[1515] At present, unfortunately, I know only three of the treatises contained in the Codex. One of these is an important, so it seems, early Valentinian text that affords us some insight into the mentality of the second century A.D. It is called "The Gospel of Truth,"² but it is less a gospel than a treatise explaining the Christian message, its purpose being to assimilate this strange and hardly understandable message to the Hellenistic-Egyptian world of thought. It is evident that the author was appealing to the intellectual understanding of his reader, as if in remembrance of the words: "We preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness" (I Cor. 1:23). For him Christ was primarily a light-bringer, who went forth from the Father in order to illuminate the stupidity, darkness, and unconsciousness of mankind. This deliverance from *agnosia* relates the text to the accounts which Hippolytus has left of the Gnostics, and of the Naassenes and Peratics in particular, in his *Elenchos*.³ There we also find most of what I call the "phenomena of assimilation." They consisted partly of allegories and partly of genuine symbols, and their purpose was to shed light on the essentially metaphysical figure of Christ and make it more comprehensible to the mentality of that epoch. For the modern mind this accumulation of symbols, parables, and synonyms has just the opposite effect, since it only deepens the darkness and entangles the light-bringer in a network of barely intelligible analogies. It is not likely that the Gnostic attempts at elucidation met with much success in the pagan world, especially as the Church very soon opposed them and whenever possible suppressed them. Luckily during this process some of the best pieces (to judge by their content) were preserved for posterity, so that today we are in a position to see in what way the Christian message was taken up by the unconscious of that age.

[1516] These phenomena are naturally of especial significance for psychologists and psychiatrists, who are professionally concerned with the psychic background, and

this is the reason why our Institute is so interested in acquiring and translating Gnostic texts. Although suppressed and forgotten, the process of assimilation that began with Gnosticism continued all through the Middle Ages, and it can still be observed in modern times whenever the individual consciousness is confronted with its own shadow, or the inferior part of the personality. This happens spontaneously in certain cases, whether they be normal or pathological. The general rule, however, is that modern man needs expert help to become conscious of his darkness, because in most cases he has long since forgotten this basic problem of Christianity: the moral and intellectual *agnosia* of the merely natural man. Christianity, considered as a psychological phenomenon, contributed a great deal to the development of consciousness, and wherever this dialectical process has not come to a standstill we find new evidence of assimilation. Even in medieval Judaism a parallel process took place over the centuries, independently of the Christian one, in the Kabbala. Its nearest analogy in the Christian sphere was philosophical alchemy, whose psychological affinities with Gnosticism can easily be demonstrated.

[1517] The urgent therapeutic necessity of confronting the patient with his own dark side is a continuation of the Christian development of consciousness and leads to phenomena of assimilation similar to those found in Gnosticism, the Kabbala, and Hermetic philosophy. Since comparison with these earlier historical stages is of the greatest importance in interpreting the modern phenomena, the discovery of authentic Gnostic texts is of the utmost practical value to us in our researches. These few hints must suffice to explain our interest in a Gnostic codex. A detailed account of these relationships may be found in a number of studies that have already been published.

LETTER TO PÈRE BRUNO¹

5 November 1953

Dear Fr. Bruno,

[1518] Your questions interested me extremely. You ask for information about the method to be followed in order to establish the existence of an archetype. Instead of a theoretical discourse, I propose to give you a practical demonstration of my method by trying to tell you what I think about that probably historical personage, Elijah.

[1519] If the tradition were concerned with a person characterized rather by individual and more or less unique traits, to whom few or no legends, miraculous deeds, and exploits or relations or parallels with mythological figures were attached, there would be no reason to suppose the presence of an archetype. If on the other hand the biography of the person concerned contains mythical motifs and parallels, and if posterity has added elements that are clearly mythological, then there is no longer any doubt that we are dealing with an archetype.

[1520] *The prophet Elijah is a highly mythical person*, though that does not prevent his being a historical one at the same time, like for example St. John the Baptist or even Jesus, the rabbi of Nazareth. I call the mythical attributes “phenomena of assimilation.” (I have just published a study on the astrological assimilation of Christ as fish in my book *Aion*, 1951.)

[1521] There is no need to repeat to you the well-known Old Testament traditions. Let us rather glance at the Christian tradition in the New Testament and later. As a “hairy” man [2 Kings 1:8] Elijah is analogous to St. John the Baptist [Mark 1:6]. His calling of an apostle (Elisha), walking on the water, the discouragement (I Kings 19: 4ff.) prefigure analogous incidents in the life of Christ, who is also interpreted as a reappearance of Elijah, and his saying on the cross: “Eli, Eli ...” as an invocation of Elijah. The name derives from El (= God). Chrysostom derives the name Elias [= Elijah] from Helios: “quod sicut sol ex oceano emergens versus supremum coelus tendit.”² At his birth he was hailed by angels. He was wrapped in fiery swaddling clothes and nourished by flames. He had *two souls* (!). (See J. Fr. Mieg, *De raptu Eliae*, 1660, and Schulinus, *De Elia corvorum alumno*, 1718.) In Roman days, there was a pagan sanctuary on Carmel, which seems to have consisted only of an altar (Tacitus, *Hist.* II, 78, “tantum ara et reverentia”).³ Vespasian is said to have obtained an oracle in this sanctuary. Iamblichus (*Vita Pythagorica* III, 15) says that the

mountain is sacred and represents a taboo area and that Pythagoras often stayed in the sacred solitude of Carmel. It is possible that the Druses have preserved in their sanctuary on the mountain the place of the altar of Elijah.

[1522] In *Pirkê Eliezer* 31, Elijah is the incarnation of an eternal soul-substance and is of the same nature as the angels. It was his spirit that called up the ram which was substituted for Isaac. He wears the ram's skin as a girdle or apron. He is present at the circumcision as the "Angel of the Covenant" (*Pirkê Eliezer* 29). Even in our own day, a special chair is reserved for Elijah at the rite of circumcision, and at the feast of the Passover a goblet of wine is placed on the table and the head of the family opens the door to invite Elijah to enter and share the feast.

[1523] Legend calls him "violent," "quarrelsome," and "merciless." It was because of these unfavourable qualities that he had to yield up his office of prophet to Elisha. He caused the sun to stand still during the sacrifice of Carmel. In the time to come he will awaken the dead. The boy he raised to life was Jonah (later swallowed by the monster). Since his ascension to heaven he is among the angels, and he hovers over the earth like an eagle spying out the secrets of men.

[1524] He is also considered to be a parallel of Moses. They have in common the murder of a man, their flight, being nourished by a woman, the vision of God, the calling together of the people by a mountain. Elijah and Moses were present at the transfiguration on Tabor.

[1525] Elijah helped Rabbi Meir by transforming himself into a hetaira. He is generally a helper in all sorts of human difficulties (healing even the toothache, enriching the poor, bringing leaves from paradise, building magic palaces, etc.) He also plays tricks by making people lose their purses. He slays on the spot a man who does not pray properly. Thus Elijah is identical with the figure of Khadir or Khidr in Islamic tradition.⁴ When, yielding to the prayer of Rabbi Hiyya, he reveals the secret of resurrecting the dead, the angels intercede, carry the rabbi off, and give him a good hiding with fiery whips. The village dogs bark joyously when Elijah appears (in disguise). Three days before the appearing of the Messiah, Elijah will manifest himself on the *mountains* of Israel.

[1526] According to Moses ben Leon, Elijah belongs to the category of angels who recommended the creation of man. Moses Cordovero compares him to Enoch, but whereas the latter's body is consumed by fire, Elijah retains his earthly form so as to be ready to appear again. His body descends from the Tree of Life. Since he was not dead, he was supposed to dwell invisibly on Mount Carmel; for example, the Shunamite went to look for him and found him at Carmel (II Kings 4:25). (For the Jewish tradition, see Strack and Billerbeck, *Kommentar zum N.T.*, vol. IV, [part 2](#), pp. 764ff. Also *Encyclopedia Judaica*, 1930, vol. 6.) In Hasidic tradition, Elijah was endowed with the *collective soul* of Israel. Every male child, when presented for the

covenant with God, receives a part of the soul of Elijah and after attaining adult age and developing this soul, Elijah appears to him. Abraham ibn Ezra of Toledo is said to have been unable to develop this soul completely. (It is evident that Elijah represents both the collective unconscious and the “self,” atman, purusha, of man. It is a question of the *individuation process*. See M. Buber, *Die Erzählungen der Chassidim* (1949), p. 402.⁵ M. Buber is one of my relentless adversaries. He has not understood even what he wrote himself!).⁶

[1527] Islamic tradition depends in the first place on the Jewish commentaries. Ilyās (Elijah) has received from God power to control the rain. He causes a great drought. He ascends to heaven on a fiery horse and God transforms him into a half-human angel (according to al-Tabari). In the Koran, Sura 18, 64ff., he is replaced by al-Khadir. (In a Jewish legend it is Elijah who travels with Joshua ben Levi, in the Koran it is al-Khadir with Joshua ben Nun.) Ordinarily, Ilyās and al-Khadir are immortal twins. They spend Ramadan at Jerusalem every year and afterwards they take part in the pilgrimage to Mecca without being recognized. Ilyās is identified with Enoch and Idrīs (= Hermes Trismegistus). Later Ilyas and al-Khadir are identified with St. George (see *Encyclopedia of Islam*, Leiden and Leipzig, 1913).

[1528] In medieval Christian tradition, Elijah continues to haunt the imagination. For example, it is specially fascinated by his ascent to heaven, which is frequently represented. In illuminated MSS, the model is followed of the Mithraic representation of the ascent of Sol inviting Mithras to join him in the fiery chariot. (See Bousset, “Die Himmelsreise der Seele,” *Arch. f. Relig. wiss.*, 1901, IV, p. 160ff., Cumont, *Textes et monuments*, I, p. 178, fig. 11.) Tertullian (*De praescriptione hereticorum* 40) says of Mithras: “imaginem resurrectionis inducit.”⁷ The Mandaeen hero-saviour Saoshyant, the next to come in the series of millennial saviours or prophets, is fused with Mithras, as is the latter with Idris (Hermes, Mercurius; see Dussaud, “Notes de myth, syrienne,” pp. 23ff.⁸ In these circumstances, it is not very surprising that Elijah should become “Helyas Artista” in medieval alchemy (e.g., Dorn, “De transmut. met.,” *Theatr. chem.*, 1602, I, p. 610: “usque in adventum Heliae Artistae quo tempore nihil tam occultum quod non revelabitur”).⁹ This passage has its origin in the treatise “De tinctura physicorum” of Paracelsus. (See also Helvetius, *Vitulus aureus*, 1667; Glauber, *De Elia Artista*, 1668, and Kopp, *Die Alchemie*, 1886, I, pp. 250ff.)¹⁰

[1529] It is unnecessary to continue this long list of *phenomena of assimilation* which follow without interruption, so to speak, from the remotest times to our own day. This proves irrefutably that Elijah is a *living archetype*. In psychology, we call it a *constellated archetype*, that is to say one that is more or less generally active, giving birth to new forms of assimilation. One of these phenomena was the choice of Carmel for the foundation of the first convent in the twelfth century. The mountain

had long been a numinous place as the seat of the Canaanite deities Baal and Astarte. (Cf. the duality of Elijah, the transformation into a hetaira.) YHWH supplants them as inhabitant of the sacred place (Eli-yah like Khadir a kind of personification of YHWH or Allah. Cf. the temperament and the fire of the prophet!). The numinous inhabitant of Carmel is chosen as the patron of the order. The choice is curious and unprecedented. According to the empirical rule, an archetype becomes active and chooses itself when a certain lack in the conscious sphere calls for a compensation on the part of the unconscious. What is lacking on the conscious side is the immediate relation with God: in so far as Elijah is an angelic being fortified with divine power, having the magic name of Eli-YHWH, delivered from corruptibility, omniscient and omnipresent, he represents the ideal compensation not only for Christians but for Jews and Moslems also. He is the typical *θεόςανθρωπος*, more human than Christ inasmuch as he is begotten and born in *peccatum originale*, and more universal in that he included even the pre-Yahwist pagan deities like Baal, El-Elyon, Mithras, Mercurius, and the personification of Allah, al-Khadir.

[1530] I have already said that the archetype “gets itself chosen” rather than is deliberately chosen. I prefer this way of putting it because it is almost the rule that one follows unconsciously the attraction and suggestion of the archetype. I think that the legend of Elijah and the unique atmosphere of Mount Carmel exercised an influence from which the founder of the order could no more withdraw himself than could the Druses, the Romans, Jews, Canaanites, or Phoenicians. It was not only the *place* which favoured the choice for the adoption of a compensatory figure but the *time*. The twelfth century and the beginning of the thirteenth were just the period which activated the spiritual movements brought into being by the new aeon which began with the eleventh century.¹¹ These were the days of Joachim of Flora and the Brethren of the Free Spirit, of Albertus Magnus and Roger Bacon, of the beginning of Latin alchemy and of the natural sciences and also of a feminine religious symbol, the Holy Grail. (For the significance of the year 1000, see my *Aion*. chs. VI and X, 3.)

[1531] To complete the establishment of a living archetype, the historical proofs do not wholly suffice, since one can explain the historical documentation by tradition (whose beginnings, however, always remain unexplained). That the archetype also manifests itself spontaneously outside tradition needs to be added to the evidence. God as collective soul, as spirit of nature, eternally renewed, incorruptible, archetype of the spirit even in the form of the “Trickster,” pagan divinity, is encountered in ancient and medieval alchemy having nothing to do with the local tradition of Carmel. The *Deus absconditus* of alchemy has the same compensating function as the figure of Elijah. Lastly—as is little known—the psychology of alchemy has become comprehensible to us thanks to the fact that we observe analogous

compensations in pathological and normal individuals in modern times. In calling themselves “atheists” or “agnostics,” people dissatisfied with the Christian tradition are not being merely negative. In many cases it is easy to observe the phenomenon of the “compensating God,” as I have demonstrated in my most recent works.

I hope, dear Fr. Bruno, that I have shown you the way an archetype is established and have answered your question concerning the choice of the archetype.

Yours sincerely, C. G. JUNG

LETTER TO PÈRE LACHAT¹

Küsnacht, 27 March 1954

Dear Sir,

[1532] It was very kind of you to send me your booklet² on the reception and action of the Holy Spirit. I have read it with special interest since the subject of the Holy Spirit seems to me one of current importance. I remember that the former Archbishop of York, Dr. Temple, admitted, in conversation with me, that the Church has not done all that it might to develop the idea of the Holy Spirit. It is not difficult to see why this is so, for *τὸ πνεῦμα πνεῖ ὅπου θέλει*³—a fact which an institution may find very inconvenient! In the course of reading your little book a number of questions and thoughts have occurred to me, which I set out below, since my reactions may perhaps be of some interest to you.

[1533] I quite agree with your view that one pauses before entrusting oneself to the “unforeseeable action” of the Holy Spirit. One feels afraid of it, not, I think, without good reason. Since there is a marked difference between the God of the Old Testament and the God of the New, a definition is desirable. You nowhere explain your idea of God. Which God have you in mind: The New Testament God, or the Old? The latter is a paradox; good and demonlike, just and unjust at the same time, while the God of the New Testament is by definition perfect, good, the Summum Bonum even, without any element of the dark or the demon in him. But if you identify these two Gods, different as they are, the fear and resistance one feels in entrusting oneself unconditionally to the Holy Spirit are easy to understand. The divine action is so unforeseeable that it may well be really disastrous. That being so, the prudence of the serpent counsels us not to approach the Holy Spirit too closely.

[1534] If, on the other hand, it is the New Testament God you have in mind, one can be absolutely certain that the risk is more apparent than real since the end will always be good. In that event the experiment loses its venturesome character; it is not really dangerous. It is then merely foolish not to give oneself up entirely to the action of the Holy Spirit. Rather one should seek him day by day, and one will easily lay hold of him, as Mr. Horton⁴ assures us. In the absence of a formal statement on your part, I assume that you identify the two Gods. In that case the Holy Spirit would not be easy to apprehend; it would even be highly dangerous to attract the divine attention by specially pious behaviour (as in the case of Job and some others). In the Old

Testament Satan still has the Father's ear, and can influence him even against the righteous. The Old Testament furnishes us with quite a number of instances of this kind, and they warn us to be very careful when we are dealing with the Holy Spirit. The man who is not particularly bold and adventurous will do well to bear these examples in mind and to thank God that the Holy Spirit does not concern himself with us overmuch. One feels much safer under the shadow of the Church, which serves as a fortress to protect us against God and his Spirit. It is very comforting to be assured by the Catholic Church that it "possesses" the Spirit, who assists regularly at its rites. Then one knows that he is well chained up. Protestantism is no less reassuring in that it represents the Spirit to us as something to be sought for, to be easily "drunk," even to be possessed. We get the impression that he is something passive, which cannot budge without us. He has lost his dangerous qualities, his fire, his autonomy, his power. He is represented as an innocuous, passive, and purely beneficent element, so that to be afraid of him would seem just stupid.

[1535] This characterization of the Holy Spirit leaves out of account the terrors of YHWH. It does not tell us what the Holy Spirit is, since it has failed to explain to us clearly what it has done with the *Deus absconditus*. Albert Schweitzer naïvely informs us that he takes the side of the ethical God and avoids the *absconditus*, as if a mortal man had the ability to hide himself when faced with an almighty God or to take the other, less risky side. God can implicate him in unrighteousness whenever he chooses.

[1536] I also fail to find a definition of Christ; one does not know whether he is identical with the Holy Spirit, or different from him. Everyone talks about Christ; but who is this Christ? When talking to a Catholic or Anglican priest, I am in no doubt. But when I am talking to a pastor of the Reformed Church, it may be that Christ is the Second Person of the Trinity and God in his entirety, or a divine man (the "supreme authority," as Schweitzer has it, which doesn't go too well with the error of the parousia), or one of those great founders of ethical systems like Pythagoras, Confucius, and so on. It is the same with the idea of God. What is Martin Buber talking about when he discloses to us his intimate relations with "God"? YHWH? The olden Trinity, or the modern Trinity, which has become something more like a Quaternity since the *Sponsa* has been received into the *Thalamus*?⁵ Or the rather misty God of Protestantism? Do you think that everyone who says that he is surrendering himself to Christ has really surrendered himself to Christ? Isn't it more likely that he has surrendered himself to the image of Christ which he has made for himself, or to that of God the Father or the Holy Spirit? Are they all the same Christ—the Christ of the Synoptics, of the *Exercitia Spiritualia*, of a mystic of Mount Athos, of Count Zinzendorf,⁶ of the hundred sects, of Caux⁷ and Rudolf Steiner, and—last but not least—of St. Paul? Do you really believe that anyone, be he who he

may, can bring about the real presence of one of the Sacred Persons by an earnest utterance of their name? I can be certain only that someone has called up a psychic image, but it is impossible for me to confirm the real presence of the Being evoked. It is neither for us nor for others to decide *who* has been invoked by the holy name and to whom one has surrendered oneself. Has it not happened that the invocation of the Holy Spirit has brought the devil on the scene? What are invoked are in the first place images, and that is why images have a special importance. I do not for a moment deny that the deep emotion of a true prayer may reach transcendence, but it is above our heads. There would not even be any transcendence if our images and metaphors were more than anthropomorphism and the words themselves had a magical effect. The Catholic Church protects itself against this insinuation *expressis verbis*, insisting on its teaching that God cannot go back on his own institutions. He is morally obliged to maintain them by his Holy Spirit or his grace. All theological preaching is a mythologem, a series of archetypal images intended to give a more or less exact description of the unimaginable transcendence. It is a paradox, but it is justified. The totality of these archetypes corresponds to what I have called the *collective unconscious*. *We are concerned here with empirical facts, as I have proved.* (Incidentally, you don't seem to be well informed about either the nature of the unconscious or my psychology. The idea that the unconscious is the abyss of all the horrors is a bit out of date. The collective unconscious is neutral; it is only nature, both spiritual and chthonic. To impute to my psychology the idea that the Holy Spirit is "only a projection of the human soul" is false. He is a transcendental fact which presents itself to us under the guise of an archetypal image (e.g. [])⁸, or are we to believe that he is really "breathed forth" by the Father and the Son?). There is no guarantee that this image corresponds exactly to the transcendental entity.

[1537] The unconscious is ambivalent; it can produce both good and evil effects. So the image of God also has two sides, like YHWH or the God of Clement of Rome with two hands; the right is Christ, the left Satan, and it is with these two hands that he rules the world.⁹ Nicholas of Cusa calls God a *complexio oppositorum* (naturally under the apotropaic condition of the *privatio boni!*). YHWH's paradoxical qualities are continued in the New Testament. In these circumstances it becomes very difficult to know what to make of *prayer*. Can we address our prayer to the good God to the exclusion of the demon, as Schweitzer recommends? Have we the power of dissociating God like the countrywoman who said to the child Jesus, when he interrupted her prayer to the Virgin: "Shhh, child, I'm talking to your mother"? Can we really put on one side the God who is dangerous to us? Do we believe that God is so powerless that we can say to him: "Get out, I'm talking to your better half?" Or can we ignore the *absconditus*? Schweitzer invites us to do just this; we're going to

have our bathe in the river, and never mind the crocodiles. One can, it seems, brush them aside. Who is there who can produce this “simple faith”?

[1538] Like God, then, the unconscious has two aspects; one good, favourable, beneficent, the other evil, malevolent, disastrous. The unconscious is the immediate source of our religious experiences. This psychic nature of all experience does not mean that the transcendental realities are also psychic; the physicist does not believe that the transcendental reality represented by his psychic model is also psychic. He calls it *matter*, and in the same way the psychologist in no wise attributes a psychic nature to his images or archetypes. He calls them “psychoids”¹⁰ and is convinced that they represent transcendental realities. He even knows of “simple faith” as that *conviction which one cannot avoid*. It is vain to seek for it; it comes when it wills, for it is the gift of the Holy Spirit. There is only one divine spirit—an immediate presence, often terrifying and in no degree subject to our choice. There is no guarantee that it may not just as well be the devil, as happened to St. Ignatius Loyola in his vision of the *serpens oculatus*, interpreted at first as Christ or God and later as the devil.¹¹ Nicholas of Flüe had his terrifying vision of the *absconditus*, and transformed it later into the kindly Trinity of the parish church of Sachseln.¹²

[1539] Surrender to God is a formidable adventure, and as “simple” as any situation over which man has no control. He who can risk himself wholly to it finds himself directly in the hands of God, and is there confronted with a situation which makes “simple faith” a vital necessity; in other words, the situation becomes so full of risk or overtly dangerous that the deepest instincts are aroused. An experience of this kind is always numinous, for it unites all aspects of totality. All this is wonderfully expressed in Christian religious symbolism: the divine will incarnate in Christ urges towards the fatal issue, the catastrophe followed by the fact or hope of resurrection, while Christian faith insists on the deadly danger of the adventure; but the Churches assure us that God protects us against all danger and especially against the fatality of our character. Instead of taking up our cross, we are told to cast it on Christ. He will take on the burden of our anguish and we can enjoy our “simple faith” at Caux. We take flight into the Christian collectivity where we can forget even the will of God, for in society we lose the feeling of personal responsibility and can swim with the current. One feels safe in the multitude, and the Church does everything to reassure us against the fear of God, as if it did not believe that He could bring about a serious situation. On the other hand psychology is painted as black as possible, because it teaches, in full agreement with the Christian creed, that no man can ascend unless he has first descended. A professor of theology once accused me publicly that “in flagrant contradiction to the words of Christ” I had criticized as *childish* the man who remains an infant retaining his early beliefs. I had to remind him of the fact that Christ never said “remain children” but “become like children.” This is one small

example of the way in which Christian experience is falsified; it is prettied up, its sombre aspects are denied, its dangers are hidden. But the action of the Holy Spirit does not meet us in the atmosphere of a normal, bourgeois (or proletarian!), sheltered, regular life, but only in the insecurity outside the human economy, in the infinite spaces where one is alone with the *providentia Dei*. We must never forget that Christ was an innovator and revolutionary, *executed with criminals*. The reformers and great religious geniuses were *heretics*. It is there that you find the footprints of the Holy Spirit, and no one asks for him or receives him *without having to pay a high price*. The price is so high that no one today would dare to suggest that he possesses or is possessed by the Holy Spirit, or he would be too close to the psychiatric clinic. The danger of making oneself ridiculous is too real, not to mention the risk of offending our real god: *respectability*. There one even becomes very strict, and it would not be at all allowable for God and his Spirit to permit themselves to give advice or orders as in the Old Testament. Certainly everyone would lay his irregularities to the account of the unconscious. One would say: God is faithful, he does not forsake us, God does not lie, he will keep his word, and so on. We know it isn't true, but we go on repeating these lies ad infinitum. It is quite understandable that we should seek to hold the truth at arm's length, because it seems impossible to give oneself up to a God who doesn't even respect his own laws when he falls victim to one of his fits of rage or forgets his solemn oath. When I allow myself to mention these well-attested facts the theologians accuse me of blasphemy, unwilling as they are to admit the ambivalence of the divine nature, the demonic character of the God of the Bible and even of the Christian God. Why was that cruel immolation of the Son necessary if the anger of the "deus ultionum" is not hard to appease? One doesn't notice much of the Father's goodness and love during the tragic end of his Son.

[1540] True, we ought to abandon ourselves to the divine will as much as we can, but admit that to do so is difficult and dangerous, so dangerous indeed that I would not dare to advise one of my clients to "take" the Holy Spirit or to abandon himself to him until I had first made him realize the risks of such an enterprise.

[1541] Permit me here to make a few comments. On pp. 11f.: The Holy Spirit is to be feared. He is revolutionary *especially* in religious matters (not at all "perhaps even religious," p. 11 bottom). Ah, yes, one does well to refuse the Holy Spirit, because people would like to palm him off on us without telling us what this sacred fire is which killeth and maketh to live. One may get through a battle without being wounded, but there are some unfortunates who do not know how to avoid either mutilation or death. Perhaps one is among their number. One can hardly take the risk of that without the most convincing necessity. It is quite normal and reasonable to refuse oneself to the Holy Spirit. Has M. Boegner's¹³ life been turned upside down? Has he taken the risk of breaking with convention (e.g., eating with Gentiles when

one is an orthodox Jew, or even better with women of doubtful reputation), or been immersed in darkness like Hosea, making himself ridiculous, overturning the traditional order, etc.? It is deeds that are needed, not words.

[1542] p. 13. It is very civil to say that the Holy Spirit is “uncomfortable and sometimes upsetting,” but very characteristic.

[1543] p. 16. It is clear that the Holy Spirit is concerned in the long run with the collectivity (*ecclesia*), but in the first place with the individual, and to create him he isolates him from his environment, just as Christ himself was thought mad by his own family.

[1544] p. 19. The Holy Spirit, “the accredited bearer of the holiness of God.” But who will recognize him as such? Everyone will certainly say that he is drunk or a heretic or mad. To the description “bearer of the holiness” needs to be added the holiness which God himself sometimes sets on one side (Ps. 89).

[1545] p. 21. It is no use for Mr. Horton to believe that receiving the Holy Spirit is quite a simple business. It is so to the degree that we do not realize what is at issue. We are surrendering ourselves to a Spirit with two aspects. That is why we are not particularly ready to “drink” of him, or to “thirst” for him. We hope rather that God is going to pass us by, that we are protected against his injustice and his violence. Granted, the New Testament speaks otherwise, but when we get to the Apocalypse the style changes remarkably and approximates to that of older times. Christ’s kingdom has been provisional; the world is left thereafter for another aeon to Antichrist and to all the horrors that can be envisaged by a pitiless and loveless imagination. This witness in favour of the god with two faces represents the last and tragic chapter of the New Testament which would like to have set up a god exclusively good and made only of love. This Apocalypse—was it a frightful gaffe on the part of those Fathers who drew up the canon? I don’t think so. They were still too close to the hard reality of things and of religious traditions to share our mawkish interpretations and prettily falsified opinions.

[1546] p. 23. “Surrender without the least reserve.” Would Mr. Horton advise us to cross the Avenue de l’Opéra blindfold? His belief in the good God is so strong that he has forgotten the fear of God. For Mr. Horton God is dangerous no longer. But in that case—what is the Apocalypse all about? He asks nevertheless, “To what interior dynamism is one surrendering oneself, natural or supernatural?” When he says, “I surrender myself wholly to God,” how does he know what is “whole”? Our wholeness is an unconscious fact, whose extent we cannot establish. God alone can judge of human wholeness. We can only say humbly: “As wholly as possible.”

[1547] There is no guarantee that it is really *God* when we say “god.” It is perhaps a word concealing a demon or a void, or it is an act of grace coincident with our prayer.

[1548] This total surrender is disturbing. Nearly twenty years ago I gave a course at the Ecole Polytechnique Suisse for two semesters on the *Exercitia Spiritualia* of St. Ignatius.¹⁴ On that occasion I received a profound impression of this total surrender, in relation to which one never knows whether one is dealing with sanctity or with spiritual pride. One sees too that the god to whom one surrenders oneself is a clear and well-defined prescription given by the director of the Exercises. This is particularly evident in the part called the “colloquium,” where there is only one who speaks, and that is the initiand. One asks oneself what God or Christ would say if it were a real dialogue, but no one expects God to reply.

[1549] p. 26. The identity of Christ with the Holy Spirit seems to me to be questionable, since Christ made a very clear distinction between himself and the paraclete, even if the latter’s function resembles Christ’s. The near-identity of the Holy Spirit with Christ in St. John’s Gospel is characteristic of the evangelist’s Gnosticism. It seems to me important to insist on the chronological sequence of the Three Persons, for there is an evolution in three stages:

1. The Father. The opposites not yet differentiated; Satan is still numbered among the “sons of God.” Christ then is only hinted at.

2. God is incarnated as the “Son of Man.” Satan has fallen from heaven. He is the other “son.” The opposites are differentiated.

