[675] If the demand for self-knowledge is willed by fate and is refused, this negative attitude may end in real death. The demand would not have come to this person had he still been able to strike out on some promising by-path. But he is caught in a blind alley from which only self-knowledge can extricate him. If he refuses this then no other way is open to him. Usually he is not conscious of his situation, either, and the more unconscious he is the more he is at the mercy of unforeseen dangers: he cannot get out of the way of a car quickly enough, in climbing a mountain he misses his foothold somewhere, out skiing he thinks he can just negotiate a tricky slope, and in an illness he suddenly loses the courage to live. The unconscious has a thousand ways of snuffing out a meaningless existence with surprising swiftness. The connection of the *unio mentalis* with the death-motif is therefore obvious, even when death consists only in the cessation of spiritual progress.

[676] The alchemists rightly regarded “mental union in the overcoming of the body” as only the first stage of conjunction or individuation, in the same way that Khunrath understood Christ as the “Saviour of the Microcosm” but not of the Macrocosm, whose saviour was the lapis.⁶⁵ In general, the alchemists strove for a *total* union of opposites in symbolic form, and this they regarded as the indispensable condition for the healing of all ills. Hence they sought to find ways and means to produce that substance in which all opposites were united. It had to be material as well as spiritual, living as well as inert, masculine as well as feminine, old as well as young, and—presumably—morally neutral. It had to be created by man, and at the same time, since it was an “increatum,” by God himself, the *Deus terrestris*.

[677] The second step on the way to the production of this substance was the reunion of the spirit with the body. For this procedure there were many symbols. One of the most important was the chymical marriage, which took place in the retort. The older alchemists were still so unconscious of the psychological implications of the opus that they understood their own symbols as mere allegories or—semiotically—as secret names for chemical combinations, thus stripping mythology, of which they made such copious use, of its true meaning and using only its terminology. Later this was to change, and already in the fourteenth century it began to dawn on them that the lapis was more than a chemical compound. This realization expressed itself mainly in the Christ-parallel.⁶⁶ Dorn was probably the first to recognize the psychological implications for what they were, so far as this was intellectually possible for a man of that age. Proof of this is his demand that the pupil must have a good physical and, more particularly, a good moral constitution.⁶⁷ A religious attitude was essential.⁶⁸ For in the individual was hidden that “substance of celestial nature known to very few,” the “incorrupt medicament” which “can be freed from its fetters, not by its contrary but by its like.” The “spagyric medicine” whereby it is freed must be “conformable to this substance.” The medicine “prepares” the body so that the separation can be undertaken. For, when the body is “prepared,” it can be separated more easily from “the other parts.”

[678] Like all alchemists, Dorn naturally did not reveal what the spagyric medicine was. One can only suppose that it was thought of as physical, more or less. At the same time he says that a certain asceticism is desirable, and this may be a reference to the moral nature of the mysterious panacea. At any rate he hastens to add that the “assiduous reader” will thenceforth advance from the meditative philosophy to the spagyric and thence to the true and perfect wisdom. It sounds as if the assiduous reader had been engaged at the outset in reading and meditating, and as if the medicine and the preparation of the body consisted precisely in that.⁶⁹ Just as for Paracelsus the right “theoria” was part of the panacea, so for the alchemists was the symbol, which expresses the unconscious projections. Indeed, it is these that make

the substance magically effective, and for this reason they cannot be separated from the alchemical procedure whose integral components they are.

[679] The second stage of conjunction, the re-uniting of the *unio mentalis* with the body, is particularly important, as only from here can the complete conjunction be attained—union with the *unus mundus*. The reuniting of the spiritual position with the body obviously means that the insights gained should be made real. An insight might just as well remain in abeyance if it is simply not used. The second stage of conjunction therefore consists in making a reality of the man who has acquired some knowledge of his paradoxical wholeness.

[680] The great difficulty here, however, is that no one knows how the paradoxical wholeness of man can ever be realized. That is the crux of individuation, though it becomes a problem only when the loophole of “scientific” or other kinds of cynicism is not used. Because the realization of the wholeness that has been made conscious is an apparently insoluble task and faces the psychologist with questions which he can answer only with hesitation and uncertainty, it is of the greatest interest to see how the more unencumbered symbolical thinking of a medieval “philosopher” tackled this problem. The texts that have come down to us do not encourage the supposition that Dorn was conscious of the full range of his undertaking. Although in general he had a clear grasp of the role the adept played in the alchemical process, the problem did not present itself to him in all its acuteness, because only a part of it was enacted in the moral and psychological sphere, while for the rest it was hypostatized in the form of certain magical properties of the living body, or as a magical substance hidden within it. This projection spread over the problem a kind of mist which obscured its sharp edges. The alchemists still believed that metaphysical assertions could be proved (even today we have still not entirely freed ourselves from this somewhat childish assumption), and they could therefore entrench themselves behind seemingly secure positions in the Beyond, which they were confident would not be shaken by any doubts. In this way they were able to procure for themselves considerable alleviations. One has only to think what it means if in the misery and incertitude of a moral or philosophical dilemma one has a *quinta essentia*, a lapis or a panacea so to say in one’s pocket! We can understand this *deus ex machina* the more easily when we remember with what passion people today believe that psychological complications can be made magically to disappear by means of hormones, narcotics, insulin shocks, and convulsion therapy. The alchemists were as little able to perceive the symbolical nature of their ideas of the arcanum as we to recognize that the belief in hormones and shocks is a symbol. We would indignantly dismiss such an interpretation as a nonsensical suggestion.

3. THE PRODUCTION OF THE QUINTESSENCE

[681] Much of Dorn's argument moves in the sphere of symbols and soars on winged feet into the clouds. But that does not prevent his symbols from having a more mundane meaning which appears more or less accessible to our psychology. Thus, he knew that even the wise man could not reconcile the opposites unless "a certain heavenly substance hidden in the human body" came to his help, namely the "balsam," the quintessence, the "philosophic wine,"⁷⁰ a "virtue and heavenly vigour"⁷¹—in short, the "truth."⁷² This truth was the panacea. It is only indirectly hidden in the body, since in reality it consists in the *imago Dei* imprinted in man. This *imago* is the true quintessence and the "virtue" of the philosophic wine. The latter is therefore an apt synonym, because wine in the form of a liquid represents the body, but as alcohol it represents spirit, which would seem to correspond with the "heavenly virtue." This, although divided up among individuals, is universal; it is *one*, and when "freed from its fetters in the things of sense" it returns to its original state of unity. "This is one of the secrets of nature, whereby the spagyrics have attained to higher things."⁷³ The "wine" can be prepared from grain⁷⁴ and from all other seeds.⁷⁵ The extracted essence is reduced to its "greatest simplicity" by "assiduous rotary movements,"⁷⁶ whereby the pure is separated from the impure:

Then you will see the pureness floating to the top, transparent, shining, and of the colour of purest air. . . .⁷⁷ You will see the heretofore spagyric [i.e., secret] heaven, which you can bedeck with the lower stars, as the upper heaven is bedecked with the upper stars. . . .⁷⁸ Will now the unbelievers, who have imitated the Physicists, marvel that we handle in our hands the heaven and the stars? . . . For us, therefore, the lower stars are all individuals produced by nature in this lower world by their conjunction with heaven, like [the conjunction] of the higher with the lower elements.⁷⁹ Now I hear the voice of many raging against us, and crying out, Avaunt! let those men be destroyed who say that heaven can conjoin itself to earth . . .

[682] The caelum therefore is a heavenly substance and a universal form, containing in itself all forms, distinct from one another, but proceeding from one single universal form. Wherefore, he who knows how individuals can be led on to the most general genus by the spagyric art, and how the special virtues, one or more, can be impressed upon this genus, will easily find the universal medicine. . . . For since there is one single and most general beginning of all corruptions, and one universal fount of regenerating, restoring, and life-giving virtues, who, save a man bereft of his senses, will call such a medicine in doubt?⁸⁰

[683] Through the alchemical treatment of the "grana" (or grape-pips),

our Mercurius is concocted by the highest sublimation [*exaltatione*]. The mixture of the new heaven, of honey,⁸¹ Chelidonia,⁸² rosemary flowers,⁸³ Mercurialis,⁸⁴ of the red lily⁸⁵ and human blood,⁸⁶ with the heaven of the red or white wine or of Tartarus, can be undertaken. . . .⁸⁷ One can also make another mixture, namely that of heaven and the philosophical key,⁸⁸ by the artifice of generation.

[684] Here even Dorn remarks that the reader will hold his breath, adding:

It is true that these things are scarcely to be understood [*vix intelligibilia*] unless one has full knowledge of the terms used in the art, and these we consider we have defined in the second stage, treating of meditative knowledge. Meditative knowledge is thus the sure and undoubted resolution by expert certitude, of all manner of opinions concerning the truth. But opinion is an anticipation [*praesumptio*] of the truth, fixed in the mind and doubtful. Experiment, on the other hand, is manifest demonstration of the truth, and resolution the putting away of doubt. We cannot be resolved of any doubt save by experiment, and there is no better way to make it than on ourselves. . . . We have said earlier that piety consists in knowledge of ourselves, and hence we begin to explain meditative knowledge from this also. But no man can truly know himself unless first he see and know by zealous meditation . . . *what* rather than *who* he is, on whom he depends, and whose he is, and to what end he was made and created, and by whom and through whom.

[685] God made man to partake of his glory and created him in his image. “Even as we were created of the basest and most worthless clay, despised of all, so and no otherwise, by reason of the prime matter whereof we consist, are we more prone to everything vile than to him who out of vile matter created us of old to be most precious creatures, adorned with glory and honour little less than the angels.” From the basest matter God created gold and precious stones. Therefore, knowing our nature and our origin, we should abstain from pride, for God looks not upon the person but upon poverty and humility and hates pride. Only he who made the water and the wine can change the one into the other, and so also the earth into a living soul, and he endued it with his image and likeness for the certainty of our salvation. Nevertheless we became rebels through the sin of Adam, but God was reconciled with us. “Who will be so stony [*lapideus*], when he shall revolve in his mind the mystery of the divine goodness, as not to be reconciled with his enemy, however great the injury he received from him?” He who knows God will know his brother also. This is the foundation of the true philosophy. And he who observes all this in himself and frees his mind from all worldly cares and distractions,⁸⁹ “little by little and from day to day will perceive with his mental eyes and with the greatest joy some sparks of divine illumination.” The soul, moved by this, will unite with the body:

At length the body is compelled to resign itself to, and obey, the union of the two that are united [soul and spirit].⁹⁰ That is the wondrous transformation of the Philosophers, of body into spirit, and of the latter into body, of which there has been left to us by the sages the saying, Make the fixed volatile and the volatile fixed,⁹¹ and in this you have our Magistry. Understand this after the following manner: Make the unyielding body tractable, so that by the excellence of the spirit coming together with the soul it becomes a most stable body ready to endure all trials. For gold is tried in the fire. . . . Draw near, ye who seek the treasures in such diverse ways, know the rejected stone which is made the head of the corner. . . . In vain do they labour, all searchers after the hidden secrets of nature, when, looking for another way of ingress, they seek to reveal the virtues of earthly things through earthly things. Learn not heaven therefore through the earth, but learn the virtues of one by those of the other. Seek the incorruptible medicine which not only transmutes bodies from corruption to their true disposition [*temperamentum*], but preserves those so disposed [*temperata*] for any length of time. Such medicine you can find nowhere but in heaven. For heaven, by virtue of invisible rays coming together from all sides in the centre of the earth, penetrates, generates, and nourishes all elements, and all things that arise from the elements. This child of the two parents, of the elements and heaven, has in itself such a nature that the potentiality and actuality [*potentia et actu*] of both parents can be found in it. What will remain there till today [i.e., in the centre of the earth], save the stone in the spagyric generation?⁹² Learn from within thyself to know all that is in heaven and on earth, and especially that all was created for thy sake. Knowest thou not that heaven and the elements were formerly one, and were separated from one another by divine artifice, that they might bring forth thee and all things? If thou knowest this, the rest cannot escape thee. Therefore in all generation a separation of this kind is necessary. . . . Thou wilt never make from others the One which thou seekest, except first there be made one thing of thyself ...⁹³

4. THE MEANING OF THE ALCHEMICAL PROCEDURE

[686] Thus Dorn describes the secret of the second stage of conjunction. To the modern mind such contrivances of thought will seem like nebulous products of a dreaming fancy. So, in a sense, they are, and for this reason they lend themselves to decipherment by the method of complex psychology. In his attempt to make the obviously confused situation clearer, Dorn involved himself in a discussion of the ways and means for producing the quintessence, which was evidently needed for uniting the *unio mentalis* with the body. One naturally asks oneself how this alchemical procedure enters into it at all. The *unio mentalis* is so patently a spiritual and moral attitude that one cannot doubt its psychological nature. To our way of

thinking, this immediately sets up a dividing wall between the psychic and the chemical process. For us the two things are incommensurable, but they were not so for the medieval mind. It knew nothing of the nature of chemical substances and their combination. It saw only enigmatic substances which, united with one another, inexplicably brought forth equally mysterious new substances. In this profound darkness the alchemist's fantasy had free play and could playfully combine the most inconceivable things. It could act without restraint and, in so doing, portray itself without being aware of what was happening.

[687] The free-ranging psyche of the adept used chemical substances and processes as a painter uses colours to shape out the images of his fancy. If Dorn, in order to describe the union of the *unio mentalis* with the body, reaches out for his chemical substances and implements, this only means that he was illustrating his fantasies by chemical procedures. For this purpose he chose the most suitable substances, just as the painter chooses the right colours. Honey, for instance, had to go into the mixture because of its purifying quality. As a Paracelsist, Dorn knew from the writings of the Master what high praises he had heaped upon it, calling it the "sweetness of the earths," the "resin of the earth" which permeates all growing things, the "Indian spirit" which is turned by the "influence of summer" into a "corporeal spirit."⁹⁴ Thereby the mixture acquired the property not only of eliminating impurities but of changing spirit into body, and in view of the proposed conjunction of the spirit and the body this seemed a particularly promising sign. To be sure, the "sweetness of the earths" was not without its dangers, for as we have seen (n. 81) the honey could change into a deadly poison. According to Paracelsus it contains "Tartarum," which as its name implies has to do with Hades. Further, Tartarum is a "calcined Saturn" and consequently has affinities with this malefic planet. For another ingredient Dorn takes Chelidonia (*Chelidonium maius*, celandine), which cures eye diseases and is particularly good for night-blindness, and even heals the spiritual "benightedness" (affliction of the soul, melancholy-madness) so much feared by the adepts. It protects against "thunderstorms," i.e., outbursts of affect. It is a precious ingredient, because its yellow flowers symbolize the philosophical gold, the highest treasure. What is more important here, it draws the humidity, the "soul,"⁹⁵ out of Mercurius. It therefore assists the "spiritualization" of the body and makes visible the essence of Mercurius, the supreme chthonic spirit. But Mercurius is also the devil.⁹⁶ Perhaps that is why the section in which Lagneus defines the nature of Mercurius is entitled "Dominus vobiscum."⁹⁷

[688] In addition, the plant Mercurialis (dog's mercury) is indicated. Like the Homeric magic herb Moly, it was found by Hermes himself and must therefore have magical effects. It is particularly favourable to the coniunctio because it occurs in male and female form and thus can determine the sex of a child about to be conceived.

Mercurius himself was said to be generated from an extract of it—that spirit which acts as a mediator (because he is *utriusque capax*, “capable of either”) and saviour of the Macrocosm, and is therefore best able to unite the above with the below. In his ithyphallic form as Hermes Kyllenios, he contributes the attractive power of sexuality, which plays a great role in the coniunctio symbolism.⁹⁸ Like honey, he is dangerous because of his possibly poisonous effect, for which reason it naturally seemed advisable to our author to add rosemary to the mixture as an alexipharmic (antidote) and a synonym for Mercurius (*aqua permanens*), perhaps on the principle that “like cures like.” Dorn could hardly resist the temptation to exploit the alchemical allusion to “ros marinus,” sea-dew. In agreement with ecclesiastical symbolism there was in alchemy, too, a “dew of grace,” the *aqua vitae*, the perpetual, permanent, and two-meaninged ἵδωρ θεῖον, divine water or sulphur water. The water was also called *aqua pontica* (sea-water) or simply “sea.” This was the great sea over which the alchemist sailed in his mystic peregrination, guided by the “heart” of Mercurius in the heavenly North Pole, to which nature herself points with the magnetic compass.⁹⁹ It was also the bath of regeneration, the spring rain which brings forth the vegetation, and the “aqua doctrinae.”

[689] Another alexipharmic is the lily. But it is much more than that: its juice is “mercurial” and even “incombustible,” a sure sign of its incorruptible and “eternal” nature. This is confirmed by the fact that the lily was conceived to be Mercurius and the quintessence itself—the noblest thing that human meditation can reach (see n. 85). The red lily stands for the male and the white for the female in the coniunctio, the divine pair that unite in the hierosgamos. The lily is therefore a true “gamonymus” in the Paracelsan sense.

[690] Finally, the mixture must not lack the thing that really keeps body and soul together: human blood, which was regarded as the seat of the soul.¹⁰⁰ It was a synonym for the red tincture, a preliminary stage of the lapis; moreover, it was an old-established magic charm, a “ligament” for binding the soul either to God or the devil, and hence a powerful medicine for uniting the *unio mentalis* with the body. The admixture of human blood seems to me unusual if one assumes that the recipe was meant literally. We move here on uncertain ground. Although the vegetable ingredients are obviously indicated because of their symbolic value, we still do not know exactly how far the symbolism had a magical quality. If it had, then the recipe must be taken literally. In the case of blood, increased doubts arise because either it was simply a synonym for the *aqua permanens* and could then be practically any liquid, or else real blood was meant, and then we must ask where this blood came from. Could it have been the adept’s? This problem seems to me not entirely irrelevant, since Dorn, in his “Philosophia meditativa,” was greatly influenced, as we shall see, by the Sabaeen “Liber quartorum,” which he obviously knew although he

did not mention it. The Sabaeans were reputed to have sacrificed human victims for magical purposes,¹⁰¹ and even today human blood is used for signing pacts with the devil. It is also not so long since tramps were made drunk and quickly immured on a building site in order to make the foundations safe. A magical recipe of the sixteenth century, therefore, might easily have used human blood as a *pars pro toto*.

[691] This whole mixture was then joined “with the heaven of the red or white wine or of Tartarus.” The *caelum*, as we have seen, was the product of the alchemical procedure, which in this case consisted in first distilling the “philosophic wine.” Thereby the soul and spirit were separated from the body and repeatedly sublimated until they were free from all “phlegm,” i.e., from all liquid that contained no more “spirit.”¹⁰² The residue, called the *corpus* (body), was reduced to ashes in the “most vehement fire” and, hot water being added, was changed into a *lixivium asperrimum*, “very sharp lye,” which was then carefully poured off the ashes by tilting the vessel. The residue was treated in the same way again, until in the end no “asperitas” remained in the ashes. The lye was filtered and then evaporated in a glass vessel. What was left over was *tartarum nostrum* (“our winestone,” *calculus vini*), the natural “salt of all things.” This salt “can be dissolved into tartaric water, in a damp and cool place on a slab of marble.”¹⁰³ The tartaric water was the quintessence of the philosophic and even of ordinary wine, and was then subjected to the above-mentioned rotation. As in a centrifuge, the pure was separated from the impure, and a liquid “of the colour of the air” floated to the top. This was the *caelum*.

[692] I have detailed this process in order to give the reader a direct impression of the alchemical procedure. One can hardly suppose that all this is mere poppycock, for Dorn was a man who obviously took things seriously. So far as one can judge he meant what he said, and he himself worked in the laboratory. Of course we do not know what success he had chemically, but we are sufficiently informed about the results of his meditative exertions.

[693] The *caelum*, for Dorn, was the celestial substance hidden in man, the secret “truth,” the “sum of virtue,” the “treasure which is not eaten into by moths nor dug out by thieves.” In the world’s eyes it is the cheapest thing, but “to the wise more worthy of love than precious stones and gold, a good that passeth not away, and is taken hence after death.”¹⁰⁴ The reader will gather from this that the adept was describing nothing less than the kingdom of heaven on earth. I think that Dorn was not exaggerating, but that he wanted to communicate to his public something very important to him. He believed in the necessity of the alchemical operation as well as in its success; he was convinced that the quintessence was needed for the “preparation” of the body,¹⁰⁵ and that the body was so much improved by this “universal medicine” that the *coniunctio* with spirit and soul could be consummated.

If the production of the *caelum* from wine is a hair-raising chemical fantasy, our understanding ceases altogether when the adept mixes this heaven with his “gamonymous” and other magical herbs. But if the one consists mainly of fantasies so does the other. This makes it interesting. Fantasies always mean something when they are spontaneous. The question then arises: what is the psychological meaning of the procedure?

5. THE PSYCHOLOGICAL INTERPRETATION OF THE PROCEDURE

[694] The answer to this question concerns us very closely, because here we come upon something that is of particular interest to modern psychology: the adept produces a system of fantasies that has a special meaning for him. Although he keeps within the general framework of alchemical ideas, he does not repeat a prescribed pattern, but, following his own fancy, devises an individual series of ideas and corresponding actions which it is evident have a symbolic character. He starts with the production of the medicine that will unite the *unio mentalis*, his spiritual position, with the body. The ambiguity already begins here: is the “corpus” his human body or the chemical substance? Apparently it is, to start off with, his living body, which as everyone knows has different desires from the spirit. But hardly has the chemical process got under way than the “body” is what remains behind in the retort from the distillation of the wine, and this “phlegm” is then treated like the subtle body of the soul in the purgatorial fire. Like it, the residue from the wine must pass through many subliming fires until it is so purified that the “air-coloured” quintessence can be extracted from it.

[695] This singular identity, simply postulated and never taken as a problem, is an example of that “participation mystique” which Lévy-Bruhl very rightly stressed as being characteristic of the primitive mentality.¹⁰⁶ The same is true of the unquestionably psychic *unio mentalis*, which is at the same time a substance-like “truth” hidden in the body, which in turn coincides with the quintessence sublimed from the “phlegm.” It never occurred to the mind of the alchemists to cast any doubt whatsoever on this intellectual monstrosity. We naturally think that such a thing could happen only in the “dark” Middle Ages. As against this I must emphasize that we too have not quite got out of the woods in this respect, for a philosopher once assured me in all seriousness that “thought could not err,” and a very famous professor, whose assertions I had ventured to criticize, came out with the magisterial dictum: “It must be right because I have thought it.”

[696] All projections are unconscious identifications with the object. Every projection is simply there as an uncriticized datum of experience, and is recognized for what it is only very much later, if ever. Everything that we today would call “mind” and “insight” was, in earlier centuries, projected into things, and even today individual idiosyncrasies are presupposed by many people to be generally valid. The original, half-animal state of unconsciousness was known to the adept as the *nigredo*, the chaos, the *massa confusa*, an inextricable interweaving of the soul with the body, which together formed a dark unity (the *unio naturalis*). From this enchainment he

had to free the soul by means of the *separatio*, and establish a spiritual-psychic counter-position—conscious and rational insight—which would prove immune to the influences of the body. But such insight, as we have seen, is possible only if the delusory projections that veil the reality of things can be withdrawn. The unconscious identity with the object then ceases and the soul is “freed from its fetters in the things of sense.” The psychologist is well acquainted with this process, for a very important part of his psychotherapeutic work consists in making conscious and dissolving the projections that falsify the patient’s view of the world and impede his self-knowledge. He does this in order to bring anomalous psychic states of an affective nature, i.e., neurotic symptoms, under the control of consciousness. The declared aim of the treatment is to set up a rational, spiritual-psychic position over against the turbulence of the emotions.

[697] Projections can be withdrawn only when they come within the possible scope of consciousness. Outside that, nothing can be corrected. Thus, in spite of all his efforts, Dorn was unable to recognize the—for us—blatant projection of psychic contents into chemical substances and thereby dissolve it. Evidently his understanding in this respect still moved within the confines of the contemporary consciousness, even though in other respects it plumbed to greater depths than did the collective consciousness of that age. Thus it is that the psychic sphere representing the body miraculously appeared to the adept to be identical with chemical preparation in the retort. Hence he could believe that any changes he effected in the latter would happen to the former as well. Significantly enough, one seldom hears of the panacea or lapis being applied to the human body. As a rule the carrying out of the chemical procedure seemed sufficient in itself. At any rate it was for Dorn, and that is why his chemical *caelum* coincided with the heavenly substance in the body, the “truth.” For him this was not a duality but an identity; for us they are incommensurables that cannot be reconciled because, owing to our knowledge of chemical processes, we are able to distinguish them from psychic ones. In other words, our consciousness enables us to withdraw this projection.

[698] The list of ingredients to be mixed with the *caelum* gives us a glimpse into the nature of the psychic contents that were projected. In the honey, the “sweetness of the earths,”¹⁰⁷ we can easily recognize the balsam of life that permeates all living, budding, and growing things. It expresses, psychologically, the joy of life and the life urge which overcome and eliminate everything dark and inhibiting. Where spring-like joy and expectation reign, spirit can embrace nature and nature spirit. The Chelidonia, a synonym for the philosophical gold, corresponds to Paracelsus’s magic herb Cheyri (*Cheiranthus cheiri*). Like this, it has four-petalled yellow flowers. Cheyri, too, was related to the gold, since it was called “aurum potabile.” It therefore comes into the category of the Paracelsan “Aniada,” “perfectors from below

upward”—magical plants which are collected in the spring and grant long life.¹⁰⁸ Dorn himself, in his “Congeries Paracelsicae chemicae de transmutatione metallorum,” commented on Paracelsus’s *De vita longa*, where this information can be found. Celandine was one of the most popular curative and magical herbs in the Middle Ages, chiefly on account of its yellow, milky juice—a remedy for non-lactation. It was also called “enchanter’s nightshade.”¹⁰⁹ Like the Cheyri, it owes its singular significance to the quaternity of its gold-coloured flowers, as Paracelsus points out.¹¹⁰ The analogy with gold always signifies an accentuation of value: the addition of Chelidonia projects the highest value, which is identical with the quaternity of the self, into the mixture. If it “draws out the soul of Mercurius,” this means psychologically that the image of the self (the golden quaternity) draws a quintessence out of the chthonic spirit.

[699] I must agree with Dorn, and no doubt with the reader too, that this statement is “vix intelligibilis.” I can explain this only as a result of the extraordinary intellectual difficulties we get into when we have to wrestle seriously with a mind that could make no proper distinction between psyche and matter. The underlying idea here is that of Mercurius, a dual being who was as much spiritual as material. In my special study of that subject I have pointed out that outwardly Mercurius corresponds to quicksilver but inwardly he is a “deus terrenus” and an *anima mundi*— in other words, that part of God which, when he “imagined” the world, was as it were left behind in his Creation¹¹¹ or, like the Sophia of the Gnostics, got lost in Physis. Mercurius has the character which Dorn ascribes to the soul. He is “good with the good, evil with the evil,” and thus occupies a middle position morally. Just as the soul inclines to earthly bodies, so Mercurius frequently appears as the spirit in matter, in chthonic or even *καταχθόνιος* (underworldly) form, as in our text. He is then the (non-human) spirit who holds the soul captive in Physis, for which reason it must be liberated from him.

[700] In a psychological sense Mercurius represents the unconscious, for this is to all appearances that “spirit” which comes closest to organic matter and has all the paradoxical qualities attributed to Mercurius. In the unconscious are hidden those “sparks of light” (*scintillae*), the archetypes, from which a higher meaning can be “extracted.”¹¹² The “magnet” that attracts the hidden thing is the self, or in this case the “theoria” or the symbol representing it, which the adept uses as an instrument.¹¹³ The *extractio* is depicted figuratively in an illustration in Reusner’s *Pandora*: a crowned figure, with a halo, raising a winged, fish-tailed, snake-armed creature (the spirit), likewise crowned with a halo, out of a lump of earth.¹¹⁴ This monster represents the *spiritus mercurialis*, the soul of the world or of matter freed from its fetters; the *filius macrocosmi*, the child of sun and moon born in the earth, the hermaphroditic homunculus, etc. Basically all these synonyms describe the inner man

as a parallel or complement of Christ. The reader who seeks further information on this figure should refer to *Psychology and Alchemy*¹¹⁵ and *Aion*.¹¹⁶

[701] Let us now turn to another ingredient of the mixture, namely the “rosemary flowers” (*flores rosis marini*). In the old pharmacopeia, rosemary (*Rosmarinus officinalis*) was regarded as an antitoxin, presumably on symbolic grounds which may be connected with its curious name. *Ros marinus* (sea-dew) was for the alchemist a welcome analogy for the *aqua permanens*, which in its turn was Mercurius.¹¹⁷ But what lends rosemary its special significance is its sweet smell and taste. The “sweet odour” of the Holy Ghost occurs not only in Gnosticism but also in ecclesiastical language,¹¹⁸ and of course in alchemy—though here there are more frequent references to the characteristic stench of the underworld, the *odor sepulchrorum*. Rosemary was often used in marriage customs and as a love philtre, and therefore had—for the alchemist—a binding power, which was of course particularly favourable for the purpose of conjunction.¹¹⁹ Thus the Holy Ghost is the “spiration” binding Father and Son, just as, in alchemy, he occasionally appears as the “ligament” of body and soul. These different aspects of rosemary signify so many qualities which are imparted to the mixture.

[702] Mercurialis is a magic herb too, but unlike rosemary it is connected not with love but with sexuality, and is another “binding” power which, as we have mentioned, can even determine the sex of the child. The red lily, as the quintessence of sulphur (n. 85), represents the male partner in the alchemical marriage, the *servus rubeus* who unites with the *foemina candida*. With this figure the adept mixed himself into the potion, so to speak, and, to make the bond inviolable, he added human blood as a further ingredient. Being a “special juice” with which pacts with the devil are signed, it would magically consolidate the bond of marriage.

[703] This peculiar mixture was then to be united with the “heaven of the red or white wine or of Tartarus.” The *caelum* or blue tincture, as we have seen, was concocted from the “phlegm” of the wine or sublimated from the “wine-stone.” Just as the phlegm is the residue, in the bottom of the vessel, of the evaporated wine, so Tartarus, the underworld and realm of the dead, is the sediment or precipitate of a once living world. In Khunrath, *Sal tartari mundi maioris* is identical with *sal Saturni* and *sal Veneris*.¹²⁰ It contains—or is—the “scintilla Animae Mundi.”¹²¹ Tartar is the *sal sapientiae*.¹²² *Sal saturni* refers to Kronos enchained in Tartarus. Plutarch identifies Typhon with Tartarus.¹²³ This is in agreement with the malefic nature of Saturn. *Sal tartari* therefore has a sinister, underworldly nuance reminiscent of death and hell. Saturn (lead) is one of the best known synonyms for the prima materia, and hence is the matrix of the filius Philosophorum. This is the sought-for celestial substance, the *caelum*, etc.

[704] What are we to think of this most peculiar philtre? Did Dorn really mean that these magic herbs should be mixed together and that the air-coloured quintessence should be distilled from the “Tartarus,” or was he using these secret names and procedures to express a moral meaning? My conjecture is that he meant both, for it is clear that the alchemists did in fact operate with such substances and thought-processes, just as, in particular, the Paracelsist physicians used these remedies and reflections in their practical work. But if the adept really concocted such potions in his retort, he must surely have chosen his ingredients on account of their magical significance. He worked, accordingly, with *ideas*, with psychic processes and states, but referred to them under the name of the corresponding substances. With the honey the pleasure of the senses and the joy of life went into the mixture, as well as the secret fear of the “poison,” the deadly danger of worldly entanglements. With the Chelidonia the highest meaning and value, the self as the total personality, the healing and “whole-making” medicine which is recognized even by modern psychotherapy, was combined with spiritual and conjugal love, symbolized by rosemary; and, lest the lower, chthonic element be lacking, Mercurialis added sexuality, together with the red slave moved by passion,¹²⁴ symbolized by the red lily, and the addition of blood threw in the whole soul. All this was united with the azure quintessence, the *anima mundi* extracted from inert matter, or the God-image imprinted on the world—a mandala produced by rotation;¹²⁵ that is to say the whole of the conscious man is surrendered to the self, to the new centre of personality which replaces the former ego. Just as, for the mystic, Christ takes over the leadership of consciousness and puts an end to a merely ego-bound existence, so the *filius macrocosmi*, the son of the great luminaries and of the dark womb of the earth, enters the realm of the psyche and seizes the human personality, not only in the shining heights of consciousness but in the dark depths which have not yet comprehended the light that appeared in Christ. The alchemist was well aware of the great shadow which Christianity obviously had not assimilated, and he therefore felt impelled to create a saviour from the womb of the earth as an analogy and complement of God’s son who came down from above.

[705] The production of the *caelum* is a symbolic rite performed in the laboratory. Its purpose was to create, in the form of a substance, that “truth,” the celestial balsam or life principle, which is identical with the God-image. Psychologically, it was a representation of the individuation process by means of chemical substances and procedures, or what we today call active imagination. This is a method which is used spontaneously by nature herself or can be taught to the patient by the analyst. As a rule it occurs when the analysis has constellated the opposites so powerfully that a union or synthesis of the personality becomes an imperative necessity. Such a situation is bound to arise when the analysis of the psychic contents, of the patient’s

attitude and particularly of his dreams, has brought the compensatory or complementary images from the unconscious so insistently before his mind that the conflict between the conscious and the unconscious personality becomes open and critical. When this confrontation is confined to partial aspects of the unconscious the conflict is limited and the solution simple: the patient, with insight and some resignation or a feeling of resentment, places himself on the side of reason and convention. Though the unconscious motifs are repressed again, as before, the unconscious is satisfied to a certain extent, because the patient must now make a conscious effort to live according to its principles and, in addition, is constantly reminded of the existence of the repressed by annoying resentments. But if his recognition of the shadow is as complete as he can make it, then conflict and disorientation ensue, an equally strong Yes and No which he can no longer keep apart by a rational decision. He cannot transform his clinical neurosis into the less conspicuous neurosis of cynicism; in other words, he can no longer hide the conflict behind a mask. It requires a real solution and necessitates a third thing in which the opposites can unite. Here the logic of the intellect usually fails, for in a logical antithesis there is no third. The “solvent” can only be of an irrational nature. In nature the resolution of opposites is always an energetic process: she acts *symbolically* in the truest sense of the word,¹²⁶ doing something that expresses both sides, just as a waterfall visibly mediates between above and below. The waterfall itself is then the incommensurable third. In an open and unresolved conflict dreams and fantasies occur which, like the waterfall, illustrate the tension and nature of the opposites, and thus prepare the synthesis.

[706] This process can, as I have said, take place spontaneously or be artificially induced. In the latter case you choose a dream, or some other fantasy-image, and concentrate on it by simply catching hold of it and looking at it. You can also use a bad mood as a starting-point, and then try to find out what sort of fantasy-image it will produce, or what image expresses this mood. You then fix this image in the mind by concentrating your attention. Usually it will alter, as the mere fact of contemplating it animates it. The alterations must be carefully noted down all the time, for they reflect the psychic processes in the unconscious background, which appear in the form of images consisting of conscious memory material. In this way conscious and unconscious are united, just as a waterfall connects above and below. A chain of fantasy ideas develops and gradually takes on a dramatic character: the passive process becomes an action. At first it consists of projected figures, and these images are observed like scenes in the theatre. In other words, you dream with open eyes. As a rule there is a marked tendency simply to enjoy this interior entertainment and to leave it at that. Then, of course, there is no real progress but only endless variations on the same theme, which is not the point of the exercise at all. What is

enacted on the stage still remains a background process; it does not move the observer in any way, and the less it moves him the smaller will be the cathartic effect of this private theatre. The piece that is being played does not want merely to be watched impartially, it wants to compel his participation. If the observer understands that his own drama is being performed on this inner stage, he cannot remain indifferent to the plot and its dénouement. He will notice, as the actors appear one by one and the plot thickens, that they all have some purposeful relationship to his conscious situation, that he is being addressed by the unconscious, and that *it* causes these fantasy-images to appear before him. He therefore feels compelled, or is encouraged by his analyst, to take part in the play and, instead of just sitting in a theatre, really have it out with his alter ego. For nothing in us ever remains quite uncontradicted, and consciousness can take up no position which will not call up, somewhere in the dark corners of the psyche, a negation or a compensatory effect, approval or resentment. This process of coming to terms with the Other in us is well worth while, because in this way we get to know aspects of our nature which we would not allow anybody else to show us and which we ourselves would never have admitted.¹²⁷ It is very important to fix this whole procedure in writing at the time of its occurrence, for you then have ocular evidence that will effectively counteract the ever-ready tendency to self-deception. A running commentary is absolutely necessary in dealing with the shadow, because otherwise its actuality cannot be fixed. Only in this painful way is it possible to gain a positive insight into the complex nature of one's own personality.

6. SELF-KNOWLEDGE

[707] Expressed in the language of Hermetic philosophy, the ego-personality's coming to terms with its own background, the shadow, corresponds to the union of spirit and soul in the *unio mentalis*, which is the first stage of the coniunctio. What I call coming to terms with the unconscious the alchemists called "meditation." Ruland says of this: "Meditation: The name of an Internal Talk of one person with another who is invisible, as in the invocation of the Deity, or communion with one's self, or with one's good angel."¹²⁸ This somewhat optimistic definition must immediately be qualified by a reference to the adept's relations with his *spiritus familiaris*, who we can only hope was a good one. In this respect Mercurius is a rather unreliable companion, as the testimony of the alchemists agrees. In order to understand the second stage, the union of the *unio mentalis* with the body, psychologically, we must bear in mind what the psychic state resulting from a fairly complete recognition of the shadow looks like. The shadow, as we know, usually presents a fundamental contrast to the conscious personality. This contrast is the prerequisite for the

difference of potential from which psychic energy arises. Without it, the necessary tension would be lacking. Where considerable psychic energy is at work, we must expect a corresponding tension and inner opposition. The opposites are necessarily of a characterological nature: the existence of a positive virtue implies victory over its opposite, the corresponding vice. Without its counterpart virtue would be pale, ineffective, and unreal. The extreme opposition of the shadow to consciousness is mitigated by complementary and compensatory processes in the unconscious. Their impact on consciousness finally produces the uniting symbols.

[708] Confrontation with the shadow produces at first a dead balance, a standstill that hampers moral decisions and makes convictions ineffective or even impossible. Everything becomes doubtful, which is why the alchemists called this stage *nigredo*, *tenebrositas*, chaos, melancholia. It is right that the magnum opus should begin at this point, for it is indeed a well-nigh unanswerable question how one is to confront reality in this torn and divided state. Here I must remind the reader who is acquainted neither with alchemy nor with the psychology of the unconscious that nowadays one very seldom gets into such a situation. Nobody now has any sympathy with the perplexities of an investigator who busies himself with magical substances, and there are relatively few people who have experienced the effects of an analysis of the unconscious on themselves, and almost nobody hits on the idea of using the objective hints given by dreams as a theme for meditation. If the ancient art of meditation is practised at all today, it is practised only in religious or philosophical circles, where a theme is subjectively chosen by the meditant or prescribed by an instructor, as in the Ignatian *Exercitia* or in certain theosophical exercises that developed under Indian influence. These methods are of value only for increasing concentration and consolidating consciousness, but have no significance as regards effecting a synthesis of the personality. On the contrary, their purpose is to shield consciousness from the unconscious and to suppress it. They are therefore of therapeutic value only in cases where the conscious is liable to be overwhelmed by the unconscious and there is the danger of a psychotic interval.

[709] In general, meditation and contemplation have a bad reputation in the West. They are regarded as a particularly reprehensible form of idleness or as pathological narcissism. No one has time for self-knowledge or believes that it could serve any sensible purpose. Also, one knows in advance that it is not worth the trouble to know oneself, for any fool can know what he is. We believe exclusively in doing and do not ask about the doer, who is judged only by achievements that have collective value. The general public seems to have taken cognizance of the existence of the unconscious psyche more than the so-called experts, but still nobody has drawn any conclusions from the fact that Western man confronts himself as a stranger and that self-knowledge is one of the most difficult and exacting of the arts.

[710] When meditation is concerned with the objective products of the unconscious that reach consciousness spontaneously, it unites the conscious with contents that proceed not from a conscious causal chain but from an essentially unconscious process. We cannot know what the unconscious psyche is, otherwise it would be conscious. We can only conjecture its existence, though there are good enough grounds for this. Part of the unconscious contents is projected, but the projection as such is not recognized. Meditation or critical introspection and objective investigation of the object are needed in order to establish the existence of projections. If the individual is to take stock of himself it is essential that his projections should be recognized, because they falsify the nature of the object and besides this contain items which belong to his own personality and should be integrated with it. This is one of the most important phases in the wearisome process of self-knowledge. And since projections involve one in an inadmissible way in externalities, Dorn rightly recommends an almost ascetic attitude to the world, so that the soul may be freed from its involvement in the world of the body. Here only the “spirit” can help it, that is, the drive for knowledge of the self, on a plane beyond all the illusion and bemusement caused by projection.

[711] The *unio mentalis*, then, in psychological as well as in alchemical language, means knowledge of oneself. In contradistinction to the modern prejudice that self-knowledge is nothing but a knowledge of the ego, the alchemists regarded the self as a substance incommensurable with the ego, hidden in the body, and identical with the image of God.¹²⁹ This view fully accords with the Indian idea of *purusha-atman*.¹³⁰ The psychic preparation of the magisterium as described by Dorn is therefore an attempt, uninfluenced by the East, to bring about a union of opposites in accordance with the great Eastern philosophies, and to establish for this purpose a principle freed from the opposites and similar to the *atman* or *tao*. Dorn called this the *substantia coelestis*, which today we would describe as a transcendental principle. This “unum” is *nirvandva* (free from the opposites), like the *atman* (self).

[712] Dorn did not invent this idea but merely gave clearer expression to what had long been secret knowledge in alchemy. Thus we read in the “Liber octo capitulorum de lapide philosophorum” of Albertus Magnus,¹³¹ with reference to quicksilver (*Mercurius non vulgi*, the philosophical mercury):

Quicksilver is cold and moist, and God created all minerals with it, and it itself is aerial, and volatile in the fire. But since it withstands the fire for some time, it will do great and wonderful works, and it alone is a living spirit, and in all the world there is nothing like it that can do such things as it can . . . It is the perennial water, the water of life, the virgin’s milk, the fount, the alumen,¹³² and [whoever] drinks of it shall not perish. When it is alive it does certain works, and when it is dead it does other and

the greatest works. It is the serpent that rejoices in itself, impregnates itself, and gives birth in a single day, and slays all metals with its venom. It flees from the fire, but the sages by their art have caused it to withstand the fire, by nourishing it with its own earth until it endured the fire, and then it performs works and transmutations. As it is transmuted, so it transmutes. . . . It is found in all minerals and has a “symbolum”¹³³ with them all. But it arises midway between the earthly and the watery, or midway between [*mediocriter*]¹³⁴ a subtle living oil and a very subtle spirit. From the watery part of the earth it has its weight and motion from above downwards, its brightness, fluidity, and silver hue. . . . But quicksilver is clearly seen to have a gross substance, like the Monocalus,¹³⁵ which excels even gold in the heaviness of its immense weight.¹³⁶ When it is in its nature¹³⁷ it is of the strongest composition [*fortissimae compositionis*]¹³⁸ and of uniform nature, since it is not divided [or: is indivisible]. It can in no way be separated into parts, because it either escapes from the fire with its whole substance or endures with it in the fire. For this reason the cause of perfection is necessarily seen in it.

[713] Since Mercurius is the soul of the gold and of the silver, the conjunction of these two must be accomplished:

Our final secret consists in this, that one obtains the medicine which flows, before Mercurius evaporates. . . . There is no worthier or purer substance than the sun and its shadow the moon, without which no tincturing quicksilver can be produced. . . . He who understands, therefore, how to unite this with the sun or moon will obtain the arcanum, which is named the sulphur of the art.

[714] Mercurius is the prima materia. This must be dissolved at the beginning of the work, and the dissolved bodies then transformed into “spirits.” The transformation is effected by putrefaction, which is synonymous with the *nigredo*, the grave, and death. The spirits are joined together as *sponsus* and *sponsa*.

Our stone is of watery nature, because it is cold and moist. For such a disposition of the body is considered obvious or manifest. But breadth is the middle [*media*] disposition whereby depth is attained. This is the medium between depth and breadth, as between two extremes or opposites, and the passage from one opposite to the other or from one extreme to the other is impossible save by a medium disposition. [This is possible] because the stone is by nature cold and moist.

Mercurius is not only the lapis as *prima* materia but the lapis as *ultima* materia, the goal of the opus. Hence Albertus cites Geber: “One is the stone, one the medicine, and therein lies the whole magistry.”

[715] In these words Albertus Magnus, more than three hundred years earlier than Dorn, describes the celestial substance, the balsam of life, and the hidden truth. His description has roots that go still further back into Greek alchemy, but I cannot

discuss this here. His account is sufficient for our purpose: it describes a transcendental substance characterized, as is only to be expected, by a large number of antinomies. Unequivocal statements can be made only in regard to immanent objects; transcendental ones can be expressed only by paradox. Thus, they are and they are not (that is to say, not to be found in our experience). Even the physicist is compelled by experience to make antinomian statements when he wants to give a concrete description of transcendental facts, such as the nature of light or of the smallest particles of matter, which he represents both as corpuscles and as waves. In the same way, the quicksilver is a material substance and at the same time a living spirit whose nature can be expressed by all manner of symbolic synonyms—though only, it is true, when it is made fire-resistant by artificial means. The quicksilver is a substance and yet not a substance, since, as a natural element, it does not resist fire and can do this only through the secret of art, thereby turning into a magical substance so wonderful that there is no prospect of our ever coming across it in reality. This clearly means that quicksilver is the symbol for a transcendental idea which is alleged to become manifest in it when the art has made it capable of resisting fire. It is also assumed that this occult quality is at least potentially present in Mercurius, since he is the prima materia of all metals and is found in all minerals. He is not only the initial material of the process but also its end-product, the lapis Philosophorum. Thus he is at the outset a significant exception among the metals and chemical elements. He is the primordial matter from which God created all material things. The change which the artifex proposes to induce in it consists, among other things, in giving it “immense weight” and indivisible wholeness. This strange statement assumes another aspect when we compare it with the modern view that matter consists of extraordinarily, indeed “immensely” heavy elementary corpuscles which in a certain sense are of “uniform nature” and apparently indivisible. They are the bricks nature builds with and they therefore contain everything that nature contains, so that each of them represents the whole of the universe. From this point of view it almost seems as if Albertus Magnus had anticipated one of the greatest physical discoveries of our time. This, of course, would be to recognize only the physical truth of his intuition, but not the symbolic implications which were bound up with it in the medieval mind.

[716] If we have hazarded a parallel between Albertus’s views and the discontinuity of protons and energy quanta, we are obliged to attempt another parallel in regard to the symbolical statements. These, as we have seen from Dorn (*supra*, sec. 3), refer to the psychological aspect of Mercurius. In order to avoid needless repetition, I must here refer the reader to my earlier investigations of Mercurius and the symbols of the self in alchemy. Anyone who knows the extraordinary importance of the concept of psychic wholeness in the practical as well as theoretical psychology of the

unconscious will not be surprised to learn that Hermetic philosophy gave this idea, in the form of the lapis Philosophorum, pre-eminence over all other concepts and symbols. Dorn in particular made this abundantly and unequivocally clear, in which respect he has the authority of the oldest sources. It is not true that alchemy devised such an interpretation of the arcanum only at the end of the sixteenth century; on the contrary, the idea of the self affords the clue to the central symbols of the art in all centuries, in Europe, the Near East, and in China. Here again I must refer the reader to my previous works.¹³⁹ Unfortunately it is not possible to exhaust the wealth of alchemical ideas in a single volume.

[717] By introducing the modern concept of the self we can explain the paradoxes of Albertus without too much difficulty. Mercurius is matter and spirit; the self, as its symbolism proves, embraces the bodily sphere as well as the psychic. This fact is expressed particularly clearly in mandalas.¹⁴⁰ Mercurius is also the “water,” which, as the text emphasizes, occupies a middle position between the volatile (air, fire) and the solid (earth), since it occurs in both liquid and gaseous form, and also as a solid in the form of ice. Mercurius shares his “*aquaeositas*” with water, since on the one hand he is a metal and amalgamates himself in solid form with other metals, and on the other hand is liquid and evaporable. The deeper reason why he is so frequently compared with water is that he unites in himself all those numinous qualities which water possesses. Thus, as the central arcanum, the ἰδωρ θεῖον or *aqua permanens* dominated alchemy from those remote times when it was still the holy and blessed water of the Nile until well into the eighteenth century. In the course of time, mainly under Gnostic-Hermetic influence, it took on the significance of the *Nous*, with which the divine *krater* was filled so that those mortals who wished to attain consciousness could renew themselves in this baptismal bath; later it signified the *aqua doctrinae* and a wonder-working magical water. Its very ancient identification with *hydrargyrum*, quicksilver, drew the whole Hermes Trismegistus tradition into the immemorally numinous sphere of the water’s significance. This could happen all the more easily since its maternal aspect as the matrix and “nurse of all things” makes it an unsurpassable analogy of the unconscious. In this way the idea of the “water” could gradually develop into the tremendous paradox of Mercurius, who, as the “age-old son of the mother,” is the Hermetic spirit, and, as a chemical substance, a magically prepared quicksilver.

[718] The “serpent rejoicing in itself” (*luxurians in se ipso*) is the Democritean physis (*natura*) “which embraces itself”¹⁴¹ and is symbolized by the uroboros of Greek alchemy, a well-known emblem of Mercurius. It is the symbol of the union of opposites *par excellence* and an alchemical version of the proverb: *les extrêmes se touchent*. The uroboros symbolizes the goal of the process but not the beginning, the *massa confusa* or chaos, for this is characterized not by the union of the elements but

by their conflict. The expression “giving birth in a single day” (*in uno die parturiens*) likewise refers to Mercurius, since he (in the form of the lapis) was named the “son of one day.”¹⁴² This name refers to the creation of light in Genesis 1 : 5: “And there was evening and morning, one day.” As the “son of one day,” therefore, Mercurius is light. Hence he is praised as the *lux moderna* and a light above all lights.¹⁴³ He is thus Sunday’s child (born on the day of the sun), just as the planet Mercury is the nearest to the sun and was accounted its child. St. Bonaventure (1221–74) also speaks of the one day in his *Itinerarium*, where he discusses the three stages of illumination (*triplex illustratio*). The first stage consists in giving up the bodily and the temporal in order to attain the “first principle,” which is spiritual and eternal and “above us”:

We must enter into our mind [*mentem*], which is the eternal spiritual image of God within us, and this is to enter into the truth of the Lord; we must pass beyond ourselves to the eternal and preeminently spiritual, and to that which is above us . . . this is the threefold illumination of the one day.¹⁴⁴

The “one day” is the day on which light appeared over the darkness. I cite this passage not only for that reason but as a parallel to the three stages of conjunction in Dorn, which obviously originated in the exercises for spiritual contemplation in the early Middle Ages. The parallel is clearly discernible: first the turning away from the world of sense, then the turning towards the inner world of the mind and the hidden celestial substance, the image and truth of God, and finally the contemplation of the transcendental *unus mundus*, the potential world outside time, of which we shall have more to say below. But first we examine more closely Albertus’s statements on the nature of the quicksilver.

[719] The middle position ascribed to Mercurius provokes Albertus to a remarkable reflection: it seems to him that the concept of breadth (*latitudo*) expresses the “middle disposition” whereby depth can be attained. This disposition is the “medium between depth and breadth” (*media est inter profunditatem et latitudinem*), as between two extremes or opposites (*contraria*). The idea at the back of his mind is obviously that of a cross, for height is the complement of depth.¹⁴⁵ This would indicate the quaternity, a symbol of Mercurius quadratus, who, in the form of the lapis, consists of the four elements.¹⁴⁶ He thus forms the mid-point of the cosmic quaternity and represents the quinta essentia, the oneness and essence of the physical world, i.e., the anima mundi. As I have shown elsewhere, this symbol corresponds to the modern representations of the self.

7. THE MONOCOLUS

[720] Evidently in order to emphasize the unity of Mercurius, Albertus makes use of the expression “monocolus” (as is probably the right reading), or “uniped.” It seems to me that this must be an alchemical ἀπαξ λεγόμενον,¹⁴⁷ for I have found it nowhere else in the literature. The alchemist’s use of a rare or strange word generally served to emphasize the extraordinary nature of the object expressed by it. (As we know, with this trick one can also make banalities appear unusual.) Even though the word “monocolus” appears to be unique, the image is not, for the uniped occurs in several illustrated alchemical manuscripts, for instance in the aforementioned Paris codex (Fr. 14765) entitled “Abraham le Juif.”¹⁴⁸ As the title shows, this presumably purported to be, or was intended to replace, the zealously sought “Rindenbuch” of the same author, of which Nicholas Flamel gives an account in his autobiography and whose loss the alchemists so deeply deplored. Though this mythical work was never found, it was reinvented in Germany;¹⁴⁹ but this forgery has nothing to do with our manuscript. On page 324 of the manuscript we find the first in a series of pictures of unipeds (cf. Pl. 4). On the left there is a crowned man in a yellow robe, and on the right a priest in a white robe with a mitre. Each of them has only one foot. The inscription under the picture begins with the sign for Mercurius (☿) and runs: “There they make but one.” This refers to the preceding text, “For there is but one single thing, one medicine, and in it all our magistry consists; there are but two coadjutors who are made perfect here.”¹⁵⁰ The subject is obviously Mercurius duplex. In my chapter on Sulphur I have pointed out that it, especially in its red form, is identical with gold, the latter being generally regarded as “rex.” The red sceptre of the king might be an allusion to this. There is, as I have shown, a red and a white sulphur, so it too is duplex and identical with Mercurius. Red sulphur stands for the masculine, active principle of the sun, the white for that of the moon. As sulphur is generally masculine by nature and forms the counterpart of the feminine salt, the two figures probably signify the spirits of the arcane substance, which is often called rex, as in Bernardus Trevisanus.

[721] This curious separation or union of the figures occurs several times in the manuscript. In the next picture (Pl. 5), on page 331, the king on the left has a blue robe and a black foot, and the one on the right a black robe and a blue foot. Both the sceptres are red. The inscription runs: “Thus is it done, that what was hid may be revealed.”¹⁵¹ This refers, as the preceding text makes clear, to the *nigredo* which is about to ensue. The *nigredo* signifies the *mortificatio*, *putrefactio*, *solutio*, *separatio*, *divisio*, etc., a state of dissolution and decomposition that precedes the synthesis. This picture is followed by one showing the two figures separated, each with two feet. The figure on the left wears the spiritual crown and the one on the right the temporal, corresponding to the occult-spiritual and earthly-corporeal nature of sulphur. The figure on the left wears a robe whose right half is blue and the left black, the one on

the right the reverse. They thus complement one another. The text explains: “The colours of the 9th year and ½ this month of January 1772 are represented by these two figures. Likewise by the mortification of our natural ☿ and of the dead water reduced to another form.” The inscription under the picture runs: “A very long time, and by putrefaction, calcination, incineration, fixation, and coagulation the materials become solid, but this comes to pass naturally after a very long time.”

[722] This probably refers to the completion of the *nigredo* after a period of pregnancy, i.e., to the complete separation of Mercurius or the two sulphurs, or of their bodily and spiritual natures, corresponding to Dorn’s extraction of the soul from the body and the production of the *unio mentalis*. According to the picture, the one figure, as regards its colours, is the mirror-image of the other. This indicates a relationship of complementarity between *physis* and spirit, so that the one reflects the other.¹⁵² That, too, is probably the meaning of the “manifestation of the hidden”: through the *unio mentalis* that which is hidden in *physis* by projection is made conscious. In the *nigredo*, the “dark night of the soul,” the psychic contents free themselves from their attachment to the body, and the nature and meaning of this connection are recognized.

[723] In the next picture (p. 335) the two figures are united again (Pl. 6). Their colours and other attributes are the same. Each figure has only one blue foot. The inscription runs: “Wherefore saith the Philosopher: He obtaineth the Art who can manifest that which is hidden, and conceal that which is manifest.” And underneath: “Hic artem digne est consecutus” (Here is the art worthily followed, or: This man worthily followed the art), and: “The blue colour after the yellow which will lead to the complete blackness or putrefaction after a very long time.”

[724] On page 337 the (spiritual) king from the previous picture is joined to a similarly crowned queen (Pl. 7). He wears a black upper garment and a blue under garment. His crown has a black rim, but the mitre-like part is gold, as in the previous picture. He has one blue foot tipped with black, as if he had dipped it in black paint. The green-clad queen has her hand in his left sleeve, presumably indicating that she takes the place of the left—worldly or bodily—half of the king and appears as his “better half,” so to speak. Her feet are black. The text runs: “There comes about an inconstant fixation, then after a little the soft hardens. The watery becomes earthy and dry; thus a change of nature is made from one to the other; and a single colour in the form of a black Raven, and the ♁ [sulphur] of the male ☿ and of the female, have become of the same nature.” The inscription says: “Take therefore in God’s almighty name this black earth, reduce it very subtly and it will become like the head of a Raven.” As if explaining the *caput corvi* the text remarks that the “Silène endormy” is bound by the shepherds with garlands of flowers in all colours of the rainbow and,

after quaffing his wine, says: “I laugh at my bond. So say the philosophers that when the blackness appears one must rejoice.”¹⁵³ The text adds that Troy was reduced to ashes after ten years of siege.

[725] This picture represents the union of the monocolus with the earth (the body). As the sulphur of the male Mercurius he is a very active power,¹⁵⁴ for he is the red sulphur of the gold or the active principle of the sun. The king in the saffron-yellow robe was originally gold and the sun but has now become totally black—the *sol ni’ger*—and even his blue robe, signifying heaven, is covered with a black one.¹⁵⁵ Only the top of his crown displays the solar gold. Dame Earth wears the same crown (only it is all gold) and thus reveals that her nature is equivalent to his: both are sulphur. One could call the sulphur of the king the “spirit,” which, hiding its light in the darkness, unites with the queen.

[726] This earth is of a watery nature, corresponding to Genesis 1 : 2 and 6: “And the earth was without form, and void. . . . And the Spirit of God moved upon the face of the waters. . . . And God said, Let there be a firmament in the midst of the waters . . .” In this way heaven can embrace the sea instead of the earth. We may recall the myth of Isis and Osiris: Isis copulated with the spirit of the dead Osiris, and from this union sprang the god of the mysteries, Harpocrates. Osiris plays a certain role in the ancient alchemical texts: the brother/sister or mother/son pair are sometimes called Isis and Osiris.¹⁵⁶ In Olympiodorus¹⁵⁷ Osiris is lead, as arcane substance, and the principle of moisture;¹⁵⁸ in Firmicus Maternus he is the life-principle.¹⁵⁹ The alchemical interpretation of him as Mercurius has its parallel in the Naassene comparison of Osiris to Hermes.¹⁶⁰ Like the latter, he was represented ithyphallically, and this is significant in regard to the monocolus.¹⁶¹ He is the dying and resurgent God-man and hence a parallel to Christ. He is of a blackish colour (*μελάγχρους*)¹⁶² and was therefore called Aithiops,¹⁶³ in Christian usage the devil,¹⁶⁴ and in alchemical language the *prima materia*.¹⁶⁵ This antithesis is characteristic of Mercurius duplex. Wine as the blood of Osiris occurs in the ancient magical texts.¹⁶⁶ In the Egyptian texts Osiris had a sun-and-moon nature, and was therefore hermaphroditic like Mercurius.¹⁶⁷

[727] *Corvus* (crow or raven) or *caput corvi* (raven’s head) is the traditional name for the *nigredo* (*nox*, melancholia, etc.). It can also, as *pars pro toto*, mean a “capital” thing or “principle,” as for instance the *caput mortuum*, which originally meant the head of the black Osiris,¹⁶⁸ but later *Mercurius philosophorum*, who, like him, undergoes death and resurrection and transformation into an incorruptible state. Thus the anonymous author of the “*Novum lumen chemicum*” exclaims: “O our heaven! O our water and our Mercurius! O dead head or dregs of our sea! . . . And these are the epithets of the bird of Hermes,¹⁶⁹ which never rests.”¹⁷⁰ This bird of Hermes is the

raven, of which it is said: “And know that the head of the art is the raven, who flies without wings in the blackness of the night and the brightness of the day.”¹⁷¹ He is a restless, unsleeping spirit, “our aerial and volatile stone,” a being of contradictory nature.¹⁷² He is the “heaven” and at the same time the “scum of the sea.” Since he is also called “water,” one thinks of rain-water, which comes from the sea and falls from heaven. As a matter of fact the idea of clouds, rain, and dew is often found in the texts and is extremely ancient.¹⁷³ A papyrus text says: “I am the mother of the gods, named heaven; I am Osiris, named water; I am Isis, named dew; . . . I am Eidolos, likened to the true spirits.” Thus speaks a magician who wishes to conjure up his familiar: he himself is a spirit and thus akin to the bird of the night. In Christian tradition the raven is an allegory of the devil.¹⁷⁴

[728] Here we encounter the primitive archetypal form of spirit, which, as I have shown,¹⁷⁵ is ambivalent. This ambivalence or antagonism also appears in the ancient Egyptian pair of brothers, Osiris and Set, and in the Ebionite opposition of Christ and Satan. The night raven (*nycticorax*) is an allegory of Christ.¹⁷⁶

[729] Nowadays the *caput mortuum*, or colcothar, denotes “the brownish-red peroxide of iron which remains in the retort after the distillation of sulphuric acid from iron sulphate,”¹⁷⁷ whereas the *caput Osiridis* was black and was therefore called *caput corvi*. The “Aquarium sapientum” compares it with Christ, whose “visage was so marred more than any man” (Isaiah 52 : 14).¹⁷⁸ The blackening usually took forty days, corresponding to the forty days between Easter and Ascension, or Christ’s forty days’ fast in the wilderness, or the forty-year wanderings of the Jews in the desert.¹⁷⁹ In the heat of the *nigredo* the “*anima media natura* holds dominion.” The old philosophers called this blackness the Raven’s Head or black sun.¹⁸⁰ The *anima media natura* corresponds to the Platonic world-soul and the Wisdom of the Old Testament.¹⁸¹ In this state the sun is surrounded by the *anima media natura* and is therefore black. It is a state of incubation or pregnancy. Great importance was attached to the blackness as the starting point of the work.¹⁸² Generally it was called the “Raven.”¹⁸³ In our context the interpretation of the *nigredo* as *terra* (earth)¹⁸⁴ is significant. Like the *anima media natura* or Wisdom, earth is in principle feminine. It is the earth which, in Genesis, appeared out of the waters,¹⁸⁵ but it is also the “*terra damnata*.”¹⁸⁶

[730] The *caput mortuum* or *caput corvi* is the head of the black Osiris or Ethiopian, and also of the “Moor” in the *Chymical Wedding*.¹⁸⁷ The head was boiled in a pot and the broth poured into a golden ball. This gives us the connection with the “golden head” of the Greek alchemy, discussed earlier. The Moor in the *Chymical Wedding* is probably identical with the black executioner mentioned there, who decapitates the royal personages. In the end his own head is struck off.¹⁸⁸ In the further course of

events a black bird is beheaded.¹⁸⁹ Beheading is significant symbolically as the separation of the “understanding” from the “great suffering and grief” which nature inflicts on the soul. It is an emancipation of the “cogitatio” which is situated in the head, a freeing of the soul from the “trammels of nature.”¹⁹⁰ Its purpose is to bring about, as in Dorn, a *unio mentalis* “in the overcoming of the body.”

[731] The Moor or Ethiopian is the black, sinful man, whom St. Hilary (d. 367) compared to the raven. (“The raven made in the form of the sinner.”¹⁹¹) In the *Chymical Wedding* there is a black king, and in Schema XXIV Mylius represents the relation of king and queen under the symbol of two ravens fighting.¹⁹² Just as the raven symbolizes man’s black soul, so the *caput corvi* represents the head or skull (*testa capitis*), which in Sabaeen alchemy served as the vessel of transformation.¹⁹³ The Sabaeans were suspected of magical practices that presupposed the killing of a man. The “brain-pan or head of the element Man” therefore has a somewhat sinister aspect: they needed a human skull because it contained the brain and this was the seat of the understanding. “And the understanding exists in that organ, because it rules the soul and assists her liberation.”¹⁹⁴ “The corpus rotundum built the skull about itself as a stronghold, girt itself with this armour, and opened windows in it,” i.e., the five senses. But the corpus rotundum, “the living being, the form of forms and the genus of genera, is man.”¹⁹⁵ The “rotundum”¹⁹⁶ obviously refers not to the empirical but to the “round” or whole man, the *τέλειος ἄνθρωπος*. “Afterwards he drew the soul to the higher world, that he might give her freedom. The higher world has always an effect in man, which consists in the perfect inspiration of man at his death; nor shall he fail to reach the firmament, until that which proceeded from the higher world returns to its place.”¹⁹⁷ The higher world is the “world of worlds,” obviously the *mundus potentialis* of Dorn, who was inspired by this text as his use of the ideas of the stronghold (*castrum sapientiae*)¹⁹⁸ and of the “window” (*spiraculum vitae aeternae*) shows.

[732] The round vessel or stronghold is the skull. “The divine organ,” says the “Liber quartorum,” “is the head, for it is the abode of the divine part, namely the soul.” That is why the philosopher must “surround this organ with greater care than other organs.” Because of its roundness, “it attracts the firmament and is by it attracted; and it is attracted in similar manner by the attracter, until the attraction reaches its end in the understanding. Man is worthier than the beasts and closer to the simple, and this on account of his understanding.” The simple (*simplex* or *res simplex*) is the One,¹⁹⁹ the *natura caelestis* of Dorn, the round and perfect, the firmament or heaven in man.²⁰⁰ “Plato is of the opinion that the man whose righteousness is the greatest attains to the bountiful [*largam*] upper substance when he is assimilated by his work to the highest place.”²⁰¹ This shows us how the production of the *caelum* attracts the starry firmament and the influences (or spirits) of the planets into the Microcosm, just

as by the same operation man is likened to the “upper substance,” the *anima mundi* or *res simplex* or the “One.”

[733] In the *nigredo* the brain turns black. Thus a Hermes recipe cited in the *Rosarium* says: “Take the brain . . . grind it up with very strong vinegar, or with boys’ urine,²⁰² until it turns black.”²⁰³ The darkening or benightedness is at the same time a psychic state which, as we have seen, was called melancholia. In the “Aurelia occulta” there is a passage where the transformative substance in the *nigredo* state says of itself (cf. Pl. 10):

I am an infirm and weak old man, surnamed the dragon; therefore am I shut up in a cave, that I may be ransomed by the kingly crown. . . . A fiery sword inflicts great torments upon me; death makes weak my flesh and bones. . . . My soul and my spirit depart; a terrible poison, I am likened to the black raven, for that is the wages of sin; in dust and earth I lie, that out of Three may come One. O soul and spirit, leave me not, that I may see again the light of day, and the hero of peace whom the whole world shall behold may arise from me.²⁰⁴

* * *

[734] What our Abraham le Juif text says about the royal persons sounds like a mythologem: the sun, the king of the blue sky, descends to earth and it becomes night; he then unites with his wife, the earth or sea. The primordial image of Uranos and Gaia may well be the background of this picture. Similarly, in connection with the raven²⁰⁵ as the name for this situation, we must consider the creative night mentioned in an Orphic hymn, which calls it a bird with black wings that was fertilized by the wind (*pneuma*). The product of this union was the silver egg, which in the Orphic view contained heaven above and earth below, and was therefore a cosmos in itself, i.e., the Microcosm. In alchemy it is the philosophical egg. The French alchemists of the eighteenth century were familiar with the king, the hot, red sulphur of the gold, and called it Osiris; the moist (*aquosum*) they called Isis. Osiris was “the fire hidden in nature, the igneous principle . . . which animates all things”;²⁰⁶ Isis was “the passive and material principle of all things.” The dismemberment of Osiris corresponded to the *solutio*, *putretractio*, etc. Of this Dom Pernety,²⁰⁷ the source for these statements, says: “The solution of the body is the coagulation of the spirit.” The blackness pertains to Isis. (Apuleius says she was clad in a “shining robe of the deepest black.”) If heaven or the sun incline to her they are covered in her blackness.

[735] The relation of alchemical fantasies to the primordial images of Greek mythology is too well known for me to document it. The cosmogonic brother-sister incest,²⁰⁸ like the Creation itself, had been from ancient times the prototype of the alchemists’ great work. Yet we seek the Graeco-Roman tradition in vain for traces of the wonder-

working monocolus. We find him, perhaps, in Vedic mythology, and in a form that is highly significant for our context, namely, as an attribute of the sun-god Rohita²⁰⁹ (red sun), who was called the “one-footed goat”²¹⁰ (*agá ékapada*). In Hymn XIII, i of the *Atharva-veda* he is praised together with his wife Rohini. Of her it says: “Rise up, O steed, that art within the waters,” and “The steed that is within the waters is risen up.”²¹¹ The hymn begins with this invocation to Rohini, who is thereby united with Rohita after he has climbed to his highest place in heaven. The parallel with our French text is so striking that one would have to infer its literary dependence if there were any way of proving that the author was acquainted with the *Atharva-veda*. This proof is next to impossible, as Indian literature was not known in the West at all until the turn of the eighteenth century, and then only in the form of the *Oupnek’hat* of Anquetil du Perron,²¹² a collection of Upanishads in Persian which he translated into Latin.²¹³ The *Atharva-veda* was translated only in the second half of the nineteenth century.²¹⁴ If we wish to explain the parallel at all we have to infer an archetypal connection.

[736] From all this it appears that our picture represents the union of the spirit with material reality. It is not the common gold that enters into combination but the spirit of the gold, only the right half of the king, so to speak. The queen is a sulphur, like him an extract or spirit of earth or water, and therefore a chthonic spirit. The “male” spirit corresponds to Dorn’s *substantia coelestis*, that is, to knowledge of the inner light—the self or imago Dei which is here united with its chthonic counterpart, the feminine spirit of the unconscious. Empirically this is personified in the psychological anima figure, who is not to be confused with the “anima” of our mediaeval philosophers, which was merely a philosophical *anima vegetativa*, the “ligament” of body and spirit. It is, rather, the alchemical queen who corresponds to the psychological anima.²¹⁵ Accordingly, the coniunctio appears here as the union of a consciousness (spirit), differentiated by self-knowledge, with a spirit abstracted from previously unconscious contents. One could also regard the latter as a quintessence of fantasy-images that enter consciousness either spontaneously or through active imagination and, in their totality, represent a moral or intellectual viewpoint contrasting with, or compensating, that of consciousness. To begin with, however, these images are anything but “moral” or “intellectual”; they are more or less concrete visualizations that first have to be interpreted. The alchemist used them more as technical terms for expressing the mysterious properties which he attributed to his chemical substances. The psychologist, on the contrary, regards them not as allegories but as genuine symbols pointing to psychic contents that are not known but are merely suspected in the background, to the impulses and “idées forces” of the unconscious. He starts from the fact that connections which are not based on sense-experience derive from fantasy creations which in turn have psychic causes. These

causes cannot be perceived directly but are discovered only by deduction. In this work the psychologist has the support of modern fantasy material. It is produced in abundance in psychoses, dreams, and in active imagination during treatment, and it makes accurate investigation possible because the author of the fantasies can always be questioned. In this way the psychic causes can be established. The images often show such a striking resemblance to mythological motifs that one cannot help regarding the causes of the individual fantasies as identical with those that determined the collective and mythological images. In other words, there is no ground for the assumption that human beings in other epochs produced fantasies for quite different reasons, or that their fantasy images sprang from quite different *idées forces*, from ours. It can be ascertained with reasonable certainty from the literary records of the past that at least the universal human facts were felt and thought about in very much the same way at all times. Were this not so, all intelligent historiography and all understanding of historical texts would be impossible. Naturally there are differences, which make caution necessary in all cases, but these differences are mostly on the surface only and lose their significance the more deeply one penetrates into the meaning of the fundamental motifs.

[737] Thus, the language of the alchemists is at first sight very different from our psychological terminology and way of thinking. But if we treat their symbols in the same way as we treat modern fantasies, they yield a meaning such as we have already deduced from the problematical modern material. The obvious objection that the meaning conveyed by the modern fantasy-material has been uncritically transferred to the historical material, which the alchemists interpreted quite differently, is disproved by the fact that even in the Middle Ages confessed alchemists interpreted their symbols in a moral and philosophical sense. Their “philosophy” was, indeed, nothing but projected psychology. For as we have said, their ignorance of the real nature of chemical matter favoured the tendency to projection. Never do human beings speculate more, or have more opinions, than about things which they do not understand.

8. THE CONTENT AND MEANING OF THE FIRST TWO STAGES

[738] I would like to impress on the reader that the following discussion, far from being a digression, is needed in order to bring a little clarity into what seems a very confused situation. This situation arose because, for the purpose of amplification, we commented on three symbolic texts ranging over a period of more than five hundred years, namely those of Albertus Magnus, Gerard Dorn, and an anonymous author of the eighteenth century. These three authors were concerned, each in his own way, with the central events and figures of the magistry. One could, of course, adduce yet

other descriptions of the mysterious process of conjunction, but that would only make the confusion worse. For the purpose of disentangling the fine-spun web of alchemical fantasy these three texts are sufficient.

[739] If Dorn, then, speaks of freeing the soul from the fetters of the body, he is expressing in rather different language what Albertus Magnus describes as the preparation or transformation of the quicksilver, or what our unknown author depicts as the splitting of the king in the yellow robe. The arcane substance is meant in all three cases. Hence we immediately find ourselves in darkness, in the *nigredo*, for the *arcanum*, the mystery, is dark. If, following Dorn's illuminating hints, we interpret the freeing of the soul from the fetters of the body as a withdrawal of the naive projections by which we have moulded both the reality around us and the image of our own character, we arrive on the one hand at a *cognitio sui ipsius*, self-knowledge, but on the other hand at a realistic and more or less non-illusory view of the outside world. This stripping off of the veils of illusion is felt as distressing and even painful. In practical treatment this phase demands much patience and tact, for the unmasking of reality is as a rule not only difficult but very often dangerous. The illusions would not be so common if they did not serve some purpose and occasionally cover up a painful spot with a wholesome darkness which one hopes will never be illuminated. Self-knowledge is not an isolated process; it is possible only if the reality of the world around us is recognized at the same time. Nobody can know himself and differentiate himself from his neighbour if he has a distorted picture of him, just as no one can understand his neighbour if he had no relationship to himself. The one conditions the other and the two processes go hand in hand.

[740] I cannot describe the process of self-knowledge here in all its details. But if the reader wishes to form some idea of it, I would draw his attention to the wide variety of infantile assumptions and attachments which play a great role not only in psychopathology but in so-called normal life, and which cause endless complications in every sphere of human existence. Freud's lasting achievement in this field suffers only from the defect that, from the insights gained, a theory was prematurely abstracted which was then used as a criterion of self-knowledge: projections were recognized and corrected only so far as they were assumed to correspond to known infantile fantasies. That there are many other kinds of illusion is mentioned hardly at all in the literature, and for just that reason. As we have seen from Dorn, there are very many important things which are posited as self-evident and which do not exist, such as the alchemist's assumption that certain substances have magical qualities which in fact are projections of fantasy. The progressive correction of these brings us, however, to a frontier which at first cannot be crossed. As a rule it is set up by the spirit of the age with its specific conception of truth, and by the state of scientific knowledge prevailing at the time.

[741] Self-knowledge is an adventure that carries us unexpectedly far and deep. Even a moderately comprehensive knowledge of the shadow can cause a good deal of confusion and mental darkness, since it gives rise to personality problems which one had never remotely imagined before. For this reason alone we can into its former bondage and everything would have been as before. The volatile essence so carefully shut up and preserved in the Hermetic vessel of the *unio mentalis* could not be left to itself for a moment, because this elusive Mercurius would then escape and return to its former nature, as, according to the testimony of the alchemists, not infrequently happened. The direct and natural way would have been to give the soul its head, since we are told that it always inclines to the body. Being more attached to this than to the spirit, it would separate itself from the latter and slip back into its former unconsciousness without taking with it anything of the light of the spirit into the darkness of the body. For this reason the reunion with the body was something of a problem. Psychologically, it would mean that the insight gained by the withdrawal of projections could not stand the clash with reality and, consequently, that its truth could not be realized in fact, at least not to the desired degree or in the desired way. You can, as you know, forcibly apply the ideals you regard as right with an effort of will, and can do so for a certain length of time and up to a certain point, that is, until signs of fatigue appear and the original enthusiasm wanes. Then free will becomes a cramp of the will, and the life that has been suppressed forces its way into the open through all the cracks. That, unfortunately, is the lot of all merely rational resolutions.

[742] Since earliest times, therefore, men have had recourse in such situations to artificial aids, ritual actions such as dances, sacrifices, identification with ancestral spirits, etc., in the obvious attempt to conjure up or reawaken those deeper layers of the psyche which the light of reason and the power of the will can never reach, and to bring them back to memory. For this purpose they used mythological or archetypal ideas which expressed the unconscious. So it has remained to the present time, when the day of the believer begins and ends with prayer, that is, with a *rite d'entrée et de sortie*. This exercise fulfils its purpose pretty well. If it did not, it would long since have fallen into disuse. If ever it lost its efficacy to any great extent, it was always in individuals or social groups for whom the archetypal ideas have become ineffective. Though such ideas or “représentations collectives” are always true in so far as they express the unconscious archetype, their verbal and pictorial form is greatly influenced by the spirit of the age. If this changes, whether by contact with understand why the alchemists called their *nigredo* melancholia, “a black blacker than black,” night, an affliction of the soul, confusion, etc., or, more pointedly, the “black raven.” For us the raven seems only a funny allegory, but for the medieval adept it was, as we have said, a well-known allegory of the devil.²¹⁶ Correctly assessing the psychic danger in which he stood, it was therefore of the utmost

importance for him to have a favourable familiar as a helper in his work, and at the same time to devote himself diligently to the spiritual exercise of prayer; all this in order to meet effectively the consequences of the collision between his consciousness and the darkness of the shadow. Even for modern psychology the confrontation with the shadow is not a harmless affair, and for this reason it is often circumvented with cunning and caution. Rather than face one's own darkness, one contents oneself with the illusion of one's civic rectitude. Certainly most of the alchemists handled their *nigredo* in the retort without knowing what it was they were dealing with. But it is equally certain that adepts like Morienus, Dorn, Michael Maier, and others knew in their way what they were doing. It was this knowledge, and not their greed for gold, that kept them labouring at the apparently hopeless opus, for which they sacrificed their money, their goods, and their life.

[743] Their "spirit" was their own belief in the light—a spirit which drew the soul to itself from its imprisonment in the body; but the soul brought with it the darkness of the chthonic spirit, the unconscious. The separation was so important because the dark deeds of the soul had to be checked. The *unio mentalis* signified, therefore, an extension of consciousness and the governance of the soul's motions by the spirit of truth. But since the soul made the body to live and was the principle of all realization, the philosophers could not but see that after the separation the body and its world were dead.²¹⁷ They therefore called this state the grave, corruption, mortification, and so on, and the problem then arose of reanimation, that is, of reuniting the soul with the "inanimate" body. Had they brought about this reanimation in a direct way, the soul would simply have snapped back a foreign and possibly more advanced civilization, or through an expansion of consciousness brought about by new discoveries and new knowledge, then the rite loses its meaning and degenerates into mere superstition. Examples of this on a grand scale are the extinction of the ancient Egyptian civilization and the dying out of the gods of Greece and Rome. A similar phenomenon can be observed in China today.

[744] The demand that arises under such conditions is for a new interpretation, in accord with the spirit of the age, of the archetypes that compensate the altered situation of consciousness. Christianity, for instance, was a new and more suitable formulation of the archetypal myth, which in its turn gave the rite its vitality. The archetype is a living idea that constantly produces new interpretations through which that idea unfolds. This was correctly recognized by Cardinal Newman in regard to Christianity.²¹⁸ Christian doctrine is a new interpretation and development of its earlier stages, as we can see very clearly from the ancient tradition of the God-man. This tradition is continued in the unfolding of ecclesiastical dogma, and it is naturally not only the archetypes mentioned in the canonical writings of the New Testament that develop, but also their near relatives, of which we previously knew only the

pagan forerunners. An example of this is the newest dogma concerning the Virgin; it refers unquestionably to the mother goddess who was constantly associated with the young dying son. She is not even purely pagan, since she was very distinctly prefigured in the Sophia of the Old Testament. For this reason the definition of the new dogma does not really go beyond the *depositum fidei*, for the mother goddess is naturally implied in the archetype of the divine son and accordingly underwent a consistent development in the course of the centuries.²¹⁹ The *depositum fidei* corresponds in empirical reality to the treasure-house of the archetypes, the “gazophylacium” of the alchemists, and the collective unconscious of modern psychology.

[745] The objection raised by theologians that the final state of the dogma in any such development would be necessarily more complete or perfect than in the apostolic era is untenable. Obviously the later interpretation and formulation of the archetype will be much more differentiated than in the beginning. A glance at the history of dogma is sufficient to confirm this. One has only to think of the Trinity, for which there is no direct evidence in the canonical writings. But it does not follow from this that the primitive Christians had a less complete knowledge of the fundamental truths. Such an assumption borders on pernicious intellectualism, for what counts in religious experience is not how explicitly an archetype can be formulated but how much I am gripped by it. The least important thing is what I think about it.²²⁰

[746] The “living idea” is always perfect and always numinous. Human formulation adds nothing and takes away nothing, for the archetype is autonomous and the only question is whether a man is gripped by it or not. If he can formulate it more or less, then he can more easily integrate it with consciousness, talk about it more reasonably and explain its meaning a bit more rationally. But he does not possess it more or in a more perfect way than the man who cannot formulate his “possession.” Intellectual formulation becomes important only when the memory of the original experience threatens to disappear, or when its irrationality seems inapprehensible by consciousness. It is an auxiliary only, not an essential.

[747] Christianity, to return to our previous argument, was “a *unio mentalis* in the overcoming of the body.” In just this respect the rite fulfilled its purpose, so far as that is possible for fallible human beings. Ancient man’s sensuous delight in the body and in nature did not disappear in the process, but found free play in the long list of sins which has never at any time diminished in scope. His knowledge of nature, however, presents a special problem. Ever since antiquity it had flourished only in secret and among the few, but it handed down certain basic conceptions through the centuries and, in the later Middle Ages, fertilized man’s reawakened interest in natural bodies. Had the alchemists not had at least a secret premonition that their

Christian *unio mentalis* had not yet realized the union with the world of the body, their almost mystical thirst for knowledge would scarcely be explicable, let alone the symbolism, rivalling that of Christianity, which began to develop already at the end of the thirteenth century. The Christ-lapis parallel shows more clearly than anything else that the world of natural bodies laid claim to equality and hence to realization in the second stage of the coniunctio.

[748] This raised the question of the way in which the coniunctio could be effected. Dorn answered this by proposing, instead of an overcoming of the body, the typical alchemical process of the *separatio, solutio, incineratio, sublimatio*, etc. of the red or white wine, the purpose of this procedure being to produce a physical equivalent of the *substantia coelestis*, recognized by the spirit as the truth and as the image of God innate in man. Whatever names the alchemists gave to the mysterious substance they sought to produce, it was always a celestial substance, i.e., something transcendental, which, in contrast to the perishability of all known matter, was incorruptible, inert as a metal or a stone, and yet alive, like an organic being, and at the same time a universal medicament. Such a “body” was quite obviously not to be met with in experience. The tenacity with which the adepts pursued this goal for at least seventeen hundred years can be explained only by the numinosity of this idea. And we do indeed find, even in the ancient alchemy of Zosimos, clear indications of the archetype of the Anthropos,²²¹ as I have shown in *Psychology and Alchemy*; an image that pervades the whole of alchemy down to the figure of the homunculus in *Faust*. The idea of the Anthropos springs from the notion of an original state of universal animation, for which reason the old Masters interpreted their Mercurius as the *anima mundi*; and just as the original animation could be found in all matter, so too could the *anima mundi*. It was imprinted on all bodies as their *raison d'être*, as an image of the demiurge who incarnated in his own creation and got caught in it. Nothing was easier than to identify this *anima mundi* with the Biblical *imago Dei*, which represented the truth revealed to the spirit. For the early thinkers the soul was by no means a merely intellectual concept; it was visualized sensuously as a breath-body or a volatile but physical substance which, it was readily supposed, could be chemically extracted and “fixed” by means of a suitable procedure. This intention was served by the preparation of the *phlegma vini*. As I pointed out earlier, this was not the spirit and water of the wine but its solid residue, the chthonic and corporeal part which would not ordinarily be regarded as the essential and valuable thing about the wine.

[749] What the alchemist sought, then, to help him out of his dilemma was a chemical operation which we today would describe as a symbol. The procedure he followed was obviously an allegory of his postulated *substantia coelestis* and its chemical equivalent. To that extent the operation was not symbolical for him but purposive and rational. For us, who know that no amount of incineration, sublimation, and

centrifuging of the vinous residue can ever produce an “air-coloured” quintessence, the entire procedure is fantastic if taken literally. We can hardly suppose that Dorn, either, meant a real wine but, after the manner of the alchemists, *vinum ardens*, *acetum*, *spiritualis sanguis*, etc., in other words *Mercurius non vulgi*, who embodied the *anima mundi*. Just as the air encompasses the earth, so in the old view the soul is wrapped round the world. As I have shown, we can most easily equate the concept of Mercurius with that of the unconscious. If we add this term to the recipe, it would run: Take the unconscious in one of its handiest forms, say a spontaneous fantasy, a dream, an irrational mood, an affect, or something of the kind, and operate with it. Give it your special attention, concentrate on it, and observe its alterations objectively. Spare no effort to devote yourself to this task, follow the subsequent transformations of the spontaneous fantasy attentively and carefully. Above all, don’t let anything from outside, that does not belong, get into it, for the fantasy-image has “everything it needs.”²²² In this way one is certain of not interfering by conscious caprice and of giving the unconscious a free hand. In short, the alchemical operation seems to us the equivalent of the psychological process of active imagination.

[750] Ordinarily, the only thing people know about psychotherapy is that it consists in a certain technique which the analyst applies to his patient. Specialists know how far they can get with it. One can use it to cure the neuroses, and even the milder psychoses, so that nothing more remains of the illness except the general human problem of how much of yourself you want to forget, how much psychic discomfort you have to take on your shoulders, how much you may forbid or allow yourself, how much or how little you may expect of others, how far you should give up the meaning of your life or what sort of meaning you should give it. The analyst has a right to shut his door when a neurosis no longer produces any clinical symptoms and has debouched into the sphere of general human problems. The less he knows about these the greater his chances are of coming across comparatively reasonable patients who can be weaned from the transference that regularly sets in. But if the patient has even the remotest suspicion that the analyst thinks rather more about these problems than he says, then he will not give up the transference all that quickly but will cling to it in defiance of all reason—which is not so unreasonable after all, indeed quite understandable. Even adult persons often have no idea how to cope with the problem of living, and on top of that are so unconscious in this regard that they succumb in the most uncritical way to the slightest possibility of finding some kind of answer or certainty. Were this not so, the numerous sects and -isms would long since have died out. But, thanks to unconscious, infantile attachments, boundless uncertainty and lack of self-reliance, they all flourish like weeds.

[751] The analyst who is himself struggling for all those things which he seeks to inculcate into his patients will not get round the problem of the transference so easily.

The more he knows how difficult it is for him to solve the problems of his own life, the less he can overlook the fear and uncertainty or the frivolity and dangerously uncritical attitude of his patients. Even Freud regarded the transference as a neurosis at second hand and treated it as such. He could not simply shut the door, but honestly tried to analyze the transference away. This is not so simple as it sounds when technically formulated. Practice often turns out to be rather different from theory. You want, of course, to put a whole man on his feet and not just a part of him. You soon discover that there is nothing for him to stand on and nothing for him to hold on to. Return to the parents has become impossible, so he hangs on to the analyst. He can go neither backwards nor forwards, for he sees nothing before him that could give him a hold. All so-called reasonable possibilities have been tried out and have proved useless. Not a few patients then remember the faith in which they were brought up, and some find their way back to it, but not all. They know, perhaps, what their faith ought to mean to them, but they have found to their cost how little can be achieved with will and good intentions if the unconscious does not lend a hand. In order to secure its co-operation the religions have long turned to myths for help, or rather, the myths always flung out bridges between the helpless consciousness and the effective *idées forces* of the unconscious. But you cannot, artificially and with an effort of will, believe the statements of myth if you have not previously been gripped by them. If you are honest, you will doubt the truth of the myth because our present-day consciousness has no means of understanding it. Historical and scientific criteria do not lend themselves to a recognition of mythological truth; it can be grasped only by the intuitions of faith or by psychology, and in the latter case although there may be insight it remains ineffective unless it is backed by experience.

[752] Thus the modern man cannot even bring about the *unio mentalis* which would enable him to accomplish the second degree of conjunction. The analyst's guidance in helping him to understand the statements of his unconscious in dreams, etc. may provide the necessary insight, but when it comes to the question of real experience the analyst can no longer help him: he himself must put his hand to the work. He is then in the position of an alchemist's apprentice who is inducted into the teachings by the Master and learns all the tricks of the laboratory. But sometime he must set about the opus himself, for, as the alchemists emphasize, nobody else can do it for him. Like this apprentice, the modern man begins with an unseemly prima materia which presents itself in unexpected form—a contemptible fantasy which, like the stone that the builders rejected, is "flung into the street" and is so "cheap" that people do not even look at it. He will observe it from day to day and note its alterations until his eyes are opened or, as the alchemists say, until the fish's eyes, or the sparks, shine in the dark solution. For the eyes of the fish are always open and therefore must always

see, which is why the alchemists used them as a symbol of perpetual attention. (Pis. 8 and 9.)

[753] The light that gradually dawns on him consists in his understanding that his fantasy is a real psychic process which is happening to him personally. Although, to a certain extent, he looks on from outside, impartially, he is also an acting and suffering figure in the drama of the psyche. This recognition is absolutely necessary and marks an important advance. So long as he simply looks at the pictures he is like the foolish Parsifal, who forgot to ask the vital question because he was not aware of his own participation in the action. Then, if the flow of images ceases, next to nothing has happened even though the process is repeated a thousand times. But if you recognize your own involvement you yourself must enter into the process with your personal reactions, just as if you were one of the fantasy figures, or rather, as if the drama being enacted before your eyes were real. It is a psychic fact that this fantasy is happening, and it is as real as you—as a psychic entity—are real. If this crucial operation is not carried out, all the changes are left to the flow of images, and you yourself remain unchanged. As Dorn says, you will never make the One unless you become one yourself. It is, however, possible that if you have a dramatic fantasy you will enter the interior world of images as a *fictitious personality* and thereby prevent any real participation; it may even endanger consciousness because you then become the victim of your own fantasy and succumb to the powers of the unconscious, whose dangers the analyst knows all too well. But if you place yourself in the drama as you really are, not only does it gain in actuality but you also create, by your criticism of the fantasy, an effective counterbalance to its tendency to get out of hand. For what is now happening is the decisive rapprochement with the unconscious. This is where insight, the *unio mentalis*, begins to become real. What you are now creating is the beginning of individuation, whose immediate goal is the experience and production of the symbol of totality.

[754] It not infrequently happens that the patient simply continues to observe his images without considering what they mean to him. He can and he should understand their meaning, but this is of practical value only so long as he is not sufficiently convinced that the unconscious can give him valuable insights. But once he has recognized this fact, he should also know that he then has in his hands an opportunity to win, by his knowledge, independence of the analyst. This conclusion is one which he does not like to draw, with the result that he frequently stops short at the mere observation of his images. The analyst, if he has not tried out the procedure on himself, cannot help him over this stile—assuming, of course, that there are compelling reasons why the procedure should be continued. In these cases there is no medical or ethical imperative but only a command of fate, which is why patients who by no means lack the necessary acumen often come to a standstill at this point. As

this experience is not uncommon I can only conclude that the transition from a merely perceptive, i.e., *aesthetic*, attitude to one of *judgment* is far from easy. Indeed, modern psychotherapy has just reached this point and is beginning to recognize the usefulness of perceiving and giving shape to the images, whether by pencil and brush or by modelling. A musical configuration might also be possible provided that it were really composed and written down. Though I have never met a case of this kind, Bach's *Art of Fugue* would seem to offer an example, just as the representation of the archetypes is a basic feature of Wagner's music. (These phenomena, however, arise less from personal necessity than from the unconscious compensations produced by the *Zeitgeist*, though I cannot discuss this here.)

[755] The step beyond a merely aesthetic attitude may be unfamiliar to most of my readers. I myself have said little about it and have contented myself with hints.²²³ It is not a matter that can be taken lightly. I tried it out on myself and others thirty years ago and must admit that although it is feasible and leads to satisfactory results it is also very difficult. It can be recommended without misgiving if a patient has reached the stage of knowledge described above. If he finds the task too difficult he will usually fail right at the beginning and never get through the dangerous impasse. The danger inherent in analysis is that, in a psychopathically disposed patient, it will unleash a psychosis. This very unpleasant possibility generally presents itself at the beginning of the treatment, when, for instance, dream-analysis has activated the unconscious. But if it has got so far that the patient can do active imagination and shape out his fantasies, and there are no suspicious incidents, then there is as a rule no longer any serious danger. One naturally asks oneself what fear—if fear it is—prevents him from taking the next step, the transition to an attitude of judgment. (The judgment of course should be morally and intellectually binding.) There are sufficient reasons for fear and uncertainty because voluntary participation in the fantasy is alarming to a naive mind and amounts to an anticipated psychosis.

[756] Naturally there is an enormous difference between an anticipated psychosis and a real one, but the difference is not always clearly perceived and this gives rise to uncertainty or even a fit of panic. Unlike a real psychosis, which comes on you and inundates you with uncontrollable fantasies irrupting from the unconscious, the judging attitude implies a voluntary involvement in those fantasy-processes which compensate the individual and—in particular—the collective situation of consciousness. The avowed purpose of this involvement is to integrate the statements of the unconscious, to assimilate their compensatory content, and thereby produce a whole meaning which alone makes life worth living and, for not a few people, possible at all. The reason why the involvement looks very like a psychosis is that the patient is integrating the same fantasy-material to which the insane person falls victim because he cannot integrate it but is swallowed up by it. In myths the hero is

the one who conquers the dragon, not the one who is devoured by it. And yet both have to deal with the same dragon. Also, he is no hero who never met the dragon, or who, if he once saw it, declared afterwards that he saw nothing. Equally, only one who has risked the fight with the dragon and is not overcome by it wins the hoard, the “treasure hard to attain.” He alone has a genuine claim to self-confidence, for he has faced the dark ground of his self and thereby has gained himself. This experience gives him faith and trust, the *pistis* in the ability of the self to sustain him, for everything that menaced him from inside he has made his own. He has acquired the right to believe that he will be able to overcome all future threats by the same means. He has arrived at an inner certainty which makes him capable of self-reliance, and attained what the alchemists called the *unio mentalis*.

[757] As a rule this state is represented pictorially by a mandala. Often such drawings contain clear allusions to the sky and the stars and therefore refer to something like the “inner” heaven, the “firmament” or “Olympus” of Paracelsus, the Microcosm. This, too, is that circular product, the *caelum*,²²⁴ which Dorn wanted to produce by “assiduous rotary movements.” Because it is not very likely that he ever manufactured this quintessence as a chemical body, and he himself nowhere asserts that he did, one must ask whether he really meant this chemical operation or rather, perhaps, the *opus alchymicum* in general, that is, the transmutation of Mercurius duplex under the synonym of the red and white wine,²²⁵ thus alluding at the same time to the *opus ad rubeum et ad album*. This seems to me more probable. At any rate some kind of laboratory work was meant. In this way Dorn “shaped out” his intuition of a mysterious centre preexistent in man, which at the same time represented a cosmos, i.e., a totality, while he himself remained conscious that he was portraying the *self* in matter. He completed the image of wholeness by the admixture of honey, magic herbs, and human blood, or their meaningful equivalents, just as a modern man does when he associates numerous symbolic attributes with his drawing of a mandala. Also, following the old Sabaeen and Alexandrian models, Dorn drew the “influence” of the planets (*stellae inferiores*)—or Tartarus and the mythological aspect of the underworld—into his quintessence, just as the patient does today.²²⁶

[758] In this wise Dorn solved the problem of realizing the *unio mentalis*, of effecting its union with the body, thereby completing the second stage of the *coniunctio*. We would say that with this production of a physical equivalent the idea of the self had taken shape. But the alchemist associated his work with something more potent and more original than our pale abstraction. He felt it as a magically effective action which, like the substance itself, imparted magical qualities. The projection of magical qualities indicates the existence of corresponding effects on consciousness, that is to say the adept felt a numinous effect emanating from the lapis, or whatever he called the arcane substance. We, with our rationalistic minds, would scarcely attribute any

such thing to the pictures which the modern man makes of his intuitive vision of unconscious contents. But it depends on whether we are dealing with the conscious or with the unconscious. The unconscious does in fact seem to be influenced by these images. One comes to this conclusion when one examines more closely the psychic reactions of the patients to their own drawings: they do have in the end a quietening influence and create something like an inner foundation. While the adept had always looked for the effects of his stone outside, for instance as the panacea or golden tincture or life-prolonging elixir, and only during the sixteenth century pointed with unmistakable clarity to an inner effect, psychological experience emphasizes above all the subjective reaction to the formation of images, and—with a free and open mind—still reserves judgment in regard to possible objective effects.²²⁷

9. THE THIRD STAGE: THE UNUS MUNDUS

[759] The production of the lapis was the goal of alchemy in general. Dorn was a significant exception, because for him this denoted only the completion of the second stage of conjunction. In this he agrees with psychological experience. For us the representation of the idea of the self in actual and visible form is a mere *rite d'entrée*, as it were a propaedeutic action and mere anticipation of its realization. The existence of a sense of inner security by no means proves that the product will be stable enough to withstand the disturbing or hostile influences of the environment. The adept had to experience again and again how unfavourable circumstances or a technical blunder or—as it seemed to him—some devilish accident hindered the completion of his work, so that he was forced to start all over again from the very beginning. Anyone who submits his sense of inner security to analogous psychic tests will have similar experiences. More than once everything he has built will fall to pieces under the impact of reality, and he must not let this discourage him from examining, again and again, where it is that his attitude is still defective, and what are the blind spots in his psychic field of vision. Just as a lapis Philosophorum, with its miraculous powers, was never produced, so psychic wholeness will never be attained empirically, as consciousness is too narrow and too one-sided to comprehend the full inventory of the psyche. Always we shall have to begin again from the beginning. From ancient times the adept knew that he was concerned with the “res simplex,” and the modern man too will find by experience that the work does not prosper without the greatest simplicity. But simple things are always the most difficult.

[760] The One and Simple is what Dorn called the *unus mundus*, This “one world” was the *res simplex*.²²⁸ For him the third and highest degree of conjunction was the union of the whole man with the *unus mundus*. By this he meant, as we have seen, the potential world of the first day of creation, when nothing was yet “in actu,” i.e.,

divided into two and many, but was still one.²²⁹ The creation of unity by a magical procedure meant the possibility of effecting a union with the world—not with the world of multiplicity as we see it but with a potential world, the eternal Ground of all empirical being, just as the self is the ground and origin of the individual personality past, present, and future. On the basis of a self known by meditation and produced by alchemical means, Dorn “hoped and expected” to be united with the *unus mundus*.

[761] This potential world is the “mundus archetypus” of the Schoolmen. I conjecture that the immediate model for Dorn’s idea is to be found in Philo Judaeus, who, in his treatise *De mundi opificio*²³⁰ says that the Creator made in the intelligible world an incorporeal heaven, an invisible earth, and the idea of the air and the void. Last of all he created man, a “little heaven” that “bears in itself the reflections of many natures similar to the stars.” Here Philo points clearly to the idea of the Microcosm and hence to the unity of the psychic man with the cosmos. According to Philo, the relation of the Creator to the *mundus intelligibilis* is the “imago” or “archetypus” of the relation of the mind to the body. Whether Dorn also knew Plotinus is questionable. In his fourth Ennead (9, iff.) Plotinus discusses the problem of whether all individuals are merely one soul, and he believes he has good grounds for affirming this question. I mention Plotinus because he is an earlier witness to the idea of the *unus mundus*. The “unity of the soul” rests empirically on the basic psychic structure common to all souls, which, though not visible and tangible like the anatomical structure, is just as evident as it.

[762] The thought Dorn expresses by the third degree of conjunction is universal: it is the relation or identity of the personal with the suprapersonal atman, and of the individual tao with the universal tao. To the Westerner this view appears not at all realistic and all too mystic; above all he cannot see why a self should become a reality when it enters into relationship with the world of the first day of creation. He has no knowledge of any world other than the empirical one. Strictly speaking, his puzzlement does not begin here; it began already with the production of the *caelum*, the inner unity. Such thoughts are unpopular and distressingly nebulous. He does not know where they belong or on what they could be based. They might be true or again they might not—in short, his experience stops here and with it as a rule his understanding, and, unfortunately, only too often his willingness to learn more. I would therefore counsel the critical reader to put aside his prejudices and for once try to experience on himself the effects of the process I have described, or else to suspend judgment and admit that he understands nothing. For thirty years I have studied these psychic processes under all possible conditions and have assured myself that the alchemists as well as the great philosophies of the East are referring to just such experiences, and that it is chiefly our ignorance of the psyche if these experiences appear “mystic.”

[763] We should at all events be able to understand that the visualization of the self is a “window” into eternity, which gave the medieval man, like the Oriental, an opportunity to escape from the stifling grip of a one-sided view of the world or to hold out against it. Though the goal of the *opus alchymicum* was indubitably the production of the lapis or *caelum*, there can be no doubt about its tendency to spiritualize the “body.” This is expressed by the symbol of the “air-coloured” liquid that floats to the surface. It represents nothing less than a *corpus glorificationis*, the resurrected body whose relation to eternity is self-evident.

[764] Now just as it seems self-evident to the naive-minded person that an apple falls from the tree to the earth, but absurd to say that the earth rises up to meet the apple, so he can believe without difficulty that the mind is able to spiritualize the body without being affected by its inertia and grossness. But all effects are mutual, and nothing changes anything else without itself being changed. Although the alchemist thought he knew better than anyone else that, at the Creation, at least a little bit of the divinity, the *anima mundi*, entered into material things and was caught there, he nevertheless believed in the possibility of a one-sided spiritualization, without considering that the precondition for this is a materialization of the spirit in the form of the blue quintessence. In reality his labours elevated the body into proximity with the spirit while at the same time drawing the spirit down into matter. By sublimating matter he concretized spirit.

[765] This self-evident truth was still strange to medieval man and it has been only partially digested even by the man of today. But if a union is to take place between opposites like spirit and matter, conscious and unconscious, bright and dark, and so on, it will happen in a third thing, which represents not a compromise but something new, just as for the alchemists the cosmic strife of the elements was composed by the *λίθος οὐ λίθος* (stone that is no stone), by a transcendental entity that could be described only in paradoxes.²³¹ Dorn’s *caelum*, which corresponded to the stone, was on the one hand a liquid that could be poured out of a bottle and on the other the Microcosm itself. For the psychologist it is the self—man as he is, and the indescribable and super-empirical totality of that same man. This totality is a mere postulate, but a necessary one, because no one can assert that he has complete knowledge of man as he is. Not only in the psychic man is there something unknown, but also in the physical. We should be able to include this unknown quantity in a total picture of man, but we cannot. Man himself is partly empirical, partly transcendental; he too is a *λίθος οὐ λίθος*. Also, we do not know whether what we on the empirical plane regard as physical may not, in the Unknown beyond our experience, be identical with what on this side of the border we distinguish from the physical as psychic. Though we know from experience that psychic processes are related to material ones, we are not in a position to say in what this relationship consists or how

it is possible at all. Precisely because the psychic and the physical are mutually dependent it has often been conjectured that they may be identical somewhere beyond our present experience, though this certainly does not justify the arbitrary hypothesis of either materialism or spiritualism.

[766] With this conjecture of the identity of the psychic and the physical we approach the alchemical view of the *unus mundus*, the potential world of the first day of creation, when there was as yet “no second.” Before the time of Paracelsus the alchemists believed in *creatio ex nihilo*. For them, therefore, God himself was the principle of matter. But Paracelsus and his school assumed that matter was an “increated,” and hence coexistent and coeternal with God. Whether they considered this view monistic or dualistic I am unable to discover. The only certain thing is that for all the alchemists matter had a divine aspect, whether on the ground that God was imprisoned in it in the form of the *anima mundi* or *anima media natura*, or that matter represented God’s “reality.” In no case was matter de-deified, and certainly not the potential matter of the first day of creation. It seems that only the Paracelsists were influenced by the dualistic words of Genesis.²³²

[767] If Dorn, then, saw the consummation of the *mysterium coniunctionis* in the union of the alchemically produced *caelum* with the *unus mundus*, he expressly meant not a fusion of the individual with his environment, or even his adaptation to it, but a *unio mystica* with the potential world. Such a view indeed seems to us “mystical,” if we misuse this word in its pejorative modern sense. It is not, however, a question of thoughtlessly used words but of a view which can be translated from medieval language into modern concepts. Undoubtedly the idea of the *unus mundus* is founded on the assumption that the multiplicity of the empirical world rests on an underlying unity, and that not two or more fundamentally different worlds exist side by side or are mingled with one another. Rather, everything divided and different belongs to one and the same world, which is not the world of sense but a postulate whose probability is vouched for by the fact that until now no one has been able to discover a world in which the known laws of nature are invalid. That even the psychic world, which is so extraordinarily different from the physical world, does not have its roots outside the one cosmos is evident from the undeniable fact that causal connections exist between the psyche and the body which point to their underlying unitary nature.

[768] All that *is* is not encompassed by our knowledge, so that we are not in a position to make any statements about its total nature. Microphysics is feeling its way into the unknown side of matter, just as complex psychology is pushing forward into the unknown side of the psyche. Both lines of investigation have yielded findings which can be conceived only by means of antinomies, and both have developed concepts which display remarkable analogies. If this trend should become more pronounced in

the future, the hypothesis of the unity of their subject-matters would gain in probability. Of course there is little or no hope that the unitary Being can ever be conceived, since our powers of thought and language permit only of antinomian statements. But this much we do know beyond all doubt, that empirical reality has a transcendental background—a fact which, as Sir James Jeans has shown, can be expressed by Plato's parable of the cave. The common background of microphysics and depth-psychology is as much physical as psychic and therefore neither, but rather a third thing, a neutral nature which can at most be grasped in hints since in essence it is transcendental.

[769] The background of our empirical world thus appears to be in fact a *unus mundus*. This is at least a probable hypothesis which satisfies the fundamental tenet of scientific theory: "Explanatory principles are not to be multiplied beyond the necessary." The transcendental psychophysical background corresponds to a "potential world" in so far as all those conditions which determine the form of empirical phenomena are inherent in it. This obviously holds good as much for physics as for psychology, or, to be more precise, for macrophysics as much as for the psychology of consciousness.

[770] So if Dorn sees the third and highest degree of conjunction in a union or relationship of the adept, who has produced the *caelum*, with the *unus mundus*, this would consist, psychologically, in a synthesis of the conscious with the unconscious. The result of this conjunction or equation is theoretically inconceivable, since a known quantity is combined with an unknown one; but in practice as many far-reaching changes of consciousness result from it as atomic physics has produced in classical physics. The nature of the changes which Dorn expects from the third stage of the coniunctio can be established only indirectly from the symbolism used by the adepts. What he called *caelum* is, as we have seen, a symbolic prefiguration of the self. We can conclude from this that the desired realization of the whole man was conceived as a healing of organic and psychic ills, since the *caelum* was described as a universal medicine (the panacea, alexipharmic, *medicina catholica*, etc.). It was regarded also as the balsam and elixir of life, as a life-prolonging, strengthening, and rejuvenating magical potion. It was a "living stone," a λίθος ἐμψυχος (*baetylus*), a "stone that hath a spirit,"²³³ and the "living stone" mentioned in the New Testament,²³⁴ which in the *Shepherd of Hermas* is the living man who adds himself as a brick to the tower of the Church. Above all, its incorruptibility is stressed: it lasts a long time, or for all eternity; though alive, it is unmoved; it radiates magic power and transforms the perishable into the imperishable and the impure into the pure; it multiplies itself indefinitely; it is simple and therefore universal, the union of all opposites; it is the parallel of Christ and is called the Saviour of the Macrocosm. But the *caelum* also signifies man's likeness to God (*imago Dei*), the *anima mundi* in matter, and the truth

itself. It “has a thousand names.” It is also the Microcosm, the whole man (τέλειος ἄνθρωπος), *chên-yên*, a homunculus and a hermaphrodite. These designations and significations are but a small selection from the plethora of names mentioned in the literature.

[771] Not unnaturally, we are at a loss to see how a psychic experience of this kind—for such it evidently was—can be formulated as a rational concept. Undoubtedly it was meant as the essence of perfection and universality, and, as such, it characterized an experience of similar proportions. We could compare this only with the ineffable mystery of the *unio mystica*, or *tao*, or the content of *samadhi*, or the experience of *satori* in Zen, which would bring us to the realm of the ineffable and of extreme subjectivity where all the criteria of reason fail. Remarkably enough this experience is an empirical one in so far as there are unanimous testimonies from the East and West alike, both from the present and from the distant past, which confirm its unsurpassable subjective significance. Our knowledge of physical nature gives us no *point d'appui* that would enable us to put the experience on any generally valid basis. It is and remains a secret of the world of psychic experience and can be understood only as a numinous event, whose actuality, nevertheless, cannot be doubted any more than the fact that light of a certain wave-length is perceived as “red”—a fact which remains incomprehensible only to a man suffering from red-green blindness.

[772] What, then, do the statements of the alchemists concerning their arcanum mean, looked at psychologically? In order to answer this question we must remember the working hypothesis we have used for the interpretation of dreams: the images in dreams and spontaneous fantasies are symbols, that is, the best possible formulation for still unknown or unconscious facts, which generally compensate the content of consciousness or the conscious attitude. If we apply this basic rule to the alchemical arcanum, we come to the conclusion that its most conspicuous quality, namely, *its unity and uniqueness*—one is the stone, one the medicine, one the vessel, one the procedure, and one the disposition²³⁵—presupposes a *dissociated consciousness*. For no one who is one himself needs oneness as a medicine—nor, we might add, does anyone who is unconscious of his dissociation, for a *conscious* situation of distress is needed in order to activate the archetype of unity. From this we may conclude that the more philosophically minded alchemists were people who did not feel satisfied with the then prevailing view of the world, that is, with the Christian faith, although they were convinced of its truth. In this latter respect we find in the classical Latin and Greek literature of alchemy no evidences to the contrary, but rather, so far as Christian treatises are concerned, abundant testimony to the firmness of their Christian convictions. Since Christianity is expressly a system of “salvation,” founded moreover on God’s “plan of redemption,” and God is unity *par excellence*, one must ask oneself why the alchemists still felt a disunity in themselves, or not at

one with themselves, when their faith, so it would appear, gave them every opportunity for unity and unison. (This question has lost nothing of its topicality today, on the contrary!) The question answers itself when we examine more closely the other attributes that are predicated of the arcanum.

[773] The next quality, therefore, which we have to consider is its *physical* nature. Although the alchemists attached the greatest importance to this, and the “stone” was the whole *raison d’être* of their art, yet it cannot be regarded as merely physical since it is stressed that the stone was alive and possessed a soul and spirit, or even that it was a man or some creature like a man. And although it was also said of God that the world is his physical manifestation, this pantheistic view was rejected by the Church, for “God is Spirit” and the very reverse of matter. In that case the Christian standpoint would correspond to the “*unio mentalis* in the overcoming of the body.” So far as the alchemist professed the Christian faith, he knew that according to his own lights he was still at the second stage of conjunction, and that the Christian “truth” was not yet “realized.” The soul was drawn up by the spirit to the lofty regions of abstraction; but the body was de-souled, and since it also had claims to live the unsatisfactoriness of the situation could not remain hidden from him. He was unable to feel himself a whole, and whatever the spiritualization of his existence may have meant to him he could not get beyond the Here and Now of his bodily life in the physical world. The spirit precluded his orientation to physis and vice versa. Despite all assurances to the contrary Christ is not a unifying factor but a dividing “sword” which sunders the spiritual man from the physical. The alchemists, who, unlike certain moderns, were clever enough to see the necessity and fitness of a further development of consciousness, held fast to their Christian convictions and did not slip back to a more unconscious level. They could not and would not deny the truth of Christianity, and for this reason it would be wrong to accuse them of heresy. On the contrary, they wanted to “realize” the unity foreshadowed in the idea of God by struggling to unite the *unio mentalis* with the body.

[774] The mainspring of this endeavour was the conviction that this world was in a morbid condition and that everything was corrupted by original sin. They saw that the soul could be redeemed only if it was freed by the spirit from its natural attachment to the body, though this neither altered nor in any way improved the status of physical life. The Microcosm, i.e., the inner man, was capable of redemption but not the corrupt body. This insight was reason enough for a dissociation of consciousness into a spiritual and a physical personality. They could all declare with St. Paul: “O wretched man that I am, who shall deliver me from the body of this death?”²³⁶ They therefore strove to find the medicine that would heal all the sufferings of the body and the disunion of the soul, the *φάρμακον ἀθανασίας* which frees the body of its corruptibility, and the elixir vitae which grants the long life of

the Biblical aforesaid, or even immortality. Since most of them were physicians, they had plenty of opportunities to form an overwhelming impression of the transitoriness of human existence, and to develop that kind of impatience which refuses to wait till Kingdom come for more endurable conditions better in accord with the message of salvation. It is precisely the claims of the physical man and the unendurability of his dissociation that are expressed in this gnawing discontent. The alchemists, consequently, saw themselves faced with the extremely difficult task of uniting the wayward physical man with his spiritual truth. As they were neither unbelievers nor heretics, they could not and would not alter this truth in order to make it more favourably disposed to the body. Besides, the body was in the wrong anyway since it had succumbed to original sin by its moral weakness. It was therefore the body with its darkness that had to be "prepared." This, as we have seen, was done by extracting a quintessence which was the physical equivalent of heaven, of the potential world, and on that account was named "caelum." It was the very essence of the body, an incorruptible and therefore pure and eternal substance, a *corpus glorificatum*, capable and worthy of being united with the *unio mentalis*. What was left over from the body was a "terra damnata," a dross that had to be abandoned to its fate. The quintessence, the *caelum*, on the other hand, corresponded to the pure, incorrupt, original stuff of the world, God's adequate and perfectly obedient instrument, whose production, therefore, permitted the alchemist to "hope and expect" the conjunction with the *unus mundus*.

[775] This solution was a compromise to the disadvantage of physis, but it was nevertheless a noteworthy attempt to bridge the dissociation between spirit and matter. It was not a solution of principle, for the very reason that the procedure did not take place in the real object at all but was a fruitless projection, since the *caelum* could never be fabricated in reality. It was a hope that was extinguished with alchemy and then, it seems, was struck off the agenda for ever. But the dissociation remained, and, in quite the contrary sense, brought about a far better knowledge of nature and a sounder medicine, while on the other hand it deposed the spirit in a manner that would paralyse Dorn with horror could he see it today. The elixir vitae of modern science has already increased the expectation of life very considerably and hopes for still better results in the future. The *unio mentalis*, on the other hand, has become a pale phantom, and the *veritas Christiana* feels itself on the defensive. As for a truth that is hidden in the human body, there is no longer any talk of that. History has remorselessly made good what the alchemical compromise left unfinished: the physical man has been unexpectedly thrust into the foreground and has conquered nature in an undreamt-of way. At the same time he has become conscious of his *empirical* psyche, which has loosened itself from the embrace of the spirit and begun to take on so concrete a form that its individual features are now the object of clinical

observation. It has long ceased to be a life-principle or some kind of philosophical abstraction; on the contrary, it is suspected of being a mere epiphenomenon of the chemistry of the brain. Nor does the spirit any longer give it life; rather is it conjectured that the spirit owes its existence to psychic activity. Today psychology can call itself a science, and this is a big concession on the part of the spirit. What demands psychology will make on the other natural sciences, and on physics in particular, only the future can tell.

10. THE SELF AND THE BOUNDS OF KNOWLEDGE

[776] As I have repeatedly pointed out, the alchemist's statements about the lapis, considered psychologically, describe the archetype of the self. Its phenomenology is exemplified in mandala symbolism, which portrays the self as a concentric structure, often in the form of a squaring of the circle. Co-ordinated with this are all kinds of secondary symbols, most of them expressing the nature of the opposites to be united. The structure is invariably felt as the representation of a central state or of a centre of personality essentially different from the ego. It is of numinous nature, as is clearly indicated by the mandalas themselves and by the symbols used (sun, star, light, fire, flower, precious stone, etc.). All degrees of emotional evaluation are found, from abstract, colourless, indifferent drawings of circles to an extremely intense experience of illumination. These aspects all appear in alchemy, the only difference being that there they are projected into matter, whereas here they are understood as symbols. The arcanum chymicum has therefore changed into a psychic event without having lost any of its original numinosity.

[777] If we now recall to what a degree the soul has humanized and realized itself, we can judge how very much it today expresses the body also, with which it is coexistent. Here is a coniunctio of the second degree, such as the alchemists at most dreamed of but could not realize. Thus far the transformation into the psychological is a notable advance, *but only if the centre experienced proves to be a spiritus rector of daily life*. Obviously, it was clear even to the alchemists that one could have a lapis in one's pocket without ever making gold with it, or the *aurum potabile* in a bottle without ever having tasted that bittersweet drink—hypothetically speaking, of course, for they never succumbed to the temptation to use their stone in reality because they never succeeded in making one. The psychological significance of this misfortune should not be overestimated, however. It takes second place in comparison with the fascination which emanated from the sensed and intuited archetype of wholeness. In this respect alchemy fared no worse than Christianity, which in its turn was not fatally disturbed by the continuing non-appearance of the Lord at the Second Coming. The intense emotion that is always associated with the vitality an archetypal

idea conveys—even though only a minimum of rational understanding may be present—a premonitory experience of wholeness to which a subsequently differentiated understanding can add nothing essential, at least as regards the totality of the experience. A better developed understanding can, however, constantly renew the vitality of the original experience. In view of the inexhaustibility of the archetype the rational understanding derived from it means relatively little, and it would be an unjustifiable overestimation of reason to assume that, as a result of understanding, the illumination in the final state is a higher one than in the initial state of numinous experience. The same objection, as we have seen, was made to Cardinal Newman's view concerning the development of dogma, but it was overlooked that rational understanding or intellectual formulation adds nothing to the experience of wholeness, and at best only facilitates its repetition. The experience itself is the important thing, not its intellectual representation or clarification, which proves meaningful and helpful only when the road to original experience is blocked. The differentiation of dogma not only expresses its vitality but is needed in order to preserve its vitality. Similarly, the archetype at the basis of alchemy needs interpreting if we are to form any conception of its vitality and numinosity and thereby preserve it at least for our science. The alchemist likewise interpreted his experience as best he could, though without ever understanding it to the degree that psychological explanation makes possible today. But his inadequate understanding did not detract from the totality of his archetypal experience any more than our wider and more differentiated understanding adds anything to it.

[778] With the advance towards the psychological a great change sets in, for self-knowledge has certain ethical consequences which are not just impassively recognized but demand to be carried out in practice. This depends of course on one's moral endowment, on which as we know one should not place too much reliance. The self, in its efforts at self-realization, reaches out beyond the ego-personality on all sides; because of its all-encompassing nature it is brighter and darker than the ego, and accordingly confronts it with problems which it would like to avoid. Either one's moral courage fails, or one's insight, or both, until in the end fate decides. The ego never lacks moral and rational counterarguments, which one cannot and should not set aside so long as it is possible to hold on to them. For you only feel yourself on the right road when the conflicts of duty seem to have resolved themselves, and you have become the victim of a decision made over your head or in defiance of the heart. From this we can see the numinous power of the self, which can hardly be experienced in any other way. For this reason *the experience of the self is always a defeat for the ego*. The extraordinary difficulty in this experience is that the self can be distinguished only conceptually from what has always been referred to as "God," but not practically. Both concepts apparently rest on an identical numinous factor

which is a condition of reality. The ego enters into the picture only so far as it can offer resistance, defend itself, and in the event of defeat still affirm its existence. The prototype of this situation is Job's encounter with Yahweh. This hint is intended only to give some indication of the nature of the problems involved. From this general statement one should not draw the overhasty conclusion that in every case there is a hybris of ego-consciousness which fully deserves to be overpowered by the unconscious. That is not so at all, because it very often happens that ego-consciousness and the ego's sense of responsibility are too weak and need, if anything, strengthening. But these are questions of practical psychotherapy, and I mention them here only because I have been accused of underestimating the importance of the ego and giving undue prominence to the unconscious. This strange insinuation emanates from a theological quarter. Obviously my critic has failed to realize that the mystical experiences of the saints are no different from other effects of the unconscious.

[779] In contrast to the ideal of alchemy, which consisted in the production of a mysterious substance, a man, an *anima mundi* or a *deus terrenus* who was expected to be a saviour from all human ills, the psychological interpretation (foreshadowed by the alchemists) points to the concept of human wholeness. This concept has primarily a therapeutic significance in that it attempts to portray the psychic state which results from bridging over a dissociation between conscious and unconscious. The alchemical compensation corresponds to the integration of the unconscious with consciousness, whereby both are altered. Above all, consciousness experiences a widening of its horizon. This certainly brings about a considerable improvement of the whole psychic situation, since the disturbance of consciousness by the counteraction of the unconscious is eliminated. But, because all good things must be paid for dearly, the previously unconscious conflict is brought to the surface instead and imposes on consciousness a heavy responsibility, as *it* is now expected to solve the conflict. But it seems as badly equipped and prepared for this as was the consciousness of the medieval alchemist. Like him, the modern man needs a special method for investigating and giving shape to the unconscious contents in order to get consciousness out of its fix. As I have shown elsewhere, an experience of the self may be expected as a result of these psychotherapeutic endeavours, and quite often these experiences are numinous. It is not worth the effort to try to describe their totality character. Anyone who has experienced anything of the sort will know what I mean, and anyone who has not had the experience will not be satisfied by any amount of descriptions. Moreover there are countless descriptions of it in world literature. But I know of no case in which the bare description conveyed the experience.

[780] It is not in the least astonishing that numinous experiences should occur in the course of psychological treatment and that they may even be expected with some regularity, for they also occur very frequently in exceptional psychic states that are not treated and may even cause them. They do not belong exclusively to the domain of psychopathology but can be observed in normal people as well. Naturally, modern ignorance of and prejudice against intimate psychic experiences dismiss them as psychic anomalies and put them in psychiatric pigeon-holes without making the least attempt to understand them. But that neither gets rid of the fact of their occurrence nor explains it.

[781] Nor is it astonishing that in every attempt to gain an adequate understanding of the numinous experience use must be made of certain parallel religious or metaphysical ideas which have not only been associated with it from ancient times but are constantly used to formulate and elucidate it. The consequence, however, is that any attempt at scientific explanation gets into the grotesque situation of being accused in its turn of offering a metaphysical explanation. It is true that this objection will be raised only by one who imagines himself to be in possession of metaphysical truths, and assumes that they posit or give valid expression to metaphysical facts corresponding to them. It seems to me at least highly improbable that when a man says "God" there must in consequence exist a God such as he imagines, or that he necessarily speaks of a real being. At any rate he can never prove that there is something to correspond with his statement on the metaphysical side, just as it can never be proved to him that he is wrong. Thus it is at best a question of *non liquet*, and it seems to me advisable under these circumstances and in view of the limitations of human knowledge to assume from the start that our metaphysical concepts are simply anthropomorphic images and opinions which express transcendental facts either not at all or only in a very hypothetical manner. Indeed we know already from the physical world around us that in itself it does not necessarily agree in the least with the world as we perceive it. The physical world and the perceptual world are two very different things. Knowing this we have no encouragement whatever to think that our metaphysical picture of the world corresponds to the transcendental reality. Moreover, the statements made about the latter are so boundlessly varied that with the best of intentions we cannot know who is right. The denominational religions recognized this long ago and in consequence each of them claims that it is the only true one and, on top of this, that it is not merely a human truth but the truth directly inspired and revealed by God. Every theologian speaks simply of "God," by which he intends it to be understood that his "god" is *the* God. But one speaks of the paradoxical God of the Old Testament, another of the incarnate God of Love, a third of the God who has a heavenly bride, and so on, and each criticizes the other but never himself.

[782] Nothing provides a better demonstration of the extreme uncertainty of metaphysical assertions than their diversity. But it would be completely wrong to assume that they are altogether worthless. For in the end it has to be explained why such assertions are made at all. There must be some reason for this. Somehow men feel impelled to make transcendental statements. Why this should be so is a matter for dispute. We only know that in genuine cases it is not a question of arbitrary inventions but of involuntary numinous experiences which happen to a man and provide the basis for religious assertions and convictions. Therefore, at the source of the great confessional religions as well as of many smaller mystical movements we find individual historical personalities whose lives were distinguished by numinous experiences. Numerous investigations of such experiences have convinced me that previously unconscious contents then break through into consciousness and overwhelm it in the same way as do the invasions of the unconscious in pathological cases accessible to psychiatric observation. Even Jesus, according to Mark 3 : 21,²³⁷ appeared to his followers in that light. The significant difference, however, between merely pathological cases and “inspired” personalities is that sooner or later the latter find an extensive following and can therefore transmit their effect down the centuries. The fact that the long-lasting effect exerted by the founders of the great religions is due quite as much to their overwhelming spiritual personality, their exemplary life, and their ethical self-commitment does not affect the present discussion. Personality is only one root of success, and there were and always will be genuine religious personalities to whom success is denied. One has only to think of Meister Eckhart. But, if they do meet with success, this only proves that the “truth” they utter hits on a consensus of opinion, that they are talking of something that is “in the air” and is “spoken from the heart” for their followers too. This, as we know to our cost, applies to good and evil alike, to the true as well as the untrue.

[783] The wise man who is not heeded is counted a fool, and the fool who proclaims the general folly first and loudest passes for a prophet and Führer, and sometimes it is luckily the other way round as well, or else mankind would long since have perished of stupidity.

[784] The insane person, whose distinguishing mark is his mental sterility, expresses no “truth” not only because he is not a personality but because he meets with no consensus of opinion. But anyone who does, has to that extent expressed the “truth.” In metaphysical matters what is “authoritative” is “true,” hence metaphysical assertions are invariably bound up with an unusually strong claim to recognition and authority, because authority is for them the only possible proof of their truth, and by this proof they stand or fall. All metaphysical claims in this respect inevitably beg the question, as is obvious to any reasonable person in the case of the proofs of God.

[785] The claim to authority is naturally not in itself sufficient to establish a metaphysical truth. Its authority must also be backed by the equally vehement need of the multitude. As this need always arises from a condition of distress, any attempt at explanation will have to examine the psychic situation of those who allow themselves to be convinced by a metaphysical assertion. It will then turn out that the statements of the inspired personality have made conscious just those images and ideas which compensate the general psychic distress. These images and ideas were not thought up or invented by the inspired personality but “happened” to him as experiences, and he became, as it were, their willing or unwilling victim. A will transcending his consciousness seized hold of him, which he was quite unable to resist. Naturally enough he feels this overwhelming power as “divine.” I have nothing against this word, but with the best will in the world I cannot see that it proves the existence of a transcendent God. Suppose a benevolent Deity did in fact inspire a salutary truth, what about all those cases where a half-truth or unholy nonsense was inspired and accepted by an eager following? Here the devil would be a better bet or—on the principle “*omne malum ab homine*”—man himself. This metaphysical either-or explanation is rather difficult to apply in practice because most inspirations fall between the two extremes, being neither wholly true nor wholly false. In theory, therefore, they owe their existence to the co-operation of a good and a bad power. We would also have to suppose a common plan of work aiming at an only tolerably good goal, so to speak, or make the assumption that one power bungles the handiwork of the other or—a third possibility—that man is capable of thwarting God’s intention to inspire a perfect truth (the inspiration of a half-truth is naturally out of the question) with an almost daemonic energy. What, in any of these cases, would have happened to God’s omnipotence?

[786] It therefore seems to me, on the most conservative estimate, to be wiser not to drag the supreme metaphysical factor into our calculations, at all events not at once, but, more modestly, to make an unknown psychic or perhaps psychoid²³⁸ factor in the human realm responsible for inspirations and suchlike happenings. This would make better allowance not only for the abysmal mixture of truth and error in the great majority of inspirations but also for the numerous contradictions in Holy Writ. The psychoid aura that surrounds consciousness furnishes us with better and less controversial possibilities of explanation and moreover can be investigated empirically. It presents a world of relatively autonomous “images,” including the manifold God-images, which whenever they appear are called “God” by naïve people and, because of their numinosity (the equivalent of autonomy!), are taken to be such. The various religious denominations support this traditional viewpoint, and their respective theologians believe themselves, inspired by God’s word, to be in a position to make valid statements about him. Such statements always claim to be final and

indisputable. The slightest deviation from the dominant assumption provokes an unbridgeable schism. One cannot and may not think about an object held to be indisputable. One can only assert it, and for this reason there can be no reconciliation between the divergent assertions. Thus Christianity, the religion of brotherly love, offers the lamentable spectacle of one great and many small schisms, each faction helplessly caught in the toils of its own unique rightness.

[787] We believe that we can make assertions about God, define him, form an opinion about him, differentiate him as the only true one amongst other gods. The realization might by this time be dawning that when we talk of God or gods we are speaking of debatable images from the psychoid realm. The existence of a transcendental reality is indeed evident in itself, but it is uncommonly difficult for our consciousness to construct intellectual models which would give a graphic description of the reality we have perceived. Our hypotheses are uncertain and groping, and nothing offers us the assurance that they may ultimately prove correct. That the world inside and outside ourselves rests on a transcendental background is as certain as our own existence, but it is equally certain that the direct perception of the archetypal world inside us is just as doubtfully correct as that of the physical world outside us. If we are convinced that we know the ultimate truth concerning metaphysical things, this means nothing more than that archetypal images have taken possession of our powers of thought and feeling, so that these lose their quality as functions at our disposal. The loss shows itself in the fact that the object of perception then becomes absolute and indisputable and surrounds itself with such an emotional taboo that anyone who presumes to reflect on it is automatically branded a heretic and blasphemer. In all other matters everyone would think it reasonable to submit to objective criticism the subjective image he has devised for himself of some object. But in the face of possession or violent emotion reason is abrogated; the numinous archetype proves on occasion to be the stronger because it can appeal to a vital necessity. This is regularly the case when it compensates a situation of distress which no amount of reasoning can abolish. We know that an archetype can break with shattering force into an individual human life and into the life of a nation. It is therefore not surprising that it is called "God." But as men do not always find themselves in immediate situations of distress, or do not always feel them to be such, there are also calmer moments in which reflection is possible. If one then examines a state of possession or an emotional seizure without prejudice, one will have to admit that the possession in itself yields nothing that would clearly and reliably characterize the nature of the "possessing" factor, although it is an essential part of the phenomenon that the "possessed" always feels compelled to make definite assertions. Truth and error lie so close together and often look so confusingly alike that nobody in his right senses could afford *not* to doubt the things that happen to him in the possessed state. I John 4 : 1 admonishes us:

“Beloved, believe not every spirit, but try the spirits whether they are of God; because many false prophets are gone out into the world.” This warning was uttered at a time when there was plenty of opportunity to observe exceptional psychic states. Although, as then, we think we possess sure criteria of distinction, the rightness of this conviction must nevertheless be called in question, for no human judgment can claim to be infallible.

[788] in view of this extremely uncertain situation it seems to me very much more cautious and reasonable to take cognizance of the fact that there is not only a psychic but also a psychoid unconscious, before presuming to pronounce metaphysical judgments which are incommensurable with human reason. There is no need to fear that the inner experience will thereby be deprived of its reality and vitality. No experience is prevented from happening by a somewhat more cautious and modest attitude—on the contrary.

[789] That a psychological approach to these matters draws man more into the centre of the picture as the measure of all things cannot be denied. But this gives him a significance which is not without justification. The two great world-religions, Buddhism and Christianity, have, each in its own way, accorded man a central place, and Christianity has stressed this tendency still further by the dogma that God became very man. No psychology in the world could vie with the dignity that God himself has accorded to him.

EPILOGUE

[790] Alchemy, with its wealth of symbols, gives us an insight into an endeavour of the human mind which could be compared with a religious rite, an *opus divinum*. The difference between them is that the alchemical opus was not a collective activity rigorously defined as to its form and content, but rather, despite the similarity of their fundamental principles, an individual undertaking on which the adept staked his whole soul for the transcendental purpose of producing a *unity*. It was a work of reconciliation between apparently incompatible opposites, which, characteristically, were understood not merely as the natural hostility of the physical elements but at the same time as a moral conflict. Since the object of this endeavour was seen outside as well as inside, as both physical and psychic, the work extended as it were through the whole of nature, and its goal consisted in a symbol which had an empirical and at the same time a transcendental aspect.

[791] Just as alchemy, tapping its way in the dark, groped through the endless mazes of its theoretical assumptions and practical experiments over a course of many centuries, so the psychology of the unconscious that began with C. G. Carus took up the trail that had been lost by the alchemists. This happened, remarkably enough, at a moment in history when the aspirations of the alchemists had found their highest poetic expression in Goethe's *Faust*. At the time Carus wrote, he certainly could not have guessed that he was building the philosophical bridge to an empirical psychology of the future, which would take quite literally the old alchemical dictum: *in stercore invenitur*—"it is found in filth." Not, this time, in the cheap, unseemly substance, which, rejected by all, could be picked up anywhere in the street, but rather in the distressing darkness of the human psyche, which meanwhile had become accessible to clinical observation. There alone could be found all those contradictions, those grotesque phantasms and scurrilous symbols which had fascinated the mind of the alchemists and confused them as much as illuminated them. And the same problem presented itself to the psychologist that had kept the alchemists in suspense for seventeen hundred years: What was he to do with these antagonistic forces? Could he throw them out and get rid of them? Or had he to admit their existence, and is it our task to bring them into harmony and, out of the multitude of contradictions, produce a unity, which naturally will not come of itself, though it may—*Deo concedente*—with human effort?

[792] Herbert Silberer has the merit of being the first to discover the secret threads that lead from alchemy to the psychology of the unconscious. The state of psychological knowledge at that time was still too primitive and still too much wrapped up in

personalistic assumptions for the whole problem of alchemy to be understood psychologically. The conventional devaluation of alchemy on the one hand and of the psyche on the other had first to be cleared away. Today we can see how effectively alchemy prepared the ground for the psychology of the unconscious, firstly by leaving behind, in its treasury of symbols, illustrative material of the utmost value for modern interpretations in this field, and secondly by indicating symbolical procedures for synthesis which we can rediscover in the dreams of our patients. We can see today that the entire alchemical procedure for uniting the opposites, which I have described in the foregoing, could just as well represent the individuation process of a single individual, though with the not unimportant difference that no single individual ever attains to the richness and scope of the alchemical symbolism. This has the advantage of having been built up through the centuries, whereas the individual in his short life has at his disposal only a limited amount of experience and limited powers of portrayal. It is therefore a difficult and thankless task to try to describe the nature of the individuation process from case-material. Since one aspect tends to predominate in one case and another in another, and one case begins earlier and another later, and the psychic conditions vary without limit, only one or the other version or phase of the process can be demonstrated in any given instance. No case in my experience is comprehensive enough to show all the aspects in such detail that it could be regarded as paradigmatic. Anyone who attempted to describe the individuation process with the help of case-material would have to remain content with a mosaic of bits and pieces without beginning or end, and if he wanted to be understood he would have to count on a reader whose experience in the same field was equal to his own. Alchemy, therefore, has performed for me the great and invaluable service of providing material in which my experience could find sufficient room, and has thereby made it possible for me to describe the individuation process at least in its essential aspects.

APPENDIX

LATIN AND GREEK TEXTS

The asterisks (*) in the footnotes refer to the following passages quoted by the author in Latin or Greek. In general, only translations are given in the body of the book. The entries below carry the pertinent footnote numbers.

I. THE COMPONENTS OF THE CONIUNCTIO

3. In hoc lapide sunt quatuor elementa et assimilatur mundo et mundi compositioni. / Natura, inquam, dum circumgyravit aureum circulum, in ipso motu qualitates quatuor in eo aequavit, hoc est, homogeneam illam simplicitatem in sese redeuntem quadravit, sive in quadrangulum duxit aequilaterum, hac ratione, ut contraria a contrariis et hostes ab hostibus aeternis quasi vinculis colligentur, et invicem teneantur. / In circulo sunt elementa coniuncta vera amicitia.
8. aquila volans per aerem et bufo gradiens per terram.
12. Desponsavi ego duo luminaria in actu, et facta est illa quasi aqua in actu habens duo lumina.
18. Hermes: Necesse est ut in fine mundi coelum et terra coniungantur, quod verbum est philosophicum.
20. Sic absconditur altitudo et manifestatur profunditas.
21. de mortuo facit vivum.
23. . . . consurgit aequalitas . . . ex quatuor repugnantibus, in natura communicantibus.
/ καὶ Ὀρφεὺς οἶδε μὲν καὶ τὸν τοῦ
Διονύσου χαρατῆρα, πολλοὺς δὲ καὶ ἄλλους ἰδρύει περὶ τὴν ἡλιαχὴν τράπεζαν.
26. *Erat vir unus.* Nos, qui adhuc peccatores sumus, non possumus istum titulum laudis acquirere, quia unus quisque nostrum non est ‘unus’, sed multi. . . . Vides, quomodo ille qui putatur ‘unus’ esse, non est ‘unus’, sed tot in eo personae videntur esse, quot mores, quia et secundum scripturas ‘insipiens sicut luna mutatur’. / Ubi peccata sunt, ibi est multitudo . . . ubi autem virtus, ibi singularitas, ibi unio. / Intellige te habere intra te ipsum greges boum. . . . Intellige habere te et greges ovium et greges caprarum. . . . Intellige esse intra te etiam aves coeli. Nec mireris quod haec intra te esse dicimus; intellige te et alium mundum esse in parvo et esse intra te solem, esse lunam, esse etiam stellas. . . . Videas habere te

omnia, quae mundus habet. / Quatuor in caelo planetis imperfectioribus, quatuor in corpore nostro correspondere volunt elementa, ut Saturno, Mercurio, Veneri, et Marti, terra, aqua, aer, et ignis, ex quibus conflatum est, et infirmum propter partium imperfectionem. Plantetur itaque arbor ex eis, cuius radix adscribitur Saturno . . .

33. combinationes duarum contrarietatum, frigidum et humidum, quae . . . non sunt amicabilia caliditati et siccitati.
34. Puerulus tuus senex est, o virgo, ipse est Antiquus dierum et omnia praecessit tempora.
40. Dum enim rostrum applicat pectori, totum collum cum rostro flectitur in circularem formam. . . . Sanguis effluens e pectore mortuis pullis reddit vitam.
41. Tanquam principium et fons, a quo . . . defluunt; et simul etiam finis ultimus.
44. Omnem rem solidam penetrabit.
48. Talis est amor philosophicus, inter inanimatorum partes, et inimicitia, *qualis in partibus hominis*. Verum in illis, non magis quam in his, unio vera fieri non potest, corruptione dictarum partium non ablata prius ante coniunctionem: qua propter pacem inter inimicos est quod facias, ut amici conveniant in unum. In omnibus corporibus imperfectis, et ab ultimata sua perfectione deficientibus, sunt amicitia et inimicitia simul innatae; haec si tollatur hominis ingenio vel industria, necesse est alteram ad perfectionem suam ultimatam redire per artem, quam in hominis unione declaravimus.
49. Fertur etiam quod pellicanus in tantum pullos suos diligit, ut eos unguibus interimat. Tertia vero die prae dolore se ipsum lacerat, et sanguis de latere eius super pullos distillans eos a morte excitat. Pellicanus significat Dominum qui sic dilexit mundum ut pro eo daret Filium suum unigenitum, quem tertia die victorem mortis excitavit et super omne nomen exaltavit.
52. cuius vis est spiritualis sanguis id est tinctura. . . . Nam corpus incorporat spiritum per sanguinis tincturam; quia omne quod habet Spiritum, habet et sanguinem. / Sensibilis autem et vitalis (spiritus) sanguis est essentia; dicit enim alibi, omni spiritui carnis sanguis est.
53. Fili, accipere debes de pinguiori carne. / crescit ex carne et sanguine. / Ovum in carne capere. / Elige carnem teneram et habebis rem optimam. / An forte carnibus ad vesperam . . . ille significatur, qui traditus est propter delicta nostra.
54. Et tunc accipe vitrum cum sponso et sponsa, et proiice eos in fornacem, et fac assare per tres dies, et tunc erunt duo in carne una.

55. Quemadmodum Christus. . . . Lapis angularis ab aedificatoribus reiectus in sacra scriptura vocatur; ita quoque Lapidi Sophorum idem accidit ...
64. Recipit vim superiorum et inferiorum. Sic habebis gloriam totius mundi.
66. Mercurius Trismegistus . . . lapidem vocavit orphanum. / Hic lapis Orphanus proprio nomine caret.
78. *Ποίησον τὸ δεῖνα πρᾶγμα ἐμοὶ τῷ τῆς χήρας ὀρφανῷ κατατετιμημένης.*
- 79.
- Ipsa maritali dum nato foedere mater
Jungitur, incestum ne videatur opus.
Sic etenim natura iubet, sic alma requirit
Lex fati, nec ea est res male grata Deo.
83. *Ἐγὼ εἰμι Ἴσις ἡ καλουμένη δρόσος.*
95. *Ἴσιδος σῶμα γῆν.*
109. Omnis Ecclesia una vidua est, deserta in hoc saeculo.
111. (Almana) Vidua. Est Malchuth, quando Tiphereth non est cum ipsa.
116. Luna, terra, sponsa, matrona, regina coeli, piscina, mare, puteus, arbor scientiae boni et mali, cerva amorum (ita vocatur Malchuth potissimum ob mysterium novilunii), venter.
120. . . . quod Malchuth vocetur hortus irriguus Jesch. 58, 11 quando Jesod in Ipsa est, eamque adimplet, atque irrigat aquis supernis. / cum Malchuth influxum accipit a 50 portis per Jesod, tunc vocatur sponsa.
136. Anima quippe humana recedens a sole iustitiae, ab illa scl. interna contemplatione incommutabilis veritatis, omnes vires suas in terrena convertit et eo magis magisque obscuratur in interioribus ac superioribus suis; sed cum redire coeperit ad illam incommutabilem sapientiam, quanto magis ei propinquat affectu pietatis, tanto magis exterior homo corrumpitur, sed interior renovatur de die in diem omnisque lux illa ingenii, quae ad inferiora vergebat, ad superiora convertitur et a terrenis quodam modo aufertur, ut magis magisque huic saeculo moriatur et vita eius abscondatur cum Christo in Deo.
145. die enim quarto in quartum, quartanam naturaliter patitur.
150. Hoc itaque completo scias quod habes corpus corpora perforans et naturam naturam continentem et naturam natura laetantem, quod profecto tyriaca philosophorum vocatur et dicitur vipera, quia sicut vipera, concipiendo prae libidinis ardore, caput secat masculi et pariendo moritur et per medium secatur. Sic lunaris humor, concipiens lucem Solarem sibi convenientem, Solem necat et

- pariendo progeniem Philosophorum, ipsa similiter moritur et uterque parens moriendo animas filio tradunt et moriuntur et pereunt. Et parentes sunt cibus filii.
151. . . . incineretur corpus residuum, quod vocatur terra, a qua est extracta tinctura per aquam . . . Deinde capiti suo iunge et caudae.
152. ἡ φύσις τῇ φύσει τέρπεται, καὶ ἡ φύσις τὴν φύσιν νικᾷ, καὶ ἡ φύσις τὴν φύσιν κρατεῖ.
153. Sic tyrium nostrum (colorem) in unoquoque regiminis gradu sui coloris nomine nuncupamus. / Hoc est sulphur rubeum, luminosum in tenebris: et est hyacinthus rubeus, et toxicum igneum, et interficiens, et Leo victor, et malefactor, et ensis scindens, et Tyriaca sanans omnem infirmitatem.
161. Qui me Miserculam i.e. me habentem materiam Mercurialem et Lunarem . . . ac dilectum meum i.e. pinguedinem solarem mecum i.e. (c)um humiditate Lunari vinculaverit i.e. in unum corpus coniunxerit, *Sagitta Ex Pharetra nostra*.
164. Παρθένος ἡ γῆ εὐρίσκεται ἐν τῇ σὺρῃ τῆς παρθένου.
170. Pulchra es amica mea, suavis et decora sicut Jerusalem: *Terribilis ut castrorum acies ordinata*. 4: *Averte oculos tuos a me quia ipsi me avolare fecerunt . . .* 9: *Quae est ista, quae progreditur quasi aurora consurgens pulchra ut luna, electa ut sol, terribilis ut castrorum acies ordinata?*
176. Procedit Christus quasi sponsus de thalamo suo, praesagio nuptiarum exiit ad campum saeculi . . . pervenit usque ad crucis torum et ibi firmavit ascendendo coniugium; ubi eum sentiret anhelantem in suspiriis creaturam, commercio pietatis se pro coniuge dedit ad poenam . . . et copulavit sibi perpetuo iure matronam.
178. Per cor amor intelligitur, qui in corde esse dicitur, et continens pro contento ponitur, et est similitudo, ab illo qui nimirum aliquam amat, et eius cor amore vulneratur. Ita *Christus amore Ecclesiae vulneratus est in cruce*. Prius vulnerasti cor meum, quando causa amoris tui flagellatus sum, ut te facerem mihi sororem . . . iterum vulnerasti cor meum, quando amore tui in cruce pendens vulneratus sum, ut te sponsam mihi facerem gloriae participem, et hoc in uno oculorum tuorum.
181. . . . illo vulnerato, neci dato ros iungitur.
185. Hic est infans Hermaphroditus, qui a primis suis incunabulis per Canem Corascenum rabidum morsu infectus est, unde perpetua hydrophobia stultescit insanitque. / vilescit per ca[r]nem infirmatus Leo.
186. Naturae siquidem per serpentem introducto morbo, lethali que inflicto vulnere quaerendum est remedium.
188. Mundi vitam enim . . . esse naturae lucem atque caeleste sulphur, cuius subiectum est firmamentalis humor aethereus et calor, ut sol et luna.
190. Alcumistas omnium hominum esse perversissimos.

Minuitur Luna, ut elementa repleat.

Hoc est vere grande mysterium.

Donavit hoc ei qui omnibus donavit gratiam.

Exinanivit earn, ut repleat,

Qui etiam se exinanivit, ut omnes repleret.

Exinanivit enim se ut descenderet nobis,

Descendit nobis, ut ascenderet omnibus ...

Ergo annuntiavit Luna mysterium Christi.

196. Ut cum Deus homo, cum immortalis mortuus, cum aeternus sepultus est, non sit intelligentiae ratio, sed potestatis exceptio; ita rursus e contrario non sensus, sed virtutis modus sit, ut Deus ex homine, ut immortalis ex mortuo, ut aeternus sit ex sepulto.
197. Quia lassae erant creaturae ferendo figuras maiestatis eius, eas suis figuris exoneravit sicut exoneravit ventrem qui eum gestavit.
218. . . . umbra mortis, quoniam tempestas dimersit me; tunc coram me procident Aethiopes et inimici mei terram meam lingent / . . . at qui de dracone comedit non alius est, quam spiritualis Aethiops per draconis laqueos mutatus et ipse in serpentem.
221. *Τὸν θεὸν ἐξ ὕλης συγχρόνου καὶ ἀγενήτου πάντα πεποιηκέναι.*
227. Lapis . . . incipit propter angustiam carceris sudare.
228. Hic princeps sudat ex tribulatione sua cuius sudor pluviae sunt. / In postremis suis operationibus . . . liquor obscuras ac rubens instar sanguinis, ex sua materia suoque vase guttatim exudat; inde praesagium protulerunt, postremis temporibus hominem purissimum in terras venturum, per quem liberatio mundi fieret, hunc ipsum guttas rosei rubeive coloris et sanguineas emissurum, quo mundus a labe redimeretur.
229. Et Marcus dicit, concipiunt in balneis, significat calorem lentum et humidum balneorum, in quibus sudat lapis in principio dissolutionis suae. / Tunc accipitur corpus perfectissimum, et ponitur ad ignem Philosophorum; tunc . . . illud corpus humectatur, et emittit sudorem quendam sanguineum post putrefactionem et mortificationem, Rorem dico Coelicum, qui quidem Ros dicitur Mercurius Philosophorum sive Aqua permanens.
232. Quae cum adparuerit, maribus femina decora adparet, feminis vero adolescentem speciosum et concupiscibilem demonstrat.

II. THE PARADOXA

1. Antiquissimi philosophorum viderunt hunc lapidem in ortu et sublimatione sua . . . omnibus rebus mundi tam realibus quam intellectualibus . . . posse in

similitudinibus convenire. Unde quaecumque dici et tractari possunt de virtutibus et vitiis, de coelo et omnibus tam corporeis quam incorporeis, de mundi creatione . . . et de Elementis omnibus . . . et de corruptibilibus et incorruptibilibus et visibilibus et invisibilibus et de spiritu et anima et corpore . . . et de vita et morte, et bono et malo, de veritate et falsitate, de unitate et multitudine, de paupertate et divitiis, de volante et non volante, de bello et pace, de victore et victo et labore et requie, de somno et vigilia, de conceptione et partu, de puero et sene, de masculo et foemina, de forti et debili, de albis et rubeis et quibuslibet coloratis, de inferno et abyssis et eorum tenebris, ac etiam ignibus sulphureis, et de paradiso et eius celsitudine, et claritate ac etiam pulchritudine et gloria eius inaestimabili. Et breviter de iis, quae sunt et de iis quae non sunt et de iis quae loqui licet et quae loqui non licet possunt omnia dici de hoc lapide venerando.

6. (illa res) vilis et pretiosa, obscura celata et a quolibet nota, unius nominis et multorum nominum.

8. *Τὶ ὑμῖν καὶ τῇ πολλῇ ὕλῃ ἐνὸς ὄντος τοῦ φυσικοῦ καὶ μιᾶς φύσεως νικώσης τὸ πᾶν:*

16. Currens sine cursu, movens sine motu.

17. Fac Mercurium per Mercurium.

21. Tot haec nostra materia habet nomina, quod res sunt in mundo.

24. *εὐκοπώτερον δέ ἐστιν τὸν οὐρανὸν καὶ τὴν γῆν παρελθεῖν ἢ τοῦ νόμου μίαν κεραίαν πεσεῖν.*

27. Iste enim spiritus generatur ex rebus ponticis et ipse vocat ipsum humidum siccum igneum.

30. Puncti proinde, monadisque ratione, res et esse coeperunt primo.

33. Punctum solis id est germen ovi quod est in vitello, quod germen movetur calore gallinae.

34. O admiranda sapientia, quae ex punctulo vix intelligibili, quicquid unquam ingentis machinae huius, vastae ponderosaeque molis a creatione factum est, solo verbo potuit excitare.

37. Ego ducam te ad aeternam mortem, ad inferos et ad domum tenebrosam. Cui anima: Anime mi spiritus. Quare ad eum sinum non reducis, a quo me adulando exceperis? credebam te mihi deuinctum necessitudine. Ego quidem sum amica tua, ducamque te ad aeternam gloriam. / Sed miser ego abire cogor, cum te super omnes lapides preciosos constituero beatamque fecero. Quare te obsecro, cum ad regni solium deveneris, mei aliquando memor existes. / Quod si is spiritus apud animam et corpus manserit, perpetua ibidem esse corruptio.

42. Deus est figura intellectualis, cuius centrum est ubique, circumferentia vero nusquam.
49. triplici muro Castrum aureum circumdatum.
50. aeternitatis imago visibilis.
51. unus in essentia / una substantia homogenea.
59. *Ἵνα ἔχη τὸν σπινθῆρα δουλεύοντα.*
60. Rex natans in mari, clamans alta voce: Qui me eripiet, ingens praemium habebit. / . . . quis est homo qui vivit sciens et intelligens eruens animam meam de manu inferi?
72. Fuit quidam homo, qui nihil quidquam profuit nec detineri potuit: omnes enim carceres confregit, imo et poenas omnes parvi fecit, interea quidam simplex vel humilis et sincerus repertus est vir, qui hujus naturam bene noverat, et consilium tale dederat, ut is omnibus vestibus exutus denudetur. / Vestes abiectae illius ad pedes illius iacebant erantque nimis rancidae, foetidae, venenosae etc. atque tandem hunc in modum loqui incipiebat: ‘Stolam meam exui, quomodo eandem iterum induam?’
76. Quousque terra luceat veluti oculi piscium.
77. Grana instar piscium oculorum. / In principio . . . quasi grana rubea et in coagulatione velut oculi piscium. / Quando veluti oculi piscium in eo elucescunt.
79. Hic lapis est subtus te, supra te, et ergo a te, et circa te.
80. Cuius pulli rostro eruunt matri oculos.
86. Alterius profani sacramenti signum est *θεὸς ἐκ πέτρας* . . . alius est lapis, quem deus in confirmandis fundamentis promissae Hierusalem missurum se esse promisit: Christus nobis venerandi lapidis significatione monstratur.
91. *Ἐπι τὴν Αἴγυπτον ἐν ταῖς μάλιστα μελάγγειον οὖσαν ὥσπερ τὸ μέλαν τοῦ ὀφθαλμοῦ χημίαν καλοῦσιν καὶ καρδίᾳ παρεικάζουσιν.*
92. Est quasi oculus quidam visusque animae, quo saepe affectus animae nobis et consilium indicatur, cuius radiis et intuitu omnia coalescunt.
97. *Ἄοσιριν πολυόφθαλμον . . . πανταχῆ γὰρ ἐπιβάλλοντα τὰς ἀκτῖνας ὥσπερ ὀφθαλμοῖς πολλοῖς κτλ.*
101. *Ἐκ δὲ τῶν ἀτόμων συνελθουσῶν γενέσθαι καὶ τὸν θεὸν καὶ τὰ στοιχεῖα καὶ τὰ ἐν αὐτοῖς πάντα καὶ Ζῶα καὶ ἄλλα κτλ.*
104. Si homo res in maiori mundo transmutare novit . . . quanto magis id in microcosmo, hoc est, in se ipso noverit, quod extra se potest, modo cognoscat

hominis in homine thesaurum existere maximum et non extra ipsum.

107. Chemicam artem naturaliter exercet Archeus in homine.
108. Quia homo est in corruptione generatus, odio prosequitur eum sua propria substantia.
109. Armoniac sal id est stella. / Ista est optima, quae extrahitur vi chalybis nostri qui invenitur in ventre Arietis . . . ante debitam coctionem est summum venenum.
110. Homo quidam est esca, in qua[m] per cotem scl. Mercurium, et chalybem (scl.) Caelum, ignis huiusmodi scintillae excussae, fomentum accipiunt, viresque suas exserunt.
112. Nam in rerum natura nihil est, quod non in se mali tantum quantum boni contineat.
133. Matrimonium enim quasi pallium hoc quicquid est vitii, tegit et abscondit.
134. Scorpio i.e. venenum. Quia mortificat seipsum et seipsum vivificat. /
Εὐοί, δίκερως δίμορφε! deus iste vester non biformis est, sed multiformis . . . ipse est basiliscus et scorpio . . . ipse malitiosus anguis . . . ipse tortuosus draco, qui hamo ducitur . . . iste deus vester Lernaevi anguis crinibus adornatur.
135. . . . *ἀνάστηθι ἐκ τοῦ τάφου . . . καὶ τὸ φάρμακον τῆς ζωῆς εἰσῆλθεν πρὸς σέ . . .* / Spiritus tingens et aqua metallina perfundens se in corpus ipsum vivificando.
137. Hanc Omnia esse, Omnia in se habere, quibus indiget ad sui perfectionem, Omnia de ipsa praedicari posse et ipsam vicissim de omnibus.
138. Unum enim est totum, ut ait maximus Chimes, ob quod
Χύμης δὲ καλῶς ἀπεφῆνατο· Ἐν γὰρ τὸ πᾶν καὶ δι' αὐτοῦ τὸ πᾶν sunt omnia, et si totum non haberet totum nihil totum esset. /
γέγονεν. ἐν τὸ πᾶν. καὶ εἰ μὴ πᾶν ἔχοι τὸ πᾶν οὐ γέγονε τὸ πᾶν.
140. materiam nostram simul esse in caelo, terris et aquis, tanquam totam, in toto, et totam in qualibet parte: adeo ut partes illae, alioquin separabiles, nusquam ab invicem separari possint, postquam unum facta sunt: hinc tota Lex et Prophetia chemica pendere videtur.
144. Quisnam igitur liber? Sapiens, sibi qui imperiosus, quem neque pauperies neque mors neque vincula terrent, respondere cupidinibus, contemnere honores fortis, et in se ipso totus teres atque rotundus.
146. Nam ipsa est continens contentum in se convertens, atque sic est sepulchrum seu continens, non habens in se cadaver seu contentum, veluti Lothi coniunx ipsa sibi sepulchrum fuisse dicitur absque cadavere et cadaver absque sepulchro.
148. crassities aëris et omnia membra in atomos divellantur. /
ποτὲ δὲ νέκυν ἢ θεὸν ἢ τὸν ἄκαρπον / Et sicut sol a principio occultatur in lunam, ita in fine occultatus extrahitur a luna.
150. Nam et eius (corporis mortui) odor est malus, et odori sepulchrorum assimilatur.

151. Purus laton tandiu decoquitur, donec veluti oculi piscium elucescat.
152. Posito hoc Uno in suo sepulcro sphaerico. / (Vas) dicitur etiam sepulcrum.
157. Tumulus ergo in quo Rex noster sepelitur Saturnus . . . dicitur.
158. In adytis habent idolum Osiridis sepultum.
159. Hinc dicit Avicenna: Quamdiu apparuerit nigredo, dominatur obscura foemina, et ipsa est prior vis nostri lapidis.
162. Extat epitaphium antiquum Bononiae quod multorum fatigavit ingenia . . . Sunt qui hoc aenigma interpretentur animum hominis, alii nubium aquam, alii Nioben in Saxum mutatam, alii alia.
166. (Epitaphium) loquitur nempe . . . de filia Laelio nascitura, eademque sponsa Agathonis designata, sed non filia, sed non sponsa, quia concepta, non edita; quia non orta, sed aborta; qua propter tali ac tanta spe frustratus Agatho, jam pridem delectus in coniugem, et a sorte elusus, hac Aenigmatica Inscriptione iure merito sic et ipse lusit, vel ludentis speciem praebuit.
169. Itaque vocatus sum Hermes Trismegistus, habens tres partes philosophiae totius mundi.
170. Numero Deus impari gaudet.
174. Hic serpens est calidus, quaerens exitum ante ortum, perdere volens foetum, cupiens abortum.
175. Naturae subtilitas . . . causam dedit augmentationis et vitae, et se in naturas perfectissimas reduxit. / Hic Serpens . . . tanquam Bufo nigerrimus tumescit et . . . petit a sua tristitia liberari.
179. Dico Aeliam Laeliam Crispem ex Hamadryadibus unam fuisse . . . i.e. Quercui in Suburbano agro Bononiensi applicitam, seu inclusam, quae mollissima simul et asperrima apparens jam a bis mille forsitan annis inconstantissimos Protei in morem tenens vultus Lucii Agathonis Prisci civis tunc Bononiensis Amores ex Chao certe, i.e. confusione Agathonia . . . elicitos anxiiis curis et sollicitudinibus implevit.
182. Tertium tandem aenigma erit de Quercu, mundum elementarem repraesentantem in caelesti quodammodo viridario plantata, ubi Sol et Luna duo veluti flores circumferuntur.
189. Induxit quercum veterem fissam per medium, (qui) tuetur a solis radiis, umbram faciens.
190. Primo duro lapide et claro clauditur, tum demum cava quercu.
193. *Τὸ σωτήριον ἐκείνο ὕδωρ, καὶ τάφος ὑμῖν ἐγένετο καὶ μήτηρ.*
195. Per matricem, intendit fundum cucurbitae. / Vas spagiricum ad similitudinem vasis naturalis esse construendum.

196. Locus generationis, licet sit artificialis, tamen imitatur naturalem, quia est *concavus, conclusus*.
198. Quod enim est matrix embrioni, hoc est aqua fideli. In aqua enim fingitur et formatur. Primum dicebatur: Producant aquae reptile animae viventis. Ex quo autem Jordanis fluente ingressus est Dominus non amplius reptilia animarum viventium, sed animas rationales Spiritum Sanctum ferentes aqua producit.
199. Arbores quae in ipso (paradiso) sunt, concupiscentiae sunt et ceterae seductiones corrumpentes cogitationes hominum. Illa autem arbor quae est in paradiso, ex qua agnoscitur bonum, ipse est Jesus et scientia eius quae est in mundo; quam qui acceperit, discernit bonum a malo.
204. Item dixit Marchos et est tempus in isto genito quod nascitur de quo facit talem similitudinem. Tunc aedificabimus sibi talem domum, quae dicitur monumentum Sihoka. Dixit, terra est apud nos quae dicitur tormos, in qua sunt reptilia comedentes opaca ex lapidibus adurentibus, et bibunt super eis sanguinem hircorum nigrorum, manentes in umbra, concipiunt in balneis, et (pariunt) in aëre et gradiuntur supra mare et manent in monumentis et etiam manent in sepulchris, et pugnat reptile contra masculum suum, et in sepulchro manet masculus eius 40 noctibus ...
215. Christus in deserto quadraginta diebus totidemque noctibus ieiunavit, quemadmodum etiam per quadraginta menses in terra concionatus est, et miracula edidit, per quadraginta horas in sepulcro iacuit: quadraginta dies, inter resurrectionem a mortuis et ascensionem suam ad coelos, cum discipulis conversatus vivum esse ipsis repraesentavit.
219. Marmor coruscans est elixir ad album. / Et proiicient semen super marmore simulachrorum et in aqua sibi simili deifica, et venient corvi volantes, et cadunt super illud simulacrum. Intendit nigredinem . . . per corvos. / Maximum quidem mysterium est creare animas, atque corpus inanime in statuum viventem confingere. / Tunc autem haec fiet, cum statua venerit. / Semper extrahis oleum (= anima) a corde statuarum: quia anima est ignis in similitudine, et ignis occultatus. / Calefacimus eius aquam extractam a cordibus statuarum ex lapidibus. / Animas venerari in lapidibus: est enim mansio eorum in ipsis.
236. Cum mea me mater gravida gestaret in alvo,
Quid pareret fertur consuluisse deos.
Phoebus ait: Puer est; Mars: Femina; Juno: Neutrum.
Jam qui sum natus Hermaphroditus eram.
Quaerenti letum dea sic ait: Occidet armis;
Mars: Cruce; Phoebus: Aqua. Sors rata quaeque fuit.
Arbor obumbrat aquas; conscendo, labitur ensis

Quem tuleram casu, labor et ipse super;

Pes haesit ramis, caput incidit amne, tulique

—Vir, mulier, neutrum—flumina, tela, crucem.

237. Vir non vir, videns non videns, in arbore non in arbore, sedentem non sedentem, volucrem non volucrem, percussit non percussit, lapide non lapide.

ὅτι βάλοι ξύλω τε καὶ οὐ ξύλω καθημένην ὄρνιθα καὶ οὐκ ὄρνιθα ἀνὴρ τε

238. *κ' οὐκ ἀνὴρ λίθω τε καὶ οὐ λίθω * τούτων γάρ ἐστι τὸ μὲν νάρθηξ, τὸ δὲ νυκτηρίς, τὸ δὲ εὐνοῦχος, τὸ δὲ κίσηρις.*

242. Ὁ τύμβος οὗτος ἔνδον οὐκ ἔχει νεκρὸν [Οἱ νέκυν],

ὁ νεκρὸς οὗτος ἐκτὸς οὐκ ἔχει τάφον

ἀλλ' αὐτὸς αὐτοῦ νεκρὸς ἐστὶ καὶ τάφος.

243. Igneus est illi vigor et coelestis origo, a qua nunc hic Haelia nominatur.

245. Habet in se . . . totius Humanitatis quasi dicerem *αὐτότητα*.

246. Sic si seipsam volet anima cognoscere, in animam debet intueri, inque eum praecipue locum, in quo inest virtus animae, sapientia.

247. Nihil aliud esse hominem quam animam ipsius.

248. Animamque ut ideam hoc Epitaphio notari.

249. Prima materia cum nihil sit, sed imaginatione sola comprehendatur, nullo istorum locorum contineri potest.

251. Scopum Autoris esse mirifice complecti Generationis, Amicitiae ac Privationis attributa.

255.

Crispulus ille, quis est, uxori semper adhaeret?

Qui Mariane tuae? Crispulus iste quis est?

260. (Anima) quae extra corpus multa profundissima imaginatur et hisce assimilatur Deo.

III. THE PERSONIFICATION OF THE OPPOSITES

4. Domine, quamvis rex sis, male tamen imperas et regis.

5. Aurum nostrum non est aurum vulgi.

6. Aurum et argentum in metallina sua forma lapidis nostri materiam non esse.

7. Substantia aequalis, permanens, fixa, longitudine aeternitatis. / Est enim Sol radix incorruptibilis. / Immo non est aliud fundamentum artis quam sol et eius umbra.

9. Scias igitur quod ignis sulphur est, id est Sol.

10. Sol noster est rubeus et ardens. / Sol nihil aliud est, quam sulphur et argentum vivum.

15. (Tractans de quadam virtute invisibili) vocat eam balsamum, omnem corporis naturam excèdentem, qui duo corpora coniunctione conservat, et coeleste corpus una cum quatuor elementis sustentat.
18. Fatuum esset cum plurimis credere, solem esse duntaxat ignem caelestem.
20. Ut fons vitae corporis humani, centrum est cordis eius, vel id potius quod in eo delitescit arcanum, in quo viget calor naturalis.
21. Ἡλῖος ὁ πάντα ποιῶν.
22. quorumvis seminaria virtus atque formalis delitescit. / Punctum solis i. e. germen ovi, quod est in vitello.
23. Masculinum et universale semen primum et potissimum est eius naturae sulphur, generationum prima pars omnium, ac potissima causa. Proinde a Paracelso prolatum est, sol et homo per hominem, generant hominem.
24. Terra fecit Lunam . . . deinde ortus est sol . . . post tenebras quas posuisti ante ortum solis in ipsa.
27. Et hoc modo Alchemia est supra naturam et est divina. Et in hoc lapide est tota difficultas istius artis, neque potest assignari sufficiens ratio naturalis, quare hoc ita esse possit. Et sic cum intellectus non possit hoc comprehendere, nec satisfacere sibi, sed oportet ipsum credere, sicut in miraculosis rebus divinis, ita ut fundamentum fidei Christianae, quod supra naturam existit, a non credentibus primo existimetur verum omnino, quoniam finis eius miraculose et supra naturam completur. Ideo tunc solus Deus est operator, quiescente natura artifice.
29. Cum non suffecissem mirari de tanta rei virtute sibi coelitus indita et infusa.
30. Porro in humano corpore latet quaedam substantia caelestis naturae paucissimis nota, quae nullo penitus indiget medicamento, sed ipsamet est sibi medicamentum incorruptum.
33. Non intelligit animalis homo . . . facti sumus sicut lapides oculos habentes et non videntes.
37. Cum Solem . . . Plato visibilem filium Dei appellet, cur non intelligamus nos imaginem esse invisibilis filii. Qui si lux vera est illuminans omnem *mentem* expressissimum habet simulachrum hunc Solem, qui est lux imaginaria illuminans omne corpus.
38. Qui autem sapientum venenum sole et eius umbra tinxit, ad maximum pervenit arcanum. / In umbra solis est calor Lunae.
39. Fili, extrahe a radio umbram suam.

40. terra auri suo proprio spiritu solvitur. / . . . obscuratus est Sol in ortu suo. Et haec denigratio est operis initium, putrefactionis indicium, certumque commixtionis principium.
41. In manifesto sunt corporalia et in occulto spiritualia.
42. Sicut sol a principio occultatur in Lunam, ita in fine occultatus extrahitur a Luna.
45. quae ex radiis Solis vel Lunae vi magnetis extracta est.
46. Sine sole terreno opus Philosophicum non perficitur.
50. Sicut enim sol sub nube, sic sol iustitiae latuit sub humana carne.
81. Sulphur est omne id quod incenditur, nequicquam concipit flammam nisi ratione sulphuris. / Sulphur enim aliud nihil est quam purus ignis occultus in mercurio. / simplex ignis vivus, alia corpora mortua vivificans.
97. Sulfura sunt animae, quae in quatuor fuerant occultae corporibus.
101. quousque natus viridis tibi appareat, qui eius est anima, quam viridem avem et aes et sulphur philosophi nuncupaverunt.
104. Pater et semen virile. / Substantia sulphuris quasi semen paternum, activum et formativum.
108. Sed quod maius est, in Regno eius est speculum in quo totus Mundus videtur. Quicumque in hoc speculum inspicit, partes sapientiae totius Mundi in illo videre et addiscere potest, atque ita sapientissimus in hisce Tribus Regnis evadet.
109. Domine, scitne etiam Sulphur aliquid in metallis? Vox: Dixi tibi, quod omnia scit et in metallis multo melius quam alibi. / est cor omnium rerum.
116. candelulae, quas vetulae ad accendendum ignem vulgo vendunt. / elychnia ex sulphure, quo subducuntur fila aut ligna.
130. In Sulphure Philosophorum totum hoc arcanum latet, quod etiam in penetralibus Mercurii continetur.
133. Caput eius vivit in aeternum et ideo caput denominatur vita gloriosa, et angeli serviunt ei.
140. Animans autem vis, tanquam mundi glutinum, inter spiritum atque corpus medium est, atque utriusque vinculum, in Sulphure nimirum rubentis atque transparentis olei cuiusdam, veluti Sol in Majore Mundo, et cor Microcosmi.
141. ab omni feculentia terrestri, et cadit Lucifer: hoc est, immunditia et terra maledicta e coelo aureo.
143. pinguedo in cavernis terrae.
146. Res ex qua sunt res est Deus invisibilis et immobilis, cuius voluntate intelligentia condita est, et voluntate et intelligentia est anima simplex, per animam sunt naturae

discretæ, ex quibus generatæ sunt compositæ.

149. Non habet in actu suo finem, quia tingit in infinitum.

170. Idque Philosophi diversimodo indigitarunt, atque Sponso et Sponsæ (quemadmodum etiam Salomon in Cantico Canticorum suo ait) compararunt.

177. Verum Luna, cum infimus sit planetarum, ut matrix concipere fertur virtutes astrorum omnium, rebusque inferioribus deinceps impartiri . . . Luna universas siderum vires . . . gignendis rebus cunctis et potissimum earum seminibus infert inseritque. / . . . etiam in interraneis eiusdem (scl. terræ) visceribus lapidum, metallorum, imo animantium species excitando condendoque.

180. Iste vult concumbere cum matre sua in medio terræ. / Et coelum corporum incorruptibilium et inalterabilium sedes et vas est Luna, quæ humiditati præsidet, aquam et terram repræsentat.

181. Cum autem videris terram sicut nivem albissimam . . . est cinis a cinere et terra extractus, sublimatus, honoratus . . . est quaesitum bonum, terra alba foliata.

182. Primum enim opus ad Album in Domo Lunæ.

188. Sed nescio quæ proprietas . . . et quædam natura inest lumini, quod de ea defluit, quæ humectet corpora et velut occulto rore madefaciat.

191. *πηγή αέναος τοῦ παραδείσου.* / mortalium corporum autor et conditrix / *φυσικὸν* autem, id est crescendi natura, de lunari ad nos globositate perveniunt.

192. *τὴν δε ψυχὴν ἢ σελήνη . . . παρέσχεν εἰς τὴν γένεσιν.*

197. Forsitan vultis videre sacratissimas arbores Solis et Lunæ, quæ annuntient vobis futura.

204. In maris Luna est spongia plantata.

205. Illud vero quod est vapor, vel in eis partibus subtilitas non retinetur nisi a corpore duro . . . et quandoque est lapis qui circumdat substantias velut spongia. / Sol et Luna cum prima aqua calcinantur philosophice, ut corpora aperiantur, et fiant spongiosa et subtilia, ut aqua secunda melius possit ingredi. / Pars superior est anima, quæ totum lapidem vivificat et reviviscere facit. / Zoophyton, neque animal, neque frutex, sed tertiam habet quandam naturam.

208. quod radices suarum minerarum sunt in aëre, et summitates in terra. Et quando evelluntur a suis locis, auditur sonus terribilis, et sequitur timor magnus. Quare vade cito, quia cito evanescunt.

219. Et sicut omnes res fuerunt ab uno, meditatione unius: sic omnes res natae fuerunt ab hac una re, adaptatione. / Pater eius est Sol, mater eius Luna; portavit illud ventus in ventre suo. / Aër mediator inter ignem (= Sol) et aquam (= Luna) per calorem et humiditatem suam. / Aër est vita uniuscuiusque rei. / Natus sapientiæ in aëre nascitur.

220. . . spiritus et anima quando decocti fuerint, in iteratione destillationis, et tunc permiscentur permixtione universali, et unus retinebit alterum et fient unum. Unum in subtilitate et spiritualitate ...
227. Dixit magister noster Belenius Philosophus, ponas lumen tuum in vase vitreo claro et nota quod omnis sapientia mundi huius circa ista tria versatur.
228. Una vero die vocavit me magister meus Bolemus Philosophus et dixit mihi: eja fili, spero te esse hominem *spiritualis intellectus*, et quod poteris pertingere ad gradum supremum sapientiae.
234. Ἑρμῆ κοσμοκράτωρ, ἐγκάρδιε, κύκλε σελήνης, στρογγύλε καὶ τετράγωνε.
239. Ciconia serpentes devorat, carnes eius contra omnia venena valent.
243. Natus est draco in nigredine, et . . . interficit seipsum.
244. Mundi animam praecipue in Sole collocamus.
248. Draco non moritur nisi cum fratre suo et sorore sua.
253. intellectum qui actu est, Lunam eum, qui est potentia.
258. Hinc illud Chaldaeorum: Vas tuum inhabitant bestiae terrae, et apud Platonem in republica discimus habere nos domi diversa genera brutorum.
260. Et lunari certe semicirculo (☾) ad solare (☉) complementum perducto: Factum est vespere et mane dies unus. Sit ergo primus, quo lux est facta Philosophorum.
261. Lunam terram statuimus infimam ignobilissimamque omnium siderum, uti est terra omnium elementorum opacitate, itidem substantiae et maculis illi persimilem.
262. Lunam quidem scimus omnibus inferiorem.
270. Luna enim est umbra Solis, et cum corporibus corruptibilibus consumitur et per ipsius corruptionem . . . Leo eclipsatur.
271. Et sicut aetheris et aëris: ita divinorum et caducorum luna confinium est.
272. A luna deorsum natura incipit caducorum, ab hac animae sub numerum dierum cadere et sub tempus incipiunt. . . . Nec dubium est, quin ipsa sit mortalium corporum et autor et conditrix.
274. Secunda empirica (metodica) i.e. experientissima inventa est ab Esculapio.
276. . . . quod fieri dicunt, cum Lunae lumen incipit crescere, usque ad quintam decimam Lunam, et rursus ad tricesimam minui, et redire ad cornua, donec nihil penitus lucis in ea appareat. Secundum hanc opinionem Luna in allegoria . . . significat ecclesiam, quod ex parte quidem spirituali lucet ecclesia, ex parte autem carnali obscura est.
280. mitis electis, terribilis reprobis, pastor verus. / vel qui alii hujus gregis canes vocantur, nisi doctores sancti?
283. [Hermes] dixit: Fili, accipe canem masculum Corascenen et caniculam Armeniae, et iunge in simul, et parient canem coloris coeli, et imbibe ipsum una siti ex aqua

maris: quia ipse custodiet tuum amicum et custodiet te ab inimico tuo et adiuvabit te ubicunque sis, semper tecum existendo in hoc mundo et in alio. Et voluit dicere Hermes, pro cane et canicula, res quae conservant corpora a combustione ignis et eius caliditate.