3. The Holy Spirit is One, his prototype is the Ruach Elohim, an emanation, an active principle, which proceeds (as quintessence) *a Patre Filioque*. Inasmuch as he proceeds also from the Son he is different from the Ruach Elohim, who represents the active principle of Yahweh (not incarnate, with only angels in place of a son). The angels are called “sons,” they are not begotten and there is no mother of the angels. Christ on the other hand shares in human nature, he is even man by definition. In this case it is evident that the Holy Spirit proceeding from the Son does not arise from the divine nature only, that is, from the second Person, but also from the human nature. Thanks to this fact, human nature is included in the mystery of the Trinity. Man forms part of it.

[1550] This “human nature” is only figuratively human, for it is exempt from original sin. This makes the “human” element definitely doubtful inasmuch as man without exception, save for Christ and his mother, is begotten and born bearing the stamp of the *macula peccati*. That is why Christ and his mother enjoy a nature divine rather than human. For the Protestant there is no reason to think of Mary as a goddess. Thus he can easily admit that on his mother’s side Christ was contaminated by original sin; this makes him all the more human, at least so far as the *filioque* of the Protestant confession does not exclude the true man from the “human” nature of Christ. On the other hand it becomes evident that the Holy Spirit necessarily proceeds *from the two natures* of Christ, not only from the God in him, but also from the man in him.

[1551] There were very good reasons why the Catholic Church has carefully purified Christ and his mother from all contamination by the *peccatum originale*. Protestantism was more courageous, even daring or—perhaps?—more oblivious of the consequences, in not denying—*expressis verbis*—the human nature (in part) of Christ and (wholly) of his mother. *Thus the ordinary man became a source of the Holy Spirit*, though certainly not the only one. It is like lightning, which issues not only from the clouds but also from the peaks of the mountains. This fact signifies the continued and progressive divine incarnation. Thus man is received and integrated into the divine drama. He seems destined to play a decisive part in it; that is why he must receive the Holy Spirit. I look upon the receiving of the Holy Spirit as a highly revolutionary fact which cannot take place until the ambivalent nature of the Father is recognized. If God is the *summum bonum*, the incarnation makes no sense, for a good god could never produce such hate and anger that his only son had to be sacrificed to appease it. A Midrash says that the Shofar is still sounded on the Day of Atonement to remind YHWH of his act of injustice towards Abraham (by compelling him to slay Isaac) and to prevent him from repeating it. A conscientious clarification of the idea of God would have consequences as upsetting as they are necessary. They would be indispensable for an interior development of the trinitarian drama and of the role of the Holy Spirit. The Spirit is destined to be incarnate in man or to choose him as a transitory dwelling-place. “Non habet nomen proprium,” says St. Thomas;¹⁵ because he will receive the name of man. That is why he must not be identified with Christ. We cannot receive the Holy Spirit unless we have accepted our own individual life as Christ accepted his. Thus we become the “sons of god” fated to experience the conflict of the divine opposites, represented by the crucifixion.

[1552] Man seems indispensable to the divine drama. We shall understand this role of man’s better if we consider the paradoxical nature of the Father. As the Apocalypse has alluded to it (*evangelium aeternum*) and Joachim of Flora¹⁶ has expressed it, the Son would seem to be the intermediary between the Father and the Holy Spirit. We could repeat what Origen said of the Three Persons, that the Father is the greatest and the Holy Spirit the least. This is true inasmuch as the Father by descending from the cosmic immensity became the least by incarnating himself within the narrow bounds of the human soul (cult of the child-god, Angelus Silesius). Doubtless the presence of the Holy Spirit enlarges human nature by divine attributes. Human nature is the divine vessel and as such the union of the Three. This results in a kind of quaternity which always signifies *totality*, while the triad is rather a process, but never the natural division of the *circle*, the natural symbol of wholeness. The quaternity as union of the Three seems to be aimed at by the *Assumption of Mary*. This dogma adds the feminine element to the masculine Trinity, the terrestrial element (*virgo terra!*) to the spiritual, and thus sinful man to the Godhead. For Mary in her character

of *omnium gratiarum mediatrix* intercedes for the sinner before the judge of the world. (She is his “paraclete.”) She is *φιλανθρωπος* like her prefiguration, the Sophia of the Old Testament.¹⁷ Protestant critics have completely overlooked the symbolic aspect of the new dogma and its emotional value, which is a capital fault.

[1553] The “littleness” of the Holy Spirit stems from the fact that God’s *pneuma* dissolves into the form of little flames, remaining none the less intact and whole. His dwelling in a certain number of human individuals and their transformation into *ὕψω τοῦ θεοῦ* signifies a very important step forward beyond “Christocentrism.” Anyone who takes up the question of the Holy Spirit seriously is faced with the question whether Christ is identical with the Holy Spirit or different from him. With dogma, I prefer the independence of the Holy Spirit. The Holy Spirit is *one*, a *complexio oppositorum*, in contrast to YHWH after the separation of the divine opposites symbolized by God’s two sons, Christ and Satan. On the level of the Son there is no answer to the question of good and evil; there is only an incurable separation of the opposites. The annulling of evil by the *privatio boni* (declaring to be *μη ὄν*) is a *petitio principii* of the most flagrant kind and no solution whatever.¹⁸ It seems to me to be the Holy Spirit’s task and charge to reconcile and reunite the opposites in the human individual through a special development of the human soul. The soul is paradoxical like the Father; it is black and white, divine and demon-like, in its primitive and natural state. By the discriminative function of its conscious side it separates opposites of every kind, and especially those of the moral order personified in Christ and Devil. Thereby the soul’s spiritual development creates an enormous tension, from which man can only suffer. Christ promised him redemption. But in what exactly does this consist? The *imitatio Christi* leads us to Calvary and to the annihilation of the “body,” that is, of biological life, and if we take this death as symbolic it is a state of suspension between the opposites, that is to say, an unresolved conflict. That is exactly what Przywara has named the “rift,”¹⁹ the gulf separating good from evil, the latent and apparently incurable dualism of Christianity, the eternity of the devil and of damnation. (Inasmuch as good is real so also is evil.)

[1554] To find the answer to this question we can but trust to our mental powers on the one hand and on the other to the functioning of the unconscious, that spirit which we cannot control. It can only be hoped that it is a “holy” spirit. The cooperation of conscious reasoning with the data of the unconscious is called the “transcendent function” (cf. *Psychological Types*, par. 828).²⁰ This function progressively unites the opposites. Psychotherapy makes use of it to heal neurotic dissociations, but this function had already served as the basis of Hermetic philosophy for seventeen centuries. Besides this, it is a natural and spontaneous phenomenon, part of the process of individuation. Psychology has no proof that this process does not unfold itself at the instigation of God’s will.

[1555] The Holy Spirit will manifest himself in any case in the psychic sphere of man and will be presented as a psychic experience. He thus becomes the object of empirical psychology, which he will need in order to translate his symbolism into the possibilities of this world. Since his intention is the incarnation, that is, the realization of the divine being in human life, he cannot be a light which the darkness comprehendeth not. On the contrary, he needs the support of man and his understanding to comprehend the *mysterium iniquitatis* which began in paradise before man existed. (The serpent owes his existence to God and by no means to man. The idea: *omne bonum a Deo, omne malum ab homine* is an entirely false one.) YHWH is inclined to find the cause of evil in men, but he evidently represents a moral antinomy accompanied by an almost complete lack of reflection. For example, he seems to have forgotten that he created his son Satan and kept him among the other “sons of God” until the coming of Christ—a strange oversight!

[1556] The data of the collective unconscious favour the hypothesis of a paradoxical creator such as YHWH. An entirely good Father seems to have very little probability; such a character is difficult to admit, seeing that Christ himself endeavoured to reform his Father. He didn't completely succeed, even in his own logia. Our unconscious resembles this paradoxical God. That is why man is faced with a psychological condition which does not let him differentiate himself from the image of God (YHWH). Naturally we can believe that God is different from the image of him that we possess, but it must be admitted on the other side that the Lord himself, while insisting on the Father's perfect goodness, has given a picture of him which fits in badly with the idea of a perfectly moral being. (A father who tempts his children, who did not prevent the error of the immediate parousia, who is so full of wrath that the blood of his only son is necessary to appease him, who left the crucified one to despair, who proposes to devastate his own creation and slay the millions of mankind to save a very few of them, and who before the end of the world is going to replace his Son's covenant by another gospel and complement the love by the fear of God.) It is interesting, or rather tragic, that God undergoes a complete relapse in the last book of the New Testament. But in the case of an antinomian being we could expect no other development. The opposites are kept in balance, and so the kingdom of Christ is followed by that of Antichrist. In the circumstances the Holy Spirit, the third form of God, becomes of extreme importance, for it is thanks to him that the man of good will is drawn towards the divine drama and mingled in it, and the Spirit is *one*. In him the opposites are separated no longer.

[1557] Begging you to excuse the somewhat heretical character of my thoughts as well as their imperfect presentation. I remain, dear monsieur, yours sincerely,

C. G. JUNG

NON RESURRECTION¹

[1558] You are quite right: I have never dealt with all aspects of the Christ-figure for the simple reason that it would have been too much. I am not a theologian and I have had no time to acquire all the knowledge that is wanted in order to attempt the solution of such problems as that of the Resurrection.

[1559] Indubitably resurrection is one of the most—if not the most—important item in the myth or the biography of Christ and in the history of the primitive church.

1. Resurrection as a historical fact in the biography of Jesus

[1560] Three Gospels have a complete report about the postmortal events after the Crucifixion. Mark, however, mentions only the open and empty tomb and the presence of the angel, while the apparition of the visible body of Christ has been reported by a later hand in an obvious addendum. The first report about the resurrected Christ is made by Mary Magdalene, from whom Christ had driven out seven devils. This annotation has a peculiarly cursory character (cf. in particular Mark 11:19),² as if somebody had realized that Mark's report was altogether too meagre and that the usual things told about Christ's death ought to be added for the sake of completeness.

[1561] The earliest source about the Resurrection is St. Paul, and he is no eyewitness, but he strongly emphasizes the absolute and vital importance of resurrection as well as the authenticity of the reports. (Cf. I Cor. 15:14ff and 15:5ff.) He mentions Cephas (Peter) as the first witness, then the twelve, then the five hundred, then James, then the apostles, and finally himself. This is interesting, since his experience was quite clearly an understandable vision, while the later reports insist upon the material concreteness of Christ's body (particularly Luke 24:42 and John 20:24ff.). The evangelical testimonies agree with each other only about the emptiness of the tomb, but not at all about the chronology of the eyewitnesses. There the tradition becomes utterly unreliable. If one adds the story about the end of Judas, who must have been a very interesting object to the hatred of the Christians, our doubts of the Resurrection story are intensified: there are two absolutely different versions of the way of his death.

[1562] *The fact of the Resurrection is historically doubtful.* If we extend the *beneficium dubii* to those contradictory statements we could consider the possibility of an individual as well as collective vision (less likely of a materialization).

[1563] The conclusion drawn by the ancient Christians—since Christ has risen from the dead so shall we rise in a new and incorruptible body—is of course just what St. Paul has feared most,³ viz., invalid and as vain as the expectation of the immediate parousia, which has come to naught.

[1564] As the many shocking miracle-stories in the Gospels show, spiritual reality could not be demonstrated to the uneducated and rather primitive population in any other way but by crude and tangible “miracles” or stories of such kind. Concretism was unavoidable with all its grotesque implications—for example, the believers in Christ were by the grace of God to be equipped with a glorified body at their resurrection, and the unbelievers and unredeemed sinners were too, so that they could be plagued in hell or purgatory for any length of time. An incorruptible body was necessary for the latter performance, otherwise damnation would have come to an end in no time.

[1565] Under those conditions, resurrection as a historical and concrete fact cannot be maintained, whereas the vanishing of the corpse could be a real fact.

2. *Resurrection as a psychological event*

[1566] The facts here are perfectly clear and well documented: The life of the God-man on earth comes to an end with his resurrection and transition to heaven. This is firm belief since the beginning of Christianity. In mythology it belongs to the hero that he conquers death and brings back to life his parents, tribal ancestors, etc. He has a more perfect, richer, and stronger personality than the ordinary mortal. Although he is also mortal himself, death does not annihilate his existence: he continues living in a somewhat modified form. On a higher level of civilization he approaches the type of the dying and resurrected god, like Osiris, who becomes the greater personality in every individual (like the Johannine Christ), viz., his *τέλειος ἄνθρωπος*, the complete (or perfect) man, the self.

[1567] The self as an archetype represents a numinous wholeness, which can be expressed only by symbols (e.g., mandala, tree, etc.). As a collective image it reaches beyond the individual in time and space⁴ and is therefore not subjected to the corruptibility of *one* body: the realization of the self is nearly always connected with the feeling of timelessness, “eternity,” or immortality. (Cf. the personal and superpersonal ātman.) We do not know what an archetype is (i.e., consists of), since the nature of the psyche is inaccessible to us, but we know that archetypes exist and work.

[1568] From this point of view it is no longer difficult to see to what degree the story of the Resurrection represents the projection of an indirect realization of the self that had appeared in the figure of a certain man, Jesus of Nazareth, of whom many rumors were circulating.⁵ In those days the old gods had ceased to be significant.

Their power had already been replaced by the concrete one of the visible god, the Caesar, whose sacrifices were the only obligatory ones. But this substitution was as unsatisfactory as that of God by the communistic state. It was a frantic and desperate attempt to create—out of no matter how doubtful material—a spiritual monarch, a *pantokrator*, in opposition to the concretized divinity in Rome. (What a joke of the *esprit d'escalier* of history—the substitution for the Caesar of the pontifical office of St. Peter!)

[1569] Their need of a spiritual authority then became so particularly urgent, because there was only one divine individual, the Caesar, while all the others were anonymous and hadn't even private gods listening to their prayers.⁶ They took therefore to magic of all kinds. Our actual situation is pretty much the same: we are rapidly becoming the slaves of an anonymous state as the highest authority ruling our lives. Communism has realized this ideal in the most perfect way. Unfortunately our democracy has nothing to offer in the way of different ideals; it also believes in the concrete power of the state. There is no spiritual authority comparable to that of the state anywhere. We are badly in need of a spiritual counterbalance to the ultimately bolshevistic concretism. It is again the case of the “witnesses” against the Caesar.

[1570] The gospel writers were as eager as St. Paul to heap miraculous qualities and spiritual significances upon that almost unknown young rabbi, who after a career lasting perhaps only one year had met with an untimely end. What they made of him we know, but we don't know to what extent this picture has anything to do with the truly historical man, smothered under an avalanche of projections. Whether he was the eternally living Christ and Logos, we don't know. It makes no difference anyhow, since the image of the God-man lives in everybody and has been incarnated (i.e., projected) in the man Jesus, to make itself visible, so that people could realize him as their own interior *homo*, their self.

[1571] Thus they had regained their human dignity: everybody had divine nature. Christ had told them: *Dii estis*: “ye are gods”; and as such they were his brethren, of his nature, and had overcome annihilation either through the power of the Caesar or through physical death. They were “resurrected with Christ.”

[1572] Since we are psychic beings and not entirely dependent upon space and time, we can easily understand the central importance of the resurrection idea: we are not completely subjected to the powers of annihilation because our psychic totality reaches beyond the barrier of space and time. Through the progressive integration of the unconscious we have a reasonable chance to make experiences of an archetypal nature providing us with the feeling of continuity before and after our existence. The better we understand the archetype, the more we participate in its life and the more we realize its eternity or timelessness.

[1573] As roundness signifies completeness or perfection, it also expresses rotation (the rolling movement) or progress on an endless circular way, an identity with the sun and the stars (hence the beautiful confession in the “Mithraic Liturgy”; *ἐγὼ εἰμι σύμπλανος ὑμῖν ἀστήρ* (“I am a Star following his way like you”). The realization of the self also means a re-establishment of Man as the microcosm, i.e., man’s cosmic relatedness. Such realizations are frequently accompanied by synchronistic events. (The prophetic experience of vocation belongs to this category.)

[1574] To the primitive Christians as to all primitives, the Resurrection had to be a concrete, materialistic event to be seen by the eyes and touched by the hands, as if the spirit had no existence of its own. Even in modern times people cannot easily grasp the reality of a psychic event, unless it is concrete at the same time. Resurrection as a psychic event is certainly not concrete, it is just a psychic experience. It is funny that the Christians are still so pagan that they understand spiritual existence only as a body and as a physical event. I am afraid our Christian churches cannot maintain this shocking anachronism any longer, if they don’t want to get into intolerable contradictions. As a concession to this criticism, certain theologians have explained St. Paul’s glorified (subtle) body given back to the dead on the day of judgment as the authentic individual “form,” viz., a spiritual idea sufficiently characteristic of the individual that the material body could be skipped. It was the evidence for man’s survival after death and the hope to escape eternal damnation that made resurrection in the body the mainstay of Christian faith. We know positively only of the fact that space and time are relative to the psyche.

ON THE DISCOURSES OF THE BUDDHA¹

[1575] It was neither the history of religion nor the study of philosophy that first drew me to the world of Buddhist thought, but my professional interests as a doctor. My task was the treatment of psychic suffering, and it was this that impelled me to become acquainted with the views and methods of that great teacher of humanity whose principal theme was the “chain of suffering, old age, sickness, and death.” For although the healing of the sick naturally lies closest to the doctor’s heart, he is bound to recognize that there are many diseases and states of suffering which, not being susceptible of a direct cure, demand from both patient and doctor some kind of attitude to their irremediable nature. Even though it may not amount to actual incurability, in all such cases there are inevitably phases of stagnation and hopelessness which seem unendurable and require treatment just as much as a direct symptom of illness. They call for a kind of moral attitude such as is provided by religious faith or a philosophical belief. In this respect the study of Buddhist literature was of great help to me, since it trains one to observe suffering objectively and to take a universal view of its causes. According to tradition, it was by objectively observing the chain of causes that the Buddha was able to extricate his consciousness from the snares of the ten thousand things, and to rescue his feelings from the entanglements of emotion and illusion. So also in our sphere of culture the suffering and the sick can derive considerable benefit from this prototype of the Buddhist mentality, however strange it may appear.

[1576] The discourses of the Buddha, here presented in K. E. Neumann’s new translation, have an importance that should not be underestimated. Quite apart from their profound meaning, their solemn, almost ritual form emits a penetrating radiance which has an exhilarating and exalting effect and cannot fail to work directly upon one’s feelings. Against this use of the spiritual treasures of the East it might be—and indeed, often has been—objected from the Christian point of view that the faith of the West offers consolations that are at least as significant, and that there is no need to invoke the spirit of Buddhism with its markedly rational attitude. Aside from the fact that in most cases the Christian faith of which people speak simply isn’t there, and no one can tell how it might be obtained (except by the special providence of God), it is a truism that anything known becomes so familiar and hackneyed by frequent use that it gradually loses its meaning and hence its effect; whereas anything strange and unknown, and so completely different in its nature, can open doors hitherto locked and new possibilities of understanding. If a Christian insists so much

on his faith when it does not even help him to ward off a neurosis, then his faith is vain, and it is better to accept humbly what he needs no matter where he finds it, if only it helps. There is no need for him to deny his religion convictions if he acknowledges his debt to Buddhism, for he is only following the Pauline injunction: “Prove all things; hold fast that which is good” (I Thess. 5:21).

[1577] To this good which should be held fast one must reckon the discourses of the Buddha, which have much to offer even to those who cannot boast of any Christian convictions. They offer Western man ways and means of disciplining his inner psychic life, thus remedying an often regrettable defect in the various brands of Christianity. The teachings of the Buddha can give him a helpful training when either the Christian ritual has lost its meaning or the authority of religious ideas has collapsed, as all too frequently happens in psychogenic disorders.

[1578] People have often accused me of regarding religion as “mental hygiene.” Perhaps one may pardon a doctor his professional humility in not undertaking to prove the truth of metaphysical assertions and in shunning confessions of faith. I am content to emphasize the importance of having a *Weltanschauung* and the therapeutic necessity of adopting some kind of attitude to the problem of psychic suffering. Suffering that is not understood is hard to bear, while on the other hand it is often astounding to see how much a person can endure when he understands the why and the wherefore. A philosophical or religious view of the world enables him to do this, and such views prove to be, at the very least, psychic methods of healing if not of salvation. Even Christ and his disciples did not scorn to heal the sick, thereby demonstrating the therapeutic power of their mission. The doctor has to cope with actual suffering for better or worse, and ultimately has nothing to rely on except the mystery of divine Providence. It is no wonder, then, that he values religious ideas and attitudes, so far as they prove helpful, as therapeutic systems, and singles out the Buddha in particular, the essence of whose teaching is deliverance from suffering through the maximum development of consciousness, as one of the supreme helpers on the road to salvation. From ancient times physicians have sought a panacea, a *medicina catholica*, and their persistent efforts have unconsciously brought them nearer to the central ideas of the religion and philosophy of the East.

[1579] Anyone who is familiar with methods of suggestion under hypnosis knows that plausible suggestions work better than those which run counter to the patient’s own nature. Consequently, whether he liked it or not, the doctor was obliged to develop conceptions which corresponded as closely as possible with the actual psychological conditions. Thus, there grew up a realm of theory which not only drew upon traditional thought but took account of the unconscious products that compensated its inevitable one-sidedness—that is to say, all those psychic factors which Christian

philosophy left unsatisfied. Among these were not a few aspects which, unknown to the West, had been developed in Eastern philosophy from very early times.

[1580] So if, as a doctor, I acknowledge the immense help and stimulation I have received from the Buddhist teachings, I am following a line which can be traced back some two thousand years in the history of human thought.

FOREWORD TO FROBOESE-THIELE: "TRÄUME—EINE QUELLE RELIGIÖSER ERFAHRUNG?"¹

[1581] This book has the merit of being the first to investigate how the unconscious of Protestants behaves when it has to compensate an intensely religious attitude. The author examines this question with the help of case material she has collected in her practical work. She has evidently had the good fortune to come upon some very instructive cases who, moreover, did not object to the publication of their material. Since we owe our knowledge of unconscious processes primarily to dreams, the author is mainly concerned with the dreams of her patients. Even for one familiar with this material, the dreams and symbols reported here are remarkable. As a therapist, she handles the dreams in a very felicitous manner, from the practical side chiefly, so that a reciprocal understanding of the meaning of the dream is gradually built up between her and the patient. This puts the reader in the advantageous position of listening in on a dialogue, so to speak. The method is as instructive as it is satisfying, since it is possible to present in this way several fairly long sequences of dreams. A detailed scientific commentary would take up a disproportionate amount of space without making the dream interpretation any more impressive. If the interpretation is at times uncertain, or disregards various details, this in no way affects the therapeutic intention to bring the meaning of the dream nearer to consciousness. In actual practice, one can often do full justice to a dream if one simply puts its general tendency, its emotional atmosphere, and its approximate meaning in the right light, having first, of course, assured oneself of the spontaneous approval of the dreamer. With intelligent persons, this thoughtful feeling of one's way into the meaning of the dream can soon be left to the patient himself.

[1582] The author has been entirely successful in bringing out the religious meaning of the dreams and so demonstrating her thesis. A religious attitude does in fact offer a direct challenge to the unconscious, and the more inimical the conscious attitude is to life, the more forceful and drastic will be this unconscious reaction. It serves the purpose, firstly, of compensating the extremism of the conscious attitude and, secondly, of individuation, since it re-establishes the approximate wholeness of the personality.

[1583] The material which Dr. Froboese-Thiele has made available in her book is of considerable importance for doctors and theologians alike, since both of them have here an opportunity to assure themselves that the unconscious possesses a religious aspect against which no cogent arguments can be mustered. One is left with a feeling

of shame that so little of the empirical case material which would give the layman an adequate idea of these religious processes has been published. The author deserves our special thanks for having taken the trouble to write up these exacting cases *in extenso*. I hope her book will come into the hands of many thoughtful persons whose minds are not stopped up with needless prejudices, and who would be in a position to find a satisfactory answer to religious questions, or at least to come by those experiences which ought to underlie any authentic religious convictions.

JUNG AND RELIGIOUS BELIEF¹

1. Questions to Jung and His Answers²

QUESTION 1. *You say that religion is psychically healthy and often for the latter part of life essential, but is it not psychically healthy only if the religious person believes that his religion is true?*

Do you think that in your natural wish to keep to the realm of psychology you have tended to underestimate man's search for truth and the ways in which he might reach this as, for example, by inference?

[1584] Nobody is more convinced of the importance of the search for truth than I am. But when I say: something transcendental is true, my critique begins. If I call something true, it does not mean that it is absolutely true. It merely seems to be true to myself and/or to other people. If I were not doubtful in this respect it would mean that I implicitly assume that I am able to state an absolute truth. This is an obvious hybris. When Mr. Erich Fromm³ criticizes me for having a wrong idea and quotes Judaism, Christianity, and Buddhism he demonstrates how illogical his standpoint is, as are the views of those religions themselves, i.e., their truths contradict each other. Judaism has a morally ambivalent God; Christianity a Trinity and Summum Bonum; Buddhism has no God but has interior gods. Their truth is relative and not an absolute truth—if you put them on the same level, as Mr. Fromm does. I naturally admit, and I even strongly believe, that it is of the highest importance to state a “truth.” I should be prepared to make transcendental statements, but on one condition: that I state at the same time the possibility of their being untrue. For instance “God is,” i.e., is as I think he is. But as I know that I could not possibly form an adequate idea of an all-embracing eternal being, my idea of him is pitifully incomplete; thus the statement “God is not” (so) is equally true and necessary. To make absolute statements is beyond man's reach, although it is ethically indispensable that he give all the credit to his subjective truth, which means that he admits being bound by his conviction to apply it as a principle of his actions. Any human judgment, no matter how great its subjective conviction, is liable to error, particularly judgments concerning transcendental subjects. Mr. Fromm's philosophy has not transcended yet—I am afraid—the level of the twentieth century; but the power-drive of man and his hybris are so great that he believes in an absolutely valid judgment. No scientifically minded person with a sense of intellectual responsibility can allow himself such arrogance. These are the reasons why I insist upon the criterion of *existence*, both in the realm of

science and in the realm of religion, and upon immediate and primordial *experience*. Facts are facts and contain no falsity. It is our judgment that introduces the element of deception. To my mind it is more important that an idea exists than that it is true. This despite the fact that it makes a great deal of difference subjectively whether an idea seems to me to be true or not, though this is a secondary consideration since there is no way of establishing the truth or untruth of a transcendental statement other than by a subjective belief.

QUESTION 2. *Is it possible that you depreciate consciousness through an overvaluation of the unconscious?*

[1585] I have never had any tendency to depreciate consciousness by insisting upon the importance of the unconscious. If such a tendency is attributed to me it is due to a sort of optical illusion. Consciousness is the “known,” but the unconscious is very little known and my chief efforts are devoted to the elucidation of our unconscious psyche. The result of this is, naturally, that I talk more about the unconscious than about the conscious. Since everybody believes or, at least, tries to believe in the unequivocal superiority of rational consciousness, I have to emphasize the importance of the unconscious irrational forces, to establish a sort of balance. Thus to superficial readers of my writings it looks as if I were giving the unconscious a supreme significance, disregarding consciousness. As a matter of fact the emphasis lies on consciousness as the *conditio sine qua non* of apperception of unconscious contents, and the supreme arbiter in the chaos of unconscious possibilities. My book about *Types* is a careful study of the empirical structure of consciousness. If we had an inferior consciousness, we should all be crazy. The ego and ego-consciousness are of paramount importance. It would be superfluous to emphasize consciousness if it were not in a peculiar compensatory relationship with the unconscious.

[1586] People like Demant⁴ start from the prejudiced idea that the unconscious is something more or less nasty and archaic that one should get rid of. This is not vouched for by experience. The unconscious is neutral, rather like nature. If it is destructive on the one side, it is as constructive on the other side. It is the source of all sorts of evils and also the matrix of all divine experience and—paradoxical as it may sound—it has brought forth and brings forth consciousness. Such a statement does not mean that the source *originates*, i.e., that the water is created just at the spot where you see the source of a river; it comes from deep down in the mountain and runs along its secret ways before it reaches daylight. When I say, “Here is the source,” I only mean the spot where the water becomes visible. The water-simile expresses rather aptly the nature and importance of the unconscious. Where there is no water nothing lives; where there is too much of it everything drowns. It is the task of consciousness to select the right place where you are not too near and not too far

from water; but the water is indispensable. An unfavourable opinion about the unconscious does not enable proper Christians, like Demant, to realize that religious experience, so far as the human mind can grasp it, cannot be distinguished from the experience of so-called unconscious phenomena. A metaphysical being does not as a rule speak through the telephone to you; it usually communicates with man through the medium of the soul, in other words, our unconscious, or rather through its transcendental “psychoid” basis.⁵ If one depreciates the unconscious one blocks the channels through which the *aqua gratiae* flows, but one certainly does not incapacitate the devil by this method. Creating obstacles is just his métier.

[1587] When St. Paul had the vision of Christ, that vision was a psychic phenomenon—if it was anything. I don’t presume to know what the psyche is; I only know that there is a psychic realm in which and from which such manifestations start. It is the place where the *aqua gratiae* springs forth, but it comes, as I know quite well, from the immeasurable depths of the mountain and I don’t pretend to know about the secret ways and places the water flows through before it reaches the surface.

[1588] As the general manifestations of the unconscious are ambivalent or even ambiguous (“It is a fearful thing to fall into the hands of the living God,” Heb. 10:31), decision and discriminating judgment are all-important. We see that particularly clearly in the development of the individuation process, when we have to prevent the patient from either rejecting blindly the data of the unconscious or submitting to them without criticism. (Why has Jacob to fight the angel of the Lord? Because he would be killed if he did not defend his life.) There is no development at all but only a miserable death in a thirsty desert if one thinks one can rule the unconscious by our arbitrary rationalism. That is exactly what the German principle, “Where there is a will, there is a way,” tried to do, and you know with what results.

QUESTION 3. *In your “Answer to Job” you state, page 463 (Collected Works, Vol. 11): “I have been asked so often whether I believe in the existence of God or not that I am somewhat concerned lest I be taken for an adherent of ‘psychologism’ far more commonly than I suspect.” You go on to say, “God is an obvious psychic and non-physical fact,” but I feel in the end you do not actually answer the question as to whether or not you believe in the existence of God other than as an archetype. Do you?*

This question is important because I should like to answer the kind of objection raised by Glover in his Freud or Jung, page 163: “Jung’s system is fundamentally irreligious. Nobody is to care whether God exists, Jung least of all. All that is necessary is to ‘experience’ an “attitude’ because it ‘helps one to live.’”

[1589] An archetype—so far as we can establish it empirically—is an *image*. An image, as the very term denotes, is a picture of something. An archetypal image is like the

portrait of an unknown man in a gallery. His name, his biography, his existence in general are unknown, but we assume nevertheless that the picture portrays a once living subject, a man who was real. We find numberless images of God, but we cannot produce the original. There is no doubt in my mind that there is an original behind our images, but it is inaccessible. We could not even be aware of the original since its translation into psychic terms is necessary in order to make it perceptible at all. How would Kant's *Critique of Pure Reason* look when translated into the psychic imagery of a cockroach? And I assume that the difference between man and the creator of all things is immeasurably greater than between a cockroach and man. Why should we be so immodest as to suppose that we could catch a universal being in the narrow confines of our language? We know that God-images play a great role in psychology, but we cannot prove the physical existence of God. As a responsible scientist I am not going to preach my personal and subjective convictions which I cannot prove. I add nothing to cognition or to a further improvement and extension of consciousness when I confess my personal prejudices. I simply go as far as my mind can reach, but to venture opinions beyond my mental reach would be immoral from the standpoint of my intellectual ethics. If I should say, "I believe in such and such a God," it would be just as futile as when a Negro states his firm belief that the tin-box he found on the shore contains a powerful fetish. If I keep to a statement which I think I can prove, this does not mean that I deny the existence of anything else that might exist beyond it. It is sheer malevolence to accuse me of an atheistic attitude simply because I try to be honest and disciplined. Speaking for myself, the question whether God exists or not is futile. I am sufficiently convinced of the effects man has always attributed to a divine being. If I should express a belief beyond that or should assert the existence of God, it would not only be superfluous and inefficient, it would show that I am not basing my opinion on facts. When people say that they believe in the existence of God, it has never impressed me in the least. Either I know a thing and then I don't need to believe it; or I believe it because I am not sure that I know it. I am well satisfied with the fact that I know experiences which I cannot avoid calling numinous or divine.

QUESTION 4. *Do you ignore the importance of other disciplines for the psyche?*

Goldbrunner in his Individuation, page 161, says that your treatment of "what God is in Himself" is a question which you regard as beyond the scope of psychology, and adds: "This implies a positivistic, agnostic renunciation of all metaphysics." Do you agree that your treatment amounts to that? Would you not agree that such subjects as metaphysics and history have their place in the experience of the psyche?

[1590] I do not ignore the importance of other disciplines for the psyche. When I was professor at the E.T.H. in Zurich I lectured for a whole year about Tantrism⁶ and for another year about the *Spiritual Exercises* of St. Ignatius of Loyola.⁷ Moreover, I have written a number of books about the peculiar spiritual discipline of the alchemists.

[1591] What Goldbrunner says is quite correct. I don't know what God is in himself. I don't suffer from megalomania. Psychology to me is an honest science that recognizes its own boundaries, and I am not a philosopher or a theologian who believes in his ability to step beyond the epistemological barrier. Science is made by man, which does not mean that there are not occasionally acts of grace permitting transgression into realms beyond. I don't depreciate or deny such facts, but to me they are beyond the scope of science as pointed out above. I believe firmly in the intrinsic value of the human attempt to gain understanding, but I also recognize that the human mind cannot step beyond itself, although divine grace may and probably does allow at least glimpses into a transcendental order of things. But I am neither able to give a rational account of such divine interventions nor can I prove them. Many of the analytical hours with my patients are filled with discussions of "metaphysical" intrusions, and I am in dire need of historical knowledge to meet all the problems I am asked to deal with. For the patient's mental health it is all-important that he gets some proper understanding of the numina the collective unconscious produces, and that he assigns the proper place to them. It is, however, either a distortion of the truth or lack of information when Goldbrunner calls my attitude "positivistic," which means a one-sided recognition of scientific truth. I know too well how transitory and sometimes even futile our hypotheses are, to assume their validity as durable truths and as trustworthy foundations of a *Weltanschauung* capable of giving man sure guidance in the chaos of this world. On the contrary, I rely very much on the continuous influx of the numina from the unconscious and from whatever lies behind it. Goldbrunner therefore is also wrong to speak of an "agnostic renunciation of all metaphysics." I merely hold that metaphysics cannot be an object of science, which does not mean that numinous experiences do not happen frequently, particularly in the course of an analysis or in the life of a truly religious individual.

QUESTION 5. *If my reading of your views is correct, I should judge that you think evil to be a far more active force than traditional theological views have allowed for. You appear unable to interpret the condition of the world today unless this is so. Am I correct in this? If so, is it really necessary to expect to find the dark side in the Deity? And if you believe that Satan completes the quaternity does this not mean that the Deity would be amoral?*

Victor White in his *God and the Unconscious* writes at the end of his footnote on page 76: “On the other hand, we are unable to find any intelligible, let alone desirable, meaning in such fundamental Jungian conceptions as the ‘assimilation of the shadow’ if they are not to be understood as the supplying of some absent good (e.g., consciousness) to what is essentially valuable and of itself ‘good.’”

[1592] I am indeed convinced that evil is as positive a factor as good. Quite apart from everyday experience it would be extremely illogical to assume that one can state a quality without its opposite. If something is good, then there must needs be something that is evil or bad. The statement that something is good would not be possible if one could not discriminate it from something else. Even if one says that something exists, such a statement is only possible alongside the other statement that something does not exist. Thus when the Church doctrine declares that evil is not (*μη ὄν*) or is a mere shadow, then the good is equally illusory, as its statement would make no sense.

[1593] Suppose one has something 100-per-cent good, and if anything evil comes in it is diminished, say by 5 per cent. Then one possesses 95 per cent of goodness and 5 per cent is just absent. If the original good diminished by 99 per cent, one has 1 per cent good and 99 per cent is gone. If that 1 per cent also disappears, the whole possession is gone and one has nothing at all. To the very last moment one had only good and oneself was good, but on the other side there is simply nothing and nothing has happened. Evil deeds simply do not exist. The identification of good with *ousia* is a fallacy, because a man who is thoroughly evil does not disappear at all when he has lost his last good. But even if he has 1 per cent of good, his body and soul and his whole existence are still *thoroughly good*; for, according to the doctrine, evil is simply identical with non-existence. This is such a horrible syllogism that there must be a very strong motive for its construction. The reason is obvious: it is a desperate attempt to save the Christian faith from dualism. According to this theory [of the *privatio boni*] even the devil, the incarnate evil, must be good, because he exists, but inasmuch as he is thoroughly bad, he does not exist. This is a clear attempt to annihilate dualism in flagrant contradiction to the dogma that the devil is eternal and damnation a very real thing. I don't pretend to be able to explain the actual condition of the world, but it is plain to any unprejudiced mind that the forces of evil are dangerously near to a victory over the powers of good. Here Basil the Great would say, “Of course that is so, but all evil comes from man and not from God,” forgetting altogether that the serpent in Paradise was not made by man, and that Satan is one of the sons of God, prior to man. If man were positively the origin of all evil, he would possess a power equal or almost equal to that of the good, which is God. But we don't need to inquire into the origin of Satan. We have plenty of evidence in the Old Testament that Yahweh is moral and immoral at the same time, and Rabbinic

theology is fully aware of this fact. Yahweh behaves very much like an immoral being, though he is a guardian of law and order. He is unjust and unreliable according to the Old Testament. Even the God of the New Testament is still irascible and vengeful to such a degree that he needs the self-sacrifice of his son to quench his wrath. Christian theology has never denied the identity of the God of the Old Testament with that of the New Testament. Now I ask you: what would you call a judge that is a guardian of the Law and is himself unjust? One would be inclined to call such a man immoral. I would call him both immoral and moral, and I think I express the truth with this formula. Certainly the God of the Old Testament is good and evil. He is the Father or Creator of Satan as well as of Christ. Certainly if God the Father were nothing else than a loving Father, Christ's cruel sacrificial death would be thoroughly superfluous. I would not allow my son to be slaughtered in order to be reconciled to my disobedient children.

[1594] What Victor White writes about the assimilation of the shadow is not to be taken seriously. Being a Catholic priest he is bound hand and foot to the doctrine of his Church and has to defend every syllogism. The Church knows all about the assimilation of the shadow, i.e., how it is to be repressed and what is evil. Being a doctor I am never too certain about my moral judgments. Too often I find that something that is a virtue in one individual is a vice in another, and something that is good for the one is poison for another. On the other hand, pious feeling has invented the term of *felix culpa* and Christ preferred the sinner. Even God does not seem particularly pleased with mere righteousness.

[1595] Nowhere else is it more important to emphasize that we are speaking of our traditional image of God (which is not the same as the original) than in the discussion of the *privatio boni*. We don't produce God by the magic word or by representing his image. The word for us is still a fetish, and we assume that it produces the thing of which it is only an image. What God is in himself nobody knows; at least I don't. Thus it is beyond the reach of man to make valid statements about the divine nature. If we disregard the short-comings of the human mind in assuming a knowledge about God, which we cannot have, we simply get ourselves into most appalling contradictions and in trying to extricate ourselves from them we use awful syllogisms, like the *privatio boni*. Moreover our superstitious belief in the power of the word is a serious obstacle to our thinking. That is the historical reason why quite a number of shocking contradictions have been heaped up, offering facile opportunities to the enemy of religion. I strongly advocate, therefore, a revision of our religious formulas with the aid of psychological insight. It is the great advantage of Protestantism that an intelligent discussion is possible. Protestantism should make use of this freedom. Only a thing that changes and evolves, lives, but static things mean spiritual death.⁸

2. Final Questions and Answers⁹

QUESTION 1. *If Christ, in His Incarnation, concentrated, as you contend, on goodness (“Answer to Job,” pp. 414, 429f.) what do you mean by “Christ preferred the sinner” and “Even God does not seem particularly pleased with mere righteousness”? Is there not an inconsistency here?*

[1596] Of course there is. I am just pointing it out.

QUESTION 2. *You stress the principle of the opposites and the importance of their union. You also write of enantiodromia in relation to the opposites but this (in the sense in which Heraclitus used the term) would never produce a condition of stability which could lead to the union of the opposites. So is there not a contradiction in what you say about the opposites?*

[1597] “Enantiodromia” describes a certain psychological fact, i.e., I use it as a psychological concept. Of course it does not lead to a union of opposites, has—as a matter of fact—nothing to do with it. I see no contradiction anywhere.

QUESTION 3. *If the principle of enantiodromia, a perpetual swinging of the pendulum, is always present would we not have a condition in which there would be no sense of responsibility, but one of amorality and meaninglessness?*

[1598] Naturally life would be quite meaningless if the enantiodromia of psychological states kept on for ever. But such an assumption would be both arbitrary and foolish.

QUESTION 4. *When we come into close contact with pharisaism, theft or murder, involving uncharitableness, ruthless and selfish treatment of others, we know that they are evil and very ugly. In actual life what we call goodness—loyalty, integrity, charitableness—does not appear as one of a pair of opposites but as the kind of behavior we want for ourselves and others. The difficulty is that we cannot judge all the motives involved in any action with certainty. We are unable to see the complete picture and so we should be cautious and charitable in our judgments. But this does not mean that what is good is not good, or what is evil is not evil. Do you not think that what you have to say about the quaternity and enantiodromia ultimately blurs the distinction between good and evil? Is not what is blurred only our capacity always to see the real moral issues clearly?*

[1599] It only means that moral judgment is human, limited, and under no condition metaphysically valid. Within these confines good is good, and evil is evil. One must have the courage to stand up for one’s convictions. We cannot imagine a state of wholeness (quaternity) which is good and evil. It is beyond our moral judgment.

QUESTION 5. *Theologians who believe in Satan have maintained that he was created good but that through the use of his free will he became evil. What necessity is there to assume that he is the inevitable principle of evil in the Godhead—the fourth member of the quaternity?*

[1600] Because the Three are the Summum Bonum, and the devil is the principle and personification of evil. In a Catholic quaternity the fourth would be the Mother, 99-per-cent divine. The devil would not count, being *μη̄ ὄν*, an empty shadow owing to the *privatio boni*, in which the Bonum is equal to *οὐσία*.

QUESTION 6. *You build much on the existence of four functions, thinking, feeling, sensation, and intuition. Is this a final or satisfactory typology? If feeling is included, why not conation?*

[1601] The four functions are a mere model for envisaging the qualities of *consciousness*. Conation is a term applicable to the creative process starting in the unconscious and ending in a conscious result, in other words a dynamic aspect of psychic life.

QUESTION 7. *By different approaches in your later writings you add Satan and the Blessed Virgin Mary to the Trinity, but this would make a quinary. Who compose the quaternity?*

[1602] The quaternity can be a hypothetical structure, depicting a wholeness. It is also not a logical concept, but an empirical fact. The *quinarius* or *quinio* (in the form of 4 + 1, i.e., quincunx) does occur as a symbol of wholeness (in China and occasionally in alchemy) but relatively rarely. Otherwise the *quinio* is not a symbol of wholeness, quite the contrary (e.g., the five-rayed star of the Soviets or of U.S.A.). Rather, it is a chaotic *prima materia*.

QUESTION 8. *Would not the quaternity involve not only a revision of doctrine but of moral issues as well, for it would appear inevitably to mean complete moral relativity and so amorality having its source in the Godhead Itself?*

[1603] Man cannot live without moral judgment. From the fact of the empirical quaternary structure of 3 + 1 (3 = good, 1 = evil) we can conclude that the unconscious characterizes itself as an unequal mixture of good and evil.

[1604] There are also not a few cases where the structure is reversed: 1 + 3 (1 = good, 3 = evil). 3 in this case would form the so-called “lower triad.” Since the quaternity as a rule appears as a unity, the opposites annul each other, which simply means that our anthropomorphic judgment is no more applicable, i.e., the divinity is beyond good and evil, or else metaphysical assertion is not valid. In so far as the human mind and

its necessities issue from the hands of the Creator, we must assume that moral judgment was provided by the same source.

QUESTION 9. *What exactly are you referring to when you use the word “quaternity” in relation to religion? Are you using “quaternity” purely for images which men form of the Godhead? You sometimes give the impression that you are referring to God-images alone. At other times you write as if you have in mind the Godhead itself. This is especially so when you stress the necessity of including Satan and also the Blessed Virgin Mary in the Godhead. If you do not refer to the Godhead itself, there seems to me to be no explanation of the urgency of your words about recognizing the evil principle in God and your welcome of the promulgation of the Assumption.*

[1605] I use the term “quaternity” for the mandala and similar structures that appear *spontaneously* in dreams and visions, or are “invented” (from *invenire* = to find), to express a totality (like four winds and seasons or four sons, seraphim, evangelists, gospels, fourfold path, etc.). The quaternity is of course an image or picture, which does not mean that there is no original!

[1606] If the opposites were not contained in the image, it would not be an image of totality. But it is meant to be a picture of ineffable wholeness, in other words, its symbol. It has an importance for the theologian only in so far as the latter attributes significance to it. If he assumes that his images or formulations are not contents of his consciousness (which is a *contradictio in adiecto*), he can only state that they are exact replicas of the original. But who could suggest such a thing? In spite of the fact that the Church long ago discouraged the idea of a quaternity, the fact remains that Church symbolism abounds in quaternity allusions. As Three (Trinity) is only one (albeit the main) aspect of the Deity, the remaining fourth principle is wiped out of existence by the *privatio boni* syllogism. But the Catholic Church was aware that the picture without opposites is not complete. It therefore admitted (at least tentatively) the existence of a feminine factor within the precincts of the masculine Trinity (*Assumptio Beatae Virginis*). For good reasons the devil is still excluded, and even annihilated, by the *privatio boni*.

[1607] The admission of the *Beata Virgo* is a daring attempt, in so far as she belongs to *lubricum illud genus*¹⁰ (St. Epiphanius), so suspect to the moralistic propensities of the said Church. However, she has been spiritually “disinfected” by the dogma of *Conceptio immaculata*. I consider the Assumption as a cautious approach to the solution of the problem of opposites, namely, to the integration of the fourth metaphysical figure into the divine totality. The Catholic Church has almost succeeded in creating a *quaternity without shadow*, but the devil is still outside. The Assumption is at least an important step forward in Christian (?) symbolism. This evolution will be completed when the dogma of the Co-Redemptrix is reached. But

the main problem will not be solved, although one pair of opposites (♂ and ♀) has been smuggled into the divine wholeness. Thus the Catholic Church (in the person of the Pope) has at least seen fit to take the Marianic movement in the masses, i.e., a *psychological fact*, so seriously that he did not hesitate to give up the time-hallowed principle of apostolic authority.

[1608] Protestantism is free to ignore the spiritual problems raised by our time, but it will remove itself from the battlefield and thereby lose its contact with life.

[1609] Being a natural and spontaneous symbol, the quaternity has everything to do with human psychology, while the trinitarian symbol (though equally spontaneous) has become cold, a remote abstraction. Curiously enough, among my collection of mandalas I have only a small number of trinities and triads. They stem one and all from Germans!¹¹ (Unconscious of their shadows, therefore unaware of collective guilt!)

[1610] I do not know at all to what extent human formulas, whether invented or spontaneous, correspond with the original. I only know that we are profoundly concerned with them, whether people know it or not, just as you can be with an illness of which you are unaware. It makes an enormous practical difference whether your dominant idea of totality is three or four. In the former case all good comes from God, all evil from man. Then man is the devil. In the latter case man has a chance to be saved from devilish possession, in so far as he is not inflated with evil. What happened under National Socialism in Germany? What is happening under Bolshevism? With the quaternity the powers of evil, so much greater than man's, are restored to the divine wholeness, whence they originated, even according to Genesis. The serpent was not created by man.

[1611] The quaternity symbol has as much to do with the Godhead as the Trinity has. As soon as I begin to think at all about the experience of "God," I have to choose from my store of images between [concepts representing him as a] monad, dyad, triad, tetrad or an indistinct multiplicity. In any serious case the choice is limited by the kind of revealed image one has received. Yahweh and Allah are monads, the Christian God a triad (historically), the modern experience presumably a tetrad, the early Persian deity a dyad. In the East you have the dyadic monad Tao and the monadic Anthropos (*purusha*), Buddha, etc.

[1612] In my humble opinion all this has very much to do with psychology. We have nothing to go by but these images. Without images you could not even speak of divine experiences. You would be completely inarticulate. You only could stammer "mana" and even that would be an image. Since it is a matter of an ineffable experience the image is indispensable. I would completely agree if you should say: God approaches man in the form of symbols. But we are far from knowing whether the symbol is correct or not.

- [1613] The *privatio boni* cannot be compared to the quaternity, because it is not a revelation. On the contrary, it has all the earmarks of a “doctrine,” a philosophical invention.
- [1614] It makes no difference at all whether I say “God” or “God-head.” Both are in themselves far beyond man’s reach. To us they are revealed as psychic images, i.e., symbols.
- [1615] I am far from making any statements about God himself. I am talking about images, which it is very important to think and talk about, and to criticize, because so much depends upon the nature of our dominant ideas. It makes all the difference in the world whether I think that the source of evil or good is myself, my neighbour, the devil, or the supreme being.
- [1616] Of course I am pleading the cause of the *thinking* man, and, inasmuch as most people do not think, of a small minority. Yet it has its place in creation and presumably it makes sense. Its contribution to the development of consciousness is considerable and since Nature has bestowed the highest premium of success on the *conscious* being, consciousness must be more precious to Nature than unconsciousness. Therefore I think that I am not too far astray in trying to understand the symbol of the Deity. My opinion is that such an attempt—whether successful or not—could be of great interest to theology which is built on the same primordial images, whether one likes it or not. At all events you will find it increasingly difficult to convince the educated layman that theology has nothing to do with psychology, when the latter acknowledges its indebtedness to the theological approach.
- [1617] My discussion with theology starts from the fact that the naturally revealed central symbols, such as the quaternity, are not in harmony with trinitarian symbols. While the former includes the darkness in the divine totality, the Christian symbol excludes it. The Yahwistic symbol of the star of David is a *complexio oppositorum*: ▽, fire △ and water ☆, a mandala built on three, an unconscious acknowledgment of the Trinity but including the shadow. Properly so, because Satan is still among the *benê Elohim* [sons of God], though Christ saw him falling out of heaven [Luke 10:18]. This vision points to the Gnostic abscission of the shadow, mentioned by Irenaeus.¹² As I have said, it makes a great and vital difference to man whether or not he considers himself as the source of evil, while maintaining that all good stems from God. Whether he knows it or not, this fills him with satanic pride and hybris on the one side and with an abysmal feeling of inferiority on the other. But when he ascribes the immense power of the opposites to the Deity, he falls into his modest place as a small image of the Deity, not of Yahweh, in whom the opposites are unconscious, but of a quaternity consisting of the main opposites: male and female, good and evil, and reflected in human consciousness as confirmed by psychological experience and by the historical evidence. Or have I invented the idea of Tao, the living spiritual symbol

of ancient China? Or the four sons of Horus in ancient Egypt? Or the alchemical quaternity that lived for almost a thousand years? Or the Mahayana mandala which is still alive?

QUESTION 10. *One of your objections to the privatio boni doctrine is that it minimizes evil, but does not your view of the quaternity, which includes both good and evil, minimize evil much more surely and assume its existence for ever?*

[1618] The quaternity symbol relativizes good and evil, but it does not minimize them in the least.

QUESTION 11. *You argue in "Answer to Job" (pp. 399, 430) that, because of his virgin birth, Christ was not truly man and so could not be a full incarnation in terms of human nature. Do you believe that Christ was born of a virgin? If not, the argument in "Answer to Job" falls to pieces. If you believe in the Virgin Birth, would it not be logical to accept the whole emphasis of the Christian Creeds, for they would not appear to be more difficult to believe in than the Virgin Birth?*

[1619] The dogma of the Virgin Birth does not abolish the fact that "God" in the form of the Holy Ghost is Christ's father. If Yahweh is his father, then it is a matter of an *a priori* union of opposites. If the Summum Bonum is his father, then the powers of darkness are missing and the term "good" has lost its meaning and Christ has not become man, because man is afflicted with darkness.

QUESTION 12. *Christ, so the Gospel narratives assert, was born in a manger because there was no room for Him in the inn at Bethlehem; His early life included the Slaughter of the Innocents and His family lived for a time exiled in Egypt; He faced temptation in the wilderness; His ministry was carried on under such hard conditions that He "had not where to lay His head" (Matt. 8:20). He met and ministered to numerous sufferers; sinners received His sympathy and understanding; He endured an agony of suffering in the Garden of Gethsemane and this was followed by His trials, and finally the cruellest of deaths by crucifixion. On what grounds then can you argue that Christ was an incarnation of the light side of God and that He did not enter fully into the dark aspects of existence? ("Answer to Job," pp. 398f., 414, 430.) On the contrary, traditionally He has often been thought of as "a man of sorrows, and acquainted with grief."*

[1620] All that has nothing to do with the dark side of man. Christ is on the contrary the innocent and blameless victim without the *macula peccati*, therefore not really a human being who has to live without the benefit of the Virgin Birth and is crucified in a thousand forms.

QUESTION 13. *What do you mean when in “Answer to Job” you refer to Antichrist and his reign, and state that this was astrologically foretold?*

[1621] It is potentially foretold by the aeon of the Fishes (♓) then beginning, and in fact by the Apocalypse. Cf. my argument in *Aion*, ch. VI.; also Rev. 20:7: “And when the thousand years are expired, Satan shall be loosed out of his prison.”

QUESTION 14. *What do you mean by “divine unconsciousness” in “Answer to Job” (footnote on page 383)? Is God more limited than man?*

[1622] This is just the trouble. From Job it is quite obvious that Yahweh behaves like a man with inferior consciousness and an absolute lack of moral self-reflection. In this respect God-image is more limited than man. Therefore God must incarnate.

QUESTION 15. *One of Job’s greatest problems was: Can I believe in a just God? Individuation, “the Christification of many,” the solution given in “Answer to Job” [p. 470], does not do justice to Job’s question. Did not Job want meaning, a good God and not simply individuation? He was concerned with metaphysical and theological issues, and the modern Job is too, and just as man cannot live by bread alone, so is he unlikely to feel that he can live by individuation alone which, at its most successful, would appear to be little more than a preparatory process enabling him to face these issues more objectively.*

[1623] Job wanted justice. He saw that he could not obtain it. Yahweh cannot be argued with. He is unreflecting power. What else is left to Job but to shut his mouth? He does not dream of individuation, but he knows what kind of God he is dealing with. It is certainly not Job drawing further conclusions but God. He sees that incarnation is unavoidable because man’s insight is a step ahead of him. He must “empty himself of his Godhead and assume the shape of the *δοῦλος*¹³ i.e., man is his lowest form of existence, in order to obtain the jewel which man possesses in his self-reflection. Why is Yahweh, the omnipotent creator, so keen to have his “slave,” body and soul, even to the point of admitted jealousy?

[1624] Why do you say “by individuation alone”? *Individuation is the life in God*, as mandala psychology clearly shows. Have you not read my later books? You can see it in every one of them. The symbols of the self coincide with those of the Deity. The self is not the ego, it symbolizes the totality of man and he is obviously not whole without God. That seems to be what is meant by incarnation and incidentally by individuation.

3. *Answers to Questions from the Rev. David Cox:*¹⁴

This question concerned Jung's statement in Two Essays on Analytical Psychology (par. 327) that Western culture has no name or concept for the "union of opposites by the middle path" which could be compared to the concept of Tao. It was suggested that the Christian doctrine of justification by faith is such a concept.

[1625] Not being a theologian I cannot see a connection between the doctrine of justification and Tao. Tao is the cooperation of opposites, bright-dark, dry-humid, hot-cold, south-north, dragon-tiger, etc., and has nothing to do with moral opposites or with a reconciliation between the Summum Bonum and the devil. Christian doctrine—so far as I know—does not recognize dualism as the constitution of Tao, but Chinese philosophy does.

[1626] It is certainly true that natural man always tries to increase what seems "good" to him and to abolish "evil." He depends upon his consciousness, which, however, may be crossed by "conscience" or by some unconscious intention. This factor can occasionally be stronger than consciousness, so that it cannot be fought. We are very much concerned in psychotherapy with such cases.

[1627] The "Will of God" often contradicts conscious principles however good they may seem. Penitence or remorse follows the deviation from the superior will. The result is—if not a chronic conflict—a *coniunctio oppositorum* in the form of the symbol (*symbolum* = the two halves of a broken coin), the expression of totality.

[1628] I did not know that you understand Christ as the new centre of the individual. Since this centre of the individual appears empirically as a union of opposites (usually a quaternity), Christ must be beyond moral conflict, thus representing ultimate decision. This conception coincides absolutely with my view of the self (= Tao, *nirdvandva*). But since the self includes my consciousness as well as my unconscious, my ego is an integral part of it. Is this also your view of Christ? If this should be so, I could completely agree with you. Life then becomes a dangerous adventure, because I surrender to a power beyond the opposites, to a superior or divine factor, without argument. His supreme decision may be what I call good or what I call bad, as it is unlimited. What is the difference between my behaviour and that of an animal fulfilling the will of God unreservedly? The only difference I can see is that I am conscious of, and reflect on, what I am doing. "If thou knowest what thou art doing, thou art blessed."¹⁵ You have acted.

[1629] (*Unjust steward.*) This is Gnostic morality but not that of the decalogue. The true servant of God runs risks of no mean order. *Entendu!* Thus, at God's command, Hosea marries a whore. It is not beyond the bounds of possibility that such orders could be issued even in modern times. Who is ready to obey? And what about the fact that anything coming from the unconscious is expressed in a peculiar language (words, thoughts, feelings, impulses) that might be misinterpreted? These questions are not meant as arguments against the validity of your view. They merely illustrate

the enormity of the risk. I ventilate them only to make sure we really believe in a Christ beyond good and evil. I am afraid of unreflecting optimism and of secret loopholes, as for instance, “Oh, you can trust in the end that everything will be all right.” *Id est*: “God is good” (and not beyond good and evil). Why has God created consciousness and reason and doubt, if complete surrender and obedience to his will is the *ultima ratio*? He was obviously not content with animals only. He wants reflecting beings who are at the same time capable of surrendering themselves to the primordial creative darkness of his will, unafraid of the consequences.