285. Hali, Philosophus et Rex Arabiae in suo Secreto dicit: Accipe canem coëtaneum, et catulam Armeniae, iunge simul, et hi duo parient tibi filium canem, coloris coelici: et iste filius servabit te in domo tua ab initio in hoc Mundo et in alio.
299. Rumpe ergo domum, frange parietes, purissimum inde extrahe succum cum sanguine; coque ut edere possis. Unde dicit Arnaldus in libro Secretorum: Purga lapidem: tere portam: frange *caniculam*: elige carnem teneram, et habebis rem optimam. In una ergo re omnia membra latent, omnia metalla lucent. Horum duo sunt artifices, duo vasa, duo tempora, duo fructus, duo fines, una salus.
305. Utraque avis volans ad regum mensas et capita salit. / Et venient corvi volantes et cadunt supra illud.
306. Recipe Gallum, crista rubea coronatum et vivum plumis priva.
311. Aquae . . . , quae *Canis Balsami* dicitur, sive lac virginis, aut argentum vivum nostrum, seu anima, aut ventus aut cauda draconis.
315. . . . recipit ille globus carnem, id est coagulationem, et sanguinem, id est tincturam. / Ex his possunt philosophicae transmutationes intelligi: nonne scimus et panis et vini puriorem substantiam in carnem et sanguinem transmutari / Iam suam carnem sanguineam et rubeam tradit omnibus manducandam. / habere scientiam corporis, grossi, turbidi, carnei, quod est pondus naturarum, et pervenit ad animam simplicem.
316. Est enim lapis unus, una medicina, cui nil extranei additur, nec diminuitur, nisi quod superflua removentur. / Unus est lapis, una medicina, unum vas, unum regimen, unaque dispositio.
319. Primum enim opus ad Album in domo Lunae, secundum in secunda Mercurii domo terminari debet. Primum autem opus ad rubeum in secundo Veneris domicilio; postremum vero in altero regali Jovis solio desinet, a quo Rex noster potentissimus coronam pretiosissimis Rubinis contextam suscipiet. / Albus (lapis) in occasu Solis incipit apparere super facies aquarum, abscondens se usque ad mediam noctem et postea vergit in profundum. Rubeus vero ex opposito operatur, quia incipit ascendere super aquas in ortu Solis usque ad meridiem et postea descendit in profundum.
320. Et opus secundum est albificatio et rubificatio, et sapientes haec duo opera in unum contraxerunt. Nam quando loquuntur de uno, loquuntur etiam et de alio, unde diversificantur legentibus eorum scripta.

321. Cur arborem dimisisti narrare, cuius fructum qui comedit, non esuriet unquam? / Dico quod ille senex de fructibus illius arboris comedere non cessat ad numeri perfectionem, quousque senex ille iuvenis fiat. . . . Pater filius factus est.
322. Tibimet, Dei vates, in visione visus es tanquam vitis ampla, universum orbem implens divinis verbis, quasi fructibus. / An ignoratis quod tota divina pagina parabolice procedit? Nam Christus . . . modum servavit eundem et dixit: Ego sum vitis vera.
324. Spagyri . . . ex ipsa Luna oleum eliciunt . . . adversus morbum caducum, omnesque cerebri affectus.
326. *Μανίας περιπίπτουσιν ἄλλ' οὐ νοῖ.*
329. In philosophica Mercurii sublimatione sive praeparatione prima Hercules labor operanti incumbit . . . limen enim a cornutis belluis custoditur . . . earum ferocitatem sola Dianae insignia et Veneris columbae mulcebunt, si te fata vocant.
335. Claves habet ad carceres infernales, ubi sulphur ligatum iacet.
337. *Ψυχὴ . . . ἔλαφον (ἐλάφου Miller) μορφὴν περικειμένη κοπιᾷ θανάτῳ μελέτημα (θανάτου μελέτησι Diels) κρατουμένη.*
350. Columba fuit Dominus Jesus . . . dicens Pax Vobis . . . En Columba, en oliva virens in ore. / Unde Propheta exclamat: Quis dabit mihi pennas [sic] ut columbae, videlicet cogitationes contemplationesque immaculatas ac simplices.
358. Ego sum illuminans omnia mea et facio lunam apparere patenter de interiore de patri meo Saturno et etiam de matre dominante, quae mihi inimicatur.
360. matrem et uxorem solis, quae foetum spagiricum a sole conceptum in sua matrice uteroque vento gestat in aëre.
369. . . . cum hac tinctura vivificantur omnes mortui, ut semper vivant, et hoc est fermentum primum elementatum, et est ad Lunam, et hoc est lumen omnium luminum, et est flos et fructus omnium luminum, quod illuminat omnia.
370. Primum namque aqua destillata pro Luna aestumatur: Sol enim, tamquam ignis, in ea occultatus est.
379. Quartus est Infemalis intelligibili oppositus, ardoris et incendii absque ullo lumine.
383. Sal autem reperitur in nobili quodam Sale et in rebus omnibus; quo circa veteres Philosophi illud vulgarem Lunam appellarunt.
384. (Deum habere) circa se ipsum amorem. Quem alii spiritum intellectualem asseruere et igneum, non habentem formam, sed transformantem se in quaecumque voluerit, et coequantem se universis. . . . Unde rite per quandam similitudinem animae naturae Deum aut Dei virtutem, quae omnes res sustinet, Animam mediam naturam, aut animam Mundi appellamus.

397. Primo fit cinis, postea sal, et de illo sale per diversas operationes Mercurius Philosophorum.
404. Qui non gustaverit saporem salium, nunquam veniet ad optatum fermentum fermenti.
410. Alexander Magnus, Macedoniae Rex, ad nos, in Philosophia sua ita ait: Benedictus Deus in coelo siet, qui artem hanc in Sale creavit.
425. (In initio) Sal est nigrum ferme ac foetidum.
- 441.
- Est lapis occultus, et in imo fonte sepultus,
Vilis et eiectus, fimo vel stercore tectus ...
Et lapis hic avis, et non lapis, aut avis hic est ...
... nunc spuma maris vel acetum,
....
Nunc quoque gemma salis, Almisadir sal generalis
....
Nunc mare purgatum cum sulphure purificatum ...
445. . . . cuius collum aureus fulgor, reliquum corpus purpureus color in pennis cinxit.
451. Ad hoc, scl. (corpus) spirituale, ignis, ad illud vero scl. corruptibile Sal refertur.
453. Profundum maris sedem intelligamus inferni.
462. Diabolus maria undique circumdat et undique pontum.
463. (imaginationis) res amaras ut lachrymas, tristitiam et vermem conscientiae.
464. Gustus torquebitur perpetua fame sitique rabiosa, in quarum levamen dabitur miseris Damnatis pro cybo absynthium, pro potu autem aqua fellis.
466. Mare Rubrum significat Baptismum.
467. Mare rubrum est baptismus sanguine Christi rubicundus, in quo hostes scl. peccata, merguntur.
479. Melius est gaudere in opere, quam laetari in divitiis sive virtuoso labore.
509. Ibi Oryx in summo aestu sitibunda lachrymis quasi effusis et gemitibus iteratis ardorem solis detestari traditur.
510. Res, cuius caput est rubeum, oculi nigri et pedes albi, est magisterium.
516. Tum tua res agitur, paries cum proximus ardet.
518. Fenix arabie avis dicta quod colorem fenicium habeat et quod sit in toto orbe singularis et unica.
519. Quem tu hic quaeris, inquit, peregrine? Ad virginem non licitum est viro appropinquare.

529. Doceat nos haec avis vel exemplo sui resurrectionem credere. / Cur igitur Judaei iniqui, Domini nostri Jesu Christi triduanam resurrectionem non crediderunt, cum avis trium dierum spatio seipsam suscitaret?
532. Sapiens, pennas cui dabis, oro, tuas.
533. Divitiae cedant et opes, huic cedat et aurum, cui mens non eadem, non homo, sed pecus est.
540. Pater ejus est Sol, mater ejus Luna; portavit illud ventus in ventre suo; nutrix ejus terra est.
Vis ejus integra est, si versa fuerit in terram.
Ascendit a terra in coelum, iterumque descendit in terram et recipit vim superiorum et inferiorum. Sic habebis gloriam totius mundi.
550. Draco mulierem et haec illum interimit, simulque sanguine perfunduntur.
552. Aenigmate hoc olim involutum est a Philosophis: fac fixum, inquiunt, volatile, et rursus volatile fixum, et totum habebis magisterium.
553. Nemo enim ascendit in caelum, quod quaeritis, nisi qui de caelo (quod non quaeritis) descendit, illuminet eum.
555. Disce ex te ipso, quicquid est et in caelo et in terra, cognoscere, ut sapiens fias in omnibus. Ignoras caelum et elementa prius unum fuisse, divino quoque ab invicem artificio separata, ut et te et omnia generare possent? Si hoc nosti, reliquum et te fugere non potest, aut ingenio cares omni. Rursus in omni generatione, separatio talis est necessaria, qualem de te supra dixi fiendam, antequam ad verae philosophiae studia velum applices. Ex aliis nunquam unum facies quod quaeris, nisi prius ex te ipso fiat unum.
556. Simul descensus in quatuor et ascensus ad monadem. / Decoquendus igitur, assandus, et fundendus: ascendit atque descendit, quae quidem operationes omnes unica sunt igne solo facta (operatio).
557. Lapis noster transit in terram, terra in aquam, aqua in aerem, aer in ignem, ibi est status, sed descendetur e converso.
559. Hac similitudine tibi satisfaciam: Filius Dei delapsus in virginem ibique caro figuratus homo nascitur, qui cum nobis propter nostram salutem veritatis viam demonstrasset, pro nobis passus et mortuus, post resurrectionem in coelos remeant. Ubi terra, hoc est humanitas, exaltata est, super omnes circulos mundi, et in coelo intellectuali sanctissimae Trinitatis est collocata.
570. Dehinc (animam) descendentem per quosdam circulos a principatibus malignis capi et secundum voluntatem victoris principis in corpora diversa contrudi eisque adscribi chirographum.

578. Itaque vocatus sum Hermes Trismegistus, habens tres partes Philosophiae totius mundi.
580. Vis eius integra est, . . . si versa fuerit in terram.
584. Nam serpentes ideo introrsum spectantia capita habent ut significant inter se legatos colloqui et convenire debere . . . Unde enim . . . legati pacis caduceatores dicuntur . . . Quibus caduceis duo mala adduntur unum Solis aliud Lunae . . . Mercurius haec tam fera animalia concordat, nos quoque concordare debere certum est. / Alii Mercurium quasi medicurrium a latinis dictum volunt, quod inter coelum et inferos semper incurrat . . . Caduceus illi adeo adsignatur, quod fide media hostes in amicitiam conducit. / Perfacile is discordes animos in concordiam trahet, duosque angues, hoc est odia mutua, doctrinae suae virgâ in unum obligabit.
585. Primo regnat Saturnus in nigredine.
587. Ut per solutionem corpora solvuntur, ita per cognitionem resolvuntur philosophorum dubia.
595. Laton autem est immundum corpus.
597. Laton est ex Sole et Luna compositum corpus imperfectum citrinum; quod cum dealbaveris et . . . ad pristinam citrinitatem perduxeris, habes iterum Latonem . . ., tunc intrasti ostium, et habes artis principium.
600. Azoth et ignis latonem abluunt, et nigredinem ab eo auferunt.
601. Ignis et aqua latonem abluunt et eius nigredinem abstergunt.
602. *θεωρῶν ἐν μέσῳ τῶν ρείθρων τόν ποτε
παίδων τριῶν μέσον θανέντα δρόσον ἐν
πυρὶ νῦν πῦρ ἐν τῷ Ἰορδάνῃ λάμπρον κτλ.*
603. Et si in fonte auri et argenti *baptisati* fuerimus et spiritus corporis nostri cum patre et filio in coelum ascenderit, et descenderit, animae nostrae reviviscent, et corpus meum animale candidum permanebit, scl. Lunae.
604. Quando autem baptizat tunc infundit animam.
608. *Ἐν γὰρ τῷ Ἄδῃ κατάκλεισον αὐτά / ἐν τῷ Ἄδῃ κλείσατε αὐτά /
πιτρώσκουσιν αὐτὴν κλύδωνες . . . ἐν τῷ Ἄδει καὶ ἐν τῷ τάφῳ ἐν ᾧ
κατάκεινται. Ὄταν δὲ ἀνεωχθῇ ἡ τάφος, ἀναβήσονται αὐτὰ ἐξ Ἄδου ὡς
οἷα βρέφος ἐκ γαστροῦ.*
609. *Τὸ σωτήριον ἐκείνο ὕδωρ καὶ τάφος ὑμῖν ἐγένετο καὶ μήτηρ.*
610. Aqua velut morientem deducit in tumulum: spiritus sanctus velut resurgentem perducit ad caelum.
615. *ἀετὸς χαλκοῦς κατερχόμενος ἐν πηγῇ καθαρᾷ καὶ λουόμενος καθ' ἡμέραν
ἐντεῦθεν ἀνανεούμενος.
ἐγὼ φυτὸν ὄνομα βαίτις, ἐγὼ ἀπόρροια αἵματος . . . ὃ ἐκπεφυκὼς ἐκ τοῦ
Βυθοῦ . . ., ἐγὼ εἶμι τὸ ἱερὸν ὄρνεον Φοῖνιξ . . ., ἐγὼ εἶμι ὁ Ἥλιος*
616. *. . . ἐγὼ εἶμι Ἀφροδείτη . . . ἐγὼ εἶμι Κρόνος, ὃ δεδειχὼς φῶς . . .
ἐγὼ εἶμι Ὅσιρις ὃ καλούμενος ὕδωρ, ἐγὼ εἶμι Ἴσις ἢ καλουμένη δρόσος,
ἐγὼ εἶμι Ἡσενεφυς ἢ καλουμένη ἔαρ.*

619. Terra alba foliata est corona victoriae, quae est cinis extractus a cinere, et corpus eorum secundum.
626. lapis albus, sol albus, Luna plena, terra alba fructuosa, mundificata et calcinata.
633. *σώματα ὄντα πνεύματα γίνονται, ἵνα ἐν τῇ κατάβαφῇ τοῦ πνεύματος βάψει.*
640. Sale et facetiis Caesar . . . vicit omnes.
642. Sal est in se uno continens aquae et ignis elementum; et hoc ex duobus est unum.
661. *Τοσαύτη κλείς λόγου τῆς ἐγκυκλίου τέχνης ἢ σύνοψις.* / Quanto magis libros legebam, tanto magis mihi illuminabatur.
680. O aquam in acerba specie, quae tu elementa conservas! o naturam vicinitatis, quae tu naturam solvis! o naturam optumam, quae tu naturam ipsam superas! . . cum lumine coronata et nata es . . . et quinta essentia ex te orta est.
682. O aquam in amara acerbaque specie! Durum enim difficileque cui vis, ut fontem illum inveniat.
688. Quae cum ita sint, satis erit humano ingenio post lucem fidei, Divinae maiestatis veluti refractos radios in mundo, et rebus creatis agnoscere.
689. Esse in Chemia nobile aliquod corpus . . . in cuius initio sit miseria cum aceto, in fine vero gaudium cum laetitia, ita et mihi eventurum praesupposui, ut primo multa aspera, amara, tristia, taediosa gustarem, perferrem et experirer, tandem omnia laetiora et facilia visurus essem.
691. *ὁ καθολικὸς ὄφεις, φησὶν, οὗτός ἐστι ὁ σοφὸς τῆς Εὐας λόγος.*
692. Pater omnis telesmi est hic.

IV. REX AND REGINA

5. . . . occidit Osirim artuatimque laceravit et per omnes Nili fluminis ripas miseri corporis palpitantia membra proiecit. / Nam Liberum ad Solem volunt referre commenta Graecorum etc. . . . qui vidit puerum solem? quis fefellit? quis occidit? quis laceravit? quis divisit? quis membris ejus epulatus est? . . . sed et errorem istum physica rursum volunt ratione protegere: indivisam mentem et divisam, id est *τόν ἀμέριστον καὶ τόν μεμερισμένον νοῦν*, hac se putant posse ratione venerari.
13. *Εἰς Βαίτ, εἰς Ἀθώρ μία τῶν βία, εἰς δὲ Ἀκῶρι, χαῖρε πάτερ κόσμου, χαῖρε τρίμορφε θεός.*
17. *Βίβλος ἀληθῆς Σοφε Αἰγυπτίου καὶ θείου Ἑβραίων κυρίου τῶν δυναμέων Σαβαωθ.*
- 21.

Hostes meos omnes superavi et vici,
 Venenosumque draconem pedibus meis subegi,
 Sum Rex eximius et dives in terris

.....

Hinc mihi Hermes nomen *sylvarum domini* tribuit.

25. Inquiunt quidam, venerare humiditates, reges namque sunt magnanimi iniuriam non patientes, parce ergo eis et eorum capta benevolentiam, et suis oculis tibi dabunt, ut quodvis ab eis habebis.
27. Denique . . . videbis Lapidem Philosophicum Regem nostrum et Dominum Dominantium, prodire ex sepulchri vitrei sui thalamo ac throno in scenam mundanam hanc . . . clamantem: Ecce, Renovabo omnia.
28. Ihsuh Christi crucifixi, Salvatoris totius generis humani, id est Mundi minoris, in Naturae libro, et ceu Speculo, typus est, Lapis Philosophorum, Servator Mundi maioris.
37. Et scito quod aqua est quae occultum extrahit.
41. Cave ab hydropisi et diluvio Noe.
42. Equorum venter secretum est maximum: in hoc se abscondit noster hydropicus, ut sanitatem recuperet et ab omni aqua ad solem se exoneret.
43. Ita senex in balneo sedet, quem in vase optime sigillato et clauso contine, quoad Mercurius visibilis invisibilis fiat et occultetur.
45. Et ad Naaman dictum est: Vade et lavare septies in Jordano et mundaberis. Nam ipse est unum baptisma in absolutionem peccatorum.
46. O benedicta aquina forma pontica, quae elementa dissolvit.
50. . . . igitur homo, caelum, et terra unum sunt, etiam aer et aqua. Si homo res in maiori mundo transmutare novit . . . quanto magis id in microcosmo, hoc est in se ipso noverit, quod extra se potest, modo cognoscat hominis in homine thesaurum existere maximum, et non extra ipsum.
53. Nemo creatorem poterit melius cognoscere quam ex opere noscitur artifex.
69. Masculus autem est, qui sine alis existit sub foemina, foemina vero habet alas. Propterea dixerunt: Proiicite foeminam super masculum et ascendet masculus super foeminam.
73. Haec petra nisi fuerit percussa aquas non dabit.
74. Sonora vox, suavis et grata philosophantium auribus. O fons divitiarum inexhaustibilis veritatem et iustitiam sitientibus! O desolatorum imperfectioni solatium! Quid ultra quaeritis mortales anxii? cur infinitis animos vestros curis exagitatis miseri? quae vestra vos excaecat dementia quaeso? cum in vobis, non ex vobis sit omne quod extra vos, non apud vos quaeritis.

75. Paradisum ipsum non terrenum videri posse, non in solo aliquo, sed in nostro principali, quod animatur et vivificatur animae virtutibus, et infusione spiritus Dei.
84. Antiquus dierum cum sua celsitate habitavit, ut infans, in utero.
85. Puerulus tuus senex est, o virgo, ipse est Antiquus dierum et omnia praecessit tempora.
95. assimilavit subtilitatem caloris ignis, gressui piaie matris super ventrem filii sui.
102. Illa res . . . passim apparere colores facit. / hic est igitur lapis, quem omnibus nuncupavimus nominibus, qui opus recipit et bibit, et ex quo omnis color apparet. / Omnes Mundi colores manifestabuntur.
104. Dum autem Quinta Essentia in terra est, id in multiplicibus coloribus contrarii splendoris Solis cognoscis, quemadmodum cernis in Iride dum Sol per pluviam splendet.
105. *Τὴν κόρην τοῦ ὀφθαλμοῦ παραφέρει καὶ τὴν ἴριν τὴν οὐρανίαν.*
112. Qui animam meam levaverit, eius colores videbit.
116. Oro ex toto corde Misericordiam tuam, ut mittas mihi de caelis sanctis tuis Ruach Hhochmah-El, Spiritum Sapientiae tuae, qui mihi familiaris semper adsistat, me dextre regat, sapienter moneat, doceat; mecum sit, Oret, Laboret; mihi det bene velle, nosse, esse et posse in Physicis, Physicomedicis.
122. Hic sigillata mater in infantis sui ventre surgit et depuratur, ut ob tantam . . . puritatem putredo hinc exulet . . . Jam scias Virginem nostram terram ultimam subire cultivationem, ut in ea fructus Solis seminetur ac maturetur . . .
125. Quae tamen omnia bonum praenunciant indicium: quod videlicet tam bene vexatus homo tandem aliquando beatum exoptatumque exitum consecuturus siet: quemadmodum et ipsa SS. scriptura testis est, in qua (2 Tim. 3, Act. 4) legitur, quod videlicet omneis, qui beate in Christo Jesu vivere velint, persecutionem pati cogantur, quodque nos, per multas tribulationes et angustias, regnum coelorum ingredi necessum habeamus.
128. Foenix dicitur rubeus, et est Christus, de quo dicitur: Quis est iste, qui venit de Edom tinctis vestibibus de Bosra. / Quare ergo rubrum est indumentum tuum et vestimenta tua sicut calcantium in torculari? / Edom quod dicitur rufus, est Esau appellatus, propter rufum pulmentum quo a fratre suo Jacob est cibatus. / Tertia die avis reparatur, quia Christus tertia die suscitatur a Patre.
129. *Ἦ ὡς ὤν ταοῦ ἔχον ἐν ἑαυτῷ τὴν τῶν χρωμάτων ποικίλην πληθύν.*
131. Et certe solitudo, unicum conservandi spiritualis animi remedium amplissimam internae felicitatis occasionem praebet.
134. Si autem mortuus fuerit pavo, non marcescit eius caro nec foetidum dat odorem, sed manet tamquam condita aromatibus.

136. Hermes Princeps.—Post tot illata generi humano damna, Dei consilio: Artis que adminiculo, medicina salubris factus heic fluo.—Bibat ex me qui potest; lavet qui vult; turbet qui audet; bibite fratres et vivite.
138. totum elixir albedinis et rubedinis, et est aqua permanens, et aqua vitae et mortis, et lac virginis, herba ablutionis—et est fons animalis: de quo qui bibit, non moritur, et est susceptivum coloris et medicina eorum, et faciens acquirere colores, et est illud quod mortificat, siccatur et humectat, calefacit et infrigidat et facit contraria. / Et ipse est Draco, qui maritat se ipsum et impraegnat seipsum et parit in die suo, et interficit ex veneno suo omnia animalia. / Accede Corpus ad fontem hunc, ut cum tua Mente bibas ad satietatem et in posterum non sitias amplius vanitates. O admiranda fontis efficacia, quae de duobus unum, et pacem inter inimicos facit! Potest amoris fons de spiritu et anima mentem facere, sed hic de mente et corpore *virum unum* efficit. Gratias agimus tibi Pater, quod filios tuos inexhausti virtutum fontis tui participes facere dignatus sis. Amen.
148. Alii appellaverunt hanc terram Leonem viridem fortem in praelio; Alii draconem devorantem, congelantem vel mortificantem caudam suam.
150. Sed nullum corpus immundum ingreditur, excepto uno, quod vulgariter vocatur a philosophis Leo viridis.
151. quia depopulata (terra) est a suis spiritibus.
155. Qui sui ipsius spiritus tam multa devorat.
156. In Leone nostro viridi vera materia . . . et vocatur Adrop, Azoth, aut Duenech viride.
173. . . . lapidem, quem qui cognoscit, ponit illum super oculos suos.
178. Dixit enim ei mater sua: O Marchos, oportet ne hunc ignem esse leviolem calore febris? Dixit ei Marchos, o mater, fiat in statu febris. Revertor et accendo illum ignem.
189. Venus autem, cum sit orientalis, Solem praecedit.
193. Igneque debito videbis Emblema Operis magni, nempe nigrum, caudam pavonis, album, citrinum, rubeumque.
204. Et nota quod natura in principio suae originis intendit facere Solem vel Lunam, sed non potest propter Venerem, corruptum argentum vivum, commistum, vel propter terram foetidam, quare sicut puer in ventre matris suae ex corruptione matricis contrahit infirmitatem et corruptionem causa loci per accidens, quamvis sperma fuerit mundum, tamen puer sit leprosus et immundus causa matricis corruptae, et sic est de omnibus metallis imperfectis, quae corrumpuntur ex Venere, et terra foetida.
205. Leonem tuum in oriente quaeras, et aquilam ad meridiem in assumptum hoc opus nostrum . . . tuum iter ad meridiem dirigas oportet; sic in Cypro votum

consequeris, de quo latius minime loquendum.

210. Completur rosa alba tempore aestivali in Oriente.

213. . . . quomodo hortus aperiendus, et rosae nobiles in agro suo conspiciendae sient.

218. Antichristus in magna Babylonia de meretrice generis Dan nascetur. In matris utero diabolo replebitur et in Corozaim a maleficis nutrietur.

219.

Ut rosa per medias effloret roscida spinas,
sic Veneris nunquam gaudia felle carent.

220. Et ita tandem, in unum contentum corruat imbibendo cum uno fermento, id est aqua una, quia aqua est fermentum aquae.

221. *Πρῶτος αὐτὸς τοῦτο ἐποίησεν ἐνάγων αὐτοὺς ἀταράχως εἰς τὴν κοινωνίαν τῶν μυστηρίων· Διὰ τοῦτο τὸ ἑαυτοῦ αἷμα αὐτὸς ἔπιεν.*

222. Sic et duas Graeciae litteras, summam et ultimam, sibi induit Dominus, initii et finis concurrentium in se figuras uti quemadmodum A ad Ω usque volvitur (Apoc. I, 8) et rursus Ω ad A replicatur, ita ostenderent in se esse et initii decursum ad finem et finis recursum ad initium, ut omnis dispositio in eum desinens per quem coepta est.

224. Quicumque Chemicam artem addiscere vult, philosophiam, non Aristotelicam, sed eam quae veritatem docet, addiscat . . . nam eius doctrina tota consistit in amphibologia, quae mendaciorum optimum est pallium. Cum ipse Platonem, et reliquos reprehendisset, quaerendae famae gratia, nullum potuit commodius instrumentum reperisse, quam idem, quo in reprehendendo fuerat usus, amphibologico sermone scilicet, scripta sua contra sinistram oppugnantem, dextro subterfugio salvans, et e contra; quod Sophismatis genus in omnibus eius scriptis videre licet.

250. Quod cum cognovisset bonus pater tenebras ad terram suam supervenisse, produxit ex se virtutem, quae dicitur mater vitae, qua circumdedit primum hominem, quae sunt quinque elementa, id est ventus, lux, aqua, ignis et materia, quibus indutus, tamquam ad adparatum belli, descendit deorsum pugnare adversum tenebras.

263. Deinde fermentum tangit cum corpore imperfecto praeparato, ut dictum est, quousque fiant unum corpore, specie et aspectu et tunc dicitur Ortus; quia tunc natus est lapis noster, qui vocatus est rex a Philosophis, ut in Turba dicitur: Honorate regem nostrum ab igne venientem, diademate coronatum.

264. . . . quare signo ilium notabili notavit Omnipotens, cuius nativitas per Orientem in Horizonte Hemisphaerii sui philosophicum annunciat. Viderunt Sapientes in Evo Magi et obstupuerunt statimque agnoverunt Regem serenissimum in mundo natum. Tu, cum eius Astra conspexeris, sequere ad usque cunabula, ibi videbis infantem pulcrum, sordes semovendo, regium puellum honora, gazam aperi, auri donum

offeras, sic tandem post mortem tibi carnem sanguinemque dabit, summam in tribus Terrae Monarchiis medicinam.

265. Et videatis iksir vestitum regni vestimento.
266. Lapis Philosophorum est rex de coelo descendens, cuius montes sunt argentei rivuli aurei et terra lapides et gemmae pretiosae.
268. Quod infunditur anima corpori, et nascitur Rex coronatus. / Ego coronor, et diademate ornor, et regiis vestibus induor: quia corporibus laetitiam ingredi facio. / Cinerem ne vilipendas, quia Deus reddet ei liquefactionem et tunc ultimo Rex diademate rubeo divino nutu coronatur. Oportet te ergo hoc magisterium tentare.
272. Proiice ergo supra quodvis corpus, et ex eo tantum quantum vis, quoniam in duplo multiplicabitur Tinctura eius. Et si una pars sui primo convertit cum suis corporibus centum partes; secundo convertit mille. Tertio decem millia, quarto centum millia; quinto mille millia in solificum et lunificum verum.
277. Et quamvis exanimis ipse philosophicorum Rex videatur, tamen vivit et ex profundo clamat: Qui me liberabit ex aquis et in siccum reducet, hunc ego divitiis beabo perpetuus. Hic clamor etsi audiatur a multis, nulli tamen eius commiseratione ducti, quaerere regem subeunt. Quis enim, inquit, se demerget in aequor? Quis suo praesentaneo periculo alterius periculum levabit? Pauci sunt eius lamentationi creduli et putant vocem auditam esse Scillae et Charybdis resonos fragores et boatus. Hinc ociosi sedent domi nec regiam gazam, ut nec salutem curant.
280. Verum philosophorum antimonium in mari profundo, ut regius ille filius demersum delitescit.
289. Plumbum vexationes et molestias significat, per quas Deus nos visitat et ad resipiscentiam reducit. Quemadmodum enim plumbum omnes metallorum imperfectiones comburit et exterminat, unde Boethus Arabs illud aquam sulphuris vocat, ita quoque tribulatio in haec vita multas maculas, quas contraximus, a nobis abstergit: unde S. Ambrosius illam clavem coeli appellat.
291. Ex ossibus deinde et medullis eius nasci primo ceu vermiculum, inde fieri pullum.
301. Hic enim dum nascitur, rerum vicissitudo fit et innovatio.
306. Phoenix avis pavone pulchrior est; pavo enim aureas argenteasque habet alas; Phoenix vero hyacinthinas et smaragdinas, preciosorumque lapidum coloribus distinctas; coronam habet in capite.
316. Ascendit per se, nigrescit, descendit et albescit, crescit et decrescit . . . nascitur, moritur, resurgit, postea in aeternum vivit.
319. Eptacephalus draco, princeps tenebrarum, traxit de coelo cauda sua partem stellarum et nebula peccatorum eas obtexit, atque mortis tenebris obduxit.

335. *σκόληξ καὶ οὐκ ἄνθρωπος, ὄνειδος ἀνθρώπου καὶ ἐξουθένημα λαοῦ* αὐτός ἐστιν ὁ βασιλεὺς τῆς δόξης, ὁ ἐν πολέμῳ δυνατός.*
351. Nam requiei aditus nimis est coarctatus, neque ad illam quisquam potest ingredi, nisi per animae afflictionem.
352. Esse in Chemia nobile aliquod corpus, quod de domino ad dominum movetur.
361. quod vocat Plato intelligibile non sensibile. / Simplex est pars inopinabilis / est unius essentiae / Opus non perficitur nisi vertatur in simplex. / Conversio elementorum ad simplex. / Homo est dignior animalium et propinquior simplici et hoc propter intelligentiam.
362. Eiusque (veritatis) talem esse virtutem compererunt, ut miracula fecerit.
366. . . . ad amussim studeat centrum cognoscere ac scire, eoque se totum conferat, et centrum liberabitur ab omnibus imperfectionibus et morbis, ut ad prioris monarchiae statum restituatur.
- 367a. Accipite spiritum nigrum veterem, et eo corpora diruite et cruciate, quousque alterantur.
368. Irritate bellum inter aes et argentum vivum, quoniam peritum tendunt et corrumpuntur prius. / Inter ea pugnam irritate aerisque corpus diruite, donee pulvis fiat.
369. Diabolum ista in caelum erexisse decidens ac deiectus ab eo, nec non illa postmodum in mentem humanam infigere conatum fuisse, videlicet ambitionem, brutalitatem, calumniam, et divortium.
370. Homo a Deo in fornacem tribulationis collocatur et ad instar compositi Hermetici tamdiu omnis generis angustiiis, diversimodisque calamitatibus et anxietatibus premitur, donec veteri Adamo et carni (Ephes. 4) siet mortuus et tamquam vere novus homo . . . iterum resurgat.
373. Per spiritualem istam suam mortem, anima sua omnino eximitur.
380. Postremum vero (opus) in altero regali Jovis solio desinet, a quo Rex noster potentissimus coronam pretiosissimis Rubinis contextam suscipiet, “sic in se sua per vestigia volvitur annus.”
383. Ciconia ibi sedebat, quasi se appellans circulum lunarem.
384. Rex ortus est, id est anima . . . lapidi mortuo infusa est.
395. Haec enim res a te extrahitur; cuius etiam minera tu existis; apud te namque illam inveniunt, et, ut verius confitear, a te accipiunt; quod cum probaveris, amor eius et dilectio in te augebitur. Et scias hoc verum et indubitabile permanere.
411. *ὅταν τὸ τῆς αἰσχύνης ἔνδυμα πατήσητε, καὶ ὅταν γένηται τὰ δύο ἐν καὶ τὸ ἄρρεν μετὰ τῆς θηλείας οὔτε ἄρρεν οὔτε θῆλυ.*
412. Confert enim Deus hanc divinam et puram scientiam suis fidelibus et servis illis scilicet quibus eam a primaeva rerum natura conferre disposuit . . . Nam haec res

nihil nisi donum Dei altissimi (esse) potest; qui prout vult, et etiam cui vult, ex suis servis et fidelibus illud committit, et monstrat . . . Prae ponit enim Dominus ex suis servis quos vult et eligit, ut hanc scientiam divinam homini celatam quaerant, et quaesitam secum retineant.

413. Dicit enim primus spagirorum Dux: Pulsate et aperietur vobis.
414. Nam evenire quandoque solet, ut post multos annos, labores et studia . . . nonnulli sint electi, multis pulsationibus, orationibus et investigatione sedula praemissis.
416. Sic etiam Iapidis compositum Rex et Regina dicuntur . . . Sic vir et mulier dicuntur Masculus et femina propter copulam videlicet et actionem et passionem. Rosinus: Artis auri arcanum et mare et femina consistit.
420. Quem divus Plato in ignea substantia habitare posuit: intelligens videlicet inenarrabilem Dei in seipso splendorem et circa seipsum amorem.
429. Qui per alienum ingenium et manum mercenariam operatur, aliena a veritate opera videbit. Et vice versa, qui alteri servilem praestat operam, uti servus in arte, nunquam ad Reginae mysteria admittetur.

V. ADAM AND EVE

1. Iste est Philosophorum Mercurius, ille celeberrimus Microcosmus et Adam.
3. Accipe Adam et quod assimilatur Adam, nominasti hic Adam et tacuisti nomen foeminae seu Evae, et non nominans eam, quia scis quod homines qui sunt tui similes in mundo, sciunt quod illud, quod tibi assimilatur, est Eva.
4. Qua propter ingenio et intellectu validissimis adseverarunt suum lapidem esse animale, quem etiam vocaverunt suum Adamum, qui suam invisibilem Evam occultam in suo corpore gestaret ab eo momento, quo virtute summi conditoris omnium unita sunt. Ea de causa merito dici potest, Mercurium philosophorum nihil aliud esse, quam compositum eorum abstrusissimum Mercurium et non vulgarem illum . . . est in Mercurio quicquid quaerunt sapientes . . . lapidis philosophorum materia, nihil aliud est, quam . . . verus hermaphroditus Adam atque microcosmus. / Natura in primis requirit ab artifice, ut philosophicus Adam in Mercurialem substantiam adducatur. / . . . compositio huius sacratissimi Iapidis Adamici, fit ex sapientum Adamico Mercurio.
6. Ecce Adam heic duo sunt, fixatum et constans unum, fugax alterum.
7. Et Adamus erat Dominus, Rex et Imperator.
- 8.

Adam in balneo residebat,

In quo Venus sui similem reperiebat,

Quod praeparaverat senex Draco.

18. Secundus Adam qui dicitur homo philosophicus.
19. Ex quatuor autem elementis pater noster Adam et filii eius . . . creati sunt.
26. (Deus) incepit autem colligere pulverem primi hominis e quatuor terrae angulis, videlicet rubrum, nigrum, album et viridem. Ruber pulvis factus est sanguis, niger fuit pro visceribus, albus pro ossibus et nervis, viridis factus est corpus.
33. Scivit enim per ternarium Adami non patere potuisse aditum unario protegente ternarium, binarium igitur Evae tentavit ingredi.
34. . . . item non ignoravit Evam a viro suo divisam tanquam naturalem binarium ab unario sui ternarii.
36. Nam Elementa circularia sunt, ut Hermes sentit, quodlibet a duobus aliis circumdatur, cum quibus convenit in una qualitatibus ipsorum sibi appropriata, uti est terra inter ignem et aquam, participans de igne in siccitate, et de aqua in frigiditate. Et sic de caeteris.
37. Homo igitur, qui magni mundi est imago, et hinc microcosmus seu parvus mundus vocatus (sicut mundus ad archetypi sui similitudinem factus, et ex quatuor elementis compositus, magnus homo appellatur) etiam suum coelum et terram habet. Nam anima et intellectus sunt ejus coelum; corpus vero et sensualitas ejus terra. Adeo ut coelum et terram hominis cognoscere, idem sit quod plenam et integram totius mundi et rerum naturalium cognitionem habere.
47. In Adamo ergo protoplaste . . . continebantur omnes illae notiones sive Species supradictae a Psyche factiva usque ad singularitatem emanativam.
50. Deinde caput, manus et pedes (leonis) colligo, et calefacio eis aquam extractam a cordibus statuarum ex lapidibus albis et citrinis, quae cadit de coelo tempore pluviae.
52. Laudanum autem barbae eius, i.e. mumia vel ysopos aut sudor.
53. Universae creaturae fundamenta . . . contineantur in . . . Radicali humido, Mundi semine, Mumia, Materia prima.
55. Et ideo per ablutionem aquae et desiccationem ignis semper extrahis oleum a corde statuarum. / Hoc oleum est tinctura, aurum et anima, ac philosophorum unguentum. / Illud oleum seu aqua divina . . . et vocatur *Mediator*.
61. Faciebant autem in iis (statuis) cum ostia, tum concavitates, quibus deorum quos colebant, simulacra imponebant. Apparebant itaque viles eiuscemodi statuae Mercuriales, sed intra se deorum ornamenta (καλλωπισμούς) continebant.
65. proiiciet semen suum supra marmorem in simulachrum.

67. Duo Adam efficiuntur: unus, pater noster, in mortem, quia mortalis factus est, peccans: secundus, pater noster, in resurrectionem, quoniam immortalis cum esset, per mortem devicit mortem atque peccatum. Primus Adam, hic, pater: posterior illic, etiam primi Adam est pater.
68. Restat nunc pars altera philosophicae praxeos, longe quidem difficilior, longe sublimior. In quo omnes ingenii neruos, omnia denique mentis curricula multorum philosophorum elanguisse legimus. Difficilius et enim hominem faceres reviviscere, quam mortem oppetere. Hic Dei petitur opus: Maximum quidem mysterium est creare animas, atque corpus inanime in statuam viventem confingere.
70. . . . et ita dimittitur magnus ille ignis qui mundum consumat universum; deinde iterum demittunt animam, quae obicitur inter medium novi saeculi, ut omnes animae peccatorum vinciantur in aeternum. Tunc autem haec fient, cum statua venerit.
78. Nunc de igne terreno ad coelestem ut ascendamus, qui est sol, mundi sensibilis oculus et cor, et Dei invisibilis imago. S. Dionysius manifestam et claram Dei statuam illum vocat.
79. *(ἡλιος) ἡ τῆς θείας ἀγαθότητος ἐμφανῆς εἰκὼν. / "Ἡλιος ἐν τύπῳ θεοῦ ἐστὶν ἡ δὲ σελήνη ἀνθρώπου.*
82. (filius) Clarissimum est, quod ad Tiphereth pertineat.
83. Matris quoque nomine appellatur Malchuth, quia mater est omnium sub ipsa existentium usque ad finem totius Abyssis.
84. Pulchritudo eius (solis) cum sponso ex camera sua nuptiali prodeunte comparata. Et ipse tanquam sponsus procedens de thalamo suo.
85. Procedit Christus quasi sponsus de thalamo suo; praesagio nuptiarum exiit ad campum saeculi; cucurrit sicut gigas exsultando per viam: pervenit usque ad crucis thorum, et ibi firmavit ascendendo conjugium; ubi cum sentiret anhelantem in suspiriis creaturam, commercio pietatis se pro conjugio dedit ad poenam. Tradidit quoque carbunculum, tanquam sui sanguinis gemmam, et copulavit sibi perpetuo jure matronam. 'Aptavi vos,' inquit Apostolus, 'uni viro virginem castam exhibere Christo.'
88. Latere in antimonio plus virtutis medicinalis quam in ullo alio simplici ideoque etiam plus virtutis tingentis seu tincturae.
89. Et ideo dicitur quod lapis in quolibet homine. Et Adam portavit secum de paradiso, ex qua materia in quolibet homine lapis noster vel Elixir eliciatur.

100. Adam tradidit Enocho, qui introductus in mysterium embolysmi intercalavit annum.
101. Dixit Adam: hae sunt tabulae, quibus inscripturus est Sanctus benedictus digito suo.
103. Mundum per aquam esse renovandum vel potius castigandum, pauloque minus quam delendum.
119. Decem circulos a se invicem disiunctos complectebatur alter circulus, qui huius universitatis anima esse ferebatur, et cuius nomen erat Leviathan.
120. In eodem (diagrammate) reperi eum, qui vocatur Beemoth sub infimo circulo collocatum. Leviathanis nomen ab impii diagrammatis auctore bis erat scriptum, in superficie scl. et in centro circuli.
121. Animam tamen omnia permeantem impium hoc diagramma esse ponit.
124. Nunc autem angelum leoni similem aiunt habere cum astro Saturni necessitudinem.
125. Tibi, prime et septime . . . opus filio et patri perfectum.
130. *Τῷ μὲν Κρόνῳ προσήκει ἡ ἑβδομάς μάλιστα καὶ πρῶτως . . . τῇ δὲ 'Ρέα ἡ ὀγδοάς.*
131. Isti autem aliis alia addunt, Prophetarum dicta, circulos circulis inclusos . . . virtutum ex quadam Prunico virgine manantem, viventem animam.
135. Quia Solis et Lunae colores haec duo metalla referunt.
136. Redemptor autem noster in carne veniens, pleiades iunxit, quia operationes septiformis spiritus simul in se et cunctas et manentes habuit.
153. Habet in se unusquisque Adam et Evam. Sicut enim in illa prima hominis transgressione suggestit serpens, delectata est Eva, consensit Adam: sic et quotidie fieri videmus, dum suggerit diabolus, delectatur caro, consentit spiritus.
158. 'Plasmavit Deus hominem', id est finxit de terrae limo. Is autem qui ad imaginem Dei factus est et ad similitudinem, interior homo noster est, invisibilis et incorporalis et incorruptus atque immortalis.
159. *'Ο δὲ κατὰ τὴν εἰκόνα ἰδέα τις ἢ γένος, ἢ σφραγίς, νοητός, ἀσώματος οὔτε ἄρρεν οὔτε θῆλυ, ἀφθαρτος φύσει.*
187. Esse in Chemia nobile aliquod corpus, quod de domino ad dominum movetur, in cuius initio sit miseria cum aceto, in fine vero gaudium cum laetitia.
193. Psyche, quae ipsis nephesch dicitur, sit spiritus vitalis, non quatenus plane corporeus sed insitus ille atque primitivus et seminalis, quem recentiores *Archeum* vocant, cum quo correspondet Philosophorum anima vegetativa seu plastica, et Platonicorum τὸ ἐπιθυμητικὸν seu concupiscibile.
- 193a. Mater enim nil est nisi propensio Patris ad inferiora.

195. (Adam) a Cabbalistic Adam Kadmon dicitur, ad differentiam Adami Protoplastae . . . eo quod inter omnia a Deo emanata primum occupet locum, prout protoplastes in specie hominum: ita ut per illum nihil commodius intelligi queat, quam anima Messiae, quem et Paulus ad I Corinth. 15, vers. 45–49 indigitat.
201. . . . inquit Ezechiel 34, v. 31: Vos Adam estis. Id est, vos merito vocamini Adami nomine. Sensus enim est: si literaliter textus intelligendus esset, obiectio merito fieret, omnes etiam populos mundi sive gentiles eodem modo esse homines, quo Israelitae; statura nempe erecta. Ubi porro quoque dicendum fuisset, vos homines estis. Verum enim vero (sensus hic est, ex animabus vestris consistebat microcosmus Adami) . . . § 11: Vos estis Adam. (Quasi diceret omnes Israelitarum animas nihil aliud fuisse quam Adamum nimirum protoplasten:) Et vos scintillae illius atque membra ejus extitistis.
203. Hinc quoque dixerunt Magistri nostri: Non veniet filius David, donec plene exiverint omnes animae, quae fuerunt in corpore (nimirum protoplastae).
204. Differentias autem numericas referri ad dispositionem bilanciformem ubi facies faciei obvertitur, et duo vel plura ejusdem perfectionis, et speciei, tantum distinguuntur, ut mas et foemina. Quae differentiae numericae etiam denotantur per id, quod dicitur antea, et posterius.
218. *Τὸ ἐν γίνεται δύο, καὶ τὰ δύο γ', καὶ τοῦ γ' τοῦ τὸ ἐν τέταρτον.*
219. Jam Adam Kadmon emanavit ab uno simplici, adeoque est unitas: sed et descendit, et delapsus est in ipsam naturam suam, adeoque est duo. Iterumque reducitur ad unum, quod in se habet, et ad summum; adeoque est tria et quatuor.
220. Et haec est causa, quod nomen essenziale habeat quatuor literas, tres diversas, et unam bis sumptam: quoniam *He* primum est uxor *τοῦ Jod*; et alterum, uxor *τοῦ Vav*. Primum emanavit a *Jod*, via directa, et alterum a *Vav*, via conversa et reflexa.
222. *Jod*, quia simplex, est unum et primum quid, et simile uni, quod numeris; et puncto, quod corporibus omnibus prius est. Punctum autem, secundum longitudinem motum producit lineam, nempe *Vav*. / Litera *Jod* quae punctum ipsum, facta est principium, medium et finis; imo ipsa etiam principium Decadum et finis unitatum atque ideo redit in unum. / Quoniam Sapia Benedicti videbat, quod etiam in splendore hoc non possent manifestari mundi, cum Lux ibi adhuc nimis magna esset atque tenuis; hinc iterum innuit literae huic *Jod*, ut denuo descenderet et perrumperet sphaeram splendoris atque emitteret lucem suam, quae paulo crassior erat. / Lucem atque Influentiam insignem vibrabat in illam Sapientiam.
223. *Vav* denotat vitam, quae est emanatio et motus essentiae, quae in se ipsa manifestatur: estque medium uniendi, et connexionis, inter essentiam et intellectum.

225. *He* designat ens, quod est compositum ex essentia et existentia. / *He* ultimum est imago et similitudo intellectus vel mentis.
228. Viriditate enim videtur praefigurari virginitas.
229. O benedicta viriditas, quae cunctas res generas!
230. Nonne spiritus Domini, qui est amor igneus, quum ferebatur super aquas, edidit eisdem igneum quendam vigorem, cum nihil sine calore generari possit? Inspiravit Deus rebus creatis . . . quandam germinationem, hoc est viriditatem, qua sese cunctae res multiplicarent . . . Omnes res dicebant esse virides, cum esse viride crescere dicatur . . . Hanc ergo generandi virtutem rerumque conservationem Animam Mundi vocare libuit.
231. Unde Aristoteles ait in libro suo: Aurum nostrum, non aurum vulgi: quia illa viriditas, quae est in eo corpore, est tota perfectio eius. Quia illa viriditas, per nostrum magisterium cito vertitur in aurum verissimum.
- 238.
- Lapis candens fit ex tribus;
Nulli datur nisi quibus
Dei fit spiramine.
248. Vas . . . oportet esse rotundae figurae: Ut sit artifex huius mutator firmamenti et testae capitis. / Caput eius vivit in aeternum et ideo caput denominatur vita gloriosa et angeli serviunt ei. Et hanc imaginem posuit Deus in paradiso deliciarum, et in ea posuit suam imaginem et similitudinem. / . . . quousque caput nigrum aethiopis portans similitudinem fuerit bene lavatum.
249. Accipe cerebrum eius, aceto acerrimo terite . . . quousque obscuretur.
250. Cum igitur spiritus ille aquarum supracoelestium in cerebro sedem et locum acquisierit.
253. . . . oportet nos vertere membrum (scl. cerebri s. cordis) in principio operis, in id ex quo generatum est, et tunc convertimus ipsum per spiritum in id quod volumus. / . . . nam est triangulus compositione et est propinquius omnibus membris corporis ad similitudinem simplicis.
254. Maxima virtus mineralis est in quolibet homine, et maxime in capite inter dentes, ut suo tempore inventum est aurum in granis minutis et oblongis . . . propter hoc dicitur quod lapis est in quolibet homine.
263. τὸ σχῆμα τῆς παρεγκεφαλίδος εἰκὸς κεφαλῆ δράκοντος.
270. Similiter nominant hanc aquam Nubem vivificantem, mundum inferiorem et per haec omnia intelligunt Aquam foliatam, quae est aurum Philosophorum, quod vocavit dominus Hermes Ovum, habens multa nomina. Mundus inferior est corpus et cinis combustus, ad quem reducunt Animam honoratam. Et cinis combustus, et

anima, sunt aurum sapientum, quod seminant in terra sua alba, et terra margaritarum stellata, foliata, benedicta, sitiente, quam nominavit terram foliorum, et terram argenti, et terram auri. / In quo dixit Hermes: Seminate aurum in terram albam foliatam. Terra alba foliata est Corona victoriae, qua est cinis extractus a cinere ...

271. Ergo Luna mater et ager in quo solare seminarique debet semen . . . / (ait sol) Ego enim sum sicut semen seminatum in terram bonam . . . / Jam scias Virginem nostram terram, ultimam subire cultivationem, ut in ea fructus Solis seminetur ac maturetur. / Recipiam a te animam adulando. / Aqua supra terram incidente, creatus est Adam, qui et mundus est minor. / Terra dicitur mater elementorum, quia portat filium in ventre suo. / Quamvis in primo suo partu per Solem et Lunam generatus, et de terra in accretione sua postulatus siet. / Pater suscipit filium, hoc est, terra retinet spiritum. / Quia totius mundi ima pars terra est, aetheris autem ima pars luna est: Lunam quoque terram, sed aetheream, vocaverunt.
275. Accipe itaque tu, charissime, verborum meorum legitimum sensum, et intellige, quia philosophi similes sunt hortulanis et agricolis, qui primum quidem semina deligunt, et delecta non in vulgarem terram, sed in excultos agros, aut hortorum iugera seminant . . . / Habito autem Sole et Luna philosophorum tanquam semine bono, terra ipsa ab omnibus suis immunditiis et herbis inutilibus expurganda est et diligenti cultura elaboranda, in eamque sic elaboratam Solis et Lunae praedicta semina mittenda sunt ...
276. Ubi terra, hoc est humanitas, exaltata est super omnes circulos Mundi, et in caelo intellectuali sanctissimae Trinitatis est collocata. / Donum namque Dei est, habens mysterium individuae unionis sanctae Trinitatis. O scientiam praeclarissimam, quae est theatrum universae naturae, eiusque anatomia, astrologia terrestris, argumentum omnipotentiae Dei, testimonium resurrectionis mortuorum, exemplum remissionis peccatorum, infallibile futuri iudicii experimentum et speculum aeternae beatitudinis!
278. Quamobrem in centro terrae ignis est copiosissimus aestuantissimusque (ex radiis solaribus ibidem collectus), qui barathrum sive orcus nuncupatur, neque alius est ignis sublunaris: faeces enim sive terrestres reliquiae principiorum praedictorum, videlicet caloris solaris et aquae, sunt ignis et terra: damnatis destinata.
279. Ipsum enim est, quod ignem superat, et ab igne non superatur: sed in illo amicabiliter requiescit, eo gaudens.
285. Ad dextram vocatur Sol justitiae Mal. 4, 2, sed ad sinistram (Sol) a calore Ignis Gebhurae.
288. In naturalibus Jesod sub se continet argentum vivum; quia hoc est fundamentum totius artis transmutatoriae.

290. (Jessod) in personis denotat membrum genitale utriusque sexus. / Quapropter pervolare semper Adonai ad Mensuram El-chai continua aestuat cupidine. / Ipse autem hic gradus firmus est inter Ilium et Illam, ut natura seminis subtilissima e supernis demissa non dimoveatur. / . . . angelus redemptor, fons aquarum viventium, arbor scientiae boni et mali, Leviathan, Salomon, Messias filius Joseph.
291. Iste enim est effusorium aquarum supernarum: Et duae olivae super illud, sunt Nezach et Hod, duo testiculi masculini.
295. Foedus Pacis autem, seu perfectionis propterea dicitur, quia iste modus pacis et perfectionis autor est inter Tiphereth et Malchuth, ita ut de eo dicitur, I Par. 29, 11, quia modus ille, qui vocatur Col, est in coelo et in terra, ubi Targum hac utitur paraphrasi, quod uniatur cum coelo et cum terra.
298. Propinquus . . . et melior quam frater e longinquo, qui est Tiphereth.
299. . . . quod robustus Jisrael sit nomen medium inter Nezach et Hod.
301. In Sohar, in historia illius Puelli, dicitur, quod Justus (Jessod) vocetur Amicus fidelis ad locum Cant. 7. 10. Vadens ad dilectum meum. Et hinc Jesod dicitur Amicus, quia unit duos dilectos et amicos: quia per ipsum fit unio Tiphereth et Malchuth.
308. Hoc est illud quod non sine mysterio vocatur Stella . . . / Aquae El boni, seu Argenti vivi . . . Hoc argentum vivum . . . vocatur Aqua Sphaerica.
309. Haec (aqua) dicitur filia Matredi, i.e. . . . Viri aurificis laborantis cum assidua defatigatione; nam haec aqua non fluit e terra, nec effoditur in mineris, sed magno labore et multa assiduitate elicitur et perficitur. Huius uxor appellatur Aqua auri sive talis Aqua, quae aurum emittit. Cum hac si desponsatur artifex, filiam generabit, quae erit Aqua balnei regii.
314. In Sohar haec litera dicitur scaturigo vitae.
315. אפרח Pullus avis cujusque. Deut. 22, 6. Psalm. 84, 4. In Raja Mehimna R. Schimeon ben Jochai tradit per hoc nomen intelligi Gradum Tiphereth, quatenus constat e sex membris suis, quae sunt sex alae, quibus sursum volat et deorsum. Sed in Tikunim sub initium Libri R. Bar, Bar Channa; haec appellatio dicitur referenda ad Justum sub mysterio Lucis reflexae ab imo ad summum. Verba sunt haec: Aephrochim sunt flores, qui fructum nondum praebent perfectum. Suntque Sephiroth sub notione arboris, quae ab imo sursum conversa est, et quidem circa Jesod.
316. Penna, ala: it. membrum, et quidem genitale . . . hoc nomen exponit de Jesod, cui cognomen Justo tribuitur.
318. Phoenix . . . ex cuius pennis circa collum aureolis . . . Medicina ad omnes affectiones humanae naturae contrarias in temperiem sanitatis optatam reducendas utilissima . . . inventa et usurpata est.

322. Sic vocatur Malchuth . . . estque locus destinatus ad coctionem et elixationem influentiae, a marito ad ipsam demissae ad nutritionem catervarum. Sicut notum est: foeminam calore suo excoquere semen ad generandum.
324. De Dei filio intelligit, qui in castigandis mundi sceleribus formidandum Leonem sat diu imitatus paulo post, morte propinquante, dum SS. Eucharistiae Sacramentum instituit, in melleos favos longe suavissimos se ipsum convertit.
325. Saepius Adonai nomen Sephiraе ultimae, et ipsa Malchuth, Regnum, ita dicitur; quoniam ipsum totius mundanae fabricae fundamentum extat.
326. . . . lapis capitalis, a quo omnes catervae superiores et inferiores in opere creationis promuntur in esse.
327. Sapphireus, quia varium a supernis gradibus colorem trahit, et in creatis mox hoc, mox contrario modo operatur: nam bonum nonnunquam, quandoque malum, nunc vitam, nunc interitum, nunc languorem, nunc medelam, nunc egestatem, nunc divitias ministrat.
332. In hoc nomine perpetuo mysterium literae י (Jod) involvitur, et quidem ut plurimum in Malchuth, quatenus in ista existit litera Jod. Informis enim massa et figura יוֹד י figuram habet lapidis; et Malchuth est fundamentum et lapis cui totum aedificium superius superstruitur. De ea dicitur Zach. 3, 9: Lapis unus septem oculorum.
337. Tunc exurgit Hermaphroditi flos Saphyricus, admirandum Maioris Mundi Mysterium. Cuius pars, si in mille liquati Ophirizi partes infundatur, id omne in sui naturam convertit.
344. . . . quoniam lapis sapphirus aereum habet colorem. Virtutes ergo coelestium lapide sapphiro designantur, quia hi spiritus . . . superioris loci in coelestibus dignitatem tenent.
345. Crystallum . . . ex aqua congelascit, et robustum fit. Scimus vero quanta sit aquae mobilitas. Corpus autem redemptoris nostri, quia usque ad mortem passionibus subiacuit, aquae simile iuxta aliquid fuit: quia nascendo, crescendo, lassescendo, esuriendo, sitiendo, moriendo usque ad passionem suam per momenta temporum mobiliter decucurrit . . . Sed quia per resurrectionis suae gloriam ex ipsa sua corruptione in incorruptionis virtutem convaluit, quasi crystalli more ex aqua duruit, ut in illo et haec eadem natura esset, et in ipsa quae jam fuerat corruptionis mutabilitas non esset. Aqua ergo in crystallum versa est, quando corruptionis eius infirmitas per resurrectionem suam ad incorruptionis est firmitatem mutata. Sed notandum quod hoc crystallum horribile, id est, pavendum, dicitur . . . omnibus vera scientibus constat quia redemptor humani generis cum iudex apparuerit, et speciosus iustis, et terribilis erit iniustis.

347. Certum quidem est, quod macroprosopus, Pater et Mater, sint Corona, Sapientia et Intelligentia mundi Emanativi post restitutionem. / . . . e tribus punctis primis mundi inanitionis constituta sint tria capita superna, quae continentur in Sene Sanctissimo. Omnia autem tria numerantur pro uno in mundo Emanativo, qui est macroprosopus.
348. Forma secunda vocatur Ros crystallinus; et haec formatur a Severitate Basiliae Adami primi, quae intrabat intra Sapientiam Macroprosopi: hinc in crystallo color quidam emphaticus rubor apparet. Et haec est Sapientia illa, de qua dixerunt, quod in ilia radidentur Iudicia.
349. Lapis in sacro eloquio Dominum et redemptorem nostrum significat.

VI. THE CONJUNCTION

8. Mineralia tamen atque vegetabilia Hermaphroditae sunt naturae, eo quod utrumque sexum habeant. Nihilominus fit ex seipsis coniunctio formae et materiae, quemadmodum fit de animalibus.
9. Unde duo sulphura et duo argent[a] viv[a] dicuntur et sunt talia, quod unum et unum dixerunt, et sibi congaudent, et unum alterum continet.
19. Si enim homo ad summum bonum pervenire cupit, tunc . . . primo Deum, dein seipsum . . . agnoscere ilium oportet.
20. Pietas autem est gratia divinitus prolapsa, quae docet unumquemque seipsum, vere ut est, cognoscere.
23. . . . cum in vitro tuo corispexeris naturas insimul misceri . . .
25. Effodiatur ergo sepulcrum et sepeliatur mulier cum viro mortuo . . .
27. Non fieri transitum nisi per medium.
28. Mercurius est medium coniungendi.
34. Aqua aeris inter caelum et terram existens, est vita uniuscuiusque rei. Ipsa enim aqua solvit corpus in spiritum, et de mortuo facit vivum, et facit matrimonium inter virum et mulierem.
35. Siccum humectare, et durum lenificare, et corpora coniungere et attenuare.
39. Non absimili modo quo Deus primo creavit unum mundum sola meditatione, pariformiter creavit unum mundum, ex quo quidem res omnes natae fuerunt adaptatione. / Item ut unus Deus tantum est non plures unum etiam per unum ex nihilo mundum in mente sua prius creare voluit ut subinde in effectum producere quo continerentur omnia quae crearet in ipso: Deus ut esset in omnibus unus.

40. Sub isto binario spirituali et corporeo, tertium quid latuit, quod vinculum est sacraei matrimonii. Hoc ipsum est medium usque hue in omnibus perdurans, ac suorum amborum extremorum particeps, sine quibus ipsum minime, nec ipsa sine hoc suo medio esse possunt, quod sunt, ex tribus unum.
48. Est enim in humano corpore quaedam substantia conformis aetherae, quae reliquas elementares partes in eo praeservat, et continuare facit.
49. Spagiricam autem nostram medicinam esse corpoream non negamus, sed spiritalem dicimus esse factam, quam spiritus spagiricus induit.
50. Concludimus meditativam philosophiam in superatione corporis unione mentali facta, consistere. Sed prior haec unio nondum sophum efficit, nec nisi mentalem sophiae discipulum: unio vero mentis cum corpore secunda sophum exhibet, completam illam et beatam unionem tertiam cum unitate prima sperantem et expectantem. Faxit omnipotens Deus ut tales efficiamur omnes et ipse sit in omnibus unus.
60. Mens igitur bene dicitur esse composita, quoties animus cum anima tali vinculo iunctus est, ut corporis appetitus et cordis affectus fraenare valeat.
62. Qui diligit animam suam, perdet eam, et qui odit animam suam, in aeternum custodit eam.
67. Impossibile est enim vitae malae hominem possidere thesaurum sapientiae filiis reconditum, et male sanum ad eum acquirendum vel inquirendum, multo minus ad inveniendum aptum esse.
68. Admonendos esse discipulos putavi auxilii divini implorationis, deinceps accuratissimae diligentiae in disponendo se ad eiusmodi gratiam recipiendam.
69. Ego sum . . . vera medicina, corrigens ac transmutans, id quod non est amplius, in id quod fuit ante corruptionem, et in multo melius, item id quod non est, in id quod esse debet.
72. At veritas est summa virtus et inexpugnabile castrum.
73. Libera tamen ad suam unitatem redit. Hoc est unum ex arcanis naturae, per quod ad altiora pertigerunt spagiri.
82. Quidam Philosophi nominaverunt aurum Chelidoniam, Karnech, Geldum.
85. Lili Alchemiae et Medicinae . . . nobilissimum hoc omne quod ex altissimi conditoris manifestatione meditationibus hominum obtingere potest.
87. Miranda praestat in spagyrica arte, nam eo mediante lux diei in primam materiam reducitur.

102. μέλαν καὶ ἄψυχον καὶ νεκρὰ καὶ ὡς εἶπειν ἄπνους. / Item sapientiam tuam semina in cordibus nostris, et ab eis phlegma, choleram corruptam, et sanguinem bulientem expelle, ac per vias beatorum perducas. / Ne cinerem vilipendas . . . in eo enim est Diadema quod permanentium cinis est.
103. Item scitote, quod spiritus est in domo marmore circumdata, aperite igitur foramina, ut spiritus mortuus exeat.
105. Ad corporis igitur bonam dispositionem artificiatam, utimur spagirico medicamento.
117. . . . quaedam inest lumini (lunae), quod de ea defluit, quae humectet corpora et velut occulto rore madefaciat.
118. Rectam fidem super unguentem olere fecisti. / Odore scientiae totum perfudit orbem.
133. . . . concordantia et . . . discordantia, quam symbolizationem intelligimus.
170. O coelum nostrum! o aqua nostra et Mercurius noster! . . . o caput mortuum seu faeces maris nostri . . . Et haec sunt aviculae Hermetis epitheta, quae nunquam quiescit.
171. Et scitote quod caput artis est corvus, qui in nigredine noctis et diei claritate sine alis volat.
173. Vocatur quoque rotunda aliqua nubes, mors itidem, nigredo, utpote tenebrae et umbra. / Istud opus fit ita subito sicut veniunt nubes de caelo.
176. Corvus se pullis senio confectum praebet in pabulum: at Phoenix noster Christus Dominus . . . se nobis in coelestem alimoniam praebuit.
180. Niger qui caput est artis, albus qui medium et rubeus qui finem rerum omnium imponit.
182. Cum videris materiam tuam denigrari, gaude: quia principium est operis. / Caput corvi artis est origo.
183. Antimonium, pix, carbo, corvus, caput corvi, plumbum, aes ustum, ebur ustum dicitur.
185. Et sic habes duo elementa, primo aquam per se, dehinc terram ex aqua.
191. corvus in formam peccatoris constitutus.
193. Vas autem necessarium in hoc opere oportet esse rotundae figurae: ut sit artifex huius mutator firmamenti et testae capitis.
194. Locus superior est cerebrum, et est sedes intelligentiae.
195. Et animal forma formarum et genus generum est homo.
196. Vas autem factum est rotundum ad imitationem superius et inferius. Est namque aptius rerum ad id cuius generatio quaeritur in eo, res enim ligatur per suum simile.

197. Mundus superior habet semper effectum in homine, et perfecta inspiratio eius scilicet hominis in morte sua, usque ad firmamentum, nec deest perventio, donec revertatur, quod egressum est de mundo superiori, ad locum suum.
198. Videtisne relucens illud et inexpugnabile castrum? / Veritas est . . . inexpugnabile castrum. Hac in arce verus . . . continetur ille thesaurus, qui . . . asportatur hinc post mortem.
199. Creatura in divina mente concepta est simplex, invariabilis et aeterna, in se ipsa autem multiplex, variabilis, transitoria.
205. Moriente leone nascitur corvus. / O triste spectaculum et mortis aeternae imago: at artifici dulce nuntium! . . . Nam spiritum intus clausum vivificum scias, qui statuto tempore ab Omnipotente vitam hisce cadaveribus reddet.
217. Notum est, quod anima antequam suo corpori misceretur, mortua fuerat, et eius corpus similiter.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the alchemical volumes are printed in capital letters.

A. VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum.... Strasbourg, 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consilium coniugii”]

ARTIS AURIFERAE quam chemiam vocant.... Basel, 1593. 2 vols.*

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [two versions: pp. 1–64, 65–139]
- ii Allegoriae super librum Turbae [pp. 139–45]
- iii Aenigmata ex visione Arislei et allegoriis sapientum [pp. 146–54; usually referred to as “Visio Arislei”]
- iv In Turbam philosophorum exercitationes [pp. 154–82]
- v Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
- vi Rosinus ad Euthiciam [pp. 246–77]
- vii Rosinus ad Sarratantam episcopum [pp. 277–319]
- viii Maria Prophetissa: Practica... in artem alchemicam [pp. 319–24]
- ix Kalid: Liber secretorum [pp. 325–51]
- x Kalid: Liber trium verborum [pp. 352–61]
- xi Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]
- xii Authoris ignoti, philosophici lapidis secreta metaphoricè describentis [pp. 389–92]

xiii Merlinus: Allegoria de arcano lapidis [pp. 392–96]

xiv Rachaidibi [et aliorum] philosophorum Regis Persarum de materia lapidis
fragmenta [pp. 397–404]

xv Tractatulus Avicennae [pp. 405–36]

xvi Clangor buccinae [pp. 448–544]

xvii Liber de arte chymica [pp. 575–631]

VOLUME II

xviii Morienus Romanus: Sermo de transmutatione metallica [pp. 7–54]

xix Scala philosophorum [pp. 107–70]

xx Ludus puerorum [pp. 171–204]

xxi Rosarium philosophorum [pp. 204–384; contains a second version of the
“Visio Arislei” at pp. 284ff.]

xxii Arnaldus de Villanova: Thesaurus thesaurorum et Rosarius [pp. 385–455]

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum
ad alchemiam pertinentium thesaurus instructissimus....* Geneva, 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

i Hoghelande: De alchimiae difficultatibus [pp. 336–68]

ii Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–445]

iii Artefius: Clavis majoris sapientiae [pp. 503–508]

iv [Altus:] Liber mutus alchimiae mysteria filiis artis nudis figuris evidentissime
aperiens [pp. 938–53]

VOLUME II

v Bonus: Margarita pretiosa novella correctissima [pp. 1–80]

vi Senior: De chemia [pp. 198–235]

vii Consilium coniugii [pp. 235–65]

viii [d’Espagnet:] Arcanum hermeticae philosophiae opus [pp. 649–61]

ix Barnaud: In aenygmaticum quoddam Epitaphium Bononiae... Commentariolus
[pp. 713–16]

In hoc volumine DE ALCHEMIA continentur haec:... Nuremberg, 1541.

Contents quoted in this volume:

i Geber: Summa perfectionis [pp. 20–205]

ii Tabula smaragdina Hermetis Trismegisti [p. 363]

*MUSAEUM HERMETICUM reformatum et amplificatum... continens tractatus
chimicos XXI praestantissimos... Frankfurt a. M., 1678. For translation, see: (B) WAITE,
The Hermetic Museum.*

Contents quoted in this volume:

- i [Hermes Trismegistus:] Tractatus aureus de lapide philosophorum [pp. 1–52]
- ii Madathanus: Aureum saeculum redivivum [pp. 53–72]
- iii [Siebmacher:] Hydrolithus sophericus, seu Aquarium sapientum [pp. 73–144]
- iv Mehung: Demonstratio naturae [pp. 145–71]
- v Flamel: Tractatus brevis seu Summarium philosophicum [pp. 172–79]
- vi [Barcius (F. von Sternberg)]: Gloria mundi, alias Paradisi tabula [pp. 203–304]
- vii Liber Alze [pp. 325–35]
- viii Lambspringk: De lapide philosophico figurae et emblemata [pp. 337–72]
- ix Valentinus: De prima materia [pp. 424–25]
- x Sendivogius: Novum lumen chemicum e naturae fonte et manuali experientia
depromptum [pp. 545–600; Parabola, seu Aenigma philosophicum
Coronidis..., pp. 585–90]
- xi [Sendivogius:] Novi luminis chemici Tractatus alter de sulphure [pp. 601–46]
- xii Philalethes: Introitus apertus ad oclusum regis palatium [pp. 601–46]
- xiii Philalethes: Fons chymicae veritatis [pp. 799–814]
- xiv Helvetius: Vitulus aureus [pp. 815–63]

*THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus... continens.
Vols. I—III, Ursel, 1602. Vols. IV-VI, Strasbourg, 1613, 1622, 1661.*

Contents quoted in this volume:

VOLUME I

- i Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]
- ii Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp.
255–310]
- iii Dorn: Physica genesis [pp. 367–404]
- iv Dorn: Physica Trismegisti [pp. 405–37]
- v Dorn: Physica Trithemii [pp. 437–50]
- vi Dorn: Philosophia meditativa [pp. 450–72]
- vii Dorn: Philosophia chemica ad meditativam comparata [pp. 472–517]
- viii Dorn: De tenebris contra naturam et vita brevi [pp. 518–35]
- ix Dorn: Duellum animi cum corpore [pp. 535–50]

- x Dorn: Congeries Paracelsicae chemicae de transmutatione metallorum [pp. 557–646]
- xi Penotus: De vera praeparatione et usu medicamentorum chemicorum [pp. 672–772]
- xii Bernard of Treviso: De chemico miraculo, quod lapidem philosophiae appellant (Liber de alchemia) [pp. 773–803]
- xiii Zacharius, Dionysius: Opusculum philosophiae naturalis metallorum, cum annotationibus Nicolai Flameli [pp. 804–901]

VOLUME II

- xiv Aegidius de Vadis: Dialogus inter naturam et filium philosophiae [pp. 95–123]
- xv Penotus: Philosophi potius occultare artem conati sunt, quam patefacere [p. 123: a table]
- xvi Ripley: Duodecim portarum axiomata philosophica [pp. 123–39]
- xvii Hollandus: Fragmentum de opere philosophorum [pp. 142–46]
- xviii Penotus: Quinquagintaseptem canones de opere physico (“Reguia et canones”) [pp. 150–54]
- xix Dee: Monas hieroglyphica [pp. 203–43]
- xx Ventura: De ratione conficiendi lapidis [pp. 244–356]
- xxi Joannes Pico Mirandola: De auro [pp. 357–432]
- xxii Albertus Magnus: Super arborem Aristotelis [pp. 524–27]

VOLUME III

- xxiii De magni lapidis compositione et operatione [pp. 1–56]
- xxiv Rupescissa: Liber de confectione veri lapidis philosophorum [pp. 191–200]
- xxv Hollandus: Opera mineralia, seu de lapide philosophico omnia [pp. 320–564]
- xxvi Greverus: Secretum [pp. 783–810]
- xxvii Alani philosophi dicta de lapide philosophico [pp. 811–20]
- xxviii Barnaud: Commentarium in quoddam Epitaphium Bononiae... [pp. 836–48]
- xxix Delphinus: Liber secreti maximi [pp. 871–78]

VOLUME IV

- xxx Lully: Theorica et practica [pp. 1–191]
- xxxi Artefius: Clavis majoris sapientiae [pp. 221–40]
- xxxii Aphorismi Basiliani sive Canones Hermetici [pp. 368–71]
- xxxiii Beatus: Aurelia occulta philosophorum [pp. 525–81]

- xxxiv Arnold of Villanova: *Speculum alchimiae* [pp. 583–613]
xxxv Hermes Trismegistus: *Tractatus aureus... cum scholiis Dominici Gnosii*
[pp. 672–797]
xxxvi Lagneus: *Harmonia chemica* [pp. 813–903]
xxxvii Albertus: *Liber octo capitulorum de lapide philosophorum* [pp. 948–71]
xxxviii Valentinus: *Opus praeclarum ad utrumque* [pp. 1061–75]
xxxix Petrus de Silento: *Opus* [pp. 1113–27]

VOLUME V

- xl *Allegoriae sapientum... supra librum Turbae* [pp. 64–100]
xli *Tractatus Micreris suo discipulo Mirnefindo* [pp. 101–13]
xlii *Liber Platonis quartorum...* [pp. 114–208]
xliii Senior: *De chemia* [pp. 219–66]
xliv Mennens: *Aureum vellus* [pp. 267–470]
xlv *Consilium coniugii* [pp. 479–566]
xlvi Bonus: *Pretiosa margarita novella correctissima* [pp. 589–794]
xlvii *Tractatus Aristotelis alchymistae ad Alexandrum Magnum de lapide philosophico* [pp. 880–92]

CORRELATION OF PARAGRAPH NUMBERS

As the *Gesammelte Werke* edition of *Mysterium Coniunctionis* (2 vols., 1968) retains the textual arrangement and paragraph numbering of the first Swiss edition (1955/1956) and therefore varies in these respects from the Collected Works edition, the following table gives the equivalents between the two. The principal changes of arrangement, approved by Professor Jung, are explained in footnotes in the Collected Works edition. Paragraphs 1–30 are numbered alike in both editions.

EPILOGUE

790	445
791	446
792	447

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in *Bollingen Series*, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

* 1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses
(1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in
Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in
Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal
Psychology (1908); The Psychological Methods of Investigation Used in
the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine
of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence
(1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917) The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval Thought
Schiller's Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)
Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)
The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART 1. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

* 10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff’s “Studies in Jungian Psychology” (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution
Mondiale” (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND

SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

* Revised for the second edition (1970).

1 *Das Aegäische Fest: Die Meergötterszene in Goethes Faust II.*

2 [First Swiss edn., 1944, but the two chief component essays first appeared in *Eranos Jahrbuch* 1935 and 1936.—EDITORS.]

3 *Problems of Mysticism and Its Symbolism*, first pub. 1914.

4 From *σπάειν*, ‘rend, tear, stretch out’, *ἀγείρειν*, ‘bring or collect together’.

5 Cf. “Psychology of the Transference.”

6 [This refers to the Swiss edition, which was published in three parts, each a separate volume, the third being devoted to a contribution by M.-L. von Franz. Parts I and II constitute the present volume. Part III has appeared in English under the title *Aurora Consurgens: A Document Attributed to Thomas Aquinas on the Problem of Opposites in Alchemy* (Bollingen Series LXXVII, New York and London, 1966), as a companion volume to *Mysterium Coniunctionis* but outside the Collected Works.—EDITORS.]

7 [The Swiss edition adds: “For Parts I and II I am responsible, while my coworker, Dr. Marie-Louise von Franz, is responsible for Part III. We have brought the book out jointly, because each author has participated in the work of the other.”]

1 Ripley says: “The coniunctio is the uniting of separated qualities or an equalizing of principles.” “Duodecim portarum axiomata philosophica,” *Theatrum chemicum*, II, p. 128.

2 Cf. the representation of the *tetrameria* in Stolcius de Stolcenberg, *Viridarium chymicum*, Fig. XLII.

3 Cf. “Consilium coniugii,” *Ars chemica*, p. 79: “In this stone are the four elements, and it is to be compared to the world and the composition of the world.” * [For the Latin or Greek of the quotations marked with an asterisk, see the Appendix.—EDITORS.] Also Michael Maier, *De circulo physico quadrato*, p. 17: “Nature, I say, when she turned about the golden circle, by that movement made its four qualities equal, that is to say, she squared that homogeneous simplicity turning back on itself, or brought it into an equilateral rectangle, in such a way that contraries are bound together by contraries, and enemies by enemies, as if with everlasting bonds, and are held in mutual embrace.” * Petrus Bonus says: “The elements are conjoined in the circle in true friendship” * (*Bibliotheca chemica*, II, p. 35).

4 Cf. John Dee, “Monas hieroglyphica,” *Theatr. chem.*, II, p. 220.

5 Cf. “Consilium coniugii,” *Ars chemica*, pp. 69f., and “Clangor buccinae,” *Artis auriferae*, I, p. 484. In the Cabala the situation is reversed: red denotes the female, white (the left side) the male. Cf. Mueller, *Der Sohar und seine Lehre*, pp. 20f.

6 “Aenigmata ex visione Arislei,” *Art. aurif.*, I, pp. 146ff. Union of sun and moon: Petrus Bonus (ed. Lacinus), *Pretiosa margarita novella* (1546), p. 112. The archetype of the heavenly marriage plays a great role here. On a primitive level this motif can be found in shamanism. Cf. Eliade, *Shamanism*, p. 75.

7 The most complete collection of the illustrations that appeared in printed works is Stolcius de Stolcenberg’s *Viridarium chymicum figuris cupro incisus adornatum* (Frankfurt, 1624).

8 *Symbola aureae mensae*, p. 192.*

9 The “treasure-house” (*gazophylacium, domus thesauraria*) of philosophy, which is a synonym for the *aurum philosophorum*, or lapis. Cf. von Fra. z, *Aurora Consurgens*, pp. 101ff. The idea goes back to Alphidius (see “Consilium coniugii,” *Ars chemica*, p. 108) and ultimately to Zosimos, who describes the lapis as a shining white temple of marble. Berthelot, *Collection des anciens alchimistes grecs*, III, i, 5.

10 *Symb. aur. mensae*, p. 200.

11 The printing is undated, but it probably comes from Samuel Emmel’s press at Strasbourg and may be contemporaneous with *Ars chemica*, which was printed there in 1566 and matches our libellus as regards type, paper, and format. The author, Senior Zadith filius Hamuel, may perhaps have been one of the Harranites of the 10th cent., or at least have been influenced by them. If the *Clavis maioris sapientiae* mentioned by Stapleton (“Muhammad bin Umail: His Date, Writings, and Place in Alchemical History”) is identical with the Latin treatise of the same name, traditionally ascribed to Artefius, this could be taken as proved, since that treatise contains a typical Harranite astral theory. Ruska (“Studien zu M. ibn Umail”) groups Senior with the *Turba* literature that grew up on Egyptian soil.

12 Senior says: “I joined the two luminaries in marriage and it became as water having two lights” * (*De chemia*, pp. 15f.).

13 *Musaeum hermeticum*, p. 343. (Cf. Waite, *The Hermetic Museum Restored and Enlarged*, I, pp. 276f.)

14 *Corpus* (as *corpus nostrum*) usually means the chemical “body” or “substance,” but morally it means the human body. “Sea” is a common symbol of the unconscious. In alchemy, therefore, the “body” would also symbolize the unconscious.

15 “Aenigmata philosophorum II,” *Art. aurif.*, I, p. 149. Cf. *Aion*, pars. 195, 213 n. 51.

16 See *Psychology and Alchemy*, fig. 240.

17 “They also appear in the “XI ‘Clavis” of Basilius Valentinus, *Chymische Schrifften*, p. 68, and in *Viridarium*, Figs. XI, LV, LXII. Variants are lion and snake (*Viridarium*, Fig. XII), lion and bird (Fig. LXXIV), lion and bear (Figs. XCIII and CVI).

18 Cf. Petrus Bonus, “Pretiosa margarita novella,” *Theatr. chem*, V, pp. 647f.: “Hermes: At the end of the world heaven and earth must be joined together, which is the philosophical word.” * Also *Mus. herm.*, p. 803 (Waite, II, p. 263).

19 Ms. Incipit: “Figurarum Aegyptiorum Secretarum.” 18th cent. (Author’s collection.)

20 “Thus the height is hidden and the depth is made manifest” * (*Mus. herm.*, p. 652).

21 Cf. the oft-repeated saying: “From the dead he makes the living” * (Mylius, *Philosophia reformata*, p. 191).

22 Mylius, p. 118. The fourth degree is the *coniunctio*, which would thus correspond to Capricorn.

23 Mylius remarks (p. 115): “... equality arises . . . from the four incompatibles mutually partaking in nature.” * A similar ancient idea seems to be that of the *ἡλιακὴ τράπεζα* (solar table) in the Orphic mysteries. Cf. Proclus, *Commentaries on the Timaeus of Plato*, trans. by Taylor, II, p. 378: “And Orpheus knew indeed of the Crater of Bacchus, but he also establishes many others about the solar table.” * Cf. also Herodotus, *The Histories*, III, 17–18 (trans. by de Selincourt, p. 181), and Pausanias, *Description of Greece*, VI, 26, 2 (trans. by Jones, III, pp. 156ff.).

24 Cf. *Psychology and Alchemy*, index, s.v. “rotundum,” “sphere,” “wheel,” and especially (par. 469, n. 110) the wheel with twelve buckets for raising souls in the *Acta Archelai*.

25 Holmyard, *Kitāb al-’ilm al-muktasab*, p. 38.

26 The idea of uniting the Many into One is found not only in alchemy but also in Origen, *In Libr. I Reg. [I Sam.] Horn.*, I, 4 (Migne, *P.G.*, vol. 12, col. 998): “There was one man. We, who are still sinners, cannot obtain this title of praise, for each of us is not one but many ... See how he who thinks himself one is not one, but seems to have as many personalities as he has moods, as also the Scripture says: A fool is changed as the moon.” * In another homily, *In Ezech.*, 9, 1 (Migne, *P.G.*, vol. 13, col. 732) he says: “Where there are sins, there is multitude ... but where virtue is, there is singleness, there is union.” * Cf. *Porphyry the Philosopher to His Wife Marcella*, trans. by Zimmern, p. 61: “If thou wouldst practise to ascend into thyself, collecting together all the powers which the body hath scattered and broken up into a multitude of parts unlike their former unity ...” Likewise the Gospel of Philip (cited from Epiphanius, *Panarium*, XXVI, 13): “I have taken knowledge (saith the soul) of myself, and have gathered myself together out of every quarter and have not begotten (sown) children unto the Ruler, but have rooted out his roots and gathered together the members that were scattered abroad. And I know thee who thou art, for I (she saith) am of them that are from above.” (James, *The Apocryphal New Testament*, p. 12.) Cf. also *Panarium*, XXVI, 3: “I am thou, and thou art I, and wherever thou art, there I am, and I am scattered in all things, and from wherever thou wilt thou canst gather me, but in gathering me thou gatherest together thyself.” The inner multiplicity of man reflects his microcosmic nature, which contains within it the stars and their (astrological) influences. Thus Origen (*In Lev. Horn.*, V, 2; Migne, *P.G.*, vol. 12, cols. 449–50) says: “Understand that thou hast within thyself herds of cattle . . . flocks of sheep and flocks of goats ... Understand that the fowls of the air are also within thee. Marvel not if we say that these are within thee, but understand that thou thyself art another world in little, and hast within thee the sun and the moon,

and also the stars ... Thou seest that thou hast all those things which the world hath." * And Dorn ("De tenebris contra naturam," *Theatr. chem.* I, p. 533) say: "To the four less perfect planets in the heavens there correspond the four elements in our body, that is, earth to Saturn, water to Mercury [instead of the moon, see above], air to Venus, and fire to Mars. Of these it is built up, and it is weak on account of the imperfection of the parts. And so let a tree be planted from them, whose root is ascribed to Saturn," * etc., meaning the philosophical tree, symbol of the developmental process that results in the unity of the filius Philosophorum, or lapis. Cf. my "The Philosophical Tree," par. 409.

27 The *ἀγαθὸς δαίμων* is a snakelike, chthonic fertility daemon akin to the "genius" of the hero. In Egypt as well it was a snakelike daemon giving life and healing power. In the Berlin Magic Papyrus it is the *ἀγαθὸς γεωργός* who fertilizes the earth, On Gnostic gems it appears together with Enoch, Enoch being an early parallel of Hermes. The Sabaeans who transmitted the Agathodaimon to the Middle Ages as the *πνεῦμα πάρεδρον* (familiar spirit) of the magical procedure, identified it with Hermes and Orpheus. (Chwolsohn, *Die Ssabier*, II, p. 624.) Olympiodorus (Berthelot, *Alch. grecs*, II, iv, 18) mentions it as the "more secret angel" (*μυστικώτερον ἄγγελον*), as the uroboros or "heaven," on which account it later became a synonym for Mercurius.

28 Cf. the Indian teachings concerning *hiranyagarbha*, 'golden germ,' and *purusha*. Also "The Psychology of Eastern Meditation," pars. 917f.

29 Cf. *ἕλη τῆς ὀρνιθογονίας* (the matter of the generation of the bird) in Zosimos (Berthelot, III, xlv, 1).

30 Holmyard, p. 37.

31 Cf. *Psychology and Alchemy*, figs. 203–5.

32 von Franz, pp. 53f Cf. also Goodenough, "The Crown of Victory. . . ." Senior (*De chemia*, p. 41) calls the *terra alba foliata* "the crown of victory." In *Heliodori carmina*, v. 252 (ed. by Goldschmidt, p. 57) the soul, on returning to the body, brings it a *νικητικὸν στέμμα*, 'wreath of victory.' In the Cabala the highest Sefira (like the lowest) is called Kether, the Crown. In Christian allegory the crown signifies Christ's humanity: Rabanus Maurus, *Allegoriae in Sacram Scripturam* (Migne, *P.L.*, vol. 112, col. 909). In the Acts of John, §109 (James, *Apocryphal New Testament*, p. 268) Christ is called the diadem.

33 *Ars chemica*, p. 196.*

34 "Opusculum autoris ignoti," *Art. aurif.*, I, p. 390. The author is generally cited as "Rhasis." Cf. Ruska, *Turba Phil.*, pp. 161f. Also Ephraem Syrus, *Hymni et Sermones* (ed. Lamy, I, col. 136): "Thy babe, O Virgin, is an old man; he is the Ancient of Days and precedeth all time."*

35 Dorn in "Physica Trismegisti," *Theatr. chem.*, I, p. 420. The division of the elements into two higher "psychic" elements and two lower "somatic" elements goes back to Aristotle. Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 147.

36 "Liber de alchemia," *Theatr. chem.*, I, p. 775.

37 Sea is a synonym for the prima materia.

38 *Theatr. chem.*, V, p. 111. This treatise (Micreris = Mercurius) is undoubtedly old and is probably of Arabic origin. The same saying is quoted by "Milvescindus" (Bonus, "Pretiosa marg. nov.," *Theatr. chem.*, V, pp. 662f.). In the *Turba* he is called "Mirnefindus."

39 This treatise, of Arabic origin, is printed in *Bibliotheca chemica*, I, pp. 400ff.

40 “For when she applies her beak to her breast, her whole neck with the beak is bent into the shape of a circle. . . . The blood flowing from her breast restores life to the dead fledglings.” * Ibid., p. 442 b.

41 Ibid.*

42 Ibid., 408 b. Cf. the words of the “bride” in *Aurora Consurgens*, p. 143: “I am the mediatrix of the elements, making one to agree with another; that which is warm I make cold . . . that which is dry I make moist . . . that which is hard I soften, and the reverse.” (Cf. Senior, *De chemia*, p. 34.)

43 *Bibl. chem.*, 408 a.

44 “It will penetrate every solid thing” * (“Tabula smaragdina”). The sentence “for the spirit alone penetrates all things, even the most solid bodies,” is probably not without reference to “for the Spirit searcheth all things, yea, the deep things of God” in I Cor. 2:10 (AV). Likewise the Mercurius of the alchemists is a “spirit of truth,” a *sapientia Dei*, but one who presses downward into the depths of matter, and whose acquisition is a *donum Spiritus Sancti*. He is the spirit who knows the secrets of matter, and to possess him brings illumination, in accordance with Paul’s “even so the things of God knoweth no man, but the Spirit of God” (I Cor. 2:11).

45 Luke 17 : 21f. Recently, “within you” (intra *υος, εντος υμων*) has been translated as “among you,” therefore, as our author says, “in the visible and bodily gathering together of men.” This shows the modern tendency to replace man’s inner cohesion by outward community, as though anyone who had no communion with himself would be capable of any fellowship at all! It is this deplorable tendency that paves the way for mass-mindedness.

46 Πνεῦμα ὁ Θεός. John 4 : 24.

47 *Bibl. chem.*, I, p. 443 a.

48 In his “Speculativa philosophia” (*Theatr. chem.*, I, p. 291) Dorn says of this union: “Such is the philosophical love between the parts of inanimate things, and the enmity also, *as between the parts of men*. [An allusion to projection!] But no more in the former than in the latter can there be a true union, unless the corruption of the said parts be removed before they are joined together; wherefore that which thou doest is for the sake of peace between enemies, that friends may come together in unity. In all imperfect bodies and those that fall short of their ultimate perfection friendship and enmity are both innate [an apt formulation of the coexistence of opposites in the unconscious “imperfect” state]; if the latter be removed by the work or effort of man, needs must the other return to its ultimate perfection through the art, which we have set forth in the union of man.” * Cf. “The Spirit Mercurius,” pars. 259ff.

49 Cf. Honorius of Autun, *Speculum de mysteriis ecclesiae* (Migne, *P.L.*, vol. 172, col. 936): “For it is said that the pelican so loves her young that she puts them to death with her claws. But on the third day for grief she wounds herself, and letting the blood from her body drip upon the fledglings she raises them from the dead. The pelican signifies the Lord, who so loved the world that he gave his only-begotten Son, whom on the third day he raised up, victor over death, and exalted above every name.” * Pelican is also the name of a retort, the spout of which runs back into the belly of the vessel. [Cf. *Alchemical Studies*, fig. B7.]

50 Cf. the comment on II Cor. 3 : 6 (“for the letter killeth, but the spirit giveth life”) in Olympiodorus (Berthelot, II, iv, 41), where one with knowledge of the hidden alchemical art is speaking: “How, then, do I understand the transformation (*μεταβολήν*)? How are the water and the fire, hostile and opposed to one another by nature, how are they come together in one, through harmony and friendship?”

51 *Bibl. chem.*, I, p. 442 b.

52 The *aqua permanens* “whose power is the spiritual blood, that is, the tincture. . . . For the body incorporates the spirit through the tincture of the blood: for all that has Spirit, has also blood.” * (Mylius, *Phil, ref.*, pp. 42f.) These quotations come from the *Turba* (ed. by Ruska, p. 129) and from the book al Habib (quoted by Ruska, pp. 42f.). For the Greek alchemists gold was the “red blood of silver” (Berthelot, II, iv, 38 and 44). Cf. also Philo, *Quaestiones in Genesim*, II, 59: “But blood is the essence of the sensible and vital spirit; for he says in another place [Leviticus 17 : 14]: The spirit of all flesh is its blood.” * Cf. Leisegang, *Der heilige Geist*, p. 97 n. and p. 94 n.

53 “Son, you must take of the fatter flesh.” * (Quotation from Aristotle in *Rosarium philosophorum*, *Art. aurif.*, II, p. 318.) The prima materia “grows from flesh and blood.” * (“Mahomet” in “Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 308.) “To take the egg in the flesh.” * (Laurentius Ventura, *Theatr. chem.*, II, p. 274.) “Choose the tender flesh and you shall have the most excellent thing.” * (Ibid., p. 292.) “Flesh and blood” correspond to the “inward and hidden fire.” (Dorn, *Theatr. chem.*, I, p. 599.) For the patristic view see Augustine, *Quaestiones in Heptateuchum*, I, lx (Migne, *P.L.*, vol. 34, col. 616): “Perhaps he who was delivered for our transgressions [Christ] is signified by the flesh at evening.”*

54 Cf. “Aenigmata phil.,” *Art. aurif.*, I (1593), p. 151: “And then take the glass vessel with the bride and bridegroom and cast them into the furnace, and cause them to be roasted for three days, and then they will be two in one flesh.” * (Cf. Gen. 2 : 24 and Matt. 19 : 5.)

55 “As Christ in the holy Scriptures is called the Stone rejected by the builders, so also doth the same befall the Stone of the Wise” * (“Epilogus Orthelii,” *Theatr. chem.*, VI, p. 431).

56 “The Shepherd of Hermas,” tr. by Lake, II, pp. 217ff., Similitude 9.

57 Cf. my “A Study in the Process of Individuation.”

58 Cf. Schweitzer’s view of Christian concepts as “late Jewish eschatology”: *Geschichte der Leben-Jesu-Forschung*, p. 635.

59 The text is in *Psychology and Alchemy*, par. 454.

60 What would appear to be the first edition of the scholia, dated 1610, was published in Leipzig under the title *Hermetis Trismegisti Tractatus vere aureus de Lapidis philosophici secreto. Cum Scholiis Dominici Gnosii M.D.* The scholia are also printed in *Theatr. chem.*, IV, pp. 672ff., but there the author is said to be anonymous.

61 Dorn, “Congeries Paracelsicae chemicae,” *Theatr. chem.*, I, p. 578.

62 In *Aurora Consurgens*, also (pp. 129f.), the Adam composed of the four elements is contrasted with the Adam “from pure elements,” who, as the concluding sentence shows, is produced by the circulation of the four elements.

63 Gratarolus, *Verae alchemiae*, II, p. 265.

64 “He receives the power of the higher and the lower things. So shall you have the glory of the whole world.” * “Tabula smaragdina,” *De alchemia*, p. 363. Also Ruska, *Tabula Smaragdina*, p. 2.

65 Cf. *Aurora Consurgens*, p. 135.

66 *Theatr. chem.*, I, p. 578. * I do not know to which Hermes text Dorn is referring here. The orphan first appears in the *Pretiosa margarita novella* of Petrus Bonus: “This Orphan stone has no proper name” * (*Theatr. chem.*, V, p. 663). It is also in the edition of Janus Lacinius, 1546, p. 54^f.

67 Du Cange, *Glossarium*, s.v. “Orphanus.”

68 Ed. by Goldschmidt, I, vv. 112–14, p. 29. Heliodorus was a Byzantine of the 8th cent. (Goldschmidt, p. 2: “In 716–17, in the reign of Theodosius [III].”) Cassel (*Aus Literatur und Symbolik*, p. 248) gives Arnold (Arnaldus?), cited in Lesser’s *Lithotheologie*, p. 1161, as the source for “Orphanus.” I was unable to verify this statement.

69 It is said that in the Book of Secrets, Mani spoke of “the son of the widow,” Jesus (Schaefer, *Urform und Fortbildungen des manichäischen Systems*, p. 75 n.). Bousset (*The Antichrist Legend*, p. 70) mentions the reign of a widow who will precede the Antichrist (according to a Greek and Armenian Apocalypse of Daniel, p. 68). Freemasons are also reckoned among the “children of the widow” (Eckert, *Die Mysterien der Heidenkirche, erhalten und fortgebildet im Bunde der alten und neuen Kinder der Wittwe*). “Widow” in the Cabala is a designation for Malchuth. Knorr von Rosenroth, *Kabbala denudata*, I, p. 118.

70 Mylius, *Phil. ref.*, p. 173.

71 Gratarolus, *Verae alch.*, II, p. 265.

72 This expression appears for the first time in *Aurora consurgens*, Part II, *Art. aurif.*, I, p. 201. Mylius (*Phil. ref.*), copies it. The “vieille exténuée” mentioned in Pernety (*Dictionnaire mytho-hermetique*, p. 280) goes back to the same source. Cf. also “a mistress of about a hundred years of age” in “Aureum saeculum redivivum,” *Mus. herm.*, p. 64 (Waite, I, p. 59).

73 *Aurora consurgens* II, *Art. aurif.*, I, p. 196.

74 In *Aurora Consurgens*, p. 77, seven women seek one husband.

75 Cf. the “matrices of all things” in Rulandus, *Lexicon of Alchemy*, p. 226.

76 *Symb. aur. mensae*, p. 344.

77 Printed in *Theatr. chem.*, III, pp. 871ff. under the title “Antiqui Philosophi Galli Delphinati anonymi Liber Secreti Maximi totius mundanae gloriae.”

78 Gabritius therefore corresponds to Horus. In ancient Egypt Horus had long been equated with Osiris. Cf. Brugsch, *Religion und Mythologie der alten Ägypter*, p. 406. The Papyrus Mimaut has: “Do the terrible deed to me, the orphan of the honoured widow.” * Preisendanz relates the “widow” to Isis and the “orphan” to Horus, with whom the magician identifies himself (*Papyri Graecae Magicae*, I, pp. 54f). We find the “medicine of the widow” in the treatise “Isis to Horus,” Berthelot, *Alch. grecs*, I, xiii, 16.

79 *Symb. aur. mensae*, p. 515. The epithalamium begins with the words: “When the mother is joined with the son in the covenant of marriage, count it not as incest. For so doth nature ordain, so doth the holy law of fate require, and the thing is not displeasing to God.”*

80 “Est quod in ipsis floribus angat,

Et ubi mel, ibi fel, ubi uber, ibi tuber.”

81 In Greco-Roman times Isis was represented as a human-headed snake. Cf. illustration in Erman, *Religion der Ägypter*, p. 391. For Isis as *δράκων* see Reitzenstein, *Poimandres*, p. 31.

82 Erman, p. 301. The text derives from the time of the New Kingdom.

83 Preisendanz, *Papyri Graec. Magicae*, II, p. 74: “I am Isis who am called dew.”*

84 Synonymous with *aqua vitae*. The relation of the “soul-comforting” water of the Nile to Isis is indicated on a bas-relief (illustrated in Eisler, *Weltenmantel und Himmelszelt*, I, p. 70) in the Vatican, of a priestess of Isis bearing the *situla* (water-vessel). The two great parallels are the cup of water in the Early Christian communion, and the water

vessel of Amitabha. For the Christian cup of water see “Transformation Symbolism in the Mass,” pars. 311ff.; for the holy water in the worship of Amitabha, see Hastings, *Encyclopaedia*, I, p. 386 b, “Amitayus.”

85 Latin MS, 18th cent., “Figurarum Aegyptiorum secretarum.” (Author’s possession.)

86 Eisler, II, p. 328, n. 1.

87 The Golden Ass, XI, 3 (trans. Adlington and Gaselee, p. 543): “utterly dark cloak.” Cf. Hippolytus, *Elenchos*, I, 8.

88 Diodorus, *Bibliothēke Historike*, I, 25: τὸ τῆς ἀθανασίας φάρμακον.

89 She tried to make the child of the king of Phoenicia immortal by holding him in the fire. Plutarch, “Isis and Osiris,” 16, *Moralia* (trans. by Babbitt, V, pp. 40f.).

90 Diodorus, I, § 11.

91 *Ibid.*, I, 27.

97 Plutarch, 53, pp. 130f.

98 Reitzenstein, *Poimandres*, p. 270.

99 *Corpus Inscriptionum Latinarum*, X, No. 3800 (= 3580), from Capua: “TE TIBI / UNA QUAE / ES OMNIA / DEA ISIS / ARRIUS BAL / BINUS V.C.” (Now in Naples Museum.)

100 Reitzenstein, *Die hellenistischen Mysterienreligionen* (1927), pp. 27ff.

101 Athenagoras, *Legatio pro Christianis*, 22 (Migne, *P.G.*, vol. 6, col. 939f.).

102 *Ros. phil.*, *Art. aurif.* (1572), II, p. 413. From the so-called “Dicta Belini” (Apollonius of Tyana), “Allegoriae sapientum,” *Distinctio* 28, *Theatr. chem.*, V, p. 97.

103 Ruska, *Turba philosophorum*, p. 247. The wind is the pneuma hidden in the prima materia. The final illustration in Maier’s *Scrutinium chymicum* shows this burial.

104 Cf. also the μάχη θηλεία (female combat) in *Carmen Archelai*, one of the *Carmina Heliodori* (p. 56, IV, lines 230f.) (ed. by Goldschmidt), where the materia flees under the rain of projectiles and ends up as a “corpse” in the grave.

105 The corresponding masculine substance is red sulphur, the *vir* or *servus rubeus*, whose redness relates him to Typhon. In a “dirge for Gabricus who died after recently celebrating his marriage,” Maier (*Symb. aur. mensae*, p. 518) does in fact mention Typhon as a possible cause of his death. He begins by saying: “She who was the cause of your life is also the cause of your death,” but he then adds: “Three there seem to be who may have caused your death: Typhon, your mother, and Mulciber’s [Vulcan’s] furnace. He [Typhon] scatters the limbs of your body; it may be your mother alone, instead of your brother. But your mother feigns innocence.” It is clear that Maier suspects the mother in particular, and wants to make Typhon, the red slave, only a “causa ministerialis.”

106 Kerényi, *Töchter der Sonne*, pp. 92ff.

107 For this reason, the story of Medea's murder of Creon, her father-in-law, was also interpreted as an alchemical arcanum. Cf. Petrus Bonus, *Theatr. chem.*, V, p. 686.

108 *Super Ezechielem Horn.*, III (Migne, *P.L.*, vol. 76, col. 808).

109 *Expositions of the Book of Psalms*, Ps. 131, 23, vol. 6, p. 105.*

110 *Ibid.*, Ps. 145, 18f., vol. 6, p. 356.

111 *Kabbala denudata*, I, 1, p. 118.* Knorr's source is Moses Cordovero, *Pardes Rimmonim*, ch. 23.

112 *Tifereth* means 'beauty.'

113 *Kabbala denudata*, p. 202.

114 *Malchuth* means 'kingdom, dominion.'

115 *Kabbala denudata*, p. 528.

116 She is called moon (p. 456), earth (p. 156), bride (p. 477), matron, queen of heaven, fish-pool (p. 215), sea, well, tree of knowledge of good and evil, hind of loves ("so is Malchuth especially called because of the mystery of the new moon," p. 77), belly (p. 192), etc.*

117 *Kabbala denudata*, p. 163.

118 According to some authorities, Sefira is derived from *σφαίρα*. Cf. Hastings, *Encyclopedia*, VII, p. 625 b, "Kabbala." According to a more recent view the word is derived from the root *sfr*, 'primordial number.' Cf. Scholem, *Major Trends in Jewish Mysticism*, pp. 76ff. For the Tree of the Sefiroth see "The Philosophical Tree," par. 411, and Scholem, pp. 214ff.

119 *Yesod* means 'foundation.' In the MS in the Bibliothèque Nationale, Fr. 14765, pl. 8, *Yesod* is depicted like the Son of Man in Revelation 1 : 12 ff., with the seven stars in his right hand, the sword issuing from his mouth, and standing between the seven candlesticks. See *infra*, our Plate 3.

120 Cf. *Kabbala denudata*, I, p. 240, 4: "... for Malchuth shall be called a watered garden, Isaiah 58 : 11, when *Yesod* is in her, and fills her, and waters her with waters from on high." * P. 477: "When Malchuth receives the inflowing from the fifty gates through *Yesod*, then is she called bride." * For *Yesod* as *membrum genitale*, *ibid.*, p. 22. Cf. also Scholem, pp. 227f., and Hurwitz, *Arche-typische Motive in der chassidischen Mystik*, pp. 123ff.

121 Cf. the legend of Father Okeanos and Mother Tethys, who could no longer come together in a conjugal embrace. *Iliad*, XIV, 11. 300 ff. (trans. by Rieu), p. 265, and Roscher, *Lexikon*, V, col. 394 B, lines 30ff. This reference points only to the similarity of the motif, not to an equivalence of meaning.

122 Cf. the cohabitation of Gabricus and Beya brought about by the intervention of the philosophers.

123 *Der Sohar* (ed. by Mueller), p. 234. There is a parallel to this in the psychotic experiences of Schreber (*Memoirs of My Nervous Illness*), where the "rays of God" longingly seek to enter into him.

124 Cf. the parallel in the Gospel according to the Egyptians (James, *Apocryphal New Testament*, p. 11): "When the two become one and the male with the female is neither male nor female."

125 Waite, *The Holy Kabbalah*, p. 381.

126 *Kabbala denudata*, I, p. 338.

127 *Theatr. chem.*, VI, pp. 1ff. Blaise de Vigenère or Vigenaire (1523–96) was a learned scholar of Hebrew. He was secretary to the Due de Nevers and then to Henry III of France.

128 Cf. Proclus, *Commentaries on the Timaeus of Plato*, where he says that Orpheus called the moon the heavenly earth (41 e), and the Pythagoreans the aetheric earth (32 b).

129 *Theatr. chem.*, VI, p. 17. Malchuth is also called moon (*Kabb. denud.* I, 1, pp. 195 and 501). Other cognomens are house and night, and in Joseph Gikatila (*Shaare ora*) fountain, sea, stone, sapphire, tree of knowledge, land of life. (This information was supplied by Dr. S. Hurwitz.) Malchuth is the “kingdom of God,” described in the *Zohar* as *Kenesseth Israel*, “the mystical archetype of the community of Israel” (Scholem, p. 213).

130 Cf. Rahner, “Mysterium Lunae,” pp. 313ff.

131 Jung, “The Spirit Mercurius,” par. 273.

132 Epistola LV, 7f. (*CSEL*, XXXIV, pp. 176f.)

133 The Vulgate has: “Homo sanctus in sapientia manet sicut sol, nam stultus sicut luna mutatur” (DV: “A holy man continueth in wisdom as the sun, but a fool is changed as the moon”).

134 “Quis ergo est ille stultus, qui tamquam luna mutatur, nisi Adam, in quo omnes peccaverunt?”

135 Sol corresponds to the conscious man, Luna to the unconscious one, i.e., to his anima.

136 “For man’s soul, when it turns away from the sun of righteousness, that is, from inward contemplation of the unchangeable truth, turns all its strength to earthly things, and thereby is darkened more and more in its inward and higher parts; but when it begins to return to that unchangeable wisdom, the more it draws nigh thereto in loving affection, the more is the outward man corrupted, but the inward man is renewed from day to day; and all that light of natural disposition, which was turned towards lower things, is directed to the higher, and in a certain wise is taken away from things of earth, that it may die more and more to this world and its life be hid with Christ in God.” * (*CSEL*, XXXIV, p. 178.)

137 “Unde est illud: Paraverunt sagittas suas in pharetra, ut sagittent *in obscura luna* rectos corde.” The Vulgate, Psalm 10 : 3, has only “in obscuro” (DV: “For behold, the wicked bend their bow, they fit the arrow to the string, to shoot in the darkness at the upright of heart”). Cf. the “**arrows drunk with blood**” in *Aurora Consurgens*, p. 67.

138 “Orietur, inquit, in diebus eius justitia et abundantia pacis, quoad usque *interficiatur luna*.”

139 DV: “In his days justice shall flourish, and abundance of peace, until the moon shall fail.”

140 Augustine further remarks that the name “Jericho” means “moon” in Hebrew, and that the walls of this city, the “walls of mortal life,” collapsed (*Epist.*, LV, 10).

141 According to Origen, the sun and the moon were involved in the Fall (*Peri Archon*, I, 7, 4). Cited in Rahner, “Mysterium Lunae,” p. 327.

142 Rahner (p. 314) speaks very aptly of the “mystical darkness of its (the moon’s, i.e., the Church’s) union with Christ” at the time of the new moon, the latter signifying the “dying” Church.

143 First printing in *Ars chemica* (1566), p. 136.

144 The text has “id est Sol inferius,” and so has the later printing of 1622 (*Theatr. chem.*, V, p. 515) as well as Manget’s *Bibl. chem.* (II, p. 248a). It could therefore mean “the sun below.” This would presumably be a “subterranean sun” equivalent to the *Sol niger* (Mylius, *Phil. ref.*, p. 19, and Ripley, *Chymische Schrifften*, p. 51).

145 The quartan fever occurs every fourth day. The text has here: “For on every fourth day he naturally suffers from a quartan fever.”*

146 Leo, as the *domicilium solis*, stands for the sun, i.e., for the active (red) Mercurius.

147 “Per carnem suam sibi contemporaneam Lunarem vilescit.” The original Arabic text of Senior (*De chemia*, p. 9) has “canem” instead of “carnem.” The dog is Hecate’s animal and pertains to the moon (pars. 174ff.). In Manichaeism it is said of the Original Man and his sons, who descended into matter, that “consciousness was taken from them, and they became like one who is bitten by a mad dog or a snake” (Theodore bar Konai, cited in Reitzenstein and Schaeder, *Studien zum antiken Synkretismus aus Iran und Griechenland*, p. 343).

148 The *aqua permanens*.

149 Sol is speaking.

150 “Consilium coniugii,” pp. 141f.*

151 The preceding passage runs: “... let the residual body, which is called earth, be reduced to ashes, from which the tincture is extracted by means of water . . . Then join it to its head and tail.” * This refers to the production of the uroboros as the arcane substance that changes the natures.

152 This is the well-known formula of Democritus. Berthelot, *Alch. grecs*, II, i, 3: “Nature rejoices in nature, nature subdues nature, nature rules over nature.”*

153 *Tyria tinctura* or *Tyrius color* (*Turba*, Sermo XIV), *lapis tyrii coloris* (Sermo XXI, XXVII). “Thus we call our Tyrian (colour) at each step of the procedure by the name of its colour” * (Sermo LXII). “This is the red sulphur, shining in the darkness; and it is the red jacinth, and the fiery and death-dealing poison, and the conquering Lion, and the evil-doer, and the cleaving sword, and the Tyrian (tincture) which heals all infirmities” * (*Theatr. chem.*, V, p. 705). *Tyriaca* is identical with *Theriaca*, which is none other than the arcane substance.

154 Luna sends the dew.

155 Where the aerial realm of the demons and Satan begins.

156 Schmieder (*Geschichte der Alchemie*, p. 106) thinks the author was an Arab of the 13th cent. The fact that the author took over *carnem* / *canem*, a mistake possible only in Latin, shows, however, that he must have been one of the early Latinists.

157 Cf. Bernardino de Sahagún, *General History of the Things of New Spain*, Book 3: *The Origin of the Gods* (trans. by Anderson and Dibble), pp. 5f; also “Transformation Symbolism in the Mass,” p. 224.

158 Wallis Budge, *The Gods of the Egyptians*, I, p. 45.

159 Cf. my account in *Aion*, pars. 137ff., 232ff.

160 Cf. the Koran, Sura 18 (trans. by Dawood, p. 96), “the sun setting in a pool of black mud.”

161 Ripley, *Opera omnia*, p. 423. “Consilium coniugii,” *Ars chemica*, p. 186: “He slew himself with his own dart.” “Rosinus ad Sarrat.,” *Art. aurif.*, I, p. 293: “Who with an arrow from our quiver bound together, that is, joined in one body, wretched me, that is, I who possess the matter of Mercury and the Moon . . . and my beloved, that is, the fatness of the Sun with the moisture of the Moon.”*

162 1588 edn., p. 249. The picture is reproduced in my “Paracelsus as a Spiritual Phenomenon,” fig. B4.

163 The drawing of this tail is certainly odd, and one wonders whether it represents water (?) or steam (?). The prototype of the picture can be found in the so-called *Drivaltigkeitsbuch*, fol. 2^r. (Codex Germanicus Monacensis 598, 15th cent.) as well as in the Codex Germ. Alch. Vad., 16th cent. There she has a proper snake’s tail. One text describes the vapours as arrows (“Consil. coniug.,” p. 127). Cf. the eagles armed with arrows in the picture of Hermes Trismegistus from Senior (*Psychology and Alchemy*, fig. 128).

164 Berthelot, *Alch. grecs*, II, iv, 24.*

165 Cf. *Psychology and Alchemy*, fig. 131.

166 Migne, *P.L.*, vol. 172, col. 419.

167 “Vulnerasti cor meum soror mea sponsa. Vulnerasti cor meum in uno oculorum tuorum et in uno crine colli tui.” The correct translation is [as in AV]: “Thou hast ravished my heart, my sister, my spouse; thou hast ravished my heart with one of thine eyes, with one chain of thy neck.”

168 Cf. *Aurora Consurgens*, p. 133.

169 Here is, significantly enough, the source of the title of that mysterious treatise discussed in von Franz, *Aurora Consurgens*, which complements the present work.

170 AV mod.* A more exact translation of the original text would be “terrible as a host of armies.” The Hebrew word *nidgālōt* is read by recent commentators as *nirgālōt*, plural of Nirgal or Nergal. The Babylonian Nergal was the god of war and the underworld, the Lord of spirits, and the god of the midday heat of summer. Wittekindt (*Das Hohe Lied und seine Beziehungen turn Istarkult*, p. 8) therefore translates “terrible as the planets.” “Evidently the opposites in the figure of Istar are meant. . . . She is the gracious goddess of love and beauty, but she is also warlike, a slayer of men” (p. 9). On account of his magic, even greater consideration should be given to the underworld aspect of Nergal as the Lord of spirits. Cf. Morris Jastrow, *Die Religion Babyloniens und Assyriens*, I, pp. 361, 467. The reading *nirgālōt* is also accepted by Haller (*Das Hohe Lied*, p. 40). Hebrew *d* and *r* are very easily confused.

171 Roscher, *Lexikon*, II, col. 3138.

172 *Ibid.*, col. 3185.

173 *Ibid.*

174 Cf. *infra*, par. 174; also “The Psychology of the Transference,” par. 458, n. 4.

175 In Cabalistic interpretation she is Israel, bride of the Lord. Thus the *Zohar* says: “And when is he (God) called One? Only at that hour when the *matrona* (= Malchuth) will pair with the King, and ‘the kingdom will belong to God,’ as is said. What is meant by kingdom? It is the children of Israel, for the King unites himself with her, as is said: ‘On that day God is known . . . as One.’”

176 Augustine (*Sermo suppositus*, 120, 8) says: “Like a bridegroom Christ went forth from his chamber, he went out with a presage of his nuptials into the field of the world. . . . He came to the marriage bed of the cross, and there, in mounting it, he consummated his marriage. And when he perceived the sighs of the creature, he lovingly gave himself up to the torment in the place of his bride, . . . and he joined the woman to himself for ever.”*

177 It is remarkable that in ancient Egypt as well the eye is connected with the hierogamos of the gods. The first day of autumn (i.e., of the dwindling sun) is celebrated in the Heliopolitan inscriptions as the “feast day of the goddess Yusasit,” as the “arrival of the sister who makes ready to unite herself with her father.” On that day “the goddess Mehnit completes her work, so that the god Osiris may enter into the left eye.” Brugsch, *Religion und Mythologie der alten Aegypter*, p. 286.

178 Honorius, *loc. cit.** The wounding of the Redeemer by love is an idea that gave rise to some curious images among the later mystic writers. The following is from a *Libellus Desideriorum Joannis Amati*: “I have learnt an art, and have become an archer, good intention is my bow and the ceaseless desires of my soul are the arrows. The bow is spanned continually by the hand of God’s gracious help, and the Holy Ghost teaches me to shoot the arrows straight

to heaven. God grant that I may learn to shoot better, and one day hit the Lord Jesus.” Held, *Angelus Silesius: Sämtliche Poetische Werke*, I, p. 141.

179 Morris, *Legends of the Holy Rood*, pp. 197ff.

180 Berthelot, *Alch. grecs*, III, i–vi. The aspect of killing is discussed in my “The Visions of Zosimos,” pars. 91ff., and the sacrificial death in “Transformation Symbolism in the Mass,” pars. 376ff.

181 Ruska, *Turba*, Sermo 58, p. 161.*

182 Hg (the alchemical “dew”) “penetrates” the gold (sun) by amalgamation.

183 The treatise is supposed to have been written in 1645. Printed in *Mus. herm.*, pp. 647ff. (Waite, II, pp. 165ff). The name of the author, Eirenaeus Philaletha, is a pseudonym (“peaceful lover of truth”); the real author is conjectured to be the English alchemist Thomas Vaughan (1621–65)—incorrectly, it seems to me. See Waite, *The Works of Thomas Vaughan*, pp. xivff., and Ferguson, *Bibliotheca Chemica*, II, p. 194.

184 See *infra*, par. 174.

185 *Mus. herm.*, p. 658: “This is the infant Hermaphrodite, who from his very cradle has been bitten by the mad Corascene dog, wherefore he rages in madness with perpetual fear of water (hydrophobia).” * (See *infra*, pars. 176f.) The “rabid black dog” is chased away “with water and blows,” and “thus will the darkness be dispelled.” From this it can be seen that the mad dog represents the nigredo and thus, indirectly, the dark new moon, which eclipses the sun (cf. Senior, *De chemia*, p. 9: “Leo decays, weakened by the dog {flesh}”).* The “infant” would correspond to the raging Attis, *κατηφές ἄκουσμα Ῥέας*, “the dark rumour of Rhea,” “whom the Assyrians call thrice-desired Adonis,” the son-lover who dies young (Hippolytus, *Elcnchos*, V, 9, 8). According to the legend of Pessinus, Agdistis (Cybele), the mother of Attis, was herself hermaphroditic at first but was castrated by the gods. She drove Attis mad, so that he did the same thing to himself at his wedding. Zeus made his body incorruptible, and this forms the parallel to the *incorruptibilitas* of the alchemical “infant.” Cf. Pausanias, *Description of Greece*, VII, 17 (Frazer trans., III, pp. 266f.).

192 = emptying. See next paragraph.

193 *Hexameron*, IV, 8, 32 (Migne, P.L., vol. 14, col. 204).*

194 Prof. Rahner was kind enough to send me the following explanation: “The fundamental idea of the theologians is always this: the earthly fate of the Church as the body of Christ is modelled on the earthly fate of Christ himself. That is to say the Church, in the course of her history, moves towards a death, as well in her individual members (here is the connecting-link with the doctrine of ‘mortification’) as in her destiny as a whole, until the last day when, after fulfilling her earthly task, she becomes ‘unnecessary’ and ‘dies,’ as is indicated in Psalm 71 : 7: until the moon shall fail.’ These ideas were expressed in the symbolism of Luna as the Church. Just as the *kenosis* of Christ was fulfilled in death, even death on the cross (Phil. 2 : 8), and out of this death the ‘glory’ of the divine nature (2 : 9f.) was

bestowed on Christ's 'form as a servant' (2 : 7), whence this whole process can be compared with the setting (death) of the sun and its rising anew (glory), even so it is with the parallel *kenosis* of Ecclesia-Luna. The closer Luna approaches to the sun, the more is she darkened until, at the conjunction of the new moon, all her light is 'emptied' into Christ, the sun. (It is well worth noting that just at this point Augustine speaks of the strange speculations of the Manichaeans about the two 'light-ships,' when the ship of Luna pours out its light into the ship of the sun, *Epistola* 55, iv, 6.) Augustine now applies this to the individual Christians of whom the Ecclesia is composed. The remarkable paradox of Luna, that she is darkest when nearest the sun, is a symbol of Christian asceticism: 'The more the inward man draws nigh to the sun, the more is the outward man destroyed, but the inward man is renewed from day to day' (a variation of II Cor. 4 : 16). That is, the Christian dies like Luna and his life is 'hid with Christ in God' (Coloss. 3 : 3). All this Augustine says in *Epistola* 55, v, 8. Afterwards he applies it to the Church and her destiny (*Epistola* 55, vi, 10): she will vanish into Christ, the sun, at the end of time: 'donee interficiatur Luna.' Augustine here translates the ἀνταναιρεθῆ of Psalm 71 : 7 by 'interficiatur'; in his *Enarratio in Ps. 71* (Migne, *P.L.*, vol. 36, cols. 907f.) he expatiates on the translation of this Greek word and there renders it by 'tollatur' (is removed) and 'auferatur' (taken away). The doctrine implied in all these passages is that the Church in her future glory ceases her work of salvation, which is destined only for the earth, and that she is totally eclipsed by the splendour of Christ the sun, because (and this again is a strange paradox) in the resurrection of the flesh she herself has become the 'full moon,' and indeed the 'sun.' 'Permanebit cum Sole,' she 'shall live while the sun endures,' as Ps. 71 : 5 (RSV 72 : 5) says."

195 "Ὅς ἐν μορφῇ θεοῦ ὑπάρχων οὐχ ἄρπαγμόν ἠγήσατο τὸ εἶναι ἴσα θεῷ ἀλλὰ ἑαυτὸν ἐκένωσεν μορφὴν δούλου λαβών.

196 De trinitate, I, 13 (Migne, *P.L.*, vol. 10, col. 35). The passage says literally: "Hence, just as the truths that God became man, that the Immortal died, that the Eternal was buried, do not belong to the order of the rational intellect but are an exceptional work of power, so it is an effect not of intellect but of omnipotence that he who is man is likewise God, that he who died is immortal, that he who was buried is eternal."*

- 218 Cf. *Psychology and Alchemy*, par. 484. Also *Aurora Consurgens*, p. 57: “... the shadow of death, for a tempest hath overwhelmed me; then before me shall the Ethiopians fall down and my enemies shall lick my earth.” * Cf. Origen, *De oratione*, 27, 12 (Migne, *P.G.*, vol. 11, cols. 514f.): “He who participates in ‘the dragon’ is none other than ‘the Ethiopian’ spiritually, himself changed into a serpent.” * (*Alexandrian Christianity*, trans. by Oulton and Chadwick, p. 301). Epiphanius, *Panarium*, XXVI, 16 (ed. by Holl, I, p. 296) speaks of the “Aethiopes denigrati peccato” (Ethiopians blackened by sin).
- 219 *Passio SS. Perpetuae et Felicitas*, ed. by van Beek, pp. 26f. Cf. also M.-L. von Franz’s “Passio Perpetuae,” in *Aion* (Swiss edn., pp. 389ff.).
- 220 Cf. Paracelsus, “Philosophia ad Athenienses” (Sudhoff, XIII, pp. 390f.); Dorn, “Physica genesis,” *Theatr. chem.*, I, p. 380, and *Psychology and Alchemy*, pars. 430ff.
- 221 Cf. “the unbegotten father, the unbegotten earth, and the unbegotten air” of the Manichaeans (Augustine, *De Actis cum Felice*, I, 18; Migne, *P.L.*, vol. 42, col. 532), mentioned by Bardesanes and Marinus (Bousset, *Hauptprobleme der Gnosis*, p. 97) and by Hermogenes: “God created all things from coexistent and ungenerated matter.” * (Hippolytus, *Elenchos*, VIII, 17, 1.)
- 222 *Confessions*, V, 10 (trans. by Sheed, p. 75).
- 223 Augustine, *Reply to Faustus*, XX, 2 (trans. by Stothert and others, p. 253).
- 224 Walch, *Entwurf einer vollständigen Historie der Ketzereien*, I, p. 753.
- 225 Augustine, “The Nature of the Good,” 44 (*Earlier Writings*, trans. by Burleigh, p. 344)
- 226 Cf. *Faust II*, the angel scene at Faust’s death. Mephistopheles is addressing the angels:

“Us spirits you call damned, and look askance.

Witch-masters, you, par excellence;

For men and maid you lead astray.

What an adventure curst and dire!

Is this love’s elemental game?”

(*Faust, Part Two*, trans. by Wayne, p. 277.)

227 Maier, *Scrut. chymicum*, pp. 82ff. Laurentius Ventura, “De ratione conficiendi Lapidis,” *Theatr. chem.*, II, p. 293: “The stone . . . begins to sweat because of the narrowness of its prison.”*

228 Hegemonius, *Acta Archelai*, IX: “This prince sweats because of his tribulation, and his sweat is rain.” * Christensen (“Les Types du premier Homme et du premier Roi dans l’histoire légendaire des Iraniens,” p. 16) quotes from the Bundahisn (3, 19) that Ormuzd fashioned a “shining youth” from his sweat and that the first men were made from the sweat of Ymir (p. 35). According to Arabic tradition, Ormuzd sweated because of his “doubting thought” (cf. my “Answer to Job,” par. 579); from this doubting thought came Ahriman, and from his sweat Gayomart. In ancient Egypt, the gods of the seasons brought forth the harvest with the sweat of Osiris’ hands (Budge, *Coptic Apocrypha in the Dialect of Upper Egypt*, Intro., pp. lxviif.). Dorn (“Congeries Paracelsicae,” *Theatr. chem.*, I, p. 584) has the following remarkable passage on the lapis: “In its last operations . . . a dark liquid, ruddy like blood, drips from the matter and its vessel; whence they predicted that in the last days there would come upon the earth a most pure man, through whom would be brought about the liberation of the world, and that he would give forth drops of blood of a rose-red hue, whereby the world would be redeemed from the fall.” * Cf. my “The Philosophical Tree,” pars. 383ff.

229 “And Marcus says, They conceive in the baths, signifying the gentle and damp heat of the baths in which the stone sweats when it begins to dissolve” * (“Consil. coniugii,” *Ars chemica*, p. 167.) This passage is a commentary on Senior, *De chemia*, p. 79. The “Epistola ad Hermannum,” *Theatr. chem.*, V, p. 894, says: “Then the most perfect body is taken and applied to the fire of the Philosophers; then . . . that body becomes moist, and gives forth a kind of bloody sweat after the putrefaction and mortification, that is, a Heavenly Dew, and this dew is called the Mercury of the Philosophers, or Aqua Permanens.” * Cf. the Creator making the first men out of sweat in Eliade (*Shamanism*, p. 334 n.), who mentions this in connection with the sweat-bath.

230 Text in *Psychology and Alchemy*, par. 469, n. 110.

231 A parallel to Barbelo.

232 “And when it appears, it is as a comely woman to men, but to women it has the appearance of a beautiful and desirable youth.” * (*Acta Archelai*, IX.)

233 “Est hominum virtus fides vera” (the strength of man is true faith). Dorn, “Speculativa philosophia,” *Theatr. chem.*, I, p. 298.

234 *Ibid.*, p. 229.

1 Cf. Bonus, "Pretiosa margarita novella," *Theatr. chem.*, V, pp. 660f.: "The philosophers of old saw that this stone in its birth and sublimation . . . could be compared in parables . . . with all things that are in the world, whether bodily or intellectual. Wherefore whatever they are able to say and declare concerning virtues and vices, concerning the heavens and all things corporeal or incorporeal, the creation of the world . . . and of all the elements . . . and concerning corruptible and incorruptible, visible and invisible things, spirit and soul and body . . . and concerning life and death, good and evil, truth and falsehood, unity and multiplicity, poverty and riches, that which flies and that which flies not, war and peace, conqueror and conquered, toil and repose, sleep and waking, conception and birth, childhood and old age, male and female, strong and weak, white and red and all colours, hell and the pit and their darkness and their sulphurous fires, and also concerning paradise and its sublimity, its light and beauty, and its inestimable glory, and in short concerning those things that are and those that are not, those which may be spoken of and those which may not be spoken of, all these things they are able to say of this worshipful stone."*

2 By "lapis" is meant both the initial material, the prima materia, and the end-product of the opus, the lapis in its strict sense.

3 Or again, the filius is "vilis et carior" (base and more dear). "Consil. coniugii," *Ars chemica*, p. 150. Cf. Senior, *De chemia*, p. 11.

4 "Tractatus aureus," *Mus. herm.*, p. 10 (Waite, I, p. 13).

5 Cf. the "body that is not a body," in "Rosinus ad Euthiciam," *Art. aurif.*, I, p. 249.

6 Sermo XIII, Ruska, p. 122.*

7 Berthelot, *Alch. grecs*, IV, xx, 3. (MS. 2252, Bibl. Nat., Paris.)

18 "Gloria mundi," *Mus. herm.*, p. 270 (Waite, I, p. 218).

19 Trans. by Foxcroft, p. 30.

20 "The Spirit Mercurius," pars. 255ff.

21 *Mus. herm.*, p. 10 (Waite, I, p. 13).*

22 A condensation of the Iliad, XIV, 201 and 246: "I am going to the ends of the fruitful earth to visit Ocean, the forbear of the gods, and Mother Tethys . . . even Ocean Stream himself, who is the forbear of them all." (Trans. by Rieu, pp. 262f.)

23 *Elenchos* VIII, 12, 2ff. (Cf. Legge trans., *Philosophumena*, II, p. 107.)

24 The iota, the smallest Greek character, corresponding to our “dot” (which did not exist in Greek). Cf. Luke 16 : 17: “And it is easier for heaven and earth to pass than one tittle of the law to fall.”*

25 *Elenchos* VIII, 12, 5ff. (Legge, II, pp. 107f.). All this is a Gnostic paraphrase of John 1 and at the same time a meaningful exposition of the psychological self. In Jewish tradition Adam signifies, not a letter, but only the small hook at the top of the Yod (י). (*Shaare Kedusha*, III, 1, cited in *Encycl. Judaica*, s.v. “Adam Kadmon.”)

26 Pernety (*Diet, mytho-hermétique*, p. 293, s.v. “mer”) says of the “sea” of the alchemists: “Their sea is found everywhere, and the sages navigate it with a calmness which is not altered by winds or tempests. Their sea in general is the four elements, in particular it is their mercury.” Cf. *Psychology and Alchemy*, par. 57, n. 1, and par. 265. For the “man from the sea” cf. II Esdras (Apoc.) 11 and 13, fifth and sixth visions.

27 Mylius, *Phil, ref.*, p. 192.*

28 Pap. IV, lines 1115ff. Preisendanz, *Pap. Graec. Magicae*, I, p. 110.

29 *Mus. herm.*, p. 559 (Waite, II, p. 89).

30 “Monas hieroglyphica,” *Theatr. chem.*, II, p. 218.*

31 *Mus. herm.*, p. 59.

32 “Consil. coniugii,” *Ars chemica*, pp. 95 and 125: “Punctus Solis in medio rubeus” (the sun-point in the midst of the yolk). Yolk corresponds to fire. “In the midst of the yolk” is the *quintum elementum*, the quintessence, from which will grow the chick. Cf. Mylius, *Phil, ref.*, p. 145.

33 “The sun-point is the germ of the egg, which is in the yolk, and that germ is set in motion by the hen’s warmth.”* Codex Berolinensis Latinus 532, fol. 154^v. Ruska, *Turba*, p. 94.

34 *Theatr. chem.*, I, p. 382: “O wondrous wisdom, which by a word alone was able to bring into being every part of the vast and weighty mass of this huge machine that hath been made since the creation.”*

35 *Ars chemica*, p. 95.

36 Mylius, *Phil, ref.*, p. 131.

37 P. 21. Here Mylius mentions the “crime of the spirit,” from an anonymous treatise (“Liber de arte chymica incerti auctoris,” *Art. aurif.*, I, pp. 613f.). The crime of the spirit was that the spirit brought about the fall of the soul. It says to the soul: “I will bring thee to eternal death, to hell and the house of darkness. To whom the soul: My spirit, why dost thou not return me to that breast wherefrom by flattery thou didst take me? I thought thou wert bound to me by necessity. But I am thy friend, and I will conduct thee to eternal glory.”* “I will do so indeed, but alas, I am compelled to go away, though I will set thee above all precious stones and make thee blessed. Wherefore I beseech thee, when thou comest to the throne of thy kingdom, be mindful sometimes of me.”* This passage points fairly clearly to Luke 23 : 42: “Remember me when thou comest into thy kingdom.” Accordingly the soul, as the *lapis pretiosissimus*, has the significance of a redeemer. The spirit, on the other hand, plays the role of the Gnostic *Naas*, the serpent who brought about the fall of our first parents. The text even says of it: “But if that spirit remaineth with the soul and body, there is perpetual corruption there.”* For this remarkable aspect of the spirit see my “Phenomenology of the Spirit in Fairytales,” sec. 3, and “The Spirit Mercurius,” pars. 264ff., also Aniela Jaffé’s comments on “Phosphorus” in “Bilder und Symbole aus E. T. A. Hoffmanns Märchen ‘Der Goldene Topf.’” Here the spirit obviously plays the role of a “Luciferian” (light-bringing) *principium individuationis*.

38 Cf. my “Paracelsus as a Spiritual Phenomenon,” par. 201.

- 48 “And therefore it represents the idea of the heavenly Jerusalem,” p. 38. Cf. the heavenly Jerusalem as “bride” in *Aurora Consurgens*, pp. 53f., and as the *domus thesauraria* (treasure-house) of the *Sapientia Dei*, pp. 101ff.
- 49 * Cf. the Anthropos symbolism in the Codex Brucianus, *Psychology and Alchemy*, pars. 138f.
- 50 *De circ, quad.*, pp. 42f.*
- 51 *Ibid.*, pp. 45f.*
- 52 Nelken reports (“Analytische Beobachtungen über Phantasien eines Schizophrenen,” p. 536) on an insane patient with Gnosticist delusions who stated that God the Father had shrunk to a small point owing to the continual emission of his semen. The semen was lured from him by a “cosmic whore,” who sprang from his blood when it mixed with the darkness. This is a pathological version of the “vir a foemina circumdatus” (“A woman shall compass a man”: Jeremiah 31 : 22).
- 53 “Congeries Paracelsicae,” *Theatr. chem.*, I, pp. 545ff. Dorn is an opponent of the quaternity. Cf. “Psychology and Religion,” par. 104 and n. 47.
- 54 Anonymous scholia to the “Tractatus aureus” in *Theatr. chem.*, IV, p. 691.
- 55 Bousset (*Hauptprobleme der Gnosis*, p. 321) says: “The Gnostics believed that human beings, or at any rate some human beings, carry within them from the beginning a higher element (the *σπιθηρ*) deriving from the world of light, which enables them to rise above the world of the Seven into the upper world of light, where dwell the unknown Father and the heavenly Mother.”
- 56 Meerpohl, “Meister Eckhardts Lehre vom Seelenfünklein.”
- 57 Irenaeus, *Adv. haer.*, I, 24. The *pneumatikoi* have in them a little bit of the Pleroma (II, 19). Cf. the teaching of Satorneilos in Hippolytus, *Elenchos*, VII, 28, 3 (Legge, II, pp. 80f.).
- 58 Macrobius, *In somnium Scipionis*, I, cap. xiv, 19.
- 59 *Elenchos*, V, 19, 7 (Legge, I, p. 162).*
- 60 This idea occurs in alchemy in numerous variations. Cf. Maier, *Symb. aur. mensae*, p. 380, and *Scrut. chymicum*, Emblema XXXI, p. 91: “The king swimming in the sea, crying with a loud voice: Whoso shall deliver me shall have a great reward.”* Likewise *Aurora Consurgens*, p. 57: “Who is the man that liveth, knowing and understanding, to deliver my soul from the hand of hell?”* and beginning of ch. 8.
- 61 *Elenchos*, V, 21, 1.
- 62 Cf. “Transformation Symbolism in the Mass,” par. 359.

63 Cf. *Aion*, par. 344, n. 147 for a parallel in Frances G. Wickes, *The Inner World of Man*, p. 245.

64 *Elenchos*, VI, 17, 7.

65 *Von den dreyen ersten Principiis oder essentiis*, ch. IX. (Sudhoff, III, p. 11.) Cf. “Paracelsus the Physician,” par. 39, n. 56; “Paracelsus as a Spiritual Phenomenon,” pars. 168, 209, 226.

66 The motif of undressing goes back to the Song of Songs 5 : 7: “The keepers of the walls took away my veil from me,” and 5 : 3: “I have put off my coat, how shall I put it on?” The undressing symbolizes the extraction of the soul.

67 *Mus. herm.*, p. 579 (Waite, II, p. 106).

68 I have subjected this text to a detailed interpretation in Ch. v, pars. 591ff.

69 “Cham” (Ham) means the blackness. The Egyptian is the same as the Ethiopian. (von Franz, “Passio Perpetuae,” pp. 464ff.)

70 *Mesech* means ‘mixed drink.’

71 *Uraltes Chymisches Wërck*, Part II, pp. 51f. This is supposed to be the book of Abraham the Jew which plays a great role in the biography of Nicholas Flamel.

72 A MS (*Incipit*: “Figurarum aegyptiorum,” 18th cent., in my possession) gives another version of this motif: “There was a certain man, who was of use for nothing, and could not be kept under guard: for he broke out of all prisons, nay more, he made light of all punishments; yet a certain simple, humble, and sincere man was found, who well understood his nature, and counselled that he be deprived of all his garments and made naked.”* According to the text (fol. 21^f), the undressing signifies putrefaction. Cf. Trevisanus, *Theatr. chem.*, I, pp. 799ff. For the prison cf. *Aurora consurgens* I, Parable 3: “Of the Gate of Brass and Bar of Iron of the Babylonish Captivity.” Similarly, in the *Carmina Heliodori* (Goldschmidt, p. 55), the *nigredo* is called a “wall like the blackness of darkness,” or a “robe of destruction” (p. 56). This goes back to the ancient idea of *σῶμα / σῆμα* (body / sign). Cf. *Corpus Hermeticum* (ed. Scott, I, p. 172f): “But first you must tear off this garment which you wear—this cloak of darkness, this web of ignorance, this [prop] of evil, this bond of corruption—this living death, this conscious corpse, this tomb you carry about with you.” The *nigredo* is also represented as the “garment of darkness.” Cf. *Aurora Consurgens*, p. 59: “He shall not deride my garment,” and the parable in the “Aureum Saeculum Redivivum” of Madathanus, *Mus. herm.*, p. 61 (Waite, I, p. 58): “Her garments, which were rancid, ill-savoured. and poisonous, lay at her feet, whither she had cast them; and at length she broke forth in these words: ‘I have put off my coat; how shall I put it on?’”* (Cf. Song of Songs 5 : 3).

73 Mylius, *Phil. ref.*, p. 149. Similarly Morienus, “De transmut. metallica,” *Art. aurif.*, II, p. 45.

74 Morienus, *ibid.*, p. 32, and Lagneus, “Harmonia chemica,” *Theatr. chem.*, IV, p. 870.

75 *Art. aurif.*, II, p. 32. They are bubbles of steam that rise up in the solution.

76 *Theatr. chem.*, V, p. 884: “Until the earth shines like fishes’ eyes.”*

77 “Granular bodies like fishes’ eyes,”* “Aquarium sapientum,” *Mus. herm.*, p. 91 (Waite, I, p. 83). “At the beginning . . . like red grains and when they coagulate, like fishes’ eyes.”* Mylius, *Phil. ref.*, p. 193. The same in Penotus, “Regulae et Canones,” *Theatr. chem.*, II, pp. 153f. “When they shine in it like fishes’ eyes,”* Ventura, “De ratione confic. lap.,” *Theatr. chem.*, II, p. 333.

78 *Bibliotheca chemica*, II, Tab. IX, Fig. 4. Malus, conjectured to be Magus, mentioned in Ruska (*Turba*) as an Arabian author. Cf. “The Spirit Mercurius,” par. 287.

79 A free version of “Rosinus ad Sarrat.,” *Art. aurif.*, I, p. 310.*

80 Evidently Dorn (“Congeries Paracelsicae,” *Theatr. chem.*, I, p. 607) means the same thing when he says of the Phoenix as the transforming substance: “Its fledglings with their beaks pull out their mother’s eyes.”*

81 *Opera*, p. 159.

82 “Physica Trismegisti,” *Theatr. chem.*, I, p. 423.

86 *Liber de errore profanarum religionum*, 20, 1.*

87 A reference to the birth of Mithras from a rock.

88 The heavenly Jerusalem of the Apocalypse.

89 This reference is valid if the “stone with seven eyes” is taken not as the keystone but as the foundation stone of the temple. The first reference is to the *lapis angularis*, whose parallel in the Eastertide consecration of the fire is the *silex* (firestone), from which the spark springs forth. Cf. the first Collect for Easter Eve: “O God, who through thy Son, who is called the cornerstone, hast brought the fire of thy light to the faithful, make holy for our future use this new fire struck from the firestone.”

90 Cf. what is said in “Adam and Eve,” pars. 568f., below, about the Cabalistic stone, and particularly about the stone as Malchuth.

91 Campbell, *The Miraculous Birth of King Amon-Hotep III*, p. 67. According to Plutarch (“Isis and Osiris,” 55, pp. 134f), Typhon, the wicked brother-shadow of Osiris, wounded or tore out the eye of Horus, and this is to be interpreted as referring to the new moon. For the relation between the eye and “Chemia” see the important passage in Plutarch (33, pp. 82f): “Egypt moreover, which has the blackest of soils, they call by the same name as the black portion of the eye, ‘Chemia,’ and compare it to a heart.”*

92 Steeb, *Coelum Sephiroticum*, p. 47.*

93 *Opera*, II, pp. 1447f.

94 On the authority of Leone Ebreo, *Philosophy of Love*.

95 Garnerus de S. Victore, *Gregorianum* (Migne, *PL.*, vol. 193, col. 166).

96 Papyrus XLVI, British Museum. Cf. Preisendanz, *Pap. Graec. Magicae*, I, p. 194, li. 401.

97 Diodorus, *Bibliothèque Historique*, I, 11: “Osiris means many-eyed . . . for in shedding his rays in every direction he surveys with many eyes”* (Loeb edn., I, pp. 38f.).

98 Radhakrishnan, *Indian Philosophy*, I, p. 333.

99 Cf. Rabanus Maurus, *Allegoriae in Sacram Script.* (Migne, *P.L.*, vol. 112, col. 1009: “The eye is . . . clarity of intellect.”)

100 Cf. my “Complex Theory,” pars. 203f., and “Nature of the Psyche,” pars. 388ff.

101 Hippolytus, *Elenchos*, I, 22, 2 (Legge, I, p. 58): “And that from the concourse of the atoms both God and all the elements came into being and that in them were all animals and other things.”*

102 “Speculativa philosophia,” *Theatr. chem.*, I, p. 275.

103 John 1 : 4f: “In him was life, and the life was the light of men. And the light shineth in the darkness ...”

104 “If a man knows how to transmute things in the greater world . . . how much more shall he know how to do in the microcosm, that is, in himself, the same that he is able to do outside himself, if he but know that the greatest treasure of man dwells within him and not outside him.”* Dorn, “Spec, phil.,” *Theatr. chem.*, I, p. 307.

105 *Imago Dei* is ‘God-image’ in the sense both of a “reflection” and an archetype.

106 *Theatr. chem.*, I, p. 460. Cf. *Aion*, pp. 37ff.

107 “The Archeus in man naturally practises the chymic art.”* “Spec, phil.,” p. 308. This agrees with Paracelsus.

108 “Because man is engendered in corruption, his own substance pursues him with hatred.”* *Ibid.*, p. 308.

109 Here *chalybs* means ‘steel,’ but as *chalybs Sendivogii* it is an arcane substance which is the “secret Salmiac.” This is Sal Armoniacus, the “dissolved stone” (Ruland, *Lexicon*, p. 281). Elsewhere Ruland says: “Sal ammoniac is the star”* (Latin edn., p. 71). Mylius (*Phil. ref.*, p. 314) says of the miraculous aqua: “That is the best, which is extracted by the force of our chalybs which is found in the Ram’s belly . . . before it is suitably cooked it is a deadly poison.”* The ruler of Aries is Mars (= iron). Cf. “Ares” in Paracelsus (“Paracelsus as a Spiritual Phenomenon,” pars. 176f.)

110 “Spec, phil.,” p. 308.*

111 Cf. the “crime of the spirit” in n. 37.

112 “Spec, phil.,” p. 307.*

113 Born in 1560, studied medicine, took his degree 1588 in Basel, and died 1605 in Leipzig.

114 *Von hylealischen Chaos*, pp. 54f.

115 P. 63. Cf. *Aurora Consurgens*, p. 97.

116 P. 94. The filling of the world with scintillae is probably a projection of the multiple luminosity of the unconscious. Cf. “Nature of the Psyche,” pars. 388ff.

117 Pp. 170f.

118 P. 217.

119 There are numerous other synonyms for the scintilla on pp. 220f. and 263f.

120 They were preserved only in Hippolytus, whose *Elenchos* was not discovered until the middle of the 19th cent., on Mount Athos. The passage about the iota (cf. Matthew 5 : 18) in Irenaeus (*Adv. haer.*, I, 3, 2) can hardly have given rise to a tradition.

121 Originally a contribution to the memorial volume for Albert Oeri (pp. 265ff.).

122 *Symb. aur. mensae*, p. 169.

123 See par. 67.

124 This was recognized very early. Thus Jacob Spon says in his *Voyage d’Italie, de Dalmatie, de Grèce et du Levant fait aux années 1675 et 1676*, I, p. 53: “I claim only that whoever composed it did not understand the principles of Latin names; for Aelia and Laelia are two different families, and Agatho and Priscus are two surnames that have no family connection.” And on p. 351: “If any melancholy dreamer chooses to amuse himself by explaining it to pass the time, let him; myself I have already said that I do not believe it to be ancient, and would not put myself to the bother of investigating its riddle.”

125 The inscription is also mentioned in Toniola, *Basilea sepulta resecta continuata* (1661), p. 101 of Appendix, “Exotica monumenta.”

126 *Aelia Laelia Crispis Non Nata Resurgens* (1683). Among the commentators Reusner (author of *Pandora*), Barnaud, Turrius, and Vitus are cited, but not Michael Maier.

127 Ferguson (*Bibliotheca chemica*, I, p. 6) mentions 43 commentators. But there are two others in Malvasius, presumably friends of the author, who are introduced as; “Aldrovandus Ulisses of Bologna and his comrade our Achilles” (p. 29). Thus, by 1683, the number of known commentators had risen to 48 (including Maier). Ulysses Aldrovandus, of Bologna, lived from 1522 to 1605. He was a famous doctor and philosopher. “Our Achilles” may be identical with Achilles Volta. His name is mentioned as one of the commentators in Schwartz, *Acta eruditorum*, p. 333. Unfortunately I have no access to his treatise. The total number of commentators is, however, larger than 48.

128 Cf. Ferguson, s.v. Barnaud and Aelia Laelia. Barnaud’s “Commentarium” is printed in *Theatr. chem.*, III, pp. 836ff., and also in Manget, *Bibl. chem.*, II, pp. 713ff.

129 According to Ruland (*Lexicon*, p. 91), “capilli” is a name for the *lapis Rebis*. It was also conjectured that the *prima materia* might be found in hair.

130 Cf. supra, par. 14, “vetula” and “vidua.”

131 “Nec casta” (not chaste) is missing in Maier.

132 From Arab, *al-baida*, ‘the White One’.

133 “For marriage, like a cloak, covers and hides whatever is vicious.”* *Symb. aur. mensae*, pp. 170f.

134 “Scorpion, i.e., poison. Because it kills itself and brings itself to life again.”* Mylius, *Phil. ref.*, p. 256, and *Ros. phil.*, *Art. aurif.*, II, p. 272. “Euoi, two-horned one, twin-formed one! This god of yours is not twin-formed, but multiform . . . he is the basilisk and the scorpion . . . he is the crafty serpent . . . he is the many-coiled dragon, who is taken with a hook . . . this god of yours is decked with the hairs of the Lernaean snake.”* Firmicus Maternus, *Lib. de err. Prof. relig.*, 21, 2 (ed. Halm, *Corp. script. lat.*, II).

135 “(The divine water) makes natures come forth from their natures, and it quickens the dead.” Djabir, “Livre du Mercure oriental” (Berthelot, *Chimie au moyen âge*, III, 213). Cf. “Komarios to Cleopatra” (Berthelot, *Alch. grecs*, IV, xx, 15): “Stand up from the grave . . . and the medicament of life has entered into you.”* “The tincturing spirit and the metallic water that is poured out over the body, bringing it to life.”* *Aurora consurgens* II, in *Art. aurif.*, I, p. 229.

136 With regard to “the piercing sword, the dividing blade of Mercurius” see “The Visions of Zosimos,” pars. 86, 109f.

137 “Commentarium,” *Theatr. chem.*, III, p. 844.*

138 * Cf. Berthelot, *Alch. grecs*, III, xviii, 1.* Barnaud seems to have known the Paris MS No. 2327 (Berthelot, p. ix).

139 He adds “which is accustomed to bear away the spirit.” Cf. the “crime of the spirit,” supra, n. 37.

140 *Theatr. chem.*, III, p. 845.*

141 Barnaud calls him “adorned with both natural and divine light” (p. 840).

142 Maier does not take *necessarius* here as meaning “kinsman.”

143 *Theatr. chem.*, III, p. 846.

144 The “wise man, whole, smoothed and rounded” is an Horatian figure, meaning a man who is not dependent on earthly things. Cf. *Satires*, lib. II, vii, 83f.: “Who then is free? The wise man, who is lord over himself, whom neither poverty nor death nor bonds affright, who bravely defies his passions, and scorns ambition, who in himself is a whole, smoothed and rounded.”* Horace, *Satires, Epistles, and Ars Poetica* (trans. by Fairclough), p. 231.

145 In so far as it is the sum of conscious and unconscious processes.

146 *Symb. aur. mensae*, p. 173.*

147 *Ros. phil., Art. aurif.*, II, p. 246. The empirical model for this is the amalgamization of gold with mercury. Hence the saying: “The whole work lies in the solution” (i.e., of sun and moon in mercury). *Ibid.*, p. 270.

148 *Opera*, p. 351. He says there arises a “thickening of the air [i.e., a concretizing of the spirit] and all the limbs are torn to atoms.”* The “mangled King” refers to Osiris, well known to the alchemists, and his dismemberment. Thus Olympiodorus (Berthelot, II, iv, 42) mentions Osiris as the “straitened tomb (ἡ ταφή ἐσφιγμένη) which hides all his limbs.” He is the moist principle (in agreement with Plutarch, “Isis and Osiris,” c. 33, trans. by Babbitt, V, pp. 80f.) and “has bound together (συνέσφιγξεν) the whole of the lead,” obviously as its “soul.” Typhon sealed the coffin of Osiris with lead. (Plutarch, *ibid.*) Osiris and Isis together form the androgynous prima materia (Maier, *Symb. aur. mensae*, pp. 343f., and Pernety, *Diet, mytho-hermétique*, p. 359). He has affinities with the “sick” or “imprisoned” King, the *Rex marinus* of the “Visio Arislei.” He is “many-eyed” (*oculi piscium!*) in Diodorus, I, 11 (Loeb edn., I, pp. 38f) and “many-formed” like Attis (or the “self-transforming” Mercurius). In the hymn to Attis (Hippolytus, *Elenchos*, V, 9, 8) he is said to be “a corpse, or a god, or the unfruitful one.”* He must be freed from his grave or prison. Cf. the daily rite of the king in cutting out the sacrificial victim’s eye in memory of the eye of Horus, which contained the soul of Osiris. (Campbell, *The Miraculous Birth of King Amon-Hotep III*, p. 67.) On the first day of Phamenoth (beginning of spring) Osiris enters the new moon. This is his conjunction with Isis (Plutarch, p. 83). “And as at the beginning the sun is hidden in the moon, so, hidden at the end, it is extracted from the moon.”* Ventura, “De ratione confic. lapidis,” *Theatr. chem.*, II, p. 276.

149 Cf. “Transformation Symbolism in the Mass,” pars. 345ff., 400, 410f.

150 The bad smell is the “stench of the graves.” “For its [the dead body’s] smell is evil, and like the stench of the graves.”* Maier, *Symb. aur. mensae*, and Morienus, “De transmut. metallica,” *Art. aurif.*, II, p. 33. The stench of the underworld is an idea that dates back to ancient Egypt. Cf. the “Book of Gates,” cited by Wallis Budge, *Coptic Apocrypha in the Dialect of Upper Egypt*, p. lxvi.

151 “The pure lato is cooked until it begins to shine like fishes’ eyes.”* Morienus in *Art. aurif.*, II, p. 32.

152 “This One being placed in its spherical tomb.”* (“Tract. Aristot.,” *Theatr. chem.*, V, p. 886.) “The vessel is also called the tomb.”* (Hoghelande, “De alchemiae diffic.,” *Theatr. chem.*, I, p. 199.) *Vas* = ‘tomb, prison.’ (Ventura, “De ratione confic. lap.,” *Theatr. chem.*, II, p. 289.) In *Aurora Consurgens*, p. 135, the stone is to be removed “from the door of my sepulchre.”

153 Ruska, *Turba*, Sermo LIX, p. 162.

154 Dorn, “Physica Trismegisti,” *Theatr. chem.*, I (1659), p. 436.

155 Berthelot, *Alch. grecs*, IV, xxiii.

156 Albertus Magnus, “Super arborem Aristot.,” *Theatr. chem.*, II, p. 527.

157 “The tomb in which our king is buried is called . . . Saturn”* (Waite, *Herm. Mus.*, II, p. 189).

158 Firmicus Maternus, *De err. prof. rel.*, 2, 3: “In their shrines they have the idol of Osiris buried.”*

159 “Liber Alze,” *Mus. herm.*, p. 332 (Waite, I, p. 267).* Cf. “Ludus puerorum,” *Art. aurif.*, II, p. 189: “Therefore Avicenna says: So long as the *nigredo* is manifest, the dark woman prevails, and that is the first strength of our stone.”*

160 “Commentarium,” *Theatr. chem.*, III, pp. 847f.

161 Cf. *Psychology and Alchemy*, pars. 23ff. The fact that the alchemists, in their attempts to solve the Enigma, immediately thought of the most significant thing they knew, namely the secret of their art, is understandable at a time when there were enigmas even concerning God, the holy scriptures, etc. Cf. Lorichius, *Aenigmatum libri III* (fol. 23^r), which also contains the riddle of the hermaphrodite: “When my pregnant mother bore me,” etc. (see infra, par. 89.)

162 Athanasius Kircher’s interpretation in his *Oedipus Aegyptiacus* (II, ch. 6, p. 418) is purely alchemical and not distinguished by any originality. He calls the inscription “the prime chymic enigma,” mentioning that Wilhelmus Baroldus the Englishman made a Cabalistic interpretation. The monument is mentioned in Drexelius, *Opera* (I, p. 69): “There is at Bologna an ancient epitaph which has puzzled the wits of many. . . . Some interpret it as referring to man’s soul, others to the water from the clouds, others to Niobe changed into a rock, others in yet other ways.”*

163 All this is in Malvasius, *Aelia Laelia*, p. 55.

164 P. 103.

165 Prof. Felix Staehelin has informed me that the inscription is cited in *Corp. inscr. lat.*, XI, Part I, p. 15*, No. 88* under the spurious ones. [These asterisks are part of the refs. in the *Corp.*]

166 P. 40.*

167 P. 90.

168 “Auspicatissimi . . . Ternarii Cultorem eximium.”

169 “Therefore I am called Hermes Trismegistus, as having three parts of the philosophy of the whole world.”*

170 “God prefers odd numbers.”*

171 Cf. *Psychology and Alchemy*, pars. 26, 209.

172 Cf. the Phibionites, Stratototics, etc., in Epiphanius, *Panarium*, XXVI, 5 (ed. Holl, I, p. 281). The same idea occurs in Manichaeism: Reitzenstein and Schaeder, *Studien zum antiken Synkretismus aus Iran und Griechenland*, p. 346. For alchemy the so-called third sonship of Basilides is particularly important (cf. *Aion*, pars. 118ff.). The sonship (*υιότης*) left below in the “universal seed-bed” (*πανσπερμία*) was “left behind in formlessness like an early birth” (*έν τῇ ἀμορφία καταλειμμένη ριονεί έκτρώματι*) (Hippolytus, *Elenchos*, VII, 26, 7). Cf. Paul (I Cor. 15 : 8): “Last of all, as to one untimely born, he appeared also to me” (RSV).

173 This treatise derives from the old Latinists, or from the “Arabists,” whose connection with Arabic tradition is uncertain.

174 *Theatr. chem.*, V, p. 881.*

175 “The subtlety of nature . . . provided the cause of growth and life, and restored itself in the most perfect natures.”* “This Serpent . . . swells like a coal-black Toad, and . . . begs to be freed from its misery.”*

176 *Aelia Laelia*, p. 29.

177 On the Capitoline Hill there was an ancient oak sacred to the Capitol. For “Junonia” see Plutarch, “Quaestiones Romanae,” 92, *Moralia* (ed. Babbitt), IV, pp. 138f.

178 Cf. *Psychology and Alchemy*, par. 116, and “Paracelsus as a Spiritual Phenomenon,” pars. 179f., 214ff.

179 *Dendrologia*, I, p. 211.*

180 *Corp. inscr. lat.*, XI, i, pp. 163, 884: MVTINA.

181 I must leave to the author the responsibility for the correctness of this statement.

182 *Dendrologia*, I, p. 215.*

183 Concerning white and red see *The Zohar* (trans. by Sperling and Simon), I, p. 3: “As the lily among thorns [Song of Songs 2 : 1] is tinged with red and white, so the community of Israel is visited now with justice and now with mercy.” In contrast to alchemy, red is co-ordinated with the feminine, and white with the masculine, side of the Sefiroth system.

184 Cf. the doves in the “grove of Diana,” *Mus. herm.*, p. 659 (Waite, II, p. 170). The dove symbol may be derived directly from Christian allegory. Here we must consider the maternal significance of the dove, since Mary is called the *columba mystica*. (Godefridus, *Homiliae Dominicales*, Migne, *P.L.*, vol. 174, col. 38.) Cf. further the “hidden mother” designated as a dove in the Acts of Thomas (James, *Apocryphal New Testament*, p. 388) and the dove symbolism of the Paraclete in Philo (“Who is the Heir of Divine Things?” Loeb edn., IV, pp. 398f.). Nelken describes the vision an insane patient had of “God the Father”: on his breast he bore a tree of life with red and white fruit, and on it was sitting a dove. (“Analytische Beobachtungen,” p. 541.)

185 Abu’l-Qasim Muhammad, *Kitāb al-’ilm al-muktasab*, ed. by Holmyard, p. 23.

186 *Psychology and Alchemy*, fig. 231. Cf. Sapientia Dei as the tree of life in *Aurora Consurgens*, p. 35.

187 “De chemico miraculo,” *Theatr. chem.*, 1, pp. 773ff.

188 P. 799.

189 “He inserted an old oak, cloven in the midst, which is protected from the rays of the sun, casting a shadow”* (p. 800).

190 P. 800.*

191 Usually the king is alone only when he is sitting in the sweat-bath.

192 [“Brunnenstock.” The fountain described here is of a type commonly found in rural parts of central Europe. Shaped like a flattened “L,” it consists of an upright block of wood, the “stock,” from which the waterpipe projects over a long trough hollowed out of a tree-trunk.-TRANS.]

193 The text is ambiguous on this point: “Petii rursum utrum fond Rex esset amicus et fons ipsi? Qui ait, mirum in modum sese vicissim amant, fons Regem attrahit et non Rex fontem: *nam Regi velut mater est*” p. 801). (I, asked again whether the King was friendly to the fount, and the fount to him. And he replied, they are wonderfully fond of each other. The fount attracts the King, and not the King the fount: *for it is like a mother to the King*.) There is a similar association in Cyril of Jerusalem, *Catecheses Mystagogicae*, II, 4 (*Opera*, ed. Reischl, II, p. 361): “And that saving water is made both a tomb and a mother to you.”* Cf. Usener, *Das Weihnachtsfest*, p. 173.

194 Cf. Ovid, *Metamorphoses*, VII (trans. by Miller, I, p. 386f.): “Before my eyes the same oak-tree seemed to stand, with just as many branches and just as many creatures on its branches.” Isidore states that the “winged oak” (*ὑπόπτερος δρῦς*) of Pherecydes was wrapped in a hood (*φᾶρος*) like a woman. (Diels, *Vorsokratiker*, I, p. 47.) The

“veiling” is an attribute of Artemis Chitone, and particularly of Ishtar: she is *tashmetu*, the Veiled One, Situri-Sabitu, who sits on the throne of the sea, “covered in a veil.” (Wittekindt, *Das Hohe Lied*, p. 15.) The constant attribute of Ishtar is the palm. According to the Koran, Sura 19, Mary was born under a palm-tree, just as Leto gave birth under a palm-tree in Delos. Maya gave birth to the Buddha with the assistance of a willow. Human beings are said to be born of oaks (Pauly-Wissowa, *Realencyclopädie*, s.v. “Drys”). Further material in my “The Philosophical Tree,” pars. 418f., 458ff.

195 This is also the liturgical name for the font. See the Preface in the *Benedictio Fontis*: “May he fecundate this water for the regeneration of man,” etc. Cf. “Consil. coniugii,” *Ars chemica*, p. 204: “By matrix he means the root of the gourd.”* “The spagyric vessel is to be constructed in the likeness of the natural vessel”* (Dorn, “Physica Trismeg.,” *Theatr. chem.*, I, p. 430). The “natural vessel” is the uterus. (*Aurora consurgens* II, in *Art. aurif.*, I, p. 203.)

196 “The place of gestation, even though it is artificial, yet imitates the natural place, since it is concave and closed.”* (“Consil. coniugii,” p. 147.)

197 Cf. *Psychology and Alchemy*, fig. 257.

198 There is a widespread idea that souls and numina appear as snakes (for instance the numen of the hero, Cecrops, Erechtheus, etc.). Cf. John Chrysostom, *Homilia XXVI (alias XXV) in Joannem* (Migne, P.G., vol. 59, col. 155): “For what the mother is to the unborn child, that water is to the believer. For in water he is moulded and formed. Of old it was said: Let the water bring forth creeping things with a living soul. But since the Lord entered the streams of the Jordan, the water beareth no longer creeping things with living souls, but reasonable souls bearing the Holy Spirit.”*

199 According to Hegemonius (*Acta Archelai*, p. 18), Jesus was the paradisaic tree, indeed the Tree of Knowledge, in Manichaeism: “The trees which are [in paradise] are the lusts and other temptations that corrupt the thoughts of men. But that tree in paradise whereby good is known is Jesus, and the knowledge of him which is in the world: and he who receives this discerns good from evil.”* Here the Tree of Knowledge is regarded as a remedy for concupiscence, though outwardly it is not to be distinguished from the other (corrupting) trees.

200 Cf. *Psychology and Alchemy*, figs. 8 and 19.

201 Cf. “The Spirit Mercurius,” pars. 239, 247f.

202 “Impone ei” could refer to the tree, as “imponere” also means to “put on.” The tree can be a birthplace. Cf. the ancient motif of tree-birth.

203 Sermo 58.

204 *De chemia*, p. 78.*

205 Probably identical with Marcus Graecus, author of the so-called “Book of Fire.” He is difficult to date. (Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, pp. 477ff.) The fact that he is mentioned by Senior, whose Arabic writings are extant, may date him before the 10th cent. In Berthelot (*Chimie au moyen âge*, III, p. 124) there is a dialogue between Marqūsh, king of Egypt, and Safanjā, king of Saïd. Cf. M. T. Ali, ed., “Three Arabic Treatises on Alchemy by Muhammad Bin Umail” (10th cent.), and the excursus by H. E. Stapleton and M. H. Husain (“M. b. Umail: His Date, Writings, and Place in Alchemical History,” p. 175).

206 Stapleton and Husain (p. 177, n. 12) have here: “It is a house, which is called the grave (*qabr*) of Sahafa. She said (*qālat*) etc. Possibly the name Māriyah has been omitted.”

207 Or ‘region?’

208 τὸρμος = ‘hole’? The Arabic text has tūmtī.

209 The Arabic word for “reptile” really means ‘witch’. Cf. Stapleton and Husain (p. 177, n. 14): “The Arabic word properly means witches who consume the livers [*iecora* instead of *opaca*] of children and drink the milk of black goats.” Stapleton rejects “reptile.”

210 In the Arabic text, “liver.”

211 This makes one think of an altar fire and a goat sacrifice. Cf. “the blood of a most fine buck goat” (von Franz, *Aurora Consurgens*, p. 103). In Pibechios (Berthelot, *Alch. grecs*, III, xxv, 3) goat’s blood is a synonym for the divine water. Here the blood is used to feed the shades, as in the Nekyia, when Odysseus sacrifices black sheep, and, for Tiresias in particular, a black ram: “... the dark blood poured in. And now the souls of the dead who had gone below came swarming up from Erebus” (Rieu trans., p. 172).

212 This may refer to the “dissolved” state in the liquid medium.

213 Reading “pariunt” for “pereunt.”

214 In the form of *volatilia* and *vapores*.

215 This shows traces of Christian influence. The “Aquarium sapientum” (*Mus. herm.*, p. 117) says on this score: “Christ fasted in the wilderness for forty days and forty nights, as also he preached and worked miracles for forty months on earth, and lay for forty hours in the tomb. For forty days, between his rising from the dead and his ascension into heaven, he conversed with his disciples and showed himself alive to them.”* “Forty” is a prefiguration of the length of the opus. According to Genesis 50 : 3, forty days are required for embalming. Forty seems to be a magic multiple of four, 10 (the *denarius*) × 4.

216 I have mentioned this dream several times, for instance in “Archetypes of the Collective Unconscious,” par. 71, “The Phenomenology of the Spirit,” par. 398, “Analytical Psychology and Education,” par. 208, and “The Relations between the Ego and the Unconscious,” par. 287.

217 Cf. Stapleton and Husain, p. 178.

218 The love-birds of Astarte.

219 Here marble is the female substance, the so-called Saturnia (or Luna, Eva, Beya, etc.) which dissolves the sun. “Sparkling marble is the elixir for the whitening”* (Mylius, *Phil. ref.*, p. 234.) “Et de là changea sa forme noire et devint comme marbre blanc et le soleil était le plus haut” (MS. 3022, Bibl. de l’Arsenal, Paris). For the meridional position of the sun see “The Visions of Zosimos,” pars. 86 (III, v bis), 95, 107f. “Marble” is also a name for the “water like to itself,” i.e., Mercurius duplex. (Philaletha in *Mus. herm.*, p. 770.) This Senior passage is commented on in “Consil. coniugii”: “And let them cast their seed on the marble of the statues [?], and into the deifying water like to itself, and flying ravens will come and fall upon that statue. By ravens . . . he means the *nigredo*.”* The Consilium seems to point to what was known in alchemy as the “statua.” The origin of this idea is to be found in the treatise of Komarios (Berthelot, IV, xx, 14f.), where the soul, after the dark shadow has been removed from the body, awakens the now shining body from Hades, that it may rise from the grave, since it is clothed in spirituality and divinity. (For the exact text see “The Statue,” infra, par. 559.) In *Aurora consurgens* II (*Art. aurif.*, I, p. 196) *mater Alchimia* is likewise a statue, but one consisting of different metals. So, too, do the seven statues in Raymond Lully (Norton’s “Ordinall,” *Theatr. chem. Brit.*, ch. 1, p. 21). In Mylius (*Phil. ref.*, p. 19) it is said: “It is a great mystery to create souls, and to mould the lifeless body into a living statue.”* According to the teaching of the Mandaeans (Bousset,

Hauptprobleme der Gnosis, p. 34) and of the Naassenes (Hippolytus, *Elenchos*, V, 7; Legge, I, p. 122), Adam was a “corporeal” or “lifeless” statue. Similarly in Hegemonius (*Acta Archelai*, VIII) the “perfect man” was a “pillar of light,” referred to also in *Act. Arch.*, XIII: “But then shall these things be, when the statue shall come.”* We must bear these ideas in mind in reading Lully (*Codicillus*, ch. 49, p. 88): “Always extract oil [= soul] from the heart of the statues; for the soul in parable is fire, and a hidden fire.”* Senior (*De chemia*, p. 65) says: “We warm its water, which is extracted from the hearts of statues of stone.”* And in *Ros. phil. (Art. aurif.*, II, p. 335) we read: “... Venerate the souls in statues: for their dwelling is in them.”* Cf. the statue of the hermaphrodite, erected in the form of a cross, which “sweats,” in Bardesanes (Schultz, *Dokumente der Gnosis*, p. lv). The statue or pillar has affinities with the tree of light and tree of fire, as well as with the world’s axis. Cf. the pillar erected to Adonai Sabaoth in Book II of the Sibylline Oracles (ed. Geffcken, p. 39). Further material in “The Philosophical Tree,” pars. 421ff.

220 The Arabic text says “they will lay eggs.”

221 A woman patient who was much concerned with the problem of opposites dreamt that “*on the shore of a lake* [i.e., the edge of the unconscious] *two ring-snakes as thick as an arm, with pale human heads, were copulating.*” About six months later came the following dream: “*A snow-white snake with a black belly was growing out of my breast. I felt a deep love for it.*”

222 Birds flying up and down appear frequently in the literature and symbolize the ascending vapours. The “heaven” to which they ascend is the alembic or *capitelum* (helmet), which was placed over the cooking-vessel to catch the steam as it condensed.

223 At any rate this is the interpretation of the Latin translator.

224 See ch. I, n. 226.

225 I have to thank Dr. C. A. Meier for this dream.

226 *Art. aurif.*, II, p. 293. Cf. “Psychology of the Transference,” par. 528.

227 *Mus. herm.*, pp. 652ff. (Waite, II, p. 166).

228 From the 3rd cent. B.C., Cadmus, as a culture hero, was identified with Hermes Kadmilos.

229 Like the hamadryads, snakes are tree numina. A snake guarded the apples of the Hesperides and the oak of Ares in Colchis. Melampus received the gift of second sight from snakes which he found in a hollow oak.

230 Cf. *Aion*, pars. 80ff.

231 Musical ideas are sounded in alchemy since there are also alchemical “compositions” in existence. Michael Maier tried his hand at this art in his *Atalanta fugiens*. Examples are printed in Read, *Prelude to Chemistry*, pp. 281ff. For the parallel between alchemy and music see Berthelot, III, xlv, I and VI, xv, 2ff.

232 *Les Fables égyptiennes et grecques*, II, p. 121.

233 Pernety derives Cadmia from Cadmus. Ruland takes Cadmia as cobalt (which means “kobold”). Cadmia seems to have been zinc oxide and other zinc compounds. (Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 24.) Cadmus is connected with alchemy because he invented the art of mining and working gold. Cadmia is included in Galen’s pharmacopoeia as a means for drying deep ulcers. (*De simplicium medicamentorum facultatibus*, IX, pp. 599ff.) It was also known to Pliny. (*Hist. nat.*, XXXII, ch. 7, and XXXIII, ch. 5.)

234 Rather like the marriage-dance of the dancing couples in Kékulé’s vision of the benzol ring. Cf. “The Psychology of the Transference,” par. 353.

235 Cf. Wickersham Crawford, “El Horosopo del Hijo del Rey Alcaraz en el ‘Libro de Buen Amor,’” pp. 184ff.

236 Lorichius, *Aenigmatum libri III*, fol. 23^r.*

237 *Symbola aureae mensae*, p. 171.*

238 The riddle refers to Plato’s remark in the *Republic* (V, 479 B-C): “‘They are ambiguous like the puzzles you hear at parties,’ he replied, ‘or the children’s riddle about the eunuch hitting the bat and what he threw at it and what it was sitting on.’” (Lee trans., p. 243.) The scholium then gives the “Vir non vir” cited above. It is cited in another form as the riddle of Panarkes (Athenaeus, *Deipnosophists*, X, 452): “A man that was not a man hit a bird that was not a bird, perched on wood that was not wood, with a stone that was not a stone. The answer to these things is, severally, eunuch, bat, fennel, and pumice.”* (Gulick trans., IV, pp. 550f.)

239 Zimmer, *Der Weg zum Selbst*, p. 54.

240 Richardus Vitus Basinstochius, *Aelia Laelia Crispis Epitaphium Antiquum*, etc.

241 Whether Agathias was the author is uncertain. He was in Byzantium in 577 and 582. Among other things he wrote a *Κύκλος τῶν νέων ἐπιγραμμάτων* (Cycle of New Epigrams), much of which is preserved in the *Anthologia palatina et planudea*, including the above epigram. (Cf. *Anthologia Graeca Epigrammatum*, ed. Stadtmueller. II, Part 1, p. 210, No. 311.) Eustathius Macrembolites (*Aenigmata*, p. 209, 8 H) cites the above-mentioned interpretation of Holobolus, that the epigram refers to Lot’s wife.

242 Richardus Vitus, p. 11.*

243 Cf. *Aeneid*, VI, 730: “These life seeds have a fiery strength and heavenly origin.”*

244 This psychological insight, which was rediscovered only in the 20th century, seems to have been a commonplace among the alchemists from the middle of the 16th century on.

245 “She has so to speak the identity (selfness: *αὐτότητα*) of all mankind in herself.”* Vitus, p. 48.