[1630] I cannot help seeing that there is much evidence in primitive Christianity for your conception of Christ, but none in the later development of the Church. Nevertheless there are the seemingly unshakable scriptural testimonies to the essential goodness of God and Christ and there is—to my knowledge—no positive statement in favour of a beyond-good-and-evil conception, not even an implied one. This seems to me to be a wholly modern and new interpretation of a revolutionary kind, at least in view of the *Summum Bonum*, as you add the *Malum* and transcend both. In this I completely agree with you. I only want to make sure that we understand each other when we reach the conclusion that man’s true relation to God must include both love and fear to make it complete. If both are true, we can be sure that our relation to him is adequate. The one relativizes the other: in fear we may hope, in love we may distrust. Both conditions appeal to our consciousness, reflection, and reason. Both our gifts come into their own. But is this not a relativization of complete surrender? Or at least an acceptance after an internal struggle? Or a fight against God that can be won only if he himself is his advocate against himself, as Job understood it? And is this not a tearing asunder of God’s original unity by man’s stubbornness? A disruption sought by God himself, or by the self itself? As I know from my professional experience, the self does indeed seek such issues because it seeks *consciousness*, which cannot exist without discrimination (differentiation, separation, opposition, contradiction, discussion). The self is empirically in a condition we call unconscious in our three-dimensional world. What it is in its transcendental condition, we do not know. So far as it becomes an object of cognition, it undergoes a process of discrimination and so does everything emanating from it. The discrimination is intellectual, emotional, ethical, etc. That means: the self is subject to our free decision thus far. But as it transcends our cognition, we are its objects or slaves or children or sheep that cannot but obey the shepherd. Are we to emphasize consciousness and freedom of judgment or lay more stress on obedience? In the former case can we fulfil the divine will to consciousness, and in the latter the primordial instinct of obedience? Thus we represent the intrinsic Yea and Nay of the *opus divinum* of *creatio continua*. We ourselves are in a certain respect “beyond good and evil.” This is very dangerous indeed (cf. Nietzsche), but no

argument against the truth. Yet our inadequacy, dullness, inertia, stupidity, etc. are equally true. Both are aspects of one and the same being.

[1631] Accordingly the alchemists thought of their opus as a continuation and perfection of creation, whereas the modern psychological attempt confronts the opposites and submits to the tension of the conflict: “Expectans naturae operationem, quae lentissima est, aequo animo,”¹⁶ to quote an old master. We know that a *tertium quid* develops out of an opposition, partly aided by our conscious effort, partly by the co-operation of the unconscious effort, partly by the co-operation of the unconscious (the alchemists add: *Deo concedente*). The result of this opus is the *symbol*, in the last resort the self. The alchemists understood it to be as much physical as spiritual, being the *filius macrocosmi*, a parallel to Christ, the *υἱος τοῦ ἀνθρώπου*. The Gnostics understood the serpent in paradise to be the *λόγος*, and in the same way the alchemists believed that their *filius philosophorum* was the chthonic *serpens mercurialis* transformed (taking the serpent on the *σταυρός* [cross] as an *allegoria ad Christum spectans*).¹⁷ Their naïveté shows a hesitation (which I feel too) to identify the self with Christ. Their symbol is the *lapis*. It is incorruptible, *semel factus* (from the *increatum*, the primordial chaos), everlasting, our tool and master at the same time (“*artifex non est magister lapidis, sed potius eius minister*”),¹⁸ the redeemer of creation in general, of minerals, plants, animals, and of man’s physical imperfection. Hence its synonyms: panacea, *alexipharmacum*, *medicina catholica*, etc. (and hellebore, because it heals insanity).

[1632] Of course if you understand Christ by definition as a *complexio oppositorum*, the equation is solved. But you are confronted with a terrific historical counterposition. As it concerns a point of supreme importance, I wanted to clarify the problem beyond all doubt. This may explain and excuse my long-winded argument.

II

In “Answer to Job” Jung claims that Jesus “incarnates only the light” side of God. This may represent the way in which Jesus is thought of by the majority of Western men and women today, but is it not false to the New Testament and to Christian thought over the centuries?

[1633] You must consider that I am an alienist and practical psychologist, who has to take things as they *are* understood, not as they *could* or *should* be understood. Thus the Gnostics thought that Christ had cut off his shadow, and I have never heard that he embodies evil as Yahweh explicitly does. Catholic as well as Protestant teaching insists that Christ is without sin. As a scientist I am chiefly concerned with what is generally believed, although I can’t help being impressed by the fact that the ecclesiastical doctrines do not do justice to certain facts in the New Testament. I have however to consider the *consensus omnium* that Christ is without the *macula peccati*.

If I should say that Christ contains some evil I am sure to have the Churches against me. As a psychologist I cannot deal with the theological conception of truth. My field is people's common beliefs.

[1634] Since I am not chiefly concerned with theology but rather with the layman's picture of theological concepts (a fact you must constantly bear in mind), I am liable to make many apparent contradictions (like the medieval mind acquainted with funny stories about Jesus, as you rightly point out). The Gospels do indeed give many hints pointing to the dark side, but this has not affected the picture of the *lumen de lumine*, which is the general view. I am thinking—as a psychologist—about all sorts of erroneous notions which do exist in spite of higher criticism and accurate exegesis and all the achievements of theological research. My object is the general condition of the Christian mind, and not theology, where I am wholly incompetent. Because the *lumen de lumine* idea is paramount in the layman's mind, I dare to point to certain scriptural evidence (accessible to the layman) showing another picture of Christ. I am certain that your conception of Christ would have a hard time getting through certain thick skulls. It is the same with the idea of evil contained in God. I am concerned with dogmas, prejudices, illusions, and errors and every kind of doubt in the layman's mind, and I try to get a certain order into that chaos by the means accessible to a layman, i.e., to myself as a representative of the humble “ignoramus.”

III

This question deals with the relationship between faith and projection. Has Jung, in his writing, treated faith as being connected with an outward form of religion?

[1635] This I do not properly understand. Of course “faith” is a relationship to projected contents. But I cannot see how that “corresponds for all practical purposes to a withdrawal of the projection.” Faith on the contrary—as it seems to me—maintains the conviction that the projection is a reality. For instance, I project saintly qualities on to somebody. My faith maintains and enhances this projection and creates a worshipful attitude on my part. But it is quite possible that the bearer of the projection is nothing of the kind, perhaps he is even an unpleasant hypocrite. Or I may project, i.e., hypostatize, a religious conviction of a certain kind which I maintain with faith and fervour. Where is the “withdrawal of the projection”?

[1636] In case of doubt you had better refer to *Symbols of Transformation*. Once I was at the beginning of things, at the time when I separated from Freud in 1912. I found myself in great inner difficulties, as I had no notion of the collective unconscious or of archetypes. My education was based chiefly on science, with a modest amount of the humanities. It was a time of *Sturm und Drang*. The so-called *Psychology of the Unconscious*¹⁹ was an intuitive leap into the dark and contains no end of inadequate formulations and unfinished thoughts.

[1637] I make a general distinction between “religion” and a “creed” for the sake of the layman, since it is chiefly he who reads my books and not the academic scholar. He (the scholar) is not interested in the layman’s mind. As a rule he nurses resentments against psychology. I must repeat again: I am a psychologist and thus people’s minds interest me in the first place, although I am keen to learn the truth the specialist produces. The layman identifies religion with a creed, that is, with the “things done in the church.” Thus Islam, Judaism, Buddhism, etc. are simply religions like Christianity. That there is a genuine inner life, a communion with transcendental powers, a possibility of religious *experience* is mere hearsay. Nor are the churches over-sympathetic to the view that the alpha and omega of religion is the subjective individual experience, but put community in the first place, without paying attention to the fact that the more people there are the less individuality there is. To be alone with God is highly suspect, and, mind you, it is, because the will of God can be terrible and can isolate you from your family and your friends and, if you are courageous or foolish enough, you may end up in the lunatic asylum. And yet how can there be religion without the experience of the divine will? Things are comparatively easy as long as God wants nothing but the fulfilment of his laws, but what if he wants you to break them, as he may do equally well? Poor Hosea could believe in the symbolic nature of his awkward marriage, but what about the equally poor little doctor who has to swear his soul away to save a human life? He cannot even begin to point out what an affliction his act of lying is, although in his solitude with God he may feel justified. But in case of discovery he has to face the ignominious consequences of his deed and nobody will believe him to be a witness for the divine will. To be God’s voice is not a social function anymore. *Si parva licet componere magnis*—what did I get for my serious struggle over *Job*, which I had postponed for as long as possible? I am regarded as blasphemous, contemptible, a fiend, whose name is mud. It fell to my lot to collect the victims of the Summum Bonum and use my own poor means to help them. But I could not say that a church of any denomination has encouraged my endeavours. You are one of the *very few* who admit the *complexio oppositorum* in the Deity. (Cusanus does not seem to have really known what he was talking about, nor anybody else in those days, otherwise he would have been roasted long ago.) That is the reason why I don’t identify religion with a creed. I can have a real communion only with those who have the same or similar religious experience, but not with the believers in the Word, who have never even taken the trouble to understand its implications and expose themselves to the divine will unreservedly. They use the Word to protect themselves against the will of God. Nothing shields you better against the solitude and forlornness of the divine experience than community. It is the best and safest substitute for individual responsibility.

[1638] The self or Christ is present in everybody *a priori*, but as a rule in an *unconscious condition* to begin with. But it is a definite *experience* of later life, when this fact becomes *conscious*. It is not really understood by teaching or suggestion. It is only real when it *happens*, and it can happen only when you withdraw your projections from an *outward* historical or metaphysical Christ and thus *wake up* Christ within. This does not mean that the unconscious self is inactive, only that we do not understand it. The self (or Christ) cannot become conscious and real without the withdrawal of external projections. An act of *introjection* is needed, i.e., the realization that the self lives in you and not in an external figure separated and different from yourself. The self has always been, and will be, your innermost centre and periphery, your *scintilla* and *punctum solis*. It is even biologically the archetype of order and—dynamically—the source of life.

IV

Here the question is concerned with Jung's objections to the view that God is the Summum Bonum and sin is a privatio boni.

[1639] Well, I have noticed that it seems to be a major difficulty for the theological mind to accept the fact that (1) “good” and “evil” are man-made judgments. Somebody’s “good” may be bad or evil for another *et vice versa*. (2) One cannot speak of “good” if one does not equally speak of “evil,” any more than there can be an “above” without a “below,” or “day” without “night.” (3) The *privatio boni* appears to me a syllogism. If “good” and *οὐσία* are one without an equally valid counterpart, then “good” is also a *μη ὄν* because the term “good” has lost its meaning; it is just “being” and evil is just “not-being” and the term means “nothing.” Of course you are free to call “nothing” evil, but nothing is just nothing and cannot bear another name, making it into “something.” Something non-existing has no name and no quality. The *privatio boni* suggests that evil is *μη ὄν*, not-being or nothing. It is not even a shadow. There remains only the *ὄν*, but it is not good, since there is no “bad.” Thus the epithet “good” is redundant. You can call God the Summum, but not the Bonum, since there is nothing else different from “being,” from the Summum *qua* being! Although the *privatio boni* is not the invention of the Church Fathers, the syllogism was most welcome to them on account of the Manichaean danger of dualism. Yet without dualism there is no cognition at all, because discrimination is impossible.

[1640] I have never [as you state] understood from my study of the Fathers that God is the highest good *with reference to man*, no matter what he is in himself. This is certainly new to me. Obviously my critique of the Summum Bonum does not apply in this case. The Bonum then would be an anthropomorphic judgment, “God is good for me,” leaving it an open question whether he is the same for other people. If one

assumes him to be a *complexio oppositorum*, i.e., beyond good and evil, it is possible that he may appear equally well as the source of evil which you believe to be ultimately good for man. I am convinced, as I have seen it too often to doubt it, that an apparent evil is really no evil at all if you accept and obediently live it as far as possible, but I am equally convinced that an apparent good is in reality not always good at all but wholly destructive. If this were not the case, then everything would be ultimately good, i.e., good in its essence, and evil would not really exist, as it would be a merely transitory appearance. In other words: the term “good” has lost its meaning, and the only safe basis of cognition is our world of experience, in which the power of evil is very real and not at all a mere appearance. One can and does cherish an optimistic hope that ultimately, in spite of grave doubts, “all will be well.” As I am not making a metaphysical judgment, I cannot help remarking that at least in our empirical world the opposites are inexorably at work and that, without them, this world would not exist. We cannot even conceive of a thing that is not a form of energy, and energy is inevitably based upon opposites.

[1641] I must however pay attention to the psychological fact that, so far as we can make out, *individuation* is a natural phenomenon, and in a way an inescapable goal, which we have reason to call *good for us*, because it liberates us from the otherwise insoluble conflict of opposites (at least to a noticeable degree). It is not invented by man, but Nature herself produces its archetypal image. Thus the credo “in the end all will be well” is not without its psychic foundation. But it is more than questionable whether this phenomenon is of any importance to the world in general, or only to the individual who has reached a more complete state of consciousness, to the “redeemed” man in accordance with our Christian tenet of eternal damnation. “Many are called, but few are chosen” is an authentic logion and not characteristic of Gnosticism alone.

V

Jung has been given the title “Gnostic” which he has rejected. This term has probably been used about him [and his system] because he appears to believe that salvation is for the few and that the many cannot and ought not to attempt individuation. Is it possible that he is a “Gnostic” in this sense?

[1642] The designation of my “system” as “Gnostic” is an invention of my theological critics. Moreover I have no “system.” I am not a philosopher, merely an empiricist. The Gnostics have the merit of having raised the problem of *πόθεν τὸ κακόν*; [whence evil?]. Valentinus as well as Basilides are in my view great theologians, who tried to cope with the problems raised by the inevitable influx of the collective unconscious, a fact clearly portrayed by the “gnostic” gospel of St. John and by St. Paul, not to mention the Book of Revelation, and even by Christ himself (unjust

steward and Codex Bezae to Luke 6:4). In the style of their time they hypostatized their ideas as metaphysical entities. Psychology does not hypostatize, but considers such ideas as psychological statements about, or models of, essential unconscious factors inaccessible to immediate experience. This is about as far as scientific understanding can go. In our days there are plenty of people who are unable to believe a statement they cannot understand, and they appreciate the help psychology can give them by showing them that human behaviour is deeply influenced by numinous archetypes. That gives them some understanding of why and how the religious factor plays an important role. It also gives them ways and means of recognizing the operation of religious ideas in their own psyche.

[1643] I must confess that I myself could find access to religion only through the psychological understanding of inner experiences, whereas traditional religious interpretations left me high and dry. It was only psychology that helped me to overcome the fatal impressions of my youth that everything untrue, even immoral, in our ordinary empirical world *must* be believed to be the eternal truth in religion. Above all, the killing of a human victim to placate the senseless wrath of a God who had created imperfect beings unable to fulfil his expectations poisoned my whole religion. Nobody knew an answer. "With God all things are possible." Just so! As the perpetrator of incredible things he is himself incredible, and yet I was supposed to believe what every fibre of my body refused to admit! There are a great many questions which I could elucidate only by psychological understanding. I loved the Gnostics in spite of everything, because they recognized the necessity of some further *raisonnement*, entirely absent in the Christian cosmos. They were at least human and therefore understandable. But I have no *γνώσις τοῦ θεοῦ*. I know the reality of religious experience and of psychological models which permit a limited understanding. I have Gnosis so far as I have immediate experience, and my models are greatly helped by the *représentations collectives* of all religions. But I cannot see why one creed should possess the unique and perfect truth. Each creed claims this prerogative, hence the general disagreement! This is not very helpful. Something must be wrong. I think it is the immodesty of the claim to god-almightiness of the believers, which compensates their inner doubt. Instead of basing themselves upon immediate experience they believe in words for want of something better. The *sacrificium intellectus* is a sweet drug for man's all-embracing spiritual laziness and inertia.

[1644] I owe you quite a number of apologies for the fact that my layman's mental attitude must be excruciatingly irritating to your point of view. But you know, as a psychologist I am not concerned with theology directly, but rather with the incompetent general public and its erroneous and faulty convictions, which are however just as real to it as their competent views are to the theologians. I am

continually asked “theological” questions by my patients, and when I say that I am only a doctor and they should ask the theologian, then the regular answer is, “Oh, yes, we have done so,” or “we do not ask a priest because we get an answer we already know, which explains nothing.”

[1645] Well this is the reason why I have to try for better or worse to help my patients to some kind of understanding at least. It gives them a certain satisfaction as it has done to me, although it is admittedly inadequate. But to them it sounds as if somebody were speaking their language and understanding their questions which they take very seriously indeed. Once, for instance, it was a very important question to me to discover how far modern Protestantism considers that the God of the Old Testament is identical with the God of the New Testament. I asked two university professors. They did not answer my letter. The third (also a professor) said he didn't know. The fourth said, “Oh, that is quite easy. Yahweh is a somewhat more archaic conception contrasted with the more differentiated view of the New Testament.” I said to him, “That is exactly the kind of psychologism you accuse me of.” My question must have been singularly inadequate or foolish. But I do not know why. I am speaking for the layman's psychology. The layman is a reality and his questions do exist. My “Answer to Job” voices the questions of thousands, but the theologians don't answer, contenting themselves with dark allusions to my layman's ignorance of Hebrew, higher criticism, Old Testament exegesis, etc., but there is not a single answer. A Jesuit professor of theology asked me rather indignantly how I could suggest that the Incarnation has remained incomplete. I said, “The human being is born under the *macula peccati*. Neither Christ nor his mother suffers from original sin. They are therefore not human, but superhuman, a sort of God.” What did he answer? Nothing.

[1646] Why is that so? My layman's reasoning is certainly imperfect, and my theological knowledge regrettably meagre, but not as bad as all that, at least I hope not. But I do know something about the psychology of man now and in the past, and as a psychologist I raise the questions I have been asked a hundred times by my patients and other laymen. Theology would certainly not suffer by paying attention. I know you are too busy to do it. I am all the more anxious to prevent avoidable mistakes and I shall feel deeply obliged to you if you take the trouble of showing me where I am wrong.

[1647] Gnosis is characterized by the hypostatizing of psychological apperceptions, i.e., by the integration of archetypal contents beyond the revealed “truth” of the Gospels. Hippolytus still considered classical Greek philosophy along with Gnostic philosophies as perfectly possible views. Christian Gnosis to him was merely the best and superior to all of them. The people who call me a Gnostic cannot understand that I am a psychologist, describing modes of psychic behaviour precisely like a biologist

studying the instinctual activities of insects. He does not *believe* in the tenets of the bee's philosophy. When I show the parallels between dreams and Gnostic fantasies I *believe* in neither. They are just facts one does not need to believe or to hypostatize. An alienist is not necessarily crazy because he describes and analyses the delusions of lunatics, nor is a scholar studying the *Tripitaka* necessarily a Buddhist.

4. Reply to a Letter from the Rev. David Cox²⁰

[1648] The crux of this question is: "Within your own personality." "Christ" can be an external reality (historical and metaphysical) or an archetypal image or idea in the collective unconscious pointing to an unknown background. I would understand the former mainly as a projection, but not the latter, because it is immediately evident. It is not projected upon anything, therefore there is no projection. Only, "faith" in Christ is different from faith in anyone else, since in this case, "Christ" being immediately evident, the word "faith," including or alluding to the possibility of doubt, seems too feeble a word to characterize that powerful presence from which there is no escape. A general can say to his soldiers, "You must have faith in me," because one might doubt him. But you cannot say to a man lying wounded on the battlefield, "You ought to *believe* that this a real battle," or "Be sure that you are up against the enemy." It is just too obvious. Even the historical Jesus began to speak of "faith" because he saw that his disciples had no immediate evidence. Instead they had to believe, while he himself being identical with God had no need to "have faith in God."

[1649] As one habitually identifies the "psyche" with what one knows of it, it is assumed that one can call certain (supposed or believed) metaphysical entities non-psyche. Being a responsible scientist I am unable to pass such a judgment, for all I know of regular religious phenomena seems to indicate that they are psychic events. Moreover I do not know the full reach of the psyche, because there is the limitless extent of the unconscious. "Christ" is definitely an archetypal image (I don't add "only") and that is all I actually know of him. As such he belongs to the (collective) foundations of the psyche. I identify him therefore with what I call the self. The self rules the whole of the psyche. I think our opinions do not differ essentially. You seem to have trouble only with the theological (and self-inflicted) devaluation of the psyche, which you apparently believe to be ultimately definable.

[1650] If my identification of Christ with the archetype of the self is valid, he is, or ought to be, a *complexio oppositorum*. Historically this is not so. Therefore I was profoundly surprised by your statement that Christ contains the opposites. Between my contention and historical Christianity there stretches that deep abyss of Christian dualism—Christ and the Devil, good and evil, God and Creation.

[1651] “Beyond good and evil” simply means: we pass no moral judgment. But in fact nothing is changed. The same is true when we state that whatever God is or does is *good*. Since God does everything (even man created by him is his instrument) everything is good, and the term “good” has lost its meaning. “Good” is a relative term. There is no good without bad.

[1652] I am afraid that even revealed truth has to evolve. Everything living changes. We should not be satisfied with unchangeable traditions. The great battle that began with the dawn of consciousness has not reached its climax with any particular interpretation, apostolic, Catholic, Protestant, or otherwise. Even the highly conservative Catholic Church has overstepped its ancient rule of apostolic authenticity with the *Assumptio Beatae Virginis*. According to what I hear from Catholic theologians, the next step would be the Coredemptrix. This obvious recognition of the female element is a very important step forward. It means psychologically the recognition of the unconscious, since the representative of the collective unconscious is the *anima*, the archetype of all divine mothers (at least in the masculine psyche).

[1653] The equivalent on the Protestant side would be a confrontation with the unconscious as the counterpart or consort of the masculine Logos. The hitherto valid symbol of the supreme spiritual structure was Trinity + Satan, the so-called 3 + 1 structure, corresponding to three conscious functions versus the one unconscious, so-called inferior function; or 1 + 3 if the conscious side is understood as one versus the so-called inferior or chthonic triad, mythologically characterized as three mother figures.²¹ I suppose that the negative evaluation of the unconscious has something to do with the fact that it has been hitherto represented by Satan, while in reality it is the female aspect of man’s psyche and thus not wholly evil in spite of the old saying: *Vir a Deo creatus, mulier a simia Dei*.

[1654] It seems to me of paramount importance that Protestantism should integrate psychological experience, as for instance Jacob Boehme did. With him God does not only contain love, but, on the other side and in the same measure, the fire of wrath, in which Lucifer himself dwells. Christ is a revelation of his love, but he can manifest his wrath in an Old Testament way just as well, i.e., in the form of evil. Inasmuch as out of evil good may come, and out of good evil, we do not know whether creation is ultimately good or a regrettable mistake and God’s suffering. It is an ineffable mystery. At any rate we are not doing justice either to nature in general or to our own human nature when we deny the immensity of evil and suffering and turn our eyes from the cruel aspect of creation. Evil should be recognized and one should not attribute the existence of evil to man’s sinfulness. Yahweh is not offended by being feared.

[1655] It is quite understandable why it was an *εὐαγγέλιον* [evangel, “good tidings”] to learn of the *bonitas Dei* and of his son. It was known to the ancients that the *cognito sui-ipsius* [self-knowledge]²² was a prerequisite for this, not only in the Graeco-Roman world but also in the Far East. It is to the individual aptitude that the man Jesus owes his apotheosis: he became the symbol of the self under the aspect of the infinite goodness, which was certainly the symbol most needed in ancient civilization (as it is still needed today).

[1656] It can be considered a fact that the dogmatic figure of Christ is the result of a condensation process from various sources. One of the main origins is the age-old god-man of Egypt: Osiris-Horus and his four sons. It was a remodeling of the unconscious archetype hitherto projected upon a divine non-human being. By embodying itself in a historical man it came nearer to consciousness, but in keeping with the mental capacity of the time it remained as if suspended between God and man, between the need for good and the fear of evil. Any doubt about the absolute *bonitas Dei* would have led to an immediate regression to the former pagan state, i.e., to the amorality of the metaphysical principle.

[1657] Since then two thousand years have passed. In this time we have learned that good and evil are categories of our moral judgment, therefore relative to man. Thus the way was opened for a new model of the self. Moral judgment is a necessity of the human mind. The Christ (*ὁ Χριστός*) is the Christian model that expresses the self, as the *Ἄνθρωπος* is the corresponding Egypto-Judaic formula. Moral qualification is withdrawn from the deity. The Catholic Church has almost succeeded in adding femininity to the masculine Trinity. Protestantism is confronted with the psychological problem of the unconscious.

[1658] It is, as far as I can see, a peculiar process extending over at least four thousand years of mental evolution. It can be contemplated in a “euhemeristic” way as a development of man’s understanding of the supreme powers beyond his control. [The process consists of the following stages:] (1) Gods. (2) A supreme Deity ruling the gods and demons. (3) God shares our human fate, is betrayed, killed or dies, and is resurrected again. There is a feminine counterpart dramatically involved in God’s fate. (4) God becomes man in the flesh and thus historical. He is identified with the abstract idea of the Summum Bonum and loses the feminine counterpart. The female deity is degraded to an ancillary position (Church). Consciousness begins to prevail against the unconscious. This is an enormously important step forward in the emancipation of consciousness and in the liberation of thought from its involvement in things. Thus the foundation of science is laid, but on the other hand, that of atheism and materialism. Both are inevitable consequences of the basic split between spirit and matter in Christian philosophy, which proclaimed the redemption of the

spirit from the body and its fetters. (5) The whole metaphysical world is understood as a psychic structure projected into the sphere of the unknown.

[1659] The danger of this viewpoint is exaggerated scepticism and rationalism, since the original “supreme powers” are reduced to mere representations over which one assumes one has complete control. This leads to a complete negation of the supreme powers (scientific materialism).

[1660] The other way of looking at it is from the standpoint of the archetype. The original chaos of multiple gods evolves into a sort of monarchy, and the archetype of the self slowly asserts its central position as the archetype of order in chaos. One God rules supreme but apart from man. It begins to show a tendency to relate itself to consciousness through a process of penetration: the humanizing effect of a feminine intercession, expressed for instance by the Isis intrigue. In the Christian myth the Deity, the self, penetrates consciousness almost completely, without any visible loss of power and prestige. But in time it becomes obvious that the Incarnation has caused a loss among the supreme powers: the indispensable dark side has been left behind or stripped off, and the feminine aspect is missing. Thus a further act of incarnation becomes necessary. Through atheism, materialism, and agnosticism, the powerful yet one-sided aspect of the Summum Bonum is weakened, so that it cannot keep out the dark side, and incidentally the feminine factor, any more. “Antichrist” and “Devil” gain the ascendancy: God asserts his power through the revelation of his darkness and destructiveness. Man is merely instrumental in carrying out the divine plan. Obviously he does not want his own destruction but is forced to it by his own inventions. He is entirely unfree in his actions because he does not yet understand that he is a mere instrument of a destructive superior will. From this paradox he could learn that—*nolens volens*—he serves a supreme power, and that supreme powers exist in spite of his denial. As God lives in everybody in the form of the *scintilla* of the self, man could see his “daemonic,” i.e., ambivalent, nature in himself and thus he could understand how he is penetrated by God or how God incarnates in man.

[1661] Through his further incarnation God becomes a fearful task for man, who must now find ways and means to unite the divine opposites in himself. He is summoned and can no longer leave his sorrows to somebody else, not even to Christ, because it was Christ that has left him the almost impossible task of his cross. Christ has shown how everybody will be crucified upon his destiny, i.e., upon his self, as he was. He did not carry his cross and suffer crucifixion so that we could escape. The bill of the Christian era is presented to us: we are living in a world rent in two from top to bottom; we are confronted with the H-bomb and we have to face our own shadows. Obviously God does not want us to remain little children looking out for a parent who will do their job for them. We are cornered by the supreme power of the incarnating Will. God really wants to become man, even if he rends him asunder.

This is so no matter what we say. One cannot talk the H-bomb or Communism out of the world. We are in the soup that is going to be cooked for us, whether we claim to have invented it or not. Christ said to his disciples “Ye are gods.” This word becomes painfully true. If God incarnates in the empirical man, man is confronted with the divine problem. Being and remaining man he has to find an answer. It is the question of the opposites, raised at the moment when God was declared to be good only. Where then is his dark side? Christ is the model for the human answers and his symbol is the *cross*, the union of the opposites. This will be the fate of man, and this he must understand if he is to survive at all. We are threatened with universal genocide if we cannot work out the way of salvation by a symbolic death.

[1662] In order to accomplish his task, man is inspired by the Holy Ghost in such a way that he is apt to identify him with his own mind. He even runs the grave risk of believing he has a Messianic mission, and forces tyrannous doctrines upon his fellow-beings. He would do better to dis-identify his mind from the small voice within, from dreams and fantasies through which the divine spirit manifests itself. One should listen to the inner voice attentively, intelligently and critically (*Probate spiritus!*), because the voice one hears is the *influxus divinus* consisting, as the *Acts of John* aptly state, of “right” and “left” streams, i.e., of opposites.²³ They have to be clearly separated so that their positive and negative aspects become visible. Only thus can we take up a middle position and discover a middle way. That is the task left to man, and that is the reason why man is so important to God that he decided to become a man himself.

[1663] I must apologize for the length of this exposition. Please do not think that I am stating a truth. I am merely trying to present a hypothesis which might explain the bewildering conclusions resulting from the clash of traditional symbols and psychological experiences. I thought it best to put my cards on the table, so that you get a clear picture of my ideas.

[1664] Although all this sounds as if it were a sort of theological speculation, it is in reality modern man’s perplexity expressed in symbolic terms. It is the problem I so often had to deal with in treating the neuroses of intelligent patients. It can be expressed in a more scientific, psychological language; for instance, instead of using the term God you say “unconscious,” instead of Christ “self,” instead of incarnation “integration of the unconscious,” instead of salvation or redemption “individuation,” instead of crucifixion or sacrifice on the Cross “realization of the four functions or of “wholeness.” I think it is no disadvantage to religious tradition if we can see how far it coincides with psychological experience. On the contrary it seems to me a most welcome aid in understanding religious traditions.

[1665] A myth remains a myth even if certain people believe it to be the literal revelation of an eternal truth, but it becomes moribund if the living truth it contains

ceases to be an object of belief. It is therefore necessary to renew its life from time to time through a *new interpretation*. This means re-adapting it to the changing spirit of the times. What the Church calls “prefigurations” refer to the original state of the myth, while the Christian doctrine represents a new interpretation and re-adaptation to a Hellenized world. A most interesting attempt at re-interpretation began in the eleventh century,²⁴ leading up to the schism in the sixteenth century. The Renaissance was no more a rejuvenation of antiquity than Protestantism was a return to the primitive Christianity: it was a new interpretation necessitated by the devitalization of the Catholic Church.

[1666] Today Christianity is devitalized by its remoteness from the spirit of the times. It stands in need of a new union with, or relation to, the atomic age, which is a unique novelty in history. The myth needs to be retold in a new spiritual language, for the new wine can no more be poured into the old bottles than it could in the Hellenistic age. Even conservative Jewry had to produce an entirely new version of the myth in its Cabalistic Gnosis. It is my practical experience that psychological understanding immediately revivifies the essential Christian ideas and fills them with the breath of life. This is because our worldly light, i.e., scientific knowledge and understanding, coincides with the symbolic statement of the myth, whereas previously we were unable to bridge the gulf between knowing and believing.

[1667] Coming back to your letter (pp. 2–3, 25 September) I must say that I could accept your definition of the Summum Bonum, “Whatever God is, that is good,” if it did not interfere with or twist our sense of good. In dealing with the moral nature of an act of God, we have either to suspend our moral judgment and blindly follow the dictates of this superior will, or we have to judge in a human fashion and call white white and black black. In spite of the fact that we sometimes obey the superior will blindly and almost heroically, I do not think that this is the usual thing, nor is it commendable on the whole to act blindly, because we are surely expected to act with conscious moral reflection. It is too dangerously easy to avoid responsibility by deluding ourselves that our will is the will of God. We can be forcibly overcome by the latter, but if we are not we must use our judgment, and then we are faced with the inexorable fact that humanly speaking some acts of God are good and some bad, so much so that the assumption of a Summum Bonum becomes almost an act of hubris.

[1668] If God can be understood as the perfect *complexio oppositorum*, so can Christ. I can agree with your view about Christ completely, only it is not the traditional but a very modern conception which is on the way to the desired new interpretation. I also agree with your understanding of Tao and its contrast to Christ, who is indeed the paradigm of the reconciliation of the divine opposites in man brought about in the process of individuation. Thus Christ stands for the treasure and the supreme “good.” (In German “good” = *gut*, but the noun *Gut* also means “property” and “treasure.”)

[1669] When theology makes metaphysical assertions the conscience of the scientist cannot back it up. Since Christ never meant more to me than what I could understand of him, and since this understanding coincides with my empirical knowledge of the self, I have to admit that I mean the self in dealing with the idea of Christ. As a matter of fact I have no other access to Christ but the self, and since I do not know anything beyond the self I cling to his archetype. I say, "Here is the living and perceptible archetype which has been projected upon the man Jesus or has historically manifested itself in him." If this collective archetype had not been associated with Jesus he would have remained a nameless Zaddik. I actually prefer the term "self" because I am talking to Hindus as well as Christians, and I do not want to divide but to unite.

[1670] Since I am putting my cards on the table, I must confess that I cannot detach a certain feeling of dishonesty from any metaphysical assertion—one may speculate but not assert. One cannot reach beyond oneself, and if somebody assures you he can reach beyond himself and his natural limitations, he overreaches himself and becomes immodest and untrue.

[1671] This may be a *deformation professionnelle*, the prejudice of a scientific conscience. Science is an honest-to-God attempt to get at the truth and its rule is never to assert more than one can prove within reasonable and defensible limits. This is my attitude in approaching the problem of religious experience.

[1672] I am unable to envisage anything beyond the self, since it is—by definition—a borderline concept designating the unknown totality of man: there are no known limits to the unconscious. There is no reason whatsoever why you should or should not call the beyond-self Christ or Buddha or Purusha or Tao or Khidr or Tifereth. All these terms are recognizable formulations of what I call the "self." Moreover I dislike the insistence upon a special name, since my human brethren are as good and as valid as I am. Why should their name-giving be less valid than mine?

[1673] It is not easy for a layman to get the desired theological information, because even the Church is not at one with herself in this respect. *Who* represents authentic Christianity? Thus the layman whether he likes it or not has to quote Protestant or Catholic statements *pêle-mêle* as Christian views because they are backed up by some authority. In my case I believe I have been careful in quoting my sources.

[1674] You as a theologian are naturally interested in the best possible view or explanation, while the psychologist is interested in all sorts of opinions because he wants to acquire some understanding of mental phenomenology and cares little for even the best possible metaphysical assertion, which is beyond human reach anyhow. The various creeds are just so many phenomena to him, and he has no means of deciding about the truth or the ultimate validity of any metaphysical statement. I cannot select the "best" or the "ultimate" opinions because I do not know which kind

of opinion to choose from which Church. Also I do not care particularly where such opinions come from, and it is quite beyond my capacity to find out whether they are erroneous or not. I would be wrong only if I attributed, for instance, the idea of the *conceptio immaculata* to Protestantism or the *sola fide* standpoint to Catholicism. The many misunderstandings attributed to me come into this category. In either case it is plain to see that someone has been careless in his assumptions. But if I attribute Ritschl's christological views to Protestantism, it is no error in spite of the fact that the Church of England does not subscribe to the opinions of Mr. Ritschl or of Mr. Barth.^{24a} I hope I have not inadvertently been guilty of some misquotation.

[1675] I can illustrate the problem by a typical instance. My little essay on Eastern Meditation²⁵ deals with the popular tract *Amitāyur Dhyāna Sūtra*, which is a relatively late and not very valuable Mahāyāna text. A critic objected to my choice: he could not see why I should take such an inconspicuous tract instead of a genuinely Buddhist and classical Pāli text in order to present Buddhist thought. He entirely overlooked the fact that I had no intention whatever of expounding classical Buddhism, but that my aim was to analyse the psychology of this particular text. Why should I not deal with Jacob Boehme or Angelus Silesius as Christian writers, even though they are not classical representatives either of Catholicism or of Protestantism?

[1676] A similar misunderstanding appears in your view that I am not doing justice to the *ideal* of community. Whenever possible I avoid *ideals* and much prefer *realities*. I have never found a community which would allow "full expression to the individual within it." Suppose the individual is going to speak the truth regardless of the feelings of everybody else: he would not only be the most abominable enfant terrible but might equally well cause a major catastrophe. Edifying examples of this can be observed at the meetings of Buchman's so-called Oxford Group Movement. At the expense of truth the individual has to "behave," i.e., suppress his reaction merely for the sake of Christian charity. What if I should get up after a sermon about ideals and ask the parson how much he himself is able to live up to his admonitions? In my own case the mere fact that I am seriously interested in psychology has created a peculiar hostility or fear in certain circles. What has happened to those people in the Church, that is in a Christian community, who ventured to have a new idea? No community can escape the laws of mass psychology. I am critical of the community in the same way as I suspect the individual who builds his castles in Spain while anxiously avoiding the expression of his own convictions. I am shy of ideals which one preaches and never lives up to, simply because one cannot. I want to know rather what we *can* live. I want to build up a possible human life which carries through God's experiment and does not invent an ideal scheme knowing that it will *never* be fulfilled.

[1677] I am much obliged to you for telling me exactly what you think and for criticizing my blunt ways of thinking and writing (also of talking, I am afraid). It seems, however, to be the style of natural scientists: we simply state our proposition, assuming that nobody will think it to be more than a disputable hypothesis. We are so imbued with doubts concerning our assumptions that scepticism is taken for granted. We are therefore apt to omit the conventional *captatio benevolentiae lectoris* with its “With hesitation I submit ...,” “I consider it a daring hypothesis ...,” etc. We even forget the preamble: “This is the way I look at it...”

[1678] The case of the Jesuit²⁷ was that he put the direct question to me: “How on earth can you suggest that Christ was not human?” The discussion was naturally on the *dogmatic* level, as there is no other basis on which this question can be answered. It is not a question of *truth*, because the problem itself is far beyond human judgment. My “Answer to Job” is merely a reconstruction of the psychology discernible in this and other Old Testament texts for the interested layman. He knows very little of Higher Criticism, which is historical and philological in the main, and it is but little concerned with the layman’s reactions to the paradoxes and moral horrors of the Old Testament. He knows his Bible and hears the sermons of his parson or priest. As a Catholic he has had a dogmatic education.

[1679] When talking of “Job” you must always remember that I am dealing with the psychology of an archetypal and anthropomorphic image of God and not with a metaphysical entity. As far as we can see, the archetype is a psychic structure with a life of its own to a certain extent.

[1680] God in the Old Testament is a guardian of law and morality, yet is himself unjust. He is a moral paradox, unreflecting in an ethical sense. We can perceive God in an infinite variety of images, yet all of them are anthropomorphic, otherwise they would not get into our heads. The divine paradox is the source of unending suffering to man. Job cannot avoid seeing it and thus he sees more than God himself. This explains why the God-image has to come down “into the flesh.” The paradox, expressed of course with many hesitations in the particularities of the myth and in the Catholic dogma, is clearly discernible in the fact that the “Suffering Righteous man” is, historically speaking, an erroneous conception, not identical with the suffering God, because he is Jesus Christ, worshipped as a separate God he is a mere prefiguration, painfully included in a triunity and not an ordinary man who is forced to accept the suffering of intolerable opposites he has not invented. They were preordained. He is the victim, because he is capable of three-dimensional consciousness and ethical decision. (This is a bit condensed. Unlike Yahweh, man has self-reflection.)

[1681] I don't know what Job is supposed to have seen. But it seems possible that he unconsciously anticipated the historical future, namely the evolution of the God-image. God had to become man. Man's suffering does not derive from his sins but from the maker of his imperfections, the paradoxical God. The righteous man is the instrument into which God enters in order to attain self-reflection and thus consciousness and rebirth as a divine child trusted to the care of adult man.

[1682] Now this is not the statement of a truth, but the psychological reading of a mythological text—a model constructed for the purpose of establishing the psychological linking together of its contents. My aim is to show what the results are when you apply modern psychology to such a text. Higher Criticism and Hebrew philology are obviously superfluous, because it is simply a question of the text which the layman has under his eyes. The Christian religion has not been shaped by Higher Criticism.

[1683] The trouble I have with my academic reader is that he cannot see a psychic structure as a relatively autonomous entity, because he is under the illusion that he is dealing with a concept. But in reality it is a living thing. The archetype? all have a life of their own which follows a biological pattern. A Church that has evolved a masculine Trinity will follow the old pattern: 3 + 1, where 1 is a female and, if 3 = good, 1 as a woman will mediate between good and evil, the latter being the devil and the shadow of the Trinity. The woman will inevitably be the Mother-Sister of the Son-God, with whom she will be united *in thalamo*, i.e., in the *ἱερός γάμος*, *quod est demonstratum* by the second Encyclical concerning the Assumption.”²⁸

[1684] A passionate discourse between the man Job and God will logically lead to a mutual rapprochement: God will be humanized, man will be “divinized.” Thus Job will be followed by the idea of the Incarnation of God and the redemption and apotheosis of man. This development, however, is seriously impeded by the fact that the “woman,” as always, inevitably brings in the problem of the shadow. Therefore *mulier taceat in ecclesia*. The arch-sin the Catholic Church is ever after is sexuality, and the ideal *par excellence* virginity, which puts a definite stop to life. But if life should insist on going on, the shadow steps in and sin becomes a serious problem, because the shadow cannot be left to eternal damnation any more. Consequently, at the end of the first millennium of the Christian aeon, as predicted in the Apocalypse, the world was suspected of being created by the devil.²⁹ The impressive and still living myth of the Holy Grail came to life with its two significant figures of Parsifal and Merlin. At the same time we observe an extraordinary development of alchemical philosophy with its central figure of the *filius macrocosmi*, a chthonic equivalent of Christ.

[1685] This was followed by the great and seemingly incurable schism of the Christian Church, and last but not least by the still greater and more formidable schism of the

world towards the end of the second millennium.

[1686] A psychological reading of the dominant archetypal images reveals a continuous series of psychological transformations, depicting the autonomous life of archetypes behind the scenes of consciousness. This hypothesis has been worked out to clarify and make comprehensible our religious history. The treatment of psychological troubles and the inability of my patients to understand theological interpretations and terminology have given me my motive. The necessities of psychotherapy have proved to me the immense importance of a religious attitude, which cannot be achieved without a thorough understanding of religious tradition, just as an individual's troubles cannot be understood and cured without a basic knowledge of their biographical antecedents. I have applied to the God-image what I have learned from the reconstruction of so many human lives through a knowledge of their unconscious. All this is empirical and may have nothing to do with theology, if theology says so. But if theology should come to the conclusion that its tenets have something to do with the empirical human psyche, I establish a claim. I think that in those circumstances my opinion should be given a hearing. It cannot be argued on the level of metaphysical assertions. It can be criticized only on its own psychological level, regardless of whether it is a psychologically satisfactory interpretation of the facts or not. The "facts" are the documented historical manifestations of the archetype, however "erroneous" they may be.

[1687] I have stated my point of view bluntly (for which I must ask your forgiveness!) in order to give you a fair chance to see it as clearly as possible. The end of your letter, where you deal with Christ, leaves me with a doubt. It looks to me as if you were trying to explain the empirical man Jesus, while I am envisaging the archetype of the Anthropos and its very general interpretation as a collective phenomenon and not as the best possible interpretation of an individual and historical person. Christianity as a whole is less concerned with the historical man Jesus and his somewhat doubtful biography than with the mythological Anthropos or God-Son figure. It would be rather hazardous to attempt to analyse the historical Jesus as a human person. "Christ" appears from a much safer (because mythological) background, which invites psychological elucidation. Moreover it is not the Jewish rabbi and reformer Jesus, but the archetypal Christ who touches upon the archetype of the Redeemer in everybody and carries conviction.

[1688] My approach is certainly not theological and cannot be treated as a theologoumenon. It is essentially a psychological attempt based upon the archetypal, amoral God-image, which is not a concept but rather an irrational and phenomenal experience, an *Urbild*. But in so far as theologians are also concerned with the adult human psyche (perhaps not as much as medical psychology). I am convinced that it would be of advantage to them to become acquainted with the psychological aspects

of the Christian religion. I will not conceal the fact that theological thinking is very difficult for me, from which I conclude that psychological thinking must be an equally laborious undertaking for the theologian. This may explain why I inundate you with such a long letter.

[1689] When I see how China (and soon India) will lose her old culture under the impact of materialistic rationalism. I grow afraid that the Christian West will succumb to the same malady, simply because the old symbolic language is no longer understood and people cannot see any more where and how it applies. In Catholic countries anyone leaving the Church becomes frankly atheistic. In Protestant countries a small number become sectarians, and the others avoid the churches for their cruelly boring and empty sermons. Not a few begin to believe in the State—not even knowing that they themselves are the State. The recent broadcasts of the B.B.C.³⁰ give a good picture of the educated layman's mind with regard to religion. What an understanding! All due to the lack of a psychological standpoint, or so it seems to me.

[1690] I am sorry that I am apparently a *petra scandali*. I do not mean to offend. Please accept my apologies for my bluntness. I am sincerely grateful to you for giving me your attention.

Faithfully yours, C. G. JUNG

XIII

ALCHEMICAL STUDIES

(related to Volumes 12, 13, and 14 of the Collected Works)

FOREWORD TO A CATALOGUE ON ALCHEMY¹

[1691] Alchemy is the forerunner or even the ancestor of chemistry, and is therefore of historical interest to the student of chemistry, in so far as it can be proved to contain recognizable descriptions of chemical substances, reactions, and technical procedures. How much may be gained in this respect from alchemical literature is shown by the comprehensive work of E. O. von Lippmann, *Entstehung und Ausbreitung der Alchemie* (Berlin, 1919). The peculiar character of this literature lies, however, in the fact that there exists a comparatively large number of treatises from which, apart from the most superficial allusions, absolutely nothing of a chemical nature can be extracted. It was therefore supposed—and many of the alchemists themselves wanted us to believe—that their mysterious sign-language was nothing but a skilful way of disguising the chemical procedures which lay behind it. The adept would see through the veil of hieroglyphics and recognize the secret chemical process. Unfortunately, alchemists of repute destroyed this legend by their admission that they were unable to read the riddle of the Sphinx, complaining that the old authors, like Geber and Raymundus Lullius, wrote too obscurely. And indeed, a careful study of such treatises, which perhaps form the majority, will reveal nothing of a chemical nature but something which is purely symbolic, i.e., *psychological*. Alchemical language is not so much *semeiotic* as *symbolic*: it does not disguise a known content but suggests an unknown one, or rather, this unknown content *suggests itself*. This content can only be psychological. If one analyses these symbolic forms of speech, one comes to the conclusion that archetypal contents of the collective unconscious are being projected. Consequently, alchemy acquires a new and interesting aspect as a *projected psychology of the collective unconscious*, and thus ranks in importance with mythology and folklore. Its symbolism has the closest connections with dream symbolism on the one hand, and the symbolism of religion on the other.

FAUST AND ALCHEMY¹

[1692] The drama of *Faust* has its primary sources in alchemy; these are on the one hand dreams, visions, and parables, on the other, personal and biographical notes regarding the Great Opus. One of the latest and most perfect examples of this sort is the *Chymische Hochzeit* of Christian Rosencreutz (1616), actually written by Johann Valentin Andreae (1586–1634), a theologian of Württemberg who was also the author of *Turbo* (1616), a comedy written in Latin.² The hero of this play is a learned know-it-all who, disillusioned with the sciences, finally returns to Christianity. The *Chymische Hochzeit* represents the *opus Alchymicum* under the aspect of the *hierosgamos* of brother and sister (Venus gives birth to a hermaphrodite). But these things are only hinted at in veiled terms. Because the royal children are still too infantile (identification with the parents, incest with the mother), they are slain, purified, and put together again, by being subjected to every alchemical procedure. To be restituted, the bridal pair is taken over the sea, and a kind of Aegean festival is celebrated with nymphs and sea-goddesses and a paean to love is sung. Rosencreutz is revealed as the father of the young king or, respectively, the royal couple.

[1693] Alchemy had long known that the mystery of transformation applies not only to chemical materials but to man as well. The central figure is Mercurius, to whom I have devoted a special study.³ He is a chthonic spirit, related to Wotan and the Devil.

[1694] Faust is introduced like Job, but it is not he who suffers; it is others who suffer through him, and even the Devil is not left unscathed. Mercurius enters in the shape of Mephistopheles (Devil and Satan), as a dog to begin with, son of Chaos, and fire (alch. *filius canis*, arises out of chaos, *natura ignea*). He becomes the servant of Faust (*familiaris, servus fugitivus*). Mephisto has two ravens (cf. Wotan)¹. He is the “northern phantom” and has his “pleasure-ground” in the “north-west.”

[1695] The axiom of Maria (3 + 1) pervades the whole work (4 main phases, 4 thieves, 4 (-1) grey women, 4 elements, Pluto’s four-in-hand team of horses, 3 + 1 boys, 1 + 2 + 3 + 4 = 10 in the witches’ tables, 3–4, 7–8 Kabiri, “Three and one and one and three,” etc.).

[1696] Mephisto brings about the projection onto the anima with its tragic end (child murder. There follows the suppression of Eros by the power drive Walpurgisnacht = overpowering by the shadow). In the fire magic and the gold swindle there appears the Boy Charioteer, a Mercurius *juvenis*, on the one hand hermaphrodite like his preform, the Devil, a *kyllenios*, and on the other an analogy to Christ and the Holy Spirit; at the same time he brings the wild host (Wotan!).

[1697] The underworld tripod embodies the feminine chthonic trinity, Diana, Luna, Hecate, and Phorkyads). It corresponds to the *vas hermeticum* (and the early Christian communion table of the catacombs with 3 loaves and 1 fish. The *Tripus Aureus* of alchemy is the one that Hephaestus cast into the sea.

[1698] Faust falls into a faint when he tries to possess Helen. This is the beginning of Phase II, and the second upsurge of Eros. Faust is again rejuvenated (as in Phase I) as the Baccalaureus; the Devil, however, is “old.” The Homunculus corresponds to the Boy Charioteer. His father is Wagner (Rosencreutz); his cousin is the Devil, hence Mercurius in a younger shape. Faust is taken to the classic “world of fable” (collective unconscious) for “healing.” The “water” heals (*aqua permanens, mare nostrum*). From it emerges the mountain (rebirth of the personality, alch. arising of the *terra firma* out of the sea). The Aegean Festival is the *hierosgamos* of Homunculus and Galatea (both are “stones brought to life”) in the sea. Touching the tripod with the key and the *hierosgamos* prefigure the “chymical” marriage of Faust to Helen, the sister anima. Their child Euphorion is the third renewal form of Mercurius.

[1699] Phase III ends with the death of Euphorion, and once again the next and last phase begins with the power drive. The devout Philemon and Baucis are murdered. After Faust’s death the Devil is cheated. The conflict goes on. Faust’s place is taken by his “entelechy,” the *puer aeternus*, who never can realize his united double nature because Faust is always the victim of whatever his shape may be at the time. He loses himself in smatterings of knowledge, in autoerotic Eros, in magic and deception, in the delusion of being a demigod (Helena), and finally in the inflation of thinking himself the saviour of the whole world. He is always blind about himself, does not know what he is doing, and lacks both responsibility and humour. But the Devil knows who he himself is; he does not lie to himself, he has humour and the small kind of love (insects), all of which Faust lacks. The shadow cannot be redeemed unless consciousness acknowledges it as a part of its own self—that is, understands its compensatory significance. The “blessed boy” is therefore only a representation of a prenatal state that in no way throws light on what the experience of earthly life was really for. Dr. Marianus is the “son of the mother.” A possible parallel might be an eighth-century alchemist, Morienes, Morienus, Marianus,⁴ who was one of the most spiritual of all alchemists and understood the *opus* as a human transformation system. He says: “Temporum quidem longa mutatio hominem sub tempore constitutum confundit et mutat ... ultimam autem mutationem mors dira subsequitur.”⁵

ALCHEMY AND PSYCHOLOGY¹

[1700] Throughout the history of alchemy we find—besides a considerable knowledge of substances (minerals and drugs) and a limited knowledge of the laws of chemical processes—indications of an accompanying “philosophy” which received the name “Hermetic” in the later Middle Ages. This natural philosophy appears first and particularly clearly in the Greek alchemists of the first to the sixth centuries A.D. (Pseudo-Demokritus, Zosimos of Panopolis, and Olympiodorus). It was also especially evident in the sixteenth and seventeenth centuries, when it reached its full development. This development owed a great deal to Paracelsus and his pupils (Gerard Dorn and Heinrich Khunrath). In the interval between these two periods, philosophical speculation gave way to a more religious tendency (ideas were produced which ran parallel to the dogmatic concepts), hand in hand with a “mystical” tendency which gives alchemy its peculiar character. As the alchemists had no real knowledge of the nature and behaviour of chemical substances, they drew conscious parallels between the unknown processes and mythological motifs and thus “explained” the former (cf. Dom Pernety, *Dictionnaire mytho-hermétique*, 1756) and they amplified these unknown processes by the projection of unconscious contents. This explains a peculiarity of the texts: on the one hand, the authors repeat what was said by their predecessors again and again and, on the other, they give a free rein to unlimited subjective fantasy in their symbolism. Comparative research has proved that the alchemical symbols are partly variations of mythological motifs, belonging to the conscious world of the alchemists, and partly spontaneous products of the unconscious. This becomes evident in the parallel character of the symbolism in modern dreams and that of alchemy. The alchemical symbols portray partly the substances or their unknown “mystical” nature and partly the process which leads to the goal of the work. It is the latter aspect that gives rise to the most highly pictorial development. The principal symbol of the substance that is transformed during the process is *Mercurius*. His portrait in the texts agrees in all essentials with the characteristics of the unconscious.

[1701] At the beginning of the process, he is in the *massa confusa*, the chaos or *nigredo* (blackness). In this condition, the elements are fighting each other. Here Mercurius plays the role of the *prima materia*, the transforming substance. He corresponds to the Nous or Anthropos, sunk in Physis, of Greek alchemy. In later days he is also called the “world soul in chains,” a “system of the higher powers in the lower,” etc. This depicts a dark (“unconscious”) condition of the adept or of a psychic content.

The procedures in the next phase have the purpose of illuminating the darkness by a *union of the opposed elements*. This leads to the *albedo* (whitening), which is compared to the sunrise or to the full moon. The white substance is also conceived as a pure body which has been refined by the fire but which still lacks a soul. It is considered to be feminine and is therefore called *sponsa* (bride), silver, or moon. Whereas the transformation of the darkness into light is symbolized by the theme of the fight with the dragon, it is the motif of the *hierosgamos* (sacred marriage of sister and brother or mother and son) which appears in this phase. The quaternity (*quaternio*) of the elements here becomes a duality (*binarius*). The reddening (*rubedo*) follows the whitening. By means of the *coniunctio* the moon is united with the sun, the silver with the gold, the female with the male.

[1702] The development of the *prima materia* up to the *rubedo* (*lapis rubeus*, *carbunculus*, *tinctura rubra*, *sanguis spiritualis s. draconis*, etc.) depicts the conscious realization (*illuminatio*) of an unconscious state of conflict which is henceforth kept in consciousness. During this process, the scum (*terra damnata*) which cannot be improved must be thrown out. The white substance is compared to the *corpus glorificationis*, and another parallel is the *ecclesia*. The feminine character of the *lapis albus* corresponds to that of the unconscious, symbolized by the moon. The sun corresponds to the “light” of consciousness.

[1703] Becoming conscious of an unconscious content amounts to its integration in the conscious psyche and is therefore a *coniunctio Solis et Lunae*. This process of integration is one of the most important, helpful factors in modern psychotherapy, which is pre-eminently concerned with the psychology of the unconscious, for both the nature of consciousness and that of the unconscious are altered by it. As a rule the process is accompanied by the phenomenon of the *transference*, that is, the projection of unconscious contents on to the doctor. We also meet this phenomenon in alchemy, where a woman adept often plays the role of the *soror mystica* (Zosimos and Theosebeia, Nicolas Flamel and Peronelle, John Pordage and Jane Leade, and in the nineteenth century Mr. South and his daughter, Mrs. Atwood).

[1704] The *coniunctio* produces the *lapis philosophorum*, the central symbol of alchemy. This lapis has innumerable synonyms. On the one hand, its symbols are quaternary or circular figures and, on the other, the *rebis* or the hermaphroditic Anthropos who is compared to Christ. He has a trichotomus form (*habat corpus, animam et spiritum*) and is also compared to the Trinity (*trinus et unus*). The symbolism of the *lapis* corresponds to the mandala (circle) symbols in dreams, etc., which represent wholeness and order and therefore express the personality that has been altered by the integration of the unconscious. The alchemical *opus* portrays the process of individuation but in a projected form because the alchemists were unconscious of this psychic process.²

XIV

THE SPIRIT IN MAN, ART, AND LITERATURE

(related to Volume 15 of the Collected Works)

MEMORIAL TO J. S.¹

[1705] Death has laid its hand upon our friend. The darkness out of which his soul had risen has come again and has undone the life of his earthly body, and has left us alone in pain and sorrow.

[1706] To many death seems to be a brutal and meaningless end to a short and meaningless existence. So it looks, if seen from the surface and from the darkness. But when we penetrate the depths of the soul and when we try to understand its mysterious life, we shall discern that death is not a meaningless end, the mere vanishing into nothingness—it is an accomplishment, a ripe fruit on the tree of life. Nor is death an abrupt extinction, but a goal that has been unconsciously lived and worked for during half a lifetime.

[1707] In the youthful expansion of our life we think of it as an ever-increasing river, and this conviction accompanies us often far beyond the noonday of our existence. But if we listen to the quieter voices of our deeper nature we become aware of the fact that soon after the middle of our life the soil begins its secret work, getting ready for the departure. Out of the turmoil and terror of our life the one precious flower of the spirit begins to unfold, the four-petaled flower of the immortal light, and even if our mortal consciousness should not be aware of its secret operation, it nevertheless does its secret work of purification.

[1708] When I met J. S. for the first time I found in him a man of rare clarity and purity of character and personality. I was deeply impressed with the honesty and sincerity of his purpose. And when I worked with him, helping him to understand the intricacies of the human psyche, I could not but admire the kindness of his feeling and the absolute truthfulness of his mind. But though it was a privilege to teach a man of such rare human qualities, it was not the thing that touched me most. Yes, I did teach him, but he taught me too. He spoke to me in the eternal language of symbols, which I did not grasp until the awe-inspiring conclusion, the culmination in death, became manifest. I shall never forget how he liberated his mind from the turmoil of modern business life, and how, gradually working back, he freed himself from the bonds that held him fast to his earthly parents and to his youth; and how the eternal image of the soul appeared to him, first dimly, then slowly taking shape in the vision of his dreams, and how finally, three weeks before his death, he beheld the vision of his own sarcophagus from which his living soul arose.

[1709] Who am I that I should dare say one word beyond this vision? Is there a human word that could stand against the revelation given to the chosen one? There is none.

[1710] Let us return, therefore, to the external language and let us hear the words of the sacred text. And as the ancient words will give truth to us, we will give life to them. (I Corinthians 13; 15:31–55.)

FOREWORD TO SCHMID-GUISAN: "TAG UND NACHT"¹

[1711] The atmosphere of this book is only too familiar to me. On reading the manuscript, I found it difficult at first to extricate myself from the toils of day-to-day psychotherapeutic practice—until I succeeded in viewing the book against its historical background. It is indeed something of a literary orphan, seeming to have no affinities with the present. Its strange form—the adventures of an allegorical hero—reminds one of the eighteenth century. But this is no more than a reminder, for the book is quite alien to the eighteenth century in its feeling. The problem of feeling is altogether modern, and the book opens up a world of experience that seems to have been locked away since the time of René d'Anjou—the whole sensuous world of Eros, which the latest Papal Encyclical on Christian marriage² and the penalistic conscience of modern man have conspired to suppress in a quite terrifying manner. Actually it is an esoteric book, a petal fallen from the unfading mystic rose which the troubadours accused the Church of hiding under a veil of secrecy. As though any Church had ever known the secret, or knowing it could have tolerated it! This book is neither for nor of the masses. For the multitude, it had better not been written, or should be read only because of its bad reputation. They will be lucky if they emerge unscathed. Nearly five hundred years ago a similar book was written, again at a cultural turning-point, and again a petal from that mystic rose—a knightly adventure and a stumbling-block to the vulgar, the *Hypnerotomachia*³ of that celebrated Poliphilo, who for a moment twitched the veil from the psychic background of the Cinquecento. From the preface to that book I would like to set down a classical passage which shows how the Knights of the Rose join hands across the centuries:

From this it is evident that all wise men have practised their sciences beneath the shadow of the fairest, innermost secrets of Love. Love was, and is still, the graceful brush which traces out all that is strange and appointed by Fate, as much among the higher as the lower powers, and all that is subject to them....