246 P. 50.*

247 P. 50.*

260 “De sulphure,” *Mus. herm.*, p. 617: “(The soul) imagines very many profound things outside the body, and by this is made like unto God.”*

- 1 “Visio Arislei,” *Art. aurif.*, I, pp. 146ff.
- 2 Maier, *Symb. aur. mensae*, p. 156.
- 3 “Visio Arislei,” p. 147.
- 4 The philosophers say to him: “Lord, king you may be, but you rule and govern badly.”*
- 5 Senior, *De chemia*, p. 92.*
- 6 “Gold and silver in their metallic form are not the matter of our stone.”* “Tractatus aureus,” *Mus. herm.*, p. 32 (Waite, I, p. 33).
- 7 Because gold is not subject to oxidization, Sol is an arcanum described in the “Consilium coniugii” as follows: “A substance equal, permanent, fixed for the length of eternity” * (*Ars chemica*, p. 58). “For Sol is the root of incorruption.”* “Verily there is no other foundation of the Art than the sun and its shadow”* (ibid., p. 138).
- 8 Rupescissa, *La Vertu et la propriété de la quinte essence*, p. 19: “Jceluy soleil est vray or. . . . L’or de Dieu est appelé par les Philosophes, Soleil; car il est fils du Soleil du Ciel, et est engendre par les influences du Soleil és entrailles et veines de la terre.”
- 9 Sulphur is even identical with fire. Cf. “Consil. coniugii” (*Ars chemica*, p. 217): “Know therefore that sulphur is fire, that is, Sol.”* In Mylius (*Phil. ref.*, p. 185) Sol is identical with sulphur, i.e., the alchemical Sol signifies the active substance of the sun or of the gold.
- 10 “Our Sol is ruddy and burning.” * (Zacharius, “Opusculum,” *Theatr. chem.*, I, p. 840.) Bernardus Trevisanus goes so far as to say: “Sol is nothing other than sulphur and quicksilver.” * (Ibid., Flamel’s annotations, p. 860.)
- 11 Olympiodorus (Berthelot, *Alch. grecs*, II, iv, 43): “Smear [with it] the leaves of the shining goddess, the red Cyprian.”
- 12 Cf. the sulphur parable (infra par. 144), where the water is “most dangerous.”
- 13 Hoghelande, *Theatr. chem.*, I, p. 181.
- 14 *Mus. herm.*, pp. 581f. (Waite, II, p. 107).
- 15 Steeb, *Coelum sephiroticum*, p. 50. Paracelsus, in “De natura rerum” (Sudhoff, XI, p. 330), says: “Now the life of man is none other than an astral balsam, a balsamic impression, a heavenly and invisible fire, an enclosed air.” *De Vita longa* (ed. Bodenstein, fol. c 7^v): “(Treating of a certain invisible virtue) he calls it balsam, surpassing all bodily nature, which preserves the two bodies by conjunction, and upholds the celestial body together with the four elements.”*
- 16 Steeb, p. 117. The moon draws “universal form and natural life” from the sun. (Dorn, “Physica genesis,” *Theatr. chem.*, I, p. 397.)
- 17 *Theatr. chem.*, V, p. 130.
- 18 “It were vain to believe, as many do, that the sun is merely a heavenly fire.”* (Dorn, “Physica Trismegisti,” *Theatr. chem.*, I, p. 423.)
- 19 The alchemists still believed with Proclus that the sun generates the gold. Cf. Proclus, *Commentaries on the Timaeus of Plato* 18 B (trans. by Taylor), I, p. 36.
- 20 Dorn (“Phys. Trismeg.,” p. 423) says: “As the fount of life of the human body, it is the centre of man’s heart, or rather that secret thing which lies hid within it, wherein the natural heat is active.” *

- 21 Zosimos (Berthelot, *Alch. grecs*, III, xxi, 3) cites the saying of Hermes: “The sun is the maker of all things.” *
- 22 “Phys. Trismeg.,” p. 423.* The Codex Berol. Lat. 532 (fol. 154^v) says of the germ-cell of the egg: “The sun-point, that is, the germ of the egg, which is in the yolk.” *
- 23 “The first and most powerful male and universal seed is, by its nature, sulphur, the first and most powerful cause of all generation. Wherefore Paracelsus says that the sun and man through man generate man.” * (Dorn, *ibid.*)
- 24 Cf. *infra*, p. 98. The alchemical sun also rises out of the darkness of the earth, as in *Aurora Consurgens*, pp. 125f.: “This earth made the moon . . . then the sun arose . . . after the darkness which thou hast appointed therein before the sunrise.” *
- 25 *Ars chemica*, p. 158. On a primitive level, blood is the seat of the soul. Hair signifies strength and divine power. (Judges 13 : 5 and 16 : 17ff.)
- 26 Cf. the works of Lehmann, Preuss, and Rohr. A collection of mana-concepts can be found in my “On Psychic Energy,” pars. 114ff.
- 27 Cf. Bonus, “Pretiosa margarita novella,” *Theatr. chem.*, V, p. 648: “And in this wise Alchemy is supernatural, and is divine. And in this stone is all the difficulty of the Art, nor can any sufficient natural reason be adduced why this should be so. And thus it is when the intellect cannot comprehend this nor satisfy itself, but must yet believe it, as in miraculous divine matters; even as the foundation of the Christian faith, being supernatural, must first be taken as true by unbelievers, because its end is attained miraculously and supernaturally. Therefore God alone is the operator, nature taking no part in the work.”*
- 28 “Spec, phil.,” *Theatr. chem.*, I, p. 298; also “Phil, chemica,” p. 497.
- 29 Cf. *Aurora Consurgens*, p. 111: “For I could not wonder enough at the great virtue of the thing, which is bestowed upon and infused into it from heaven.”*
- 30 “Phil. meditativa,” *Theatr. chem.*, I, p. 456. There is a similar passage on P. 457: “Further, in the human body is concealed a certain substance of heavenly nature, known to very few, which needeth no medicament, being itself the incorrupt medicament.”*
- 31 P. 457.
- 32 P. 458. See also “Spec, phil.,” p. 266.
- 33 P. 459.*
- 34 “The Spirit Mercurius.”
- 35 Cf. the ancient idea that the sun corresponds to the right eye and the moon to the left. (Olympiodorus in Berthelot, *Alch. grecs*, II, iv, 51.)
- 36 Just as for the natural philosophers of the Middle Ages the sun was the god of the physical world, so the “little god of the world” is consciousness.
- 37 Consciousness, like the sun, is an “eye of the world.” (Cf. Pico della Mirandola, “Disputationes adversus astrologos,” lib. III, cap. X, p. 88r.) In his *Heptaplus* (Expositio 7, cap. IV, p. 11^f) he says: “Since Plato calls the Sun . . . the visible son of God, why do we not understand that we are the image of the invisible son? And if he is the true light enlightening every mind, he hath as his most express image this Sun, which is the light of the image enlightening every body.”*

38 This idea occurs already in the *Turba* (ed. by Ruska, p. 130): “But he who hath tinged the poison of the sages with the sun and its shadow, hath attained to the greatest secret.” * Mylius (*Phil, ref.*, p. 22) says: “In the shadow of the sun is the heat of the moon.” *

39 From ch. II of the “Tractatus aureus,” *Ars chemica*, p. 15.*

40 Cf. Mylius, *Phil, ref.*, p. 19. Here the *sol niger* is synonymous with the *caput corvi* and denotes the *anima media natura* in the state of *nigredo*, which appears when the “earth of the gold is dissolved by its own proper spirit.” * Psychologically, this means a provisional extinction of the conscious standpoint owing to an invasion from the unconscious. Mylius refers to the “ancient philosophers” as a source for the *sol niger*. A similar passage occurs on p. 118: “The sun is obscured at its birth. And this denigration is the beginning of the work, the sign of putrefaction, and the sure beginning of the commixture.” * This *nigredo* is the “changing darkness of purgatory.” Ripley (*Chymische Schriften*, p. 51) speaks of a “dark” sun, adding: “You must go through the gate of the blackness if you would gain the light of Paradise in the whiteness.” Cf. *Turba*, p. 145: “nigredo solis.”

41 *De chemia*, p. 91.*

42 The *sol niger* is a “counter-sun,” just as there is an invisible sun enclosed in the centre of the earth. (See Agnostus, *Prodromus Rhodostauroticus*, 1620, Vr.) A similar idea is found in Ventura (*Theatr. chem.*, II, p. 276): “And as at the beginning the sun is hidden in the Moon, so, hidden at the end, it is extracted from the moon.”*

43 “Tractatus aureus,” *Ars chemica*, p. 15.

44 Dorn, “Spec, phil.,” *Theatr. chem.*, I, p. 308. He conceives it in the first place as a physiologically destructive action which turns the salts in the body into chalk, so that the body becomes “sulphurous.” But this medical observation is introduced by the remark: “Because man is engendered in corruption, his own substance pursues him with hatred.” By this he means original sin and the corruption resulting therefrom.

45 I am not forgetting that the dangerous quality of Sol may also be due to the fact that his rays contain the miraculous water “which by the power of the magnet is extracted from the rays of the sun and moon.” * This water is a putrefying agent, because “before it is properly cooked it is a deadly poison.” Mylius, *Phil, ref.*, p. 314. This aqua permanens is the ὕδωρ θεῖον (divine water), the “divinity” being sulphur. It was called “sulphur water” (τὸ θεῖον also means sulphur) and is the same as mercury. θεῖον or θήιον in Homer was believed to possess apotropaic powers, and this may be the reason why it was called “divine.”

46 *Art. aurif.*, I, p. 58ff.*

47 The text only has “auri similitudinem profundam,” without a verb.

48 *Art. aurif.*, I, pp. 580ff.

49 “The Lapis-Christ Parallel.”

50 Especially as “sol iustitiae” (sun of justice), Malachi 4 : 2. Cf. Honorius of Autun, *Speculum de mysteriis Ecclesiae* (Migne, *P.L.*, vol. 172, col. 921): “For, like to the sun beneath a cloud, so did the sun of justice lie concealed under human flesh.” * Correspondingly, the Gnostic Anthropos is identical with the sun. (Cf. Reitzenstein, *Poimandres*, p. 280.)

51 *Art. aurif.*, I, p. 155.

52 The alchemical equivalent of the Trinity is the three-headed serpent (Mercurius). See *Psychology and Alchemy*, fig. 54.

53 Cf. my “Psychological Approach to the Dogma of the Trinity,” pars. 243ff. Though some may find it objectionable, the opposition between Christ and the devil in the above schema presupposes an inner relationship (regarded by the Ebionites, says Epiphanius, as that between two brothers). Angelus Silesius seems to have felt something of the sort, too:

“Were from the Devil all his His-ness gone,
You’d see the Devil sitting in God’s throne.”

Cherubinischer Wandersmann, I, No. 143 (Cf. Flicht version, p. 144). By “His-ness” Angelus Silesius means the “selfhood which damns,” as is incontestably true of all selfhood that does not acknowledge its identity with God.

54 The thinking in the Psalms and of the prophets is “circular. Even the Apocalypse consists of spiral images . . . One of the main characteristics of Gnostic thinking is circularity.” (Koepgen, *Gnosis des Christentums*, p. 149.) Koepgen gives an example from Ephraem Syrus: “Make glad the body through the soul, but give the soul back to the body, that both may be glad that after the separation they are joined again” (p. 151). An alchemist could have said the same of the uroboros, since this is the primal symbol of alchemical truth. Koepgen also describes dogma as “circular”: it is “round in the sense of a living reality. . . . Dogmas are concerned with the religious reality, and this is circular” (p. 52). He calls attention to the “fact of not knowing and not recognizing, which lies at the core of the dogma itself” (p. 51). This remark indicates the reason or one of the reasons for the “roundness”: dogmas are approximative concepts for a fact that exists yet cannot be described, and can only be approached by circumambulation. At the same time, these facts are “spheres” of indeterminable extent, since they represent *principles*. Psychologically they correspond to the archetypes. Overlapping and interpenetration are an essential part of their nature. “Roundness” is a peculiarity not only of dogmas, but, in especial degree, of alchemical thought.

55 Particularly dreams about hunger, thirst, pain, and sex. Another complementary factor is the feminine nature of the unconscious in a man.

56 For the compensatory aspect of this “reflection” see *Psychology and Alchemy*, pars. 26ff.

57 Koepgen, p. 112.

58 Cf. “The Spirit Mercurius,” pars. 282f. In another respect, also, the *filius philosophorum* is a “third” when we consider the development in the concept of the devil among the Ebionites (Epiphanius, *Panarium*, XXX). They spoke of two figures begotten by God, one of them Christ, the other the devil. The latter, according to Psellus, was called by the Euchites Satanaël, the elder brother of Christ. (Cf. *Aion*, par. 229, and “The Spirit Mercurius,” pars. 271f. In relation to these two the *filius regius*—as *donum Spiritus Sancti* and son of the prima materia—is a “third sonship,” which, in common with the prima materia, can trace its descent—though a more distant one—from God. For the threefold sonship see Hippolytus, *Elenchos*, VII, 22, 7f. (Legge, II, pp. 71f) and *Aion*, pars. 118f. The “sonships” come from the “true light” (John 1 : 9), from the Logos, the *sapientia Patris*. Hippolytus, VII, 22, 4 (Legge, II, pp. 68f.).

59 In psychotherapy the situation is no different from what it is in somatic medicine, where surgery is performed on the *individual*. I mention this fact because of the modern tendency to treat the psyche by group analysis, as if it were a collective phenomenon. The psyche as an individual factor is thereby eliminated.

60 “Spec, phil.,” *Theatr. chem.*, I, p. 308.

61 Ripley, *Chymische Schriften*, p. 34: “For then your Work will obtain the perfect whiteness. Then turn from the East towards midday, there it should rest at a fiery place, for that is the harvest or end of the Work. . . . Thereupon the sun will shine pure red in its circle and will triumph after the darkness.”

62 Cf. “Concerning the Archetypes, with Special Reference to the Anima Concept.” An example of the anima in plural form is given in *Psychology and Alchemy*, pars. 58ff.

63 Examples of both archetypes are to be found *ibid.*, Part II. Cf. also *Aion*, chs. 2 and 3. Another problem is the *shadow of the self*, which is not considered here.

64 Cf. *Psychology and Alchemy*, par. 159.

65 Examples of the sun and moon dreams are given *ibid.*, p. 135.

66 Here the concept of the *self* can be mentioned only in passing. (For a detailed discussion see *Aion*, ch. 4.) The self is the hypothetical summation of an indescribable totality, one half of which is constituted by ego-consciousness, the other by the shadow. The latter, so far as it can be established empirically, usually presents itself as the inferior or negative personality. It comprises that part of the collective unconscious which intrudes into the personal sphere, there forming the so-called personal unconscious. The shadow forms, as it were, the bridge to the figure of the anima, who is only partly personal, and through her to the impersonal figures of the collective unconscious. The concept of the self is essentially intuitive and embraces ego-consciousness, shadow, anima, and collective unconscious in indeterminable extension. As a totality, the self is a *coincidentia oppositorum*; it is therefore bright and dark and yet neither.

If we hypostatize the self and derive from it (as from a kind of pre-existent personality) the ego and the shadow, then these would appear as the empirical aspects of the opposites that are preformed in the self. Since I have no wish to construct a world of speculative concepts, which leads merely to the barren hair-splitting of philosophical discussion, I set no particular store by these reflections. If such concepts provisionally serve to put the empirical material in order, they will have fulfilled their purpose. The empiricist has nothing to say about the concepts self and God in themselves, and how they are related to one another.

67 Genesis 1 : 1–7 is a projection of this process. The coming of consciousness is described as an objective event, the active subject of which is not the ego but Elohim. Since primitive people very often do not feel themselves the subject of their thinking, it is possible that in the distant past consciousness appeared as an outside event that happened to the ego, and that it was integrated with the subject only in later times. Illumination and inspiration, which in reality are sudden expansions of consciousness, still seem to have, even for us, a subject that is not the ego. Cf. Neumann, *The Origins and History of Consciousness*, pp. 102ff.

68 I use the word “consciousness” here as being equivalent to “ego,” since in my view they are aspects of the same phenomenon. Surely there can be no consciousness without a knowing subject, and vice versa.

69 Cf. Rig-Veda, X, 31, 6 (trans. from Deussen, *Geschichte der Philosophie*, I, 1, p. 140):

“And this prayer of the singer, continually expanding,
Became a cow that was there before the world was,
The gods are foster-children of the same brood,
Dwelling together in the womb of this god.”

Vajasaneyi-samhita, 34, 3 (trans. from Deussen, *Die Geheimlehre des Veda*, p. 17):

“He who as consciousness, thought, decision,
Dwells as immortal light within man.”

70 “Save as a child, one goes not in where all
God’s children are: the door is much too small.”

Cherubinischer Wandersmann, I, No. 153.

71 “I am God’s child and son, and he is mine.
How comes it that we both can both combine?” (I, 256)
“God is my centre when I close him in;
And my circumference when I melt in him.” (III, 148)
“God, infinite, more present is in me
Than if a sponge should soak up all the sea.” (IV, 156)
“The hen contains the egg, the egg the hen,
The twain in one, and yet the one in twain.” (IV, 163)
“God becomes I and takes my manhood on:
Because I was before him was that done!” (IV, 259)

72 Part of this section appeared in *Nova Acta Paracelsica*, 1948, pp. 27ff.

73 Laurentius Ventura, “De ratione confic. lap.,” *Theatr. chem.*, II, pp. 334f.

74 “Figurarum Aegyptiorum,” MS, 18th cent. Author’s possession.

75 “Introitus apertus,” *Mus. herm.*, p. 652 (Waite, II, p. 165).

76 “Tractatus aureus,” *Mus. herm.*, p. 33 (Waite, I, p. 34); Mylius, *Phil. ref.*, p. 54.

77 Ventura, *Theatr. chem.*, II, p. 342.

78 “Tract, aureus,” *Mus. herm.*, p. 24 (Waite, I, p. 26).

79 *Ibid.*, pp. 11 and 21 (Waite, I, pp. 14 and 23); Aegidius de Vadis, “Dialogus,” *Theatr. chem.*, II, p. 100; Ripley, “Axiomata philosophica,” *Theatr. chem.*, II, p. 125.

80 Ripley, *Theatr. chem.*, II, p. 125. As *sulphur incremabile*, it is an end-product in *Theatr. chem.*, II, p. 302, and also in “De sulphure,” *Mus. herm.*, p. 622 (Waite, II, p. 142).

81 “Consil. coniug.,” *Ars chemica*, p. 217. In Paracelsus (ed. Huser, II, p.521) sulphur is one of the three primary fires (“fire is the body of souls”). In his *Vita longa* (ed. Bodenstein, fol. a 6^v) he says: “Sulphur is everything that burns, and nothing catches fire save by reason of sulphur.” * Trevisanus (“De chemico miraculo,” *Theatr. chem.*, I, p. 793) says: “For sulphur is none other than the pure fire hidden in the mercury.” * In Mylius (*Phil. ref.*, p. 50) the philosophical sulphur is “simple living fire, quickening other dead bodies [or: inert substances].” * Cf. also Penotus, “Regulae et canones,” *Theatr. chem.*, II, p. 150. Sulphur as “magna flamma” is a danger to the little life-flame of the alchemists (“De sulphure,” *Mus. herm.*, p. 637).

82 Ripley, *Opera omnia*, p. 150.

83 “Tract, aureus,” *Mus. herm.*, p. 24 (Waite, I, p. 26).

84 *Aurora consurgens* II, in *Art. aurif.*, I, p. 229.

- 85 In the Symbolic Table of Penotus (*Theatr. chem.*, II, p. 123) sulphur is co-ordinated with “virilitas prima” and “Dii caelestes.” The further co-ordination of sulphur with lion, dragon, and unicorn is the direct opposite of the heavenly.
- 86 “Consil. coniug.,” *Ars chemica*, p. 217, and “Epistola ad Hermannum,” *Theatr. chem.*, V, p. 893.
- 87 Mylius, *Phil. ref.*, p. 104; Zacharius, “Opusculum,” *Theatr. chem.*, I, p. 859.
- 88 Mylius, p. 179; *Mus. herm.*, p. 37 (Waite, I, p. 37).
- 89 *Mus. herm.*, p. 39.
- 90 *Turba*, p. 149, lines 21ff. “Consil. coniug.” (p. 66) says: “All quicksilver is sulphur” (a quotation attributed to Plato). On p. 202 there is a similar quotation from Geber.
- 91 *De pestilitate*, lib. 1 (ed. Sudhoff, XIV, p. 597).
- 92 Quotation from Geber in Trevisanus, *Theatr. chem.*, I, p. 793.
- 93 Quotation from Morienus, *ibid.*
- 94 Ripley, *Chymische Schrifften*, p. 31. For Mercurius as the “wife” of sulphur, who “receives from him the impregnation of the fruit,” see *ibid.*, pp. 10f.
- 95 “De sulphure,” *Mus. herm.*, p. 626 (Waite, II, p. 145).
- 96 *Mus. herm.*, p. 39 (Waite, I, p. 39). “Our,” of course, means: how we, the alchemists, understand it. Similarly in the *Turba*, p. 123, lines 17f.
- 97 *Turba*, p. 149.* The “four bodies” refer to the ancient *tetrasomia*, consisting of four metals. Dorn (“Congeries Paracelsicae,” *Theatr. chem.*, I, p. 622) accuses the Greeks of having turned the number four (i.e., the *tetrasomia*) into a monarchy of devilish idols, ruled over by Saturn, Venus, Mars, and Mercury.
- 98 *De natura rerum*, lib. 1 (“De Generatione rerum naturalium”). (Sudhoff, XI, p. 318; Huser, 1590, VI, p. 265.)
- 99 *Phil. ref.*, p. 202.
- 100 Referring to a “Sol” mentioned earlier.
- 101 *Theatr. chem.*, V, p. 103.*
- 102 Hoghelande, “Liber de alchimiae diff.,” *Theatr. chem.*, I, p. 171.
- 103 God is equated with greenness in the *Cherubinischer Wandersmann* (I, 190):
- “God is my sap: the leaves and buds I show,
They are his Holy Ghost, by whom I grow.”
- 104 “physica Trismegisti,” *Theatr. chem.*, I, p. 423. Hoghelande (*Theatr. chem.*, I, p. 172) quotes from Lully: “The father and the male seed,” and from Aquinas: “The substance of sulphur is like to the paternal seed, active and formative.”*
- 105 *Theatr. chem.*, I, p. 518.
- 106 “Phil. chemica,” *ibid.*, p. 482.
- 107 *Chymische Schrifften*, p. 10.
- 108 “But what is more, in his Kingdom there is a mirror in which the whole World is to be seen. Whosoever looks into this mirror, can see and learn therein the parts of the wisdom of the whole World, and so departs fully knowledgeable in these Three Kingdoms.” * *Mus. herm.*, p. 635 (Waite, II, p. 151).

109 Cf. the conversation between the alchemist and a “voice” in *Mus. herm.*, p. 637: “Master, doth Sulphur know aught concerning the metals? Voice: I have told thee that he knoweth all things, and of the metals even much more than of other things.” * “He is the heart of all things” * (p. 634).

110 *Turba*, p. 125, line 10.

111 *Art. aurif.*, II, p. 229.

112 Zacharius, “Opusculum,” *Theatr. chem.*, I, p. 842.

113 “De sulphure,” *Mus. herm.*, p. 632 (Waite, II, p. 149).

114 Mylius, *Phil. ref.*, pp. 61ff.

115 In my copy of *Phil. ref.*, p. 62. In Glauber (*De natura salium*, pp. 41 and 43) sulphur is the “exceeding black devil of hell” who quarrels with the salt.

116 “De sulphure,” *Mus. herm.*, p. 640 (Waite, II, p. 155). * *Candelulae* are “Elychnia of Sulphur, in which threads or morsels of wood are inserted.” * (Ruland, *Lexicon*, Latin edn., p. 457.)

117 The higher and the lower, the subtle and the coarse, the spiritual and the material.

118 They are one and the same, however. As above so below, and vice versa. Cf. “*Tabula smaragdina*.”

119 “Nature rejoices in nature,” according to the axiom of Democritus.

120 An allusion to the uroboros. The text of this passage is in “Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 302.

121 *Mus. herm.*, p. 633ff. (Waite, II, pp. 149ff.).

122 A patient dreamt: “*Animals were being hunted. The devil, their patron saint, appeared. Suddenly all the colours appeared in his dark-brown face, and then a vermilion spot in his cheek.*”

123 The only other figure who could be the mother is Luna. She, too, appears later in the parable, but in the form of Diana, i.e., in the role of daughter-sister.

124 The green colour attributed to Sulphur he has in common with Venus, as the verses in the *Gemma gemmarum* show. Venus says:

“Transparent / green / and fair to view
I am commixt of every hue /
Yet in me’s a Red Spirit hid /
No name I know by which he’s bid /
And he did from my husband come /
The noble Mars, full quarrelsome.”

The “red spirit” is our Sulphur—“painter of all colours.”

125 The “*Occulta chemicorum philosophia*,” printed in the 1611 edn. of Basilus Valentinus’ *Triumphwagen Antimonii* (pp. 579ff.), mentions an astrological characteristic of Saturn: he is “supreme tester,” and Sol and Luna (who “only exist through him”), warm his cold body “better than a young woman” (p. 583). Already in the pre-Ptolemaic tradition Saturn was connected with dubious love-affairs (Bouche-Leclercq, *L’Astrologie grecque*, p. 436, n. 1). *Mus. herm.*, p. 623 (Waite, II, p. 143) mentions the “infernal prisons where Sulphur lies bound.”

126 “Sulphur is his [the dragon’s] tail.” (*Ars chemica*, p. 140.)

- 127 Johannes à Mehung (Jean de Meung) in “Demonstratio naturae,” *Mus. herm.*, p. 162 (Waite, I, p. 135). Jean de Meung lived c. 1250–1305.
- 128 In the second version of the Vision of Arisleus in *Ros. phil.*, *Art. aurif.*, II (1572), p. 246.
- 129 Albertus Magnus, “Super arborem Aristotelis,” *Theatr. chem.*, II, pp. 526f.
- 130 “The whole arcanum lies hidden in the sulphur of the Philosophers, which is also contained in the inmost part of their mercury.” * *Mus. herm.*, p. 643 (Waite, II, p. 157).
- 131 Regarding Hermes Kyllenios see “The Spirit Mercurius,” par. 278.
- 132 Flamel, “Summarium philosophicum,” *Mus. herm.*, p. 173 (Waite, I, p. 142).
- 133 Albertus Magnus, p. 525.*
- 134 Cf. *Psychology and Alchemy*, par. 26.
- 135 Mylius, *Phil. ref.*, p. 185.
- 136 Ventura, *Theatr. chem.*, II, p. 262.
- 137 *Ibid.*, p. 276.
- 138 *Mus. herm.*, p. 634.
- 139 *Ibid.*, p. 635.
- 140 *Ars chemica*, p. 66. The oil is described as resembling the *anima media natura* in “Aphorismi Basiliani” (*Theatr. chem.*, IV, p. 368): “But the quickening power, like that which holds the world together, is midway between spirit and body, and the bond of them both, especially in the sulphur of a certain rubeous and transparent oil ...”*
- 141 *phil. ref.*, p. 18.* An older source is “De arte chymica,” *Art. aurif.*, I, p. 608.
- 142 So named by Lully. Cf. Hoghelande, *Theatr. chem.*, I, p. 199.
- 143 This is consistently so in Khunrath; cf. *Von Hylealischen Chaos*, p. 264. In “Rosinus ad Euthiciam,” *Art. aurif.*, I, p. 252, it is the “name of the divine water.” In Zacharius (*Theatr. chem.*, I, p. 831) sulphur is the “fatness in the caverns of the earth.” * Cf. Ruland, *Lexicon*, p. 305. Pernety (*Diet. mytho-herm.*, pp. 148f.) says: “On voit le mot de soufre attribué à bien des matières même très opposées entre elles . . . Les Philosophes ont donné à ce soufre une infinité de noms.”
- 144 P. 192.
- 145 An allusion to the axiom of Democritus.
- 146 “That from which things have their being is God the invisible and unmoved, whose will created the intelligence; from the will and intelligence is produced the simple soul; but the soul gives rise to the discriminated natures from which the composite natures are produced,” etc.* (*Theatr. chem.*, V, p. 145.)
- 147 P. 255.
- 148 *Aurora consurgens* II, in *Art. aurif.*, I, p. 229. In “Consil. coniug.” it is called “incombustible” (p. 149).
- 149 “It has no end to its action, for it goes on tincturing for ever.” * (*Ibid.*, p. 164.)
- 150 *Ibid.*, p. 199.
- 151 In Huser, II, p. 525; in Sudhoff, XIV, p. 555, ϕ is used for sulphur; here as in Mylius associated with the rainbow. Sudhoff, without stating any reasons, textual or otherwise, reckons the *Liber Azoth* among the spurious treatises. I cannot agree with this view.

152 *Phil, ref.*, p. 50.

153 *Theatr. chem.*, V, p. 106.

154 For a detailed discussion see *Psychology and Alchemy*, Part III, ch. 5.

155 The stream, though small, is “most dangerous.” The servants say they have once tried to cross it, but “we scarcely escaped the peril of eternal death.” They add: “We know too that our predecessors perished here.” The servants are the alchemists, and the stream or its water symbolizes the danger threatening them, which is clearly the danger of drowning. The psychic danger of the opus is the irruption of the unconscious and the “loss of soul” caused thereby. I have in my possession an alchemical MS. of the 17th cent., showing an invasion of the unconscious in a series of pictures. The images produced bear all the marks of schizophrenia.

156 “De sulphure,” *Mus. herm.*, pp. 639f.

157 Prof. C. Kerényi has kindly lent me the MS. of his work on Asklepios [trans. *Asklepios: Archetypal Image of the Physician's Existence*, 1959], which is of the greatest interest to all doctors. He describes the primordial physician as the “wounded wounder” (Chiron, Machaon, etc.). But, curiously enough, there are other parallels too. In our treatise the Prince is called “vir fords,” the strong man. He is without doubt the sun, and he surprises Diana while bathing. The birth-myth of Asklepios states that the sun-god Apollo surprised Coronis (the “crow maiden”) while she was bathing in Lake Boibeis [ibid., pp. 93ff.]. Coronis, being black, is associated with the new moon (*σύννοδος solis et lunae*), and her dangerousness is shown in the name of her father Phlegyas (“the incendiary”). Her brother or uncle was Ixion, rapist and murderer. The connection of Coronis with the moon is also explained by the fact that Phoebe (moon) was her ancestress. When Coronis was already pregnant with Apollo's son, Asklepios, she had intercourse with the chthonic Ischys (*ισχύς* = strong, the “vir fortis”) and as a punishment was slain by Artemis. The child was rescued from the body of its mother, on the funeral pyre, by Apollo. Kerényi supposes an identity between the bright Apollo and the dark Ischys. (A similar identity would be that of Asklepios and Trophonios.) The wounds of the physicians were usually caused by arrows, and the same fate was suffered by Asklepios: he was struck with the thunderbolt of Zeus because of an excess of zeal and skill, for he had not only healed the sick but called back the dead, and this was too much for Pluto. (Cf. Wilamowitz-Moellendorff, “Isyllos von Epidaurus,” pp. 44ff.) The “Novum lumen chemicum” gives an “Aenigma coronidis” (*Mus. herm.*, pp. 585ff.; Waite, II, pp. 111ff.), but this, except for the miraculous “water at times manifested to thee in sleep,” contains nothing that would point to the myth of Asklepios. Dom Pernety (*Fables égyptiennes et grecques*, II, p. 152) correctly interprets Coronis as *putreductio, nigredo, caput corvi*, and the myth as an opus. This is surprisingly apt, since alchemy, although the alchemists did not know it, was a child of this mythology, or of the matrix from which the classical myth sprang as an elder brother.

158 Reproduced in “Paracelsus as a Spiritual Phenomenon” (fig. B4).

159 Cf. *Psychology and Alchemy*, fig. 150, where one “telum passionis” bears the sign of Mercurius, the other the sign of sulphur.

160 As is evident in the very word *un-conscious*.

161 Isaiah 52 : 14: “As many were astonished at him—his appearance was so marred, beyond human semblance, and his form beyond that of the sons of men.” 53 : 2f.: “For he grew up before [us] like a young plant, and like a root out of dry ground; he had no form or comeliness that we should look at him, and no beauty that we should desire him. He was despised and rejected of men; a man of sorrows, and acquainted with grief; and as one from whom men hide

their faces he was despised, and we esteemed him not.” [RSV. In the last verse, alternative readings for “sorrows” and “grief” are “pains” and “sickness”; cf. *Schmerzen* and *Krankheit* in the Zürcher Bibel, quoted by the author.—TRANS.]

162 *Elenchos*, V, 8, 18 (Legge, I, p. 134).

163 Psalm 24 : 7.

164 Psalm 22 : 6.

165 “Mensura, numerus et pondus.” Cf. von Franz, *Aurora Consurgens*, Parable 4 (p. 83).

166 *Liber formularum spiritalis intelligentiae*, V (Migne, P.L., vol. 50, col. 751).

167 *Explanatio Psalmorum XII*, ed. Petschenig, pp. 139, 256.

168 “Gloria mundi,” *Mus. herm.*, p. 275 (Waite, I, p. 221).

169 Dorn, “Physica Trismeg.,” *Theatr. chem.*, I, p. 424.

170 “This union the Philosophers have declared in various ways, and likened it, for instance, to the wedlock of a bride and bridegroom (as in the Song of Solomon).” * *Mus. herm.*, p. 90 (Waite, I, p. 82).

171 The immediate model for this was probably Senior’s “Epistola solis ad lunam crescentem” (*De chemia*, pp. 7f.), but it may also have been inspired by Cicero’s *De natura deorum*, III, 11: “... unless indeed we hold that the sun holds conversation with the moon, when their courses approximate” (trans. Rackham, pp. 312ff.). Luna was identified with the wife *par excellence*, Juno: “... considering the moon and Juno to be the same” (Macrobius, *Saturnalia*, lib. I, cap. XV).

172 Wittekindt, *Das Hohe Lied und seine Beziehungen zum Istarkult*, pp. 13 and 23. Further material in Eisler, *Weltenmantel und Himmelszelt*, I, pp. 122ff.; II, PP. 370, 435, 602.

173 Penotus, *Theatr. chem.*, I, p. 681.

174 Steeb, *Coelum sephiroticum*, p. 138. The original idea is in Plutarch, “Isis and Osiris,” 43: “She [Selene] is receptive and made pregnant by the sun, but she in turn emits and disseminates into the air generative principles.” (*Moralia*, trans. Babbitt, V, pp. 104f.).

175 “Consilium coniugii,” *Ars chemica*, pp. 141f.

176 Dorn, “Physica genesis,” *Theatr. chem.*, I, p. 397. As early as Firmicus Maternus (*Matheseos*, I, 4, 9) we find the idea that the moon undergoes a kind of rebirth from the sun. This idea reached its highest development in the patristic parallel between the moon and the Church. Cf. Rahner, “Mysterium Lunae.”

177 Dorn, “Phys. Trismeg.,” *Theatr. chem.*, I, p. 426. For the Stoics the moon was the mediatrix between the world of eternal stars and the lower, earthly realm; similarly in Macrobius (*In somnium Scipionis*, I, 21) the moon stands midway between things divine and things corruptible. Mennens, in his “Aureum vellus” (*Theatr. chem.*, V, p. 321) says: “But the Moon, being the lowest of the planets, is said to conceive like a womb the virtues of all the stars, and then to bestow them on sublunary things . . . The moon implants all the virtues of the stars for the generation of all things, and especially their seeds.” * The moon also has a life- giving influence on minerals, “fashioning and preserving in its [the earth’s] bowels the various species of stones, metals, nay more, of living things.”*

178 Plutarch, “The Face on the Moon,” 21 (XII, p. 139); Macrobius, *In somn. Scip.*, I, 11, and Orphic fragment 81: *ἄλλη γαῖα*, ‘another earth.’ See Eisler, *Welten-mantel*, II, p. 657.

178a P. 125.

179 P. 141.

180 “He desires to lie with his mother in the midst of the earth.”* (“Allegoriae sapientum,” *Theatr. chem.*, V, p. 69.) Vigenerus (“De igne et sale,” *Theatr. chem.*, VI, p. 98) says: “And the heaven of incorruptible bodies and the seat and vessel of things that change not is the Moon, which rules over moisture and represents water and earth.”*

181 *Ros. phil.*, in *Art. aurif.*, II, pp. 338f.: “... when thou seest the earth as whitest snow . . . the ash is extracted from ash and earth, sublimed and honoured . . . the white foliated earth is the good that is sought.”*

182 “For the first work is towards the whitening, in the house of the Moon.”* (D’Espagnet, *Arcanum Hermeticae philosophiae opus*, p. 82.)

183 The *servus rubicundus* (red slave) and the *femina alba* (white woman) form the traditional pair. The “whiteness” occurs also in Chinese alchemy and is likened to a virgin: “The white lives inside like a virgin.” (Wei Po-yang, “An Ancient Chinese Treatise on Alchemy,” p. 238.) For the whiteness of the moon cf. Witte-kindt’s translation of Song of Songs 6 : 10: “Who is that, rising like the moon, beautiful as the whiteness?” (*Das Hohe Lied*, p. 8.) *Lebānā* = whiteness, a designation for the moon in Isaiah 24 : 23 and 30 : 26.

184 Ripley, *Opera omnia*, p. 362. The same in “Gloria mundi,” *Mus. herm.*, p. 217 (Waite, I, p. 176), and “Fons chymicae veritatis,” *Mus. herm.*, p. 809 (Waite, II, p. 267).

185 Philaletha, “Introitus apertus,” *Mus. herm.*, p. 659 (Waite, II, p. 170). See *infra*, pars. 182ff.

186 *Symb. aur. mensae*, p. 378.

187 *Art. aurif.*, I, p. 191.

188 “Consil. coniug.,” *Ars chemica*, p. 57. Similarly “Rosinus ad Sarrat.” (*Art. aurif.*, I, p. 301): “Moisture . . . from the dominion of the Moon.” Macrobius says: “But there is a certain property . . . and nature in the light that flows from it, which moistens bodies and bathes them as with a hidden dew.”* (*Saturnalia*, lib. VII, cap. XVI.)

189 *Mus. herm.*, p. 809 (Waite, II, p. 267).

190 ‘Ο **Χριστιανός** is not a proper name but only the designation by which an anonymous “Christian philosopher” was known. He was said to have been a contemporary of Stephen of Alexandria, and would thus have lived in the reign of the Emperor Heraclius, at the turn of the 6th cent.

191 He compares it to the “ever-flowing fount of Paradise.”* (Berthelot, *Alch. grecs*, VI, i, 2.) In Macrobius (*In somn. scip.*, I, 11) Luna is the “author and creator of mortal bodies,”* and (I, 19) “the vegetative principle, that is, growth, comes to us from the roundness of the moon.”*

192 The moon receives the souls of the dead (Hegemonius, *Acta Archelai*, ed. Beeson, p. 11). The soul comes from the moon: “The moon produces the soul . . . for man’s generation.”* (Plutarch, “The Face on the Moon,” 28, pp. 198f.) Further material in Capelle, *De luna stellis lacteo orbe animarum sedibus*.

193 “Mercurial water of the moon” and “fount of the mother.” Cf. “Rosinus ad Sarrat.,” *Art. aurif.*, I, p. 299.

194 Albertus Magnus, “Super arborem Aristotelis,” *Theatr. chem.*, II, p. 525.

195 *Ros. phil.*, in *Art. aurif.*, II, pp. 275ff.

196 *Ibid.*, p. 243.

197 See *Psychology and Alchemy*, figs. 116 and 188. Cf. also the sun-and-moon trees of the “House of the Sun” in the *Romance of Alexander*: “Perhaps you would like to see the most holy trees of the Sun and Moon, which will declare the future to you.” * (Hilka, *Der altfranzösische Prosa-Alexanderroman*, pp. 203f.)

198 *Theatr. chem.*, II, p. 527.

199 Naturally an alchemistic pseudo-Galen. Galen is credited with having written a *Liber Secretorum*, to which unfortunately I have no access.

200 Du Cange (*Glossarium ad scriptores mediae et infimae Graecitatis*, Appendix, p. 38) gives: “βήρσσα, τὸ μῶλυ, molix.” The herbal of Tabernaemontanus (*Kräuter-buch*, I, p. 408) mentions “βίμσασᾶ = ἄρμαλα = πήγανον ἄγριον, *Peganum sylvestre*, called μῶλυ by Galen, *Hermelraute*, often confused with hemlock. A cure for epilepsy and melancholic fantasies, makes sleepy and drunken like wine, is used in love-potions.” Dioscorides (*De medica materia*, lib. III, cap. 46, p. 349) says that *Ruta sylvestris* “is called *moly* in Cappadocia and Galatia, neighboring regions of Asia.” Galen (*De simplicium medicamentorum facultatibus*, lib. VII, p. 491) states: “Moly, *Ruta sylvestris*, has a black root and a milk-white flower.” For “moly” see Rahner, “Die seelenheilende Blume: Moly und Mandragora in antiker und christlicher Symbolik.”

201 *Aurora consurgens* II, in *Art. aurif.*, I, p. 222. The “yellow flowers” are reminiscent of the “Cheyri,” the miraculous herb of Paracelsus. Cf. *infra*, par. 698, and “Paracelsus as a Spiritual Phenomenon,” par. 171 and n. 7. In his *Labyrinthus medicorum* (Sudhoff, XI, p. 205) Paracelsus mentions the Lunatica: “Thus there is in the Lunatica the course of the whole moon, not visible, but in spirit.”

202 He calls the flowers “most familiar to the philosophers.” “Congeries Paracelsicae,” *Theatr. chem.*, I, p. 581.

203 *Von hylealischen Chaos*, p. 270.

204 * I have not been able to find a parallel for “maris Luna.” “Sea” always signifies the solvent, i.e., the *aqua permanens*. In it Sol bathes, is immersed or drowned, often alone. The parallel to Luna in the bath, as we have shown above (n. 157), is Diana. But she never drowns in her bath, because she is the water itself.

205 “Spongia” means not only sponge but also pumice-stone, which has the same porous structure. Thus the “Liber quartorum” (*Theatr. chem.*, V, p. 190) says: “But that which is a vapour or subtlety in those parts is retained only by a hard body . . . and whenever there is a stone which surrounds the substances like a sponge.” * Possibly referring to this passage Mylius (*Phil. ref.*, p. 107) writes: “The Sun and Moon are calcined philosophically with the first water, that the bodies may be opened and become spongy and subtle, and the second water enter more easily.” * Ruland (*Lexicon*, p. 300) takes over from Dioscorides (*De medica materia*, lib. V, cap. 96, p. 625) the differentiation of sponges into male (one species of which is called *tragos*, ‘goat’) and female. Their ashes were used as a styptic. Ruland adds, from Avicenna, that sponges “have souls,” by which he probably meant the vapours they produce when they are warmed. But then, for the alchemists, “anima” always had a special meaning which Avicenna formulates as follows: “The higher part is the soul, which quickens the whole stone and makes it live again.” * Ruland stresses that sponges have “understanding” (*intellectum*) because they contract when they hear a noise or are touched. He regards the sponge as “a zoophyte, neither animal nor vegetable, but having a third nature.”

206 *Art. aurif.*, I, p. 141.

207 Cf. *Psychology and Alchemy*, par. 537, where the text of Abu'l-Qāsim (*Kitāb al-'ilm al-muktasab*) is cited in Holmyard's translation.

208 See *Psychology and Alchemy*, figs. 122, 131, 135, 186, 188. Ventura: “The roots of its ores are in the air and its summits in the earth. And when they are torn from their places, a horrible sound is heard and there follows a great fear. Wherefore go quickly, for they quickly vanish.” * (*Theatr. chem.*, II, p. 257.) This obviously refers to the mandragora, which shrieks when it is pulled out. See “The Philosophical Tree,” par. 380, n. 4, and pars. 410ff.

209 Here the tree is God himself: “The purpose of the Creation was, that God should be known as Lord and Ruler; He, the stem and root of the world.” (*Zohar* I, fol. 11b, as cited by Hamburger, *Encyclopädie der Judentums*, II.) Joseph Gikatila says: “Know that the holy names of God found in the Scriptures are all dependent on the four-letter name YHVH. Should you object that the name Ehyeh is the ground and the source, know that the four-letter name may be likened to the trunk of a tree, whereas the name Ehyeh is the root of this tree. From it, further roots and branches extend in every direction.” (Winter and Wiinsche, *Die Jüdische Literatur seit Abschluss des Kanons*, III, p. 267.) Of the “crown” (Kether) it is said: “It is the source which makes the tree fruitful and drives the sap through all its arms and branches. For You, Lord of the worlds, You who are the ground of all grounds, the cause of all causes, You water the tree from that source, which, like the soul in the body, spreads life everywhere.” (*Tik-kune Zohar*, as cited by Joel, *Die Religionsphilosophie des Sohar*, pp. 308f., and Bischoff, *Elemente der Kabbalah*, I, p. 82.)

210 John of Ruysbroeck (1294–1381) says of the tree of Zacchaeus (Luke 19): “And he must climb up into the tree of faith, which grows from above downwards, for its roots are in the Godhead. This tree has twelve branches, which are the twelve articles of faith. The lower speak of the Divine Humanity, and of those things which belong to our salvation of soul and of body. The upper part of the tree tells of the Godhead, of the Trinity of Persons, and of the Unity of the Nature of God. And the man must cling to that unity, in the highest part of the tree; for there it is that Jesus must pass with all his gifts.” (*The Adornment of the Spiritual Marriage*, trans. by Wynschenk Dom, pp. 47f.)

211 *Katha Upanishad*, II, 6, 1 (SBE, XV, p. 21): “There is that ancient tree, whose roots grow upward and whose branches grow downward—that indeed is called the Bright, that is called Brahman, that alone is called the Immortal. All worlds are contained in it, and no one goes beyond.”

212 The Sanskrit word *manas* means ‘mind’. It includes all intellectual as well as emotional processes, and can therefore mean, on the one hand, understanding, intellect, reflection, thought, etc., and, on the other, soul, heart, conscience, desire, will, etc. *Manas* is an organ of the inner “soul,” or *atman*. (MacDonell, *A Sanskrit-English Dictionary*, s.v. *manas*). Rig-veda, X, 90, 13 (trans. by Griffith, II, p. 519) says: “The Moon was gendered from his mind, and from his eye the Sun had birth.” This refers to the two eyes of Purusha, the macrocosmic Primordial Man (Anthropos), who created the world by transforming himself into it—a very primitive concept which perhaps underlies the “generation by adaptation” mentioned in the “Tabula smaragdina” (infra, par. 162). *Brihadaranyaka Upanishad* (I, 3, 16) says: “When the mind had become freed from death, it became the moon” (trans. by Max Müller, II, p. 81).

213 Bousset, *Hauptprobleme der Gnosis*, p. 78. “**Ἐννοια** means ‘thought, conception, reflection, view’, also ‘meaning’, and, as contrasted with **ἄνοια** (thoughtlessness), could be translated by the modern terms ‘insight’ and ‘consciousness’, while **ἄνοια** is in certain places (for instance in the *Corpus Hermeticum*) fittingly rendered by ‘unconsciousness’. In Orphism, Selene is the “all-wise maiden.”

214 Clement of Rome, *Recognitiones* (Migne, P.G., vol. 1, col. 1254).

215 ‘Notion, invention, purpose, design’.

216 *Elenchos*, VI, 19, 2.

217 Ibid., 18, 2. (Cf. Legge, II, p. 13.)

218 Ruska rightly rejects “adoptione” as a variant. By “things” the alchemists understood “substances.” The “adaptation” process is reminiscent of the notion, found especially among the Australian aborigines, that the Original Being changed himself into the things and creatures of this world. The striking use of the neuter pronoun “illud” is easily explained by the hermaphroditism of the product, which is constantly stressed.

219 Ruska, *Tabula Smaragdina*, p. 2.* Senior says of this text (*De chemia*, p. 30f.): “Air is a mediator between fire (= Sol) and water (= Luna) by reason of its heat and moisture.” “Air is the life of everything.” “The son of wisdom is born in the air.”*

220 Cf. Senior, p. 20: “... spirit and soul, when they shall have been boiled down in the repetition of the distillation, will be mixed together in a universal mixture, and the one will retain the other and they will become one. One in subtlety and spirituality ...”*

221 “Nisi me interfeceritis, intellectus vester non erit perfectus, et in sorore mea Luna crescit gradus sapientiae vestrae, et non cum alio ex servis meis, etsi sciretis secretum meum.” *Art. aurif.*, II, p. 380. The “servants” refer to the planets, or to the corresponding metals.

222 P. 175. Here he cites this sentence as coming from the “Epistola Solis ad Lunam,” which is in Senior, *De chemia*, pp. 7ff., but it does not occur there.

223 Mylius, *Phil. ref.*, p. 309, and *Ros. phil.*, in *Art. aurif.*, II, p. 378.

224 “Nuncio ergo vobis omnibus sapientibus, quod nisi me interficiatis, non potestis sapientes nuncupari. Si vero me interfeceritis, intellectus vester erit perfectus, et in sorore mea crescit luna, secundum gradum sapientiae nostrae et non cum alio ex servis meis, etsi sciretis secretum meum.” (*Theatr. chem.*, V, pp. 96ff.)

225 Other corruptions of the name are Bolemus, Belenius, Balinas, Bellus, Bonellus.

226 *Theatr. chem.*, IV, p. 221.

227 * The “three” refers to the three ways of combining souls: in the body, in the soul, in the spirit.

228 *

229 I cannot refrain from pointing out the remarkable analogy that exists between Simon of Gitta and Pseudo-Apollonius on the one hand, and Lao-tzu on the other, with regard to the *principia mundi*. The components of *tao* are the masculine *yang* and the feminine *yin*, the one hot, bright, and dry like the sun, the other cold, dark, and moist like the (new) moon. The *Tao Teh Ching* (ch. 25) says of the Original Being:

“There was something formless yet complete
that existed before heaven and earth;
Without sound, without substance,
Dependent on nothing, unchanging,
All pervading, unfailing.
One may think of it as the mother of all things under heaven.”

(*The Way and Its Power*, trans. Waley, p. 174.)

230 He may even be identical with Senior. Cf. Stapleton and Husain, “Muhammad bin Umail,” p. 126, n. 2.

231 *Theatr. chem.*, V, pp. 114ff.

- 232 Cf. *Psychology and Alchemy*, pars. 366ff.

- 238 *Theatr. chem.*, II, p. 525.
- 239 Ibid., p. 527. Concerning the significance of the stork the “Aureum vellus” (*Theatr. chem.*, V, p. 446) says: “The stork devours serpents, and its flesh is profitable against all poisons.” * The stork is therefore a dragon-killer and a symbol of the demon-conquering moon. This symbol is also an attribute of the Church.
- 240 *Dialogue on Miracles*, IV, 39 (trans. by Scott and Bland, I, p. 236). The moon is related to the soul by the further fact that it is the “receptacle of souls.” Cf. Hegemonius, *Acta Archelai*, VIII.
- 241 Cf. *Psychology and Alchemy*, par. 140, n. 17, par. 220, n. 108, par. 385, n. 87.
- 242 Cf. Kalid, “Liber trium verborum,” ch. VI, *Art. aurif.*, I (1593), pp. 357f.
- 243 “The dragon is born in the blackness and . . . kills itself.” * *Ros. phil.*, in *Art. aurif.*, II, p. 230. The “soul in chains” occurs as early as the treatise of Sophe, the Egyptian: “the divine soul bound in the elements.” Berthelot, III, xlii, 1, line 17.
- 244 “We place the soul of the world especially in the sun.” * Mylius, *Phil. ref.*, p. 10.
- 245 See Fig. 8 in Mylius, p. 359, and Figura CI in Stolcenberg, *Viridarium chymicum*.
- 246 Cf. *Psychology and Alchemy*, pars. 430f.
- 247 See the final Emblema in Maier’s *Scrutinium chymicum*, p. 148.
- 248 *Art. aurif.*, II, p. 224.* The passage occurs again on p. 241, with the added words: “That is, with Sol and Luna.”
- 249 As in the frontispiece of *Le Songe de Poliphile* (*Psychology and Alchemy*, fig. 4).
- 250 Senior, *De chemia*, p. 15.
- 251 ‘Thought, intellect, mind’.
- 252 ‘Opinion, view, notion’. Pico adds: “According to the principles of their teaching.” “Heptaplus,” *Opera omnia*, Lib. IV, cap. IV, p. 32.
- 253 In the same place Pico mentions that Plato and “certain younger” philosophers interpreted Sol as “active intellect, but the Moon [as] potential intellect.”*
- 254 Ibid.
- 255 Ibid.
- 256 Ibid.
- 257 Ibid. Cf. the idea of the “inner firmament” as a symbol of the unconscious. “Nature of the Psyche,” pars. 390f., and “Paracelsus the Physician,” pars. 29ff.
- 258 Cap. V. Pico adds: “Hence this saying of the Chaldees: The beasts of the earth inhabit thy vessel, and in Plato’s Republic we learn that we have at home diverj kinds of brutes.” * Cf. the text from Origen supra, par. 6, n. 26. The

English mystic John Pordage speaks in his *Sophia* (p. 108 of the Dutch edn., 1699) of the “horrible people” in the soul.

259 “Heptaplus,” Lib. II, cap. III, p. 20.

260 Cf. Dee, “Monas hieroglyphica,” *Theatr. chem.*, II, p. 219: “And when the semi-circle of the moon was brought to be the complement of the sun, there was evening and there was morning, one day. Be that (day) therefore the first, on which was made the light of the Philosophers.”* The union of ☉ and ☾ gives the sign for Taurus, ♉, ruler of the house of Venus. The marriage of day (sun) and night (moon) is the reason for the rather rare designation of the lapis as the “filius unius diei” (son of one day). See *infra*, pars. 472ff.

261 “We hold therefore the moon to be the lowest earth and the most ignoble of all stars, as is the earth, very like to it by the opacity of all its elements, and by its blemishes.” * (“Heptaplus,” Lib. II, cap. II, p. 18.)

262 “And we know the moon to be inferior to all.” * (“In Astrologiam,” X, iv, *Opera omnia*, I, p. 685.)

263 *Ibid.*, III, v, p. 461f.

264 A milder form of these is the salamander.

265 Often mentioned as the “Corascene dog” (sun) and the “Armenian bitch” (moon). See *infra*, section B.

266 Said to devour its own wings or feathers. The eagle is therefore a variant of the uroboros.

267 Senior, *De chemia*, p. 9.

268 Sol is mindful of the dangerous role of Luna: “No one torments me but my sister.” (“Exercitationes in Turbam,” *Art. aurif.*, I, p. 173.)

269 Song of Songs 1 : 5: “I am black, but comely,” and 1 : 6: “... I am black because the sun has burnt me” is sometimes quoted.

270 “Consil. coniugii,” *Ars chemica*, p. 136.*

271 *Commentary on the Dream of Scipio*, I, xxi, p. 181: “The moon, being the boundary of ether and air, is also the demarcation between the divine and the mortal.”*

272 *Ibid.*, I, xi, p. 131.*

273 The heat and dew of the moon “turn flesh rotten.” Macrobius, *Saturnalia*, lib. VII, cap. XVI.

274 The empirical method of physicians is a heresy, according to Isidore of Seville (*Liber etymologiarum*, IV, cap. IV, fol. xxi^l). There are three medical heresies, and of this one he says: “The second empirical method, the method of trial and error, was discovered by Aesculapius.”*

275 Cf. Rahner, “Das christliche Mysterium von Sonne und Mond,” p. 400.

276 The mediating position of the moon and the Church is mentioned by the alchemist William Mennens (“Aureum vellus,” *Theatr. chem.*, V, p. 460): “[This] comes about when the light of the Moon begins to increase up to its fifteenth day and then to decrease until its thirtieth, returning then into the horns, until no light at all appears in it. According to this view, the Moon in allegory . . . signifies the Church, which is bright on its spiritual side, but dark on its carnal.” * Note the due emphasis he lays on the two aspects of the Moon. This is the spirit of scientific truth as contrasted with the retouchings of the kerygmatic point of view, which plays such an unfortunate role in the two great Christian confessions.

277 Preisendanz, *Pap. Graec. Mag.*, I, p. 142, Pap. IV, line 2280. It is also said that Selene has the voice of a dog. (Pap. IV line 2810, p. 162, and IV, line 2550, p. 152.) Her confusion with Hecate naturally makes this attribute all the stronger. (Cf. Siecke, *Beiträge zur genauen Kenntnis der Mondgottheit bei den Griechen*, pp. 14f.) In the Iliad, VI, 344 Helen calls herself a “nasty, mean-minded bitch” *κυνὸς κακομηχάνου ὀκρνοέσσης*. *Κύνες* are the pert, wanton maids of Penelope.

278 Line 1695, p. 126. In the twelfth hour he appears as a crocodile. Cf. the “dragon-son of the sun.”

279 This term occurs in ch. 9 of the “Dialogus philosophiae” of Aegidius de Vadis (*Theatr. chem.*, II, p. 107). “Symbolizatio” is the drawing of parallels and analogies—in brief, an amplification, described by Clement of Alexandria (*Stromata*, V, 46, trans. Wilson, II, p. 248) as “symbolic interpretation.”

280 In the history of symbols the dog is distinguished by an uncommonly wide range of associations, which I will not attempt to exhaust here. The Gnostic parallel *Logos/canis* is reflected in the Christian one, *Christus / canis*, handed down in the formula “gentle to the elect, terrible to the reprobate,” a “true pastor.” * St. Gregory says: “Or what others are called the watch-dogs of this flock, save the holy doctors?” * (*Moralia in Job*, XX, vi, 15; Migne, P.L., vol. 76, col. 145.) Also to be borne in mind is the “Indian dog,” a quadruped on the earth but a fish in water. This ability to change its shape makes it an allegory of St. Paul. (All this and more can be found in Picinellus, *Mundus symbolicus*, I, pp. 352ff., s.v. *canis*.) In the *Hieroglyphics of Horapollo* (Boas trans., No. 39, p. 77) emphasis is laid on the dog’s power to spread infection, especially rabies and diseases of the spleen. Because of its rich symbolic context the dog is an apt synonym for the transforming substance.

281 Khalid ibn Jazid (c. 700), an Omayyad prince. The “Liber secretorum” is ascribed to him. The text is quoted in *Theatr. chem.*, IV, p. 859.

282 One of the many Hermes quotations whose origins are obscure.

283 *Art. aurif.*, I, pp. 340f.*

284 Cf. “Psychology of the Transference,” par. 353, n. 1.

285 *Art. aurif.*, II, p. 248.* This passage is cited in *Theatr. chem.*, IV, p. 832.

286 *Κυνόσουρα* means ‘dog’s tail’ and denotes the constellation of the Little Bear.

287 Perhaps a reference to Matthew 7 : 14: “... strait is the gate, and narrow is the way, which leadeth unto life.”

288 *Elenchos*, IV, 48, 10 (cf. Legge, I, p. 112). *Κύειν* means ‘to be pregnant’, also ‘beget’. The related verb *κυνεῖν* means ‘to kiss’.

289 ‘Ο *ἐγγόνασι*, the Kneeler, is the constellation of Hercules. Cf. *Elenchos*, V, 16, 16.

290 For “canis” as synonym for the lapis see Lagneus, “Harmonia chemica,” *Theatr. chem.*, IV, p. 822.

291 Wendland has *κυνοειδῆ*. *Κυανοειδῆ* is a conjecture.

292 One conjecture is *Περσεφόνη Φλυά*.

293 *Elenchos*, V, 20, 6f.

293a Cf. pars. 160f.

294 The motif of disappearance occurs in the second version of the Gabricus / Beya myth (*Ros. phil.*, *Art. aurif.*, 1593, II, p. 263) and in the submersion of the sun (p. 333).

295 The same archetype forms the background to the Nicodemus dialogue in John 3.

296 A Venetian physician of the 16th cent.

297 The text has “succu.” It could therefore mean ‘extract the most pure with the juice and blood.’

298 Schmieder (*Geschichte der Alchemie*, p. 153) mentions a MS of Arnaldus de Villanova, “De secretis naturae,” and so does Du Fresnoy, *Histoire de la philosophic hermétique*, III, p. 325.

299 *Theatr. chem.*, II, pp. 292f.*

300 “Noli alienum introducere” and “nihil extraneum,” an oft-repeated saying.

301 *Art. aurif.*, II, pp. 385ff.

302 “Superflua removenda,” an equally popular phrase.

303 The idea of the “house” may have derived originally from astrology. Here the house (as *domus propria*) means the matrix of the substance, but as *domus aliena* it means the chemical vessel (for instance the *domus vitrea*, ‘house of glass’). The “flying bird” is a gas that issues from the matrix. The stone, on the other hand, signifies the substance, which does not leave its house like the gas, but must be transferred to another vessel. The gas (spirit) is invisible and feminine by nature, and therefore belongs to the unconscious sphere, whereas the substance is visible and tangible — “more real,” as it were. It is masculine and belongs to the conscious sphere (in a man). Accordingly the *domus aliena* could be interpreted as consciousness, and the *domus propria* as the unconscious.

304 In the “separatio” one of the birds can fly, the other not. The “unio” produces the winged hermaphrodite.

305 Perhaps the only parallel to this * is in Senior (*De chemia*, p. 78): “And the ravens will come flying and fall upon it.” * The idea is, obviously, that the birds share the king’s meal, a possible influence here being the marriage of the king’s son (Matthew 22 : 2ff.) and the marriage of the Lamb (Revelation 19 : 9ff.). Rex always signifies the sun, while the king’s table signifies the bright world of day, i.e., consciousness, in and by which the contents of the unconscious (the birds) are recognized. These are the “fishes and birds” that bring the stone. (Cf. *Aion*, par. 224.)

306 Variants of the “bird flying and without wings” (Senior, *De chemia*, p. 37.) For the plucked bird see “Allegoriae super turbam,” *Art. aurif.*, I, p. 140: “Take a cock crowned with a red comb and pluck it alive.”*

307 The two birds are the two luminaries, Sol and Luna, or their spirits. One bird is male and without wings, the other female and winged. When bound together as “colligatae” they represent the coniunctio. They are the parents of the lapis, which is practically identical with “Ars nostra” since it is an “artificium” (artefact).

308 “Hominum consortia relinquere nescit.” In other words, they remain with men, which reminds us of Kalid’s “always being with you” (par. 174). The birds are personified contents of the unconscious which, once they are made conscious, cannot become unconscious again. As we know, an essential if not decisive part of any analytical treatment is based on the fact that conscious realization generally brings about a psychic change.

309 Sol as the day-star.

310 Luna as the mother of the living and mistress of the night.

311 The *succus vitae* is once more the *aqua permanens*, which remarkably enough is also designated “dog,” as a passage in the “Opus praeclarum” of Valentinus (*Theatr. chem.*, IV, p. 1069) shows: “... of the water . . . which is called Dog of the balsam, or virgin’s milk, or our quicksilver, or soul, or wind, or the dragon’s tail.”*

312 The arcane substance is frequently likened to an egg. Cf. the treatise “Concerning the Egg” *περὶ τοῦ ὄου*. Berthelot, *Alch. grecs*, I, iii), where the equivalents are the brain-stone (*οἱ δὲ λίθον ἐγκέφαλον*), the stone that is no

stone (*ἕτεροι λίθον οὐ λίθον*), and the image of the world (*ἕτεροι τὸ τοῦ κόσμου μίμημα*), as in the *Turba* (ed. Ruska, p. 112) and numerous other places.

313 Cf. the frequent direction “on a slow fire.”

314 As stated above, the term “domus” is often used. *Domus thesauraria* (treasure-house) denotes the place where the arcanum is found, or else it is the chemical vessel (*domus vitrea*) or furnace. Cf. “Visio Arislei,” *Art. aurif.*, I, p. 148.

315 *Caro* (flesh) is a name for the arcane substance, especially when it is “vivified.” The “Consil. coniug.” says (*Ars chemica*, p. 234): “That globe receives the flesh, i.e., the coagulation, and the blood, i.e., the tincture.” * Dorn reveals the reason for this in his “Spec. phil.” (*Theatr. chem.*, I, p. 300): “Hence we can understand the philosophical transmutations: do we not know that the pure substance of bread and wine is transformed into flesh and blood?” * Trevisanus (“De chemico miraculo,” *Theatr. chem.*, I, p. 802) is equally clear when he says of the “king”: “And now he gives his red and bleeding flesh to be eaten by us all.” * In “Congeries Paracelsicae” (*Theatr. chem.*, I, p. 599) Dorn says that the medicament “can be made more than perfect through its own flesh and blood,” in agreement with the above quotation from the “Consilium.” A quotation from Malchamech in *Ros. phil.* (*Art. aurif.*, II, p. 238) says of the lapis: “It grows from flesh and blood.” Often we come across the “fat flesh,” as in a quotation from Pseudo-Aristotle in Mylius (*Phil. ref.*, p. 277): “Son, you must take of the fatter flesh,” and (p. 70): “Eat a morsel of the fat flesh,” a quotation from Arnaldus de Villanova (“Thesaurus thesaurorum,” *Art. aurif.*, II, p. 406). “Caro” is an allusion to the “fleshly” nature of man, which is tintured by the opus. The “Liber Platonis quatorum” (*Theatr. chem.*, V, p. 144) emphasizes this, and also the importance of “having knowledge of the gross, disordered, fleshly body, which is the burden of nature and reaches to the simple soul.” * The “animam simplicem” comes close to Plato’s “eternal Idea.”

316 Arnaldus de Villanova (p. 397) lays stress on the oneness of the stone: “For there is one stone, one medicine, to which nothing from outside is added, nor is it diminished, save that the superfluities are removed.” * *Ros. phil.* (*Art. aurif.*, II, p. 206) is even more emphatic: “One the stone, one the medicament, one the vessel, one the procedure, and one the disposition.”*

317 Classic pairs are Simon Magus and Helen, Zosimos and Theosebeia, Nicholas Flamel and Peronelle, Mr. South and his daughter (Mrs. Atwood, author of *A Suggestive Enquiry into the Hermetic Mystery*). A good account of Flamel’s career can be found in Larguier, *Le Faiseur d’or Nicolas Flamel*. The *Mutus liber* of Altus, recently reprinted, represents the *Mysterium Solis et Lunae* as an alchemical operation between man and wife, in a series of pictures. That such an abstruse and, aesthetically speaking, far from commendable book should be reprinted in the 20th century is proof of the psyche’s secret and quite irrational participation in its own mysterium. I have attempted to describe the psychology of these relationships in my “Psychology of the Transference.”

318 Cf. the illustrations in the *Mutus liber*, where this motif is well represented.

319 The opus is to be performed at certain fixed, symbolical times. For example, the *Arcanum hermeticae Philosophiae opus* (p. 82) says: “For the first work towards the whiteness must be brought to an end in the house of the Moon, and the second in the second house of Mercury. The first work towards the redness [should end] in the second house of Venus; the latter terminates in the second royal throne of Jove, wherefrom our most mighty King receives his crown adorned with precious stones.” * Besides this time co-ordination there are a number of others. The “Consilium coniugii” (*Ars chemica*, p. 65) says: “The white [stone] begins to appear at sunset on the face of the

waters, hiding itself until midnight, and thereafter it inclines towards the deep. But the red works contrariwise, for it begins to rise above the waters at sunrise and thereafter descends into the deep.”*

320 Cf. Senior, *De chemia*, pp. 26ff. His account is not altogether clear on’ this point—which, as he himself admits, is due to the obscurities of the whole procedure. On p. 28 he says: “And the second work is the albefaction and the rubefaction, and the sages have brought these two works together in one. For when they speak of the one, they speak of the other also, and hence their writings seem to the readers to be contradictory.”*

321 The result of the opus is often called its “fruit,” as in the *Turba*, Sermo LVIII (Ruska, p. 161): “Why hast thou ceased to speak of the tree, of the fruit whereof he that eateth shall never hunger?” * (This passage is probably not without reference to John 6 : 35: “. . . he that cometh to me shall never hunger, and he that believeth on me shall never thirst.”) The *Turba* continues: “I say that old man ceases not to eat of the fruits of that tree . . . until that old man becomes a youth . . . and the father is become the son.” * It is questionable whether this is a Christian interpolation.

322 There are many pictures of the *arbor philosophica*. In patristic language it is “the fruitful tree which is to be nourished in our hearts” (Gregory the Great, *Super Cantica Canticorum*, 2 : 3; Migne, *P.L.*, vol. 79, col. 495), like the vine in the Eastern Church: “Thou, prophet of God, art seen as a mighty vine, filling the whole world with divine words as with fruits”* (Theodore the Studite, *Hymnus de S. Ephrem*, in Pitra, *Analecta Sacra*, I, p. 341). “[I am] the fruitful vine” (*Aurora Consurgens*, p. 139). *Aurora* II likewise refers to John 15 : 1 and 5: “Know ye not that all holy writing is in parables? For Christ followed the same practice and said: I am the true vine.” * (*Art. aurif.*, I, p. 186). Cf. also “The Philosophical Tree,” par. 359, n. 5, par. 458 and n. 5.

323 *Mus. herm.*, pp. 658f. (Waite, II, p. 171).

324 “The Spagyrics . . . extract from the moon itself an oil against falling-sickness and all affections of the brain.” * Penotus, *Theatr. chem.*, I, p. 714.

325 Not only does Luna cause moon-sickness, she herself is sick or ailing. One sickness is the “combustible sulphur” which prevents her from staying in the mixture, the other is “excessive coldness and dampness.” Hollandus, *Theatr. chem.*, III, p. 365.

326 “They fall into madness through ignorance.”* Berthelot, *Alch. grecs*, II, iv, 46.

327 *Isis*, XVIII, p. 237. On p. 238 Wei Po-yang describes the madness that attacks the adept. Cf. “The Philosophical Tree,” pars. 432ff.

328 Berthelot, II, iv, 52. An alchemist would say that he knew the secret of gold-making. Psychologically it would mean that he knew about the transformation of consciousness, but that it was abortive, so that instead of being illuminated he fell into deeper darkness.

329 “In the philosophical sublimation or first preparation of Mercury a Herculean task confronts the worker . . . The threshold is guarded by horned beasts . . . naught will assuage their ferocity save the tokens of Diana and the doves of Venus, if the fates call thee”* (D’Espagnet, “Arcanum hermeticae philos.,” XLII, *Bibliotheca chemica*, II, p. 653). The doves themselves were originally the “chicks of crows” (p. 655). The priestesses of Ishtar were called doves (Wittekindt, *Das Hohe Lied*, p. 12), just as the priestesses of the goddess of Asia Minor were called *πελειάδες*, ‘wild doves’ (Eisler, *Weltenmantel und Himmelszelt*, p. 158). The dove is also the attribute of the mother-goddess of the Hittites, who is depicted in an obscene position (Wittekindt, p. 50).

330 Eleazar, *Uraltes Chymisches Werck*, I, p. 34.

331 Ibid., p. 52. See *infra*, par. 624.

332 The text is corrupt here: “concutit statim pero ledos.” I read “terrae sedes.” It refers to the resurrection of the lapis out of the earth, which it penetrated as the “aer sophorum” (air of the sages), one of the many allusions to the coniunctio. The birth of the lapis has its parallel in Christ’s resurrection, hence the reference to the earthquake. (Cf. Matthew 28 : 2: “And behold, there was a great earthquake ...”)

333 Philaletha, *Mus. herm.*, p. 657 (Waite, II, p. 169).

334 John 5 : 2ff.

335 “He has the key to the infernal prison house where sulphur lies bound.”* “De sulphure,” *Mus. herm.*, p. 623 (Waite, II, p. 143).

336 “Servus fugitivus” (fugitive slave) is more common. “Cervus” occurs in Agrippa von Nettesheim (*The Vanity of Arts and Sciences*, p. 315): “... foolish Mysteries of this Art, and empty Riddles, of the Green Lion, the fugitive Hart.” There is a picture of Diana and Actaeon on the title-page of *Mus. herm.*, 1678 (reproduced in Bernoulli, “Spiritual Development as Reflected in Alchemy”). In the Table of Figures in Manget (*Bibl. chem.*, II, Plate IX, Fig. 13) the stag appears as the emblem of “Mahomet Philosophus.” It is a symbol of self-rejuvenation in Honorius of Autun, *Sermo in Epiphania Domini* (Migne, *P.L.*, vol. 172, col. 847), where it is said that the stag, when he has swallowed a poisonous snake, drinks water “that he may eject the poison, and then cast his horns and his hair and so take new”; we likewise should “put aside the horns of pride and the hair of worldly superfluity.” In the legend of the Grail it is related that Christ sometimes appeared to his disciples as a white stag with four lions (= the four evangelists). (Cf. “Nature of Dreams,” par. 559, n. 9, and the frontispiece to Vol. 8 of these *Coll. Works*) Here too it is stated that the stag can renew itself (*Le Saint Graal*, III, pp. 219 and 224). Ruland (*Lexicon*, p. 96) mentions only that “*Cerviculae Spiritus* is a bone of the heart of the stag.” Dom Pernety (*Diet, mytho-hermétique*, p. 72) says of the “cerveau ou coeur de cerf”: “C’est la matière des Philosophes.” The *Livre des Secrez de Nature* says: “The stag is a well-known beast, which renews itself when it feels it is growing old and weak. It goes to an ant-hill and digs at the foot thereof and brings forth thence a serpent, on which it tramples with its feet and afterwards eats; it then swells up, and so renews itself. Wherefore it lives for 900 years, as we find in scripture ...” (Delatte, *Textes Latins et Vieux François relatifs aux Cyranides*, p. 346.)

337 Since a psychic transformation is involved, the obscure passage in the Naassene hymn (Hippolytus, *Elenchos*, V, 10, 2), describing the sufferings of the soul, might be relevant here: “The soul . . . veiled in the form of a stag, wearies, overpowered by the pains of death.” * But the text is so uncertain that it has little documentary value.

338 Cf. “Psychology of the Transference,” pars. 419ff.

339 Goethe, “Der Schatzgräber.”

340 So in Rueckert’s well-known poem. Hebrew *Yetser ha-ra* means “instinct of evil.”

341 Cf. Heraclitus, R. P. 49, in Burnet, *Early Greek Philosophy*, p. 141.

342 *West-östlicher Diwan*.

343 Naturally, this is true only during the process of coming to terms with the unconscious.

344 P. 49.

345 “In outward forms thou’lt not find unity,

Thine eye must ever introverted be.

Canst thou forget thyself, to all forlorn,
Thou'lt feel God in thee, well and truly One.”

(Tersteegen, *Geistliches Blumengärtlein inniger Seelen*, No. 102, p. 24.)

“When I seek him outside, God makes me bad:
Only within is salvation to be had.”

(Angelus Silesius, *Sämtliche Poetische Werke*, ed. Held, I, p. 162.)

346 Book of Enoch 48 : 1: “... fountains of wisdom; and all the thirsty drank of them.” (Charles, *Apocrypha and Pseudepigrapha*, II, p. 216).

347 Boy Charioteer, Homunculus, and Euphorion.

348 Clement of Rome, Second Epistle to the Corinthians, 12 (*The Apostolic Fathers*, trans. Lake, I, p. 147).

349 This has been shown once again in our own day by the solemn promulgation of the dogma of the Assumption. A Catholic author aptly remarks: “There seems to be some strange rightness in the portrayal of this reunion in splendour of Son and Mother, Father and Daughter, Spirit and Matter.” (Victor White, “The Scandal of the Assumption,” *Life of the Spirit*, V, p. 199.) In this connection it is worth recalling the words of Pope Pius XII’s Apostolic Constitution, *Munificentissimus Deus*; “On this day the Virgin Mother was taken up to her heavenly bridal chamber” (English trans., p. 15). Cf. Antony of Padua, “Sermo in Assumptione S. Mariae Virginis,” *Sermones*, III, p. 730.

350 Also of gentleness, tameness, peacefulness (dove of Noah), simplicity (“simplices sicut columbae,” Matthew 10 : 16; DV: “guileless as doves”). Christ, too, is called a dove: “The Lord Jesus was a dove . . . saying Peace be unto you. . . . Behold the dove, behold the green olive-branch in its mouth.” * (Fernandus, cited in Picinellus, *Mundus Symbolicus*, p. 283.) Picinellus calls Mary the “most pure dove.” The “Aureum vellus” (Mennens, *Theatr. chem.*, V, p. 311) interprets the dove as follows: “Wherefore the Prophet crieth: Who will give me wings like a dove, that is to say, spotless and simple thoughts and contemplations?” *

351 II Corinthians 12 : 7.

352 A paradox which, like the *kenosis* doctrine (Philippians 2 : 6f.), is a slap in the face for reason.

353 My conjecture. See supra, II. 332.

354 An idea echoed in the dogma of the Assumption, which lays particular emphasis on the incorruptibility of the body, likening it, as the earthly vessel of divinity, to the ark of the covenant: “In the ark of the covenant, built of incorruptible wood and placed in the temple of God, they perceive an image of the most pure body of the Virgin Mary, preserved free from all corruption of the tomb.” (*Munificenlissimus Deus*, English trans., p. 13.) The coexistence in heaven of the real earthly body with the soul is expressed unequivocally in the words of the definition: “... was taken up . . . body and soul ...”

355 Baechtold and Stäubli, *Handwörterbuch des deutschen Aberglaubens*, VI, s.v. “Mond.”

356 Sudhoff, XIV, pp. 651ff.

357 Pseudonym Bernardus à Portu Aquitanus, *Theatr. chem.*, II, p. 123.

358 The moon also has a relation to Saturn, the astrological maleficus. In the “Dicta Belini” Saturn is, as it were, the “father-mother” of the moon: “I am the light of all things that are mine and I cause the moon to appear openly from

within my father Saturn, even from the regnant mother, who is at enmity with me.”* (“Allegoriae sapientum,” *Theatr. chem.*, V, p. 97.) Saturn plays the role of Typhon: dismemberment.

359 Medical psychologists would profit from Esther Harding’s account of moon psychology in her book *Woman’s Mysteries*. See especially ch. 12, “The Inner Meaning of the Moon Cycle.”

360 Dorn, “Phys. Trismeg.,” *Theatr. chem.*, I, p. 424.* An allusion to “Tabula Smaragdina,” *De Alchemia*, p. 363: “The wind hath borne it in his belly.”

361 “Congeries Paracelsicae,” *Theatr. chem.*, I, pp. 641f.

362 *Ibid.*, p. 642.

363 Penotus in “De medicament, chem.,” *Theatr. chem.*, I, p. 681.

364 “Aurei velleris Libri tres,” *Theatr. chem.*, V, p. 321.

365 A parallel to the Maria Mediatrix of the Church, who dispenses grace.

366 Presumably aether as the *quinta essentia*.

367 The “opus ad Lunam” is the whitening (*albedo*), which is compared with sunrise.

368 That is, of all luminaries, i.e., stars.

369 *Art. aurif.*, I, p. 398.*

370 “Gloria mundi,” *Mus. herm.*, p. 280 (Waite, I, p. 225).*

371 “Isis and Osiris,” 43, *Moralia* (trans. by Babbitt, V, pp. 104f.).

372 Goethe, *Faust* (trans. by MacNeice), p. 48 (mod.).

373 For instance in Marcus the Gnostic. Cf. Hippolytus, *Elenchos*, VI, 42, 2 (Legge, II, p. 44).

374 Cf. “Brother Klaus,” pars. 485f.

375 *Anna Kingsford: Her Life, Letters, Diary, and Work*, I, p. 130. I have quoted this vision at some length in my “Commentary on *The Secret of the Golden Flower*,” par. 40.

376 Cf. *Penguin Island* (trans. by Evans), p. 30.

377 “Spirit and Life,” pars. 629ff.

378 Cf. *I Ching, or the Book of Changes* (trans. Wilhelm and Baynes), I, p. 80, Hexagram 18: “Work on What Has Been Spoiled.”

379 Vigenerus (“De igne et sale,” *Theatr. chem.*, V, pp. 32f.) speaks of three worlds. The fire on earth corresponds to the sun in heaven, and this to the Spiritus Sanctus “in the intelligible world.” But on p. 39 he suddenly remembers the fourth, forgotten world: “The fourth is infernal, opposed to the intelligible, glowing and burning without any light.” * He also distinguishes four kinds of fire. (Cf. *Aion*, pars. 203, 393, and n. 81.)

380 Heaven, earth, hell (like sulphur, mercurius, sal) is a false triad: earth is dual, consisting of the light-world above and the shadow-world below.

381 Fire = sulphur, Sol = Mercurius (as the mother and son of Sol).

382 *Opus Mago-Cabbalisticum et Theosophicum*, p. 30.

383 A quotation from Hermes in *Rosarium phil.* (*Art. aurif.*, II, p. 244) mentions “Sal nostrae lunariae” (the salt of our moon-plant). “Our salt is found in a certain precious Salt, and in all things. On this account the ancient Philosophers called it the common moon” * (*Mus. herm.*, p. 217; Waite, I, p. 177). The salt from the Polar Sea is

“lunar” (feminine), and the salt from the Equatorial Sea is “solar” (masculine): Welling, p. 17. Glauber (*De signatura salium, metallorum et planetarum*, p. 12) calls salt feminine and gives Eve as a parallel.

384 St. Gregory, *In primum Regum expositiones*, I, i, 1 (Migne, *P.L.*, vol. 79, col. 23). This idea is developed in literal form, in both Tibetan and Bengali Tantrism, as Shiva in the embrace of Shakti, the maker of Maya. We find the same idea in alchemy. Mylius (*Phil. ref.*, pp. 8f.) says: “[God has] love all round him. Others have declared him to be an intellectual and fiery spirit, having no form, but transforming himself into whatsoever he wills and making himself equal to all things. . . . Whence, by a kind of similitude to the nature of the soul, we give to God, or the power of God which sustains all things, the name of Anima media natura or soul of the World.” * The concluding words are a quotation from “De arte chymica,” *Art. aurif.*, I, p. 608.

385 *De natura salium*, pp. 41ff.

386 “In the course of time these requests and petitions, so far from decreasing, grew daily more numerous and more insistent.” *Munificentissimus Deus*, p. 5.

387 A Catholic writer says of the Assumption: “Nor, would it seem, is the underlying motif itself even peculiarly Christian; rather would it seem to be but one expression of a universal archetypal pattern, which somehow responds to some deep and widespread human need, and which finds other similar expressions in countless myths and rituals, poems and pictures, practices and even philosophies, all over the globe.” Victor White, “The Scandal of the Assumption,” *Life of the Spirit*, V, p. 200.

388 (Basel, 1588), p. 253. Cf. *Psychology and Alchemy*, Fig. 232.

389 Cf. the man with a fish’s tail in the mosaic on the floor of the cathedral of Pesaro, 6th cent., with the inscription: “Est homo non totus medius sed piscis ab imo.” (This man is not complete, but half fish from the deep.) Becker, *Die Darstellung Jesu Christi unter dem Bilde des Fisches*, p. 127.

390 Cf. “The Spirit Mercurius,” pars. 267ff.; also the arcane teaching of Paracelsus in “Paracelsus as a Spiritual Phenomenon,” pars. 159ff.

391 Cf. “Dogma of the Trinity,” pars. 248f., 252ff.

392 For a closer discussion see “Psychology and Religion,” pars. 104ff.

393 “De Tenebris contra Naturam,” *Theatr. chem.*, I, p. 527. Cf. “Psychology and Religion,” pars. 104, n, 47, 120, n. 11, and “Dogma of the Trinity,” par. 262.

394 For details see *Aion*, pars. 359ff.

395 *Ibid.*, par. 171, n. 29.

396 P. 283.

397 “First comes the ash, then the salt, and from that salt by divers operations the Mercury of the Philosophers.” * Quoted in *Ros. phil.* (*Art. aurif.*, II, p. 210) and in “Clangor buccinae” (*Art. aurif.*, I, p. 488).

398 “De chemia,” *Theatr. chem.*, V, p. 231. For “salsatura” see *Aurora consurgens* II, in *Art. aurif.*, I, p. 205.

399 *Theatr. chem.*, V, p. 77.

400 Cited in *Ros. phil.*, p. 244.

401 *Ibid.*

402 Ibid., p. 222. The same on p. 225, where the salt is also called the “key that closes and opens.” In Parable VII of *Aurora Consurgens* (p. 141), the bride calls herself the “key” (*clavicula*).

403 *Ros. phil.*, p. 244.

404 Ibid., p. 269. The text adds: “He who tastes not the savour of the salts, shall never come to the desired ferment of the ferment.”*

405 “Opera mineralia,” *Theatr. chem.*, III, p. 411.

406 *Phil. ref.*, p. 189.

407 Ibid., p. 195.

408 Ibid., p. 222. Also in *Ros. phil.*, p. 208; Khunrath, *Amphitheatrum sapientiae*, p. 194, and *Mus. herm.*, p. 20 (Waite, I, p. 22).

409 Cited in “Tract, aureus,” *Mus. herm.*, p. 31 (Waite, I, p. 32). The writings of Basilius Valentinus do not date from the 15th cent, but are a 17th-cent. forgery.

410 “Alexander the Great, King of Macedonia, in his Philosophy has the following words: . . . Blessed be God in heaven who has created this art in the Salt.”* “Gloria mundi,” *Mus. herm.*, p. 217 (Waite, I, p. 176).

411 Ibid., p. 218 (Waite, I, p. 177).

412 Ibid., p. 216.

413 Ibid., p. 217. It is also described as the “balsam of nature” (Khunrath, *Hyl. Chaos*, p. 258) and as the “fifth element” (sea). Vigenerus, “De igne et sale,” *Theatr. chem.*, VI, p. 122.

414 *Hyl. Chaos*, p. 256.

415 Ibid., p. 257.

416 Ibid., p. 260.

417 *Amphitheatrum*, p. 194.

418 *Hyl. Chaos*, p. 257.

436 P. 222.

437 *Mus. herm.*, p. 328 (Waite, I, pp. 263f).

438 A *Turba* quotation from Sermo XV of Flritis (or Fictes = Socrates). See Ruska, *Turba philosophorum*, pp. 124f.

439 Cf. *Psychology and Alchemy*, pars. 56f., 476.

440 “Isis and Osiris,” 32, *Moralia* (trans. Babbitt) V, pp. 78f.

441 The text is a poem which Mylius cites from an older source. The most important passages are the following:

“There is a secret stone, hidden in a deep well
Worthless and rejected, concealed in dung or filth ...
And this stone is a bird, and neither stone nor bird ...
... now sea-spume or vinegar,
Now again the gem of salt, Almisadir the common salt ...
....
Now the sea, cleansed and purged with sulphur.”*

Phil. ref., p. 305. At that time *gemma* simply meant “stone.” Cf. Ruland, *Lexicon*, pp. 241f.

442 Cf. supra, par. 245: “Our stone is endowed with the strongest spirit.”

443 *Art. aurif.*, II, pp. 282f.

444 Cf. Rosencreutz, *Chymical Wedding* (trans. by Foxcroft), p. 155.

445 The phoenix, the Western equivalent of this wonder-bird, is described by Maier as very colourful: “His neck is surrounded with a golden brightness, and the rest of his body by feathers of purple hue.” * *Symb. aur. mens.*, p. 598.

446 *Isis*, XVIII, pp. 218, 258.

447 It is strange that the editors of Wei Po-yang are of the opinion that no fundamental analogy obtains between Chinese and Western alchemy. The similarity is, on the contrary, amazing. [Cf. “Concerning Mandala Symbolism,” pars. 630ff. (figs. 1–3).—EDS.]

448 *De natura animalium*, X, 29 (ed. Hercher, I, p. 257).

- 464 *Pratica di alcuni esercitij Spirituali di S. Ignatio*, “Esercizio dell’Inferno,” H, p. 6.* The concluding words are reminiscent of Jeremiah 23 : 15: “Behold, I will feed them with wormwood [*absynthio*], and make them drink the water of gall.”
- 465 Doelger, *Antike und Christentum*, II, pp. 63ff.
- 466 *Tractates on the Gospel of St. John*, XXV, 9 (trans. by Innes), II, p. 80.*
- 467 *Speculum de mysteriis ecclesiae*, Migne, *P.L.*, vol. 172, col. 921.*
- 468 Whence the designation “Peratics,” a Gnostic sect. (Cf. *Aion*, pp. 185L) They were the “trans-scendentalists.”
- 469 Hippolytus, *Elenchos*, V, 16, 4f.
- 470 There exists a level or threshold of consciousness which is characteristic of a definite time-period or stratum of society, and which might be compared to a water-level. The unconscious level rises whenever the conscious level falls, and vice versa. Anything that is not in the conscious field of vision remains invisible and forms a content of the unconscious.
- 471 Cf. *Psychological Types*, def. 30.
- 472 *Ibid.*, def. 51 (especially par. 828). See also my “The Transcendent Function.”
- 473 Cf. Evans trans., II, p. 86. This passage refers to Hosea 13 : 5: “I did know thee in the wilderness, and in the land of great drought.”
- 474 *Turba*, ed. Ruska, p. 164.
- 475 *Venenum* or φάρμακον is a synonym for the tincture.
- 476 *Art. aurif.*, I, p. 272.
- 477 “Gloria mundi,” *Mus. herm.*, p. 216: “In the work it becomes like unto blood.”
- 478 The rest of the title is: “olim conscriptus et a quodam Christiano Philosopho collectus” (Written of old and gathered together by a certain Christian Philosopher). *Theatr. chem.*, V, pp. 880ff.
- 479 Here the author adds (p. 886): “It is better to take pleasure in the opus than in riches or in works of virtuosity (*virtuoso labore*).” * The rare “virtuosus” is equivalent to the Greek ἐνάρετος.
- 480 *Ibid.*, p. 885.

481 In his sermon on the “vessel of beaten gold” (Ecclesiasticus 50 : 9) Meister Eckhart says: “I have spoken a word which could be spoken of Saint Augustine or of any virtuous soul, such being likened to a golden vessel, massive and firm, adorned with every precious stone.” Cf. Evans, I, p. 50.

482 Not only the vessel must be round, but the “fimarium” it is heated in. The “fimarium” is made of *fimus equinus* (horse-dung). *Theatr. chem.*, V, p. 887.

483 Cf. *Psychological Types*, def. 29 and par. 828, and “The Transcendent Function.”

484 Cf. *Psychology and Alchemy*, par. 469.

485 Cf. *Two Essays on Analytical Psychology*, par. 367.

486 Cf. the heating and incubation of the Philosophers in the triple glass-house at the bottom of the sea in the Arisleus Vision. (Ruska, “Die Vision des Arisleus,” *Historische Studien und Skizzen zu Natur- und Heilwissenschaft*, pp. 22ff.; cf. the “Psychology of the Transference,” par. 455 and n. 22.)

487 *Tapas* is a technical term, meaning ‘self-incubation’ (‘brooding’) in the *dhyana* state.

488 For the psychology of the mandala see my “Commentary on *The Secret of the Golden Flower*,” pars. 31ff., *Psychology and Alchemy*, pars. mff., “A Study in the Process of Individuation,” and “Concerning Mandala Symbolism.”

489 Cf. *Symbols of Transformation*, pars. 308ff., and the Arisleus vision, which seems to be the prototype of the motif of the king in the sweat-bath.

490 Ruland, *Lexicon*, p. 37.

491 Remarkably enough, a 12th-cent. representation of the four-wheeled chariot (see below) bears the inscription: “Foederis ex area Christi cruce sistitur ara” (Out of the ark of the covenant an altar is built by the cross of Christ).

492 “Plaustrum” also denotes the “chariot” in the sky, Charles’ Wain (Ursa Major or Big Dipper). This constellation marks the celestial Pole, which was of great significance in the history of symbols. It is a model of the structure of the self.

493 Ezekiel 1 : 16f. There is a similar vision in Zechariah 6 : 1: “... and behold, four chariots came out from between two mountains ...” The first chariot had red horses, the second black, the third white, and the fourth dappled grey (RSV. Vulgate: “*varii et fortes*”; DV: “grisled and strong.”) The horses “went forth to the four winds of heaven.” For a remarkable parallel vision see Neihardt, *Black Elk Speaks, being the Life Story of a Holy Man of the Ogalala Sioux*, p. 23. In Black Elk’s vision twelve black horses stand in the west, twelve white horses in the north, twelve bays in the east, and in the south twelve greys.

494 Mâle, *L’Art religieux du XIIème siecle en France*, p. 182.

495 The passage is corrupt. The Hebrew original text has only: “My soul set me—chariots of Aminadab.” There are many different interpretations and conjectures, of which I will mention only Riwkah Scharf’s: Merkābāh can also be the sun-chariot (2 Kings 23 : 11); Aminadab is a king’s name, from Ammon, ’Amm, ’Ammi, a Semitic god, here possibly transferred to the sun-chariot.

496 For Honorius this naturally has the moral meaning of “turn again.” See his *Expositio in Cantica Cant.*, Migne, *P.L.*, vol. 172, col. 462.

497 In this connection the alchemists also mentioned the three men in the fiery furnace, Daniel 3 : 20ff.

498 Vulgate: “Quia spiritus vitae erat in rotis” Ezekiel 1 : 20. Cf. *Psychology and Alchemy*, par. 471.

499 Cf. “On the Nature of the Psyche,” pars. 395f.

500 Ramanuja’s commentary to the Vedanta-Sutras (SBE, XLVIII), p. 578.

501 Cf. my “Analysis of the Associations of an Epileptic.”

502 “The Bald-headed Gooseherd.” Cf. Dirr, *Kaukasische Mdrchen*, pp. 47ff.

503 “Whole” is meant here only in a relative sense, implying merely the most important aspects of the individual psyche and of the collective unconscious.

504 *Symb. aur. mensae*, pp. 568ff.

505 Maier makes the following equations: Europe = earth, America = water, Asia = air, Africa = fire.

506 Frobenius, *Das Zeitalter des Sonnengottes*, p. 82 and note.

507 “In the intense heat of summer.” *Art. aurif.*, I, p. 148.

508 “Sitibundus” means one who is parched with thirst on the sea. “Sitibundi in medio Oceani gurgite” (thirsting in the mid flood of Ocean).

509 *Symb. aur. mensae*, p. 594. Maier completes the picture of hell by citing the legend of the oryx: “There the Oryx, thirsting in the great heat of summer, is said to curse the heat of the sun with the shedding of tears and repeated groanings.”*

510 *Ibid.*, p. 199.* From Avicenna’s *Liber de anima artis*, to which unfortunately I have no access. The saying is cited as an “Aenigma” in cap. X of the “Rosarius” of Arnaldus de Villanova (Gratarolus, *Ferae alchemiae*, I, Part 2, p. 42).

511 “The cross of Jesus Christ the Son of God, Saviour.”

512 *The City of God*, II, p. 196. Cf. Geffcken, *Die Oracula Sibyllina*, pp. 153f.

512a Migne, *P.G.*, vol. 20, col. 1302.

513 *Plato’s Cosmology* (trans. by Cornford), p. 9.

514 There are two Armenian legends concerning Alexander, of which the first runs as follows: “When Alexander came into the world, he at once ran about the room. But when he came to the fourth corner, an angel struck him down and gave him to understand that he would conquer only three-quarters of the world.” In the second legend Alexander does conquer three-quarters of the world, but not the fourth, which is called that of the “righteous poor.” A sea surrounds it and cuts it off from other parts of the earth. Dirr, *Kaukasische Märchen*, p. 259.

515 Cf. *Psychology and Alchemy*, pars. 209. Concerning the problem in the Timaeus see “A Psychological Approach to the Dogma of the Trinity,” pars. 181ff.

516 Horace, *Epistolae*, I, xviii, 84.*

517 Corresponding to the *xanthesis*, *citrinitas*, or yellowing.

518 Isidore of Seville, *Liber etymologiarum* (XII, ch. 7, fol. lxxv): “The phoenix, a biru of Arabia, so called because it has a purple colour and is singular and unique in all the world.”*

519 “Whom, says she, seekest thou here, stranger? It is not lawful for a man to approach a virgin.” * The Sibyl pardons him, however, because he is “very desirous of learning.”

520 For the anima in this role see *Psychology and Alchemy*, pars. 73f.

521 Namely in the form of symbolic animals which appear in dreams as prefiguretions of the self.

522 *Spiritual Exercises* (trans. by Rickaby), p. 41.

523 *Ibid.*, p. 215.

524 Cf. "Psychology and Religion," par. 133.

525 Angelus Silesius says, however:

"Turn inward for your voyage! For all your arts
You will not find the Stone in foreign parts."

Cherubinischer Wandersmann, III, No. 118. All the same, no one has yet discovered himself without the world.

526 Mylius, *Phil, ref.*, pp. 33 and 245.

527 *Cher. Wand.*, III, No. 148.

528 See *Psychology and Alchemy*, fig. 53.

529 St. Ambrose says: "Let this bird teach us by his example to believe in the resurrection." * Epiphanius: "Why therefore did the wicked Jews not believe in the resurrection of our Lord Jesus Christ on the third day, when a bird brings himself to life again in the space of three days?" * Both cited in Picinellus, *Mundus symbolicus*, I, pp. 575, 576, 578.

530 If the iconographic symbols spontaneously produced by modern people are examined in this respect, we seldom find a human being as the central figure (in a mandala, for instance), but, much more frequently, an impersonal abstract sign which is meant to express totality. Occasionally there is a face or head, but this only enhances the analogy with alchemy. (Cf. *Psychology and Alchemy*, par. 530, and "Transformation Symbolism in the Mass," pars. 363ff.) The most extreme expression of the abstract and impersonal in alchemy is the lapis. I have already drawn attention to the peculiar nature of these central figures in "Psychology and Religion," pars. 156ff.

531 An exception to this is the third Person of the Trinity, the Holy Ghost, who is "breathed" by Father and Son (active and passive spiration: cf. my "Dogma of the Trinity," pars. 235ff. and n. 10). He is, as the usual representations show, the most "depersonalized" of the figures. I have already mentioned the alchemists' preference for a religion of the Holy Ghost. (See also *Aion*, pars. 141ff.)

532 *Symb. aur. mens.*, p. 606.*

533 *Ibid.*, p. 607.*

534 DV; AV, 18 : 9.

535 $\pi\acute{o}\kappa\omicron\varsigma$ = 'wool, fleece' (L. *vellus*). The passage refers to Psalm 71 : 6 (Vulgate): "Descendet sicut pluvia in vellus" (DV: "He shall come down like rains upon the fleece"), and Judges 6 : 37: "Ponam hoc vellus lanae in aera" (DV: "I will put this fleece of wool on the floor").

536 Pitra, *Analecta sacra*, V, pp. 85f.

537 Refers to Acts 1 : 9: "... and a cloud received him out of their sight."

538 *Adv. haer.*, III, VI, 2 (*The Writings of Irenaeus*, I, p. 270).

539 Reproduced in my "Psychology of the Transference," figs. 7 and 9.

540 Cf. "Tabula smaragdina" (ed. Ruska), p. 2.*

541 *Ars chemica*, p. 118.

542 This “someone,” as is clear from the later text (in *Bibliotheca chemica*), is the “beloved” in the Song of Songs, i.e., Luna. She speaks here to Sol.

543 Possibly an allusion to the “Tabula smaragdina.”

544 “Consil. coniug.,” p. 128; or remain “in the golden tree,” p. 211. There may be a reference here to John 3 : 13: “And no one has ascended into heaven except him who has descended from heaven” (DV).

545 I.e., from the “sulphur nostrum” previously referred to.

546 “In Luna crescente, in naturam solarem.” This could also be translated: “waxing in Luna into the nature of the sun.”

547 The light of sun *and* moon.

548 The 1566 edn. has “figitur amanti eum.” I read “earn.”

549 Consil. coniug.,” p. 165 (commentary in Senior, *De chemia*, p. 15). Cf. the “transposition of the lights” in the Cabala.

550 Emblema L, p. 148: “The dragon slays the woman and she him, and together they are bespattered with blood.”*

551 *Theatr. chem.*, I, p. 409.

552 Ibid., p. 431. Dorn adds: “It was hidden of old by the Philosophers in the riddle: Make the fixed, said they, volatile, and the volatile fixed, and you will have the whole magistry.”*

553 “Spec. phil.,” *Theatr. chem.*, I, p. 276.* Here the allusion to John 3 : 13 is even clearer.

554 Cf. supra, n. 393.

555 He says, for instance: “Learn from within thyself to know all that is in heaven and on earth, that thou mayest be wise in all things. Knowest thou not that heaven and the elements were formerly one, and were separated from one another by divine artifice, that they might bring forth thee and all things? If thou knowest this, the rest cannot escape thee, or thou lackest all sense. Again, in every generation such a separation is necessary, as I have said above, and needs to be effected of thyself, before thou settest sail towards the true philosophy. Thou wilt never make from others the One which thou seekest, except first there be made one thing of thyself.” * “Spec. phil.,” p. 276. The stages of the ascent are: (i) devotion to the faith, (2) knowledge of God by faith, (3) love from the knowledge of God. (“Physica Trithemii,” *Theatr. chem.*, I, p. 449.)

556 * A similar view is suggested in the “Congeries Paracelsicae chemicae,” *Theatr. chem.*, I, p. 589: “Therefore it must be boiled, roasted, and melted; it ascends and descends, and all these operations are one single operation performed by the fire alone.”*

557 The *Rosarium phil.* formulates the ascent and descent as follows: “Our stone passes into earth, earth into water, water into air, air into fire, and there it stays, but on the other hand it descends.” * *Art. aurif.*, II, p. 250.

558 The water in which the earth is dissolved is the earth’s soul or spirit, of which Senior says: “This divine water is the king descending from heaven.” Before that, the “king” was in the earth. Cf. *Ros. phil.*, p. 283.

559 *phil. ref.*, p. 20. This idea derives from “De arte chymica” (*Art. aurif.*, I, p. 612). Here the descent is identical with God’s incarnation. Our passage is followed by the text: “I will content thee with this parable: The Son of God coming down into the Virgin and there clothed with flesh is born as a man, who, after showing us the way of truth for our salvation, suffering and dying for us, after his resurrection returned to heaven, where the earth, that is, mankind, is exalted above all the circles of the world and set in the intellectual heaven of the most holy Trinity.”*

560 “De vera praep. medicament, chem.,” *Theatr. chem.*, I, p. 681.

561 Cf. *Psychology and Alchemy*, pars. 64ff., 78f.

562 “Phys. Trismeg.,” *Theatr. chem.*, I, p. 430.

563 This motif is not uncommon in mandaias drawn by patients, the centre being represented either by a fluttering bird, or a pulsing cyst or heart. (In pathology we speak of an “auricular flutter.”) The same motif appears in the form of concentric rings (see “A Study in the Process of Individuation,” Picture 8), or of waves surrounding a centre (Picture 3).

564 *Theatr. chem.*, IV, p. 575.

565 Colonna, *Hypnerotomachia Poliphili* (1499).

566 Dorn, “Phys. Trismeg.,” *Theatr. chem.*, I, p. 409.

567 For a thorough psychological analysis of the text see Fierz-David, *The Dream of Poliphilo*, pp. 57ff.

568 A psychological statement which, like all such, only becomes entirely true when it can be reversed.

569 Colossians 2 : 14f. (AV, mod.).

570 Orosius, *Ad Aurelium Augustinum commonitorium* (CSEL., XVIII, p. 153).*

571 *Contra Celsum*, VI, 22 (trans. by Chadwick), p. 334. (Migne, P.G., vol. 9, col. 1324.)

572 Usually the series seems to begin with Saturn. Cf. Bousset, “Die Himmelsreise der Seele.”

573 The interested reader is referred to Cumont, *Textes et Monuments relatifs aux Mystères de Mithra*, I, pp. 36ff.; Bousset, “Himmelsreise”; and Reitzenstein, “Himmelswanderung und Drachenkampf.”

574 Cf. the journey motif in *Psychology and Alchemy*, pars. 304f., 457 and n. 75. Concerning Mercurius see the *puer-senex* motif in Curtius, *European Literature and the Latin Middle Ages*, pp. 98ff.

575 *Shepherd of Hermas*, IV, 1, 10–2, 1 (trans. by Lake), p. 63.

576 In his *Symbola aureae mensae*.

577 I would also draw attention to the maiden and the dragon and the triadic symbolism in *The Dream of Poliphilo* (ed. by Fierz-David), especially the encounter with the triple-tongued dragon and the black prism in the realm of Queen Eleuterilida (pp. 73ff. and 90ff.). For the Erythraean Sibyl see Curtius, pp. 101ff.

578 “Therefore I am called Hermes Trismegistos, as having three parts of the Philosophy of the whole world.”* “Tabula smaragdina,” *De alchemia* (1541), cap. 12. “Domus barbae” comes from Arab *al-birba*, ‘pyramid’, where Hermes was said to be buried.

579 *Shepherd of Hermas*, IV, 3, 2–3, 5 (Lake, p. 67).

580 “Its power is complete when it is turned towards the earth.” * “Tabula smaragdina,” *De alchemia* (1541), cap. 6.

581 As, for example, Asklepios and his cabir, Telesphoros. Cf. Kerényi, *Asklepios*, pp. 58, 88, and C.A. Meier, *Antike Inkubation und moderne Psychotherapie*, pp. 47f.

582 *Shepherd of Hermas*, IV, 3, 6 (Lake, p. 67).

583 *Ibid.*, V, 1–4 (p. 69).

584 For the interpretation of the caduceus see Servius, *In Vergilii Carmina commentarii* (ed. by Thilo and Hagen), I, p. 508: “For the serpents have heads which look inward, in order to signify that ambassadors ought to discuss and agree among themselves. . . . For which reason . . . ambassadors of peace are called Caduceatores . . . and to those

Caducei are added two apples, one of the Sun and one of the Moon. . . . Mercury causes these two fierce animals to agree, so surely we also ought to agree with one another.” “Others say that the Latins call Mercury by that name as if he were Medicurrius, the mid-runner, because he is always passing between heaven and the lower regions . . . and that the Caduceus is assigned to him because he brings enemies together in friendship by mediating confidence.” * (Ibid. II, p. 220.) The medieval writer Pierius says of the caduceus: “He will very readily bring discordant minds into agreement, and will bind together the two serpents, that is, mutual hatreds, into one by the rod of his doctrine.” * Cited in Picinellus, *Mundus symbolicus*, I, p. 152.

585 “In the first place Saturn reigns in the *nigredo*.” * *Symb. aur. mensae*, p. 156.

586 Ibid., p. 568.

587 “Spec, phil.,” *Theatr. chem.*, I, p. 303: “As bodies are dissolved by solution, so the doubts of the philosophers are resolved by knowledge.”*

588 Berthelot, *Alch. grecs*, III, v bis (text vol., p. 118).

589 More precisely, before he comes to the house of Saturn, “in one of the entrances.” *Symb. aur. mensae*, p. 603.

590 Ibid., p. 477. Cf. Waite, *The Real History of the Rosicrucians*, pp. 268ff.

591 For details see “Archetypes of the Collective Unconscious,” pars. 66, 79.

592 Ruland, *Lexicon*, p. 226.

593 *Symb. aur. mensae*, pp. 603f.

594 Dorn, “Spec, phil.,” *Theatr. chem.*, I, p. 276.

595 “Rosinus ad Sarrat.,” *Art. aurif.*, I, p. 280: “But the lato is the unclean body.”*

596 For instance in Maier, *Symb. aur. mensae*, p. 215.

597 The whitened lato is identical with the “crystalline salt.” (Khunrath, *Hyl. Chaos*, p. 197.) The lato, too, is an arcane substance, but it has a negative character. Mylius says: “The lato is an imperfect yellow body compounded of Sun and Moon: when you have whitened it and restored it to its pristine yellowness, you have the lato again . . . Then you have passed through the door and have the beginning of the art.” * It is the *prima materia lapidis* in the state of *vilitas*, ‘baseness,’ from which the “pearl of great price” arises. (*Phil. ref.*, p. 199.) This passage seems to be taken from “Consil. coniug.,” *Ars chemica*, p. 134. The lato is the “black earth” (ibid., p. 80, also p. 39). According to Du Cange, “lato” has something to do with “*electrum*.” Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 481.

598 “Dealbate Latonem et libros rumpite, ne corda vestra corrumpantur.” *Ros. phil.* cites this saying from Geber, but in corrupt form: “reponite” instead of “rumpite.”

599 Ablutio was understood by the alchemists as distillatio. Cf. Mylius, *Phil. ref.*, P. 35.

600 Quotation from Hermes: “Azoth and fire cleanse the lato, and remove the blackness from it” * (*Art. aurif.*, II, p. 277).

601 Mylius has: “Fire and water cleanse the lato and wipe off its blackness.” * *Phil. ref.*, p. 297.

602 The fire symbolism connected with baptism is expressed particularly clearly in the hymn of St. Romanus, “De theophania”: “I behold him in the midst of the floods, him who once appeared as dew in the fire in the midst of the three youths [Daniel 3 : 24f.], now a fire shining in the Jordan.” * Pitra, *Analecta sacra*, I, p. 21.

603 P. 128.* Cf. supra, par. 291.

604 Parable 4. Another passage has: “But when he baptizes, he infuses the soul.”* Ibid.

605 *Theatr. chem.*, II, p. 123.

606 The classic example of this is the dissolution of Gabricus in the body of Beya, into “atoms” (*partes indivisibiles*). *Ros. Phil*, in *Art. aurif.*, II, p. 246.

607 Morienus, “De transmut. metallica,” *Art. aurif.*, II, p. 33.

608 * The text is in a poor state here. The passage is apparently attributed to Stephanos, and occurs not only in the treatise of Komarios (Berthelot, *Alch. grecs.* IV, xx, 13, lines 17 and 20) but also in Zosimos (III, ii). Whether Stephanos (7th cent.) would have expressed himself in such an old-fashioned way is uncertain. The passage does in fact belong in the treatise of Komarios, where it also occurs in different words at 10, lines 22ff. This runs: “The waves injure them [the substances] . . . in Hades and in the grave where they lie. But when the grave is opened, they will rise up from Hades like the newborn from the belly.”*

609 *Catecheses mystagogicae*, II, 4 (Migne, *P.G.*, vol. 33, col. 1080).*

610 Pitra, *Analecta sacra*, V, p. 150.*

611 Berthelot, *Alch. grecs*, IV, ii, 2.

612 *isis*, XVIII, pp. 238 and 251.

613 Berthelot, *Alch. grecs*, IV, xx, 8, 9, 12.

614 The *ἐναβύσσαιον ὕδωρ* (abyssal water) is mentioned in the treatise of Christianos, “The Making of the Mystical Water” (Berthelot, VI, v, 6, line 12).

615 Probably the earliest reference to the phoenix is in Zosimos (Berthelot, III, vi, 5), where a quotation from Ostanos speaks of an “eagle of brass, who descends into the pure spring and bathes there every day, thus renewing himself.”*

616 Preisendanz, *Pap. Graec. Mag.*, II, p. 73, Pap. XII, lines 228–38.*

617 *Mus. herm.*, p. 262 (Waite, I, p. 211). This opinion is put into the mouth of “Socrates,” and corresponds more or less to Sermo XVI of the *Turba*.

618 Ash is the calcined and annealed substance, freed from all decomposition.

619 Senior, *De chemia*, p. 41: “The white foliated earth is the crown of victory, which is ash extracted from ash, and their second body.” * The connection with 1 Thess. 2 : 19, “... our hope, or joy, or crown of glory” (DV), is doubtful, likewise with Isaiah 28 : 5, “... the Lord of hosts shall be a crown of glory” (DV). On the other hand, Isaiah 61 : 3, “... to give them a crown for ashes,” is of importance for the alchemical connection between ashes, diadem, and crown. Cf. Coodenough, “The Crown of Victory.”

620 Ibid., p. 40.

621 Vigenerus, “De igne et sale,” *Theatr. chem.*, VI, pp. 44f.

622 *Mus. herm.*, p. 217 (Waite, I, p. 176).

623 Vigenerus, p. 57.

624 *Mus. herm.*, p. 217.

625 *De natura salium*, pp. 16f. Glauber alludes here to Mark 9 : 49.

- 626 Mylius, *Phil, ref.*, p. 20.*
- 627 Cf. the *Liber de aluminibus et salibus*, attributed to Rhasis or to Garlandus (*Buch der Alaune und Salze*, ed. Ruska, pp. 81ff.). This purely chemical treatise of Arabic origin gives some idea of what the early medieval alchemists knew of chemistry.
- 628 *De chemia*, p. 42.
- 629 For the alchemists magnesia was as a rule an arcane substance and not a specifically chemical one. Cf. *Aion*, pars. 241f., 244.
- 630 Khunrath, *Hyl. Chaos*, p. 197.
- 631 *De Signatura salium*, p. 12. For Eve as the feminine element contained in the man see “Psychology and Religion,” par. 47, n. 22.
- 632 *Mus. herm.*, p. 217 (Waite, I, p. 176): “Sal terrae est anima.”
- 633 P. 218. How very much the tincture is the “baptismal water” can be seen from the Greek (Berthelot, VI, xviii, 4, line 2): “Being bodies they become spirits, so that he will baptize in the tincture of the spirit.” * There is a similar passage in Pelagios (Berthelot, IV, i, 9, lines 17ff.). We are reminded of the famous passage about the *krater* in Zosimos (Berthelot, III, li, line 8): “baptized in the *krater*,” referring to the baptism of Theosebeia into the Poimandres community.
- 634 *De signature salium*, p. 15.
- 635 *Ibid.*, p. 23.
- 636 Cf. *supra*, par. 261.
- 637 *De natura salium*, p. 44.
- 638 *Ibid.*, p. 51.
- 639 *Opus Mago-Cabbalisticum*, pp. 6 and 31.
- 640 *De officiis* I, §133 (trans. by Miller), pp. 136f.*
- 641 For instance, Leviticus 2 : 13.
- 642 *Commentarium in Matthaei Evangelium*, IV, 10 (Migne, *P.L.*, vol. 9, col. 954).*
- 643 *Mundus symbolicus*, p. 711.
- 644 “Aspergatur seimo sapientia, non obruatur.”
- 645 *Polyhistor symbolicus*.
- 646 *Adv. haer.*, I, vi, 1 (cf. trans. Roberts / Rambaut, I; p. 25).
- 647 Here *pneuma* has the meaning of a holy spirit and not of wind.
- 648 “Death” and the “father below” are both preceded by the same ἀπό (from) and are therefore parallel if not identical, in so far as the begetter of life is also the begetter of death. This is an indication of the ineluctable polaristic nature of the *auctor rerum*.
- 649 *Elenchos*, V, 19, 14ff. Cf. Legge, *Philosophumena*, I, pp. 163f.
- 650 See *A ion*, ch. 13.
- 651 Cubic salt crystals are mentioned in Welling, *Opus Mago-Cabbalisticum*, p. 41.
- 652 *Mus. herm.*, p. 20 (Waite, I, p. 22).

653 “Area arcani,” *Theatr. chem.*, VI, p. 314.

654 *Mus. herm.*, p. 216 (Waite, I, p. 176).

655 *Mus. herm.*, p. 88 (Waite, I, p. 80).

656 *Hyl. Chaos*, pp. 229, 254.

657 *Amphitheatrum*, p. 197. The lapis, however, corresponds to the self.

658 By “computatio” is meant the “isosephia,” that is, the sum which results from the numerical values of the letters in a word, this word being then equated with another word having the same numerical value.

659 “De igne et sale,” *Theatr. chem.*, VI, pp. 129f.

660 *De natura salium*, pp. 25 and 51. Christ as *sal sapientiae* is another symbol of the self.

661 Olympiodorus (Berthelot, II, iv, 38) remarks: “Thus the key to the meaning of the circular art is the synopsis thereof.” * And the *Turba* says: “The more I read the books, the more I am enlightened” * (ed. Ruska, *Sermo XV*, p. 125).

662 I take the concept of *participation mystique*, in the sense defined above, from the works of Lévy-Bruhl. Recently this idea has been repudiated by ethnologists, partly for the reason that primitives know very well how to differentiate between things. There is no doubt about that; but it cannot be denied, either, that incommensurable things can have, for them, an equally incommensurable tertium *comparationis*. One has only to think of the ubiquitous application of “mana,” the werewolf motif, etc. Furthermore, “unconscious identity” is a psychic phenomenon which the psychotherapist has to deal with every day. Certain ethnologists have also rejected Levy-Bruhl’s concept of the *Hat prelogique*, which is closely connected with that of *participation*. The term is not a very happy one, for in his own way the primitive thinks just as logically as we do. Levy-Bruhl was aware of this, as I know from personal conversation with him. By “prelogical” he meant the primitive presuppositions that contradict only our rationalistic logic. These presuppositions are often exceedingly strange, and though they may not deserve to be called “prelogical” they certainly merit the term “irrational.” Astonishingly enough Lévy-Bruhl, in his posthumously published diary, recanted both these concepts. This is the more remarkable in that they had a thoroughly sound psychological basis.

663 *Hyl. Chaos*, p. 74. Probably an allusion to John 1 : 9: “That was the true Light, which lighteth,” etc.

664 *Ibid.*, p. 194.

665 *Mus. herm.*, pp. 217f. (Waite, I, p. 177).

666 *Theatr. chem.*, VI, p. 127.

667 *Hyl. Chaos*, pp. 197f.

668 *Mus. herm.*, p. 216.

668 “Spec, phil.,” *Theatr. chem.*, I, p. 307.

670 *Mus. herm.*, p. 216.

671 Steeb, *Coel. sephiroth.*, pp. 26 and 29.

672 *phil. ref.*, p. 195.

673 I cannot recall ever having come across this association in the texts.

674 AV; DV, 40 : 10.

675 *Uraltes Chymisches Werck*, II, p. 62. This story is told in abbreviated form in the Babylonian Talmud, “*Baba Bathra*,” trans. by Slotki, II, pp. 296f. (74b): “All that the Holy One, blessed be He, created in this world He created male and female. Likewise, Leviathan the slant serpent and Leviathan the tortuous serpent He created male and female; and had they mated with one another they would have destroyed the whole world. What then did the Holy One, blessed be He, do? He castrated the male and killed the female, preserving it in salt for the righteous in the world to come; for it is written: And he will slay the dragon that is in the sea.” He is also said to have done the same thing to Behemoth. By way of explanation I should like to add that the two prehistoric animals, Leviathan (water) and Behemoth (land), together with their females, form a quaternio of opposites. The *coniunctio oppositorum* on the animal level, i.e., in the unconscious state, is prevented by God as being dangerous, for it would keep consciousness on the animal level and hinder its further development. (Cf. *Aion*, pars. 181ff.) Regarding the connection between salt and the female element, it is significant that it was the female Leviathan who was salted.

676 According to an old tradition God, after the Fall, moved Paradise and placed it in the future.

677 Cf. Plutarch, “Isis and Osiris,” 32, *Moralia* (trans. Babbitt, pp. 80ff.): “The saying of the Pythagoreans, that the sea is a tear of Kronos.”

678 Cf. The Gnostic view that Kronos is “a power of the colour of water, and all-destructive.” Hippolytus, *Elenchos*, V, 16, 2 (Legge, I, p. 154). For further associations of the “bright” water see “The Spirit Mercurius,” par. 274.

679 *Mus. herm.*, p. 222 (Waite, I, p. 180).

680 *Ibid.*, p. 213 (Waite, p. 173).*

681 Morienus, in whose treatise (“*De transmutatione metallica*”) is found only the expression “blessed water,” then the idea of the “one fount” of the four qualities, and finally, the important remark that no one attains the completion of the work “save by the affliction of the soul.” (*Art. aurif.*, II, pp. 18, 26, 34.)

682 *Mus. herm.*, p. 214.*

683 “*Curvitatem*,” presumably an allusion to the winding course of water and the “*rivuli*” (streams) of the Mercurial serpent.

684 “Darkness there was: at first concealed in darkness this All was indiscriminated chaos.” *Rig-veda*, X, 129, 2 (*Hymns of the Rig-veda*, trans. by Griffith, II, p. 575).

685 “*Vilitas*” was also something Christ was reproached with. Cf. John 1 : 46: “Can there any good thing come out of Nazareth?”

686 Cf. *Psychology and Alchemy*, par. 421.

687 Or as Morienus (*Art. aurif.*, II, p. 32) so graphically says: “Until it begins to shine like fishes’ eyes.”

688 Caussin, *Polyhistor symbolicus* (1618), p. 3.*

689 Maier (*Symb. aur. mensae*, p. 568): “There is in our chemistry a certain noble substance . . . in the beginning whereof is wretchedness with vinegar, but in its ending joy with gladness. And so I have supposed it will fare with me, that at first I shall taste, suffer, and experience much difficulty, bitterness, grief, and weariness, but in the end shall come to glimpse pleasanter and easier things.”*

690 Matthew 10 : 16.

691 Hippolytus reports the following saying of the Peratics: “The universal serpent is the wise word of Eve.” * This was the mystery and the river of Paradise, and the sign that protected Cain so that no one should kill him, for the God

of this world (ὁ θεὸς τοῦδε τοῦ κόσμου) had not accepted his offering. This God reminds us very much of the “prince of this world” in St. John. Among the Peratics it was naturally the demiurge, the “father below” (πατὴρ κάτωθεν). See *Elenchos*, V, 16, 8f. (I.egge, I, p. 155f.).

692 “This is the father of all perfection.” * Ruska, *Tabula Smaragdina*, p. 2.

1 A Fiji Islander told Hocart: “Only the chief was believed in: he was by way of being a human god” (*Kings and Councillors*, p. 61). “We must always bear in mind that the king is the god or gods” (p. 104).

2 Pharaoh is the son of the Creator-god. “But at certain festivities the ‘son’ unites with the divine ‘father’ in the mystic fashion of the rite” (Jacobsohn, *Die dogmatische Stellung des Königs in der Theologie der alten Aegypter*, p. 46).

3 Amon, the Father-god, unites himself, for instance, with Thutmosis I, and then, as the father, begets the son with the Queen (Jacobsohn, p. 17). Or again, the King lives on after his death as “Horus, the son of Hathor” (p. 20). A pyramid text says of Pharaoh: “Merenre is the Great, the son of the Great; Nut gave him birth” (p. 26). The *ka-mutef* makes the Queen the mother of the god (p. 62). Similar ideas are suggested by the names of the Canaanite kings Adoni-bezek and Adoni-zedek, which indicate an identification with the divine son of Ishtar, Adonis. Frazer (*The Golden Bough*, Pt. IV, p. 17), from whom I take this observation, comments: “Adoni-zedek means ‘Lord of righteousness’ and is therefore equivalent to Mel-chizedek, that is ‘king of righteousness,’ the title of that mysterious king of Salem and priest of God Most High.”

4 Among the Fiji Islanders the king is called “the Prosperity of the Land.” “When the great chief, entitled the ‘Lord of the Reef is installed, they pray: . . . ‘Let the fields resound, the land resound . . . let the fish come to land; let the fruit trees bear; let the land prosper’” (Hocart, p. 61).

5 Frazer, *The Golden Bough*, Pt. III, p. 14ff. His death or sacrifice is followed by dismemberment. Classic examples are Osiris and Dionysus. Cf. Firmicus Maternus, *Liber de errore profanarum religionum* (Corp. Scrip. Eccl. Lat., II, p. 76): “. . . slew Osiris and tore him limb from limb, and cast forth the palpitating members of the wretched corpse along all the banks of the river Nile.”* The same author says (7,7) concerning Dionysus: “For the stories of the Greeks claim to relate Liber to the Sun . . . Who has seen the infant sun? who has beguiled it, who has slain it? who has torn it to pieces, who has cut it up, who has feasted on its members? . . . But this error also they seek to cover by a rational explanation, that of the undivided and divided mind, and thus too they think they can provide a reason for their worship.”* In this connection we might also mention the bull-god of the eleventh nome of Lower Egypt: he was called “The Divided One,” and in later times was associated with Osiris. For this reason the eleventh nome was tabooed. (Kees, *Der Götterglaube im alten Aegypten*, pp. 12 and 258).

6 Cf. Jacobsohn, pp. 17 and 46.

7 The dead king, resuscitated, is addressed as Amun, who drinks the milk of Isis (ibid., p. 41).

8 The god, the king, and his *ka* form, as it were, a trinity composed of father, son, and procreative force (ibid., p. 58).

9 To correspond with the 14 *kas* of Ra, statues of 14 of the king’s ancestors were carried at the processions. They were the previous royal incarnations of the father-god, who reproduced himself once more in the king (Jacobsohn, pp. 28, 32, 62, 67). Baynes says in this connection: “The safeguarding power of the continuity of tribal authority and tradition from earliest times is concentrated by means of mass-projection upon the person of the king. The distant heroic ancestors, the mighty figures of the mythic past are alive and present in the person of the king. He is the master symbol just because he is living history.” (“On the Psychological Origins of Divine Kingship,” p. 91.)

10 It should be noted that Typhon tore the slain Osiris into 14 parts. Plutarch says: “The dismemberment of Osiris into 14 parts refers allegorically to the days of the waning of that satellite from the time of the full moon to the new moon.” (“Isis and Osiris,” 18, *Moralia*, trans. by Babbitt, V. pp. 44f.) Jacobsohn calls attention to the genealogical

table of Jesus in Matthew 1 : 1ff. Verse 17 runs: “So all the generations from Abraham to David are fourteen generations; and from the carrying away into Babylon unto Christ are fourteen generations.” This construction is somewhat arbitrary out of consideration for the number 14. Of the 14 ancestors of Pharaoh, Jacobsohn says (p. 67): “The conscious intention to bring out the number 14 is clearly discernible each time.”

11 Jacobsohn, p. 38.

12 Jacobsohn stresses the homoousia of father, son, the king’s *ka*, and the *ka-mutef* (pp. 38, 45f., 58, 62). In elucidating the *ka-mutef* as prototype of the ἅγιον πνεῦμα he cites (p. 65) the answer to the fifty-third question in the Heidelberg Catechism: “[I believe] that he [the Holy Ghost] is at the same time eternal God with the Father and the Son. Likewise, that he is also vouchsafed to me” (as personal *ka*). Jacobsohn also refers to the anecdote about Christ in *Pistis Sophia*, where the Holy Ghost appears as Christ’s double (that is, as a proper *ka*). He enters the house of Mary, who at first mistakes him for Jesus. But he asks: “Where is Jesus my brother, that I may go to meet him?” Mary took him for a phantom and bound him to the foot of the bed. When Jesus came in, he recognized and embraced him, and they became one. (*Pistis Sophia*, ed. Schmidt, ch. 61, pp. 20ff. Cf. *Aion*, par. 131.)

13 *

14 Spiegelberg, “Der Gott Bait in dem Trinitätsamulett des Britischen Museums,” pp. 225ff.

15 For the complete series, see my “Psychology of the Transference.”

16 According to Berthelot, “Sophe” is a variant of “Cheops-Souphis.” He cites a passage from the résumé of Africanus (3rd cent.) in Eusebius: “King Souphis wrote a book, which I purchased in Egypt as a very valuable thing” (*Origines de l’aichimie*, p. 58).

17 Berthelot, *Alch. grecs*, III, xlii.* So in Codex Parisiensis 2327, fol. 251 (Berthelot, *Origines de l’alchimie*, p. 58).

18 The text has *παναφθόρων*, but the sense requires *παμφθόρων*. Berthelot accordingly translates as ‘corruptible’.

19 Berthelot, *Alch. grecs*, III, xlii, 1.

20 Naturally this is still true of alchemy in later times. Thus Khunrath (*Von hylealischen Chaos*, p. 338) defines the King as gold refined from silver.

21 Rex as synonym for the lapis: “The Philosophers’ stone . . . is the Chemical King” (“Aquarium sapientum,” *Mus. herm.*, p. 119; Waite, I, p. 103). In Lamspringk’s *Symbols* he is the perfected arcane substance:

“I have overcome and vanquished my foes,
I have trodden the venomous Dragon under foot,
I am a great and glorious King in the earth ...
Therefore Hermes has called me the Lord of the Forests.” *

(*Mus. herm.*, p. 358; Waite, I, p. 292.) “The Philosophers’ stone is the king descending from Heaven.” (“Consil. coniug.,” *Ars chemica*, p. 61.) In Hoghelande’s “De alchemiae difficultatibus” (*Theatr. chem.*, I, p. 162) there is a strange description of the stone as a “tall and helmeted man” (*homo galeatus et altus*); it is also a “king crowned with a red diadem.” In Mylius (*Phil. ref.*, p. 17) it is the “princely stone” (*princeps lapis*).

22 For a literal translation of the text see *Psychology and Alchemy*, par. 456.

23 Cf. the saying of Democritus, quoted in many variants: “Nature rejoices in nature, nature subdues nature, nature rules over nature.” The truth of this dictum receives remarkable confirmation in the psychology of the individuation

process.

24 P. 276.

25 Cf. the curious passage in *Distinctio XIV* of the “*Allegoriae sapientum*” (*Theatr. chem.*, V, p. 86): “For some say, the moistures are to be honoured, for they are high-minded kings that suffer not insult: be careful therefore with them and seek their good will, and they will give to thee with their eyes, that thou mayest have of them whatsoever thou wiliest.”*

26 A paraphrase for the retort as the place of rebirth.

27 *Amphitheatrum*, p. 202.*

28 *Ibid.*, p. 197.*

29 *Ibid.*, pp. 198f.

30 Colin Campbell, *The Miraculous Birth of King Amon-Hotep III*, p. 82: “The Coronation, which bestowed on the divine being, the king, the two crowns of Egypt, advanced him a step further than birth in the divine scale of life.”

31 *Ibid.*, pp. 83ff.: “The anniversary of the Coronation seems to have been held as a Sed festival, when the king was regarded as Osiris on earth.” “The king is not ‘dancing’ or striding in the presence of his Osiris-self, as if worshipping him . . . no, the striding is a movement in the ceremony, preparatory to his taking possession of the throne, which marks his complete Osirification—the last act of the Sed festival” (p. 94). Breasted (*Development of Religion and Thought in Ancient Egypt*, p. 39) says of the Sed festival: “One of the ceremonies of this feast symbolized the resurrection of Osiris, and it was possibly to associate the Pharaoh with this auspicious event that he assumed the role of Osiris.” On the significance of the Sed festival Frazer (*The Golden Bough*, Pt. IV, ii, p. 153) says: “The intention of the festival seems to have been to procure for the king a new lease of life, a renovation of his divine energies, a rejuvenescence.” One of the inscriptions at Abydos runs: “Thou dost begin to renew thyself, to thee it is granted to blossom forth again like the young moon-god, thou dost grow young again . . . Thou art reborn in the renewal of the Sed festival” (Moret, *Du caractère religieux de la royauté pharaonique*, pp. 255f.). The Sed festival was held every 30 years, probably in connection with the quarters of the 120-year Sirius (= Isis) period. This festival, it should be noted, was also connected with a ceremony for making the fields fruitful: the king circumambulated a marked-off field four times, accompanied by the Apis bull. (Kees, *Der Götterglaube im alten Ägypten*, pp. 296f.) Similar ceremonies are still performed today. Amenophis IV caused the Aton, the symbol of his religious reformation, to be introduced at his Sed festival (Kees, p. 372).

32 Printed in *Art. aurif.*, I, pp. 392ff.

33 The name “Anus” which occasionally occurs, and which one might connect with the king of the same name in the Grail legend, is a corruption of “Horus.” It is possible that the source for the “*Allegoria Merlini*” is the “*Prophetia Merlini*,” which was well known in the Middle Ages. Cf. Geoffrey of Monmouth, *Histories of the Kings of Britain* (Book 7, pp. 170ff.).

34 The verses of a certain Mercurinus are preserved in *Ros. phil.*, *Art. aurif.* (1610 edn.), II, pp. 242f.

35 The distillation of alcohol from wine was probably discovered at the beginning of the 12th cent. (Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 38.)

36 Its equivalent, the ὕδωρ θεῖον, can be translated either as ‘divine water’ or as ‘sulphur water,’ since θεῖον means both.

37 For instance in “Allegoriae sapientum” (*Theatr. chem.*, V, p. 67): “**And know** that it is the water which draweth forth what is hidden.” *

38 Jacobsohn, *Die dogmatische Stellung des Königs in der Theologie der alten Ägypter*, p. 11.

39 [Cf. Neumann, *The Origins and History of Consciousness*, pp. 69ff.]

40 The king who is imprisoned in the sea also belongs to this context. (Cf. Maier, *Symbolae aureae mensae*, p. 380.) See text in “Paracelsus as a Spiritual Phenomenon,” pars. 181ff.

41 *Aurora consurgens* II, in *Art. aurif.*, I, p. 196: “Beware of dropsy and the flood of Noah.” * (Cf. Ripley, *Opera omnia*, p. 69.)

42 Maier, p. 261: “The horse’s belly is a great secret: our dropsical patient concealeth himself therein, that he may be restored to health and may free himself of all water [in turning] towards the sun.” *

43 “So doth the old man sit in the bath, whom keep in a carefully sealed and closed vessel, until the visible Mercurius be invisible and hidden” (*Theatr. chem.*, III, p. 820). *

44 Cf. supra, pars. 74f.

45 Cf. *Aurora Consurgens*, pp. 97f.: “And to Naaman was it said: Go and wash seven times in the Jordan and thou shalt be clean. For there is one baptism for the remission of sins.” *

46 “O blessed form of sea-water, which dissolvest the elements” (Tractatus aureus,” *Ars chemica*, p. 20).*

47 *Theatr. chem.*, I, p. 266.

48 In Dorn “veritas” is synonymous with “sapientia,” as is shown by the passage that follows in the original text. There Truth says, “Come unto me, all ye who seek,” which is a slight rephrasing of Ecclesiasticus 24 : 19: “Come unto me, all ye who desire me.”

49 “Spec, phil.,” p. 271.

50 Dorn stresses the great importance of self-knowledge for the performance of the *opus alchymicum* in other places as well. For instance, on p. 307 he says: “Therefore man, heaven and earth are one thing, likewise air and water. If man knows how to transmute things in the greater world . . . how much more so in the microcosm, that is, in himself, if he know that the greatest treasure of a man exists within the man, and not outside him.” *

51 “Quid, non quis ipse sit” is an excellent formulation of the personalistic question Who? and of the impersonal and objective What? Quis refers to the ego, quid to the self. Cf. *Aion*, par. 252.

52 “Spec, phil.,” p. 272.

53 P. 273.*

54 P. 303.

55 *Theatr. chem.*, I, p. 449.

56 That is, alchemical or occult.

57 *Theatr. chem.*, I, p. 475.

58 It is also regarded as the supreme sin. Cf. Wegmann, *Das Rätsel der Sünde*, ch. 3.

59 The water signifies the *sponsa* (bride) and *dilecta* (beloved) as well as Sapientia. Cf. Ecclesiasticus 24 : 5, where Wisdom “walked in the bottom of the deep, in the waves of the sea,” and, as the love-goddess Ishtar, praises herself as a cedar, cypress, palm-tree, rose-plant, vine, etc. (13ff.).

60 “Spec. phil.,” *Theatr. chem.*, I, p. 266, where Sapientia holds a long discourse.

61 Cf. *Psychology and Alchemy*, Part III, ch. 5, and *Aion*, pars. 121ff.

62 The method of the physicians was an imitation of Typhon’s dismemberment of Osiris. Indeed, the king had already begun to drink his fill of Typhon’s sea, in order to dissolve himself in it. The second version of the Visio Arislei in *Ros. phil.* likewise contains a dismemberment into “indivisible particles,” but there it refers not to the king but to his son. His dismemberment takes place in the body of Beya, and thus represents a process of histolysis in the chrysalis state.

63 Further material in “Transformation Symbolism in the Mass,” pars. 353, 400.

64 Variants of the latter are: the king immersed or drowning in the sea, the “sterile king of the sea,” Mater Alchimia’s dropsy, etc. The motif of the drowned king goes back to Osiris. In the lament of Isis for her son in the daily ritual, she says: “I have crossed the seas to the bounds of the earth, seeking the place where my Lord was; I have traversed Nadit in the night; I have sought . . . him who is in the water . . . in that night of the great affliction. I have found the drowned one of the earth of aforetime . . .” (Moret, *Mystères égyptiens*, p. 24).

65 Concerning this separation see the Poimandres vision in the *Corpus hermeticum*, lib. I, 4: “. . . And I beheld a boundless vision: all was changed into a mild and joyous light, and I marvelled when I saw it. And in a little while, Darkness settled upon it, fearful and gloomy . . . And I saw the darkness changing into a watery substance, which was in great turmoil, and belched forth smoke as from a fire. And I heard it making an indescribable sound of lamentation; for there came forth from it an inarticulate cry, as it were a cry for light. But from the light there arose above the watery substance a holy Word, that one might hear it; a voice and pure fire and a spiritual Word (*πνευματικὸν λόγον*).” (Cf. Scott, *Hermetica*, I, pp. 114ff. and Mead, *Thrice-Greatest Hermes*, II, pp. 4f.) The separation of the four elements from the dark chaos then follows. (The text is corrupt, so I have translated it literally.) Concerning the “cry,” cf. the drowning king’s cry for help in Maier, *Symb. aur. mensae*, p. 380.

66 Ruland, *Lexicon*, pp. 281, 283.

67 *Opera omnia chemica* (Cassel, 1649), pp. 421ff. [Like all Ripley’s works, the *Cantilena* did not appear in print until the middle of the 17th cent., long after his death. It was written in Latin and consists of 38 four-line stanzas (rhymed *aaaa*). Latin texts, which vary somewhat, appear in MSS. Ashmole 1394, pp. 67, 75; 1445, VIII, 2; 1479, 223, and English translations in MS. Ashmole 1445, VIII, pp. 2–12, 41–44, all dating from the 16th cent, and now at the Bodleian. The former of these translations (rhymed *aabb*), by an unknown hand, and entitled “George Ripley’s Song,” has been used here as a basis for the verses which follow. It was first published by F. Sherwood Taylor in *Ambix* (II, nos. 3 and 4, Dec. 1946). With the assistance of Mr. A. S. B. Glover, I have attempted to bring certain phrases in the *Ambix* version somewhat closer to the original Latin and hence to the prose translation made by Professor Jung in the Swiss edition of the *Mysterium*, and some of the verses have been recast. The Latin text given in the footnotes follows that of the Cassel edition throughout.—TRANS.]

68 “En philosophantium in hac cantilena

Summa arcana concino voce cum amoena,

Quae mentalis jubili pullulat a vena,

Et mens audientium fit dulcore plena.

“In extremis partibus nuptiis Mercurii

Accidit post studium semel quod interfui,
Ubi vescens epulis tam grandis convivii
Ignorata primitus haec novella didici.

“Quidam erat sterilis Rex in genitura,
Cujus forma nobilis et decora pura
Extitit, sanguineus erat hic natura,
Attamen conqueritur sua contra jura.

“Rex caput corporum quare sum ego,
Sterilis, inutilis sine prole dego,
Cuneta tamen interim mundana ego rego,
Et terrae nascentia quaeque, quod non nego.

“Causa tamen extitit quaedam naturalis
Vel defectus aliquis est originalis;
Quamvis sine maculis alvi naturalis
Eram sub solaribus enutritus alis.”

69 De *chemia*, p. 38: “It is the male which without wings is under the female, but the female has wings. Wherefore they said: Cast the female upon the male, and the male shall ascend upon the female.” *

70 “Ex terrae visceribus quoque vegetantur
Suis in seminibus, et qua animantur
Congruis temporibus fructu cumulantur,
Speciebus propriis et multiplicantur.

“Mea sed restringitur fortiter natura
Quod de meo corpore non fluit tinctura,
Infoecunda igitur mea est natura
Nee ad actum germinis multum valitura.”

71 Khunrath (*Hyl. chaos*, p. 268): “From the belly of Saturn’s salt flow living waters leaping up to blessed life.” (Cf. John 7 : 38: “... out of his belly shall flow rivers of living water.”) Saturn’s salt is the sapientia Saturni, the white dove hidden in the lead.

72 In *Numeros homiliae*, 17, 4 (Migne, *P.G.*, vol. 12, col. 707).

73 See fig. 150 in *Psychology and Alchemy*. Origen, In *Exodum homiliae*, 11, 2 (Migne, *P.G.*, vol. 12, col. 376) says of Christ: “Unless this rock had been smitten, it had not given water.” *

74 *Commentarius in Cantica Canticorum*, 1 (Migne, *PL.*, vol. 15, col. 1860). Dora (“Spec, phil.,” *Theatr. chem.*, I, p. 267) says: “Sweet is the ringing voice and grateful to the ears of them that philosophize! O inexhaustible fountain of riches to them that thirst after truth and justice! O solace to the want of them that are desolate! What more do ye seek, ye anguished mortals? Why, poor wretches, do you trouble your spirits with infinite cares? What madness is it, pray,

that blinds you? seeing that all that you seek outside yourselves and not within yourselves is within you and not without you.” *

75 Ambrose, *Explanatio Psalmorum XII* (ed. Petschenig, p. 337). In *Epistolae*, XLV, 3 (Migne, *PL.*, vol. 16, col. 1142) he says: “That real paradise is not an earthly and visible one, it is not in any place, but in ourself, and it is quickened and vivified by the powers of the soul and the inpouring of the spirit.” *

76 Rahner, “Flumina de ventre Christi,” p. 289.

77 “Massa mei corporis semper est mansura

Valde delectabilis atque satis dura,

Hancque, cum examinat ignis creatura,

Nulla mei ponderis abest caritura.

“Meque mater genuit sphaericae figurae

Domi, quod rotunditas esset mini curae.

Foremque prae ceteris speciei purae,

Et assistens regibus dignitatis jura.”

78 “Modo tamen anxia illud scio verum

Nisi fruar protinus ope specierum,

Generare nequeo, quia tempus serum

Est et ego stupeo antiquus dierum.”

79 Cf. the printer’s apology in the Introduction to *Aurora consurgens* II (*Art. aurif.*, I, p. 183), cited in *Psychology and Alchemy*, par. 464.

80 “In immunditia huius mundi, in stercore.”

81 Son of Basilides the Gnostic.

82 Further material in *Psychology and Alchemy*, pars. 522f. and n. 22.

83 Poema 25, Migne, *PL.* vol. 61, col. 637. Further material in Curtius, *European Literature and the Latin Middle Ages*, pp. 103ff.

84 Ephraem Syrus, *Hymni et sermones*, II, col. 620.*

85 *Ibid.*, I, col. 136.*

86 Nelken. “Analytische Beobachtungen über Phantasien eines Schizophrenen,” pp. 538ff.

87 Rahner, “Die Gottesgeburt,” pp. 341ff.

88 [The Swiss edition (II, p. 26, n. 85) has here “I heard that I should be reborn through Christ’s Tree.” This is based on the reading “Christi sed arbore” in line 2 of verse 11, which proves to be an error in transcription. The Cassel edition of the *Cantilena* (1649, and there appears to be no other) shows (p. 422) “Christi sed ab ore” (by Christ’s mouth), in this agreeing with the 16th cent. Latin and English MSS. at the Bodleian. Since pars. 36–39 of the Swiss text are mainly concerned with the “arbor philosophica” mentioned elsewhere in Ripley’s writings, they are here omitted with the author’s consent.—TRANS.]

89 “Me praedatum penitus iuventutis flore

Mots invasit funditus Chiisti sed ab ore
Me audivi coelitus grandi cum stupore
Renascendum denuo nescio quo araore.

“Regnum Dei aliter nequeo intrare
Hinc ut nascar denuo me humiliare
Voló matres sinibus meque adaptare
In primam materiam et me disgregare.”

90 “Ad hoc mater propria regem animavit
Eiusque conceptui sese acceleravit,
Quem statim sub chlamyde sua occultavit
Donee eum iterum ex se incarnavit.”

91 Cf. Diodorus, *Bibliothèque Historique*, 4, 39 (trans. by Oldfather, II, pp. 468f.)

92 Nebo corresponds to the planet Mercury.

93 Roscher, *Lexikon*, III, 1, col. 62, s.v. Nebo.

94 Senior, *De chemia*, p. 63.

95 *Ibid.*, p. 63.*

96 The “thalamus” refers to the mystic marriage. See *infra*, the “green lion.”

97 “Mirum erat ilico cerneré connexum
Factura naturaliter primum ad complexum,
Foedere complacito ad utrumque sexum
Penitus post aeris montana transvexurn,

“Mater tunc ingreditur thalamum pudoris
Et sese in lectulo collocat honoris,
Inter linteamina plenaque candoris
Signa statim edidit futuri languoris.

“Moribundi corporis virus emanabat,
Quod maternam faciem candidam foedabat,
Hinc a se extraneos cunctos exserebat
Ostiumque camerae firme sigillabat.

“Vescebatur interim carnibus pavonis
Et bibebat sanguinem viridis leonis
Sibi quem Mercurio telo passionis
Ministrabat aureo scypho Babylonis.”

98 The sequence of alchemical operations is arbitrary in its details and varies from author to author.

99 Hoghelande seems to suggest something of the sort when he says that “colours appear on the surface of the mercury” (*Theatr. chem.*, I, p. 150).

100 Cf. *supra*, par. 6, n. 26.

101 *Theatrum Chemicum Britannicum*, p. 54.

102 “This thing . . . maketh the colours to appear sporadically” * (*Turba*, Sermo XIII, lines gff.). “This, therefore, is the stone which we have called by all manner of names, which receiveth and drinketh the work, and out of which every colour appeareth” * (*ibid.*, lines 24f.). Similarly Mylius (*Phil. ref.*, p. 119): “All the colours of the world shall be manifested.” *

103 *Theatr. chem.*, I, p. 179.

104 “An earthly manifestation of the quintessence you may behold in the colours of the rainbow, when the rays of the sun shine through the rain.” * “Gloria mundi,” *Mus. herm.*, p. 251 (*Wake*, I. p. 202).

105 “... the pupil of the eye and Iris (rainbow) in the sky.” (Olympiodorus, in Berthelot, *Alch. grecs*, II, iv, 38.)*

106 *Elenchos*, V. 9 (cf. Legge trans., I, p. 143).

107 Abu’l Qāsim Muhammad, *Kitāb al-Urn al-muktasab* (ed. Holmyard), p. 23.

108 *Phil. ref.*, p. 121.

109 “In fine quadrangulari,” i.e., at the synthesis of the four elements.

110 *Theatr. chem.*, V, p. 881.

111 Cf. Berthelot, *Alch. grecs*, Introduction, p. 76. Also *infra*, par. 577.

112 P, 95: “He who shall raise up his soul shall see its colours.” *

113 *Citrinitas* = the choleric temperament, *rubedo* = the sanguine, *albedo* = the phlegmatic, *nigredo* = the melancholic. (“*Harmonia chemica*,” *Theatr. chem.*, IV, p. 873.)

114 “*Phil. chem.*,” *Theatr. chem.*, I, p. 485.

115 Cf. *Psychology and Alchemy*, pars. 212, 262, and “A Study in the Process of Individuation,” pars. 564ff. (Picture 5).

116 Cf. the naive prayer of the author in *Amphitheatrum sapientiae*, p. 221: “I beseech thee with all my heart, that thou wilt send me from thy holy heavens Ruach-Hokhmah-El, the Spirit of thy Wisdom, that it may ever be beside me as a familiar, may skilfully govern me, wisely admonish me and teach me; may be with me and pray with me and work with me; may give me right will and knowledge and experience and ability in physical and physico-medical matters.” * The learned Dr. Khunrath would no doubt have been delighted to have the Holy Ghost as a laboratory assistant.

117 Cf. Fig. IV in the Appendix to *Amphitheatrum*.

118 *Ibid.*, p. 202.

119 The emphasis is thus on the green colour.

120 “... and a rainbow was upon his head, and his face was as the sun.”

121 *Mus. herm.*, p. 693 (*Waite*, II, p. 194).

122 *Ibid.*, p. 694. It is worth pointing out that a remarkable change occurs during the regimen Martis: whereas in the regimen Veneris the stone, the material to be transformed, is “put into another vessel,” in the regimen Martis we are

told that “The mother, being now sealed in her infant’s belly, swells and is purified, and because of the great . . . purity of the compound, no putridity can have place in this regimen . . . Know that our Virgin Earth here undergoes the last degree of cultivation, and prepares to receive and mature the fruit of the sun.” * It is interesting that in this regimen the maternal substance is enclosed in the belly of its own child. These are transformations that could be expressed only in terms of the operation of *yin* and *yang*. Cf. the *I Ching* (Book of Changes).

123 Cf. Cassiodorus, *Expositio in Cantica Canticorum* (Migne, *P.L.*, vol. 70, cols. 1071, 1073, 1096).

124 Ruland, *Lexicon*, p. 126, s.v. Digestio: “A change of any substance into another by a process of natural coction.”

125 *Mus. herm.*, p. 131 (Waite, I, p. 111). The text continues: “All which things are of good omen: namely that a man so troubled shall nonetheless in due time reach the blessed and greatly desired conclusion, as also the Holy Scripture itself witnesseth, wherein it is written (II Tim. 3 : 12), that all those who desire to live godly in Christ Jesus shall suffer persecution, and that it is through many tribulations and straits that we must enter the kingdom of Heaven.” *

126 Latin MS, 18th cent., “Figurarum Aegyptiorum sectetioium,” fol. 5 (author’s possession).

127 “Congeries Paracelsicae,” *Theatr. chem.*, I, p. 599.

128 Honorius of Autun, *Speculum de mysteriis ecclesiae* (Migne, *P.L.*, vol. 172, col. 936) says of the phoenix: “The phoenix is said to be red, and is Christ, of whom it is written: Who is this that cometh from Edom, with dyed garments from Bosra?” * (Cf. Isaiah 63 : 2: “Wherefore an thou red in thine apparel, and thy garments like him that treadeth in the winefat?” * Also verse 3: “. . . and their blood shall be sprinkled upon my garments.”) Honorius continues: “Edom, which means red, is the name given to Esau, from the red pottage with which he was fed by Jacob his brother.” * After relating the myth of the phoenix Honorius adds: “On the third day the bird is restored, because on the third day Christ was Taised again by the Father.” *

129 *Elenchos*, X, 14, 1 (Legge, II, p. 159).*

130 *Zoological Mythology*, II, p. 323 (mod.).

131 In order to hatch its eggs, the peacock seeks a lonely and hidden spot. Picinellus adds: “And assuredly solitude, the only recipe for preserving a spiritual disposition, offers the fullest occasion for inner felicity.” *

132 I take this statement from Picinellus, as I was unable to ascertain which *Merula* is meant.

133 *Mundus Symbolicus*, I, p. 316.

134 *City of God*, XXI, 4 (trans. by Healey, II, p. 322): “Who was it but God that made the flesh of a dead peacock to remain always sweet, and without any putrefaction?” In the *Cyranides* the peacock is accounted “a most sacred bird.” Its eggs are useful in preparing the gold colour. “When the peacock is dead, its flesh does not fade nor emit a foetid smell, but remains as if preserved with aromatic substances.” * Its brain can be used to prepare a love-potion. Its blood, when drunk, expels demons, and its dung cures epilepsy. (Delatte, *Textes latins et vieux français relatifs aux Cyranides*, p. 171.)

135 In China (cf. the treatise of Wei Po-yang, in *Isis*, XVIII, p. 258) the nearest analogy is the “fluttering Chu-Niao,” the scarlet bird; it has five colours, symbolizing totality, corresponding to the five elements and the five directions. “It is put into the cauldron of hot fluid to the detriment of its feathers.” In Western alchemy the cock is plucked, or its wings are clipped, or it eats its own feathers.

136 Ripley himself takes blood as synonymous with spirit: “The spirit or blood of the green lion” (*Opera omnia*, p. 139). In Rosencreutz’s *Chymkal Wedding* (p. 74) the lion holds a tablet with the inscription: “Hermes the Prince.

After so many wounds inflicted on humankind, here by God's counsel and the help of the Art flow I, a healing medicine. Let him drink me who can: let him wash who will: let him trouble me who dare: drink, brethren, and live."

*

137 Cf. the parallel of the opus with the Mass in *Psychology and Alchemy*, pars. 480ff., and "Transformation Symbolism in the Mass," pars. 339ff.

138 Cf. Mylius, *Phil. ref.*, p. 303, where he says that Mercurius is the green lion and "is the whole elixir of the *albedo* and the *rubedo*, and the *aqua permanens* and the water of life and death, and the virgin's milk, the herb of ablution [an allusion to the Saponaria, Berissa, and moly], and the fountain of the soul: of which who shall drink does not die, and it takes on colour and is their medicine and causes them to acquire colours, and it is this which mortifies and desiccates and moistens, makes warm and cool, and does contrary things," etc.* In short, Mercurius is the master-workman and the artifex. Therefore Mylius proceeds with the winged word: "And he is the dragon who marries himself and impregnates himself, and brings to birth in due time, and slays all living things with his poison." * (Usually he is said to "slay himself," too, and to "bring himself to life.") The uroboros has the wonderful quality of "aseity" (existence by self-origination) in common with the Godhead, for which reason it cannot be distinguished from him. This *aqua permanens*, unlike the ambiguous *ὕδωρ θεῖον*, is explicitly "divine." We can therefore understand the solemn exhortation in Dorn ("Spec. phil.," *Theatr. chem.*, I, p. 299): "Draw nigh, O Body, to this fountain, that with thy Mind thou mayest drink to satiety and hereafter thirst no more after vanities. O wondrous efficacy of this fount, which maketh one of two, and peace between enemies! The fount of love can make *mind* out of spirit and soul, but this maketh *one man* of mind and body. We thank thee, O Father, that thou hast deigned to make thy sons partakers of thy inexhaustible fount of virtues. Amen." *

139 The extraction of the soul from the prima materia is equivalent to the *mortificatio*. Then, in the *impraegnatio*, *informatio*, *impressio*, *imbibitio*, *cibatio*, etc., the soul returns to the dead body, and this is followed by its resuscitation or rebirth in a state of incorruptibility.

140 The best instances of this interconnection of everything with everything else can be found in dreams, which are very much nearer to the unconscious even than myths.

141 The "Liber Platonis quattorum," which dates from the 10th cent., cites blood as a solvent (*Theatr. chem.*, V, p. 157), and says also that a particularly strong solvent is lion's dung (p. 159).

142 Cf. the treatise of Wei Po-yang (pp. 231ff.), where *yin* and *yang* are the "charioteers" who lead from the inside to the outside. The sun is *yang*, the moon *yin* (p. 233). Our western image of the uroboros is expressed in the words: "*Yin* and *yang* drink and devour one another" (p. 244); "*Yang* donates and *yin* receives" (p. 245), and, in another form: "The Dragon breathes into the Tiger and the Tiger receives the spirit from the Dragon. They mutually inspire and benefit" (p. 252). As in western alchemy Mercurius duplex is designated "orientalis" and "occidentalis," so in China the dragon (*yang*) reigns over the East and the Tiger (*yin*) over the West. "The way is long and obscurely mystical, at the end of which the Ch'ien (*yang*) and the K'un (*yin*) come together" (p. 260).

143 Cf.n. 138.

144 See the illustration in Lambspringk's *Symbols, Mus. herm.*, p. 349 (Waite, I, p. 283).

145 That is to say, the "flying lion" is equated with Mercurius, who, in turn, consists of the winged and wingless dragon. Cf. Flamel, "Summarium philosophicum," *Mus. herm.*, p. 173 (Waite, I, p. 142).

- 146 Mylius, *Phil, ref.*, p. 190.
- 147 Emotional outbursts usually occur in cases of insufficient adaptation due to unconsciousness.
- 148 Maier, quoting Lully, says: “Some have called this earth the green lion mighty in battle; others the serpent that devours, stiffens, and mortifies his own tail” * (*Symb. aur. mensae*, p. 427).
- 149 See n. 148.
- 150 “But no unclean body enters, with one exception, which is commonly called by the philosophers the green Lion.” * (Maier, p. 464, and Ripley, *Opera omnia*, p. 139)
- 151 Maier (p. 427) adds: “because the earth is depopulated of its spirits.” *
- 152 Ibid.
- 153 *Medium coniungendi tincturas inter solem et lunam.*” (Maier, p. 464, Ripley, *Opera omnia*, p. 139.)
- 154 *Chymische Schrifften*, pp. 248f.
- 155 *Mus. herm.*, p. 219 (Waite, I, p. 178).*
- 156 Further evidence for the lion as the arcane substance can be found in “Consil. coniugii” (*Ars chemica*, p. 64), where the lion signifies the “aes Hermetis” (bronze of Hermes). Another synonym for the lion is “vitrum” (glass), which on account of its transparency was also a symbol for the soul. (Cf. Caesarius of Heisterbach, *Dialogue on Miracles*, I.32 and IV.39 (trans. by Scott and Bland, I, pp. 42 and 237.) So, too, in Morienus, who counts the lion among the three substances that have to be kept secret. (“De transmut. metallica,” *Art. aurif.*, II, pp. 51f.) *Ros. phil.* (*Art. aurif.*, II, p. 229) says: “In our green Lion is the true material . . . and it is called Adrop, Azoth, or the green Duenech.” *
- 157 The red lion is probably a later equivalent of sulphur ruboum (from the time of Paracelsus, it would seem). Mylius (*Phil, ref.*, p. 209, and Schema 23, p. 190) equates the two lions with red and white sulphur.
- 158 Khunrath, *Hyl. Chaos*, p. 325.
- 159 “Clavis maioris sapientiae” (*Theatr. chem.*, IV, p. 238). The treatise is probably of Harranite origin.
- 160 Paris Magic Papyrus, line 1665 (Preisendanz, *Pap. Graec. Magic*, I, p. 126.) The lion is emblematic of the 6th hour.
- 161 Ventura, *Theatr. chem.*, II, p. 289.
- 162 Contact with wild nature, whether it be man, animal, jungle or swollen river, requires tact, foresight, and politeness. Rhinoceroses and buffaloes do not like being surprised.
- 163 Wieland, *Dschinistan, oder auserlesene Feen- und Geistermärchen*.
- 164 As in Apuleius the ass regains his human shape by eating roses, so he does here by eating a lily. In the Paris Magic Papyrus the ass is the solar emblem of the 5th hour.
- 165 Also with the griffin, camel, horse, and calf. (*Theatr. chem.*, I, p. 163.)
- 166 Dorn, “Spec, phil.,” *Theatr. chem.*, I, p. 301.
- 167 *Sermo in Dominica in Palmis* (Migne, *P.L.*, vol. 172, col. 916): “The devil is also called Dragon and lion.”
- 168 Eleazar (Abraham the Jew) mentions that the doves of Diana rouse the sleeping lion. Cf. *Uraltes Chymisches Werck*, Part I, p. 86.

169 *Mus. herm.*, p. 654. “Si voto tuo cupis potiri” might mean rather more than this, since “votum” also means “vow.”

170 Revelation 17 : 5: “Mystery, Babylon the great, the mother of harlots and abominations of the earth.”

171 Presumably two or three miles from the city. “Summarium philosophicum,” *Mus. herm.*, p. 173 (Waite, I, p. 142).

172 Mentioned in the Arabic texts as Marqūš, king of Egypt. Cf. Ruska, *Tabula Smaragdina*, p. 57.

173 “The stone which he who knows, places on his eyes.” *

174 “Et hic lapis, quem diligit Leo, est foemina.”

175 Cf. my “Synchronicity: An Acausal Connecting Principle,” pars. 949ff.

176 Considering, that is to say, that time is psychically relative, as the ESP experiments have shown. Cf. the writings of J. B. Rhine.

177 I am aware of the problematical nature of this conception. But those who know the material will admit that it is no easy task to express this subtle but very important difference in conceptual terms. In actual practice the difference is immediately apparent, since, compared with personal contents, the products of the non-ego often have the quite specific character of “revelation,” and are therefore felt as being inspired by an alien presence, or as perceptions of an object independent of the ego. Archetypal experiences often have a numinous effect and for that reason are of the greatest importance in psychotherapy.

178 As this discussion started with the concept of Leo, I would like to draw the reader’s attention to Bruno Goetz’s novel *Das Reich ohne Raum* (1919). Goetz gives an excellent description of that feverish atmosphere, which ends with the sorcerer shrinking down a pair of lovers and putting them in a glass phial. This erotic fever seems to be connected with Leo, for a passage in the “Lion Hunt” runs: “His mother said to him: O Marchos, must this fire be lighter than the heat of fever? Marchos said to her: O mother, let it be in the state of fever. I return and enkindle that fire” *—the fire in the pit that serves Leo as a bridal bed. (Cf. Senior, *De chemia*, p. 63.)

179 *Mus. herm.*, pp. 653f. (Waite, II, p. 166).

180 In Abu’l Qasim (Holmyard, pp. 419f.) Venus is nicknamed “the noble, the impure, the green lion, the father of colours, the peacock of the Pleiades, the phoenix.”

181 *Mus. herm.*, pp. 30f. (Waite, I, pp. 31f.). Quotation from Basilus Valentinus.

182 The contradiction between *meretrix* and *sponsa* is of very ancient origin: Ishtar, the “beloved” of the Song of Songs, is on the one hand the harlot of the gods (the “hierodule of heaven,” Belli, the Black One), but on the other hand she is the mother and virgin. (Wittekindt, *Das Hohe Lied*, pp. 11f., 17, 24.) Unperturbed by the identity of the arcane substance with Venus, which he himself asserts, Khunrath (*Hyl. Chaos*, p. 62) calls the mother of the lapis a virgin and a “generado casta” (chaste generation). Or again, he speaks of the “virgin womb of Chaos” (p. 75), inspired less by Christian tradition than by the insistence of the archetype, which had already prompted the same statements about Ishtar. Mother, daughter, sister, bride, matron, and whore are always combined in the anima archetype.

183 Concerning the rose, see *infra*, pars. 419f.

184 The richness of Venus’s colours is also praised by Basilus Valentinus in his treatise on the seven planets (*Chymische Schrifften*, p. 167). Cf. *supra*, par. 140, n. 124.

- 185 *Mus. herm.*, p. 399 (Waite, I, p. 330).
- 186 D'Espagnet, *Bibliotheca Chemica*, II, p. 653.
- 187 *Symb. aur. mensae*, p. 178.
- 188 D'Espagnet, *Arcanum Hermeticae philosophiae opus* (1653), p. 82.
- 189 "Venus, however, precedes the Sun, since she is eastern." * Sermo 67 (ed. Ruska), p. 166.
- 190 *Theatr. chem.*, I, p. 883. The magnesia is also called "aphroselinum Orientis," the moonstone of the East (ibid., p. 885).
- 191 Her classical cognomen is "armata." According to Pernety (*Diet, mytho-her- métique*, p. 518) Venus is bound to Mars by a fire which is of the same nature as the sun. Cf. the bull-slaying Venus with the sword in Lajard, *Recherches sur leculte de Vénus*, Pl. IXff.
- 192 *Chymische Schrifften*, pp. 73f. Cf. infra, par. 547.
- 193 The text continues: "And in the fire you will see an emblem of the great Work: black, the peacock's tail, white, yellow, and red." * *Mus. herm.*, p. 683 (Waite, II, p. 186).
- 194 Obscenely described in Figulus, *Rosarium novum Olympicum*, I, p. 73.
- 195 The androgynous Venus is a very ancient prototype. Cf. Lajard, "Mémoire sur une représentation figurée de la Vénus orientale androgyne," likewise his *Recherches sur le culte de Vénus*, Pl. I, no. 1.
- 196 *Chymische Schrifften*, p. 62.
- 197 *Hyl. Chaos*, p. 91.
- 198 Ibid., p. 233. Other synonyms are *Sal Veneris*, *Vitriolum Veneris*, *Sal Saturni*, *leo rubeus et viridis*, *sulphur vitrioli*. They are all the *scintilla animae mundi*, the active principle that manifests itself in powerful instincts. Cf. Khunrath, *Hyl. Chaos*, p. 264.
- 199 Mylius, *Phil, ref.*, p. 17.
- 200 See Grimm's fairytale of the "Spirit in the Bottle," cited in my "The Spirit Mercurius," par. 239.
- 201 Berthelot, *Alch. grecs*, V, vii, 18 and 19.
- 202 Berthelot, *Chimie au moyen âge*, III, pp. 61ff.
- 203 "The Spirit Mercurius," par. 278.
- 204 *Art. aurif.*, I, p. 318.*
- 205 This is also suggested by the mysterious passage in Dorn: "Seek your lion in the East and the eagle to the South in taking up this work of ours . . . you should direct your way to the south; so shall you obtain your desire in Cyprus, of which nothing more may be said." * ("Congeries Paracelsicae," *Theatr. chem.*, I, p. 610.) For the alchemists Cyprus is definitely associated with Venus. In this connection I would also refer to Dorn's commentary on the *Vita longa* of Paracelsus, discussed in my "Paracelsus as a Spiritual Phenomenon." It is concerned with the "characteristics of Venus" in Paracelsus, which Dorn interprets as the "shield and buckler of love" (ibid., par. 234).
- 206 The idea of the rose-coloured blood seems to go back to Paracelsus: "Therefore I say to you (saith Paracelsus) . . ." (Dorn, *Theatr. chem.*, I, p. 609).
- 207 *Hyl. Chaos*, pp. 93 and 196.

208 On p. 276 he speaks of the “rose-coloured blood and aethereal water that flowed from the side of the Son of the Great World.”

209 Figulus (*Rosarium novum Olympicum*, Part 2, p. 15) says: “I will not forbear to admonish thee not to reveal to anyone, however dear, the treasure of our secrets, lest the stinking goats browse upon the red and white roses of our rose-garden.”

210 “The white rose is completed in summer-time in the East”* (Mylius, *Phil. ref.*, p. 124).

211 See *infra*, par. 485.

212 “Aquarium sapientum,” *Mus. herm.*, p. 118 (Waite, I, p. 103).

213 “Gloria Mundi,” *Mus. herm.*, p. 218 (Waite, I, p. 178): “... how the garden is to be opened, and the noble roses are to be seen in their field.” *

214 Cf. “rosy Paphian,” “rose-hued Aphrodite,” “rose-hued Cyprian,” etc. (Bruchmann, *Epitheta Deorum quae apud poetas Graecos leguntur*, s.v. Aphrodite, pp. 65, 68).

215 **κόκκινος**, *coccineus*. Cf. Rev. 17 : 4f.

216 Isaiah 1 : 18: “... though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool.”

217 In keeping with these associations, the adulterous queen in Wieland’s alchemical fairytale was changed into a pink goat.

218 “Antichrist shall be born in great Babylon of a whore of the tribe of Dan. He will be filled with the devil in his mother’s womb and brought up by witches in Corozain” * (Migne, *P.L.*, vol. 172, col. 1163).

219 “Like to the rose that blooms in the midst of the thorns that enclose it,

So are the pleasures of love never unshared with its gall.” *

(Georgius Camerarius, cited in Picinellus, *Mundus Symbolicus*, I, pp. 665f.)

220 “Consil. coniugii,” *Ars chemica*, p. 220.*

221 *In Matth. Homiliae*, 72 (73) (Migne, *P.G.*, vol. 57–58, col. 739).*

222 *Treatises on Marriage and Remarriage*, trans. by Le Saint, pp. 78f.*

223 This pun is permissible, since one of the synonyms for the *aqua permanens* is “urina puerorum.”

224 Dorn (“Spec. Phil., “*Theatr. chem.*, I, p. 271) writes: “Whoever wishes to learn the alchemical art, let him learn not the philosophy of Aristotle, but that which teaches the truth . . . for his teaching consists entirely in amphibology, which is the best of all cloaks for lies. When he censured Plato and others for the sake of gaining renown, he could find no more commodious instrument than that which he used for his censure, namely amphibology, attacking his writings on the one hand, defending them by subterfuge on the other, and the reverse; and this kind of sophistry is to be found in all his writings.” *

225 For the alchemists the world was an image and symbol of God.

226 Mercurius is also an “archer.”

227 “Impraegnata igitur graviter languebat

Certe novem mensibus in quibus madebat

Fusis ante lachrymis quam parturiebat

Lacte manans, viridis Leo quod sugebat.”

228 *Cherubinischer Wandersmann*, III, 11.

229 “Eius tunc multicolor cutis apparebat
Nunc nigra, nunc viridis, nunc rubea fiebat,
Sese quod multoties sursum erigebat
Et deorsum postea sese reponebat.”

230 “Centum et quinquaginta noctibus languebat
Et diebus totidem moerens residebat,
In triginta postmodum rex reviviscebat,
Cuius onus vernulo flore redolebat.”

231 “Ejus magnitudine primo coaequatus
Venter in millecuplum crevit ampliatus,
Ut super principio suo sit testatus
Finis perfectissime ignibus probatus.
“Erat sine scopulis thalamus et planus,
Et cum parietibus erectus ut manus
Prolongatus aliter sequeretur vanus
Fructus neque filius nasceretur sanus.”
“Stufa subtus lectulum erat collocata,
Una atque alia artificiata
Erat super lectulum valde temperata
Membrana frigescerent ejus delicata.
“Eratque cubiculi ostium firmatum,
Nulli praebens aditum suum vel gravatum,
Et camini etiam os redintegratum
Ab inde ne faceret vapor evolutum.”

232 [*IllHam* could also refer to *tetredo*, ‘foulness.’—TRANS.]

233 *Spirificare* = *spiram facere*, ‘to make a coil, wind like a snake.’ *Spiritum facere* does not seem to me credible. *Sine coeli polis* (without the poles of heaven) is probably put in to fill up the line, and means no more than that this process does not take place in heaven but in the *cucurbita*.

234 “Postquam computruerunt ibi membra prolis
Carneae tetredinem deponebat molis,
Illam Lunae similans sine coeli polis
Postquam spirificans in splendorem Solis.”

235 *Mutus liber*. Luna is shown in Pl. 5, and Sol or Phoebus Apollo in Pl. 6.

236 *Supra*, pars. 19ff., 172f.

237 As I have shown earlier, the alchemists thought the conjunction of the new moon was something sinister. Cf. particularly the “viperinus conatus” of the mother (supra, par. 14), a parallel of the early death of the mythological sun-god.

238 “Sic cum tempus aderat mater suum natum
Prius quem conceperat, edidit renatum.
Qui post partum regium repetebat statum,
Possidens omnimodum foetum coeli gratum.

“Lectus matris extitit qui quadrangularis
Post notata témpora fit orbicularis,
Cuius cooperculum formae circularis
Undequaque candeat fulgor ut Lunaris.”

239 Cf. *Psychology and Alchemy*, par. 116.

240 Ibid., par. 338.

241 “Lecti sic quadrangulus factus est rotundus
Et de nigro maximo albus atque mundus
De quo statim prodiit natus rubicundus
Qui resumpsit regium sceptrum laetabundus.”

242 “Hinc Deus paradysi portas reseravit,
Uti Luna candida ilium decoravit,
Quam post ad imperii loca sublimavit
Soleque ignivomo digne coronavit.”

243 Angelus Silesius (*Cherub. Wandersmann*, III, 195) says of Sapientia:

“As once a Virgin fashioned the whole earth,
So by a Virgin it shall have rebirth.”

244 That the Church has not done everything it might have been expected to do in regard to the doctrine of the Holy Ghost was a remark made to me spontaneously by Dr. Temple, the late Archbishop of Canterbury. For the psychological aspect of the doctrine of the Holy Ghost see “Dogma of the Trinity,” pars. 234ff.

245 This conclusion is quite obvious in Angelus Silesius.

246 Cf. the magnificent sermon on the text “When all things were in the midst of silence” (Wisdom of Solomon 18 : 14) in Meister Eckhart (trans. by Evans, I, p. 3): “Here in time we make holiday because the eternal birth which God the Father bore and bears unceasingly in eternity is now born in time, in human nature. St. Augustine says this birth is always happening. But if it happen not in me what does it profit me? What matters is that it shall happen in me. We intend therefore to speak of this birth as happening in us, as being consummated in the virtuous soul; for it is in the perfect soul that God speaks his Word . . . There is a saying of the wise man: ‘When all things were in the midst of silence, then leapt there down into me from on high, from the royal throne, a secret Word.’”

247 *Cherub. Wandersmann*, II, 101–104.

248 The critical passages are: “And thus God the Father gives birth to his Son, in the very oneness of the divine nature. Mark, thus it is and in no other way that God the Father gives birth to his Son, in the ground and essence of the soul, and thus he unites himself with her.” “St. John says: ‘The light shineth in the darkness; it came unto its own and as many as received it became in authority sons of God; to them was given power to become God’s sons.’” (Trans. by Evans, I, pp. 5 and 9.)

249 “Elementis quatuor Deus insignita

Arma tibi contulit decenter polita,

Quorum erat medio virgo redimita

Quae in quinto circulo fuit stabilita.”

250 Hegemonius, *Acta Archelai* (ed. Beeson), p. 10: “When the good father knew that darkness had come upon his earth, he brought forth from himself the virtue [or strength] which is called the mother of life, wherewith he surrounded the first man. These are the five elements, wind, light, water, fire, and matter; and clothed therewith, as preparation for war, he came down to fight against the darkness.” *

251 See *Psychology and Alchemy*, figs. 64, 82, 114.

252 Ibid., pars. 499, 505f., fig. 208.

253 “In our vessel the Passion is enacted,” says Mylius (*Phil, ref.*, p. 33). The motif of torture can be found in the visions of Zosimos. Cf. “Transformation Symbolism in the Mass,” pars. 344ff., 410f. and “The Philosophical Tree,” chs. 17 and 18.

254 The eagle represents the next-higher stage of transformation after Leo. The lion is a quadruped and still earthbound, whereas the eagle symbolizes spirit.

255 “Et unguento affluit haec delicioso

Expurgala sanguine prius menstruoso

Radiabat undique vultu luminoso

Adornata lapide omni pretioso.

“Ast in eius gremio viridis iacebat

Leo, cui aquila prandium ferebat;

De leonis latere cruor effluebat,

De manu Mercurii, quem Virgo bibebat.

“Lac, quod mirum extitit, ilia propinabat

Suis de uberibus, quod leoni dabat.

Eius quoque faciem spongia mundabat,

Quam in lacte proprio saepe madidabat.

“Illa diademate fuit coronata

Igneoque pedibus aere ablata

Et in suis vestibis splendide stellata,

Empyreo medio coeli collocata.

“Signis, temporibus et ceteris planetis,
Circumfusa, nebulis tenebrosis spretis,
Quae, contextis crinibus in figuram retis,
Sedit, quam luminibus Rex respexit laetis.”

256 [Cf. Curtius, *James Joyce und sein Ulysses*.]

257 *Hexastichon Sebastiani Brant in memorabiles evangelistarum figuras* (1502). See our Pls. 1 and 2.

258 One of my critics includes me among the “smelters,” on the ground that I take an interest in the psychology of comparative religion. This description is justified in so far as I have called all religious ideas *psychic* (though their possible transcendental meaning is something I am not competent to judge). That is to say, I maintain that there is a relationship between Christian doctrine and psychology—a relationship which in my view need not necessarily turn out to the disadvantage of the former. My critic betrays a singular lack of confidence in the assimilating power of his doctrine when he deprecates with horror this incipient process of fusion. The Church was able to assimilate Aristotle despite his essentially alien way of thinking, and what has she not taken over from pagan philosophy, pagan cults, and—last but not least—from Gnosticism, without poisoning herself in the process! If Christian doctrine is able to assimilate the fateful impact of psychology, that is a sign of vitality, for life is assimilation. Anything that ceases to assimilate dies. The assimilation of Aristotle warded off the danger then threatening from the Arabs. Theological critics should remember these things before launching purely negative attacks on psychology. It is no more the intention of the psychologist than it was of the alchemist to disparage in any way the significance of religious symbols.

259 “Fit hie Regum omnium summus triumphator,
Et aegrorum corporum grandis mediator,
Omnium defectuum tantus reformator,
Illi ut obedient Caesar et viator.

“Praelatis et regibus praebens decoramen,
Aegris et invalidis fit in consolamen.
Quis est quem non afficit huius medicamen,
Quo omnis penuriae pellitur gravamen.”

260 *Ars chemica*, ch. III, p. 22.

261 “Introitus apertus,” *Mus. herm.*, p. 654 (Waite, II, p. 167).

262 *Mus. herm.*, p. 96 (Waite, I, p. 86).

263 Cf. “Rosinus ad Sarrat.,” *Art. aurif.*, I, p. 281: “Then he touches the ferment with the prepared imperfect body, as it is said, until they become one in body, figure, and appearance, and then it is called the Birth. For then is born our stone, which is called king by the Philosophers, as it is said in the *Turba*: Honour our king coming out of the fire, crowned with a diadem.” *

264 *Mus. herm.*, pp. 654f. (Waite, II, p. 167).*

265 And ye shall see the *iksir* [elixir] clothed with the garment of the kingdom.” * *Turba* (ed. Ruska), p. 147.

266 “The stone of the Philosophers is the king descending from heaven, and his hills are of silver, and his rivers of gold, and his earth precious stones and gems” * (*Ars chemica*, p. 61).

267 *Phil, ref.*, p. 10.

268 *Ibid.*, p. 284. Cited in *Ros. phil. (Art. aurif.*, II, p. 329) as a quotation from Lully. A similar quotation in *Ros. phil.* (p. 272) is attributed to Ortulanus and Arnaldus: “Because the soul is infused into the body and a crowned king is born.” * On p. 378 *Ros. phil.* cites an “Aenigma Hermetis de tinctura rubea”: “I am crowned and adorned with a diadem and clothed with kingly garments; for I cause joy to enter into bodies.” * The “Tractatulus Avicennae” (*Art. aurif.*, I, p. 422) says: “Despise not the ash, for God will grant it liquefaction, and then finally by divine permission the king is crowned with a red diadem. It behoves thee therefore to attempt this magistry.” *

269 *Hyl. Chaos*, pp. 236f.