Know, see and hear, and you will wisely remark that the most splendid, sublime, and precious mysteries are hidden beneath the beauties of Love, from which they issue anew, for Love is the joyful soul of everything that lives....

Should I discover that some profane person had put forth his odious hand to this book to finger it, or that some unworthy creature should make bold to turn its pages, or that some shameless dissembler, under the cloak of piety, should derive a vulgar pleasure from it, or that some evil-minded spectator of these sovereign gifts should seek, from boredom, the profit that by right belongs only to loving hearts, I would

break the pen which has described so many configurations of the great secret, and, utterly forgetful of myself, would expunge all memory of the satisfaction I have found in the narration, delicately veiled in the semblance of pretty fictions, of things most wonderful and rare, which serve but to elevate a man to all that is virtuous, and denying myself the very life of my life, I would abstain from the eager pursuit of those voluptuous charms which draw men towards the sacred delights.⁴

[1712] Since witless literal-mindedness has not died out in four hundred years, I would like to impress upon the reader the classical warning which the unconscious gave Poliphilo on his journey into the darkness: “Whoever thou mayest be, take of this treasure as much as thou wilt. Yet I warn thee, take from the head and touch not the body.”⁵

*Hans Schmid-Guisan: In Memoriam*⁶

[1713] Life is in truth a battle, in which friends and faithful companions-in-arms sink away, struck by the wayward bullet. Sorrowfully I see the passing of a comrade, who for more than twenty years shared with me the experiment of life and the adventure of the modern spirit.

[1714] I first met Hans Schmid-Guisan at a conference of psychiatrists in Lausanne,^{6a} where I discussed for the first time the impersonal, collective nature of psychic symbols. He was then assistant physician at the Mahaim Clinic in Cery. Not long afterwards he came to Zurich, in order to study analytical psychology with me. This collaborative effort gradually broadened into a friendly relationship, and the problems of psychological practice frequently brought us together in serious work or round a convivial table. At that time we were especially interested in the question of the relativity of psychological judgments, or, in other words, the influence of temperament on the formation of psychological concepts. As it turned out, he developed instinctively an attitude type which was the direct opposite of my own. This difference led to a long and lively correspondence,⁷ thanks to which I was able to clear up a number of fundamental questions. The results are set forth in my book on types.

[1715] I remember a highly enjoyable bicycle tour which took us to Ravenna, where we rode along the sand through the waves of the sea. This tour was a continual discussion which lasted from coffee in the morning, all through the dust of the Lombardy roads, to the round-bellied bottle of Chianti in the evening, and continued even in our dreams. He stood the test of this journey: he was a good companion and always remained so. He battled valiantly with the hydra of psychotherapy and did his best to inculcate into his patients the same humanity for which he strove as an ideal. He never actually made a name for himself in the scientific world, but shortly before his death he had the pleasure of finding a publisher for his book *Tag und Nacht*,⁸ in

which he set down many of his experiences in a form peculiarly his own. Faithful to his convictions, he wrote it as he felt he had to write it, pandering to nobody's prejudices. His humanity and his sensitive psychological understanding were not gifts that dropped down from heaven, but the fruit of unending work on his own soul. Not only relatives and friends stand mourning today by his bier, but countless people for whom he opened the treasure-house of the psyche. They know what this means to them in a time of spiritual drought.

ON THE TALE OF THE OTTER¹

[1716] In writing a few introductory words to this publication, one of his last, I am discharging a duty to my dead friend, Oskar A. H. Schmitz. I am not a literary man, nor am I competent to pass judgment on aesthetic questions. Moreover, the literary value of “The Tale of the Otter” is of little concern to me. I readily admit that, as a fairytale, it is as good or as bad as any other that a writer has invented. Such tales, as we know, even though invented by a great writer, do not breathe the flowery, woodland magic of the popular fairytale. Usually they can be shown to be products of the author’s personal psychology, and they have a problematical air that makes them slightly unnatural. This is true also of “The Tale of the Otter.” It is only a literary form for a content that could have been expressed in quite other words and in quite another way. Nevertheless, it was not chosen fortuitously. The content clothed itself in fairytale form not with the secret pretence of being an allegory, but because in this guise it could find the simplest and most direct access to the reader’s heart. Childlike simplicity of heart was a basic trait of Schmitz’s nature, known to very few people, and one which he himself recognized only late in life. Thanks to this simplicity, he could speak to the hearts of those he wished to touch.

[1717] I happen to know how the tale came to be written. It was not born of any conscious intention to reach a particular kind of public; it was never even thought out, but flowed unconsciously from his pen. Schmitz had learnt how to switch off his critical intellect for certain purposes and to place his literary powers at the disposal of the heart’s wisdom. In this way he was able to say things that are infinitely far removed from the usual style of his writings. At times, it became a real necessity for him to express himself in this way. For many things which reason wrestles with in vain flow easily and effortlessly into a pen emptied of all critical intentions.

[1718] The result may seem very simple, indeed naïve, and anyone who read it as one reads a popular fairytale would be disappointed. It is equally idle to take it as an allegory. Schmitz himself did not really know what his tale meant. He told me so himself, for we often talked about it.

[1719] The utterances of the heart—unlike those of the discriminating intellect—always relate to the whole. The heartstrings sing like an Aeolian harp only under the gentle breath of a mood, an intuition, which does not drown the song but listens. What the heart hears are the great, all-embracing things of life, the experiences which we do not arrange ourselves but which happen to us. All the pyrotechnics of reason and literary skill pale beside this, and language returns to the naïve and childlike.

Simplicity of style is justified only by significance of content, and the content acquires its significance only from the revelation of experience. The decisive experience of Schmitz's life was his discovery of the reality of the psyche and the overcoming of rationalistic psychologism. He discovered that the psyche is something that really exists. This changed his life and his work outlook.

[1720] For those who are vouchsafed such a discovery, the psyche appears as something objective, a psychic non-ego. This experience is very like the discovery of a new world. The supposed vacuum of a merely subjective psychic space becomes filled with objective figures, having wills of their own, and is seen to be a cosmos that conforms to law, and among these figures the ego takes its place in transfigured form. This tremendous experience means a shattering of foundations, an overturning of our arrogant world of consciousness, a cosmic shift of perspective, the true nature of which can never be grasped rationally or understood in its full implications.

[1721] An experience of this kind induces an almost frightening need to communicate with sympathetic fellow-beings, to whom one then turns with naïve words. "The Tale of the Otter" describes an experience of the unconscious and the resultant transformation both of the personality and of the figures in the psyche. The King stands for the ruling principle of consciousness, which strays further and further away from the unconscious. (The fish disappear from the waters of the kingdom.) The stagnation of consciousness finally compels the King to make contact with the unconscious again. (The King's pilgrimage.) The otter, the unconscious partner of the ego, seeks to bring about a reconciliation with consciousness. (Gilgamesh-Eabani motif.) This is successful, and a new world of consciousness arises on an apparently firm foundation. But as the King represents only the best part of the personality, and not the inferior part, the shadow, which should also be included in the transformation, the old King dies and his good-for-nothing nephew succeeds to the throne. The second half of the tale is concerned with the far more difficult task of including the weaknesses of the personality and its useless, adolescent traits in the process of transformation. This is especially difficult because the shadow is burdened with a still more inferior, feminine component, a negative anima figure (Brolante, the harlot). While the masculine components are successfully brought into harmony with the vital instincts (represented by animals), there is a final separation between the spiritual and the physical nature of the anima. The masculine half is rescued from evil, but the feminine half becomes its victim.

[1722] "The Tale of the Otter" gives touching and modest expression to an all-embracing and all-transforming initiation. Read it with care and meditate upon it! For when all this has been fulfilled in him, Schmitz died. In this little fairytale he tells posterity how it fared with him and what transformations his soul had to undergo before it was ready to lay aside its garment and end its lifelong experiment.

IS THERE A FREUDIAN TYPE OF POETRY?¹

[1723] Poetry, like every product of the human mind, is naturally dependent on a man's general psychological attitude. If a writer is sick, psychically sick, it is highly probable that whatever he produces will bear the stamp of his sickness. This is true with reservations, of course; for there actually are cases where the creative genius so far transcends the sickness of the creator that only a few traces of human imperfection are to be seen in the work. But these are exceptions; the general rule is that a neurotic poet will make neurotic poems. The more neurotic a poem is, the less it is a creative work of art and the more it is a symptom. It is therefore very easy to point out infantile symptoms in such cases and to view the product in the light of a particular theory; indeed, it is sometimes possible to explain a work of art in the same way as one can explain a nervous illness in terms of Freud's theory or Adler's. But when it comes to great poetry the pathological explanation, the attempt to apply Freudian or Adlerian theory, is in effect a ridiculous belittlement of the work of art. The explanation not only contributes nothing to an understanding of the poetry, but, on the contrary, deflects our gaze from that deeper vision which the poet offers. The Freudian and the Adlerian theory alike formulate nothing but the human-all-too-human aspects of the commonplace neurosis. So when one applies this point of view to great poetry, one is dragging it down to the level of dull ordinariness, when actually it towers above it like a high mountain. It is quite obvious that all human beings have father and mother complexes, and it therefore means nothing if we discern traces of a father or mother complex in a great work of art; just as little as would the discovery that Goethe had a liver and two kidneys like any other mortal.

[1724] If the meaning of a poetic work can be exhausted through the application of a theory of neurosis, then it was nothing but a pathological product in the first place, to which I would never concede the dignity of a work of art. Today, it is true, our taste has become so uncertain that often we no longer know whether a thing is art or a disease. I am convinced, however, that if a work of art can be explained in exactly the same way as the clinical history of a neurosis, either it is not a work of art, or the explainer has completely misunderstood its meaning. I am quite convinced that a great deal of modern art, painting as well as poetry, is simply neurotic and that it can, consequently, be reduced like an hysterical symptom to the basic, elementary facts of neurotic psychology. But so far as this is possible, it ceases to be art, because great art is man's creation of something superhuman in defiance of all the ordinary,

miserable conditions of his birth and childhood. To apply to this the psychology of neurosis is little short of grotesque.

FOREWORD TO GILBERT: "THE CURSE OF INTELLECT"¹

[1725] The author has kindly given me a chance of reading his book in manuscript. I must say, I have read it with the greatest interest and pleasure. It is most refreshing, after the whole nineteenth century and a stretch of the twentieth, to see the intellect once more turned loose upon herself, not exactly in the dispassionate form of a "Critique of Pure Reason," but in the rather impassioned way of a most temperamental onslaught on herself. As a matter of fact, it is a wholesome and vitalizing tearing into sorry shreds of what all "healthy-minded" people believed in as their most cherished securities. I am human enough to enjoy a juicy piece of injustice when it comes in the right moment and in the right place. Sure enough, Intellect has done her worst in our "Western Civilization," and she is still at it with undoubted force. Kant could still afford to deal with the contemporaneous intellect in a polite, careful, and gentle way, because she then was but a mere fledgling. But our time is concerned with a monster completely grown up and so fat that it can easily begin to devour itself.

[1726] At the funeral somebody will be allowed to say only something nice about the deceased. In anticipation of that future event I will say it now: The chief trouble seems to be that the intellect escaped the control of man and became his obsession, instead of remaining the obedient tool in the hands of a creator, shaping his world, adorning it with the colourful images of his mind.

January 1934

FOREWORD TO JUNG: "WIRKLICHKEIT DER SEELE" (1934)¹

[1727] This, the fourth volume of my "Psychologische Abhandlungen," contains a number of essays that faithfully reflect the manifold facets of the more recent psychology. It is not long since the psychology of the personality broke free from the all too narrow confines of the consulting room on the one hand, and of materialistic and rationalistic assumptions on the other. It is therefore no wonder if much still clings to it that is in need of clarification. Until recently the worst chaos prevailed in the realm of theory, and only now have serious attempts been made to clear away the confusion. Dr. Kranefeldt's contributions² are devoted to this task. Dr. Rosenthal's contribution³ is an application of the typological viewpoint to the scientific study of religion. The archetypical figures of anima and animus form a special department of depth psychology. Emma Jung discusses the phenomenology of the animus complex.⁴

[1728] My own contributions are concerned on the one hand with the philosophical problems of modern psychology, and on the other hand with its applications. Since this time, too, my essays came into being as answers to questions addressed to me by the public,⁵ their unusual diversity may be taken as an indication that recent psychological insights have left their mark on as many diverse realms of the mind. Not only doctors and teachers, but writers and educated laymen, and—last but not least—even publishers are now evincing an interest in things psychological.

[1729] These many facets of complex psychology, lighting up the most varied walks of life and domains of the mind, are in turn a much simplified reflection of the measureless diversity and iridescence of the psyche itself. Although one could never dream of exhausting its mysteries and fathoming all its secrets, it nevertheless seems to me one of the foremost tasks of the human mind to labour without cease for an ever deeper knowledge of man's psychic nature. For the greatest enigma in the world, and the one that is closest to us, is man himself.

September 1933

FOREWORD TO MEHLICH: "J. H. FICHTE'S SEELENLEHRE UND IHRE BEZIEHUNG ZUR GEGENWART"¹

[1730] Although I owe not a little to philosophy, and have benefited by the rigorous discipline of its methods of thought, I nevertheless feel in its presence that holy dread which is inborn in every observer of facts. The unending profusion of concepts spawning yet other concepts, rolling along like a great flood in the history of philosophy, is only too likely to inundate the little experimental gardens of the empiricist, so carefully marked out, swamping his well-ploughed fields, and swallowing up the still unexplored virgin land. Confronting the flux of events with unprejudiced gaze, he must fashion for himself an intellectual tool stripped of all preconceptions, and anxiously eschew as perilous temptations all those modes of thinking which philosophy offers him in such excessive abundance.

[1731] Because I am an empiricist first and foremost, and my views are grounded in experience, I had to deny myself the pleasure of reducing them to a well-ordered system and of placing them in their historical and ideological context. From the philosophical standpoint, of whose requirements I am very well aware, this is indeed a painful omission. Even more painful to me, however, is the fact that the empiricist must also forswear an intellectual clarification of his concepts such as is absolutely imperative for the philosopher. His thinking has to mould itself to the facts, and the facts have as a rule a distressingly irrational character which proves refractory to any kind of philosophical systematization. Thus it comes about that empirical concepts are concerned for the most part with the chaos of chance events, because it is their function to produce a provisional order amid the disorder of the phenomenal world. And because they are wholly bent on this urgent task, they neglect—sometimes only too readily—their own philosophical development and inner clarification, for a thinker who performs the first task satisfactorily will seldom be able to complete the second.

[1732] These two aspects became overwhelmingly clear to me as I read this admirable study of Fichte's psychology: on the one hand the apparent carelessness and vagueness of my own concepts when it comes to systematic formulation, and on the other the precision and clarity of a philosophical system which is singularly unencumbered by empirical impedimenta. The strange but undeniable analogy between two points of view derived from totally different sources certainly gives one food for thought. I am not aware of having plagiarized Fichte, whom I have not read. Naturally I am familiar with Leibniz, C. G. Carus, and von Hartmann, but I never

knew till now that my psychology is “Romantic.” Unlike Rickert² and many other philosophers and psychologists, I hold that, in spite of all abstraction, objectivity, absence of bias, and empiricism, everyone thinks as *he* thinks and sees as *he* sees. Accordingly, if there is a type of mind, or a disposition, that thinks and interprets “romantically,” analogous conclusions will emerge no matter whether they are coloured by the subject or by the object. It would be vain to imagine—gamely competing with Baron Münchhausen—that one could disembarass oneself of one’s own weight and thus get rid of the ultimate and most fundamental of all premises—one’s own disposition. Only an isolated and hypertrophied psychic function is capable of cherishing such an illusion. But a function is only a part of the human whole, and its limited character is beyond all doubt. Were it not for these considerations the analogy between Fichte and me would certainly have to be regarded as a minor miracle.

[1733] It is a bold undertaking—for which the author deserves all the more credit—to bring Fichte into line with a modern empirical psychology based on facts that were wholly inaccessible to this philosopher—an empiricism, moreover, which has unearthed conceptual material that is singularly unsuited to philosophical evaluation. But it seems that this undertaking has been successful, for I learn to my amazement that the Romantic Movement has not been relegated to the age of fossils, but still has living representatives. This is probably no accident, for it appears that besides the self-evident experience of the “objective” world there is an *experience of the psyche*, without which an experience of the world would not be possible at all. It seems to me that the secret of Romanticism is that it confronted the all-too-obvious *object* of experience with a *subject* of experience, which it proceeded to objectify thanks to the infinite refractive powers of consciousness. There is a psychology that always has another person or thing for an object—a fairly well-differentiated kind of behaviourism which might be described as “classical.” But besides this there is a psychology which is a knowing of the knower and an experiencing of the experiment.

[1734] The indirect influence of the type of mind exemplified by Hume, Berkeley, and Kant can hardly be overestimated. Kant in particular erected a barrier across the mental world which made it impossible for even the boldest flight of speculation to penetrate into the object. Romanticism was the logical counter-movement, expressed most forcefully, and most cunningly disguised, in Hegel, that great psychologist in philosopher’s garb. Nowadays it is not Kant but natural science and its de-subjectivized world that have erected the barrier against which the speculative tendency rebounds. Its essentially behaviourist statements about the object end in meaninglessness and nonsense. That is why we seek the meaning in the statements of the subject, believing we are not in error if we assume that the subject will first of all make statements about itself. Is it the empiricist in me, or is it because analogy is not

identity, that makes me regard the “Romantic” standpoint simply as a point of departure and its statements as “comparative material”?

[1735] I admit that this attitude is disappointingly sober, but the psychic affinity with a romantic philosopher prompts me to a critical utterance which seems to me the more in place as there are only too many people for whom “Romantic” always means something out of a romance.

[1736] Apart from this critical proviso, which the author herself stresses, her book is a welcome contribution of the study of a specific attitude of mind which has recurred many times in the course of history and presumably will also recur in the future.

FOREWORD TO VON KOENIG-FACHSENFELD: "WANDLUNGEN DES TRAUMPROBLEMS VON DER ROMANTIK BIS ZUR GEGENWART"¹

[1737] The author has asked me to write a foreword to her dissertation. I am happy to comply with her request because this comprehensive and well-documented work deserves to be known to a wider scientific public. Although we already possess a number of valuable "synoptic" studies which give a fairly complete account of the various doctrines prevalent in modern psychology—I would mention in particular the works of W. Kranefeldt, G. R. Heyer, and Gerhard Adler—there was always a noticeable gap as regards the historical and philosophical side of complex psychology. The more conscious it became of the magnitude of its task—the study of the human psyche in its totality—the more contacts it made with other fields of thought where the psyche has an equal right to speak, above all with philosophy. For whenever a science begins to grow beyond its narrow specialist boundaries, the need for fundamental principles is forced upon it, and with this it moves into the sovereign sphere of philosophy. If the science happens to be psychology, a confrontation with philosophy is unavoidable for the very reason that it had been a philosophic discipline from the beginning, resolutely breaking away from philosophy only in quite recent times, when it established itself within the philosophical and the medical faculties as an independent empirical science with mechanistic techniques. The experimental psychology inaugurated by W. Wundt was succeeded by the psychology of the neuroses, which had been developed almost simultaneously by Freud in Vienna and by Pierre Janet in Paris. My own course of development was influenced primarily by the French school and later by Wundt's psychology. Later, in 1906, I made contact with Freud, only to part company with him in 1913, after seven years of collaboration, owing to differences of scientific opinion. It was chiefly considerations of principle that brought about the separation, above all the recognition that psychopathology can never be based exclusively on the psychology of psychic disease, which would restrict it to the pathological, but must include normal psychology and the full range of the psyche. Modern medicine quite rightly adheres to the principle that pathology must be based on a thorough knowledge of normal anatomy and physiology. The criterion by which we judge disease does not and cannot lie in the disease itself, as most of the medieval physicians thought, but only in the normal functioning of the body. Disease is a variation of the normal. The same considerations apply to therapy.

[1738] For a long time it seemed as though experimental and medical psychologists could get along with purely scientific methods. But the view gradually gained ground that a critique of certain ideals originating in the humanistic disciplines was not out of place, since a careful investigation of the aetiology of pathological states had shown how the general attitude of the patient which led to the morbid variation depended on just these ideal or moral premises, not to mention the interpretation of facts and the theories resulting therefrom. But as soon as medical psychology reached this point, it turned out that the principles which had hitherto held unlimited sway over men's minds were of a purely rationalistic or materialistic nature, and, in spite of their "scientific" pretensions, had to be subjected to philosophical criticism because the object of their judgment was the *psyche itself*. The psyche is an extremely complex factor, so fundamental to all premises that no judgment can be regarded as "purely empirical" but must first indicate the premises by which it judges. Modern psychology can no longer disguise the fact that the object of its investigation is its own essence, so that in certain respects there can be no "principles" or valid judgments at all, but only *phenomenology*—in other words, *sheer experience*. On this level of knowledge, psychology has to abdicate as a science, though only on this very high level. Below that, judgments and hence science are still possible, provided that the premises are always stated, and to that extent the prospects for psychology as a science are by no means hopeless. But once it ceases to be conscious of the factors conditioning its judgments, or if it has never attained to this consciousness, it is like a dog chasing his own tail.

[1739] So far, then, as psychology takes its own premises into account, its relevance to philosophy and the history of ideas is self-evident, and this is where the present book comes in. No one can deny that certain of these premises are a restatement of ideas dating back to the time of the Romantics. However, it is not so much the ideal premises that justify the author's historical approach as the supposedly "modern" phenomenological standpoint of "sheer experience," which was not only anticipated by the Romantics but actually pertains to their very nature. It was the essence of Romanticism to "experience" the psyche rather than to "investigate" it. This was once again an age of philosopher-physicians, a phenomenon that was observed for the first time in the post-Paracelsan era, more especially in philosophical alchemy, whose most important practitioners were usually doctors. In keeping with the pre-scientific spirit of the times, the Romantic psychology of the early nineteenth century was a child of Romantic natural philosophy—one thinks of C. G. Carus—although the beginnings of empiricism were already discernible in Justinus Kerner. The psychology of the sixteenth century, on the other hand, still had occult and religious undercurrents, and though it called itself "philosophy" a later, "enlightened" age would hardly have countenanced the name. The psyche as experience is the hallmark

of the Romantics who sought the blue flower,² as well as of the philosophical alchemists who sought the *lapis noster*.

[1740] This book performs the valuable service of unlocking a veritable treasure-house of contemplative Romantic poetry for modern psychology. The parallelism with my psychological conceptions is sufficient justification for calling them “Romantic.” A similar inquiry into their philosophical antecedents would also justify such an epithet, for every psychology that takes the psyche as “experience” is from the historical point of view both “Romantic” and “alchemystical.” Below this experimental level, however, my psychology is scientific and rationalistic, a fact I would beg the reader not to overlook. The premise underlying my judgments is the *reality of everything psychic*, a concept based on the appreciation of the fact that the psyche can also be pure experience.

[1741] The author has carried out her task with great professional expertise, and I warmly recommend her book to everyone who is interested in the problems of modern complex psychology.

FOREWORD TO GILLI: "DER DUNKLE BRUDER"¹

[1742] By writing a foreword to Gertrud Gilli's drama in verse, I do not wish to evoke the impression that it needs a psychological explanation in order to heighten its effect. Works of art are their own interpretation. *The Dark Brother* does not share the modern obscurantism of certain contemporary paintings, nor is it a direct product of unconscious activity which would require interpretation and transcription into generally intelligible language.

[1743] The play is modern, however, in so far as the central process of Christianity, the divine drama, is reflected in the sphere of human motivations. A bold stroke indeed! But has not the personality of Judas always been a problematical figure in the redemption mystery? For certain Protestant theologians and historians, Christ himself has been stripped of his divine incarnation and become simply a founder of religion, a very superior and exemplary one, it is true, and his passion mere human suffering for the sake of an ideal, thus lending considerably more plausibility to the human protagonists and antagonists. Only in the mythological phase of the mind are heroes representatives of light and purity, and their adversaries embodiments of absolute evil. The real man is a mixture of good and bad, of self-determination and supine dependence, and the borderline between genuine ideals and personal striving for power is often very difficult to draw. As for the genius, his role as the mouthpiece and proclaimer of new truths is not always felt as an unmixed blessing by ordinary mortals, especially where religious beliefs are concerned.

[1744] In one form or another, the figure of the redeemer is universal because it partakes of our common humanity. It invariably emerges from the unconscious of the individual or the people when an intolerable situation cries out for a solution that cannot be implemented by conscious means alone. Thus the Messianic expectations of the Jews were bound to rise to fever pitch when, as a result of the corruption that followed in the wake of Herod the Great, all hope of an independent sacerdotal order or kingdom had vanished, and the country had become a Roman province lacking any form of autonomy. It is therefore readily understandable that these Messianic expectations centred on a political redeemer, and that more than one enthusiastic patriot sought to fulfil this role—above all Judas of Galilee, whose insurrection is reported by Flavius Josephus,² and who, boldly but quite logically, entangles the eponymous hero of this drama in a similar task.

[1745] But underlying the divine drama there is a different plan, which is not concerned with man's outward, social, or political liberation. It focuses rather on the inner man

and his psychic transformation. What is the use of changing the external conditions if man's inner attitude remains the same? It is all the same, psychologically, whether his subjection is the result of external circumstances or of intellectual or moral systems. True "redemption" comes about only when he is led back to that deepest and innermost source of life which is generally called God. Jesus was the channel for a new and direct experience of God, and how little this depends on external conditions is amply demonstrated by the history of Christianity.

[1746] Man lives in a state of continual conflict between the truth of the external world in which he has been placed and the inner truth of the psyche that connects him with the source of life. He is pulled now to one side and now to the other until he has learnt to see that he has obligations to both. In this sense Gertrud Gilli's play gives expression to a universal and timeless human fact: beyond our personal and time-bound consciousness, in our interior selves, there is enacted the everlasting drama in which the all-too-human players reach out, yearning and shrinking at once, for the deeper truth, and seek to bend it to their own purposes and their own ruin.

[1747] If Judas in Gilli's play is depicted as the dark brother of Jesus, and if his character and fate are reminiscent of Hamlet's, there may well be deeper reasons for this. One could imagine him more active and aggressive, for instance as a fiery patriot who has to get rid of Jesus from inner necessity, because Jesus as the corrupter of the people obstructs his plans for their liberation, or else because Judas sees him as the political Messiah and then betrays him out of disappointment and rage. In this sense, too, Judas would be his dark brother, since in the story of the Temptation the devil of worldly power stepped up to Jesus in much the same way as Mara tempted the Buddha. Judas might easily have become a hero after the manner of classical drama. But because his dependence catches him on every side and he can scarcely act on his own initiative, he becomes an exponent of the human drama which, though played out within the confines of the earth's shadow, has at all times accompanied the divine drama and often eclipsed it.

GÉRARD DE NERVAL¹

[1748] Gérard de Nerval (pseudonym of Gérard Labrunie, 1808–1853) was a lyric poet and translator of Goethe and Heine. He is best known by his posthumously published novel *Aurélia*, in which he relates the history of his anima and at the same time of his psychosis. The dream at the beginning, of a vast edifice and the fatal fall of a winged daemon, deserves special attention. The dream has no lysis. The daemon represents the self, which no longer has any room to unfold its wings. The disastrous event preceding the dream is the projection of the anima upon “une personne ordinaire de notre siècle,” with whom the poet was unable to work on the *mysterium* and in consequence jilted Aurélia. Thus he lost his “pied à terre” and the collective unconscious could break in. His psychotic experiences are largely descriptions of archetypal figures. During his psychosis the real Aurélia appears to have died, so that his last chance of connecting the unconscious with reality, and of assimilating its archetypal contents, vanished. The poet ended by suicide. The MS of *Aurelia* was found on his body.

FOREWORD TO FIERZ-DAVID: "THE DREAM OF POLIPHILLO"¹

[1749] It must be twenty-five years since Francesco Colonna's *Hypnerotomachia Poliphili* first came my way in the French translation published by Béroalde de Verville in 1600. Later, in the Morgan Library, New York, I saw and admired the first Italian edition² with its superb woodcuts. I set about reading the book, but soon got lost in the mazes of its architectural fantasies, which no human being can enjoy today. Probably the same thing has happened to many a reader, and we can only sympathize with Jacob Burckhardt, who dismissed it with a brief mention while bothering little about its contents. I then turned to the "Recueil Stéganographique," Béroalde's Introduction, and in spite of its turgid and high-flown verbiage I caught fleeting glimpses which aroused my curiosity and encouraged me to continue my labours, for labours they are in a case like this. My efforts found their reward, for plodding on, chapter by chapter, I sensed, rather than recognized, more and more things I was later to encounter in my study of alchemy. Indeed, I cannot even say how far it was this book that put me on the track of the royal art. In any case, not long afterwards I began to collect the old Latin treatises of the alchemists, and in a close study of them lasting many years I did eventually succeed in unearthing those subterranean processes of thought from which sprang not only the world of alchemical imagery but also Poliphilo's dream. What first found expression in the poetry of the minnesingers and troubadours can be heard here as a distant echo of a dreamlike past, but it is also a premonition of the future. Like every proper dream, the *Hypnerotomachia* is Janus-faced: it is a picture of the Middle Ages on the brink of the Renaissance—a transition between two eras, and therefore highly relevant to the world today, which is even more obviously a time of transition and change.