270 *Ibid.*, pp. 286f. Cf. the passage from *Amphitheatrum*, p. 197 (supra, par. 355, n. 28).

271 “Illius species” = a piece of the king, as it were, who is now suddenly a substance.

272 The “multiplicado” often means a spontaneous renewal of the tincture, comparable to the widow’s cruse of oil. Mylius (*Phil, ref.*, p. 92) lays down the following rule: “Project therefore on any body as much of it as you please, since its Tincture shall be multiplied twofold. And if one part of it in the first place converts with its bodies a hundred parts: in the second it converts a thousand, in the third ten thousand, in the fourth a hundred thousand, in the fifth a million, into the true sun-making and moon-making (substance).” *

273 “Nostrum Deus igitur nobis det optamen

Illius in speciem per multiplicamen,

Ut gustemus practicae per regeneramen

Eius fructus, uberes et ter dukes. Amen.”

274 Cf. the king’s bath in Bernardus Trevisanus, supra, pars. 74f. For a detailed parable see the “Tractatus aureus de lapide,” in *Mus. herrn.*, pp. 41ff. (Wake, I, pp. 41ff).

275 *Art. aurif.*, I, pp. 146ff.

276 *Mus. herm.*, p. 654 (Wake, II, p. 167).

277 *Symb. aur. mensae*, p. 380: “And although that king of the philosophers seems dead, yet he lives, and cries out from the deep: He who shall deliver me from the waters and bring me back to dry land, him will I bless with riches everlasting. But although that cry is heard by many, yet are none near at hand to be moved with compassion for the king and to seek him. For who, say they, will plunge into the sea? Who will relieve another’s danger at the cost of his own? For few there are who credit his lamentation and they think the voice they hear to be the loud cries and echoes of Scylla and Charybdis. So they stay idle at home, and have no care for the king’s treasure nor for his safety.”* Cf. *Psychology and Alchemy*, pars. 434ff.

278 Possibly a reference to Psalm 69 : 2f.: “I sink in deep mire, where there is no standing; I am come into deep waters, where the floods overflow me. I am weary of crying, my throat is dried; mine eyes fail while I wait for my God.” Verse 14f.: “Deliver me out of the mire, and let me not sink; let me be delivered from them that hate me, and out of the deep waters. Let not the waterflood overflow me, neither let the deep swallow me up, and let not the pit shut her mouth upon me.”

279 *Splendor Solis: Alchemical Treatises of Solomon Trismosin*, pp. 29f. See also *Psychology and Alchemy*, fig. 166.

280 The true antimony of the philosophers [lies] in the deep sea, that the son of the king may lurk submerged” * (*Symb. aur. rnensae*, p. 380).

281 Ibid., p. 378, referring to *The Triumphal Chariot of Antimony* of Basilius Valentinus, which, it seems, was first published in German in 1604. The Latin edition appeared later, in 1646. See Schmieder, *Geschichte der Alchemie*, p. 205.

282 Pars. 434ff.

282a p. 133.

283 *Panarium* (ed. Holl), Haer. 36, cap. 4 (II, pp. 47ff.).

284 *Ancoratus* (ed. Holl), vol. I, p. 20.

285 Ibid., pp. 104f.

286 See *Psychology and Alchemy*, figs. 10–12, 46, 47.

287 Cf. “The Spirit Mercurius,” par. 269 and n. 41, and “Paracelsus as a Spiritual Phenomenon,” par. 182, n. 61.

288 P. 195, “the son of one (HIS) day; wherein are warm, cold, moist and dry.” The Mercurial Serpent “giving birth in a single day,” however, is mentioned in “De lapide philosophorum” of Albertus Magnus (*Theatr. chem.*, IV, pp. 98f). See *infra*, pars. 712 and 718. Cf. also *Das Buch der Alaune und Salze* (ed. Ruska), pp. 58f.

289 As regards the Saturn/lead equation, it should be noted that although astrologically Saturn is a malefic planet of whom only the worst is expected, he is also a purifier, because true purity is attained only through repentance and expiation of sin. Thus Meister Eckhart says in his sermon on the text, “For the powers of heaven shall be shaken” (Luke 21 : 26): “Further we must note how (God) has decked the natural heavens with seven planets, seven noble stars which are nearer to us than the rest. The first is Saturn, then comes Jupiter, then Mars, and then the Sun; after that comes Venus, and then Mercury, and then the Moon. Now when the soul becomes a spiritual heaven, our Lord will deck her with these same stars spiritually, as St. John saw in his Apocalypse when he espied the King of Kings seated upon the throne of the majesty of God, and having seven stars in his hand. Know that the first star, Saturn, is the purger . . . In the heaven of the soul Saturn becomes of angelic purity, bringing as reward the vision of God, as our Lord said, ‘Blessed are the pure in heart for they shall see God.’” (Evans, I, p. 168.) It is in this sense that Saturn should be understood here. Cf. Vigenerus (“De igne et sale,” *Theatr. chem.*, VI, p. 76): “Lead signifies the vexations and troubles wherewith God visits us and brings us back to repentance. For as lead burns up and removes all the imperfections of metals, for which reason Boethus the Arab called it the water of sulphur, so likewise tribulation in this life cleanses us from the many blemishes which we have incurred: wherefore St. Ambrose calls it the key of heaven.” *

294 *Catecheses Mystagogicae*, XVIII, 8 (ed. Reischl and Rupp, II, pp. 307ff.).

295 *De Excessu fratris*, lib. II, cap. 59 (ed. Faller, p. 281), and *Hexaameron*, V, cap. 23 (Migne, *P.L.*, vol. 14, col. 238).

296 *De subtilitate*, p. 602.

297 The fact that the myth was assimilated into Christianity by interpretation is proof, first of all, of the myth's vitality; but it also proves the vitality of Christianity, which was able to interpret and assimilate so many myths. The importance of hermeneutics should not be under-estimated: it has a beneficial effect on the psyche by consciously linking the distant past, the ancestral heritage which is still alive in the unconscious, with the present, thus establishing the vitally important connection between a consciousness oriented to the present moment only and the historical psyche which extends over infinitely long periods of time. As the most conservative of all products of the human mind, religions are in themselves the bridges to the ever-living past, which they make alive and present for us. A religion that can no longer assimilate myths is forgetting its proper function. But its spiritual vitality depends on the continuity of myth, and this can be preserved only if each age translates the myth into its own language and makes it an essential content of its view of the world. The *Sapientia Dei* which reveals itself through the archetype always ensures that the wildest deviations shall return to the middle position. Thus the fascination of philosophical alchemy comes very largely from the fact that it was able to give new expression to nearly all the most important archetypes. Indeed, as we have seen already, it even tried to assimilate Christianity.

298 Numerous examples of these parallels can be found in Picinellus, *Mundus Symbolicus*, I, pp. 322ff.

299 Cf. the edition of his *Hieroglyphica* in Caussin, *De Symbolica Aegyptorum sapientia* (1618), p. 142.

300 *The Hieroglyphics of Horapollo* (trans. by Boas), p. 75 (Book I, No. 34).

301 Ibid., p. 96 (Book II, No. 57): "For when this bird is born, there is a renewal of things." *

302 Likewise Col. 1 : 20, and in a certain sense Rom. 8 : 19ff.

303 "Today shalt thou be with me in paradise."

304 According to the dogma, Christ descended with his body into limbo.

305 These speculations belong to the 17th cent., whereas Khunrath wrote in the 16th cent. See the article by M. Lauterburg on Christ's descent into hell in Herzog and Hauck, *Realenzyklopaedie für protestantische Theologie*, VIII, p. 204.

306 Cf. the aforementioned "Onus," which is identical with the phoenix and shares its display of colours. In his excerpts from Epiphanius Caussin cites: "The bird phoenix is more beautiful than the peacock; for the peacock has wings of gold and silver, but the phoenix of jacinth and emerald, and adorned with the colours of precious stones: she has a crown upon her head" * (*Symb. Aegypt. sap.*, p. 142).

307 Vulgate: "Factumque est vespere et mane, dies unus."

308 Gen. 1 : 2: "And darkness was upon the face of the deep." Cf. Boehme ("Tabulae principiorum," I, 3, in *De signatura rerum*, Amsterdam edn., p. 271), who calls darkness the first of the three principles.

309 John 8 : 12: "I am the light of the world."

310 Among the Valentinians (Irenaeus, *Adversus haereses*, I, 5, 1) the demiurge and king of all things who was created by Achamoth was called the "Father-Mother"—an hermaphrodite. Similar traditions may have been known to the alchemists, though I have found no trace of any such connections.

311 The alchemical figures, especially the gods of metals, should always be thought of astrologically as well.

312 [The first edition was published at Venice (1666) with the title *Lux obnubilata suapte natura refulgens*; the French edition (1687), which contains the Italian poem at pp. 3ff., is cited below: poem in the text, Crasselame's

commentary in the foot-notes. Crasselame was the pseudonym of Otto Tachenius. Grateful acknowledgment is made to Professor Charles Singleton for the prose translation of the Italian verses.—EDITORS.]

313 “It establishes a twofold motion in Mercurius, one of descent and the other of ascent, and as the former serves to give form to the materials by means of the rays of the sun and of the other stars which by their nature are directed towards lower bodies, and by the action of its vital spirit to awaken the natural fire which is as it were asleep in them, so the movement of ascent serves naturally to purify the bodies.” (P. 112) The first descent *comes* within the story of the Creation and is therefore left out of account by most of the alchemists. Accordingly, they begin their work with the ascent and complete it with the descent, whose purpose is to reunite the freed soul (the *aqua permanens*) with the dead (purified) body, thus bringing the *filius* to birth.

314 “From it goes forth Splendour, from its light Life, from its movement Spirit” (p. 113).

315 Cf. “The Spirit Mercurius,” par. 283, and *Psychology and Alchemy*, pars. 430ff. Crasselame was influenced by Paracelsus. He identifies his Mercurius with the “Illiastes”; cf. “Paracelsus as a Spiritual Phenomenon,” pars. 160, 168, n. 62, 170ff. and n. 10.

316 The “Epístola ad Hermannum” (*Theatr. chem.*, V, p. 900) says of the lapis: “it ascends of itself, blackens, descends and whitens, grows and diminishes . . . is born, dies, rises again, and thereafter lives forever.” *

317 Examples are Trophonios in his cave (Rohde, *Psyche*, trans. Hillis, p. 105, n. 12) and Erechtheus in the crypt of the Erechtheion (p. 98). The heroes themselves often have the form of snakes (p. 137), or else the snake is their symbol (p. 290, n. 105). The dead in general are frequently depicted as snakes (p. 170). Like the “hero” of alchemy, Mercurius, another ancient alchemical authority, the Agathodaimon, also has the form of a snake.

318 Cf. the snake-boat of Ra in the underworld (Budge, *The Egyptian Heaven and Hell*, I, pp. 66, 86). The snake-monster *par excellence* is the Apep-serpent (Budge, *The Gods of the Egyptians*, I, p. 269). Its equivalent in Babylonia is Tiamat (I, p. 277). The Book of the Apostle Bartholomew (Budge, *Coptic Apocrypha in the Dialect of Upper Egypt*, p. 180) says with reference to the resurrection of Christ: “Now Abbaton, who is Death, and Gaios, and Tryphon, and Ophiath, and Phthinon, and Sotomis, and Komphion, who are the six sons of Death, wriggled into the tomb of the Son of God on their faces, in the form of serpents.” Budge comments (intro., p. Ixiii): “In the Coptic Amente lived Death with his six sons, and in the form of a seven-headed serpent, or of seven serpents, they wriggled into the tomb of the Lord to find out when his body was going to Amente. The seven-headed serpent of the Gnostics is only a form of the serpent of Nau . . . and the belief in this monster is as old at least as the 6th dynasty.” The “seven Uraei of Amente,” mentioned in the Book of the Dead (ch. 83) are probably identical with the “worms in Rastau, that live upon the bodies of men and feed upon their blood” (Papyrus of Nektu-Amen). When Ra stabbed the Apep-serpent with his lance, it threw up everything it had devoured (Budge, *Osiris and the Egyptian Resurrection*, I, p. 65). This is a motif which recurs in the primitive whale-dragon myths. Generally the hero’s father and mother come up with him out of the monster’s belly (cf. *Symbols of Transformation*, par. 538, n. 85), or everything that death had swallowed (par. 310). It is clear that this motif is a préfiguration of the apocatastasis on a primitive level.

319 Rev. 20 : 2. Honorius of Autun, *Speculum de misteriis ecclesiae* (Migne, P.L., vol. 172, col. 937): “The seven-headed dragon, the prince of darkness, drew down from heaven with his tail a part of the stars, and covered them over with a cloud of sins, and drew over them the shadow of death.” *

320 Isaiah 38 : 10: “... in the cutting off of my days I shall go to the gates of hell” (AV/DV).

321 Job 17 : 13f.: "... the grave is mine house: I have made my bed in the darkness. I have said to corruption, Thou art my father; to the worm, Thou art my mother and my sister." Job 21 : 26: "They shall lie down alike in the dust, and the worms shall cover them."

322 Niedner, *Thule, II*, p. 39.

323 Grimm, *Teutonic Mythology* (trans. by Stallybrass), IV, p. 1540.

324 Cf. Nietzsche, *Thus Spake Zarathustra* (trans. by Common), p. 121: "When did ever a dragon die of a serpent's poison?" says Zarathustra to the snake that had bitten him. He is a hero of the race of dragons, for which reason he is also called the "stone of wisdom" (p. 205).

325 Cf. Lucian's story of Alexander the mountebank, who produced an egg with Asklepios inside it. ("Pseudomantis," 12, in *Works*, I, pp. 144ff.)

326 Brugsch, *Religion und Mythologie der alten Ägypter*, pp. 103f.

327 It is astonishing to see how alchemy made analogous use of the same images: the opus is a repetition of the Creation, it brings light from the darkness (*nigredo*), the lapis is "one," it is produced in the form of *puer*, *infans*, *puellus*, and can be multiplied indefinitely.

328 The worm stands for the most primitive and archaic form of life from which ultimately developed the direct opposite of the earth-bound creature—the bird. This pair of opposites—snake and bird—is classical. The eagle and serpent, the two animals of Zarathustra, symbolize the cycle of eternal return. "For thine animals know well, O Zarathustra, who thou art and must become: behold, thou art the teacher of the eternal return" (*Thus Spake Zarathustra*, p. 264). Cf. the "ring of return" (p. 273) and "alpha and omega" (p. 275). The shepherd into whose mouth the serpent crawled is also connected with the idea of eternal return (pp. 207f.). He forms with the snake the circle of the uroboros. "The circle did not evolve: it is the primary law" (Aphorism 29 in Horneffer, *Nietzsches Lehre von der Ewigen Wiederkunft*, p. 78). Cf. also the teaching of Saturninus that the angels first created a man who could only crawl like a worm. (Irenaeus, *Adv. haer.*, I, XXIV, 1.) As Hippolytus remarks (*Elenchos*, VII, 28, 3), because of the weakness of the angels who created him, man "grovelled like a worm."

329 Cf. *Psychology and Alchemy*, fig. 217. There is also an indirect hint of this in the hanging up of the snake on a tree. Cf. the alchemical myth of Cadmus (*supra*, pars. 84ff.), and *Psychology and Alchemy*, fig. 150.

330 Honorius of Autun, *Spec. de myst. eccl.* (Migne, P.L., vol. 172, col. 915).

331 Migne, P.L., vol. 51, col. 833.

332 Cf. *Symbols of Transformation*, pars. 572ff.

333 Cf. *supra*, par. 146; also "Paracelsus as a Spiritual Phenomenon," par. 182.

334 This is another quotation, namely from Psalm 21 : 7 (DV). It is interesting that this psalm begins with the words: "My God, my God, why hast thou forsaken me?" an indication that the transformation of the King of Glory into the least of his creatures is felt as abandonment by God. The words are the same as Matthew 27 : 46: "Eli, Eli, lama sabachthani."

335 *Elenchos*, V, 8, 18 (Legge, I, p. 134).*

336 *Ancoratus*, 45 (ed. Holl, p. 55).

337 *Mus. Herm.*, pp. 117f.

338 "Assatus." The word was used by the alchemists to denote the roasting of the ore.

339 The fire of divine wrath” suggests Boehme’s “divine wrath-fire.” I do not know whether there is direct connection between them. In our treatise God’s wrath, falling upon Christ, turns against God himself. Boehme discusses this question in “Aurora” (*Works*, I), VIII, 20ff., pp. 62ff., and *Quaestiones theosophicae* (Amsterdam edn., 1682, pp. 3, 11ff), and says that on the one hand the wrath-fire comes from the “dryness,” one of the seven “qualities” of Creation, and on the other hand it is connected with the first principle of “divine revelation,” the darkness (Gen. 1 : 2), which “reaches into the fire” (“*Tabula principiorum*,” I, pp. 2ff.). The fire is hidden in the centre of the light as well as in all creatures, and was kindled by Lucifer.

340 The rose-coloured tincture brings Christ into connection with the lion. (Cf. *supra*, pars. 419f.)

341 We have an amusing example of this tendency in Dom Pernety (*Les Fables égyptiennes et grecques*), who demonstrates the alchemical nature of ancient mythology without seeing that this was the matrix from which the alchemical ideas arose.

342 *Elenchos*, VII, 27, 4f. (Legge, II, p. 78).

343 Cf. *Psychology and Alchemy*, par. 451.

344 Cf. Leisegang, *Der heilige Geist*, pp. 78f.

345 Wei Po-yang, “An Ancient Chinese Treatise on Alchemy,” p. 241.

346 Cf. the Anthropos doctrine in Zosimos. (*Psychology and Alchemy*, par. 456.)

347 P. 251.

348 It is highly remarkable that there should be an Anthropos doctrine in China, where the basic philosophical assumptions are so very different.

349 Who, *nota bene*, is not to be confused with the ego.

350 A reverse process set in during the 17th cent., exemplified most clearly in Boehme. (The “*Aquarium sapientum*” represents the critical point between the two.) After that, the dogmatic figure of Christ began to predominate and enriched itself with alchemical ideas.

351 As Morienus (*Art. aurif.*, II, p. 18) says: “For the entry into rest is exceeding narrow, and no man can enter therein save by affliction of the soul.” *

352 “There is in our chemistry a certain noble substance, which moves from lord to lord” * (Maier, *Symb. aur. mensae*, p. 568). “*Verus Mercurii spiritus*” and “*sulphuris anima*” are parallels to dragon and eagle, king and lion, spirit and body (*Mus. herm.*, p. 11). The “*senex-draco*” must be reborn as the king (*Verus Hermes*, p. 16). King and Queen are represented with a dragon’s tail (Eleazar, *Uraltes Chymisches Werck*, pp. 82ff.). There, on p. 38, it is said that a black worm and dragon come from the king and queen in the *nigredo*. The worm *Phyton* sucks the king’s blood (p. 47).

353 Since the alchemical symbols are saturated with astrology, it is important to know that the chief star in Leo is called *Regulus* (“little king”) and that the Chaldaeans regarded it as the lion’s heart (Bouché-Leclercq, *L’Astrologie grecque*, pp. 438f.). *Regulus* is a favourable sign at the birth of kings. “*Cor*” (heart) is one of the names of the arcane substance. It signifies “fire, or any great heat” (Ruland, *Lexicon*, p. 114).

354 Cf. *Psychology and Alchemy*, fig. 4, top left. Also the inscription in *Pandora* (ed. Reusner), p. 227: “Kill the lion in his blood.” The symbol derives from Senior (*De chemia*, p. 64).

355 See the eagle with the head of a king consuming his feathers in the Ripley Scrowle: *Psychology and Alchemy*, fig. 228.

356 So far I have found no reference to Dante in any of the texts.

357 Berthelot, *Alch. grecs*, II, iv, 28.

358 It is difficult to explain why the constellation Ophiuchos (Anguitenens, Serpentarius, the Serpent-Holder) is called a demon. Astronomically speaking he stands on Scorpio and is therefore connected astrologically with poison and physicians. And indeed, in the ancient world he signified Asklepios (Roscher, *Lexikon*, VI, cols. 921f.). Hippolytus (*Elenchos*, IV, 47, 5ff.) states that whereas the constellation Engonasi (The Kneeler) represents Adam and his labours, and hence the first creation, Ophiuchos represents the second creation or rebirth through Christ, since he prevents the Serpent from reaching the Crown (*στέφανος. corona borealis*, the Wreath of Ariadne, the beloved of Dionysus). (Cf. Bouché-Leclercq, p. 609, n. 1.) This interpretation does not fit in badly with the “saviour” Asklepios. But since, according to the ancients, snake-charmers are born under this constellation, a nefarious connotation may have crept in (also, perhaps, through the “poisonous” Scorpio).

359 *Μόλυβδος*, another name for the arcane substance.

360 An allusion to Matthew 13 : 31: “The kingdom of heaven is like to a grain of mustard seed.”

361 “Unionis simplicitas” refers probably to the doctrine of the “res simplex,” signifying the Platonic “Idea.” “The simple is that which Plato calls the intelligible, not the sensible.” “The simple is the unexpected part,” it is “indivisible” and “of one essence.” The soul is “simplex.” “The work is not brought to perfection unless it ends in the simple.” “The conversion of the elements to the simple.” “Man is the most worthy of living things and nearest to the simple, and this because of his intelligence.” Quotations from “Liber Platonis quattorum,” *Theatr. chem.*, V, pp. 120, 122, 130, 139, 179, 189.*

362 Cf. “Spec, phil.,” *Theatr. chem.*, I, p. 298: “They found the virtue [power] of it [truth] to be such, that it performed miracles.”* (Cf. also “Phil, chemica,” *Theatr. chem.*, I, pp. 497 and 507.)

363 “Physica Trismegisti,” *Theatr. chem.*, I, p. 433.

364 *Ibid.*, p. 434.

365 The centre, therefore, cannot be simply God (the “One”), since only in man can it be attacked by disease.

366 “De tenebris contra naturam,” *Theatr. chem.*, I, pp. 530f.*

367 Cf. “The Spirit Mercurius.”

367a *Turba*, Sermo XLVII, p. 152.* (Another reading for “veterum” is “et unientem.”)

368 *Ibid.*, p. 149.

369 “The devil seeking to erect them [the horns] into heaven, and being cast down therefrom, attempted thereafter to infix them in the mind of man, namely, ambition, brutality, calumny, and dissension.” * (“De tenebris contra naturam,” *Theatr. chem.*, I, p. 531.)

370 Likewise the “Aquarium sapientum,” *Mus. herm.*, p. 129 (Waite, I, p. 110) says: “Man is placed by God in the furnace of tribulation, and like the Hermetic compound he is troubled at length with all kinds of straits, divers calamities and anxieties, until he die to the old Adam and the flesh, and rise again as in truth a new man.” *

371 Here the author refers to Wisdom of Solomon, ch. 5, obviously meaning verses 3 and 4: “... These are they whom we had some little time in derision and for parable of reproach. We fools esteemed their life madness and their

end without honour” (DV). He also mentions Job 30, where verse 10 would be relevant: “They abhor me and flee far from me, and are not afraid to spit in my face.”

372 Genesis 8 : 6: Noah sent forth the raven after 40 days. Gen. 7 : 7: rising of the flood. Gen. 7 : 4: “I will rain upon the earth forty days and forty nights.” Luke 4 : 1f: “Jesus . . . was led by the Spirit into the wilderness, being forty days tempted of the devil.” Exodus 34 : 28: Moses was with the Lord forty days and forty nights. Deut. 8 : 2: The children of Israel wandered forty years in the wilderness.

373 *Mus. herm.*, p. 130 (Waite, I, p. 111).*

374 “An Ancient Chinese Treatise on Alchemy,” p. 238. Cf. the motif of torture in “Transformation Symbolism in the Mass,” pars. 345ff., 410f.

375 *Hyl. Chaos*, pp. 186f.

376 Instead of “tristitia” the usual synonym for the nigredo is “melancholia,” as in “Consil. coniugii” (*Ars chemica*, pp. 125f.): “Melancholia id est nigredo.”

377 *Ars chemica*, p. 14.

378 Cf. James, *The Apocryphal New Testament*, p. 367.

379 Bousset, *Hauptprobleme der Gnosis*, pp. 58ff.

380 The coincidence of the apotheosis of the king with the birth of Christ is indicated in D’Espagnet, *Arcanum Hermeticae philosophiae opus*, p. 82: “But lastly, [the opus] comes to an end in the other royal throne of Jove, from which our most mighty king shall receive a crown adorned with most precious rubies. ‘Thus in its own footsteps does the year revolve upon itself.’” *

381 The anima mediates between consciousness and the collective unconscious, just as the persona does between the ego and the environment. Cf. *Two Essays on Analytical Psychology*, pars. 305ff., 339, 507.

382 Pars. 107f. and n. 38, 116. Cf. “Transformation Symbolism in the Mass,” pars. 366ff.

383 Cf. Albertus Magnus, “Super arborem Aristotelis” (*Theatr. chem.*, II, p. 527): “The stork sat there, as if calling itself the circle of the moon.” * The stork, like the swan and goose, has a maternal significance.

384 “Exercit. in Turbam,” *Art. aurif.*, I, p. 181.*

385 *Ibid.*, p. 180.

386 The primitive assertion that the individual has a plurality of souls is in agreement with our findings. Cf. Tylor, *Primitive Culture*, I, pp. 391ff.; Schultze, *Psychologie der Naturvölker*, p. 268; Crawley, *The Idea of the Soul*, pp. 235ff.; and Frazer, *Taboo and the Perils of the Soul*, pp. 27 and 80, and *Balder the Beautiful*, II, pp. 221ff.

387 Cf. *Psychology and Alchemy*, figs. 27, 57, 257.

388 *Ibid.*, fig. 149.

389 The phase of the conflict of opposites is usually represented by fighting animals, such as the lion, dragon, wolf, and dog. Cf. Lambspringk’s *Symbols in the Musaeum hermeticum*.

390 Cf. *Psychology and Alchemy*, pars. 520ff.

391 *Ibid.*, pars. 38, 56ff.

392 In late antiquity Pan was no longer a grotesque pastoral deity but had taken on a philosophical significance. The Naassenes regarded him as one of the forms of the “many-formed Attis” (*Elenchos*, V, 9, 9) and as synonymous with

Osiris, Sophia, Adam, Korybas, Papa, Bakcheus, etc. The story of the dirge is in Plutarch, “The Obsolescence of Oracles,” 17 (*Moralia*, V, pp. 401ff.). (Cf. “Psychology and Religion,” par. 145). Its modern equivalent is Zarathustra’s cry “God is dead!” (*Thus Spake Zarathustra*, p. 67).

393 “In the midst of the Chaos a small globe is happily indicated, and this is the supreme point of junction of all that is useful for this quest. This small place, more efficient than all the entirety, this part which comprises its whole, this accessory more abundant than its principal, on opening the store of its treasures, causes the two substances to appear which are but a single one. . . . Of these two is composed the unique perfect, the simple abundant, the composite without parts, the only indivisible hatchet of the sages, from which emerges the scroll of destiny, extending evenly beyond the Chaos, after which it advances in ordered fashion to its rightful end.” (“Recueil stéganographique,” *Le Songe de Poliphile*, II, f.) In these words Béroalde de Verville describes the germ of unity in the unconscious.

394 Because of his fiery nature, the lion is the “affective animal” *par excellence*. The drinking of the blood, the essence of the lion, is therefore like assimilating one’s own affects. Through the wound the lion is “tapped,” so to speak: the affect is pierced by the well-aimed thrust of the weapon (insight), which sees through the motive for the affect. In alchemy, the wounding or mutilation of the lion signifies the subjugation of concupiscence.

395 Thus Morienus (7th-8th cent.) states: “This thing is extracted from thee, for thou art its ore; in thee they find it, and, to speak more plainly, from thee they take it; and when thou hast experienced this, the love and desire for it will be increased in thee. And thou shalt know that this thing subsists truly and beyond all doubt” * (*Art. aurif.*, II, p. 37).

396 In Freud this is done by making conscious the repressed contents; in Adler, by gaining insight into the fictitious “life-style.”

397 This sentence needs qualifying as it does not apply to all conflict situations. Anything that can be decided by reason without injurious effects can safely be left to reason. I am thinking, rather, of those conflicts which reason can no longer master without danger to the psyche.

398 There were, nevertheless, some who would have liked to have the Holy Ghost as a familiar during their work. (See *supra*, n. 116.)

*[For par. 518a. inadvertently omitted at this point in the first edition, see *supra*, p. vii.]

399 Cf. the *solificatio* in the Isis mysteries: “And a garland of flowers was upon my head, with white palm-leaves sprouting out on every side like rays; thus I was adorned like unto the sun, and made in the fashion of an image” (*The Golden Ass*, trans. by Adlington, pp. 582f.).

400 Consciousness consists in the relation of a psychic content to the ego. Anything not associated with the ego remains unconscious.

401 This ever-repeated psychological situation is archetypal and expresses itself, for instance, in the relation of the Gnostic demiurge to the highest God.

402 The conjunction symbolism appears in two places: first, at the descent into the darkness, when the marriage has a nefarious character (incest, murder, death); second, before the ascent, when the union has a more “heavenly” character.

403 Cf. Oxyrhynchos Fragment 5 (discovered 1897): “Jesus saith, Wherever there are (two), they are not without God, and wherever there is one alone, I say, I am with him. Raise the stone, and there thou shalt find me; cleave the

wood, and there am I.” (Grenfell and Hunt, *New Sayings of Jesus*, p. 38.) The text is fragmentary. See Preuschen, *Antilegomena*, p. 43.

404 Particularly in the *Turba*.

405 Cf. the androgynous statue in the form of a cross, in Bardesanes.

406 As late as Boehme, Adam was described as a “male virgin.” Cf. “Three Principles of the Divine Essence” (*Works*, I), X, 18, p. 68, and XVII, 82, p. 159. Such views had been attacked by Augustine.

407 Cf. the picture of his baptism in the Reichenau Codex Lat. Mon. 4453, reproduced in Goldschmidt, *German Illumination*, II, 27.

408 How different is the picture of the “Holy Shroud” in Turin! Cf. Vignon, *The Shroud of Christ*.

409 Koepgen notes: “Not even the reformers, who twisted the ideal of virginity in the interests of a bourgeois ethos, ventured to change anything in this respect. Even for them Christ was an androgynous unity of man and virgin. The only puzzling thing is that they acknowledged the virginity of Christ while disapproving the virginity of the priesthood.” (p. 319).

410 Senior, *De chemia*, p. 108. Cf. ἀπροσδεής (“in need of nothing”) as an attribute of the Valentinian monad. (Hippolytus, *Elenchos*, VI, 29, 4.)

411 *Stromata*, III, 13, 92,* cited in James, *The Apocryphal New Testament*, p. 11.

412 “De transmut. metallka,” *Art. aurif.*, II, pp. 22f.* This seemingly pointless and selfish procedure becomes understandable if the alchemical opus is regarded as a divine mystery. In that case its mere presence in the world would be sufficient.

413 “For the first Chief of the spagyrics saith: Knock and it shall be opened unto you” * (Matthew 7 : 7). “Phys. Trismegisti,” *Theatr. chem.*, I, p. 413.

414 Ibid.* Eleazar (*Uraltes Chymisches Werck*, II, p. 53) says: “For this stone belongeth only to the proven and elect of God.”

415 I can only agree with Aldous Huxley when he writes in *Grey Eminence* (1943): “By the end of the seventeenth century, mysticism has lost its old significance in Christianity and is more than half dead. ‘Well, what of it?’* may be asked. ‘Why shouldn’t it die? What use is it when it’s alive?’—The answer to these questions is that where there is no vision, the people perish; and that, if those who are the salt of the earth lose their savour, there is nothing to keep that earth disinfected, nothing to prevent it from falling into complete decay. The mystics are channels through which a little knowledge of reality filters down into our human universe of ignorance and illusion. A totally unmystical world would be a world totally blind and insane” (p. 98). “In a world inhabited by what the theologians call unregenerate or natural men, church and state can probably never become appreciably better than the best of the states and churches of which the past has left us a record. Society can never be greatly improved, until such time as most of its members choose to become theocentric saints. Meanwhile, the few theocentric saints who exist at any given moment are able in some slight measure to qualify and mitigate the poisons which society generates within itself by its political and economic activities. In the gospel phrase, theocentric saints are the salt which preserves the social world from breaking down into irremediable decay” (p. 296).

416 Hoghelande (*Theatr. chem.*, I, p. 162): “So also the King and Queen are called the composite of the stone . . . Thus man and woman are called Male and Female, because of their union and action and passion. Rosinus [says]:

The secret of the art of gold consists in the male and the female.” *

417 Parable XII, pp. 135ff.

418 “Area arcani,” *Theatr. chem.*, VI, p. 314.

419 *Theatr. chem.*, II, p. 149.

420 St. Gregory, *In I Regum expos.* (Migne, *P.L.*, vol. 79, col. 23). Mylius (*Phil. réf.*, p. 8) says of God: “Whom the divine Plato declared to dwell in the substance of fire; meaning thereby the unspeakable splendour of God in himself and the love that surrounds him.” *

421 Cf. “The Spirit Mercurius,” pars. 271, 284.

422 *Aurora Consurgens*, p. 141: “I am the crown wherewith my beloved is crowned.”

423 *Mus, herm.*, p. 50 (Waite, I, p. 48).

424 “Adorned with a most excellent crown composed of pure diamonds” probably refers to the wreath of stars about her head.

425 Migne, *P.L.*, vol. 172, col. 834.

426 Colossians 2:3: “... so as to know the mystery of God the Father and of Christ Jesus, in whom are hidden all the treasures of wisdom and knowledge’ (DV).

427 The alchemists were in *some* doubt as to whether to call the body or the soul feminine. Psychologically, this consideration applies only to the soul as the representative of the body, for the body itself is experienced only indirectly through the soul. The masculine element is spirit.

428 This is true only of the male artifex. The situation is reversed in the case of a woman.

429 Thus Maier (*Symb. aur. mensae*, p. 336) says: “He who works through the talent of another and the hand of a hireling, will find that his works are estranged from the truth. And conversely, he who performs servile work for another, as a servant in the Art, will never be admitted to the mysteries of the Queen.” * Cf. *Psychology and Alchemy*, par. 421.

430 The materia prima, raw material, black earth.

431 *Uraltes Chymisches Werck*, II, p. 72.

432 “Come then, to higher spheres conduct him!

Divining *you*, he knows the way.”

(*Faust II*, trans. by MacNeice, p. 303.)

433 *Art. aurif.*, II, p. 294f. Cf. *Aurora Consurgens*, pp. 53f.

- 1 “Monas hieroglyphica,” *Theatr. chem.*, II, p. 222. *
- 2 Azoch = Azoth = “Mercurius duplex.” Cf. Ruland, *Lexicon*, p. 66, s.v. Azoch.
- 3 “Take Adam and that which is made like to Adam: here hast thou named Adam and hast been silent concerning the name of the woman or Eve, not naming her, for thou knowest that men who are like unto thee in the world know that that which is made like unto thee is Eve” * (“Rosinus ad Euthiciam,” *Art. aurif.*, I, p. 248).
- 4 “Congeries Paracelsicae chemicae,” *Theatr. chem.*, I, p. 578: “Wherefore with the most powerful talent and understanding they asserted that their stone was a living thing, which they also called their Adam, who bore his invisible Eve hidden in his body from the moment when they were united by the power of the great Creator of all things. And for that reason the Mercury of the Philosophers may fittingly be called nothing else than their most secret compound Mercury, and not the vulgar one.... There is in Mercury whatever the wise seek . . . the matter of the stone of the philosophers is naught else than . . . Adam the true hermaphrodite and microcosm.” * “Nature first requires of the artifex that the philosophic Adam be drawn to the Mercurial substance” * (p. 589). “... the composition of the most holy Adamic stone is made from the Adamic Mercury of the sages” * (p. 590).
- 5 For instance, Adam as “God the Father” fused together with Eve. Cf. Nelken, p. 542.
- 6 *Mus. herm.*, p. 228. *
- 7 “Adam was the Lord, King, and Ruler.” * *Ibid.*, p. 269.
- 8 “De prima materia,” *Mus. herm.*, p. 425. * Cf. *supra*, pars. 415f.
- 9 Cf. Hoghelande (*Theatr. chem.*, I, p. 162): “A tall and helmeted man.”
- 10 A Paracelsan neologism, presumably a compound of “Adam” and “Enoch.” Cf. “Paracelsus as a Spiritual Phenomenon” par. 168.
- 11 Dorn (in his edition of Paracelsus’ *De vita longa*, p. 178) calls him the “invisibilis homo maximus.”
- 12 Ms. from 18th cent., “Figurarum aegyptiorum,” fol. 17.
- 13 *De laude charitatis* (Migne, *P.L.*, vol. 176, col. 974).
- 14 See *supra*, pan. 24f.
- 15 Cf. Wünsche, “Schöpfung und Sündenfall,” p. 10. Adam had two faces. God sawed him into two halves—Adam and Eve.
- 16 *Ibid.*, p. 24.
- 17 Further material in *Psychology and Alchemy*, pars. 425ff., 430f., 433.
- 18 “The second Adam who is called the philosophic man.” * (*Aurora consurgens*, I, Parable VI.)
- 19 Sermo VIII (ed. Ruska), p. 115. *
- 20 The Latin Geber, author of the classical “Summa perfectionis,” was formerly thought to be identical with Jabir. For the present state of the Jabir controversy see Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 89.
- 21 Berthelot, *Chimie au moyen âge*, III, pp. 148f.
- 22 For instance in Mylius, *Phil. ref.*, p. 168.
- 23 Adam’s body came from the earth of Babylonia, his head from the land of Israel, and his limbs from the remaining countries. (*Talmud*, ed. Epstein, “Sanhedrin,” 38a; I, p. 241.)
- 24 *Theatr. chem.*, V, p. 109.

25 Here the text develops the comparison of Adam with the arcane substance.

26 “He [God] began to collect the dust of the first man from the four corners of the world; red, black, white, and green. Red, this is the blood; black refers to the entrails; white refers to the bones and sinews; green refers to the body.” * *Pirke de Rabbi Eliezer* (trans. by Friedlander), ch. 11, pp. 77f. (modified). According to other sources, green refers to the skin and the liver. Cf. *Jewish Encyclopaedia*, I, pp. 173ff., s.v. Adam, for further material.

27 *Ibid.*, p. 174.

28 Bezold, *Die Schatzhöhle*, p. 3.

29 Kohut, “Die talmudisch-midrassische Adamssage in ihrer Rückbeziehung auf die persische Yima- und Meshiasage.”

30 Grimm (*Teutonic Mythology*, II, p. 565) cites a Latin version from the *Rituale Ecclesiae Dunelmensis* (10th cent.) and other material besides. The above quotation is from Koehler, *Kleinere Schriften zur erzählenden Dichtung des Mittelalters*, II, p. 2. The “questions” go back to an Anglo-Saxon “Dialogue between Saturn and Solomon” (Thorpe, *Analecta Anglo-Saxonica*, pp. 95ff.).

31 Isidore of Seville, *De natura rerum*, IX (ed. Becker, p. 21). Cited in *Jewish Encyclopaedia*, I, p. 174, s.v. Adam.

32 Cf. the seven sons of Adam and the seven metals from the blood of Gayomart. There is the same uncertainty in the legend of the seven sleepers recounted in the 18th Sura of the Koran: in some versions there are seven, in others eight sleepers, or the eighth is a dog, or there are three men and a dog, and so on. (See “Concerning Rebirth,” par. 242, n. 6.) Similarly, Adam sometimes has three colours, red, black, and white, and sometimes four, white, black, red, and green. (Cf. *Jewish Encyclopaedia*, I, p. 174.)

33 Elsewhere he says of the devil: “For he knew that through the ternarius no entry could lie open to Adam, since the unarius protected the ternarius, and therefore he sought to enter the binarius of Eve” * (“Duellum animi cum corpore,” *Theatr. chem.*, I, p. 542).

34 “De tenebris contra naturam,” *Theatr. chem.*, I, p. 527. *

35 “The first man was of the earth, earthy; the second man is from heaven, heavenly” (DV).

36 “De igne et sale,” *Theatr. chem.*, VI, p. 3. *

37 *Ibid.* *

38 *Pirke de Rabbi Eliezer*, p. 79.

39 *Jewish Encyclopaedia*, s.v. Adam.

40 Mentioned in Zosimos, in Berthelot, *Alch. grecs*, III, xlix, 6. Cf. also *Sibylline Oracles* (ed. Geffcken), pp. 47ff.

41 In the sixth hour, on a Friday, “Heva mounted the tree of transgression, and in the sixth hour the Messiah mounted the cross” (Bezold, *Die Schatzhöhle*, p. 62). Cf. Augustine’s interpretation of the crucifixion as Christ’s marriage with the “matrona.” (Infra, par. 568.)

42 Bezold, pp. 27ff.

43 *Ibid.*, p. 76.

44 “Testament of Adam,” in Riessler, *Altjüdisches Schrifttum ausserhalb der Bibel*, p. 1087.

45 Charles, *Apocrypha and Pseudepigrapha of the Old Testament*, II, p. 142.

46 Ch. 20, pp. 148f. Dr. R. Schärf points out that the cave is not identical with the City of Four, since Kirjath Arba' is a name for Hebron, where the cave is.

47 “Therefore in Adam the first man . . . were contained all those ideas or species aforesaid, from the practical soul to the emanative simplicity.” * [I am indebted to Prof. G. Scholem for the following interpretative translation of the last few words: “. . . from the *nefesh* (i.e., the lowest of the five parts of the soul) of the world of *'asiyah* (i.e., the lowest of the four worlds of the Cabalistic cosmos) to the *yehidah* (the highest soul) of the world of *'atsiluth* (the highest world of the Cabalistic cosmos).”—TRANS.] Knorr von Rosenroth, “De revolutionibus animarum,” Part I, cap. I, sec. 10, *Kabbala denudata*, II, Part 3, p. 248.

48 Berthelot, *Alch. grecs*, IV, xx.

49 *Ibid.*, IV, xx, 15.

50 *De chemia*, p. 64: “Then I gather together the head, hands and feet [of the lion] and warm with them the water extracted from the hearts of statues, from the white and yellow stones, which falls from heaven in time of rain.” *

51 Stapleton, “Muhammad bin Umail.”

52 Already in the *Cyranides* we find: “Also the laudanum of his [the goat’s] beard, i.e., mumia or hyssop or sweat.” * (Delatte, *Textes latins et vieux jranfais relatifs aux Cyranides*, p. 129.)

53 *Von hyl. Chaos*, pp. 310f.: “The foundations of all that is created . . . are contained in . . . the radical moisture, the seed of the world, the Mumia, the materia prima.” *

54 Cf. “Paracelsus as a Spiritual Phenomenon,” pars. 170 and n. 5, 190.

55 *Codicillus*, 1651, p. 88. * Cf. Maier, *Symbola*, p. 19. Concerning the oil Lully says: “This oil is the tincture, gold and the soul, and the unguent of the philosophers” * (*Codicillus*, p. 96). A follower of Lully, Christopher of Paris, says: “That oil or divine water . . . is called the Mediator” * (“Elucidarius,” *Theatr. chem.*, VI, p. 214). It is therefore not surprising that Pernety (*Diet, mytho-hermetique*, p. 472) quotes the first *Codicillus* passage thus: “You extract this God [*deum* for *oleum*] from the hearts of statues by a moist bath of water and by a dry bath of fire.”

56 *Theatr. chem. Brit.*, pp. 20f.

57 Of these Norton discusses iron, copper, and lead.

58 Cf. “The Phenomenology of the Spirit in Fairytales,” pars. 425, 437ff.

59 I have had access to only a few of the dozens of Lully treatises that exist, so I have not attempted to trace the origin of the story.

60 Dionysius is cited in the alchemical literature. See *Theatr. chem.*, VI, p. 91.

61 “They made in them [the statues] both doors and hollows, in which they placed images of the gods they worshipped. And so statues of Mercury after this kind appeared of little worth, but contained within them ornaments of gods” * (Pachymeres’ paraphrase of Dionysius the Areopagite, *De caelesti hierarchia*, in Migne, *P.G.*, vol. 3, col. 162).

62 *Symposium*, 215a; trans. by Hamilton, p. 100. In his commentary on this passage R. G. Bury (*The Symposium of Plato*, p. 143) says: “The interiors [of the statuettes] were hollow and served as caskets to hold little figures of gods wrought in gold or other precious metals.”

63 One has only to read the meditations of St. Teresa of Avila or of St. John of the Cross on Song of Songs 1:1: “Let him kiss me with the kiss of his mouth, for thy breasts (*ubcra*) are better than wine” (DV). Usually (as in AV and

RSV) the passage is falsified: “love” for “breasts.”

64 The corresponding passage in Hippolytus, *Elenchos*, V, 7, 6, runs: “But the Assyrians say that the fish-eating Cannes [the first man] was born among them, and the Chaldaeans say the same thing about Adam; and they assert that he was the man whom the earth brought forth alone, and that he lay unbreathing and unmoved as a statue [*ἀνδριάντα*], an image of him on high who is praised as the man Adamas, begotten of many powers” (Legge trans., I, p. 122, modified).

65 Bousset, *Hauptprobleme der Gnosis*, pp. 34f This story from the Genza (holy book of the Mandaeans) may throw light on the passage in Senior, where he says that the male reptile “will cast his semen upon the marble in a statue” * (*De chemia*, p. 78).

66 Kohen, *Ernek ha-Melech*. [This reference is untraceable—EDITORS.]

67 Cf. the pregnant sentences in Ephraem Syrus (“De poenitentia,” *Opera omnia*, p. 572): “Two Adams are created: the one, our father, unto death, because he was created mortal, and sinned; the second, our father, unto resurrection, since when he was immortal he by death overcame death and sin. The first Adam, here, is father; the second, there, is also father of the first Adam.” *

68 *Phil. ref.*, p. 19. * It is by no means certain that Mylius, who seldom or never gives his sources, is the originator of this thought. He might just as easily have copied it from somewhere, though I cannot trace the source.

69 “Paracelsus as a Spiritual Phenomenon” par. 214.

70 *Acta Archelai*, XIII, p. 21. *

71 Schmidt, *Manichäische Handschriften der Staatlichen Museen, Berlin*, I.

72 Ch. XXIV, p. 72, vv. 33f.

73 Ch. LIX, p. 149, v. 29f.

74 P. 150, v. 8.

75 Ch. LXII, p. 155, v. 10ff.

76 Ch. LXXII, p. 176, v. 3ff.

77 P. 177, v. 2ff.

78 *Theatr. chem.*, VI, p. 91. *

79 *Divine Names* (trans. by Rolt), p. 93. * An older authority than Dionysius is Theophilus of Antioch (2nd cent.), who says: “The sun is a type of God, and the moon of man” (*Three Books to Autolytus*, II, 15; trans. by Pratten and others, p. 82). *

80 *Kabbala denudata*, I, Part 1, p. 546.

81 This was the stone of Bethel, which Jacob set up after his dream of the ladder.

82 “It is the brightest, which belongs to Tifereth.” * *Kabbala denudata*, p. 202.

83 Malchuth = *sponsa* (pp. 366, 477). The “ecclesia Israel” is also called Malchuth (p. 480). Besides this, Tifereth and Malchuth are brother and sister (p. 120). “Malchuth is also called by the name of mother, since she is the mother of all things that exist under her, even to the bound of the whole Abyss” * (p. 120).

84 “His [the sun’s] beauty is compared with that of a bridegroom coming forth from his bridechamber. And he is as a bridegroom issuing from his couch” * (*Theatr. chem.*, VI, p. 92).

- 85 *Sermo suppositus*, 120, 8 (Migne, *P.L.*, vol. 39, cols. 1984f.). *
- 86 *Mus. herm.*, p. 688 (Waite, II, p. 189).
- 87 As the “chaos,” the materia prima likewise consists of four elements (*Theatr. chem.*, VI, p. 228) which are in conflict. The task of the opus is to reconcile them so that they give rise to the One, the filius philosophorum. The Gnostics of Hippolytus thought in the same way; they spoke of the ascent and rebirth of Adam “that he may be born spiritual, not fleshly” (*Elenchos*, V, 8, 18). He is called “mighty in war,” but the war is in his own body, which “is made from warring elements” (V, 8, 19; Legge, I, p. 134).
- 88 “More medicinal virtue lies hid in antimony than in any other simple, and therefore more of the tinging virtue of the tincture.” * (*Symbola*, p. 379.)
- 89 Similarly Mylius says: “And therefore it is said that the stone is in every man. And Adam brought it forth with him from Paradise, from which material our stone or Elixir is produced in every man.” * (*Phil. ref.*, p. 30.)
- 90 *Mus. herm.*, p. 97.
- 91 *Mus. herm.*, p. 268 (Waite, I, p. 216).
- 92 In the Naassene view the Chaldaeans equated Oannes with Adam. Cf.n. 64, supra.
- 93 *Summa theol.*, I, q. 94, ad 3 (I, pp. 480ff.).
- 94 Chwolsohn, *Die Ssabier*, II, p. 601.
- 95 Wünsche, “Salomos Thron und Hippodrom,” p. 50.

- 97 *Jewish Encyclopaedia*, s.v. Adam.
- 98 “Alfabet des Ben-Sira.” Cf. Scheftelowitz, *Die altpersische Religion und das Judentum*, p. 218.
- 99 Chwolsohn, *Die Ssabier*, I, p. 709.
- 100 “Adam handed on the tradition to Enoch, who was initiated into the principle of intercalation” * (*Pirke de Rabbi Eliezer*, 8, trans. by Friedlander, p. 52).
- 101 “Adam said: these are the tables, on which the Holy One, blessed be He, will write with his own finger.” * (Cf. *Pirke de Rabbi Eliezer*, 20, p. 148.)
- 102 *Theatr. chem.*, I, pp. 774f.
- 103 “The world is to be renewed, or rather, chastened and little short of destroyed, by water” * (“Congeries Paracelsicae,” *Theatr. chem.*, I, p. 617).
- 104 *Theatr. chem.*, I, pp. 617f.
- 105 From Aramaic *ras* = ‘secret’.
- 106 Peter Beer, *Geschichte, Lehre und Meinungen aller bestandenen und noch bestehenden religiösen Sekten der Juden und der Geheimlehre oder Cabbalah*, II, pp. 1 if. The mystical book Sefer Raziel is one of the oldest texts of the Cabala (1st edn., Amsterdam, 1701). It is identified with “Sifre de-Adam Kadmaa,” cited in *the Zohar*. (Cf. *Jewish Encyclopaedia*, s.v. Adam.) According to another version the book was made of precious stones and contained the names of the seven charms which God gave to Adam. (Grunwald, “Neue Spuk- und Zaubersliteratur,” pp. 167f.)

- 107 The series consists of Adam, Enoch, Noah, Abraham, Isaac, Jacob, Moses, Christ. *Clementine Homilies* (trans. by Smith and others), pp. 283 and 259.
- 108 *P'an* means 'egg-shell,' *Ku* 'firm, to make firm; 'undeveloped and unenlightened, i.e., the embryo' (Hastings, *Encyclopaedia of Religion and Ethics*, IV, 141a).
- 109 Moses, too, is represented with horns.
- 110 Cf. the Christian relation of the Anthropos to the tetramorph (angel, eagle, lion, ox). See *Psychology and Alchemy*, fig. 53.
- 111 He is supposed to have been invented, so to speak, by the Taoist philosopher Ko Hung, 4th cent.
- 112 He is an "increated" made of uncreated, incorruptible air.
- 113 For these statements see Werner, *Myths and Legends of China*, pp. 76ff. Krieg (*Chinesische Mythen und Legenden*, pp. 7ff.) gives a very fine recension of the P'an-Ku legend, in which he brings together a number of Taoist-alchemical motifs.

147 Avalon, *The Serpent Power*.

148 For this motif see *Symbols of Transformation*, pars. 306, 349, 620.

149 Lit., “vergaffte sich.” This expression derives from Paracelsus. See *Liber Azoth* (ed. Sudhoff, vol. XIV) p. 574.

150 von Baader, *Werke*, VII, p. 229.

151 *Ibid.*, p. 231.

152 *In Genesim Hom.*, I, 7 (Migne, *P.G.*, vol. 12, col. 151).

153 “Every man has in himself both Adam and Eve. For as in that first transgression of man, the serpent suggested, Eve delighted, and Adam consented, so we see every day that when the devil suggests, the flesh delights, and the spirit consents.” * *In Septem Psalmos poenitentiales*, V, § 8 (Migne, *P.L.*, vol. 79, col. 608).

154 “*In Cant. hom.* II (Migne, *P.G.*, vol. 13, cols. 47ff.).

155 “Le Livre des Balances,” in Berthelot, *Chimie au moyen âge*, III, p. 140.

156 Irenaeus, *Adv. haer.*, I, 30, 9; Bousset, *Hauptprobleme der Gnosis*, p. 198; Bezold, *Die Schatzhöhle*, p. 3; Kohut, “Adamssage,” pp. 72 and 87; *Jewish Encyclopaedia*, s.v. Adam; Wünsche, “Schöpfung und Sündenfall des ersten Menschenpaares,” p. 11.

157 Gruenbaum, *Jüdisch-deutsche Chrestomathie*, p. 180. *Adamah* is also related to Hebrew *dam*, ‘blood.’ “Adam” would therefore mean “made of red earth.”

158 *In Genesim Hom.*, I, 13. *

159 Philo distinguishes between the mortal Adam made of earth and the Adam created after the image of God and says of the latter: “He that was created after the [divine] image was an idea, or genus, or imprint, or object of thought, incorporeal, neither male nor female, by nature incorruptible” * (“On the Account of the World’s Creation given by Moses,” §134, *Works*, I, pp. 106f., mod.).

160 “Congeries Paracelsicae,” *Theatr. chem.*, I, p. 578.

161 *Elenchos*, V, 6, 4f (Legge, I, p. 120).

162 Ed. Freedman and Simon, II, p. 54. Cf. also Scheftelowitz, *Die altpersische Religion und das Judentum*, p. 217, and Bousset, *Hauptprobleme der Gnosis*, p. 198.

163 Adam’s back is of significance. An Islamic legend says: “Then God also made a covenant with the descendants of Adam: for he touched his back, and lo, all men who will be born until the end of the world crept forth from his back, in stature no greater than ants, and ranged themselves to his right hand and to his left.” (Weil, *Biblische Legende der Muselmänner*, p. 34.) Then God sent these little souls back into Adam’s backbone, where they died and were changed into a single spirit. (Ghazali, *Die kostbare Perle im Wissen des Jenseits*, ed. Brugsch, p. 7.) Citations from Aptowitz, “Arabisch-jüdische Schopfungstheorien,” p. 216.

177 Euthymios Zigabenos, *Panoplia Dogmatica* (Migne, *P.G.*, vol. 130).

178 Wünsche, *Die Sagen vom Lebensbaum und Lebenswasser*, p. 23.

179 For a comprehensive survey of the Adam material see Murrelstein, “Adam, ein Beitrag zur Messiaslehre.” Concerning the universal soul see *ibid.*, XXXV, p. 269, and XXXVI, p. 52; also Aptowitz, “Arabisch-jüdische Schopfungstheorien,” p. 214: “While Adam lay there a lifeless body, God showed him all the righteous who would one day issue from him. These have their origin in the separate parts of Adam’s body: one from his head, the other from his hair, and others from his forehead, eyes, nose, mouth, ear and jawbone. Proof of this can be found in Job 38

: 4, where [as interpreted by the midrash] God says to Job: ‘Tell me how thou art made, from what part of Adam’s body thou comest; if thou canst tell me this, then mayest thou contend with me.’” “The first Adam was as great as the world from one end to the other, therefore the angels would have cried ‘Holy!’ before him, but God made him small by taking away pieces of his limbs, which then lay round about Adam. Adam said to God: ‘Wherefore dost thou rob me?’ God answered him: ‘I will recompense thine injuries many times, for it hath been said, The son of David shall not come until all the souls in thy body are become earth. Take these pieces and carry them into all regions of the earth; wherever thou dost cast them, they will be turned to dust, and there shall the earth be inhabited by thy descendants. The places which thou shalt appoint for Israel shall belong to Israel, and the places which thou shalt appoint for the other peoples shall belong to the other peoples.” In this Haggadah (discourse), therefore, it is said that all the generations of men were contained in Adam; in his soul, all souls, and in his body, all bodies.

180 Lidzbarski, *Das Johannesbuch der Mandäer*, p. 168, line 7.

181 Cf. the Zosimos text in *Psychology and Alchemy*, par. 456.

182 Berthelot, *Alch. grecs*, III, xlix, 4–12.

183 Reuchlin, *De verbo mirifico*, and *De arte cabbalistica*.

184 “Apologia tredecim Quaestionum,” *Opera* (Venice, 1557).

185 *Uraltes Chymisches Werck*, 2nd edn., 1760. Published in Leipzig by Julius Gervasius von Schwartzburg.

186 See preface to the book. The MS is said to have been in the possession of Cardinal Richelieu. The story goes that Flamel bought the treatise, which was written on sheets of bark, for two florins from an unknown person. It is a late forgery from the beginning of the 18th cent. The first edition appeared in 1735.

187 This phrase occurs also in Maier, *Symbola*, p. 568: “There is in our chemistry a certain noble substance which moves from lord to lord, in the beginning whereof is wretchedness with vinegar, but in the end joy with gladness.” *

188 Eleazar states that Marez, , signifies earth, Hebrew *erets*.

189 Hebrew *riqma*, ‘many-coloured garment.’

190 The men of Kedar lived in black tents.

191 Mixed drink, spiced wine.

192 *Uraltes Chymisches Werck*, II, pp. 51f.

193 “The psyche, which by them is called *nefesh*, is the vital spirit, not in so far as it is wholly corporeal, but as that which is inborn and primitive and seminal, which later writers call the Archeus. This corresponds to the vegetative or plastic soul of the Philosophers, and the affective or concupiscible soul of the Platonists.” * (Knorr’s note to § 7 of the “Tractatus de revolutionibus animarum,” *Kabbala denudata*, II, Part 3, p. 247.) *Nefesh* is a kind of blood-soul, hence the prohibition against shedding blood (Leviticus 17 : 14).

193a *

194 [The Hebrew word used in Song of Songs 6 : 13 is “Shulamith” or “Shulammit,” translated in most versions of the Bible as “the Shulamite” (the girl from Shulem or ancient Shunem). Cf. Sellin, *Introduction to Old Testament*, pp. 223ff. “Sulamith” or “Shulamith” is also used as a personal name by modern Jews.—TRANS.]

195 “Adam is called by the Cabalists Adam Kadmon, to distinguish him from Adam the first man . . . because of all things that came forth from God he occupies the first place, as the first man among the species of men. Nothing can

more fitly be signified thereby than the soul of the Messiah, of which Paul speaks in I Corinthians 15:45–49.” * (Knorr’s note to “Tract, de revolut. animarum,” *Kabbala denudata*, II, Part 3, p. 244.)

196 “The love of the ‘King’ for the ‘Queen’ is the love of God for ‘Zion’, or for that power which is also called ‘Shalom,’ peace or fulfilment; for ‘Shulamith,’ who is praised in the Song of Songs” (Müller, *Der Sohar und seine Lehre*, p. 46).

197 Scholem, “Kabbala,” in *Encyclopaedia Judaica*, IX, cols. 630ff.

198 *Kabbala denudata*, I, p. 28, s.v. homo. Wünsche (“Kabbala,” in Herzog and Hauck, *Realenzyklopädie*, IX, p. 676) says: “Concerning Adam Kadmon the Cabalistic writings are not altogether clear. Sometimes he is conceived as the Sephiroth in their entirety, sometimes as a first emanation existing before the Sephiroth and superior to them, through which God . . . was made manifest and . . . revealed himself to the whole of Creation as a kind of prototype (macrocosm). In the latter event it looks as though Adam Kadmon were a first revelation interposed between God and the world, a second *God*, so to speak, or *the divine Logos*.” This view agrees with that of the *Kabbala denudata*, which was influenced by Isaac Luria. Here Adam Kadmon is “a mediator between En Soph and the Sefiroth” (*Jewish Encyclopaedia*, III, p. 475, s.v. Cabala). Dr. S. Hurwitz refers me to the *Zohar* (III, 48a): “As soon as man was created everything was created, the upper and the lower worlds, for everything is contained in man.” According to this view Adam Kadmon is the *homo maximus*, who is himself the world. Man and his heavenly prototype are “twins” (*Talmud*, “Sanhedrin,” 46b, ed. Epstein, I, p. 306). Adam Kadmon is the “highest man” of the divine chariot (Merkabah), the “highest crown” (Kether), the anima generalis. Isaac Luria says he contains in himself the ten Sefiroth. They went forth from him in ten concentric circles, and these are his *nefesh*, souls. (Cf. supra, pars. 574ff., the diagram of the Ophites in Origen, *Contra Celsum*.)

199 Ezek. 34 : 31 apparently says nothing of the kind. What it does say, however, is: “And ye my flock, the flock of my pasture, are men” (AV). “Man” = “Adam.” “Adam” here is a collective concept.

200 The parentheses are Knorr von Rosenroth’s.

201 *Kabbala denudata*, II, Part 3, pp. 248. *

202 Cf. *ibid.*, ch. 3, sect. I, pp. 255f.

203 *Ibid.*, p. 251. * Knorr’s parentheses.

204 “Sed differentias specificas designari per rectilineum.” The so-called “numerical differences” are concerned with the opposites. The text says: “The numerical differences refer to the balance-like arrangement in which there is a turning [in which two principles are related, i.e., “turned”] face to face, and two or more things of the same perfection or species are distinguished only as male and female. And these numerical differences [i.e., relationships] are also denoted by such expressions as “facing,” “turning the back,” etc.” * Diss. VI, § 9, p. 118.

205 “Ab Aen-Soph, i.e., Uno generalissimo, productum esse Universum, qui est Adam Kadmon, qui est unum et multum, et ex quo et in quo omnia. . . . Differentias autem generum notari per circulos homocentricos, sicut Ens, substantiam; haec, corpus; hoc, vivens; istud, sensitivum; et haec, rationale continet. . . . Et hoc modo in Adam Kadmon repraesentantur omnium rerum ordines, turn genera, quam species et individua.” (*Ibid.*) Cf. Scholem, *Major Trends in Jewish Mysticism*, p.215.

206 For the Egyptian source see the account in Bousset, *Hauptprobleme der Gnosis*, and Reitzenstein and Schaeder, *Studien zum antiken Synkretismus*. For the Indian, see Deussen, *Ceschichte der Philosophic*, I, 1, p. 228, and for its

relations with the belief in the Messiah, see Abegg, *Der Messiasglaube in Indien und Iran*.

207 Cf. supra, par. 589. According to the Valentinians, man is covered in a “pelt-like garment” (δερμάτικον χιτῶνα). Irenaeus, *Adv. haer.*, I, 5, 5 (Migne, *P.G.*, vol. 7, cols. 501f.).

208 Cf. “Instinct and the Unconscious,” par. 277.

209 It makes no difference here that the definition and classification of the instincts are an extremely controversial matter. The word “instinct” still denotes something that is known and understood by everyone.

210 Cf. supra, par. 18, the separation of Tifereth and Malchuth as the cause of evil.

211 As an example of “being in Tao” and its synchronistic accompaniments I will cite the story, told me by the late Richard Wilhelm, of the rain-maker of Kiaochau: “There was a great drought where Wilhelm lived; for months there had not been a drop of rain and the situation became catastrophic. The Catholics made processions, the Protestants made prayers, and the Chinese burned joss-sticks and shot off guns to frighten away the demons of the drought, but with no result. Finally the Chinese said, ‘We will fetch the rain-maker.’ And from another province a dried up old man appeared. The only thing he asked for was a quiet little house somewhere, and there he locked himself in for three days. On the fourth day the clouds gathered and there was a great snow-storm at the time of the year when no snow was expected, an unusual amount, and the town was so full of rumours about the wonderful rain-maker that Wilhelm went to ask the man how he did it. In true European fashion he said: ‘They call you the rain-maker, will you tell me how you made the snow?’ And the little Chinese said: ‘I did not make the snow, I am not responsible.’ ‘But what have you done these three days?’ ‘Oh, I can explain that. I come from another country where things are in order. Here they are out of order, they are not as they should be by the ordinance of heaven. Therefore the whole country is not in Tao, and I also am not in the natural order of things because I am in a disordered country. So I had to wait three days until I was back in Tao and then naturally the rain came.’” From “Interpretation of Visions,” Vol. 3 of seminars in English by C. G. Jung (new edn., privately multigraphed, 1939), p. 7.

212 In this connection Eleazar makes use of the symbol (significant only for a Christian) of the snake set up on a pole, a prefiguration of Christ (John 3 : 14).

213 I am informed that the American Indian punishment for a fallible medicineman was to have him pulled asunder by four horses, all going in opposite directions. (I cannot vouch for the truth of this statement, but the important thing is the idea as such.)

214 Wolfram von Eschenbach calls the carbuncle a healing stone which lies under the horn of the unicorn. Cf. *Psychology and Alchemy*, par. 552.

215 The passage we have cited may be decisive in regard to the origin and date of the treatise, both of which were contested by Robert Eisler, who, without having seen the book, doubted Scholem’s view that it is a late forgery. (Eisler, “Zur Terminologie und Geschichte der jüdischen Alchemie,” pp. 194 and 202.) See also Kopp (*Die Alchemie in Alterer und neuerer Zeit*, II, pp. 314ff.), who established a first edition in 1735 and regards the publisher Gervasius von Schwartzenburg as the author.

216 Pars. 422ff.

217 Cf. my “On Psychic Energy,” pars. 18ff.

218 Berthelot, *Alch. grecs*, VI, v, 6. *

219 *Kabbah denudata*, I, Part 3, “Porta coelorum,” ch. 8, § 3, p. 116. *

220 Ibid., § 4: “And this is the reason why the Essential Name has four letters, three different, and the fourth a repetition of the second: for the first *he* is the spouse of the *yod*; and the second, the spouse of the *vau*. The first emanated from *yod*, directly, and the second from *vau*, in a converse and reflex way.” *

221 Another view of the *yod* can be found in the *Zohar*, III, 191 (Vol. V, p. 267): “He then cited the verse, ‘I am black, but comely.’ This means that when she (the Moon) is very lovesick for her Beloved, she shrinks to nothing until only a dot is left of her, and she is hidden from all her hosts and camps. Then she says, ‘I am black,’ like the letter *Yod*, in which there is no white space, and I have no room to shelter you under my wings; therefore ‘do not look at me,’ for ye cannot see me at all.”

222 “*Yod*, because it is simple, is something single and primary, and like the number ‘1,’ which, among numbers and as a point, is the first of all bodies. But the point by moving along its length produces a line, namely *vau*.” * (*Kabbala denudata*, Vol. 1, Part 3, Diss. VII, § 1, p. 142.) “The letter *yod*, because it is a point, is made the beginning and the middle and the end; indeed, it is also the beginning of the Decads and the end of the unities and therefore it returns to the One.” * (Introductio in Librum Sohar, § 1, ch. XXXVII, § 1, *Kabbala denudata*, II, Part 1, p. 203.) With regard to the function of *yod*, Sect. VI, ch. I, p. 259 is significant: “When the Wisdom of the Blessed One saw that even in this splendour the worlds could not be manifested, since the Light was still too weak there, he again signalled to this letter *yod* that it should once more descend and break through the sphere of splendour and give forth its light, which was a little denser.” * The point is the “inner point,” which is the same as the “inner rose,” the “community of Israel,” the “Bride.” Further attributes of the rose are: sister, companion, dove, perfect one, twin. (“Tres discursus initiales Libri Sohar,” Comm. in Disc. I, § 12f., *Kabbala denudata*, II, Part 2, p. 151.) *Yod* is attached to the “summit of the crown” and descends upon Sapiencia (Hokhmah): “It scattered light and an eminent influence on that Wisdom.” * (“Theses Cabbalisticæ,” I, § 19. *Kabbala denudata*, I, Part 2, p. 151.) *Yod* is the “vas” or “vasculum” into which the “fount of the sea” pours, and from which the “fount gushing forth wisdom” issues. (“Pneumatica Kabbalistica,” Diss. I, ch. I, § 7 and 10, *Kabbala denudata*, II, Part 3, pp. 189f.)

223 “*Vau* denotes life, which is the emanation and movement of the essence that is manifested in it; and it is the medium of union and connection between the essence and the understanding.” * (Herrera, “Porta coelorum,” Diss. VII, ch. I, § 3, *Kabbala denudata*, I, Part 3, p. 141.)

224 A whole series of quaternions are associated with the Tetragrammaton. Cf. “Porta coelorum,” Diss. VII, ch. III, § 5, p. 145.

225 “*He* denotes Being, which is composed of essence and existence.” “The last *he* is the image of the intellect or mind.” * (Ibid., ch. I, § 2 and 4, p. 141.)

226 Song of Songs says of the Shulamite (4 : 8): “Come with me from Lebanon, my spouse, with me from Lebanon; come down from the top of Amana, from the top of Shenir and Hermon, from the lions’ dens, from the mountains of the leopards” (AV, mod.). According to Wittekindt (*Das Hohe Lied*, p. 166) Lebanon, lion, and leopard refer to Ishtar.

227 Eleazar, *Uraltes Chymisches Werck*, II, p. 52.

228 “For by greenness virginity would appear to be prefigured” * (Mennens, “Aureum vellus,” *Theatr. chem.*, V, p. 434).

229 *Art. aurif.*, II, p. 220. *

230 *Phil, ref.*, p. 11. *

231 “Speculum alchimiae,” *Theatr. chem.*, IV, p. 605. *

232 “Asophol” means gold.

233 This must refer to Job 28 : 5: “As for the earth, out of it cometh bread, and under it is turned up as it were fire” (AV). (“... but underneath it is turned up as by fire.” RSV.)

234 Earth.

235 Fire.

236 “Adamah” means red earth, synonymous with “laton.”

237 The Vulgate has: “Semitam ignoravit avis, nec intuitus est earn oculus vulturis” (DV: The bird hath not known the path, neither hath the eye of the vulture beheld it). Our text obviously does not follow the Vulgate, but seems to be based on Luther’s version.

238 “Three things make the shining stone;
Save where God’s own breath has blown
No man it possesses.” *

Joh. de Tetzen, “Processus de lapide philosophorum,” *Drey Chymische Bücher*, p. 64.

239 Genesis 8 : 11.

240 Song of Songs 5 : 11: “His head is as the most fine gold, his locks are bushy, and black as a raven.”

241 Hebrew *shemesh* (sun) is masculine as well as feminine. The Book Bahir says: “And why is the gold called ZaHaB? Because in it are comprised three principles: the Male (Zakhar), and this is indicated by the letter *Zayin*, the soul, and that is indicated by *He*. And what is its function? *He* is the throne for *Zayin* . . . and *Beth* (guarantees) their continuance.” (Scholem, *Das Buch Bahir*, p. 39, sect. 36.) For the sun-moon conjunction see the vision of the sun-woman (Rev. 11 : 19), discussed in “Answer to Job,” pars. 710ff. [According to Sellin, *Introduction to Old Testament*, p. 224, it has been suggested that the Song of Songs may contain festal hymns on the relations of the sun (*Shelems*) and the moon (*Shelamith*).—TRANS.]

242 Cf. the motif of curly-headedness in the discussion of Aelia Laelia Crispis, *supra*, par. 37.

243 Salomon Trismosin, *Aureum Vellus*, *Tractatus Tertius*, p. 28.

244 Berthelot, *Alch. grecs*, III, x, 1.

245 *Χρυσέα κεφαλή κατὰ τὸν θεσπέσιον Δανιὴλ τὸν θεηγόρον* (Berthelot, *Alch. grecs*, IV, vi, 1). This refers to Daniel 2 : 31f, describing Nebuchadnezzar’s dream of the great image with feet of clay.

246 Thomdike, *A History of Magic and Experimental Science*, I, p. 705. Sylvester II, formerly Gerbert of Rheims, was, it appears, interested in alchemy. Evidence for this is an alleged letter to Gerbert (early 12th cent.) on the squaring of the circle (Bodleian MS. Digby 83). Thomdike attributes the letter to Gerbert himself.

247 Cf. “Transformation Symbolism in the Mass,” pars. 365f.

248 Cf. *Psychology and Alchemy*, pars. 116, 220; also the “round thing” or “Moor’s head” in Rosencreutz, *Chymical Wedding*, pp. 147–8; the golden ball heated by the sun (p. 113), *cibatio* (feeding) with the blood of the beheaded (p. 117), death’s head and sphere (p. 120). The cranium is mentioned as the place of origin of the prima materia in Ventura (*Theatr. chem.*, II, p. 271), and in “Liber Platonis quattorum” (*Theatr. chem.*, V, p. 151): “The vessel necessary in this work must be round in shape, that the artifex may be the transformer of this firmament and of the

brain-pan.” * Albertus Magnus (“Super arborem Aristotelis,” *Theatr. chem.*, II, p. 525) says: “His head lives forever and therefore his head is called the life of glory and the angels serve it. And God placed this image in the paradise of delights and in it he set his own image and likeness,” * and on p. 526: “... until the black head of the Ethiopian bearing the likeness be well washed.” * Among the Naassenes of Hippolytus the head of the primordial man Edem signified paradise, and the four rivers that issue from it signified the four senses. (*Elenchos*, V, 9, 15; Legge, I, p. 143.) The same author describes the “talking head” as a magic trick. (*Elenchos*, IV, 41; Legge, I, p. 102.) There is some connection between the text of Albertus Magnus and the report in Hippolytus, at any rate in meaning; perhaps the common source is I Corinthians 11 : 3: “But I would have you know that the head of every man is Christ, and the head of the woman is the man, and the head of Christ is God” (DV). Compare the Albertus text with verse 7: “A man indeed ought not to cover his head, because he is the image and glory of God.” For the head as a trophy of revenge see “Peredur son of Efwarg” in the *Mabinogion* (trans. by Jones), pp. 183ff. As early as the Greek alchemists the “simple thing” (ἀπλοῦν), i.e., the prima materia, was called the “golden head.” (Berthelot, *Alch. grecs*, IV, vi, 1.)

249 *Art. aurif.*, II, p. 264. *

250 Steeb, *Coelum Sefhiroticum*, pp. 117f. *

251 *Art. aurif.*, I, p. 147.

252 *Theatr. chem.*, V, pp. 124, 127, 187.

253 *Ibid.*, p. 124. P. 128: “We must convert the member (i.e., the brain or heart) at the beginning of the work into that from which it is generated, and then we convert it through the spirit into whatsoever we will.” * “Member” means here a part of the body (“membrum cerebri,” p. 127). What is meant is a transformation of the brain into the *res simplex*, to which it is in any case related, “for it is a triangle in shape and is nearer than all members of the body to the likeness of the simple.” *

254 This seems to have made a particularly strong impression on Albertus Magnus, who believed he had proof that gold is formed in the head: “The greatest mineral virtue is in every man, and especially in the head between the teeth, so that in due time gold is found in tiny oblong grains . . . Wherefore it is said that the stone is in every man.” * (Cited in Ripley, “Axiomata philosophica,” *Theatr. chem.*, II, p. 134.) Can there have been gold-fillings in those days?

255 *Isis*, XVIII, p. 260.

256 Berthelot, *Alch. grecs*, I, iii, 1.

257 *Ibid.*, III, ii, 1.

258 *Ibid.*, III, xxix, 4.

259 “Characteres secretorum celandorum,” *Theatr. chem.*, II, p. 123.

260 The alchemists connected the “white stone” with Rev. 2 : 17: “... and I will give him a white pebble (*calculus*, ψῆφον) and upon the pebble a new name written, which no one knows except him who receives it.” (DV).

261 “Visio Arislei,” *Art. aurif.*, I, p. 148.

262 Hence the devil is expressly called “Lucifer.” Penotus therefore correlates the brain with the snake, to whom our first parents owed their first independent action. The Gnostic Naas and the *serpens mercurialis* of the alchemists play a similar role.

263 Hippolytus, *Elenchos*, IV, 51, 13 (Legge, I, p. 117). *

264 The parallels include Attis, Osiris, the serpent, and Christ.

265 ἀπό τοῦ ἀχαρακτηριστοῦ ἐγκεφάλου.

266 He adds: “But no one is aware of it,” another reference to unconsciousness.

267 *Elenchos*, V, 8, 13ff. (Legge, I, p. 133). Cf. Psalm 29 : 3: “The voice of the Lord is upon the waters,” and verse 10: “The Lord sitteth upon the flood.” For an alchemical parallel in Maier see *Psychology and Alchemy*, pars. 434ff.

268 This stone in the foundations of Zion may refer to Zech. 4 : 9f.: “The hands of Zorobabel have laid the foundation of this house, and his hands shall finish it . . . And they shall rejoice and shall see the tin plummet in the hand of Zorobabel. These are the seven eyes of the Lord that run to and fro through the whole earth” (DV). One of the alchemists brought this passage into connection with the lapis philosophorum on the ground that the “eyes of the Lord” were on the foundationstone. (Cf. *supra*, par. 45.)

269 *Elenchos*, V, 7, 35L (Legge, I, p. 129). The passages in parentheses are uncertain.

270 “Seminate aurum in terram albam foliata.” *Ros. phil., Art. aurif.*, II, p. 336 has: “Seminate ergo animam in terram albam foliatam.” Concerning terra foliata see Emblema VI in Maier, *Scrutinium chymicum*, pp. 16ff. The symbol probably derives from Senior, *De chemia*, pp. 24f.: “Likewise they call this water the lifegiving Cloud, the lower world, and by this they understand the foliate Water, which is the gold of the Philosophers, which Lord Hermes called the Egg with many names. The lower world is the body and burnt ashes, to which they reduce the venerable Soul. And the burnt ashes and the soul are the gold of the sages which they sow in their white earth, and [in] the earth scattered with stars, foliate, blessed, and thirsting, which he called the earth of leaves and the earth of silver and the earth of gold.” * “[Wherefore] Hermes said: Sow the gold in white foliate earth. For white foliate earth is the crown of victory, which is ashes extracted from ashes” * (p. 41). The “Liber de magni lapidis compositione” (*Theatr. chem.*, III, p. 33) mentions the “star Diana” as a synonym for *terra*.

271 In their use of the terms Luna and Terra the alchemists often make no distinction between the two. The following two sentences occur almost side by side in “Clangor buccinae” (*Art. aurif.*, I, p. 464): “Therefore *Luna* is the mother and the field in which the seed should be sown and planted,” * and “for I [says Sol] am as seed sown in good *earth*.”

* The generative pair are always Sol and Luna, but at least as often the earth is the mother. It seems that Luna represents the beloved and bride, while earth represents the maternal element. The “Introitus apertus,” *Mus. herm.*, p. 694 (Waite, II, pp. 194f.) says: “Know that our virgin earth here undergoes the last degree of cultivation, that the fruit of the Sun may be sown and ripened.” * The earth is the “mother of metals” and of all creatures. As *terra alba*, it is the “perfect white stone” (*Art. aurif.*, II, p. 490); but this phase of the *albedo* is called “full moon” and “fruitful white earth” (Mylius, *Phil. ref.*, p. 20). Just as Luna longs for her lover, so the earth draws down the moon’s soul. (Ripley, *Opera omnia*, p. 78.) Luna says to Sol: “I shall receive a soul from thee by flattery” * (Senior, *De chemia*, p. 8). The “Tractatus Micreris” (*Theatr. chem.*, V, p. 109) says: “From water falling upon the earth Adam was created, who is also the lesser world.” * Mylius (*Phil. ref.*, p. 185): “Earth is called the mother of the elements, for she bears the son in her womb.” * “Gloria mundi” (*Mus. herm.*, p. 221; Waite, I, p. 179) endows the filius with the dual birth of the hero: “although at his first birth he is begotten by the Sun and the Moon, he embodies certain earthly elements.” * “The father receives the son, that is, the earth retains the spirit.” * (Mylius, *Phil. ref.*, p. 137.) This whole identification of earth and moon is attested in antiquity: “For the lowest part of all the world is the earth, but the lowest part of the aether is the moon; and they have called the moon the aethereal earth.” * (Macrobius, *In somnium Scipionis*, I, 19, 10.) Pherecydes says the moon is the heavenly earth from which souls are born. In Firmicus

Maternus (*Matheseos*, V, praef. 5) the moon is even “the mother of mortal bodies.” For the connection between the moon and the earth’s fertility see Rahner, “Mysterium Lunae,” pp. 61ff.

272 Cf. “Psychology of the Transference,” pars. 469ff.

273 Proof of this is the controversy about universals, which Abelard sought to resolve by means of his “conceptualism.” Cf. *Psychological Types* pars. 68ff.

274 Theosophy and kindred systems are still based on this principle.

275 The presbyter Jodocus Greverus says in his “Secretum” (*Theatr. chem.*, III, pp. 785f.): “But do thou therefore, dear reader, receive the legitimate meaning of my words, and understand that philosophers are like to gardeners and husbandmen, who first choose their seeds, and when they are selected, sow them not in common earth, but in cultivated fields or prepared gardens.” * “But the Sun and Moon of the philosophers being taken as good seed, the earth itself is to be cleared of all its refuse and weeds, and worked with diligent tending, and after it has been thus tilled the aforesaid seeds of Sun and Moon are to be set therein.” *

276 “De arte chymica,” *Art. aurif.*, I, p. 613.” This earth is in the truest sense paradise, the “garden of happiness and wisdom.” “For it is the gift of God, having the mystery of the union of Persons in the Holy Trinity. O most wondrous knowledge, which is the theatre of all nature, and its anatomy, earthly astrology, proof of God’s omnipotence, testimony to the resurrection of the dead, pattern of the remission of sins, infallible rehearsal of the judgment to come and mirror of eternal blessedness.” * (Greverus, *Theatr. chem.*, III, p. 809.)

277 “Male and female created he them. From this we learn that every figure which does not comprise male and female elements is not a higher [heavenly] figure. . . . Observe this: God does not make his abode in any place where male and female are not joined together.” (*Zohar*, I, p. 177, mod.) Cf. “When we have trampled on the garment of shame, and when the two become one and the male with the female is neither male nor female” (*Stromata*, III, 13, 92). According to the *Zohar* (IV, p. 338), a male and female principle are to be distinguished in God himself. Cf. Wiinsche, “Kabbala,” Herzog and Hauck, *Realenzyklopädie*, IX, p. 679, line 43.

278 “Wherefore in the centre of the earth there is a most vast and raging fire, gathered together from the rays of the sun. It is called the abyss or nether world, and there is no other sublunar fire; for the dregs or earthly remains of the aforesaid principles, i.e., of the sun’s heat and of water, are fire and earth, set aside for the damned.” * (Mennens, *Theatr. chem.*, V, p. 370.)

279 “For he it is that overcomes fire, and by fire is not overcome; but in it amicably rests, rejoicing therein.” * (*The Works of Geber*, trans. by Russell, p. 135.)

280 Identified by Eleazar with Albaon = black lead.

281 This expression derives from Khunrath, *Hyl. Chaos*.

282 Cf. “The Spirit Mercurius” par. 263.

283 *Uraltes Chymisches Werck*, I, p. 63.

284 Χαλκολιβάνω, rendered by the Vulgate as *aurichalcum*, from *ὄρειχαλκος*, a copper alloy.

285 Cf. the dual aspect of the Cabalistic Tifereth, who corresponds to the Son of Man: “To the right he is called the Sun of righteousness, Malachi 4 : 2, but to the left [he is called the Sun] from the heat of the fire of Geburah.” * (*Kabbah denudata*, I, Part 1, p. 348.) Of the second day, which is assigned to Geburah, it is said: “On that day Gehenna was created” (ibid., p. 439).

286 Bibliothèque Nationale, Fr. 14765, pl. 8.

287 Cf. the 4 × 4 structure in *Aion*, par. 410.

288 “In natural things Yesod contains in itself quicksilver, for this is the foundation of the whole art of transmutation” * (*Kabbala denudata*, I, p. 441).

289 Cf. “The Spirit Mercurius,” par. 278.

290 “Yesod in human beings denotes the genital member of either sex” * (*Kab. den.*, I, p. 440). The divine name assigned to him is El-chai: “Wherefore Adonai burns with continual lust to fly to the measure of El-chai” * (p. 441). Yesod is also called “firm” and “true,” because he leads the “influx” of Tifereth down into Malchuth: “It is this firm step between Him and Her, that the most subtle nature of the semen sent down from above shall not be moved” * (p. 560). His cognomina are, among others: “redeeming angel, fount of living waters, tree of knowledge of good and evil, Leviathan, Solomon, Messiah the son of Joseph.” * The ninth Sefira (Yesod) is named “member of the covenant (or of circumcision).” (*Kabbala denudata*, I, Part 2, Apparatus in *Librum Sohar*, p. 10.) “The Zohar makes prominent use of phallic symbolism in connection with speculations concerning the Sefira Yesod” (Scholem, *Major Trends*, p. 228). The author adds: “There is of course ample room here for psychoanalytical interpretations.” In so far as the Freudian school translates psychic contents into sexual terminology there is nothing left for it to do here, since the author of the *Zohar* has done it already. This school merely shows us all the things that a penis can be, but it never discovered what the phallus can symbolize. It was assumed that in such a case the censor had failed to do its work. As Scholem himself shows and emphasizes particularly, the sexuality of the *Zohar*, despite its crudity, should be understood as a symbol of the “foundation of the world.”

291 “He is the spout for the waters from on high . . . and upon it are two olives, Nezach and Hod, the two testicles of the male” * (*Kabbala denudata*, I, Part 1, p. 330).

292 P. 544, “fons” p. 215.

293 P. 551.

294 *Ibid.*, p. 165, s.v. Botri.

295 P. 210, 5: “But the covenant of peace or perfection is so called because this mode makes peace and perfection between Tifereth and Malchuth, so that it is said thereof in I Chron. 29 : 11, ‘for this mode, which is called Qol [i.e., “All”], is in heaven and earth,’ the Targum using this paraphrase, that it is united with heaven and earth.” *

296 P. 500.

297 Pp. 674 and 661.

298 P. 677: “Near . . . and better than the brother from afar, who is Tifereth.” *

299 P. 14: “For the Strong One of Israel is the name midway between Nezach and Hod.” *

300 As *castella munita* (fortified strongholds) and *botri* (grapes), Nezach and Hod signify the testicles. (Pp. 156 and 165).

301 Yesod is also called, like Tifereth, *amicus fidelis*, the faithful friend: “In the Zohar, in speaking of that youth, it is said that the Just One (Yesod) shall be called the faithful friend, according to Song of Songs 7 : 10, ‘I am my beloved’s.’ And hence Yesod is called Friend, for he unites two lovers and friends; for through him is effected the union of Tifereth and Malchuth” * (p. 247).

302 P. 560. The symbolism is sexual (cf. supra, n. 290). The attribute “strong,” “mighty” applies to Tifereth as well as to Yesod.

303 P. 710.

304 P. 340.

305 P. 165.

306 P. 660: Proverbs 10 : 25: “But the righteous is an everlasting foundation.”

307 P. 441.

308 Pp. 441f. *

309 P. 442. * This appears to come from the alchemical treatise “Ash Metsareph,” on which Knorr elaborates in his “Apparatus.”

310 See supra, par. 329, n. 658.

311 From Ital. *cameo*, L. *cammaeus*.

312 As a multiple of 4, 64 thus represents the highest totality. The 64 hexagrams of the *I Ching* should probably be understood in the same way. They represent the course of the “valley spirit,” Tao, winding like a dragon or water. Cf. Rousselle, “Drache und Stute,” p. 28; also Tschärner, *Das Vermächtnis des Laotse*, p. 11.

313 *Kabbala denudata*, I, Part 1, p. 443.

314 “In the Zohar this letter is called the fount of life” * (pp. 439 and 366).

315 P. 144: “Aprokh: the chick of any bird. Deut. 22 : 6; Ps. 84 : 4. In Raya Mehimna, R. Simeon ben Yochai says that by this name is to be understood the grade Tifereth, as is apparent from its six members (limbs), which are six wings, wherewith it flies up and down. But in Tikkunim at the beginning of the book of R. Bar, Bar Channa: this name is said to refer to the Just One under the mystery of light reflected from the depths to the height. His words are these: Aepbrochim are flowers, which do not yet bear perfect fruit. They are the Sefiroth under the notion of a tree, which is turned from the depths upwards, and this with reference to Yesod.” *

316 “Feather, wing . . . the genital member . . . this name is expounded of Yesod, who is surnamed the Just One” * (p. 22).

317 See *Psychology and Alchemy*, fig. 228.

318 “The phoenix . . . from the glittering feathers about whose neck . . . is made a medicine most useful for restoring to the desired state of health all affections contrary to human nature” * (*Symbola*, p. 599).

319 *Kabbala denudata*, I, Part 1, pp. 499 and 737.

320 Ibid., p. 348.

321 Pp. 157, 266, 439.

322 The text continues: “As is well known, the woman by her warmth cooks the seed for generation” * (p. 465).

323 Judges 14 : 14.

324 “This is to be understood of the Son of God, who after having long imitated the terrible lion in rebuking the world’s sins, a little later, when he instituted the most holy sacrament of the Eucharist as his death drew nigh, turned himself into exceeding sweet honeycombs” * (Picinellus, *Mundus Symbolicus*, I, p. 397).

325 *Kabbala denudata*, I, Part 1, p. 16. *

326 Ibid., p. 16. * *Zohar*, I, 831a (Eng. trans., II, p. 339) says: “The world did not come into being until God took a certain stone, which is called the foundationstone, and cast it into the abyss so that it held fast there, and from it the world was planted. This is the central point of the universe, and on this point stands the Holy of Holies. This is the stone referred to in the verses, ‘Who laid the cornerstone thereof? (Job 38 : 6), ‘a tried stone, a precious cornerstone’ (Isaiah 28:16), and ‘The stone which the builders rejected has become the head of the corner’ (Psalm 118 : 22). This stone is compounded of fire, water, and air, and rests on the abyss.... ‘This stone has on it seven eyes’ . . . (Zech. 3 : 9). It is the rock Moriah, the place of Isaac’s sacrifice. It is also the navel of the world.”

327 *Kabbala denudata*, I, Part 1, p. 16. *

328 “See now that I, even I, am he, and there is no god with me; I kill, and I make alive; I wound, and I heal; neither is there any that can deliver out of my hand.”

329 He recommends his work to “philosophers, theologians of every religion, and lovers of the chymic art.” See title-page of Vol. I, [Part 1](#).

330 Pp. 16 and 18.

331 Pp. 16f.

332 The stone refers not only to the upper world but also to Malchuth: “In this perpetual name the mystery of the letter Yod (י) is involved, and that to the greatest degree in Malchuth, for in her exists the letter Yod. For the shapeless mass and form of the hath the figure of the stone, and Malchuth is the foundation and the stone on which the whole upper edifice is built. Of her it is said in Zachariah 3 : 9: Upon one stone there are seven eyes” * (p. 17). (Cf. supra, ch. II, “The Scintilla,” where I discuss the *κεφαλα* of Monoimos, the iota.) The “lower stone” has an evil significance in the Midrashic legend of Armillus, the “son of the stone.” The Midrash of the Ten Kings says: “And Satan will come down and have intercourse with the stone in Rome. The stone will conceive and bear Armillus.” “This stone is the wife of Belial, and after he had cohabited with her she became pregnant and gave birth to Armillus.” The latter has “squinting red eyes, two heads, green feet.” “His hair is red like gold.” He is thus a Typhon-like figure, the adversary of the second Adam. “He will come to the Edomites and say to them, I am your saviour.” The stone in Rome had “the shape of a beautiful girl, who was made in the first six days of the Creation.” Armillus corresponds to the threeheaded Azi-Dahaka of Persian legend, who subdued Yima, the Anthropos. See Murrelstein, “Adam,” pp. 75ff. Further variants in Hurwitz, *Die Gestalt des sterbenden Messias*.

333 *Das Buch Paragranum* (ed. Strunz), p. 77.

334 P. 64.

335 Cf. “Paracelsus as a Spiritual Phenomenon,” par. 234, n. 22.

336 *De vita longa*, p. 72.

337 *Theatr. chem.*, V, p. 899. *

338 “Ophirizum” may be derived from Ophir, whose pure gold was proverbial. (Cf. Job 22 : 24 and Isaiah 13 : 12.) Reusner’s *Pandora* (p. 304) gives for “purum aurum, clear gold”: “Obrizum aurum.” This agrees with Isidore of Seville, *Liber etymologiarum*, lib. XVI, cap. XVII, fol. 84r: “Obrycum aurum.” L. *obrussa*, Gk. *ὄβρυζον χρυσίον*, ‘pure gold’. Also mentioned in Pico della Mirandola, “De auro,” *Theatr. chem.*, II, p. 392.

339 Mylius, *Phil, ref.*, p. 151.

340 *Theatr. chem.*, II, p. 526. Cf. Rev. 21 : 21: “pure gold, as it were transparent glass.”

341 Helvetius, “Vitus aureus,” *Mus. herm.*, p. 826 (Waite, II, p. 280).

342 Bezold, *Die Schatzhöhle*, p. 4.

343 Picinellus, *Mundus symbolicus*, I, p. 690.

344 In *Ezechielem*, I, Horn, viii (Migne, *P.L.*, vol. 76, col. 863). He continues: “The virtues therefore of the heavens are signified by the sapphire stone, for these spirits . . . hold the dignity of the highest place in heaven.” * Cf. also *Moralia in Job*, lib. XVIII, cap. XXVII.

345 in *Ezechielem*, lib. I, Horn, vii: “The crystal . . . is congealed from water, and becomes solid. And we know how great is the mobility of water; but the body of our Redeemer, because it underwent sufferings even unto death, was in some respects like unto water; for in being born, growing up, and suffering weariness, hunger, thirst, and death, he pursued a mobile course moment by moment until his passion. . . . But because through the glory of his resurrection he was restored out of that corruptibility into the strength of incorruptibility, he hardened after the fashion of a crystal from water, so that there was one and the same nature in it and in him, and the mutability of corruption which had formerly been in him was no more. Therefore water was changed into crystal when the infirmity of corruptibility was changed into the strength of incorruptibility by his resurrection. But mark that the crystal is said to be dreadful, that is, to be feared . . . and to all who know the truth it is manifest that the Redeemer of mankind, when he shall appear as judge, will be comely to the just, but terrible to the unjust.” *

346 The Kingdom (Basilia) refers to Malchuth.

347 The Macroprosopos corresponds to the first triad of the Aziluth system: Kether (*corona*), Binah (*intelligentia*), and Hokhmah (*sapientia*). “It is certain that Macroprosopos, the Father and Mother, are the Crown, Wisdom and Intelligence of the emanative world after the restitution.” * (Ibid., sect. 166, pp. 56f.) This triad is a real Trinity: “From the first three parts of the world of emptiness are constituted three supreme heads, which are contained in the Most Holy Ancient One. But all three are counted as one in the emanative world, which is Macroprosopos.” * The *λόγος μακρόκοσμος ΟΥ μακροπρόσωπος* occurs in Philo.

348 “Commentarius generalis,” *Kabbala denudata*, II, Part 2, Tract. IV, p. 61. *

349 Christ is called lapis in the patristic literature. Cf. for example St. Gregory, *Expos, in I Reg.*, lib. IV, cap. vii, 12 (Migne, *P.L.*, vol. 79, col. 212): “The stone in Holy Writ signifies our Lord and Redeemer.” *

350 Berthelot, *Alch. grecs*, III, vi, 5. Cf. *Psychology and Alchemy*, par. 405.

351 Daniel 2 : 34 (DV).

352 Cf. “The Spirit Mercurius,” pars. 270ff., 283.

353 Cf. “The Phenomenology of the Spirit in Fairytales,” pars. 425f., 436ff.

354 *The Celestial Hierarchies*, III, 3 (Eng. trans., p. 18).

355 The fate of the Shulamite corresponds, in a sense, to that of Sophia among the Gnostics, as reported by Irenaeus. (Cf. *Aion*, pars. 75, n. 23, 118, n. 86, 307, n. 33.)

356 Geryon was the son of Callirhoe and Chrysaor, who sprang from the blood of the Gorgon.

357 *Elenchos*, V, 8, 4.

358 Ibid., V, 6, 6f. (Cf. Legge, I, p. 121).

359 Similar ideas can be found in the *Panarium* of Epiphanius, XXX, 3 (ed. Holl, vol. I, p. 336): The Elkesaites declared that Adam was Christ. He came down into Adam, put on his body and appeared to Abraham, Isaac, and

Jacob. Concerning Abraham's grave on Golgotha see *ibid.*, XLVI, 5 (II, pp. 208f).

360 "Osiris, heavenly horn of the moon" is a cognomen of Attis. (*Elenchos*, V, 9, 8.)

361 John 1 : 3.

- 39 “In a way not unlike that in which God in the beginning created one world by meditation alone, so likewise he created one world, from which all things came into being by adaptation” * (*Theatr. chem.*, I, p. 417).
- “Also, as there is only one God and not many, so he willed at first in his mind to create from nothing one world, and then to bring it about that all things which he created should be contained in it, that God in all things might be one” * (*ibid.*, p. 415).
- 40 *Ibid.*, p. 418.*
- 41 Cf. the “mountain” in which all knowledge is found, but no distinctions and no opposites. (Abu’I-Qasim Muhammad, *Kitāb al-’ilm al-muktasab*, p. 24.) Further material in *Psychology and Alchemy*, par. 516 and n. 1.
- 42 See “Concerning Mandala Symbolism,” par. 645.
- 43 Cf. *Psychology and Alchemy*, par. 426 and n. 2, fig. 195.
- 44 Cf. my “Synchronicity: An Acausal Connecting Principle.”
- 45 Cf. his *New Frontiers of the Mind* and *The Reach of the Mind*. The relevant phenomena are discussed in “Synchronicity,” pars. 833ff.
- 46 Balsam occurs in Zosimos as a synonym for the *aqua permanens*. (Berthelot, *Alch. greccs*, III, xxv, 1.)
- 47 Cf. “Paracelsus as a Spiritual Phenomenon,” par. 171.
- 48 “For there is in man’s body a certain substance conformable to the ethereal, which preserves the other elemental parts in it and causes them to continue” * (“Phil. meditativa,” *Theatr. chem.*, I, p. 456).
- 49 “And we do not deny that our spagyric medicine is corporeal, but we say that it is made spiritual when the spagyric spirit clothes it” * (*ibid.*). A synonym for balsam is the wine that is “duplex,” i.e., both “philosophic” and

“common” (ibid., p. 464).

50 Ibid., p. 456.*

51 For instance in Reusner’s *Pandora. Cf. Psychology and Alchemy*, fig. 232.

52 See “Psychology of the Transference,” pars. 419ff. The incest symbolism is due to the intrusion of endogamous libido. The primitive “cross-cousin-marriage” was superseded by a pure exogamy which left the endogamous demands unsatisfied. It is these demands that come to the fore in incest symbolism.

53 This is already the case with the alchemist Democritus, who probably lived at least as early as the 1st cent. A.D. For him it is a marriage of the natures. (Texts in Berthelot *Alch. grecs*, II, i ff.) Significantly enough, the last and grandest example of an alchemical opus, Goethe’s *Faust*, ends with the apotheosis of the Virgin Mother, Mary-Sophia, queen and goddess. The epithet “dea” also occurs in Mechthild of Magdeburg.

54 This does not contradict the statement that symbols are the best possible formulation of an idea whose referent is not clearly known. Such an idea is always based on a tendency to represent its referent in its own way.

55 Another example is the series of mandalas in “A Study in the Process of Individuation.”

56 Further material in Heiler, *Das neue Mariendogma im Lichte der Geschichte*.

57 Cf. Emblema L in Maier’s *Scrutinum chymicum*, p. 148. Cf. also *Turba*, Sermo LIX.

58 *Scrut. chymicum*, p. 46, and *Mus. herm.*, pp. 351, 357 (Waite, I, pp. 285, 291).

59 “Merlini allegoria,” *Art. aurif.*, I, p. 393.

60 “Therefore the mind is well said to be composed when the spirit and the soul are joined by such a bond that the bodily appetites and the heart’s affections are restrained” * (“Phil, medit.,” *Theatr. chem.*, I, p. 451).

61 Ibid., pp. 451f.

62 Here Dorn cites the “verbum Dei”: “He that loveth his soul shall lose it, and he that hateth his soul preserveth it for ever” * (p. 453). Cf. Matthew 16 : 25, Luke 17 : 33, and John 12 : 25.

63 Cf. the parallel in Wei Po-yang: “Closed on all sides, its interior is made up of intercommunicating labyrinths. The protection is so complete as to turn back all that is devilish and undesirable. . . . Cessation of thought is desirable and worries are preposterous. The divine *ch’i* (air, spirit, ethereal essence) fills the quarters. . . . Whoever retains it will prosper and he who loses it, will perish.” (P. 238.)

64 The *distractio* is something that “some call voluntary death.” Cf. the death of the royal pair in *Ros. phil.*, discussed in “Psychology of the Transference,” pars. 467ff.

65 Cf. supra, par. 355.

66 Early references are given in *Psychology and Alchemy*, pars. 453f.

67 “It is impossible for a man of evil life to possess the treasure that is concealed from the sons of wisdom, and he is unfit to acquire it or to search it out, much less to find it” * (“Phil, medit.,” p. 457).

68 “I have thought it right to admonish the disciples to implore the divine aid, and [to remind them] of the need for the most careful diligence in preparing themselves for the reception of this grace” * (ibid.).

69 “I am the true medicine [says Wisdom], correcting and transmuting that which *is no longer* into that which it *was before* its corruption, and that which *is not* into that which it *ought to be.*” * (Ibid., p. 459).

70 The vinum philosophicum contains the *essentia caelestis*. (“Phil, medit.,” p. 464.)

71 P.457.

72 “But truth is the supreme virtue and an impregnable stronghold” * (p. 458).

73 P. 464.*

74 “Grana” can also mean grape-pips.

75 For details of this procedure see *infra*.

76 P. 465.

77 Cf. Rupescissa, *La Vertu et la propriété de la quinte essence*. The quintessence is the equivalent of heaven (p. 15). It is also called “esprit du vin” and “eau de vie.” It is the “ciel humain” (p. 17), “de la couleur du ciel” (p. 19).

78 Dorn is probably referring here to the magical procedure described in the second part of Artefius, “Clavis maioris sapientiae” (*Bibl. chem.*, I, pp. 503ff., and *Theatr. chem.*, IV, pp. 236ff.), whereby the planetary spirits who are needed in order to unite the spirit or soul with the body, and to transform the latter, are compelled to descend. Cf. the pictures of the coniunctio in the bath in the Ripley Scrowle and its variants, one of which is given in *Psychology and Alchemy*, fig. 257.

79 “Phil. medit.,” p. 466. “Sunt igitur stellae nobis inferiores individua quaevis a natura hoc in mundo inferiori producta coniunctione videlicet earum et caeli tanquam superiorum cum inferioribus elementis” (*Theatr. chem.*, 1602, 1, p. 466).

80 *Ibid.*, pp. 465f.

81 “The elixir of honey preserves and cleanses the human body from all imperfections, both within and without” (Penotus, *Theatr. chem.*, I, p. 730). The first chapter of Paracelsus’ *Lumen apothecariorum* (Huser, VII, pp. 222ff.; Sudhoff, II, 193ff.) is devoted to honey. In the “third elevation” the honey becomes a “deadly poison,” like “Tartarus mortalis.” *Von den Tartarischen Krankheiten*, cap. XIV (Huser, II, p. 239; Sudhoff, XI, pp. 88f.). It contains “Tartarum” (Huser, p. 223). It occurs in Zosimos as the *aqua permanens* (Berthelot, *Alch. grecs*, III, xxv, 1). Both here and in the *Turba* (Sermo XXXVII (p. 16) it forms, with vinegar, a pair of opposites.

82 “Chelidonia” occurs as a secret name in the version of the *Turba* given in *Art. aurif.*, I, pp. 1ff., which does not differ appreciably from Ruska’s text: “Some philosophers have named gold Chelidonia, Karnech, Geldum.” * Ruska explains “Geldum” as “Chelidonium maius L.” (p. 28). Dioscorides (*Materia medica*, II, cap. 176, p. 302) says that with this herb swallows cure blindness in their young. In the Herbal of Tabernaemontanus (I, p. 106) it is cited as an eye-salve (against night-blindness). In Ruland (*Lexicon*, p. 98) Chelidonia is a pseudonym for gold (presumably on account of its yellow flowers). In the maws of young swallows two small stones are found, the “lapides Chelidonii,” one of them black, the other red (*ibid.*, pp. 98–99). On account of its colour, the eye-salve (*Succus chelidoniae*) is used to extract the moisture (soul) of Mercurius. (Dorn, “Congeries Paracelsicae,” *Theatr. chem.*, I, p. 582). Sal Chelidoniae is mentioned as an “emmenagogue and solvent” (I, p. 759). Chelidonia is a name for the lapis (IV, p. 822) and a cure for insanity (V, p. 432). In Paracelsus there are four Chelidonias synonymous with “anthos” (*Paragranum*, Part II, “De philosophia”; Sudhoff, VIII, pp. 68–90). (Cf. “Cheyri” in “Paracelsus as a Spiritual Phenomenon,” par. 171 and n. 7.) Chelidonia is a preservative against thunderstorms (*De phil. occulta*, Huser, IX, p. 361, Sudhoff, XIV, p. 537).

83 “Ros” (dew) = *aqua permanens*. According to Tabernaemontanus, rosemary is an alexipharmic (p. 312).

84 Tabernaemontanus (II, pp. 940ff.) says that *Mercurialis testiculata* (Dog's mercury) was found, like moly, by Mercurius, has a divided sex and is an emmenagogue. According to Dioscorides, Mercurialis, inserted into the vagina, determines the sex of the child (*Mat. med.*, lib. IV, cap. 183, p. 559). "Mercurialis saeva: Water of Alum wherein Mercury is generated. It is . . . of a golden colour" (Ruland, *Lexicon*, p. 231).

85 Liliū = Mercurius and *quinta essentia sulphuris* (Ruland, p. 207). "The Lily of Alchemy and Medicine . . . this is the noblest thing of all the manifestations of the supreme Creator which man may meditate upon." * (Dorn, "Congeries Paracelsicae," p. 608.) *Anthera* (presumably stamen) *liliorum* is given in Paracelsus as an alexipharmic (*Scholia in poëmata Macri*, Huser, VII, p. 268, Sudhoff, III, p. 414). The *succus liliorum* is "mercurial" and "incombustible" (Grasseus, "Area arcani," *Theatr. chem.*, VI, p. 327). Coniunctio of the white and red lily (*ibid.*, p. 335).

86 Blood is a synonym for the red tincture (= aqua permanens), a preliminary stage of the lapis (Ruland, p. 286). *Sanguis hominis ruffi* = Sulphur = *Mercurius solis* (*ibid.*).

87 Penotus (*Theatr. chem.*, I, p. 749) says of tartar: "It performs wonderful things in the spagyric art, for by its mediation the light of day is turned into the prima materia." * *Saturnus calcinatus* was named by Ripley the "tartar from black grapes" (Orthelius, *Theatr. chem.*, VI, p. 471).

88 This probably refers to the treatise of Artefius (n. 78).

89 "Phil. medit.," pp. 470f.

90 "Corpus tandem in amborum iam unitorum unionem condescendere cogitur et obedire."

91 Perhaps this saying lies at the root of the word "spagyric," from *σπάειν*, 'to rend, tear, stretch out,' *ἀγείρειν*, 'to bring or collect together.'

92 "Quis haerebit adhuc nisi lapis in generatione spagirica?" That is to say, the centre of the earth and the stone correspond.

93 Pp. 466ff.

94 *Lumen apothecariorum* (Huser, VII, pp. 222ff.).

95 The essence.

96 Cf. "The Spirit Mercurius," par. 276.

97 "Harmonía chemica," *Theatr. chem.*, IV, p. 820.

98 Cf. "The Spirit Mercurius," par. 278.

99 Cf. *Psychology and Alchemy*, par. 265, also *Aion*, par. 206.

100 So, too, in Paracelsus, where the soul, Melusine, lives in the blood. Cf. "Paracelsus as a Spiritual Phenomenon," par. 180.

101 Cf. the passage from the *Fihrist-el-U'lum* of Muhammad ibn Ishak al-Nadim in Chwolsohn, *Die Ssabier und der Ssabismus*, II, pp. 19f., describing the maceration of a man's body in oil and borax. The head of the corpse was then used as an oracle. See also the report by Laurens van der Post in "Transformation Symbolism in the Mass," par. 370.

102 Cf. the description of the *caput mortuum* in Christianos: "... black and soulless and dead, and so to speak unbreathing." * (Berthelot, *Alch. greccs*, VI, xii, 1.) Phlegm has also a moral connotation: "Sow likewise thy wisdom in our hearts, expel from them the phlegm, the corrupt choler and boiling blood, and lead us in the ways of the blessed" * ("Allegoriae sap.," *Theatr. chem.*, V, p. 66). The residue, the "black earth," is the ash of which the

“Tractatus Micreris” says: “Despise not the ashes . . . for in them is the diadem, the ash of the things that endure” * (*Theatr. chem.*, V, p. 104).

103 There is in man a “marmoreus tartarus,” a “very hard stone” (Ruland, p. 220). Bowls of marble or serpentine are said to give protection against poison. (Hellwig, *Lexikon Medico-Chymicum*, p. 162.) “Know also that the spirit is enclosed in a house of marble; open therefore the passages that the dead spirit may come forth” * (“Alleg. sap.,” p. 66).

104 Dorn, “Phil, medit.,” pp. 457f. Obviously, therefore, the immortal part of man.

105 “Therefore, for the preparation of a good disposition of the body, we make use of the spagyric medicine” (ibid., p. 457).*

106 Lévy-Bruhl’s view has recently been disputed by ethnologists, not because this phenomenon does not occur among primitives, but because they have not understood it. Like so many other specialists, these critics prefer to know nothing of the psychology of the unconscious.

107 Cf. “Thereniabin,” manna, etc. Honeydew or “maydew” occurs in Paracelsus. Cf. “Paracelsus as a Spiritual Phenomenon,” par. 190 and n. 93.

108 Baechtold-Stäubli, *Handwörterbuch*, s.v. Schellkraut.

109 Ibid., pp. 86f.

110 “And the Spagyric makes of the four a harmonious whole, as the flower Cheyri shows” (*De vita longa*, Book III, cap. I, in Sudhoff, I, 3, p. 301).

111 Cf. *Mus. herm.*, p. 112 (Waite, I, p. 98).

112 Cf. “extraction of the cogitation” in “Liber Plat, quartorum,” *Theatr. chem.*, V, p. 144.

113 *Aion*, pars. 239ff.

114 *Pandora*, p. 253. Cf. *Psychology and Alchemy*, fig. 232.

115 “The Lapis-Christ Parallel.”

116 Ch. v.

117 Also called “ros Gideonis” with reference to Judges 6 : 36ff. This is an ancient idea, cf. Macrobius (*Saturnalia*, VII, 16): “There is in its [the moon’s] light something that flows down from it, which moistens bodies and soaks them with a kind of hidden dew.” * Dew wakens the dead and is the food of the holy (*Zohar*, 128b). Irenaeus speaks of the “dew of light” in Gnosticism (*Adv. haer.*, I, 30, 3, and III, 17, 3). In Rabanus Maurus it is “God’s grace” (Migne, *P.L.*, vol. 112, col. 1040). In Romanus it is Christ (Pitra, *Analecta sacra*, I, p. 237). Dew contains the “mellifluous nectar of heaven” (Steeb, *Coel. sephiroth.*, p. 139). Hermes Trismegistus meant dew when he said in the “Tabula Smaragdina”: “Its father is the sun, its mother the moon.” (*De alchimia*, p. 363). Dew is frequently mentioned in the *Turba* (e.g., in Sermo 58).

118 Theodore the Studite (Pitra, I, p. 337): “Thou hast made right faith to give forth an odour above ointment.” * “It imbued the whole world with the odour of knowledge” * (ibid., p. 342). The “Great Book of the Mandaeans” speaks of the “odour of almighty life” (Lidzbarski, *Ginza, der Schatz*, p. 110). Compare the sweet odour of Sapientia with the perfume of the mother goddess in and around the temple of Hierapolis (Lucian, “The Syrian Goddess,” *Works*, I, p. 261), and with the scent of the Tree of Life in the Book of Enoch (Charles, *Apocrypha and Pseudepigrapha*, II, p.

205). See also Nestle, “Der süsse Geruch als Erweis des Geistes,” p. 95, and Lohmeyer, “Vom göttlichen Wohlgeruch,” pp. 41ff.

119 Baechtold-Stäubli, *Handwörterbuch*, s.v. Rosmarin.

120 *Von hylealischen Chaos*, pp. 263ff.

121 *Ibid.*, p. 264.

122 P. 260.

123 “Isis and Osiris,” cap. 57, *Moralia*, V, p. 137.

124 Such was the significance of the Rubeus in the art of geomancy, much practised in Dorn’s day.

125 Concerning the rotation of the mandala see “Concerning Mandala Symbolism,” par. 693 and Fig. 38, also *Aion*, pars. 408ff.

126 A *σύμβολον* is a ‘throwing together.’

127 Cf. “Relations between the Ego and the Unconscious,” pars. 341ff.

128 Cf. *Lexicon*, p. 226.

129 Cf. *Aion*, pars. 70ff.

130 In Chinese alchemy this is *chên-yên*, the true man (*τέλειος ἄνθρωπος*). “True man is the extreme of excellence. He is and he is not. He resembles a vast pool of water, suddenly sinking and suddenly floating. . . . When first gathered, it may be classified as white. Treat it and it turns red. . . . The white lives inside like a virgin. The squareness, the roundness, the diameter and the dimensions mix and restrain one another. Having been in existence before the beginning of the heavens and the earth: lordly, lordly, high and revered.” (Wei Po-yang, pp. 237f.)

131 *Theatr. chem.*, IV, pp. 948ff.

132 Here a synonym for Mercurius. Cf. Ruland, *Lexicon*, p. 24.

133 In the strictest sense of the word, a “symbolum” is a coin broken into two pieces, so that the halves “tally.” Cf. Aegidius de Vadis, “Dialogus” (*Theatr. chem.*, II, p. 107): “... concord and discord, which we take to mean symbolization.” * The symbolum here means the capacity of elements to combine; it is the “retinaculum elementorum,” the rope of the elements. (Lully, “Theorica et practica,” *Theatr. chem.*, IV, p. 133.)

134 Instead of *medioxime*.

135 Presumably derived from *μονόκαυλος* (bot.), ‘one-stemmed’, but more probably a misprint for *monocolus* (*μονόκωλος*), ‘one-footed’, or for the late Latin *monocaleus*, ‘having only one testicle, semi-castrated.’ (Cf. Du Cange, *Glossarium*, s.h.v.) *Monocaleus* might be a reference to the androgynous nature of Mercurius. The conjecture *monocerus* (*μονόκερως*) is possible, since the unicorn signified Mercurius and was well known in 16th- and especially 17th-cent. alchemy. (Cf. *Psychology and Alchemy*, pars. 518, 547.) According to Horapollo the scarab, which in the Leyden Papyrus is identical with Osiris, is one-horned (*ibid.*, par. 530).

136 The text is not in a good state. I have therefore placed a full point after “praeponderat” and begin a new sentence with “dum in sua natura.”

137 Obviously its arcane nature.

138 By which something like “cohesion” is meant.

139 Particularly *Aion*.

- 140 Cf. “A Study in the Process of Individuation” and “Concerning Mandala Symbolism.”
- 141 Berthelot, *Alch. grecs*, II, i, 3.
- 142 Khunrath, *Hyl. Chaos*, p. 195. Cf. supra, pars. 472ff.
- 143 For instance in Mylius, *Phil. ref.*, p. 244, and Ros. *phil., Art. aurif.*, II, p. 381: “And I illumine all luminaries with my light.”
- 144 Cf. *The Franciscan Vision*, pp. 14f. For the “one day” in Epiphanius, see supra, pars. 472ff.
- 145 Cf. Ephesians 3 : 18: “... so that . . . you may be able to comprehend . . . what is the breadth and length and height and depth ...”
- 146 The alchemical sign for the four elements is a cross.
- 147 An expression occurring only once.
- 148 Supra, pars. 634ff.
- 149 Eleazar, *Uraltes Chymisches Werck*.
- 150 The Latin MS. “Figurarum aegyptiorum secretarum” (author’s possession) has on fol. 19: “Duo tantum sunt coadjutores qui hic perficiuntur.” Pl. 4 is taken not from the Paris Codex but from the above MS., fol. 20. The pictures are similar in both. [Cf. *Psychology and Alchemy*, par. 391, n. 101.]
- 151 The corresponding picture in my MS. (fol. 27) bears the inscription: “Sic fit, ut quod latuit, pateat.”
- 152 Just as Albertus supposes that gold is silver “inside” and vice versa. Here I would recall to the reader the dream of the black and white magicians, discussed supra, pars. 79f.
- 153 Pernety (*Les Fables égyptiennes et grecques*, I, p. 179) says of the putrefaction: “It uncovers for us the interior of the mixture. . . . It makes . . . the hidden manifest. It is the death of accidentals, the first step to generation.”
- 154 The king’s foot is the right one. This has always been regarded as masculine and luck-bringing. That is why in some countries one starts to march with the right foot. Besides this, the foot in general has a phallic significance. See Aigremont, *Fussund Schuhsymbolik und -Erotik*.
- 155 He has himself become the “black earth” referred to earlier: “Prenez cette terre noire.”
- 156 Maier, *Symbola*, pp. 344f.
- 157 Berthelot, *Alch. grecs*, II, iv, 42.
- 158 Corresponding to the ὕδροποιός ἀρχή in Plutarch (“Isis and Osiris,” c. 33, *Moralia*, V, pp. 80f.)
- 159 “... the seeds of fruits are Osiris” (*De errore prof, relig.*, 2, 6).
- 160 Osiris is also likened to the Logos, the corpse, and the grave. (Hippolytus, *Elenchos*, V, 8, 10; V, 8, 22; V, 9, 5 and 8.)
- 161 Hippolytus, V, 8, 10. Although there are no one-footed heroes in Greek mythology, names like Oedipus and Melampus and ideas such as that of the one tooth and one eye of the Phorcyds suggest something very similar.
- 162 Plutarch, “Isis and Osiris,” c. 22, pp. 54f.
- 163 Doelger, *Die Sonne der Gerechtigkeit und der Schwarze*, p. 64.
- 164 Cf. von Franz, “Die Passio Perpetuae,” in *Aion* (Swiss edn.), pp. 467f.
- 165 *Theatr. chem.*, III, p. 854. In “Super arborem Aristotelis” (*Theatr. chem.*, II, p. 526) the *nigredo* or *caput corvi* is termed the “caput nigrum aethiopsis.”

166 Cf. Reitzenstein, *Die hellenistischen Mysterienreligionen*, p. 80.

167 Jacobsohn, *Die dogmatische Stellung des Königs in der Theologie der alten Aegypter*, p. 23: “Hail to thee [Osiris] . . . who risest in the heavens as Ra, renewing thy form as the moon.”

168 Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, pp. 180, 303, 326.

169 The bird of Hermes is usually the goose.

170 *Mus. herm.*, pp. 581f. (Waite, II, p. 108).*

171 *Ros. phil., Art. aurif.*, II, p. 258.*

172 *Ibid.*, p. 259.

173 “it [the water] is also called a round cloud, death, blackness, darkness, shadow.” * *Mus. herm.*, p. 327 (Waite, I, p. 263). Rupescissa speaks of a “dark blue cloud” (*La Vertu et la propriété de la quinte essence*, p. 29). It is mentioned in the *Turba* (ed. Ruska, pp. 120f.) together with the shadow. “That work comes about as suddenly as the clouds from heaven” (Hoghelande, *Theatr. chem.*, I, p. 204).* In Mylius (*Phil. ref.*, pp. 108 and 304) the “water of the cloud” is Mercurius, also in Abu’l-Qasim (p. 420). “Black clouds” are the *nigredo* (Mylius, p. 234, and “Tractatus aureus,” *Ars chemica*, p. 15). References to the “cloud rising from the sea,” “the new waters,” “the life-potion that rouses the sleepers” occur in the very ancient treatise of Komarios (Berthelot, *Alch. grecs*, IV, xx, 8), and in Rabanus Maurus the cloud represents the “comfort of the Holy Ghost and Christ’s ascension” (Migne, *P.L.*, vol. 112, col. 1007). This would correspond to the remark in Komarios that “the clouds rising from the sea carry the blessed waters” (Berthelot, IV, xx, 12). Augustine likens the apostles to a cloud, which symbolizes the concealment of the Creator under the flesh (*Expositions of the Book of Psalms*, Ps. 88 (89) : 7, IV, p. 245). Similarly, Christ was prefigured by the pillar of cloud that guided the Jews through the wilderness (Augustine, Ps. 98 (99): 10, p. 456, and Epiphanius, *Ancoratus*). “From thee the clouds flow,” says Hildegard of Bingen of the Holy Ghost (Remy de Gourmont, *Le Latin mystique*, p. 157). The alchemical concept of the cloud may have been influenced by the liturgical “Drop down dew, ye heavens, from above, and let the clouds rain down the Just One: let the earth open and bud forth a Saviour” (*Roman Missal*, Introit for 4th Sunday of Advent. Cf. Isaiah 45 : 8). One thinks also of the Eleusinian *ἕε κύε*, “Let it rain, make fruitful!” (Cf. Kerényi, “Kore,” pp. 205f.) In Mandaicism the cloud signifies the feminine. One of the texts says: “Yonder, yonder I stand, I and the cloud that arose with me” (Lidzbarski, *Ginza*, p. 399).

174 In a lecture at the Eranos Conference of 1945, which was not printed in the *Eranos Jahrbuch*, Rahner discussed the allegory of the devil in patristic literature.

175 “The Phenomenology of the Spirit in Fairytales,” sects. III and IV.

176 Based on Psalm 102 : 6: “I am like an owl of the desert.” Cf. Eucherius, *Liber formularum spiritualis intelligentiae* (Migne, *P.L.*, vol. 50, col. 750), and Rabanus Maurus (Migne, *P.L.*, vol. 112, col. 1006). For the crucifixion of the raven see “Spirit in Fairytales,” par. 422. Referring to the story in Aelian, Caussin says: “The raven, overcome with age, offers itself for food to its young; but our phoenix, Christ the Lord . . . offered himself to us as heavenly nourishment” * (*Polyhistor symbolicus*, pp. 308f.). The raven is thus an allegory of Christ, or of the Host.

177 *Oxford English Dictionary*, s.v. colcothar.

178 *Mus. herm.*, p. 117 (Waite, I, p. 102).

179 Ibid., pp. 91 and 117 (Waite, I, pp. 82, 102).

180 “Liber de arte chymica” (*Art. aurif.*, I, p. 610) mentions in this connection a trinitarian image of three suns, black, white, and red. The commentary to “Tractatus Aureus” (*Theatr. chem.*, IV, p. 703) remarks that there are three ravens on the mountain of the Philosophers: “The black which is the head of the art, the white which is the middle, and the red which brings all things to an end.” * “Consil. coniugii” (*Ars chemica*, p. 167) even mentions a quaternity of ravens. In the Book of El-Habib (Berthelot, *La Chimie au moyen âge*, III, p. 100), Mary says that the red male (i.e., the Sulphur) should be recognized as the “head of the world.”

181 Mylius (*Phil. ref.*, p. 19) comments that if Lucifer had had within him the *anima media natura* or God, he would not have been cast into hell.

182 “When you see your matter going black, rejoice: for that is the beginning of the work.” * (*Ros. phil.*, *Art. aurif.*, II, p. 258) “The raven’s head is the beginning of the work” * (Hoghelande, *Theatr. chem.*, I, p. 166).

183 “It is called antimony, pitch, coal, the raven, the raven’s head, lead, burnt copper, burnt ivory” * (*Theatr. chem.*, I, p. 166).

184 *Ros. phil.*, p. 265.

185 “And thus you have two elements, first water by itself, then earth from water” * (ibid.).

186 Steinerus, *Dissertatio chymico-medica*, p. A 2v.

187 Rosencreutz, *Chymical Wedding*, p. 148.

188 Ibid., p. 123.

189 P. 159.

190 Cf. “Liber Plat, quart.,” *Theatr. chem.*, V, p. 186. Concerning the Sabaeen magical rite of decapitation see “The Visions of Zosimos,” pars. 93f.

191 * *Tract, super Psalmos*, CXLVI, 12 (Migne, *P.L.*, vol. 9, col. 874).

192 *Phil. ref.*, p. 190. The ravens are the black souls of the king and queen. Cf. the story of Aristeas, who saw his soul fly out of his mouth in the shape of a raven. (Pliny, *Nat. hist.*, lib. VII, cap. LII.) The raven is the black soul-symbol, the dove is the bright one. There is a battle between raven and dove in *Chymical Wedding*. p. 24.

193 “The vessel necessary in this work must be round in shape, that the artifex may be the transformer of this firmament and of the brainpan” * (“Lib. Plat. quart.,” pp. 150f.).

194 “The upper place is the brain, and that is the seat of the understanding” * (ibid., p. 187).

195 Ibid., p. 186.*

196 “The vessel is made round after the fashion of the upper and lower [worlds?]. For it is eminently suited to that [thing] whose generation is sought in it, for a thing is bound by its like” * (p. 150).

197 p. 186.*

198 “Seest thou that gleaming and impregnable stronghold?” * (“Spec, phil.,” *Theatr. chem.*, I, p. 278). “Truth is . . . an impregnable stronghold. In this citadel is contained that true treasure which is taken hence after death.” * (“Phil, medit.,” p. 458). The “castle” is an allegory of Mary (Godefridus, *Homiliae Dominicales*, Migne, *P.L.*, vol. 174, col. 32). Dorn distinguishes four strongholds, placed as it were on top of one another. The lowest is of crystal and shelters “philosophical love”; the second is of silver and contains Sophia; the third is of diamond (*adamantina*) and only a

few get there, “who are taken up by the will of God”; the fourth is golden but “not perceptible to the senses,” “a place of eternal felicity, free from care and filled with every manner of eternal joy” (“Spec, phil.,” p. 279). Cf. the four stages of transformation in the “Liber quartorum,” discussed in *Psychology and Alchemy*, pars. 366ff.

199 Honorius of Autun says in *Liber duodecim quaest.* (Migne, *P.L.*, vol. 172, col. 1179): “The creature as conceived in the divine mind is simple, unchanging, and eternal, but in itself it is multiple, changing, transitory.”*

200 Cf. Reitzenstein, *Poimandres*, p. 16, and the description of the Microcosmus in the *Sacramentarium* of Honorius (Migne, *P.L.*, vol. 172, col. 773): his head is round as heaven and his eyes are the sun and moon.

201 *Theatr. chem.*, V, p. 189.

202 Both synonyms for the *aqua permanens*.

203 *Art. aurif.*, II, p. 264.

204 *Theatr. chem.*, IV, pp. 569f.

205 The “Introitus apertus” says: “With the death of the lion the raven is bom,” * i.e., when desire dies, the blackness of death sets in. “O sad spectacle and image of eternal death, but glad news for the Artificer! . . . For thou knowest that the spirit enclosed within is quickened, which at the time appointed by the Almighty will restore life to these dead bodies.” * (*Mus. herm.*, p. 691.)

206 Usually, in better accord with ancient tradition, he is the moist principle.

207 *Les Fables égyptiennes et grecques*, I, p. 179.

208 Cf. Kerényi, *The Gods of the Greeks*, p. 19.

209 Synonymous with Surya, the sun. Cf. *Hymns of the Atharva-Veda*, XIII, 1, 32 (trans. by Bloomfield, p. 211).

210 Like the “high-climbing” goat, the he-goat in general has a sexual significance, as has the foot (see n. 154). In view of the coniunctio situation this aspect is not without importance. (See par. 688, concerning Mercurialis.)

211 *Hymns of the Atharva-Veda*, p. 207. *Ēkapāda* is also a one-foot verse metre (Gk. *μονοποδία* and *μονοποδιαίος*). *Agā ēkapād* has the subsidiary meanings of ‘herd-driver’, ‘shepherd’, and ‘unborn,’ ‘eternal’. Cf. MacDonell, *Sanskrit-English Dictionary*, s.v., and *Sacred Books of the East*, XLII, p. 664.

212 Floruit 1731 to 1805. The *Oupnek’hat* was published between 1802 and 1804. First German trans. in 1808.

213 It had a great influence on Schopenhauer. In the *Oupnek’hat* there is a section entitled “Oupnek’hat Naraiin,” which is an excerpt from the *Atharva-veda*. But there is nothing in it about the *ēkapād*.

214 Grill, *Hundert Lieder des Atharva-Veda*.

215 See *Aion*, ch. 3.

216 The raven is a symbol of the devil in Paulinus of Aquileia, *Liber Exhortationis*, cap. 50 (Migne, *P.L.*, vol. 99, col. 253) and Wolbero, *Commentaria super Cant. Cant.* (ibid., vol. 195, col. 1159).

217 “It is well known that the soul, before it was mingled with its body, was dead, and its body likewise” * (“Tractatus Micreris,” *Theatr. chem.*, V, p. 106).

218 *Essay on the Development of Christian Doctrine*.

219 Declaration of the Virgin’s right to the title of Theotokos (“God-bearer”) at the Council of Ephesus in 431, and definition of the Immaculate Conception by Pope Pius IX in 1854.

220 Cf. I Corinthians 13 : 12: “Now I know in part, but then I shall know even as I am known.”

221 Cf. the *ckên-yên* of Wei Po-yang.

222 “Omne quo indiget” is frequently said of the lapis.

223 Cf. “The Transcendent Function,” pars. 166ff.

224 Cf. “Concerning Mandala Symbolism,” fig. 28 and commentary, par. 682, and the blue centre of Indian mandalas.

225 Red (= sun) and white (= moon) are the alchemical colours.

226 Cf. “A Study in the Process of Individuation,” Picture 9.

227 I refer here to the relation between the archetype and the phenomenon of synchronicity.

228 In the “Liber Platonis quattorum” this is the term for the arcane substance.

229 Similarly, Aquinas conceives the prima materia as “ens in potentia” (*Summa*, Part I, p. 66, Art. 1). Cf. von Franz, *Aurora Consurgens*, Commentary, p. 174, n. 88.

230 Philo’s writings were available in the Latin edition of Petronillus (Lyons, 1561) and may have been known to Dorn, who wrote ca. 1590.

231 The antiquity of the stone symbolism is shown by the fact that it occurs not only among primitives living today but in the documents of ancient cultures as well, as for instance in the Hurrian texts of Boghazköy, where the son of the father-god Kumarbi is the stone Ullikummi, a “terrible” diorite stone that “grew in the water.” This stone parallels the Greek myth of the stone which Kronos swallowed and spat out again when Zeus compelled him to yield up the children he had devoured. Zeus then set it up as a cult-object in Pytho. Ullikummi is a Titanic being and, interestingly enough, an implacable enemy of the gods. (Cf. Güterbock, “Kumarbi,” *Istanbul Schriften*, No. 16; Gurney, *The Hittites*, pp. 190ff.)

232 Genesis 1 : 2: “The earth was without form and void, and the Spirit of God brooded over the deep.” (Author’s trans.)

233 Berthelot, *Alch. grecs*, III, vi, 5.

234 I Peter 2 : 5: “... like living stones be yourselves built into a spiritual edifice” (RSV, mod.). Cf. Ephesians 2 : 20.

235 *Ros. phil.*, *Art. aurif.*, II, p. 206.

236 Romans 7 : 24.

237 “And when his friends heard of it, they went out to lay hold on him: for they said, He is beside himself.”

238 Cf. “On the Nature of the Psyche,” par. 368.

* Other editions of the *Artis auriferae* include one in 1572 (from which the “Visio Arislei” is sometimes quoted in this volume) and one in 1610 (3 vols.; from which “Rosinus ad Euthiciam” [I, pp. 158–78] is quoted in this volume).

* For details of the Collected Works of C. G. Jung, see list at end of this volume.

EDITORIAL NOTE

There are different ways of looking at the achievements of outstanding personalities. Each can be studied in the light of his individual development, of the historical influences that played upon him, or of the more intangible collective influences expressed by the word *Zeitgeist*. Jung's attention was directed mainly to the great cultural movements—alchemy in particular—which compensated the *Zeitgeist* or arose from it, and to the creative spirit that introduced pioneering interpretations into realms as diverse as those of medicine, psychoanalysis, Oriental studies, the visual arts, and literature. The essays on Paracelsus, Freud, the sinologist Richard Wilhelm, Picasso, and Joyce's *Ulysses* have been brought together in illustration of this central theme; two others consider literary products independently of personality structure and the psychology of the individual artist. The source of scientific and artistic creativity in archetypal structures, and particularly in the dynamics of the "spirit archetype," forms an essential counterpoint to the theme underlying this collection of essays.

*

Grateful acknowledgment is made to those who helped in various ways to document and annotate the contents of this volume, particularly the essay on *Ulysses*: Leonard Albert, Daniel Brody, Ed. Bucher, Joseph Campbell, Stanley Dell, Richard Ellmann, Carola Giedion-Welcker, Stuart Gilbert, Jolande Jacobi, Aniela Jaffé, and Lilly Jung. For permission to quote from Joyce's *Ulysses* the publishers acknowledge to Random House, Inc., New York, and The Bodley Head Ltd., London.

INDEX

I

PARACELSUS

PARACELSUS THE PHYSICIAN

PARACELSUS¹

- [1] That remarkable man, Philippus Aureolus Bombast von Hohenheim, known as Theophrastus Paracelsus,² was born in this house on November 10, 1493. His medieval mind and questing spirit would not take it amiss if, in respectful remembrance of the customs of his day, we first glance at the position of the sun at the time of his birth. It stood in the sign of Scorpio, a sign that, according to ancient tradition, was favourable to physicians, the ministers of poisons and of healing. The ruler of Scorpio is the proud and bellicose Mars, who endows the strong with warlike courage and the weak with a quarrelsome and irascible disposition. The course of Paracelsus's life certainly did not belie his nativity.
- [2] Turning now from the heavens to the earth on which he was born, we see his parents' house embedded in a deep, lonely valley, darkly overhung by woods, and surrounded by the sombre towering mountains that shut in the moorlike slopes of the hills and declivities round about melancholy Einsiedeln. The great peaks of the Alps rise up menacingly close, the might of the earth visibly dwarfs the will of man; threateningly alive, it holds him fast in its hollows and forces its will upon him. Here, where nature is mightier than man, none escapes her influence; the chill of water, the starkness of rock, the gnarled, jutting roots of trees and precipitous cliffs—all this generates in the soul of anyone born there something that can never be extirpated, lending him that characteristically Swiss obstinacy, doggedness, stolidity, and innate pride which have been interpreted in various ways—favourably as self-reliance, unfavourably as dour pigheadedness. “The Swiss are characterized by a noble spirit of liberty, but also by a certain coldness which is less agreeable,” a Frenchman once wrote.
- [3] Father Sun and Mother Earth seem to have been more truly the begetters of his character than were Paracelsus's own begetters by blood. For, at any rate on his father's side, Paracelsus was not a Swiss but a Swabian, a son of Wilhelm Bombast, the illegitimate offspring of Georg Bombast of Hohenheim, Grand Master of the Order of the Knights of St. John. But, born under the spell of the Alps, in the lap of a more potent earth that, regardless of his blood, had made him her own, Paracelsus came into the world by character a Swiss, in accordance with the unknown topographical law that rules a man's disposition.
- [4] His mother came from Einsiedeln, and nothing is known of her influence. His father, on the other hand, was something of a problem. He had wandered into the country as a doctor and had settled down in that out-of-the-way spot along the

pilgrims' route. What right had he, born illegitimate, to bear his father's noble name? One surmises the tragedy in the soul of the illegitimate child: a grim, lonely man shorn of his birthright, nursing resentment against his homeland in the seclusion of his wooded valley, and yet, with unconfessed longing, receiving news from pilgrims of the world outside to which he will never return. Aristocratic living and the pleasures of cosmopolitanism were in his blood, and remained buried there. Nothing exerts a stronger psychic effect upon the human environment, and especially upon children, than the life which the parents have not lived. So we may expect this father to have exerted the most powerful influence on the young Paracelsus, who will have reacted in just the opposite way.

[5] A great love—indeed, his only love—bound him to his father. This was the only man he remembered with love. A loyal son like this will make amends for his father's guilt. All the father's resignation will turn into consuming ambition in the son. The father's resentment and inevitable feelings of inferiority will make the son an avenger of his father's wrongs. He will wield his sword against all authority, and will do battle with everything that lays claim to the *potestas patris*, as if it were his own father's adversary. What the father lost or had to relinquish—success, fame, a free-roving life in the great world—he will have to win back again. And, following a tragic law, he must also fall out with his friends, as the predestined consequence of the fateful bond with his only friend, his father—for psychic endogamy is attended by heavy punishments.

[6] As is not uncommon, nature equipped him very badly for the role of avenger. Instead of an heroic figure fit for a rebel, she gave him a stature of a mere five feet, an unhealthy appearance, an upper lip that was too short and did not quite cover his teeth (often the distinguishing mark of nervous people), and, so it seems, a pelvis that struck everybody by its femininity when, in the nineteenth century, his bones were exhumed in Salzburg.³ There is even a legend that he was a eunuch, though to my knowledge there is no further evidence of this. At all events, love seems never to have woven her roses into his earthly life, and he had no need of their thorns, since his character was prickly enough as it was.

[7] Hardly had he reached an age to bear arms than the little man buckled on a sword much too big for him, from which he seldom let himself be parted, the less so because, in its ball-shaped pommel, he kept his laudanum pills, which were his true arcanum. Thus accoutred, a figure not entirely lacking in comedy, he set forth into the wide world on his amazing and hazardous journeys which took him to Germany, France, Italy, the Netherlands, Denmark, Sweden, and Russia. An eccentric thaumaturge, almost a second Apollonius of Tyana, he is supposed, according to legend, to have travelled to Africa and Asia, where he discovered the greatest secrets. He never undertook any regular studies, as submission to authority was taboo to him.

He was a self-made man, who devised for himself the apt motto *Alterius non sit, qui suus esse potest*,⁴ a right and proper Swiss sentiment. All that befell Paracelsus on his endless journeys must remain forever in the realm of conjecture, but probably it was a constant repetition of what happened to him in Basel. In 1525, already famed as a physician, he was summoned to Basel by the town council, the latter evidently acting in one of those rare fits of clear-headedness which now and then occur in the course of history, as the appointment of the youthful Nietzsche also shows. The appointment of Paracelsus had a somewhat distressing background, as Europe at that time was suffering under an unexampled epidemic of syphilis which had broken out after the Neapolitan campaign. Paracelsus occupied the post of a town physician, but he comported himself with a lack of dignity not at all to the taste of the university or of the worshipful public. He scandalized the former by giving his lectures in the language of stable-boys and scullions, that is, in German; the latter he outraged by appearing in the street, not in his robe of office, but in a labourer's jerkin. Among his colleagues he was the best-hated man in Basel, and not a hair was left unscathed in his medical treatises. He was known as the "mad bull," the "wild ass of Einsiedeln." He gave it all back, and more, in studiedly obscene invective, a far from edifying spectacle.

[8] In Basel, fate dealt him a blow that struck deep into his life: he lost his friend and favourite pupil, the humanist Johannes Oporinus, who meanly betrayed him and supplied his enemies with the most powerful ammunition. Afterwards, Oporinus himself regretted his disloyalty, but it was too late; the damage could never be mended. Nothing, however, could dampen the arrogant and obstreperous behaviour of Paracelsus; on the contrary, the betrayal only increased it. He soon took to travelling again, mostly poverty-stricken and often reduced to beggary.

When he was thirty-eight, a characteristic change showed itself in his writings: philosophical treatises began to appear alongside his medical ones. "Philosophical" is hardly the right word for this spiritual phenomenon—one would do better to call it "Gnostic." This remarkable psychic change is one that usually occurs after the midpoint of life has been crossed, and it might be described as a reversal of the psychic current. Only rarely does this subtle change of direction appear clearly on the surface; in most people it takes place, like all the important things in life, beneath the threshold of consciousness. Among those with powerful minds, it manifests itself as a transformation of the intellect into a kind of speculative or intuitive spirituality, as for instance in the case of Newton, Swedenborg, and Nietzsche. With Paracelsus, the tension between the opposites was not so marked, though it was noticeable enough.

[9] This brings us, after having touched on the externals and the vicissitudes of his personal life, to Paracelsus the spiritual man, and we now enter a world of ideas that must seem extraordinarily dark and confusing to the man of the present, unless he has

some special knowledge of the late-medieval mentality. Above all, Paracelsus—despite his high estimation of Luther—died a good Catholic, in strange contrast to his pagan philosophy. One can hardly suppose that Catholicism was simply his style of life. For him it was probably such a manifestly and completely incomprehensible thing that he never even reflected upon it, otherwise he would certainly have got into difficulties with the Church and with his own feelings. Paracelsus was evidently one of those people who keep their intellect and their feelings in different compartments, so that they can happily go on thinking with the intellect and not run the risk of colliding with what their feelings believe. It is indeed a great relief when the one hand does not know what the other is doing, and it would be idle curiosity to want to know what would happen if the two ever did collide. In those days, if all went well, they did not collide—this is the distinctive feature of that peculiar age, and it is quite as puzzling as the mentality, say, of Pope Alexander VI and of the whole higher clergy of the Cinquecento. Just as, in art, a merry paganism emerged from under the skirts of the Church, so, behind the curtain of scholastic disputation, a paganism of the spirit flourished in a rebirth of Neoplatonism and natural philosophy. Among the leaders of this movement it was particularly the Neoplatonism of the humanist Marsilio Ficino which influenced Paracelsus, as it did so many other aspiring “modern” minds in those days. Nothing is more characteristic of the explosive, revolutionary, futuristic spirit of the times, which left Protestantism far behind and anticipated the nineteenth century, than the motto of Agrippa von Nettesheim’s book *De incertitudine et vanitate scientiarum* (1527):

Nullis his parcat Agrippa,
contemnit, scit, nescit, flet, ridet,
irascitur, insectatur, carpit omnia,
ipse philosophus, daemon, heros, deus et omnia.⁵

[10] A new era had dawned, the overthrow of the authority of the Church was under way, and with it vanished the metaphysical certainty of the Gothic man. But whereas in Latin countries antiquity broke through in every conceivable form, the barbarous Germanic countries, instead of reverting to classical times, succumbed to the primitive experience of the spirit in all its immediacy, in different forms and at different levels, embodied by great and marvellous thinkers and poets like Meister Eckhart, Agrippa, Paracelsus, Angelus Silesius, and Jacob Boehme. All of them show their primitive but forceful originality by an impetuous language that has broken away from tradition and authority. Apart from Boehme, probably the worst rebel in this respect was Paracelsus. His philosophical terminology is so individual and so arbitrary that it surpasses by far the “power words” of the Gnostics in eccentricity and turgidity of style.

[11] The highest cosmogonic principle, corresponding to the Gnostic demiurge, is the Yliaster or Hylaster, a hybrid compound of *hyle* (matter) and *astrum* (star). This concept might be translated as “cosmic matter.” It is something like the “One” of Pythagoras and Empedocles, or the Heimarmene of the Stoics—a primitive conception of primary matter or energy. The Graeco-Latin coinage is no more than a fashionable stylistic flourish, a cultural veneer for a very ancient idea that had also fascinated the pre-Socratics, though there is no reason to suppose that Paracelsus inherited it from them. These archetypal images belong to humanity at large and can crop up autochthonously in anybody’s head at any time and place, only needing favourable circumstances for their reappearance. The suitable moment for this is always when a particular view of the world is collapsing, sweeping away all the formulas that purported to offer final answers to the great problems of life. It is, as a matter of fact, quite in accord with psychological law that, when all the uprooted gods have come home to roost in man, he should cry out, “Ipse philosophus, daemon, heros, deus et omnia,” and that, when a religion glorifying the spirit disappears, there should rise up in its stead a primordial image of creative matter.

[12] In strictest contrast to the Christian view, the supreme Paracelsan principle is thoroughly materialistic. The spiritual principle takes second place, this being the *anima mundi* that proceeds from matter, the “Ideos” or “Ides,” the “Mysterium magnum” or “Limbus major, a spiritual being, an invisible and intangible thing.” Everything is contained in it in the form of Plato’s “eidola,” the archetypes, a germinal idea that may have been implanted in Paracelsus by Marsilio Ficino. The “Limbus” is a circle. The animate world is the larger circle, man is the “Limbus minor,” the smaller circle. He is the microcosm. Consequently, everything without is within, everything above is below. Between all things in the larger and smaller circles reigns “correspondence” (*correspondentia*), a notion that culminates in Swedenborg’s *homo maximus* as a gigantic anthropomorphization of the universe. In the more primitive conception of Paracelsus the anthropomorphization is lacking. For him man and world alike are aggregates of animate matter, and this in turn is a notion that has an affinity with the scientific conceptions of the late nineteenth century, except that Paracelsus did not think mechanistically, in terms of inert, chemical matter, but in a primitive animistic way. For him nature swarmed with witches, incubi, succubi, devils, sylphs, undines, etc. The animation he experienced psychically was simultaneously the animation of nature. The death of all things psychic that took place in scientific materialism was still a long way off, but he prepared the ground for it. He was still an animist, in keeping with his primitive cast of mind, but already a materialist. Matter, as something infinitely distributed throughout space, is the absolute opposite of that concentration of the organic which is psyche. The world of sylphs and undines was soon to come to an end, and would be resurrected only in the

psychological era, when one would wonder how such ancient truths could ever have been forgotten. But, of course, it is much simpler to suppose that what we do not understand does not exist.

[13] The world of Paracelsus, macrocosmically and microcosmically, consisted of animate particles, or *entia*. Diseases, too, were *entia*, and in the same way there was an *ens astrorum, veneni, naturale, spirituale, or ideale*. The great epidemic of plague raging at that time, he explained in a letter to the Emperor, was caused by succubi begotten in whore-houses. An *ens* was another “spiritual being,” hence he said in his book *Paragranum*: “Diseases are not bodies, wherefore spirit must be used against spirit.” By this he meant that, according to the doctrine of correspondence, for every *ens morbi* there existed a natural “arcanum” which could be used as a specific against the corresponding disease. For this reason he did not describe diseases clinically or anatomically, but in terms of their specifics; for instance, there were “tartaric” diseases, which could be cured by their specific *arcanum*, in this case tartar. Therefore he held in high esteem the doctrine of signatures, which seems to have been one of the main principles of folk-medicine in those days, as practised by midwives, army surgeons, witches, quacks, and hangmen. According to this doctrine, a plant, for instance, with leaves shaped like a hand is good for diseases of the hand, and so forth.

[14] Disease for Paracelsus was “a natural growth, a spiritual, living thing, a seed.” We may safely say that for him a disease was a proper and necessary constituent of life that lived together with man, and not a hated “alien body” as it is for us. It was kith and kin to the arcana which were present in nature and which, as nature’s constituents, were as necessary to her as diseases were to man. Here the most modern doctor would shake Paracelsus by the hand and say: “I don’t think it’s quite like that, but it’s not so far off.” The whole world, said Paracelsus, was an apothecary’s shop, and God the apothecary in chief.

[15] Paracelsus had a mind typical of a crucial time of transition. His searching and wrestling intellect had broken free from a spiritual view of the world to which his feelings still clung. *Extra ecclesiam nulla salus*—this saying applies in the highest degree to every man whose spiritual transformation carries him beyond the magic circle of traditional holy images which, as ultimate truths, shut off the horizon: he loses all his comforting prejudices, his whole world falls apart, and he knows as yet nothing about a different order of things. He has become impoverished, as unknowing as a small child, still entirely ignorant of the new world, and able to recall only with difficulty the age-old experiences of mankind that speak to him from his blood. All authority has dropped away, and he must build a new world out of his own experience.

[16] On his long journeys Paracelsus gathered a rich harvest of experience, not scorning even the grimmest sources, for he was a pragmatist and empiricist without parallel. All this primary material he accepted without prejudice, at the same time drawing upon the primitive darkness of his own psyche for the philosophical ideas fundamental to his work. Old pagan beliefs, living on in the blackest superstitions of the populace, were fished up. Christian spirituality reverted to primitive animism, and out of this Paracelsus, with his scholastic training, concocted a philosophy that had no Christian prototype, but resembled far more the thinking of the most execrated enemies of the Church—the Gnostics. Like every ruthless innovator who rejects authority and tradition, he was in danger of retrogressing to the very things that they in turn had once rejected, and so reaching a lifeless and purely destructive standstill. But probably owing to the fact that, while his intellect roved far and wide and probed back into the distant past, his feelings still clung to the traditional values, the full consequences of retrogression were averted. Thanks to this unbearable opposition, regression turned into progression. He did not deny the spirit his feelings believed in, but erected beside it the counter-principle of matter: earth as opposed to heaven, nature as opposed to spirit. For this reason he was not a blind destroyer, a genius-*cum-charlatan* like Agrippa, but a father of natural science, a pioneer of the new spirit, and as such he is rightly honoured today. He would certainly shake his head at the idea for which some of his modern disciples most venerate him. His hard-won discovery was not “panpsychism”—this still clung to him as a relic of his primitive *participation mystique* with nature—but *matter and its qualities*. The conscious situation of his age and the existing state of knowledge did not allow him to see man outside the framework of nature as a whole. This was reserved for the nineteenth century. The indissoluble, unconscious oneness of man and world was still an absolute fact, but his intellect had begun to wrestle with it, using the tools of scientific empiricism. Modern medicine can no longer understand the psyche as a mere appendage of the body and is beginning to take the “psychic factor” more and more into account. In this respect it approaches the Paracelsan conception of physically animated matter, with the result that the whole spiritual phenomenon of Paracelsus appears in a new light.

[17] Just as Paracelsus was the great medical pioneer of his age, so today he is symbolic of an important change in our conception of the nature of disease and of life itself.

PARACELSUS THE PHYSICIAN¹

[18] Anyone who is at all familiar with the writings of that great physician whose memory we honour today will know how impossible it is to give an adequate account in a lecture of all the achievements that have made the name of Paracelsus immortal. He was a veritable whirlwind, tearing up everything by the roots and leaving behind him a pile of wreckage. Like an erupting volcano he laid waste and destroyed, but he also fertilized and brought to life. It is impossible to be fair to him; one can only underestimate him or overestimate him, and so one remains continually dissatisfied with one's own efforts to comprehend even one facet of his multitudinous nature. Even if one limits oneself to sketching a picture of Paracelsus the "physician," one meets this physician on so many different levels and in so many different guises that every attempt at portraiture remains a miserable patchwork. His prodigious literary output has done little to clear up the general confusion, least of all the still controversial question of the genuineness of some of the most important writings, not to speak of the mass of contradictions and arcane terms that make Paracelsus one of the greatest obscurantists of the epoch. Everything about him was on an immense scale, or, we might equally well say, everything was exaggerated. Long dreary stretches of utter nonsense alternate with oases of inspired insight, so rich and illuminating that one cannot shake off the uneasy feeling that somehow one has overlooked the main point of his argument.

[19] Unfortunately, I cannot claim to be a Paracelsus specialist and to possess a full knowledge of the *Opera omnia*. If, for professional reasons, one has to devote oneself to other things than just Paracelsus, it is hardly possible to make a conscientious study of the two thousand six hundred folio pages of the Huser edition of 1616, or the still more comprehensive edition of Sudhoff. Paracelsus is an ocean, or, to put it less kindly, a chaos, an alchemical melting-pot into which the human beings, gods, and demons of that tremendous age, the first half of the sixteenth century, poured their peculiar juices. The first thing that strikes us on reading his works is his bilious and quarrelsome temperament. He raged against the academic physicians all along the line, and against their authorities, Galen, Avicenna, Rhazes, and the rest. The only exceptions (apart from Hippocrates) were the alchemical authorities, Hermes, Archelaos, Morienus, and others, whom he quotes with approval. In general, he attacked neither astrology² nor alchemy, nor any of the popular superstitions. On this latter account his works are a mine of information for the folklorist. There are only a few treatises from the pen of Paracelsus, except for theological ones, that do not

reveal his fanatical hatred of academic medicine. Again and again one comes across violent outbursts that betray his bitterness and his personal grievances. It is quite clear that this was no longer objective criticism; it was the deposit of numerous personal disappointments that were especially bitter for him because he had no insight into his own faults. I mention this fact not in order to bring his personal psychology into the limelight, but to stress one of the chief impressions which his writings make on the reader. Practically every page bears in one way or another the human, often all too human stamp of this strange and powerful personality. His motto is said to have been *Alterius non sit, qui suus esse potest* (Let him not be another's who can be his own), and if this necessitated a ruthless, not to say brutal passion for independence, there is certainly no lack of literary as well as biographical proofs of its existence. As is the way of things, this rebellious defiance and harshness contrasted very strongly with his loyal attachment to the Church and with the soft-heartedness and sympathy with which he treated his patients, particularly those who were destitute.

[20] Paracelsus was both a conservative and a revolutionary. He was conservative as regards the basic truths of the Church, and of astrology and alchemy, but sceptical and rebellious, both in practice and theory, where academic medicine was concerned. It is largely to this that he owes his celebrity, for it seems to me very difficult to single out any medical discoveries of a *fundamental nature* that can be traced back to Paracelsus. What seems so important to us, the inclusion of surgery within the province of medicine, did not, for Paracelsus, mean developing a new science, but merely taking over the arts of the barbers and field-surgeons along with those of midwives, witches, sorcerers, astrologers, and alchemists. I feel I ought to apologize for the heretical thought that, if Paracelsus were alive today, he would undoubtedly be the advocate of all those arts which academic medicine prevents us from taking seriously, such as osteopathy, magnetopathy, iridodiagnosis, faith-healing, dietary manias, etc. If we imagine for a moment the emotions of faculty members at a modern university where there were professors of iridodiagnosis, magnetopathy, and Christian Science, we can understand the outraged feelings of the medical faculty at Basel when Paracelsus burned the classic text-books of medicine, gave his lectures in German, and, scorning the dignified gown of the doctor, paraded the streets in a workman's smock. The glorious Basel career of the "wild ass of Einsiedeln," as he was called, came to a speedy end. The impish impedimenta of the Paracelsan spirit were a bit too much for the respectable doctors of his day.

[21] In this respect we have the valuable testimony of a medical contemporary, the learned Dr. Conrad Gessner, of Zurich, in the form of a letter, written in Latin, to Ferdinand I's personal physician, Crato von Crafftheim, dated August 16, 1561.³ Although written twenty years after the death of Paracelsus, it is still redolent of the

reactions he provoked. Replying to a question of Crato's, Gessner states that he had no list of Paracelsus's writings, nor would he bother to get one, since he considered Theophrastus utterly unworthy to be mentioned along with respectable authors, let alone with Christian ones, and certainly not with pious citizens, such as even the pagans were. He and his followers were nothing but Arian heretics. He had been a sorcerer and had intercourse with demons. "The Basel Carolostadius," continues Gessner, "by name of Bodenstein,⁴ a few months ago sent a treatise of Theophrastus, 'De anatome corporis humani,' here to be printed. In it he makes mock of physicians who examine single parts of the body and carefully determine their position, shape, number, and nature, but neglect the most important thing, namely, to what stars and to what regions of the heavens each part belongs."

[22] Gessner ends with the lapidary words: "But our typographers have refused to print it." The letter tells us that Paracelsus was not counted among the "boni scriptores." He was even suspected of practising divers kinds of magic and—worse still—of the Arian heresy.⁵ Both these were capital offences at that time. Such accusations may do something to explain the restlessness of Paracelsus and his wanderlust, which never left him and drove him from city to city through half Europe. He may very well have been concerned for his skin. Gessner's attack on "De anatome corporis humani" is justified in so far as Paracelsus really did make mock of anatomical dissection, then beginning to be practised, because he said the doctors saw nothing at all in the cut-up organs. He himself was mainly interested in the cosmic correlations, such as he found in the astrological tradition. His doctrine of the "star in the body" was a favourite idea of his, and it occurs everywhere in his writings. True to the conception of man as a microcosm, he located the "firmament" in man's body and called it the "astrum" or "Sydus." It was an endosomatic heaven, whose constellations did not coincide with the astronomical heaven but originated with the individual's nativity, the "ascendant" or horoscope.

[23] Gessner's letter shows how Paracelsus was judged by a contemporary colleague, and an authoritative one at that. We must now try to get a picture of Paracelsus as a physician from his own writings. For this purpose I shall let the Master speak in his own words, but since these words contain a good many that he made up himself, I must now and then interject a comment.

[24] Part of the doctor's function is to be equipped with special knowledge. Paracelsus is also of this opinion, though with the strange qualification that a "made" doctor has to be a hundred times more industrious than a "natural" one, because everything comes to the latter from the "light of nature." He himself, it seems, studied at Ferrara and obtained his doctor's degree there. He also acquired knowledge of the classical medicine of Hippocrates, Galen, and Avicenna, having already received some kind of

preliminary education from his father. Let us hear, from the *Book Paragranum*,⁶ what he has to say about the physician's art:

What then is the physician's art? He should know what is useful and what harmful to intangible things, to the *beluis marinis*, to the fishes, what is pleasant and unpleasant, healthy and unhealthy to the beasts: these are the arts relating to natural things. What more? The wound-blessings and their powers, why and for what cause they do what they do: what *Melosina* is, and what *Syrena*, what *permutatio*, *transplantatio* and *transmutatio* are, and how they may be fully understood: what is above nature, what is above species, what is above life, what the visible is and the invisible, what produces sweetness and bitterness, what taste is, what death is, what is useful to fishermen, what a currier, a tanner, a dyer, a blacksmith, and a carpenter should know, what belongs in the kitchen, in the cellar, in the garden, what belongs to time, what a hunter knows, what a mountaineer knows, what befits a traveller, what befits a sedentary man, what warfare requires, what makes peace, what makes clerics and laymen, what every calling does, what every calling is, what God is, what Satan, what poison, and what the antidote to poison is, what there is in women, what in men, what distinguishes women from maidens, yellow from white, white from black, and red from fallow, in all things, why one colour here, another there, why short, why long, why success, why failure: and wherein this knowledge applies to all things.

[25] This quotation introduces us straight away to the strange sources of Paracelsus's empiricism. We see him as a wandering scholar on the road, with a company of travellers; he turns in at the village smith, who, as the chief medical authority, knows all the spells for healing wounds and stanching blood. From hunters and fishermen he hears wondrous tales of land and water creatures; of the Spanish tree-goose, which on putrefying turns into tortoises, or of the fertilizing power of the wind in Portugal, which begets mice in a sheaf of straw set up on a pole.⁷ The ferryman tells of the *Lorind*, which causes the mysterious "crying and echoing of the waters."⁸ Animals sicken and cure themselves like people, and the mountain folk even tell of the diseases of metals, of the leprosy of copper, and such things.⁹ All this the physician should know. He should also know of the wonders of nature and the strange correspondence of the microcosm with the macrocosm, and not only with the visible universe, but with the invisible cosmic arcana, the mysteries. We meet one of these arcana at once—Melusina, a magical creature belonging half to folklore and half to the alchemical doctrine of Paracelsus, as her connection with the *permutatio* and *transmutatio* shows. According to him, Melusines dwell in the blood, and, since blood is the ancient seat of the soul, we may conjecture that Melusina is a kind of *anima vegetativa*. She is, in essence, a variant of the mercurial spirit, which in the fourteenth and fifteenth centuries was depicted as a female monster. Unfortunately, I

must refrain from going into this figure more closely, as it would lead us into the depths of alchemical speculation.

[26] But now let us return to our theme—the physician’s science, as Paracelsus conceives it. The *Book Paragranum* says that the physician “sees and knows all disease outside the human body,”¹⁰ and that “the physician should proceed from external things, not from man.”¹¹ “Therefore the physician proceeds from what is before his eyes, and from what is before him he sees what is behind him, that is: from the external he sees the internal. Only external things give knowledge of the internal; without them no internal thing may be known.”¹² This means that the physician gains his knowledge of disease less from the sick person than from other natural phenomena that apparently have nothing to do with man, and above all from alchemy. “If they do not know that,” says Paracelsus, “then they do not know the *Arcana*. And if they do not know what makes copper and what engenders the *Vitriolata*, then they do not know what causes leprosy. And if they do not know what makes rust on iron, then they do not know what causes ulcerations. And if they do not know what makes earthquakes, then they do not know what causes cold ague. External things teach and reveal the causes of man’s infirmities, and man does not reveal the infirmity himself.”¹³

[27] Evidently, then, the physician recognizes from, say, the diseases of the metals what disease a man is suffering from, He must in any case be an alchemist. He “must employ the *Scientia Alchimiae* and not the foul brew of the Montpellier school,” which is “such filthy hogwash that even the pigs would rather eat offal.”¹⁴ He must know the health and diseases of the elements.¹⁵ As the “*species lignorum, lapidum, herbarum*” are likewise in man, he must know them too. Gold, for example, is a “natural comfortative” in man.¹⁶ There is an “external art of Alchemy,” but also an “*Alchimia microcosmi*,” and the digestive process is such. The stomach, according to Paracelsus, is the alchemist in the belly. The physician must know alchemy in order to make his medicines, in particular the *arcana* such as *aurum potable*, the *tinctura Rebis*, the *tinctura procedens*, the *Elixir tincturae*, and the rest.¹⁷ Here, as so often, Paracelsus makes mock of himself, for he “knows not how,” yet he says of the academic physicians: “You all talk drivel and have made yourselves strange dictionaries and vocabularies. No one can look at them without being led by the nose, and yet people are sent to the apothecary’s with this incomprehensible jargon when they have better medicine in their own garden.”¹⁸ The *arcana* play a great role in Paracelsan therapy, especially in the treatment of mental diseases. “For in the *Arcanis*,” says Paracelsus, “the tuff-stone becomes jacinth, the liver-stone alabaster, the flint garnet, clay a noble bolus, sand pearls, nettles manna, *Ungula* balsam. Herein lies the description of things, and in these things the physician should be well grounded.”¹⁹ And in conclusion Paracelsus cries out: “Is it not true that Pliny never

proved anything? Then what did he write? What he heard from the alchemists. If you do not know these things and what they are, you are a quack!” Thus the physician must know alchemy in order to diagnose human diseases from their analogy with the diseases of minerals. And finally, he himself is the subject of the alchemical process of transformation, since he is “ripened” by it.²⁰

[28] This difficult remark refers once more to the secret doctrine. Alchemy was not simply a chemical procedure as we understand it, but far more a philosophical procedure, a special kind of yoga, in so far as yoga also seeks to bring about a psychic transformation. For this reason the alchemists drew parallels between their *transmutatio* and the transformation symbolism of the Church.

[29] The physician had to be not only an alchemist but also an astrologer,²¹ for a second source of knowledge was the “firmament.” In his *Labyrinthus medicorum* Paracelsus says that the stars in heaven must be “coupled together,” and that the physician must “extract the judgment of the firmament from them.”²² Lacking this art of astrological interpretation, the physician is but a “pseudomedicus.” The firmament is not merely the cosmic heaven, but a body which is a part or content of the human body. “Where the body is, there will the eagles gather. And where the medicine is, there do the physicians gather.”²³ The firmamental body is the corporeal equivalent of the astrological heaven.²⁴ And since the astrological constellation makes a diagnosis possible, it also indicates the therapy. In this sense the firmament may be said to contain the “medicine.” The physicians gather round the firmamental body like eagles round a carcass because, as Paracelsus says in a not very savoury comparison, “the carcass of the natural light” lies in the firmament. In other words, the *corpus sydereum* is the source of illumination by the *lumen naturae*, the “natural light,” which plays the greatest possible role not only in the writings of Paracelsus but in the whole of his thought. This intuitive conception is, in my opinion, an achievement of the utmost historical importance, for which no one should grudge Paracelsus undying fame. It had a great influence on his contemporaries and an even greater one on the mystic thinkers who came afterwards, but its significance for philosophy in general and for the theory of knowledge in particular still lies dormant. Its full development is reserved for the future.

[30] The physician should learn to know this inner heaven. “For if he knows heaven only externally, he remains an astronomer and an astrologer; but if he establishes its order in man, then he knows two heavens. Now these two give the physician knowledge of the part which the upper sphere influences. This [part?] must be present without infirmity in the physician in order that he may know the *Caudam Draconis* in man, and know the *Arietem* and *Axem Polarem*, and his *Lineam Meridionalem*, his Orient and his Occident.” “From the external we learn to know the internal.” “Thus there is in man a firmament as in heaven, but not of one piece; there

are two. For the hand that divided light from darkness, and the hand that made heaven and earth, has done likewise in the microcosm below, having taken from above and enclosed within man's skin everything that heaven contains. For that reason the external heaven is a guide to the heaven within. Who, then, will be a physician who does not know the external heaven? For we live in this same heaven and it lies before our eyes, whereas the heaven within us is not before the eyes but behind them, and therefore we cannot see it. For who can see through the skin? No one."²⁵

[31] We are involuntarily reminded of Kant's "starry heaven above me" and "moral law within me"—that "categorical imperative" which, psychologically speaking, took the place of the Heimarmene (compulsion of the stars) of the Stoics. There can be no doubt that Paracelsus was influenced by the Hermetic idea of "heaven above, heaven below."²⁶ In his conception of the inner heaven he glimpsed an eternal primordial image, which was implanted in him and in all men, and recurs at all times and places. "In every human being," he says, "there is a special heaven, whole and unbroken."²⁷ "For a child which is being conceived already has its heaven." "As the great heaven stands, so it is imprinted at birth."²⁸ Man has "his Father in heaven and also in the air, he is a child that is made and born from the air and from the firmament." There is a "linea lactea" in heaven and in us. "The galaxa goes through the belly."²⁹ The poles and the zodiac are likewise in the human body. "It is necessary," he says, "that a physician should recognize the ascendants, the conjunctions, the exaltations, etc., of the planets, and that he understand and know all the constellations. And if he knows these things externally in the Father, it follows that he will know them in man, even though the number of men is so very great, and where to find heaven with its concordance in everyone, where health, where sickness, where beginning, where end, where death. For heaven is man and man is heaven, and all men are one heaven, and heaven is only one man."³⁰ The "Father in heaven" is the starry heaven itself. Heaven is the *homo maximus*, and the *corpus sydereum* is the representative of the *homo maximus* in the individual. "Now man was not born of man, for the first man had no progenitor, but was created. From created matter there grew the *Limbus*, and from the *Limbus* man was created and man has remained of the *Limbus*. And since he has remained so, he must be apprehended through the Father and not from himself, because he is enclosed in the skin (and no one can see through this and the workings within him are not visible). For the external heaven and the heaven within him are one, but in two parts. Even as Father and Son are two [aspects of one Godhead], so there is one Anatomy [which has two aspects]. Whoever knows the one, will also know the other."³¹

[32] The heavenly Father, the *homo maximus*, can also fall sick, and this enables the physician to make his human diagnoses and prognoses. Heaven, says Paracelsus, is

its own physician, “as the dog of its wounds.” But man is not. Therefore he must “seek the locus of all sickness and health in the Father, and be mindful that this organ is of Mars, this of Venus, this of Luna,” etc.³² This evidently means that the physician has to diagnose sickness and health from the condition of the Father, or heaven. The stars are important aetiological factors. “Now all infection starts in the stars, and from the stars it follows afterwards in man. That is to say, if heaven is for it, then it begins in man. Now heaven does not enter into man—we should not talk nonsense on that account—but the stars in man, as ordered by God’s hand, copy what heaven starts and brings to birth externally, and therefore it follows in man. It is like the sun shining through a glass and the moon giving light on the earth: but this does not injure a man, corrupting his body and causing diseases. For no more than the sun itself comes down to the earth do the stars enter a man, and their rays give a man nothing. The *Corpora* must do that and not the rays, and these are the *Corpora Microcosmi Astrali*, which gives the nature of the Father.”³³ The *Corpora Astrali* are the same as the aforementioned *corpus sydereum* or *astrale*. Elsewhere Paracelsus says that “diseases come from the Father”³⁴ and not from man, just as the woodworm does not come from the wood.

[33] The *astrum* in man is important not only for diagnosis and prognosis, but also for therapy. “From this emerges the reason why heaven is unfavourable to you and will not guide your medicine, so that you accomplish nothing: heaven must guide it for you. And the art lies, therefore, in that very place [i.e., heaven]. Say not that Melissa is good for the womb, or Marjoram for the head: so speak the ignorant. Such matters lie in Venus and in Luna, and if you wish them to have the effect you claim, you must have a favourable heaven or there will be no effect. Therein lies the error that has become prevalent in medicine: Just hand out remedies, if they work, they work. Any peasant lad can engage in such practices, it takes no Avicenna or Galen.”³⁵ When the physician has brought the *corpus astrale*, that is, the physiological Saturn (spleen) or Jupiter (liver), into the right connection with heaven, then, says Paracelsus, he is “on the right road.” “And he should know, accordingly, how to make the Astral Mars and the physical Mars [the *corpus astrale*] subservient to one another, and how to conjugate and unite them. For this is the core which no physician from the first until myself has bit into. Thus it is understood that the medicine must be prepared in the stars and become firmamental. For the upper stars bring sickness and death, and also make well. Now if anything is to be done, it cannot be done without the *Astra*. And if it is to be done with the *Astra*, then the preparation should be completed at the same time as the medicine is being made and prepared by heaven.”³⁶ The physician must “recognize the kind of medicine according to the stars and that, therefore, there are *Astra* both above and below. And since medicine can do nothing without heaven, it must be guided by heaven.” This means that the astral influence must direct the

alchemical procedure and the preparation of arcane remedies. “The course of heaven teaches the course and regimen of the fire in the Athanar.³⁷ For the virtue which lies in the sapphire comes from heaven by means of solution and coagulation and fixation.”³⁸ Of the practical use of medicines Paracelsus says: “Medicine is in the will of the stars and is guided and directed by the stars. What belongs to the brain is directed to the brain by Luna; what belongs to the spleen is directed to the spleen by Saturn; what belongs to the heart is directed to the heart by Sol; and similarly to the kidneys by Venus, to the liver by Jupiter, to the bile by Mars. And not only is this so with these [organs], but with all the others which cannot be mentioned here.”³⁹

[34] The names of diseases should likewise be correlated with astrology, and so should anatomy, which for Paracelsus meant nothing less than the astrophysiological structure of man, a “concordance with the machine of the world,” and nothing at all resembling what Vesalius understood by it. It was not enough to cut open the body, “like a peasant looking at a psalter.”⁴⁰ For him anatomy meant something like analysis. Accordingly he says: “Magic is the *Anatomia Medicinae*. Magic divides up the *corpora* of medicine.”⁴¹ But anatomy was also a kind of re-remembering of the original knowledge inborn in man, which is revealed to him by the *lumen naturae*. In his *Labyrinthus medicorum* he says: “How much labour and toil did the Mille Artifex⁴² need to wrest this Anatomy from out the memory of man, to make him forget this noble art and lead him into vain imaginings and other mischief wherein there is no art, and which consume his time on earth unprofitably! For he who knows nothing loves nothing ... but he who understands loves, observes, sees.”⁴³

[35] With regard to the names of diseases, Paracelsus thought they should be chosen according to the zodiac and the planets, e.g., *Morbus leonis, sagittarii, martis*, etc. But he himself seldom adhered to this rule. Very often he forgot how he had called something and then invented a new name for it—which, incidentally, only adds to our difficulties in trying to understand his writings.

[36] We see, therefore, that for Paracelsus aetiology, diagnosis, prognosis, therapy, nosology, pharmacology, pharmaceuticals, and—last but not least—the daily hazards of medical practice were all directly related to astrology. Thus he admonished his colleagues: “You should see to it, all you physicians, that you know the cause of fortune and misfortune: until you can do this, keep away from medicine.”⁴⁴ This could mean that if the indications elicited from the patient’s horoscope were unfavourable, the doctor had an opportunity to make himself scarce—a very welcome one in those robust times, as we also know from the career of the great Dr. Cardan.

[37] But not content with being an alchemist and astrologer, the physician had also to be a philosopher. What did Paracelsus mean by “philosophy”? Philosophy, as he understood it, had nothing whatever to do with our conception of the matter. For him

it was something “occult,” as we would say. We must not forget that Paracelsus was an alchemist through and through, and that the “natural philosophy” he practised had far less to do with thinking than with *experience*. In the alchemical tradition “philosophia,” “sapientia,” and “scientia” were essentially the same. Although they were treated as abstract ideas, they were in some strange way imagined as being quasi-material, or at least as being contained in matter,⁴⁵ and were designated accordingly. Hence they appeared in the form of quicksilver or Mercurius, lead or Saturn, gold or *aurum non vulgi*, salt or *sal sapientiae*, water or *aqua permanens*, etc. These substances were arcana, and like them philosophy too was an arcanum. In practice, this meant that philosophy was as it were concealed in matter and could also be found there.⁴⁶ We are obviously dealing with psychological projections, that is, with a primitive state of mind still very much in evidence at the time of Paracelsus, the chief symptom of which is the unconscious identity of subject and object.

[38] These preparatory remarks may help us to understand Paracelsus’s question: “What is nature other than philosophy?”⁴⁷ “Philosophy” was in man and outside him. It was like a mirror, and this mirror consisted of the four elements, for in the elements the microcosm was reflected.⁴⁸ The microcosm could be known from its “mother,”⁴⁹ i.e., elemental “matter.” There were really two “philosophies,” relating respectively to the lower and higher spheres. The lower philosophy had to do with minerals, the higher with the *Astra*.⁵⁰ By this he meant astronomy, from which we can see how thin was the dividing line between philosophy and “Scientia.” This is made very clear when we are told that philosophy was concerned with earth and water, astronomy with air and fire.⁵¹ Like philosophy, Scientia was inborn in all creatures; thus the pear-tree produced pears only by virtue of its Scientia. Scientia was an “influence” hidden in nature, and one needed “magic” in order to reveal this arcanum. “All else is vain delusion and madness, from which are begotten the fantasts.” The gift of Scientia had to be “raised alchemically to the highest pitch,”⁵² that is to say it had to be distilled, sublimated, and subtilized like a chemical substance. If the “Scientiae of nature” are not in the physician, “you will only hem and haw and know nothing for certain but the babbling of your mouth.”⁵³

[39] So it is not surprising that philosophy also involved practical work. “In philosophy is knowledge, the entire globulus, and this by means of the *practica*. For philosophy is nothing other than the *practica globuli* or *sphaerae*.... Philosophy teaches the powers and properties of earthly and watery things ... therefore concerning philosophy I will tell you that just as there is in the earth a philosopher, so is there also in man, for one philosopher is of the earth, another of water,” etc.⁵⁴ Thus there is a “philosopher” in man just as there is an “alchemist,” who, we have heard, is the stomach. This same philosophizing function is also found in the earth and can be “extracted” from it. The “*practica globuli*” mentioned in the text means the

alchemical treatment of the *massa globosa* or *prima materia*, the arcane substance; hence philosophy was in essence an alchemical procedure.⁵⁵ For Paracelsus, philosophical cognition was actually an activity of the object itself, therefore he calls it a “Zuwerffen”: the object “throws” its meaning at man. “The tree ... gives the name tree without [the aid of] the alphabet”; it says what it is and contains, just as the stars do, which have within them their own “firmamental judgment.” Thus Paracelsus can assert that it is the “Archasius”⁵⁶ in man which “draws to itself *scientiam atque prudentiam*.”⁵⁷ Indeed, he admits with great humility: “What does man invent out of himself or through himself? Not enough to patch a pair of breeches with.”⁵⁸ Besides which not a few of the medical arts are “revealed by devils and spirits.”⁵⁹

[40] I won't pile up quotations, but from all this it should be clear that the physician's “philosophy” was of an arcane nature. That Paracelsus was a great admirer of magic and the *Ars cabbalistica*, the “Gabal,” is only to be expected. If a physician does not know magic, he says, he is a “well-intentioned madman in medicine, who inclines more to deception than to the truth.” Magic is a preceptor and teacher.⁶⁰ Accordingly, Paracelsus made many amulets and seals,⁶¹ so it was partly his own fault if he got a bad reputation for practising magic. Speaking of physicians in times to come—and this peering into the future is characteristic—he says: “They will be *Geomantici*, they will be *Adepti*, they will be *Archei*, they will be *Spagyri*, they will possess the *Quintum esse*.”⁶² The chemical dream of alchemy has been fulfilled, and it was Paracelsus who foresaw the role which chemistry was destined to play in present-day medicine.

[41] Before I bring my all too summary remarks to a close, I would like to lay stress on one highly important aspect of his therapy, namely, the psychotherapeutic aspect. Paracelsus still practised the ancient art of “charming” an illness, of which the Ebers Papyrus gives so many excellent examples from ancient Egypt.⁶³ Paracelsus calls this method *Theorica*. He concedes that there is a *Theorica Essentiae Curae* and a *Theorica Essentiae Causae*, but immediately adds that the “*Theorica curae et causae* are hidden together and inseparably one.” What the physician has to say to the patient will depend on his own nature: “He must be whole and complete, otherwise he will discover nothing.” The light of nature must give him instruction, that is, he must proceed intuitively, for only by illumination can he understand “nature's textbooks.” The “theoricus medicus” must therefore speak with God's mouth, for the physician and his medicines were created by God,⁶⁴ and just as the theologian draws his truth from the holy revealed scripture, the physician draws it from the light of nature. The *Theorica* is a “*religio medici*.” He gives an example of how it should be practised and how to speak to the patient: “Or a dropsical patient says his liver is chilled, etc., and consequently they are inclined to dropsy. Such reasons are much too trivial. But if you say the cause is a meteoric semen which turns to rain, and the rain percolates

down from above, from the *media interstitia* into the lower parts, so that the semen becomes a stretch of water, a pond, a lake, then you have put your finger on it. It is like when you see a fine, clear cloudless sky: suddenly a little cloud appears, which grows and increases, so that within an hour a great rain, hailstorm, shower, etc., sets in. This is how we should theorize concerning the fundamentals of medicine in disease, as has been said.”⁶⁵ One can see how suggestively this must have worked on the patient: the meteorological comparison induces a precipitation, immediately the sluices of the body open and the ascites stream off. Even in organic diseases such psychic stimulation is not to be underestimated, and I am convinced that more than one of the miraculous cures of the Master can be traced back to his admirable *theorica*.

[42] Concerning the physician’s attitude to the patient, Paracelsus has many good things to say. From the wealth of utterances on this subject I would like, in conclusion, to quote a few scattered sayings from the *Liber de caducis*.⁶⁶ “First of all it is very necessary to tell of the compassion that must be innate in a physician.” “Where there is no love, there is no art.” Physician and medicine “are both nothing other than a mercy conferred on the needy by God.” The art is achieved by the “work of love.” “Thus the physician must be endowed with no less compassion and love than God intends towards man.” Compassion is “the physician’s mentor.” “I under the Lord, the Lord under me, I under Him outside my office, He under me outside His office. Thus each is subordinate to the other’s office, and in such love each subordinate to the other.” What the physician does is not *his* work: he is “the means by which nature is put to work.” Medicine “grows unbidden and pushes up from the earth even if we sow nothing.” “The practice of this art lies in the heart: if your heart is false, the physician within you will be false.” “Let him not say with desperate Satan: it is impossible.” He should put his trust in God. “For sooner will the herbs and roots speak with you, and in them will be the power you need.” “The physician has partaken of the banquet to which the invited guests did not come.”

[43] With this I come to the end of my lecture. I shall be content if I have succeeded in giving you at least a few impressions of the strange personality and the spiritual force of the celebrated physician whom his contemporaries rightly named the “Luther of medicine.” Paracelsus was one of the great figures of the Renaissance, and one of the most unfathomable. For us he is still an enigma, four hundred years afterwards.

FREUD IN HIS HISTORICAL SETTING

IN MEMORY OF SIGMUND FREUD

SIGMUND FREUD IN HIS HISTORICAL SETTING¹

[44] It is always a delicate and dangerous task to place a living man in historical perspective. But at least it is possible to gauge his significance and the extent to which he has been conditioned by history if his life-work and system of thought form a self-contained whole as do Freud's. His teaching, which in its fundamentals is probably known to every educated layman today, is not limitless in its ramifications, nor does it include any extraneous elements whose origins lie in other fields of science; it is based on a few transparent principles which, to the exclusion of everything else, dominate and permeate the whole substance of his thought. The originator of this teaching has, moreover, identified it with his method of "psychoanalysis," thereby making it into a rigid system that may rightly be charged with absolutism. On the other hand, the extraordinary emphasis laid upon this theory causes it to stand out as a strange and unique phenomenon against its philosophical and scientific background. Nowhere does it merge with other contemporary concepts, nor has its author made any conscious effort to connect it with its historical predecessors. This impression of isolation is heightened still further by a peculiar terminology which at times borders on subjective jargon. To all appearances—and Freud would prefer to have it that way—it is as if this theory had developed exclusively in the doctor's consulting-room and were unwelcome to everyone but himself and a thorn in the flesh of "academic" science. And yet, even the most original and isolated idea does not drop down from heaven, but grows out of an objective network of thought which binds all contemporaries together whether they recognize it or not.

[45] The historical conditions which preceded Freud were such that they made a phenomenon like himself necessary, and it is precisely the fundamental tenet of his teaching—namely, the repression of sexuality—that is most clearly conditioned in this historical sense. Like his greater contemporary Nietzsche, Freud stands at the end of the Victorian era, which was never given such an appropriate name on the Continent despite the fact that it was just as characteristic of the Germanic and Protestant countries as of the Anglo-Saxon. The Victorian era was an age of repression, of a convulsive attempt to keep anaemic ideals artificially alive in a framework of bourgeois respectability by constant moralizings. These ideals were the last offshoots of the collective religious ideas of the Middle Ages, and shortly before had been severely shaken by the French Enlightenment and the ensuing revolution. Hand in hand with this, ancient truths in the political field had become hollow and

threatened to collapse. It was still too soon for the final overthrow, and consequently all through the nineteenth century frantic efforts were made to prevent the Christian Middle Ages from disappearing altogether. Political revolutions were stamped out, experiments in moral freedom were thwarted by middle-class public opinion, and the critical philosophy of the late eighteenth century reached its end in a renewed, systematic attempt to capture the world in a unified network of thought on the medieval model. But in the course of the nineteenth century enlightenment slowly broke through, particularly in the form of scientific materialism and rationalism.

[46] This is the matrix out of which Freud grew, and its mental characteristics have shaped him along foreordained lines. He has a passion for explaining everything rationally, exactly as in the eighteenth century; one of his favourite maxims is Voltaire's "Écrasez l'infâme." With a certain satisfaction he invariably points out the flaw in the crystal; all complex psychic phenomena like art, philosophy, and religion fall under his suspicion and appear as "nothing but" repressions of the sexual instinct. This essentially reductive and negative attitude of Freud's towards accepted cultural values is due to the historical conditions which immediately preceded him. He sees as his time forces him to see. This comes out most clearly in his book *The Future of an Illusion*, where he draws a picture of religion which corresponds exactly with the prejudices of a materialistic age.

[47] Freud's revolutionary passion for negative explanations springs from the historical fact that the Victorian age falsified its cultural values in order to produce a middle-class view of the world, and, among the means employed, religion—or rather, the religion of repression—played the chief role. It is this sham religion that Freud has his eye on. The same is true of his idea of man: man's conscious qualities, his idealistically falsified persona, rest on a correspondingly dark background, that is to say on a basis of repressed infantile sexuality. Every positive gift or creative activity depends on some infantile negative quantity, in accordance with the materialistic *bon mot*: "Der Mensch ist, was er isst" (man is what he eats).

[48] This conception of man, considered historically, is a reaction against the Victorian tendency to see everything in a rosy light and yet to describe everything *sub rosa*. It was an age of mental "pussyfooting" that finally gave birth to Nietzsche, who was driven to philosophize with a hammer. So it is only logical that ethical motives as determining factors in human life do not figure in Freud's teaching. He sees them in terms of conventional morality, which he justifiably supposes would not have existed in this form, or not have existed at all, if one or two bad-tempered patriarchs had not invented such precepts to protect themselves from the distressing consequences of their impotence. Since then these precepts have unfortunately gone on existing in the super-ego of every individual. This grotesquely depreciative view

is a just punishment for the historical fact that the ethics of the Victorian age were nothing but conventional morality, the creation of curmudgeonly *praeceptores mundi*.

[49] If Freud is viewed in this retrospective way as an exponent of the resentment of the new century against the old, with its illusions, its hypocrisy, its half-truths, its faked, overwrought emotions, its sickly morality, its bogus, sapless religiosity, and its lamentable taste, he can be seen, in my opinion, much more correctly than when one marks him out as the herald of new ways and new truths. He is a great destroyer who breaks the fetters of the past. He liberates us from the unwholesome pressure of a world of rotten habits. He shows how the values in which our parents believed may be understood in an altogether different sense: for instance, that sentimental fraud about the parents who live only for their children, or the noble son who worships his mother all his life, or the ideal daughter who completely understands her father. Previously these things were believed uncritically, but ever since Freud laid the unsavoury idea of incestuous fixation on the dining-room table as an object of discussion, salutary doubts have been aroused—though for reasons of health they should not be pushed too far.

[50] The sexual theory, to be properly understood, should be taken as a negative critique of our contemporary psychology. We can become reconciled even to its most disturbing assertions if we know against what historical conditions they are directed. Once we know how the nineteenth century twisted perfectly natural facts into sentimental, moralistic virtues in order not to have its picture of the world upset, we can understand what Freud means by asserting that the infant already experiences sexuality at its mother's breast—an assertion which has aroused the greatest commotion. This interpretation casts suspicion on the proverbial innocence of the child at the breast, that is, on the mother-child relationship. That is the whole point of the assertion—it is a shot aimed at the heart of “holy motherhood.” The fact that mothers bear children is not holy but merely natural. If people say it is holy, then one strongly suspects that something very unholy has to be covered up by it. Freud has said out loud “what is behind it,” only he has unfortunately blackened the infant instead of the mother.

[51] Scientifically, the theory of infantile sexuality is of little value. It is all one to the caterpillar whether we say that it eats its leaf with ordinary pleasure or with sexual pleasure. Freud's historical contribution does not consist in these scholastic mistakes of interpretation in the field of specialized science, but in the fact on which his fame is justifiably founded, namely that, like an Old Testament prophet, he overthrew false idols and pitilessly exposed to the light of day the rottenness of the contemporary psyche. Whenever he undertakes a painful reduction (explaining the nineteenth-century God as a glorified version of Papa, or money-grubbing as infantile pleasure in excrement), we can be sure that a collective overvaluation or falsification is being

attacked. Where, for instance, is the saccharine God of the nineteenth century confronted with a *deus absconditus*, as in Luther's teaching? And is it not assumed by all nice people that good men also earn good money?

[52] Like Nietzsche, like the Great War, and like James Joyce, his literary counterpart, Freud is an answer to the sickness of the nineteenth century. That is indeed his chief significance. For those with a forward-looking view he offers no constructive plan, because not even with the boldest effort or the strongest will would it ever be possible to act out in real life all the repressed incest-wishes and other incompatibilities in the human psyche. On the contrary, Protestant ministers have already plunged into psychoanalysis because it seems to them an excellent means of sensitizing people's consciences to yet more sins than merely conscious ones—a truly grotesque but extremely logical turn of events prophesied years ago by Stanley Hall in his autobiography. Even the Freudians are beginning to take note of a new and if possible even more soulless repression—quite understandably, since no one knows what to do with his incompatible wishes. On the contrary, one begins to understand how unavoidable it is that such things are repressed.

[53] In order to mitigate this cramp of conscience, Freud invented the idea of sublimation. Sublimation means nothing less than the alchemist's trick of turning the base into the noble, the bad into the good, the useless into the useful. Anyone who knew how to do this would be certain of immortal fame. Unfortunately, the secret of converting energy without the consumption of a still greater quantity of energy has never yet been discovered by the physicists. Sublimation remains, for the present, a pious wish-fulfilment invented for silencing inopportune questions.

[54] In discussing these problems I do not wish to lay the main emphasis on the professional difficulties of the practising psychotherapist, but on the evident fact that Freud's programme is not a forward-looking one. Everything about it is oriented backwards. Freud's only interest is where things come from, never where they are going. It is more than the scientific need for causality that drives him to seek for causes, for otherwise it could not have escaped him that many psychological facts have explanations entirely different from those based on the *faux pas* of a *chronique scandaleuse*.

[55] An excellent example of this is his essay on Leonardo da Vinci and the problem of the two mothers. As a matter of fact, Leonardo did have an illegitimate mother and a stepmother, but in reality the dual-mother problem may be present as a mythological motif even when the two mothers do not really exist. Mythical heroes very often have two mothers, and for the Pharaohs this mythological custom was actually *de rigueur*. But Freud stops short at the scurrilous fact; he contents himself with the idea that *naturally* something unpleasant or negative is concealed in the situation. Although this procedure is not exactly "scientific," yet, considered from the

standpoint of historical justice, I credit it with a greater value than if it were scientifically unassailable. All too easily the dark background that is *also* present in the Leonardo problem could be rationalized away by a narrow scientific approach, and then Freud's historical task of showing up the darkness behind the false façades would not be fulfilled. A small scientific inaccuracy has little meaning here. If one goes through his works carefully and critically, one really does have the impression that Freud's aim of serving science, which he pushes again and again to the fore, has been secretly diverted to the cultural task of which he himself is unconscious, and that this has happened at the expense of the development of his theory. Today the voice of one crying in the wilderness must necessarily strike a scientific tone if the ear of the multitude is to be reached. At all costs we must be able to say that it is science which has brought such facts to light, for that alone is convincing. But even science is not proof against the unconscious *Weltanschauung*. How easy it would have been to take Leonardo's *St. Anne with the Virgin and the Christ Child* as a classical representation of the mythological motif of the two mothers! But for Freud's late Victorian psychology, and for an infinitely large public as well, it is far more effective if after "thorough investigation" it can be confirmed that the great artist owed his existence to a slip-up of his respectable father! This thrust goes home, and Freud makes this thrust not because he consciously wants to abandon science for gossip, but because he is under compulsion from the *Zeitgeist* to expose the possible dark side of the human psyche. Yet the really scientific clue to the picture is the dual-mother motif, but that only stirs the few to whom knowledge really matters, however unfashionable it may be. Such an hypothesis leaves the greater public cold, because to them Freud's one-sided, negative explanation means very much more than it does to science.

[56] It is axiomatic that science strives for an impartial, unbiased, and inclusive truth. The Freudian theory, on the other hand, is at best a partial truth, and therefore in order to maintain itself and be effective it has the rigidity of a dogma and the fanaticism of an inquisitor. For a scientific truth a simple statement suffices. Secretly, psychoanalytic theory has no intention of passing as a strict scientific truth; it aims rather at influencing a wider public. And from this we can recognize its origin in the doctor's consulting-room. It preaches those truths which it is of paramount importance that the neurotic of the early twentieth century should understand because he is an unconscious victim of late Victorian psychology. Psychoanalysis destroys the false values in him personally by cauterizing away the rottenness of the dead century. Thus far, it betokens a valuable, indeed indispensable increase in practical knowledge which has advanced the study of neurotic psychology in the most lasting way. We have to thank the bold one-sidedness of Freud if medicine is now in a position to treat

cases of neurosis individually and make the individual psyche an object of research. Before Freud, this happened only as a rare curiosity.

[57] But in so far as neurosis is not an illness specific to the Victorian era but enjoys a wide distribution in time and space, and is therefore found among people who are not in need of any special sexual enlightenment or the destruction of harmful assumptions in this respect, a theory of neurosis or of dreams which is based on a Victorian prejudice is at most of secondary importance to science. If this were not so, Adler's very different conception would have fallen flat and had no effect. Adler reduces everything not to the pleasure principle but to the power drive, and the success of his theory is not to be denied. This fact brings out with dazzling clearness the one-sidedness of the Freudian theory. Adler's, it is true, is just another one-sidedness, but taken together with Freud's it produces a more comprehensive and still clearer picture of the resentment against the spirit of the nineteenth century. All the modern defection from the ideals of our fathers is mirrored again in Adler.

[58] The human psyche, however, is not simply a product of the *Zeitgeist*, but is a thing of far greater constancy and immutability. The nineteenth century is a merely local and passing phenomenon, which has deposited but a thin layer of dust on the age-old psyche of mankind. Once this layer is wiped off and our professional eye-glasses are cleaned, what shall we see? How shall we look upon the psyche, and how shall we explain a neurosis? This problem confronts every analyst whose cases are not cured even after all the sexual experiences of childhood have been dug up, and all their cultural values dissected into lurid elements, or even when the patient has become that strange fiction—a "normal" man and a gregarious animal.

[59] A general psychological theory that claims to be scientific should not be based on the malformations of the nineteenth century, and a theory of neurosis must also be capable of explaining hysteria among the Maori. As soon as the sexual theory leaves the narrow field of neurotic psychology and branches out into other fields, for instance that of primitive psychology, its one-sidedness and inadequacy leap to the eye. Insights that grew up from the observation of Viennese neuroses between 1890 and 1920 prove themselves poor tools when applied to the problems of totem and taboo, even when the application is made in a very skilful way. Freud has not penetrated into that deeper layer which is common to all men. He could not have done so without being untrue to his historical task. And this task he has fulfilled—a task enough for a whole life's work, and fully deserving the fame it has won.

IN MEMORY OF SIGMUND FREUD¹

[60] The cultural history of the past fifty years is inseparably bound up with the name of Sigmund Freud, the founder of psychoanalysis, who has just died. The Freudian outlook has affected practically every sphere of our contemporary thinking, except that of the exact sciences. Wherever the human psyche plays a decisive role, this outlook has left its mark, above all in the broad field of psychopathology, then in psychology, philosophy, aesthetics, ethnology and—last but not least—the psychology of religion. Everything that man can say about the nature of the psyche, whether it be true or only apparently true, necessarily touches upon the foundations of all the humane sciences, even though the really decisive discoveries have been made within the sphere of medicine, which, as we know, cannot be counted among the “humanities.”

[61] Freud was first and foremost a “nerve specialist” in the strictest sense of this word, and in every respect he always remained one. By training he was no psychiatrist, no psychologist, and no philosopher. In philosophy he lacked even the most rudimentary elements of education. He once assured me personally that it had never occurred to him to read Nietzsche. This fact is of importance in understanding Freud’s peculiar views, which are distinguished by an apparently total lack of any philosophical premises. His theories bear the unmistakable stamp of the doctor’s consulting-room. His constant point of departure is the neurotically degenerate psyche, unfolding its secrets with a mixture of reluctance and ill-concealed enjoyment under the critical eye of the doctor. But as the neurotic patient, besides having his individual sickness, is also an exponent of the local and contemporary mentality, a bridge exists from the start between the doctor’s view of his particular case and certain general assumptions. The existence of this bridge enabled Freud to turn his intuition from the narrow confines of the consulting-room to the wide world of moral, philosophical, and religious ideas, which also, unhappily enough, proved themselves amenable to this critical investigation.

[62] Freud owed his initial impetus to Charcot, his great teacher at the Salpêtrière. The first fundamental lesson he learnt there was the teaching about hypnotism and suggestion, and in 1888 he translated Bernheim’s book on the latter subject. The other was Charcot’s discovery that hysterical symptoms were the consequence of certain ideas that had taken possession of the patient’s “brain.” Charcot’s pupil, Pierre Janet, elaborated this theory in his comprehensive work *Névroses et idées fixes* and provided it with the necessary foundations. Freud’s older colleague in Vienna, Joseph

Breuer, furnished an illustrative case in support of this exceedingly important discovery (which, incidentally, had been made long before by many a family doctor), building upon it a theory of which Freud said that it “coincides with the medieval view once we substitute a psychological formula for the ‘demon’ of priestly fantasy.” The medieval theory of possession (toned down by Janet to “obsession”) was thus taken over by Breuer and Freud in a more positive form, the evil spirit—to reverse the Faustian miracle—being transmogrified into a harmless “psychological formula.” It is greatly to the credit of both investigators that they did not, like the rationalistic Janet, gloss over the significant analogy with possession, but rather, following the medieval theory, hunted up the factor causing the possession in order, as it were, to exorcize the evil spirit. Breuer was the first to discover that the pathogenic “ideas” were memories of certain events which he called “traumatic.” This discovery carried forward the preliminary work done at the Salpêtrière, and it laid the foundation of all Freud’s theories. As early as 1893 both men recognized the far-reaching practical importance of their findings. They realized that the symptom-producing “ideas” were rooted in an *affect*. This affect had the peculiarity of never really coming to the surface, so that it was never really conscious. The task of the therapist was therefore to “abreact” the “blocked” affect.

[63] This provisional formulation was certainly simple—too simple to do justice to the essence of the neuroses in general. At this point Freud commenced his own independent researches. It was first of all the question of the trauma that occupied him. He soon found (or thought he had found) that the traumatic factors were unconscious because of their painfulness. But they were painful because—according to his views at the time—they were one and all connected with the sphere of sex. The theory of the sexual trauma was Freud’s first independent theory of hysteria. Every specialist who has to do with the neuroses knows on the one hand how suggestible the patients are and, on the other, how unreliable are their reports. The theory was therefore treading on slippery and treacherous ground. As a result, Freud soon felt compelled to correct it more or less tacitly by attributing the traumatic factor to an abnormal development of infantile fantasy. The motive force of this luxuriant fantasy-activity he took to be an infantile sexuality, which nobody had liked to speak of before. Cases of abnormal precocity of development had naturally long been known in the medical literature, but such had not been assumed to be the case in relatively normal children. Freud did not commit this mistake either, nor did he envisage any concrete form of precocious development. It was rather a question of his paraphrasing and interpreting more or less normal infantile occurrences in terms of sexuality. This view unleashed a storm of indignation and disgust, first of all in professional circles and then among the educated public. Apart from the fact that every radically new idea invariably provokes the most violent resistance of the

experts, Freud's conception of the infant's instinctual life was an encroachment upon the domain of general and normal psychology, since his observations from the psychology of neurosis were transferred to a territory which had never before been exposed to this kind of illumination.

[64] Careful and painstaking investigation of neurotic and, in particular, hysterical states of mind could not conceal from Freud that such patients often exhibit an unusually lively dream-life and on that account like to tell of their dreams. In structure and manner of expression their dreams frequently correspond to the symptomatology of their neurosis. Anxiety states and anxiety dreams go hand in hand and obviously spring from the same root. Freud could therefore not avoid including dreams within the scope of his investigations. He had recognized very early that the "blocking" of the traumatic affect was due to the *repression* of "incompatible" material. The symptoms were substitutes for impulses, wishes, and fantasies which, because of their moral or aesthetic painfulness, were subjected to a "censorship" exercised by ethical conventions. In other words, they were pushed out of the conscious mind by a certain kind of moral attitude, and a specific inhibition prevented them from being remembered. The "theory of repression," as Freud aptly called it, became the centre-piece of his psychology. Since a great many things could be explained by this theory, it is not surprising that it was also applied to dreams. Freud's *Interpretation of Dreams* (1900) is an epoch-making work and probably the boldest attempt ever made to master the enigma of the unconscious psyche on the apparently firm ground of empiricism. Freud sought to prove with the aid of case material that dreams are disguised wish-fulfilments. This extension of the "repression mechanism," a concept borrowed from the psychology of neurosis, to the phenomenon of dreams was the second encroachment upon the sphere of normal psychology. It had immense consequences, as it stirred up problems which would have required for their solution a more compendious equipment than the limited experiences of the consulting-room.

[65] *The Interpretation of Dreams* is probably Freud's most important work, and at the same time the most open to attack. For us young psychiatrists it was a fount of illumination, but for our older colleagues it was an object of mockery. As with his recognition that neurosis has the character of a medieval "possession," so, by treating dreams as a highly important source of information about the unconscious processes—"the dream is the *via regia* to the unconscious"—Freud rescued something of the utmost value from the past, where it had seemed irretrievably sunk in oblivion. Indeed, in ancient medicine as well as in the old religions, dreams had a lofty significance and the dignity of an oracle. At the turn of the century, however, it was an act of the greatest scientific courage to make anything as unpopular as dreams an object of serious discussion. What impressed us young psychiatrists most was neither

the technique nor the theory, both of which seemed to us highly controversial, but the fact that anyone should have dared to investigate dreams at all. This line of investigation opened the way to an understanding of schizophrenic hallucinations and delusions from the inside, whereas hitherto psychiatrists had been able to describe them only from the outside. More than that, *The Interpretation of Dreams* provided a key to the many locked doors in the psychology of neurotics as well as of normal people.

[66] The repression theory was further applied to the interpretation of jokes, and in 1905 Freud published his entertaining *Jokes and Their Relation to the Unconscious*, a pendant to *The Psychopathology of Everyday Life*. Both these books may be read with enjoyment and instruction by the layman. A foray beyond the repression theory into the domain of primitive psychology, in *Totem and Taboo*, was less successful, since the application of concepts derived from the psychology of neurotics to the views of primitives did not explain the latter but only showed up the insufficiency of the former in a rather too obvious light.

[67] The final application of this theory was to the field of religion, in *The Future of an Illusion* (1927). Though there is much that is still tenable in *Totem and Taboo*, the same cannot, unfortunately, be said of the latter work. Freud's inadequate training in philosophy and in the history of religion makes itself painfully conspicuous, quite apart from the fact that he had no understanding of what religion was about. In his old age he wrote a book on Moses, who led the children of Israel to the Promised Land but was not allowed to set foot in it himself. That his choice fell on Moses is probably no accident in the case of a personality like Freud.

[68] As I said at the beginning, Freud always remained a physician. For all his interest in other fields, he constantly had the clinical picture of neurosis before his mind's eye—the very attitude that makes people ill and effectively prevents them from being healthy. Anyone who has this picture before him always sees the flaw in everything, and however much he may struggle against it, he must always point out what this daemonically obsessive picture compels him to see: the weak spot, the unadmitted wish, the hidden resentment, the secret, illegitimate fulfilment of a wish distorted by the “censor.” The neurotic is ill precisely because such things haunt his psyche; for though his unconscious contains many *other* things, it appears to be exclusively populated by contents that his consciousness has rejected for very good reasons. The keynote of Freud's thought is therefore a devastatingly pessimistic “nothing but.” Nowhere does he break through to a vision of the helpful, healing powers which would let the unconscious be of some benefit to the patient. Every position is undermined by a psychological critique that reduces everything to its unfavourable or ambiguous elements, or at least makes one suspect that such elements exist. This negative attitude is undoubtedly correct when applied to the little

games of make-believe which a neurosis produces in such abundance. Here the conjecture of unpleasant things in the background is often very much to the point, but not always. Also, there is no illness that is not at the same time an unsuccessful attempt at a cure. Instead of showing up the patient as the secret accomplice of morally inadmissible wishes, one can just as well explain him as the unwitting victim of instinctual problems which he doesn't understand and which nobody in his environment has helped him solve. His dreams, in particular, can be taken as nature's own auguries, having nothing whatever to do with the all-too-human self-deluding operations which Freud insinuates into the dream-process.

[69] I say this not in order to criticize Freud's theories but to lay due emphasis on his scepticism towards all or most of the ideals of the nineteenth century. Freud has to be seen against this cultural background. He put his finger on more than one ulcerous spot. All that glittered in the nineteenth century was very far from being gold, religion included. Freud was a great destroyer, but the turn of the century offered so many opportunities for debunking that even Nietzsche was not enough. Freud completed the task, very thoroughly indeed. He aroused a wholesome mistrust in people and thereby sharpened their sense of real values. All that gush about man's innate goodness, which had addled so many brains after the dogma of original sin was no longer understood, was blown to the winds by Freud, and the little that remains will, let us hope, be driven out for good and all by the barbarism of the twentieth century. Freud was no prophet, but he is a prophetic figure. Like Nietzsche, he overthrew the gigantic idols of our day, and it remains to be seen whether our highest values are so real that their glitter is not extinguished in the Acherontian flood. Doubt about our civilization and its values is the contemporary neurosis. If our convictions were really indubitable nobody would ever doubt them. Nor would anyone have been able to make it seem plausible that our ideals are only disguised expressions of motives that we do well to hide. But the nineteenth century has left us such a legacy of dubious propositions that doubt is not only possible but altogether justified, indeed meritorious. The gold will not prove its worth save in the fire. Freud has often been compared to a dentist, drilling out the carious tissue in the most painful manner. So far the comparison holds true, but not when it comes to the gold-filling. Freudian psychology does not fill the gap. If our critical reason tells us that in certain respects we are irrational and infantile, or that all religious beliefs are illusions, what are we to do about our irrationality, what are we to put in place of our exploded illusions? Our naïve childishness has in it the seeds of creativity, and illusion is a natural component of life, and neither of them can ever be suppressed or replaced by the rationalities and practicalities of convention.

[70] Freud's psychology moves within the narrow confines of nineteenth-century scientific materialism. Its philosophical premises were never examined, thanks

obviously to the Master's insufficient philosophical equipment. So it was inevitable that it should come under the influence of local and temporal prejudices—a fact that has been noted by various other critics. Freud's psychological method is and always was a cauterizing agent for diseased and degenerate material, such as is found chiefly in neurotic patients. It is an instrument to be used by a doctor, and it is dangerous and destructive, or at best ineffective, when applied to the natural expressions of life and its needs. A certain rigid one-sidedness in the theory, backed by an often fanatical intolerance, was perhaps an unavoidable necessity in the early decades of the century. Later, when the new ideas met with ample recognition, this grew into an aesthetic defect, and finally, like every fanaticism, it evoked the suspicion of an inner uncertainty. In the last resort, each of us carries the torch of knowledge only part of the way, and none is immune against error. Doubt alone is the mother of scientific truth. Whoever fights against dogma in high places falls victim, tragically enough, to the tyranny of a partial truth. All who had a share in the fate of this great man saw this tragedy working out step by step in his life and increasingly narrowing his horizon.

[71] In the course of the personal friendship which bound me to Freud for many years, I was permitted a deep glimpse into the mind of this remarkable man. He was a man possessed by a daemon—a man who had been vouchsafed an overwhelming revelation that took possession of his soul and never let him go. It was the encounter with Charcot's ideas that called awake in him that primordial image of a soul in the grip of a daemon, and kindled that passion for knowledge which was to lay open a dark continent to his gaze. He felt he had the key to the murky abysses of the possessed psyche. He wanted to unmask as illusion what the "absurd superstition" of the past took to be a devilish incubus, to whip away the disguises worn by the evil spirit and turn him back into a harmless poodle—in a word, reduce him to a "psychological formula." He believed in the power of the intellect; no Faustian shudderings tempered the hybris of his undertaking. He once said to me: "I only wonder what neurotics will do in the future when all their symbols have been unmasked. It will then be impossible to have a neurosis." He expected enlightenment to do everything—his favourite quotation was Voltaire's "Écrasez l'infâme." From this sentiment there grew up his astonishing knowledge and understanding of any morbid psychic material, which he smelt out under a hundred disguises and was able to bring to light with truly unending patience.

[72] Ludwig Klages' saying that "the spirit is the adversary of the soul"² might serve as a cautionary motto for the way Freud approached the possessed psyche. Whenever he could, he dethroned the "spirit" as the possessing and repressing agent by reducing it to a "psychological formula." Spirit, for him, was just a "nothing but." In a crucial talk with him I once tried to get him to understand the admonition: "Try the spirits

whether they are of God” (I John 4 : 1). In vain. Thus fate had to take its course. For one can fall victim to possession if one does not understand betimes why one is possessed. One should ask oneself for once: Why has this idea taken possession of me? What does that mean in regard to myself? A modest doubt like this can save us from falling head first into the idea and vanishing for ever.

[73] Freud’s “psychological formula” is only an apparent substitute for the daemonically vital thing that causes a neurosis. In reality only the spirit can cast out the “spirits”—not the intellect, which at best is a mere assistant, like Faust’s Wagner, and scarcely fitted to play the role of an exorcist.

RICHARD WILHELM: IN MEMORIAM

RICHARD WILHELM: IN MEMORIAM¹

[74] It is no easy task for me to speak of Richard Wilhelm and his work, because, starting very far away from one another, our paths crossed in cometlike fashion. His life-work has a range that lies outside my compass. I have never seen the China that first moulded his thought and later continued to engross him, nor am I familiar with its language, the living expression of the Chinese East. I stand indeed as a stranger outside that vast realm of knowledge and experience in which Wilhelm worked as a master of his profession. He as a sinologist and I as a doctor would probably never have come into contact had we remained specialists. But we met in a field of humanity which begins beyond the academic boundary posts. There lay our point of contact; there the spark leapt across and kindled a light that was to become for me one of the most significant events of my life. Because of this I may perhaps speak of Wilhelm and his work, thinking with grateful respect of this mind which created a bridge between East and West and gave to the Occident the precious heritage of a culture thousands of years old, a culture perhaps destined to disappear forever.

[75] Wilhelm possessed the kind of mastery which is won only by a man who goes beyond his speciality, and so his striving for knowledge became a concern touching all mankind. Or rather, it had been that from the beginning and remained so always. What else could have liberated him so completely from the narrow horizon of the European—and indeed, of the missionary—that no sooner had he delved into the secrets of the Chinese mind than he perceived the treasure hidden there for us, and sacrificed his European prejudices for the sake of this rare pearl? Only an all-embracing humanity, a greatness of heart that glimpses the whole, could have enabled him to open himself without reserve to a profoundly alien spirit, and to further its influence by putting his manifold gifts and capacities at its service. The understanding with which he devoted himself to this task, with no trace of Christian resentment or European arrogance, bears witness to a truly great mind; for all mediocre minds in contact with a foreign culture either perish in the blind attempt to deracinate themselves or else they indulge in an uncomprehending and presumptuous passion for criticism. Toying only with the surface and externals of the foreign culture, they never eat its bread or drink its wine, and so never enter into a real communion of minds, that most intimate transfusion and interpenetration which generates a new birth.

[76] As a rule, the specialist's is a purely masculine mind, an intellect to which fecundity is an alien and unnatural process; it is therefore an especially ill-adapted

tool for giving rebirth to a foreign spirit. But a larger mind bears the stamp of the feminine; it is endowed with a receptive and fruitful womb which can reshape what is strange and give it a familiar form. Wilhelm possessed the rare gift of a maternal intellect. To it he owed his unequalled ability to feel his way into the spirit of the East and to make his incomparable translations.

[77] To me the greatest of his achievements is his translation of, and commentary on, the *I Ching*.² Before I came to know Wilhelm's translation, I had worked for years with Legge's inadequate rendering,³ and I was therefore fully able to appreciate the extraordinary difference between the two. Wilhelm has succeeded in bringing to life again, in new form, this ancient work in which not only many sinologists but most of the modern Chinese see nothing more than a collection of absurd magical spells. This book embodies, as perhaps no other, the living spirit of Chinese civilization, for the best minds of China have collaborated on it and contributed to it for thousands of years. Despite its fabulous age it has never grown old, but still lives and works, at least for those who seek to understand its meaning. That we too belong to this favoured group we owe to the creative achievement of Wilhelm. He has brought the book closer to us by his careful translation and personal experience both as a pupil of a Chinese master of the old school and as an initiate in the psychology of Chinese yoga, who made constant use of the *I Ching* in practice.

[78] But together with these rich gifts, Wilhelm has bequeathed to us a task whose magnitude we can only surmise at present, but cannot fully apprehend. Anyone who, like myself, has had the rare good fortune to experience in association with Wilhelm the divinatory power of the *I Ching* cannot remain ignorant of the fact that we have here an Archimedean point from which our Western attitude of mind could be lifted off its foundations. It is no small service to have given us, as Wilhelm did, such a comprehensive and richly coloured picture of a foreign culture. What is even more important is that he has inoculated us with the living germ of the Chinese spirit, capable of working a fundamental change in our view of the world. We are no longer reduced to being admiring or critical observers, but find ourselves partaking of the spirit of the East to the extent that we succeed in experiencing the living power of the *I Ching*.

[79] The principle on which the use of the *I Ching* is based appears at first sight to be in complete contradiction to our scientific and causal thinking. For us it is unscientific in the extreme, almost taboo, and therefore outside the scope of our scientific judgment, indeed incomprehensible to it.

[80] Some years ago, the then president of the British Anthropological Society asked me how it was that so highly intelligent a people as the Chinese had produced no science. I replied that this must be an optical illusion, since the Chinese did have a science whose standard text-book was the *I Ching*, but that the principle of this

science, like so much else in China, was altogether different from the principle of our science.

[81] The science of the *I Ching* is based not on the causality principle but on one which—hitherto unnamed because not familiar to us—I have tentatively called the *synchronistic* principle. My researches into the psychology of unconscious processes long ago compelled me to look around for another principle of explanation, since the causality principle seemed to me insufficient to explain certain remarkable manifestations of the unconscious. I found that there are psychic parallelisms which simply cannot be related to each other causally, but must be connected by another kind of principle altogether. This connection seemed to lie essentially in the relative simultaneity of the events, hence the term “synchronistic.” It seems as though time, far from being an abstraction, is a concrete continuum which possesses qualities or basic conditions capable of manifesting themselves simultaneously in different places by means of an acausal parallelism, such as we find, for instance, in the simultaneous occurrence of identical thoughts, symbols, or psychic states. Another example, pointed out by Wilhelm, would be the coincidence of Chinese and European periods of style, which cannot have been causally related to one another. Astrology would be an example of synchronicity on a grand scale if only there were enough thoroughly tested findings to support it. But at least we have at our disposal a number of well-tested and statistically verifiable facts which make the problem of astrology seem worthy of scientific investigation. Its value is obvious enough to the psychologist, since astrology represents the sum of all the psychological knowledge of antiquity.

[82] The fact that it is possible to reconstruct a person’s character fairly accurately from his birth data shows the relative validity of astrology. It must be remembered, however, that the birth data are in no way dependent on the actual astronomical constellations, but are based on an arbitrary, purely conceptual time system. Owing to the precession of the equinoxes, the spring-point has long since moved out of the constellation of Aries into Pisces, so that the astrological zodiac on which horoscopes are calculated no longer corresponds to the heavenly one. If there are any astrological diagnoses of character that are in fact correct, this is due not to the influence of the stars but to our own hypothetical time qualities. In other words, whatever is born or done at this particular moment of time has the quality of this moment of time.

[83] Here we have the basic formula for the use of the *I Ching*. As you know, the hexagram that characterizes the moment of time, and gives us insight into it, is obtained by manipulating a bundle of yarrow stalks or by throwing three coins. The division of the yarrow stalks or the fall of the coins depends on pure chance. The runic stalks or coins fall into the pattern of the moment. The only question is: Did King Wen and the Duke of Chou, who lived a thousand years before the birth of Christ, interpret these chance patterns correctly?⁴ Experience alone can decide.

[84] At his first lecture at the Psychological Club in Zurich, Wilhelm, at my request, demonstrated the use of the *I Ching* and at the same time made a prognosis which, in less than two years, was fulfilled to the letter and with the utmost clarity. Predictions of this kind could be further confirmed by numerous parallel experiences. However, I am not concerned with establishing objectively the validity of the *I Ching*'s statements, but take it simply as a premise, just as Wilhelm did. I am concerned only with the astonishing fact that the hidden qualities of the moment become legible in the hexagram. The interconnection of events made evident by the *I Ching* is essentially analogous to what we find in astrology. There the moment of birth corresponds to the fall of the coins, the constellation to the hexagram, and the astrological interpretation of the birth data corresponds to the text assigned to the hexagram.

[85] The type of thinking based on the synchronistic principle, which reached its climax in the *I Ching*, is the purest expression of Chinese thinking in general. In the West it has been absent from the history of philosophy since the time of Heraclitus, and reappears only as a faint echo in Leibniz.⁵ However, in the interim it was not altogether extinguished, but lingered on in the twilight of astrological speculation, and it still remains on that level today.

[86] At this point the *I Ching* responds to something in us that is in need of further development. Occultism has enjoyed a renaissance in our times that is without parallel—the light of the Western mind is nearly darkened by it. I am not thinking now of our seats of learning and their representatives. As a doctor who deals with ordinary people, I know that the universities have ceased to act as disseminators of light. People are weary of scientific specialization and rationalism and intellectualism. They want to hear truths that broaden rather than restrict, that do not obscure but enlighten, that do not run off them like water but penetrate them to the marrow. This search is only too likely to lead a large if anonymous public astray.

[87] When I think of the significance of Wilhelm's achievement, I am always reminded of Anquetil Duperron, the Frenchman who brought the first translation of the Upanishads to Europe. This was at the very time when, after almost eighteen hundred years, the inconceivable happened and the Goddess of Reason drove the Christian God from his throne in Notre-Dame. Today, when far more inconceivable things are happening in Russia than ever did in Paris, and Christianity has become so debilitated that even the Buddhists think it is high time they sent missionaries to Europe, it is Wilhelm who brings new light from the East. This was the cultural task to which he felt himself called, recognizing how much the East had to offer in our spiritual need.

[88] A beggar is not helped by having alms, great or small, pressed into his hand, even though this may be what he wants. He is far better helped if we show him how he can

permanently rid himself of his beggary by work. Unfortunately, the spiritual beggars of our time are too inclined to accept the alms of the East in bulk and to imitate its ways unthinkingly. This is a danger about which too many warnings cannot be uttered, and one which Wilhelm felt very clearly. The spirit of Europe is not helped merely by new sensations or a titillation of the nerves. What it has taken China thousands of years to build cannot be acquired by theft. If we want to possess it, we must earn the right to it by working on ourselves. Of what use to us is the wisdom of the Upanishads or the insight of Chinese yoga if we desert our own foundations as though they were errors outlived, and, like homeless pirates, settle with thievish intent on foreign shores? The insights of the East, and in particular the wisdom of the *I Ching*, have no meaning for us if we close our minds to our own problems, jog along with our conventional prejudices, and veil from ourselves our real human nature with all its dangerous undercurrents and darkneses. The light of this wisdom shines only in the dark, not in the brightly lit theatre of our European consciousness and will. The wisdom of the *I Ching* issued from a background of whose horrors we have a faint inkling when we read of Chinese massacres, of the sinister power of Chinese secret societies, or of the nameless poverty, hopeless filth and vices of the Chinese masses.

[89] We need to have a firmly based, three-dimensional life of our own before we can experience the wisdom of the East as a living thing. Therefore, our prime need is to learn a few European truths about ourselves. Our way begins with European reality and not with yoga exercises which would only delude us about our own reality. We must continue Wilhelm's work of translation in a wider sense if we wish to show ourselves worthy pupils of the master. The central concept of Chinese philosophy is *tao*, which Wilhelm translated as "meaning." Just as Wilhelm gave the spiritual treasure of the East a European meaning, so we should translate this meaning into life. To do this—that is, to realize *tao*—would be the true task of the pupil.

[90] If we turn our eyes to the East, we see an overwhelming destiny fulfilling itself. The guns of Europe have burst open the gates of Asia; European science and technology, European materialism and cupidity, are flooding China. We have conquered the East politically. And what happened when Rome did the same thing to the Near East? The spirit of the East entered Rome. Mithras, the Persian god of light, became the god of the Roman legions, and out of the most unlikely corner of Asia Minor a new spiritual Rome arose. Would it be unthinkable that the same thing might happen today and find us just as blind as the cultured Romans who marvelled at the superstitions of the Christians? It is worth noticing that England and Holland, the two main colonizing powers in Asia, are also the two most infected with Hindu theosophy. I know that our unconscious is full of Eastern symbolism. The spirit of the East is really at our gates. Therefore it seems to me that the search for *tao*, for a

meaning in life, has already become a collective phenomenon among us, and to a far greater extent than is generally realized. The fact that Wilhelm and the indologist Hauer were asked to lecture on yoga at this year's congress of German psychotherapists is a most significant sign of the times. Imagine what it means when a practising physician, who has to deal with people at their most sensitive and receptive, establishes contact with an Eastern system of healing! In this way the spirit of the East penetrates through all our pores and reaches the most vulnerable places of Europe. It could be a dangerous infection, but it might also be a remedy. The Babylonian confusion of tongues in the West has created such a disorientation that everyone longs for simpler truths, or at least for guiding ideas which speak not to the head alone but also to the heart, which bring clarity to the contemplative spirit and peace to the restless pressure of our feelings. Like ancient Rome, we today are once more importing every form of exotic superstition in the hope of finding the right remedy for our sickness.

[91] Human instinct knows that all great truth is simple. The man whose instincts are atrophied therefore supposes that it is found in cheap simplifications and platitudes; or, as a result of his disappointment, he falls into the opposite error of thinking that it must be as obscure and complicated as possible. Today we have a Gnostic movement in the anonymous masses which is the exact psychological counterpart of the Gnostic movement nineteen hundred years ago. Then, as today, solitary wanderers like Apollonius of Tyana spun the spiritual threads from Europe to Asia, perhaps to remotest India. Viewing him in this historical perspective, I see Wilhelm as one of those great Gnostic intermediaries who brought the Hellenic spirit into contact with the cultural heritage of the East and thereby caused a new world to rise out of the ruins of the Roman Empire.

[92] In the midst of the jarring disharmony of European opinion and the shouts of false prophets, it is indeed a blessing to hear the simple language of Wilhelm, the messenger from China. One notices at once that it is schooled in the plant-like spontaneity of the Chinese mind, which is able to express profound things in simple language. It discloses something of the simplicity of great truth, the ingenuousness of deep meaning, and it carries to us the delicate perfume of the Golden Flower. Penetrating gently, it has set in the soil of Europe a tender seedling, giving us a new intuition of life and its meaning, far removed from the tension and arrogance of the European will.

[93] Faced with the alien culture of the East, Wilhelm showed a degree of modesty highly unusual in a European. He approached it freely, without prejudice, without the assumption of knowing better; he opened his heart and mind to it. He let himself be gripped and shaped by it, so that when he came back to Europe he brought us, not only in his spirit but in his whole being, a true image of the East. This deep

transformation was certainly not won without great sacrifice, for our historical premises are so entirely different. The keenness of Western consciousness and its harsh problems had to soften before the more universal, more equable nature of the East; Western rationalism and one-sided differentiation had to yield to Eastern breadth and simplicity. For Wilhelm this change meant not only a shifting of the intellectual standpoint but a radical rearrangement of the components of his personality. The picture of the East he has given us, free of ulterior motive and all trace of tendentiousness, could never have been painted in such perfection had he not been able to let the European in him slip into the background. If he had allowed East and West to clash together with unyielding harshness, he could not have fulfilled his mission of conveying to us a true picture of China. The sacrifice of the European was unavoidable and necessary for the fulfilment of the task fate laid upon him.

[94] Wilhelm accomplished his mission in every sense of the word. Not only did he make accessible to us the cultural treasure of ancient China, but, as I have said, he brought us its spiritual root, the root that has remained alive all these thousands of years, and planted it in the soil of Europe. With the completion of this task, his mission reached its climax and, unfortunately, its end. According to the law of *enantiodromia*, so well understood by the Chinese, the end of one phase is the beginning of its opposite. Thus *yang* at its highest point changes into *yin*, and positive into negative. I came closer to Wilhelm only in the last years of his life, and I could observe how, with the completion of his life-work, Europe and European man hemmed him in more and more closely, beset him in fact. And at the same time there grew in him the feeling that he stood on the brink of a great change, an upheaval whose nature he could not clearly grasp. He only knew that he faced a decisive crisis. His physical illness went parallel with this development. His dreams were filled with memories of China, but the images were always sad and gloomy, a clear proof that the Chinese contents of his mind had become negative.

[95] Nothing can be sacrificed for ever. Everything returns later in changed form, and when once a great sacrifice has been made, the sacrificed thing when it returns must meet with a healthy and resistant body that can take the shock. Therefore, a spiritual crisis of these dimensions often means death if it takes place in a body weakened by disease. For now the sacrificial knife is in the hand of him who was sacrificed, and a death is demanded of the erstwhile sacrificer.

[96] As you see, I have not withheld my personal views, for if I had not told you what Wilhelm meant to me, how would it have been possible for me to speak of him? Wilhelm's life-work is of such immense importance to me because it clarified and confirmed so much that I had been seeking, striving for, thinking, and doing in my efforts to alleviate the psychic sufferings of Europeans. It was a tremendous experience for me to hear through him, in clear language, things I had dimly divined

in the confusion of our European unconscious. Indeed, I feel myself so very much enriched by him that it seems to me as if I had received more from him than from any other man. That is also the reason why I do not feel it a presumption if I am the one to offer on the altar of his memory the gratitude and respect of all of us.

IV

ON THE RELATION OF ANALYTICAL PSYCHOLOGY TO POETRY

PSYCHOLOGY AND LITERATURE

ON THE RELATION OF ANALYTICAL PSYCHOLOGY TO POETRY¹

[97] In spite of its difficulty, the task of discussing the relation of analytical psychology to poetry affords me a welcome opportunity to define my views on the much debated question of the relations between psychology and art in general. Although the two things cannot be compared, the close connections which undoubtedly exist between them call for investigation. These connections arise from the fact that the practice of art is a psychological activity and, as such, can be approached from a psychological angle. Considered in this light, art, like any other human activity deriving from psychic motives, is a proper subject for psychology. This statement, however, involves a very definite limitation of the psychological viewpoint when we come to apply it in practice. Only that aspect of art which consists in the process of artistic creation can be a subject for psychological study, but not that which constitutes its essential nature. The question of what art is in itself can never be answered by the psychologist, but must be approached from the side of aesthetics.

[98] A similar distinction must be made in the realm of religion. A psychological approach is permissible only in regard to the emotions and symbols which constitute the phenomenology of religion, but which do not touch upon its essential nature. If the essence of religion and art could be explained, then both of them would become mere subdivisions of psychology. This is not to say that such violations of their nature have not been attempted. But those who are guilty of them obviously forget that a similar fate might easily befall psychology, since its intrinsic value and specific quality would be destroyed if it were regarded as a mere activity of the brain, and were relegated along with the endocrine functions to a subdivision of physiology. This too, as we know, has been attempted.

[99] Art by its very nature is not science, and science by its very nature is not art; both these spheres of the mind have something in reserve that is peculiar to them and can be explained only in its own terms. Hence when we speak of the relation of psychology to art, we shall treat only of that aspect of art which can be submitted to psychological scrutiny without violating its nature. Whatever the psychologist has to say about art will be confined to the process of artistic creation and has nothing to do with its innermost essence. He can no more explain this than the intellect can describe or even understand the nature of feeling. Indeed, art and science would not exist as separate entities at all if the fundamental difference between them had not long since forced itself on the mind. The fact that artistic, scientific, and religious

propensities still slumber peacefully together in the small child, or that with primitives the beginnings of art, science, and religion coalesce in the undifferentiated chaos of the magical mentality, or that no trace of “mind” can be found in the natural instincts of animals—all this does nothing to prove the existence of a unifying principle which alone would justify a reduction of the one to the other. For if we go so far back into the history of the mind that the distinctions between its various fields of activity become altogether invisible, we do not reach an underlying principle of their unity, but merely an earlier, undifferentiated state in which no separate activities yet exist. But the elementary state is not an explanatory principle that would allow us to draw conclusions as to the nature of later, more highly developed states, even though they must necessarily derive from it. A scientific attitude will always tend to overlook the peculiar nature of these more differentiated states in favour of their causal derivation, and will endeavour to subordinate them to a general but more elementary principle.

[100] These theoretical reflections seem to me very much in place today, when we so often find that works of art, and particularly poetry, are interpreted precisely in this manner, by reducing them to more elementary states. Though the material he works with and its individual treatment can easily be traced back to the poet’s personal relations with his parents, this does not enable us to understand his poetry. The same reduction can be made in all sorts of other fields, and not least in the case of pathological disturbances. Neuroses and psychoses are likewise reducible to infantile relations with the parents, and so are a man’s good and bad habits, his beliefs, peculiarities, passions, interests, and so forth. It can hardly be supposed that all these very different things must have exactly the same explanation, for otherwise we would be driven to the conclusion that they actually are the same thing. If a work of art is explained in the same way as a neurosis, then either the work of art is a neurosis or a neurosis is a work of art. This explanation is all very well as a play on words, but sound common sense rebels against putting a work of art on the same level as a neurosis. An analyst might, in an extreme case, view a neurosis as a work of art through the lens of his professional bias, but it would never occur to an intelligent layman to mistake a pathological phenomenon for art, in spite of the undeniable fact that a work of art arises from much the same psychological conditions as a neurosis. This is only natural, because certain of these conditions are present in every individual and, owing to the relative constancy of the human environment, are constantly the same, whether in the case of a nervous intellectual, a poet, or a normal human being. All have had parents, all have a father- or a mother-complex, all know about sex and therefore have certain common and typical human difficulties. One poet may be influenced more by his relation to his father, another by the tie to his mother, while a third shows unmistakable traces of sexual repression in his poetry.

Since all this can be said equally well not only of every neurotic but of every normal human being, nothing specific is gained for the judgment of a work of art. At most our knowledge of its psychological antecedents will have been broadened and deepened.

[101] The school of medical psychology inaugurated by Freud has undoubtedly encouraged the literary historian to bring certain peculiarities of a work of art into relation with the intimate, personal life of the poet. But this is nothing new in principle, for it has long been known that the scientific treatment of art will reveal the personal threads that the artist, intentionally or unintentionally, has woven into his work. The Freudian approach may, however, make possible a more exhaustive demonstration of the influences that reach back into earliest childhood and play their part in artistic creation. To this extent the psychoanalysis of art differs in no essential from the subtle psychological nuances of a penetrating literary analysis. The difference is at most a question of degree, though we may occasionally be surprised by indiscreet references to things which a rather more delicate touch might have passed over if only for reasons of tact. This lack of delicacy seems to be a professional peculiarity of the medical psychologist, and the temptation to draw daring conclusions easily leads to flagrant abuses. A slight whiff of scandal often leads spice to a biography, but a little more becomes a nasty inquisitiveness—bad taste masquerading as science. Our interest is insidiously deflected from the work of art and gets lost in the labyrinth of psychic determinants, the poet becomes a clinical case and, very likely, yet another addition to the curiosa of *psychopathia sexualis*. But this means that the psychoanalysis of art has turned aside from its proper objective and strayed into a province that is as broad as mankind, that is not in the least specific of the artist and has even less relevance to his art.

[102] This kind of analysis brings the work of art into the sphere of general human psychology, where many other things besides art have their origin. To explain art in these terms is just as great a platitude as the statement that “every artist is a narcissist.” Every man who pursues his own goal is a “narcissist”—though one wonders how permissible it is to give such wide currency to a term specifically coined for the pathology of neurosis. The statement therefore amounts to nothing; it merely elicits the faint surprise of a *bon mot*. Since this kind of analysis is in no way concerned with the work of art itself, but strives like a mole to bury itself in the dirt as speedily as possible, it always ends up in the common earth that unites all mankind. Hence its explanations have the same tedious monotony as the recitals which one daily hears in the consulting-room.

[103] The reductive method of Freud is a purely medical one, and the treatment is directed at a pathological or otherwise unsuitable formation which has taken the place of the normal functioning. It must therefore be broken down, and the way

cleared for healthy adaptation. In this case, reduction to the common human foundation is altogether appropriate. But when applied to a work of art it leads to the results I have described. It strips the work of art of its shimmering robes and exposes the nakedness and drabness of *Homo sapiens*, to which species the poet and artist also belong. The golden gleam of artistic creation—the original object of discussion—is extinguished as soon as we apply to it the same corrosive method which we use in analysing the fantasies of hysteria. The results are no doubt very interesting and may perhaps have the same kind of scientific value as, for instance, a post-mortem examination of the brain of Nietzsche, which might conceivably show us the particular atypical form of paralysis from which he died. But what would this have to do with *Zarathustra*? Whatever its subterranean background may have been, is it not a whole world in itself, beyond the human, all-too-human imperfections, beyond the world of migraine and cerebral atrophy?

[104] I have spoken of Freud's reductive method but have not stated in what that method consists. It is essentially a medical technique for investigating morbid psychic phenomena, and it is solely concerned with the ways and means of getting round or peering through the foreground of consciousness in order to reach the psychic background, or the unconscious. It is based on the assumption that the neurotic patient represses certain psychic contents because they are morally incompatible with his conscious values. It follows that the repressed contents must have correspondingly negative traits—infantile-sexual, obscene, or even criminal—which make them unacceptable to consciousness. Since no man is perfect, everyone must possess such a background whether he admits it or not. Hence it can always be exposed if only one uses the technique of interpretation worked out by Freud.

[105] In the short space of a lecture I cannot, of course, enter into the details of the technique. A few hints must suffice. The unconscious background does not remain inactive, but betrays itself by its characteristic effects on the contents of consciousness. For example, it produces fantasies of a peculiar nature, which can easily be interpreted as sexual images. Or it produces characteristic disturbances of the conscious processes, which again can be reduced to repressed contents. A very important source for knowledge of the unconscious contents is provided by dreams, since these are direct products of the activity of the unconscious. The essential thing in Freud's reductive method is to collect all the clues pointing to the unconscious background, and then, through the analysis and interpretation of this material, to reconstruct the elementary instinctual processes. Those conscious contents which give us a clue to the unconscious background are incorrectly called *symbols* by Freud. They are not true symbols, however, since according to his theory they have merely the role of *signs* or *symptoms* of the subliminal processes. The true symbol differs essentially from this, and should be understood as an expression of an

intuitive idea that cannot yet be formulated in any other or better way. When Plato, for instance, puts the whole problem of the theory of knowledge in his parable of the cave, or when Christ expresses the idea of the Kingdom of Heaven in parables, these are genuine and true symbols, that is, attempts to express something for which no verbal concept yet exists. If we were to interpret Plato's metaphor in Freudian terms we would naturally arrive at the uterus, and would have proved that even a mind like Plato's was still struck on a primitive level of infantile sexuality. But we would have completely overlooked what Plato actually created out of the primitive determinants of his philosophical ideas; we would have missed the essential point and merely discovered that he had infantile-sexual fantasies like any other mortal. Such a discovery could be of value only for a man who regarded Plato as superhuman, and who can now state with satisfaction that Plato too was an ordinary human being. But who would want to regard Plato as a god? Surely only one who is dominated by infantile fantasies and therefore possesses a neurotic mentality. For him the reduction to common human truths is salutary on medical grounds, but this would have nothing whatever to do with the meaning of Plato's parable.

[106] I have purposely dwelt on the application of medical psychoanalysis to works of art because I want to emphasize that the psychoanalytic method is at the same time an essential part of the Freudian doctrine. Freud himself by his rigid dogmatism has ensured that the method and the doctrine—in themselves two very different things—are regarded by the public as identical. Yet the method may be employed with beneficial results in medical cases without at the same time exalting it into a doctrine. And against this doctrine we are bound to raise vigorous objections. The assumptions it rests on are quite arbitrary. For example, neuroses are by no means exclusively caused by sexual repression, and the same holds true for psychoses. There is no foundation for saying that dreams merely contain repressed wishes whose moral incompatibility requires them to be disguised by a hypothetical dream-censor. The Freudian technique of interpretation, so far as it remains under the influence of its own one-sided and therefore erroneous hypotheses, displays a quite obvious bias.

[107] In order to do justice to a work of art, analytical psychology must rid itself entirely of medical prejudice; for a work of art is not a disease, and consequently requires a different approach from the medical one. A doctor naturally has to seek out the causes of a disease in order to pull it up by the roots, but just as naturally the psychologist must adopt exactly the opposite attitude towards a work of art. Instead of investigating its typically human determinants, he will inquire first of all into its meaning, and will concern himself with its determinants only in so far as they enable him to understand it more fully. Personal causes have as much or as little to do with a work of art as the soil with the plant that springs from it. We can certainly learn to understand some of the plant's peculiarities by getting to know its habitat, and for the

botanist this is an important part of his equipment. But nobody will maintain that everything essential has then been discovered about the plant itself. The personal orientation which the doctor needs when confronted with the question of aetiology in medicine is quite out of place in dealing with a work of art, just because a work of art is not a human being, but is something supra-personal. It is a thing and not a personality; hence it cannot be judged by personal criteria. Indeed, the special significance of a true work of art resides in the fact that it has escaped from the limitations of the personal and has soared beyond the personal concerns of its creator.

[108] I must confess from my own experience that it is not at all easy for a doctor to lay aside his professional bias when considering a work of art and look at it with a mind cleared of the current biological causality. But I have come to learn that although a psychology with a purely biological orientation can explain a good deal about man in general, it cannot be applied to a work of art and still less to man as creator. A purely causalistic psychology is only able to reduce every human individual to a member of the species *Homo sapiens*, since its range is limited to what is transmitted by heredity or derived from other sources. But a work of art is not transmitted or derived—it is a creative reorganization of those very conditions to which a causalistic psychology must always reduce it. The plant is not a mere product of the soil; it is a living, self-contained process which in essence has nothing to do with the character of the soil. In the same way, the meaning and individual quality of a work of art inhere within it and not in its extrinsic determinants. One might almost describe it as a living being that uses man only as a nutrient medium, employing his capacities according to its own laws and shaping itself to the fulfilment of its own creative purpose.

[109] But here I am anticipating somewhat, for I have in mind a particular type of art which I still have to introduce. Not every work of art originates in the way I have just described. There are literary works, prose as well as poetry, that spring wholly from the author's intention to produce a particular result. He submits his material to a definite treatment with a definite aim in view; he adds to it and subtracts from it, emphasizing one effect, toning down another, laying on a touch of colour here, another there, all the time carefully considering the over-all result and paying strict attention to the laws of form and style. He exercises the keenest judgment and chooses his words with complete freedom. His material is entirely subordinated to his artistic purpose; he wants to express this and nothing else. He is wholly at one with the creative process, no matter whether he has deliberately made himself its spearhead, as it were, or whether it has made him its instrument so completely that he has lost all consciousness of this fact. In either case, the artist is so identified with his work that his intentions and his faculties are indistinguishable from the act of creation itself. There is no need, I think, to give examples of this from the history of literature or from the testimony of the artists themselves.

[110] Nor need I cite examples of the other class of works which flow more or less complete and perfect from the author's pen. They come as it were fully arrayed into the world, as Pallas Athene sprang from the head of Zeus. These works positively force themselves upon the author; his hand is seized, his pen writes things that his mind contemplates with amazement. The work brings with it its own form; anything he wants to add is rejected, and what he himself would like to reject is thrust back at him. While his conscious mind stands amazed and empty before this phenomenon, he is overwhelmed by a flood of thoughts and images which he never intended to create and which his own will could never have brought into being. Yet in spite of himself he is forced to admit that it is his own self speaking, his own inner nature revealing itself and uttering things which he would never have entrusted to his tongue. He can only obey the apparently alien impulse within him and follow where it leads, sensing that his work is greater than himself, and wields a power which is not his and which he cannot command. Here the artist is not identical with the process of creation; he is aware that he is subordinate to his work or stands outside it, as though he were a second person; or as though a person other than himself had fallen within the magic circle of an alien will.

[111] So when we discuss the psychology of art, we must bear in mind these two entirely different modes of creation, for much that is of the greatest importance in judging a work of art depends on this distinction. It is one that had been sensed earlier by Schiller, who as we know attempted to classify it in his concept of the *sentimental* and the *naïve*. The psychologist would call "sentimental" art *introverted* and the "naïve" kind *extraverted*. The introverted attitude is characterized by the subject's assertion of his conscious intentions and aims against the demands of the object, whereas the extraverted attitude is characterized by the subject's subordination to the demands which the object makes upon him. In my view, Schiller's plays and most of his poems give one a good idea of the introverted attitude: the material is mastered by the conscious intentions of the poet. The extraverted attitude is illustrated by the second part of *Faust*: here the material is distinguished by its refractoriness. A still more striking example is Nietzsche's *Zarathustra*, where the author himself observed how "one became two."

[112] From what I have said, it will be apparent that a shift of psychological standpoint has taken place as soon as one speaks not of the poet as a person but of the creative process that moves him. When the focus of interest shifts to the latter, the poet comes into the picture only as a reacting subject. This is immediately evident in our second category of works, where the consciousness of the poet is not identical with the creative process. But in works of the first category the opposite appears to hold true. Here the poet appears to be the creative process itself, and to create of his own free will without the slightest feeling of compulsion. He may even be fully convinced of

his freedom of action and refuse to admit that his work could be anything else than the expression of his will and ability.

[113] Here we are faced with a question which we cannot answer from the testimony of the poets themselves. It is really a scientific problem that psychology alone can solve. As I hinted earlier, it might well be that the poet, while apparently creating out of himself and producing what he consciously intends, is nevertheless so carried away by the creative impulse that he is no longer aware of an “alien” will, just as the other type of poet is no longer aware of his own will speaking to him in the apparently “alien” inspiration, although this is manifestly the voice of his own self. The poet’s conviction that he is creating in absolute freedom would then be an illusion: he fancies he is swimming, but in reality an unseen current sweeps him along.

[114] This is not by any means an academic question, but is supported by the evidence of analytical psychology. Researches have shown that there are all sorts of ways in which the conscious mind is not only influenced by the unconscious but actually guided by it. Yet is there any evidence for the supposition that a poet, despite his self-awareness, may be taken captive by his work? The proof may be of two kinds, direct or indirect. Direct proof would be afforded by a poet who thinks he knows what he is saying but actually says more than he is aware of. Such cases are not uncommon. Indirect proof would be found in cases where behind the apparent free will of the poet there stands a higher imperative that renews its peremptory demands as soon as the poet voluntarily gives up his creative activity, or that produces psychic complications whenever his work has to be broken off against his will.

[115] Analysis of artists consistently shows not only the strength of the creative impulse arising from the unconscious, but also its capricious and wilful character. The biographies of great artists make it abundantly clear that the creative urge is often so imperious that it battens on their humanity and yokes everything to the service of the work, even at the cost of health and ordinary human happiness. The unborn work in the psyche of the artist is a force of nature that achieves its end either with tyrannical might or with the subtle cunning of nature herself, quite regardless of the personal fate of the man who is its vehicle. The creative urge lives and grows in him like a tree in the earth from which it draws its nourishment. We would do well, therefore, to think of the creative process as a living thing implanted in the human psyche. In the language of analytical psychology this living thing is an *autonomous complex*. It is a split-off portion of the psyche, which leads a life of its own outside the hierarchy of consciousness. Depending on its energy charge, it may appear either as a mere disturbance of conscious activities or as a supraordinate authority which can harness the ego to its purpose. Accordingly, the poet who identifies with the creative process would be one who acquiesces from the start when the unconscious imperative begins

to function. But the other poet, who feels the creative force as something alien, is one who for various reasons cannot acquiesce and is thus caught unawares.

[116] It might be expected that this difference in its origins would be perceptible in a work of art. For in the one case it is a conscious product shaped and designed to have the effect intended. But in the other we are dealing with an event originating in unconscious nature; with something that achieves its aim without the assistance of human consciousness, and often defies it by wilfully insisting on its own form and effect. We would therefore expect that works belonging to the first class would nowhere overstep the limits of comprehension, that their effect would be bounded by the author's intention and would not extend beyond it. But with works of the other class we would have to be prepared for something suprapersonal that transcends our understanding to the same degree that the author's consciousness was in abeyance during the process of creation. We would expect a strangeness of form and content, thoughts that can only be apprehended intuitively, a language pregnant with meanings, and images that are true symbols because they are the best possible expressions for something unknown—bridges thrown out towards an unseen shore.

[117] These criteria are, by and large, corroborated in practice. Whenever we are confronted with a work that was consciously planned and with material that was consciously selected, we find that it agrees with the first class of qualities, and in the other case with the second. The example we gave of Schiller's plays, on the one hand, and *Faust II* on the other, or better still *Zarathustra*, is an illustration of this. But I would not undertake to place the work of an unknown poet in either of these categories without first having examined rather closely his personal relations with his work. It is not enough to know whether the poet belongs to the introverted or to the extraverted type, since it is possible for either type to work with an introverted attitude at one time, and an extraverted attitude at another. This is particularly noticeable in the difference between Schiller's plays and his philosophical writings, between Goethe's perfectly formed poems and the obvious struggle with his material in *Faust II*, and between Nietzsche's well-turned aphorisms and the rushing torrent of *Zarathustra*. The same poet can adopt different attitudes to his work at different times, and on this depends the standard we have to apply.

[118] The question, as we now see, is exceedingly complicated, and the complication grows even worse when we consider the case of the poet who identifies with the creative process. For should it turn out that the apparently conscious and purposeful manner of composition is a subjective illusion of the poet, then his work would possess symbolic qualities that are outside the range of his consciousness. They would only be more difficult to detect, because the reader as well would be unable to get beyond the bounds of the poet's consciousness which are fixed by the spirit of the time. There is no Archimedean point outside his world by which he could lift his

time-bound consciousness off its hinges and recognize the symbols hidden in the poet's work. For a symbol is the intimation of a meaning beyond the level of our present powers of comprehension.

[119] I raise this question only because I do not want my typological classification to limit the possible significance of works of art which apparently mean no more than what they say. But we have often found that a poet who has gone out of fashion is suddenly rediscovered. This happens when our conscious development has reached a higher level from which the poet can tell us something new. It was always present in his work but was hidden in a symbol, and only a renewal of the spirit of the time permits us to read its meaning. It needed to be looked at with fresher eyes, for the old ones could see in it only what they were accustomed to see. Experiences of this kind should make us cautious, as they bear out my earlier argument. But works that are openly symbolic do not require this subtle approach; their pregnant language cries out at us that they mean more than they say. We can put our finger on the symbol at once, even though we may not be able to unriddle its meaning to our entire satisfaction. A symbol remains a perpetual challenge to our thoughts and feelings. That probably explains why a symbolic work is so stimulating, why it grips us so intensely, but also why it seldom affords us a purely aesthetic enjoyment. A work that is manifestly not symbolic appeals much more to our aesthetic sensibility because it is complete in itself and fulfils its purpose.

[120] What then, you may ask, can analytical psychology contribute to our fundamental problem, which is the mystery of artistic creation? All that we have said so far has to do only with the psychological phenomenology of art. Since nobody can penetrate to the heart of nature, you will not expect psychology to do the impossible and offer a valid explanation of the secret of creativity. Like every other science, psychology has only a modest contribution to make towards a deeper understanding of the phenomena of life, and is no nearer than its sister sciences to absolute knowledge.

[121] We have talked so much about the meaning of works of art that one can hardly suppress a doubt as to whether art really "means" anything at all. Perhaps art has no "meaning," at least not as we understand meaning. Perhaps it is like nature, which simply *is* and "means" nothing beyond that. Is "meaning" necessarily more than mere interpretation—an interpretation secreted into something by an intellect hungry for meaning? Art, it has been said, is beauty, and "a thing of beauty is a joy for ever." It needs no meaning, for meaning has nothing to do with art. Within the sphere of art, I must accept the truth of this statement. But when I speak of the relation of psychology to art we are outside its sphere, and it is impossible for us not to speculate. We must interpret, we must find meanings in things, otherwise we would be quite unable to think about them. We have to break down life and events, which are self-contained processes, into meanings, images, concepts, well knowing that in

doing so we are getting further away from the living mystery. As long as we ourselves are caught up in the process of creation, we neither see nor understand; indeed we ought not to understand, for nothing is more injurious to immediate experience than cognition. But for the purpose of cognitive understanding we must detach ourselves from the creative process and look at it from the outside; only then does it become an image that expresses what we are bound to call "meaning." What was a mere phenomenon before becomes something that in association with other phenomena has meaning, that has a definite role to play, serves certain ends, and exerts meaningful effects. And when we have seen all this we get the feeling of having understood and explained something. In this way we meet the demands of science.

[122] When, a little earlier, we spoke of a work of art as a tree growing out of the nourishing soil, we might equally well have compared it to a child growing in the womb. But as all comparisons are lame, let us stick to the more precise terminology of science. You will remember that I described the nascent work in the psyche of the artist as an autonomous complex. By this we mean a psychic formation that remains subliminal until its energy-charge is sufficient to carry it over the threshold into consciousness. Its association with consciousness does not mean that it is assimilated, only that it is perceived; but it is not subject to conscious control, and can be neither inhibited nor voluntarily reproduced. Therein lies the autonomy of the complex: it appears and disappears in accordance with its own inherent tendencies, independently of the conscious will. The creative complex shares this peculiarity with every other autonomous complex. In this respect it offers an analogy with pathological processes, since these too are characterized by the presence of autonomous complexes, particularly in the case of mental disturbances. The divine frenzy of the artist comes perilously close to a pathological state, though the two things are not identical. The *tertium comparationis* is the autonomous complex. But the presence of autonomous complexes is not in itself pathological, since normal people, too, fall temporarily or permanently under their domination. This fact is simply one of the normal peculiarities of the psyche, and for a man to be unaware of the existence of an autonomous complex merely betrays a high degree of unconsciousness. Every typical attitude that is to some extent differentiated shows a tendency to become an autonomous complex, and in most cases it actually does. Again, every instinct has more or less the character of an autonomous complex. In itself, therefore, an autonomous complex has nothing morbid about it; only when its manifestations are frequent and disturbing is it a symptom of illness.

[123] How does an autonomous complex arise? For reasons which we cannot go into here, a hitherto unconscious portion of the psyche is thrown into activity, and gains ground by activating the adjacent areas of association. The energy needed for this is

naturally drawn from consciousness—unless the latter happens to identify with the complex. But where this does not occur, the drain of energy produces what Janet calls an *abaissement du niveau mental*. The intensity of conscious interests and activities gradually diminishes, leading either to apathy—a condition very common with artists—or to a regressive development of the conscious functions, that is, they revert to an infantile and archaic level and undergo something like a degeneration. The “inferior parts of the functions,” as Janet calls them, push to the fore; the instinctual side of the personality prevails over the ethical, the infantile over the mature, and the unadapted over the adapted. This too is something we see in the lives of many artists. The autonomous complex thus develops by using the energy that has been withdrawn from the conscious control of the personality.

[124] But in what does an autonomous *creative* complex consist? Of this we can know next to nothing so long as the artist’s work affords us no insight into its foundations. The work presents us with a finished picture, and this picture is amenable to analysis only to the extent that we can recognize it as a symbol. But if we are unable to discover any symbolic value in it, we have merely established that, so far as we are concerned, it means no more than what it says, or to put it another way, that it *is* no more than what it *seems* to be. I use the word “seems” because our own bias may prevent a deeper appreciation of it. At any rate we can find no incentive and no starting-point for an analysis. But in the case of a symbolic work we should remember the dictum of Gerhard Hauptmann: “Poetry evokes out of words the resonance of the primordial word.” The question we should ask, therefore, is: “What primordial image lies behind the imagery of art?”

[125] This question needs a little elucidation. I am assuming that the work of art we propose to analyse, as well as being symbolic, has its source not in the *personal unconscious* of the poet, but in a sphere of unconscious mythology whose primordial images are the common heritage of mankind. I have called this sphere the *collective unconscious*, to distinguish it from the personal unconscious. The latter I regard as the sum total of all those psychic processes and contents which are capable of becoming conscious and often do, but are then suppressed because of their incompatibility and kept subliminal. Art receives tributaries from this sphere too, but muddy ones; and their predominance, far from making a work of art a symbol, merely turns it into a symptom. We can leave this kind of art without injury and without regret to the purgative methods employed by Freud.

[126] In contrast to the personal unconscious, which is a relatively thin layer immediately below the threshold of consciousness, the collective unconscious shows no tendency to become conscious under normal conditions, nor can it be brought back to recollection by any analytical technique,² since it was never repressed or forgotten. The collective unconscious is not to be thought of as a self-subsistent

entity; it is no more than a potentiality handed down to us from primordial times in the specific form of mnemonic images³ or inherited in the anatomical structure of the brain. There are no inborn ideas, but there are inborn possibilities of ideas that set bounds to even the boldest fantasy and keep our fantasy activity within certain categories: *a priori* ideas, as it were, the existence of which cannot be ascertained except from their effects. They appear only in the shaped material of art as the regulative principles that shape it; that is to say, only by inferences drawn from the finished work can we reconstruct the age-old original⁴ of the primordial image.

[127] The primordial image, or archetype, is a figure—be it a daemon, a human being, or a process—that constantly recurs in the course of history and appears wherever creative fantasy is freely expressed. Essentially, therefore, it is a mythological figure. When we examine these images more closely, we find that they give form to countless typical experiences of our ancestors. They are, so to speak, the psychic residua of innumerable experiences of the same type. They present a picture of psychic life in the average, divided up and projected into the manifold figures of the mythological pantheon. But the mythological figures are themselves products of creative fantasy and still have to be translated into conceptual language. Only the beginnings of such a language exist, but once the necessary concepts are created they could give us an abstract, scientific understanding of the unconscious processes that lie at the roots of the primordial images. In each of these images there is a little piece of human psychology and human fate, a remnant of the joys and sorrows that have been repeated countless times in our ancestral history, and on the average follow ever the same course. It is like a deeply graven river-bed in the psyche, in which the waters of life, instead of flowing along as before in a broad but shallow stream, suddenly swell into a mighty river. This happens whenever that particular set of circumstances is encountered which over long periods of time has helped to lay down the primordial image.

[128] The moment when this mythological situation reappears is always characterized by a peculiar emotional intensity; it is as though chords in us were struck that had never resounded before, or as though forces whose existence we never suspected were unloosed. What makes the struggle for adaptation so laborious is the fact that we have constantly to be dealing with individual and atypical situations. So it is not surprising that when an archetypal situation occurs we suddenly feel an extraordinary sense of release, as though transported, or caught up by an overwhelming power. At such moments we are no longer individuals, but the race; the voice of all mankind resounds in us. The individual man cannot use his powers to the full unless he is aided by one of those collective representations we call ideals, which releases all the hidden forces of instinct that are inaccessible to his conscious will. The most effective ideals are always fairly obvious variants of an archetype, as is evident from

the fact that they lend themselves to allegory. The ideal of the “mother country,” for instance, is an obvious allegory of the mother, as is the “fatherland” of the father. Its power to stir us does not derive from the allegory, but from the symbolical value of our native land. The archetype here is the *participation mystique* of primitive man with the soil on which he dwells, and which contains the spirits of his ancestors.

[129] The impact of an archetype, whether it takes the form of immediate experience or is expressed through the spoken word, stirs us because it summons up a voice that is stronger than our own. Whoever speaks in primordial images speaks with a thousand voices; he enthral and overpowers, while at the same time he lifts the idea he is seeking to express out of the occasional and the transitory into the realm of the ever-enduring. He transmutes our personal destiny into the destiny of mankind, and evokes in us all those beneficent forces that ever and anon have enabled humanity to find a refuge from every peril and to outlive the longest night.

[130] That is the secret of great art, and of its effect upon us. The creative process, so far as we are able to follow it at all, consists in the unconscious activation of an archetypal image, and in elaborating and shaping this image into the finished work. By giving it shape, the artist translates it into the language of the present, and so makes it possible for us to find our way back to the deepest springs of life. Therein lies the social significance of art: it is constantly at work educating the spirit of the age, conjuring up the forms in which the age is most lacking. The unsatisfied yearning of the artist reaches back to the primordial image in the unconscious which is best fitted to compensate the inadequacy and one-sidedness of the present. The artist seizes on this image, and in raising it from deepest unconsciousness he brings it into relation with conscious values, thereby transforming it until it can be accepted by the minds of his contemporaries according to their powers.

[131] Peoples and times, like individuals, have their own characteristic tendencies and attitudes. The very word “attitude” betrays the necessary bias that every marked tendency entails. Direction implies exclusion, and exclusion means that very many psychic elements that could play their part in life are denied the right to exist because they are incompatible with the general attitude. The normal man can follow the general trend without injury to himself; but the man who takes to the back streets and alleys because he cannot endure the broad highway will be the first to discover the psychic elements that are waiting to play their part in the life of the collective. Here the artist’s relative lack of adaptation turns out to his advantage; it enables him to follow his own yearnings far from the beaten path, and to discover what it is that would meet the unconscious needs of his age. Thus, just as the one-sidedness of the individual’s conscious attitude is corrected by reactions from the unconscious, so art represents a process of self-regulation in the life of nations and epochs.

[32] I am aware that in this lecture I have only been able to sketch out my views in the barest outline. But I hope that what I have been obliged to omit, that is to say their practical application to poetic works of art, has been furnished by your own thoughts, thus giving flesh and blood to my abstract intellectual frame.

PSYCHOLOGY AND LITERATURE¹

Introduction

Psychology, which once eked out a modest existence in a small and highly academic backroom, has, in fulfilment of Nietzsche's prophecy, developed in the last few decades into an object of public interest which has burst the framework assigned to it by the universities. In the form of psychotechnics it makes its voice heard in industry, in the form of psychotherapy it has invaded wide areas of medicine, in the form of philosophy it has carried forward the legacy of Schopenhauer and von Hartmann, it has quite literally rediscovered Bachofen and Carus, through its mythology and the psychology of primitives have acquired a new focus of interest, it will revolutionize the science of comparative religion, and not a few theologians want to apply it even to the cure of souls. Will Nietzsche be proved right in the end with his "scientia ancilla psychologiae"?

At present, unfortunately, this encroaching advance of psychology is still a welter of chaotic cross-currents, each of the conflicting schools attempting to cover up the confusion by an all the more vociferous dogmatism and a fanatical defence of its own standpoint. Equally onesided are the attempts to open up all these different areas of knowledge and life to psychological research. Onesidedness and rigidity of principle are, however, the childish errors of every young science that has to perform pioneer work with but few intellectual tools. Despite all [my] tolerance and realization of the necessity of doctrinal opinions of various kinds, I have never wearied of emphasizing that onesidedness and dogmatism harbour in themselves the gravest dangers precisely in the domain of psychology. The psychologist should constantly bear in mind that his hypothesis is no more at first than the expression of his own subjective premise and can therefore never lay immediate claim to general validity. What the individual researcher has to contribute in explanation of any one of the countless aspects of the psyche is merely a point of view, and it would be doing the grossest violence to the object of research if he tried to make this one point of view into a generally binding truth. The phenomenology of the psyche is so colourful, so variegated in form and meaning, that we cannot possibly reflect all its riches in *one* mirror. Nor in our description of it can we ever embrace the whole, but must be content to shed light only on single parts of the total phenomenon.

Since it is a characteristic of the psyche not only to be the source of all productivity but, more especially, to express itself in all the activities and achievements of the human mind, we can nowhere grasp the nature of the psyche *per*

se but can meet it only in its various manifestations. The psychologist is therefore obliged to make himself familiar with a wide range of subjects, not out of presumption and inquisitiveness but rather from love of knowledge, and for this purpose he must abandon his thickly walled specialist fortress and set out on the quest for truth. He will not succeed in banishing the psyche to the confines of the laboratory or of the consulting room, but must follow it through all those realms where its visible manifestations are to be found, however strange they may be to him.

Thus it comes that I, unperturbed by the fact that I am by profession a doctor, speak to you today as a psychologist about the poetic imagination, although this constitutes the proper province of literary science and of aesthetics. On the other hand, it is also a psychic phenomenon, and as such it probably must be taken into account by the psychologist. In so doing I shall not encroach on the territory either of the literary historian or of the aesthetician, for nothing is further from my intentions than to replace their points of view by psychological ones. Indeed, I would be making myself guilty of that same sin of onesidedness which I have just censured. Nor shall I presume to put before you a complete theory of poetic creativity, as that would be altogether impossible for me. My observations should be taken as nothing more than points of view by which a psychological approach to poetry might be oriented in a general way.

[133] It is obvious enough that psychology, being a study of psychic processes, can be brought to bear on the study of literature, for the human psyche is the womb of all the arts and sciences. The investigation of the psyche should therefore be able on the one hand to explain the psychological structure of a work of art, and on the other to reveal the factors that make a person artistically creative. The psychologist is thus faced with two separate and distinct tasks, and must approach them in radically different ways.

[134] In the case of a work of art we are confronted with a product of complicated psychic activities—but a product that is apparently intentional and consciously shaped. In the case of the artist we must deal with the psychic apparatus itself. In the first instance the object of analysis and interpretation is a concrete artistic achievement, while in the second it is the creative human being as a unique personality. Although these two objects are intimately related and even interdependent, neither of them can explain the other. It is of course possible to draw inferences about the artist from the work of art, and *vice versa*, but these inferences are never conclusive. At best they are probably surmises or lucky guesses. A knowledge of Goethe's particular relation to his mother throws some light on Faust's exclamation: "The mothers, the mothers, how eerily it sounds!" But it does not enable us to see how the attachment to his mother could produce the *Faust* drama itself, however deeply we sense the importance of this relationship for Goethe the

man from the many telltale traces it has left behind in his work. Nor are we more successful in reasoning in the reverse direction. There is nothing in *The Ring of the Nibelungs* that would lead us to discern or to infer the fact that Wagner had a tendency towards transvestism, even though a secret connection does exist between the heroics of the Nibelungs and a certain pathological effeminacy in the man Wagner. The personal psychology of the artist may explain many aspects of his work, but not the work itself. And if ever it did explain his work successfully, the artist's creativity would be revealed as a mere symptom. This would be detrimental both to the work of art and to its repute.

[135] The present state of psychological knowledge does not allow us to establish those rigorous causal connections in the realm of art which we would expect a science to do. Psychology, after all, is the newest of the sciences. It is only in the realm of the psychophysical instincts and reflexes that we can confidently operate with the concept of causality. From the point where true psychic life begins—that is, at a level of greater complexity—the psychologist must content himself with widely ranging descriptions of psychic processes, and with portraying as vividly as he can the warp and woof of the mind in all its amazing intricacy. At the same time, he should refrain from calling any one of these processes “necessary” in the sense that it is causally determined. If the psychologist were able to demonstrate definite causalities in a work of art and in the process of artistic creation, he would leave aesthetics no ground to stand on and would reduce it to a special branch of his own science. Although he should never abandon his claim to investigate and establish the causality of complex psychic processes—to do so would be to deny psychology the right to exist—he will never be able to make good this claim in the fullest sense, because the creative urge which finds its clearest expression in art is irrational and will in the end make a mock of all our rationalistic undertakings. All conscious psychic processes may well be causally explicable; but the creative act, being rooted in the immensity of the unconscious, will forever elude our attempts at understanding. It describes itself only in its manifestations; it can be guessed at, but never wholly grasped. Psychology and aesthetics will always have to turn to one another for help, and the one will not invalidate the other. It is an important principle of psychology that any given psychic material can be shown to derive from causal antecedents; it is a principle of aesthetics that a psychic product can be regarded as existing in and for itself. Whether the work of art or the artist himself is in question, both principles are valid in spite of their relativity.

1. *The Work of Art*

[136] There is a fundamental difference of attitude between the psychologist's approach to a literary work and that of a literary critic. What is of decisive importance and

value for the latter may be quite irrelevant for the former. Indeed, literary products of highly dubious merit are often of the greatest interest to the psychologist. The so-called “psychological novel” is by no means as rewarding for the psychologist as the literary-minded suppose. Considered as a self-contained whole, such a novel explains itself. It has done its own work of psychological interpretation, and the psychologist can at most criticize or enlarge upon this.

[137] In general, it is the non-psychological novel that offers the richest opportunities for psychological elucidation. Here the author, having no intentions of this sort, does not show his characters in a psychological light and thus leaves room for analysis and interpretation, or even invites it by his unprejudiced mode of presentation. Good examples of such novels are those of Benoît, or English fiction after the manner of Rider Haggard, as well as that most popular article of literary mass-production, the detective story, first exploited by Conan Doyle. I would also include Melville’s *Moby Dick*, which I consider to be the greatest American novel, in this broad class of writings. An exciting narrative that is apparently quite devoid of psychological intentions is just what interests the psychologist most of all. Such a tale is constructed against a background of unspoken psychological assumptions, and the more unconscious the author is of them, the more this background reveals itself in unalloyed purity to the discerning eye. In the psychological novel, on the other hand, the author himself makes the attempt to raise the raw material of his work into the sphere of psychological discussion, but instead of illuminating it he merely succeeds in obscuring the psychic background. It is from novels of this sort that the layman gets his “psychology”; whereas novels of the first kind require the psychologist to give them a deeper meaning.

[138] I have been speaking in terms of the novel, but what I am discussing is a psychological principle which is not restricted to this form of literature. We meet with it also in poetry, and in *Faust* it is so obvious that it divides the first part from the second. The love-tragedy of Gretchen is self-explanatory; there is nothing the psychologist can add to it that has not already been said in better words by the poet. But the second part cries out for interpretation. The prodigious richness of the imaginative material has so overtaxed, or outstripped, the poet’s powers of expression that nothing explains itself any more and every line only makes the reader’s need of an interpretation more apparent. *Faust* is perhaps the best illustration of these two extremes in the psychology of art.

[139] For the sake of clarity I would like to call the one mode of artistic creation *psychological*,² and the other *visionary*. The psychological mode works with materials drawn from man’s conscious life—with crucial experiences, powerful emotions, suffering, passion, the stuff of human fate in general. All this is assimilated by the psyche of the poet, raised from the commonplace to the level of poetic

experience, and expressed with a power of conviction that gives us a greater depth of human insight by making us vividly aware of those everyday happenings which we tend to evade or to overlook because we perceive them only dully or with a feeling of discomfort. The raw material of this kind of creation is derived from the contents of man's consciousness, from his eternally repeated joys and sorrows, but clarified and transfigured by the poet. There is no work left for the psychologist to do—unless perhaps we expect him to explain why Faust fell in love with Gretchen, or why Gretchen was driven to murder her child. Such themes constitute the lot of humankind; they are repeated millions of times and account for the hideous monotony of the police court and the penal code. No obscurity surrounds them, for they fully explain themselves in their own terms.

[140] Countless literary products belong to this class: all the novels dealing with love, the family milieu, crime and society, together with didactic poetry, the greater number of lyrics, and drama both tragic and comic. Whatever artistic form they may take, their contents always derive from the sphere of conscious human experience—from the psychic foreground of life, we might say. That is why I call this mode of creation “psychological”; it remains within the limits of the psychologically intelligible. Everything it embraces—the experience as well as its artistic expression—belongs to the realm of a clearly understandable psychology. Even the psychic raw material, the experiences themselves, have nothing strange about them; on the contrary, they have been known from the beginning of time—passion and its fated outcome, human destiny and its sufferings, eternal nature with its beauty and horror.

[141] The gulf that separates the first from the second part of *Faust* marks the difference between the psychological and the visionary modes of artistic creation. Here everything is reversed. The experience that furnishes the material for artistic expression is no longer familiar. It is something strange that derives its existence from the hinterland of man's mind, as if it had emerged from the abyss of prehuman ages, or from a superhuman world of contrasting light and darkness. It is a primordial experience which surpasses man's understanding and to which in his weakness he may easily succumb. The very enormity of the experience gives it its value and its shattering impact. Sublime, pregnant with meaning, yet chilling the blood with its strangeness, it arises from timeless depths; glamorous, daemonic, and grotesque, it bursts asunder our human standards of value and aesthetic form, a terrifying tangle of eternal chaos, a *crimen laesae majestatis humanae*. On the other hand, it can be a revelation whose heights and depths are beyond our fathoming, or a vision of beauty which we can never put into words. This disturbing spectacle of some tremendous process that in every way transcends our human feeling and understanding makes quite other demands upon the powers of the artist than do the experiences of the foreground of life. These never rend the curtain that veils the cosmos; they do not

exceed the bounds of our human capacities, and for this reason they are more readily shaped to the demands of art, however shattering they may be for the individual. But the primordial experiences rend from top to bottom the curtain upon which is painted the picture of an ordered world, and allow a glimpse into the unfathomable abyss of the unborn and of things yet to be. Is it a vision of other worlds, or of the darkneses of the spirit, or of the primal beginnings of the human psyche? We cannot say that it is any or none of these.

Formation, transformation.

Eternal Mind's eternal recreation.

[142] We find such a vision in the *Shepherd of Hermas*, in Dante, in the second part of *Faust*, in Nietzsche's Dionysian experience,³ in Wagner's *Ring*, *Tristan*, *Parsifal*, in Spitteler's *Olympian Spring*, in William Blake's paintings and poetry, in the *Hypnerotomachia* of the monk Francesco Colonna,⁴ in Jacob Boehme's poetic-philosophic stammerings,⁵ and in the magnificent but scurrilous imagery of E. T. A. Hoffmann's tale *The Golden Bowl*.⁶ In more restricted and succinct form, this primordial experience is the essential content of Rider Haggard's *She* and *Ayesha*, of Benoît's *L'Atlantide*, of Alfred Kubin's *Die andere Seite*, of Meyrink's *Das grüne Gesicht*, of Goetz's *Das Reich ohne Raum*, and of Barlach's *Der tote Tag*. The list might be greatly extended.

[143] In dealing with the psychological mode of creation, we need never ask ourselves what the material consists of or what it means. But this question forces itself upon us when we turn to the visionary mode. We are astonished, confused, bewildered, put on our guard or even repelled;⁷ we demand commentaries and explanations. We are reminded of nothing in everyday life, but rather of dreams, night-time fears, and the dark, uncanny recesses of the human mind. The public for the most part repudiates this kind of literature, unless it is crudely sensational, and even the literary critic finds it embarrassing. It is true that Dante and Wagner have made his task somewhat easier for him by disguising the visionary experience in a cloak of historical or mythical events, which are then erroneously taken to be the real subject-matter. In both cases the compelling power and deeper meaning of the work do not lie in the historical or mythical material, but in the visionary experience it serves to express. Rider Haggard, pardonably enough, is generally regarded as a romantic story-teller, but in his case too the tale is only a means—admittedly a rather lush one—for capturing a meaningful content.

[144] It is strange that a deep darkness surrounds the sources of the visionary material. This is the exact opposite of what we find in the psychological mode of creation, and we are led to suspect that this obscurity is not unintentional. We are naturally inclined to suppose, under the influence of Freudian psychology, that some highly personal

experiences must lie behind all this phantasmagoric darkness, which would help to explain that strange vision of chaos, and why it sometimes seems as if the poet were intentionally concealing the source of his experience. From here it is only a step to the conjecture that this kind of art is pathological and neurotic, but a step that is justified in so far as the visionary material exhibits peculiarities which are observed in the fantasies of the insane. Conversely, psychotic products often contain a wealth of meaning such as is ordinarily found only in the works of a genius. One will naturally feel tempted to regard the whole phenomenon from the standpoint of pathology and to explain the strange images as substitute figures and attempts at concealment. It is easy enough to suppose that an intimate personal experience underlies the “primordial vision,” an experience that cannot be reconciled with morality. It may, for instance, have been a love affair that seemed morally or aesthetically incompatible with the personality as a whole or with the poet’s fictitious view of himself. His ego then sought to repress this experience altogether, or at least its salient features, and make it unrecognizable, i.e., unconscious. For this purpose the whole arsenal of pathological fantasy is called into play, and because this manoeuvre is bound to be unsatisfactory, it has to be repeated in an almost endless series of fictions. This would account for the proliferation of monstrous, daemonic, grotesque, and perverse figures, which all act as substitutes for the “unacceptable” reality and at the same time conceal it.

[145] Such a view of the poet’s psychology has aroused considerable attention and is the only theoretical attempt that has been made so far to give a “scientific” explanation of the sources of visionary material. If I now put forward my own view, I do so because I assume it is not so well-known, and is less understood, than the one I have just described.

[146] The reduction of the vision to a personal experience makes it something unreal and unauthentic—a mere substitute, as we have said. The vision thus loses its primordial quality and becomes nothing but a symptom; the teeming chaos shrinks to the proportions of a psychic disturbance. We feel reassured by this explanation, and turn back to our picture of a well-ordered cosmos. As practical and reasonable human beings, we never expected it to be perfect; we accept these unavoidable imperfections which we call abnormalities and diseases, and take it for granted that human nature is not exempt from them. The frightening revelation of abysses that defy human understanding is dismissed as illusion, and the poet is regarded as the victim and perpetrator of deception. His primordial experience was “human, all too human,” so much so that he could not face it and had to conceal its meaning from himself.

[147] We should do well, I think, to bear clearly in mind the full consequences of this reduction of art to personal factors, and see where it leads. The truth is that it deflects our attention from the psychology of the work of art and focuses it on the psychology

of the artist. The latter presents a problem that cannot be denied, but the work of art exists in its own right and cannot be got rid of by changing it into a personal complex. As to what it means to the artist, whether it is just a game, or a mask, or a source of suffering, or a positive achievement, these are questions which we shall discuss in the next section. Our task for the moment is to interpret the work of art psychologically, and to do this we must take its foundation—the primordial experience—as seriously as we do the experiences underlying personalistic art, which no one doubts are real and important. It is certainly much more difficult to believe that a visionary experience can be real, for it has all the appearance of something that does not fall to the ordinary lot of man. It has about it a fatal suggestion of vague metaphysics, so that we feel obliged to intervene in the name of well-intentioned reasonableness. We are driven to the conclusion that such things simply cannot be taken seriously, or else the world would sink back into benighted superstition. Anyone who does not have distinct leanings towards the occult will be inclined to dismiss visionary experiences as “lively fantasy” or “poetic licence.” The poets themselves contribute to this by putting a wholesome distance between themselves and their work. Spitteler, for example, maintained that his *Olympian Spring* “meant” nothing, and that he could just as well have sung: “May is come, tra-la-la-la-la!” Poets are human too, and what they say about their work is often far from being the best word on the subject. It seems as if we have to defend the seriousness of the visionary experience against the personal resistance of the poet himself.

[148] In the *Shepherd of Hermas*, the *Divine Comedy*, and *Faust*, we catch echoes of a preliminary love-episode which culminates in a visionary experience. There is no ground for the assumption that the normal, human experience in the first part of *Faust* is repudiated or concealed in the second, or that Goethe was normal at the time when he wrote [Part I](#) but in a neurotic state of mind when he wrote [Part II](#). These three works cover a period of nearly two thousand years, and in each of them we find the undisguised personal love-episode not only connected with the weightier visionary experience but actually subordinated to it. This testimony is significant, for it shows that in the work of art (irrespective of the personal psychology of the poet) the vision represents a deeper and more impressive experience than human passion. In works of art of this nature—and we must never confuse them with the artist as a person—it cannot be doubted that the vision is a genuine primordial experience, no matter what the rationalists may say. It is not something derived or secondary, it is not symptomatic of something else, it is a true symbol—that is, an expression for something real but unknown. The love-episode is a real experience really suffered, and so is the vision. It is not for us to say whether its content is of a physical, psychic, or metaphysical nature. In itself it had psychic reality, and this is no less real than

physical reality. Human passion falls within the sphere of conscious experience, while the object of the vision lies beyond it. Through our senses we experience the known, but our intuitions point to things that are unknown and hidden, that by their very nature are secret. If ever they become conscious, they are intentionally kept secret and concealed for which reason they have been regarded from earliest times as mysterious, uncanny, and deceptive. They are hidden from man, and he hides himself from them out of religious awe, protecting himself with the shield of science and reason. The ordered cosmos he believes in by day is meant to protect him from the fear of chaos that besets him by night—his enlightenment is born of night-fears! What if there were a living agency beyond our everyday human world—something even more purposeful than electrons? Do we delude ourselves in thinking that we possess and control our own psyches, and is what science calls the “psyche” not just a question-mark arbitrarily confined within the skull, but rather a door that opens upon the human world from a world beyond, allowing unknown and mysterious powers to act upon man and carry him on the wings of the night to a more than personal destiny? It even seems as if the love-episode had served as a mere release, or had been unconsciously arranged for a definite purpose, and as if the personal experience were only a prelude to the all-important “divine comedy.”

[149] The creator of this kind of art is not the only one who is in touch with the night-side of life; prophets and seers are nourished by it too. St. Augustine says: “And higher still we soared, thinking in our minds and speaking and marvelling at Your works: and so we came to our own souls, and went beyond them to reach at last that region of richness unending, where You feed Israel forever with the food of truth ...”⁸ But this same region also has its victims: the great evil-doers and destroyers who darken the face of the times, and the madmen who approach too near to the fire: “Who among us shall dwell with the devouring fire? Who among us shall dwell with everlasting burnings?”⁹ It is true indeed that those whom the gods wish to destroy they first make mad. However dark and unconscious this night-world may be, it is not wholly unfamiliar. Man has known it from time immemorial, and for primitives it is a self-evident part of their cosmos. It is only we who have repudiated it because of our fear of superstition and metaphysics, building up in its place an apparently safer and more manageable world of consciousness in which natural law operates like human law in a society. The poet now and then catches sight of the figures that people the night-world—spirits, demons, and gods; he feels the secret quickening of human fate by a suprahuman design, and has a presentiment of incomprehensible happenings in the pleroma. In short, he catches a glimpse of the psychic world that terrifies the primitive and is at the same time his greatest hope. It would, incidentally, be an interesting subject for research to investigate how far our recently invented fear of superstition and our materialistic outlook are derived from, and are a further

development of, primitive magic and the fear of ghosts. At any rate the fascination exerted by depth psychology and the equally violent resistance it evokes are not without relevance to our theme.

[150] From the very beginnings of human society we find traces of man's efforts to banish his dark forebodings by expressing them in a magical or propitiatory form. Even in the Rhodesian rock-drawings of the Stone Age there appears, side by side with amazingly lifelike pictures of animals, an abstract pattern—a double cross contained in a circle. This design has turned up in practically every culture, and we find it today not only in Christian churches but in Tibetan monasteries as well. It is the so-called sun-wheel, and since it dates from a time when the wheel had not yet been invented, it cannot have had its origin in any experience of the external world. It is rather a symbol for some inner experience, and as a representation of this it is probably just as lifelike as the famous rhinoceros with tick-birds on its back. There has never been a primitive culture that did not possess a highly developed system of secret teaching, a body of lore concerning the things that lie beyond man's earthly existence, and of wise rules of conduct.¹⁰ The men's councils and the totem clans preserve this knowledge, and it is handed down to the younger men in the rites of initiation. The mysteries of the Graeco-Roman world performed the same function, which has left behind a rich deposit in the world's mythologies.

[151] It is therefore to be expected that the poet will turn to mythological figures in order to give suitable expression to his experience. Nothing would be more mistaken than to suppose that he is working with second-hand material. On the contrary, the primordial experience is the source of his creativeness, but it is so dark and amorphous that it requires the related mythological imagery to give it form. In itself it is wordless and imageless, for it is a vision seen "as in a glass, darkly." It is nothing but a tremendous intuition striving for expression. It is like a whirlwind that seizes everything within reach and assumes visible form as it swirls upward. Since the expression can never match the richness of the vision and can never exhaust its possibilities, the poet must have at his disposal a huge store of material if he is to communicate even a fraction of what he has glimpsed, and must make use of difficult and contradictory images in order to express the strange paradoxes of his vision. Dante decks out his experience in all the imagery of heaven, purgatory, and hell; Goethe brings in the Blocksberg and the Greek underworld; Wagner needs the whole corpus of Nordic myth, including the Parsifal saga; Nietzsche resorts to the hieratic style of the bard and legendary seer; Blake presses into his service the phantasmagoric world of India, the Old Testament, and the Apocalypse; and Spitteler borrows old names for the new figures that pour in alarming profusion from his muse's cornucopia. Nothing is missing in the whole gamut that ranges from the ineffably sublime to the perversely grotesque.

[152] The psychologist can do little to elucidate this variegated spectacle except provide comparative material and a terminology for its discussion. Thus, what appears in the vision is the imagery of the collective unconscious. This is the matrix of consciousness and has its own inborn structure. According to phylogenetic law, the psychic structure must, like the anatomical, show traces of the earlier stages of evolution it has passed through. This is in fact so in the case of the unconscious, for in dreams and mental disturbances psychic products come to the surface which show all the traits of primitive levels of development, not only in their form but also in their content and meaning, so that we might easily take them for fragments of esoteric doctrines. Mythological motifs frequently appear, but clothed in modern dress; for instance, instead of the eagle of Zeus, or the great roc, there is an airplane; the fight with the dragon is a railway smash; the dragon-slaying hero is an operatic tenor; the Earth Mother is a stout lady selling vegetables; the Pluto who abducts Persephone is a reckless chauffeur, and so on. What is of particular importance for the study of literature, however, is that the manifestations of the collective unconscious are compensatory to the conscious attitude, so that they have the effect of bringing a one-sided, unadapted, or dangerous state of consciousness back into equilibrium. This function can also be observed in the symptomatology of neurosis and in the delusions of the insane, where the process of compensation is often perfectly obvious—for instance in the case of people who have anxiously shut themselves off from the world and suddenly discover that their most intimate secrets are known and talked about by everybody. The compensation is, of course, not always as crass as this; with neurotics it is much more subtle, and in dreams—particularly in one's own dreams—it is often a complete mystery at first not only to the layman but even to the specialist, however staggeringly simple it turns out to be once it has been understood. But, as we know, the simplest things are often the most difficult to understand.

[153] If we disregard for the moment the possibility that *Faust* was compensatory to Goethe's conscious attitude, the question that arises is this: in what relation does it stand to the conscious outlook of his time, and can this relation also be regarded as compensatory? Great poetry draws its strength from the life of mankind, and we completely miss its meaning if we try to derive it from personal factors. Whenever the collective unconscious becomes a living experience and is brought to bear upon the conscious outlook of an age, this event is a creative act which is of importance for a whole epoch. A work of art is produced that may truthfully be called a message to generations of men. So *Faust* touches something in the soul of every German, as Jacob Burckhardt has already remarked.¹¹ So also Dante's fame is immortal, and the *Shepherd of Hermas* was very nearly included in the New Testament canon. Every period has its bias, its particular prejudice, and its psychic malaise. An epoch is like

an individual; it has its own limitations of conscious outlook, and therefore requires a compensatory adjustment. This is effected by the collective unconscious when a poet or seer lends expression to the unspoken desire of his times and shows the way, by word or deed, to its fulfilment—regardless whether this blind collective need results in good or evil, in the salvation of an epoch or its destruction.

[154] It is always dangerous to speak of one's own times, because what is at stake is too vast to be comprehended.¹² A few hints must therefore suffice. Francesco Colonna's book takes the form of a dream which depicts the apotheosis of love. It does not tell the story of a human passion, but describes a relationship to the anima, man's subjective image of woman, incarnated in the fictitious figure of the lady Polia. The relationship is played out in the pagan setting of classical antiquity, and this is remarkable because the author, so far as we know, was a monk. His book, written in 1453, compensates the medieval Christian outlook by conjuring up a simultaneously older and more youthful world from Hades, which is at the same time the grave and the fruitful mother.¹³ The *Hypnerotomachia* of Colonna, says Linda Fierz-David, "is the symbol of the living process of growth which had been set going, obscurely and incomprehensibly, in the men of his time, and had made of the Renaissance the beginning of a new era."¹⁴ Already in Colonna's time the Church was being weakened by schisms, and the age of the great voyages and of scientific discovery was dawning. These tensions between the old and the new are symbolized by the paradoxical figure of Polia, the "modern" soul of the monk Francesco Colonna. After three centuries of religious schism and the scientific discovery of the world, Goethe paints a picture of the megalomania that threatens the Faustian man, and attempts to redeem the inhumanity of this figure by uniting him with the Eternal Feminine, the maternal Sophia. She is the highest manifestation of the anima, stripped of the pagan savagery of the nymph Polia. But this compensation of Faust's inhumanity had no lasting effect, for Nietzsche, after proclaiming the death of God, announces the birth of the Superman, who in turn is doomed to destruction. Nietzsche's contemporary, Spitteler, transforms the waxing and waning of the gods into a myth of the seasons. If we compare his *Prometheus and Epimetheus*¹⁵ with the drama that is being enacted on the world stage today, the prophetic significance of the great work of art will become painfully apparent.¹⁶ Each of these poets speaks with the voice of thousands and tens of thousands, foretelling changes in the conscious outlook of his time.

2. The Artist

[155] The secret of creativeness, like that of the freedom of the will, is a transcendental problem which the psychologist cannot answer but can only describe. The creative personality, too, is a riddle we may try to answer in various ways, but always in vain. Nevertheless, modern psychologists have not been deterred from investigating the

problem of the artist and his art. Freud thought he had found a key to the work of art by deriving it from the personal experience of the artist.¹⁷ This was a possible approach, for it was conceivable that a work of art might, like a neurosis, be traced back to complexes. It was Freud's great discovery that neuroses have a quite definite psychic cause, and that they originate in real or imagined emotional experiences in early childhood. Some of his followers, in particular Rank and Stekel, adopted a similar approach and arrived at similar results. It is undeniable that the artist's personal psychology may occasionally be traced out in the roots and in the furthest ramifications of his work. This view, that personal factors in many ways determine the artist's choice of material and the form he gives it, is not in itself new. Credit, however, is certainly due to the Freudian school for showing how far-reaching this influence is and the curious analogies to which it gives rise.

[156] Freud considers a neurosis to be a substitute for a direct means of gratification. For him it is something inauthentic—a mistake, a subterfuge, an excuse, a refusal to face facts; in short, something essentially negative that should never have been. One hardly dares to put in a good word for a neurosis, since it is apparently nothing but a meaningless and therefore irritating disturbance. By treating a work of art as something that can be analysed in terms of the artist's repressions we bring it into questionable proximity with a neurosis, where, in a sense, it finds itself in good company, for the Freudian method treats religion and philosophy in the same way. No legitimate objection can be raised to this if it is admitted to be no more than an unearthing of those personal determinants without which a work of art is unthinkable. But if it is claimed that such an analysis explains the work of art itself, then a categorical denial is called for. The essence of a work of art is not to be found in the personal idiosyncrasies that creep into it—indeed, the more there are of them, the less it is a work of art—but in its rising above the personal and speaking from the mind and heart of the artist to the mind and heart of mankind. The personal aspect of art is a limitation and even a vice. Art that is only personal, or predominantly so, truly deserves to be treated as a neurosis. When the Freudian school advances the opinion that all artists are undeveloped personalities with marked infantile autoerotic traits, this judgment may be true of the artist as a man, but it is not applicable to the man as an artist. In this capacity he is neither autoerotic, nor heteroerotic, nor erotic in any sense. He is in the highest degree objective, impersonal, and even inhuman—or suprahuman—for as an artist he is nothing but his work, and not a human being.

[157] Every creative person is a duality or a synthesis of contradictory qualities. On the one side he is a human being with a personal life, while on the other he is an impersonal creative process. As a human being he may be sound or morbid, and his personal psychology can and should be explained in personal terms. But he can be understood as an artist only in terms of his creative achievement. We should make a

great mistake if we reduced the mode of life of an English gentleman, or a Prussian officer, or a cardinal, to personal factors. The gentleman, the officer, and the high ecclesiastic function as impersonal officials, and each role has its own objective psychology. Although the artist is the exact opposite of an official, there is nevertheless a secret analogy between them in so far as a specifically artistic psychology is more collective than personal in character. Art is a kind of innate drive that seizes a human being and makes him its instrument. The artist is not a person endowed with free will who seeks his own ends, but one who allows art to realize its purposes through him. As a human being he may have moods and a will and personal aims, but as an artist he is “man” in a higher sense—he is “collective man,” a vehicle and moulder of the unconscious psychic life of mankind. That is his office, and it is sometimes so heavy a burden that he is fated to sacrifice happiness and everything that makes life worth living for the ordinary human being. As K. G. Carus says: “Strange are the ways by which genius is announced, for what distinguishes so supremely endowed a being is that, for all the freedom of his life and the clarity of his thought, he is everywhere hemmed round and prevailed upon by the Unconscious, the mysterious god within him; so that ideas flow to him—he knows not whence; he is driven to work and to create—he knows not to what end: and is mastered by an impulse for constant growth and development—he knows not whither.”¹⁸

[158] In these circumstances it is not at all surprising that the artist is an especially interesting specimen for the critical analysis of the psychologist. His life cannot be otherwise than full of conflicts, for two forces are at war within him: on the one hand the justified longing of the ordinary man for happiness, satisfaction, and security, and on the other a ruthless passion for creation which may go so far as to override every personal desire. If the lives of artists are as a rule so exceedingly unsatisfactory, not to say tragic, it is not because of some sinister dispensation of fate, but because of some inferiority in their personality or an inability to adapt. A person must pay dearly for the divine gift of creative fire. It is as though each of us was born with a limited store of energy. In the artist, the strongest force in his make-up, that is, his creativeness, will seize and all but monopolize this energy, leaving so little over that nothing of value can come of it. The creative impulse can drain him of his humanity to such a degree that the personal ego can exist only on a primitive or inferior level and is driven to develop all sorts of defects—ruthlessness, selfishness (“autoeroticism”), vanity, and other infantile traits. These inferiorities are the only means by which it can maintain its vitality and prevent itself from being wholly depleted. The autoeroticism of certain artists is like that of illegitimate or neglected children who from their earliest years develop bad qualities to protect themselves from the destructive influence of a loveless environment. Such children easily become ruthless and selfish, and later display an invincible egoism by remaining all

their lives infantile and helpless or by actively offending against morality and the law. How can we doubt that it is his art that explains the artist, and not the insufficiencies and conflicts of his personal life? These are nothing but the regrettable results of his being an artist, a man upon whom a heavier burden is laid than upon ordinary mortals. A special ability demands a greater expenditure of energy, which must necessarily leave a deficit on some other side of life.

[159] It makes no difference whether the artist knows that his work is generated, grows and matures within him, or whether he imagines that it is his own invention. In reality it grows out of him as a child its mother. The creative process has a feminine quality, and the creative work arises from unconscious depths—we might truly say from the realm of the Mothers. Whenever the creative force predominates, life is ruled and shaped by the unconscious rather than by the conscious will, and the ego is swept along on an underground current, becoming nothing more than a helpless observer of events. The progress of the work becomes the poet's fate and determines his psychology. It is not Goethe that creates *Faust*, but *Faust* that creates Goethe.¹⁹ And what is *Faust*? *Faust* is essentially a symbol. By this I do not mean that it is an allegory pointing to something all too familiar, but the expression of something profoundly alive in the soul of every German, which Goethe helped to bring to birth. Could we conceive of anyone but a German writing *Faust* or *Thus Spake Zarathustra*? Both of them strike a chord that vibrates in the German psyche, evoking a "primordial image," as Burckhardt once called it—the figure of a healer or teacher of mankind, or of a wizard. It is the archetype of the Wise Old Man, the helper and redeemer, but also of the magician, deceiver, corrupter, and tempter. This image has lain buried and dormant in the unconscious since the dawn of history; it is awakened whenever the times are out of joint and a great error deflects society from the right path. For when people go astray they feel the need of a guide or teacher, and even of a physician. The seductive error is like a poison that can also act as a cure, and the shadow of a saviour can turn into a fiendish destroyer. These opposing forces are at work in the mythical healer himself: the physician who heals wounds is himself the bearer of a wound, a classic example being Chiron.²⁰ In Christianity it is the wound in the side of Christ, the great physician. Faust, characteristically enough, is unwounded, which means that he is untouched by the moral problem. A man can be as high-minded as Faust and as devilish as Mephistopheles if he is able to split his personality into two halves, and only then is he capable of feeling "six thousand feet beyond good and evil." Mephistopheles was cheated of his reward, Faust's soul, and for this he presented a bloody reckoning a hundred years later. But who now seriously believes that poets utter truths that apply to all men? And if they do, in what way would we have to regard the work of art?

[160] In itself, an archetype is neither good nor evil. It is morally neutral, like the gods of antiquity, and becomes good or evil only by contact with the conscious mind, or else a paradoxical mixture of both. Whether it will be conducive to good or evil is determined, knowingly or unknowingly, by the conscious attitude. There are many such archetypal images, but they do not appear in the dreams of individuals or in works of art unless they are activated by a deviation from the middle way. Whenever conscious life becomes one-sided or adopts a false attitude, these images “instinctively” rise to the surface in dreams and in the visions of artists and seems to restore the psychic balance, whether of the individual or of the epoch.

[161] In this way the work of the artist meets the psychic needs of the society in which he lives, and therefore means more than his personal fate, whether he is aware of it or not. Being essentially the instrument of his work, he is subordinate to it, and we have no right to expect him to interpret it for us. He has done his utmost by giving it form, and must leave the interpretation to others and to the future. A great work of art is like a dream; for all its apparent obviousness it does not explain itself and is always ambiguous. A dream never says “you ought” or “this is the truth.” It presents an image in much the same way as nature allows a plant to grow, and it is up to us to draw conclusions. If a person has a nightmare, it means he is either too much given to fear or too exempt from it; if he dreams of a wise old man, it means he is either too much of a pedant or else in need of a teacher. In a subtle way both meanings come to the same thing, as we realize when we let a work of art act upon us as it acted upon the artist. To grasp its meaning, we must allow it to shape us as it shaped him. Then we also understand the nature of his primordial experience. He has plunged into the healing and redeeming depths of the collective psyche, where man is not lost in the isolation of consciousness and its errors and sufferings, but where all men are caught in a common rhythm which allows the individual to communicate his feelings and strivings to mankind as a whole.

[162] This re-immersion in the state of *participation mystique* is the secret of artistic creation and of the effect which great art has upon us, for at that level of experience it is no longer the weal or woe of the individual that counts, but the life of the collective. That is why every great work of art is objective and impersonal, and yet profoundly moving. And that is also why the personal life of the artist is at most a help or a hindrance, but is never essential to his creative task. He may go the way of the Philistine, a good citizen, a fool, or a criminal. His personal career may be interesting and inevitable, but it does not explain his art.

V

"ULYSSES": A MONOLOGUE

PICASSO

“ULYSSES”: A MONOLOGUE¹

[163] The Ulysses of my title has to do with James Joyce and not with that shrewd and storm-driven figure of Homer’s world who knew how to escape by guile and wily deeds the enmity and vengeance of gods and men, and who after a wearisome voyage returned to hearth and home. Joyce’s Ulysses, very much unlike his ancient namesake, is a passive, merely perceiving consciousness, a mere eye, ear, nose, and mouth, a sensory nerve exposed without choice or check to the roaring, chaotic, lunatic cataract of psychic and physical happenings, and registering all this with almost photographic accuracy.

[164] *Ulysses* is a book that pours along for seven hundred and thirty-five pages, a stream of time seven hundred and thirty-five days long which all consist in one single and senseless day in the life of every man, the completely irrelevant sixteenth day of June, 1904, in Dublin—a day on which, in all truth, nothing happens. The stream begins in the void and ends in the void. Is all this perhaps one single, immensely long, and excessively complicated Strindbergian pronouncement upon the essence of human life—a pronouncement which, to the reader’s dismay, is never finished? Possibly it does touch upon the essence, but quite certainly it reflects life’s ten thousand facets and their hundred thousand gradations of colour. So far as I can see, there are in those seven hundred and thirty-five pages no obvious repetitions, not a single blessed island where the long-suffering reader may come to rest; no place where he can seat himself, drunk with memories, and contemplate with satisfaction the stretch of road he has covered, be it one hundred pages or even less. If only he could spot some little commonplace that had obligingly slipped in again where it was not expected! But no! The pitiless stream rolls on without a break, and its velocity or viscosity increases in the last forty pages till it sweeps away even the punctuation marks. Here the suffocating emptiness becomes so unbearably tense that it reaches the bursting point. This utterly hopeless emptiness is the dominant note of the whole book. It not only begins and ends in nothingness, it consists of nothing but nothingness.² It is all infernally nugatory. As a piece of technical virtuosity it is a brilliant and hellish monster-birth.³

[165] I had an uncle whose thinking was always direct and to the point. One day he stopped me on the street and demanded: “Do you know how the devil tortures the souls in hell?” When I said no, he replied: “He keeps them waiting.” And with that he walked away. This remark occurred to me when I was ploughing through *Ulysses* for the first time. Every sentence rouses an expectation that is not fulfilled; finally, out of

sheer resignation, you come to expect nothing, and to your horror it gradually dawns on you that you have hit the mark. In actual fact nothing happens, nothing comes of it all,⁴ and yet a secret expectation battling with hopeless resignation drags the reader from page to page. The seven hundred and thirty-five pages that contain nothing by no means consist of blank paper but are closely printed. You read and read and read and you pretend to understand what you read. Occasionally you drop through an airpocket into a new sentence, but once the proper degree of resignation has been reached you get accustomed to anything. Thus I read to page 135 with despair in my heart, falling asleep twice on the way. The incredible versatility of Joyce's style has a monotonous and hypnotic effect. Nothing comes to meet the reader, everything turns away from him, leaving him gaping after it. The book is always up and away, dissatisfied with itself, ironic, sardonic, virulent, contemptuous, sad, despairing, and bitter. It plays on the reader's sympathies to his own undoing unless sleep kindly intervenes and puts a stop to this drain of energy. Arrived at page 135, after making several heroic efforts to get at the book, to "do it justice," as the phrase goes, I fell at last into profound slumber.⁵ When I awoke quite a while later, my views had undergone such a clarification that I started to read the book backwards. This method proved as good as the usual one; the book can just as well be read backwards, for it has no back and no front, no top and no bottom. Everything could easily have happened before, or might have happened afterwards.⁶ You can read any of the conversations just as pleasurably backwards, for you don't miss the point of the gags. Every sentence is a gag, but taken together they make no point. You can also stop in the middle of a sentence—the first half still makes sense enough to live by itself, or at least seems to. The whole work has the character of a worm cut in half, that can grow a new head or a new tail as required.

[166] This singular and uncanny characteristic of the Joycean mind shows that his work pertains to the class of cold-blooded animals and specifically to the worm family. If worms were gifted with literary powers they would write with the sympathetic nervous system for lack of a brain.⁷ I suspect that something of this kind has happened to Joyce, that we have here a case of visceral thinking⁸ with severe restriction of cerebral activity and its confinement to the perceptual processes. One is driven to unqualified admiration for Joyce's feats in the sensory sphere: what he sees, hears, tastes, smells, touches, inwardly as well as outwardly, is beyond measure astonishing. The ordinary mortal, if he is a specialist in sense-perception, is usually restricted either to the outer world or to the inner. Joyce knows them both. Garlands of subjective association twine themselves about the objective figures on a Dublin street. Objective and subjective, outer and inner, are so constantly intermingled that in the end, despite the clearness of the individual images, one wonders whether one is dealing with a physical or with a transcendental tape worm.⁹ The tapeworm is a

whole living cosmos in itself and is fabulously procreative; this, it seems to me, is an inelegant but not unfitting image for Joyce's proliferating chapters. It is true that the tapeworm can produce nothing but other tapeworms, but it produces them in inexhaustible quantities. Joyce's book might have been fourteen hundred and seventy pages long or even a multiple of that and still it would not have lessened infinity by a drop, and the essential would still have remained unsaid. But does Joyce want to say anything essential? Has this old-fashioned prejudice any right to exist here? Oscar Wilde maintained that a work of art is something entirely useless. Nowadays even the Philistine would raise no objection to this, yet in his heart he still expects a work of art to contain something "essential." Where is it with Joyce? Why doesn't he say it right out? Why doesn't he hand it to the reader with an expressive gesture—"a straight way, so that fools shall not err therein"?

[167] Yes, I admit I feel I have been made a fool of. The book would not meet me half way, nothing in it made the least attempt to be agreeable, and that always gives the reader an irritating sense of inferiority. Obviously I have so much of the Philistine in my blood that I am naïve enough to suppose that a book wants to tell me something, to be understood—a sad case of mythological anthropomorphism projected on to the book! And what a book—no opinion possible—epitome of maddening defeat of intelligent reader, who after all is not such a—(if I may use Joyce's suggestive style). Surely a book has a content, represents something; but I suspect that Joyce did not wish to "represent" anything. Does it by any chance represent *him*—does that explain this solipsistic isolation, this drama without eyewitnesses, this infuriating disdain for the assiduous reader? Joyce has aroused my ill will. One should never rub the reader's nose into his own stupidity, but that is just what *Ulysses* does.

[168] A therapist like myself is always practising therapy—even on himself. Irritation means: You haven't yet seen what's behind it. Consequently we should follow up our irritation and examine whatever it is we discover in our ill temper. I observe then: this solipsism, this contempt for the cultivated and intelligent member of the reading public who wants to understand,¹⁰ who is well-meaning, and who tries to be kindly and just, gets on my nerves. There we have it, the cold-blooded unrelatedness of his mind which seems to come from the saurian in him or from still lower regions—conversation in and with one's own intestines—a man of stone, he with the horns of stone, the stony beard, the petrified intestines, Moses, turning his back with stony unconcern on the flesh-pots and gods of Egypt, and also on the reader, thereby outraging his feelings of good will.

[169] From this stony underworld there rises up the vision of the tapeworm, rippling, peristaltic, monotonous because of its endless proglottic proliferation. No proglottid is quite like any other, yet they can easily be confused. In every segment of the book, however small, Joyce himself is the sole content of the segment. Everything is new

and yet remains what it was from the beginning. Talk of likeness to nature! What pullulating richness—and what boredom! Joyce bores me to tears, but it is a vicious dangerous boredom such as not even the worst banality could induce. It is the boredom of nature, the bleak whistling of the wind over the crags of the Hebrides, sunrise and sunset over the wastes of the Sahara, the roar of the sea—real Wagnerian “programme music” as Curtius rightly says, and yet eternal repetition. Notwithstanding Joyce’s baffling many-sidedness, certain themes can be picked out though they may not be intended. Perhaps he would like there to be none, for causality and finality have neither place nor meaning in his world, any more than have values. Nevertheless, themes are unavoidable, they are the scaffolding for all psychic happenings, however hard one tries to soak the soul out of every happening, as Joyce consistently does. Everything is desouled, every particle of warm blood has been chilled, events unroll in icy egoism. In all the book there is nothing pleasing, nothing refreshing, nothing hopeful, but only things that are grey, grisly, gruesome, or pathetic, tragic, ironic, all from the seamy side of life and so chaotic that you have to look for the thematic connections with a magnifying glass. And yet they are there, first of all in the form of unavowed resentments of a highly personal nature, the wreckage of a violently amputated boyhood; then as flotsam from the whole history of thought exhibited in pitiful nakedness to the staring crowd. The religious, erotic, and domestic prehistory of the author is reflected in the drab surface of the stream of events; we even behold the disintegration of his personality into Bloom, *l’homme moyen sensuel*, and the almost gaseous Stephen Dedalus, who is mere speculation and mere mind. Of these two, the former has no son and the latter no father.

[170] Somewhere there may be a secret order or parallelism in the chapters—authoritative voices have been raised to this effect¹¹—but in any case it is so well concealed that at first I noticed nothing of the kind. And even if I had, it would not have interested me in my helplessly irritated state, any more than would the monotony of any other squalid human comedy.

[171] I had already taken up *Ulysses* in 1922 but had laid it aside disappointed and vexed. Today it still bores me as it did then. Why do I write about it? Ordinarily, I would no more be doing this than writing about any other form of surrealism (what is surrealism?) that passes my understanding. I am writing about Joyce because a publisher was incautious enough to ask me what I thought about him, or rather about *Ulysses*,¹² concerning which opinions are notoriously divided. The only thing beyond dispute is that *Ulysses* is a book that has gone through ten printings and that its author is glorified by some and damned by others. He stands in the cross-fire of discussion and is thus a phenomenon which the psychologist should not ignore. Joyce has exerted a very considerable influence on his contemporaries, and it was this fact which first aroused my interest in *Ulysses*. Had this book slipped noiselessly and

unsung into the shades of oblivion I would certainly never have dragged it back again; for it annoyed me thoroughly and amused me only a little. Above all, it held over me the threat of boredom because it had only a negative effect on me and I feared it was the product of an author's negative mood.

[172] But of course I am prejudiced. I am a psychiatrist, and that implies a professional prejudice with regard to all manifestations of the psyche. I must therefore warn the reader: the tragicomedy of the average man, the cold shadow-side of life, the dull grey of spiritual nihilism are my daily bread. To me they are a tune ground out on a street organ, stale and without charm. Nothing in all this shocks or moves me, for all too often I have to help people out of these lamentable states. I must combat them incessantly and I may only expend my sympathy on people who do not turn their backs on me. *Ulysses* turns its back on me. It is unco-operative, it wants to go on singing its endless tune into endless time—a tune I know to satiety—and to extend to infinity its ganglionic rope-ladder of visceral thinking and cerebration reduced to mere sense-perception. It shows no tendency towards reconstruction; indeed, destructiveness seems to have become an end in itself.

[173] But that is not the half of it—there is also the symptomatology! It is all too familiar, those interminable ramblings of the insane who have only a fragmentary consciousness and consequently suffer from a complete lack of judgment and an atrophy of all their values. Instead, there is often an intensification of the sense-activities. We find in these writings an acute power of observation, a photographic memory for sense-perceptions, a sensory curiosity directed inwards as well as outwards, the predominance of retrospective themes and resentments, a delirious confusion of the subjective and psychic with objective reality, a method of presentation that takes no account of the reader but indulges in neologisms, fragmentary quotations, sound- and speech-associations, abrupt transitions and hiatuses of thought. We also find an atrophy of feeling¹³ that does not shrink from any depth of absurdity or cynicism. Even the layman would have no difficulty in tracing the analogies between *Ulysses* and the schizophrenic mentality. The resemblance is indeed so suspicious that an indignant reader might easily fling the book aside with the diagnosis “schizophrenia.” For the psychiatrist the analogy is startling, but he would nevertheless point out that a characteristic mark of the compositions of the insane, namely, the presence of stereotyped expressions, is notably absent. *Ulysses* may be anything, but it is certainly not monotonous in the sense of being repetitious. (This is not a contradiction of what I said earlier; it is impossible to say anything contradictory about *Ulysses*.) The presentation is consistent and flowing, everything is in motion and nothing is fixed. The whole book is borne along on a subterranean current of life that shows singleness of aim and rigorous selectivity, both these being unmistakable proof of the existence of a unified personal will and directed intention.

The mental functions are under severe control; they do not manifest themselves in a spontaneous and erratic way. The perceptive functions, that is, sensation and intuition, are given preference throughout, while the discriminative functions, thinking and feeling, are just as consistently suppressed. They appear merely as mental contents, as objects of perception. There is no relaxing of the general tendency to present a shadow-picture of the mind and the world, in spite of frequent temptations to surrender to a sudden touch of beauty. These are traits not ordinarily found in the insane. There remains, then, the insane person of an uncommon sort. But the psychiatrist has no criteria for judging such a person. What seems to be mental abnormality may be a kind of mental health which is inconceivable to the average understanding; it may even be a disguise for superlative powers of mind.

[174] It would never occur to me to class *Ulysses* as a product of schizophrenia. Moreover, nothing would be gained by this label, for we wish to know why *Ulysses* exerts such a powerful influence and not whether its author is a high-grade or a low-grade schizophrenic. *Ulysses* is no more a pathological product than modern art as a whole. It is “cubistic” in the deepest sense because it resolves the picture of reality into an immensely complex painting whose dominant note is the melancholy of abstract objectivity. Cubism is not a disease but a tendency to represent reality in a certain way—and that way may be grotesquely realistic or grotesquely abstract. The clinical picture of schizophrenia is a mere analogy in that the schizophrenic apparently has the same tendency to treat reality as if it were strange to him, or, conversely, to estrange himself from reality. With the schizophrenic the tendency usually has no recognizable purpose but is a symptom inevitably arising from the disintegration of the personality into fragmentary personalities (the autonomous complexes). In the modern artist it is not produced by any disease in the individual but is a collective manifestation of our time. The artist does not follow an individual impulse, but rather a current of collective life which arises not directly from consciousness but from the collective unconscious of the modern psyche. Just because it is a collective phenomenon it bears identical fruit in the most widely separated realms, in painting as well as literature, in sculpture as well as architecture. It is, moreover, significant that one of the spiritual fathers of the modern movement—van Gogh—was actually schizophrenic.

[175] The distortion of beauty and meaning by grotesque objectivity or equally grotesque irreality is, in the insane, a consequence of the destruction of the personality; in the artist it has a creative purpose. Far from his work being an expression of the destruction of his personality, the modern artist finds the unity of his artistic personality in destructiveness. The Mephistophelian perversion of sense into nonsense, of beauty into ugliness—in such an exasperating way that nonsense almost makes sense and ugliness has a provocative beauty—is a creative

achievement that has never been pushed to such extremes in the history of human culture, though it is nothing new in principle. We can observe something similar in the perverse change of style under Ikhnaton, in the inane lamb symbolism of the early Christians, in those doleful Pre-Raphaelite figures, and in late Baroque art, strangling itself in its own convolutions. Despite their differences all these epochs have an inner relationship: they were periods of creative incubation whose meaning cannot be satisfactorily explained from a causal standpoint. Such manifestations of the collective psyche disclose their meaning only when they are considered teleologically as anticipations of something new.

[176] The epoch of Ikhnaton was the cradle of the first monotheism, which has been preserved for the world in Jewish tradition. The crude infantilism of the early Christian era portended nothing less than the transformation of the Roman Empire into a City of God. The rejection of the art and science of his time was not an impoverishment for the early Christian, but a great spiritual gain. The Pre-Raphaelite primitives were the heralds of an ideal of bodily beauty that had been lost to the world since classical times. The Baroque was the last of the ecclesiastical styles, and its self-destruction anticipates the triumph of the spirit of science over the spirit of medieval dogmatism. Tiepolo, for instance, who had already reached the danger zone in his technique, is not a symptom of decadence when considered as an artistic personality, but labours with the whole of his being to bring about a much needed disintegration.

[177] This being so we can ascribe a positive, creative value and meaning not only to *Ulysses* but also to its artistic congeners. In its destruction of the criteria of beauty and meaning that have held till today, *Ulysses* accomplishes wonders. It insults all our conventional feelings, it brutally disappoints our expectations of sense and content, it thumbs its nose at all synthesis. We would show ill will even to suspect any trace of synthesis or form, for if we succeeded in demonstrating any such unmodern tendencies in *Ulysses* this would amount to pointing out a gross aesthetic defect. Everything abusive we can say about *Ulysses* bears witness to its peculiar quality, for our abuse springs from the resentment of the unmodern man who does not wish to see what the gods have graciously veiled from sight.

[178] All those ungovernable forces that welled up in Nietzsche's Dionysian exuberance and flooded his intellect have burst forth in undiluted form in modern man. Even the darkest passages in the second part of *Faust*, even *Zarathustra* and, indeed, *Ecce Homo*, try in one way or another to recommend themselves to the public. But it is only modern man who has succeeded in creating an art in reverse, a backside of art that makes no attempt to be ingratiating, that tells us just where we get off, speaking with the same rebellious contrariness that had made itself

disturbingly felt in those precursors of the moderns (not forgetting Hölderlin) who had already started to topple the old ideals.

[179] If we stick to one field of experience only, it is not really possible to see clearly what is happening. It is not a matter of a single thrust aimed at one definite spot, but of an almost universal “restratification” of modern man, who is in the process of shaking off a world that has become obsolete. Unfortunately we cannot see into the future and so we do not know how far we still belong in the deepest sense to the Middle Ages. If, from the watch-towers of the future, we should seem stuck in medievalism up to the ears, I for one would be little surprised. For that alone would satisfactorily explain to us why there should be books or works of art after the style of *Ulysses*. They are drastic purgatives whose full effect would be dissipated if they did not meet with an equally strong and obstinate resistance. They are a kind of psychological specific which is of use only where the hardest and toughest material must be dealt with. They have this in common with Freudian theory, that they undermine with fanatical one-sidedness values that have already begun to crumble.

[180] *Ulysses* makes a show of semi-scientific objectivity, at times even employing “scientific” language, and yet it displays a truly unscientific temper: it is sheer negation. Even so it is creative—a creative destruction. Here is no theatrical gesture of a Herostratus burning down temples, but an earnest endeavour to rub the noses of our contemporaries in the shadow-side of reality, not with any malicious intent but with the guileless naïveté of artistic objectivity. One may safely call the book pessimistic even though at the very end, on nearly the final page, a redeeming light breaks wistfully through the clouds. This is only *one* page against seven hundred and thirty-four which were one and all born of Orcus. Here and there, a fine crystal glitters in the black stream of mud, so that even the unmodern may realize that Joyce is an “artist” who knows his trade—which is more than can be said of most modern artists—and is even a past master at it, but a master who has piously renounced his powers in the name of a higher goal. Even in his “restratification” Joyce has remained a pious Catholic: his dynamite is expended chiefly upon churches and upon those psychic edifices which are begotten or influenced by churches. His “anti-world” has the medieval, thoroughly provincial, quintessentially Catholic atmosphere of an Erin trying desperately to enjoy its political independence. He worked at *Ulysses* in many foreign lands, and from all of them he looked back in faith and kinship upon Mother Church and Ireland. He used his foreign stopping-places merely as anchors to steady his ship in the maelstrom of his Irish reminiscences and resentments. Yet *Ulysses* does not strain back to his Ithaca—on the contrary, he makes frantic efforts to rid himself of his Irish heritage.

[181] We might suppose this behaviour to be of only local interest and expect it to leave the rest of the world quite cold. But it does not leave the world cold. The local

phenomenon seems to be more or less universal, to judge from its effects on Joyce's contemporaries. The cap must fit. There must exist a whole community of moderns who are so numerous that they have been able to devour ten editions of *Ulysses* since 1922. The book must mean something to them, must even reveal something that they did not know or feel before. They are not infernally bored by it, but are helped, refreshed, instructed, converted, "restratified." Obviously, they are thrown into a desirable state of some sort, for otherwise only the blackest hatred could enable the reader to go through the book from page 1 to page 735 with attention and without fatal attacks of drowsiness. I therefore surmise that medieval Catholic Ireland covers a geographical area of whose size I have hitherto been ignorant; it is certainly far larger than the area indicated on the ordinary map. This Catholic Middle Ages, with its Messrs. Dedalus and Bloom, seems to be pretty well universal. There must be whole sections of the population that are so bound to their spiritual environment that nothing less than Joycean explosives are required to break through their hermetic isolation. I am convinced that this is so: we are still stuck in the Middle Ages up to the ears. And it is because Joyce's contemporaries are so riddled with medieval prejudices that such prophets of negation as he and Freud are needed to reveal to them the other side of reality.

[182] Of course, this tremendous task could hardly be accomplished by a man who with Christian benevolence tried to make people turn an unwilling eye on the shadow-side of things. That would amount only to their looking on with perfect unconcern. No, the revelation must be brought about by the appropriate attitude of mind, and Joyce is again a master here. Only in this way can the forces of negative emotion be mobilized. *Ulysses* shows how one should execute Nietzsche's "sacrilegious backward grasp." Joyce sets about it coldly and objectively, and shows himself more "bereft of gods" than Nietzsche ever dreamed of being. All this on the implicit and correct assumption that the fascinating influence exerted by the spiritual environment has nothing to do with reason, but everything with feeling. One should not be misled into thinking that because Joyce reveals a world that is horribly bleak and bereft of gods, it is inconceivable that anyone should derive the slightest comfort from his book. Strange as it may sound, it remains true that the world of *Ulysses* is a better one than the world of those who are hopelessly bound to the darkness of their spiritual birthplaces. Even though the evil and destructive elements predominate, they are far more valuable than the "good" that has come down to us from the past and proves in reality to be a ruthless tyrant, an illusory system of prejudices that robs life of its richness, emasculates it, and enforces a moral compulsion which in the end is unendurable. Nietzsche's "slave-uprising in morals" would be a good motto for *Ulysses*. What frees the prisoner of a system is an "objective" recognition of his world and of his own nature. Just as the arch-Bolshevist revels in his unshaven

appearance, so the man who is bound in spirit finds a rapturous joy in saying straight out for once exactly how things are in his world. For the man who is dazzled by the light the darkness is a blessing, and the boundless desert is a paradise to the escaped prisoner. It is nothing less than redemption for the medieval man of today not to have to be the embodiment of goodness and beauty and common sense. Looked at from the shadow-side, ideals are not beacons on mountain peaks, but taskmasters and gaolers, a sort of metaphysical police originally thought up on Sinai by the tyrannical demagogue Moses and thereafter foisted upon mankind by a clever ruse.

[183] From the causal point of view Joyce is a victim of Roman Catholic authoritarianism, but considered teleologically he is a reformer who for the present is satisfied with negation, a Protestant nourished by his own protests. Atrophy of feeling is a characteristic of modern man and always shows itself as a reaction when there is too much feeling around, and in particular too much false feeling. From the lack of feeling in *Ulysses* we may infer a hideous sentimentality in the age that produced it. But are we really so sentimental today?

[184] Again a question which the future must answer. Still, there is a good deal of evidence to show that we actually are involved in a sentimentality hoax of gigantic proportions. Think of the lamentable role of popular sentiment in wartime! Think of our so-called humanitarianism! The psychiatrist knows only too well how each of us becomes the helpless but not pitiable victim of his own sentiments. Sentimentality is the superstructure erected upon brutality. Unfeelingness is the counter-position and inevitably suffers from the same defects. The success of *Ulysses* proves that even its lack of feeling has a positive effect on the reader, so that we must infer an excess of sentiment which he is quite willing to have damped down. I am deeply convinced that we are not only stuck in the Middle Ages but also are caught in our own sentimentality. It is therefore quite comprehensible that a prophet should arise to teach our culture a compensatory lack of feeling. Prophets are always disagreeable and usually have bad manners, but it is said that they occasionally hit the nail on the head. There are, as we know, major and minor prophets, and history will decide to which of them Joyce belongs. Like every true prophet, the artist is the unwitting mouthpiece of the psychic secrets of his time, and is often as unconscious as a sleep-walker. He supposes that it is he who speaks, but the spirit of the age is his prompter, and whatever this spirit says is proved true by its effects.

[185] *Ulysses* is a *document humain* of our time and, what is more, it harbours a secret. It can release the spiritually bound, and its coldness can freeze all sentimentality—and even normal feeling—to the marrow. But these salutary effects do not exhaust its powers. The notion that the devil himself stood sponsor to the work, if interesting, is hardly a satisfactory hypothesis. There is life in it, and life is never exclusively evil and destructive. To be sure, the side of it that is most tangible seems negative and

disruptive; but one senses behind it something intangible—a secret purpose which lends it meaning and value. Is this patchwork quilt of words and images perhaps “symbolic”? I am not thinking of an allegory (heaven forbid!), but of the symbol as an expression of something whose nature we cannot grasp. In that case a hidden meaning would doubtless shine through the curious fabric at some point, here and there notes would resound that had been heard at other times and places, maybe in unusual dreams or in the cryptic wisdom of forgotten races. This possibility cannot be contested, but, for myself, I cannot find the key. On the contrary, the book seems to me to be written in the full light of consciousness; it is not a dream and not a revelation of the unconscious. Compared with *Zarathustra* or the second part of *Faust*, it shows an even stronger purposiveness and sense of direction. This is probably why *Ulysses* does not bear the features of a symbolic work. Of course, one senses the archetypal background. Behind Dedalus and Bloom there stand the eternal figures of spiritual and carnal man; Mrs. Bloom perhaps conceals an anima entangled in worldliness, and Ulysses himself might be the hero. But the book does not focus upon this background; it veers away in the opposite direction and strives to attain the utmost objectivity of consciousness. It is obviously not symbolic and has no intention of being so. Were it none the less symbolic in certain parts, then the unconscious, in spite of every precaution, would have played the author a trick or two. For when something is “symbolic,” it means that a person divines its hidden, ungraspable nature and is trying desperately to capture in words the secret that eludes him. Whether it is something of the world he is striving to grasp or something of the spirit, he must turn to it with all his mental powers and penetrate all its iridescent veils in order to bring to the light of day the gold that lies jealously hidden in the depths.

[186] But the shattering thing about *Ulysses* is that behind the thousand veils nothing lies hidden; it turns neither to the world nor to the spirit but, cold as the moon looking on from cosmic space,¹⁴ leaves the comedy of genesis and decay to pursue its course. I sincerely hope that *Ulysses* is not symbolic, for if it were it would have failed in its purpose. What kind of anxiously guarded secret might it be that is hidden with matchless care under seven hundred and thirty-five unendurable pages? It is better not to waste one’s time and energy on a fruitless treasure-hunt. Indeed, there *ought not* to be anything symbolic behind the book, for if there were our consciousness would be dragged back into world and spirit, perpetuating Messrs. Bloom and Dedalus to all eternity, befooled by the ten thousand facets of life. This is just what *Ulysses* seeks to prevent: it wants to be an eye of the moon, a consciousness detached from the object, in thrall neither to the gods nor to sensuality, and bound neither by love nor by hate, neither by conviction nor by prejudice. *Ulysses* does not preach this but practises it—detachment of consciousness¹⁵ is the goal that shimmers through the fog of this book. This, surely, is its real secret, the secret of a new cosmic

consciousness; and it is revealed not to him who has conscientiously waded through the seven hundred and thirty-five pages, but to him who has gazed at his world and his own mind for seven hundred and thirty-five days with the eyes of Ulysses. This space of time, at any rate, is to be taken symbolically—"a time, times and a half a time"—an indefinite time, therefore; but sufficiently long for the transformation to take place. The detachment of consciousness can be expressed in the Homeric image of Odysseus sailing the straits between Scylla and Charybdis, between the Symplegades, the clashing rocks of the world and the spirit; or, in the imagery of the Dublin inferno, between Father John Conmee and the Viceroy of Ireland, "a light crumpled throwaway," drifting down the Liffey (p. 239):

Elijah, skiff, light crumpled throwaway, sailed eastward by flanks of ships and trawlers, amid an archipelago of corks, beyond new Wapping street past Benson's ferry, and by the threemasted schooner *Rosevean* from Bridgwater with bricks.

[187] Can this detachment of consciousness, this depersonalization of the personality, can this be the Ithaca of the Joycean Odyssey?

[188] One might suppose that in a world of nothing but nothingness at least the "I"—James Joyce himself—would be left over. But has anyone noticed the appearance, among all the unhappy, shadowy "I"s of this book, of a single, actual ego? True, every figure in *Ulysses* is superlatively real, none of them could be other than what they are, they are themselves in every respect. And yet not one of them has an ego, there is no acutely conscious, human centre, an island surrounded by warm heart's blood, so small and yet so vitally important. All the Dedaluses, Blooms, Harrys, Lynches, Mulligans, and the rest of them talk and go about as in a collective dream that begins nowhere and ends nowhere, that takes place only because "No-man"—an unseen Odysseus—dreams it. None of them knows this, and yet all live for the sole reason that a god bids them live. That is how life is—*vita somnium breve*—and that is why the Joycean figures are so real. But the ego that embraces them all appears nowhere. It betrays itself by nothing, by no judgment, no sympathy, not a single anthropomorphism. The ego of the creator of these figures is not to be found. It is as though it had dissolved into the countless figures of *Ulysses*.¹⁶ And yet, or rather for that very reason, all and everything, even the missing punctuation of the final chapter, is Joyce himself. His detached, contemplative consciousness, dispassionately embracing in one glance the timeless simultaneity of the happenings of the sixteenth day of June, 1904, must say of all these appearances: *Tat tvam asi*, "That art thou"—"thou" in a higher sense, not the ego but the self. For the self alone embraces the ego and the non-ego, the infernal regions, the viscera, the *imagines et lares*, and the heavens.

[189] Whenever I read *Ulysses* there comes into my mind a Chinese picture, published by Richard Wilhelm,¹⁷ of a yogi in meditation, with five human figures growing out

of the top of his head and five more figures growing out of the top of each of *their* heads. This picture portrays the spiritual state of the yogi who is about to rid himself of his ego and to pass over into the more complete, more objective state of the self. This is the state of the “moon-disk, at rest and alone,” of *sat-chit-ananda*, the epitome of being and not-being, the ultimate goal of the Eastern way of redemption, the priceless pearl of Indian and Chinese wisdom, sought and extolled through the centuries.

[190] The “light crumpled throwaway” drifts towards the East. Three times this crumpled note turns up in *Ulysses*, each time mysteriously connected with Elijah. Twice we are told: “Elijah is coming.” He actually does appear in the brothel scene (rightly compared by Middleton Murry to the Walpurgisnacht in *Faust*), where in Americanese he explains the secret of the note (p. 478):

Boys, do it now. God’s time is 12.25. Tell mother you’ll be there. Rush your order and you play a slick ace. Join on right here! Book through to eternity junction, the nonstop run. Just one word more. Are you a god or a doggone clod? If the second advent came to Coney Island are we ready? Florry Christ, Stephen Christ, Zoe Christ, Bloom Christ, Kitty Christ, Lynch Christ, it’s up to you to sense that cosmic force. Have we cold feet about the cosmos? No. Be on the side of the angels. Be a prism. *You have that something within, the higher self.*¹⁸ You can rub shoulders with a Jesus, a Gautama, an Ingersoll. Are you all in this vibration? I say you are. You once noble that, congregation, and a buck joyride to heaven becomes a back number. You got me? It’s a lifebrightener, sure. The hottest stuff ever was. It’s the whole pie with jam in. It’s just the cutest snappiest line out. It is immense, supersumptuous. It restores.

[191] One can see what has happened: the detachment of human consciousness and its consequent approximation to the divine—the whole basis and highest artistic achievement of *Ulysses*— suffers an infernal distortion in the drunken madhouse of the brothel as soon as it appears in the cloak of a traditional formula. Ulysses, the sorely tried wanderer, toils ever towards his island home, back to his true self, beating his way through the turmoil of eighteen chapters, and, free at last from the fool’s world of illusions, “looks on from afar,” impassively. Thus he achieves what a Jesus or a Buddha achieved, and what Faust also strove for—the overcoming of a fool’s world, liberation from the opposites. And just as Faust was dissolved in the Eternal Feminine, so it is Molly Bloom (whom Stuart Gilbert compares to the blossoming earth) who has the last word in her unpunctuated monologue, putting a blessed close to the hellish, shrieking dissonances with a harmonious final chord.

[192] Ulysses is the creator-god in Joyce, a true demiurge who has freed himself from entanglement in the physical and mental world and contemplates them with detached consciousness. He is for Joyce what Faust was for Goethe, or Zarathustra for Nietzsche. He is the higher self who returns to his divine home after blind

entanglement in *samsara*. In the whole book no Ulysses appears; the book itself is Ulysses, a microcosm of James Joyce, the world of the self and the self of the world in one. Ulysses can return home only when he has turned his back on the world of mind and matter. This is surely the message underlying that sixteenth day of June, 1904, the everyday of everyman, on which persons of no importance restlessly do and say things without beginning or aim—a shadowy picture, dreamlike, infernal, sardonic, negative, ugly, devilish, but true. A picture that could give one bad dreams or induce the mood of a cosmic Ash Wednesday, such as the Creator might have felt on August 1, 1914. After the optimism of the seventh day of creation the demiurge must have found it pretty difficult in 1914 to identify himself with his handiwork. *Ulysses* was written between 1914 and 1921—hardly the conditions for painting a particularly cheerful picture of the world or for taking it lovingly in one's arms (nor today either, for that matter). So it is not surprising that the demiurge in the artist sketched a negative picture, so blasphemously negative that in Anglo-Saxon countries the book was banned in order to avoid the scandal of its contradicting the creation story in Genesis! And that is how the misunderstood demiurge became Ulysses in search of his home.

[193] There is so little feeling in *Ulysses* that it must be very pleasing to all aesthetes. But let us assume that the consciousness of *Ulysses* is not a moon but an ego that possesses judgment, understanding, and a feeling heart. Then the long road through the eighteen chapters would not only hold no delights but would be a road to Calvary; and the wanderer, overcome by so much suffering and folly, would sink down at nightfall into the arms of the Great Mother, who signifies the beginning and end of life. Under the cynicism of Ulysses there is hidden a great compassion; he knows the sufferings of a world that is neither beautiful nor good and, worse still, rolls on without hope through the eternally repeated everyday, dragging with it man's consciousness in an idiot dance through the hours, months, years. Ulysses has dared to take the step that leads to the detachment of consciousness from the object; he has freed himself from attachment, entanglement, and delusion, and can therefore turn homeward. He gives us more than a subjective expression of personal opinion, for the creative genius is never one but many, and he speaks in stillness to the souls of the multitude, whose meaning and destiny he embodies no less than the artist's own.

[194] It seems to me now that all that is negative in Joyce's work, all that is cold-blooded, bizarre and banal, grotesque and devilish, is a positive virtue for which it deserves praise. Joyce's inexpressibly rich and myriad-faceted language unfolds itself in passages that creep along tapeworm fashion, terribly boring and monotonous, but the very boredom and monotony of it attain an epic grandeur that makes the book a *Mahabharata* of the world's futility and squalor. "From drains, clefts, cesspools, middens arise on all sides stagnant fumes" (p. 412). And in this open cloaca is

reflected with blasphemous distortion practically everything that is highest in religious thought, exactly as in dreams. (Alfred Kubin's *Die andere Seite* is a country-cousin of the metropolitan *Ulysses*.)

[195] Even this I willingly accept, for it cannot be denied. On the contrary, the transformation of eschatology into scatology proves the truth of Tertullian's dictum: *anima naturaliter christiana*. Ulysses shows himself a conscientious Antichrist and thereby proves that his Catholicism still holds together. He is not only a Christian but—still higher title to fame—a Buddhist, Shivaist, and a Gnostic (p. 481):

(*With a voice of waves.*) ... White yoghin of the Gods. Occult pimander of Hermes Trismegistos. (*With a voice of whistling seawind.*) Punarjanam patsypunjaub! I won't have my leg pulled. It has been said by one: beware of the left, the cult of Shakti. (*With a cry of storm birds.*) Shakti, Shiva! Dark hidden Father! ... Aum! Baum! Pyjaum! I am the light of the homestead, I am the dreamery creamery butter.

[196] Is not that touching and significant? Even on the dunghill the oldest and noblest treasures of the spirit are not lost. There is no cranny in the psyche through which the divine afflatus could finally breathe out its life and perish in noisome filth. Old Hermes, father of all heretical bypaths, is right: "As above, so below." Stephen Dedalus, the bird-headed sky-man, trying to escape from the all too gaseous regions of the air, falls into an earthly slough and in the very depths encounters again the heights from which he fled. "And should I flee to the uttermost ends of the earth ..." The close of this sentence is a blasphemy that furnishes the most convincing proof of this in all *Ulysses*.¹⁹ Better still, that nosyparker Bloom, the perverse and impotent sensualist, experiences in the dirt something that had never happened to him before: his own transfiguration. Glad tidings: when the eternal signs have vanished from the heavens, the pig that hunts truffles finds them again in the earth. For they are indelibly stamped on the lowest as on the highest; only in the lukewarm intermediate realm that is accursed of God are they nowhere to be found.

[197] Ulysses is absolutely objective and absolutely honest and therefore trustworthy. One can trust his testimony as to the power and nugatoriness of the world and the spirit. Ulysses alone is reality, life, meaning; in him is comprised the whole phantasmagoria of mind and matter, of egos and non-egos. And here I would like to ask Mr. Joyce a question: "Have you noticed that you are a representation, a thought, perhaps a complex of Ulysses? That he stands about you like a hundred-eyed Argus, and has thought up for you a world and an anti-world, filling them with objects without which you could not be conscious of your ego at all?" I do not know what the worthy author would answer to this question. Nor is it any business of mine—there is nothing to stop me from indulging in metaphysics on my own. But one is driven to ask it when one sees how neatly the microcosm of Dublin, on that sixteenth day of June, 1904, has been fished out of the chaotic macrocosm of world history,

how it is dissected and spread out on a glass slide in all its tasty details, and described with the most pedantic exactitude by a completely detached observer. Here are the streets, here are the houses and a young couple out for a walk, a real Mr. Bloom goes about his advertising business, a real Stephen Dedalus diverts himself with aphoristic philosophy. It would be quite possible for Mr. Joyce himself to loom up at some Dublin street-corner. Why not? He is surely as real as Mr. Bloom and could therefore equally well be fished out, dissected, and described (as, for instance, in *A Portrait of the Artist as a Young Man*).

[198] Who, then, is Ulysses? Doubtless he is a symbol of what makes up the totality, the oneness, of all the single appearances in *Ulysses* as a whole—Mr. Bloom, Stephen, Mrs. Bloom, and the rest, including Mr. Joyce. Try to imagine a being who is not a mere colourless conglomerate soul composed of an indefinite number of ill-assorted and antagonistic individual souls, but consists also of houses, street-processions, churches, the Liffey, several brothels, and a crumpled note on its way to the sea—and yet possesses a perceiving and registering consciousness! Such a monstrosity drives one to speculation, especially as one can prove nothing anyway and has to fall back on conjecture. I must confess that I suspect Ulysses of being a more comprehensive self who is the subject of all the objects on the glass slide, a being who acts as if he were Mr. Bloom or a printing-shop or a crumpled note, but actually is the “dark hidden Father” of his specimens. “I am the sacrificer and the sacrificed.” In the language of the infernal regions: “I am the dreamery creamery butter.” When he turns to the world with a loving embrace, all the gardens blossom. But when he turns his back upon it, the empty everyday rolls on—*labitur et labetur in omne volubilis aevum*.²⁰

[199] The demiurge first created a world that in his vainglory seemed to him perfect; but looking upward he beheld a light which he had not created. Thereupon he turned back towards the place where was his home. But as he did so, his masculine creative power turned into feminine acquiescence, and he had to confess:

All things ephemeral
Are but a reflection;
The unattainable
Here finds perfection;
The indescribable
Here it is done;
The Eternal Feminine
Still draws us on.

[200] From the specimen-slide far below upon earth, in Ireland, Dublin, 7 Eccles Street, from her bed as she grows sleepy at about two o'clock in the morning of the seventeenth of June, 1904, the voice of easy-going Mrs. Bloom speaks:

O and the sea the sea crimson sometimes like fire and the glorious sunsets and the figtrees in the Alameda gardens yes and all the queer little streets and pink and blue and yellow houses and the rosegardens and the jessamine and geraniums and cactuses and Gibraltar as a girl where I was a Flower of the mountain yes when I put the rose in my hair like the Andalusian girls used or shall I wear a red yes and how he kissed me under the Moorish wall and I thought well as well him as another and then I asked him with my eyes to ask again yes and then he asked me would I yes to say yes my mountain flower and first I put my arms around him yes and drew him down to me so he could feel my breasts all perfume yes and his heart was going like mad and yes I said yes I will Yes.

[201] O *Ulysses*, you are truly a devotional book for the object-besotted, object-ridden white man! You are a spiritual exercise, an ascetic discipline, an agonizing ritual, an arcane procedure, eighteen alchemical alembics piled on top of one another, where amid acids, poisonous fumes, and fire and ice, the homunculus of a new, universal consciousness is distilled!

[202] You say nothing and betray nothing, O *Ulysses*, but you give us the works! Penelope need no longer weave her never-ending garment; she now takes her ease in the gardens of the earth, for her husband is home again, all his wanderings over. A world has passed away, and is made new.

[203] Concluding remark: I am now getting on pretty well with my reading of *Ulysses*—forward!

APPENDIX

[The genesis of the foregoing paper is of interest, in that conflicting explanations have been published. The version that is believed to be authentic is given first:

(1) In par. 171, Jung stated that he wrote the article because a publisher asked him “what I thought about [Joyce], or rather about *Ulysses*.” This was Dr. Daniel Brody, formerly head of Rhein-Verlag (Zurich), which published a German translation of *Ulysses* in 1927 (2nd and 3rd edns., 1930). Dr. Brody has recounted that, in 1930, he attended a lecture by Jung in Munich on “the psychology of the author.” (This was probably an earlier version of the preceding paper, “Psychology and Literature.”) Speaking with Jung later, Dr. Brody said that he felt Jung was referring to Joyce, without mentioning his name. Jung denied this but said that he was indeed interested in Joyce and had read part of *Ulysses*. Dr. Brody responded that the Rhein-Verlag was preparing to publish a literary review, and he would welcome an article on Joyce by Jung for the first issue. Jung agreed, and about a month later he delivered the article to Dr. Brody, who discovered that Jung had dealt with Joyce and *Ulysses* mainly from a clinical point of view and, so it seemed, harshly. He sent the article to Joyce, who cabled him, “Niedrigerhängen,” meaning “Hang it lower” or, figuratively, “Show it up by printing it.” (Joyce was quoting Frederick the Great, who upon seeing a placard attacking him directed that it be hung lower for all to behold.) Friends of Joyce, including Stuart Gilbert, advised Brody not to publish the article, though Jung at first insisted on its publication. In the meantime, political tensions had developed in Germany, so that the Rhein-Verlag decided to abandon the projected literary review, and Dr. Brody therefore returned the article to Jung. Later, Jung revised the essay (modifying its severity) and published it in 1932 in the *Europäische Revue*. The original version has never come to light.

The foregoing summary is based partially on recent communications from Dr. Brody to the Editors and partially on the contents of a letter from Professor Richard Ellmann, who obtained a similar account from Dr. Brody. Professor Ellmann has stated that he will deal with the subject in a new edition of his biography of Joyce.

(2) In the first edition of his *James Joyce* (1959; p. 641), Professor Ellmann wrote that Brody asked Jung for a preface to the third edition (late 1930) of the German translation of *Ulysses*. Patricia Hutchins, in *James Joyce's World* (1957; p. 182), quotes Jung in an interview: “In the thirties I was asked to write an introduction to the German edition of *Ulysses*, but as such it was not a success. Later I published it in

one of my books. My interest was not literary but professional.... The book was a most valuable document from my point of view....”

(3) In a letter to Harriet Shaw Weaver, Sept. 27, 1930, from Paris, Joyce wrote: “The Rheinverlag wrote to Jung for a preface to the German edition of Gilbert’s book. He replied with a very long and hostile attack ... which they are much upset about, but I want them to use it....” (*Letters*, ed. Stuart Gilbert, p. 294). Rhein-Verlag published a German edition of *James Joyce’s “Ulysses”: A Study*, as *Das Rätsel Ulysses*, in 1932. Mr. Gilbert stated, in a letter to the Editors: “I fear my memories of Jung’s *Ulysses* essay remain vague, but ... I feel fairly sure that Jung was asked to write the piece for my *Rätsel* and not for any German edition of *Ulysses*.” Professor Ellmann has subsequently commented, in a letter: “I suspect that at some point in the negotiations with Jung the possibility of using the article also as a preface to Gilbert’s book may well have arisen, either at Brody’s suggestion or at Joyce’s.”

*

Jung sent Joyce a copy of the revised version of his essay, with the following letter (cf. Ellmann, *James Joyce*, p. 642):

Küsnacht-Zürich
Seestrasse 228
September 27th, 1932.

James Joyce Esq.

Hotel Elite,
Zürich

Dear Sir,

Your *Ulysses* has presented the world such an upsetting psychological problem that repeatedly I have been called in as a supposed authority on psychological matters.

Ulysses proved to be an exceedingly hard nut and it has forced my mind not only to most unusual efforts, but also to rather extravagant peregrinations (speaking from the standpoint of a scientist). Your book as a whole has given me no end of trouble and I was brooding over it for about three years until I succeeded to put myself into it. But I must tell you that I’m profoundly grateful to yourself as well as to your gigantic opus, because I learned a great deal from it. I shall probably never be quite sure whether I did enjoy it, because it meant too much grinding of nerves and of grey matter. I also don’t know whether you will enjoy what I have written about *Ulysses* because I couldn’t help telling the world how much I was bored, how I grumbled, how I cursed and how I admired. The 40 pages of non stop run in the end is a string

of veritable psychological peaches. I suppose the devil's grandmother knows so much about the real psychology of a woman, I didn't.

Well I just try to recommend my little essay to you, as an amusing attempt of a perfect stranger who went astray in the labyrinth of your *Ulysses* and happened to get out of it again by sheer good luck. At all events you may gather from my article what *Ulysses* has done to a supposedly balanced psychologist.

With the expression of my deepest appreciation, I remain, dear Sir,

Yours faithfully

C. G. Jung

Jung's copy of *Ulysses* (cf. above, p. 109, n. 1) contains on its flyleaf the following inscription in Joyce's hand: "To Dr C. G. Jung, with grateful appreciation of his aid and counsel. James Joyce. Xmas 1934, Zurich." The copy is evidently the one that Jung owned when he wrote the essay, as some of the passages quoted therein have been marked in pencil.

—EDITORS.]

PICASSO¹

[204] As a psychiatrist, I almost feel like apologizing to the reader for becoming involved in the excitement over Picasso. Had it not been suggested to me from an authoritative quarter, I should probably never have taken up my pen on the subject. It is not that this painter and his strange art seem to me too slight a theme—I have, after all, seriously concerned myself with his literary brother, James Joyce.² On the contrary, his problem has my undivided interest, only it appears too wide, too difficult, and too involved for me to hope that I could come anywhere near to covering it fully in a short article. If I venture to voice an opinion on the subject at all, it is with the express reservation that I have nothing to say on the question of Picasso's "art" but only on its psychology. I shall therefore leave the aesthetic problem to the art critics, and shall restrict myself to the psychology underlying this kind of artistic creativeness.

[205] For almost twenty years, I have occupied myself with the psychology of the pictorial representation of psychic processes, and I am therefore in a position to look at Picasso's pictures from a professional point of view. On the basis of my experience, I can assure the reader that Picasso's psychic problems, so far as they find expression in his work, are strictly analogous to those of my patients. Unfortunately, I cannot offer proof on this point, as the comparative material is known only to a few specialists. My further observations will therefore appear unsupported, and require the reader's good will and imagination.

[206] Non-objective art draws its contents essentially from "inside." This "inside" cannot correspond to consciousness, since consciousness contains images of objects as they are generally seen, and whose appearance must therefore necessarily conform to general expectations. Picasso's object, however, appears different from what is generally expected—so different that it no longer seems to refer to any object of outer experience at all. Taken chronologically, his works show a growing tendency to withdraw from the empirical objects, and an increase in those elements which do not correspond to any outer experience but come from an "inside" situated behind consciousness—or at least behind that consciousness which, like a universal organ of perception set over and above the five senses, is orientated towards the outer world. Behind consciousness there lies not the absolute void but the unconscious psyche, which affects consciousness from behind and from inside, just as much as the outer world affects it from in front and from outside. Hence those pictorial elements which do not correspond to any "outside" must originate from "inside."

[207] As this “inside” is invisible and cannot be imagined, even though it can affect consciousness in the most pronounced manner, I induce those of my patients who suffer mainly from the effects of this “inside” to set them down in pictorial form as best they can. The aim of this method of expression is to make the unconscious contents accessible and so bring them closer to the patient’s understanding. The therapeutic effect of this is to prevent a dangerous splitting-off of the unconscious processes from consciousness. In contrast to objective or “conscious” representations, all pictorial representations of processes and effects in the psychic background are *symbolic*. They point, in a rough and approximate way, to a meaning that for the time being is unknown. It is, accordingly, altogether impossible to determine anything with any degree of certainty in a single, isolated instance. One only has the feeling of strangeness and of a confusing, incomprehensible jumble. One does not know what is actually meant or what is being represented. The possibility of understanding comes only from a comparative study of many such pictures. Because of their lack of artistic imagination, the pictures of patients are generally clearer and simpler, and therefore easier to understand, than those of modern artists.

[208] Among patients, two groups may be distinguished: the *neurotics* and the *schizophrenics*. The first group produces pictures of a synthetic character, with a pervasive and unified feeling-tone. When they are completely abstract, and therefore lacking the element of feeling, they are at least definitely symmetrical or convey an unmistakable meaning. The second group, on the other hand, produces pictures which immediately reveal their alienation from feeling. At any rate they communicate no unified, harmonious feeling-tone but, rather, contradictory feelings or even a complete lack of feeling. From a purely formal point of view, the main characteristic is one of fragmentation, which expresses itself in the so-called “lines of fracture”—that is, a series of psychic “faults” (in the geological sense) which run right through the picture. The picture leaves one cold, or disturbs one by its paradoxical, unfeeling, and grotesque unconcern for the beholder. This is the group to which Picasso belongs.³

[209] In spite of the obvious differences between the two groups, their productions have one thing in common: their *symbolic content*. In both cases the meaning is an implied one, but the neurotic searches for the meaning and for the feeling that corresponds to it, and takes pains to communicate it to the beholder. The schizophrenic hardly ever shows any such inclination; rather, it seems as though he were the victim of this meaning. It is as though he had been overwhelmed and swallowed up by it, and had been dissolved into all those elements which the neurotic at least tries to master. What I said about Joyce holds good for schizophrenic forms of expression too: nothing comes to meet the beholder, everything turns away from him; even an occasional touch of beauty seems only like an inexcusable delay in withdrawal. It is

the ugly, the sick, the grotesque, the incomprehensible, the banal that are sought out—not for the purpose of expressing anything, but only in order to obscure; an obscurity, however, which has nothing to conceal, but spreads like a cold fog over desolate moors; the whole thing quite pointless, like a spectacle that can do without a spectator.

[210] With the first group, one can divine what they are trying to express; with the second, what they are unable to express. In both cases, the content is full of secret meaning. A series of images of either kind, whether in drawn or written form, begins as a rule with the symbol of the Nekyia—the journey to Hades, the descent into the unconscious, and the leave-taking from the upper world. What happens afterwards, though it may still be expressed in the forms and figures of the day-world, gives intimations of a hidden meaning and is therefore symbolic in character. Thus Picasso starts with the still objective pictures of the Blue Period—the blue of night, of moonlight and water, the Tuat-blue of the Egyptian underworld. He dies, and his soul rides on horseback into the beyond. The day-life clings to him, and a woman with a child steps up to him warningly. As the day is woman to him, so is the night; psychologically speaking, they are the light and the dark soul (anima). The dark one sits waiting, expecting him in the blue twilight, and stirring up morbid presentiments. With the change of colour, we enter the underworld. The world of objects is death-struck, as the horrifying masterpiece of the syphilitic, tubercular, adolescent prostitute makes plain. The motif of the prostitute begins with the entry into the beyond, where he, as a departed soul, encounters a number of others of his kind. When I say “he,” I mean that personality in Picasso which suffers the underworld fate—the man in him who does not turn towards the day-world, but is fatefully drawn into the dark; who follows not the accepted ideals of goodness and beauty, but the demoniacal attraction of ugliness and evil. It is these antichristian and Luciferian forces that well up in modern man and engender an all-pervading sense of doom, veiling the bright world of day with the mists of Hades, infecting it with deadly decay, and finally, like an earthquake, dissolving it into fragments, fractures, discarded remnants, debris, shreds, and disorganized units. Picasso and his exhibition are a sign of the times, just as much as the twenty-eight thousand people who came to look at his pictures.

[211] When such a fate befalls a man who belongs to the neurotic group, he usually encounters the unconscious in the form of the “Dark One,” a Kundry of horribly grotesque, primeval ugliness or else of infernal beauty. In Faust’s metamorphosis, Gretchen, Helen, Mary, and the abstract “Eternal Feminine” correspond to the four female figures of the Gnostic underworld, Eve, Helen, Mary, and Sophia. And just as Faust is embroiled in murderous happenings and reappears in changed form, so Picasso changes shape and reappears in the underworld form of the tragic Harlequin

—a motif that runs through numerous paintings. It may be remarked in passing that Harlequin is an ancient chthonic god.⁴

[212] The descent into ancient times has been associated ever since Homer's day with the Nekyia. Faust turns back to the crazy primitive world of the witches' sabbath and to a chimerical vision of classical antiquity. Picasso conjures up crude, earthy shapes, grotesque and primitive, and resurrects the soullessness of ancient Pompeii in a cold, glittering light—even Giulio Romano could not have done worse! Seldom or never have I had a patient who did not go back to neolithic art forms or revel in evocations of Dionysian orgies. Harlequin wanders like Faust through all these forms, though sometimes nothing betrays his presence but his wine, his lute, or the bright lozenges of his jester's costume. And what does he learn on his wild journey through man's millennial history? What quintessence will he distil from this accumulation of rubbish and decay, from these half-born or aborted possibilities of form and colour? What symbol will appear as the final cause and meaning of all this disintegration?

[213] In view of the dazzling versatility of Picasso, one hardly dares to hazard a guess, so for the present I would rather speak of what I have found in my patients' material. The Nekyia is no aimless and purely destructive fall into the abyss, but a meaningful *katabasis eis antron*, a descent into the cave of initiation and secret knowledge. The journey through the psychic history of mankind has as its object the restoration of the whole man, by awakening the memories in the blood. The descent to the Mothers enabled Faust to raise up the sinfully whole human being—Paris united with Helen—that *homo totus* who was forgotten when contemporary man lost himself in one-sidedness. It is he who at all times of upheaval has caused the tremor of the upper world, and always will. This man stands opposed to the man of the present, because he is the one who ever is as he was, whereas the other is what he is only for the moment. With my patients, accordingly, the *katabasis* and *katalysis* are followed by a recognition of the bipolarity of human nature and of the necessity of conflicting pairs of opposites. After the symbols of madness experienced during the period of disintegration there follow images which represent the coming together of the opposites: light/dark, above/below, white/black, male/female, etc. In Picasso's latest paintings, the motif of the union of opposites is seen very clearly in their direct juxtaposition. One painting (although traversed by numerous lines of fracture) even contains the conjunction of the light and dark anima. The strident, uncompromising, even brutal colours of the latest period reflect the tendency of the unconscious to master the conflict by violence (colour = feeling).

[214] This state of things in the psychic development of a patient is neither the end nor the goal. It represents only a broadening of his outlook, which now embraces the whole of man's moral, bestial, and spiritual nature without as yet shaping it into a living unity. Picasso's *drame intérieur* has developed up to this last point before the

dénouement. As to the future Picasso, I would rather not try my hand at prophecy, for this inner adventure is a hazardous affair and can lead at any moment to a standstill or to a catastrophic bursting asunder of the conjoined opposites. Harlequin is a tragically ambiguous figure, even though—as the initiated may discern—he already bears on his costume the symbols of the next stage of development. He is indeed the hero who must pass through the perils of Hades, but will he succeed? That is a question I cannot answer. Harlequin gives me the creeps—he is too reminiscent of that “motley fellow, like a buffoon” in *Zarathustra*, who jumped over the unsuspecting rope-dancer (another Pagliacci) and thereby brought about his death. Zarathustra then spoke the words that were to prove so horrifyingly true of Nietzsche himself: “Your soul will be dead even sooner than your body: fear nothing more!” Who the buffoon is, is made plain as he cries out to the rope-dancer, his weaker *alter ego*: “To one better than yourself you bar the way!” He is the greater personality who bursts the shell, and this shell is sometimes—the brain.

THE COLLECTED WORKS OF C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1 PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

2 EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

***3 THE PSYCHOGENESIS OF MENTAL DISEASE**

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

‡4 FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡5 SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6 PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7 TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8 THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

***9 PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS**

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

***9 PART II. AION (1951)**

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

*10 CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff’s “Studies in Jungian Psychology” (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution Mondiale” (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

†11 PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12 PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13 ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14 MYSTERIUM CONIUNCTIONIS (1955-56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

*15 THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

†16 THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17 THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18 MISCELLANY

Posthumous and Other Miscellaneous Works

19 BIBLIOGRAPHY AND INDEX

Complete Bibliography of C. G. Jung's Writings

General Index to the Collected Works

¹ [An address delivered in the house in which Paracelsus was born, at Einsiedeln (Canton Schwyz), June, 1929, under the auspices of the Literary Club of Zurich, and published in *Der Lesezirkel* (Zurich), XVI: 10 (Sept., 1929). Reprinted in *Wirklichkeit der Seele* (Zurich, 1934) and as a pamphlet (St. Gallen, 1952).—EDITORS.]