[1750] So it was with considerable interest that I read the manuscript sent me by Mrs. Linda Fierz-David, for it is the first serious attempt to unlock Poliphilo's secret and to unravel its crabbed symbolism with the help of modern psychology. In my opinion, her undertaking has been entirely successful. She has pursued the psychological problem which forms the central theme of the book through all the twists and turns of the story, demonstrating its personal and suprapersonal character as well as bringing to light its significance for the world of that time. Many of her interpretations are so astute and illuminating that this seemingly outlandish and baroque tale, eagerly read in the sixteenth and seventeenth centuries, is once more brought within the intellectual orbit of the modern reader. With an intelligence equalled only by her intuition, she has painted a picture of that peculiar Renaissance

psychology whose literary monument is the *Hypnerotomachia*, while giving that picture a timeless background. Thus, the tale reappears in all the freshness of its original colours and makes a direct appeal to the man of today by virtue of its imperishable psychological truth.

[1751] On its voyage through uncharted seas, the book owes some of its happiest discoveries to the sensitiveness of the feminine mind, which, delicately indiscreet, can take a peep behind Francesco Colonna's richly ornate baroque façade. It was because of this feminine gift that St. Catherine was consulted by the heavenly assembly "in all difficult cases," as we learn from Anatole France's amusing account in *Penguin Island*. "While on earth, St. Catherine had confounded fifty very learned doctors. She was versed in the philosophy of Plato as well as the Scriptures, and possessed rhetoric." Hence, it is no matter for surprise if Mrs. Fierz-David has brought off some dazzling feats of interpretation which throw considerable light on the obscurities of Poliphilo's symbolism. The tortuous ways of the masculine mind, setting traps for itself with its own vanities, are here exposed and illuminated, and modern man would do well to learn from this example.

[1752] In her commentary, she takes us deep into psychological problems that remain unfathomable to the modern mind and set it a hard task. The book is not easy reading—indeed, it requires some effort. But it is a rich and stimulating repast, and will amply reward the attentive reader who comes to meet it halfway. For myself, I am grateful to the author for the enriched knowledge and insight her book has brought me.

February 1946

FOREWORD TO CROTTET: "MONDWALD"¹

[1753] The author of this book is no ordinary explorer, of whom there is no lack nowadays, but one who still understands the almost forgotten art of travelling with all his senses open. This art or, as we might also say, this gift bestowed by the grace of heaven, enables the traveller to bring back from distant shores more than can ever be captured by cameras and tape-recorders, to wit, his own experience through which we glimpse the lure of foreign lands and peoples. This alone makes them come alive for us as we listen to the tale of the clash of two worlds. The "subjectivity" so rightly feared by science here becomes a source of illumination, conveying to us flashes of insight which no description of facts however complete can attain. This is a matter of taking notes with scrupulous objectivity. Instead, the "sensitive traveller" creates an experience which does not, like a factual record, consist merely of the data of the senses and the intellect, but of those countless, indescribable, subliminal impressions which hold the traveller captive in a foreign land. Certainly his objective description tells us a great deal, but his emotion, his being carried away, means far more. It reveals something that cannot be expressed in words: the wholeness of prehistoric nature and preconscious humanity, which for the civilized man and inhabitant of a virtually enslaved earth is utterly alien and unfathomable. All sorts of possibilities hang invisibly in the air, yet somehow we have always known of them; realities of which an age-old, nearly forgotten knowledge in us evokes a distant echo; a longing that looks back to the golden haze of a childhood morning, and forward to fulfilment at the millennium. It is the intimation of a pristine wholeness, lost and now hoped for again, that hovers over the primeval landscape and its inhabitants, and only the storyteller's emotion can bring it home to us. We understand and share his passionate desire to preserve and perpetuate this fathomless splendour, for which a National Park would be but a feeble substitute, and we lament with him the devastation that threatens it because of our civilizing barbarism. In Kenya an old squatter once said to me: "This ain't man's country, it's God's country." Today it is dotted with goldmines, schools, mission stations—and where are the slow rivers of grazing herds, the human dwellings clustering like wasps' nests on yellow and red cliffs beneath the shade of acacias, the soundless eternity of a life without history?

[1754] The author's aim is to preserve the life of a primitive people, the Lappish Skolts in northern Finland, who have been robbed of their reindeer herds, and thus protect at least a little bit of that primeval age from irremediable disaster. May his wish be granted.

March 1949

FOREWORD TO JACOBI: "PARACELSUS: SELECTED WRITINGS"¹

[1755] The author has asked me for some introductory words to the English edition of her book on Paracelsus. I am more than willing to comply with this request, for Paracelsus, an almost legendary figure in our time, was a preoccupation of mine when I was trying to understand alchemy, especially its connection with natural philosophy. In the sixteenth century, alchemical speculation received a strong impetus from this master, notably from his singular doctrine of "longevity"—a theme ever dear to the alchemist's heart.

[1756] In her book, Dr. Jacobi emphasizes the moral aspect of Paracelsus. She wisely lets the master speak for himself on crucial points, so that the reader can gain first-hand information about this strange Renaissance personality, so amply endowed with genius. The liberal use of original texts, with their vivid, imaginative language, helps to develop a striking picture of the man who exerted a powerful influence not only on his own time but on succeeding centuries.

[1757] A contradictory and controversial figure, Paracelsus cannot be brought into line with any stereotype—as Sudhoff,² for instance, sought to do when, arbitrarily and without a shadow of evidence, he declared that certain aberrant texts were spurious. Paracelsus remains a paradox, like his contemporary, Agrippa von Nettesheim. He is a true mirror of his century, which even at this late date presents many unsolved mysteries.

[1758] An excellent feature of Dr. Jacobi's book is her glossary of Paracelsus' concepts, each furnished with a succinct definition. To follow the language of this physician, this natural philosopher and mystic—a language freighted with technical terms and neologisms—is not easy for readers unfamiliar with alchemical writings.

[1759] The book abounds in pictorial material which, coming for the most part from Paracelsus' time and from the places where he lived, rounds out and sharpens the presentation.

May 1949

FOREWORD TO KANKELEIT: “DAS UNBEWUSSTE ALS KEIMSTÄTTE DES SCHÖPFERISCHEN”¹

[1760] Dr. Otto Kankeleit has given me the manuscript of his book and has asked me to write a foreword. It is not a scientific study of a theoretical nature, but a descriptive survey of the multitudinous phenomena and problems which beset the practising psychotherapist in his daily work. It is a kaleidoscopic assortment of images, visions, flickerings on the edge of the mind—a phantasmagoria of all the things the doctor wonders about. He finds himself confronted with a mass of problems stretching into a limitless horizon. That is the particular value of this book: it opens vistas into reaches of the psyche extending far beyond the confines of the consulting room, giving the reader a glimpse into a world hitherto unknown to him. It does not stop short at the pathological and does not apply to the sick the psychopathology of the sick. It leads beyond that to the wide realm of psychic life in general, to an abiding concern with the sick person, for the principal aim of modern medicine is not so much to eliminate the symptoms of sickness as to guide the patient back to a normal and balanced life.

[1761] Naturally this can be done only if he is given a balanced picture of the human psyche to offset his morbid and limited experience of it. For this purpose, as the author very rightly points out, it is necessary for doctor and patient to come to terms with the nature of the unconscious, since, for good or ill, they are both involved in its mysterious reality.

[1762] The book is in many respects extremely instructive for the doctor, and a very sympathetic one because of its unbiased standpoint.

Jung's Contribution

Among the “testimonials from scholars, writers, and artists” (subtitle of Dr. Kankeleit’s book) are Jung’s answers (ibid., pp. 68f.) to the following questionnaire:

What is the respective share of the conscious and the unconscious in the creative process?

[1763] Like all psychic life the creative process stems from the unconscious. If you identify with the creative process you usually end up by imagining that you yourself are the creator.

Have you, at the onset of a new period of creativity, observed in yourself exceptional states of any kind, in which the unconscious took the lead?

[1764] Speaking for myself, I must confess that I always notice the strangest things at the onset of a new period of creativity. (I don't doubt that there are people who never notice such things.) The unconscious takes the lead nightly in our dreams, so it is not at all surprising that it should usher in the creative process with all sorts of spontaneous phenomena.

Do you occasionally resort to stimulants of any kind (alcohol, morphine, hashish, etc.)?

[1765] Oh no! Never! A new idea is intoxicating enough.

Do you think dreams play a part in the creative process?

[1766] For years my dreams used to anticipate my creative activities as well as other things.

Have you ever experienced exceptional states of any kind (precognition, telepathy, etc.) which are not dependent on the creative process?

[1767] On closer analysis, I don't think any exceptional states can be separated from the creative process, because life itself is creativity par excellence.

I would like very much to have a detailed description of a creative process.

[1768] I could give you a detailed description but will not do so because for me the whole thing is too mysterious. I stand in such awe of the great mysteries that I am unable to talk about them. In any case, a close study of any dream series will provide perfect examples.

FOREWORD TO SERRANO: "THE VISITS OF THE QUEEN OF SHEBA"¹

[1769] This book is an extraordinary piece of work. It is dreams within dreams, highly poetic I should say, and most unlike the spontaneous products of the unconscious I am used to, although well-known archetypal figures are clearly discernible. The poetic genius has transformed this primordial material into almost musical shapes, just as, conversely, Schopenhauer understood music as the movement of archetypal ideas. The principal formative factor seems to be a strong aesthetic tendency. The reader is caught in an endlessly proliferating dream, in ever-expanding space and immeasurable depths of time. On the other hand the cognitive element plays no significant role—it even recedes into a misty background, yet alive with the wealth of colourful images. The unconscious or whatever we designate by this name presents itself to the author under its poetic aspect, while I envisage it chiefly under its scientific and philosophical or, to be more accurate, its religious aspect. The unconscious is surely the *Pammeter*, the Mother of All (i.e., of all psychic life), being the matrix, background, and foundation of all the differentiated phenomena we call psychic—religion, science, philosophy, art. The experience of the unconscious, whatever form it may take, is an approach to wholeness, the one experience lacking in our modern civilization. It is the *via regia* to the *Unus Mundus*.

IS THERE A TRUE BILINGUALISM?¹

[1770] You have asked me a question which I cannot answer precisely. I would not be able to define what you understand by “bilingualism.”

[1771] There are certainly people living abroad who have become so used to a new language that they not only think but even dream in the idiom of the country. I, personally, have experienced this after a rather long stay in England. I suddenly caught myself definitely thinking in English.

[1772] This has never happened to me with the French language, but I noticed that after a comparatively short stay in France my vocabulary unexpectedly increased. This was caused not so much by intense reading of French nor by conversation with French people, but was more the influence of the atmosphere—if this expression is permissible. This is a fact that has been observed quite often. But once one returns to one’s country these riches generally disappear.

[1773] I am absolutely convinced that in many cases a second language can be implanted in this fashion—even at the expense of the original language. But as one’s memory is not without limit, a bi- or tri-lingual state ends by damaging the scope of one’s vocabulary as well as the greatest potential use of each language.

XV

THE PRACTICE OF PSYCHOTHERAPY

(related to Volume 16 of the Collected Works)

REVIEWS OF BOOKS BY HEYER

*Der Organismus der Seele*¹

[1774] The author of this book has performed the grateful service of giving a comprehensive account of the chaos—one can hardly say less—that reigns in the field of psychotherapy. I know of no book that grasps the essential problems of modern therapy and its conflicting views in just this knowledgeable, unprejudiced, and wholly impartial manner. Unfortunately, most other books of the kind are written in the interests of some system and therefore suffer from that distressing theoretical narrow-mindedness which, on occasion, borders on sectarian bigotry. Many of these authors appear to have forgotten that psychology, of all the sciences, demands the most constant self-criticism. Every psychologist should realize first and foremost that his point of view is his own subjective prejudice. This particular prejudice is certainly no worse than any other, moreover it is extremely likely to be a fundamental assumption with many other people as well. Hence it is generally worth while pursuing one's point of view as far as possible. It will doubtless bear fruit that have a certain usefulness. But under no circumstances should one indulge in the unscientific delusion that one's own subjective prejudice represents a universal and fundamental psychological truth. No true science can spring from this, only a faith whose shadow is intolerance and fanaticism. Contradictory views are necessary for the evolution of any science; they must not be set up in opposition to each other, but should seek the earliest possible synthesis. Books like Heyer's have long been wanting. They are absolutely indispensable if we are ever to create an objective psychology, which can never be the work of a single individual but only the result of the concerted labours of many. Heyer's book offers a conspectus of the main contemporary doctrines of Freud, Adler, and myself. Separate accounts of these may be known to the reader, but until now they have not, as a rule, been related to one another, so that each formed a closed system. Heyer's book thus fills a long-felt need. It is written in a lively style and is richly interspersed with the author's own practical experiences—perhaps the most commendable book I know on this subject.

Praktische Seelenheilkunde²

[1775] One is often tempted to think that it was a fatal error of medical psychology in the days of its infancy to suppose that the neuroses were quite simple things which could be explained by a single hypothesis. This optimism was probably inevitable; had it been otherwise, perhaps nobody would have plucked up courage to venture any theory about the psyche at all. The difficulties and complications that beset the psychology of neuroses are nowhere more apparent than in the great variety of possible methods of treatment. There are so many of them that the layman in psychiatry may easily be driven to despair when it comes to choosing the method which suits not only the neurosis to be treated but the doctor treating it. We are familiar enough, nowadays, with the idea that physical illnesses derive from all sorts of causes and are subject to all sorts of conditions and therefore generally need treating from various angles; but it is still taken too much for granted that, among all these physical illnesses, a neurosis is just another illness or, at best, another category of illness. The reason for this prejudice is that modern medicine has only recently discovered the “psychological factor” in illness, and now clings to the idea that this “factor” is a simple quantity, one of the many conditioning factors or causes of physical disease. The psyche is thus vested with the kind of reality we concede to a toxin, a bacillus, or a cancer cell; but we are altogether disinclined to attribute to the psyche anything like the real existence with which we unthinkingly endow the body.

[1776] In this book, Heyer again presents us, as he did with such signal success in his earlier work *Organismus der Seele*, with a synoptic view, not of theories this time, but of the practical methods of treatment. He offers a survey, richly documented with case histories, of all the techniques which the psychotherapist requires for his everyday medical work and which are therefore also of great interest to the general practitioner. The latter regards his neurotic patients as being physically ill, like the other patients who are suffering from predominantly physical disturbances. Illnesses that are psychogenic in origin are naturally, to his way of thinking, physical, and so his first thought will be of a physical cure. The attitude of the orthodox psychotherapist who makes a sharp cut between neurosis and the pathology of the body is foreign to him. But neuroses, too, are unorthodox things and do not always prove resistant to physical treatment. The truth is that some neuroses are predominantly physical and others predominantly psychological. And often it is a diagnostic feat to make out to which category a particular case belongs. Thus psychotherapy is inevitably, at least for the time being, a curious mixture of psychological and physiological therapeutics. On all this Heyer's book provides a

wealth of information that should be of the greatest value to the psychotherapist as well as to the general practitioner and the medical student.

[1777] It is sometimes said that when many remedies are prescribed for a certain disease, none of them can claim to be particularly efficacious. The multitude of views in psychotherapy does not, however, arise from this source of confusion, but rather from the fact that neurosis is not so much *one* disease as an amalgam of several diseases which require an equal number of remedies. It is exceedingly probable that the psyche is analogous to the body and is capable of having as many diseases. The future has still to discover a pathology of the psyche to match that of the body. That modest “psychological factor” will, in time, broaden out and cover a field of medical experience no whit inferior to that of the body in scope and significance. Hence we would do well to infer, from the diversity of psychotherapeutic methods, a corresponding diversity of psychopathological states. Every one of the types of treatment mentioned corresponds, up to a point, to one aspect of the so-called “neurosis”—in other words, to a genuine form of sickness. But our present knowledge of psychopathology is not yet sufficiently advanced for us to specify without a doubt what particular form of psychic sickness calls for what treatment. We are still in the position of the physicians in the Middle Ages who, lacking the requisite knowledge of anatomy, physiology, and pathological anatomy, were solely dependent on practical experience, intuition, and the *physician’s art*. They were not necessarily bad doctors for that, any more than primitive medicine-men are bad doctors. It is precisely through the various kinds of treatment, their successes and failures, that we shall get to know the various kinds of psychic pathology, psychic biology, and psychic structure.

[1778] Heyer’s book is an important milestone on the road to the discovery of the diseases of the psyche and their specific remedies. It is written from practical experience and will be particularly valuable to the general practitioner. In its arrangement it relies on clinical pictures of illness; thus Chapter II deals with disturbances in the respiratory and circulatory systems, Chapter III with digestive disturbances, Chapter IX with sexual disturbances, and Chapter X with insomnia. Chapters I, IV, and V form an introduction to psychology. Three chapters deal with the various kinds of therapy. The book is equipped with a very readable appendix by Lucy Heyer, giving an account of the physical aids to psychotherapy, such as gymnastics, breathing, massage, etc.

[1779] I regret the absence of a similar account dealing with the artistic and spiritual remedies, for in practice these play no small part along with the purely physical ones. Maldevelopment and inhibitedness exist in the psyche as well as in the body and are in just as much need of exercise and reeducation.

ON THE “ROSARIUM PHILOSOPHORUM”¹

[1780] The *Rosarium* is one of the first, if not *the* first, synoptic texts covering the whole field of alchemy. It may have originated about 1350. The author is anonymous. It has been attributed to Peter of Toledo, who is supposed to have been an older brother of the famous Arnaldus de Villanova (1235–1313). Certain parts of it may date back to the former, but not the whole text, which was first printed in 1550 and contains numerous quotations from Arnaldus. The 1550 edition is a compilation consisting of two different parts, each a separate treatise. There are also interpolations of some length from various authors, for instance a letter of Raymundus Lullius to Rupertum Regem Franciae. (This Rupertus may be identical with Robert I, the Wise, 1309–1343.)

[1781] The text begins with a kind of preface or introduction in which the author discusses the “art” in general terms. He emphasizes that the art operates only “within Nature.” Only *one* thing is needed for the procedure, and not several things. Operating “outside Nature” leads nowhere. The author stresses that the laborant must have a sound mental disposition. The art consists in *uniting the opposites*, which are represented as male and female, form and matter. In addition the *4 roots* (radices, rhizomata, elements) are needed. The *prima materia* (initial material) is found everywhere. It is also called *lapis* = stone, or “salt” or “water.” The water (*aqua permaens*) is identical with *argentum vivum* (quicksilver). The elements are likewise represented as pairs of opposites:

The author warns against taking the terminology *literally*; only fools would do this.

[1782] In the preface we find the following verses:

Hic lapis exilis extat, precio quoque vilis,
Spernitur a stultis, amatur plus ab edoctis.
(Here stands the mean, uncomely stone,
'Tis very cheap in price!
The more it is despised by fools,
The more loved by the wise.)²

[1783] The “lapis exilis” may correspond to the “lapisit exillis,” Wolfram von Eschenbach’s name for the Grail.³

[1784] The text proper opens with a pictorial representation of the alchemical process:⁴ a fountain from which the *aqua permanens* flows out of three pipes in the form of *lac virginis* (virgin's milk), *acetum fontis* (vinegar of the fount), and *aqua vitae* (water of life). Above the fountain is a star, with the sun to the left and the moon to the right (as opposites). Surmounting the star is the two-headed Mercurial Serpent, symbolizing the contamination of opposites in the unconscious. The picture is flanked by two columns of cloud or smoke, an indication of the "spiritual" (volatile) nature of the process. In the corners are four stars, alluding to the quaternity of the elements. The three springs form the *material Trinity* (the spirit of God, brooding over the chaos, penetrated into matter and became water). Together with inert matter (earth) they constitute the unity which is indicated by the quaternity of the elements ($3 + 1 = 4$).

[1785] For some alchemists the *prima materia* is something that can be found everywhere, for others it has first to be produced out of the "imperfect body" or substance. The contradiction resolves itself when one takes account of the amply documented theory of the *humidum radicale*: all chemical substances contain, in greater or lesser degree, the moisture, the water of the beginning that was brooded over by the spirit of God. This water was the *prima materia*. The opening words of the first chapter can thus be understood without difficulty:

The imperfect body has been changed into the *prima materia*, and this water, combined with our water (*aqua permanens*), produces *one* pure, clear water (solvent) that purifies everything and contains within itself everything needful (i.e., for the process of self-transformation)... Out of this water and with this water our procedure is brought to completion. But it dissolves the bodies not by means of the common solvent (*solutione vulgari*), as transmitted by the ignorant who transform the body into rain-water, but by means of the true philosophical solvent in which the body is transformed into the original water whence it arose in the beginning. This same water reduces the bodies themselves to ashes. You must know that the art of alchemy is a gift of the Holy Spirit.

[1786] The dissolution of the imperfect body transforms it back into the watery initial state, i.e., into the *prima materia*. The *aqua nostra* (our water), as is evident from the text and from numerous other sources, is also *fire*, the baptismal water, and at the same time the Holy Spirit this contains. *Aqua nostra* is therefore a "spirit water," which is united with the *prima materia* in the same way as the spirit of God brooded over the water of the beginning and from it created the world.

[1787] The process of creation is performed outwardly through a chemical operation and inwardly through *active imagination*: "And imagine this with the true and not with the fantastic imagination," the text enjoins.⁵ Matter was thought of as entirely passive; everything creative and active proceeded from the mind. *Aqua nostra* as

“spirit water” was a chemical body endowed with spirit, which was produced by the art; it was named the “tincture” or “quintessence.” Medieval man thought in terms of spirit, whereas we always start with matter. We can understand how matter alters mind, but cannot see how mind can transform matter, although logically there is a reciprocal relationship between the two processes.

[1788] The second chapter is concerned mainly with the secret of the *aqua nostra*. This water, as we have said, is the *humidum radicale*, a *spirituale corpus* also named *sapo sapientum* (“soap of the wise,” a play on words). It is so named in *Clavis sapientiae* of Alfonso X, king of Castile, who reigned 1252–1284. His treatise is said to be a translation from the Arabic. The *humidum radicale* is identical with the *serpens mercurialis*, the dragon, hence is also named “dragon’s blood.” The body to be transformed must be dissolved in its own liquid, its “blood”; this tincture, the elixir or *lapis*, is identical with *aqua nostra*. The texts are very confused on this point. But the confusion is not so bad if one bears in mind that the “water” is either extracted by sublimation from a body that contains a particularly large amount of it, or that the elixir already extracted is used for dissolving the body. The texts deal sometimes with the one and sometimes with the other, or more generally with both at once, as does the *Rosarium*. Other synonyms for the water are *pinguedo* (fat), *unctuositas*, *vapor unctuosus* (fatty vapour).

[1789] These basic ideas are developed and embroidered on in the following chapters, particularly the idea of the *coniunctio*. By this is meant the reunion of the imperfect body with its soul (*anima*), of which it had been deprived.⁶ Here the *anima* (= *humidum radicale*) serves as a vehicle for the spirit, which through active imagination permeates the watery solution. Usually the spirit is active and male, the material body passive and female. (Occasionally it is the other way round!) The male is red (red tincture, red slave, sun, red rose), the female white (white tincture, white spouse, moon, lily, white rose). The myth of Gabricus and Beya is the model for the *coniunctio* symbolism,⁷ one of the commonest and most impressive motifs in alchemy. It is concerned with the problem of opposites projected into matter, with the union of opposites for the purpose of producing a third thing, the Hermaphroditus or Rebis (“consisting of two”),⁸ or the “living” Stone of the Wise. This symbol is something that originates in man, like a child, and continues to exist in him, as an ancient treatise, probably of Arabic origin and attributed to Rosinus (Zosimos), says. (“Rosinus ad Sarratantam,” *Artis auriferae*, II, 1593, p. 311.) The stone has the significance of a panacea, of a drink of immortality, of a redeemer in general, and hence is an *allegoria Christi*.

PREFACE TO AN INDIAN JOURNAL OF PSYCHOTHERAPY¹

[1790] Dr. Bannerjee has kindly asked me to write a foreword to the special number of this journal devoted to my psychological work. It is a great pleasure to express my appreciation of the attentive interest given to my modest attempts at furthering the development of psychological understanding in general and the deepening of insight into the workings of the unconscious. India with her highly differentiated spiritual culture enjoys certain advantages over the European mind, inasmuch as the latter, owing to its origin in ancient Greek culture, is more handicapped by its dependence upon the sensory aspects of the external world. We expect of India and her spiritual attitude a unique contribution—an introspection originating in a different point of view which would compensate the one-sidedness of the European outlook. We look forward hopefully to a collaboration with the Indian mind, knowing that the mystery of the psyche can be understood only when approached from opposite sides.

[1791] I believe that the coming age will be in desperate need of a common basic understanding of man, which would enable mankind to become a brotherhood rather than a chaos of power-driven usurpers.

ON PICTURES IN PSYCHIATRIC DIAGNOSIS¹

[1792] The case that you lay before me presents every ground for thinking of latent schizophrenia. This diagnosis is confirmed by the pictures. There is a distinct tendency to translate living reality into abstractions in order to cut off the emotional rapport with the object. This forces the ego into an unsuitable power stance with the sole aim of domination. His (the artist's) commentary is very enlightening in this respect. Under these conditions there naturally can be no point in looking for symbols of the self,² since there is an overwhelming tendency to push the ego into the foreground and suppress the self. The ego is an arbitrary fragment, and the self the unwanted whole. No trace of the latter can be seen in the pictures.

XVI

THE DEVELOPMENT OF PERSONALITY

(related to Volume 17 of the Collected Works)

FOREWORD TO EVANS: "THE PROBLEM OF THE NERVOUS CHILD"¹

[1793] I have read the manuscript of Mrs. Evans' book, *The Problem of the Nervous Child*, with great pleasure and interest. Mrs. Evans' knowledge of her subject-matter is based on a solid foundation of practical experience, an experience gained in the difficult and toilsome treatment and education of nervous children. Whoever has had to deal with nervous children knows what an amount of patience, as well as skill, is needed to guide a child out of a wrong pathological attitude into a normal life. This book, as the reader can see on almost every page, is the fruit of extensive work in the field of neuroses and abnormal characters. Despite the fact that there are numerous books on education, there are very few that concern themselves with a child's most intimate problems in such a careful and painstaking way. It is self-evident that this contribution will be of great value to anyone interested in educational questions. The physician should be particularly indebted to the author, as her book will be a valuable ally in the fight against the widespread evil of neuroses in adults. More and more the neurologist of today realizes that the origin of the nervousness of his patients is very rarely of recent date, but goes back to the early impressions and developments in childhood. There lies the source of many later nervous diseases. Most of the neuroses originate from a wrong psychological attitude which hinders adjustment to the environment or to the individual's own requirements. This wrong psychological position which is at the bottom of almost every neurosis has, as a rule, been built up during the course of the years and very often began in early childhood as a consequence of incompatible familial influences. Knowing this, Mrs. Evans lays much stress on the parent's mental attitude and its importance for the child's psychology. One easily overlooks the enormous power of imitation in children. Parents too easily content themselves with the belief that a thing hidden from the child cannot influence it. They forget that infantile imitation is less concerned with action than with the parent's state of mind from which the action emanates. I have frequently observed children who were particularly influenced by certain unconscious tendencies of the parents, and, in such cases, I have often advised the treatment of the mother rather than of the child. Through the enlightenment of the parents, their wrong influences can at least be avoided, and thus much can be done for the prevention of later neuroses in the children.

[1794] The author particularly insists upon the importance of watching the manifestations of the sexual instinct in childhood. Anyone concerned with the education of abnormal children will confirm the existence and the frequency of

sexual symptoms in these children. Despite the fact that sexual activity does not belong to the infantile period, it frequently manifests itself in a symptomatic way, as a symptom of abnormal development. An abnormal development does not provide sufficient opportunity for the normal display of the child's energies. Thus, the normal outlet being blocked, the energy accumulates and forcibly seeks an abnormal outlet in premature and perverted sexual interests and activities. Infantile sexuality is the most frequent symptom of a morbid psychological attitude. In my view, it is wrong to consider sexual phenomena in early childhood as the expression of an organic disposition; most of the cases are due to an environment unsuited to the child's psychological nature. The attitude of the child towards life is certainly determined by the inherited disposition, but only to a certain extent; on the other side it is the result of the immediate parental influences and of education. While the inherited disposition cannot be changed, these latter influences can be improved by suitable methods, and thus the original unfavourable disposition can be overcome. Mrs. Evans' book shows the way, and how to treat even the most intricate cases.

October 1919

FOREWORD TO HARDING: "THE WAY OF ALL WOMEN"¹

[1795] It is a pleasure to comply with the author's wish that I should write an introduction to her book. I have read her work with the greatest interest, and am gratified to find that it does not come into the category of those sententious books, bristling with prejudices, which expatiate on the psychology of women with gushing eloquence, and finally overflow in a sentimental hymn to "holy motherhood." Such books have another unpleasant characteristic: they never speak of things as they are, but only as they should be, and instead of taking the problem of the feminine psyche seriously, they conveniently gloss over all the dark and disagreeable truths with advice that is as ineffectual as it is patently good. Such books are not always written by men—if they were they might be excusable—but many are written by women who seem to know as little about feminine feelings as men do.