² See the excellent edition of Paracelsus's writings prepared by Bernhard Aschner.

³ [Paracelsus died Sept. 24, 1541, at Salzburg, where he was buried in the cemetery of St. Sebastian, "among the poor of the almshouse" (Jacobi, in her edn. of Paracelsus' selected writings, p. lxi).—EDITORS.]

⁴ "Let him not be another's who can be his own."

⁵ "Agrippa spares no man; he contemns, knows, knows not, weeps, laughs, waxes wroth, reviles, carps at all things; being himself philosopher, demon, hero, god, and all things."

¹ [Originally delivered as a lecture to the Swiss Society for the History of Medicine and the Natural Sciences, at the annual meeting of the Society for Nature Research, Basel, Sept. 7, 1941, to commemorate the 400th anniversary of Paracelsus's death; published as "Paracelsus als Arzt," *Schweizerische medizinische Wochenschrift* (Basel), LXXXI (1941): 40, 1153-70; republished in *Paracelsica: Zwei Vorlesungen über den Arzt und Philosophen Theophrastus* (Zurich, 1942). The other essay from *Paracelsica* is published in Vol. 13 of the *Coll. Works under the title* "Paracelsus as a Spiritual Phenomenon," together with Jung's foreword to *Paracelsica*.—EDITORS.]

² Not, at least, in principle. He did, however, expressly repudiate various superstitious abuses of astrology.

³ *Epistolarum Conradi Gessneri, Philosophici Medici Tiguri, Libri III* (Zurich, 1577), fol. 2^{v-r}.

⁴ Adam von Bodenstein, editor of the *Vita longa* and a pupil of Paracelsus in Basel.

⁵ Paracelsus himself mentions the accusation in "Haeresiarcha." Cf. *Das Buch Paragranum*, ed. Strunz, preface, p. 18.

⁶ *Ibid.*, p. 105. [For the translation of the quotations from Paracelsus I am greatly indebted to Dr. R. T. Llewellyn.—TRANS.]

⁷ *Liber Azoth*, ed. Huser, pp. 534 and 535. He declares that he witnessed the transformation of the tree-goose himself.

⁸ *De caducis* (Huser, I), p. 595.

⁹ *Paragranum*. The *leprositatis aeris* is a well-known idea in alchemy. Cf. *Faust II*: "It's only rust that gives the coin its worth."

¹⁰ P. 33.

¹¹ P. 39.

¹² P. 53.

¹³ P. 35.

¹⁴ *Labyrinthus medicorum errantium* (Huser, I), p. 272.

¹⁵ *Ibid.*, p. 269.

¹⁶ P. 270.

¹⁷ *De morbis amentium*, Part II, ch. VI (Huser, I), p. 506.

¹⁸ *Paragranum*, p. 32.

¹⁹ *Ibid.*, pp. 65f.

²⁰ Pp. 80. 83.

²¹ Paracelsus makes no real *distinction* between astronomy and astrology.

²² Ch. II (Huser, I), p. 267.

²³ *Ibid.*

²⁴ *Paragranum*, p. 50: "As in the heavens so also in the body the stars float free, pure, and have an invisible influence, like the arcana."

²⁵ *Ibid.*, p. 52.

²⁶ Paracelsus certainly knew the "Tabula smaragdina," the classical authority of medieval alchemy, and the text: "What is below is like what is above. What is above is like what is below. Thus is the miracle of the One

accomplished.”

²⁷ *Paragranum*, p. 56.

²⁸ *Ibid.*, p. 57.

²⁹ P. 48. Cf. the description in “De ente astrali,” *Fragmenta ad Paramirum* (Huser, I, p. 132): “The heavens are a spirit and a vapour in which we live just like a bird in time. Not only the stars or the moon etc. constitute the heavens, but also there are stars in us, and these which are in us and which we do not see constitute the heavens also ... the firmament is twofold, that of the heavens and that of the bodies, and these latter agree with each other, and not the body with the firmament ... man’s strength comes from the upper firmament and all his power lies in it. As the former may be weak or strong, so, too, is the firmament in the body ...”

³⁰ *Paragranum*, p. 56.

³¹ P. 55.

³² P. 60.

³³ P. 54.

³⁴ P. 48.

³⁵ P. 73.

³⁶ P. 72.

³⁷ Alchemical furnace.

³⁸ *Paragranum*, p. 77.

³⁹ P. 73.

⁴⁰ *Lab. med.*, ch. IV (Huser, I), p. 370.

⁴¹ *Ibid.*, ch. IX, p. 277.

⁴² The devil.

⁴³ *Lab. med.*, ch. IX, p. 278.

⁴⁴ *Paragranum*, p. 67.

⁴⁵ Hence the alchemists’ strange but characteristic use of language, as for instance: “That body is the place of the science, gathering it together,” etc. (Mylius, *Philosophia reformata*, p. 123.)

⁴⁶ The “Liber quattorum” (10th cent.) speaks of the *extraction of thought*. The relevant passage runs: “Those seated by the river Euphrates are the Chaldaeans, who are skilled in the stars and in judging them, and they were the first to accomplish the extraction of thought.” These inhabitants of the banks of the Euphrates were probably the Sabaeans or Harranites, to whose learned activities we owe the transmission of a great many scientific treatises of Alexandrian origin. Here, as in Paracelsus, alchemical transformation is connected with the influence of the stars. The same passage says: “They who sit by the banks of the Euphrates convert gross bodies into a simple appearance, with the help of the movement of the higher bodies” (*Theatrum chemicum*, 1622, V, p. 144). Compare the “extraction of thought” with the Paracelsan saying that the Archasius “attracts science and prudence.” See *infra*, par. 39.

⁴⁷ *Paragranum*, p. 26.

⁴⁸ *Ibid.*, p. 27.

⁴⁹ Pp 28, 29.

⁵⁰ Pp. 13, 33.

⁵¹ P. 47.

⁵² *Lab. med.*, ch. VI (Huser, I), p. 273.

⁵³ *Ibid.*

⁵⁴ *Fragmenta medica*, Lib. IV Columnarum Medicinae (Huser, I), p. 142.

⁵⁵ In this respect, too, Paracelsus showed himself to be a conservative alchemist, for even in antiquity the fourfold alchemical procedure was known as *τετραμερεῖν τὴν φιλοσοφίαν*, “the division of the philosophy into four parts” (Berthelot, *Alch. grecs*, III, xlv, 5).

⁵⁶ “Archasius” is probably the same as “Archeus,” the life-warmth, also called Vulcan. It seems to have been localized in the belly, where it took care of digestion and produced “foods,” just as the *archeus terrae* produced metals. This was the alchemist of the earth who regulated the “mineral fire in the mountains” (*De transmutationibus rerum naturalium*, Lib. VII, Huser, I, p. 900). We find this idea also in the “Liber quattorum,” where the Archeus is called “Alkian” or “Alkien.” “Alkian is ... the spirit that nourishes and governs man, through which comes about the conversion of his food and his animal generation, and through it man exists” (*Theatr. chem.*, 1622, V, p. 152). “The Alkien of the earth is the animal Alkien: at the ends of the earth ... are powers ... like those animal powers which the physicians call Alkien” (*ibid.*, p. 191).

⁵⁷ *De vita longa*, Lib. I, ch. IX, ed. Bodenstein, p. 26.

⁵⁸ *Paragranum*, p. 98.

⁵⁹ *Von dem Podagra* (Huser, I), p. 541.

⁶⁰ *Lab. med.*, ch. IX (Huser, I), p. 277.

⁶¹ *Archidoxis magicae*, Lib. I (Huser, II), p. 546.

⁶² *Paragranum*, preface, p. 21.

⁶³ G. Ebers, *Papyros E. Das hermetische Buch über die Arzneimittel der alten Aegypter*.

⁶⁴ God loves the physician above all scholars. Therefore he should be truthful and not a “man of masks” (*Paragranum*, p. 95).

⁶⁵ *Lab. med.*, ch. VIII (Huser, I), p. 276.

⁶⁶ Huser, I, p. 589ff.

¹ [First published simultaneously in the English and German editions of the same journal: translated by Cary F. Baynes, under the present title, in *Character and Personality: An International Quarterly of Psychodiagnostics and Allied Studies* (Durham, North Carolina), I: 1 (Sept. 1932); and as “Sigmund Freud als kulturhistorische Erscheinung” (the original version) in *Charakter: eine Vierteljahresschrift für psychodiagnostische Studien und verwandte Gebiete* (Berlin), I: 1 (Sept. 1932). Jung was a collaborating editor of the journal, along with Alfred Adler, Gordon W. Allport, Manfred Bleuler, Lucien Lévy-Bruhl, and others. The essay was reprinted in *Wirklichkeit der Seele* (Zurich, 1934).—EDITORS.]

¹ [Originally published as “Sigmund Freud: Ein Nachruf,” *Sonntagsblatt der Basler Nachrichten*, XXXIII:40 (Oct. 1, 1939). Freud died in London on Sept. 23.—EDITORS.]

² [Cf. Klages, *Der Geist als Widersacher der Seele*; and Jung, *Civilization in Transition*, pars. 375, 657.—EDITORS.]

¹ [Originally delivered as the principal address at a memorial service held in Munich in May, 1930, for Wilhelm, who had died the previous March 1. Published as “Nachruf für Richard Wilhelm,” *Neue Zürcher Zeitung*, CLI: 1 (March 6, 1930), and in the *Chinesisch-Deutscher Almanach* (Frankfurt a. M.), 1931. Republished in the 2nd edition of Jung and Wilhelm, *Das Geheimnis der goldenen Blüte: Ein chinesisches Lebensbuch* (Zurich, 1938). Previously translated by Cary F. Baynes as an appendix to Jung and Wilhelm, *The Secret of the Golden Flower* (London and New York, 1931; revised and augmented edition, 1962). Grateful acknowledgment is made here to Mrs. Baynes for permission to draw upon the 1962 version of her translation. For Jung’s commentary on *The Secret of the Golden Flower*, see *Coll. Works*, Vol. 13.—EDITORS.]

² [Wilhelm’s translation of the Chinese classic was published in Jena, 1924. Translated into English by Cary F. Baynes as *The I Ching, or Book of Changes* (1950), with a foreword by Jung (see *Coll. Works*, Vol. 11).—EDITORS.]

³ *The Yi King*, trans. by James Legge (*Sacred Books of the East*, Vol. 16; 1882).

⁴ For the details and history of the method, see the *I Ching* (1967 edn.), pp. xlixff. and 356ff.

⁵ [See Hellmut Wilhelm, “The Concept of Time in the Book of Changes,” pp. 216ff.—EDITORS.]

¹ [A lecture delivered to the Society for German Language and Literature, Zurich, May, 1922. First published as “Über die Beziehungen der analytischen Psychologie zum dichterischen Kunstwerk,” *Wissen und Leben* (Zurich), XV: 19-20 (Sept., 1922); reprinted in *Seelenprobleme der Gegenwart* (Zurich, 1931); translated by H. G. Baynes, as “On the Relation of Analytical Psychology to Poetic Art,” *British Journal of Psychology* (Medical Section) (Cambridge), III:3 (1923), reprinted in *Contributions to Analytical Psychology* (London and New York, 1928).—EDITORS.]

² [By this Jung probably meant the analytical techniques that were in use at the time (1922), and more particularly the Freudian. Whether he had by then developed his own technique for constellating the collective unconscious is an open question. Cf. “The Transcendent Function” (orig. 1916), pp. 67ff., and ch. VI of Jung’s *Memories, Dreams, Reflections*.—EDITORS.]

³ [Here Jung defines the *collective unconscious* in much the same way as a year earlier (*Psychological Types*, pars. 624, 747) he had defined the *archetype*. Still earlier, in 1919, using the term “archetype” for the first time, he had stated: “The instincts and the archetypes together form the ‘collective unconscious’” (“Instinct and the Unconscious,” par. 270). This is in better agreement with his later formulations. The subject of the above sentence should therefore be understood as the archetype.—EDITORS.]

⁴ [Lit., “primitive Vorlage.” In the light of Jung’s later formulations, this would mean the “archetype *per se*” as distinct from the “archetypal image.” Cf. particularly “On the Nature of the Psyche,” par. 417.—EDITORS.]

¹ [First published as “Psychologie und Dichtung” in *Philosophie der Literaturwissenschaft* (Berlin, 1930), ed. by Emil Ermatinger; expanded and revised in *Gestaltungen des Unbewussten* (Zurich, 1950). The original version was translated by Eugene Jolas as “Psychology and Poetry,” *transition: An International Quarterly for Creative Experiment*, no. 19/20 (June, 1930); also translated by W. S. Dell and Cary F. Baynes, in *Modern Man in Search of a Soul* (London and New York, 1933).

A typescript of an introduction was found among Jung’s posthumous papers; it is first published here, in translation. Evidently Jung used the introduction when he read the essay as a lecture, though nothing certain is known of such an occasion. Cf. p. 132, par. (1).—EDITORS.]

² [The designation “psychological” is somewhat confusing in this context because, as the subsequent discussion makes clear, the “visionary” mode deals equally with “psychological” material. Moreover, “psychological” is used in still another sense in pars. 136–37, where the “psychological novel” is contrasted with the “non-psychological novel.”

[The term “personalistic” suggests itself as coming closer to defining the material in question, which derives from “the sphere of conscious human experience—from the psychic foreground of life” (par. 140). The term “personalistic” occurs elsewhere in Jung’s writings, e.g., in *The Practice of Psychotherapy*, pars. 212 and 281, n. 34. Both times it characterizes a particular kind of psychology. The second instance is the more significant in that “personalistic” is contrasted with “archetypal,” and this would appear to be precisely the distinction intended between the two kinds of psychological material and the two modes of artistic creation.—EDITORS.]

³ Cf. my essay “Wotan,” pars. 375ff.

⁴ Recently interpreted along the lines of analytical psychology by Linda Fierz-David, in *The Dream of Poliphilo*.

⁵ Some samples of Boehme may be found in my *Psychology and Alchemy*, pars. 214ff., and in “A Study in the Process of Individuation,” pars. 533ff., 578ff.

⁶ Cf. the detailed study by Aniela Jaffé in *Gestaltungen des Unbewussten*.

⁷ One has only to think of James Joyce’s *Ulysses*, which is a work of the greatest significance in spite or perhaps because of its nihilistic tendencies.

⁸ *Confessions* (trans. Sheed), p. 158.

⁹ Isaiah 33:14.

¹⁰ *Die Stammeslehren der Dschagga*, edited by Bruno Gutmann, comprises no less than three volumes and runs to 1975 pages!

¹¹ Letter to Albert Brenner. [In 1855. See Dru trans. of Burckhardt’s letters, p. 116, and Jung, *Symbols of Transformation*, par. 45, n. 45.—EDITORS.]

¹² Written in 1929.

¹³ *The Dream of Poliphilo*, pp. 234ff.

¹⁴ *Ibid.*, p. 27.

¹⁵ I am referring to the first version, written in prose.

¹⁶ Cf. *Psychological Types*, pars. 321ff.

¹⁷ See his essays on Jensen’s *Gradiva* (Standard Edition, IX), and on Leonardo da Vinci (XI).

¹⁸ *Psyche*, ed. Ludwig Klages, p. 158.

¹⁹ Eckermann's dream, in which he saw Faust and Mephistopheles falling to earth in the form of a double meteor, recalls the motif of the Dioscuri (cf. the motif of the two friends in my essay "Concerning Rebirth," pp. 135ff.), and this sheds light on an essential characteristic of Goethe's psyche. An especially subtle point here is Eckermann's remark that the swift and horned figure of Mephisto reminded him of Mercurius. This observation is in full accord with the alchemical nature of Goethe's masterpiece. (I have to thank my colleague W. Kranefeldt for refreshing my memory of Eckermann's *Conversations*.)

²⁰ Cf. C. Kerényi, *Asklepios*, pp. 78f.

¹ [For the genesis of this essay, see appendix, *infra*, p. 132. It was first published in the *Europäische Revue* (Berlin), VIII:2/9 (Sept., 1932); reprinted in *Wirklichkeit der Seele* (Zurich, 1934). Translated by W. Stanley Dell in *Spring* (New York), 1949, and in *Nimbus* (London), II: 1 (June–Aug., 1952), which translation forms the basis of the present version.

[The quotations from *Ulysses* are in accordance with the 10th printing (Paris, 1928), a copy of which Jung owned and cited, though he evidently (*infra*, par. 171) had seen *Ulysses* upon its first publication, 1922.—EDITORS.]

[Author's headnote added to version in *Wirklichkeit der Seele*:] This literary essay first appeared in the *Europäische Revue*. It is not a scientific treatise, any more than is my *aperçu* on Picasso. I have included it in the present volume because *Ulysses* is an important "document humain" very characteristic of our time, and because my opinions may show how ideas that play a considerable role in my work can be applied to literary material. My essay lacks not only any scientific but also any didactic intention, and is of interest to the reader only as a subjective confession.

² As Joyce himself says (*Work in Progress, in transition*): "We may come, touch and go, from atoms and ifs but we are presurely destined to be odd's without ends." [As in *Finnegans Wake* (1939), p. 455. Fragments were published 1924-38, under the title *Work in Progress*, in the monthly magazine *transition* and elsewhere.—EDITORS]

³ Curtius (*James Joyce und sein Ulysses*) calls *Ulysses* a "Luciferian book, a work of Antichrist."

⁴ Curtius (*ibid.*, p. 60): "A metaphysical nihilism is the substance of Joyce's work."

⁵ The magic words that sent me to sleep occur at the bottom of p. 134 and top of p. 135: "that stone effigy in frozen music, horned and terrible, of the human form divine, that eternal symbol of wisdom and prophecy which, if aught that the imagination or the hand of sculptor has wrought in marble of soultransfigured and of soultransfiguring deserves to live, deserves to live." At this point, dizzy with sleep, I turned the page and my eye fell on the following passage: "a man supple in combat: stonehorned, stonebearded, heart of stone." This refers to Moses, who refused to be cowed by the might of Egypt. The two passages contained the narcotic that switched off my consciousness, activating a still unconscious train of thought which consciousness would only have disturbed. As I later discovered, it dawned on me here for the first time what the author was doing and what was the idea behind his work.

⁶ This is greatly intensified in *Work in Progress*. Carola Giedion-Welcker aptly remarks on the "ever-recurring ideas in ever-changing forms, projected into a sphere of absolute irreality. Absolute time, absolute space" (*Neue Schweizer Rundschau*, Sept. 1929, p. 666).

⁷ In Janet's psychology this phenomenon is known as *abaissement du niveau mental*. Among the insane it happens involuntarily, but with Joyce it is the result of deliberate training. All the richness and grotesque profundity of dream-thinking come to the surface when the "fonction du réel," that is, adapted consciousness, is switched off. Hence the predominance of psychic and verbal automatisms and the total neglect of any communicable meaning.

⁸ I think Stuart Gilbert (*James Joyce's "Ulysses,"* 1930, p. 40) is right in supposing that each chapter is presided over, among other things, by one of the visceral or sensory dominants. Those he cites are the kidneys, genitals, heart, lungs, oesophagus, brain, blood, ear, musculature, eye, nose, uterus, nerves, skeleton, skin. These dominants each function as a *leitmotif*. My remark about visceral thinking was written in 1930. For me Gilbert's proof offers valuable confirmation of the psychological fact that an *abaissement du niveau mental* constellates what Wernicke calls the "organ-representatives," i.e., symbols representing the organs.

- ⁹ Curtius, p. 30: “He reproduces the stream of consciousness without filtering it either logically or ethically.”
- ¹⁰ Curtius, p. 8: “The author has done everything to avoid making it easier for the reader to understand.”
- ¹¹ Curtius, Stuart Gilbert, and others.
- ¹² [See the appendix, *infra*.]
- ¹³ Gilbert, p. 2, speaks of a “deliberate deflation of sentiment.”
- ¹⁴ Gilbert, p. 355 n.: “... to take, so to speak, a God’s-eye view of the cosmos.”
- ¹⁵ Gilbert likewise stresses this detachment. He says on p. 21: “The attitude of the author of *Ulysses* towards his personages is one of serene detachment.” (I would put a question-mark after “serene.”) P. 22: “All facts of any kind, mental or material, sublime or ridiculous, have an equivalence of meaning for the artist.” P. 23: “In this detachment, as absolute as the indifference of Nature herself towards her children, we may see one of the causes of the apparent ‘realism’ of *Ulysses*.”
- ¹⁶ As Joyce himself says in *A Portrait of the Artist as a Young Man* (1930 edn., p. 245): “The artist, like the God of Creation, remains within or behind or beyond or above his handiwork, invisible, refined out of existence, indifferent, paring his fingernails.”
- ¹⁷ Wilhelm and Jung, *The Secret of the Golden Flower* (1962 edn.), p. 57. [The picture is reproduced in *Alchemical Studies*, p. 33.—EDITORS,]
- ¹⁸ My italics.
- ¹⁹ [This passage has been difficult to interpret, for the quotation could not be located in *Ulysses*. Jung quoted the novel usually in English but here he uses German: “‘Und flöh’ ich ans äusserste Ende der Welt, so ...’ der Nachsatz ist des Ulysses beweiskräftige Blasphemie.” This may be a reference to the beginning of a speech of Stephen Dedalus in the Circe episode (p. 476): “What went forth to the ends of the world to traverse not itself. God, the sun, Shakespeare, a commercial traveller, having itself traversed in reality itself, becomes that self.... Wait a second. Damn that fellow’s noise in the street....” The “noise in the street” is a gramophone playing a sacred cantata, *The Holy City*. Professor Ellmann has suggested a back-reference here to Stephen’s remark to Deasy in the Nestor episode (ch. 2): “That is God.... A shout in the street.” Jung could also have intended a Biblical allusion; cf. Psalm 139: 7–9 (AV): “... whither shall I flee from thy presence? If I ascend up into heaven, thou art there: if I make my bed in hell, behold, thou art there. If I take the wings of the morning, and dwell in the uttermost parts of the sea ...”—EDITORS.]
- ²⁰ [Horace, *Epistles*, 1.2.33 (trans. Fairclough: “yet on [the river] glides, and on it will glide, rolling its flood forever”).—EDITORS.]

¹ [First published in the *Neue Zürcher Zeitung*, CLIII : 2 (Nov. 13, 1932); reprinted in *Wirklichkeit der Seele* (Zurich, 1934). Previously translated by Alda F. Oertly for the *Papers of the Analytical Psychology Club of New York City* (1940); another translation, by Ivo Jarosy, appeared in *Nimbus* (London), II : 2 (autumn, 1953). Both versions have been consulted in the present translation.

[The Kunsthaus, Zurich, held an exhibition of 460 works by Picasso from Sept. 11 to Oct. 30, 1932.—EDITORS.]

² “‘Ulysses’: A Monologue,” supra.

³ By this I do not mean that anyone who belongs to these two groups suffers from either neurosis or schizophrenia. Such a classification merely means that in the one case a psychic disturbance will probably result in ordinary neurotic symptoms, while in the other it will produce schizoid symptoms. In the case under discussion, the designation “schizophrenic” does not, therefore, signify a diagnosis of the mental illness schizophrenia, but merely refers to a disposition or habitus on the basis of which a serious psychological disturbance could produce schizophrenia. Hence I regard neither Picasso nor Joyce as psychotics, but count them among a large number of people whose habitus it is to react to a profound psychic disturbance not with an ordinary psychoneurosis but with a schizoid syndrome. As the above statement has given rise to some misunderstanding, I have considered it necessary to add this psychiatric explanation. [Jung’s article in the *Zeitung* was followed by replies in the press, provoked especially by the observation on schizophrenia in par. 208. Consequently, Jung added this note in the 1934 version.—EDITORS.]

⁴ I am indebted to Dr. W. Kaegi for this information.

EDITORIAL NOTE TO THE SECOND EDITION

Since this volume was one of the first to appear in the Collected Works, its second edition calls for considerable revision. As with each new edition of these volumes, the reference materials (footnotes and bibliography) have been corrected and brought up to date, taking into account the subsequent publication of nearly all of Jung's works in this English edition. The use of numbers for bibliographical citations having been found to be inconvenient for readers, references by title have been substituted.

The first eleven papers are unchanged, except for new information in some of the editorial footnotes (indicated by an asterisk). The translation of "The Psychology of the Transference" has, however, been extensively reworked. The translations from Latin and Greek have been revised by Mr. A. S. B. Glover, and improved readings have been substituted in the text. Among the other revisions are several taken over from the subsequent Swiss edition of the volume and the changes noted at pars. 405 and 433.

In 1958 the present work, with the title *Praxis der Psychotherapie*, was the first volume to appear in the *Gesammelte Werke von C. G. Jung*, under the editorship of Marianne Niehus-Jung, Lena Hurwitz-Eisner, and Franz Riklin, in Zurich. Acknowledgment is gratefully made to the Swiss Editors for suggestions which were helpful in the preparation of this second English edition. The foreword which Jung specially wrote for *Praxis der Psychotherapie* has been added to the present volume.

A 1937 lecture, "The Realities of Practical Psychotherapy," previously unpublished and recently rediscovered among Jung's posthumous papers, has been added to this second edition as an appendix.

TRANSLATOR'S NOTE

Certain of the essays in this volume were previously translated and published in *Contributions to Analytical Psychology* (London and New York, 1928), *Modern Man in Search of a Soul* (London and New York, 1933), and *Essays on Contemporary Events* (London, 1947). I wish to thank Mrs. Cary F. Baynes and Miss Mary Briner for permission to make full use of those texts in preparing the present revised versions. My particular thanks are due to Miss Barbara Hannah for placing at my disposal her draft translation of the opening chapters of "The Psychology of the Transference."

It may be noted that two papers, "Some Aspects of Modern Psychotherapy" and "The Therapeutic Value of Abreaction," were written in English, and are published here with certain editorial modifications.

FOREWORD TO THE SWISS EDITION (1958)

This volume, number 16 in the series, is the first of the *Gesammelte Werke* to be published. It contains both early and late writings on questions concerned with the practice of psychotherapy. I am indebted to the Editors not only for their careful revision of the texts, but in particular for their choice of material. This testifies to their appreciation of the fact that my contribution to the knowledge of the psyche is founded on practical experience of human beings. It was, indeed, my endeavours as a medical psychologist to understand the ills of the soul that led me, in more than fifty years of psychotherapeutic practice, to all my later insights and conclusions, and in turn compelled me to re-examine my findings and to modify them in the light of new experience.

The reader will find in these essays not only an outline of my attitude as a practising psychotherapist and of the principles on which it rests. They also contain an historical study of a phenomenon that may be regarded as the crux, or at any rate the crucial experience, in any thorough going analysis—the problem of the transference, whose central importance was recognized long ago by Freud. This question is of such scope, and so difficult to elucidate in all its aspects, that a deeper investigation of its historical antecedents could not be avoided.

Naturally, if an historical study like this is seen in isolation from my later writings, the unprepared reader will have some difficulty in recognizing its connection with his conception of what psychotherapy should be. Psychotherapeutic practice and the historical approach will seem to him to be two incommensurable things. In psychological reality, however, this is not the case at all, for we are constantly coming upon phenomena that reveal their historical character as soon as their causality is examined a little more closely. Psychic modes of behaviour are, indeed, of an eminently historical nature. The psychotherapist has to acquaint himself not only with the personal biography of his patient, but also with the mental and spiritual assumptions prevalent in his milieu, both present and past, where traditional and cultural influences play a part and often a decisive one.

For example, no psychotherapist who seriously endeavours to understand the whole man is spared the task of learning the language of dreams and their symbolism. As with every language, historical knowledge is needed in order to understand it properly. This is particularly so since it is not an everyday language, but a symbolic language that makes frequent use of age-old forms of expression. A knowledge of these enables the analyst to extricate his patient from the oppressive constriction of a purely personalistic

understanding of himself, and to release him from the egocentric prison that cuts him off from the wide horizon of his further social, moral, and spiritual development.

In spite or because of its heterogeneous composition, this book may serve to give the reader a good idea of the empirical foundations of psychotherapy and its widely ramifying problems.

I

GENERAL PROBLEMS OF PSYCHOTHERAPY

PRINCIPLES OF PRACTICAL PSYCHOTHERAPY¹

[1] Psychotherapy is a domain of the healing art which has developed and acquired a certain independence only within the last fifty years. Views in this field have changed and become differentiated in a great variety of ways, and the mass of experience accumulated has given rise to all sorts of different interpretations. The reason for this lies in the fact that psychotherapy is not the simple, straightforward method people at first believed it to be, but, as has gradually become clear, a kind of dialectical process, a dialogue or discussion between two persons. Dialectic was originally the art of conversation among the ancient philosophers, but very early became the term for the process of creating new syntheses. A person is a psychic system which, when it affects another person, enters into reciprocal reaction with another psychic system. This, perhaps the most modern, formulation of the psychotherapeutic relation between physician and patient is clearly very far removed from the original view that psychotherapy was a method which anybody could apply in stereotyped fashion in order to reach the desired result. It was not the needs of speculation which prompted this unsuspected and, I might well say, unwelcome widening of the horizon, but the hard facts of reality. In the first place, it was probably the fact that one had to admit the possibility of different interpretations of the observed material. Hence there grew up various schools with diametrically opposed views. I would remind you of the Liébeault-Bernheim French method of suggestion therapy, *rééducation de la volonté*; Babinski's "persuasion"; Dubois' "rational psychic orthopedics"; Freud's psychoanalysis, with its emphasis on sexuality and the unconscious; Adler's educational method, with its emphasis on power-drives and conscious fictions; Schultz's autogenic training—to name only the better known methods. Each of them rests on special psychological assumptions and produces special psychological results; comparison between them is difficult and often wellnigh impossible. Consequently it was quite natural that the champions of any one point of view should, in order to simplify matters, treat the opinions of the others as erroneous. Objective appraisal of the facts shows, however, that each of these methods and theories is justified up to a point, since each can boast not only of certain successes but of psychological data that largely prove its particular assumption. Thus we are faced in psychotherapy with a situation comparable with that in modern physics where, for instance, there are two contradictory theories of light. And just as physics

does not find this contradiction unbridgeable, so the existence of many possible standpoints in psychology should not give grounds for assuming that the contradictions are irreconcilable and the various views merely subjective and therefore incommensurable. Contradictions in a department of science merely indicate that its subject displays characteristics which at present can be grasped only by means of antinomies—witness the wave theory and the corpuscular theory of light. Now the psyche is infinitely more complicated than light; hence a great number of antinomies is required to describe the nature of the psyche satisfactorily. One of the fundamental antinomies is the statement that *psyche depends on body and body depends on psyche*. There are clear proofs for both sides of this antinomy, so that an objective judgment cannot give more weight to thesis or to antithesis. The existence of valid contradictions shows that the object of investigation presents the inquiring mind with exceptional difficulties, as a result of which only relatively valid statements can be made, at least for the time being. That is to say, the statement is valid only in so far as it indicates what kind of psychic system we are investigating. Hence we arrive at the dialectical formulation which tells us precisely that psychic influence is the reciprocal reaction of two psychic systems. Since the individuality of the psychic system is infinitely variable, there must be an infinite variety of relatively valid statements. But if individuality were absolute in its particularity, if one individual were totally different from every other individual, then psychology would be impossible as a science, for it would consist in an insoluble chaos of subjective opinions. Individuality, however, is only relative, the complement of human conformity or likeness; and therefore it is possible to make statements of general validity, i.e., scientific statements. These statements relate only to those parts of the psychic system which do in fact conform, i.e., are amenable to comparison and statistically measurable; they do not relate to that part of the system which is individual and unique. The second fundamental antinomy in psychology therefore runs: *the individual signifies nothing in comparison with the universal, and the universal signifies nothing in comparison with the individual*. There are, as we all know, no universal elephants, only individual elephants. But if a generality, a constant plurality, of elephants did not exist, a single individual elephant would be exceedingly improbable.

[2] These logical reflections may appear somewhat remote from our theme. But in so far as they are the outcome of previous psychological experience, they yield practical conclusions of no little importance. When, as a psychotherapist, I set myself up as a medical authority over my patient and on that account claim to know something about his individuality, or to be able to make valid statements about it, I am only demonstrating my lack of criticism, for I am in no position to judge the whole of the personality before me. I cannot say anything valid about him except in so far as he

approximates to the “universal man.” But since all life is to be found only in individual form, and I myself can assert of another individuality only what I find in my own, I am in constant danger either of doing violence to the other person or of succumbing to his influence. If I wish to treat another individual psychologically at all, I must for better or worse give up all pretensions to superior knowledge, all authority and desire to influence. I must perforce adopt a dialectical procedure consisting in a comparison of our mutual findings. But this becomes possible only if I give the other person a chance to play his hand to the full, unhampered by my assumptions. In this way his system is geared to mine and acts upon it; my reaction is the only thing with which I as an individual can legitimately confront my patient.

[3] These considerations of principle produce in the psychotherapist a very definite attitude which, in all cases of *individual* treatment, seems to me to be absolutely necessary because it alone is scientifically responsible. Any deviation from this attitude amounts to therapy by suggestion, the kind of therapy whose main principle is: “The individual signifies nothing in comparison with the universal.” Suggestion therapy includes all methods that arrogate to themselves, and apply, a knowledge or an interpretation of other individualities. Equally it includes all strictly technical methods, because these invariably assume that all individuals are alike. To the extent that the insignificance of the individual is a truth, suggestive methods, technical procedures, and theorems in any shape or form are entirely capable of success and guarantee results with the universal man—as for instance, Christian Science, mental healing, faith cures, remedial training, medical and religious techniques, and countless other isms. Even political movements can, not without justice, claim to be psychotherapy in the grand manner. The outbreak of war cured many a compulsion neurosis, and from time immemorial certain miraculous localities have caused neurotic states to disappear; similarly, popular movements both large and small can exert a curative influence on the individual.

[4] This fact finds the simplest and most nearly perfect expression in the primitive idea of “mana.” Mana is a universal medicinal or healing power which renders men, animals, and plants fruitful and endows chieftain and medicine-man with magical strength. Mana, as Lehmann has shown, is identified with anything “extraordinarily potent,” or simply with anything impressive. On the primitive level anything impressive is therefore “medicine.” Since it is notorious that a hundred intelligent heads massed together make one big fathead, virtues and endowments are essentially the hallmarks of the individual and not of the universal man. The masses always incline to herd psychology, hence they are easily stampeded; and to mob psychology, hence their witless brutality and hysterical emotionalism. The universal man has the characteristics of a savage and must therefore be treated with technical methods. It is in fact bad practice to treat collective man with anything other than “technically

correct” methods, i.e., those collectively recognized and believed to be effective. In this sense the old hypnotism or the still older animal magnetism achieved, in principle, just as much as a technically irreproachable modern analysis, or for that matter the amulets of the primitive medicine-man. It all depends on the method the therapist happens to believe in. His belief is what does the trick. If he really believes, then he will do his utmost for the sufferer with seriousness and perseverance, and this freely given effort and devotion will have a curative effect—up to the level of collective man’s mentality. But the limits are fixed by the “individual-universal” antinomy.

[5] This antinomy constitutes a psychological as well as a philosophical criterion, since there are countless people who are not only collective in all essentials but are fired by a quite peculiar ambition to be nothing but collective. This accords with all the current trends in education which like to regard individuality and lawlessness as synonymous. On this plane anything individual is rated inferior and is repressed. In the corresponding neuroses individual contents and tendencies appear as psychological poisons. There is also, as we know, an overestimation of individuality based on the rule that “the universal signifies nothing in comparison with the individual.” Thus, from the psychological (not the clinical) point of view, we can divide the psychoneuroses into two main groups: the one comprising collective people with underdeveloped individuality, the other individualists with atrophied collective adaptation. The therapeutic attitude differs accordingly, for it is abundantly clear that a neurotic individualist can only be cured by recognizing the collective man in himself—hence the need for collective adaptation. It is therefore right to bring him down to the level of collective truth. On the other hand, psychotherapists are familiar with the collectively adapted person who has everything and does everything that could reasonably be required as a guarantee of health, but yet is ill. It would be a bad mistake, which is nevertheless very often committed, to normalize such a person and try to bring him down to the collective level. In certain cases all possibility of individual development is thereby destroyed.

[6] Since individuality, as we stressed in our introductory argument, is absolutely unique, unpredictable, and uninterpretable, in these cases the therapist must abandon all his preconceptions and techniques and confine himself to a purely dialectical procedure, adopting the attitude that shuns all methods.

[7] You will have noticed that I began by presenting the dialectical procedure as the latest phase of psychotherapeutic development. I must now correct myself and put this procedure in the right perspective: it is not so much an elaboration of previous theories and practices as a complete abandonment of them in favour of the most

unbiased attitude possible. In other words, the therapist is no longer the agent of treatment but a fellow participant in a process of individual development.

[8] I would not like it to be supposed that these discoveries dropped straight into our laps. They too have their history. Although I was the first to demand that the analyst should himself be analysed, we are largely indebted to Freud for the invaluable discovery that analysts too have their complexes and consequently one or two blind spots which act as so many prejudices. The psychotherapist gained this insight in cases where it was no longer possible for him to interpret or to guide the patient from on high or *ex cathedra*, regardless of his own personality, but was forced to admit that his personal idiosyncrasies or special attitude hindered the patient's recovery. When one possesses no very clear idea about something, because one is unwilling to admit it to oneself, one tries to hide it from the patient as well, obviously to his very great disadvantage. The demand that the analyst must be analysed culminates in the idea of a dialectical procedure, where the therapist enters into relationship with another psychic system both as questioner and answerer. No longer is he the superior wise man, judge, and counsellor; he is a fellow participant who finds himself involved in the dialectical process just as deeply as the so-called patient.

[9] The dialectical procedure has another source, too, and that is the *multiple significance of symbolic contents*. Silberer distinguishes between the psychoanalytic and the anagogic interpretation, while I distinguish between the analytical-reductive and the synthetic-hermeneutic interpretation. I will explain what I mean by instancing the so-called infantile fixation on the parental imago, one of the richest sources of symbolic contents. The analytical-reductive view asserts that interest ("libido") streams back regressively to infantile reminiscences and there "fixates"—if indeed it has ever freed itself from them. The synthetic or anagogic view, on the contrary, asserts that certain parts of the personality which are capable of development are in an infantile state, as though still in the womb. Both interpretations can be shown to be correct. We might almost say that they amount virtually to the same thing. But it makes an enormous difference in practice whether we interpret something regressively or progressively. It is no easy matter to decide aright in a given case. Generally we feel rather uncertain on this point. The discovery that there are essential contents of an indubitably equivocal nature has thrown suspicion on the airy application of theories and techniques, and thus helped to range the dialectical procedure alongside the subtler or cruder suggestion methods.

[10] The depth-dimension which Freud has added to the problems of psychotherapy must logically lead sooner or later to the conclusion that any final understanding between doctor and patient is bound to include the personality of the doctor. The old hypnotists and Bernheim with his suggestion therapy were well enough aware that

the healing effect depended firstly on the “rapport”—in Freud’s terminology, “transference”—and secondly on the persuasive and penetrative powers of the doctor’s personality. In the doctor-patient relationship, as we have said, two psychic systems interact, and therefore any deeper insight into the psychotherapeutic process will infallibly reach the conclusion that in the last analysis, since individuality is a fact not to be ignored, the relationship must be dialectical.

[11] It is now perfectly clear that this realization involves a very considerable shift of standpoint compared with the older forms of psychotherapy. In order to avoid misunderstandings, let me say at once that this shift is certainly not meant to condemn the existing methods as incorrect, superfluous, or obsolete. The more deeply we penetrate the nature of the psyche, the more the conviction grows upon us that the diversity, the multidimensionality of human nature requires the greatest variety of standpoints and methods in order to satisfy the variety of psychic dispositions. It is therefore pointless to subject a simple soul who lacks nothing but a dose of common sense to a complicated analysis of his impulses, much less expose him to the bewildering subtleties of psychological dialectic. It is equally obvious that with complex and highly intelligent people we shall get nowhere by employing well-intentioned advice, suggestions, and other efforts to convert them to some kind of system. In such cases the best thing the doctor can do is lay aside his whole apparatus of methods and theories and trust to luck that his personality will be steadfast enough to act as a signpost for the patient. At the same time he must give serious consideration to the possibility that in intelligence, sensibility, range and depth the patient’s personality is superior to his own. But in all circumstances the prime rule of dialectical procedure is that the individuality of the sufferer has the same value, the same right to exist, as that of the doctor, and consequently that every development in the patient is to be regarded as valid, unless of course it corrects itself of its own accord. Inasmuch as a man is merely collective, he can be changed by suggestion to the point of becoming—or seeming to become—different from what he was before. But inasmuch as he is an individual he can only become what he is and always was. To the extent that “cure” means turning a sick man into a healthy one, cure is change. Wherever this is possible, where it does not demand too great a sacrifice of personality, we should change the sick man therapeutically. But when a patient realizes that cure through change would mean too great a sacrifice, then the doctor can, indeed he should, give up any wish to change or cure. He must either refuse to treat the patient or risk the dialectical procedure. This is of more frequent occurrence than one might think. In my own practice I always have a fair number of highly cultivated and intelligent people of marked individuality who, on ethical grounds, would vehemently resist any serious attempt to change them. In all such cases the doctor must leave the individual way to healing open, and then the cure will bring

about no alteration of personality but will be the process we call “individuation,” in which the patient becomes what he really is. If the worst comes to the worst, he will even put up with his neurosis, once he has understood the meaning of his illness. More than one patient has admitted to me that he has learned to accept his neurotic symptoms with gratitude, because, like a barometer, they invariably told him when and where he was straying from his individual path, and also whether he had let important things remain unconscious.

[12] Although the new, highly differentiated methods allow us an unsuspected glimpse into the endless complications of psychic relationships and have gone a long way to putting them on a theoretical basis, they nevertheless confine themselves to the analytical-reductive standpoint, so that the possibilities of individual development are obscured by being reduced to some general principle, such as sexuality. This is the prime reason why the phenomenology of individuation is at present almost virgin territory. Hence in what follows I must enter into some detail, for I can only give you an idea of individuation by trying to indicate the workings of the unconscious as revealed in the observed material itself. For, in the process of individual development, it is above all the unconscious that is thrust into the forefront of our interest. The deeper reason for this may lie in the fact that the conscious attitude of the neurotic is unnaturally one-sided and must be balanced by complementary or compensatory contents deriving from the unconscious. The unconscious has a special significance in this case as a corrective to the onesidedness of the conscious mind; hence the need to observe the points of view and impulses produced in dreams, because these must take the place once occupied by collective controls, such as the conventional outlook, habit, prejudices of an intellectual or moral nature. The road the individual follows is defined by his knowledge of the laws that are peculiar to himself; otherwise he will get lost in the arbitrary opinions of the conscious mind and break away from the mother-earth of individual instinct.

[13] So far as our present knowledge extends, it would seem that the vital urge which expresses itself in the structure and individual form of the living organism produces in the unconscious a process, or is itself such a process, which on becoming partially conscious depicts itself as a fugue-like sequence of images. Persons with natural introspective ability are capable of perceiving fragments of this autonomous or self-activating sequence without too much difficulty, generally in the form of visual fantasies, although they often fall into the error of thinking that they have *created* these fantasies, whereas in reality the fantasies have merely occurred to them. Their spontaneous nature can no longer be denied, however, when, as often happens, some fantasy-fragment becomes an obsession, like a tune you cannot get out of your head, or a phobia, or a “symbolic tic.” Closer to the unconscious sequence of images are the dreams which, if examined over a long series, reveal the continuity of the

unconscious pictorial flood with surprising clearness. The continuity is shown in the repetition of motifs. These may deal with people, animals, objects, or situations. Thus the continuity of the picture sequence finds expression in the recurrence of some such motif over a long series of dreams.

[14] In a dream series extending over a period of two months, one of my patients had the water-motif in twenty-six dreams. In the first dream it appeared as the surf pounding the beach, then in the second as a view of the glassy sea. In the third dream the dreamer was on the seashore watching the rain fall on the water. In the fourth there was an indirect allusion to a voyage, for he was journeying to a distant country. In the fifth he was travelling to America; in the sixth, water was poured into a basin; in the seventh he was gazing over a vast expanse of sea at dawn; in the eighth he was aboard ship. In the ninth he travelled to a far-off savage land. In the tenth he was again aboard ship. In the eleventh he went down a river. In the twelfth he walked beside a brook. In the thirteenth he was on a steamer. In the fourteenth he heard a voice calling, "This is the way to the sea, we must get to the sea!" In the fifteenth he was on a ship going to America. In the sixteenth, again on a ship. In the seventeenth he drove to the ship in an automobile. In the eighteenth he made astronomical calculations on a ship. In the nineteenth he went down the Rhine. In the twentieth he was on an island, and again in the twenty-first. In the twenty-second he navigated a river with his mother. In the twenty-third he stood on the seashore. In the twenty-fourth he looked for sunken treasure. In the twenty-fifth his father was telling him about the land where the water comes from. And finally in the twenty-sixth he went down a small river that debouched into a larger one.

[15] This example illustrates the continuity of the unconscious theme and also shows how the motifs can be evaluated statistically. Through numerous comparisons one can find out to what the water-motif is really pointing, and the interpretation of motifs follows from a number of similar dream-series. Thus the sea always signifies a collecting-place where all psychic life originates, i.e., the collective unconscious. Water in motion means something like the stream of life or the energy-potential. The ideas underlying all the motifs are visual representations of an archetypal character, symbolic primordial images which have served to build up and differentiate the human mind. These primordial images are difficult to define; one might even call them hazy. Cramping intellectual formulae rob them of their natural amplitude. They are not scientific concepts which must necessarily be clear and unequivocal; they are universal perceptions of the primitive mind, and they never denote any particular content but are significant for their wealth of associations. Lévy-Bruhl calls them "collective representations," and Hubert and Mauss call them *a priori* categories of the imagination.

[16] In a longer series of dreams the motifs frequently change places. Thus, after the last of the above dreams, the water-motif gradually retreated to make way for a new motif, the “unknown woman.” In general, dreams about women refer to women whom the dreamer knows. But now and then there are dreams in which a female figure appears who cannot be shown to be an acquaintance and whom the dream itself distinctly characterizes as unknown. This motif has an interesting phenomenology which I should like to illustrate from a dream series extending over a period of three months. In this series the motif occurred no less than fifty-one times. At the outset it appeared as a throng of vague female forms, then it assumed the vague form of a woman sitting on a step. She then appeared veiled, and when she took off the veil her face shone like the sun. Then she was a naked figure standing on a globe, seen from behind. After that she dissolved once more into a throng of dancing nymphs, then into a bevy of syphilitic prostitutes. A little later the unknown appeared on a ball, and the dreamer gave her some money. Then she was a syphilitic again. From now on the unknown becomes associated with the so-called “dual motif,” a frequent occurrence in dreams. In this series a savage woman, a Malay perhaps, is doubled. She has to be taken captive, but she is also the naked blonde who stood on the globe, or else a young girl with a red cap, a nursemaid, or an old woman. She is very dangerous, a member of a robberband and not quite human, something like an abstract idea. She is a guide, who takes the dreamer up a high mountain. But she is also like a bird, perhaps a marabou or pelican. She is a mancatcher. Generally she is fair-haired, a hairdresser’s daughter, but has a dark Indian sister. As a fair-haired guide she informs the dreamer that part of his sister’s soul belongs to her. She writes him a love-letter, but is another man’s wife. She neither speaks nor is spoken to. Now she has black hair, now white. She has peculiar fantasies, unknown to the dreamer. She may be his father’s unknown wife, but is not his mother. She travels with him in an airplane, which crashes. She is a voice that changes into a woman. She tells him that she is a piece of broken pottery, meaning presumably that she is a part-soul. She has a brother who is prisoner in Moscow. As the dark figure she is a servant-girl, stupid, and she has to be watched. Often she appears doubled, as two women who go mountain-climbing with him. On one occasion the fair-haired guide comes to him in a vision. She brings him bread, is full of religious ideas, knows the way he should go, meets him in church, acts as his spiritual guide. She seems to pop out of a dark chest and can change herself from a dog into a woman. Once she appears as an ape. The dreamer draws her portrait in a dream, but what comes out on the paper is an abstract symbolic ideogram containing the trinity, another frequent motif.

[17] The unknown woman, therefore, has an exceedingly contradictory character and cannot be related to any normal woman. She represents some fabulous being, a kind

of fairy; and indeed fairies have the most varied characters. There are wicked fairies and good fairies; they too can change themselves into animals, they can become invisible, they are of uncertain age, now young, now old, elfin in nature, with part-souls, alluring, dangerous, and possessed of superior knowledge. We shall hardly be wrong in assuming that this motif is identical with the parallel ideas to be found in mythology, where we come across this elfin creature in a variety of forms—nymph, oread, sylph, undine, nixie, hamadryad, succubus, lamia, vampire, witch, and what not. Indeed the whole world of myth and fable is an outgrowth of unconscious fantasy just like the dream. Frequently this motif replaces the water-motif. Just as water denotes the unconscious in general, so the figure of the unknown woman is a personification of the unconscious, which I have called the “anima.” This figure only occurs in men, and she emerges clearly only when the unconscious starts to reveal its problematical nature. In man the unconscious has feminine features, in woman masculine; hence in man the personification of the unconscious is a feminine creature of the type we have just described.

[18] I cannot, within the compass of a lecture, describe all the motifs that crop up in the process of individuation—when, that is to say, the material is no longer reduced to generalities applicable only to the collective man. There are numerous motifs, and we meet them everywhere in mythology. Hence we can only say that the psychic development of the individual produces something that looks very like the archaic world of fable, and that the individual path looks like a regression to man’s prehistory, and that consequently it seems as if something very untoward were happening which the therapist ought to arrest. We can in fact observe similar things in psychotic illnesses, especially in the paranoid forms of schizophrenia, which often swarm with mythological images. The fear instantly arises that we are dealing with some misdevelopment leading to a world of chaotic or morbid fantasy. A development of this kind may be dangerous with a person whose social personality has not found its feet; moreover any psychotherapeutic intervention may occasionally run into a latent psychosis and bring it to full flower. For this reason to dabble in psychotherapy is to play with fire, against which amateurs should be stringently cautioned. It is particularly dangerous when the mythological layer of the psyche is uncovered, for these contents have a fearful fascination for the patient—which explains the tremendous influence mythological ideas have had on mankind.

[19] Now, it would seem that the recuperative process mobilizes these powers for its own ends. Mythological ideas with their extraordinary symbolism evidently reach far into the human psyche and touch the historical foundations where reason, will, and good intentions never penetrate; for these ideas are born of the same depths and speak a language which strikes an answering chord in the inner man, although our reason may not understand it. Hence, the process that at first sight looks like an

alarming regression is rather a *reculer pour mieux sauter*, an amassing and integration of powers that will develop into a new order.

[20] A neurosis at this level is an entirely spiritual form of suffering which cannot be tackled with ordinary rational methods. For this reason there are not a few psychotherapists who, when all else fails, have recourse to one of the established religions or creeds. I am far from wishing to ridicule these efforts. On the contrary, I must emphasize that they are based on an extremely sound instinct, for our religions contain the still living remains of a mythological age. Even a political creed may occasionally revert to mythology, as is proved very clearly by the swastika, the German Christians, and the German Faith Movement. Not only Christianity with its symbols of salvation, but all religions, including the primitive with their magical rituals, are forms of psychotherapy which treat and heal the suffering of the soul, and the suffering of the body caused by the soul. How much in modern medicine is still suggestion therapy is not for me to say. To put it mildly, consideration of the psychological factor in practical therapeutics is by no means a bad thing. The history of medicine is exceedingly revealing in this respect.

[21] Therefore, when certain doctors resort to the mythological ideas of some religion or other, they are doing something historically justified. But they can only do this with patients for whom the mythological remains are still alive. For these patients some kind of rational therapy is indicated until such time as mythological ideas become a necessity. In treating devout Catholics, I always refer them to the Church's confessional and its means of grace. It is more difficult in the case of Protestants, who must do without confession and absolution. The more modern type of Protestantism has, however, the safetyvalve of the Oxford Group movement, which prescribes lay confession as a substitute, and group experience instead of absolution. A number of my patients have joined this movement with my entire approval, just as others have become Catholics, or at least better Catholics than they were before. In all these cases I refrain from applying the dialectical procedure, since there is no point in promoting individual development beyond the needs of the patient. If he can find the meaning of his life and the cure for his disquiet and disunity within the framework of an existing credo—including a political credo—that should be enough for the doctor. After all, the doctor's main concern is the sick, not the cured.

[22] There are, however, very many patients who have either no religious convictions at all or highly unorthodox ones. Such persons are, on principle, not open to any conviction. All rational therapy leaves them stuck where they were, although on the face of it their illness is quite curable. In these circumstances nothing is left but the dialectical development of the mythological material which is alive in the sick man himself, regardless of history and tradition. It is here that we come across those

mythological dreams whose characteristic sequence of images presents the doctor with an entirely new and unexpected task. He then needs the sort of knowledge for which his professional studies have not equipped him in the least. For the human psyche is neither a psychiatric nor a physiological problem; it is not a biological problem at all but—precisely—a psychological one. It is a field on its own with its own peculiar laws. Its nature cannot be deduced from the principles of other sciences without doing violence to the idiosyncrasy of the psyche. It cannot be identified with the brain, or the hormones, or any known instinct; for better or worse it must be accepted as a phenomenon unique in kind. The phenomenology of the psyche contains more than the measurable facts of the natural sciences: it embraces the problem of mind, the father of all science. The psychotherapist becomes acutely aware of this when he is driven to penetrate below the level of accepted opinion. It is often objected that people have practised psychotherapy before now and did not find it necessary to go into all these complications. I readily admit that Hippocrates, Galen, and Paracelsus were excellent doctors, but I do not believe that modern medicine should on that account give up serum therapy and radiology. It is no doubt difficult, particularly for the layman, to understand the complicated problems of psychotherapy; but if he will just consider for a moment why certain situations in life or certain experiences are pathogenic, he will discover that human opinion often plays a decisive part. Certain things accordingly seem dangerous, or impossible, or harmful, simply because there are opinions that cause them to appear in that light. For instance, many people regard wealth as the supreme happiness and poverty as man's greatest curse, although in actual fact riches never brought supreme happiness to anybody, nor is poverty a reason for melancholia. But we have these opinions, and these opinions are rooted in certain mental preconceptions—in the *Zeitgeist*, or in certain religious or antireligious views. These last play an important part in moral conflicts. As soon as the analysis of a patient's psychic situation impinges on the area of his mental preconceptions, we have already entered the realm of general ideas. The fact that dozens of normal people never criticize their mental preconceptions—obviously not, since they are unconscious of them—does not prove that these preconceptions are valid for all men, or indeed unconscious for all men, any more than it proves that they may not become the source of the severest moral conflict. Quite the contrary: in our age of revolutionary change, inherited prejudices of a general nature on the one hand and spiritual and moral disorientation on the other are very often the deeperlying causes of far-reaching disturbances in psychic equilibrium. To these patients the doctor has absolutely nothing to offer but the possibility of individual development. And for their sake the specialist is compelled to extend his knowledge over the field of the humane sciences, if he is to do justice to the symbolism of psychic contents.

[23] I would make myself guilty of a sin of omission if I were to foster the impression that specialized therapy needed nothing but a wide knowledge. Quite as important is the moral differentiation of the doctor's personality. Surgery and obstetrics have long been aware that it is not enough simply to wash the patient—the doctor himself must have clean hands. A neurotic psychotherapist will invariably treat his own neurosis in the patient. A therapy independent of the doctor's personality is just conceivable in the sphere of rational techniques, but it is quite inconceivable in a dialectical procedure where the doctor must emerge from his anonymity and give an account of himself, just as he expects his patient to do. I do not know which is the more difficult: to accumulate a wide knowledge or to renounce one's professional authority and anonymity. At all events the latter necessity involves a moral strain that makes the profession of psychotherapist not exactly an enviable one. Among laymen one frequently meets with the prejudice that psychotherapy is the easiest thing in the world and consists in the art of putting something over on people or wheedling money out of them. But actually it is a tricky and not undangerous calling. Just as all doctors are exposed to infections and other occupational hazards, so the psychotherapist runs the risk of psychic infections which are no less menacing. On the one hand he is often in danger of getting entangled in the neuroses of his patients; on the other hand if he tries too hard to guard against their influence, he robs himself of his therapeutic efficacy. Between this Scylla and this Charybdis lies the peril, but also the healing power.

[24] Modern psychotherapy is built up of many layers, corresponding to the diversities of the patients requiring treatment. The simplest cases are those who just want sound common sense and good advice. With luck they can be disposed of in a single consultation. This is certainly not to say that cases which look simple are always as simple as they look; one is apt to make disagreeable discoveries. Then there are patients for whom a thorough confession or "abreaction" is enough. The severer neuroses usually require a reductive analysis of their symptoms and states. And here one should not apply this or that method indiscriminately but, according to the nature of the case, should conduct the analysis more along the lines of Freud or more along those of Adler. St. Augustine distinguishes two cardinal sins: concupiscence and conceit (*superbia*). The first corresponds to Freud's pleasure principle, the second to Adler's power-drive, the desire to be on top. There are in fact two categories of people with different needs. Those whose main characteristic is infantile pleasure-seeking generally have the satisfaction of incompatible desires and instincts more at heart than the social role they could play, hence they are often well-to-do or even successful people who have arrived socially. But those who want to be "on top" are mostly people who are either the under-dogs in reality or fancy that they are not playing the role that is properly due to them. Hence they often have difficulty in

adapting themselves socially and try to cover up their inferiority with power fictions. One can of course explain all neuroses in Freudian or Adlerian terms, but in practice it is better to examine the case carefully beforehand. In the case of educated people the decision is not difficult: I advise them to read a bit of Freud and a bit of Adler. As a rule they soon find out which of the two suits them best. So long as one is moving in the sphere of genuine neurosis one cannot dispense with the views of either Freud or Adler.

[25] But when the thing becomes monotonous and you begin to get repetitions, and your unbiased judgment tells you that a standstill has been reached, or when mythological or archetypal contents appear, then is the time to give up the analytical-reductive method and to treat the symbols anagogically or synthetically, which is equivalent to the dialectical procedure and the way of individuation.

[26] All methods of influence, including the analytical, require that the patient be seen as often as possible. I content myself with a maximum of four consultations a week. With the beginning of synthetic treatment it is of advantage to spread out the consultations. I then generally reduce them to one or two hours a week, for the patient must learn to go his own way. This consists in his trying to understand his dreams himself, so that the contents of the unconscious may be progressively articulated with the conscious mind; for the cause of neurosis is the discrepancy between the conscious attitude and the trend of the unconscious. This dissociation is bridged by the assimilation of unconscious contents. Hence the interval between consultations does not go unused. In this way one saves oneself and the patient a good deal of time, which is so much money to him; and at the same time he learns to stand on his own feet instead of clinging to the doctor.

[27] The work done by the patient through the progressive assimilation of unconscious contents leads ultimately to the integration of his personality and hence to the removal of the neurotic dissociation. To describe the details of this development would far exceed the limits of a lecture. I must therefore rest content with having given you at least a general survey of the principles of practical psychotherapy.

II

WHAT IS PSYCHOTHERAPY?¹

[28] It is not so very long ago that fresh air, application of cold water, and “psychotherapy” were all recommended in the same breath by well-meaning doctors in cases mysteriously complicated by psychic symptoms. On closer examination “psychotherapy” meant a sort of robust, benevolently paternal advice which sought to persuade the patient, after the manner of Dubois, that the symptom was “only psychic” and therefore a morbid fancy.

[29] It is not to be denied that advice may occasionally do some good, but advice is about as characteristic of modern psychotherapy as bandaging of modern surgery—that is to say, personal and authoritarian influence is an important factor in healing, but not by any means the only one, and in no sense does it constitute the essence of psychotherapy. Whereas formerly it seemed to be everybody’s province, today psychotherapy has become a science and uses the scientific method. With our deepened understanding of the nature of neuroses and the psychic complications of bodily ills, the nature of the treatment, too, has undergone considerable change and differentiation. The earlier suggestion theory, according to which symptoms had to be suppressed by counteraction, was superseded by the psychoanalytical viewpoint of Freud, who realized that the cause of the illness was not removed with the suppression of the symptom and that the symptom was far more a kind of signpost pointing, directly or indirectly, to the cause. This novel attitude—which has been generally accepted for the last thirty years or so—completely revolutionized therapy because, in contradiction to suggestion therapy, it required that the causes be brought to consciousness.

[30] Suggestion therapy (hypnosis, etc.) was not lightly abandoned—it was abandoned only because its results were so unsatisfactory. It was fairly easy and practical to apply, and allowed skilled practitioners to treat a large number of patients at the same time, and this at least seemed to offer the hopeful beginnings of a lucrative method. Yet the actual cures were exceedingly sparse and so unstable that even the delightful possibility of simultaneous mass treatment could no longer save it. But for that, both the practitioner and the health insurance officer would have had every interest in retaining this method. It perished, however, of its own insufficiency.

[31] Freud's demand that the causes be made conscious has become the *leitmotiv* or basic postulate of all the more recent forms of psychotherapy. Psychopathological research during the last fifty years has proved beyond all possibility of doubt that the most important aetiological processes in neurosis are essentially unconscious; while practical experience has shown that the making conscious of aetiological facts or processes is a curative factor of far greater practical importance than suggestion. Accordingly in the course of the last twenty-five or thirty years there has occurred over the whole field of psychotherapy a swing away from direct suggestion in favour of all forms of therapy whose common standpoint is the raising to consciousness of the causes that make for illness.

[32] As already indicated, the change of treatment went hand in hand with a profounder and more highly differentiated theory of neurotic disturbance. So long as treatment was restricted to suggestion, it could content itself with the merest skeleton of a theory. People thought it sufficient to regard neurotic symptoms as the "fancies" of an overwrought imagination, and from this view the therapy followed easily enough, the object of which was simply to suppress those products of imagination—the "imaginary" symptoms. But what people thought they could nonchalantly write off as "imaginary" is only one manifestation of a morbid state that is positively protean in its symptomatology. No sooner is one symptom suppressed than another is there. The core of the disturbance had not been reached.

[33] Under the influence of Breuer and Freud the so-called "trauma" theory of neuroses held the field for a long time. Doctors tried to make the patient conscious of the original traumatic elements with the aid of the "cathartic method." But even this comparatively simple method and its theory demanded an attitude of doctor to patient very different from the suggestion method, which could be practised by anyone with the necessary determination. The cathartic method required careful individual scrutiny of the case in question and a patient attitude that searched for possible traumata. For only through the most meticulous observation and examination of the material could the traumatic elements be so constellated as to result in abreaction of the original affective situations from which the neurosis arose. Hence a lucrative group treatment became exceedingly difficult, if not impossible. Although the performance expected of the doctor was qualitatively higher than in the case of suggestion, the theory was so elementary that there was always the possibility of a rather mechanical routine, for in principle there was nothing to prevent the doctor from putting several patients at once into the relaxed condition in which the traumatic memories could be abreacted.

[34] As a result of this more exhaustive treatment of the individual case it could no longer be disguised that the trauma theory was a hasty generalization. Growing

experience made it clear to every conscientious investigator of neurotic symptoms that specifically sexual traumata and other shocks may indeed account for some forms of neurosis, but not by any means for all. Freud himself soon stepped beyond the trauma theory and came out with his theory of “repression.” This theory is much more complicated, and the treatment became differentiated accordingly. It was realized that mere abreaction cannot possibly lead to the goal, since the majority of neuroses are not traumatic at all. The theory of repression took far more account of the fact that typical neuroses are, properly speaking, developmental disturbances. Freud put it that the disturbance was due to the repression of infantile sexual impulses and tendencies which were thereby made unconscious. The task of the theory was to track down these tendencies in the patient. But since by definition they are unconscious, their existence could only be proved by a thorough examination of the patient’s anamnesis as well as his actual fantasies.

[35] In general the infantile impulses appear mainly in dreams, and that is why Freud now turned to a serious study of the dream. This was the decisive step that made modern psychotherapy a method of individual treatment. It is quite out of the question to apply psychoanalysis to several patients at once. It is anything but a mechanical routine.

[36] Now whether this form of treatment calls itself “individual psychology” with Adler or “psychoanalysis” with Freud and Stekel, the fact remains that modern psychotherapy of whatever kind, so far as it claims to be medically conscientious and scientifically reliable, can no longer be mass-produced but is obliged to give undivided and generous attention to the individual. The procedure is necessarily very detailed and lengthy. True, attempts are often made to shorten the length of treatment as much as possible, but one could hardly say that the results have been very encouraging. The point is that most neuroses are misdevelopments that have been built up over many years, and these cannot be remedied by a short and intensive process. Time is therefore an irreplaceable factor in healing.

[37] Neuroses are still—very unjustly—counted as mild illnesses, mainly because their nature is not tangible and of the body. People do not “die” of a neurosis—as if every bodily illness had a fatal outcome! But it is entirely forgotten that, unlike bodily illnesses, neuroses may be extremely deleterious in their psychic and social consequences, often worse than psychoses, which generally lead to the social isolation of the sufferer and thus render him innocuous. An ankylosed knee, an amputated foot, a long-drawn-out phthisis, are in every respect preferable to a severe neurosis. When the neurosis is regarded not merely from the clinical but from the psychological and social standpoint, one comes to the conclusion that it really is a severe illness, particularly in view of its effects on the patient’s environment and way

of life. The clinical standpoint by itself is not and cannot be fair to the nature of a neurosis, because a neurosis is more a psychosocial phenomenon than an illness in the strict sense. It forces us to extend the term “illness” beyond the idea of an individual body whose functions are disturbed, and to look upon the neurotic person as a sick system of social relationships. When one has corrected one’s views in this way, one will no longer find it astonishing that a proper therapy of neuroses is an elaborate and complicated matter.

[38] Unfortunately, the medical faculties have bothered far too little with the fact that the number of neuroses (and above all the frequency of psychic complications in organic diseases) is very great and thus concerns the general practitioner in unusually high degree, even though he may not realize it. Nevertheless his studies give him no preparation whatever in this most important respect; indeed, very often he never has a chance to find out anything about this subject, so vital in practice.

[39] Although the beginnings of modern psychotherapy rest in the main on the services of Freud, we should be very wrong if we—as so often happens—identified psychological treatment with Freudian “psychoanalysis” pure and simple. This error is certainly fostered by Freud himself and his adherents, who, in most sectarian fashion, regard their sexual theory and their methodology as the sole means of grace. Adler’s “individual psychology” is a contribution not to be underestimated, and represents a widening of the psychological horizon. There is much that is right and true in the theory and method of psychoanalysis; nevertheless it restricts its truth essentially to the sexual frame of reference and is blind to everything that is not subordinate to it. Adler has proved that not a few neuroses can be more successfully explained in quite another way.

[40] These newer developments of theory have as their therapeutic aim not only the raising to consciousness of pathogenic contents and tendencies, but their reduction to original “simple” instincts, which is supposed to restore the patient to his natural, unwarped state. Such an aim is no less praiseworthy than it is logical and promising in practice. The wholesome results are, when one considers the enormous difficulties in treating the neuroses, most encouraging, if not so ideal that we need wish for nothing better.

[41] Reduction to instinct is itself a somewhat questionable matter, since man has always been at war with his instincts—that is to say, they are in a state of perpetual strife; hence the danger arises that the reduction to instinct will only replace the original neurotic conflict by another. (To give but one example: Freud replaces the neurosis by the so-called “transference neurosis.”) In order to avoid this danger, psychoanalysis tries to devalue the infantile desires through analytical insight, whereas individual psychology tries to replace them by collectivizing the individual

on the basis of the herd instinct. Freud represents the scientific rationalism of the nineteenth century, Adler the socio-political trends of the twentieth.

[42] Against these views, which clearly rest on time-bound assumptions, I have stressed the need for more extensive individualization of the method of treatment and for an irrationalization of its aims—especially the latter, which would ensure the greatest possible freedom from prejudice. In dealing with psychological developments, the doctor should, as a matter of principle, let nature rule and himself do his utmost to avoid influencing the patient in the direction of his own philosophical, social, and political bent. Even if all citizens are equal before the law, they are very unequal as individuals, and therefore each can find happiness only in his own way. This is not to preach “individualism,” but only the necessary precondition for responsible action: namely that a man should know himself and his own peculiarities and have the courage to stand by them. Only when a man lives in his own way is he responsible and capable of action—otherwise he is just a hanger-on or follower-on with no proper personality.

[43] I mention these far-reaching problems of modern psychotherapy not, indeed, to give an elaborate account of them but simply to show the reader the sort of problems which the practitioner comes up against when his avowed aim is to guide the neurotic misdevelopment back to its natural course. Consider a man who is largely unconscious of his own psychology: in order to educate him to the point where he can consciously take the right road for *him* and at the same time clearly recognize his own social responsibilities, a detailed and lengthy procedure is needed. If Freud, by his observation of dreams—which are so very important therapeutically—has already done much to complicate the method, it is rendered even more exacting, rather than simplified, by further individualization, which logically sets greater store by the patient’s individual material. But to the extent that his particular personality is thereby brought into play, his collaboration can be enlisted all the more. The psychoanalyst thinks he must see his patient for an hour a day for months on end; I manage in difficult cases with three or four sittings a week. As a rule I content myself with two, and once the patient has got going, he is reduced to one. In the interim he has to work at himself, but under my control. I provide him with the necessary psychological knowledge to free himself from my medical authority as speedily as possible. In addition, I break off the treatment every ten weeks or so, in order to throw him back on his normal milieu. In this way he is not alienated from his world—for he really suffers from his tendency to live at another’s expense. In such a procedure time can take effect as a healing factor, without the patient’s having to pay for the doctor’s time. With proper direction most people become capable after a while of making their contribution—however modest at first—to the common work. In my experience the absolute period of cure is not shortened by too many sittings. It lasts a

fair time in all cases requiring thorough treatment. Consequently, in the case of the patient with small means, if the sittings are spaced out and the intervals filled in with the patient's own work, the treatment becomes financially more endurable than when undertaken daily in the hope of (problematical) suggestive effects.

[44] In all clear cases of neurosis a certain re-education and regeneration of personality are essential, for we are dealing with a misdevelopment that generally goes far back into the individual's childhood. Accordingly the modern method must also take account of the philosophical and pedagogical views of the humane sciences, for which reason a purely medical education is proving increasingly inadequate. Such an activity should in all cases presuppose a thorough knowledge of psychiatry. But for adequate treatment of dreams a plentiful admixture of symbolical knowledge is needed, which can only be acquired by a study of primitive psychology, comparative mythology, and religion.

[45] Much to the astonishment of the psychotherapist, the object of his labours has not grown simpler with deepened knowledge and experience, but has visibly increased in scope and complexity; and in the clouds of the future the lineaments of a new practical psychology have already begun to take shape, which will embrace the insights of the doctor as well as of the educator and all those whose concern is the human soul. Till then, psychotherapy will assuredly remain the business of the doctor, and it is to be hoped that the medical faculties will not long continue to turn a deaf ear to this plea addressed to the doctor by the sick. The educated public knows of the existence of psychotherapy, and the intelligent doctor knows, from his own practice, the great importance of psychological influence. Hence in Switzerland there is already a fine body of doctors who stand up for the rights of psychotherapy and practise it with self-sacrificing devotion, despite the fact that their work is often made bitter for them by ridicule, misinterpretation, and criticism, as inept as it is malevolent.

III

SOME ASPECTS OF MODERN PSYCHOTHERAPY¹

- [46] Modern psychotherapy finds itself in rather an awkward position at a public-health congress. It can boast of no international agreements, nor can it provide the legislator or the minister of public hygiene with suitable or workable advice. It must assume the somewhat humble role of personal charity work versus the big organizations and institutions of public welfare, and this despite the fact that neuroses are alarmingly common and occupy no small place among the host of evils that assail the health of civilized nations.
- [47] Psychotherapy and modern psychology are as yet individual experiments with little or no general applicability. They rest upon the initiative of individual doctors, who are not supported even by the universities. Nevertheless the problems of modern psychology have aroused a widespread interest out of all proportion to the exceedingly restricted official sympathy.
- [48] I must confess that I myself did not find it at all easy to bow my head to Freud's innovations. I was a young doctor then, busying myself with experimental psychopathology and mainly interested in the disturbances of mental reactions to be observed in the so-called association experiments. Only a few of Freud's works had then been published. But I could not help seeing that my conclusions undoubtedly tended to confirm the facts indicated by Freud, namely the facts of repression, substitution, and "symbolization." Nor could I honestly deny the very real importance of sexuality in the aetiology and indeed in the actual structure of neuroses.
- [49] Medical psychology is still pioneer work, but it looks as if the medical profession were beginning to see a psychic side to many things which have hitherto been considered from the physiological side only, not to mention the neuroses, whose psychic nature is no longer seriously contested. Medical psychology seems, therefore, to be coming into its own. But where, we may ask, can the medical student learn it? It is important for the doctor to know something about the psychology of his patients, and about the psychology of nervous, mental, and physical diseases. Quite a lot is known about these things among specialists, though the universities do not encourage such studies. I can understand their attitude. If I were responsible for a

university department, I should certainly feel rather hesitant about teaching medical psychology.

[50] In the first place, there is no denying the fact that Freud's theories have come up against certain rooted prejudices. It was to no purpose that he modified the worst aspects of his theories in later years. In the public eye he is branded by his first statements. They are one-sided and exaggerated; moreover they are backed by a philosophy that is falling more and more out of favour with the public: a thoroughly materialistic point of view which has been generally abandoned since the turn of the century. Freud's exclusive standpoint not only offends too many ideals but also misinterprets the natural facts of the human psyche. It is certain that human nature has its dark side, but the layman as well as the reasonable scientist is quite convinced that it also has its good and positive side, which is just as real. Common sense does not tolerate the Freudian tendency to derive everything from sexuality and other moral incompatibilities. Such a view is too destructive.

[51] The extraordinary importance which Freud attaches to the unconscious meets with scant approval, although it is an interesting point with a certain validity. But one should not stress it too much, otherwise one robs the conscious mind of its practical significance and eventually arrives at a completely mechanistic view of things. This goes against our instincts, which have made the conscious mind the *arbiter mundi*. It is nevertheless true that the conscious mind has been overvalued by the rationalists. Hence it was a healthy sign to give the unconscious its due share of value. But this should not exceed the value accorded to consciousness.

[52] A further reason for hesitation is the absence of a real medical psychology, though there may be a psychology for doctors. Psychology is not for professionals only, nor is it peculiar to certain diseases. It is something broadly human, with professional and pathological variations. Nor, again, is it merely instinctual or biological. If it were, it could very well be just a chapter in a text-book of biology. It has an immensely important social and cultural aspect without which we could not imagine a human psyche at all. It is therefore quite impossible to speak of a general or normal psychology as the mere expression of a clash between instinct and moral law, or other inconveniences of that kind. Since the beginning of history man has been the maker of his own laws; and even if, as Freud seems to think, they were the invention of our malevolent forefathers, it is odd how the rest of humanity has conformed to them and given them silent assent.

[53] Even Freud, who tried to restrict what he called psychoanalysis to the medical sphere (with occasional, somewhat inappropriate excursions into other spheres), even he was forced to discuss fundamental principles that go far beyond purely medical considerations. The most cursory professional treatment of an intelligent patient is

bound to lead to basic issues, because a neurosis or any other mental conflict depends much more on the personal attitude of the patient than on his infantile history. No matter what the influences are that disturbed his youth, he still has to put up with them and he does so by means of a certain attitude. The attitude is all-important. Freud emphasizes the aetiology of the case, and assumes that once the causes are brought into consciousness the neurosis will be cured. But mere consciousness of the causes does not help any more than detailed knowledge of the causes of war helps to raise the value of the French franc. The task of psychotherapy is to correct the conscious attitude and not to go chasing after infantile memories. Naturally you cannot do the one without paying attention to the other, but the main emphasis should be upon the attitude of the patient. There are extremely practical reasons for this, because there is scarcely a neurotic who does not love to dwell upon the evils of the past and to wallow in self-commiserating memories. Very often his neurosis consists precisely in his hanging back and constantly excusing himself on account of the past.

[54] As you know, I am critical of Freud in this particular respect, but my criticism would not go so far as to deny the extraordinary power of the retrospective tendency. On the contrary, I consider it to be of the greatest importance, so important that I would not call any treatment thorough that did not take it into account. Freud in his analysis follows this regressive tendency to the end and thus arrives at the findings you all know. These findings are only *apparent* facts; in the main they are interpretations. He has a special method of interpreting psychic material, and it is partly because the material has a sexual aspect and partly because he interprets it in a special way that he arrives at his typical conclusions. Take for instance his treatment of dreams. He believes that the dream is a façade. He says you can turn it inside out, that this or that factor is eliminated by a censor, and so forth.

[55] I hold that interpretation is the crux of the whole matter. One can just as well assume that the dream is not a façade, that there is no censor, and that the unconscious appears in dreams in the naïvest and most genuine way. The dream is as genuine as the albumen in urine, and this is anything but a façade. If you take the dream like this, you naturally come to very different conclusions. And the same thing happens with the patient's regressive tendency. I have suggested that it is not just a relapse into infantilism, but a genuine attempt to get at something necessary. There is, to be sure, no lack of infantile perversions. But are we so certain that what appears to be, and is interpreted as, an incestuous craving is really only that? When we try, conscientiously and without theoretical bias, to find out what the patient is really seeking in his father or mother, we certainly do not, as a rule, find incest, but rather a genuine horror of it. We find that he is seeking something entirely different, something that Freud only appreciates negatively: the universal feeling of childhood

innocence, the sense of security, of protection, of reciprocated love, of trust, of faith—a thing that has many names.

[56] Is this goal of the regressive tendency entirely without justification? Or is it not rather the very thing the patient urgently needs in order to build up his conscious attitude?

[57] I believe that incest and the other perverted sexual aspects are, in most cases, no more than by-products, and that the essential contents of the regressive tendency are really those which I have just mentioned. I have no objection to a patient's going back to that kind of childhood, nor do I mind his indulging in such memories.

[58] I am not blind to the fact that the patient must sink or swim, and that he may possibly go under as the result of infantile indulgence; but I call him back to these valuable memories with conscious intent. I appeal to his sense of values deliberately, because I have to make the man well and therefore I must use all available means to achieve the therapeutic aim.

[59] The regressive tendency only means that the patient is seeking *himself* in his childhood memories, sometimes for better, sometimes for worse. His development was one-sided; it left important items of character and personality behind, and thus it ended in failure. That is why he has to go back. In *Psychological Types*, I tried to establish the general lines along which these one-sided developments move. There are two main attitudes which differ fundamentally, namely introversion and extraversion. Both are perfectly good ways of living, so long as they co-operate reasonably well. It is only a dominating one-sidedness that leads to disaster. Within this very general framework there are more subtle distinctions based upon whatever function is preferred by the individual. Thus somebody with a good brain will develop a powerful intellect at the expense of his feelings. Or again, the facts perceived by the realist will obliterate the beautiful visions of the intuitive. All such people will look back to childhood when they come to the end of their particular tether, or they will hanker for some state when they were still in touch with the lost world, or their dreams will reproduce enchanting memories of a past that has sunk into oblivion.

[60] By adopting a more idealistic philosophy, one can interpret things differently and produce a perfectly decent and respectable psychology which is just as true, relatively speaking, as the sordid underside. I do not see why one should not interpret the facts in a decent and positive way when one can easily afford to do so. For many people this is much better and more encouraging than to reduce everything to primitive constituents with nasty names. But here too we must not be one-sided, because certain patients are all the better for being told some drastic but cleansing truth.

[61] Freud's original idea of the unconscious was that it was a sort of receptacle or storehouse for repressed material, infantile wishes, and the like. But the unconscious is far more than that: it is the basis and precondition of all consciousness. It represents the unconscious functioning of the psyche in general. It is psychic life before, during, and after consciousness. And inasmuch as the newborn child is presented with a ready-made, highly developed brain which owes its differentiation to the accretions of untold centuries of ancestral life, the unconscious psyche must consist of inherited instincts, functions, and forms that are peculiar to the ancestral psyche. This collective heritage is by no means made up of inherited ideas, but rather of the possibilities of such ideas—in other words, of *a priori* categories of possible functioning. Such an inheritance could be called instinct, using the word in its original sense. But it is not quite so simple. On the contrary, it is a most intricate web of what I have called archetypal conditions. This implies the probability that a man will behave much as his ancestors behaved, right back to Methuselah. Thus the unconscious is seen as the collective predisposition to extreme conservatism, a guarantee, almost, that nothing new will ever happen.

[62] If this statement were unreservedly true, there would be none of that creative fantasy which is responsible for radical changes and innovations. Therefore our statement must be in part erroneous, since creative fantasy exists and is not simply the prerogative of the unconscious psyche. Generally speaking, it is an intrusion from the realm of the unconscious, a sort of lucky hunch, different in kind from the slow reasoning of the conscious mind. Thus the unconscious is seen as a creative factor, even as a bold innovator, and yet it is at the same time the stronghold of ancestral conservatism. A paradox, I admit, but it cannot be helped. It is no more paradoxical than man himself and that cannot be helped either.

[63] There are sound philosophical reasons why our arguments should end in paradox and why a paradoxical statement is the better witness to truth than a one-sided, so-called "positive" statement. But this is not the place to embark on a lengthy logical discourse.

[64] Now if you will bear in mind what we have just said about the significance of the unconscious, and if you will recall our discussion of the regressive tendency, you will discover a further and cogent reason why the patient should have such a tendency, and why he is quite justified in having it. To be retrospective and introspective is a pathological mistake only when it stops short at futilities like incest and other squalid fantasies, or at feelings of inferiority. Retrospection and introspection should be carried much further, because then the patient will not only discover the true reason for his childhood longings, but, going beyond himself into the sphere of the collective psyche, he will enter first into the treasure-house of collective ideas and

then into creativity. In this way he will discover his identity with the whole of humanity, as it ever was, is, and ever shall be. He will add to his modest personal possessions which have proved themselves insufficient. Such acquisitions will strengthen his attitude, and this is the very reason why collective ideas have always been so important.

[65] It looks as if Freud had got stuck in his own pessimism, clinging as he does to his thoroughly negative and personal conception of the unconscious. You get nowhere if you assume that the vital basis of man is nothing but a very personal and therefore very private *affaire scandaleuse*. This is utterly hopeless, and true only to the extent that a Strindberg drama is true. But pierce the veil of that sickly illusion, and you step out of your narrow, stuffy personal corner into the wide realm of the collective psyche, into the healthy and natural matrix of the human mind, into the very soul of humanity. That is the true foundation on which we can build a new and more workable attitude.

IV

THE AIMS OF PSYCHOTHERAPY¹

[66] It is generally agreed today that neuroses are functional psychic disturbances and are therefore to be cured preferably by psychological treatment. But when we come to the question of the structure of the neuroses and the principles of therapy, all agreement ends, and we have to acknowledge that we have as yet no fully satisfactory conception of the nature of the neuroses or of the principles of treatment. While it is true that two currents or schools of thought have gained a special hearing, they by no means exhaust the number of divergent opinions that actually exist. There are also numerous non-partisans who, amid the general conflict of opinion, have their own special views. If, therefore, we wanted to paint a comprehensive picture of this diversity, we should have to mix upon our palette all the hues and shadings of the rainbow. I would gladly paint such a picture if it lay within my power, for I have always felt the need for a conspectus of the many viewpoints. I have never succeeded in the long run in not giving divergent opinions their due. Such opinions could never arise, much less secure a following, if they did not correspond to some special disposition, some special character, some fundamental psychological fact that is more or less universal. Were we to exclude one such opinion as simply wrong and worthless, we should be rejecting this particular disposition or this particular fact as a misinterpretation—in other words, we should be doing violence to our own empirical material. The wide approval which greeted Freud's explanation of neurosis in terms of sexual causation and his view that the happenings in the psyche turn essentially upon infantile pleasure and its satisfaction should be instructive to the psychologist. It shows him that this manner of thinking and feeling coincides with a fairly widespread trend or spiritual current which, independently of Freud's theory, has made itself felt in other places, in other circumstances, in other minds, and in other forms. I should call it a manifestation of the collective psyche. Let me remind you here of the works of Havelock Ellis and August Forel and the contributors to *Anthropophyteia*;² then of the changed attitude to sex in Anglo-Saxon countries during the post-Victorian period, and the broad discussion of sexual matters in literature, which had already started with the French realists. Freud is one of the exponents of a contemporary psychological fact which has a special history of its own; but for obvious reasons we cannot go into that here.

[67] The acclaim which Adler, like Freud, has met with on both sides of the Atlantic points similarly to the undeniable fact that, for a great many people, the need for self-assertion arising from a sense of inferiority is a plausible basis of explanation. Nor can it be disputed that this view accounts for psychic actualities which are not given their due in the Freudian system. I need hardly mention in detail the collective psychological forces and social factors that favour the Adlerian view and make it their theoretical exponent. These matters are sufficiently obvious.

[68] It would be an unpardonable error to overlook the element of truth in both the Freudian and the Adlerian viewpoints, but it would be no less unpardonable to take either of them as the sole truth. Both truths correspond to psychic realities. There are in fact some cases which by and large can best be described and explained by the one theory, and some by the other.

[69] I can accuse neither of these two investigators of any fundamental error; on the contrary, I endeavour to apply both hypotheses as far as possible because I fully recognize their relative rightness. It would certainly never have occurred to me to depart from Freud's path had I not stumbled upon facts which forced me into modifications. And the same is true of my relation to the Adlerian viewpoint.

[70] After what has been said it seems hardly necessary to add that I hold the truth of my own deviationist views to be equally relative, and feel myself so very much the mere exponent of another disposition that I could almost say with Coleridge: "I believe in the one and only saving Church, of which at present I am the only member."³

[71] It is in applied psychology, if anywhere, that we must be modest today and bear with an apparent plurality of contradictory opinions; for we are still far from having anything like a thorough knowledge of the human psyche, that most challenging field of scientific inquiry. At present we have merely more or less plausible opinions that cannot be squared with one another.

[72] If, therefore, I undertake to say something about my views I hope I shall not be misunderstood. I am not advertising a novel truth, still less am I announcing a final gospel. I can only speak of attempts to throw light on psychic facts that are obscure to me, or of efforts to overcome therapeutic difficulties.

[73] And it is just with this last point that I should like to begin, for here lies the most pressing need for modifications. As is well known, one can get along for quite a time with an inadequate theory, but not with inadequate therapeutic methods. In my psychotherapeutic practice of nearly thirty years I have met with a fair number of failures which made a far deeper impression on me than my successes. Anybody can have successes in psychotherapy, starting with the primitive medicine-man and faith-

healer. The psychotherapist learns little or nothing from his successes, for they chiefly confirm him in his mistakes. But failures are priceless experiences because they not only open the way to a better truth but force us to modify our views and methods.

[74] I certainly recognize how much my work has been furthered first by Freud and then by Adler, and in practice I try to acknowledge this debt by making use of their views, whenever possible, in the treatment of my patients. Nevertheless I must insist that I have experienced failures which, I felt, might have been avoided had I considered the facts that subsequently forced me to modify their views.

[75] To describe all the situations I came up against is almost impossible, so I must content myself with singling out a few typical cases. It was with older patients that I had the greatest difficulties, that is, with persons over forty. In handling younger people I generally get along with the familiar viewpoints of Freud and Adler, for these tend to bring the patient to a certain level of adaptation and normality. Both views are eminently applicable to the young, apparently without leaving any disturbing after-effects. In my experience this is not so often the case with older people. It seems to me that the basic facts of the psyche undergo a very marked alteration in the course of life, so much so that we could almost speak of a psychology of life's morning and a psychology of its afternoon. As a rule, the life of a young person is characterized by a general expansion and a striving towards concrete ends; and his neurosis seems mainly to rest on his hesitation or shrinking back from this necessity. But the life of an older person is characterized by a contraction of forces, by the affirmation of what has been achieved, and by the curtailment of further growth. His neurosis comes mainly from his clinging to a youthful attitude which is now out of season. Just as the young neurotic is afraid of life, so the older one shrinks back from death. What was a normal goal for the young man becomes a neurotic hindrance to the old—just as, through his hesitation to face the world, the young neurotic's originally normal dependence on his parents grows into an incest-relationship that is inimical to life. It is natural that neurosis, resistance, repression, transference, "guiding fictions," and so forth should have one meaning in the young person and quite another in the old, despite apparent similarities. The aims of therapy should undoubtedly be modified to meet this fact. Hence the age of the patient seems to me a most important *indicium*.

[76] But there are various *indicia* also within the youthful phase of life. Thus, in my estimation, it is a technical blunder to apply the Freudian viewpoint to a patient with the Adlerian type of psychology, that is, an unsuccessful person with an infantile need to assert himself. Conversely, it would be a gross misunderstanding to force the Adlerian viewpoint on a successful man with a pronounced pleasure-principle

psychology. When in a quandary the resistances of the patient may be valuable signposts. I am inclined to take deep-seated resistances seriously at first, paradoxical as this may sound, for I am convinced that the doctor does not necessarily know better than the patient's own psychic constitution, of which the patient himself may be quite unconscious. This modesty on the part of the doctor is altogether becoming in view of the fact that there is not only no generally valid psychology today but rather an untold variety of temperaments and of more or less individual psyches that refuse to fit into any scheme.

[77] You know that in this matter of temperament I postulate two different basic attitudes in accordance with the typical differences already suspected by many students of human nature—namely, the extraverted and the introverted attitudes. These attitudes, too, I take to be important *indicia*, and likewise the predominance of one particular psychic function over the others.⁴

[78] The extraordinary diversity of individual life necessitates constant modifications of theory which are often applied quite unconsciously by the doctor himself, although in principle they may not accord at all with his theoretical creed.

[79] While we are on this question of temperament I should not omit to mention that there are some people whose attitude is essentially spiritual and others whose attitude is essentially materialistic. It must not be imagined that such an attitude is acquired accidentally or springs from mere misunderstanding. Very often they are ingrained passions which no criticism and no persuasion can stamp out; there are even cases where an apparently outspoken materialism has its source in a denial of religious temperament. Cases of the reverse type are more easily credited today, although they are not more frequent than the others. This too is an *indicium* which in my opinion ought not to be overlooked.

[80] When we use the word *indicium* it might appear to mean, as is usual in medical parlance, that this or that treatment is indicated. Perhaps this should be the case, but psychotherapy has at present reached no such degree of certainty—for which reason our *indicia* are unfortunately not much more than warnings against one-sidedness.

[81] The human psyche is a thing of enormous ambiguity. In every single case we have to ask ourselves whether an attitude or a so-called *habitus* is authentic, or whether it may not be just a compensation for its opposite. I must confess that I have so often been deceived in this matter that in any concrete case I am at pains to avoid all theoretical presuppositions about the structure of the neurosis and about what the patient can and ought to do. As far as possible I let pure experience decide the therapeutic aims. This may perhaps seem strange, because it is commonly supposed that the therapist has an aim. But in psychotherapy it seems to me positively advisable for the doctor not to have too fixed an aim. He can hardly know better than

the nature and will to live of the patient. The great decisions in human life usually have far more to do with the instincts and other mysterious unconscious factors than with conscious will and well-meaning reasonableness. The shoe that fits one person pinches another; there is no universal recipe for living. Each of us carries his own life-form within him—an irrational form which no other can outbid.

[82] All this naturally does not prevent us from doing our utmost to make the patient normal and reasonable. If the therapeutic results are satisfactory, we can probably let it go at that. If not, then for better or worse the therapist must be guided by the patient's own irrationalities. Here we must follow nature as a guide, and what the doctor then does is less a question of treatment than of developing the creative possibilities latent in the patient himself.

[83] What I have to say begins where the treatment leaves off and this development sets in. Thus my contribution to psychotherapy confines itself to those cases where rational treatment does not yield satisfactory results. The clinical material at my disposal is of a peculiar composition: new cases are decidedly in the minority. Most of them already have some form of psychotherapeutic treatment behind them, with partial or negative results. About a third of my cases are not suffering from any clinically definable neurosis, but from the senselessness and aimlessness of their lives. I should not object if this were called the general neurosis of our age. Fully two thirds of my patients are in the second half of life.

[84] This peculiar material sets up a special resistance to rational methods of treatment, probably because most of my patients are socially well-adapted individuals, often of outstanding ability, to whom normalization means nothing. As for so-called normal people, there I really am in a fix, for I have no ready made philosophy of life to hand out to them. In the majority of my cases the resources of the conscious mind are exhausted (or, in ordinary English, they are "stuck"). It is chiefly this fact that forces me to look for hidden possibilities. For I do not know what to say to the patient when he asks me, "What do you advise? What shall I do?" I don't know either. I only know one thing: when my conscious mind no longer sees any possible road ahead and consequently gets stuck, my unconscious psyche will react to the unbearable standstill.

[85] This "getting stuck" is a psychic occurrence so often repeated during the course of human history that it has become the theme of many myths and fairytales. We are told of the Open sesame! to the locked door, or of some helpful animal who finds the hidden way. In other words, getting stuck is a typical event which, in the course of time, has evoked typical reactions and compensations. We may therefore expect with some probability that something similar will appear in the reactions of the unconscious, as, for example, in dreams.

[86] In such cases, then, my attention is directed more particularly to dreams. This is not because I am tied to the notion that dreams must always be called to the rescue, or because I possess a mysterious dream-theory which tells me how everything must shape itself; but quite simply from perplexity. I do not know where else to go for help, and so I try to find it in dreams. These at least present us with images pointing to something or other, and that is better than nothing. I have no theory about dreams, I do not know how dreams arise. And I am not at all sure that my way of handling dreams even deserves the name of a “method.” I share all your prejudices against dream-interpretation as the quintessence of uncertainty and arbitrariness. On the other hand, I know that if we meditate on a dream sufficiently long and thoroughly, if we carry it around with us and turn it over and over, something almost always comes of it. This something is not of course a scientific result to be boasted about or rationalized; but it is an important practical hint which shows the patient what the unconscious is aiming at. Indeed, it ought not to matter to me whether the result of my musings on the dream is scientifically verifiable or tenable, otherwise I am pursuing an ulterior—and therefore autoerotic—aim. I must content myself wholly with the fact that the result means something to the patient and sets his life in motion again. I may allow myself only one criterion for the result of my labours: Does it work? As for my scientific hobby—my desire to know *why* it works—this I must reserve for my spare time.

[87] Infinitely varied are the contents of the initial dreams, that is, the dreams that come at the outset of the treatment. In many cases they point directly to the past and recall things lost and forgotten. For very often the standstill and disorientation arise when life has become one-sided, and this may, in psychological terms, cause a sudden loss of libido. All our previous activities become uninteresting, even senseless, and our aims suddenly no longer worth striving for. What in one person is merely a passing mood may in another become a chronic condition. In these cases it often happens that other possibilities for developing the personality lie buried somewhere or other in the past, unknown to anybody, not even to the patient. But the dream may reveal the clue.

[88] In other cases the dream points to present facts, for example marriage or social position, which the conscious mind has never accepted as sources of problems or conflicts.

[89] Both possibilities come within the sphere of the rational, and I daresay I would have no difficulty in making such initial dreams seem plausible. The real difficulty begins when the dreams do not point to anything tangible, and this they do often enough, especially when they hold anticipations of the future. I do not mean that such dreams are necessarily prophetic, merely that they feel the way, they “reconnoitre.”

These dreams contain inklings of possibilities and for that reason can never be made plausible to an outsider. Sometimes they are not plausible even to me, and then I usually say to the patient, “I don’t believe it, but follow up the clue.” As I have said, the sole criterion is the stimulating effect, but it is by *no* means necessary for me to understand why such an effect takes place.

[90] This is particularly true of dreams that contain something like an “unconscious metaphysics,” by which I mean mythological analogies that are sometimes incredibly strange and baffling.

[91] Now, you will certainly protest: How on earth can I know that the dreams contain anything like an unconscious metaphysics? And here I must confess that I do not really know. I know far too little about dreams for that. I see only the effect on the patient, of which I would like to give you a little example.

[92] In a long initial dream of one of my “normal” patients, the illness of his sister’s child played an important part. She was a little girl of two.

[93] Some time before, this sister had in fact lost a boy through illness, but otherwise none of her children was ill. The occurrence of the sick child in the dream at first proved baffling to the dreamer, probably because it failed to fit the facts. Since there was no direct and intimate connection between the dreamer and his sister, he could feel in this image little that was personal to him. Then he suddenly remembered that two years earlier he had taken up the study of occultism, in the course of which he also discovered psychology. So the child evidently represented his interest in the psyche—an idea I should never have arrived at of my own accord. Seen purely theoretically, this dream image can mean anything or nothing. For that matter, does a thing or a fact ever mean anything in itself? The only certainty is that it is always man who interprets, who assigns meaning. And that is the gist of the matter for psychology. It impressed the dreamer as a novel and interesting idea that the study of occultism might have something sickly about it. Somehow the thought struck home. And this is the decisive point: the interpretation works, however we may elect to account for its working. For the dreamer the thought was an implied criticism, and through it a certain change of attitude was brought about. By such slight changes, which one could never think up rationally, things are set in motion and the dead point is overcome, at least in principle.

[94] From this example I could say figuratively that the dream meant that there was something sickly about the dreamer’s occult studies, and in this sense—since the dream brought him to such an idea—I can also speak of “unconscious metaphysics.”

[95] But I go still further: Not only do I give the patient an opportunity to find associations to his dreams, I give myself the same opportunity. Further, I present him

with my ideas and opinions. If, in so doing, I open the door to “suggestion,” I see no occasion for regret; for it is well known that we are susceptible only to those suggestions with which we are already secretly in accord. No harm is done if now and then one goes astray in this riddle-reading: sooner or later the psyche will reject the mistake, much as the organism rejects a foreign body. I do not need to prove that my interpretation of the dream is right (a pretty hopeless undertaking anyway), but must simply try to discover, with the patient, what *acts* for him—I am almost tempted to say, what is actual.

[96] For this reason it is particularly important for me to know as much as possible about primitive psychology, mythology, archaeology, and comparative religion, because these fields offer me invaluable analogies with which I can enrich the associations of my patients. Together, we can then find meaning in apparent irrelevancies and thus vastly increase the effectiveness of the dream. For the layman who has done his utmost in the personal and rational sphere of life and yet has found no meaning and no satisfaction there, it is enormously important to be able to enter a sphere of irrational experience. In this way, too, the habitual and the commonplace come to wear an altered countenance, and can even acquire a new glamour. For it all depends on how we look at things, and not on how they are in themselves. The least of things with a meaning is always worth more in life than the greatest of things without it.

[97] I do not think I underestimate the risk of this undertaking. It is as if one began to build a bridge out into space. Indeed, the ironist might even allege—and has often done so—that in following this procedure both doctor and patient are indulging in mere fantasy-spinning.

[98] This objection is no counter-argument, but is very much to the point. I even make an effort to second the patient in his fantasies. Truth to tell, I have no small opinion of fantasy. To me, it is the maternally creative side of the masculine mind. When all is said and done, we can never rise above fantasy. It is true that there are unprofitable, futile, morbid, and unsatisfying fantasies whose sterile nature is immediately recognized by every person endowed with common sense; but the faulty performance proves nothing against the normal performance. All the works of man have their origin in creative imagination. What right, then, have we to disparage fantasy? In the normal course of things, fantasy does not easily go astray; it is too deep for that, and too closely bound up with the tap-root of human and animal instinct. It has a surprising way of always coming out right in the end. The creative activity of imagination frees man from his bondage to the “nothing but”⁵ and raises him to the status of one who plays. As Schiller says, man is completely human only when he is at play.

[99] My aim is to bring about a psychic state in which my patient begins to experiment with his own nature—a state of fluidity, change, and growth where nothing is eternally fixed and hopelessly petrified. I can here of course adumbrate only the principles of my technique. Those of you who happen to be acquainted with my works can easily imagine the necessary parallels. I would only like to emphasize that you should not think of my procedure as entirely without aim or limit. In handling a dream or fantasy I make it a rule never to go beyond the meaning which is effective for the patient; I merely try to make him as fully conscious of this meaning as possible, so that he shall also become aware of its supra-personal connections. For, when something happens to a man and he supposes it to be personal only to himself, whereas in reality it is a quite universal experience, then his attitude is obviously wrong, that is, too personal, and it tends to exclude him from human society. By the same token we need to have not only a personal, contemporary consciousness, but also a supra-personal consciousness with a sense of historical continuity. However abstract this may sound, practical experience shows that many neuroses are caused primarily by the fact that people blind themselves to their own religious promptings because of a childish passion for rational enlightenment. It is high time the psychologist of today recognized that we are no longer dealing with dogmas and creeds but with the religious attitude *per se*, whose importance as a psychic function can hardly be overrated. And it is precisely for the religious function that the sense of historical continuity is indispensable.

[100] Coming back to the question of my technique, I ask myself how far I am indebted to Freud for its existence. At all events I learned it from Freud's method of free association, and I regard it as a direct extension of that.

[101] So long as I help the patient to discover the effective elements in his dreams, and so long as I try to get him to see the general meaning of his symbols, he is still, psychologically speaking, in a state of childhood. For the time being he is dependent on his dreams and is always asking himself whether the next dream will give him new light or not. Moreover, he is dependent on my having ideas about his dreams and on my ability to increase his insight through my knowledge. Thus he is still in an undesirably passive condition where everything is rather uncertain and questionable; neither he nor I know the journey's end. Often it is not much more than a groping about in Egyptian darkness. In this condition we must not expect any very startling results—the uncertainty is too great for that. Besides which there is always the risk that what we have woven by day the night will unravel. The danger is that nothing permanent is achieved, that nothing remains fixed. It not infrequently happens in these situations that the patient has a particularly vivid or curious dream, and says to me, "Do you know, if only I were a painter I would make a picture of it." Or the

dreams are about photographs, paintings, drawings, or illuminated manuscripts, or even about the films.

[102] I have turned these hints to practical account, urging my patients at such times to paint in reality what they have seen in dream or fantasy. As a rule I am met with the objection, "But I am not a painter!" To this I usually reply that neither are modern painters, and that consequently modern painting is free for all, and that anyhow it is not a question of beauty but only of the trouble one takes with the picture. How true this is I saw recently in the case of a talented professional portraitist; she had to begin my way of painting all over again with pitiably childish efforts, literally as if she had never held a brush in her hand. To paint what we see before us is a different art from painting what we see within.

[103] Many of my more advanced patients, then, begin to paint. I can well understand that everyone will be profoundly impressed with the utter futility of this sort of dilettantism. Do not forget, however, that we are speaking not of people who still have to prove their social usefulness, but of those who can no longer see any sense in being socially useful and who have come upon the deeper and more dangerous question of the meaning of their own individual lives. To be a particle in the mass has meaning and charm only for the man who has not yet reached that stage, but none for the man who is sick to death of being a particle. The importance of what life means to the individual may be denied by those who are socially below the general level of adaptation, and is invariably denied by the educator whose ambition it is to breed mass-men. But those who belong to neither category will sooner or later come up against this painful question.

[104] Although my patients occasionally produce artistically beautiful things that might very well be shown in modern "art" exhibitions, I nevertheless treat them as completely worthless when judged by the canons of real art. As a matter of fact, it is essential that they should be considered worthless, otherwise my patients might imagine themselves to be artists, and the whole point of the exercise would be missed. It is not a question of art at all—or rather, it should not be a question of art—but of something more and other than mere art, namely the living effect upon the patient himself. The meaning of individual life, whose importance from the social standpoint is negligible, stands here at its highest, and for its sake the patient struggles to give form, however crude and childish, to the inexpressible.

[105] But why do I encourage patients, when they arrive at a certain stage in their development, to express themselves by means of brush, pencil, or pen at all?

[106] Here again my prime purpose is to produce an effect. In the state of psychological childhood described above, the patient remains passive; but now he begins to play an active part. To start off with, he puts down on paper what he has

passively seen, thereby turning it into a deliberate act. He not only talks about it, he is actually doing something about it. Psychologically speaking, it makes a vast difference whether a man has an interesting conversation with his doctor two or three times a week, the results of which are left hanging in mid air, or whether he has to struggle for hours with refractory brush and colours, only to produce in the end something which, taken at its face value, is perfectly senseless. If it were really senseless to him, the effort to paint it would be so repugnant that he could scarcely be brought to perform this exercise a second time. But because his fantasy does not strike him as entirely senseless, his busying himself with it only increases its effect upon him. Moreover, the concrete shaping of the image enforces a continuous study of it in all its parts, so that it can develop its effects to the full. This invests the bare fantasy with an element of reality, which lends it greater weight and greater driving power. And these rough-and-ready pictures do indeed produce effects which, I must admit, are rather difficult to describe. For instance, a patient needs only to have seen once or twice how much he is freed from a wretched state of mind by working at a symbolical picture, and he will always turn to this means of release whenever things go badly with him. In this way something of inestimable importance is won—the beginning of independence, a step towards psychological maturity. The patient can make himself creatively independent through this method, if I may call it such. He is no longer dependent on his dreams or on his doctor's knowledge; instead, by painting himself he gives shape to himself. For what he paints are active fantasies—that which is active within him. And that which is active within is himself, but no longer in the guise of his previous error, when he mistook the personal ego for the self; it is himself in a new and hitherto alien sense, for his ego now appears as the object of that which works within him. In countless pictures he strives to catch this interior agent, only to discover in the end that it is eternally unknown and alien, the hidden foundation of psychic life.

[107] It is impossible for me to describe the extent to which this discovery changes the patient's standpoint and values, and how it shifts the centre of gravity of his personality. It is as though the earth had suddenly discovered that the sun was the centre of the planetary orbits and of its own earthly orbit as well.

[108] But have we not always known this to be so? I myself believe that we have always known it. But I may know something with my head which the other man in me is far from knowing, for indeed and in truth I live as though I did not know it. Most of my patients knew the deeper truth, but did not live it. And why did they not live it? Because of that bias which makes us all live from the ego, a bias which comes from overvaluation of the conscious mind.

[109] It is of the greatest importance for the young person, who is still unadapted and has as yet achieved nothing, to shape his conscious ego as effectively as possible, that is, to educate his will. Unless he is a positive genius he cannot, indeed he should not, believe in anything active within him that is not identical with his will. He must feel himself a man of will, and may safely depreciate everything else in him and deem it subject to his will, for without this illusion he could not succeed in adapting himself socially.

[110] It is otherwise with a person in the second half of life who no longer needs to educate his conscious will, but who, to understand the meaning of his individual life, needs to experience his own inner being. Social usefulness is no longer an aim for him, although he does not deny its desirability. Fully aware as he is of the social unimportance of his creative activity, he feels it more as a way of working at himself to his own benefit. Increasingly, too, this activity frees him from morbid dependence, and he thus acquires an inner stability and a new trust in himself. These last achievements now redound to the good of the patient's social existence; for an inwardly stable and self-confident person will prove more adequate to his social tasks than one who is on a bad footing with his unconscious.

[111] I have purposely avoided loading my lecture with theory, hence much must remain obscure and unexplained. But, in order to make the pictures produced by my patients intelligible, certain theoretical points must at least receive mention. A feature common to all these pictures is a primitive symbolism which is conspicuous both in the drawing and in the colouring. The colours are as a rule quite barbaric in their intensity. Often an unmistakable archaic quality is present. These peculiarities point to the nature of the underlying creative forces. They are irrational, symbolistic currents that run through the whole history of mankind, and are so archaic in character that it is not difficult to find their parallels in archaeology and comparative religion. We may therefore take it that our pictures spring chiefly from those regions of the psyche which I have termed the collective unconscious. By this I understand an unconscious psychic functioning common to all men, the source not only of our modern symbolical pictures but of all similar products in the past. Such pictures spring from, and satisfy, a natural need. It is as if a part of the psyche that reaches far back into the primitive past were expressing itself in these pictures and finding it possible to function in harmony with our alien conscious mind. This collaboration satisfies and thus mitigates the psyche's disturbing demands upon the latter. It must, however, be added that the mere execution of the pictures is not enough. Over and above that, an intellectual and emotional understanding is needed; they require to be not only rationally integrated with the conscious mind, but morally assimilated. They still have to be subjected to a work of synthetic interpretation. Although I have travelled this path with individual patients many times, I have never yet succeeded in

making all the details of the process clear enough for publication.⁶ So far this has been fragmentary only. The truth is, we are here moving in absolutely new territory, and a ripening of experience is the first requisite. For very important reasons I am anxious to avoid hasty conclusions. We are dealing with a process of psychic life outside consciousness, and our observation of it is indirect. As yet we do not know to what depths our vision will plumb. It would seem to be some kind of centring process, for a great many pictures which the patients themselves feel to be decisive point in this direction. During this centring process what we call the ego appears to take up a peripheral position. The change is apparently brought about by an emergence of the historical part of the psyche. Exactly what is the purpose of this process remains at first sight obscure. We can only remark its important effect on the conscious personality. From the fact that the change heightens the feeling for life and maintains the flow of life, we must conclude that it is animated by a peculiar purposefulness. We might perhaps call this a new illusion. But what is “illusion”? By what criterion do we judge something to be an illusion? Does anything exist for the psyche that we are entitled to call illusion? What we are pleased to call illusion may be for the psyche an extremely important life-factor, something as indispensable as oxygen for the body—a psychic actuality of over-whelming significance. Presumably the psyche does not trouble itself about our categories of reality; for it, everything that *works* is real. The investigator of the psyche must not confuse it with his consciousness, else he veils from his sight the object of his investigation. On the contrary, to recognize it at all, he must learn to see how different it is from consciousness. Nothing is more probable than that what we call illusion is very real for the psyche—for which reason we cannot take psychic reality to be commensurable with conscious reality. To the psychologist there is nothing more fatuous than the attitude of the missionary who pronounces the gods of the “poor heathen” to be mere illusion. Unfortunately we still go blundering along in the same dogmatic way, as though *our* so-called reality were not equally full of illusion. In psychic life, as everywhere in our experience, all things that work are reality, regardless of the names man chooses to bestow on them. To take these realities for what they are—not foisting other names on them—that is our business. To the psyche, spirit is no less spirit for being named sexuality.

[112] I must repeat that these designations and the changes rung upon them never even remotely touch the essence of the process we have described. It cannot be compassed by the rational concepts of the conscious mind, any more than life itself; and it is for this reason that my patients consistently turn to the representation and interpretation of symbols as the more adequate and effective course.

[113] With this I have said pretty well everything I can say about my therapeutic aims and intentions within the broad framework of a lecture. It can be no more than an

incentive to thought, and I shall be quite content if such it has been.

V

PROBLEMS OF MODERN PSYCHOTHERAPY¹

[114] Psychotherapy, or the treatment of the mind by psychological methods, is today identified in popular thought with “psychoanalysis.”

[115] The word “psychoanalysis” has become so much a part of common speech that everyone who uses it seems to understand what it means. But what the word actually connotes is unknown to most laymen. According to the intention of its creator, Freud, it can be appropriately applied only to the method, inaugurated by himself, of reducing psychic symptoms and complexes to certain repressed impulses; and in so far as this procedure is not possible without the corresponding points of view, the idea of psychoanalysis also includes certain theoretical assumptions, formulated as the Freudian theory of sexuality expressly insisted upon by its author. But, Freud notwithstanding, the layman employs the term “psychoanalysis” loosely for all modern attempts whatsoever to probe the mind by scientific methods. Thus Adler’s school must submit to being labelled “psychoanalytic” despite the fact that Adler’s viewpoint and method are apparently in irreconcilable opposition to those of Freud. In consequence, Adler does not call his psychology “psychoanalysis” but “individual psychology”; while I prefer to call my own approach “analytical psychology.” by which I mean something like a general concept embracing both psychoanalysis and individual psychology as well as other endeavours in the field of “complex psychology.”

[116] Since, however, there is but one mind, or one psyche, in man, it might seem to the layman that there can be only one psychology, and he might therefore suppose these distinctions to be either subjective quibbles or the commonplace attempts of small-minded persons to set themselves up on little thrones. I could easily lengthen the list of “psychologies” by mentioning other systems not included under “analytical psychology.” There are in fact many different methods, standpoints, views, and beliefs which are all at war with one another, chiefly because they all misunderstand one another and refuse to give one another their due. The many-sidedness, the diversity, of psychological opinions in our day is nothing less than astonishing, not to say confusing for the layman.

[117] If, in a text-book of pathology, we find numerous remedies of the most diverse kind prescribed for a given disease, we may safely conclude that none of these

remedies is particularly efficacious. So, when many different ways of approaching the psyche are recommended, we may rest assured that none of them leads with absolute certainty to the goal, least of all those advocated with fanaticism. The very number of present-day psychologies is a confession of perplexity. The difficulty of gaining access to the psyche is gradually being borne in upon us, and the psyche itself is seen to be a “horned problem,” to use Nietzsche’s expression. It is small wonder therefore that efforts to attack this elusive riddle keep on multiplying, first from one side and then from another. The variety of contradictory standpoints and opinions is the inevitable result.

[118] The reader will doubtless agree that in speaking of psychoanalysis we should not confine ourselves to its narrower connotation, but should deal in general with the successes and failures of the various contemporary endeavours, which we sum up under the term “analytical psychology,” to solve the problem of the psyche.

[119] But why this sudden interest in the human psyche as a datum of experience? For thousands of years it was not so. I wish merely to raise this apparently irrelevant question, not to answer it. In reality it is not irrelevant, because the impulses at the back of our present-day interest in psychology have a sort of subterranean connection with this question.

[120] All that now passes under the layman’s idea of “psychoanalysis” has its origin in medical practice; consequently most of it is medical psychology. This psychology bears the unmistakable stamp of the doctor’s consulting-room, as can be seen not only in its terminology but also in its theoretical set-up. Everywhere we come across assumptions which the doctor has taken over from natural science and biology. It is this that has largely contributed to the divorce between modern psychology and the academic or humane sciences, for psychology explains things in terms of irrational nature, whereas the latter studies are grounded in the intellect. The distance between mind and nature, difficult to bridge at best, is still further increased by a medical and biological nomenclature which often strikes us as thoroughly mechanical, and more often than not severely overtaxes the best-intentioned understanding.

[121] Having expressed the hope that the foregoing general remarks may not be out of place in view of the confusion of terms existing in this field, I should now like to turn to the real task in hand and scrutinize the achievements of analytical psychology.

[122] Since the endeavours of our psychology are so extraordinarily heterogeneous, it is only with the greatest difficulty that we can take up a broadly inclusive standpoint. If, therefore, I try to divide the aims and results of these endeavours into certain classes, or rather stages, I do so with the express reservation appropriate to a purely provisional undertaking which, it may be objected, is just as arbitrary as the surveyor’s triangulation of a landscape. Be that as it may, I would venture to regard

the sum total of our findings under the aspect of four stages, namely, confession, elucidation, education, and transformation. I shall now proceed to discuss these somewhat unusual terms.

[123] The first beginnings of all analytical treatment of the soul are to be found in its prototype, the confessional. Since, however, the two have no direct causal connection, but rather grow from a common irrational psychic root, it is difficult for an outsider to see at once the relation between the groundwork of psychoanalysis and the religious institution of the confessional.

[124] Once the human mind had succeeded in inventing the idea of sin, man had recourse to psychic concealment; or, in analytical parlance, repression arose. Anything concealed is a secret. The possession of secrets acts like a psychic poison that alienates their possessor from the community. In small doses, this poison may be an invaluable medicament, even an essential pre-condition of individual differentiation, so much so that even on the primitive level man feels an irresistible need actually to invent secrets: their possession safeguards him from dissolving in the featureless flow of unconscious community life and thus from deadly peril to his soul. It is a well known fact that the widespread and very ancient rites of initiation with their mystery cults subserved this instinct for differentiation. Even the Christian sacraments were looked upon as “mysteries” in the early Church, and, as in the case of baptism, were celebrated in secluded spots and only mentioned under the veil of allegory.

[125] A secret shared with several persons is as beneficial as a merely private secret is destructive. The latter works like a burden of guilt, cutting off the unfortunate possessor from communion with his fellows. But, if we are conscious of what we are concealing, the harm done is decidedly less than if we do not know what we are repressing—or even that we have repressions at all. In this case the hidden content is no longer consciously kept secret; we are concealing it even from ourselves. It then splits off from the conscious mind as an independent complex and leads a sort of separate existence in the unconscious psyche, where it can be neither interfered with nor corrected by the conscious mind. The complex forms, so to speak, a miniature self-contained psyche which, as experience shows, develops a peculiar fantasy-life of its own. What we call fantasy is simply spontaneous psychic activity, and it wells up wherever the inhibitive action of the conscious mind abates or, as in sleep, ceases altogether. In sleep, fantasy takes the form of dreams. But in waking life, too, we continue to dream beneath the threshold of consciousness, especially when under the influence of repressed or other unconscious complexes. Incidentally, unconscious contents are on no account composed exclusively of complexes that were once conscious and subsequently became unconscious by being repressed. The

unconscious, too, has its own specific contents which push up from unknown depths and gradually reach consciousness. Hence we should in no wise picture the unconscious psyche as a mere receptacle for contents discarded by the conscious mind.

[126] All unconscious contents, which either approach the threshold of consciousness from below, or have sunk only slightly beneath it, affect the conscious mind. Since the content does not appear as such in consciousness, these effects are necessarily indirect. Most of our “lapses” are traceable to such disturbances, as are all neurotic symptoms, which are nearly always, in medical parlance, of a psychogenic nature, the exceptions being shock effects (shell-shock and the like). The mildest forms of neurosis are the lapses of consciousness mentioned above—e.g., slips of the tongue, suddenly forgetting names and dates, inadvertent clumsiness leading to injuries and accidents, misunderstandings and so-called hallucinations of memory, as when we think we have said something or done something, or faulty apprehension of things heard and said, and so on.

[127] In all these instances a thorough investigation can show the existence of some content which, in an indirect and unconscious way, is distorting the performance of the conscious mind.

[128] Generally speaking, therefore, an unconscious secret is more injurious than a conscious one. I have seen many patients who, as a result of difficult circumstances that might well have driven weaker natures to suicide, sometimes developed a suicidal tendency but, because of their inherent reasonableness, prevented it from becoming conscious and in this way generated an unconscious suicide-complex. This unconscious urge to suicide then engineered all kinds of dangerous accidents—as, for instance, a sudden attack of giddiness on some exposed place, hesitation in front of a motor-car, mistaking corrosive sublimate for cough mixture, a sudden zest for dangerous acrobatics, and so forth. When it was possible to make the suicidal leaning conscious in these cases, common sense could intervene as a salutary check: the patients could then consciously recognize and avoid the situations that tempted them to self-destruction.

[129] All personal secrets, therefore, have the effect of sin or guilt, whether or not they are, from the standpoint of popular morality, wrongful secrets.

[130] Another form of concealment is the act of holding something back. What we usually hold back are emotions or affects. Here too it must be stressed that self-restraint is healthy and beneficial; it may even be a virtue. That is why we find self-discipline to be one of the earliest moral arts even among primitive peoples, where it has its place in the initiation ceremonies, chiefly in the form of ascetic continence and the stoical endurance of pain and fear. Self-restraint is here practised within a

secret society as an undertaking shared with others. But if self-restraint is only a personal matter, unconnected with any religious views, it may become as injurious as the personal secret. Hence the well-known bad moods and irritability of the over-virtuous. The affect withheld is likewise something we conceal, something we can hide even from ourselves—an art in which men particularly excel, while women, with very few exceptions, are by nature averse to doing such injury to their affects. When an affect is withheld it is just as isolating and just as disturbing in its effects as the unconscious secret, and just as guilt-laden. In the same way that nature seems to bear us a grudge if we have the advantage of a secret over the rest of humanity, so she takes it amiss if we withhold our emotions from our fellow men. Nature decidedly abhors a vacuum in this respect; hence there is nothing more unendurable in the long run than a tepid harmony based on the withholding of affects. The repressed emotions are often of a kind we wish to keep secret. But more often there is no secret worth mentioning, only emotions which have become unconscious through being withheld at some critical juncture.

[131] The respective predominance of secrets or of inhibited emotions is probably responsible for the different forms of neurosis. At any rate the hysterical subject who is very free with his emotions is generally the possessor of a secret, while the hardened psychasthenic suffers from emotional indigestion.

[132] To cherish secrets and hold back emotion is a psychic misdemeanour for which nature finally visits us with sickness—that is, when we do these things in private. But when they are done in communion with others they satisfy nature and may even count as useful virtues. It is only restraint practised for oneself alone that is unwholesome. It is as if man had an inalienable right to behold all that is dark, imperfect, stupid, and guilty in his fellow men—for such, of course, are the things we keep secret in order to protect ourselves. It seems to be a sin in the eyes of nature to hide our inferiority—just as much as to live entirely on our inferior side. There would appear to be a sort of conscience in mankind which severely punishes every one who does not somehow and at some time, at whatever cost to his virtuous pride, cease to defend and assert himself, and instead confess himself fallible and human. Until he can do this, an impenetrable wall shuts him off from the vital feeling that he is a man among other men.

[133] This explains the extraordinary significance of genuine, straightforward confession—a truth that was probably known to all the initiation rites and mystery cults of the ancient world. There is a saying from the Greek mysteries: “Give up what thou hast, and then thou wilt receive.”

[134] We may well take this saying as a motto for the first stage in psychotherapeutic treatment. The beginnings of psychoanalysis are in fact nothing else than the

scientific rediscovery of an ancient truth; even the name that was given to the earliest method—catharsis, or cleansing—is a familiar term in the classical rites of initiation. The early cathartic method consisted in putting the patient, with or without the paraphernalia of hypnosis, in touch with the hinterland of his mind, hence into that state which the yoga systems of the East describe as meditation or contemplation. In contrast to yoga, however, the aim here is to observe the sporadic emergence, whether in the form of images or of feelings, of those dim representations which detach themselves in the darkness from the invisible realm of the unconscious and move as shadows before the inturned gaze. In this way things repressed and forgotten come back again. This is a gain in itself, though often a painful one, for the inferior and even the worthless belongs to me as my shadow and gives me substance and mass. How can I be substantial without casting a shadow? I must have a dark side too if I am to be whole; and by becoming conscious of my shadow I remember once more that I am a human being like any other. At any rate, if this rediscovery of my own wholeness remains private, it will only restore the earlier condition from which the neurosis, i.e., the split-off complex, sprang. Privacy prolongs my isolation and the damage is only partially mended. But through confession I throw myself into the arms of humanity again, freed at last from the burden of moral exile. The goal of the cathartic method is full confession—not merely the intellectual recognition of the facts with the head, but their confirmation by the heart and the actual release of suppressed emotion.

[135] As may easily be imagined, the effect of such a confession on simple souls is very great, and its curative results are often astonishing. Yet I would not wish to see the main achievement of our psychology at this stage merely in the fact that some sufferers are cured, but rather in the systematic emphasis it lays upon the significance of confession. For this concerns us all. All of us are somehow divided by our secrets, but instead of seeking to cross the gulf on the firm bridge of confession, we choose the treacherous makeshift of opinion and illusion.

[136] Now I am far from wishing to enunciate a general maxim. It would be difficult to imagine anything more unsavoury than a wholesale confession of sin. Psychology simply establishes the fact that we have here a sore spot of first-rate importance. As the next stage, the stage of elucidation, will make clear, it cannot be tackled directly, because it is a problem with quite particularly pointed horns.

[137] It is of course obvious that the new psychology would have remained at the stage of confession had catharsis proved itself a panacea. First and foremost, however, it is not always possible to bring the patients close enough to the unconscious for them to perceive the shadows. On the contrary, many of them—and for the most part complicated, highly conscious persons—are so firmly anchored in consciousness that

nothing can pry them loose. They develop the most violent resistances to any attempt to push consciousness aside; they want to talk with the doctor on the conscious plane and go into a rational explanation and discussion of their difficulties. They have quite enough to confess already, they say; they do not have to turn to the unconscious for that. For such patients a complete technique for approaching the unconscious is needed.

[138] This is one fact which at the outset seriously restricts the application of the cathartic method. The other restriction reveals itself later on and leads straight into the problems of the second stage. Let us suppose that in a given case the cathartic confession has occurred, the neurosis has vanished, or rather the symptoms are no longer visible. The patient could now be dismissed as cured—if it depended on the doctor alone. But he—or especially she—cannot get away. The patient seems bound to the doctor through the confession. If this seemingly senseless attachment is forcibly severed, there is a bad relapse. Significantly enough, and most curiously, there are cases where no attachment develops; the patient goes away apparently cured, but he is now so fascinated by the hinterland of his own mind that he continues to practise catharsis on himself at the expense of his adaptation to life. He is bound to the unconscious, to himself, and not to the doctor. Clearly the same fate has befallen him as once befell Theseus and Peirithous his companion, who went down to Hades to bring back the goddess of the underworld. Tiring on the way, they sat down to rest for a while, only to find that they had grown fast to the rocks and could not rise.

[139] These curious and unforeseen mischances need elucidation just as much as the first-mentioned cases, those that proved inaccessible to catharsis. In spite of the fact that the two categories of patients are apparently quite different, elucidation is called for at precisely the same point—that is, where the problem of fixation arises, as was correctly recognized by Freud. This is immediately obvious with patients who have undergone catharsis, especially if they remain bound to the doctor. The same sort of thing had already been observed as the unpleasant result of hypnotic treatment, although the inner mechanisms of such a tie were not understood. It now turns out that the nature of the tie in question corresponds more or less to the relation between father and child. The patient falls into a sort of childish dependence from which he cannot defend himself even by rational insight. The fixation is at times extraordinarily powerful—its strength is so amazing that one suspects it of being fed by forces quite outside ordinary experience. Since the tie is the result of an unconscious process, the conscious mind of the patient can tell us nothing about it. Hence the question arises of how this new difficulty is to be met. Obviously we are dealing with a neurotic formation, a new symptom directly induced by the treatment. The unmistakable outward sign of the situation is that the “feeling-toned” memory-image of the father is transferred to the doctor, so that whether he likes it or not the

doctor appears in the role of the father and thus turns the patient into a child. Naturally the patient's childishness does not arise on that account—it was always present, but repressed. Now it comes to the surface, and—the long-lost father being found again—tries to restore the family situation of childhood. Freud gave to this symptom the appropriate name of “transference.” That there should be a certain dependence on the doctor who has helped you is a perfectly normal and humanly understandable phenomenon. What is abnormal and unexpected is the extraordinary toughness of the tie and its imperviousness to conscious correction.

[140] It is one of Freud's outstanding achievements to have explained the nature of this tie, or at least the biological aspects of it, and thus to have facilitated an important advance in psychological knowledge. Today it has been incontestably proved that the tie is caused by unconscious fantasies. These fantasies have in the main what we may call an “incestuous” character, which seems adequately to explain the fact that they remain unconscious, for we can hardly expect such fantasies, barely conscious at best, to come out even in the most scrupulous confession. Although Freud always speaks of incest-fantasies as though they were repressed, further experience has shown that in very many cases they were never the contents of the conscious mind at all or were conscious only as the vaguest adumbrations, for which reason they could not have been repressed intentionally. It is more probable that the incest-fantasies were always essentially unconscious and remained so until positively dragged into the light of day by the analytical method. This is not to say that fishing them out of the unconscious is a reprehensible interference with nature. It is something like a surgical operation on the psyche, but absolutely necessary inasmuch as the incest-fantasies are the cause of the transference and its complex symptoms, which are no less abnormal for being an artificial product.

[141] While the cathartic method restores to the ego such contents as are capable of becoming conscious and should normally be components of the conscious mind, the process of clearing up the transference brings to light contents which are hardly ever capable of becoming conscious in that form. This is the cardinal distinction between the stage of confession and the stage of elucidation.

[142] We spoke earlier of two categories of patients: those who prove impervious to catharsis and those who develop a fixation after catharsis. We have just dealt with those whose fixation takes the form of transference. But, besides these, there are people who, as already mentioned, develop no attachment to the doctor but rather to their own unconscious, in which they become entangled as in a web. Here the parental imago is not transferred to any human object but remains a fantasy, although as such it exerts the same pull and results in the same tie as does the transference. The first category, the people who cannot yield themselves unreservedly to catharsis,

can be understood in the light of Freudian research. Even before they came along for treatment they stood in an identity-relationship to their parents, deriving from it that authority, independence, and critical power which enabled them successfully to withstand the catharsis. They are mostly cultivated, differentiated personalities who, unlike the others, did not fall helpless victims to the unconscious activity of the parental imago, but rather usurped this activity by unconsciously identifying themselves with their parents.

[143] Faced with the phenomenon of transference, mere confession is of no avail; it was for this reason that Freud was driven to substantial modifications of Breuer's original cathartic method. What he now practised he called the "interpretative method."

[144] This further step is quite logical, for the transference relationship is in especial need of elucidation. How very much this is the case the layman can hardly appreciate; but the doctor who finds himself suddenly entangled in a web of incomprehensible and fantastic notions sees it all too clearly. He must interpret the transference—explain to the patient what he is projecting upon the doctor. Since the patient himself does not know what it is, the doctor is obliged to submit what scraps of fantasy he can obtain from the patient to analytical interpretation. The first and most important products of this kind are dreams. Freud therefore proceeded to examine dreams exclusively for their stock of wishes that had been repressed because incompatible with reality, and in the process discovered the incestuous contents of which I have spoken. Naturally the investigation revealed not merely incestuous material in the stricter sense of the word, but every conceivable kind of filth of which human nature is capable—and it is notorious that a lifetime would be required to make even a rough inventory of it.

[145] The result of the Freudian method of elucidation is a minute elaboration of man's shadow-side unexampled in any previous age. It is the most effective antidote imaginable to all the idealistic illusions about the nature of man; and it is therefore no wonder that there arose on all sides the most violent opposition to Freud and his school. I will not speak of the inveterate illusionists; I would merely point out that among the opponents of this method of explanation there are not a few who have no illusions about man's shadow-side and yet object to a biased portrayal of man from the shadow-side alone. After all, the essential thing is not the shadow but the body which casts it.

[146] Freud's interpretative method rests on "reductive" explanations which unfailingly lead backwards and downwards, and it is essentially destructive if overdone or handled one-sidedly. Nevertheless psychology has profited greatly from Freud's pioneer work; it has learned that human nature has its black side—and not man alone,

but his works, his institutions, and his convictions as well. Even our purest and holiest beliefs rest on very deep and dark foundations; after all, we can explain a house not only from the attic downwards, but from the basement upwards, and the latter explanation has the prime advantage of being genetically the more correct, since houses are in fact built bottom-side first, and the beginning of all things is simple and crude. No thinking person can deny that Salomon Reinach's explanation of the Last Supper in terms of primitive totemism is fraught with significance; nor will he reject the application of the incest hypothesis to the myths of the Greek divinities. Certainly it pains our sensibilities to interpret radiant things from the shadow-side and thus in a measure trample them in the sorry dirt of their beginnings. But I hold it to be an imperfection in things of beauty, and a frailty in man, if anything of such a kind permit itself to be destroyed by a mere shadow-explanation. The uproar over Freud's interpretations is entirely due to our own barbarous or childish naïveté, which does not yet understand that high rests on low, and that *les extrêmes se touchent* really is one of the ultimate verities. Our mistake lies in supposing that the radiant things are done away with by being explained from the shadow-side. This is a regrettable error into which Freud himself has fallen. Shadow pertains to light as evil to good, and vice versa. Therefore I cannot lament the shock which this exposure administered to our occidental illusions and pettiness; on the contrary I welcome it as an historic and necessary rectification of almost incalculable importance. For it forces us to accept a philosophical relativism such as Einstein embodies for mathematical physics, and which is fundamentally a truth of the Far East whose ultimate effects we cannot at present foresee.

[147] Nothing, it is true, is less effective than an intellectual idea. But when an idea is a *psychic fact* that crops up in two such totally different fields as psychology and physics, apparently without historical connection, then we must give it our closest attention. For ideas of this kind represent forces which are logically and morally unassailable; they are always stronger than man and his brain. He fancies that he makes these ideas, but in reality they make him—and make him their unwitting mouthpiece.

[148] To return to our problem of fixation, I should now like to deal with the effects of elucidation. The fixation having been traced back to its dark origins, the patient's position becomes untenable; he cannot avoid seeing how inept and childish his demands are. He will either climb down from his exalted position of despotic authority to a more modest level and accept an insecurity which may prove very wholesome, or he will realize the inescapable truth that to make claims on others is a childish self-indulgence which must be replaced by a greater sense of responsibility.

[149] The man of insight will draw his own moral conclusions. Armed with the knowledge of his deficiencies, he will plunge into the struggle for existence and consume in progressive work and experience all those forces and longings which previously caused him to cling obstinately to a child's paradise, or at least to look back at it over his shoulder. Normal adaptation and forbearance with his own shortcomings: these will be his guiding moral principles, together with freedom from sentimentality and illusion. The inevitable result is a turning away from the unconscious as from a source of weakness and temptation—the field of moral and social defeat.

[150] The problem which now faces the patient is his education as a social being, and with this we come to the third stage. For many morally sensitive natures, mere insight into themselves has sufficient motive force to drive them forward, but it is not enough for people with little moral imagination. For them—to say nothing of those who may have been struck by the analyst's interpretation but still doubt it in their heart of hearts—self-knowledge without the spur of external necessity is ineffective even when they are deeply convinced of its truth. Then again it is just the intellectually differentiated people who grasp the truth of the reductive explanation but cannot tolerate mere deflation of their hopes and ideals. In these cases, too, the power of insight will be of no avail. The explanatory method always presupposes sensitive natures capable of drawing independent moral conclusions from insight. It is true that elucidation goes further than uninterpreted confession alone, for at least it exercises the mind and may awaken dormant forces which can intervene in a helpful way. But the fact remains that in many cases the most thorough elucidation leaves the patient an intelligent but still incapable child. Moreover Freud's cardinal explanatory principle in terms of pleasure and its satisfaction is, as further research has shown, one-sided and therefore unsatisfactory. Not everybody can be explained from this angle. No doubt we all have this angle, but it is not always the most important. We can give a starving man a beautiful painting; he would much prefer bread. We can nominate a languishing lover President of the United States; he would far rather wrap his arms round his adored. On the average, all those who have no difficulty in achieving social adaptation and social position are better accounted for by the pleasure principle than are the unadapted who, because of their social inadequacy, have a craving for power and importance. The elder brother who follows in his father's footsteps and wins to a commanding position in society may be tormented by his desires; while the younger brother who feels himself suppressed and overshadowed by the other two may be goaded by ambition and the need for self-assertion. He may yield so completely to this passion that nothing else can become a problem for him, anyway not a vital one.

[151] At this point in Freud's system of explanation there is a palpable gap, into which there stepped his one-time pupil, Adler. Adler has shown convincingly that numerous cases of neurosis can be far more satisfactorily explained by the power instinct than by the pleasure principle. The aim of his interpretation is therefore to show the patient that he "arranges" his symptoms and exploits his neurosis in order to achieve a fictitious importance; and that even his transference and his other fixations subserve the will to power and thus represent a "masculine protest" against imaginary suppression. Obviously Adler has in mind the psychology of the under-dog or social failure, whose one passion is self-assertion. Such individuals are neurotic because they always imagine they are hard done by and tilt at the windmills of their own fancy, thus putting the goal they most desire quite out of reach.

[152] Adler's method begins essentially at the stage of elucidation; he explains the symptoms in the sense just indicated, and to that extent appeals to the patient's understanding. Yet it is characteristic of Adler that he does not expect too much of understanding, but, going beyond that, has clearly recognized the need for social education. Whereas Freud is the investigator and interpreter, Adler is primarily the educator. He thus takes up the negative legacy which Freud bequeathed him, and, refusing to leave the patient a mere child, helpless despite his valuable understanding, tries by every device of education to make him a normal and adapted person. He does this evidently in the conviction that social adaptation and normalization are desirable goals, that they are absolutely necessary, the consummation of human life. From this fundamental attitude comes the widespread social activity of the Adlerian school, but also its depreciation of the unconscious, which, it seems, occasionally amounts to its complete denial. This is probably a swing of the pendulum—the inevitable reaction to the emphasis Freud lays on the unconscious, and as such quite in keeping with the natural aversion which we noted in patients struggling for adaptation and health. For, if the unconscious is held to be nothing more than a receptacle for all the evil shadow-things in human nature, including deposits of primeval slime, we really do not see why we should linger longer than necessary on the edge of this swamp into which we once fell. The scientific inquirer may behold a world of wonders in a mud puddle, but for the ordinary man it is something best left alone. Just as early Buddhism had no gods because it had to free itself from an inheritance of nearly two million gods, so psychology, if it is to develop further, must leave behind so entirely negative a thing as Freud's conception of the unconscious. The educational aims of the Adlerian school begin precisely where Freud leaves off; consequently they meet the needs of the patient who, having come to understand himself, wants to find his way back to normal life. It is obviously not enough for him to know how his illness arose and whence it came, for we seldom get rid of an evil merely by understanding its causes. Nor should it be forgotten that the crooked paths of a neurosis lead to as

many obstinate habits, and that for all our insight these do not disappear until replaced by other habits. But habits are won only by exercise, and appropriate education is the sole means to this end. The patient must be *drawn out* of himself into other paths, which is the true meaning of “education,” and this can only be achieved by an educative will. We can therefore see why Adler’s approach has found favour chiefly with clergymen and teachers, while Freud’s approach is fancied by doctors and intellectuals, who are one and all bad nurses and educators.

[153] Each stage in the development of our psychology has something curiously final about it. Catharsis, with its heart-felt outpourings, makes one feel: “Now we are there, everything has come out, everything is known, the last terror lived through and the last tear shed; now everything will be all right.” Elucidation says with equal conviction: “Now we know where the neurosis came from, the earliest memories have been unearthed, the last roots dug up, and the transference was nothing but the wish-fulfilling fantasy of a childhood paradise or a relapse into the family romance; the road to a normally disillusioned life is now open.” Finally comes education, pointing out that no amount of confession and no amount of explaining can make the crooked plant grow straight, but that it must be trained upon the trellis of the norm by the gardener’s art. Only then will normal adaptation be reached.

[154] This curious sense of finality which attends each of the stages accounts for the fact that there are people using cathartic methods today who have apparently never heard of dream interpretation, Freudians who do not understand a word of Adler, and Adlerians who do not wish to know anything about the unconscious. Each is ensnared in the peculiar finality of his own stage, and thence arises that chaos of opinions and views which makes orientation in these troubled waters so exceedingly difficult.

[155] Whence comes the feeling of finality that evokes so much authoritarian bigotry on all sides?

[156] I can only explain it to myself by saying that each stage does in fact rest on a final truth, and that consequently there are always cases which demonstrate this particular truth in the most startling way. In our delusion-ridden world a truth is so precious that nobody wants to let it slip merely for the sake of a few so-called exceptions which refuse to toe the line. And whoever doubts this truth is invariably looked on as a faithless reprobate, so that a note of fanaticism and intolerance everywhere creeps into the discussion.

[157] And yet each of us can carry the torch of knowledge but a part of the way, until another takes it from him. If only we could understand all this impersonally—could understand that we are not the personal creators of our truths, but only their exponents, mere mouthpieces of the day’s psychic needs, then much venom and

bitterness might be spared and we should be able to perceive the profound and supra-personal continuity of the human mind.

[158] As a rule, we take no account of the fact that the doctor who practises catharsis is not just an abstraction which automatically produces nothing but catharsis. He is also a human being, and although his thinking may be limited to his special field, his actions exert the influence of a complete human being. Without giving it a name and without being clearly conscious of it, he unwittingly does his share of explanation and education, just as the others do their share of catharsis without raising it to the level of a principle.

[159] All life is living history. Even the reptile still lives in us *par sous-entendu*. In the same way, the three stages of analytical psychology so far dealt with are by no means truths of such a nature that the last of them has gobbled up and replaced the other two. On the contrary, all three are salient aspects of one and the same problem, and they no more invalidate one another than do confession and absolution.

[160] The same is true of the fourth stage, transformation. It too should not claim to be the finally attained and only valid truth. It certainly fills a gap left by the earlier stages, but in so doing it merely fulfils a further need beyond the scope of the others.

[161] In order to make clear what this fourth stage has in view and what is meant by the somewhat peculiar term “transformation,” we must first consider what psychic need was not given a place in the earlier stages. In other words, can anything lead further or be higher than the claim to be a normal and adapted social being? To be a normal human being is probably the most useful and fitting thing of which we can think; but the very notion of a “normal human being,” like the concept of adaptation, implies a restriction to the average which seems a desirable improvement only to the man who already has some difficulty in coming to terms with the everyday world—a man, let us say, whose neurosis unfits him for normal life. To be “normal” is the ideal aim for the unsuccessful, for all those who are still below the general level of adaptation. But for people of more than average ability, people who never found it difficult to gain successes and to accomplish their share of the world’s work—for them the moral compulsion to be nothing but normal signifies the bed of Procrustes—deadly and insupportable boredom, a hell of sterility and hopelessness. Consequently there are just as many people who become neurotic because they are merely normal, as there are people who are neurotic because they cannot become normal. That it should enter anyone’s head to educate them to normality is a nightmare for the former, because their deepest need is really to be able to lead “abnormal” lives.

[162] A man can find satisfaction and fulfilment only in what he does not yet possess, just as he can never be satisfied with something of which he has already had too much. To be a social and adapted person has no charms for one to whom such an

aspiration is child's play. Always to do the right thing becomes a bore for the man who knows how, whereas the eternal bungler cherishes a secret longing to be right for once in some distant future.

[163] The needs and necessities of mankind are manifold. What sets one man free is another man's prison. So also with normality and adaptation. Even if it be a biological axiom that man is a herd animal who only finds optimum health in living as a social being, the very next case may quite possibly invert this axiom and show us that he is completely healthy only when leading an abnormal and unsocial life. It is enough to drive one to despair that in practical psychology there are no universally valid recipes and rules. There are only individual cases with the most heterogeneous needs and demands—so heterogeneous that we can virtually never know in advance what course a given case will take, for which reason it is better for the doctor to abandon all preconceived opinions. This does not mean that he should throw them overboard, but that in any given case he should use them merely as hypotheses for a possible explanation. Not, however, in order to instruct or convince his patient, but rather to show how the doctor reacts to that particular individual. For, twist and turn the matter as we may, the relation between doctor and patient remains a personal one within the impersonal framework of professional treatment. By no device can the treatment be anything but the product of mutual influence, in which the whole being of the doctor as well as that of his patient plays its part. In the treatment there is an encounter between two irrational factors, that is to say, between two persons who are not fixed and determinable quantities but who bring with them, besides their more or less clearly defined fields of consciousness, an indefinitely extended sphere of non-consciousness. Hence the personalities of doctor and patient are often infinitely more important for the outcome of the treatment than what the doctor says and thinks (although what he says and thinks may be a disturbing or a healing factor not to be underestimated). For two personalities to meet is like mixing two different chemical substances: if there is any combination at all, both are transformed. In any effective psychological treatment the doctor is bound to influence the patient; but this influence can only take place if the patient has a reciprocal influence on the doctor. You can exert no influence if you are not susceptible to influence. It is futile for the doctor to shield himself from the influence of the patient and to surround himself with a smoke-screen of fatherly and professional authority. By so doing he only denies himself the use of a highly important organ of information. The patient influences him unconsciously none the less, and brings about changes in the doctor's unconscious which are well known to many psychotherapists: psychic disturbances or even injuries peculiar to the profession, a striking illustration of the patient's almost "chemical" action. One of the best known symptoms of this kind is the counter-transference evoked by the transference. But the effects are often much more

subtle, and their nature can best be conveyed by the old idea of the demon of sickness. According to this, a sufferer can transmit his disease to a healthy person whose powers then subdue the demon—but not without impairing the well-being of the subduer.

[164] Between doctor and patient, therefore, there are imponderable factors which bring about a mutual transformation. In the process, the stronger and more stable personality will decide the final issue. I have seen many cases where the patient assimilated the doctor in defiance of all theory and of the latter's professional intentions—generally, though not always, to the disadvantage of the doctor.

[165] The stage of transformation is grounded on these facts, but it took more than twenty-five years of wide practical experience for them to be clearly recognized. Freud himself has admitted their importance and has therefore seconded my demand for the analysis of the analyst.

[166] What does this demand mean? Nothing less than that the doctor is as much “in the analysis” as the patient. He is equally a part of the psychic process of treatment and therefore equally exposed to the transforming influences. Indeed, to the extent that the doctor shows himself impervious to this influence, he forfeits influence over the patient; and if he is influenced only unconsciously, there is a gap in his field of consciousness which makes it impossible for him to see the patient in true perspective. In either case the result of the treatment is compromised.

[167] The doctor is therefore faced with the same task which he wants his patient to face—that is, he must become socially adapted or, in the reverse case, appropriately non-adapted. This therapeutic demand can of course be clothed in a thousand different formulae, according to the doctor's beliefs. One doctor believes in overcoming infantilism—therefore he must first overcome his own infantilism. Another believes in abreacting all affects—therefore he must first abreact all his own affects. A third believes in complete consciousness—therefore he must first reach consciousness of himself. The doctor must consistently strive to meet his own therapeutic demand if he wishes to ensure the right sort of influence over his patients. All these guiding principles of therapy make so many ethical demands, which can be summed up in the single truth: be the man through whom you wish to influence others. Mere talk has always been counted hollow, and there is no trick, however artful, by which this simple truth can be evaded in the long run. The fact of being convinced and not the thing we are convinced of—that is what has always, and at all times, worked.

[168] Thus the fourth stage of analytical psychology requires the counter-application to the doctor himself of whatever system is believed in—and moreover with the same

relentlessness, consistency, and perseverance with which the doctor applies it to the patient.

[169] When one considers with what attentiveness and critical judgment the psychologist must keep track of his patients in order to show up all their false turnings, their false conclusions and infantile subterfuges, then it is truly no mean achievement for him to perform the same work upon himself. We are seldom interested enough in ourselves for that; moreover nobody pays us for our introspective efforts. Again, the common neglect into which the reality of the human psyche has fallen is still so great that self-examination or preoccupation with ourselves is deemed almost morbid. Evidently we suspect the psyche of harbouring something unwholesome, so that any concern with it smells of the sick-room. The doctor has to overcome these resistances in himself, for who can educate others if he is himself uneducated? Who can enlighten others if he is still in the dark about himself? And who purify others if himself impure?

[170] The step from education to self-education is a logical advance that completes the earlier stages. The demand made by the stage of transformation, namely that the doctor must change himself if he is to become capable of changing his patient, is, as may well be imagined, a rather unpopular one, and for three reasons. First, because it seems unpractical; second, because of the unpleasant prejudice against being preoccupied with oneself; and third, because it is sometimes exceedingly painful to live up to everything one expects of one's patient. The last item in particular contributes much to the unpopularity of this demand, for if the doctor conscientiously doctors himself he will soon discover things in his own nature which are utterly opposed to normalization, or which continue to haunt him in the most disturbing way despite assiduous explanation and thorough abreaction. What is he to do about these things? He always knows what the patient should do about them—it is his professional duty to do so. But what, in all sincerity, will he do when they recoil upon himself or perhaps upon those who stand nearest to him? He may, in his self-investigations, discover some inferiority which brings him uncomfortably close to his patients and may even blight his authority. How will he deal with this painful discovery? This somewhat "neurotic" question will touch him on the raw, no matter how normal he thinks he is. He will also discover that the ultimate questions which worry him as much as his patients cannot be solved by any treatment, that to expect solutions from others is childish and keeps you childish, and that if no solution can be found the question must be repressed again.

[171] I will not pursue any further the many problems raised by self-examination because, owing to the obscurity which still surrounds the psyche, they would be of little interest today.

[172] Instead, I would like to emphasize once again that the newest developments in analytical psychology confront us with the imponderable elements in the human personality; that we have learned to place in the foreground the personality of the doctor himself as a curative or harmful factor; and that what is now demanded is his own transformation—the self-education of the educator. Consequently, everything that occurred on the objective level in the history of our psychology—confession, elucidation, education—passes to the subjective level; in other words, what happened to the patient must now happen to the doctor, so that his personality shall not react unfavourably on the patient. The doctor can no longer evade his own difficulty by treating the difficulties of others: the man who suffers from a running abscess is not fit to perform a surgical operation.

[173] Just as the momentous discovery of the unconscious shadow-side in man suddenly forced the Freudian school to deal even with questions of religion, so this latest advance makes an unavoidable problem of the doctor's ethical attitude. The self-criticism and self-examination that are indissolubly bound up with it necessitates a view of the psyche radically different from the merely biological one which has prevailed hitherto; for the human psyche is far more than a mere object of scientific interest. It is not only the sufferer but the doctor as well, not only the object but also the subject, not only a cerebral function but the absolute condition of consciousness itself.

[174] What was formerly a method of medical treatment now becomes a method of self-education, and with this the horizon of our psychology is immeasurably widened. The crucial thing is no longer the medical diploma, but the human quality. This is a significant turn of events, for it places all the implements of the psychotherapeutic art that were developed in clinical practice, and then refined and systematized, at the service of our self-education and self-perfection, with the result that analytical psychology has burst the bonds which till then had bound it to the consulting-room of the doctor. It goes beyond itself to fill the hiatus that has hitherto put Western civilization at a psychic disadvantage as compared with the civilizations of the East. We Westerners knew only how to tame and subdue the psyche; we knew nothing about its methodical development and its functions. Our civilization is still young, and young civilizations need all the arts of the animal-tamer to make the defiant barbarian and the savage in us more or less tractable. But at a higher cultural level we must forgo compulsion and turn to self-development. For this we must have a way, a method, which, as I said, has so far been lacking. It seems to me that the findings and experiences of analytical psychology can at least provide a foundation, for as soon as psychotherapy takes the doctor himself for its subject, it transcends its medical origins and ceases to be merely a method for treating the sick. It now treats the healthy or such as have a moral right to psychic health, whose sickness is at most

the suffering that torments us all. For this reason analytical psychology can claim to serve the common weal—more so even than the previous stages which are each the bearer of a general truth. But between this claim and present-day reality there lies a gulf, with no bridge leading across. We have yet to build that bridge stone by stone.

VI

PSYCHOTHERAPY AND A PHILOSOPHY OF LIFE¹

[175] So much is psychotherapy the child of practical improvisation that for a long time it had trouble in thinking out its own intellectual foundations. Empirical psychology relied very much at first on physical and then on physiological ideas, and ventured only with some hesitation on the complex phenomena which constitute its proper field. Similarly, psychotherapy was at first simply an auxiliary method; only gradually did it free itself from the world of ideas represented by medical therapeutics and come to understand that its concern lay not merely with physiological but primarily with psychological principles. In other words, it found itself obliged to raise psychological issues which soon burst the framework of the experimental psychology of that day with its elementary statements. The demands of therapy brought highly complex factors within the purview of this still young science, and its exponents very often lacked the equipment needed to deal with the problems that arose. It is therefore not surprising that a bewildering assortment of ideas, theories, and points of view predominated in all the initial discussions of this new psychology which had been, so to speak, forced into existence by therapeutic experience. An outsider could hardly be blamed if he received an impression of babel. This confusion was inevitable, for sooner or later it was bound to become clear that one cannot treat the psyche without touching on man and life as a whole, including the ultimate and deepest issues, any more than one can treat the sick body without regard to the totality of its functions—or rather, as a few representatives of modern medicine maintain, the totality of the sick man himself.

[176] The more “psychological” a condition is, the greater its complexity and the more it relates to the whole of life. It is true that elementary psychic phenomena are closely allied to physiological processes, and there is not the slightest doubt that the physiological factor forms at least one pole of the psychic cosmos. The instinctive and affective processes, together with all the neurotic symptomatology that arises when these are disturbed, clearly rest on a physiological basis. But, on the other hand, the disturbing factor proves equally clearly that it has the power to turn physiological order into disorder. If the disturbance lies in a repression, then the disturbing factor—that is, the repressive force—belongs to a “higher” psychic order. It is not something elementary and physiologically conditioned, but, as experience shows, a highly complex determinant, as for example certain rational, ethical, aesthetic, religious, or

other traditional ideas which cannot be scientifically proved to have any physiological basis. These extremely complex dominants form the other pole of the psyche. Experience likewise shows that this pole possesses an energy many times greater than that of the physiologically conditioned psyche.

[177] With its earliest advances into the field of psychology proper, the new psychotherapy came up against the problem of opposites—a problem that is profoundly characteristic of the psyche. Indeed, the structure of the psyche is so contradictory or contrapuntal that one can scarcely make any psychological assertion or general statement without having immediately to state its opposite.

[178] The problem of opposites offers an eminently suitable and ideal battleground for the most contradictory theories, and above all for partially or wholly unrealized prejudices regarding one's philosophy of life. With this development psychotherapy stirred up a hornets' nest of the first magnitude. Let us take as an example the supposedly simple case of a repressed instinct. If the repression is lifted, the instinct is set free. Once freed, it wants to live and function in its own way. But this creates a difficult—sometimes intolerably difficult—situation. The instinct ought therefore to be modified, or “sublimated,” as they say. How this is to be done without creating a new repression nobody can quite explain. The little word “ought” always proves the helplessness of the therapist; it is an admission that he has come to the end of his resources. The final appeal to reason would be very fine if man were by nature a rational animal, but he is not; on the contrary, he is quite as much irrational. Hence reason is often not sufficient to modify the instinct and make it conform to the rational order. Nobody can conceive the moral, ethical, philosophical, and religious conflicts that crop up at this stage of the problem—the facts surpass all imagination. Every conscientious and truth-loving psychotherapist could tell a tale here, though naturally not in public. All the contemporary problems, all the philosophical and religious questionings of our day, are raked up, and unless either the psychotherapist or the patient abandons the attempt in time it is likely to get under both their skins. Each will be driven to a discussion of his philosophy of life, both with himself and with his partner. There are of course forced answers and solutions, but in principle and in the long run they are neither desirable nor satisfying. No Gordian knot can be permanently cut; it has the awkward property of always tying itself again.

[179] This philosophical discussion is a task which psychotherapy necessarily sets itself, though not every patient will come down to basic principles. The question of the measuring rod with which to measure, of the ethical criteria which are to determine our actions, must be answered somehow, for the patient may quite possibly expect us to account for our judgments and decisions. Not all patients allow themselves to be condemned to infantile inferiority because of our refusal to render

such an account, quite apart from the fact that a therapeutic blunder of this kind would be sawing off the branch on which we sit. In other words, the art of psychotherapy requires that the therapist be in possession of avowable, credible, and defensible convictions which have proved their viability either by having resolved any neurotic dissociations of his own or by preventing them from arising. A therapist with a neurosis is a contradiction in terms. One cannot help any patient to advance further than one has advanced oneself. On the other hand, the possession of complexes does not in itself signify neurosis, for complexes are the normal foci of psychic happenings, and the fact that they are painful is no proof of pathological disturbance. Suffering is not an illness; it is the normal counterpole to happiness. A complex becomes pathological only when we think we have not got it.

[180] As the most complex of psychic structures, a man's philosophy of life forms the counterpole to the physiologically conditioned psyche, and, as the highest psychic dominant, it ultimately determines the latter's fate. It guides the life of the therapist and shapes the spirit of his therapy. Since it is an essentially subjective system despite the most rigorous objectivity, it may and very likely will be shattered time after time on colliding with the truth of the patient, but it rises again, rejuvenated by the experience. Conviction easily turns into self-defence and is seduced into rigidity, and this is inimical to life. The test of a firm conviction is its elasticity and flexibility; like every other exalted truth it thrives best on the admission of its errors.

[181] I can hardly draw a veil over the fact that we psychotherapists ought really to be philosophers or philosophic doctors—or rather that we already are so, though we are unwilling to admit it because of the glaring contrast between our work and what passes for philosophy in the universities. We could also call it religion *in statu nascendi*, for in the vast confusion that reigns at the roots of life there is no line of division between philosophy and religion. Nor does the unrelieved strain of the psychotherapeutic situation, with its host of impressions and emotional disturbances, leave us much leisure for the systematization of thought. Thus we have no clear exposition of guiding principles drawn from life to offer either to the philosophers or to the theologians.

[182] Our patients suffer from bondage to a neurosis, they are prisoners of the unconscious, and if we attempt to penetrate with understanding into that realm of unconscious forces, we have to defend ourselves against the same influences to which our patients have succumbed. Like doctors who treat epidemic diseases, we expose ourselves to powers that threaten our conscious equilibrium, and we have to take every possible precaution if we want to rescue not only our own humanity but that of the patient from the clutches of the unconscious. Wise self-limitation is not the same thing as text-book philosophy, nor is an ejaculatory prayer in a moment of

mortal danger a theological treatise. Both are the outcome of a religious and philosophical attitude that is appropriate to the stark dynamism of life.

[183] The highest dominant always has a religious or a philosophical character. It is by nature extremely primitive, and consequently we find it in full development among primitive peoples. Any difficulty, danger, or critical phase of life immediately calls forth this dominant. It is the most natural reaction to all highly charged emotional situations. But often it remains as obscure as the semiconscious emotional situation which evoked it. Hence it is quite natural that the emotional disturbances of the patient should activate the corresponding religious or philosophical factors in the therapist. Often he is most reluctant to make himself conscious of these primitive contents, and he quite understandably prefers to turn for help to a religion or philosophy which has reached his consciousness from outside. This course does not strike me as being illegitimate in so far as it gives the patient a chance to take his place within the structure of some protective institution existing in the outside world. Such a solution is entirely natural, since there have always and everywhere been totem clans, cults, and creeds whose purpose it is to give an ordered form to the chaotic world of the instincts.

[184] The situation becomes difficult, however, when the patient's nature resists a collective solution. The question then arises whether the therapist is prepared to risk having his convictions dashed and shattered against the truth of the patient. If he wants to go on treating the patient he must abandon all preconceived notions and, for better or worse, go with him in search of the religious and philosophical ideas that best correspond to the patient's emotional states. These ideas present themselves in archetypal form, freshly sprung from the maternal soil whence all religious and philosophical systems originally came. But if the therapist is not prepared to have his convictions called in question for the sake of the patient, then there is some reason for doubting the stability of his basic attitude. Perhaps he cannot give way on grounds of self-defence, which threatens him with rigidity. The margin of psychological elasticity varies both individually and collectively, and often it is so narrow that a certain degree of rigidity really does represent the maximum achievement. *Ultra posse nemo obligatur.*

[185] Instinct is not an isolated thing, nor can it be isolated in practice. It always brings in its train archetypal contents of a spiritual nature, which are at once its foundation and its limitation. In other words, an instinct is always and inevitably coupled with something like a philosophy of life, however archaic, unclear, and hazy this may be. Instinct stimulates thought, and if a man does not think of his own free will, then you get compulsive thinking, for the two poles of the psyche, the physiological and the mental, are indissolubly connected. For this reason instinct cannot be freed without

freeing the mind, just as mind divorced from instinct is condemned to futility. Not that the tie between mind and instinct is necessarily a harmonious one. On the contrary it is full of conflict and means suffering. Therefore the principal aim of psychotherapy is not to transport the patient to an impossible state of happiness, but to help him acquire steadfastness and philosophic patience in face of suffering. Life demands for its completion and fulfilment a balance between joy and sorrow. But because suffering is positively disagreeable, people naturally prefer not to ponder how much fear and sorrow fall to the lot of man. So they speak soothingly about progress and the greatest possible happiness, forgetting that happiness is itself poisoned if the measure of suffering has not been fulfilled. Behind a neurosis there is so often concealed all the natural and necessary suffering the patient has been unwilling to bear. We can see this most clearly from hysterical pains, which are relieved in the course of treatment by the corresponding psychic suffering which the patient sought to avoid.

[186] The Christian doctrine of original sin on the one hand, and of the meaning and value of suffering on the other, is therefore of profound therapeutic significance and is undoubtedly far better suited to Western man than Islamic fatalism. Similarly the belief in immortality gives life that untroubled flow into the future so necessary if stoppages and regressions are to be avoided. Although we like to use the word “doctrine” for these—psychologically speaking—extremely important ideas, it would be a great mistake to think that they are just arbitrary intellectual theories. Psychologically regarded, they are emotional experiences whose nature cannot be discussed. If I may permit myself a banal comparison, when I feel well and content nobody can prove to me that I am not. Logical arguments simply bounce off the facts felt and experienced. Original sin, the meaning of suffering, and immortality are emotional facts of this kind. But to experience them is a charisma which no human art can compel. Only unreserved surrender can hope to reach such a goal.

[187] Not everybody is capable of this surrender. There is no “ought” or “must” about it, for the very act of exerting the will inevitably places such an emphasis on *my* will to surrender that the exact opposite of surrender results. The Titans could not take Olympus by storm, and still less may a Christian take Heaven. The most healing, and psychologically the most necessary, experiences are a “treasure hard to attain,” and its acquisition demands something out of the common from the common man.

[188] As we know, this something out of the common proves, in practical work with the patient, to be an invasion by archetypal contents. If these contents are to be assimilated, it is not enough to make use of the current philosophical or religious ideas, for they simply do not fit the archaic symbolism of the material. We are therefore forced to go back to pre-Christian and non-Christian conceptions and to

conclude that Western man does not possess the monopoly of human wisdom and that the white race is not a species of *Homo sapiens* specially favoured by God. Moreover we cannot do justice to certain contemporary collective phenomena unless we revert to the pre-Christian parallels.

[189] Medieval physicians seem to have realized this, for they practised a philosophy whose roots can be traced back to pre-Christian times and whose nature exactly corresponds to our experiences with patients today. These physicians recognized, besides the light of divine revelation, a *lumen naturae* as a second, independent source of illumination, to which the doctor could turn if the truth as handed down by the Church should for any reason prove ineffective either for himself or for the patient.

[190] It was eminently practical reasons, and not the mere caperings of a hobby-horse, that prompted me to undertake my historical researches. Neither our modern medical training nor academic psychology and philosophy can equip the doctor with the necessary education, or with the means, to deal effectively and understandingly with the often very urgent demands of his psychotherapeutic practice. It therefore behoves us, unembarrassed by our shortcomings as amateurs of history, to go to school once more with the medical philosophers of a distant past, when body and soul had not yet been wrenched asunder into different faculties. Although we are specialists par excellence, our specialized field, oddly enough, drives us to universalism and to the complete overcoming of the specialist attitude, if the totality of body and soul is not to be just a matter of words. Once we have made up our minds to treat the soul, we can no longer close our eyes to the fact that neurosis is not a thing apart but the whole of the pathologically disturbed psyche. It was Freud's momentous discovery that the neurosis is not a mere agglomeration of symptoms, but a wrong functioning which affects the whole psyche. The important thing is not the neurosis, but the man who has the neurosis. We have to set to work on the human being, and we must be able to do him justice as a human being.

[191] The conference we are holding today proves that our psychotherapy has recognized its aim, which is to pay equal attention to the physiological and to the spiritual factor. Originating in natural science, it applies the objective, empirical methods of the latter to the phenomenology of the mind. Even if this should remain a mere attempt, the fact that the attempt has been made is of incalculable significance.

VII

MEDICINE AND PSYCHOTHERAPY¹

[192] Speaking before an audience of doctors, I always experience a certain difficulty in bridging the differences that exist between medicine on the one hand and psychotherapy on the other in their conception of pathology. These differences are the source of numerous misunderstandings, and it is therefore of the greatest concern to me, in this short talk, to express one or two thoughts which may serve to clarify the special relationship that psychotherapy bears to medicine. Where distinctions exist, well-meaning attempts to stress the common ground are notoriously lacking in point. But it is extremely important, in his own interests, that the psychotherapist should not in any circumstances lose the position he originally held in medicine, and this precisely because the peculiar nature of his experience forces upon him a certain mode of thought, and certain interests, which no longer have—or perhaps I should say, do not yet have—a rightful domicile in the medicine of today. Both these factors tend to lead the psychotherapist into fields of study apparently remote from medicine, and the practical importance of these fields is generally difficult to explain to the non-psychotherapist. From accounts of case histories and miraculously successful cures the non-psychotherapist learns little, and that little is frequently false. I have yet to come across a respectable specimen of neurosis of which one could give anything like an adequate description in a short lecture, to say nothing of all the therapeutic intricacies that are far from clear even to the shrewdest professional.

[193] With your permission I will now examine the three stages of medical procedure—anamnesis, diagnosis, and therapy—from the psychotherapeutic point of view. The pathological material I am here presupposing is pure psychoneurosis.

[194] We begin with the anamnesis, as is customary in medicine in general and psychiatry in particular—that is to say, we try to piece together the historical facts of the case as flawlessly as possible. The psychotherapist, however, does not rest content with these facts. He is aware not only of the unreliability of all evidence, but, over and above that, of the special sources of error in statements made on one's own behalf—the statements of the patient who, wittingly or unwittingly, gives prominence to facts that are plausible enough in themselves but may be equally misleading as regards the pathogenesis. The patient's whole environment may be drawn into this system of explanation in a positive or negative sense, as though it were in

unconscious collusion with him. At all events one must be prepared *not* to hear the very things that are most important. The psychotherapist will therefore take pains to ask questions about matters that seem to have nothing to do with the actual illness. For this he needs not only his professional knowledge; he has also to rely on intuitions and sudden ideas, and the more widely he casts his net of questions the more likely he is to succeed in catching the complex nature of the case. If ever there were an illness that cannot be localized, because it springs from the whole of a man, that illness is a psychoneurosis. The psychiatrist can at least console himself with diseases of the brain; not so the psychotherapist, even if he privately believes in such a maxim, for the case before him demands the thorough psychological treatment of a disturbance that has nothing to do with cerebral symptoms. On the contrary, the more the psychotherapist allows himself to be impressed by hereditary factors and the possibility of psychotic complications, the more crippled he will be in his therapeutic action. For better or worse he is obliged to overlook such cogent factors as heredity, the presence of schizophrenic symptoms, and the like, particularly when these dangerous things are put forward with special emphasis. His assessment of anamnestic data may therefore turn out to be very different from a purely medical one.

[195] It is generally assumed in medical circles that the examination of the patient should lead to the diagnosis of his illness, so far as this is possible at all, and that with the establishment of the diagnosis an important decision has been arrived at as regards prognosis and therapy. Psychotherapy forms a startling exception to this rule: the diagnosis is a highly irrelevant affair since, apart from affixing a more or less lucky label to a neurotic condition, nothing is gained by it, least of all as regards prognosis and therapy. In flagrant contrast to the rest of medicine, where a definite diagnosis is often, as it were, logically followed by a specific therapy and a more or less certain prognosis, the diagnosis of any particular psychoneurosis means, at most, that some form of psychotherapy is indicated. As to the prognosis, this is in the highest degree independent of the diagnosis. Nor should we gloss over the fact that the classification of the neuroses is very unsatisfactory, and that for this reason alone a specific diagnosis seldom means anything real. In general, it is enough to diagnose a “psychoneurosis” as distinct from some organic disturbance—the word means no more than that. I have in the course of years accustomed myself wholly to disregard the diagnosing of specific neuroses, and I have sometimes found myself in a quandary when some word-addict urged me to hand him a specific diagnosis. The Greco-Latin compounds needed for this still seem to have a not inconsiderable market value and are occasionally indispensable for that reason.

[196] The sonorous diagnosis of neuroses *secundum ordinem* is just a façade; it is not the psychotherapist’s real diagnosis. His establishment of certain facts might

conceivably be called “diagnosis,” though it is psychological rather than medical in character. Nor is it meant to be communicated; for reasons of discretion, and also on account of the subsequent therapy, he usually keeps it to himself. The facts so established are simply perceptions indicating the direction the therapy is to take. They can hardly be reproduced in the sort of Latin terminology that sounds scientific; but there are on the other hand expressions of ordinary speech which adequately describe the essential psychotherapeutic facts. The point is, we are not dealing with clinical diseases but with psychological ones. Whether a person is suffering from hysteria, or an anxiety neurosis, or a phobia, means little beside the much more important discovery that, shall we say, he is *fiils à papa*. Here something fundamental has been said about the content of the neurosis and about the difficulties to be expected in the treatment. So that in psychotherapy the recognition of disease rests much less on the clinical picture than on the content of complexes. Psychological diagnosis aims at the diagnosis of complexes and hence at the formulation of facts which are far more likely to be concealed than revealed by the clinical picture. The real toxin is to be sought in the complex, and this is a more or less autonomous psychic quantity. It proves its autonomous nature by not fitting into the hierarchy of the conscious mind, or by the resistance it successfully puts up against the will. This fact, which can easily be established by experiment, is the reason why psychoneuroses and psychoses have from time immemorial been regarded as states of *possession*, since the impression forces itself upon the naïve observer that the complex forms something like a shadow-government of the ego.

[197] The content of a neurosis can never be established by a single examination, or even by several. It manifests itself only in the course of treatment. Hence the paradox that the true psychological diagnosis becomes apparent only at the end. Just as a sure diagnosis is desirable and a thing to be aimed at in medicine, so, conversely, it will profit the psychotherapist to know as little as possible about specific diagnoses. It is enough if he is reasonably sure of the differential diagnosis between organic and psychic, and if he knows what a genuine melancholy is and what it can mean. Generally speaking, the less the psychotherapist knows in advance, the better the chances for the treatment. Nothing is more deleterious than a routine understanding of everything.

[198] We have now established that the anamnesis appears more than usually suspect to the psychotherapist, and that clinical diagnosis is, for his purposes, well-nigh meaningless. Finally, the therapy itself shows the greatest imaginable departures from the views commonly accepted in medicine. There are numerous physical diseases where the diagnosis also lays down the lines for a specific treatment; a given disease cannot be treated just anyhow. But for the psychoneuroses the only valid principle is that their treatment must be psychological. In this respect there is any number of

methods, rules, prescriptions, views, and doctrines, and the remarkable thing is that any given therapeutic procedure in any given neurosis can have the desired result. The various psychotherapeutic dogmas about which such a great fuss is made do not, therefore, amount to very much in the end. Every psychotherapist who knows his job will, consciously or unconsciously, theory notwithstanding, ring all the changes that do not figure in his own theory. He will occasionally use suggestion, to which he is opposed on principle. There is no getting round Freud's or Adler's or anybody else's point of view. Every psychotherapist not only has his own method—he himself is that method. *Ars requirit totum hominem*, says an old master. The great healing factor in psychotherapy is the doctor's personality, which is something not given at the start; it represents his performance at its highest and not a doctrinaire blueprint. Theories are to be avoided, except as mere auxiliaries. As soon as a dogma is made of them, it is evident that an inner doubt is being stifled. Very many theories are needed before we can get even a rough picture of the psyche's complexity. It is therefore quite wrong when people accuse psychotherapists of being unable to reach agreement even on their own theories. Agreement could only spell one-sidedness and desiccation. One could as little catch the psyche in a theory as one could catch the world. Theories are not articles of faith, they are either instruments of knowledge and of therapy, or they are no good at all.

[199] Psychotherapy can be practised in a great variety of ways, from psychoanalysis, or something of that kind, to hypnotism, and so on right down to cataplasms of honey and possets of bat's dung. Successes can be obtained with them all. So at least it appears on a superficial view. On closer inspection, however, one realizes that the seemingly absurd remedy was exactly the right thing, not for this particular *neurosis*, but for this particular human being, whereas in another case it would have been the worst thing possible. Medicine too is doubtless aware that sick people exist as well as sicknesses; but psychotherapy knows first and foremost—or rather should know—that its proper concern is not the fiction of a neurosis but the distorted totality of the human being. True, it too has tried to treat neurosis like an *ulcus cruris*, where it matters not a jot for the treatment whether the patient was the apple of her father's eye or whether she is a Catholic, a Baptist, or what not; whether the man she married be old or young, and all the rest of it. Psychotherapy began by attacking the symptom, just as medicine did. Despite its undeniable youthfulness as a scientifically avowable method, it is yet as old as the healing art itself and, consciously or otherwise, has always remained mistress of at least half the medical field. Certainly its real advances were made only in the last half century when, on account of the specialization needed, it withdrew to the narrower field of the psychoneuroses. But here it recognized relatively quickly that to attack symptoms or, as it is now called,

symptom analysis was only half the story, and that the real point is the treatment of the whole psychic human being.

[200] What does this mean: the whole psychic human being?

[201] Medicine in general has to deal, in the first place, with man as an anatomical and physiological phenomenon, and only to a lesser degree with the human being psychically defined. But this precisely is the subject of psychotherapy. When we direct our attention to the psyche from the viewpoint of the natural sciences, it appears as one biological factor among many others. In man this factor is usually identified with the conscious mind, as has mostly been done up to now by the so-called humane sciences as well. I subscribe entirely to the biological view that the psyche is one such factor, but at the same time I am given to reflect that the psyche—in this case, consciousness—occupies an exceptional position among all these biological factors. For without consciousness it would never have become known that there is such a thing as a world, and without the psyche there would be absolutely no possibility of knowledge, since the object must go through a complicated physiological and psychic process of change in order to become a psychic image. This image alone is the immediate object of knowledge. The existence of the world has two conditions: it to exist, and us to know it.

[202] Now, whether the psyche is understood as an epiphenomenon of the living body, or as an *ens per se*, makes little difference to psychology, in so far as the psyche knows itself to exist and behaves as such an existent, having its own phenomenology which can be replaced by no other. Thereby it proves itself to be a biological factor that can be described phenomenologically like any other object of natural science. The beginnings of a phenomenology of the psyche lie in psychophysiology and experimental psychology on the one hand, and, on the other, in descriptions of diseases and the diagnostic methods of psychopathology (e.g., association experiments and Rorschach's irrational ink-blot). But the most convincing evidence is to be found in every manifestation of psychic life, in the humane sciences, religious and political views and movements, the arts, and so forth.

[203] The “whole psychic human being” we were asking about thus proves to be nothing less than a world, that is, a microcosm, as the ancients quite rightly thought, though for the wrong reasons. The psyche reflects, and knows, the whole of existence, and everything works in and through the psyche.

[204] But in order to get a real understanding of this, we must very considerably broaden our conventional conception of the psyche. Our original identification of psyche with the conscious mind does not stand the test of empirical criticism. The medical philosopher C.G. Carus had a clear inkling of this and was the first to set forth an explicit philosophy of the unconscious. Today he would undoubtedly have

been a psychotherapist. But in those days the psyche was still the anxiously guarded possession of philosophy and therefore could not be discussed within the framework of medicine, although the physicians of the Romantic Age tried all sorts of unorthodox experiments in this respect. I am thinking chiefly of Justinus Kerner. It was reserved for the recent past to fill in the gaps in the conscious processes with hypothetical unconscious ones. The existence of an unconscious psyche is as likely, shall we say, as the existence of an as yet undiscovered planet, whose presence is inferred from the deviations of some known planetary orbit. Unfortunately we lack the aid of the telescope that would make certain of its existence. But once the idea of the unconscious was introduced, the concept of the psyche could be expanded to the formula “psyche = ego-consciousness + unconscious.”

[205] The unconscious was understood personalistically at first—that is to say, its contents were thought to come exclusively from the sphere of ego-consciousness and to have become unconscious only secondarily, through repression. Freud later admitted the existence of archaic vestiges in the unconscious, but thought they had more or less the significance of anatomical atavisms. Consequently we were still far from an adequate conception of the unconscious. Certain things had yet to be discovered, although actually they lay ready to hand: above all the fact that in every child consciousness grows out of the unconscious in the course of a few years, also that consciousness is always only a temporary state based on an optimum physiological performance and therefore regularly interrupted by phases of unconsciousness (sleep), and finally that the unconscious psyche not only possesses the longer lease of life but is continuously present. From this arises the important conclusion that the real and authentic psyche is the unconscious, whereas the ego-consciousness can be regarded only as a temporary epiphenomenon.

[206] In ancient times the psyche was conceived as a microcosm, and this was one of the characteristics attributed to the psychophysical man. To attribute such a characteristic to the ego-consciousness would be boundlessly to overestimate the latter. But with the unconscious it is quite different. This, by definition and in fact, cannot be circumscribed. It must therefore be counted as something boundless: infinite or infinitesimal. Whether it may legitimately be called a microcosm depends simply and solely on whether certain portions of the world beyond individual experience can be shown to exist in the unconscious—certain constants which are not individually acquired but are *a priori* presences. The theory of instinct and the findings of biology in connection with the symbiotic relationship between plant and insect have long made us familiar with these things. But when it comes to the psyche one is immediately seized with the fear of having to do with “inherited ideas.” We are not dealing with anything of the sort; it is more a question of *a priori* or prenatally determined modes of behaviour and function. It is to be conjectured that just as the

chicken comes out of the egg in the same way all the world over, so there are psychic modes of functioning, certain ways of thinking, feeling, and imagining, which can be found everywhere and at all times, quite independent of tradition. A general proof of the rightness of this expectation lies in the ubiquitous occurrence of parallel mythologems, Bastian's "folk-thoughts" or primordial ideas; and a special proof is the autochthonous reproduction of such ideas in the psyche of individuals where direct transmission is out of the question. The empirical material found in such cases consists of dreams, fantasies, delusions, etc.

[207] Mythologems are the aforementioned "portions of the world" which belong to the structural elements of the psyche. They are constants whose expression is everywhere and at all times the same.

[208] You may ask in some consternation: What has all this to do with psychotherapy? That neuroses are somehow connected with instinctual disturbances is not surprising. But, as biology shows, instincts are by no means blind, spontaneous, isolated impulses; they are on the contrary associated with typical situational patterns and cannot be released unless existing conditions correspond to the *a priori* pattern. The collective contents expressed in mythologems represent such situational patterns, which are so intimately connected with the release of instinct. For this reason knowledge of them is of the highest practical importance to the psychotherapist.

[209] Clearly, the investigation of these patterns and their properties must lead us into fields that seem to lie infinitely far from medicine. That is the fate of empirical psychology, and its misfortune: to fall between all the academic stools. And this comes precisely from the fact that the human psyche has a share in all the sciences, because it forms at least half the ground necessary for the existence of them all.

[210] It should be clear from the foregoing discussion that everything psychotherapy has in common with symptomatology clinically understood—i.e., with the medical picture—is, I will not say irrelevant, but of secondary importance in so far as the medical picture of disease is a provisional one. The real and important thing is the psychological picture, which can only be discovered in the course of treatment behind the veil of pathological symptoms. In order to get closer to the sphere of the psyche, the ideas derived from the sphere of medicine are not enough. But, to the extent that psychotherapy, considered as part of the healing art, should never, for many cogent reasons, slip out of the doctor's control and should therefore be taught in medical faculties, it is forced to borrow from the other sciences—which is what other medical disciplines have been doing for a long time. Yet whereas medicine in general can limit its borrowings to the natural sciences, psychotherapy needs the help of the humane sciences as well.

[211] In order to complete my account of the differences between medicine and psychotherapy, I ought really to describe the phenomenology of those psychic processes which manifest themselves in the course of treatment and do not have their counterpart in medicine. But such an undertaking would exceed the compass of my lecture, and I must therefore refrain. I trust, however, that the little I have been privileged to say has thrown some light on the relations between psychotherapy and the medical art.

VIII

PSYCHOTHERAPY TODAY¹

[212] It would be a rewarding task to examine in some detail the relationship between psychotherapy and the state of mind in Europe today. Yet probably no one would be blamed for shrinking from so bold a venture, for who could guarantee that the picture he has formed of the present psychological and spiritual plight of Europe is true to reality? Are we, as contemporaries of and participants in these cataclysmic events, at all capable of cool judgment and of seeing clearly amid the indescribable political and ideological chaos of present-day Europe? Or should we perhaps do better to narrow the field of psychotherapy and restrict our science to a modest specialists' corner, remaining indifferent to the ruin of half the world? I fear that such a course, in spite of its commendable modesty, would ill accord with the nature of psychotherapy, which is after all the "treatment of the soul." Indeed, the concept of psychotherapy, however one may choose to interpret it, carries with it very great pretensions: for the soul is the birth-place of all action and hence of everything that happens by the will of man. It would be difficult, if not impossible, to carve out an arbitrarily limited segment of the infinitely vast realm of the psyche and call that the secluded theatre of psychotherapy. Medicine, it is true, has found itself obliged to mark off a specific field, that of the neuroses and psychoses, and this is both convenient and feasible for the practical purpose of treatment. But the artificial restriction must be broken down immediately psychotherapy understands its problems not simply as those of a technique but as those of a science. Science *qua* science has no boundaries, and there is no speciality whatever that can boast of complete self-sufficiency. Any speciality is bound to spill over its borders and to encroach on adjoining territory if it is to lay serious claim to the status of a science. Even so highly specialized a technique as Freudian psychoanalysis was unable, at the very outset, to avoid poaching on other, and sometimes exceedingly remote, scientific preserves. It is, in fact, impossible to treat the psyche, and human personality in general, sectionally. In all psychic disturbances it is becoming clear—perhaps even more so than in the case of physical illnesses—that the psyche is a whole in which everything hangs together. When the patient comes to us with a neurosis, he does not bring a part but the whole of his psyche and with it the fragment of world on which that psyche depends, and without which it can never be properly understood. Psychotherapy is therefore less able than any other specialized department of science to take refuge in the sanctuary of a

speciality which has no further connection with the world at large. Try as we may to concentrate on the most personal of personal problems, our therapy nevertheless stands or falls with the question: What sort of world does our patient come from and to what sort of world has he to adapt himself? The world is a supra-personal fact to which an essentially personalistic psychology can never do justice. Such a psychology only penetrates to the personal element in man. But in so far as he is also a part of the world, he carries the world in himself, that is, something at once impersonal and supra-personal. It includes his entire physical and psychic basis, so far as this is given from the start. Undoubtedly the personalities of father and mother form the first and apparently the only world of man as an infant; and, if they continue to do so for too long, he is on the surest road to neurosis, because the great world he will have to enter as a whole person is no longer a world of fathers and mothers, but a supra-personal fact. The child first begins to wean itself from the childhood relation to father and mother through its relation to its brothers and sisters. The elder brother is no longer the true father and the elder sister no longer the true mother. Later, husband and wife are originally strangers to one another and come from different families with a different history and often a different social background. When children come, they complete the process by forcing the parents into the role of father and mother, which the parents, in accordance with their infantile attitude, formerly saw only in others, thereby trying to secure for themselves all the advantages of the childhood role. Every more or less normal life runs this enantiomorphous course and compels a change of attitude from the extreme of the child to the other extreme of the parent. The change requires the recognition of objective facts and values which a child can dismiss from his mind. School, however, inexorably instils into him the idea of objective time, of duty and the fulfilment of duty, of outside authority, no matter whether he likes or loathes the school and his teacher. And with school and the relentless advance of time, one objective fact after another increasingly forces its way into his personal life, regardless of whether it is welcome or not and whether he has developed any special attitude towards it. Meanwhile it is made overpoweringly clear that any prolongation of the father-and-mother world beyond its allotted span must be paid for dearly. All attempts to carry the infant's personal world over into the greater world are doomed to failure; even the transference which occurs during the treatment of neurosis is at best only an intermediate stage, giving the patient a chance to shed all the fragments of egg-shell still adhering to him from his childhood days, and to withdraw the projection of the parental imagos from external reality. This operation is one of the most difficult tasks of modern psychotherapy. At one time it was optimistically assumed that the parental imagos could be more or less broken down and destroyed through analysis of their contents. But in reality that is not the case: although the parental imagos can be released from the state of projection and withdrawn from the external world, they continue, like everything else acquired in

early childhood, to retain their original freshness. With the withdrawal of the projection they fall back into the individual psyche, from which indeed they mainly originated.²

[213] Before we go into the question of what happens when the parental imagos are no longer projected, let us turn to another question: Is this problem, which has been brought to light by modern psychotherapy, a new one in the sense that it was unknown to earlier ages which possessed no scientific psychology as we understand it? How did this problem present itself in the past?

[214] In so far as earlier ages had in fact no knowledge of psychotherapy in our sense of the word, we cannot possibly expect to find in history any formulations similar to our own. But since the transformation of child into parent has been going on everywhere from time immemorial and, with the increase of consciousness, was also experienced subjectively as a difficult process, we must conjecture the existence of various general psychotherapeutic systems which enabled man to accomplish the difficult transition-stages. And we do find, even at the most primitive level, certain drastic measures at all those moments in life when psychic transitions have to be effected. The most important of these are the initiations at puberty and the rites pertaining to marriage, birth, and death. All these ceremonies, which in primitive cultures still free from foreign influence are observed with the utmost care and exactitude, are probably designed in the first place to avert the psychic injuries liable to occur at such times; but they are also intended to impart to the initiand the preparation and teaching needed for life. The existence and prosperity of a primitive tribe are absolutely bound up with the scrupulous and traditional performance of the ceremonies. Wherever these customs fall into disuse through the influence of the white man, authentic tribal life ceases; the tribe loses its soul and disintegrates. Opinion is very much divided about the influence of Christian missionaries in this respect; what I myself saw in Africa led me to take an extremely pessimistic view.

[215] On a higher and more civilized level the same work is performed by the great religions. There are the christening, confirmation, marriage, and funeral ceremonies which, as is well known, are much closer to their origins, more living and complete, in Catholic ritual than in Protestantism. Here too we see how the father-mother world of the child is superseded by a wealth of analogical symbols: a patriarchal order receives the adult into a new filial relationship through spiritual generation and rebirth. The pope as *pater patrum* and the *ecclesia mater* are the parents of a family that embraces the whole of Christendom, except such parts of it as protest. Had the parental imagos been destroyed in the course of development and thus been rendered ineffective, an order of this kind would have lost not only its *raison d'être* but the very possibility of its existence. As it is, however, a place is found for the ever-active

parental imagos as well as for that ineradicable feeling of being a child, a feeling which finds meaning and shelter in the bosom of the Church. In addition, a number of other ecclesiastical institutions provide for the steady growth and constant renewal of the bond. Among them I would mention in particular the mass and the confessional. The Communion is, in the proper sense of the word, the family table at which the members foregather and partake of the meal in the presence of God, following a sacred custom that goes far back into pre-Christian times.

[216] It is superfluous to describe these familiar things in greater detail. I mention them only to show that the treatment of the psyche in times gone by had in view the same fundamental facts of human life as modern psychotherapy. But how differently religion deals with the parental imagos! It does not dream of breaking them down or destroying them; on the contrary, it recognizes them as living realities which it would be neither possible nor profitable to eliminate. Religion lets them live on in changed and exalted form within the framework of a strictly traditional patriarchal order, which keeps not merely decades but whole centuries in living connection. Just as it nurtures and preserves the childhood psyche of the individual, so also it has conserved numerous and still living vestiges of the childhood psyche of humanity. In this way it guards against one of the greatest psychic dangers—loss of roots—which is a disaster not only for primitive tribes but for civilized man as well. The breakdown of a tradition, necessary as this may be at times, is always a loss and a danger; and it is a danger to the soul because the life of instinct—the most conservative element in man—always expresses itself in traditional usages. Age-old convictions and customs are deeply rooted in the instincts. If they get lost, the conscious mind becomes severed from the instincts and loses its roots, while the instincts, unable to express themselves, fall back into the unconscious and reinforce its energy, causing this in turn to overflow into the existing contents of consciousness. It is then that the rootless condition of consciousness becomes a real danger. This secret *vis a tergo* results in a hybris of the conscious mind which manifests itself in the form of exaggerated self-esteem or an inferiority complex. At all events a loss of balance ensues, and this is the most fruitful soil for psychic injury.

[217] If we look back over the thousand-odd years of our European civilization, we shall see that the Western ideal of the education and care of the soul has been, and for the most part still is, a patriarchal order based on the recognition of parental imagos. Thus in dealing with the individual, no matter how revolutionary his conscious attitude may be, we have to reckon with a patriarchal or hierarchical orientation of the psyche which causes it instinctively to seek and cling to this order. Any attempt to render the parental imagos and the childhood psyche ineffective is therefore doomed to failure from the outset.

[218] At this point we come back to our earlier question of what happens when the parental imagos are withdrawn from projection. The detachment of these imagos from certain persons who carry the projection is undoubtedly possible and belongs to the stock in trade of psychotherapeutic success. On the other hand the problem becomes more difficult when there is a transference of the imagos to the doctor. In these cases the detachment can develop into a crucial drama. For what is to happen to the imagos if they are no longer attached to a human being? The pope as supreme father of Christendom holds his office from God; he is the servant of servants, and transference of the imagos to him is thus a transference to the Father in heaven and to Mother Church on earth. But how fares it with men and women who have been uprooted and torn out of their tradition? Professor Murray³ of Harvard University has shown on the basis of extensive statistical material—thus confirming my own previously published experience—that the incidence of complexes is, on the average, highest among Jews; second come Protestants; and Catholics third. That a man's philosophy of life is directly connected with the well-being of the psyche can be seen from the fact that his mental attitude, his way of looking at things, is of enormous importance to him and his mental health—so much so that we could almost say that things are less what they are than how we see them. If we have a disagreeable view of a situation or thing, our pleasure in it is spoiled, and then it does in fact usually disagree with us. And, conversely, how many things become bearable and even acceptable if we can give up certain prejudices and change our point of view. Paracelsus, who was above all a physician of genius, emphasized that nobody could be a doctor who did not understand the art of “theorizing.”⁴ What he meant was that the doctor must induce, not only in himself but also in his patient, a way of looking at the illness which would enable the doctor to cure and the patient to recover, or at least to endure being ill. That is why he says “every illness is a purgatorial fire.”⁵ He consciously recognized and made full use of the healing power of a man's mental attitude. When, therefore, I am treating practising Catholics, and am faced with the transference problem, I can, by virtue of my office as a doctor, step aside and lead the problem over to the Church. But if I am treating a non-Catholic, that way out is debarred, and by virtue of my office as a doctor I cannot step aside, for there is as a rule nobody there, nothing towards which I could suitably lead the father-imago. I can, of course, get the patient to recognize with his reason that I am not the father. But by that very act I become the reasonable father and remain despite everything the father. Not only nature, but the patient too, abhors a vacuum. He has an instinctive horror of allowing the parental imagos and his childhood psyche to fall into nothingness, into a hopeless past that has no future. His instinct tells him that, for the sake of his own wholeness, these things must be kept alive in one form or another. He knows that a complete withdrawal of the projection will be followed by an apparently endless isolation within the ego, which is all the more burdensome because he has so

little love for it. He found it unbearable enough before, and he is unlikely to bear it now simply out of sweet reasonableness. Therefore at this juncture the Catholic who has been freed from an excessively personal tie to his parents can return fairly easily to the mysteries of the Church, which he is now in a position to understand better and more deeply. There are also Protestants who can discover in one of the newer variants of Protestantism a meaning which appeals to them, and so regain a genuine religious attitude. All other cases—unless there is a violent and sometimes injurious solution—will, as the saying goes, “get stuck” in the transference relationship, thereby subjecting both themselves and the doctor to a severe trial of patience. Probably this cannot be avoided, for a sudden fall into the orphaned, parentless state may in certain cases—namely, where there is a tendency to psychosis—have dangerous consequences owing to the equally sudden activation of the unconscious which always accompanies it. Accordingly the projection can and should be withdrawn only step by step. The integration of the contents split off in the parental imagos has an activating effect on the unconscious, for these imagos are charged with all the energy they originally possessed in childhood, thanks to which they continued to exercise a fateful influence even on the adult. Their integration therefore means a considerable afflux of energy to the unconscious, which soon makes itself felt in the increasingly strong coloration of the conscious mind by unconscious contents. Isolation in pure ego-consciousness has the paradoxical consequence that there now appear in dreams and fantasies impersonal, collective contents which are the very material from which certain schizophrenic psychoses are constructed. For this reason the situation is not without its dangers, since the releasing of the ego from its ties with the projection—and of these the transference to the doctor plays the principal part—involves the risk that the ego, which was formerly dissolved in relationships to the personal environment, may now be dissolved in the contents of the collective unconscious. For, although the parents may be dead in the world of external reality, they and their imagos have passed over into the “other” world of the collective unconscious, where they continue to attract the same ego-dissolving projections as before.

[219] But at this point a healthful, compensatory operation comes into play which each time seems to me like a miracle. Struggling against that dangerous trend towards disintegration, there arises out of this same collective unconscious a counteraction, characterized by symbols which point unmistakably to a process of centring. This process creates nothing less than a new centre of personality, which the symbols show from the first to be superordinate to the ego and which later proves its superiority empirically. The centre cannot therefore be classed with the ego, but must be accorded a higher value. Nor can we continue to give it the name of “ego,” for which reason I have called it the “self.” To experience and realize this self is the

ultimate aim of Indian yoga, and in considering the psychology of the self we would do well to have recourse to the treasures of Indian wisdom. In India, as with us, the experience of the self has nothing to do with intellectualism; it is a vital happening which brings about a fundamental transformation of personality. I have called the process that leads to this experience the “process of individuation.” If I recommend the study of classical yoga, it is not because I am one of those who roll up their eyes in ecstasy when they hear such magic words as *dhyana* or *buddhi* or *mukti*, but because psychologically we can learn a great deal from yoga philosophy and turn it to practical account. Furthermore, the material lies ready to hand, clearly formulated in the Eastern books and the translations made of them. Here again my reason is not that we have nothing equivalent in the West: I recommend yoga merely because the Western knowledge which is akin to it is more or less inaccessible except to specialists. It is esoteric, and it is distorted beyond recognition by being formulated as an arcane discipline and by all the rubbish that this draws in its wake. In alchemy there lies concealed a Western system of yoga meditation, but it was kept a carefully guarded secret from fear of heresy and its painful consequences. For the practising psychologist, however, alchemy has one inestimable advantage over Indian yoga—its ideas are expressed almost entirely in an extraordinarily rich symbolism, the very symbolism we still find in our patients today. The help which alchemy affords us in understanding the symbols of the individuation process is, in my opinion, of the utmost importance.⁶

[220] Alchemy describes what I call the “self” as *incorruptibile*, that is, an indissoluble substance, a One and Indivisible that cannot be reduced to anything else and is at the same time a Universal, to which a sixteenth-century alchemist even gave the name of *filius macrocosmi*.⁷ Modern findings agree in principle with these formulations.

[221] I had to mention all these things in order to get to the problem of today. For if we perseveringly and consistently follow the way of natural development, we arrive at the experience of the self, and at the state of being simply what one is. This is expressed as an ethical demand by the motto of Paracelsus, the four-hundredth anniversary of whose birth we celebrated in the autumn of 1941: “*Alterius non sit, qui suus esse potest*” (That man no other man shall own,/Who to himself belongs alone)—a motto both characteristically Swiss and characteristically alchemical. But the way to this goal is toilsome and not for all to travel. “*Est longissima via*,” say the alchemists. We are still only at the beginning of a development whose origins lie in late antiquity, and which throughout the Middle Ages led little more than a hole-and-corner existence, vegetating in obscurity and represented by solitary eccentrics who were called, not without reason, *tenebriones*. Nevertheless men like Albertus Magnus, Roger Bacon, and Paracelsus were among the fathers of modern science, and their spirit did much to shake the authority of the “total” Church. Our modern

psychology grew out of the spirit of natural science and, without realizing it, is carrying on the work begun by the alchemists. These men were convinced that the *donum artis* was given only to the few *electis*, and today our experience shows us only too plainly how arduous is the work with each patient and how few can attain the necessary knowledge and experience. Meanwhile the disintegration and weakening of that salutary institution, the Christian Church, goes on at an alarming rate, and the loss of any firm authority is gradually leading to an intellectual, political, and social anarchy which is repugnant to the soul of European man, accustomed as he is to a patriarchal order. The present attempts to achieve full individual consciousness and to mature the personality are, socially speaking, still so feeble that they carry no weight at all in relation to our historic needs. If our European social order is not to be shaken to its foundations, authority must be restored at all costs.

[222] This is probably one reason for the efforts now being made in Europe to replace the collectivity of the Church by the collectivity of the State. And just as the Church was once absolute in its determination to make theocracy a reality, so the State is now making an absolute bid for totalitarianism. The mystique of the spirit has not been replaced by a mystique either of nature or of the *lumen naturae*, as Paracelsus named it, but by the total incorporation of the individual in a political collective called the "State." This offers a way out of the dilemma, for the parental imagos can now be projected upon the State as the universal provider and the authority responsible for all thinking and willing. The ends of science are made to serve the social collective and are only valued for their practical utility to the collective's ends. The natural course of psychological development is succeeded, not by a spiritual direction which spans the centuries and keeps cultural values alive, but by a political directorate which ministers to the power struggles of special groups and promises economic benefits to the masses. In this way European man's deep-seated longing for a patriarchal and hierarchical order finds an appropriate concrete expression which accords only too well with the herd instinct, but is fixed at such a low level as to be in every respect detrimental to culture.

[223] It is here that opinion is apt to be divided. In so far as psychotherapy claims to stand on a scientific basis and thus by the principle of free investigation, its declared aim is to educate people towards independence and moral freedom in accordance with the knowledge arrived at by unprejudiced scientific research. Whatever the conditions to which the individual wishes to adapt himself, he should always do so consciously and of his own free choice. But, in so far as political aims and the State are to claim precedence, psychotherapy would inevitably become the instrument of a particular political system, and it is to *its* aims that people would have to be educated and at the same time seduced from their own highest destiny. Against this conclusion

it will undoubtedly be objected that man's ultimate destiny lies not in his existence as an individual but in the aspirations of human society, because without this the individual could not exist at all. This objection is a weighty one and cannot be lightly dismissed. It is an undoubted truth that the individual exists only by virtue of society and has always so existed. That is why among primitive tribes we find the custom of initiation into manhood, when, by means of a ritual death, the individual is detached from his family and indeed from his whole previous identity, and is reborn as a member of the tribe. Or we find early civilizations, such as the Egyptian and Babylonian, where all individuality is concentrated in the person of the king, while the ordinary person remains anonymous. Or again, we observe whole families in which for generations the individuality of the name has compensated for the nonentity of its bearers; or a long succession of Japanese artists who discard their own name and adopt the name of a master, simply adding after it a modest numeral. Nevertheless, it was the great and imperishable achievement of Christianity that, in contrast to these archaic systems which are all based on the original projection of psychic contents, it gave to each individual man the dignity of an immortal soul, whereas in earlier times this prerogative was reserved to the sole person of the king. It would lead me too far to discuss here just how much this Christian innovation represents an advance of human consciousness and of culture in general, by putting an end to the projection of the highest values of the individual soul upon the king or other dignitaries. The innate will to consciousness, to moral freedom and culture, proved stronger than the brute compulsion of projections which keep the individual permanently imprisoned in the dark of unconsciousness and grind him down into nonentity. Certainly this advance laid a cross upon him—the torment of consciousness, of moral conflict, and the uncertainty of his own thoughts. This task is so immeasurably difficult that it can be accomplished, if at all, only by stages, century by century, and it must be paid for by endless suffering and toil in the struggle against all those powers which are incessantly at work persuading us to take the apparently easier road of unconsciousness. Those who go the way of unconsciousness imagine that the task can safely be left to “others” or, ultimately, to the anonymous State. But who are these “others,” these obvious supermen who pretend to be able to do what everybody is only too ready to believe that he cannot do? They are men just like ourselves, who think and feel as we do, except that they are past masters in the art of “passing the buck.” Exactly *who* is the State?—The agglomeration of all the nonentities composing it. Could it be personified, the result would be an individual, or rather a monster, intellectually and ethically far below the level of most of the individuals in it, since it represents mass psychology raised to the nth power. Therefore Christianity in its best days never subscribed to a belief in the State, but set before man a supramundane goal which should redeem him from the compulsive force of his projections upon this world, whose ruler is the spirit of

darkness. And it gave him an immortal soul that he might have a fulcrum from which to lift the world off its hinges, showing him that his goal lies not in the mastery of this world but in the attainment of the Kingdom of God, whose foundations are in his own heart.

[224] If, then, man cannot exist without society, neither can he exist without oxygen, water, albumen, fat, and so forth. Like *these, society is one of the necessary conditions of his existence*. It would be ludicrous to maintain that man lives in order to breathe air. It is equally ludicrous to say that the individual exists for society. “Society” is nothing more than a term, a concept for the symbiosis of a group of human beings. A concept is not a carrier of life. The sole and natural carrier of life is the individual, and that is so throughout nature.⁸ “Society” or “State” is an agglomeration of life-carriers and at the same time, as an organized form of these, an important condition of life. It is therefore not quite true to say that the individual can exist only as a particle in society. At all events man can live very much longer without the State than without air.

[225] When the political aim predominates there can be no doubt that a secondary thing has been made the primary thing. Then the individual is cheated of his rightful destiny and two thousand years of Christian civilization are wiped out. Consciousness, instead of being widened by the withdrawal of projections, is narrowed, because society, a mere condition of human existence, is set up as a goal. Society is the greatest temptation to unconsciousness, for the mass infallibly swallows up the individual—who has no security in himself—and reduces him to a helpless particle. The totalitarian State could not tolerate for one moment the right of psychotherapy to help man fulfil his natural destiny. On the contrary, it would be bound to insist that psychotherapy should be nothing but a tool for the production of manpower useful to the State. In this way it would become a mere technique tied to a single aim, that of increasing social efficiency. The soul would forfeit all life of its own and become a function to be used as the State saw fit. The science of psychology would be degraded to a study of the ways and means to exploit the psychic apparatus. As to its therapeutic aim, the complete and successful incorporation of the patient into the State machine would be the criterion of cure. Since this aim can best be achieved by making the individual completely soulless—that is, as unconscious as possible—all methods designed to increase consciousness would at one stroke become obsolete, and the best thing would be to bring out of the lumber-rooms of the past all the methods that have ever been devised to prevent man from becoming conscious of his unconscious contents. Thus the art of psychotherapy would be driven into a complete regression.⁹

[226] Such, in broad outline, is the alternative facing psychotherapy at this present juncture. Future developments will decide whether Europe, which fancied it had escaped the Middle Ages, is to be plunged for a second time and for centuries into the darkness of an Inquisition. This will only happen if the totalitarian claims of the State are forcibly carried through and become a permanency. No intelligent person will deny that the organization of society, which we call the State, not only feels a lively need to extend its authority but is compelled by circumstances to do so. If this comes about by free consent and the conscious choice of the public, the results will leave nothing to be desired. But if it comes about for the sake of convenience, in order to avoid tiresome decisions, or from lack of consciousness, then the individual runs the certain risk of being blotted out as a responsible human being. The State will then be no different from a prison or an ant-heap.

[227] Although the conscious achievement of individuality is consistent with man's natural destiny, it is nevertheless not his whole aim. It cannot possibly be the object of human education to create an anarchic conglomeration of individual existences. That would be too much like the unavowed ideal of extreme individualism, which is essentially no more than a morbid reaction against an equally futile collectivism. In contrast to all this, the natural process of individuation brings to birth a consciousness of human community precisely because it makes us aware of the unconscious, which unites and is common to all mankind. Individuation is an at-one-ment with oneself and at the same time with humanity, since oneself is a part of humanity. Once the individual is thus secured in himself, there is some guarantee that the organized accumulation of individuals in the State—even in one wielding greater authority—will result in the formation no longer of an anonymous mass but of a conscious community. The indispensable condition for this is conscious freedom of choice and individual decision. Without this freedom and self-determination there is no true community, and, it must be said, without such community even the free and self-secured individual cannot in the long run prosper.¹⁰ Moreover, the common weal is best served by independent personalities. Whether man today possesses the maturity needed for such a decision is another question. On the other hand, solutions which violently forestall natural development and are forced on mankind are equally questionable. The facts of nature cannot in the long run be violated. Penetrating and seeping through everything like water, they will undermine any system that fails to take account of them, and sooner or later they will bring about its downfall. But an authority wise enough in its statesmanship to give sufficient free play to nature—of which spirit is a part—need fear no premature decline. It is perhaps a humiliating sign of spiritual immaturity that European man needs, and wants, a large measure of authority. The fact has to be faced that countless millions in Europe—with the guilty complicity of reformers whose childishness is only equalled by their lack of tradition

—have escaped from the authority of the Church and the *patria potestas* of kings and emperors only to fall helpless and senseless victims to any power that cares to assume authority. The immaturity of man is a fact that must enter into all our calculations.

[228] We in Switzerland are not living on a little planetoid revolving in empty space, but on the same earth as the rest of Europe. We are right in the middle of these problems, and if we are unconscious, we are just as likely to succumb to them as the other nations. The most dangerous thing would be for us to imagine that we are on a higher plane of consciousness than our neighbours. There is no question of that. While it would be an impropriety for a handful of psychologists and psychotherapists like ourselves to take our importance too seriously—or I might say, too pompously—I would nevertheless emphasize that just because we are psychologists it is our first task and duty to understand the psychic situation of our time and to see clearly the problems and challenges with which it faces us. Even if our voice is too weak to make itself heard above the tumult of political strife and fades away ineffectively, we may yet comfort ourselves with the saying of the Chinese Master: “When the enlightened man is alone and thinks rightly, it can be heard a thousand miles away.”

[229] All beginnings are small. Therefore we must not mind doing tedious but conscientious work on obscure individuals, even though the goal towards which we strive seems unattainably far off. But one goal we can attain, and that is to develop and bring to maturity individual personalities. And inasmuch as we are convinced that the individual is the carrier of life, we have served life’s purpose if one tree at least succeeds in bearing fruit, though a thousand others remain barren. Anyone who proposed to bring all growing things to the highest pitch of luxuriance would soon find the weeds—those hardiest of perennials—waving above his head. I therefore consider it the prime task of psychotherapy today to pursue with singleness of purpose the goal of individual development. So doing, our efforts will follow nature’s own striving to bring life to the fullest possible fruition in each individual, for only in the individual can life fulfil its meaning—not in the bird that sits in a gilded cage.

IX

FUNDAMENTAL QUESTIONS OF PSYCHOTHERAPY¹

[230] In the medical text-books of a few years back, under the general heading of “therapy,” at the end of a list of cures and pharmaceutical prescriptions, one might find a mysterious item called “psychotherapy.” What exactly one was to understand by this remained shrouded in eloquent obscurity. What did it mean? Was it hypnosis, suggestion, persuasion, catharsis, psychoanalysis, Adlerian education, autogenic training, or what? This list amply illustrates the vague multiplicity of opinions, views, theories, and methods that all pass under the name of “psychotherapy.”

[231] When a new and uninhabited continent is discovered, there are no landmarks, no names, no highways, and every pioneer who sets foot upon it comes back with a different story. Something of this kind seems to have happened when medical men plunged for the first time into the new continent named “psyche.” One of the first explorers to whom we are indebted for more or less intelligible reports is Paracelsus. His uncanny knowledge, which is at times not lacking in prophetic vision, was, however, expressed in a language that was informed by the spirit of the sixteenth century. It abounds not only in demonological and alchemical ideas, but in Paracelsian neologisms, whose florid exuberance compensated a secret feeling of inferiority quite in keeping with the self-assertiveness of their much maligned, and not unjustly misunderstood, creator. The scientific era, which began in earnest with the seventeenth century, cast out the pearls of Paracelsus’ medical wisdom along with the other lumber. Not until two centuries later did a new and altogether different kind of empiricism arise with Mesmer’s theory of animal magnetism, stemming partly from practical experiences which today we should attribute to suggestion, and partly from the old alchemical lore. Working along these lines, the physicians of the Romantic Age then turned their attention to somnambulism, thus laying the foundations for the clinical discovery of hysteria. But almost another century had to pass before Charcot and his school could begin to consolidate ideas in this field. We have to thank Pierre Janet for a deeper and more exact knowledge of hysterical symptoms, and the two French physicians, Liébeault and Bernheim, later to be joined by August Forel in Switzerland, for a systematic investigation and description of the phenomena of suggestion. With the discovery by Breuer and Freud of the affective origins of psychogenic symptoms, our knowledge of their causation took a decisive step forward into the realm of psychology. The fact that the affectively toned

memory images which are lost to consciousness lay at the root of the hysterical symptom immediately led to the postulate of an *unconscious* layer of psychic happenings. This layer proved to be, not “somatic,” as the academic psychology of those days was inclined to assume, but *psychic*, because it behaves exactly like any other psychic function from which consciousness is withdrawn, and which thus ceases to be associated with the ego. As Janet showed almost simultaneously with Freud, but independently of him, this holds true of hysterical symptoms generally. But whereas Janet supposed that the reason for the withdrawal of consciousness must lie in some specific weakness, Freud pointed out that the memory images which produce the symptoms are characterized by a disagreeable affective tone. Their disappearance from consciousness could thus easily be explained by *repression*. Freud therefore regarded the aetiological contents as “incompatible” with the tendencies of the conscious mind. This hypothesis was supported by the fact that repressed memories frequently arouse a moral censorship, and do so precisely on account of their traumatic or morally repellent nature.

[232] Freud extended the repression theory to the whole field of psychogenic neuroses with great practical success; indeed, he went on to use it as an explanation of culture as a whole. With this he found himself in the sphere of general psychology, which had long been entrusted to the philosophical faculty. Apart from a few technical terms and methodical points of view, psychology, as practised by the doctor, had not so far been able to borrow much from the philosophers, and so medical psychology, on encountering an unconscious psyche right at the beginning of its career, literally stepped into a vacuum. The concept of the unconscious was, with a few praiseworthy exceptions, anathematized by academic psychology, so that only the phenomena of consciousness were left as a possible object for psychological research. The collision between the medical approach and the general psychology then prevailing was therefore considerable. On the other hand, Freud’s discoveries were just as much of a challenge and a stumbling-block to the purely somatic views of the doctors. And so they have remained for the last fifty years. It needed the trend towards psychosomatic medicine that came over from America to put a fresher complexion on the picture. Even so, general psychology has still not been able to draw the necessary conclusions from the fact of the unconscious.

[233] Any advance into new territory is always attended by certain dangers, for the pioneer has to rely in all his undertakings upon the equipment he happens to take with him. This, in the present instance, is his training in somatic medicine, his general education, and his view of the world, which is based chiefly on subjective premises, partly temperamental, partly social. His medical premises enable him to size up correctly the somatic and biological aspects of the material he has to deal with; his general education makes it possible for him to form an approximate idea of

the nature of the repressive factor; and finally, his view of the world helps him to put his special knowledge on a broader basis and to fit it into a larger whole. But when scientific research moves into a region hitherto undiscovered and therefore unknown, the pioneer must always bear in mind that another explorer, setting foot on the new continent at another place and with other equipment, may well sketch quite another picture.

[234] So it happened with Freud: his pupil Alfred Adler developed a view which shows neurosis in a very different light. It is no longer the sexual urge, or the pleasure principle, that dominates the picture, but the urge to power (self-assertion, "masculine protest," "the will to be on top"). As I have shown in a concrete instance,² both theories can be successfully applied to one and the same case; moreover it is a well-known psychological fact that the two urges keep the scales balanced, and that the one generally underlies the other. Adler remained as one-sided as Freud, and both agree that not only the neurosis, but the man himself, can be explained from the shadow side, in terms of his moral inferiority.

[235] All this points to the existence of a personal equation, a subjective prejudice that was never submitted to criticism. The rigidity with which both men adhered to their position denotes, as always, the compensating of a secret uncertainty and an inner doubt. The facts as described by the two investigators are, if taken with a pinch of salt, right enough; but it is possible to interpret them in the one way as much as in the other, so that both are partially wrong, or rather, they are mutually complementary. The lesson to be drawn from this is that in practice one would do well to consider both points of view.

[236] The reason for this first dilemma of medical psychology presumably lies in the fact that the doctors found no cultivated ground under their feet, since ordinary psychology had nothing concrete to offer them. They were therefore thrown back on their own subjective prejudices as soon as they looked round for tools. For me, this resolved itself into the pressing need to examine the kind of attitudes which human beings in general adopt towards the object (no matter what this object may be). Accordingly, I have come to postulate a number of types which all depend on the respective predominance of one or the other orienting function of consciousness, and have devised a tentative scheme into which the various attitudes can be articulated. From this it would appear that there are no less than eight theoretically possible attitudes. If we add to these all the other more or less individual assumptions, it is evident that there is no end to the possible viewpoints, all of which have their justification, at least subjectively. In consequence, criticism of the psychological assumptions upon which a man's theories are based becomes an imperative necessity. Unfortunately, however, this has still not been generally recognized, otherwise

certain viewpoints could not be defended with such obstinacy and blindness. One can only understand why this should be so when one considers what the subjective prejudice signifies: it is as a rule a carefully constructed product into whose making has gone the whole experience of a lifetime. It is the individual psyche colliding with the environment. In the majority of cases, therefore, it is a subjective variant of a universal human experience, and for that very reason careful self-criticism and detailed comparison are needed if we are to frame our judgments on a more universal basis. But the more we rely on the principles of consciousness in endeavouring to perform this essential task, the greater becomes the danger of our interpreting experience in those terms, and thus of doing violence to the facts by excessive theorizing. Our psychological experience is still too recent and too limited in scope to permit of general theories. The investigator needs a lot more facts which would throw light on the nature of the psyche before he can begin to think of universally valid propositions. For the present we must observe the rule that a psychological proposition can only lay claim to significance if the obverse of its meaning can also be accepted as true.

[237] Personal and theoretical prejudices are the most serious obstacles in the way of psychological judgment. They can, however, be eliminated with a little good will and insight. Freud himself accepted my suggestion that every doctor should submit to a training analysis before interesting himself in the unconscious of his patients for therapeutic purposes. All intelligent psychotherapists who recognize the need for conscious realization of unconscious aetiological factors agree with this view. Indeed it is sufficiently obvious, and has been confirmed over and over again by experience, that what the doctor fails to see in himself he either will not see at all, or will see grossly exaggerated, in his patient; further, he encourages those things to which he himself unconsciously inclines, and condemns everything that he abhors in himself. Just as one rightly expects the surgeon's hands to be free from infection, so one ought to insist with especial emphasis that the psychotherapist be prepared at all times to exercise adequate self-criticism, a necessity which is all the more incumbent upon him when he comes up against insuperable resistances in the patient which may possibly be justified. He should remember that the patient is there to be treated and not to verify a theory. For that matter, there is no single theory in the whole field of practical psychology that cannot on occasion prove basically wrong. In particular, the view that the patient's resistances are in no circumstances justified is completely fallacious. The resistance might very well prove that the treatment rests on false assumptions.

[238] I have dwelt on the theme of training analysis at some length because of late there have been renewed tendencies to build up the doctor's authority as such, and thus to inaugurate another era of *ex cathedra* psychotherapy, a project which differs

in no way from the somewhat antiquated techniques of suggestion, whose inadequacy has long since become apparent. (This is not to say that suggestion therapy is never indicated.)

[239] The intelligent psychotherapist has known for years that any complicated treatment is an individual, *dialectical* process, in which the doctor, as a person, participates just as much as the patient. In any such discussion the question of whether the doctor has as much insight into his own psychic processes as he expects from his patient naturally counts for a very great deal, particularly in regard to the “rapport,” or relationship of mutual confidence, on which the therapeutic success ultimately depends. The patient, that is to say, can win his own inner security only from the security of his relationship to the doctor as a human being. The doctor can put over his authority with fairly good results on people who are easily gulled. But for critical eyes it is apt to look a little too threadbare. This is also the reason why the priest, the predecessor of the doctor in his role of healer and psychologist, has in large measure forfeited his authority, at any rate with the educated public. Difficult cases, therefore, are a veritable ordeal for both patient and doctor. The latter should be prepared for this as far as possible by a thorough training analysis. It is far from being either an ideal or an absolutely certain means of dispelling illusions and projections, but at least it demonstrates the need for self-criticism and can reinforce the psychotherapist’s aptitude in this direction. No analysis is capable of banishing all unconsciousness for ever. The analyst must go on learning endlessly, and never forget that each new case brings new problems to light and thus gives rise to unconscious assumptions that have never before been constellated. We could say, without too much exaggeration, that a good halt of every treatment that probes at all deeply consists in the doctor’s examining himself, for only what he can put right in himself can he hope to put right in the patient. It is no loss, either, if he feels that the patient is hitting him, or even scoring off him: it is his own hurt that gives the measure of his power to heal. This, and nothing else, is the meaning of the Greek myth of the wounded physician.³

[240] The problems with which we are concerned here do not occur in the field of “minor” psychotherapy, where the doctor can get along quite well with suggestion, good advice, or an apt explanation. But neuroses or psychotic borderline states in complicated and intelligent people frequently require what is called “major” psychotherapy, that is, the dialectical procedure. In order to conduct this with any prospect of success, all subjective and theoretical assumptions must be eliminated as far as practicable. One cannot treat a Mohammedan on the basis of Christian beliefs, nor a Parsee with Jewish orthodoxy, nor a Christian with the pagan philosophy of the ancient world, without introducing dangerous foreign bodies into his psychic organism. This sort of thing is constantly practised, and not always with bad results;

but, for all that, it is an experiment whose legitimacy seems to me exceedingly doubtful. I think a conservative treatment is the more advisable. One should, if possible, not destroy any values that have not proved themselves definitely injurious. To replace a Christian view of the world by a materialistic one is, to my way of thinking, just as wrong as the attempt to argue with a convinced materialist. That is the task of the missionary, not of the doctor.

[241] Many psychotherapists, unlike me, hold the view that theoretical problems do not enter into the therapeutic process at all. The aetiological factors, they think, are all questions of purely personal psychology. But if we scrutinize these factors more closely, we find that they present quite a different picture. Take, for example, the sexual urge, which plays such an enormous role in Freudian theory. This urge, like every other urge, is not a personal acquisition, but is an objective and universal datum that has nothing whatever to do with our personal wishes, desires, opinions, and decisions. It is a completely impersonal force, and all we can do is to try to come to terms with it with the help of subjective and theoretical judgments. Of these latter, only the subjective premises (and then only a part of them) belong to the personal sphere; for the rest they are derived from the stream of tradition and from environmental influences, and only a very small fraction of them has been built up personally as a result of conscious choice. Just as I find myself moulded by external and objective social influences, so also I am moulded by internal and unconscious forces, which I have summed up under the term “the subjective factor.” The man with the extraverted attitude bases himself primarily on social relationships; the other, the introvert, primarily on the subjective factor. The former is largely unaware of his subjective determinacy and regards it as insignificant; as a matter of fact, he is frightened of it. The latter has little or no interest in social relationships; he prefers to ignore them, feeling them to be onerous, even terrifying. To the one, the world of relationships is the important thing; for him it represents normality, the goal of desire. The other is primarily concerned with the inner pattern of his life, with his own self-consistency.

[242] When we come to analyse the personality, we find that the extravert makes a niche for himself in the world of relationships at the cost of unconsciousness (of himself as a subject); while the introvert, in realizing his personality, commits the grossest mistakes in the social sphere and blunders about in the most absurd way. These two very typical attitudes are enough to show—quite apart from the types of physiological temperament described by Kretschmer—how little one can fit human beings and their neuroses into the strait jacket of a single theory.

[243] As a rule these subjective premises are quite unknown to the patient, and also, unfortunately, to the doctor, so that the latter is too often tempted to overlook the old

adage *quod licet Jovi, non licet bovi*, or in other words, one man's meat is another man's poison, and in this way to unlock doors that were better shut, and vice versa. Medical theory is just as likely as the patient to become the victim of its own subjective premises, even if to a lesser degree, since it is at least the outcome of comparative work on a large number of cases and has therefore rejected any excessively individual variants. This, however, is only in the smallest degree true of the personal prejudices of its creator. Though the comparative work will do something to mitigate them, they will nevertheless give a certain colouring to his medical activities and will impose certain limits. Accordingly, one urge or the other, one idea or the other, will then impose itself as the limit and become a bogus principle which is the be-all and end-all of research. Within this framework everything can be observed correctly and—according to the subjective premise—logically interpreted, as was undoubtedly the case with Freud and Adler; and yet in spite of this, or perhaps just because of it, very different views will result, in fact to all appearances they will be flatly irreconcilable. The reason obviously lies in the subjective premise, which assimilates what suits it and discards what does not.

[244] Such developments are by no means the exception in the history of science, they are the rule. Anyone who accuses modern medical psychology of not even being able to reach agreement on its own theories is completely forgetting that no science can retain its vitality without divergences of theory. Disagreements of this kind are, as always, incentives to a new and deeper questioning. So also in psychology. The Freud-Adler dilemma found its solution in the acceptance of divergent principles, each of which laid stress on one particular aspect of the total problem.

[245] Seen from this angle, there are numerous lines of research still waiting to be opened up. One of the most interesting, perhaps, is the problem of the *a priori* attitude-type and of the functions underlying it. This was the line followed by the Rorschach test, Gestalt psychology, and the various other attempts to classify type-differences. Another possibility, which seems to me equally important, is the investigation of the theoretical⁴ factors that have proved to be of such cardinal importance when it comes to choosing and deciding. They have to be considered not only in the aetiology of neurosis, but in the evaluation of the analytical findings. Freud himself laid great emphasis on the function of the moral "censor" as one cause of repression, and he even felt obliged to hold up religion as one of the neuroticizing factors which lend support to infantile wish-fantasies. There are, in addition, theoretical assumptions that claim to play a decisive part in "sublimation"—value-categories that are supposed to help or hinder the work of fitting the tendencies revealed by the analysis of the unconscious into the life-plan of the patient. The very greatest significance attaches to the investigation of these so-called theoretical factors, not only in regard to the aetiology but—what is far more important—in

regard to the therapy and necessary *reconstruction of the personality*, as Freud himself confirmed, even if only negatively, in his later writings. A substantial part of these factors was termed by him the “super-ego,” which is the sum of all the collective beliefs and values consciously handed down by tradition. These, like the Torah for the orthodox Jew, constitute a solidly entrenched psychic system which is superordinate to the ego and the cause of numerous conflicts.

[246] Freud also observed that the unconscious occasionally produces images that can only be described as “archaic.” They are found more particularly in dreams and in waking fantasies. He, too, tried to interpret or amplify such symbols “historically,” as for example in his study of the dual mother motif in a dream of Leonardo da Vinci.⁵

[247] Now it is a well-known fact that the factors composing the “super-ego” correspond to the “collective representations” which Lévy-Bruhl posited as basic to the psychology of primitive man. The latter are general ideas and value-categories which have their origin in the primordial motifs of mythology, and they govern the psychic and social life of the primitive in much the same way as our lives are governed and moulded by the general beliefs, views, and ethical values in accordance with which we are brought up and by which we make our way in the world. They intervene almost automatically in all our acts of choice and decision, as well as being operative in the formation of concepts. With a little reflection, therefore, we can practically always tell why we do something and on what general assumptions our judgments and decisions are based. The false conclusions and wrong decisions of the neurotic have pathogenic effects because they are as a rule in conflict with these premises. Whoever can live with these premises without friction fits into our society as perfectly as the primitive, who takes his tribal teachings as an absolute rule of conduct.

[248] But when an individual, as a result perhaps of some anomaly in his personal disposition (no matter what this may be), ceases to conform to the *canon* of collective ideas, he will very likely find himself not only in conflict with society, but in disharmony with himself, since the super-ego represents another psychic system within him. In that case he will become neurotic: a dissociation of the personality supervenes, which, given the necessary psychopathic foundation, may lead to its complete fragmentation, that is, to the schizoid personality and to schizophrenia. Such a case serves as a model for the *personal neurosis*, for which an explanation in personalistic terms is quite sufficient, as we know from experience that no further procedure is necessary for a cure except the demolition of the subject’s false conclusions and wrong decisions. His wrong attitude having been corrected, the patient can then fit into society again. His illness was in fact nothing but the product of a certain “weakness,” either congenital or acquired. In cases of this kind it would

be a bad mistake to try to alter anything in the fundamental idea, the “collective representation.” That would only thrust the patient still deeper into his conflict with society by countenancing his pathogenic weakness.

[249] Clinical observations seem to show that schizophrenics fall into two different groups: an asthenic type (hence the French term *psychasthénie*) and a spastic type, given to active conflict. And the same is true of neurotics. The first type is represented by the kind of neurosis which can be explained purely personalistically, as it is a form of maladjustment based on personal weakness. The second type is represented by individuals who *could* be adjusted without much difficulty, and who have also proved their aptitude for it. But for some reason or other they cannot or will not adjust themselves, and they do not understand why their own particular “adjustment” does not make normal life possible for them, when in their estimation such a life should be well within the bounds of possibility. The reason for their neurosis seems to lie in their having something above the average, an overplus for which there is no adequate outlet. We may then expect the patient to be consciously or—in most cases—unconsciously critical of the generally accepted views and ideas. Freud, too, seems to have come across similar experiences, otherwise he would hardly have felt impelled to attack religion from the standpoint of the medical psychologist, as being the cornerstone of a man’s fundamental beliefs. Seen in the light of medical experience, however, this attempt was, in a sense, thoroughly consistent with its own premises, although one can hold a very different view on the manner in which it was conducted; for not only is religion not the enemy of the sick, it is actually a system of psychic healing, as the use of the Christian term “cure of souls” makes clear, and as is also evident from the Old Testament.⁶

[250] It is principally the neuroses of the second type that confront the doctor with problems of this kind. There are in addition not a few patients who, although they have no clinically recognizable neurosis, come to consult the doctor on account of psychic conflicts and various other difficulties in their lives, laying before him problems whose answer inevitably involves a discussion of fundamental questions. Such people often know very well—what the neurotic seldom or never knows—that their conflicts have to do with the fundamental problem of their own attitude, and that this is bound up with certain principles or general ideas, in a word, with their religious, ethical, or philosophical beliefs. It is precisely because of such cases that psychotherapy has to spread far beyond the confines of somatic medicine and psychiatry into regions that were formerly the province of priests and philosophers. From the degree to which priests and philosophers no longer discharge any duties in this respect or their competence to do so has been denied by the public, we can see what an enormous gap the psychotherapist is sometimes called upon to fill, and how remote religion on the one hand and philosophy on the other have become from the

actualities of life. The parson is blamed because one always knows in advance what he is going to say; the philosopher, because he never says anything of the slightest practical value. And the odd thing is that both of them—with few and ever fewer exceptions—are distinctly unsympathetic towards psychology.

[251] The positive meaning of the religious factor in a man's philosophical outlook will not, of course, prevent certain views and interpretations from losing their force and becoming obsolete, as a result of changes in the times, in the social conditions, and in the development of human consciousness. The old mythologems upon which all religion is ultimately based are, as we now see them, the expression of inner psychic events and experiences; and, by means of a ritualistic "anamnesis," they enable the conscious mind to preserve its link with the unconscious, which continues to send out or "ecphorate"⁷ the primordial images just as it did in the remote past. These images give adequate expression to the unconscious, and its instinctive movements can in that way be transmitted to the conscious mind without friction, so that the conscious mind never loses touch with its instinctive roots. If, however, certain of these images become antiquated, if, that is to say, they lose all intelligible connection with our contemporary consciousness, then our conscious acts of choice and decision are sundered from their instinctive roots, and a partial disorientation results, because our judgment then lacks any feeling of definiteness and certitude, and there is no emotional driving-force behind decision. The collective representations that connect primitive man with the life of his ancestors or with the founders of his tribe form the bridge to the unconscious for civilized man also, who, if he is a believer, will see it as the world of divine presences. Today these bridges are in a state of partial collapse, and the doctor is in no position to hold those who are worst hit responsible for the disaster. He knows that it is due far more to a shifting of the whole psychic situation over many centuries, such as has happened more than once in human history. In the face of such transformations the individual is powerless.

[252] The doctor can only look on and try to understand the attempts at restitution and cure which nature herself is making. Experience has long shown that between conscious and unconscious there exists a compensatory relationship, and that the unconscious always tries to make whole the conscious part of the psyche by adding to it the parts that are missing, and so prevent a dangerous loss of balance. In our own case, as might be expected, the unconscious produces compensating symbols which are meant to replace the broken bridges, but which can only do so with the active cooperation of consciousness. In other words, these symbols must, if they are to be effective, be "understood" by the conscious mind; they must be assimilated and integrated. A dream that is not understood remains a mere occurrence; understood, it becomes a living experience.

[253] I therefore consider it my main task to examine the manifestations of the unconscious in order to learn its language. But since, on the one hand, the theoretical assumptions we have spoken of are of eminently historical interest, and, on the other hand, the symbols produced by the unconscious derive from archaic modes of psychic functioning, one must, in carrying out these investigations, have at one's command a vast amount of historical material; and, secondly, one must bring together and collate an equally large amount of empirical material based on direct observation.

[254] The practical need for a deeper understanding of the products of the unconscious is sufficiently obvious. In pursuit of this, I am only going further along the path taken by Freud, though I certainly try to avoid having any preconceived metaphysical opinions. I try rather to keep to first-hand experience, and to leave metaphysical beliefs, either for or against, to look after themselves. I do not imagine for a moment that I can stand above or beyond the psyche, so that it would be possible to judge it, as it were, from some transcendental Archimedean point "outside." I am fully aware that I am entrapped in the psyche and that I cannot do anything except describe the experiences that there befall me. When, for instance, one examines the world of fairytales, one can hardly avoid the impression that one is meeting certain figures again and again, albeit in altered guise. Such comparisons lead on to what the student of folklore calls the investigation of motifs. The psychologist of the unconscious proceeds no differently in regard to the psychic figures which appear in dreams, fantasies, visions, and manic ideas, as in legends, fairytales, myth, and religion. Over the whole of this psychic realm there reign certain motifs, certain typical figures which we can follow far back into history, and even into prehistory, and which may therefore legitimately be described as "archetypes."⁸ They seem to me to be built into the very structure of man's unconscious, for in no other way can I explain why it is that they occur universally and in identical form, whether the redeemer-figure be a fish, a hare, a lamb, a snake, or a human being. It is the same redeemer-figure in a variety of accidental disguises. From numerous experiences of this kind I have come to the conclusion that the most individual thing about man is surely his consciousness, but that his shadow, by which I mean the uppermost layer of his unconscious, is far less individualized, the reason being that a man is distinguished from his fellows more by his virtues than by his negative qualities. The unconscious, however, in its principal and most overpowering manifestations, can only be regarded as a collective phenomenon which is everywhere identical, and, because it never seems to be at variance with itself, it may well possess a marvellous unity and self-consistency, the nature of which is at present shrouded in impenetrable darkness. Another fact to be considered here is the existence today of parapsychology, whose proper subject is manifestations that are directly connected with the unconscious. The most important of these are the ESP⁹ phenomena, which medical psychology should

on no account ignore. If these phenomena prove anything at all, it is the fact of a certain psychic relativity of space and time, which throws a significant light on the unity of the collective unconscious. For the present, at any rate, only two groups of facts have been established with any certainty: firstly, the congruence of individual symbols and mythologems; and secondly, the phenomenon of extra-sensory perception. The interpretation of these phenomena is reserved for the future.

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

THE THERAPEUTIC VALUE OF ABREACTION¹

[255] In his discussion of William Brown's paper, "The Revival of Emotional Memories and Its Therapeutic Value," William McDougall, writing in the *British Journal of Psychology*,² gave expression to some important considerations which I would like to underline here. The neuroses resulting from the Great War have, with their essentially traumatic aetiology, revived the whole question of the trauma theory of neurosis. During the years of peace this theory had rightly been kept in the background of scientific discussion, since its conception of neurotic aetiology is far from adequate.

[256] The originators of the theory were Breuer and Freud. Freud went on to a deeper investigation of the neuroses and soon adopted a view that took more account of their real origins. In by far the greater number of ordinary cases there is no question of a traumatic aetiology.

[257] But, in order to create the impression that the neurosis is caused by some trauma or other, unimportant and secondary occurrences must be given an artificial prominence for the sake of the theory. These traumata, when they are not mere products of medical fantasy, or else the result of the patient's own compliancy, are secondary phenomena, the outcome of an attitude that is already neurotic. The neurosis is as a rule a pathological, one-sided development of the personality, the imperceptible beginnings of which can be traced back almost indefinitely into the earliest years of childhood. Only a very arbitrary judgment can say where the neurosis actually begins.

[258] If we were to relegate the determining cause as far back as the patient's prenatal life, thus involving the physical and psychic disposition of the parents at the time of conception and pregnancy—a view that seems not at all improbable in certain cases—such an attitude would be more justifiable than the arbitrary selection of a definite point of neurotic origin in the individual life of the patient.

[259] Clearly, in dealing with this question, one should never be influenced too much by the surface appearance of the symptoms, even when both the patient and his family synchronize the first manifestation of these with the onset of the neurosis. A

more thorough investigation will almost invariably show that some morbid tendency existed long before the appearance of clinical symptoms.

[260] These obvious facts, long familiar to every specialist, pushed the trauma theory into the background until, as a result of the war, there was a regular spate of traumatic neuroses.

[261] Now, if we set aside the numerous cases of war neurosis where a trauma—a violent shock—impinged upon an established neurotic history, there still remain not a few cases where no neurotic disposition can be established, or where it is so insignificant that the neurosis could hardly have arisen without a trauma. Here the trauma is more than an agent of release: it is causative in the sense of a *causa efficiens*, especially when we include, as an essential factor, the unique psychic atmosphere of the battlefield.

[262] These cases present us with a new therapeutic problem which seems to justify a return to the original Breuer-Freud method and its underlying theory; for the trauma is either a single, definite, violent impact, or a complex of ideas and emotions which may be likened to a psychic wound. Everything that touches this complex, however slightly, excites a vehement reaction, a regular emotional explosion. Hence one could easily represent the trauma as a complex with a high emotional charge, and because this enormously effective charge seems at first sight to be the pathological cause of the disturbance, one can accordingly postulate a therapy whose aim is the complete release of this charge. Such a view is both simple and logical, and it is in apparent agreement with the fact that abreaction—i.e., the dramatic rehearsal of the traumatic moment, its emotional recapitulation in the waking or in the hypnotic state—often has a beneficial therapeutic effect. We all know that a man feels a compelling need to recount a vivid experience again and again until it has lost its affective value. As the proverb says, “What filleth the heart goeth out by the mouth.” The unbosoming gradually depotentiates the affectivity of the traumatic experience until it no longer has a disturbing influence.

[263] This conception, apparently so clear and simple, is unfortunately—as McDougall rightly objects—no more adequate than many another equally simple and therefore delusive explanation. Views of this kind have to be fiercely and fanatically defended as though they were dogmas, because they cannot hold their own in the face of experience. McDougall is also right to point out that in quite a large number of cases abreaction is not only useless but actually harmful.

[264] In reply, it is possible to take up the attitude of an injured theorist and say that the abreactive method never claimed to be a panacea, and that refractory cases are to be met with in every method.

[265] But, I would rejoin, it is precisely here, in a careful study of the refractory cases, that we gain the most illuminating insight into the method or theory in question, for they disclose far more clearly than the successes just where the theory is weak. Naturally this does not disprove the efficacy of the method or its justification, but it does at least lead to a possible improvement of the theory and, indirectly, of the method.

[266] McDougall, therefore, has laid his finger on the right spot when he argues that the essential factor is the dissociation of the psyche and not the existence of a highly charged affect and, consequently, that the main therapeutic problem is not abreaction but how to integrate the dissociation. This argument advances our discussion and entirely agrees with our experience that a traumatic complex brings about dissociation of the psyche. The complex is not under the control of the will and for this reason it possesses the quality of psychic autonomy.

[267] Its autonomy consists in its power to manifest itself independently of the will and even in direct opposition to conscious tendencies: it forces itself tyrannically upon the conscious mind. The explosion of affect is a complete invasion of the individual, it pounces upon him like an enemy or a wild animal. I have frequently observed that the typical traumatic affect is represented in dreams as a wild and dangerous animal—a striking illustration of its autonomous nature when split off from consciousness.

[268] Considered from this angle, abreaction appears in an essentially different light: as an attempt to reintegrate the autonomous complex, to incorporate it gradually into the conscious mind as an accepted content, by living the traumatic situation over again, once or repeatedly.

[269] But I rather question whether the thing is as simple as that, or whether there may not be other factors essential to the process. For it must be emphasized that mere rehearsal of the experience does not itself possess a curative effect: the experience must be rehearsed in the presence of the doctor.

[270] If the curative effect depended solely upon the rehearsal of experience, abreaction could be performed by the patient alone, as an isolated exercise, and there would be no need of any human object upon whom to discharge the affect. But the intervention of the doctor is absolutely necessary. One can easily see what it means to the patient when he can confide his experience to an understanding and sympathetic doctor. His conscious mind finds in the doctor a moral support against the unmanageable affect of his traumatic complex. No longer does he stand alone in his battle with these elemental powers, but some one whom he trusts reaches out a hand, lending him moral strength to combat the tyranny of uncontrolled emotion. In this way the integrative powers of his conscious mind are reinforced until he is able once more to

bring the rebellious affect under control. This influence on the part of the doctor, which is absolutely essential, may, if you like, be called suggestion.

[271] For myself, I would rather call it his human interest and personal devotion. These are the property of no method, nor can they ever become one; they are moral qualities which are of the greatest importance in all methods of psychotherapy, and not in the case of abreaction alone. The rehearsal of the traumatic moment is able to reintegrate the neurotic dissociation only when the conscious personality of the patient is so far reinforced by his relationship to the doctor that he can consciously bring the autonomous complex under the control of his will.

[272] Only under these conditions has abreaction a curative value. But this does not depend solely on the discharge of affective tension; it depends, as McDougall shows, far more on whether or not the dissociation is successfully resolved. Hence the cases where abreaction has a negative result appear in a different light.

[273] In the absence of the conditions just mentioned, abreaction by itself is not sufficient to resolve the dissociation. If the rehearsal of the trauma fails to reintegrate the autonomous complex, then the relationship to the doctor can so raise the level of the patient's consciousness as to enable him to overcome the complex and assimilate it. But it may easily happen that the patient has a particularly obstinate resistance to the doctor, or that the doctor does not have the right kind of attitude to the patient. In either case the abreactive method breaks down.

[274] It stands to reason that when dealing with neuroses which are traumatically determined only to a minor degree, the cathartic method of abreaction will meet with poor success. It has nothing to do with the nature of the neurosis, and its rigid application is quite ludicrous here. Even when a partial success is obtained, it can have no more significance than the success of any other method which admittedly had nothing to do with the nature of the neurosis.

[275] *Success* in these cases is due to suggestion; it is usually of very limited duration and clearly a matter of chance. The prime cause is always the transference to the doctor, and this is established without too much difficulty provided that the doctor evinces an earnest belief in his method. Precisely because it has as little to do with the nature of neurosis as, shall we say, hypnosis and other such cures, the cathartic method has, with few exceptions, long been abandoned in favour of analysis.

[276] Now it happens that the analytical method is most unassailable just where the cathartic method is most shaky: that is, in the relationship between doctor and patient. It matters little that, even today, the view prevails in many quarters that analysis consists mainly in "digging up" the earliest childhood complex in order to pluck out the evil by the root. This is merely the aftermath of the old trauma theory.

Only in so far as they hamper the patient's adaptation to the present have these historical contents any real significance. The painstaking pursuit of all the ramifications of infantile fantasy is relatively unimportant in itself; the therapeutic effect comes from the doctor's efforts to enter into the psyche of his patient, thus establishing a psychologically adapted relationship. For the patient is suffering precisely from the absence of such a relationship. Freud himself has long recognized that the transference is the alpha and omega of psychoanalysis. The transference is the patient's attempt to get into psychological rapport with the doctor. He needs this relationship if he is to overcome the dissociation. The feebler the rapport, i.e., the less the doctor and patient understand one another, the more intensely will the transference be fostered and the more sexual will be its form.

[277] To attain the goal of adaptation is of such vital importance to the patient that sexuality intervenes as a function of compensation. Its aim is to consolidate a relationship that cannot ordinarily be achieved through mutual understanding. In these circumstances the transference can well become the most powerful obstacle to the success of the treatment. It is not surprising that violent sexual transferences are especially frequent when the analyst concentrates too much on the sexual aspect, for then all other roads to understanding are barred. An exclusively sexual interpretation of dreams and fantasies is a shocking violation of the patient's psychological material: infantile-sexual fantasy is by no means the whole story, since the material also contains a creative element, the purpose of which is to shape a way out of the neurosis. This natural means of escape is now blocked; the doctor is the only certain refuge in a wilderness of sexual fantasies, and the patient has no alternative but to cling to him with a convulsive erotic transference, unless he prefers to break off the relationship in hatred.

[278] In either case the result is spiritual desolation. This is the more regrettable since, obviously, psychoanalysts do not in the least desire such a melancholy result; yet they often bring it about through their blind allegiance to the dogma of sexuality.

[279] Intellectually, of course, the sexual interpretation is extremely simple; it concerns itself at most with a handful of elementary facts which recur in numberless variations. One always knows in advance where the matter will end. *Inter faeces et urinam nascimur* remains an eternal truth, but it is a sterile, a monotonous, and above all an unsavoury truth. There is absolutely no point in everlastingly reducing all the finest strivings of the soul back to the womb. It is a gross technical blunder because, instead of promoting, it destroys psychological understanding. More than anything else neurotic patients need that psychological rapport; in their dissociated state it helps them to adjust themselves to the doctor's psyche. Nor is it by any means so simple to establish this kind of human relationship; it can only be built up with great

pains and scrupulous attention. The continual reduction of all projections to their origins—and the transference is made up of projections—may be of considerable historical and scientific interest, but it never produces an adapted attitude to life; for it constantly destroys the patient's every attempt to build up a normal human relationship by resolving it back into its elements.

[280] If, in spite of this, the patient does succeed in adapting himself to life, it will have been at the cost of many moral, intellectual, and aesthetic values whose loss to a man's character is a matter for regret. Quite apart from this major loss, there is the danger of perpetually brooding on the past, of looking back wistfully to things that cannot be remedied now: the morbid tendency, very common among neurotics, always to seek the cause of their inferiority in the dim bygone, in their upbringing, the character of their parents, and so forth.

[281] This minute scrutiny of minor determinants will affect their present inferiority as little as the existing social conditions would be ameliorated by an equally painstaking investigation of the causes of the Great War. The real issue is the moral achievement of the whole personality.

[282] To assert, as a general principle, that a reductive analysis is unnecessary would of course be short-sighted and no more intelligent than to deny the value of all research into the causes of war. The doctor must probe as deeply as possible into the origins of the neurosis in order to lay the foundations of a subsequent synthesis. As a result of reductive analysis, the patient is deprived of his faulty adaptation and led back to his beginnings. The psyche naturally seeks to make good this loss by intensifying its hold upon some human object—generally the doctor, but occasionally some other person, like the patient's husband or a friend who acts as a counterpole to the doctor. This may effectively balance a one-sided transference, but it may also turn out to be a troublesome obstacle to the progress of the work. The intensified tie to the doctor is a compensation for the patient's faulty attitude to reality. This tie is what we mean by "transference."

[283] The transference phenomenon is an inevitable feature of every thorough analysis, for it is imperative that the doctor should get into the closest possible touch with the patient's line of psychological development. One could say that in the same measure as the doctor assimilates the intimate psychic contents of the patient into himself, he is in turn assimilated as a figure into the patient's psyche. I say "as a figure," because I mean that the patient sees him not as he really is, but as one of those persons who figured so significantly in his previous history. He becomes associated with those memory images in the patient's psyche because, like them, he makes the patient divulge all his intimate secrets. It is as though he were charged with the power of those memory images.

[284] The transference therefore consists in a number of projections which act as a substitute for a real psychological relationship. They create an apparent relationship and this is very important, since it comes at a time when the patient's habitual failure to adapt has been artificially intensified by his analytical removal into the past. Hence a sudden severance of the transference is always attended by extremely unpleasant and even dangerous consequences, because it maroons the patient in an impossibly unrelated situation.

[285] Even if these projections are analysed back to their origins—and all projections can be dissolved and disposed of in this way—the patient's claim to human relationship still remains and should be conceded, for without a relationship of some kind he falls into a void.

[286] Somehow he must relate himself to an object existing in the immediate present if he is to meet the demands of adaptation with any degree of adequacy. Irrespective of the reductive analysis, he will turn to the doctor not as an object of sexual desire, but as an object of purely human relationship in which each individual is guaranteed his proper place. Naturally this is impossible until all the projections have been consciously recognized; consequently they must be subjected to a reductive analysis before all else, provided of course that the legitimacy and importance of the underlying claim to personal relationship is constantly borne in mind.

[287] Once the projections are recognized as such, the particular form of rapport known as the transference is at an end, and the problem of individual relationship begins. Every student who has perused the literature and amused himself with interpreting dreams and unearthing complexes in himself and others can easily get as far as this, but beyond it no one has the right to go except the doctor who has himself undergone a thorough analysis, or can bring such passion for truth to the work that he can analyse himself through his patient. The doctor who has no wish for the one and cannot achieve the other should never touch analysis; he will be found wanting, cling as he may to his petty conceit of authority.

[288] In the last resort his whole work will be intellectual bluff—for how can he help his patient to conquer his morbid inferiority when he himself is so manifestly inferior? How can the patient learn to abandon his neurotic subterfuges when he sees the doctor playing hide-and-seek with his own personality, as though unable, for fear of being thought inferior, to drop the professional mask of authority, competence, superior knowledge, etc.?

[289] The touchstone of every analysis that has not stopped short at partial success, or come to a standstill with no success at all, is always this person-to-person relationship, a psychological situation where the patient confronts the doctor upon

equal terms, and with the same ruthless criticism that he must inevitably learn from the doctor in the course of his treatment.

[290] This kind of personal relationship is a freely negotiated bond or contract as opposed to the slavish and humanly degrading bondage of the transference. For the patient it is like a bridge; along it, he can make the first steps towards a worthwhile existence. He discovers that his own unique personality has value, that he has been accepted for what he is, and that he has it in him to adapt himself to the demands of life. But this discovery will never be made while the doctor continues to hide behind a method, and allows himself to carp and criticize without question. Whatever method he then adopts, it will be little different from suggestion, and the results will match the method. In place of this, the patient must have the right to the freest criticism, and a true sense of human equality.

[291] I think I have said enough to indicate that, in my view, analysis makes far higher demands on the mental and moral stature of the doctor than the mere application of a routine technique, and also that his therapeutic influence lies primarily in this more personal direction.

[292] But if the reader should conclude that little or nothing lay in the method, I would regard that as a total misapprehension of my meaning. Mere personal sympathy can never give the patient that objective understanding of his neurosis which makes him independent of the doctor and sets up a counterinfluence to the transference.

[293] For the objective understanding of his malady, and for the creation of a personal relationship, science is needed—not a purely medical knowledge that embraces only a limited field, but a wide knowledge of every aspect of the human psyche. The treatment must do more than destroy the old morbid attitude; it must build up a new attitude that is sound and healthy. This requires a fundamental change of vision. Not only must the patient be able to see the cause and origin of his neurosis, he must also see the legitimate psychological goal towards which he is striving. We cannot simply extract his morbidity like a foreign body, lest something essential be removed along with it, something meant for life. Our task is not to weed it out, but to cultivate and transform this growing thing until it can play its part in the totality of the psyche.

II

THE PRACTICAL USE OF DREAM-ANALYSIS¹

[294] The use of dream-analysis in psychotherapy is still a much debated question. Many practitioners find it indispensable in the treatment of neuroses, and consider that the dream is a function whose psychic importance is equal to that of the conscious mind itself. Others, on the contrary, dispute the value of dream-analysis and regard dreams as a negligible by-product of the psyche. Obviously, if a person holds the view that the unconscious plays a decisive part in the aetiology of neuroses, he will attribute a high practical importance to dreams as direct expressions of the unconscious. Equally obviously, if he denies the unconscious or at least thinks it aetiologically insignificant, he will minimize the importance of dream-analysis. It might be considered regrettable that in this year of grace 1931, more than half a century after Carus formulated the concept of the unconscious, more than a century after Kant spoke of the “illimitable field of obscure ideas,” and nearly two hundred years after Leibniz postulated an unconscious psychic activity, not to mention the achievements of Janet, Flournoy, Freud, and many more—that after all this, the actuality of the unconscious should still be a matter for controversy. But, since it is my intention to deal exclusively with practical questions, I will not advance in this place an apology for the unconscious, although our special problem of dream-analysis stands or falls with such an hypothesis. Without it, the dream is a mere freak of nature, a meaningless conglomeration of fragments left over from the day. Were that really so, there would be no excuse for the present discussion. We cannot treat our theme at all unless we recognize the unconscious, for the avowed aim of dream-analysis is not only to exercise our wits, but to uncover and realize those hitherto unconscious contents which are considered to be of importance in the elucidation or treatment of a neurosis. Anyone who finds this hypothesis unacceptable must simply rule out the question of the applicability of dream-analysis.

[295] But since, according to our hypothesis, the unconscious possesses an aetiological significance, and since dreams are the direct expression of unconscious psychic activity, the attempt to analyse and interpret dreams is theoretically justified from a scientific standpoint. If successful, we may expect this attempt to give us scientific insight into the structure of psychic causality, quite apart from any therapeutic results that may be gained. The practitioner, however, tends to consider scientific discoveries as, at most, a gratifying by-product of his therapeutic work, so he is hardly likely to

take the bare possibility of theoretical insight into the aetiological background as a sufficient reason for, much less an indication of, the practical use of dream-analysis. He may believe, of course, that the explanatory insight so gained is of therapeutic value, in which case he will elevate dream-analysis to a professional duty. It is well known that the Freudian school is of the firm opinion that very valuable therapeutic results are achieved by throwing light upon the unconscious causal factors—that is, by explaining them to the patient and thus making him fully conscious of the sources of his trouble.

[296] Assuming for the moment that this expectation is justified by the facts, then the only question that remains is whether dream-analysis can or cannot be used, alone or in conjunction with other methods, to discover the unconscious aetiology. The Freudian answer to this question is, I may assume, common knowledge. I can confirm this answer inasmuch as dreams, particularly the initial dreams which appear at the very outset of the treatment, often bring to light the essential aetiological factor in the most unmistakable way. The following example may serve as an illustration:

[297] I was consulted by a man who held a prominent position in the world. He was afflicted with a sense of anxiety and insecurity, and complained of dizziness sometimes resulting in nausea, heaviness in the head, and constriction of breath—a state that might easily be confused with mountain sickness. He had had an extraordinarily successful career, and had risen, by dint of ambition, industry, and native talent, from his humble origins as the son of a poor peasant. Step by step he had climbed, attaining at last a leading position which held every prospect of further social advancement. He had now in fact reached the spring-board from which he could have commenced his flight into the empyrean, had not his neurosis suddenly intervened. At this point in his story the patient could not refrain from that familiar exclamation which begins with the stereotyped words: “And just now, when....” The fact that he had all the symptoms of mountain sickness seemed highly appropriate as a drastic illustration of his peculiar impasse. He had also brought to the consultation two dreams from the preceding night. The first dream was as follows: “*I am back again in the small village where I was born. Some peasant lads who went to school with me are standing together in the street. I walk past, pretending not to know them. Then I hear one of them say, pointing at me: ‘He doesn’t often come back to our village.’*”

[298] It requires no feat of interpretation to see in this dream a reference to the humble beginnings of the dreamer’s career and to understand what this reference means. The dream says quite clearly: “You forgot how far down you began.”

[299] Here is the second dream: “*I am in a great hurry because I want to go on a journey. I keep on looking for things to pack, but can find nothing. Time flies, and the*

train will soon be leaving. Having finally succeeded in getting all my things together, I hurry along the street, only to discover that I have forgotten a brief-case containing important papers. I dash back all out of breath, find it at last, then race to the station, but I make hardly any headway. With a final effort I rush on to the platform only to see the train just steaming out of the station yard. It is very long, and it runs in a curious S-shaped curve, and it occurs to me that if the engine-driver does not look out, and puts on steam when he comes into the straight, the rear coaches will still be on the curve and will be thrown off the rails by the gathering speed. And this is just what happens: the engine-driver puts on steam, I try to cry out, the rear coaches give a frightful lurch and are thrown off the rails. There is a terrible catastrophe. I wake up in terror.”

[300] Here again no effort is needed to understand the message of the dream. It describes the patient's frantic haste to advance himself still further. But since the engine-driver in front steams relentlessly ahead, the neurosis happens at the back: the coaches rock and the train is derailed.

[301] It is obvious that, at the present phase of his life, the patient has reached the highest point of his career; the strain of the long ascent from his lowly origin has exhausted his strength. He should have rested content with his achievements, but instead of that his ambition drives him on and on, and up and up into an atmosphere that is too thin for him and to which he is not accustomed. Therefore his neurosis comes upon him as a warning.

[302] Circumstances prevented me from treating the patient further, nor did my view of the case satisfy him. The upshot was that the fate depicted in the dream ran its course. He tried to exploit the professional openings that tempted his ambition, and ran so violently off the rails that the catastrophe was realized in actual life.

[303] Thus, what could only be inferred from the conscious anamnesis—namely that the mountain sickness was a symbolical representation of the patient's inability to climb any further—was confirmed by the dreams as a fact.

[304] Here we come upon something of the utmost importance for the applicability of dream-analysis: the dream describes the inner situation of the dreamer, but the conscious mind denies its truth and reality, or admits it only grudgingly. Consciously the dreamer could not see the slightest reason why he should not go steadily forward; on the contrary, he continued his ambitious climbing and refused to admit his own inability which subsequent events made all too plain. So long as we move in the conscious sphere, we are always unsure in such cases. The anamnesis can be interpreted in various ways. After all, the common soldier carries the marshal's baton in his knapsack, and many a son of poor parents has achieved the highest success. Why should it not be the case here? Since my judgment is fallible, why should my

conjecture be better than his? At this point the dream comes in as the expression of an involuntary, unconscious psychic process beyond the control of the conscious mind. It shows the inner truth and reality of the patient as it really is: not as I conjecture it to be, and not as he would like it to be, but *as it is*. I have therefore made it a rule to regard dreams as I regard physiological facts: if sugar appears in the urine, then the urine contains sugar, and not albumen or urobilin or something else that might fit in better with my expectations. That is to say, I take dreams as diagnostically valuable facts.

[305] As is the way of all dreams, my little dream example gives us rather more than we expected. It gives us not only the aetiology of the neurosis but a prognosis as well. What is more, we even know exactly where the treatment should begin: we must prevent the patient from going full steam ahead. This is just what he tells himself in the dream.

[306] Let us for the time being content ourselves with this hint and return to our consideration of whether dreams enable us to throw light on the aetiology of a neurosis. The dreams I have cited actually do this. But I could equally well cite any number of initial dreams where there is no trace of an aetiological factor, although they are perfectly transparent. I do not wish for the present to consider dreams which call for searching analysis and interpretation.

[307] The point is this: there are neuroses whose real aetiology becomes clear only right at the end of an analysis, and other neuroses whose aetiology is relatively unimportant. This brings me back to the hypothesis from which we started, that for the purposes of therapy it is absolutely necessary to make the patient conscious of the aetiological factor. This hypothesis is little more than a hang-over from the old trauma theory. I do not of course deny that many neuroses are traumatic in origin; I simply contest the notion that all neuroses are of this nature and arise without exception from some crucial experience in childhood. Such a view necessarily results in the causalistic approach. The doctor must give his whole attention to the patient's past; he must always ask "Why?" and ignore the equally pertinent question "What for?" Often this has a most deleterious effect on the patient, who is thereby compelled to go searching about in his memory—perhaps for years—for some hypothetical event in his childhood, while things of immediate importance are grossly neglected. The purely causalistic approach is too narrow and fails to do justice to the true significance either of the dream or of the neurosis. Hence an approach that uses dreams for the sole purpose of discovering the aetiological factor is biased and overlooks the main point of the dream. Our example indeed shows the aetiology clearly enough, but it also offers a prognosis or anticipation of the future as well as a suggestion about the treatment. There are in addition large numbers of

initial dreams which do not touch the aetiology at all, but deal with quite other matters, such as the patient's attitude to the doctor. As an example of this I would like to tell you three dreams, all from the same patient, and each dreamt at the beginning of a course of treatment under three different analysts. Here is the first: "*I have to cross the frontier into another country, but cannot find the frontier and nobody can tell me where it is.*"

[308] The ensuing treatment proved unsuccessful and was broken off after a short time. The second dream is as follows: "*I have to cross the frontier, but the night is pitch-black and I cannot find the customs-house. After a long search I see a tiny light far off in the distance, and assume that the frontier is over there. But in order to get there, I have to pass through a valley and a dark wood in which I lose my way. Then I notice that someone is near me. Suddenly he clings to me like a madman and I awake in terror.*"

[309] This treatment, too, was broken off after a few weeks because the analyst unconsciously identified himself with the patient and the result was complete loss of orientation on both sides.

[310] The third dream took place under my treatment: "*I have to cross a frontier, or rather, I have already crossed it and find myself in a Swiss customs-house. I have only a handbag with me and think I have nothing to declare. But the customs official dives into my bag and, to my astonishment, pulls out a pair of twin beds.*"

[311] The patient had got married while under my treatment, and at first she developed the most violent resistance to her marriage. The aetiology of the neurotic resistance came to light only many months afterwards and there is not a word about it in the dreams. They are without exception anticipations of the difficulties she is to have with the doctors concerned.

[312] These examples, like many others of the kind, may suffice to show that dreams are often anticipatory and would lose their specific meaning completely on a purely causalistic view. They afford unmistakable information about the analytical situation, the correct understanding of which is of the greatest therapeutic importance. Doctor A understood the situation correctly and handed the patient over to Doctor B. Under him she drew her own conclusions from the dream and decided to leave. My interpretation of the third dream was a disappointment to her, but the fact that the dream showed the frontier as already crossed encouraged her to go on in spite of all difficulties.

[313] Initial dreams are often amazingly lucid and clear-cut. But as the work of analysis progresses, the dreams tend to lose their clarity. If, by way of exception, they keep it we can be sure that the analysis has not yet touched on some important layer of the

personality. As a rule, dreams get more and more opaque and blurred soon after the beginning of the treatment, and this makes the interpretation increasingly difficult. A further difficulty is that a point may soon be reached where, if the truth be told, the doctor no longer understands the situation as a whole. That he does not understand is proved by the fact that the dreams become increasingly obscure, for we all know that their “obscurity” is a purely subjective opinion of the doctor. To the understanding nothing is obscure; it is only when we do not understand that things appear unintelligible and muddled. In themselves dreams are naturally clear; that is, they are just what they must be under the given circumstances. If, from a later stage of treatment or from a distance of some years, we look back at these unintelligible dreams, we are often astounded at our own blindness. Thus when, as the analysis proceeds, we come upon dreams that are strikingly obscure in comparison with the illuminating initial dreams, the doctor should not be too ready to accuse the dreams of confusion or the patient of deliberate resistance; he would do better to take these findings as a sign of his own growing inability to understand—just as the psychiatrist who calls his patient “confused” should recognize that this is a projection and should rather call himself confused, because in reality it is he whose wits are confused by the patient’s peculiar behaviour. Moreover it is therapeutically very important for the doctor to admit his lack of understanding in time, for nothing is more unbearable to the patient than to be always understood. He relies far too much anyway on the mysterious powers of the doctor and, by appealing to his professional vanity, lays a dangerous trap for him. By taking refuge in the doctor’s self-confidence and “profound” understanding, the patient loses all sense of reality, falls into a stubborn transference, and retards the cure.

[314] Understanding is clearly a very subjective process. It can be extremely one-sided, in that the doctor understands but not the patient. In such a case the doctor conceives it to be his duty to convince the patient, and if the latter will not allow himself to be convinced, the doctor accuses him of resistance. When the understanding is all on my side, I say quite calmly that I do not understand, for in the end it makes very little difference whether the doctor understands or not, but it makes all the difference whether the patient understands. Understanding should therefore be understanding in the sense of an agreement which is the fruit of joint reflection. The danger of a one-sided understanding is that the doctor may judge the dream from the standpoint of a preconceived opinion. His judgment may be in line with orthodox theory, it may even be fundamentally correct, but it will not win the patient’s assent, he will not come to an understanding with him, and that is in the practical sense incorrect—incorrect because it anticipates and thus cripples the patient’s development. The patient, that is to say, does not need to have a truth inculcated into him—if we do that, we only

reach his head; he needs far more to grow up to this truth, and in that way we reach his heart, and the appeal goes deeper and works more powerfully.

[315] When the doctor's one-sided interpretation is based on mere agreement as to theory or on some other preconceived opinion, his chances of convincing the patient or of achieving any therapeutic results depend chiefly upon *suggestion*. Let no one deceive himself about this. In itself, suggestion is not to be despised, but it has serious limitations, not to speak of the subsidiary effects upon the patient's independence of character which, in the long run, we could very well do without. A practising analyst may be supposed to believe implicitly in the significance and value of conscious realization, whereby hitherto unconscious parts of the personality are brought to light and subjected to conscious discrimination and criticism. It is a process that requires the patient to face his problems and that taxes his powers of conscious judgment and decision. It is nothing less than a direct challenge to his ethical sense, a call to arms that must be answered by the whole personality. As regards the maturation of personality, therefore, the analytical approach is of a higher order than suggestion, which is a species of magic that works in the dark and makes no ethical demands upon the personality. Methods of treatment based on suggestion are deceptive makeshifts; they are incompatible with the principles of analytical therapy and should be avoided if at all possible. Naturally suggestion can only be avoided if the doctor is conscious of its possibility. There is at the best of times always enough—and more than enough—unconscious suggestion.

[316] The analyst who wishes to rule out conscious suggestion must therefore consider every dream interpretation invalid until such time as a formula is found which wins the assent of the patient.

[317] The observance of this rule seems to me imperative when dealing with those dreams whose obscurity is evidence of the lack of understanding of both doctor and patient. The doctor should regard every such dream as something new, as a source of information about conditions whose nature is unknown to him, concerning which he has as much to learn as the patient. It goes without saying that he should give up all his theoretical assumptions and should in every single case be ready to construct a totally new theory of dreams. There are still boundless opportunities for pioneer work in this field. The view that dreams are merely the imaginary fulfilments of repressed wishes is hopelessly out of date. There are, it is true, dreams which manifestly represent wishes or fears, but what about all the other things? Dreams may contain ineluctable truths, philosophical pronouncements, illusions, wild fantasies, memories, plans, anticipations, irrational experiences, even telepathic visions, and heaven knows what besides. One thing we ought never to forget: almost half our life is passed in a more or less unconscious state. The dream is specifically the utterance of

the unconscious. Just as the psyche has a diurnal side which we call consciousness, so also it has a nocturnal side: the unconscious psychic activity which we apprehend as dreamlike fantasy. It is certain that the conscious mind consists not only of wishes and fears, but of vastly more besides; and it is highly probable that our dream psyche possesses a wealth of contents and living forms equal to or even greater than those of the conscious mind, which is characterized by concentration, limitation, and exclusion.

[318] This being so, it is imperative that we should not pare down the meaning of the dream to fit some narrow doctrine. We must remember that there are not a few patients who imitate the technical or theoretical jargon of the doctor, and do this even in their dreams, in accordance with the old tag, *Canis panem somniat, piscator pisces*. This is not to say that the fishes of which the fisherman dreams are fishes and nothing more. There is no language that cannot be misused. As may easily be imagined, the misuse often turns the tables on us; it even seems as if the unconscious had a way of strangling the doctor in the coils of his own theory. Therefore I leave theory aside as much as possible when analysing dreams—not entirely, of course, for we always need some theory to make things intelligible. It is on the basis of theory, for instance, that I expect dreams to have a meaning. I cannot prove in every case that this is so, for there are dreams which the doctor and the patient simply do not understand. But I have to make such an hypothesis in order to find courage to deal with dreams at all. To say that dreams add something important to our conscious knowledge, and that a dream which fails to do so has not been properly interpreted—that, too, is a theory. But I must make this hypothesis as well in order to explain to myself why I analyse dreams in the first place. All other hypotheses, however, about the function and the structure of dreams are merely rules of thumb and must be subjected to constant modification. In dream-analysis we must never forget, even for a moment, that we move on treacherous ground where nothing is certain but uncertainty. If it were not so paradoxical, one would almost like to call out to the dream interpreter: “Do anything you like, only don’t try to understand!”

[319] When we take up an obscure dream, our first task is not to understand and interpret, but to establish the context with minute care. By this I do *not* mean unlimited “free association” starting from any and every image in the dream, but a careful and conscious illumination of the interconnected associations objectively grouped round particular images. Many patients have first to be educated to this, for they resemble the doctor in their insuperable desire to understand and interpret offhand, especially when they have been primed by ill-digested reading or by a previous analysis that went wrong. They begin by associating in accordance with a theory, that is, they try to understand and interpret, and they nearly always get stuck. Like the doctor, they want to get behind the dream at once in the false belief that the

dream is a mere façade concealing the true meaning. But the so-called façade of most houses is by no means a fake or a deceptive distortion; on the contrary, it follows the plan of the building and often betrays the interior arrangement. The “manifest” dream-picture is the dream itself and contains the whole meaning of the dream. When I find sugar in the urine, it is sugar and not just a façade for albumen. What Freud calls the “dream-façade” is the dream’s obscurity, and this is really only a projection of our own lack of understanding. We say that the dream has a false front only because we fail to see into it. We would do better to say that we are dealing with something like a text that is unintelligible not because it has a façade—a text has no façade—but simply because we cannot read it. We do not have to get behind such a text, but must first learn to read it.

[320] The best way to do this, as I have already remarked, is to establish the context. Free association will get me nowhere, any more than it would help me to decipher a Hittite inscription. It will of course help me to uncover all my own complexes, but for this purpose I have no need of a dream—I could just as well take a public notice or a sentence in a newspaper. Free association will bring out all my complexes, but hardly ever the meaning of a dream. To understand the dream’s meaning I must stick as close as possible to the dream images. When somebody dreams of a “deal table,” it is not enough for him to associate it with his writing-desk which does not happen to be made of deal. Supposing that nothing more occurs to the dreamer, this blocking has an objective meaning, for it indicates that a particular darkness reigns in the immediate neighbourhood of the dream-image, and that is suspicious. We would expect him to have dozens of associations to a deal table, and the fact that there is apparently nothing is itself significant. In such cases I keep on returning to the image, and I usually say to my patient, “Suppose I had no idea what the words ‘deal table’ mean. Describe this object and give me its history in such a way that I cannot fail to understand what sort of a thing it is.”

[321] In this way we manage to establish almost the whole context of the dream-image. When we have done this for all the images in the dream we are ready for the venture of interpretation,

[322] Every interpretation is an hypothesis, an attempt to read an unknown text. An obscure dream, taken in isolation, can hardly ever be interpreted with any certainty. For this reason I attach little importance to the interpretation of single dreams. A relative degree of certainty is reached only in the interpretation of a series of dreams, where the later dreams correct the mistakes we have made in handling those that went before. Also, the basic ideas and themes can be recognized much better in a dream-series, and I therefore urge my patients to keep a careful record of their dreams and of the interpretations given. I also show them how to work out their

dreams in the manner described, so that they can bring the dream and its context with them in writing to the consultation. At a later stage I get them to work out the interpretation as well. In this way the patient learns how to deal correctly with his unconscious without the doctor's help.

[323] Were dreams nothing more than sources of information about factors of aetiological importance, the whole work of dream-interpretation could safely be left to the doctor. Again, if their only use was to provide the doctor with a collection of useful hints and psychological tips, my own procedure would be entirely superfluous. But since, as my examples have shown, dreams contain something more than practical helps for the doctor, dream-analysis deserves very special attention. Sometimes, indeed, it is a matter of life and death. Among many instances of this sort, there is one that has remained particularly impressive. It concerns a colleague of mine, a man somewhat older than myself, whom I used to see from time to time and who always teased me about my dream-interpretations. Well, I met him one day in the street and he called out to me, "How are things going? Still interpreting dreams? By the way, I've had another idiotic dream. Does that mean something too?" This is what he had dreamed: "*I am climbing a high mountain, over steep snow-covered slopes. I climb higher and higher, and it is marvellous weather. The higher I climb the better I feel. I think, 'If only I could go on climbing like this for ever!' When I reach the summit my happiness and elation are so great that I feel I could mount right up into space. And I discover that I can actually do so: I mount upwards on empty air, and awake in sheer ecstasy.*"

[324] After some discussion, I said, "My dear fellow, I know you can't give up mountaineering, but let me implore you not to go alone from now on. When you go, take two guides, and promise on your word of honour to follow them absolutely." "Incorrigible!" he replied, laughing, and waved good-bye. I never saw him again. Two months later the first blow fell. When out alone, he was buried by an avalanche, but was dug out in the nick of time by a military patrol that happened to be passing. Three months afterwards the end came. He went on a climb with a younger friend, but without guides. A guide standing below saw him literally step out into the air while descending a rock face. He fell on the head of his friend, who was waiting lower down, and both were dashed to pieces far below. That was *ecstasis* with a vengeance!²

[325] No amount of scepticism and criticism has yet enabled me to regard dreams as negligible occurrences. Often enough they appear senseless, but it is obviously we who lack the sense and ingenuity to read the enigmatic message from the nocturnal realm of the psyche. Seeing that at least half our psychic existence is passed in that realm, and that consciousness acts upon our nightly life just as much as the

unconscious overshadows our daily life, it would seem all the more incumbent on medical psychology to sharpen its senses by a systematic study of dreams. Nobody doubts the importance of conscious experience; why then should we doubt the significance of unconscious happenings? They also are part of our life, and sometimes more truly a part of it for weal or woe than any happenings of the day.

[326] Since dreams provide information about the hidden inner life and reveal to the patient those components of his personality which, in his daily behaviour, appear merely as neurotic symptoms, it follows that we cannot effectively treat him from the side of consciousness alone, but must bring about a change in and through the unconscious. In the light of our present knowledge this can be achieved only by the thorough and conscious assimilation of unconscious contents.

[327] “Assimilation” in this sense means mutual penetration of conscious and unconscious, and not—as is commonly thought and practised—a one-sided evaluation, interpretation, and deformation of unconscious contents by the conscious mind. As to the value and significance of unconscious contents in general, very mistaken views are current. It is well known that the Freudian school presents the unconscious in a thoroughly negative light, much as it regards primitive man as little better than a monster. Its nursery-tales about the terrible old man of the tribe and its teachings about the “infantile-perverse-criminal” unconscious have led people to make a dangerous ogre out of something perfectly natural. As if all that is good, reasonable, worth while, and beautiful had taken up its abode in the conscious mind! Have the horrors of the World War done nothing to open our eyes, so that we still cannot see that the conscious mind is even more devilish and perverse than the naturalness of the unconscious?

[328] The charge has recently been laid at my door that my teaching about the assimilation of the unconscious would undermine civilization and deliver up our highest values to sheer primitivity. Such an opinion can only be based on the totally erroneous supposition that the unconscious is a monster. It is a view that springs from fear of nature and the realities of life. Freud invented the idea of sublimation to save us from the imaginary claws of the unconscious. But what is real, what actually exists, cannot be alchemically sublimated, and if anything is apparently sublimated it never was what a false interpretation took it to be.

[329] The unconscious is not a demoniacal monster, but a natural entity which, as far as moral sense, aesthetic taste, and intellectual judgment go, is completely neutral. It only becomes dangerous when our conscious attitude to it is hopelessly wrong. To the degree that we repress it, its danger increases. But the moment the patient begins to assimilate contents that were previously unconscious, its danger diminishes. The dissociation of personality, the anxious division of the day-time and the nighttime

sides of the psyche, cease with progressive assimilation. What my critic feared—the overwhelming of the conscious mind by the unconscious—is far more likely to ensue when the unconscious is excluded from life by being repressed, falsely interpreted, and depreciated.

[330] The fundamental mistake regarding the nature of the unconscious is probably this: it is commonly supposed that its contents have only one meaning and are marked with an unalterable plus or minus sign. In my humble opinion, this view is too naïve. The psyche is a self-regulating system that maintains its equilibrium just as the body does. Every process that goes too far immediately and inevitably calls forth compensations, and without these there would be neither a normal metabolism nor a normal psyche. In this sense we can take the theory of compensation as a basic law of psychic behaviour. Too little on one side results in too much on the other. Similarly, the relation between conscious and unconscious is compensatory. This is one of the best-proven rules of dream interpretation. When we set out to interpret a dream, it is always helpful to ask: What conscious attitude does it compensate?

[331] Compensation is not as a rule merely an illusory wishfulfilment, but an actual fact that becomes still more actual the more we repress it. We do not stop feeling thirsty by repressing our thirst. In the same way, the dream-content is to be regarded with due seriousness as an actuality that has to be fitted into the conscious attitude as a codetermining factor. If we fail to do this, we merely persist in that eccentric frame of mind which evoked the unconscious compensation in the first place. It is then difficult to see how we can ever arrive at a sane judgment of ourselves or at a balanced way of living.

[332] If it should occur to anyone to replace the conscious content by an unconscious one—and this is the prospect which my critics find so alarming—he would only succeed in repressing it, and it would then reappear as an unconscious compensation. The unconscious would thus have changed its face completely: it would now be timidly reasonable, in striking contrast to its former tone. It is not generally believed that the unconscious operates in this way, yet such reversals constantly take place and constitute its proper function. That is why every dream is an organ of information and control, and why dreams are our most effective aid in building up the personality.

[333] The unconscious does not harbour in itself any explosive materials unless an overweening or cowardly conscious attitude has secretly laid up stores of explosives there. All the more reason, then, for watching our step.

[334] From all this it should now be clear why I make it an heuristic rule, in interpreting a dream, to ask myself: What conscious attitude does it compensate? By so doing, I relate the dream as closely as possible to the conscious situation; indeed, I would even assert that without knowledge of the conscious situation the dream can

never be interpreted with any degree of certainty. Only in the light of this knowledge is it possible to make out whether the unconscious content carries a plus or a minus sign. The dream is not an isolated event completely cut off from daily life and lacking its character. If it seems so to us, that is only the result of our lack of understanding, a subjective illusion. In reality the relation between the conscious mind and the dream is strictly causal, and they interact in the subtlest of ways.

[335] I should like to show by means of an example how important it is to evaluate the unconscious contents correctly. A young man brought me the following dream: “*My father is driving away from the house in his new car. He drives very clumsily, and I get very annoyed over his apparent stupidity. He goes this way and that, forwards and backwards, and manoeuvres the car into a dangerous position. Finally he runs into a wall and damages the car badly. I shout at him in a perfect fury that he ought to behave himself. My father only laughs, and then I see that he is dead drunk.*” This dream has no foundation in fact. The dreamer is convinced that his father would never behave like that, even when drunk. As a motorist he himself is very careful and extremely moderate in the use of alcohol, especially when he has to drive. Bad driving, and even slight damage to the car, irritate him greatly. His relation to his father is positive. He admires him for being an unusually successful man. We can say, without any great feat of interpretation, that the dream presents a most unfavourable picture of the father. What, then, should we take its meaning to be for the son? Is his relation to his father good only on the surface, and does it really consist in over-compensated resistances? If so, we should have to give the dream-content a positive sign; we should have to tell the young man: “That is your real relation to your father.” But since I could find nothing neurotically ambivalent in the son’s real relation to his father, I had no warrant for upsetting the young man’s feelings with such a destructive pronouncement. To do so would have been a bad therapeutic blunder.

[336] But, if his relation to his father is in fact good, why must the dream manufacture such an improbable story in order to discredit the father? In the dreamer’s unconscious there must be some tendency to produce such a dream. Is that because he has resistances after all, perhaps fed by envy or some other inferior motive? Before we go out of our way to burden his conscience—and with sensitive young people this is always rather a dangerous proceeding—we would do better to inquire not *why* he had this dream, but what its purpose is. The answer in this case would be that his unconscious is obviously trying to take the father down a peg. If we regard this as a compensation, we are forced to the conclusion that his relation to his father is not only good, but actually too good. In fact he deserves the French soubriquet of *fils à papa*. His father is still too much the guarantor of his existence, and the dreamer is still living what I would call a provisional life. His particular danger is that he

cannot see his own reality on account of his father; therefore the unconscious resorts to a kind of artificial blasphemy so as to lower the father and elevate the son. “An immoral business,” we may be tempted to say. An unintelligent father would probably take umbrage, but the compensation is entirely to the point, since it forces the son to contrast himself with his father, which is the only way he could become conscious of himself.

[337] The interpretation just outlined was apparently the correct one, for it struck home. It won the spontaneous assent of the dreamer, and no real values were damaged, either for the father or for the son. But this interpretation was only possible when the whole conscious phenomenology of the father-son relationship had been carefully studied. Without a knowledge of the conscious situation the real meaning of the dream would have remained in doubt.

[338] For dream-contents to be assimilated, it is of overriding importance that no real values of the conscious personality should be damaged, much less destroyed, otherwise there is no one left to do the assimilating. The recognition of the unconscious is not a Bolshevik experiment which puts the lowest on top and thus re-establishes the very situation it intended to correct. We must see to it that the values of the conscious personality remain intact, for unconscious compensation is only effective when it co-operates with an integral consciousness. Assimilation is never a question of “this *or* that,” but always of “this *and* that.”

[339] Just as the interpretation of dreams requires exact knowledge of the conscious status quo, so the treatment of dream symbolism demands that we take into account the dreamer’s philosophical, religious, and moral convictions. It is far wiser in practice not to regard dream-symbols semiotically, i.e., as signs or symptoms of a fixed character, but as true symbols, i.e., as expressions of a content not yet consciously recognized or conceptually formulated. In addition, they must be considered in relation to the dreamer’s immediate state of consciousness. I say that this procedure is advisable *in practice* because in theory relatively fixed symbols do exist whose meaning must on no account be referred to anything known and formulable as a concept. If there were no such relatively fixed symbols it would be impossible to determine the structure of the unconscious, for there would be nothing that could in any way be laid hold of or described.

[340] It may seem strange that I should attribute an as it were indefinite content to these relatively fixed symbols. Yet if their content were not indefinite, they would not be symbols at all, but signs or symptoms. We all know how the Freudian school operates with hard-and-fast sexual “symbols”—which in this case I would call “signs”—and endows them with an apparently definitive content, namely sexuality. Unfortunately Freud’s idea of sexuality is incredibly elastic and so vague that it can be made to

include almost anything. The word sounds familiar enough, but what it denotes is no more than an indeterminable x that ranges from the physiological activity of the glands at one extreme to the sublime reaches of the spirit at the other. Instead of yielding to a dogmatic conviction based on the illusion that we know something because we have a familiar word for it, I prefer to regard the symbol as an unknown quantity, hard to recognize and, in the last resort, never quite determinable. Take, for instance, the so-called phallic symbols which are supposed to stand for the *membrum virile* and nothing more, Psychologically speaking, the *membrum* is itself—as Kranefeldt points out in a recent work³—an emblem of something whose wider content is not at all easy to determine. But primitive people, who, like the ancients, make the freest use of phallic symbols, would never dream of confusing the phallus, as a ritualistic symbol, with the penis. The phallus always means the creative mana, the power of healing and fertility, the “extraordinarily potent,” to use Lehmann’s expression, whose equivalents in mythology and in dreams are the bull, the ass, the pomegranate, the yoni, the he-goat, the lightning, the horse’s hoof, the dance, the magical cohabitation in the furrow, and the menstrual fluid, to mention only a few of the thousand other analogies. That which underlies all the analogies, and sexuality itself, is an archetypal image whose character is hard to define, but whose nearest psychological equivalent is perhaps the primitive mana-symbol.

[341] All these symbols are relatively fixed, but in no single case can we have the *a priori* certainty that in practice the symbol must be interpreted in that way.

[342] Practical necessity may call for something quite different. Of course, if we had to give an exhaustive scientific interpretation of a dream, in accordance with a theory, we should have to refer every such symbol to an archetype. But in practice that can be a positive mistake, for the patient’s psychological state at the moment may require anything but a digression into dream theory. It is therefore advisable to consider first and foremost the meaning of the symbol in relation to the conscious situation—in other words, to treat the symbol as if it were not fixed. This is as much as to say that we must renounce all preconceived opinions, however knowing they make us feel, and try to discover what things mean for the patient. In so doing, we shall obviously not get very far towards a theoretical interpretation; indeed we shall probably get stuck at the very beginning. But if the practitioner operates too much with fixed symbols, there is a danger of his falling into mere routine and pernicious dogmatism, and thus failing his patient. Unfortunately I must refrain from illustrating this point, for I should have to go into greater detail than space here permits. Moreover I have published sufficient material elsewhere in support of my statements.

[343] It frequently happens at the very beginning of the treatment that a dream will reveal to the doctor, in broad perspective, the whole programme of the unconscious.

But for practical reasons it may be quite impossible to make clear to the patient the deeper meaning of the dream. In this respect, too, we are limited by practical considerations. Such insight is rendered possible by the doctor's knowledge of relatively fixed symbols. It can be of the greatest value in diagnosis as well as in prognosis. I was once consulted about a seventeen-year-old girl. One specialist had conjectured that she might be in the first stages of progressive muscular atrophy, while another thought that it was a case of hysteria. In view of the second opinion, I was called in. The clinical picture made me suspect an organic disease, but there were signs of hysteria as well. I asked for dreams. The patient answered at once: "Yes, I have terrible dreams. Only recently I dreamt *I was coming home at night. Everything is as quiet as death. The door into the living-room is half open, and I see my mother hanging from the chandelier, swinging to and fro in the cold wind that blows in through the open windows.* Another time I dreamt that *a terrible noise broke out in the house at night. I get up and discover that a frightened horse is tearing through the rooms. At last it finds the door into the hall, and jumps through the hall window from the fourth floor into the street below. I was terrified when I saw it lying there, all mangled.*"

[344] The gruesome character of the dreams is alone sufficient to make one pause. All the same, other people have anxiety dreams now and then. We must therefore look more closely into the meaning of the two main symbols, "mother" and "horse." They must be equivalents, for they both do the same thing: they commit suicide. "Mother" is an archetype and refers to the place of origin, to nature, to that which passively creates, hence to substance and matter, to materiality, the womb, the vegetative functions. It also means the unconscious, our natural and instinctive life, the physiological realm, the body in which we dwell or are contained; for the "mother" is also the matrix, the hollow form, the vessel that carries and nourishes, and it thus stands psychologically for the foundations of consciousness. Being inside or contained in something also suggests darkness, something nocturnal and fearful, hemming one in. These allusions give the idea of the mother in many of its mythological and etymological variants; they also represent an important part of the Yin idea in Chinese philosophy. This is no individual acquisition of a seventeen-year-old girl; it is a collective inheritance, alive and recorded in language, inherited along with the structure of the psyche and therefore to be found at all times and among all peoples.

[345] The word "mother," which sounds so familiar, apparently refers to the best-known, the individual mother—to "my mother." But the mother-symbol points to a darker background which eludes conceptual formulation and can only be vaguely apprehended as the hidden, nature-bound life of the body. Yet even this is too narrow and excludes too many vital subsidiary meanings. The underlying, primary psychic

reality is so inconceivably complex that it can be grasped only at the farthest reach of intuition, and then but very dimly. That is why it needs symbols.

[346] If we apply our findings to the dream, its interpretation will be: The unconscious life is destroying itself. That is the dream's message to the conscious mind of the dreamer and to anybody who has ears to hear.

[347] "Horse" is an archetype that is widely current in mythology and folklore. As an animal it represents the non-human psyche, the subhuman, animal side, the unconscious. That is why horses in folklore sometimes see visions, hear voices, and speak. As a beast of burden it is closely related to the mother-archetype (witness the Valkyries that bear the dead hero to Valhalla, the Trojan horse, etc.). As an animal lower than man it represents the lower part of the body and the animal impulses that rise from there. The horse is dynamic and vehicular power: it carries one away like a surge of instinct. It is subject to panics like all instinctive creatures who lack higher consciousness. Also it has to do with sorcery and magical spells—especially the black night-horses which herald death.

[348] It is evident, then, that "horse" is an equivalent of "mother" with a slight shift of meaning. The mother stands for life at its origin, the horse for the merely animal life of the body. If we apply this meaning to the text of our dream, its interpretation will be: The animal life is destroying itself.

[349] The two dreams make nearly identical statements, but, as is usually the case, the second is the more specific. Note the peculiar subtlety of the dream: there is no mention of the death of the individual. It is notorious that one often dreams of one's own death, but that is no serious matter. When it is really a question of death, the dream speaks another language.

[350] Both dreams point to a grave organic disease with a fatal outcome. This prognosis was soon confirmed.

[351] As for the relatively fixed symbols, this example gives a fair idea of their general nature. There are a great many of them, and all are individually marked by subtle shifts of meaning. It is only through comparative studies in mythology, folklore, religion, and philology that we can evaluate their nature scientifically. The evolutionary stratification of the psyche is more clearly discernible in the dream than in the conscious mind. In the dream, the psyche speaks in images, and gives expression to instincts, which derive from the most primitive levels of nature. Therefore, through the assimilation of unconscious contents, the momentary life of consciousness can once more be brought into harmony with the law of nature from which it all too easily departs, and the patient can be led back to the natural law of his own being.

[352] I have not been able, in so short a space, to deal with anything but the elements of the subject. I could not put together before your eyes, stone by stone, the edifice that is reared in every analysis from the materials of the unconscious and finally reaches completion in the restoration of the total personality. The way of successive assimilations goes far beyond the curative results that specifically concern the doctor. It leads in the end to that distant goal which may perhaps have been the first urge to life: the complete actualization of the whole human being, that is, individuation. We physicians may well be the first conscious observers of this dark process of nature. As a rule we see only the pathological phase of development, and we lose sight of the patient as soon as he is cured. Yet it is only after the cure that we would really be in a position to study the normal process, which may extend over years and decades. Had we but a little knowledge of the ends toward which the unconscious development is tending, and were the doctor's psychological insight not drawn exclusively from the pathological phase, we should have a less confused idea of the processes mediated to the conscious mind by dreams and a clearer recognition of what the symbols point to. In my opinion, every doctor should understand that every procedure in psychotherapy, and particularly the analytical procedure, breaks into a purposeful and continuous process of development, now at this point and now at that, and thus singles out separate phases which seem to follow opposing courses. Each individual analysis by itself shows only one part or one aspect of the deeper process, and for this reason nothing but hopeless confusion can result from comparative case histories. For this reason, too, I have preferred to confine myself to the rudiments of the subject and to practical considerations; for only in closest *contact* with the everyday facts can we come to anything like a satisfactory understanding.

III

THE PSYCHOLOGY OF THE TRANSFERENCE¹

INTERPRETED IN CONJUNCTION WITH A SET OF ALCHEMICAL PICTURES

Quaero non pono, nihil hic determino dictans Coniicio, conor, confero, tento, rogo....

(I inquire, I do not assert; I do not here determine anything with final assurance; I conjecture, try, compare, attempt, ask....)

—Motto to Christian Knorr von Rosenroth,

Adumbratio Kabbalae Christianae

TO MY WIFE

FOREWORD

Everyone who has had practical experience of psychotherapy knows that the process which Freud called “transference” often presents a difficult problem. It is probably no exaggeration to say that almost all cases requiring lengthy treatment gravitate round the phenomenon of transference, and that the success or failure of the treatment appears to be bound up with it in a very fundamental way. Psychology, therefore, cannot very well overlook or avoid this problem, nor should the psychotherapist pretend that the so-called “resolution of the transference” is just a matter of course. We meet with a similar optimism in the treatment of “sublimation,” a process closely connected with the transference. In discussing these phenomena, people often talk as though they could be dealt with by reason, or by intelligence and will, or could be remedied by the ingenuity and art of a doctor armed with superior technique. This euphemistic and propitiatory approach is useful enough when the situation is not exactly simple and no easy results are to be had; but it has the disadvantage of disguising the difficulty of the problem and thus preventing or postponing deeper investigation. Although I originally agreed with Freud that the importance of the transference could hardly be overestimated, increasing experience has forced me to realize that its importance is relative. The transference is like those medicines which are a panacea for one and pure poison for another. In one case its appearance denotes a change for the better, in another it is a hindrance and an aggravation, if not a change for the worse, and in a third it is relatively unimportant. Generally speaking, however, it is a critical phenomenon of varying shades of meaning and its absence is as significant as its presence.

In this book I am concerned with the “classical” form of transference and its phenomenology. As it is a form of relationship, it always implies a vis-à-vis. Where it is negative or not there at all, the vis-à-vis plays an unimportant part, as is generally the case, for instance, when there is an inferiority complex coupled with a compensating need for self-assertion.²

*It may seem strange to the reader that, in order to throw light on the transference, I should turn to something so apparently remote as alchemical symbolism. But anyone who has read my book *Psychology and Alchemy* will know what close connections exist between alchemy and those phenomena which must, for practical reasons, be considered in the psychology of the unconscious. Consequently he will not be surprised to learn that this phenomenon, shown by experience to be so frequent and so important, also has its place in the symbolism and imagery of alchemy. Such images are not likely*

to be conscious representations of the transference relationship; rather, they unconsciously take that relationship for granted, and for this reason we may use them as an Ariadne thread to guide us in our argument.

The reader will not find an account of the clinical phenomena of transference in this book. It is not intended for the beginner who would first have to be instructed in such matters, but is addressed exclusively to those who have already gained sufficient experience from their own practice. My object is to provide some kind of orientation in this newly discovered and still unexplored territory, and to acquaint the reader with some of its problems. In view of the great difficulties that beset our understanding here, I would like to stress the provisional character of my investigation. I have tried to put together my observations and ideas, and I recommend them to the reader's consideration in the hope of directing his attention to certain points of view whose importance has forced itself upon me in the course of time. I am afraid that my description will not be easy reading for those who do not possess some knowledge of my earlier works. I have therefore indicated in the footnotes those of my writings which might be of assistance.

The reader who approaches this book more or less unprepared will perhaps be astonished at the amount of historical material I bring to bear on my investigation. The reason and inner necessity for this lie in the fact that it is only possible to come to a right understanding and appreciation of a contemporary psychological problem when we can reach a point outside our own time from which to observe it. This point can only be some past epoch that was concerned with the same problems, although under different conditions and in other forms. The comparative analysis thus made possible naturally demands a correspondingly detailed account of the historical aspects of the situation. These could be described much more succinctly if we were dealing with well-known material, where a few references and hints would suffice. But unfortunately that is not the case, since the psychology of alchemy here under review is almost virgin territory. I must therefore take it for granted that the reader has some knowledge of my *Psychology and Alchemy*, otherwise it will be hard for him to gain access to the present volume. The reader whose professional and personal experience has sufficiently acquainted him with the scope of the transference problem will forgive me this expectation.

Although the present study can stand on its own, it forms at the same time an introduction to a more comprehensive account of the problem of opposites in alchemy, and of their phenomenology and synthesis, which will appear later under the title *Mysterium Coniunctionis*. I would like to express my thanks here to all those who read my manuscript and drew attention to defects. My particular thanks are due to Dr Marie-Louise von Franz for her generous help.

Autumn, 1945

INTRODUCTION

Bellica pax, vulnus dulce, suave malum.

(A warring peace, a sweet wound, a mild evil.)

—JOHN GOWER, *Confessio amantis*, II, p. 35

1

[353] The fact that the idea of the mystic marriage plays such an important part in alchemy is not so surprising when we remember that the term most frequently employed for it, *coniunctio*, referred in the first place to what we now call chemical combination, and that the substances or “bodies” to be combined were drawn together by what we would call affinity. In days gone by, people used a variety of terms which all expressed a human, and more particularly an erotic, relationship, such as *nuptiae*, *matrimonium*, *coniugium*, *amicitia*, *attractio*, *adulatio*. Accordingly the bodies to be combined were thought of as *agens et patiens*, as *vir* or *masculus*, and as *femina*, *mulier*, *femineus*; or they were described more picturesquely as dog and bitch,¹ horse (stallion) and donkey,² cock and hen,³ and as the winged and wingless dragon.⁴ The more anthropomorphic and theriomorphic the terms become, the more obvious is the part played by creative fantasy and thus by the unconscious, and the more we see how the natural philosophers of old were tempted, as their thoughts explored the dark, unknown qualities of matter, to slip away from a strictly chemical investigation and to fall under the spell of the “myth of matter.” Since there can never be absolute freedom from prejudice, even the most objective and impartial investigator is liable to become the victim of some unconscious assumption upon entering a region where the darkness has never been illuminated and where he can recognize nothing. This need not necessarily be a misfortune, since the idea which then presents itself as a substitute for the unknown will take the form of an archaic though not inapposite analogy. Thus Kekulé’s vision of the dancing couples,⁵ which first put him on the track of the structure of certain carbon compounds, namely the benzene ring, was surely a vision of the *coniunctio*, the mating that had preoccupied the minds of the alchemists for seventeen centuries. It was precisely this image that had always lured the mind of the investigator away from the problem of chemistry and back to the ancient myth of the royal or divine marriage; but in Kekulé’s vision it reached its chemical goal in the end, thus rendering the greatest imaginable service both to our understanding of organic compounds and to the subsequent

unprecedented advances in synthetic chemistry. Looking back, we can say that the alchemists had keen noses when they made this *arcanum arcanorum*,⁶ this *donum Dei et secretum altissimi*,⁷ this inmost mystery of the art of gold-making, the climax of their work. The subsequent confirmation of the other idea central to gold-making—the transmutability of chemical elements—also takes a worthy place in this belated triumph of alchemical thought. Considering the eminently practical and theoretical importance of these two key ideas, we might well conclude that they were intuitive anticipations whose fascination can be explained in the light of later developments.⁸

[354] We find, however, that alchemy did not merely change into chemistry by gradually discovering how to break away from its mythological premises, but that it also became, or had always been, a kind of mystic philosophy. The idea of the *coniunctio* served on the one hand to shed light on the mystery of chemical combination, while on the other it became the symbol of the *unio mystica*, since, as a mythologem, it expresses the archetype of the union of opposites. Now the archetypes do not represent anything external, non-psychic, although they do of course owe the concreteness of their imagery to impressions received from without. Rather, independently of, and sometimes in direct contrast to, the outward forms they may take, they represent the life and essence of a non-individual psyche. Although this psyche is innate in every individual it can neither be modified nor possessed by him personally. It is the same in the individual as it is in the crowd and ultimately in everybody. It is the precondition of each individual psyche, just as the sea is the carrier of the individual wave.

[355] The alchemical image of the *coniunctio*, whose practical importance was proved at a later stage of development, is equally valuable from the psychological point of view: that is to say, it plays the same role in the exploration of the darkness of the psyche as it played in the investigation of the riddle of matter. Indeed, it could never have worked so effectively in the material world had it not already possessed the power to fascinate and thus to fix the attention of the investigator along those lines. The *coniunctio* is an *a priori* image that occupies a prominent place in the history of man's mental development. If we trace this idea back we find it has two sources in alchemy, one Christian, the other pagan. The Christian source is unmistakably the doctrine of Christ and the Church, *sponsus* and *sponsa*, where Christ takes the role of Sol and the Church that of Luna.⁹ The pagan source is on the one hand the hierosgamos,¹⁰ on the other the marital union of the mystic with God.¹¹ These psychic experiences and the traces they have left behind in tradition explain much that would otherwise be totally unintelligible in the strange world of alchemy and its secret language.

[356] As we have said, the image of the *coniunctio* has always occupied an important place in the history of the human mind. Recent developments in medical psychology have, through observation of the mental processes in neuroses and psychoses, forced us to become more and more thorough in our investigation of the psychic background, commonly called the unconscious. It is psychotherapy above all that makes such investigations necessary, because it can no longer be denied that morbid disturbances of the psyche are not to be explained exclusively by the changes going on in the body or in the conscious mind; we must adduce a third factor by way of explanation, namely hypothetical unconscious processes.¹²

[357] Practical analysis has shown that unconscious contents are invariably projected at first upon concrete persons and situations. Many projections can ultimately be integrated back into the individual once he has recognized their subjective origin; others resist integration, and although they may be detached from their original objects, they thereupon transfer themselves to the doctor. Among these contents the relation to the parent of opposite sex plays a particularly important part, i.e., the relation of son to mother, daughter to father, and also that of brother to sister.¹³ As a rule this complex cannot be integrated completely, since the doctor is nearly always put in the place of the father, the brother, and even (though naturally more rarely) the mother. Experience has shown that this projection persists with all its original intensity (which Freud regarded as aetiological), thus creating a bond that corresponds in every respect to the initial infantile relationship, with a tendency to recapitulate all the experiences of childhood on the doctor. In other words, the neurotic maladjustment of the patient is now *transferred* to him.¹⁴ Freud, who was the first to recognize and describe this phenomenon, coined the term “transference neurosis.”¹⁵

[358] This bond is often of such intensity that we could almost speak of a “combination.” When two chemical substances combine, both are altered. This is precisely what happens in the transference. Freud rightly recognized that this bond is of the greatest therapeutic importance in that it gives rise to a *mixtum compositum* of the doctor’s own mental health and the patient’s maladjustment. In Freudian technique the doctor tries to ward off the transference as much as possible—which is understandable enough from the human point of view, though in certain cases it may considerably impair the therapeutic effect. It is inevitable that the doctor should be influenced to a certain extent and even that his nervous health should suffer.¹⁶ He quite literally “takes over” the sufferings of his patient and shares them with him. For this reason he runs a risk—and must run it in the nature of things.¹⁷ The enormous importance that Freud attached to the transference phenomenon became clear to me at our first personal meeting in 1907. After a conversation lasting many hours there came a pause. Suddenly he asked me out of the blue, “And what do you think about

the transference?” I replied with the deepest conviction that it was the alpha and omega of the analytical method, whereupon he said, “Then you have grasped the main thing.”

[359] The great importance of the transference has often led to the mistaken idea that it is absolutely indispensable for a cure, that it must be demanded from the patient, so to speak. But a thing like that can no more be demanded than faith, which is only valuable when it is spontaneous. Enforced faith is nothing but spiritual cramp. Anyone who thinks that he must “demand” a transference is forgetting that this is only one of the therapeutic factors, and that the very word “transference” is closely akin to “projection”—a phenomenon that cannot possibly be demanded.¹⁸ I personally am always glad when there is only a mild transference or when it is practically unnoticeable. Far less claim is then made upon one as a person, and one can be satisfied with other therapeutically effective factors. Among these the patient’s own insight plays an important part, also his goodwill, the doctor’s authority, suggestion,¹⁹ good advice,²⁰ understanding, sympathy, encouragement, etc. Naturally the more serious cases do not come into this category.

[360] Careful analysis of the transference phenomenon yields an extremely complicated picture with such startlingly pronounced features that we are often tempted to pick out one of them as the most important and then exclaim by way of explanation: “Of course, it’s nothing but...!” I am referring chiefly to the erotic or sexual aspect of transference fantasies. The existence of this aspect is undeniable, but it is not always the only one and not always the essential one. Another is the will to power (described by Adler), which proves to be coexistent with sexuality, and it is often very difficult to make out which of the two predominates. These two aspects alone offer sufficient grounds for a paralysing conflict.

[361] There are, however, other forms of instinctive *concupiscentia* that come more from “hunger,” from wanting to possess; others again are based on the instinctive negation of desire, so that life seems to be founded on fear or self-destruction. A certain *abaissement du niveau mental*, i.e., a weakness in the hierarchical order of the ego, is enough to set these instinctive urges and desires in motion and bring about a dissociation of personality—in other words, a multiplication of its centres of gravity. (In schizophrenia there is an actual fragmentation of personality.) These dynamic components must be regarded as real or symptomatic, vitally decisive or merely syndromal, according to the degree of their predominance. Although the strongest instincts undoubtedly demand concrete realization and generally enforce it, they cannot be considered exclusively biological since the course they actually follow is subject to powerful modifications coming from the personality itself. If a man’s temperament inclines him to a spiritual attitude, even the concrete activity of the

instincts will take on a certain symbolical character. This activity is no longer the mere satisfaction of instinctual impulses, for it is now associated with or complicated by “meanings.” In the case of purely syndromal instinctive processes, which do not demand concrete realization to the same extent, the symbolical character of their fulfilment is all the more marked. The most vivid examples of these complications are probably to be found in erotic phenomenology. Four stages of eroticism were known in the late classical period: Hawwah (Eve), Helen (of Troy), the Virgin Mary, and Sophia. The series is repeated in Goethe’s *Faust*: in the figures of Gretchen as the personification of a purely instinctual relationship (Eve); Helen as an anima figure;²¹ Mary as the personification of the “heavenly,” i.e., Christian or religious, relationship; and the “eternal feminine” as an expression of the alchemical *Sapientia*. As the nomenclature shows, we are dealing with the heterosexual Eros or anima-figure in four stages, and consequently with four stages of the Eros cult. The first stage—Hawwah, Eve, earth—is purely biological; woman is equated with the mother and only represents something to be fertilized. The second stage is still dominated by the sexual Eros, but on an aesthetic and romantic level where woman has already acquired some value as an individual. The third stage raises Eros to the heights of religious devotion and thus spiritualizes him: Hawwah has been replaced by spiritual motherhood. Finally, the fourth stage illustrates something which unexpectedly goes beyond the almost unsurpassable third stage: *Sapientia*. How can wisdom transcend the most holy and the most pure?—Presumably only by virtue of the truth that the less sometimes means the more. This stage represents a spiritualization of Helen and consequently of Eros as such. That is why *Sapientia* was regarded as a parallel to the Shulamite in the Song of Songs.

[362] Not only are there different instincts which cannot forcibly be reduced to one another, there are also different levels on which they move. In view of this far from simple situation, it is small wonder that the transference—also an instinctive process, in part—is very difficult to interpret and evaluate. The instincts and their specific fantasy-contents are partly concrete, partly symbolical (i.e., “unreal”), sometimes one, sometimes the other, and they have the same paradoxical character when they are projected. The transference is far from being a simple phenomenon with only one meaning, and we can never make out beforehand what it is all about. The same applies to its specific content, commonly called incest. We know that it is possible to interpret the fantasy-contents of the instincts either as *signs*, as self-portraits of the instincts, i.e., reductively; or as *symbols*, as the spiritual meaning of the natural instinct. In the former case the instinctive process is taken to be “real” and in the latter “unreal.”

[363] In any particular case it is often almost impossible to say what is “spirit” and what is “instinct.” Together they form an impenetrable mass, a veritable magma

sprung from the depths of primeval chaos. When one meets such contents one immediately understands why the psychic equilibrium of the neurotic is disturbed, and why the whole psychic system is broken up in schizophrenia. They emit a fascination which not only grips—and has already gripped—the patient, but can also have an inductive effect on the unconscious of the impartial spectator, in this case the doctor. The burden of these unconscious and chaotic contents lies heavy on the patient; for, although they are present in everybody, it is only in him that they have become active, and they isolate him in a spiritual loneliness which neither he nor anybody else can understand and which is bound to be misinterpreted. Unfortunately, if we do not feel our way into the situation and approach it purely from the outside, it is only too easy to dismiss it with a light word or to push it in the wrong direction. This is what the patient has long been doing on his own account, giving the doctor every opportunity for misinterpretation. At first the secret seems to lie with his parents, but when this tie has been loosed and the projection withdrawn, the whole weight falls upon the doctor, who is faced with the question: “What are *you* going to do about the transference?”

[364] The doctor, by voluntarily and consciously taking over the psychic sufferings of the patient, exposes himself to the overpowering contents of the unconscious and hence also to their inductive action. The case begins to “fascinate” him. Here again it is easy to explain this in terms of personal likes and dislikes, but one overlooks the fact that this would be an instance of *ignotum per ignotius*. In reality these personal feelings, if they exist at all in any decisive degree, are governed by those same unconscious contents which have become activated. An unconscious tie is established and now, in the patient’s fantasies, it assumes all the forms and dimensions so profusely described in the literature. The patient, by bringing an activated unconscious content to bear upon the doctor, constellates the corresponding unconscious material in him, owing to the inductive effect which always emanates from projections in greater or lesser degree. Doctor and patient thus find themselves in a relationship founded on mutual unconsciousness.

[365] It is none too easy for the doctor to make himself aware of this fact. One is naturally loath to admit that one could be affected in the most personal way by just any patient. But the more unconsciously this happens, the more the doctor will be tempted to adopt an “apotropaic” attitude, and the *persona medici* he hides behind is, or rather seems to be, an admirable instrument for this purpose. Inseparable from the *persona* is the doctor’s routine and his trick of knowing everything beforehand, which is one of the favourite props of the well-versed practitioner and of all infallible authority. Yet this lack of insight is an ill counsellor, for the unconscious infection brings with it the therapeutic possibility—which should not be underestimated—of the illness being transferred to the doctor. We must suppose as a matter of course that

the doctor is the better able to make the constellated contents conscious, otherwise it would only lead to mutual imprisonment in the same state of unconsciousness. The greatest difficulty here is that contents are often activated in the doctor which might normally remain latent. He might perhaps be so normal as not to need any such unconscious standpoints to compensate his conscious situation. At least this is often how it looks, though whether it is so in a deeper sense is an open question. Presumably he had good reasons for choosing the profession of psychiatrist and for being particularly interested in the treatment of the psychoneuroses; and he cannot very well do that without gaining some insight into his own unconscious processes. Nor can his concern with the unconscious be explained entirely by a free choice of interests, but rather by a fateful disposition which originally inclined him to the medical profession. The more one sees of human fate and the more one examines its secret springs of action, the more one is impressed by the strength of unconscious motives and by the limitations of free choice. The doctor knows—or at least he should know—that he did not choose this career by chance; and the psychotherapist in particular should clearly understand that psychic infections, however superfluous they seem to him, are in fact the predestined concomitants of his work, and thus fully in accord with the instinctive disposition of his own life. This realization also gives him the right attitude to his patient. The patient then means something to him personally, and this provides the most favourable basis for treatment.

3

[366] In the old pre-analytical psychotherapy, going right back to the doctors of the Romantic Age, the transference was already defined as “rapport.” It forms the basis of therapeutic influence once the patient’s initial projections are dissolved. During this work it becomes clear that the projections can also obscure the judgment of the doctor—to a lesser extent, of course, for otherwise all therapy would be impossible. Although we may justifiably expect the doctor at the very least to be acquainted with the effects of the unconscious on his own person, and may therefore demand that anybody who intends to practise psychotherapy should first submit to a training analysis, yet even the best preparation will not suffice to teach him everything about the unconscious. A complete “emptying” of the unconscious is out of the question, if only because its creative powers are continually producing new formations. Consciousness, no matter how extensive it may be, must always remain the smaller circle within the greater circle of the unconscious, an island surrounded by the sea; and, like the sea itself, the unconscious yields an endless and self-replenishing abundance of living creatures, a wealth beyond our fathoming. We may long have known the meaning, effects, and characteristics of unconscious contents without ever having fathomed their depths and potentialities, for they are capable of infinite variation and can never be depotentiated. The only way to get at them in practice is to

try to attain a conscious attitude which allows the unconscious to co-operate instead of being driven into opposition.

[367] Even the most experienced psychotherapist will discover again and again that he is caught up in a bond, a combination resting on mutual unconsciousness. And though he may believe himself to be in possession of all the necessary knowledge concerning the constellated archetypes, he will in the end come to realize that there are very many things indeed of which his academic knowledge never dreamed. Each new case that requires thorough treatment is pioneer work, and every trace of routine then proves to be a blind alley. Consequently the higher psychotherapy is a most exacting business and sometimes it sets tasks which challenge not only our understanding or our sympathy, but the whole man. The doctor is inclined to demand this total effort from his patient, yet he must realize that this same demand only works if he is aware that it applies also to himself.

[368] I said earlier that the contents which enter into the transference were as a rule originally projected upon the parents or other members of the family. Owing to the fact that these contents seldom or never lack an erotic aspect or are genuinely sexual in substance (apart from the other factors already mentioned), an incestuous character does undoubtedly attach to them, and this has given rise to the Freudian theory of incest. Their exogamous transference to the doctor does not alter the situation. He is merely drawn into the peculiar atmosphere of family incest through the projection. This necessarily leads to an unreal intimacy which is highly distressing to both doctor and patient and arouses resistance and doubt on both sides. The violent repudiation of Freud's original discoveries gets us nowhere, for we are dealing with an empirically demonstrable fact which meets with such universal confirmation that only the ignorant still try to oppose it. But the interpretation of this fact is, in the very nature of the case, highly controversial. Is it a genuine incestuous instinct or a pathological variation? Or is the incest one of the "arrangements" (Adler) of the will to power? Or is it regression of normal libido²² to the infantile level, from fear of an apparently impossible task in life?²³ Or is all incest-fantasy purely symbolical, and thus a reactivation of the incest archetype, which plays such an important part in the history of the human mind?

[369] For all these widely differing interpretations we can marshal more or less satisfactory arguments. The view which probably causes most offence is that incest is a genuine instinct. But, considering the almost universal prevalence of the incest taboo, we may legitimately remark that a thing which is not liked and desired generally requires no prohibition. In my opinion, each of these interpretations is justified up to a point, because all the corresponding shades of meaning are present in individual cases, though with varying intensity. Sometimes one aspect predominates

and sometimes another. I am far from asserting that the above list could not be supplemented further.

[370] In practice, however, it is of the utmost importance how the incestuous aspect is interpreted. The explanation will vary according to the nature of the case, the stage of treatment, the perspicacity of the patient, and the maturity of his judgment.

[371] The existence of the incest element involves not only an intellectual difficulty but, worst of all, an emotional complication of the therapeutic situation. It is the hiding place for all the most secret, painful, intense, delicate, shamefaced, timorous, grotesque, unmoral, and at the same time the most sacred feelings which go to make up the indescribable and inexplicable wealth of human relationships and give them their compelling power. Like the tentacles of an octopus they twine themselves invisibly round parents and children and, through the transference, round doctor and patient. This binding force shows itself in the irresistible strength and obstinacy of the neurotic symptom and in the patient's desperate clinging to the world of infancy or to the doctor. The word "possession" describes this state in a way that could hardly be bettered.

[372] The remarkable effects produced by unconscious contents allow us to infer something about their energy. All unconscious contents, once they are activated—i.e., have made themselves felt—possess as it were a specific energy which enables them to manifest themselves everywhere (like the incest motif, for instance). But this energy is normally not sufficient to thrust the content into consciousness. For that there must be a certain predisposition on the part of the conscious mind, namely a deficit in the form of loss of energy. The energy so lost raises the psychic potency of certain compensating contents in the unconscious. The *abaissement du niveau mental*, the energy lost to consciousness, is a phenomenon which shows itself most drastically in the "loss of soul" among primitive peoples, who also have interesting psychotherapeutic methods for recapturing the soul that has gone astray. This is not the place to go into these matters in detail, so a bare mention must suffice.²⁴ Similar phenomena can be observed in civilized man. He too is liable to a sudden loss of initiative for no apparent reason. The discovery of the real reason is no easy task and generally leads to a somewhat ticklish discussion of things lying in the background. Carelessness of all kinds, neglected duties, tasks postponed, wilful outbursts of defiance, and so on, all these can dam up his vitality to such an extent that certain quanta of energy, no longer finding a conscious outlet, stream off into the unconscious, where they activate other, compensating contents, which in turn begin to exert a compulsive influence on the conscious mind. (Hence the very common combination of extreme neglect of duty and a compulsion neurosis.)

[373] This is one way in which loss of energy may come about. The other way causes loss not through a malfunctioning of the conscious mind but through a “spontaneous” activation of unconscious contents, which react secondarily upon consciousness. There are moments in human life when a new page is turned. New interests and tendencies appear which have hitherto received no attention, or there is a sudden change of personality (a so-called mutation of character). During the incubation period of such a change we can often observe a loss of conscious energy: the new development has drawn off the energy it needs from consciousness. This lowering of energy can be seen most clearly before the onset of certain psychoses and also in the empty stillness which precedes creative work.²⁵

[374] The remarkable potency of unconscious contents, therefore, always indicates a corresponding weakness in the conscious mind and its functions. It is as though the latter were threatened with impotence. For primitive man this danger is one of the most terrifying instances of “magic.” So we can understand why this secret fear is also to be found among civilized people. In serious cases it is the secret fear of going mad; in less serious, the fear of the unconscious—a fear which even the normal person exhibits in his resistance to psychological views and explanations. This resistance borders on the grotesque when it comes to scouting all psychological explanations of art, philosophy, and religion, as though the human psyche had, or should have, absolutely nothing to do with these things. The doctor knows these well-defended zones from his consulting hours: they are reminiscent of island fortresses from which the neurotic tries to ward off the octopus. (“Happy neurosis island,” as one of my patients called his conscious state!) The doctor is well aware that the patient needs an island and would be lost without it. It serves as a refuge for his consciousness and as the last stronghold against the threatening embrace of the unconscious. The same is true of the normal person’s taboo regions which psychology must not touch. But since no war was ever won on the defensive, one must, in order to terminate hostilities, open negotiations with the enemy and see what his terms really are. Such is the intention of the doctor who volunteers to act as a mediator. He is far from wishing to disturb the somewhat precarious island idyll or pull down the fortifications. On the contrary, he is thankful that somewhere a firm foothold exists that does not first have to be fished up out of the chaos, always a desperately difficult task. He knows that the island is a bit cramped and that life on it is pretty meagre and plagued with all sorts of imaginary wants because too much life has been left outside, and that as a result a terrifying monster is created, or rather is roused out of its slumbers. He also knows that this seemingly alarming animal stands in a secret compensatory relationship to the island and could supply everything that the island lacks.

[375] The transference, however, alters the psychological stature of the doctor, though this is at first imperceptible to him. He too becomes affected, and has as much difficulty in distinguishing between the patient and what has taken possession of him as has the patient himself. This leads both of them to a direct confrontation with the daemonic forces lurking in the darkness. The resultant paradoxical blend of positive and negative, of trust and fear, of hope and doubt, of attraction and repulsion, is characteristic of the initial relationship. It is the *veíkos kai ψιλία* (hate and love) of the elements, which the alchemists likened to the primeval chaos. The activated unconscious appears as a flurry of unleashed opposites and calls forth the attempt to reconcile them, so that, in the words of the alchemists, the great panacea, the *medicina catholica*, may be born.

4

[376] It must be emphasized that in alchemy the dark initial state of *nigredo* is often regarded as the product of a previous operation, and that it therefore does not represent the absolute beginning.²⁶ Similarly, the psychological parallel to the *nigredo* is the result of the foregoing preliminary talk which, at a certain moment, sometimes long delayed, “touches” the unconscious and establishes the unconscious identity²⁷ of doctor and patient. This moment *may* be perceived and registered consciously, but generally it happens outside consciousness and the bond thus established is recognized only later and indirectly by its results. Occasionally dreams occur about this time, announcing the appearance of the transference. For instance, a dream may say that a fire has started in the cellar, or that a burglar has broken in, or that the patient’s father has died, or it may depict an erotic or some other ambiguous situation.²⁸ From the moment when such a dream occurs there may be initiated a queer unconscious time-reckoning, lasting for months or even longer. I have often observed this process and will give a practical instance of it:

[377] When treating a lady of over sixty, I was struck by the following passage in a dream she had on October 21, 1938: “*A beautiful little child, a girl of six months old, is playing in the kitchen with her grandparents and myself, her mother. The grandparents are on the left of the room and the child stands on the square table in the middle of the kitchen. I stand by the table and play with the child. The old woman says she can hardly believe we have known the child for only six months. I say that it is not so strange because we knew and loved the child long before she was born.*”

[378] It is immediately apparent that the child is something special, i.e., a child hero or divine child. The father is not mentioned; his absence is part of the picture.²⁹ The kitchen, as the scene of the happening, points to the unconscious. The square table is the quaternity, the classical basis of the “special” child,³⁰ for the child is a symbol of the self and the quaternity is a symbolical expression of this. The self as such is

timeless and existed before any birth.³¹ The dreamer was strongly influenced by Indian writings and knew the Upanishads well, but not the medieval Christian symbolism which is in question here. The precise age of the child made me ask the dreamer to look in her notes to see what had happened in the unconscious six months earlier. Under April 20, 1938, she found the following dream:

[379] “*With some other women I am looking at a piece of tapestry, a square with symbolical figures on it. Immediately afterwards I am sitting with some women in front of a marvellous tree. It is magnificently grown, at first it seems to be some kind of conifer, but then I think—in the dream—that it is a monkey-puzzle [a tree of genus *Araucaria*] with the branches growing straight up like candles [a confusion with *Cereus candelabrum*]. A Christmas tree is fitted into it in such a way that at first it looks like one tree instead of two.*”—As the dreamer was writing down this dream immediately on waking, with a vivid picture of the tree before her, she suddenly had a vision of a tiny golden child lying at the foot of the tree (tree-birth motif). She had thus gone on dreaming the sense of the dream. It undoubtedly depicts the birth of the divine (“golden”) child.

[380] But what had happened nine months previous to April 20, 1938? Between July 19 and 22, 1937, she had painted a picture showing, on the left, a heap of coloured and polished (precious) stones surmounted by a silver serpent, winged and crowned. In the middle of the picture there stands a naked female figure from whose genital region the same serpent rears up towards the heart, where it bursts into a five-pointed, gorgeously flashing golden star. A coloured bird flies down on the right with a little twig in its beak. On the twig five flowers are arranged in a *quaternio*, one yellow, one blue, one red, one green, but the topmost is golden—obviously a mandala structure.³² The serpent represents the hissing ascent of Kundalini, and in the corresponding yoga this marks the first moment in a process which ends with deification in the divine Self, the syzygy of Shiva and Shakti.³³ It is obviously the moment of symbolical conception, which is both Tantric and—because of the bird—Christian in character, being a contamination of the symbolism of the Annunciation with Noah’s dove and the sprig of olive.

[381] This case, and more particularly the last image, is a classical example of the kind of symbolism which marks the onset of the transference. Noah’s dove (the emblem of reconciliation), the *incarnatio Dei*, the union of God with matter for the purpose of begetting the redeemer, the serpent path, the Sushumna representing the line midway between sun and moon—all this is the first, anticipatory stage of an as-yet-unfulfilled programme that culminates in the union of opposites. This union is analogous to the “royal marriage” in alchemy. The prodromal events signify the meeting or collision of various opposites and can therefore appropriately be called chaos and blackness.

As mentioned above, this may occur at the beginning of the treatment, or it may have to be preceded by a lengthy analysis, a stage of *rapprochement*. Such is particularly the case when the patient shows violent resistances coupled with fear of the activated contents of the unconscious.³⁴ There is good reason and ample justification for these resistances and they should never, under any circumstances, be ridden over roughshod or otherwise argued out of existence. Neither should they be belittled, disparaged, or made ridiculous; on the contrary, they should be taken with the utmost seriousness as a vitally important defence mechanism against overpowering contents which are often very difficult to control. The general rule should be that the weakness of the conscious attitude is proportional to the strength of the resistance. When, therefore, there are strong resistances, the conscious rapport with the patient must be carefully watched, and—in certain cases—his conscious attitude must be supported to such a degree that, in view of later developments, one would be bound to charge oneself with the grossest inconsistency. That is inevitable, because one can never be too sure that the weak state of the patient's conscious mind will prove equal to the subsequent assault of the unconscious. In fact, one must go on supporting his conscious (or, as Freud thinks, "repressive") attitude until the patient can let the "repressed" contents rise up spontaneously. Should there by any chance be a latent psychosis³⁵ which cannot be detected beforehand, this cautious procedure may prevent the devastating invasion of the unconscious or at least catch it in time. At all events the doctor then has a clear conscience, knowing that he has done everything in his power to avoid a fatal outcome.³⁶ Nor is it beside the point to add that consistent support of the conscious attitude has in itself a high therapeutic value and not infrequently serves to bring about satisfactory results. It would be a dangerous prejudice to imagine that analysis of the unconscious is the one and only panacea which should therefore be employed in every case. It is rather like a surgical operation and we should only resort to the knife when other methods have failed. So long as it does not obtrude itself the unconscious is best left alone. The reader should be quite clear that my discussion of the transference problem is not an account of the daily routine of the psychotherapist, but far more a description of what happens when the check normally exerted on the unconscious by the conscious mind is disrupted, though this need not necessarily occur at all

[382] Cases where the archetypal problem of the transference becomes acute are by no means always "serious" cases, i.e., grave states of illness. There are of course such cases among them, but there are also mild neuroses, or simply psychological difficulties which we would be at a loss to diagnose. Curiously enough, it is these latter cases that present the doctor with the most difficult problems. Often the persons concerned endure unspeakable suffering without developing any neurotic symptoms

that would entitle them to be called ill. We can only call it an intense suffering, a passion of the soul but not a disease of the mind.

[383] Once an unconscious content is constellated, it tends to break down the relationship of conscious trust between doctor and patient by creating, through projection, an atmosphere of illusion which either leads to continual misinterpretations and misunderstandings, or else produces a most disconcerting impression of harmony. The latter is even more trying than the former, which at worst (though it is sometimes for the best!) can only hamper the treatment, whereas in the other case a tremendous effort is needed to discover the points of difference. But in either case the constellation of the unconscious is a troublesome factor. The situation is enveloped in a kind of fog, and this fully accords with the nature of the unconscious content: it is a “black blacker than black” (*nigrum, nigrius nigro*),³⁷ as the alchemists rightly say, and in addition is charged with dangerous polar tensions, with the *inimicitia elementorum*. One finds oneself in an impenetrable chaos, which is indeed one of the synonyms for the mysterious *prima materia*. The latter corresponds to the nature of the unconscious content in every respect, with one exception: this time it does not appear in the alchemical substance but in man himself. In the case of alchemy it is quite evident that the unconscious content is of human origin, as I have shown in *Psychology and Alchemy*.³⁸ Hunted for centuries and never found, the *prima materia* or *lapis philosophorum* is, as a few alchemists rightly suspected, to be discovered in man himself. But it seems that this content can never be found and integrated directly, but only by the circuitous route of projection. For as a rule the unconscious first appears in projected form. Whenever it appears to obtrude itself directly, as in visions, dreams, illuminations, psychoses, etc., these are always preceded by psychic conditions which give clear proof of projection. A classical example of this is Saul’s fanatical persecution of the Christians before Christ appeared to him in a vision.

[384] The elusive, deceptive, ever-changing content that possesses the patient like a demon now flits about from patient to doctor and, as the third party in the alliance, continues its game, sometimes impish and teasing, sometimes really diabolical. The alchemists aptly personified it as the wily god of revelation, Hermes or Mercurius; and though they lament over the way he hoodwinks them, they still give him the highest names, which bring him very near to deity.³⁹ But for all that, they deem themselves good Christians whose faithfulness of heart is never in doubt, and they begin and end their treatises with pious invocations.⁴⁰ Yet it would be an altogether unjustifiable suppression of the truth were I to confine myself to the negative description of Mercurius’ impish drolleries, his inexhaustible invention, his

insinuations, his intriguing ideas and schemes, his ambivalence and—often—his unmistakable malice. He is also capable of the exact opposite, and I can well understand why the alchemists endowed their Mercurius with the highest spiritual qualities, although these stand in flagrant contrast to his exceedingly shady character. The contents of the unconscious are indeed of the greatest importance, for the unconscious is after all the matrix of the human mind and its inventions. Wonderful and ingenious as this other side of the unconscious is, it can be most dangerously deceptive on account of its numinous nature. Involuntarily one thinks of the devils mentioned by St Athanasius in his life of St Anthony, who talk very piously, sing psalms, read the holy books, and—worst of all—speak the truth. The difficulties of our psychotherapeutic work teach us to take truth, goodness, and beauty where we find them. They are not always found where we look for them: often they are hidden in the dirt or are in the keeping of the dragon. “In stercore invenitur” (it is found in filth)⁴¹ runs an alchemical dictum—nor is it any the less valuable on that account. But, it does not transfigure the dirt and does not diminish the evil, any more than these lessen God’s gifts. The contrast is painful and the paradox bewildering. Sayings like are too optimistic and superficial; they forget the moral torment occasioned by the opposites, and the importance of ethical values.

ουρανο ανω	(Heaven above
ουρανο κατω	Heaven below
αστρα ανω	Stars above
αστρα κατω	Stars below
παν ο ανω	All that is above
τουτο κατω	Also is below
ταυτα λαβε	Grasp this
κε ευτυχε	And rejoice) ⁴²

[385] The refining of the *prima materia*, the unconscious content, demands endless patience, perseverance,⁴³ equanimity, knowledge, and ability on the part of the doctor; and, on the part of the patient, the putting forth of his best powers and a capacity for suffering which does not leave the doctor altogether unaffected. The deep meaning of the Christian virtues, especially the greatest among these, will become clear even to the unbeliever; for there are times when he needs them all if he is to rescue his consciousness, and his very life, from this pocket of chaos, whose final subjugation, without violence, is no ordinary task. If the work succeeds, it often works like a miracle, and one can understand what it was that prompted the alchemists to insert a heartfelt *Deo concedente* in their recipes, or to allow that only if God wrought a miracle could their procedure be brought to a successful conclusion.

[386] It may seem strange to the reader that a “medical procedure” should give rise to such considerations. Although in illnesses of the body there is no remedy and no treatment that can be said to be infallible in all circumstances, there are still a great many which will probably have the desired effect without either doctor or patient having the slightest need to insert a *Deo concedente*. But we are not dealing here with the body—we are dealing with the psyche. Consequently we cannot speak the language of body-cells and bacteria; we need another language commensurate with the nature of the psyche, and equally we must have an attitude which measures the danger and can meet it. And all this must be genuine or it will have no effect; if it is hollow, it will damage both doctor and patient. The *Deo concedente* is not just a rhetorical flourish; it expresses the firm attitude of the man who does not imagine that he knows better on every occasion and who is fully aware that the unconscious material before him is something *alive*, a paradoxical Mercurius of whom an old master says: “Et est ille quem natura paululum operata est et in metallicam formam formavit, tamen imperfectum relinquit.” (And he is that on whom nature hath worked but a little, and whom she hath wrought into metallic form yet left unfinished)⁴⁴—a natural being, therefore, that longs for integration within the wholeness of a man. It is like a fragment of primeval psyche into which no consciousness has as yet penetrated to create division and order, a “united dual nature,” as Goethe says—an abyss of ambiguities.

[387] Since we cannot imagine—unless we have lost our critical faculties altogether—that mankind today has attained the highest possible degree of consciousness, there must be some potential unconscious psyche left over whose development would result in a further extension and a higher differentiation of consciousness. No one can say how great or small this “remnant” might be, for we have no means of measuring the possible range of conscious development, let alone the extent of the unconscious. But there is not the slightest doubt that a *massa confusa* of archaic and undifferentiated contents exists, which not only manifests itself in neuroses and psychoses but also forms the “skeleton in the cupboard” of innumerable people who are not really pathological. We are so accustomed to hear that everybody has his “difficulties and problems” that we simply accept it as a banal fact, without considering what these difficulties and problems really mean. Why is one never satisfied with oneself? Why is one unreasonable? Why is one not always good and why must one ever leave a cranny for evil? Why does one sometimes say too much and sometimes too little? Why does one do foolish things which could easily be avoided with a little forethought? What is it that is always frustrating us and thwarting our best intentions? Why are there people who never notice these things and cannot even admit their existence? And finally, why do people in the mass beget the historical lunacy of the last thirty years? Why couldn’t Pythagoras, twenty-four

hundred years ago, have established the rule of wisdom once and for all, or Christianity have set up the Kingdom of Heaven upon earth?

[388] The Church has the doctrine of the devil, of an evil principle, whom we like to imagine complete with cloven hoofs, horns, and tail, half man, half beast, a chthonic deity apparently escaped from the rout of Dionysus, the sole surviving champion of the sinful joys of paganism. An excellent picture, and one which exactly describes the grotesque and sinister side of the unconscious; for we have never really come to grips with it and consequently it has remained in its original savage state. Probably no one today would still be rash enough to assert that the European is a lamblike creature and not possessed by a devil. The frightful records of our age are plain for all to see, and they surpass in hideousness everything that any previous age, with its feeble instruments, could have hoped to accomplish.

[389] If, as many are fain to believe, the unconscious were only nefarious, only evil, then the situation would be simple and the path clear: to do good and to eschew evil. But what is “good” and what is “evil”? The unconscious is not just evil by nature, it is also the source of the highest good:⁴⁵ not only dark but also light, not only bestial, semi-human, and demonic but superhuman, spiritual, and, in the classical sense of the word, “divine.” The Mercurius who personifies the unconscious⁴⁶ is essentially “duplex,” paradoxically dualistic by nature, fiend, monster, beast, and at the same time panacea, “the philosophers’ son,” *sapientia Dei*, and *donum Spiritus Sancti*.⁴⁷

[390] Since this is so, all hope of a simple solution is abolished. All definitions of good and evil become suspect or actually invalid. As moral forces, good and evil remain unshaken, and—as the simple verities for which the penal code, the ten commandments, and conventional Christian morality take them—undoubted. But conflicting loyalties are much more subtle and dangerous things, and a conscience sharpened by worldly wisdom can no longer rest content with precepts, ideas, and fine words. When it has to deal with that remnant of primeval psyche, pregnant with the future and yearning for development, it grows uneasy and looks round for some guiding principle or fixed point. Indeed, once this stage has been reached in our dealings with the unconscious, these desiderata become a pressing necessity. Since the only salutary powers visible in the world today are the great psychotherapeutic systems which we call the religions, and from which we expect the soul’s salvation, it is quite natural that many people should make the justifiable and often successful attempt to find a niche for themselves in one of the existing creeds and to acquire a deeper insight into the meaning of the traditional saving verities.

[391] This solution is normal and satisfying in that the dogmatically formulated truths of the Christian Church express, almost perfectly, the nature of psychic experience. They are the repositories of the secrets of the soul, and this matchless knowledge is

set forth in grand symbolical images. The unconscious thus possesses a natural affinity with the spiritual values of the Church, particularly in their dogmatic form, which owes its special character to centuries of theological controversy—absurd as this seemed in the eyes of later generations—and to the passionate efforts of many great men.

[392] The Church would be an ideal solution for anyone seeking a suitable receptacle for the chaos of the unconscious were it not that everything man-made, however refined, has its imperfections. The fact is that a return to the Church, i.e., to a particular creed, is not the general rule. Much the more frequent is a better understanding of, and a more intense relation to, religion as such, which is not to be confused with a creed.⁴⁸ This, it seems to me, is mainly because anyone who appreciates the legitimacy of the two viewpoints, of the two branches into which Christianity has been split, cannot maintain the exclusive validity of either of them, for to do so would be to deceive himself. As a Christian, he has to recognize that the Christendom he belongs to has been split for four hundred years and that his Christian beliefs, far from redeeming him, have exposed him to a conflict and a division that are still rending the body of Christ. These are the facts, and they cannot be abolished by each creed pressing for a decision in its favour, as though each were perfectly sure it possessed the absolute truth. Such an attitude is unfair to modern man; he can see very well the advantages that Protestantism has over Catholicism and *vice versa*, and it is painfully clear to him that this sectarian insistence is trying to corner him against his better judgment—in other words, tempting him to sin against the Holy Ghost. He even understands why the churches are bound to behave in this way, and knows that it must be so lest any joyful Christian should imagine himself already reposing in Abraham's anticipated bosom, saved and at peace and free from all fear. Christ's passion continues—for the life of Christ in the *corpus mysticum*, or Christian life in both camps, is at loggerheads with itself and no honest man can deny the split. We are thus in the precise situation of the neurotic who must put up with the painful realization that he is in the midst of conflict. His repeated efforts to repress the other side have only made his neurosis worse. The doctor must advise him to accept the conflict just as it is, with all the suffering this inevitably entails, otherwise the conflict will never be ended. Intelligent Europeans, if at all interested in such questions, are consciously or semiconsciously protestant Catholics and catholic Protestants, nor are they any the worse for that. It is no use telling me that no such people exist: I have seen both sorts, and they have considerably raised my hopes about the European of the future.

[393] But the negative attitude of the public at large to all credos seems to be less the result of religious convictions than one symptom of the general mental sloth and ignorance of religion. We can wax indignant over man's notorious lack of spirituality, but when one is a doctor one does not invariably think that the disease is malevolent or the patient morally inferior; instead, one supposes that the negative results may possibly be due to the remedy applied. Although it may reasonably be doubted whether man has made any marked or even perceptible progress in morality during the known five thousand years of human civilization, it cannot be denied that there has been a notable development of consciousness and its functions. Above all, there has been a tremendous extension of consciousness in the form of *knowledge*. Not only have the individual functions become differentiated, but to a large extent they have been brought under the control of the ego—in other words, man's will has developed. This is particularly striking when we compare our mentality with that of primitives. The security of our ego has, in comparison with earlier times, greatly increased and has even taken such a dangerous leap forward that, although we sometimes speak of "God's will," we no longer know what we are saying, for in the same breath we assert, "Where there's a will there's a way." And who would ever think of appealing to God's help rather than to the goodwill, the sense of responsibility and duty, the reason or intelligence, of his fellow men?

[394] Whatever we may think of these changes of outlook, we cannot alter the fact of their existence. Now when there is a marked change in the individual's state of consciousness, the unconscious contents which are thereby constellated will also change. And the further the conscious situation moves away from a certain point of equilibrium, the more forceful and accordingly the more dangerous become the unconscious contents that are struggling to restore the balance. This leads ultimately to a dissociation: on the one hand, ego-consciousness makes convulsive efforts to shake off an invisible opponent (if it does not suspect its next-door neighbour of being the devil!), while on the other hand it increasingly falls victim to the tyrannical will of an internal "Government opposition" which displays all the characteristics of a dæmonic subman and superman combined.

[395] When a few million people get into this state, it produces the sort of situation which has afforded us such an edifying object-lesson every day for the last ten years. These contemporary events betray their psychological background by their very singularity. The insensate destruction and devastation are a reaction against the deflection of consciousness from the point of equilibrium. For an equilibrium does in fact exist between the psychic ego and non-ego, and that equilibrium is a *religio*, a "careful consideration"⁴⁹ of ever-present unconscious forces which we neglect at our peril. The present crisis has been brewing for centuries because of this shift in man's conscious situation.

[396] Have the Churches adapted themselves to this secular change? Their truth may, with more right than we realize, call itself “eternal,” but its temporal garment must pay tribute to the evanescence of all earthly things and should take account of psychic changes. Eternal truth needs a human language that alters with the spirit of the times. The primordial images undergo ceaseless transformation and yet remain ever the same, but only in a new form can they be understood anew. Always they require a new interpretation if, as each formulation becomes obsolete, they are not to lose their spellbinding power over that *fugax Mercurius*⁵⁰ and allow that useful though dangerous enemy to escape. What is that about “new wine in old bottles”? Where are the answers to the spiritual needs and troubles of a new epoch? And where the knowledge to deal with the psychological problems raised by the development of modern consciousness? Never before has eternal truth been faced with such a hybris of will and power.

8

[397] Here, apart from motives of a more personal nature, probably lie the deeper reasons for the fact that the greater part of Europe has succumbed to neo-paganism and anti-Christianity, and has set up a religious ideal of worldly power in opposition to the metaphysical ideal founded on love. But the individual’s decision not to belong to a Church does not necessarily denote an anti-Christian attitude; it may mean exactly the reverse: a reconsidering of the kingdom of God in the human heart where, in the words of St. Augustine,⁵¹ the *mysterium paschale* is accomplished “in its inward and higher meanings.” The ancient and long obsolete idea of man as a microcosm contains a supreme psychological truth that has yet to be discovered. In former times this truth was projected upon the body, just as alchemy projected the unconscious psyche upon chemical substances. But it is altogether different when the microcosm is understood as that interior world whose inward nature is fleetingly glimpsed in the unconscious. An inkling of this is to be found in the words of Origen: “Intellige te alium mundum esse in parvo et esse intra te Solem, esse Lunam, esse etiam stellas” (Understand that thou art a second little world and that the sun and the moon are within thee, and also the stars).⁵² And just as the cosmos is not a dissolving mass of particles, but rests in the unity of God’s embrace, so man must not dissolve into a whirl of warring possibilities and tendencies imposed on him by the unconscious, but must become the unity that embraces them all. Origen says pertinently: “Vides, quomodo ille, qui putatur unus esse, non est unus, sed tot in eo personae videntur esse, quot mores” (Thou seest that he who seemeth to be one is yet not one, but as many persons appear in him as he hath velleities).⁵³ Possession by the unconscious means being torn apart into many people and things, a *disiunctio*. That is why, according to Origen, the aim of the Christian is to become an inwardly united human being.⁵⁴ The blind insistence on the outward community of the Church

naturally fails to fulfil this aim; on the contrary, it inadvertently provides the inner disunity with an outward vessel without really changing the *disiunctio* into a *coniunctio*.

[398] The painful conflict that begins with the *nigredo* or *tenebrositas* is described by the alchemists as the *separatio* or *divisio elementorum*, the *solutio*, *calcinatio*, *incineratio*, or as dismemberment of the body, excruciating animal sacrifices, amputation of the mother's hands or the lion's paws, atomization of the bridegroom in the body of the bride, and so on.⁵⁵ While this extreme form of *disiunctio* is going on, there is a transformation of that arcanum—be it substance or spirit—which invariably turns out to be the mysterious Mercurius. In other words, out of the monstrous animal forms there gradually emerges a *res simplex*, whose nature is one and the same and yet consists of a duality (Goethe's "united dual nature"). The alchemist tries to get round this paradox or antinomy with his various procedures and formulae, and to make one out of two.⁵⁶ But the very multiplicity of his symbols and symbolic processes proves that success is doubtful. Seldom do we find symbols of the goal whose dual nature is not immediately apparent. His *filius philosophorum*, his *lapis*, his *rebis*, his homunculus, are all hermaphroditic. His gold is *non vulgi*, his *lapis* is spirit and body, and so is his tincture, which is a *sanguis spiritualis*—a spiritual blood.⁵⁷ We can therefore understand why the *nuptiae chymicae*, the royal marriage, occupies such an important place in alchemy as a symbol of the supreme and ultimate union, since it represents the magic-by-analogy which is supposed to bring the work to its final consummation and bind the opposites by love, for "love is stronger than death."

9

[399] Alchemy describes, not merely in general outline but often in the most astonishing detail, the same psychological phenomenology which can be observed in the analysis of unconscious processes. The individual's specious unity that emphatically says "I want, I think" breaks down under the impact of the unconscious. So long as the patient can think that somebody else (his father or mother) is responsible for his difficulties, he can save some semblance of unity (*putatur unus esse!*). But once he realizes that he himself has a shadow, that his enemy is in his own heart, then the conflict begins and one becomes two. Since the "other" will eventually prove to be yet another duality, a compound of opposites, the ego soon becomes a shuttlecock tossed between a multitude of "velleities," with the result that there is an "obfuscation of the light," i.e., consciousness is depotentiated and the patient is at a loss to know where his personality begins or ends. It is like passing through the valley of the shadow, and sometimes the patient has to cling to the doctor as the last remaining shred of reality. This situation is difficult and distressing for

both parties; often the doctor is in much the same position as the alchemist who no longer knew whether he was melting the mysterious amalgam in the crucible or whether he was the salamander glowing in the fire. Psychological induction inevitably causes the two parties to get involved in the transformation of the third and to be themselves transformed in the process, and all the time the doctor's knowledge, like a flickering lamp, is the one dim light in the darkness. Nothing gives a better picture of the psychological state of the alchemist than the division of his work-room into a "laboratory," where he bustles about with crucibles and alembics, and an "oratory," where he prays to God for the much needed illumination—"purge the horrible darkneses of our mind,"⁵⁸ as the author of *Aurora* quotes.

[400] "Ars requirit totum hominem," we read in an old treatise.⁵⁹ This is in the highest degree true of psychotherapeutic work. A genuine participation, going right beyond professional routine, is absolutely imperative, unless of course the doctor prefers to jeopardize the whole proceeding by evading his own problems, which are becoming more and more insistent. The doctor must go to the limits of his subjective possibilities, otherwise the patient will be unable to follow suit. Arbitrary limits are no use, only real ones. It must be a genuine process of purification where "all superfluities are consumed in the fire" and the basic facts emerge. Is there anything more fundamental than the realization, "This is what I am"? It reveals a unity which nevertheless is—or was—a diversity. No longer the earlier ego with its make-believes and artificial contrivances, but another, "objective" ego, which for this reason is better called the "self." No longer a mere selection of suitable fictions, but a string of hard facts, which together make up the cross we all have to carry or the fate we ourselves are. These first indications of a future synthesis of personality, as I have shown in my earlier publications, appear in dreams or in "active imagination," where they take the form of the mandala symbols which were also not unknown in alchemy. But the first signs of this symbolism are far from indicating that unity has been attained. Just as alchemy has a great many very different procedures, ranging from the sevenfold to the thousandfold distillation, or from the "work of one day" to "the errant quest" lasting for decades, so the tensions between the psychic pairs of opposites ease off only gradually; and, like the alchemical end-product, which always betrays its essential duality, the united personality will never quite lose the painful sense of innate discord. Complete redemption from the sufferings of this world is and must remain an illusion. Christ's earthly life likewise ended, not in complacent bliss, but on the cross. (It is a remarkable fact that in their hedonistic aims materialism and a certain species of "joyful" Christianity join hands like brothers.) The goal is important only as an idea; the essential thing is the *opus* which leads to the goal: *that* is the goal of a lifetime. In its attainment "left and right"⁶⁰ are united, and conscious and unconscious work in harmony.

[401] The *coniunctio oppositorum* in the guise of Sol and Luna, the royal brother-sister or mother-son pair, occupies such an important place in alchemy that sometimes the entire process takes the form of the *hierosgamos* and its mystic consequences. The most complete and the simplest illustration of this is perhaps the series of pictures contained in the *Rosarium philosophorum* of 1550, which series I reproduce in what follows. Its psychological importance justifies closer examination. Everything that the doctor discovers and experiences when analysing the unconscious of his patient coincides in the most remarkable way with the content of these pictures. This is not likely to be mere chance, because the old alchemists were often doctors as well, and thus had ample opportunity for such experiences if, like Paracelsus, they worried about the psychological well-being of their patients or inquired into their dreams (for the purpose of diagnosis, prognosis, and therapy). In this way they could collect information of a psychological nature, not only from their patients but also from themselves, i.e., from the observation of their own unconscious contents which had been activated by induction.⁶¹ Just as the unconscious expresses itself even today in a picture-series, often drawn spontaneously by the patient, so those earlier pictures, such as we find in the Codex Rhenoviensis 172, in Zurich, and in other treatises, were no doubt produced in a similar way, that is, as the deposit of impressions collected during the work and then interpreted or modified in the light of traditional factors.⁶² In the modern pictures, too, we find not a few traces of traditional themes side by side with spontaneous repetitions of archaic or mythological ideas. In view of this close connection between picture and psychic content, it does not seem to me out of place to examine a medieval series of pictures in the light of modern discoveries, or even to use them as an Ariadne thread in our account of the latter. These curiosities of the Middle Ages contain the seeds of much that emerged in clearer form only many centuries later.

THE MERCURIAL FOUNTAIN

We are the metals' first nature and only source/

The highest tincture of the Art is made through us.

No fountain and no water has my like/

I make both rich and poor both whole and sick.

For healthful can I be and poisonous.¹

[Figure 1]

[402] This picture goes straight to the heart of alchemical symbolism, for it is an attempt to depict the mysterious basis of the *opus*. It is a quadratic quaternity characterized by the four stars in the four corners. These are the four elements. Above, in the centre, there is a fifth star which represents the fifth entity, the “One” derived from the four, the *quinta essentia*. The basin below is the *vas Hermeticum*, where the transformation takes place. It contains the *mare nostrum*, the *aqua permanens* or ἵδωρ θεῖον, the “divine water.” This is the *mare tenebrosum*, the chaos. The vessel is also called the uterus² in which the *foetus spagyricus* (the homunculus) is gestated.³ This basin, in contrast to the surrounding square, is circular, because it is the matrix of the perfect form into which the square, as an imperfect form, must be changed. In the square the elements are still separate and hostile to one another and must therefore be united in the circle. The inscription on the rim of the basin bears out this intention. It runs (filling in the abbreviations): “Unus est Mercurius mineralis, Mercurius vegetabilis, Mercurius animalis.” (*Vegetabilis* should be translated as “living” and *animalis* as “animate” in the sense of having a soul, or even as “psychic.”⁴) On the outside of the basin there are six stars which together with Mercurius represent the seven planets or metals. They are all as it were contained in Mercurius, since he is the *pater metallorum*. When personified, he is the unity of the seven planets, an Anthropos whose body is the world, like Gayomart, from whose body the seven metals flow into the earth. Owing to his feminine nature, Mercurius is also the mother of the seven, and not only of the six, for he is his own father and mother.⁵

[403] Out of the “sea,” then, there rises this Mercurial Fountain, *triplex nomine*, as is said with reference to the three manifestations of Mercurius.⁶ He is shown flowing out of three pipes in the form of *lac virginis*, *acetum fontis*, and *aqua vitae*. These are three of his innumerable synonyms. The aforementioned unity of Mercurius is here represented as a triad. It is repeatedly emphasized that he is a trinity, *triunus* or *trinus*,

the chthonic, lower, or even infernal counterpart of the Heavenly Trinity, just as Dante's devil is three-headed.⁷ For the same reason Mercurius is often shown as a three-headed serpent. Above the three pipes we find the sun and moon, who are the indispensable acolytes and parents of the mystic transformation, and, a little higher, the quintessential star, symbol of the unity of the four hostile elements. At the top of the picture is the *serpens bifidus*, the divided (or two-headed) serpent, the fatal *binarius* which Dorn defines as the devil.⁸ This serpent is the *serpens mercurialis*,⁹ representing the *duplex natura* of Mercurius. The heads are spitting forth fire, from which Maria the Copt or Jewess derived her "duo fumi."¹⁰ These are the two vapours whose condensation¹¹ initiates the process which leads to a multiple sublimation or distillation for the purpose of purifying away the *mali odores*, the *foetor sepulcrorum*¹² and the clinging darkness of the beginning.

ROSARIUM

Wir sind der metall anfang vnd erste natur /
 Die kunst macht durch vns die höchste tinctur.
 Keen brunn noch wasser ist meyn gleych /
 Ich mach gesund arm vnd reich.
 Vnd bin doch gesund gystig vnd dñlich.

Succus

Figure 1

[404] This structure reveals the tetrameria (fourfold nature) of the transforming process, already known to the Greeks. It begins with the four separate elements, the state of chaos, and ascends by degrees to the three manifestations of Mercurius in the inorganic, organic, and spiritual worlds; and, after attaining the form of Sol and Luna (i.e., the precious metals gold and silver, but also the radiance of the gods who can

overcome the strife of the elements by love), it culminates in the one and indivisible (incorruptible, ethereal, eternal) nature of the *anima*, the *quinta essentia*, *aqua permanens*, tincture, or *lapis philosophorum*. This progression from the number 4 to 3 to 2 to 1 is the “axiom of Maria,” which runs in various forms through the whole of alchemy like a *leitmotiv*. If we set aside the numerous “chemical” explanations we come to the following symbolical ground-plan: the initial state of wholeness is marked by four mutually antagonistic tendencies—4 being the minimum number by which a circle can be naturally and visibly defined. The reduction of this number aims at final unity. The first to appear in the progression is the number 3, a masculine number, and out of it comes the feminine number 2.¹³ Male and female inevitably constellate the idea of sexual union as the means of producing the 1, which is then consistently called the *filius regius* or *filius philosophorum*.

[405] The quaternity¹⁴ is one of the most widespread archetypes and has also proved to be one of the most useful schemata for representing the arrangement of the functions by which the conscious mind takes its bearings.¹⁵ It is like the crossed threads in the telescope of our understanding. The cross formed by the points of the quaternity is no less universal and has in addition the highest possible moral and religious significance for Western man. Similarly the circle, as the symbol of completeness and perfect being, is a widespread expression for heaven, sun, and God; it also expresses the primordial image of man and the soul.¹⁶ Four as the minimal number by which order can be created represents the pluralistic state of the man who has not yet attained inner unity, hence the state of bondage and disunion, of disintegration, and of being torn in different directions—an agonizing, unredeemed state which longs for union, reconciliation, redemption, healing, and wholeness.

[406] The triad appears as “masculine,” i.e., as the active resolve or *agens* whose alchemical equivalent is the “upwelling.” In relation to it the dyad is “feminine,” the receptive, absorbent *patiens*, or the material that still has to be formed and impregnated (*informatio, impraegnatio*). The psychological equivalent of the triad is want, desire, instinct, aggression and determination, whereas the dyad corresponds to the reaction of the psychic system as a whole to the impulse or decision of the conscious mind. This would of course perish of inanition if it did not succeed in overcoming the inertia of the merely natural man and in achieving its object despite his laziness and constant resistance. But by dint of compulsion or persuasion the conscious mind is able to carry through its purpose, and only in the resultant *action* is a man a living whole and a unity (“In the beginning was the deed,” as Faust says)¹⁷—provided that the action is the mature product of a process embracing the whole psyche and not just a spasm or impulse that has the effect of suppressing it.

[407] At bottom, therefore, our symbolical picture is an illustration of the methods and philosophy of alchemy. These are not warranted by the nature of matter as known to the old masters; they can only derive from the *unconscious* psyche. No doubt there was also a certain amount of *conscious* speculation among the alchemists, but this is no hindrance whatever to unconscious projection, for wherever the mind of the investigator departs from exact observation of the facts before it and goes its own way, the unconscious *spiritus rector* will take over and lead the mind back to the unchangeable, underlying archetypes, which are then forced into projection by this regression. We are moving here on familiar ground. These things are depicted in the most magnificent images in the last and greatest work of alchemy—Goethe's *Faust*. Goethe is really describing the experience of the alchemist who discovers that what he has projected into the retort is his own darkness, his unredeemed state, his passion, his struggles to reach the goal, i.e., to become what he really is, to fulfil the purpose for which his mother bore him, and, after the peregrinations of a long life full of confusion and error, to become the *filius regius*, son of the supreme mother. Or we can go even further back to the important forerunner of *Faust*, the *Chymical Wedding* of Christian Rosencreutz (1616), which was assuredly known to Goethe.¹⁸ Fundamentally it is the same theme, the same "Axioma Mariae," telling how Rosencreutz is transformed out of his former unenlightened condition and comes to realize that he is related to "royalty." But in keeping with its period (beginning of the seventeenth century), the whole process is far more projected and the withdrawal of the projection into the hero—which in *Faust*'s case turns him into a superman¹⁹—is only fleetingly hinted at. Yet the psychological process is essentially the same: the becoming aware of those powerful contents which alchemy sensed in the secrets of matter.

[408] The text that follows the picture of the Mercurial Fountain is mainly concerned with the "water" of the art, i.e., mercury. In order to avoid repetition, I would refer the reader to my lecture "The Spirit Mercurius." Here I will only say that this fluid substance, with all its paradoxical qualities, really signifies the unconscious which has been projected into it. The "sea" is its static condition, the "fountain" its activation, and the "process" its transformation. The integration of unconscious contents is expressed in the idea of the elixir, the *medicina catholica* or *universalis*, the *aurum potabile*, the *cibus sempiternus* (everlasting food), the health-giving fruits of the philosophical tree, the *vinum ardens*, and all the other innumerable synonyms. Some of them are decidedly ominous but no less characteristic, such as *succus lunariae* or *lunatica* (juice of the moon-plant),²⁰ *aqua Saturni* (note that Saturn is a baleful deity!), poison, scorpion, dragon, son of the fire, boys' or dogs' urine, brimstone, devil, etc.

[409] Although not expressly stated in the text, the gushing up and flowing back of the Mercurial Fountain within its basin completes a circle, and this is an essential characteristic of Mercurius because he is also the serpent that fertilizes, kills, and devours itself and brings itself to birth again. We may mention in this connection that the circular sea with no outlet, which perpetually replenishes itself by means of a spring bubbling up in its centre, is to be found in Nicholas of Cusa as an allegory of God.²¹

KING AND QUEEN

[410] The *arcanum artis*, or *coniunctio Solis et Lunae* as supreme union of hostile opposites, was not shown in our first picture; but now it is illustrated in considerable detail, as its importance deserves, in a series of pictures. King and Queen, bridegroom and bride, approach one another for the purpose of betrothal or marriage. The incest element appears in the brother-sister relationship of Apollo and Diana. The pair of them stand respectively on sun and moon, thus indicating their solar and lunar nature in accordance with the astrological assumption of the importance of the sun's position for man and the moon's for woman. The meeting is somewhat distant at first, as the court clothes suggest. The two give each other their *left* hands, and this can hardly be unintentional since it is contrary to custom. The gesture points to a closely guarded secret, to the "left-hand path," as the Indian Tantrists call their Shiva and Shakti worship. The left-hand (sinister) side is the dark, the unconscious side. The left is inauspicious and awkward; also it is the side of the heart, from which comes not only love but all the evil thoughts connected with it, the moral contradictions in human nature that are expressed most clearly in our affective life. The contact of left hands could therefore be taken as an indication of the affective nature of the relationship, of its dubious character, since this is a mixture of "heavenly and earthly" love further complicated by an incestuous *sous-entendu*. In this delicate yet altogether human situation the gesture of the *right* hands strikes us as compensatory. They are holding a device composed of five (4 + 1) flowers. The branches in the hands each have two flowers; these four again refer to the four elements of which two—fire and air—are active and two—water and earth—passive, the former being ascribed to the man and the latter to the woman. The fifth flower comes from above and presumably represents the *quinta essentia*; it is brought by the dove of the Holy Ghost, an analogy of Noah's dove that carried the olive branch of reconciliation in its beak. The bird descends from the quintessential star (cf. [fig. 1](#)).

[411] The real secret lies in the union of *right* hands, for, as the picture shows, this is mediated by the *donum Spiritus Sancti*, the royal art. The "sinister" left-handed contact here becomes associated with the union, effected from above, of two quaternities (the masculine and feminine manifestations of the four elements) in the form of an ogdoad consisting of five flowers and three branches. These masculine numbers point to action, decision, purpose, and movement. The fifth flower is distinguished from the four in that it is brought by the dove. The three branches correspond to the upwelling of Mercurius *triplex nomine* or to the three pipes of the

fountain. So once again we have an abbreviated recapitulation of the *opus*, i.e., of its deeper meaning as shown in the first picture. The text to [Figure 2](#) begins significantly with the words: “Mark well, in the art of our magisterium nothing is concealed by the philosophers except the secret of the art which may not be revealed to all and sundry. For were that to happen, that man would be accursed; he would incur the wrath of God and perish of the apoplexy. Wherefore all error in the art arises because men do not begin with the proper substance,¹ and for this reason you should employ venerable Nature, because from her and through her and in her is our art born and in naught else: and so our magisterium is the work of Nature and not of the worker.”²

[412] If we take the fear of divine punishment for betrayal at its face value, the reason for this must lie in something that is thought to endanger the soul’s salvation, i.e., a typical “peril of the soul.” The causal “wherefore” with which the next sentence begins can only refer to the secret that must not be revealed; but because the *prima materia* remains unknown in consequence, all those who do not know the secret fall into error, and this happens because, as said, they choose something arbitrary and artificial instead of pure Nature. The emphasis laid on *venerabilis natura*³ gives us some idea of that passion for investigation which ultimately gave birth to natural science, but which so often proved inimical to faith. Worship of nature, a legacy from the past, stood in more or less secret opposition to the views of the Church and led the mind and heart in the direction of a “left-hand path.” What a sensation Petrarch’s ascent of Mont Ventoux caused! St. Augustine had warned in his *Confessions* (X, viii): “And men go forth to admire the high mountains and the great waves of the sea and the broad torrent of the rivers and the vast expanse of the ocean and the orbits of the stars, and to turn away from themselves....”

Nota bene: In arte nostri magisterij nihil est *Secretum*
 celatū à Philosophis excepto secreto artis, quod *artis*
 non licet cuiquam reuelare, quod si fieret ille ma-
 lediceretur, & indignationem domini incur-
 reret, & apoplexia moreretur. # Quare om-
 nis error in arte existit, ex eo, quod debitam
 C ij

Figure 2

[413] The exclusive emphasis on nature as the one and only basis of the art is in flagrant contrast to the ever-recurring protestation that the art is a *donum Spiritus Sancti*, an arcanum of the *sapientia Dei*, and so forth, from which we would have to conclude that the alchemists were unshakably orthodox in their beliefs. I do not think that this can be doubted as a rule. On the contrary, their belief in illumination through the Holy Ghost seems to have been a psychological necessity in view of the ominous darkness of nature's secrets.

[414] Now if a text which insists so much on pure nature is explained or illustrated by a picture like [Figure 2](#), we must assume that the relationship between king and queen was taken to be something perfectly natural. Meditation and speculation about the mystery of the *coniunctio* were inevitable, and this would certainly not leave erotic fantasy untouched, if only because these symbolical pictures spring from the corresponding unconscious contents—half spiritual, half sexual—and are also intended to remind us of that twilight region, for only from indistinguishable night can the light be born. This is what nature and natural experience teach, but the spirit believes in the *lumen de lumine*—the light born of light.⁴ Somehow the artifex was

entangled in this game of unconscious projection and was bound to experience the mysterious happening with shudders of fear, as a tremendum. Even that scoffer and blasphemer Agrippa von Nettesheim displays a remarkable reticence in his criticism of “Alkumistica.”⁵ After saying a great deal about this dubious art, he adds:⁶ “Permulta adhuc de hoc arte (mihi tamen non ad modum inimica) dicere possem, nisi iuratum esset (quod facere solent, qui mysteriis initiantur) de silentio”(I could say much more about this art—which I do not find so disagreeable—were it not for the oath of silence usually taken by initiates into mysteries).⁷ Such a mitigation of his criticism, most unexpected in Agrippa, makes one think that he is on the defensive: somehow he was impressed by the royal art.

[415] It is not necessary to think of the secret of the art as anything very lurid. Nature knows nothing of moral squalor, indeed her truths are alarming enough. We need only bear in mind one fact: that the desired *coniunctio* was not a legitimate union but was always—one could almost say, on principle incestuous. The fear that surrounds this complex—the “fear of incest”—is quite typical and has already been stressed by Freud. It is further exacerbated by fear of the compulsive force which emanates from most unconscious contents.

[416] The left-handed contact and crosswise union of the right hands—*sub rosa*— is a startlingly concrete and yet very subtle hint of the delicate situation in which “venerable nature” has placed the adept. Although the Rosicrucian movement cannot be traced further back than the *Fama* and *Confessio fraternitatis* of Andreae at the beginning of the seventeenth century,⁸ we are nevertheless confronted with a “rosie cross” in this curious bouquet of three flowering branches, which evidently originated sometime before 1550 but, equally obviously, makes no claim to be a true *rosicrucus*.⁹ As we have already said, its threefold structure is reminiscent of the Mercurial Fountain, while at the same time it points to the important fact that the “rose” is the product of three *living* things: the king, the queen, and between them the dove of the Holy Ghost. Mercurius *triplex nomine* is thus converted into three figures, and he can no longer be thought of as a metal or mineral, but only as “spirit.” In this form also he is triple-natured—masculine, feminine, and divine. His coincidence with the Holy Ghost as the third person of the Trinity certainly has no foundation in dogma, but “venerable nature” evidently enabled the alchemist to provide the Holy Ghost with a most unorthodox and distinctly earth-bound partner, or rather to complement him with that divine spirit which had been imprisoned in all creatures since the day of Creation. This “lower” spirit is the Primordial Man, hermaphroditic by nature and of Iranian origin, who was imprisoned in Physis.¹⁰ He is the spherical, i.e., perfect, man who appears at the beginning and end of time and is man’s own beginning and end. He is man’s totality, which is beyond the division of the sexes and can only be reached when male and female come together in one. The

revelation of this higher meaning solves the problems created by the “sinister” contact and produces from the chaotic darkness the *lumen quod superat omnia lumina*.

[417] If I did not know from ample experience that such developments also occur in modern man, who cannot possibly be suspected of having any knowledge of the Gnostic doctrine of the Anthropos, I should be inclined to think that the alchemists were keeping up a secret tradition, although the evidence for this (the hints contained in the writings of Zosimos of Panopolis) is so scanty that Waite, who knows medieval alchemy relatively well, doubts whether a secret tradition existed at all.¹¹ I am therefore of the opinion, based on my professional work, that the Anthropos idea in medieval alchemy was largely “autochthonous,” i.e., the outcome of subjective experience. It is an “eternal” idea, an archetype that can appear spontaneously at any time and in any place. We meet the Anthropos even in ancient Chinese alchemy, in the writings of Wei Po-yang, about A.D. 142. There he is called *chên-jên* (‘true man’).¹²

[418] The revelation of the Anthropos is associated with no ordinary religious emotion; it signifies much the same thing as the vision of Christ for the believing Christian. Nevertheless it does not appear *ex opere divino* but *ex opere naturae*; not from above but from the transformation of a shade from Hades, akin to evil itself and bearing the name of the pagan god of revelation. This dilemma throws a new light on the secret of the art: the very serious danger of heresy. Consequently the alchemists found themselves between Scylla and Charybdis: on the one hand they ran the conscious risk of being misunderstood and suspected of fraudulent gold-making, and on the other of being burned at the stake as heretics. As to the gold, right at the beginning of the text to [Figure 2](#), the *Rosarium* quotes the words of Senior: “Aurum nostrum non est aurum vulgi.” But, as history shows, the alchemist would rather risk being suspected of gold-making than of heresy. It is still an open question, which perhaps can never be answered, how far the alchemist was conscious of the true nature of his art. Even texts as revealing as the *Rosarium* and *Aurora consurgens* do not help us in this respect.

[419] As regards the psychology of this picture, we must stress above all else that it depicts a human encounter where love plays the decisive part. The conventional dress of the pair suggests an equally conventional attitude in both of them. Convention still separates them and hides their natural reality, but the crucial contact of left hands points to something “sinister,” illegitimate, morganatic, emotional, and instinctive, i.e., the fatal touch of incest and its “perverse” fascination. At the same time the intervention of the Holy Ghost reveals the hidden meaning of the incest, whether of brother and sister or of mother and son, as a repulsive symbol for the *unio mystica*.

Although the union of close blood-relatives is everywhere taboo, it is yet the prerogative of kings (witness the incestuous marriages of the Pharaohs, etc.). Incest symbolizes union with one's own being, it means individuation or becoming a self, and, because this is so vitally important, it exerts an unholy fascination—not, perhaps, as a crude reality, but certainly as a psychic process controlled by the unconscious, a fact well known to anybody who is familiar with psychopathology. It is for this reason, and not because of occasional cases of human incest, that the first gods were believed to propagate their kind incestuously. Incest is simply the union of like with like, which is the next stage in the development of the primitive idea of self-fertilization.¹³

[420] This psychological situation sums up what we can all see for ourselves if we analyse a transference carefully. The conventional meeting is followed by an unconscious “familiarization” of one's partner, brought about by the projection of archaic, infantile fantasies which were originally vested in members of the patient's own family and which, because of their positive or negative fascination, attach him to parents, brothers, and sisters.¹⁴ The transference of these fantasies to the doctor draws him into the atmosphere of family intimacy, and although this is the last thing he wants, it nevertheless provides a workable *prima materia*. Once the transference has appeared, the doctor must accept it as part of the treatment and try to understand it, otherwise it will be just another piece of neurotic stupidity. The transference itself is a perfectly natural phenomenon which does not by any means happen only in the consulting-room—it can be seen everywhere and may lead to all sorts of nonsense, like all unrecognized projections. Medical treatment of the transference gives the patient a priceless opportunity to withdraw his projections, to make good his losses, and to integrate his personality. The impulses underlying it certainly show their dark side to begin with, however much one may try to whitewash them; for an integral part of the work is the *umbra solis* or *sol niger* of the alchemists, the black shadow which everybody carries with him, the inferior and therefore hidden aspect of the personality, the weakness that goes with every strength, the night that follows every day, the evil in the good.¹⁵ The realization of this fact is naturally coupled with the danger of falling victim to the shadow, but the danger also brings with it the possibility of consciously deciding not to become its victim. A visible enemy is always better than an invisible one. In this case I can see no advantage whatever in behaving like an ostrich. It is certainly no ideal for people always to remain childish, to live in a perpetual state of delusion about themselves, foisting everything they dislike on to their neighbours and plaguing them with their prejudices and projections. How many marriages are wrecked for years, and sometimes forever, because he sees his mother in his wife and she her father in her husband, and neither ever recognizes the other's reality! Life has difficulties enough without that; we

might at least spare ourselves the stupidest of them. But, without a fundamental discussion of the situation, it is often simply impossible to break these infantile projections. As this is the legitimate aim and real meaning of the transference, it inevitably leads, whatever method of rapprochement be used, to discussion and understanding and hence to a heightened consciousness, which is a measure of the personality's integration. During this discussion the conventional disguises are dropped and the true man comes to light. He is in very truth reborn from this psychological relationship, and his field of consciousness is rounded into a circle.

[421] It would be quite natural to suppose that the king and queen represent a transference relationship in which the king stands for the masculine partner and the queen for the feminine partner. But this is by no means the case, because the figures represent contents which have been projected from the unconscious of the adept (and his *soror mystica*). Now the adept is conscious of himself as a man, consequently his masculinity cannot be projected, since this only happens to unconscious contents. As it is primarily a question of man and woman here, the projected fragment of personality can only be the feminine component of the man, i.e., his anima.¹⁶ Similarly, in the woman's case, only the masculine component can be projected. There is thus a curious counter-crossing of the sexes: the man (in this case the adept) is represented by the queen, and the woman (the *soror mystica*) by the king. It seems to me that the flowers forming the "symbol" suggest this counter-crossing. The reader should therefore bear in mind that the picture shows two archetypal figures meeting, and that Luna is secretly in league with the adept, and Sol with his woman helper. The fact that the figures are royal expresses, like real royalty, their archetypal character; they are collective figures common to large numbers of people. If the main ingredient of this mystery were the enthronement of a king or the deification of a mortal, then the figure of the king might possibly be a projection and would in that case correspond to the adept. But the subsequent development of the drama has quite another meaning, so we can discount this possibility.¹⁷

[422] The fact that, for reasons which can be proved empirically, king and queen play cross roles and represent the unconscious contra-sexual side of the adept and his soror leads to a painful complication which by no means simplifies the problem of transference. Scientific integrity, however, forbids all simplification of situations that are not simple, as is obviously the case here. The pattern of relationship is simple enough, but, when it comes to detailed description in any given case, it is extremely difficult to make out from which angle the relationship is being described and what aspect we are describing. The pattern is as follows:

[423] The direction of the arrows indicates the pull from masculine to feminine and *vice versa*, and from the unconscious of one person to the conscious of the other, thus denoting a positive transference relationship. The following relationships have therefore to be distinguished, although in certain cases they can all merge into each other, and this naturally leads to the greatest possible confusion:

(a) An uncomplicated personal relationship.

(b) A relationship of the man to his anima and of the woman to her animus.

(c) A relationship of anima to animus and *vice versa*.

(d) A relationship of the woman's animus to the man (which happens when the woman is identical with her animus), and of the man's anima to the woman (which happens when the man is identical with his anima).

[424] In describing the transference problem with the help of this series of illustrations, I have not always kept these different possibilities apart; for in real life they are invariably mixed up and it would have put an intolerable strain on the explanation had I attempted a rigidly schematic exposition. Thus the king and queen each display every conceivable shade of meaning from the superhuman to the subhuman, sometimes appearing as a transcendental figure, sometimes hiding in the figure of the adept. The reader should bear this in mind if he comes across any real or supposed contradictions in the remarks which follow.

[425] These counter-crossing transference relationships are foreshadowed in folklore: the archetype of the cross-marriage, which I call the "marriage quaternio,"¹⁸ can also be found in fairytales. An Icelandic fairytale¹⁹ tells the following story:

[426] Finna was a girl with mysterious powers. One day, when her father was setting out for the Althing, she begged him to refuse any suitor who might ask for her hand. There were many suitors present, but the father refused them all. On the way home he met a strange man, Geir by name, who forced the father at point of sword to promise his daughter to him. So they were married, and Finna took Sigurd her brother with her to her new home. About Christmas-time, when Finna was busy with the festive preparations, Geir disappeared. Finna and her brother went out to look for him and found him on an island with a beautiful woman. After Christmas, Geir suddenly appeared in Finna's bedroom. In the bed lay a child. Geir asked her whose

child it was, and Finna answered that it was her child. And so it happened for three years in succession, and each time Finna accepted the child. But at the third time, Geir was released from his spell. The beautiful woman on the island was Ingeborg, his sister. Geir had disobeyed his stepmother, a witch, and she had laid a curse on him: he was to have three children by his sister, and unless he found a wife who knew everything and held her peace, he would be changed into a snake and his sister into a filly. Geir was saved by the conduct of his wife; and he married his sister Ingeborg to Sigurd.

[427] Another example is the Russian fairytale “Prince Danila Govorila.”²⁰ There is a young prince who is given a lucky ring by a witch. But its magic will work only on one condition: he must marry none but the girl whose finger the ring fits. When he grows up he goes in search of a bride, but all in vain, because the ring fits none of them. So he laments his fate to his sister, who asks to try on the ring. It fits perfectly. Thereupon her brother wants to marry her, but she thinks it would be a sin and sits at the door of the house weeping. Some old beggars who are passing comfort her and give her the following advice: “Make four dolls and put them in the four corners of the room. If your brother summons you to the wedding, go, but if he summons you to the bedchamber, do not hurry! Trust in God and follow our advice.”

[428] After the wedding her brother summons her to bed. Then the four dolls begin to sing:

Cuckoo, Prince Danila,
Cuckoo, Govorila,
Cuckoo, he takes his sister,
Cuckoo, for a wife,
Cuckoo, earth open wide,
Cuckoo, sister fall inside.

[429] The earth opens and swallows her up. Her brother calls her three times, but by the third time she has already vanished. She goes along under the earth until she comes to the hut of Baba Yaga,²¹ whose daughter kindly shelters her and hides her from the witch. But before long the witch discovers her and heats up the oven. The two girls then seize the old woman and put her in the oven instead, thus escaping the witch’s persecution. They reach the prince’s castle, where the sister is recognized by her brother’s servant. But her brother cannot tell the two girls apart, they are so alike. So the servant advises him to make a test: the prince is to fill a skin with blood and put it under his arm. The servant will then stab him in the side with a knife and the prince is to fall down as if dead. The sister will then surely betray herself. And so it happens: the sister throws herself upon him with a great cry, whereupon the prince

springs up and embraces her. But the magic ring also fits the finger of the witch's daughter, so the prince marries her and gives his sister to a suitable husband.

[430] In this tale the incest is on the point of being committed, but is prevented by the peculiar ritual with the four dolls. The four dolls in the four corners of the room form the marriage quaternio, the aim being to prevent the incest by putting four in place of two. The four dolls form a magic simulacrum which stops the incest by removing the sister to the underworld, where she discovers her alter ego. Thus we can say that the witch who gave the young prince the fatal ring was his mother-in-law-to-be, for, as a witch, she must certainly have known that the ring would fit not only his sister but her own daughter.

[431] In both tales the incest is an evil fate that cannot easily be avoided. Incest, as an endogamous relationship, is an expression of the libido which serves to hold the family together. One could therefore define it as "kinship libido," a kind of instinct which, like a sheep-dog, keeps the family group intact. This form of libido is the diametrical opposite of the exogamous form. The two forms together hold each other in check: the endogamous form tends towards the sister and the exogamous form towards some stranger. The best compromise is therefore a first cousin. There is no hint of this in our fairy-stories, but the marriage quaternio is clear enough. In the Icelandic story we have the schema:

In the Russian:

[432] The two schemata agree in a remarkable way. In both cases the hero wins a bride who has something to do with magic or the world beyond. Assuming that the archetype of the marriage quaternio described above is at the bottom of these folkloristic quaternities, the stories are obviously based on the following schema:

[433] Marriage with the anima is the psychological equivalent of absolute identity between conscious and unconscious. But since such a condition is possible only in

the complete absence of psychological self-knowledge, it must be more or less primitive, i.e., the man's relationship to the woman is essentially an anima projection. The only sign that the whole thing is unconscious is the remarkable fact that the carrier of the animaimage is distinguished by magical characteristics. These characteristics are missing from the soror-animus relationship in the stories; that is, the unconscious does not make itself felt at all as a separate experience. From this we must conclude that the symbolism of the stories rests on a much more primitive mental structure than the alchemical quaternio and its psychological equivalent. Therefore we must expect that on a still more primitive level the anima too will lose her magical attributes, the result being an uncomplicated, purely matter-of-fact marriage quaternio. And we do find a parallel to the two crossed pairs in the so-called "cross-cousin marriage." In order to explain this primitive form of marriage I must go into some detail. The marriage of a man's sister to his wife's brother is a relic of the "sister-exchange marriage" characteristic of the structure of many primitive tribes. But at the same time this double marriage is the primitive parallel of the problem which concerns us here: the conscious and unconscious dual relationship between adept and soror on the one hand and king and queen (or animus and anima) on the other. John Layard's important study, "The Incest Taboo and the Virgin Archetype," put me in mind of the sociological aspects of our psychologem. The primitive tribe falls into two halves, of which Howitt says: "It is upon the division of the whole community into two exogamous intermarrying classes that the whole social structure is built up."²² These "moieties" show themselves in the lay-out of settlements²³ as well as in many strange customs. At ceremonies, for instance, the two moieties are strictly segregated and neither may trespass on the other's territory. Even when going out on a hunt, they at once divide into two halves as soon as they set up camp, and the two camps are so arranged that there is a natural obstacle between them, e.g., the bed of a stream. On the other hand the two halves are connected by what Hocart calls "the ritual interdependence of the two sides" or "mutual ministrations." In New Guinea one side breeds and fattens pigs and dogs, not for themselves but for the other side, and vice versa. Or when there is a death in the village and the funeral feast is prepared, this is eaten by the other side, and so on.²⁴ [Another form of such division elsewhere is]²⁵ the widespread institution of "dual kingship."²⁶

[434] The names given to the two sides are particularly enlightening, such as—to mention only a few—east and west, high and low, day and night, male and female, water and land, left and right. It is not difficult to see from these names that the two halves are felt to be antithetical and thus the expression of an endopsychic antithesis. The antithesis can be formulated as the masculine ego versus the feminine "other," i.e., conscious versus unconscious personified as anima. The primary splitting of the psyche into conscious and unconscious seems to be the cause of the division within

the tribe and the settlement. It is a division founded on fact but not consciously recognized as such.

[435] The social split is by origin a matrilineal division into two, but in reality it represents a division of the tribe and settlement into four. The quartering comes about through the crossing of the matrilineal by a patrilineal line of division, [so that the entire population is divided into patrilineal as well as matrilineal moieties].²⁷ The practical purpose of this quartering is the separation and differentiation of marriage classes, [or “kinship sections,” as they are now called]. The basic pattern is a square or circle divided by a cross; it forms the ground-plan of the primitive settlement and the archaic city, also of monasteries, convents, etc., as can be seen in Europe, Asia, and prehistoric America.²⁸ The Egyptian hieroglyph for “city” is a St. Andrew’s cross in a circle.²⁹

[436] In specifying the marriage classes, it should be mentioned that every man belongs to his father’s patrilineal moiety, [and the woman he marries must not come from his mother’s moiety. In other words, he can take a wife only from the opposite matrilineal *and* patrilineal moiety.] In order to avoid the possibility of incest, he marries his mother’s brother’s daughter and gives his sister to his wife’s brother (sister-exchange marriage). This results in the cross-cousin marriage.³⁰

[437] This form of union, consisting of two brother-and-sister marriages crossing each other, seems to be the original model for the peculiar psychologem which we find in alchemy:

When I say “model” I do not mean that the system of marriage classes was the cause and our psychologem the effect. I merely wish to point out that this system predated the alchemical quaternio. Nor can we assume that the primitive marriage quaternio is the absolute origin of this archetype, for the latter is not a human invention at all but a fact that existed long before consciousness, as is true of all ritual symbols among primitives as well as among civilized peoples today. We do certain things simply without thinking, because they have always been done like that.³²

[438] The difference between the primitive and the cultural marriage quaternio consists in the fact that the former is a sociological and the latter a mystical phenomenon. While marriage classes have all but disappeared among civilized peoples, they nevertheless re-emerge on a higher cultural level as spiritual ideas. In the interests of the welfare and development of the tribe, the exogamous social order thrust the endogamous tendency into the background so as to prevent the danger of regression

to a state of having no groups at all. It insisted on the introduction of “new blood” both physically and spiritually, and it thus proved to be a powerful instrument in the development of culture. In the words of Spencer and Gillen: “This system of what has been called group marriage, serving as it does to bind more or less closely together groups of individuals who are mutually interested in one another’s welfare, has been one of the most powerful agents in the early stages of the upward development of the human race.”³³ Layard has amplified this idea in his above-mentioned study. He regards the endogamous (incest) tendency as a genuine instinct which, if denied realization in the flesh, must realize itself in the spirit. Just as the exogamous order made culture possible in the first place, so also it contains a latent spiritual purpose. Layard says: “Its latent or spiritual purpose is to enlarge the spiritual horizon by developing the idea that there is after all a sphere in which the primary desire may be satisfied, namely the divine sphere of the gods together with that of their semi-divine counterparts, the culture heroes.”³⁴ The idea of the incestuous hierogamos does in fact appear in the civilized religions and blossoms forth in the supreme spirituality of Christian imagery (Christ and the Church, *sponsus* and *sponsa*, the mysticism of the Song of Songs, etc.). “Thus the incest taboo,” says Layard, “leads in full circle out of the biological sphere into the spiritual.”³⁵ On the primitive level the feminine image, the anima, is still completely unconscious and therefore in a state of latent projection. Through the differentiation of the “four-class marriage system” into the eight-class,³⁶ the degree of kinship between marriage partners is considerably diluted, and in the twelve-class system it becomes [further reduced]. These “dichotomies”³⁷ obviously serve to enlarge the framework of the marriage classes and thus to draw more and more groups of people into the kinship system. Naturally such an enlargement was possible only where a sizeable population was expanding.³⁸ The eight-class and particularly the twelve-class systems mean a great advance for the exogamous order, but an equally severe repression of the endogamous tendency, which is thereby stimulated to a new advance in its turn. Whenever an instinctive force—i.e., a certain sum of psychic energy—is driven into the background through a onesided (in this case, exogamous) attitude on the part of the conscious mind, it leads to a dissociation of personality. The conscious personality with its one-track (exogamous) tendency comes up against an invisible (endogamous) opponent, and because this is unconscious it is felt to be a stranger and therefore manifests itself in projected form. At first it makes its appearance in human figures who have the power to do what others may not do—kings and princes, for example. This is probably the reason for the royal incest prerogative, as in ancient Egypt. To the extent that the magical power of royalty was derived increasingly from the gods, the incest prerogative shifted to the latter and so gave rise to the incestuous hierogamos. But when the numinous aura surrounding the person of the king is taken over by the gods, it has been transferred to a spiritual authority, which results in

the projection of an autonomous psychic complex—in other words, psychic existence becomes reality. Thus Layard logically derives the anima from the numen of the goddess.³⁹ In the shape of the goddess the anima is manifestly projected, but in her proper (psychological) shape she is *introjected*; she is, as Layard says, the “anima within.” She is the natural *sponsa*, man’s mother or sister or daughter or wife from the beginning, the companion whom the endogamous tendency vainly seeks to win in the form of mother and sister. She represents that longing which has always had to be sacrificed since the grey dawn of history. Layard therefore speaks very rightly of “internalization through sacrifice.”⁴⁰

[439] The endogamous tendency finds an outlet in the exalted sphere of the gods and in the higher world of the spirit. Here it shows itself to be an instinctive force of a spiritual nature; and, regarded in this light, the life of the spirit on the highest level is a return to the beginnings, so that man’s development becomes a recapitulation of the stages that lead ultimately to the perfection of life in the spirit.

[440] The specifically alchemical projection looks at first sight like a regression: god and goddess are reduced to king and queen, and these in turn look like mere allegories of chemical substances which are about to combine. But the regression is only apparent. In reality it is a highly remarkable development: the conscious mind of the medieval investigator was still under the influence of metaphysical ideas, but because he could not derive them from nature he projected them into nature. He sought for them in matter, because he supposed that they were most likely to be found there. It was really a question of a transference of numen the converse of that from the king to the god. The numen seemed to have migrated in some mysterious way from the world of the spirit to the realm of matter. But the descent of the projection into matter had led some of the old alchemists, for example Morienus Romanus, to the clear realization that this matter was not just the human body (or something in it) but the human personality itself. These prescient masters had already got beyond the inevitable stage of obtuse materialism that had yet to be born from the womb of time. But it was not until the discoveries of modern psychology that this human “matter” of the alchemists could be recognized as the *psyche*.

[441] On the psychological level, the tangle of relationships in the cross-cousin marriage reappears in the transference problem. The dilemma here consists in the fact that anima and animus are projected upon their human counterparts and thus create by suggestion a primitive relationship which evidently goes back to the time of group marriages. But in so far as anima and animus undoubtedly represent the contrasexual components of the personality, their kinship character does not point backwards to the group marriage but “forwards” to the integration of personality, i.e., to individuation.

[442] Our present-day civilization with its cult of consciousness—if this can be called civilization—has a Christian stamp, which means that neither anima nor animus is integrated but is still in the state of projection, i.e., expressed by dogma. On this level both these figures are unconscious as components of personality, though their effectiveness is still apparent in the numinous aura surrounding the dogmatic ideas of bridegroom and bride. Our “civilization,” however, has turned out to be a very doubtful proposition, a distinct falling away from the lofty ideal of Christianity; and, in consequence, the projections have largely fallen away from the divine figures and have necessarily settled in the human sphere. This is understandable enough, since the “enlightened” intellect cannot imagine anything greater than man except those tin gods with totalitarian pretensions who call themselves State or Fuehrer. This regression has made itself as plain as could be wished in Germany and other countries. And even where it is not so apparent, the lapsed projections have a disturbing effect on human relationships and wreck at least a quarter of the marriages. If we decline to measure the vicissitudes of the world’s history by the standards of right and wrong, true and false, good and evil, but prefer to see the retrograde step in every advance, the evil in every good, the error in every truth, we might compare the present regression with the apparent retreat which led from scholasticism to the mystical trend of natural philosophy and thence to materialism. Just as materialism led to empirical science and thus to a new understanding of the psyche, so the totalitarian psychosis with its frightful consequences and the intolerable disturbance of human relationships are forcing us to pay attention to the psyche and our abysmal unconsciousness of it. Never before has mankind as a whole experienced the numen of the psychological factor on so vast a scale. In one sense this is a catastrophe and a retrogression without parallel, but it is not beyond the bounds of possibility that such an experience also has its positive aspects and might become the seed of a nobler culture in a regenerated age. It is possible that the endogamous urge is not ultimately tending towards projection at all; it may be trying to unite the different components of the personality on the pattern of the cross-cousin marriage, but on a higher plane where “spiritual marriage” becomes an inner experience that is not projected. Such an experience has long been depicted in dreams as a mandala divided into four, and it seems to represent the goal of the individuation process, i.e., the self.

[443] Following the growth of population and the increasing dichotomy of the marriage classes, which led to a further extension of the exogamous order, all barriers gradually broke down and nothing remained but the incest-taboo. The original social order made way for other organizing factors culminating in the modern idea of the State. Now, everything that is past sinks in time into the unconscious, and this is true also of the original social order. It represented an archetype that combined exogamy

and endogamy in the most fortunate way, for while it prevented marriage between brother and sister it provided a substitute in the cross-cousin marriage. This relationship is still close enough to satisfy the endogamous tendency more or less, but distant enough to include other groups and to extend the orderly cohesion of the tribe. But with the gradual abolition of exogamous barriers through increasing dichotomy, the endogamous tendency was bound to gain strength in order to give due weight to consanguineous relationships and so hold them together. This reaction was chiefly felt in the religious and then in the political field, with the growth on the one hand of religious societies and sects—we have only to think of the brotherhoods and the Christian ideal of “brotherly love”—and of nations on the other. Increasing internationalism and the weakening of religion have largely abolished or bridged over these last remaining barriers and will do so still more in the future, only to create an amorphous mass whose preliminary symptoms can already be seen in the modern phenomenon of the mass psyche. Consequently the original exogamous order is rapidly approaching a condition of chaos painfully held in check. For this there is but one remedy: the inner consolidation of the individual, who is otherwise threatened with inevitable stultification and dissolution in the mass psyche. The recent past has given us the clearest possible demonstration of what this would mean. No religion has afforded any protection, and our organizing factor, the State, has proved to be the most efficient machine for turning out mass-men. In these circumstances the immunizing of the individual against the toxin of the mass psyche is the only thing that can help. As I have already said, it is just conceivable that the endogamous tendency will intervene compensatorily and restore the consanguineous marriage, or the union of the divided components of the personality, on the psychic level—that is to say, *within* the individual. This would form a counterbalance to the progressive dichotomy and psychic dissociation of collective man.

[444] It is of supreme importance that this process should take place *consciously*, otherwise the psychic consequences of massmindedness will harden and become permanent. For, if the inner consolidation of the individual is not a conscious achievement, it will occur spontaneously and will then take the well-known form of that incredible hard-heartedness which collective man displays towards his fellow men. He becomes a soulless herd animal governed only by panic and lust: his soul, which can live only in and from human relationships, is irretrievably lost. But the conscious achievement of inner unity clings to human relationships as to an indispensable condition, for without the conscious acknowledgment and acceptance of our fellowship with those around us there can be no synthesis of personality. That mysterious something in which the inner union takes place is nothing personal, has nothing to do with the ego, is in fact superior to the ego because, as the self, it is the synthesis of the ego and the supra-personal unconscious. The inner consolidation of

the individual is not just the hardness of collective man on a higher plane, in the form of spiritual aloofness and inaccessibility: it emphatically includes our fellow man.

[445] To the extent that the transference is projection and nothing more, it divides quite as much as it connects. But experience teaches that there is one connection in the transference which does not break off with the severance of the projection. That is because there is an extremely important instinctive factor behind it: the kinship libido. This has been pushed so far into the background by the unlimited expansion of the exogamous tendency that it can find an outlet, and a modest one at that, only within the immediate family circle, and sometimes not even there, because of the quite justifiable resistance to incest. While exogamy was limited by endogamy, it resulted in a natural organization of society which has entirely disappeared today. Everyone is now a stranger among strangers. Kinship libido—which could still engender a satisfying feeling of belonging together, as for instance in the early Christian communities—has long been deprived of its object. But, being an instinct, it is not to be satisfied by any mere substitute such as a creed, party, nation, or state. It wants the *human* connection. That is the core of the whole transference phenomenon, and it is impossible to argue it away, because relationship to the self is at once relationship to our fellow man, and no one can be related to the latter until he is related to himself.

[446] If the transference remains at the level of projection, the connection it establishes shows a tendency to regressive concretization, i.e., to an atavistic restoration of the primitive social order. This tendency has no possible foothold in our modern world, so that every step in this direction only leads to a deeper conflict and ultimately to a real transference neurosis. Analysis of the transference is therefore an absolute necessity, because the projected contents must be reintegrated if the patient is to gain the broader view he needs for free decision.

[447] If, however, the projection is broken, the connection—whether it be negative (hate) or positive (love)—may collapse for the time being so that nothing seems to be left but the politeness of a professional tête-à-tête. One cannot begrudge either doctor or patient a sigh of relief when this happens, although one knows full well that the problem has only been postponed for both of them. Sooner or later, here or in some other place, it will present itself again, for behind it there stands the restless urge towards individuation.

[448] Individuation has two principal aspects: in the first place it is an internal and subjective process of integration, and in the second it is an equally indispensable process of objective relationship. Neither can exist without the other, although sometimes the one and sometimes the other predominates. This double aspect has two corresponding dangers. The first is the danger of the patient's using the

opportunities for spiritual development arising out of the analysis of the unconscious as a pretext for evading the deeper human responsibilities, and for affecting a certain “spirituality” which cannot stand up to moral criticism; the second is the danger that atavistic tendencies may gain the ascendancy and drag the relationship down to a primitive level. Between this Scylla and that Charybdis there is a narrow passage, and both medieval Christian mysticism and alchemy have contributed much to its discovery.

[449] Looked at in this light, the bond established by the transference—however hard to bear and however incomprehensible it may seem—is vitally important not only for the individual but also for society, and indeed for the moral and spiritual progress of mankind. So, when the psychotherapist has to struggle with difficult transference problems, he can at least take comfort in these reflections. He is not just working for this particular patient, who may be quite insignificant, but for himself as well and his own soul, and in so doing he is perhaps laying an infinitesimal grain in the scales of humanity’s soul. Small and invisible as this contribution may be, it is yet an *opus magnum*, for it is accomplished in a sphere but lately visited by the numen, where the whole weight of mankind’s problems has settled. The ultimate questions of psychotherapy are not a private matter—they represent a supreme responsibility.

THE NAKED TRUTH

[450] The text to this picture (Fig. 3) is, with a few alterations, a quotation from the “Tractatus aureus.”¹ It runs: “He who would be initiated into this art and secret wisdom must put away the vice of arrogance, must be devout, righteous, deep-witted, humane towards his fellows, of a cheerful countenance and a happy disposition, and respectful withal. Likewise he must be an observer of the eternal secrets that are revealed to him. My son, above all I admonish thee to fear God who seeth what manner of man thou art [*in quo dispositionis tuae visus est*] and in whom is help for the solitary, whosoever he may be [*adiuvatio cuiuslibet sequestrati*].”² And the *Rosarium* adds from Pseudo-Aristotle: “Could God but find a man of faithful understanding, he would open his secret to him.”³

[451] This appeal to obviously moral qualities makes one thing quite clear: the *opus* demands not only intellectual and technical ability as in the study and practice of modern chemistry; it is a moral as well as a psychological undertaking. The texts are full of such admonitions, and they indicate the kind of attitude that is required in the execution of a religious work. The alchemists undoubtedly understood the *opus* in this sense, though it is difficult to square our picture with such an exordium. The chaste disguises have fallen away.⁴ Man and woman confront one another in unabashed naturalness. Sol says, “O Luna, let⁵ me be thy husband,” and Luna, “O Sol, I must submit to thee.” The dove bears the inscription: “Spiritus est qui unificat.”⁶ This remark hardly fits the unvarnished eroticism of the picture, for if what Sol and Luna say—who, be it noted, are brother and sister—means anything at all, it must surely mean earthly love. But since the spirit descending from above is stated to be the mediator,⁷ the situation acquires another aspect: it is supposed to be a union in the spirit. This is borne out admirably by one important detail in the picture: the contact of left hands has ceased. Instead, Luna’s left hand and Sol’s right hand now hold the branches (from which spring the *flores Mercurii*, corresponding to the three pipes of the fountain), while Luna’s right and Sol’s left hand are touching the flowers. The left-handed relationship is no more: the two hands of both are now connected with the “uniting symbol.” This too has been changed: there are only three flowers instead of five, it is no longer an ogdoad but a hexad,⁸ a sixrayed figure. The double quaternity has thus been replaced by a double triad. This simplification is evidently the result of the fact that two elements have each paired off, presumably with their opposites, for according to alchemical theory each element contains its opposite “within” it. Affinity, in the form of a “loving” approach, has already

achieved a partial union of the elements, so that now only one pair of opposites remains: masculine-feminine or *agens-patiens*, as indicated by the inscription. In accordance with the axiom of Maria, the elementary quaternity has become the active triad, and this will lead to the *coniunctio* of the two.

PHILOSOPHORVM.
scipsis secundum equalitatē inspissentur. Solus enim calor tēperatus est humiditatis inspissatiuus et mixtionis perfectiuius, et non super excedens. Nā generatiōes et procreationes rerū naturalū habent solū fieri per tēperatissimū calorē et equa lē, vti est solus finus equinus humidus et calidus.

Figure 3

[452] Psychologically we can say that the situation has thrown off the conventional husk and developed into a stark encounter with reality, with no false veils or adornments of any kind. Man stands forth as he really is and shows what was hidden under the mask of conventional adaptation: the shadow. This is now raised to consciousness and integrated with the ego, which means a move in the direction of wholeness. Wholeness is not so much perfection as completeness. Assimilation of the shadow gives a man body, so to speak; the animal sphere of instinct, as well as the primitive or archaic psyche, emerge into the zone of consciousness and can no longer be repressed by fictions and illusions. In this way man becomes for himself the difficult problem he really is. He must always remain conscious of the fact that he is such a problem if he wants to develop at all. Repression leads to a one-sided development if not to stagnation, and eventually to neurotic dissociation. Today it is

no longer a question of “How can I get rid of my shadow?”—for we have seen enough of the curse of one-sidedness. Rather we must ask ourselves: “How can man live with his shadow without its precipitating a succession of disasters?” Recognition of the shadow is reason enough for humility, for genuine fear of the abysmal depths in man. This caution is most expedient, since the man without a shadow thinks himself harmless precisely because he is ignorant of his shadow. The man who recognizes his shadow knows very well that he is not harmless, for it brings the archaic psyche, the whole world of the archetypes, into direct contact with the conscious mind and saturates it with archaic influences. This naturally adds to the dangers of “affinity,” with its deceptive projections and its urge to assimilate the object in terms of the projection, to draw it into the family circle in order to actualize the hidden incest situation, which seems all the more attractive and fascinating the less it is understood. The advantage of the situation, despite all its dangers, is that once the naked truth has been revealed the discussion can get down to essentials; ego and shadow are no longer divided but are brought together in an—admittedly precarious—unity. This is a great step forward, but at the same time it shows up the “differentness” of one’s partner all the more clearly, and the unconscious usually tries to close the gap by increasing the attraction, so as to bring about the desired union somehow or other. All this is borne out by the alchemical idea that the fire which maintains the process must be temperate to begin with and must then gradually be raised to the highest intensity.

IMMERSION IN THE BATH

[453] A new motif appears in this picture: the bath. In a sense this takes us back to the first picture of the Mercurial Fountain, which represents the “upwelling.” The liquid is Mercurius, not only of the three but of the “thousand” names. He stands for the mysterious psychic substance which nowadays we would call the unconscious psyche. The rising fountain of the unconscious has reached the king and queen, or rather they have descended into it as into a bath. This is a theme with many variations in alchemy. Here are a few of them: the king is in danger of drowning in the sea; he is a prisoner under the sea; the sun drowns in the mercurial fountain; the king sweats in the glass-house; the green lion swallows the sun; Gabricus disappears into the body of his sister Beya, where he is dissolved into atoms; and so forth. Interpreted on the one hand as a harmless bath and on the other hand as the perilous encroachment of the “sea,” the earth-spirit Mercurius in his watery form now begins to attack the royal pair from *below*, just as he had previously descended from above in the shape of the dove. The contact of left hands in [Figure 2](#) has evidently roused the spirit of the deep and called up a rush of water.

[454] The immersion in the “sea” signifies the *solutio*— “dissolution” in the physical sense of the word and at the same time, according to Dorn, the solution of a problem.¹ It is a return to the dark initial state, to the amniotic fluid of the gravid uterus. The alchemists frequently point out that their stone grows like a child in its mother’s womb; they call the *vas hermeticum* the uterus and its contents the foetus. What is said of the *lapis* is also said of the water: “This stinking water contains everything it needs.”² It is sufficient unto itself, like the Uroboros, the tail-eater, which is said to beget, kill, and devour itself. *Aqua est, quae occidit et vivificat*— the water is that which kills and vivifies.³ It is the *aqua benedicta*, the lustral water,⁴ wherein the birth of the new being is prepared. As the text to our picture explains: “Our stone is to be extracted from the nature of the two bodies.” It also likens the water to the *ventus* of the “Tabula smaragdina,” where we read: “Portavit eum ventus in ventre suo” (The wind hath carried it in his belly). The *Rosarium* adds: “It is clear that wind is air, and air is life, and life is soul, that is, oil and water.”⁵ The curious idea that the soul (i.e., the breath-soul) is oil and water derives from the dual nature of Mercurius. The *aqua permanens* is one of his many synonyms, and the terms *oleum*, *oleaginitas*, *unctuosum*, *unctuositas*, all refer to the arcane substance which is likewise Mercurius. The idea is a graphic reminder of the ecclesiastical use of various unguents and of the consecrated water. The two bodies mentioned above

are represented by the king and queen, a possible reference to the *commixtio* of the two substances in the chalice of the Mass. A similar *coniunctio* is shown in the “Grandes heures du duc de Berry,”⁶ where a naked “little man and woman” are being anointed by two saintly servitors in the baptismal bath of the chalice. There can be no doubt of the connections between the alchemical *opus* and the Mass, as the treatise of Melchior Cibinensis⁷ proves. Our text says: “Anima est Sol et Luna.” The alchemist thought in strictly medieval trichotomous terms:⁸ anything alive—and his *lapis* is undoubtedly alive—consists of corpus, anima, and spiritus. The *Rosarium* remarks (p. 239) that “the body is Venus and feminine, the spirit is Mercurius and masculine”; hence the anima, as the “vinculum,” the link between body and spirit, would be hermaphroditic,⁹ i.e., a *coniunctio Solis et Lunae*. Mercurius is the hermaphrodite par excellence. From all this it may be gathered that the queen stands for the body¹⁰ and the king for the spirit,¹¹ but that both are unrelated without the soul, since this is the *vinculum* which holds them together.¹² If no bond of love exists, they have no soul. In our pictures the bond is effected by the dove from above and by the water from below. These constitute the link—in other words, they are the soul. Thus the underlying idea of the psyche proves it to be a half bodily, half spiritual substance, an *anima media natura*,¹³ as the alchemists call it,¹⁴ an hermaphroditic being¹⁵ capable of uniting the opposites, but who is never complete in the individual unless related to another individual. The unrelated human being lacks wholeness, for he can achieve wholeness only through the soul, and the soul cannot exist without its other side, which is always found in a “You.” Wholeness is a combination of I and You, and these show themselves to be parts of a transcendent unity¹⁶ whose nature can only be grasped symbolically, as in the symbols of the *rotundum*, the rose, the wheel,¹⁷ or the *coniunctio Solis et Lunae*. The alchemists even go so far as to say that the *corpus*, *anima*, and *Spiritus* of the arcane substance are one, “because they are all from the One, and of the One, and with the One, which is the root of itself” (Quia ipsa omnia sunt ex uno et de uno et cum uno, quod est radix ipsius).¹⁸ A thing which is the cause and origin of itself can only be God, unless we adopt the implied dualism of the Paracelsists, who were of the opinion that the *prima materia* is an *increatedum*.¹⁹ Similarly, the pre-Paracelsist *Rosarium*²⁰ maintains that the quintessence is a “self-subsistent body, differing from all the elements and from everything composed thereof.”

ROSARIUM

corrūpitur, neq; ex imperfecto penitus secundū artem aliquid fieri potest. Ratio est quia ars primas dispositiones inducere non potest, sed lapis noster est res media inter perfecta & imperfecta corpora, & quod natura ipsa incepit hoc per artem ad perfectionē deducitur. Si in ipso Mercurio operari inceperis vbi natura reliquit imperfectum, inuenies in eo perfectionē et gaudebis.

Perfectum non alteratur, sed corrumpitur. Sed imperfectum bene alteratur, ergo corruptio vnius est generatio alterius.

Speculum

Figure 4

[455] Coming now to the psychology of the picture, it is clearly a descent into the unconscious. The immersion in the bath is another “night sea journey,”²¹ as the “Visio Arislei” proves. There the philosophers are shut up with the brother-sister pair in a triple glass-house at the bottom of the sea by the *Rex Marinus*. Just as, in the primitive myths, it is so stiflingly hot in the belly of the whale that the hero loses his hair, so the philosophers suffer very much from the intense heat²² during their confinement. The hero-myths deal with rebirth and apocatastasis, and the “Visio” likewise tells of the resuscitation of the dead Thabritius (Gabricus) or, in another version, of his rebirth.²³ The night sea journey is a kind of *descensus ad inferos*—a descent into Hades and a journey to the land of ghosts somewhere beyond this world, beyond consciousness, hence an immersion in the unconscious. In our picture the immersion is effected by the rising up of the fiery, chthonic Mercurius, presumably the sexual libido which engulfs the pair²⁴ and is the obvious counterpart to the heavenly dove. The latter has always been regarded as a love-bird, but it also has a purely spiritual significance in the Christian tradition accepted by the alchemists. Thus the pair are united *above* by the symbol of the Holy Ghost, and it looks as if the immersion in the bath were also uniting them *below*, i.e., in the water which is the

counterpart of spirit (“It is death for souls to become water,” says Heraclitus). Opposition and identity at once—a philosophical problem only when taken as a psychological one!

[456] This development recapitulates the story of how the Original Man (Nous) bent down from heaven to earth and was wrapped in the embrace of Physis—a primordial image that runs through the whole of alchemy. The modern equivalent of this stage is the conscious realization of sexual fantasies which colour the transference accordingly. It is significant that even in this quite unmistakable situation the pair are still holding on with both hands to the starry symbol brought by the Holy Ghost, which signalizes the meaning of their relationship: man’s longing for transcendent wholeness.

THE CONJUNCTION

O Luna, folded in my sweet embrace/
 Be you as strong as I, as fair of face.
 O Sol, brightest of all lights known to men/
 And yet you need me, *as the cock the hen.*

[Figure 5]

[457] The sea has closed over the king and queen, and they have gone back to the chaotic beginnings, the *massa confusa*. Physis has wrapped the “man of light” in a passionate embrace. As the text says: “Then Beya [the maternal sea] rose up over Gabricus and enclosed him in her womb, so that nothing more of him was to be seen. And she embraced Gabricus with so much love that she absorbed him completely into her own nature, and dissolved him into atoms.” These verses from Mercurinus are then quoted:

Candida mulier, si rubeo sit nupta marito,
 Mox complexantur, complexaque copulantur,
 Per se solvuntur, per se quoque conficiuntur,
 Ut duo qui fuerant, unum quasi corpore fiant.

(White-skinned lady, lovingly joined to her ruddy-limbed husband, Wrapped in each other’s arms in the bliss of connubial union, Merge and dissolve as they come to the goal of perfection: They that were two are made one, as though of one body.)

[458] In the fertile imagination of the alchemists, the hierosgamos of Sol and Luna continues right down to the animal kingdom, as is shown by the following instructions: “Take a Coetanean dog and an Armenian bitch, mate them, and they will bear you a son in the likeness of a dog.”¹ The symbolism is about as crass as it could be. On the other hand the *Rosarium*² says: “In hora coniunctionis maxima apparent miracula” (In the hour of conjunction the greatest marvels appear). For this is the moment when the *filius philosophorum* or *lapis* is begotten. A quotation from Alfidius³ adds: “Lux moderna ab eis gignitur” (The new light is begotten by them). Kalid says of the “son in the likeness of a dog” that he is “of a celestial hue” and that “this son will guard you... in this world and in the next.”⁴ Likewise Senior: “She hath borne a son who served his parents in all things, save that he is more splendid and refulgent than they,”⁵ i.e., he outshines the sun and moon. The real meaning of the

coniunctio is that it brings to birth something that is one and united. It restores the vanished “man of light” who is identical with the Logos in Gnostic and Christian symbolism and who was there before the creation; we also meet him at the beginning of the Gospel of St. John. Consequently we are dealing with a cosmic idea, and this amply explains the alchemists’ use of superlatives.

[459] The psychology of this central symbol is not at all simple. On a superficial view it looks as if natural instinct had triumphed. But if we examine it more closely we note that the coitus is taking place in the water, the *mare tenebrositatis*, i.e., the unconscious. This idea is borne out by a variant of the picture (Figure 5a). There again Sol and Luna are in the water, but both are winged. They thus represent spirit—they are aerial beings, creatures of thought. The texts indicate that Sol and Luna are two *vapores* or *fumi* which gradually develop as the fire increases in heat, and which then rise as on wings from the *decoctio* and *digestio* of the *prima materia*.⁶ That is why the paired opposites are sometimes represented as two birds fighting⁷ or as winged and wingless dragons.⁸ The fact that two aerial creatures should mate on or beneath the water does not disturb the alchemist in the least, for he is so familiar with the changeable nature of his synonyms that for him water is not only fire but all sorts of astonishing things besides. If we interpret the water as steam we may be getting nearer the truth. It refers to the boiling solution in which the two substances unite.

[460] As to the frank eroticism of the pictures, I must remind the reader that they were drawn for medieval eyes and that consequently they have a symbolical rather than a pornographic meaning. Medieval hermeneutics and meditation could contemplate even the most delicate passages in the Song of Songs without taking offence and view them through a veil of spirituality. Our pictures of the *coniunctio* are to be understood in this sense: union on the biological level is a symbol of the *unio oppositorum* at its highest. This means that the union of opposites in the royal art is just as real as coitus in the common acceptance of the word, so that the *opus* becomes an analogy of the natural process by means of which instinctive energy is transformed, at least in part, into symbolical activity. The creation of such analogies frees instinct and the biological sphere as a whole from the pressure of unconscious contents. Absence of symbolism, however, overloads the sphere of instinct.⁹ The analogy contained in Figure 5 is a little too obvious for our modern taste, so that it almost fails in its purpose.

FERMENTATIO.

Die wird Sol aber verschlossen
Und mit Mercurio philosophorum ybergossen.

Figure 5a

[461] As every specialist knows, the psychological parallels encountered in medical practice often take the form of fantasy-images which, when drawn, differ hardly at all from our pictures. The reader may remember the typical case I mentioned earlier (par. 377ff.), where the act of conception was represented symbolically and, exactly nine months later, the unconscious, as though influenced by a *suggestion à échéance*, produced the symbolism of a birth, or of a new-born child, without the patient's being conscious of the preceding psychic conception or having consciously reckoned the period of her "pregnancy." As a rule the whole process passes off in a series of dreams and is discovered only retrospectively, when the dream material comes to be analysed. Many alchemists compute the duration of the *opus* to be that of a pregnancy, and they liken the entire procedure to such a period of gestation.¹⁰

[462] The main emphasis falls on the *unio mystica*, as is shown quite clearly by the presence of the uniting symbol in the earlier pictures. It is perhaps not without deeper significance that this symbol has disappeared in the pictures of the *coniunctio*. For at this juncture the meaning of the symbol is fulfilled: the partners have themselves become symbolic. At first each represented two elements; then each of them united into one (integration of the shadow); and finally the two together with the third become a whole—"ut duo qui fuerant, unum quasi corpore fiant." Thus the axiom of

Maria is fulfilled. In this union the Holy Ghost disappears as well, but to make up for that, Sol and Luna themselves become spirit. The real meaning, therefore, is Goethe's "higher copulation,"¹¹ a union in unconscious identity, which could be compared with the primitive, initial state of chaos, the *massa confusa*, or rather with the state of *participation mystique* where heterogeneous factors merge in an unconscious relationship. The *coniunctio* differs from this not as a mechanism but because it is by nature never an initial state: it is always the product of a process or the goal of endeavour. This is equally the case in psychology, though here the *coniunctio* comes about unintentionally and is opposed to the bitter end by all biologically minded and conscientious doctors. That is why they speak of "resolving the transference." The detachment of the patient's projections from the doctor is desirable for both parties and, if successful, may be counted as a positive result. This is a practical possibility when, owing to the patient's immaturity, or his disposition, or because of some misunderstanding arising out of the projection, or because reason and plain common sense demand it, the continued transformation of projected unconscious contents comes to a hopeless standstill, and at the same time an opportunity presents itself from outside for the projection to be switched to another object. This solution has about the same merit as persuading a person not to go into a monastery or not to set out on a dangerous expedition or not to make a marriage which everybody agrees would be stupid. We cannot rate reason highly enough, but there are times when we must ask ourselves: do we really know enough about the destinies of individuals to enable us to give good advice under *all* circumstances? Certainly we must act according to our best convictions, but are we so sure that our convictions are for the best as regards the other person? Very often we do not know what is best for ourselves, and in later years we may come to thank God from the bottom of our hearts that his kindly hand preserved us from the "reasonableness" of our former plans. It is easy for the critic to say after the event, "Ah, but that wasn't the right sort of reason!" Who can know with unassailable certainty when he has the right sort? Moreover, is it not essential to the true art of living, sometimes, in defiance of all reason and fitness, to include the unreasonable and the unfitting within the ambience of the possible?

[463] It should therefore not surprise us to find that there are not a few cases where, despite every effort, no possibility presents itself of resolving the transference, although the patient is—from the rational point of view—equipped with the necessary understanding and neither he nor the doctor can be accused of any technical negligence or oversight. Both of them may be so deeply impressed by the vast irrationality of the unconscious as to come to the conclusion that the best thing is to cut the Gordian knot with a drastic decision. But the surgical partition of these Siamese twins is a perilous operation. There may be successes, though in my

experience they are few and far between. I am all for a conservative solution of the problem. If the situation really is such that no other possibilities of any kind can be considered, and the unconscious obviously insists on the retention of the tie, then the treatment must be continued hopefully. It may be that the severance will only occur at a later stage, but it may also be a case of psychological “pregnancy” whose natural outcome must be awaited with patience, or again it may be one of those fatalities which, rightly or wrongly, we take on our own shoulders or else try to avoid. The doctor knows that always, wherever he turns, man is dogged by his fate. Even the simplest illness may develop surprising complications; or, equally unexpectedly, a condition that seemed very serious may take a turn for the better. Sometimes the doctor’s art helps, sometimes it is useless. In the domain of psychology especially, where we still know so little, we often stumble upon the unforeseen, the inexplicable—something of which we can make neither head nor tail. Things cannot be forced, and wherever force seems to succeed it is generally regretted afterwards. Better always to be mindful of the limitations of one’s knowledge and ability. Above all one needs forbearance and patience, for often time can do more than art. Not everything can and must be cured. Sometimes dark moral problems or inexplicable twists of fate lie hidden under the cloak of a neurosis. One patient suffered for years from depressions and had an unaccountable phobia about Paris. She managed to rid herself of the depressions, but the phobia proved inaccessible. However, she felt so well that she was prepared to risk ignoring her phobia. She succeeded in getting to Paris, and the next day she lost her life in a car smash. Another patient had a peculiar and abiding horror of flights of steps. One day he got caught up in some street-rioting and shots were fired. He found himself in front of a public building with a broad flight of steps leading up to it. In spite of his phobia he dashed up them to seek shelter inside the building, and fell on the steps, mortally wounded by a stray bullet.

[464] These examples show that psychic symptoms need to be judged with the greatest caution. This is also true of the various forms of transference and its contents. They sometimes set the doctor almost insoluble problems or cause him all manner of worries which may go to the limits of the endurable and even beyond. Particularly if he has a marked ethical personality and takes his psychological work seriously, this may lead to moral conflicts and divided loyalties whose real or supposed incompatibility has been the occasion of more than one disaster. On the basis of long experience I would therefore like to warn against too much therapeutic enthusiasm. Psychological work is full of snags, but it is just here that incompetents swarm. The medical faculties are largely to blame for this, because for years they refused to admit the psyche among the aetiological factors of pathology, even though they had no other use for it. Ignorance is certainly never a recommendation, but often the best

knowledge is not enough either. Therefore I say to the psychotherapist: let no day pass without humbly remembering that everything has still to be learned.

[465] The reader should not imagine that the psychologist is in any position to explain what “higher copulation” is, or the *coniunctio*, or “psychic pregnancy,” let alone the “soul’s child.” Nor should one feel annoyed if the newcomer to this delicate subject, or one’s own cynical self, gets disgusted with these—as he thinks them—phoney ideas and brushes them aside with a pitying smile and an offensive display of tact. The unprejudiced scientific inquirer who seeks the truth and nothing but the truth must guard against rash judgments and interpretations, for here he is confronted with *psychological facts* which the intellect cannot falsify and conjure out of existence. There are among one’s patients intelligent and discerning persons who are just as capable as the doctor of giving the most disparaging interpretations, but who cannot avail themselves of such a weapon in the face of these insistent facts. Words like “nonsense” only succeed in banishing little things—not the things that thrust themselves tyrannically upon you in the stillness and loneliness of the night. The images welling up from the unconscious do precisely that. What we choose to call this fact does not affect the issue in any way. If it is an illness, then this *morbus sacer* must be treated according to its nature. The doctor can solace himself with the reflection that he, like the rest of his colleagues, does not only have patients who are curable, but chronic ones as well, where curing becomes nursing. At all events the empirical material gives us no sufficient grounds for always talking about “illness”; on the contrary, one comes to realize that it is a moral problem and often one wishes for a priest who, instead of confessing and proselytizing, would just listen, obey, and put this singular matter before God so that He could decide.

[466] *Patientia et mora* are absolutely necessary in this kind of work. One must be able to wait on events. Of work there is plenty—the careful analysis of dreams and other unconscious contents. Where the doctor fails, the patient will fail too, which is why the doctor should possess a real knowledge of these things and not just opinions, the offscourings of our modern philosophy for everyman. In order to augment this much-needed knowledge, I have carried my researches back to those earlier times when naïve introspection and projection were still at work, mirroring a psychic hinterland that is virtually blocked for us today. In this way I have learned much for my own practice, especially as regards understanding the formidable fascination of the contents in question. These may not always strike the patient as particularly fascinating, so he suffers instead from a proportionately strong compulsive tie in whose intensity he can rediscover the force of those subliminal images. He will, however, try to interpret the tie rationalistically, in the spirit of the age, and consequently does not perceive and will not admit the irrational foundations of his transference, namely the archetypal images.

6

DEATH

Here King and Queen are lying dead/

In great distress the soul is sped.

[Figure 6]

[467] *Vas hermeticum*, fountain, and sea have here become sarcophagus and tomb. King and queen are dead and have melted into a single being with two heads. The feast of life is followed by the funereal threnody. Just as Gabricus dies after becoming united with his sister, and the son-lover always comes to an early end after consummating the hierosgamos with the mother-goddess of the Near East, so, after the *coniunctio oppositorum*, deathlike stillness reigns. When the opposites unite, all energy ceases: there is no more flow. The waterfall has plunged to its full depth in that torrent of nuptial joy and longing; now only a stagnant pool remains, without wave or current. So at least it appears, looked at from the outside. As the legend tells us, the picture represents the *putrefactio*, the corruption, the decay of a once living creature. Yet the picture is also entitled “Conceptio.” The text says: “Corruptio unius generatio est alterius”—the corruption of one is the generation of the other,¹ an indication that this death is an interim stage to be followed by a new life. No new life can arise, say the alchemists, without the death of the old. They liken the art to the work of the sower, who buries the grain in the earth: it dies only to waken to new life.² Thus with their *mortificatio*, *interfectio*, *putrefactio*, *combustio*, *incineratio*, *calcinatio*, etc., they are imitating the work of nature. Similarly they liken their labours to human mortality, without which the new and eternal life cannot be attained.³

[468] The corpse left over from the feast is already a new body, a *hermaphroditus* (a compound of Hermes-Mercurius and Aphrodite-Venus). For this reason one half of the body in the alchemical illustrations is masculine, the other half feminine (in the *Rosarium* this is the left half). Since the *hermaphroditus* turns out to be the long-sought *rebis* or *lapis*, it symbolizes that mysterious being yet to be begotten, for whose sake the *opus* is undertaken. But the *opus* has not yet reached its goal, because the *lapis* has not come alive. The latter is thought of as animal, a living being with body, soul, and spirit. The legend says that the pair who together represented body and spirit are dead, and that the soul (evidently only *one*⁴ soul) parts from them “in great distress.”⁵ Although various other meanings play a part here, one cannot rid oneself of the impression that the death is a sort of tacit punishment for the sin of

incest, for “the wages of sin is death.”⁶ That would explain the soul’s “great distress” and also the blackness mentioned in the variant of our picture⁷ (“Here is Sol turned black”).⁸ This blackness is the *immunditia* (uncleanliness), as is proved by the *ablutio* that subsequently becomes necessary. The *coniunctio* was incestuous and therefore sinful, leaving pollution behind it. The *nigredo* always appears in conjunction with *tenebrositas*, the darkness of the tomb and of Hades, not to say of Hell. Thus the descent that began in the marriage-bath has touched rock-bottom: death, darkness, and sin. For the adept, however, the hopeful side of things is shown in the anticipated appearance of the hermaphrodite, though the psychological meaning of this is at first obscure.

Figure 6

[469] The situation described in our picture is a kind of Ash Wednesday. The reckoning is presented, and a dark abyss yawns. Death means the total extinction of consciousness and the complete stagnation of psychic life, so far as this is capable of consciousness. So catastrophic a consummation, which has been the object of annual lamentations in so many places (e.g., the laments for Linus, Tammuz,⁹ and Adonis), must surely correspond to an important archetype, since even today we have our

Good Friday. An archetype always stands for some typical event. As we have seen, there is in the *coniunctio* a union of two figures, one representing the daytime principle, i.e., lucid consciousness, the other a nocturnal light, the unconscious. Because the latter cannot be seen directly, it is always projected; for, unlike the shadow, it does not belong to the ego but is collective. For this reason it is felt to be something alien to us, and we suspect it of belonging to the particular person with whom we have emotional ties. In addition a man's unconscious has a feminine character; it hides in the feminine side of him which he naturally does not see in himself but in the woman who fascinates him. That is probably why the soul (*anima*) is feminine. If, therefore, man and woman are merged in some kind of unconscious identity, he will take over the traits of her animus and she the traits of his anima. Although neither anima nor animus can be constellated without the intervention of the conscious personality, this does not mean that the resultant situation is nothing but a personal relationship and a personal entanglement. The personal side of it is a fact, but not the main fact. The main fact is the *subjective experience* of the situation—in other words, it is a mistake to believe that one's personal dealings with one's partner play the most important part. Quite the reverse: the most important part falls to the man's dealings with the anima and the woman's dealings with the animus. Nor does the *coniunctio* take place with the personal partner; it is a royal game played out between the active, masculine side of the woman (the animus) and the passive, feminine side of the man (the anima). Although the two figures are always tempting the ego to identify itself with them, a real understanding even on the personal level is possible only if the identification is refused. Non-identification demands considerable moral effort. Moreover it is only legitimate when not used as a pretext for avoiding the necessary degree of personal understanding. On the other hand, if we approach this task with psychological views that are too personalistic, we fail to do justice to the fact that we are dealing with an archetype which is anything but personal. It is, on the contrary, an *a priori* so universal in scope and incidence that it often seems advisable to speak less of *my* anima or *my* animus and more of *the* anima and *the* animus. As archetypes, these figures are semi-collective and impersonal quantities, so that when we identify ourselves with them and fondly imagine that we are then most truly ourselves, we are in fact most estranged from ourselves and most like the average type of *Homo sapiens*. The personal protagonists in the royal game should constantly bear in mind that at bottom it represents the "trans-subjective" union of archetypal figures, and it should never be forgotten that it is a *symbolical* relationship whose goal is complete individuation. In our series of pictures this idea is suggested *sub rosa*. Hence, when the *opus* interposes itself in the form of the rose or wheel, the unconscious and purely personal relationship becomes a psychological problem which, while it prevents a descent into complete darkness, does not in any way cancel out the operative force of the archetype. The right way, like the wrong way, must be

paid for, and however much the alchemist may extol *venerabilis natura*, it is in either case an *opus contra naturam*. It goes against nature to commit incest, and it goes against nature not to yield to an ardent desire. And yet it is nature that prompts such an attitude in us, because of the kinship libido. So it is as Pseudo-Democritus says: “Nature rejoices in nature, nature conquers nature, nature rules over nature.”¹⁰ Man’s instincts are not all harmoniously arranged, they are perpetually jostling each other out of the way. The ancients were optimistic enough to see this struggle not as a chaotic muddle but as aspiring to some higher order.

[470] Thus the encounter with anima and animus means conflict and brings us up against the hard dilemma in which nature herself has placed us. Whichever course one takes, nature will be mortified and must suffer, even to the death; for the merely natural man must die in part during his own lifetime. The Christian symbol of the crucifix is therefore a prototype and an “eternal” truth. There are medieval pictures showing how Christ is nailed to the Cross by his own virtues. Other people meet the same fate at the hands of their vices. Nobody who finds himself on the road to wholeness can escape that characteristic suspension which is the meaning of crucifixion. For he will infallibly run into things that thwart and “cross” him: first, the thing he has no wish to be (the shadow); second, the thing he is not (the “other,” the individual reality of the “You”); and third, his psychic non-ego (the collective unconscious). This being at cross purposes with ourselves is suggested by the crossed branches held by the king and queen, who are themselves man’s cross in the form of the anima and woman’s cross in the form of the animus. The meeting with the collective unconscious is a fatality of which the natural man has no inkling until it overtakes him. As Faust says: “You are conscious only of the single urge/O may you never know the other!”

[471] This process underlies the whole *opus*, but to begin with it is so confusing that the alchemist tries to depict the conflict, death, and rebirth figuratively, on a higher plane, first—in his *practica*— in the form of chemical transformations and then—in his *theoria*— in the form of conceptual images. The same process may also be conjectured to underlie certain religious *opera*, since notable parallels exist between ecclesiastical symbolism and alchemy. In psychotherapy and in the psychology of neuroses it is recognized as the psychic process par excellence, because it typifies the content of the transference neurosis. The supreme aim of the *opus psychologicum* is conscious realization, and the first step is to make oneself conscious of contents that have hitherto been projected. This endeavour gradually leads to knowledge of one’s partner and to self-knowledge, and so to the distinction between what one really is and what is projected into one, or what one imagines oneself to be. Meanwhile, one is so taken up with one’s own efforts that one is hardly conscious of the extent to which “nature” acts not only as a driving-force but as a helper—in other words, how much

instinct insists that the higher level of consciousness be attained. This urge to a higher and more comprehensive consciousness fosters civilization and culture, but must fall short of the goal unless man voluntarily places himself in its service. The alchemists are of the opinion that the *artifex* is the servant of the work, and that not he but nature brings the work to fruition. All the same, there must be will as well as ability on man's part, for unless both are present the urge remains at the level of merely natural symbolism and produces nothing but a perversion of the instinct for wholeness which, if it is to fulfil its purpose, needs all parts of the whole, including those that are projected into a "You." Instinct seeks them there, in order to re-create that royal pair which every human being has in his wholeness, i.e., that bisexual First Man who has "no need of anything but himself." Whenever this drive for wholeness appears, it begins by disguising itself under the symbolism of incest, for, unless he seeks it in himself, a man's nearest feminine counterpart is to be found in his mother, sister, or daughter.

[472] With the integration of projections—which the merely natural man in his unbounded naïveté can never recognize as such—the personality becomes so vastly enlarged that the normal ego-personality is almost extinguished. In other words, if the individual identifies himself with the contents awaiting integration, a positive or negative inflation results. Positive inflation comes very near to a more or less conscious megalomania; negative inflation is felt as an annihilation of the ego. The two conditions may alternate. At all events the integration of contents that were always unconscious and projected involves a serious lesion of the ego. Alchemy expresses this through the symbols of death, mutilation, or poisoning, or through the curious idea of dropsy, which in the "Aenigma Merlini"¹¹ is represented as the king's desire to drink inordinate quantities of water. He drinks so much that he melts away and has to be cured by the Alexandrian physicians.¹² He suffers from a surfeit of the unconscious and becomes dissociated—"ut mihi videtur omnia membra mea ab invicem dividuntur" (so that all my limbs seem divided one from another).¹³ As a matter of fact, even Mother Alchemia is dropsical in her lower limbs.¹⁴ In alchemy, inflation evidently develops into a psychic oedema.¹⁵

[473] The alchemists assert that death is at once the conception of the *filius philosophorum*, a peculiar variation of the doctrine of the Anthropos.¹⁶ Procreation through incest is a royal or divine prerogative whose advantages the ordinary man is forbidden to enjoy. The ordinary man is the natural man, but the king or hero is the "supernatural" man, the *pneumatikos* who is "baptized with spirit and water," i.e., begotten in the *aqua benedicta* and born from it. He is the Gnostic Christ who descends upon the man Jesus during his baptism and departs from him again before the end. This "son" is the new man, the product of the union of king and queen—

though here he is not born of the queen, but queen and king are themselves transformed into the new birth.¹⁷

[474] Translated into the language of psychology, the mythologem runs as follows: the union of the conscious mind or egopersonality with the unconscious personified as anima produces a new personality compounded of both—"ut duo qui fuerant, unum quasi corpore fiant." Not that the new personality is a third thing midway between conscious and unconscious, it is both together. Since it transcends consciousness it can no longer be called "ego" but must be given the name of "self." Reference must be made here to the Indian idea of the atman, whose personal and cosmic modes of being form an exact parallel to the psychological idea of the self and the *filius philosophorum*.¹⁸ The self too is both ego and non-ego, subjective and objective, individual and collective. It is the "uniting symbol" which epitomizes the total union of opposites.¹⁹ As such and in accordance with its paradoxical nature, it can only be expressed by means of symbols. These appear in dreams and spontaneous fantasies and find visual expression in the mandalas that occur in the patient's dreams, drawings, and paintings. Hence, properly understood, the self is not a doctrine or theory but an image born of nature's own workings, a natural symbol far removed from all conscious intention. I must stress this obvious fact because certain critics still believe that the manifestations of the unconscious can be written off as pure speculation. But they are matters of observed fact, as every doctor knows who has to deal with such cases. The integration of the self is a fundamental problem which arises in the second half of life. Dream symbols having all the characteristics of mandalas may occur long beforehand without the development of the inner man becoming an immediate problem. Isolated incidents of this kind can easily be overlooked, so that it then seems as if the phenomena I have described were rare curiosities. They are in fact nothing of the sort; they occur whenever the individuation process becomes the object of conscious scrutiny, or where, as in the psychoses, the collective unconscious peoples the conscious mind with archetypal figures.

THE ASCENT OF THE SOUL

Here is the division of the four elements/

As from the lifeless corpse the soul ascends.

[Figure 7]

[475] This picture carries the *putrefactio* a stage further. Out of the decay the soul mounts up to heaven. Only *one* soul departs from the two, for the two have indeed become one. This brings out the nature of the soul as a *vinculum* or *ligamentum*: it is a function of relationship. As in real death, the soul departs from the body and returns to its heavenly source. The One born of the two represents the metamorphosis of both, though it is not yet fully developed and is still a “conception” only. Yet, contrary to the usual meaning of conception, the soul does not come down to animate the body, but leaves the body and mounts heavenwards. The “soul” evidently represents the *idea* of unity which has still to become a concrete fact and is at present only a potentiality. The idea of a wholeness made up of *sponsus* and *sponsa* has its correlate in the *rotundus globus coelestis*.¹

[476] This picture corresponds psychologically to a dark state of disorientation. The decomposition of the elements indicates dissociation and the collapse of the existing ego-consciousness. It is closely analogous to the schizophrenic state, and it should be taken very seriously because this is the moment when latent psychoses may become acute, i.e., when the patient becomes aware of the collective unconscious and the psychic non-ego. This collapse and disorientation of consciousness may last a considerable time and it is one of the most difficult transitions the analyst has to deal with, demanding the greatest patience, courage, and faith on the part of both doctor and patient. It is a sign that the patient is being driven along willy-nilly without any sense of direction, that, in the truest sense of the word, he is in an utterly *soulless* condition, exposed to the full force of autoerotic affects and fantasies. Referring to this state of deadly darkness, one alchemist says: “Hoc est ergo magnum signum, in cuius investigatione nonnulli perierunt” (This is a great sign, in the investigation of which not a few have perished).²

[477] This critical state, when the conscious mind is liable to be submerged at any moment in the unconscious, is akin to the “loss of soul” that frequently attacks primitives. It is a sudden *abaissement du niveau mental*, a slackening of the conscious tension, to which primitive man is especially prone because his consciousness is still relatively weak and means a considerable effort for him. Hence

his lack of will-power, his inability to concentrate and the fact that, mentally, he tires so easily, as I have experienced to my cost during palavers. The widespread practice of yoga and dhyana in the East is a similar *abaissement* deliberately induced for the purpose of relaxation, a technique for releasing the soul. With certain patients, I have even been able to establish the existence of subjectively experienced levitations in moments of extreme derangement.³ Lying in bed, the patients felt that they were floating horizontally in the air a few feet above their bodies. This is a suggestive reminder of the phenomenon called the “witch’s trance,” and also of the parapsychic levitations reported of many saints.

[478] The corpse in our picture is the residue of the past and represents the man who is no more, who is destined to decay. The “torments” which form part of the alchemist’s procedure belong to this stage of the *iterum mori*— the reiterated death. They consist in “*membra secare, arctius sequestrare ac partes mortificare et in naturam, quae in eo [lapide] est, vertere*” (cutting up the limbs, dividing them into smaller and smaller pieces, mortifying the parts, and changing them into the nature which is in [the stone]), as the *Rosarium* says, quoting from Hermes. The passage continues: “You must guard the water and fire dwelling in the arcane substance and contain those waters with the permanent water, even though this be no water, but the fiery form of the true water.”⁴ For the precious substance, the soul, is in danger of escaping from the bubbling solution in which the elements are decomposed. This precious substance is a paradoxical composite of fire and water, i.e., Mercurius, the *servus* or *cervus fugitivus* who is ever about to flee—or who, in other words, resists integration (into consciousness). He has to be “contained” by the “water,” whose paradoxical nature corresponds to the nature of Mercurius and actually contains him within itself. Here we seem to have a hint about the treatment required: faced with the disorientation of the patient, the doctor must hold fast to his own orientation; that is, he must know what the patient’s condition means, he must understand what is of value in the dreams, and do so moreover with the help of that *aqua doctrinae* which alone is appropriate to the nature of the unconscious. In other words, he must approach his task with views and ideas capable of grasping unconscious symbolism. Intellectual or supposedly scientific theories are not adequate to the nature of the unconscious, because they make use of a terminology which has not the slightest affinity with its pregnant symbolism. The waters must be drawn together and held fast by the one water, by the *forma ignea verae aquae*. The kind of approach that makes this possible must therefore be plastic and symbolical, and itself the outcome of personal experience with unconscious contents. It should not stray too far in the direction of abstract intellectualism; hence we are best advised to remain within the framework of traditional mythology, which has already proved comprehensive enough for all

practical purposes. This does not preclude the satisfaction of theoretical requirements, but these should be reserved for the private use of the doctor.

De

Figure 7

[479] Therapy aims at strengthening the conscious mind, and whenever possible I try to rouse the patient to mental activity and get him to subdue the *massa confusa* of his mind with his own understanding,⁵ so that he can reach a vantage-point *au-dessus de la mêlée*. Nobody who ever had any wits is in danger of losing them in the process, though there are people who never knew till then what their wits are for. In such a situation, understanding acts like a life-saver. It integrates the unconscious, and gradually there comes into being a higher point of view where both conscious and unconscious are represented. It then proves that the invasion by the unconscious was rather like the flooding of the Nile: it increases the fertility of the land. The panegyric addressed by the *Rosarium* to this state is to be taken in that sense: “O natura benedicta et benedicta est tua operatio, quia de imperfecto facis perfectum cum vera putrefactione quae est nigra et obscura. Postea facis germinare novas res et diversas, cum tua viriditate facis diversos colores apparere.” (O blessed Nature, blessed are thy works, for that thou makest the imperfect to be perfect through the true putrefaction,

which is dark and black. Afterwards thou makest new and multitudinous things to grow, causing with thy verdure the many colours to appear.)⁶ It is not immediately apparent why this dark state deserves special praise, since the *nigredo* is universally held to be of a sombre and melancholy humour reminiscent of death and the grave. But the fact that medieval alchemy had connections with the mysticism of the age, or rather was itself a form of mysticism, allows us to adduce as a parallel to the *nigredo* the writings of St. John of the Cross⁷ concerning the “dark night.” This author conceives the “spiritual night” of the soul as a supremely positive state, in which the invisible—and therefore dark—radiance of God comes to pierce and purify the soul.

[480] The appearance of the colours in the alchemical vessel, the so-called *cauda pavonis*, denotes the spring, the renewal of life—*post tenebras lux*. The text continues: “This blackness is called earth.” The Mercurius in whom the sun drowns is an earth-spirit, a *Deus terrenus*,⁸ as the alchemists say, or the *Sapi entia Dei* which took on body and substance in the creature by creating it. The unconscious is the spirit of chthonic nature and contains the archetypal images of the *Sapientia Dei*. But the intellect of modern civilized man has strayed too far in the world of consciousness, so that it received a violent shock when it suddenly beheld the face of its mother, the earth.

[481] The fact that the soul is depicted as a homunculus in our picture indicates that it is on the way to becoming the *filius regius*, the undivided and hermaphroditic First Man, the Anthropos. Originally he fell into the clutches of Physis, but now he rises again, freed from the prison of the mortal body. He is caught up in a kind of ascension, and, according to the *Tabula smaragdina*, unites himself with the “upper powers.” He is the essence of the “lower power” which, like the “third filiation” in the doctrine of Basilides, is ever striving upwards from the depths,⁹ not with the intention of staying in heaven, but solely in order to reappear on earth as a healing force, as an agent of immortality and perfection, as a mediator and saviour. The connection with the Christian idea of the Second Coming is unmistakable.

[482] The psychological interpretation of this process leads into regions of inner experience which defy our powers of scientific description, however unprejudiced or even ruthless we may be. At this point, unpalatable as it is to the scientific temperament, the idea of mystery forces itself upon the mind of the inquirer, not as a cloak for ignorance but as an admission of his inability to translate what he knows into the everyday speech of the intellect. I must therefore content myself with a bare mention of the archetype which is inwardly experienced at this stage, namely the birth of the “divine child” or—in the language of the mystics—the inner man.¹⁰

PURIFICATION

Here falls the heavenly dew, to lave/

The soiled black body in the grave.

[Figure 8]

[483] The falling dew is a portent of the divine birth now at hand. *Ros Gedeonis* (Gideon's dew)¹ is a synonym for the *aqua permanens*, hence for Mercurius.² A quotation from Senior at this point in the *Rosarium* text says: "Maria says again: 'But the water I have spoken of is a king descending from heaven, and the earth's humidity absorbs it, and the water of heaven is retained with the water of the earth, and the water of the earth honours that water with its lowliness and its sand, and water consorts with water and water will hold fast to water and Albira is whitened with Astuna.'"³

[484] The whitening (*albedo* or *dealbatio*) is likened to the *ortus solis*, the sunrise; it is the light, the illumination, that follows the darkness. Hermes says: "Azoth et ignis latonem abluunt et nigredinem ab eo auferunt" (Azoth and fire cleanse the lato and remove the blackness).⁴ The spirit Mercurius descends in his heavenly form as *sapientia* and as the fire of the Holy Ghost, to purify the blackness. Our text continues: "Dealbate latonem et libros rumpite, ne corda vestra rumpantur."⁵ Haec est enim compositio omnium Sapientum et etiam tertia pars totius operis.⁶ Jungite ergo, ut dicitur in *Turba*, siccum humido: id est terram nigram cum aqua sua et coquite donee dealbatur. Sic habes aquam et terram per se et terram cum aqua dealbatam: ilia albedo dicitur aer." (Whiten the lato and rend the books lest your hearts be rent asunder.⁵ For this is the synthesis of the wise and the third part of the whole *opus*⁶ Join therefore, as is said in the *Turba*,⁷ the dry to the moist, the black earth with its water, and cook till it whitens. In this manner you will have the essence of water and earth, having whitened the earth with water: but that whiteness is called air.) So that the reader may know that the "water" is the *aqua sapientiae*, and the dew falling from heaven the divine gift of illumination and wisdom, there follows a long disquisition on Wisdom, entitled "Septimum Sapientiae Salomonis":

She it is that Solomon chose to have instead of light, and above all beauty and health; in comparison of her he compared not unto her the virtue of any precious stone. For all gold in her sight shall be esteemed as a little sand, and silver shall be counted as clay; and this is not without cause, for to gain her is better than the merchandise of silver and the most pure gold. And her fruit is more precious than all

the riches of this world, and all the things that are desired are not to be compared with her. Length of days and health are in her right hand, and in her left hand glory and infinite riches. Her ways are beautiful operations and praiseworthy, not unsightly nor ill-favoured, and her paths are measured and not hasty,⁸ but are bound up with stubborn and day-long toil. She is a tree of life to them that lay hold on her, and an unfailing light. Blessed shall they be who retain her, for the science of God shall never perish, as Alphidius beareth witness, for he saith: He who hath found this science, it shall be his rightful food for ever.⁹

PHILOSOPHORVM

ABLVTIO VEL *Mundificatio*

*Sie sehe der Tau von Himmel herab/
Vnd wascht den schwarzen leyb im grab ab.*

K ij

Figure 8

[485] In this connection I would like to point out that water as a symbol of wisdom and spirit can be traced back to the parable which Christ told to the Samaritan woman at the well.¹⁰ The uses to which this parable was put can be seen in one of the sermons of Cardinal Nicholas of Cusa, a contemporary of our alchemists: “There is in Jacob’s well a water which human ingenuity has sought and found. Philosophy is its name, and it is found through laborious investigation of the world of the senses. But in the Word of God, which dwells in the depths of the living well of Christ’s humanity, there is a fountain for the refreshment of the spirit. Here, then, we have Jacob’s well of the senses, the well of reason and the well of wisdom. From the first well, which is

of animal nature and deep, the father drinks, together with his children and cattle; from the second, which is yet deeper and on the very margin of nature, there drink only the children of men, namely those whose reason has awakened and whom we call philosophers; from the third, the deepest of all, drink the sons of the All-Highest, whom we call gods and true theologians. Christ in his humanity may be called the deepest well.... In this deepest well is the source of wisdom, which brings bliss and immortality.... The living well bears the source of its own life, it calls the thirsty to the waters of salvation that they may be refreshed with the water of saving wisdom.”¹¹ Another passage in the same sermon says: “Whosoever drinks the spirit, drinks of a bubbling spring.”¹² Finally, Cusanus says: “Mark well, our reason is given to us with the power of an intellectual seed; wherefore it contains a welling principle through which it generates in itself the water of understanding. And this well can yield naught but water of a like nature, namely, the water of human understanding; just as the understanding of the principle ‘every thing either is or is not’ yields the metaphysical water from which the other streams of science flow without cease.”¹³

[486] After all this there can be no more doubt that the black darkness is washed away by the *aqua sapientiae* of “our science,” namely the God-given gift of the royal art and the knowledge it bestows. The *mundificatio* (purification) means, as we have seen, the removal of the superfluities that always cling to merely natural products, and especially to the symbolic unconscious contents which the alchemist found projected into matter. He therefore acted on Cardan’s rule that the object of the work of interpretation is to reduce the dream material to its most general principles.¹⁴ This is what the laboratory worker called the *extractio animae*, and what in the psychological field we would call the working through of the idea contained in the dream. We know that this requires a necessary premise or hypothesis, a certain intellectual structure by means of which “apperceptions” can be made. In the case of the alchemist, such a premise was ready to hand in the *aqua (doctrinae)*, or the God-inspired *sapientia* which he could also acquire through a diligent study of the “books,” the alchemical classics. Hence the reference to the books, which at this stage of the work must be avoided or destroyed “lest your hearts be rent asunder.” This singular exhortation, altogether inexplicable from the chemical point of view, has a profound significance here. The atolvent water or *aqua sapientiae* had been established in the teachings and sayings of the masters as the *donum Spiritus Sancti* which enables the philosopher to understand the *miracula operis*. Therefore he might easily be tempted to assume that philosophical knowledge is the highest good, as the Cusanus quotation shows. The psychological equivalent of this situation is when people imagine that they have reached the goal of the work once the unconscious contents have been made conscious and theoretically evaluated. In both cases this would be arbitrarily to define “spirit” as a mere matter of thinking and intuition. Both

disciplines, it is true, are aiming at a “spiritual” goal: the alchemist undertakes to produce a new, volatile (hence aerial or “spiritual”) entity endowed with *corpus, anima, et spiritus*, where *corpus* is naturally understood as a “subtle” body or “breath body”; the analyst tries to bring about a certain attitude or frame of mind, a certain “spirit” therefore. But because the body, even when conceived as the *corpus glorificationis*, is grosser than *anima* and *spiritus*, a “remnant of earth” necessarily clings to it, albeit a very subtle one.¹⁵ Hence an attitude that seeks to do justice to the unconscious as well as to one’s fellow human beings cannot possibly rest on knowledge alone, in so far as this consists merely of thinking and intuition. It would lack the function that perceives values, i.e., feeling, as well as the *fonction du réel*, i.e., sensation, the sensible perception of reality.¹⁶

[487] Thus if books and the knowledge they impart are given exclusive value, man’s emotional and affective life is bound to suffer. That is why the purely intellectual attitude must be abandoned. “Gideon’s dew” is a sign of divine intervention, it is the moisture that heralds the return of the soul.

[488] The alchemists seem to have perceived the danger that the work and its realization may get stuck in one of the conscious functions. Consequently they stress the importance of the *theoria*, i.e., intellectual understanding as opposed to the *practica*, which consisted merely of chemical experiments. We might say that the *practica* corresponds to pure perception, and that this must be supplemented by apperception. But this second stage still does not bring complete realization. What is still lacking is heart or feeling, which imparts an abiding value to anything we have understood. The books must therefore be “destroyed” lest thinking impair feeling and thus hinder the return of the soul.

[489] These difficulties are familiar ground to the psychotherapist. It often happens that the patient is quite satisfied with merely registering a dream or fantasy, especially if he has pretensions to aestheticism. He will then fight against even intellectual understanding because it seems an affront to the reality of his psychic life. Others try to understand with their brains only, and want to skip the purely practical stage. And when they have understood, they think they have done their full share of realization. That they should also have a *feeling-relationship* to the contents of the unconscious seems strange to them or even ridiculous. Intellectual understanding and aestheticism both produce the deceptive, treacherous sense of liberation and superiority which is liable to collapse if feeling intervenes. Feeling always binds one to the reality and meaning of symbolic contents, and these in turn impose binding standards of ethical behaviour from which aestheticism and intellectualism are only too ready to emancipate themselves.

[490] Owing to the almost complete lack of psychological differentiation in the age of alchemy, it is hardly surprising that such considerations as these are only hinted at in the treatises. But hints do exist, as we have seen. Since then the differentiation of the functions has increased apace, with the result that they have become more and more segregated from one another. Consequently it is very easy for the modern mind to get stuck in one or other of the functions and to achieve only an incomplete realization. It is hardly necessary to add that in time this leads to a neurotic dissociation. To this we owe the further differentiation of the individual functions as well as the discovery of the unconscious, but at the price of psychological disturbance. Incomplete realization explains much that is puzzling both in the individual and in the contemporary scene. It is a crucial matter for the psychotherapist, particularly for those who still believe that intellectual insight and routine understanding, or even mere recollection, are enough to effect a cure. The alchemists thought that the *opus* demanded not only laboratory work, the reading of books, meditation, and patience, but also love.

[491] Nowadays we would speak of “feeling-values” and of realization through feeling. One is often reminded of Faust’s shattering experience when he was shaken out of the “deadly dull rut” of his laboratory and philosophical work by the revelation that “feeling is all.” In this we can already see the modern man who has got to the stage of building his world on a single function and is not a little proud of his achievement. The medieval philosophers would certainly never have succumbed to the idea that the demands of feeling had opened up a new world. The pernicious and pathological slogan *l’art pour l’art* would have struck them as absurd, for when they contemplated the mysteries of nature, sensation, creation, thinking, cognition and feeling were all one to them. Their state of mind was not yet split up into so many different functions that each stage of the realization process would have needed a new chapter of life. The story of Faust shows how unnatural our condition is: it required the intervention of the devil—in anticipation of Steinach ¹⁷—to transform the ageing alchemist into a young gallant and make him forget himself for the sake of the all-too-youthful feelings he had just discovered! That is precisely the risk modern man runs: he may wake up one day to find that he has missed half his life.

[492] Nor is realization through feeling the final stage. Although it does not really belong to this chapter, yet it might not be out of place to mention the fourth stage after the three already discussed, particularly since it has such a very pronounced symbolism in alchemy. This fourth stage is the anticipation of the *lapis*. The imaginative activity of the fourth function—intuition, without which no realization is complete—is plainly evident in this anticipation of a possibility whose fulfilment could never be the object of empirical experience at all: already in Greek alchemy it was called *λίθος οὐ λίθος* “the stone that is no stone.” Intuition gives outlook and insight; it revels in the garden of magical possibilities as if they were real. Nothing is more

charged with intuitions than the *lapis philosophorum*. This keystone rounds off the work into an experience of the totality of the individual. Such an experience is completely foreign to our age, although no previous age has ever needed wholeness so much. It is abundantly clear that this is the prime problem confronting the art of psychic healing in our day, as a consequence of which we are now trying to loosen up our rigid *psychologie à compartiments* by putting in a few communicating doors.

[493] After the ascent of the soul, with the body left behind in the darkness of death, there now comes an enantiodromia: the *nigredo* gives way to the *albedo*. The black or unconscious state that resulted from the union of opposites reaches the nadir and a change sets in. The falling dew signals resuscitation and a new light: the ever deeper descent into the unconscious suddenly becomes illumination from above. For, when the soul vanished at death, it was not lost; in that other world it formed the living counterpole to the state of death in this world. Its reappearance from above is already indicated by the dewy moisture. This dewiness partakes of the nature of the psyche, for *ψυχή* is cognate with *ψυχρός* (cold) and *ψυχώω* (to freshen and animate), while on the other hand dew is synonymous with the *aqua permanens*, the *aqua sapientiae*, which in turn signifies illumination through the realization of meaning. The preceding union of opposites has brought light, as always, out of the darkness of night, and by this light it will be possible to see what the real meaning of that union was.

THE RETURN OF THE SOUL

Here is the soul descending from on high/

To quick the corpse we strove to purify.

[Figure 9]

[494] Here the reconciler, the soul, dives down from heaven to breathe life into the dead body. The two birds at the bottom left of the picture represent the allegorical winged and wingless dragons in the form of fledged and unfledged birds.¹ This is one of the many synonyms for the double nature of Mercurius, who is both a chthonic and a pneumatic being. The presence of this divided pair of opposites means that although the hermaphrodite appears to be united and is on the point of coming alive, the conflict between them is by no means finally resolved and has not yet disappeared: it is relegated to the “left” and to the “bottom” of the picture, i.e., banished to the sphere of the unconscious. The fact that these still unintegrated opposites are represented theriomorphically (and not anthropomorphically as before) bears out this supposition.

[495] The text of the *Rosarium* continues with a quotation from Morienus: “Despise not the ash, for it is the diadem of thy heart.” This ash, the inert product of incineration, refers to the dead body, and the admonition establishes a curious connection between body and heart which at that time was regarded as the real seat of the soul.² The diadem refers of course to the supremely kingly ornament. Coronation plays some part in alchemy—the *Rosarium*, for instance, has a picture³ of the *Coronatio Mariae*, signifying the glorification of the white, moonlike (purified) body. The text then quotes Senior as follows: “Concerning the white tincture: When my beloved parents have tasted of life, have been nourished with pure milk and become drunk with my white substance, and have embraced each other in my bed, they shall bring forth the son of the moon, who will excel all his kindred. And when my beloved has drunk from the red rock sepulchre and tasted the maternal fount in matrimony, and has drunk with me of my red wine and lain with me in my bed in friendship, then I, loving him and receiving his seed into my cell, shall conceive and become pregnant and when my time is come shall bring forth a most mighty son, who shall rule over and govern all the kings and princes of the earth, crowned with the golden crown of victory by the supreme God who liveth and reigneth for ever and ever.”⁴

[496] The coronation picture that illustrates this text⁵ proves that the resuscitation of the purified corpse is at the same time a glorification, since the process is likened to the

crowning of the Virgin.⁶ The allegorical language of the Church supports such a comparison. The connections of the Mother of God with the moon,⁷ water, and fountains are so well known that I need not substantiate them further. But whereas it is the Virgin who is crowned here, in the Senior text it is the son who receives the “crown of victory”—which is quite in order since he is the *filius regius* who replaces his father. In *Aurora* the crown is given to the *regina austri*, Sapientia, who says to her beloved: “I am the crown wherewith my beloved is crowned,” so that the crown serves as a connection between the mother and her son-lover.⁸ In a later text⁹ the *aqua amara* is defined as “crowned with light.” At that time Isidore of Seville’s etymology was still valid: *mare ab amaro*,¹⁰ which vouches for “sea” as synonymous with the *aqua permanens*. It is also an allusion to the water symbolism of Mary (πηγή, “fountain”).¹¹ Again and again we note that the alchemist proceeds like the unconscious in the choice of his symbols: every idea finds both a positive and a negative expression. Sometimes he speaks of a royal pair, sometimes of dog and bitch; and the water symbolism is likewise expressed in violent contrasts. We read that the royal diadem appears “in menstruo meretricis (in the menstruum of a whore),”¹² or the following instructions are given: “Take the foul deposit [*faecem*] that remains in the cooking-vessel and preserve it, for it is the crown of the heart.” The deposit corresponds to the corpse in the sarcophagus, and the sarcophagus corresponds in turn to the mercurial fountain or the *vas hermeticum*.

PHILOSOPHORVM
ANIMÆ IVBILATIO SEV
Ortus seu Sublimatio,

Sie schwingt sich die seel hernidder/
Vnd erquicket den gereinigten leychnam wider-

L ij

Figure 9

[497] The soul descending from heaven is identical with the dew, the *aqua divina*, which, as Senior, quoting Maria, explains, is “Rex de coelo descendens.”¹³ Hence this water is itself crowned and forms the “diadem of the heart,”¹⁴ in apparent contradiction to the earlier statement that the ash was the diadem. It is difficult to tell whether the alchemists were so hopelessly muddled that they did not notice these flat contradictions, or whether their paradoxes were sublimely deliberate. I suspect it was a bit of both, since the *ignorantes, stulti, fatui* would take the texts at their face value and get bogged in the welter of analogies, while the more astute reader, realizing the necessity for symbolism, would handle it like a virtuoso with no trouble at all. Intellectual responsibility seems always to have been the alchemists’ weak spot, though a few of them tell us plainly enough how we are to regard their peculiar language.¹⁵ The less respect they showed for the bowed shoulders of the sweating reader, the greater was their debt, willing or unwilling, to the unconscious, for it is just the infinite variety of their images and paradoxes that points to a psychological fact of prime importance: the indefiniteness of the archetype with its multitude of meanings, all presenting different facets of a single, simple truth. The alchemists were so steeped in their inner experiences that their sole concern was to devise fitting

images and expressions regardless of whether these were intelligible or not. Although in this respect they remained behind the times, they nevertheless performed the inestimable service of having constructed a phenomenology of the unconscious long before the advent of psychology. We, as heirs to these riches, do not find our heritage at all easy to enjoy. Yet we can comfort ourselves with the reflection that the old masters were equally at a loss to understand one another, or that they did so only with difficulty. Thus the author of the *Rosarium* says that the “antiqui Philosophi tam obscure quam confuse scripserunt,” so that they only baffled the reader or put him off altogether. For his part, he says, he would make the “experimentum verissimum” plain for all eyes to see and reveal it “in the most certain and human manner”—and then proceeds to write exactly like all the others before him. This was inevitable, as the alchemists did not really know what they were writing about. Whether we know today seems to me not altogether sure. At any rate we no longer believe that the secret lies in chemical substances, but that it is rather to be found in one of the darker and deeper layers of the psyche, although we do not know the nature of this layer. Perhaps in another century or so we shall discover a new darkness from which there will emerge something we do not understand either, but whose presence we sense with the utmost certainty.

[498] The alchemist saw no contradiction in comparing the diadem with a “foul deposit” and then, in the next breath, saying that it is of heavenly origin. He follows the rule laid down in the “Tabula smaragdina”: “Quod est inferius, est sicut quod est superius. Et quod est superius, est sicut quod est inferius.”¹⁶ His faculty for conscious discrimination was not as acute as modern man’s, and was distinctly blunter than the scholastic thought of his contemporaries. This apparent regression cannot be explained by any mental backwardness on the part of the alchemist; it is more the case that his main interest is focussed on the unconscious itself and not at all on the powers of discrimination and formulation which mark the concise conceptual thinking of the schoolmen. He is content if he succeeds in finding expressions to delineate afresh the secret he feels. How these expressions relate to and differ from one another is of the smallest account to him, for he never supposes that anybody could reconstruct the art from his ideas about it, but that those who approach the art at all are already fascinated by its secret and are guided by sure intuition, or are actually elected and predestined thereto by God. Thus the *Rosarium*¹⁷ says, quoting Hortulanus:¹⁸ “Solus ille, qui scit facere lapidem Philosophorum, intelligit verba eorum de lapide” (Only he who knows how to make the philosophers’ stone can understand their words concerning it). The darkness of the symbolism scatters before the eyes of the enlightened philosopher. Hortulanus says again: “Nihil enim prodest occultatio philosophorum in sermonibus, ubi doctrina Spiritus sancti operatur”¹⁹ (The

mystification in the sayings of the philosophers is of no avail where the teaching of the Holy Ghost is at work).

[499] The alchemist's failure to distinguish between *corpus* and *spiritus* is in our case assisted by the assumption that, owing to the preceding *mortificatio* and *sublimatio*, the body has taken on "quintessential" or spiritual form and consequently, as a *corpus mundum* (pure substance), is not so very different from spirit. It may shelter spirit or even draw it down to itself.²⁰ All these ideas lead one to conclude that not only the *coniunctio* but the reanimation of the "body" is an altogether transmundane event, a process occurring in the psychic non-ego. This would explain why the process is so easily projected, for if it were of a personal nature its liability to projection would be considerably reduced, because it could then be made conscious without too much difficulty. At any rate this liability would not have been sufficient to cause a projection upon inanimate matter, which is the polar opposite of the living psyche. Experience shows that the carrier of the projection is not just *any* object but is always one that proves adequate to the nature of the content projected—that is to say, it must offer the content a "hook" to hang on.²¹

[500] Although the process is essentially transcendental, the projection brings it down to reality by violently affecting the conscious and personal psyche. The result is an inflation, and it then becomes clear that the *coniunctio* is a hierosgamos of the gods and not a mere love-affair between mortals. This is very subtly suggested in the *Chymical Wedding*, where Rosencreutz, the hero of the drama, is only a guest at the feast and, though forbidden to do so, slips into the bedchamber of Venus in order to gaze admiringly on the naked beauty of the sleeper. As a punishment for this intrusion Cupid wounds him in the hand with an arrow.²² His own personal, secret connection with the royal marriage is only fleetingly indicated right at the end: the king, alluding to Rosencreutz, says that he (Rosencreutz) was his father.²³ Andreae, the author, must have been a man of some wit, since at this point he tries to extricate himself from the affair with a jest. He gives a clear hint that he himself is the father of his characters and gets the king to confirm this. The voluntarily proffered information about the paternity of this "child" is the familiar attempt of a creative artist to bolster up the prestige of his ego against the suspicion that he is the victim of the creative urge welling out of the unconscious. Goethe could not shake off the grip of *Faust*—his "main business"—half so easily. (Lesser men have correspondingly more need of greatness, hence they must make others think more highly of them.) Andreae was as fascinated by the secret of the art as any alchemist; the serious attempt he made to found the Rosicrucian Order is proof of this, and it was largely for reasons of expediency, owing to his position as a cleric, that he was led to adopt a more distant attitude in later years.²⁴

[501] If there is such a thing as an unconscious that is not personal—i.e., does not consist of individually acquired contents, whether forgotten, subliminally perceived, or repressed—then there must also be processes going on in this non-ego, spontaneous archetypal events which the conscious mind can only perceive when they are projected. They are immemorially strange and unknown, and yet we seem to have known them from everlasting; they are also the source of a remarkable fascination that dazzles and illuminates at once. They draw us like a magnet and at the same time frighten us; they manifest themselves in fantasies, dreams, hallucinations, and in certain kinds of religious ecstasy.²⁵ The *coniunctio* is one of these archetypes. The absorptive power of the archetype explains not only the widespread incidence of this motif but also the passionate intensity with which it seizes upon the individual, often in defiance of all reason and understanding. To the *peripeteia* of the *coniunctio* also belong the processes illustrated in the last few pictures. They deal with the after-effects of the fusion of opposites, which have involved the conscious personality in their union. The extreme consequence of this is the dissolution of the ego in the unconscious, a state resembling death. It results from the more or less complete identification of the ego with unconscious factors, or, as we would say, from contamination. This is what the alchemists experienced as *immunditia*, pollution. They saw it as the defilement of something transcendent by the gross and opaque body which had for that reason to undergo sublimation. But the body, psychologically speaking, is the expression of our individual and conscious existence, which, we then feel, is in danger of being swamped or poisoned by the unconscious. We therefore try to separate the ego-consciousness from the unconscious and free it from that perilous embrace. Yet, although the power of the unconscious is feared as something sinister, this feeling is only partially justified by the facts, since we also know that the unconscious is capable of producing beneficial effects. The kind of effect it will have depends to a large extent on the attitude of the conscious mind.

[502] Hence the *mundificatio*—purification—is an attempt to discriminate the mixture, to sort out the *coincidentia oppositorum* in which the individual has been caught. The rational man, in order to live in this world, has to make a distinction between “himself” and what we might call the “eternal man.” Although he is a unique individual, he also stands for “man” as a species, and thus he has a share in all the movements of the collective unconscious. In other words, the “eternal” truths become dangerously disturbing factors when they suppress the unique ego of the individual and live at his expense. If our psychology is forced, owing to the special nature of its empirical material, to stress the importance of the unconscious, that does not in any way diminish the importance of ego-consciousness. It is merely the one-sided overvaluation of the latter that has to be checked by a certain relativization of values. But

this relativization should not be carried so far that the ego is completely fascinated and overpowered by the archetypal truths. The ego lives in space and time and must adapt itself to their laws if it is to exist at all. If it is absorbed by the unconscious to such an extent that the latter alone has the power of decision, then the ego is stifled, and there is no longer any medium in which the unconscious could be integrated and in which the work of realization could take place. The separation of the empirical ego from the “eternal” and universal man is therefore of vital importance, particularly today, when mass-degeneration of the personality is making such threatening strides. Mass-degeneration does not come only from without: it also comes from within, from the collective unconscious. Against the outside, some protection was afforded by the *droits de l’homme* which at present are lost to the greater part of Europe,²⁶ and even where they are not actually lost we see political parties, as naïve as they are powerful, doing their best to abolish them in favour of the slave state, with the bait of social security. Against the daemonism from within, the Church offers some protection so long as it wields authority. But protection and security are only valuable when not excessively cramping to our existence; and in the same way the superiority of consciousness is desirable only if it does not suppress and shut out too much life. As always, life is a voyage between Scylla and Charybdis.

[503] The process of differentiating the ego from the unconscious,²⁷ then, has its equivalent in the *mundificatio*, and, just as this is the necessary condition for the return of the soul to the body, so the body is necessary if the unconscious is not to have destructive effects on the ego-consciousness, for it is the body that gives bounds to the personality. The unconscious can be integrated only if the ego holds its ground. Consequently, the alchemist’s endeavour to unite the *corpus mundum*, the purified body, with the soul is also the endeavour of the psychologist once he has succeeded in freeing the ego-consciousness from contamination with the unconscious. In alchemy the purification is the result of numerous distillations; in psychology too it comes from an equally thorough separation of the ordinary ego-personality from all inflationary admixtures of unconscious material. This task entails the most painstaking self-examination and self-education, which can, however, be passed on to others by one who has acquired the discipline himself. The process of psychological differentiation is no light work; it needs the tenacity and patience of the alchemist, who must purify the body from all superfluities in the fiercest heat of the furnace, and pursue Mercurius “from one bride chamber to the next.” As alchemical symbolism shows, a radical understanding of this kind is impossible without a human partner. A general and merely academic “insight into one’s mistakes” is ineffectual, for then the mistakes are not really seen at all, only the idea of them. But they show up acutely when a human relationship brings them to the fore and when they are noticed by the other person as well as by oneself. Then and then only can they really be felt and

their true nature recognized. Similarly, confessions made to one's secret self generally have little or no effect, whereas confessions made to another are much more promising.

[504] The "soul" which is reunited with the body is the One born of the two, the *vinculum* common to both.²⁸ It is therefore the very essence of relationship. Equally the psychological anima, as representative of the collective unconscious, has a collective character. The collective unconscious is a natural and universal datum and its manifestation always causes an unconscious identity, a state of *participation mystique*. If the conscious personality becomes caught up in it and offers no resistance, the relationship is personified by the anima (in dreams, for instance), who then, as a more or less autonomous part of the personality, generally has a disturbing effect. But if, as the result of a long and thorough analysis and the withdrawal of projections, the ego has been successfully separated from the unconscious, the anima will gradually cease to act as an autonomous personality and will become a function of relationship between conscious and unconscious. So long as she is projected she leads to all sorts of illusions about people and things and thus to endless complications. The withdrawal of projections makes the anima what she originally was: an archetypal image which, in its right place, functions to the advantage of the individual. Interposed between the ego and the world, she acts like an ever-changing Shakti, who weaves the veil of Maya and dances the illusion of existence. But, functioning between the ego and the unconscious, the anima becomes the matrix of all the divine and semi-divine figures, from the pagan goddess to the Virgin, from the messenger of the Holy Grail to the saint.²⁹ The unconscious anima is a creature without relationships, an autoerotic being whose one aim is to take total possession of the individual. When this happens to a man he becomes strangely womanish in the worst sense, with a moody and uncontrolled disposition which, in time, has a deleterious effect even on the hitherto reliable functions—e.g., his intellect—and gives rise to the kind of ideas and opinions we rightly find so objectionable in animus-possessed women.³⁰

[505] Here I must point out that very different rules apply in feminine psychology, since in this case we are not dealing with a function of relationship but, on the contrary, with a *discriminative* function, namely the animus. Alchemy was, as a philosophy, mainly a masculine preoccupation and in consequence of this its formulations are for the most part masculine in character. But we should not overlook the fact that the feminine element in alchemy is not so inconsiderable since, even at the time of its beginnings in Alexandria, we have authentic proof of female philosophers like Theosebeia,³¹ the *soror mystica* of Zosimos, and Paphnutia and Maria Prophetissa. From later times we know of the pair of alchemists, Nicolas Flamel and his wife Peronelle. The *Mutus liber* of 1677 gives an account of a man

and wife performing the *opus* together,³² and finally in the nineteenth century we have the pair of English alchemists, Thomas South and his daughter, who later became Mrs. Atwood. After busying themselves for many years with the study of alchemy, they decided to set down their ideas and experiences in book form. To this end they separated, the father working in one part of the house and his daughter in another. She wrote a thick, erudite tome while he versified. She was the first to finish and promptly sent the book to the printer. Scarcely had it appeared when her father was overcome with scruples, fearing lest they had betrayed the great secret. He succeeded in persuading his daughter to withdraw the book and destroy it. In the same spirit, he sacrificed his own poetic labours. Only a few lines are preserved in her book, of which it was too late to withdraw all the copies. A reprint,³³ prepared after her death in 1910, appeared in 1918. I have read the book: no secrets are betrayed. It is a thoroughly medieval production garnished with would-be theosophical explanations as a sop to the syncretism of the new age.

[506] A remarkable contribution to the role of feminine psychology in alchemy is furnished by the letter which the English theologian and alchemist, John Pordage,³⁴ wrote to his *soror mystica* Jane Leade. In it³⁵ he gives her spiritual instruction concerning the *opus*:

[507] This sacred furnace, this *Balneum Mariae*, this glass phial, this secret furnace, is the place, the matrix or womb, and the centre from which the divine Tincture flows forth from its source and origin. Of the place or abode where the Tincture has its home and dwelling I need not remind you, nor name its name, but I exhort you only to knock at the foundation. Solomon tells us in his Song that its inner dwelling its not far from the navel, which resembles a round goblet filled with the sacred liquor of the pure Tincture.³⁶ You know the fire of the philosophers, it was the key they kept concealed.... The fire is the love-fire, the life that flows forth from the Divine Venus, or the Love of God; the fire of Mars is too choleric, too sharp, and too fierce, so that it would dry up and burn the *materia*: wherefore the love-fire of Venus alone has the qualities of the right true fire.

[508] This true philosophy will teach you how you should know yourself, and if you know yourself rightly, you will also know the pure nature; for the pure nature is in yourself. And when you know the pure nature which is your true selfhood, freed from all wicked, sinful selfishness, then also you will know God, for the Godhead is concealed and wrapped in the pure nature like a kernel in the nutshell.... The true philosophy will teach you who is the father and who is the mother of this magical child.... The father of this child is Mars, he is the fiery life which proceeds from Mars as the father's quality. His mother is Venus, who is the gentle love-fire proceeding from the son's quality. Here then, in the qualities and forms of nature, you

see male and female, man and wife, bride and bridegroom, the first marriage or wedding of Galilee, which is celebrated between Mars and Venus when they return from their fallen state. Mars, or the husband, must become a godly man, otherwise the pure Venus will take him neither into the conjugal nor into the sacred marriage bed. Venus must become a pure virgin, a virginal wife, otherwise the wrathful jealous Mars in his wrath-fire will not wed with her nor live with her in union; but instead of agreement and harmony, there will be naught but strife, jealousy, discord, and enmity among the qualities of nature....

[509] Accordingly, if you think to become a learned artist, look with earnestness to the union of your own Mars and Venus, that the nuptial knot be rightly tied and the marriage between them well and truly consummated. You must see to it that they lie together in the bed of their union and live in sweet harmony; then the virgin Venus will bring forth her pearl, her water-spirit, in you, to soften the fiery spirit of Mars, and the wrathful fire of Mars will sink quite willingly, in mildness and love, into the love-fire of Venus, and thus both qualities, *as fire and water*, will mingle together, agree, and flow into one another; and from their agreement and union there will proceed the first conception of the magical birth which we call Tincture, the love-fire Tincture. Now although the Tincture is conceived in the womb of your humanity and is awakened to life, yet there is still a great danger, and it is to be feared that, because it is still in the body or womb, it may yet be spoiled by neglect before it be brought in due season into the light. On this account you must look round for a good nurse, who will watch it in its childhood and will tend it properly: and such must be your own pure heart and your own virginal will....

[510] This child, this tincturing life, must be assayed, proved, and tried in the qualities of nature; and here again great anxiety and danger will arise, seeing that it must suffer the damage of temptation in the body and womb, and you may thus lose the birth. For the delicate Tincture, this tender child of life, must descend into the forms and qualities of nature, that it may suffer and endure temptation and overcome it; it must needs descend into the Divine Darkness, into the darkness of Saturn, wherein no light of life is to be seen: there it must be held captive, and be bound with the chains of darkness, and must live from the food which the prickly Mercurius will give it to eat, which to the Divine Tincture of life is naught but dust and ashes, poison and gall, fire and brimstone. It must enter into the fierce wrathful Mars, by whom (as happened to Jonah in the belly of hell) it is swallowed, and must experience the curse of God's wrath; also it must be tempted by Lucifer and the million devils who dwell in the quality of the wrathful fire. And here the divine artist in this philosophical work will see the first colour, where the Tincture appears in its blackness, and it is the blackest black; the learned philosophers call it their black crow, or their black raven, or again their blessed and blissful black; for in the darkness of this black is hidden the

light of lights in the quality of Saturn; and in this poison and gall there is hidden in Mercurius the most precious medicament against the poison, namely the life of life. And the blessed Tincture is hidden in the fury or wrath and curse of Mars.

[511] Now it seems to the artist that all his work is lost. What has become of the Tincture? Here is nothing that is apparent, that can be perceived, recognized, or tasted, but darkness, most painful death, a hellish fearful fire, nothing but the wrath and curse of God; yet he does not see that the Tincture of Life is in this putrefaction or dissolution and destruction, that there is light in this darkness, life in this death, love in this fury and wrath, and in this poison the highest and most precious Tincture and medicament against all poison and sickness.

[512] The old philosophers named this work or labour their descension, their cineration, their pulverization, their death, their putrefaction of the *materia* of the stone, their corruption, their *caput mortuum*. You must not despise this blackness, or black colour, but persevere in it in patience, in suffering, and in silence, until its forty days of temptation are over, until the days of its tribulations are completed, when the seed of life shall waken to life, shall rise up, sublimate or glorify itself, transform itself into whiteness, purify and sanctify itself, give itself the redness, in other words, transfigure and fix its shape. When the work is brought thus far, it is an easy work: for the learned philosophers have said that the making of the stone is then woman's work and child's play. Therefore, if the human will is given over and left, and becomes patient and still and as a dead nothing, the Tincture will do and effect everything in us and for us, if we can keep our thoughts, movements, and imaginations still, or can leave off and rest. But how difficult, hard, and bitter this work appears to the human will, before it can be brought to this shape, so that it remains still and calm even though all the fire be let loose in its sight, and all manner of temptations assail it!

[513] Here, as you see, there is great danger, and the Tincture of life can easily be spoiled and the fruit wasted in the womb, when it is thus surrounded on all sides and assailed by so many devils and so many tempting essences. But if it can withstand and overcome this fiery trial and sore temptation, and win the victory: then you will see the beginning of its resurrection from hell, death, and the mortal grave, appearing first in the quality of Venus; and then the Tincture of life will itself burst forth mightily from the prison of the dark Saturn, through the hell of the poisonous Mercurius, and through the curse and direful death of God's wrath that burns and flames in Mars, and the gentle love-fire of the Venus quality will gain the upper hand, and the love-fire Tincture will be preferred in the government and have supreme command. And then the gentleness and love-fire of Divine Venus will reign as lord and king in and over all qualities.

[514] Nevertheless there is still another danger that the work of the stone may yet miscarry. Therefore the artist must wait until he sees the Tincture covered over with its other colour, as with the whitest white, which he may expect to see after long patience and stillness, and which truly appears when the Tincture rises up in the lunar quality: illustrious Luna imparts a beautiful white to the Tincture, the most perfect white hue and a brilliant splendour. And thus is the darkness transformed into light, and death into life. And this brilliant whiteness awakens joy and hope in the heart of the artist, that the work has gone so well and fallen out so happily. For now the white colour reveals to the enlightened eye of the soul cleanliness, innocence, holiness, simplicity, heavenly-mindedness, and righteousness, and with these the Tincture is henceforth clothed over and over as with a garment. She is radiant as the moon, beautiful as the dawn. Now the divine virginity of the tincturing life shines forth, and no spot or wrinkle nor any other blemish is to be seen.

[515] The old masters were wont to call this work their white swan, their albification, or making white, their sublimation, their distillation, their circulation, their purification, their separation, their sanctification, and their resurrection, because the Tincture is made white like a shining silver. It is sublimed or exalted and transfigured by reason of its many descents into Saturn, Mercurius, and Mars, and by its many ascents into Venus and Luna. This is the distillation, the *Balneum Mariae*: because the Tincture is purified in the qualities of nature through the many distillations of the water, blood, and heavenly dew of the Divine Virgin Sophia, and, through the manifold circulation in and out of the forms and qualities of nature, is made white and pure, like brilliantly polished silver. And all uncleanliness of the blackness, all death, hell, curse, wrath, and all poison which rise up out of the qualities of Saturn, Mercury, and Mars are separated and depart, wherefore they call it their separation, and when the Tincture attains its whiteness and brilliance in Venus and Luna they call it their sanctification, their purification and making white. They call it their resurrection, because the white rises up out of the black, and the divine virginity and purity out of the poison of Mercurius and out of the red fiery rage and wrath of Mars....

[516] Now is the stone shaped, the elixir of life prepared, the love-child or the child of love born, the new birth completed, and the work made whole and perfect. Farewell! fall, hell, curse, death, dragon, beast, and serpent! Good night! mortality, fear, sorrow, and misery! For now redemption, salvation, and recovery of everything that was lost will again come to pass within and without, for now you have the great secret and mystery of the whole world; you have the Pearl of Love; you have the unchangeable eternal essence of Divine Joy from which all healing virtue and all multiplying power come, from which there actively proceeds the active power of the Holy Ghost. You

have the seed of the woman who has trampled on the head of the serpent. You have the seed of the virgin and the blood of the virgin in one essence and quality.

[517] O wonder of wonders! You have the tincturing Tincture, the pearl of the virgin, which has three essences or qualities in one; it has body, soul, and spirit, it has fire, light, and joy, it has the Father's quality, it has the Son's quality, and has also the Holy Ghost's quality, even all these three, in one fixed and eternal essence and being. This is the Son of the Virgin, this is her first-born, this is the noble hero, the trampler of the serpent, and he who casts the dragon under his feet and tramples upon him.... For now the Man of Paradise is become clear as a transparent glass, in which the Divine Sun shines through and through, like gold that is wholly bright, pure, and clear, without blemish or spot. The soul is henceforth a most substantial seraphic angel, she can make herself doctor, theologian, astrologer, divine magician, she can make herself whatsoever she will, and do and have whatsoever she will: for all qualities have but one will in agreement and harmony. And this same one will is God's eternal infallible will; and from henceforth the Divine Man is in his own nature become one with God.³⁷

[518] This hymn-like myth of love, virgin, mother, and child sounds extremely feminine, but in reality it is an archetypal conception sprung from the masculine unconscious, where the Virgin Sophia corresponds to the anima (in the psychological sense).³⁸ As is shown by the symbolism and by the not very clear distinction between her and the son, she is also the "paradisal" or "divine" being, i.e., the self. The fact that these ideas and figures were still mystical for Pordage and more or less undifferentiated is explained by the emotional nature of the experiences which he himself describes.³⁹ Experiences of this kind leave little room for critical understanding. They do, however, throw light on the processes hidden behind the alchemical symbolism and pave the way for the discoveries of modern medical psychology. Unfortunately we possess no original treatises that can with any certainty be ascribed to a woman author. Consequently we do not know what kind of alchemical symbolism a woman's view would have produced. Nevertheless, modern medical practice tells us that the feminine unconscious produces a symbolism which, by and large, is compensatory to the masculine. In that case, to use Pordage's terms, the leitmotiv would not be gentle Venus but fiery Mars, not Sophia but Hecate, Demeter, and Persephone, or the matriarchal Kali of southern India in her brighter and darker aspects.⁴⁰

[519] In this connection I would like to draw attention to the curious pictures of the *arbor philosophica* in the fourteenth-century Codex Ashburnham.⁴¹ One picture shows Adam struck by an arrow,⁴² and the tree growing out of his genitals; in the other picture the tree grows out of Eve's head. Her right hand covers her genitals, her

left points to a skull. Plainly this is a hint that the man's *opus* is concerned with the erotic aspect of the anima, while the woman's is concerned with the animus, which is a "function of the head."⁴³ The *prima materia*, i.e., the unconscious, is represented in man by the "unconscious" anima, and in woman by the "unconscious" animus. Out of the *prima materia* grows the philosophical tree, the unfolding *opus*. In their symbolical sense, too, the pictures are in accord with the findings of psychology, since Adam would then stand for the woman's animus who generates "philosophical" ideas with his member (*λόγοι σπερματικοί*), and Eve for the man's anima who, as Sapiientia or Sophia, produces out of her head the intellectual content of the work.

[520] Finally, I must point out that a certain concession to feminine psychology is also to be found in the *Rosarium*, in so far as the first series of pictures is followed by a second—less complete, but otherwise analogous—series, at the end of which there appears a masculine figure, the "emperor," and not, as in the first, an "empress," the "daughter of the philosophers." The accentuation of the feminine element in the Rebis (Fig. 10) is consistent with a predominantly male psychology, whereas the addition of an "emperor" in the second version is a concession to woman (or possibly to the male consciousness).

[521] In its primary "unconscious" form the animus is a compound of spontaneous, unpremeditated opinions which exercise a powerful influence on the woman's emotional life, while the anima is similarly compounded of feelings which thereafter influence or distort the man's understanding ("she has turned his head"). Consequently the animus likes to project himself upon "intellectuals" and all kinds of "heroes," including tenors, artists, sporting celebrities, etc. The anima has a predilection for everything that is unconscious, dark, equivocal, and unrelated in woman, and also for her vanity, frigidity, helplessness, and so forth. In both cases the incest element plays an important part: there is a relation between the young woman and her father, the older woman and her son, the young man and his mother, the older man and his daughter.

[522] It will be clear from all this that the "soul" which accrues to ego-consciousness during the *opus* has a feminine character in the man and a masculine character in the woman. His anima wants to reconcile and unite; her animus tries to discern and discriminate. This strict antithesis is depicted in the alchemists' Rebis, the symbol of transcendental unity, as a coincidence of opposites; but in conscious reality—once the conscious mind has been cleansed of unconscious impurities by the preceding *mundificatio*—it represents a conflict even though the conscious relations between the two individuals may be quite harmonious. Even when the conscious mind does not identify itself with the inclinations of the unconscious, it still has to face them and somehow take account of them in order that they may play their part in the life of the

individual, however difficult this may be. For if the unconscious is not allowed to express itself through word and deed, through worry and suffering, through our consideration of its claims and resistance to them, then the earlier, divided state will return with all the incalculable consequences which disregard of the unconscious may entail. If, on the other hand, we give in to the unconscious too much, it leads to a positive or negative inflation of the personality. Turn and twist this situation as we may, it always remains an inner and outer conflict: one of the birds is fledged and the other not. We are always in doubt: there is a pro to be rejected and a contra to be accepted. All of us would like to escape from this admittedly uncomfortable situation, but we do so only to discover that what we left behind us was ourselves. To live in perpetual flight from ourselves is a bitter thing, and to live with ourselves demands a number of Christian virtues which we then have to apply to our own case, such as patience, love, faith, hope, and humility. It is all very fine to make our neighbour happy by applying them to him, but the demon of self-admiration so easily claps us on the back and says, “Well done!” And because this is a great psychological truth, it must be stood on its head for an equal number of people so as to give the devil something to carp at. But—does it make *us* happy when we have to apply these virtues to ourselves? when I am the recipient of my own gifts, the least among my brothers whom I must take to my bosom? when I must admit that I need all my patience, my love, my faith, and even my humility, and that I myself am my own devil, the antagonist who always wants the opposite in everything? Can we ever really endure ourselves? “Do unto others...”—this is as true of evil as of good.

[523] In John Gower’s *Confessio amantis*⁴⁴ there is a saying which I have used as a motto to the Introduction of this book: “Bellica pax, vulnus dulce, suave malum” (a warring peace, a sweet wound, a mild evil). Into these words the old alchemist put the quintessence of his experience. I can add nothing to their incomparable simplicity and conciseness. They contain all that the ego can reasonably demand of the *opus*, and illuminate for it the paradoxical darkness of human life. Submission to the fundamental contrariety of human nature amounts to an acceptance of the fact that the psyche is at cross purposes with itself. Alchemy teaches that the tension is fourfold, forming a cross which stands for the four warring elements. The quaternio is the minimal aspect under which such a state of total opposition can be regarded. The cross as a form of suffering expresses psychic reality, and carrying the cross is therefore an apt symbol for the wholeness and also for the passion which the alchemist saw in his work. Hence the *Rosarium* ends, not unfittingly, with the picture of the risen Christ and the verses:

After my many sufferings and great martyrdom
I rise again transfigured, of all blemish free.

[524] An exclusively rational analysis and interpretation of alchemy, and of the unconscious contents projected into it, must necessarily stop short at the above parallels and antinomies, for in a total opposition there is no third—*tertium non datur!* Science comes to a stop at the frontiers of logic, but nature does not—she thrives on ground as yet untrodden by theory. *Venerabilis natura* does not halt at the opposites; she uses them to create, out of opposition, a new birth.

THE NEW BIRTH

Here is born the Empress of all honour/
 The philosophers name her their daughter.

She multiplies/bears children ever again/
 They are incorruptibly pure and without stain.

[Figure 10]

[525] Our last picture is the tenth in the series, and this is certainly no accident, for the denarius is supposed to be the perfect number.¹ We have shown that the axiom of Maria consists of 4, 3, 2, 1; the sum of these numbers is 10, which stands for unity on a higher level. The unarius represents unity in the form of the *res simplex*, i.e., God as *auctor rerum*,² while the denarius is the result of the completed work. Hence the real meaning of the denarius is the Son of God.³ Although the alchemists call it the *filius philosophorum*,⁴ they use it as a Christ-symbol and at the same time employ the symbolic qualities of the ecclesiastical Christ-figure to characterize their Rebis.⁵ It is probably correct to say that the medieval Rebis had these Christian characteristics, but for the Hermaphroditus of Arabic and Greek sources we must conjecture a partly pagan tradition. The Church symbolism of *sponsus* and *sponsa* leads to the mystic union of the two, i.e., to the *anima Christi* which lives in the *corpus mysticum* of the Church. This unity underlies the idea of Christ's androgyny, which medieval alchemy exploited for its own ends. The much older figure of the Hermaphroditus, whose outward aspect probably derives from a Cyprian *Venus barbata*, encountered in the Eastern Church the already extant idea of an androgynous Christ, which is no doubt connected with the Platonic conception of the bisexual First Man, for Christ is ultimately the Anthropos.

Hie ist geboren die eddele Keyserin reich/
 Die meister nennen sie ihrer dochter gleich.
 Die vermeret sich/gebirt kinder ohn zal/
 Sein vnd dōlich rein/vmnd ohn alles mahl.

Die

Figure 10

[526] The denarius forms the *totius operis summa*, the culminating point of the work beyond which it is impossible to go except by means of the *multiplicatio*. For, although the denarius represents a higher stage of unity, it is also a multiple of 1 and can therefore be multiplied to infinity in the ratio of 10, 100, 1000, 10,000, etc., just as the mystical body of the Church is composed of an indefinitely large number of believers and is capable of multiplying that number without limit. Hence the Rebis is described as the *cibus sempiternus* (everlasting food), *lumen indeficiens*, and so forth; hence also the assumption that the tincture replenishes itself and that the work need only be completed once and for all time.⁶ But, since the *multiplicatio* is only an attribute of the denarius, 100 is no different from and no better than 10.⁷

[527] The *lapis*, understood as the cosmogonic First Man, is the *radix ipsius*, according to the *Rosarium*: everything has grown from this One and through this One.⁸ It is the Uroboros, the serpent that fertilizes and gives birth to itself, by definition an *increatedum*, despite a quotation from Rosarius to the effect that “Mercurius noster nobilissimus” was created by God as a “res nobilis.” This *creatum increatum* can only be listed as another paradox. It is useless to rack our brains over this

extraordinary attitude of mind. Indeed we shall continue to do so only while we assume that the alchemists were not being consciously and intentionally paradoxical. It seems to me that theirs was a perfectly natural view: anything unknowable could best be described in terms of opposites.⁹ A longish poem in German, evidently written at about the time it was printed in the 1550 *Rosarium*, explains the nature of the Hermaphroditus as follows:

[528] Here is born the Empress of all honour/

The philosophers name her their daughter.
She multiplies/bears children ever again/
They are incorruptibly pure and without stain.
The Queen hates death and poverty
She surpasses gold silver and jewellery/
All medicaments great and small.
Nothing upon earth is her equal/
Wherefore we say thanks to God in heaven.
O force constrains me naked woman that I am/
For unblest was my body when I first began.
And never did I become a mother/
Until the time when I was born another.
Then the power of roots and herbs did I possess/
And I triumphed over all sickness.
Then it was that I first knew my son/
And we two came together as one.
There I was made pregnant by him and gave birth
Upon a barren stretch of earth.
I became a mother yet remained a maid/
And in my nature was established.
Therefore my son was also my father/
As God ordained in accordance with nature.
I bore the mother who gave me birth/
Through me she was born again upon earth.
To view as one what nature hath wed/
Is in our mountain most masterfully hid.
Four come together in one/
In this our magisterial Stone.
And six when seen as a trinity/

Is brought to essential unity.
To him who thinks on these things aright/
God giveth the power to put to flight
All such sicknesses as pertain
To metals and the bodies of men.
None can do that without God's help/
And then only if he see through himself.
Out of my earth a fountain flows/
And into two streams it branching goes.
One of them runs to the Orient/
The other towards the Occident.
Two eagles fly up with feathers aflame/
Naked they fall to earth again.
Yet in full feather they rise up soon/
That fountain is Lord of sun and moon.
O Lord Jesu Christ who bestow'st
The gift through the grace of thy Holy Ghost:
He unto whom it is given truly/
Understands the masters' sayings entirely.
That his thoughts on the future life may dwell/
Body and soul are joined so well.
And to raise them up to their father's kingdom/
Such is the way of art among men.

[529] This poem is of considerable psychological interest. I have already stressed the anima nature of the androgyne. The “unblessedness” of the “first body” has its equivalent in the disagreeable, daemonic, “unconscious” anima which we considered in the last chapter. At its second birth, that is, as a result of the opus, this anima becomes fruitful and is born together with her son, in the shape of the Hermaphroditus, the product of mother-son incest. Neither fecundation nor birth impairs her virginity.¹⁰ This essentially Christian paradox is connected with the extraordinary *timeless* quality of the unconscious: everything has already happened and is yet unhappened, is already dead and yet unborn.¹¹ Such paradoxical statements illustrate the potentiality of unconscious contents. In so far as comparisons are possible at all, they are objects of memory and knowledge, and in this sense belong to the remote past; we therefore speak of “vestiges of primordial mythological ideas.” But, in so far as the unconscious manifests itself in a sudden incomprehensible invasion, it is something that was never there before, something altogether strange,

new, and belonging to the future. The unconscious is thus the mother as well as the daughter, and the mother has given birth to her own mother (*in creatum*), and her son was her father.¹² It seems to have dawned on the alchemists that this most monstrous of paradoxes was somehow connected with the self, for no man can practise such an art unless it be with God's help, and unless "he see through himself." The old masters were aware of this, as we can see from the dialogue between Morienus and King Kalid. Morienus relates how Hercules (the Byzantine Emperor Heraclius) told his pupils: "O sons of wisdom, know that God, the supreme and glorious Creator, has made the world out of four unequal elements and set man as an ornament between them." When the King begged for further explanation, Morienus answered: "Why should I tell you many things? For this substance [i.e., the arcanum] is extracted from you, and you are its ore; in you the philosophers find it, and, that I may speak more plainly, from you they take it. And when you have experienced this, the love and desire for it will be increased in you. And you shall know that this thing subsists truly and beyond all doubt.... For in this stone the four elements are bound together, and men liken it to the world and the composition of the world."¹³

[530] One gathers from this discourse that, owing to his position between the four world-principles, man contains within himself a replica of the world in which the unequal elements are united. This is the microcosm in man, corresponding to the "firmament" or "Olympus" of Paracelsus: that unknown quantity in man which is as universal and wide as the world itself, which is in him by nature and cannot be acquired. Psychologically, this corresponds to the collective unconscious, whose projections are to be found everywhere in alchemy. I must refrain from adducing more proofs of the psychological insight of the alchemists, since this has already been done elsewhere.¹⁴

[531] The end of the poem hints at immortality—at the great hope of the alchemists, the *elixir vitae*. As a transcendental idea, immortality cannot be the object of experience, hence there is no argument either for or against. But immortality as an *experience of feeling* is rather different. A feeling is as indisputable a reality as the existence of an idea, and can be experienced to exactly the same degree. On many occasions I have observed that the spontaneous manifestations of the self, i.e., the appearance of certain symbols relating thereto, bring with them something of the timelessness of the unconscious which expresses itself in a feeling of eternity or immortality. Such experiences can be extraordinarily impressive. The idea of the *aqua permanens*, the *in corruptibilitas lapidis*, the *elixir vitae*, the *cibus immortalis*, etc., is not so very strange, since it fits in with the phenomenology of the collective unconscious.¹⁵ It might seem a monstrous presumption on the part of the alchemist to imagine himself capable, even with God's help, of producing an everlasting substance. This claim gives many treatises an air of boastfulness and humbug on

account of which they have deservedly fallen into disrepute and oblivion. All the same, we should beware of emptying out the baby with the bath water. There are treatises that look deep into the nature of the *opus* and put another complexion on alchemy. Thus the anonymous author of the *Rosarium* says: "It is manifest, therefore, that the stone is the master of the philosophers, as if he [the philosopher] were to say that he does of his own nature that which he is compelled to do; and so the philosopher is not the master, but rather the minister, of the stone. Consequently, he who attempts through the art and apart from nature to introduce into the matter anything which is not in it naturally, errs, and will bewail his error."¹⁶ This tells us plainly enough that the artist does not act from his own creative whim, but is driven to act by the stone. This almighty taskmaster is none other than the self. The self wants to be made manifest in the work, and for this reason the *opus* is a process of individuation, a becoming of the self. The self is the total, timeless man and as such corresponds to the original, spherical,¹⁷ bisexual being who stands for the mutual integration of conscious and unconscious.

[532] From the foregoing we can see how the *opus* ends with the idea of a highly paradoxical being that defies rational analysis. The work could hardly end in any other way, since the *complexio oppositorum* cannot possibly lead to anything but a baffling paradox. Psychologically, this means that human wholeness can only be described in antinomies, which is always the case when dealing with a transcendental idea. By way of comparison, we might mention the equally paradoxical corpuscular theory and wave theory of light, although these do at least hold out the possibility of a mathematical synthesis, which the psychological idea naturally lacks. Our paradox, however, offers the possibility of an *intuitive* and *emotional* experience, because the unity of the self, unknowable and incomprehensible, irradiates even the sphere of our discriminating, and hence divided, consciousness, and, like all unconscious contents, does so with very powerful effects. This inner unity, or experience of unity, is expressed most forcibly by the mystics in the idea of the *unio mystica*, and above all in the philosophies and religions of India, in Chinese Taoism, and in the Zen Buddhism of Japan. From the point of view of psychology, the names we give to the self are quite irrelevant, and so is the question of whether or not it is "real." Its psychological reality is enough for all practical purposes. The intellect is incapable of knowing anything beyond that anyway, and therefore its Pilate-like questionings are devoid of meaning.

[533] To come back to our picture: it shows an apotheosis of the Rebis, the right side of the body being male, the left female. The figure stands on the moon, which in this case corresponds to the feminine lunar vessel, the *vas hermeticum*. Its wings betoken volatility, i.e., spirituality. In one hand it holds a chalice with three snakes in it, or possibly one snake with three heads; in the other, a single snake. This is an obvious

allusion to the axiom of Maria and the old dilemma of 3 and 4, and also to the mystery of the Trinity. The three snakes in the chalice are the chthonic equivalent of the Trinity, and the single snake represents, firstly, the unity of the three as expressed by Maria and, secondly, the “sinister” *serpens Mercurialis* with all its subsidiary meanings.¹⁸ Whether pictures of this kind are in any way related to the Baphomet¹⁹ of the Templars is an open question, but the snake symbolism²⁰ certainly points to the evil principle, which, although excluded from the Trinity, is yet somehow connected with the work of redemption. Moreover to the left of the Rebis we also find the raven, a synonym for the devil.²¹ The unfledged bird has disappeared: its place is taken by the winged Rebis. To the right, there stands the “sun and moon tree,” the *arbor philosophica*, which is the conscious equivalent of the unconscious process of development suggested on the opposite side. The corresponding picture of the Rebis in the second version²² has, instead of the raven, a pelican plucking its breast for its young, a well-known allegory of Christ. In the same picture a lion is prowling about behind the Rebis and, at the bottom of the hill on which the Rebis stands, there is the three-headed snake.²³ The alchemical hermaphrodite is a problem in itself and really needs special elucidation. Here I will say only a few words about the remarkable fact that the fervently desired goal of the alchemist’s endeavours should be conceived under so monstrous and horrific an image. We have proved to our satisfaction that the antithetical nature of the goal largely accounts for the monstrosity of the corresponding symbol. But this rational explanation does not alter the fact that the monster is a hideous abortion and a perversion of nature. Nor is this a mere accident undeserving of further scrutiny; it is on the contrary highly significant and the outcome of certain psychological facts fundamental to alchemy. The symbol of the hermaphrodite, it must be remembered, is one of the many synonyms for the goal of the art. In order to avoid unnecessary repetition I would refer the reader to the material collected in *Psychology and Alchemy*, and particularly to the lapis-Christ parallel, to which we must add the rarer and, for obvious reasons, generally avoided comparison of the *prima materia* with God.²⁴ Despite the closeness of the analogy, the *lapis* is not to be understood simply as the risen Christ and the *prima materia* as God; the *Tabula smaragdina* hints, rather, that the alchemical mystery is a “lower” equivalent of the higher mysteries, a sacrament not of the paternal “mind” but of maternal “matter.” The disappearance of theriomorphic symbols in Christianity is here compensated by a wealth of allegorical animal forms which tally quite well with *mater natura*. Whereas the Christian figures are the product of spirit, light, and good, the alchemical figures are creatures of night, darkness, poison, and evil. These dark origins do much to explain the misshapen hermaphrodite, but they do not explain everything. The crude, embryonic features of this symbol express the immaturity of the alchemist’s mind, which was not sufficiently developed to equip him for the difficulties of his task. He was underdeveloped in two senses: firstly he did not

understand the real nature of chemical combinations, and secondly he knew nothing about the psychological problem of projection and the unconscious. All this lay as yet hidden in the womb of the future. The growth of natural science has filled the first gap, and the psychology of the unconscious is endeavouring to fill the second. Had the alchemists understood the psychological aspects of their work, they would have been in a position to free their “uniting symbol” from the grip of instinctive sexuality where, for better or worse, mere nature, unsupported by the critical intellect, was bound to leave it. Nature could say no more than that the combination of supreme opposites was a hybrid thing. And there the statement stuck, in sexuality, as always when the potentialities of consciousness do not come to the assistance of nature—which could hardly have been otherwise in the Middle Ages owing to the complete absence of psychology.²⁵ So things remained until, at the end of the nineteenth century, Freud dug up this problem again. There now ensued what usually happens when the conscious mind collides with the unconscious: the former is influenced and prejudiced in the highest degree by the latter, if not actually overpowered by it. The problem of the union of opposites had been lying there for centuries in its sexual form, yet it had to wait until scientific enlightenment and objectivity had advanced far enough for people to mention “sexuality” in scientific conversation. The sexuality of the unconscious was instantly taken with great seriousness and elevated to a sort of religious dogma, which has been fanatically defended right down to the present time: such was the fascination emanating from those contents which had last been nurtured by the alchemists. The natural archetypes that underlie the mythologems of incest, the hierosgamos, the divine child, etc., blossomed forth—in the age of science—into the theory of infantile sexuality, perversions, and incest, while the *coniunctio* was rediscovered in the transference neurosis.²⁶

[534] The sexualism of the hermaphrodite symbol completely overpowered consciousness and gave rise to an attitude of mind which is just as unsavoury as the old hybrid symbolism. The task that defeated the alchemists presented itself anew: how is the profound cleavage in man and the world to be understood, how are we to respond to it and, if possible, abolish it? So runs the question when stripped of its natural sexual symbolism, in which it had got stuck only because the problem could not push its way over the threshold of the unconscious. The sexualism of these contents always denotes an unconscious identity of the ego with some unconscious figure (either anima or animus), and because of this the ego is obliged, willing and reluctant at once, to be a party to the hierosgamos, or at least to believe that it is simply and solely a matter of an erotic consummation. And sure enough it increasingly becomes so the more one believes it—the more exclusively, that is to say, one concentrates on the sexual aspect and the less attention one pays to the archetypal patterns. As we have seen, the whole question invites fanaticism because

it is so painfully obvious that we are in the wrong. If, on the other hand, we decline to accept the argument that because a thing is fascinating it is the absolute truth, then we give ourselves a chance to see that the alluring sexual aspect is but one among many—the very one that deludes our judgment. This aspect is always trying to deliver us into the power of a partner who seems compounded of all the qualities we have failed to realize in ourselves. Hence, unless we prefer to be made fools of by our illusions, we shall, by carefully analysing every fascination, extract from it a portion of our own personality, like a quintessence, and slowly come to recognize that we meet ourselves time and again in a thousand disguises on the path of life. This, however, is a truth which only profits the man who is temperamentally convinced of the individual and irreducible reality of his fellow men.

[535] We know that in the course of the dialectical process the unconscious produces certain images of the *goal*. In *Psychology and Alchemy* I have described a long series of dreams which contain such images (including even a shooting target). They are mostly concerned with ideas of the mandala type, that is, the circle and the quaternity. The latter are the plainest and most characteristic representations of the goal. Such images unite the opposites under the sign of the quaternio, i.e., by combining them in the form of a cross, or else they express the idea of wholeness through the circle or sphere. The superior type of personality may also figure as a goal-image, though more rarely. Occasionally special stress is laid on the luminous character of the centre. I have never come across the hermaphrodite as a personification of the goal, but more as a symbol of the initial state, expressing an identity with anima or animus.

[536] These images are naturally only anticipations of a wholeness which is, in principle, always just beyond our reach. Also, they do not invariably indicate a subliminal readiness on the part of the patient to realize that wholeness consciously, at a later stage; often they mean no more than a temporary compensation of chaotic confusion and lack of orientation. Fundamentally, of course, they always point to the self, the container and organizer of all opposites. But at the moment of their appearance they merely indicate the possibility of order in wholeness.

[537] What the alchemist tried to express with his Rebis and his squaring of the circle, and what the modern man also tries to express when he draws patterns of circles and quaternities, is wholeness—a wholeness that resolves all opposition and puts an end to conflict, or at least draws its sting. The symbol of this is a *coincidentia oppositorum* which, as we know, Nicholas of Cusa identified with God. It is far from my intention to cross swords with this great man. My business is merely the natural science of the psyche, and my main concern to establish the facts. How these facts are named and what further interpretation is then placed upon them is of secondary

importance. Natural science is not a science of words and ideas, but of facts. I am no terminological rigorist—call the existing symbols “wholeness,” “self,” “consciousness,” “higher ego,” or what you will, it makes little difference. I for my part only try not to give any false or misleading names. All these terms are simply names for the facts that alone carry weight. The names I give do not imply a philosophy, although I cannot prevent people from barking at these terminological phantoms as if they were metaphysical hypostases. The facts are sufficient in themselves, and it is well to know about them. But their interpretation should be left to the individual’s discretion. “The maximum is that to which nothing is opposed, and in which the minimum is also the maximum,”²⁷ says Nicholas of Cusa. Yet God is also above the opposites: “Beyond this coincidence of creating and being created art thou God.”²⁸ Man is an analogy of God: “Man is God, but not in an absolute sense, since he is man. He is therefore God in a human way. Man is also a world, but he is not all things at once in contracted form, since he is man. He is therefore a microcosm.”²⁹ Hence the *complexio oppositorum* proves to be not only a possibility but an ethical duty: “In these most profound matters every endeavour of our human intelligence should be bent to the achieving of that simplicity where contradictories are reconciled.”³⁰ The alchemists are as it were the empiricists of the great problem of the union of opposites, whereas Nicholas of Cusa is its philosopher.

EPILOGUE

[538] To give any description of the transference phenomenon is a very difficult and delicate task, and I did not know how to set about it except by drawing upon the symbolism of the alchemical *opus*. The *theoria* of alchemy, as I think I have shown, is for the most part a projection of unconscious contents, of those archetypal forms which are characteristic of all pure fantasy-products, such as are to be met with in myths and fairytales, or in the dreams, visions, and the delusional systems of individual men and women. The important part played in the history of alchemy by the hierosgamos and the mystical marriage, and also by the *coniunctio*, corresponds to the central significance of the transference in psychotherapy on the one hand and in the field of normal human relationships on the other. For this reason, it did not seem to me too rash an undertaking to use an historical document, whose substance derives from centuries of mental effort, as the basis and guiding thread of my argument. The gradual unfolding of the symbolic drama presented me with a welcome opportunity to bring together the countless individual experiences I have had in the course of many years' study of this theme—experiences which, I readily admit, I did not know how to arrange in any other way. This venture, therefore, must be regarded as a mere experiment; I have no desire to attribute any conclusive significance to it. The problems connected with the transference are so complicated and so various that I lack the categories necessary for a systematic account. There is in such cases always an urge to simplify things, but this is dangerous because it so easily violates the facts by seeking to reduce incompatibles to a common denominator. I have resisted this temptation so far as possible and allow myself to hope that the reader will not run away with the idea that the process I have described here is a working model of the average course of events. Experience shows, in fact, that not only were the alchemists exceedingly vague as to the sequence of the various stages, but that in our observation of individual cases there is a bewildering number of variations as well as the greatest arbitrariness in the sequence of states, despite all agreement in principle as to the basic facts. A logical order, as we understand it, or even the possibility of such an order, seems to lie outside the bounds of our subject at present. We are moving here in a region of individual and unique happenings that have no parallel. A process of this kind can, if our categories are wide enough, be reduced to an order of sorts and described, or at least adumbrated, with the help of analogies; but its inmost essence is the uniqueness of a life individually lived—which nobody can grasp from outside, but which, on the contrary, holds the individual in its grip. The series of pictures that served as our Ariadne thread is one of many,¹ so that

we could easily set up several other working models which would display the process of transference each in a different light. But no single model would be capable of fully expressing the endless wealth of individual variations which all have their *raison d'être*. Such being the case, it is clear to me that even this attempt to give a comprehensive account of the phenomenon is a bold undertaking. Yet its practical importance is so great that the attempt surely justifies itself, even if its defects give rise to misunderstandings.

[539] We live today in a time of confusion and disintegration. Everything is in the melting pot. As is usual in such circumstances, unconscious contents thrust forward to the very borders of consciousness for the purpose of compensating the crisis in which it finds itself. It is therefore well worth our while to examine all such borderline phenomena with the greatest care, however obscure they seem, with a view to discovering the seeds of new and potential orders. The transference phenomenon is without doubt one of the most important syndromes in the process of individuation; its wealth of meanings goes far beyond mere personal likes and dislikes. By virtue of its collective contents and symbols it transcends the individual personality and extends into the social sphere, reminding us of those higher human relationships which are so painfully absent in our present social order, or rather disorder. The symbols of the circle and the quaternity, the hallmarks of the individuation process, point back, on the one hand, to the original and primitive order of human society, and forward on the other to an inner order of the psyche. It is as though the psyche were the indispensable instrument in the reorganization of a civilized community as opposed to the collectivities which are so much in favour today, with their aggregations of half-baked mass-men. This type of organization has a meaning only if the human material it purports to organize is good for something. But the mass-man is good for nothing—he is a mere particle that has forgotten what it is to be human and has lost its soul. What our world lacks is the *psychic connection*; and no clique, no community of interests, no political party, and no State will ever be able to replace this. It is therefore small wonder that it was the doctors and not the sociologists who were the first to feel more clearly than anybody else the true needs of man, for, as psychotherapists, they have the most direct dealings with the sufferings of the soul. If my general conclusions sometimes coincide almost word for word with the thoughts of Pestalozzi, the deeper reason for this does not lie in any special knowledge I might possess of this great educator's writings, but in the nature of the subject itself, that is, in insight into the reality of man.

APPENDIX

THE REALITIES OF PRACTICAL PSYCHOTHERAPY¹

[540] Psychogenic disturbances, quite unlike organic diseases, are atypical and individual. With growing experience one even finds oneself at a loss in making a diagnosis. The neuroses, for example, vary so much from individual to individual that it hardly means anything when we diagnose “hysteria.” “Hysteria” has a meaning only in so far as it marks a distinction from an organic disease. To the psychotherapist it means infinitely less than typhoid, scarlet fever, or pneumonia do to the practising physician. It belongs to a group that is only vaguely defined both clinically and psychologically, like “obsessional neurosis” or “schizophrenia.” Though we cannot do without such a nomenclature, we use it with the feeling that we have not said very much. As a rule, the diagnosis does not greatly matter since the needs and the difficulties of the treatment have to do with quite other factors than the more or less fortuitous diagnosis. And because there are only individual illnesses, they practically never follow a typical course on which a specific diagnosis could be based.

[541] What we have said about diagnosis is also true of therapy in so far as this takes the form of an individual analysis. It is just as impossible to describe a typical course of treatment as it is to make a specific diagnosis. This radical, not to say nihilistic statement naturally does not apply to cases where a *method* is employed as a matter of principle. Here the accent lies on the procedure and not on the recognition of the individual symptoms and their aetiology. One can employ any method at random, so to speak, regardless of the individual factors; one can hypnotize, suggest, train the will, psychoanalyse in such a way that the individual neurosis amounts to little more than a *disturbance of the method employed*. A physician can treat syphilis with a mercury compound, or rheumatic fever with salicylate, without qualms and without under normal circumstances going wide of the mark. But when the psychotherapist treats neuroses according to Freud, Adler, or Jung—that is to say, when he employs their alleged methods as a matter of principle—it may easily happen that the procedure, although unexceptionable in itself, is so disturbed and thrown off the rails by an atypical neurosis that the entire treatment comes to nothing. The orthodox standpoint then holds that this was the patient’s fault, as though he had failed to take advantage of the indubitable blessings of the method, which in itself is always effective.

[542] One can employ methods as a matter of principle so long as the pathological processes are restricted to a field that is markedly collective and not individual, and so long as the premises on which the method is based are in accord with the pathological facts. Not everyone has a power complex, which as a rule is

characteristic of the unsuccessful person, nor is everyone involved in an incestuous romance, which happens only to those whose family have soured them against the pleasure principle. But when the premises of the method coincide with the problematical situation of the patient, the method will be successful up to the moment when its collective viewpoint can no longer grasp the individual factors that begin to appear. It is then no longer a question of fictions and inferiority feelings that can be reduced to power complexes, or of resistances and repressions that can be reduced to infantile sexuality, but of individual, unique factors of vital importance. When this point is reached, it is the method and the analyst that fail, not the patient. Yet I have had many patients who have dolefully confessed that they could not be treated because they always “failed” with the transference, in other words, could not produce one, when according to the method a transference was a therapeutic necessity. Any analyst who inculcates such things into his patients is entirely forgetting that “transference” is only another word for “projection.” No one can voluntarily *make* projections, they just *happen*. Besides that, they are illusions which merely make the treatment more difficult. What seems to be so easily won by the transference always turns out in the end to be a loss; for a patient who gets rid of a symptom by transferring it to the analyst always makes the analyst the guarantor of this miracle and so binds himself to him more closely than ever.

[543] When one employs a method on principle, it is perfectly possible, within those limits, to describe a more or less typical course of treatment. Speaking for myself, I must confess that experience has taught me to keep away from therapeutic “methods” as much as from diagnoses. The enormous variation among individuals and their neuroses has set before me the ideal of approaching each case with a minimum of prior assumptions. The ideal would naturally be to have no assumptions at all. But this is impossible even if one exercises the most rigorous self-criticism, for one is *oneself* the biggest of all one’s assumptions, and the one with the gravest consequences. Try as we may to have no assumptions and to use no ready-made methods, the assumption that I myself am will determine my method: as I am, so will I proceed.

[544] In spite of the differences between people, we must recognize that there are a great many similarities. As long as the analyst moves within a psychological sphere that is similar in kind to the patient’s, nothing of fundamental therapeutic importance has happened. He has at most laid the foundations of a mutual understanding, and this can be appealed to when he comes up against those essential differences in the patient to which the pathological process is always ready to return. These qualitative differences cannot be dealt with by any method that is based on premises held to be generally valid. If one wants to give a name to the process of coming to terms with them, one could call it a dialectical procedure—which means no more than an

encounter between my premises and the patient's. This encounter is complicated by the fact that the patient's premises are to some extent pathological, whereas a so-called "normal" attitude is presupposed of the analyst.

[545] "Normal" is a somewhat vague concept which simply means that the analyst at least has no neurosis and is more or less in full possession of his mental faculties. If, on the contrary, he is neurotic, a fateful, unconscious identity with the patient will inevitably supervene—a "counter-transference" of a positive or negative character. Even if the analyst has no neurosis, but only a rather more extensive area of unconsciousness than usual, this is sufficient to produce a sphere of mutual unconsciousness, i.e., a counter-transference. This phenomenon is one of the chief occupational hazards of psychotherapy. It causes psychic infections in both analyst and patient and brings the therapeutic process to a standstill. This state of unconscious identity is also the reason why an analyst can help his patient just so far as he himself has gone and not a step further. In my practice I have had from the beginning to deal with patients who got "stuck" with their previous analysts, and this always happened at the point where the analyst could make no further progress with himself. As soon as an unconscious identity appears, one notices a peculiar staleness and triteness in the analytical relationship, the dreams become incomprehensible or cease altogether, personal misunderstandings arise, with outbursts of affect, or else there is a resigned indifference which leads sooner or later to a discontinuation of the treatment.

[546] The reason for this may not always lie in the analyst's evasion of his personal difficulties, but in a *lack of knowledge, which has exactly the same effect as unconsciousness*. I remember a case that caused me no end of trouble.² It concerned a 25-year-old woman patient, who suffered from a high degree of emotivity, exaggerated sensitiveness, and hysterical fever. She was very musical; whenever she played the piano she got so emotional that her temperature rose and after ten minutes registered 100° F. or more. She also suffered from a compulsive argumentativeness and a fondness for philosophical hair-splitting that was quite intolerable despite her high intelligence. She was unmarried, but was having a love-affair which, except for her hypersensitivity, was perfectly normal. Before she came to me, she had been treated by an analyst for two months with no success. Then she went to a woman analyst, who broke off the treatment at the end of a week. I was the third. She felt she was one of those who were doomed to fail in analysis, and she came to me with pronounced feelings of inferiority. She didn't know why it hadn't worked with the other analysts. I got her to tell me her somewhat lengthy anamnesis, which took several consulting hours. I then asked her: "Did you notice that when you were treated by Dr. X [the first], you had at the very beginning a dream which struck you, and which you did not understand at the time?" She remembered at once that during

the second week of the treatment she had an impressive dream which she had not understood then, but which seemed clear enough to her in the light of later events. *She had dreamt that she had to cross a frontier. She had arrived at a frontier station; it was night, and she had to find where the frontier could be crossed, but she could not find the way and got lost in the darkness.* This darkness represented her unconsciousness, that is, her unconscious identity with the analyst, who was also in the dark about finding a way out of this unconscious state—which is what crossing the frontier meant. As a matter of fact, a few years later this analyst gave up psychotherapy altogether because of too many failures and personal involvements.

[547] Early in the second treatment, the dream of the frontier was repeated in the following form: *She had arrived at the same frontier station. She had to find the crossing, and she saw, despite the darkness, a little light in the distance showing where the place was. In order to get there, she had to go through a wooded valley in pitch-blackness. She plucked up her courage and went ahead. But hardly had she entered the wood than she felt somebody clinging to her, and she knew it was her analyst.* She awoke in terror. This analyst, too, later gave up her profession for very much the same reasons.

[548] I now asked the patient: “Have you had a dream like that since you have been with me?” She gave an embarrassed smile and told the following dream: *I was at the frontier station. A customs official was examining the passengers one by one. I had nothing but my handbag, and when it came to my turn I answered with a good conscience that I had nothing to declare. But he said, pointing to my handbag: “What have you got in there?” And to my boundless astonishment he pulled a large mattress, and then a second one, out of my bag.*” She was so frightened that she woke up.³

[549] I then remarked: “So you wanted to hide your obviously bourgeois wish to get married, and felt you had been unpleasantly caught out.” Though the patient could not deny the logical rightness of the interpretation, she produced the most violent resistances against any such possibility. Behind these resistances, it then turned out, there was hidden a most singular fantasy of a quite unimaginable erotic adventure that surpassed anything I had ever come across in my experience. I felt my head reeling, I thought of nymphomaniac possession, of weird perversions, of completely depraved erotic fantasies that rambled meaninglessly on and on, of latent schizophrenia, where at least the nearest comparative material could be found. I began to look askance at the patient and to find her unsympathetic, but was annoyed with myself for this, because I knew that no good results could be hoped for while we remained on such a footing. After about four weeks the undeniable symptoms of a standstill did in fact appear. Her dreams became sketchy, dull, dispiriting, and

incomprehensible. I had no more ideas and neither had the patient. The work became tedious, exhausting, and barren. I felt that we were gradually getting stuck in a kind of soggy dough. The case began to weigh upon me even in my leisure hours; it seemed to me uninteresting, hardly worth the bother. Once I lost patience with her because I felt she wasn't making any effort. "So here are the personal reactions coming out," I thought. The following night *I dreamt that I was walking along a country road at the foot of a steep hill. On the hill was a castle with a high tower. Sitting on the parapet of the topmost pinnacle was a woman, golden in the light of the evening sun. In order to see her properly, I had to bend my head so far back that I woke up with a crick in the neck.* I realized to my amazement that the woman was my patient.⁴

[550] The dream was distinctly disturbing, for the first thing that came into my head while dozing was the verse from Schenkenbach's "Reiterlied":

She sits so high above us,
No prayer will she refuse.

This is an invocation to the Virgin Mary. The dream had put my patient on the highest peak, making her a goddess, while I, to say the least, had been looking down on her.

[551] The next day I said to her: "Haven't you noticed that our work is stuck in the doldrums?" She burst into tears and said: "Of course I've noticed it. I know I always fail and never do anything right. You were my last hope and now this isn't going to work either." I interrupted her: "This time it is different. I've had a dream about you." And I told her the dream, with the result that the superficial symptomatology, her argumentativeness, her insistence on always being right, and her touchiness vanished. But now her real neurosis began, and it left me completely flabbergasted. It started with a series of highly impressive dreams, which I could not understand at all, and then she developed symptoms whose cause, structure, and significance were absolutely incomprehensible to me. They first took the form of an indefinable excitation in the perineal region, and she dreamt that a white elephant was coming out of her genitals. She was so impressed by this that she tried to carve the elephant out of ivory. I had no idea what it meant, and only had the uncomfortable feeling that something inexplicable was going on with a logic of its own, though I couldn't see at all where it would lead.

[552] Soon afterwards symptoms of uterine ulcers appeared, and I had to send the patient to a gynaecologist. There was an inflamed swelling of the mucous membrane of the uterus, about the size of a pea, which refused to heal after months of treatment and merely shifted from place to place.

[553] Suddenly this symptom disappeared, and she developed an extreme hyperaesthesia of the bladder. She had to leave the room two or three times during the consulting hour. No local infection could be found. Psychologically, the symptom meant that something had to be “ex-pressed.” So I gave her the task of expressing by drawings whatever her hand suggested to her. She had never drawn before, and set about it with much doubt and hesitation. But now symmetrical flowers took shape under her hand, vividly coloured and arranged in symbolic patterns.⁵ She made these pictures with great care and with a concentration I can only call devout.

[554] Meanwhile the hyperaesthesia of the bladder had ceased, but intestinal spasms developed higher up, causing gurgling noises and sounds of splashing that could be heard even outside the room. She also suffered from explosive evacuations of the bowels. At first the colon was affected, then the ileum, and finally the upper sections of the small intestine. These symptoms gradually abated after several weeks. Their place was then taken by a strange paraesthesia of the head. The patient had the feeling that the top of her skull was growing soft, that the fontanelle was opening up, and that a bird with a long sharp beak was coming down to pierce through the fontanelle as far as the diaphragm.

[555] The whole case worried me so much that I told the patient there was no sense in her coming to me for treatment, I didn’t understand two-thirds of her dreams, to say nothing of her symptoms, and besides this I had no notion how I could help her. She looked at me in astonishment and said: “But it’s going splendidly! It doesn’t matter that you don’t understand my dreams. I always have the craziest symptoms, but something is happening all the time.”

[556] I could only conclude from this peculiar remark that for her the neurosis was a positive experience; indeed, “positive” is a mild expression for the way she felt about it. As I could not understand her neurosis, I was quite unable to explain how it was that all these extremely unpleasant symptoms and incomprehensible dreams could give her such a positive feeling. One can, with an effort, imagine that *something* is better than nothing, even though this something took the form of disagreeable physical symptoms. But so far as the dreams were concerned, I can only say that I have seldom come across a series of dreams that seemed to be so full of meaning. Only, their meaning escaped me.

[557] In order to elucidate this extraordinary case, I must return to a point in the anamnesis which has not been mentioned so far. The patient was a full-blooded European, but had been born in Java. As a child she spoke Malay and had an *ayah*, a native nurse. When she was of school age, she went to Europe and never returned to the Indies. Her childhood world was irretrievably sunk in oblivion, so that she could not remember a single word of Malay. In her dreams there were frequent allusions to

Indonesian motifs, but though I could sometimes understand them I was unable to weave them into a meaningful whole.

[558] About the time when the fantasy of the fontanelle appeared, I came upon an English book which was the first to give a thorough and authentic account of the symbolism of Tantric Yoga. The book was *The Serpent Power*, by Sir John Woodroffe, who wrote under the pseudonym of Arthur Avalon. It was published about the time when the patient was being treated by me. To my astonishment I found in this book an explanation of all those things I had not understood in the patient's dreams and symptoms.

[559] It is, as you see, quite impossible that the patient knew the book beforehand. But could she have picked up a thing or two from the *ayah*? I regard this as unlikely because Tantrism, and in particular Kundalini Yoga, is a cult restricted to southern India and has relatively few adherents. It is, moreover, an exceedingly complicated symbolical system which no one can understand unless he has been initiated into it or has at least made special studies in this field. Tantrism corresponds to our Western scholasticism, and if anyone supposes that a Javanese *ayah* could teach a five-year-old child about the *chakra* system, this would amount to saying that a French nanny could induct her charge into the *Summa* of St. Thomas or the conceptualism of Abelard. However the child may have picked up the rudiments of the *chakra* system, the fact remains that its symbolism does much to explain the patient's symptoms.

[560] According to this system, there are seven centres, called *chakras* or *padmas* (lotuses), which have fairly definite localizations in the body. They are, as it were, psychic localizations, and the higher ones correspond to the historical localizations of consciousness. The nethermost *chakra*, called *mulādhāra*, is the perineal lotus and corresponds to the cloacal zone in Freud's sexual theory. This centre, like all the others, is represented in the shape of a flower, with a circle in the middle, and has attributes that express in symbols the psychic qualities of that particular localization. Thus, the perineal *chakra* contains as its main symbol the sacred *white elephant*. The next *chakra*, called *svadhīsthāna*, is localized near the bladder and represents the sexual centre. Its main symbol is water or sea, and subsidiary symbols are the sickle moon as the feminine principle, and a devouring water-monster called *makara*, which corresponds to the biblical and cabalistic Leviathan. The mythological whaledragon is, as you know, a symbol for the devouring and birth-giving womb, which in its turn symbolizes certain reciprocal actions between consciousness and the unconscious. The patient's bladder symptoms can be referred to the *svadhīsthāna* symbolism, and so can the inflamed spots in the uterus. Soon afterwards she began her drawings of flowers, whose symbolic content relates them quite clearly to the *chakras*. The third centre, called *manipura*, corresponds to the solar plexus. As we have seen, the noises

in the abdomen gradually moved up to the small intestine. This third *chakra* is the emotional centre, and is the earliest known localization of consciousness. There are primitives in existence who still think with their bellies. Everyday speech still shows traces of this: something lies heavy on the stomach, the bowels turn to water, etc. The fourth *chakra*, called *anāhata*, is situated in the region of the heart and the diaphragm. In Homer the diaphragm (*phren, phrenes*) was the seat of feeling and thinking.⁶ The fifth and sixth, called *vishuddha* and *ajña*, are situated respectively in the throat and between the eyebrows. The seventh, *sahasrāra*, is at the top of the skull.

[561] The fundamental idea of Tantrism is that a feminine creative force in the shape of a serpent, named *kundalinī*, rises up from the perineal centre, where she had been sleeping, and ascends through the *chakras*, thereby activating them and constellating their symbols. This “Serpent Power” is personified as the *mahādevishakti*, the goddess who brings everything into existence by means of *māyā*, the building material of reality.

[562] When the *kundalinī* serpent had reached the *manipura* centre in my patient, it was met by the bird of thought descending from above, which with its sharp beak pierced through the fontanelle (*sahasrāra chakra*) to the diaphragm (*anāhata*). Thereupon a wild storm of affect broke out, because the bird had implanted in her a thought which she would not and could not accept. She gave up the treatment and I saw her only occasionally, but noticed she was hiding something. A year later came the confession: she was beset by the thought that she wanted a child. This very ordinary thought did not fit in at all well with the nature of her psychic experience and it had a devastating effect, as I could see for myself. For as soon as the *kundalinī* serpent reached *manipura*, the most primitive centre of consciousness, the patient’s brain told her what kind of thought the *shakti* was insinuating into her: that she wanted a real child and not just a psychic experience. This seemed a great let-down to the patient. But that is the disconcerting thing about the *shakti*: her building material is *māyā*, “real illusion.” In other words, she spins fantasies with real things.

[563] This little bit of Tantric philosophy helped the patient to make an ordinary human life for herself, as a wife and mother, out of the local demonology she had sucked in with her *ayah*’s milk, and to do so without losing touch with the inner, psychic figures which had been called awake by the long-forgotten influences of her childhood. What she experienced as a child, and what later estranged her from the European consciousness and entangled her in a neurosis, was, with the help of analysis, transformed not into nebulous fantasies but into a lasting spiritual possession in no way incompatible with an ordinary human existence, a husband, children, and housewifely duties.

[564] Although this case is an unusual one, it is not an exception. It has served its purpose if it has enabled me to give you some idea of my psychotherapeutic procedure. The case is not in the least a story of triumph; it is more like a saga of blunders, hesitations, doubts, gropings in the dark, and false clues which in the end took a favourable turn. But all this comes very much nearer the truth and reality of my procedure than a case that brilliantly confirms the preconceived opinions and intentions of the therapist. I am painfully aware, as you too must be, of the gaps and shortcomings of my exposition, and I must rely on your imagination to supply a large part of what has been left unsaid. If you now recall that mutual ignorance means mutual unconsciousness and hence unconscious identity, you will not be wrong in concluding that in this case the analyst's lack of knowledge of Oriental psychology drew him further and further into the analytical process and forced him to participate as actively as possible. Far from being a technical blunder, this is a fate-sent necessity in such a situation. Only your own experience can tell you what this means in practice. No psychotherapist should lack that natural reserve which prevents people from riding roughshod over mysteries they do not understand and trampling them flat. This reserve will enable him to pull back in good time when he encounters the mystery of the patient's difference from himself, and to avoid the danger—unfortunately only too real—of committing psychic murder in the name of therapy. For the ultimate cause of a neurosis is something *positive* which needs to be safeguarded for the patient; otherwise he suffers a psychic loss, and the result of the treatment is at best a defective cure. The fact that our patient was born in the East and spent the most important years of her childhood under Oriental influences is something that cannot be eliminated from her life. The childhood experience of a neurotic is not, in itself, negative; far from it. It becomes negative only when it finds no suitable place in the life and outlook of the adult. The real task of analysis, it seems to me, is to bring about a synthesis between the two.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum.... Strasbourg, 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consilium coniugii”]

ARTIS AURIFERAE quam chemiam vocant.... Basel, [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Aenigmata ex visione Arislei philosophi et allegoriis sapientum [pp. 146–54; usually referred to as “Visio Arislei”]
- ii In Turbam philosophorum exercitationes [pp. 154–82]
- iii Aurora consurgens, quae dicitur Aurea hora [Part II only] [pp. 185–246]
- iv Rosinus ad Euthicium [pp. 246–77]
- v Rosinus ad Sarratantam episcopum [pp. 277–319]
- vi Maria Prophetissa: Practica... in artem alchemicam [pp. 319–24]
- vii Kalid: Liber secretorum alchemiae [pp. 325–51]
- viii Kalid: Liber trium verborum [pp. 352–61]
- ix Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]
- x Merlinus: Allegoria de arcano lapidis [pp. 392–96]
- xi Tractatulus Avicennae [pp. 405–36]
- xii Liber de arte chimica [pp. 575–631]

VOLUME II

xiii Morienus Romanus: Sermo de transmutatione metallica [pp. 7–54]

xiv Rosarium philosophorum [pp. 204–384]

MANGET (US), JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus....* Geneva, 1702. 2 vols.

Contents quoted in this volume:

i Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–445]

ii Lully: Testamentum novissimum, regi Carolo dicatum [pp. 790–806]

iii [Altus:] Mutus Liber, in quo tamen tota Philosophia hermetica figuris hieroglyphicis depingitur [pp. 938–53]

MUSAEUM HERMETICUM rejormatum et amplificatum... continens tractatus chimicos XXI praestantissimos... Frankfurt a. M., 1678. For translation, see (B) WAITE.

Contents quoted in this volume:

i [Hermes Trismegistus:] Tractatus aureus de philosophorum lapide [pp. 1–52]

ii [Barcius (F. von Sternberg):] Gloria mundi, alias Paradisi tabula [pp. 203–304]

iii Lamspringk: De lapide philosophico figurae et emblemata [pp. 337–72]

iv Philalethes: Introitus apertus ad occlusum regis palatium [pp. 647–700]

v Philalethes: Fons chemica veritatis [pp. 799–814]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus... continens. Vols. I-III, Ursel, 1602; Vols. IV-VI, Strasbourg, 1613, 1622, 1661.

Contents quoted in this volume:

VOLUME I

i Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]

ii Dorn: Speculativae philosophiae, gradus septem vel decern continens [pp. 255–310]

iii Dorn: Physica Trismegisti [pp. 405–37]

iv Dorn: Duellum animi cum corpore [pp. 535–50]

v Dorn: Congeries Paracelsicae chemicae de transmutationibus metallorum [pp. 557–646]

vi Zacharius, Dionysius: Opusculum philosophiae naturalis metallorum, cum annotationibus Nicolai Flamelli [pp. 804–901]

VOLUME II

- vii Aegidius de Vadis: Dialogus inter naturam et filium philosophiae [pp. 95–123]
- viii Penotus: Quinquaginta septem canones de opere physico [pp. 150–54]
- ix Dee: Monas hieroglyphica [pp. 203–43]
- x Ventura: De ratione conficiendi lapidis [pp. 244–356]

VOLUME III

- xi [Melchior:] Addam et processum sub forma missae, a Nicolao [Melchiori] Cibinensi, ad Ladislaum Ungariae et Bohemiae regem olim missum [pp. 853–60]

VOLUME IV

- xii Artefius: Clavis maioris sapientiae [pp. 221–40]
- xiii Avicenna: Declaratio lapidis physici filio suo Aboali [pp. 986–94]

VOLUME V

- xiv Liber Platonis quartorum... [pp. 114–208]
- xv Mennens: Aureum vellus [pp. 267–470]
- xvi Bonus: Pretiosa margarita novella [pp. 589–794]
- xvii Tractatus Aristotelis alchymistae ad Alexandrum Magnum, de lapide philosophico [pp. 880–92]

THEATRUM CHEMICUM BRITANNICUM... Collected with annotations by Elias Ashmole. London, 1652.

Contents quoted in this volume:

- i Norton: The Ordinall of Alchimy [pp. 13–106; for a modern edition see (B) NORTON]

Jung, Carl Gustav:

CASES (*in order of presentation, numbered for reference*):

[1] Man who experienced dream series including water motif, unknown woman motif, etc., illustrating continuity of unconscious themes.—[12ff](#)

[2] Man whose initial dream criticized his interest in occult subjects.—[44ff](#)

[3] Man with symptoms resembling mountain sickness, and archetypal dreams indicating need for check on his ambitious plans.—[140ff](#)

[4] Woman with dreams of crossing frontier, indicating course her three attempts at analysis would take.—[144](#)

[5] Mountain climber with dreams presaging fatal climbing expedition.—[150f](#)

[6] Young man with derogatory dreams of father compensating his “too good” relationship with parent.—[154f](#)

[7] Girl of 17, whose dreams, studied to establish diagnosis between hysteria and progressive muscular atrophy, pointed to grave organic disease and death.—[158ff](#)

[8] Woman over 60, whose dreams and pictures (notably of divine child) illustrate onset of transference.—[183ff](#)

[9] Woman whose attempt to overcome phobia of Paris by a visit there resulted in her death.—[254](#)

[10] Man with phobia of flights of steps, who dies in accident on steps.—[254](#)