[1796] It is a foregone conclusion among the initiated that men understand nothing of women's psychology as it actually is, but it is astonishing to find that women know nothing of themselves either. However, we are only surprised as long as we naïvely and optimistically imagine that mankind understands anything fundamental about the psyche. This is indeed one of the most difficult tasks the investigating mind can set itself. The latest developments in psychology show with ever-increasing clarity not only that there are no simple formulas from which the world of the psyche might be derived, but that we have never yet succeeded in defining the field of psychic experience with sufficient exactitude. Despite the immense surface area, scientific psychology has not even begun to break down the mountain of prejudices that persistently block the way to the psyche as it really is. Psychology is the youngest of the sciences and is suffering from all those childhood ailments which afflicted the adolescence of other sciences in the late Middle Ages. There still exist psychologies which limit the field of psychic experience to the consciousness and its contents, or understand the psyche as a purely reactive phenomenon without any trace of autonomy. The fact of an unconscious psyche has not yet gained undisputed acceptance, despite an overwhelming mass of empirical material which proves beyond all doubt that there can be no psychology of consciousness without a recognition of the unconscious. Lacking this foundation, it is impossible to deal with a psychological datum that is in any way complex, and the actual psyche we have to deal with in real life is complexity itself. Consequently, a psychology of woman cannot be written without an adequate knowledge of the unconscious background of the mind.

[1797] Drawing on her rich psychotherapeutic experience, Dr. Harding has sketched a picture of the feminine psyche which, in scope and thoroughness, far surpasses previous works in this field. Her presentation is refreshingly free from prejudice and remarkable for the love of truth it displays. Her arguments never lose themselves in dead theories and fanatical fads, which unfortunately are so frequently met with in this field of work, and she has succeeded in penetrating with the light of knowledge into crannies and depths where before darkness prevailed. Only one half of feminine psychology can be grasped with the aid of biological and social concepts, and in this book it becomes clear that woman possesses a peculiar spirituality very strange to man, to which Dr. Harding has devoted a special chapter. Without a knowledge of the unconscious this new aspect, so essential for an understanding of the psychology of woman, could never have been brought out with such clarity and completeness. The fructifying influence of the psychology of the unconscious is also evident in many other places in the book.

[1798] At a time when the divorce rate has broken all records, when the relation of the sexes has become a perplexing problem, a book like this seems to me of the greatest help. To be sure, it does not provide the one thing everybody expects—a generally acceptable recipe for solving this dreadful tangle of questions in a simple and practical way, so that we need rack our brains about it no longer. On the other hand, the book contains an ample store of what we actually need very badly, and that is understanding—understanding of psychic facts and conditions with the help of which we can orient ourselves in the complicated situations of life.

[1799] Why after all do we have a psychology? Why is it that we are especially interested in psychology just now? The answer is that everyone is in desperate need of it. Humanity seems to have reached a point where the concepts of the past are no longer adequate, and we begin to realize that our nearest and dearest are actually strangers to us, whose language we no longer understand. It is beginning to dawn on us that the people living on the other side of the mountain are not made up exclusively of red-headed devils who are responsible for all the evil on this side of the mountain. A little of this uneasy suspicion has filtered through into the relations between sexes; not everyone is utterly convinced that everything good is in “me” and everything evil in “you.” Already we can find super-moderns who ask themselves in all seriousness whether there may not be something wrong with us, whether perhaps we are too unconscious, too antiquated, and whether this may not be the reason why when confronted with difficulties in sexual relationships we still continue to employ with disastrous results the methods of the Middle Ages if not those of the caveman. There are indeed people who have read with horror the Pope’s Encyclical on Christian marriage,² and yet must admit that for cavemen our so-called “Christian” marriage is a cultural step forward. Although we are still far from having overcome

our prehistoric mentality, which enjoys its most signal triumphs just in the sphere of sex, where man is made most vividly aware of his mammalian nature, certain ethical refinements have nevertheless crept in which permit anyone with ten to fifteen centuries of Christian education behind him to progress towards a slightly higher level.

[1800] On this level the spirit—from the biological point of view an incomprehensible psychic phenomenon—plays a not unimportant role psychologically. It had a weighty word to say on the subject of Christian marriage, and it still participates vigorously in the discussion whenever marriage is doubted and depreciated. It appears in a negative capacity as counsel for the instincts, and in a positive one as the defender of human dignity. Small wonder, then, that a wild and confusing conflict breaks out between man as an instinctual creature of nature and man as a spiritual and cultural being. The worst thing about it is that the one is forever trying violently to suppress the other in order to bring about a so-called harmonious solution of the conflict. Unfortunately, too many people still believe in this procedure, which is all-powered in politics; there are only a few here and there who condemn it as barbaric and would like to set up in its place a just compromise whereby each side of man's nature is given a hearing.

[1801] But unhappily, in the problem between the sexes, no one can bring about a compromise by himself alone; it can only be achieved in relation to the other sex. Hence the need for psychology! On this level, psychology becomes a kind of special pleading—or rather, a *method of relationship*. It guarantees real knowledge of the other sex instead of arbitrary opinions, which are the source of the incurable misunderstandings now undermining in increasing numbers the marriages of our time.

[1802] As a weighty contribution to this striving for a deeper knowledge of human nature and for a clarification of the confusion in the relations between the sexes, Dr. Harding's book is heartily to be welcomed.

February 1932

DEPTH PSYCHOLOGY AND SELF-KNOWLEDGE¹

Is depth psychology a new way to self-knowledge?

[1803] Yes, depth psychology must be termed a new way, because in all the methods practised up to now no account was taken of the existence of the unconscious. Thus a new factor entered our field of vision, which has seriously complicated and fundamentally altered the situation. Formerly, the fact had not been reckoned with that man is a “twofold” being—a being with a conscious side which he knows, and an unconscious side of which he knows nothing but which need be no secret to his fellows. How often one makes all sorts of mistakes without being conscious of them in the least, while they are borne in upon others all the more painfully! Man lives as a creature whose one hand doesn’t know what the other is doing. The recognition that we have to allow for the existence of an unconscious is a fact of revolutionary importance. Conscience as an ethical authority extends only as far as consciousness extends. When a man lacks self-knowledge he can do the most astonishing or terrible things without calling himself to account and without ever suspecting what he is doing. Unconscious actions are always taken for granted and are therefore not critically evaluated. One is then surprised at the incomprehensible reactions of one’s neighbours, whom one holds to be responsible; that is, one fails to see what one does oneself and seeks in others the cause of all the consequences that follow from one’s own actions.

[1804] Marriages furnish an instructive example of how easily one sees the mote in another’s eye but not the beam in one’s own. Of far greater, indeed truly monstrous, proportions are the projections of war propaganda, when the lamentably bad manners of civil life are exalted into a principle. Our unwillingness to see our own faults and the projection of them on to others is the source of most quarrels, and the strongest guarantee that injustice, animosity, and persecution will not easily die out. When one remains unconscious of oneself one is frequently unaware of one’s own conflicts; indeed the existence of unconscious conflicts is actually held to be impossible. There are many marriages in which the partners skirt round every possible conflict with the greatest caution, the one actually imagining himself to be immune from such things, while the other is filled to the neck with laboriously repressed complexes and almost choked by them. Such a situation often has injurious effects on the children too. We know that children often have dreams dealing with the unconfessed problems of their parents. These problems weigh upon the children because the parents, being themselves unconscious of them, have never attempted to come to grips with their

own difficulties, and this creates something like a poisoning of the atmosphere. For this reason the neuroses of childhood depend to a considerable degree upon the parents' conflicts.

How is depth psychology distinguished from the previous methods of psychological research? Where does it coalesce with other disciplines?

[1805] Psychology up till now took no account of the motivation of conscious contents due to the existence of the unconscious. Once the unconscious is included in the calculation, everything suddenly gets a double bottom, as it were. We have to look at everything from two sides, whereas the old psychology was satisfied with the contents of consciousness. Thus the old method of explaining the appearance of psychogenic (psychologically caused) symptoms could rest content with the supposition that they were auto-suggested figments of the imagination. The modern explanation, which lets the unconscious psyche of the patient have its say, investigates his dreams, fantasies, and complexes, i.e., that segment of his life-history which is responsible for the formation of the symptoms. No one questions today that neurotic symptoms are produced by processes in the unconscious. The conscious realization of the unconscious causative factors therefore has a definite therapeutic value. Psychogenic symptoms are products of the unconscious. These symptom also include various opinions and convictions which, though they may be uttered consciously enough, nevertheless are determined in reality by unconscious motives. Thus a too importunate and one-sided assertion of principles can often be traced back to an unconscious failure to live up to them. I knew someone, for instance, who, on every occasion, suitable or not, paraded his principle of honesty and truthfulness before the public. As I soon discovered, he suffered from a rather too lively imagination, which now and then seduced him into gross lies. The whole question of truth therefore occasioned in him a not undeserved "sentiment d'incomplétude," which in turn moved him to exceptionally loud ethical protestations, no small part of whose aim was to beget in himself a conviction of honesty.

[1806] With the recognition that every conscious process rests in part upon an unconscious one and may represent it symbolically, our previous views of psychic causality are radically called into question. Direct causal sequences in consciousness appear doubtful, and every experience of psychic contents urgently requires them to be supplemented by their unconscious aspect. Although depth psychology is a discipline in itself, it lurks invisibly, thanks to the fact of the unconscious, in the background of all other disciplines. Just as the discovery of radioactivity overthrew the old physics and necessitated a revision of many scientific concepts, so all disciplines that are in any way concerned with the realm of the psychic are broadened out and at the same time remoulded by depth psychology. It raises new problems for philosophy; it greatly enriches pedagogics and still more the study of human

character; it also poses new problems for criminology, especially as regards criminal motives; for medicine it opens up an unsuspected store of fresh insights and possibilities through the discovery of the interdependence of bodily and psychic processes and the inclusion of the neurotic factor; and it has richly fecundated, less closely related sciences such as mythology, ethnology, etc.

Are the various schools of depth psychology similar in their aims?

[1807] The difference between the principal schools of depth psychology up to date are based upon as many different aspects of the unconscious. The unconscious possesses a biological, a physiological, a mythical, a religious aspect, and so on. This means that the most varied conceptions are not only possible but even necessary. Each has its own justification, though none to the exclusion of others, for the unconscious is a highly complex phenomenon to which one single concept can never do justice. One cannot judge a person from a moral standpoint *only*, for example, but has to regard him from this standpoint *too!* Certain contents of the unconscious can be understood as strivings for power, others as the expression of sexual or other drives, while yet others allow no explanation in terms of biological drives under any circumstances.

Has "analytical psychology," i.e., the Jungian school of depth psychology, definite guiding principles?

[1808] I should prefer not to use the term "guiding principles" in this connection. Just because of the extreme variety and complexity of the aspects of the unconscious and its possible meanings, every "guiding principle" works as an arbitrary assumption, as an actual prejudice that tries to anticipate its irrational manifestations, though these cannot be determined in advance, and perhaps force them into an unsuitable mould. One must avoid all assumptions so far as possible in order to grasp the pure manifestation itself. This must carry its own interpretation with it, to such an extent that its significance is immediately evident from the nature of the phenomenon and is not forced upon it by the observer. He must, in fact, accustom himself to be guided more by the material than by his own opinions, however well founded they may appear to him. Every item of psychic experience presents itself in an individual form, even though its deeper content may be collective. One can never determine in advance, however, which of its principal aspects lies concealed behind the individual form. "Guiding principles" are therefore admissible at most as working hypotheses, and this only in the realm of scientific research. The practical material is best accepted *mente vacua* (without any preconceived theories).

What are the principal tools of analytical psychology? Does the interpretation of dreams occupy a central place?

[1809] The analytical situation has a fourfold aspect: (a) The patient gives me in his own words a picture of the situation as he consciously sees it. (b) His dreams give me a compensating picture of the unconscious aspect of it. (c) The relational situation in which the patient is placed vis-à-vis the analyst adds an objective side to the two other subjective ones, (d) Working through the material collected under a, b, and c fills out the total picture of the psychological situation. The necessity of working through it arises from the fact that the total picture often stands in the liveliest contrast to the views of the ego-personality and therefore leads to all sorts of intellectual and emotional reactions and problems, which in their turn clamour for solution and answer. Since the final goal of the undertaking can only consist in restoring the original wholeness of the personality in a viable form, one cannot dispense with a knowledge of the unconscious. The purest product of the unconscious is the dream. The dream points directly to the unconscious, for it “happens” and we have not invented it. It brings us unfalsified material. What has passed through consciousness is already sifted and remodelled. As we can deduce from the lava ejected by a volcano the constitution of the strata from which it comes, so we can draw deductions as to the unconscious situation from the contents of dreams. Only dream material plus conscious material reveals the picture of the *whole* man. And only in this way can we find out who our antagonist is.

[1810] Although dreams disclose the unconscious to us with perhaps the nearest approach to faithfulness we can attain, we also come upon its traces in every form of creative activity, such as music and poetry, and in all other forms of art. It appears in all manifestations of a spontaneous and creative kind, the further these are removed from everything mechanical, technical, and intellectual. As well as from dreams we can therefore draw conclusions from such things as drawings in which patients are encouraged to reveal their inner images. Although obviously the personality of the patient holds the centre of our attention, and introspection is an indispensable instrument of our work in common, yet this is anything rather than *brooding*. Brooding is a sterile activity which runs round in a circle and never reaches a reasonable goal. It is not *work* but a weakness, even a vice. On the other hand, if you feel out of sorts, you can legitimately make yourself an object of serious investigation, just as you can earnestly search your conscience without lapsing into moral weakness. Anyone who is in bad odour with himself and feels in need of improvement, anyone who in brief wishes to “grow,” must take counsel with himself. Unless you change yourself inwardly too, outward changes in the situation are worthless or even harmful. It is not enough to jump up, puff yourself out, and shout: “I take the responsibility!” Not only mankind but fate itself would like to know *who* promises to take this weighty step and whether it is someone who *can* take the responsibility. We all know that anyone can *say* so. It is not the position that makes

the man, but the man who does his work. Therefore self-searching, with the help of one or more persons, is—or rather should be—the essential condition for taking on a higher responsibility, even if it is only that of realizing the meaning of individual life in the best possible form and to the fullest possible degree. Nature always does that, but *without responsibility*, for this is the fated and divinely allotted task of man.

Is not an important milestone in the development of self-knowledge, which has increased the difficulties of the “way to oneself,” to be found in the Reformation and in the loss of confession for Protestants, and so for millions of people? Has not self-searching become keener and deeper because of the loss of the dialogue that the Catholic has with his confessor, and the loss of absolution?

[1811] The difficulties have indeed become enormously greater, as evidenced by the increased prevalence of complexes among Protestants, which has been statistically established. But these increased difficulties constitute—if the Protestant will really face and grapple with them—an exceptionally advantageous basis for self-knowledge. They can, however, just as easily lead, precisely because a confessor is lacking, either to sterile brooding or to thoughtless superficiality. Most people need someone to confess to, otherwise the basis of experience is not sufficiently real. They do not “hear” themselves, cannot contrast themselves with something different, and thus they have no outside “control.” Everything flows inwards and is answered only by oneself, not by another, someone different. It makes an enormous difference whether I confess my guilt only to myself or to another person. This being thrown back upon themselves often leads Protestants to spiritual arrogance and to isolation in their own ego. Although analytical psychology guards against being considered a substitute for confession, in practice it must often function willy-nilly as such. There are so many Catholics who no longer go to confession, and still more Protestants who do not even know what confession is, that it is not surprising some of them yield to their need of communication and share their burdens with an analyst in a way which could almost be called confession. The difference, however, is considerable, inasmuch as the doctor is no priest, no theological and moral authority, but, at best, a sympathetically listening confidant with some experience of life and knowledge of human nature. There is no admonition to repentance unless the patient does it himself, no penance unless—as is almost the rule—he has got himself in a thorough mess, and no absolution unless God has mercy on him. Psychology is admittedly only a makeshift, but at the present time a necessary one. Were it not a necessity it would have collapsed long ago from inner emptiness. It meets a need that unquestionably exists.

Does a knowledge of the “other side,” that is, one’s own unconscious side, bring relief, release? Does not self-knowledge rather increase the tension between what

one is and what one would like to be?

[1812] Being able to talk things over freely can in itself be a great relief. In general, working with the unconscious brings an increase of tension at first, because it activates the opposites in the psyche by making them conscious. This entirely depends, though, on the situation from which one starts. The carefree optimist falls into a depression because he has now become conscious of the situation he is in. On the other hand, the pressure on the inward brooding person is released. The initial situation decides whether a release or increase of pressure will result. Through self-searching in analysis people suddenly become aware of their real limitations. How often a woman has previously felt herself a snow-white dove and had no suspicion of the devil concealed within her! Without this knowledge she can neither be healed nor attain wholeness. For one person deeper knowledge of himself is a punishment, for another a blessing. In general, every act of conscious realization means a tensing of opposites. It is in order to avoid this tension that people repress their conflicts. But if they become conscious of them, they get into a corresponding state of tension. This supplies in turn the driving power for a solution of the problems they are faced with.

Doesn't a systematic preoccupation with oneself lead to egocentricity?

[1813] At first glance, from an external and superficial point of view, it does make one egocentric. But I consider this justifiable up a point. One *must* occupy oneself with oneself; otherwise one does not grow, otherwise one can never develop! One must plant a garden and give it increasing attention and care if one wants vegetables; otherwise only weeds flourish. "Egocentric" has an unpleasant undertone of pathological egoism. But as I have said, occupation with and meditation on one's own being is an absolutely legitimate, even necessary activity if one strives after a real alteration and improvement of the situation. Outwardly changing the situation, doing something else, forgetting what one was, alters nothing essential. Indeed, even when a bad man does good, he is nevertheless not good but suffers from a good symptom without being altered in character. How many drinkers, for example, have turned teetotalers without being freed from their psychic alcoholism! And only too soon they succumbed again to their vice. There are essentially bad natures that actually specialize in being good and, if they chance to become some kind of educator, the results are catastrophic. A *systematic* preoccupation with oneself serves a purpose. It is work and achievement. Often, in fact, it is much better to educate oneself first before one educates others. It is by no means certain that the man with good intentions is under all circumstances a good man. If he is not, then his best intentions will lead to ruin as daily experience proves.

Doesn't an exact knowledge of one's own nature with all its contradictions and absurdities, make one unsure? Doesn't it weaken selfconfidence and so lessen the

ability to survive in the battle of life?

[1814] Much too often people have a pathetic cocksureness which leads them into nothing but foolishness. It is better to be unsure because one then becomes more modest, more humble. It is true that an inferiority complex always harbours within it the danger of outdoing itself and compensating the supposed lack by a flight into the opposite. Wherever an inferiority complex exists, there is good reason for it. There actually is an inferiority of some kind, though not precisely where one is persuaded it is. Modesty and humility are not the signs of an inferiority complex. They are highly estimable, indeed admirable, virtues and not complexes. They prove that their fortunate possessor is not a presumptuous fool, but knows his own limitations, and will therefore never stumble beyond the bounds of humanity, dazzled and intoxicated by his imagined greatness. The people who fancy they are sure of themselves are the ones who are truly unsure. Our life is unsure, and therefore a feeling of unsureness is much nearer to the truth than the illusion and the bluff of sureness. In the long run it is the better-adapted man who triumphs, not the wrongly self-confident, who is at the mercy of dangers from without and within. Measure not by money or power! Peace of soul means more.

Can depth psychology assist social adaptation and increase the capacity for human contacts?

[1815] The increased self-knowledge which depth psychology necessitates also creates greater possibilities of communication: you can interpret yourself in the analytical dialogue and learn through self-knowledge to understand others. In that way you become more just and more tolerant. Above all, you can remedy your own mistakes, and this is probably the best chance of making a proper adaptation to society. Naturally you can also make wrong use of self-knowledge, just as any other knowledge.

Has self-knowledge a healing, liberating effect?

[1816] Repentance, confession, and purification from sin have always been the conditions of salvation. So far as analysis helps confession, it can be said to bring about a kind of renewal. Again and again we find that patients dream of the analysis as of a refreshing and purifying bath, or their dreams and visions present symbols of rebirth, which show unmistakably that knowledge of their unconscious and its meaningful integration in their psychic life give them renewed vitality, and do indeed appear to them as a deliverance from otherwise unavoidable disaster or from entanglement in the skeins of fate.

How does the integration of the unconscious express itself in the actual psychic situation?

[1817] This question can be answered only in a very general sense. Individuality is so varied that in each single case the integration of the unconscious takes place in a different and unforeseen way. One could describe this only with the help of concrete examples. The human personality is incomplete so long as we take simply the ego, the conscious, into account. It becomes complete only when supplemented by the unconscious. Therefore knowledge of the unconscious is indispensable for every true self-investigation. Through its integration, the centre of the personality is displaced from the limited ego into the more comprehensive self, into that centre which embraces both realms, the conscious and the unconscious, and unites them with each other. This self is the mid-point about which the true personality turns. It has therefore been since remotest times the goal of every method of development based upon the principle of self-knowledge, as, for example, Indian yoga proves. From the Indian standpoint our psychology looks like a “dialectical” yoga. I must remark, however, that the yogi has quite definite notions as to the goal to be reached and does everything to attain this postulated goal. With us, intellectualism, rationalism, and voluntarism are such dangerous psychic forces that psychotherapy must whenever possible avoid setting itself any such goal. If the goal of wholeness and of realizing his originally intended personality should grow naturally in the patient, we may sympathetically assist him towards it. If it does not grow of itself, it cannot be implanted without remaining a permanent foreign body. Therefore we renounce such artifices when nature herself is clearly not working to this end. As a medical art, equipped only with human tools, our psychotherapy does not presume to preach salvation or a way thereto, for that does not lie within its power.

FOREWORD TO SPIER: "THE HANDS OF CHILDREN"¹

[1818] Chirology is an art which dates back to very ancient times. The ancient physicians never hesitated to make use of such auxiliary techniques as chiromancy and astrology for diagnostic purposes, as is shown, for instance, by the little book written by Dr. Goclenius,² who lived at the end of the sixteenth century in Würzburg. The rise of the natural sciences and hence of rationalism in the eighteenth century brought these ancient arts, which could look back on a thousand or more years of history, into disrepute, and led to the rejection of everything that, on the one hand, defied rational explanation and verification by experiment or, on the other, made too exclusive a claim on intuition. On account of the uncertainty and paucity of scientific knowledge in the Middle Ages, even the most conscientious thinkers were in danger of applying their intuition more to the promotion of superstition than of science. Thus all early, and particularly medieval, treatises on palmistry are an inextricable tangle of empiricism and fantasy. To establish a scientific method and to obtain reliable results it was necessary, first of all, to make a clean sweep of all these irrational procedures. In the twentieth century, after two hundred years of intensive scientific progress, we can risk resurrecting these almost forgotten arts which have lingered on in semi-obscurity and can test them in the light of modern knowledge for possible truths.

[1819] The view of modern biology that man is a totality, supported by a host of observations and researches, does not exclude the possibility that *hands*, those organs so intimately connected with the psyche, might reveal by their shape and functioning the psychic peculiarities of the individual and thus furnish eloquent and intelligible clues to his character. Modern science is steadily abandoning the medieval conception of the dichotomy of body and mind, and just as the body is now seen to be something neither purely mechanical nor chemical, so the mind seems to be but another aspect of the living body. Conclusions drawn from one as to the nature of the other seem therefore to be within the realm of scientific possibility.

[1820] I have had several opportunities of observing Mr. Spier at work, and must admit that the results he has obtained have made a lasting impression on me. His method, though predominantly intuitive, is based on wide practical experience. Experiences of this nature can be rationalized to a large extent, that is to say they admit of a rational explanation once they have happened. Apart from routine, however, the manner in which they are obtained depends at all decisive points on a finely differentiated, creative intuition which is in itself a special talent. Hence persons with nothing but an

average intelligence can hardly be expected to master the method. There is, nevertheless, a definite possibility that people who are intuitively gifted will be able to obtain similar results provided they are properly taught and trained. Intuition is not by any means an isolated gift but a regular function which is capable of being developed. Like the functions of seeing and hearing it has a specific field of experience and a specific range of knowledge based upon this.

[1821] The findings presented in this book are of fundamental importance for psychologists, doctors, and teachers. Spier's chiromancy is a valuable contribution to the study of human character in its widest sense.

FOREWORD TO THE HEBREW EDITION OF JUNG: "PSYCHOLOGY AND EDUCATION"¹

[1822] I have before me the Hebrew edition of my essays on psychology and education.² Not knowing this language, I am unable to appreciate the merits of the translation, so I can only bid it welcome as a "firstling" that is unique in my experience.

[1823] As the study of the child psyche and the question of education may fairly be said to occupy a privileged position today, it does not seem inappropriate that the contributions of analytical psychology should receive some attention. I have never made the child psyche an object of special research, but have merely collected experiences from my psychotherapeutic practice. These do however give rise to a number of interesting observations, firstly in regard to adults who have not yet rid themselves of their disturbing infantilism, secondly in regard to the complex relations between parents and children, and thirdly in regard to the children themselves.

[1824] The complex psychology of the child and in particular the psychic disorders of children are more often than not causally connected with the psychology of the parents, and in most cases one would do well to pay more attention to the faulty attitude of parents and educators than to the child's psyche, which in itself would function correctly if it were not disturbed by the harmful influence of the parents. The most important question next to the education of the child is the education of the educator. I hope these essays will prove stimulating in this respect, which is the one I would recommend to the especial consideration of the reader.

ADDENDA

FOREWORD TO "PSYCHOLOGISCHE ABHANDLUNGEN," VOLUME I¹

[1825] The *Psychologische Abhandlungen* (Psychological Papers) comprise the works of my friends and pupils as well as other colleagues, and also my own contributions to psychology. In accordance with the character of our psychological interests, this series will include not only works in the area of psychopathology, but also investigations of a general psychological nature. The present state of psychology seems to make it advisable that schools or movements have their own organs of publication; in this way a troublesome scattering of works among many different periodicals can be avoided, and mutuality of outlook can achieve suitable expression through publication in one consistent place.

Küsnacht-Zurich, May 1914

The Editor:
C. G. JUNG

ADDRESS AT THE PRESENTATION OF THE JUNG CODEX¹

Mr. President, Mr. Minister, viri magnifici, Ladies and Gentlemen!

[1826] It gives me much pleasure to accept this precious gift in the name of our Institute. For this I thank you, and also for the surprising and undeserved honour you have done me in baptising the Codex with my name. I would like to express my special thanks both to Mr. Page, who through generous financial assistance made the purchase of the papyrus possible, and to Dr. Meier, who through unflagging efforts has given it a home.

[1827] Dr. Meier has asked me to say a few words to you about the psychological significance of Gnostic texts. Of the four tracts contained in this codex, I should like to single out especially the *Evangelium Veritatis*, an important Valentinian text that affords us some insight into the mentality of the second century A.D. “The Gospel of Truth” is less a gospel than a highly interesting commentary on the Christian message. It belongs therefore to the series of numerous “phenomena of assimilation,” its purpose being to assimilate this strange and hardly understandable message to the Hellenistic-Egyptian world of thought. It is evident that the author was appealing to the intellectual understanding of his reader, as if in remembrance of the words: “We preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness” (I Cor. 1.23). For him Christ was primarily a metaphysical figure, a light-bringer, who went forth from the Father in order to illuminate the stupidity, darkness, and unconsciousness of mankind and to lead the individual back to his origins through self-knowledge. This deliverance from *agnosia* relates the text to the accounts which Hippolytus, in his *Elenchos*, has left of the Gnostics, and of the Naassenes and Peratics in particular. There we also find most of what I call the “phenomena of assimilation.” By this term I mean to delineate those specifically psychic reactions aroused by the impact that the figure and message of Christ had on the pagan world, most prominently those allegories and symbols such as fish, snake, lion, peacock, etc., characteristic of the first Christian centuries, but also those much more extensive amplifications due to Gnosticism, which clearly were meant to illuminate and render more comprehensible the metaphysical role of the Saviour. For the modern mind this accumulation of symbols, parables, and synonyms has just the opposite effect, since it only deepens the darkness and entangles the light-bringer in a network of barely intelligible analogies.

[1828] Gnostic amplification, as we encounter it in Hippolytus, has a character in part hymn-like, in part dream-like, which one invariably finds where an aroused imagination is trying to clarify an as yet still unconscious content. These are, on the one hand, intellectual, philosophical—or rather, theosophical—speculations, and, on the other, analogies, synonyms, and symbols whose psychological nature is immediately convincing. The phenomenon of assimilation mainly represents the reaction of the psychic matrix, i.e., the unconscious, which becomes agitated and responds with archetypal images, thereby demonstrating to what degree the message has penetrated into the depths of the psyche and how the unconscious interprets the phenomenon of Christ.

[1829] It is not likely that the Gnostic attempts at elucidation met with success in the pagan world, quite aside from the fact that the Church very soon opposed them and whenever possible suppressed them. Luckily during this process some of the best pieces (to judge by their content) were preserved for posterity, so that today we are in a position to see in what way the Christian message was taken up by the unconscious of that age. These assimilation phenomena are naturally of especial significance for psychologists and psychiatrists, who are professionally concerned with the psychic background, and this is the reason why our Institute is so interested in acquiring and translating authentic Gnostic texts.

[1830] Although suppressed and forgotten, the process of assimilation that began with Gnosticism continued all through the Middle Ages, and it can still be observed in modern times whenever individual consciousness is confronted with its own shadow, or the inferior part of the personality. This aspect of human personality, which is most often repressed owing to its incompatibility with one's self-image, does not consist only of inferior characteristics but represents the entire unconscious; that is, it is almost always the first form in which unconsciousness brings itself to the attention of consciousness. Freud's psychology occupied itself exclusively, so to speak, with this aspect. Behind the shadow, however, the deeper layers of the unconscious come forward, those which, so far as we are able to ascertain, consist of archetypal, sometimes instinctive, structures, so-called "patterns of behaviour." Under the influence of extraordinary psychic situations, especially life crises, these archetypal forms or images may spontaneously invade consciousness, in the case of sick persons just as in the case of healthy ones. The general rule, however, is that modern man needs expert help to become conscious of his darkness, because in most cases he has long since forgotten this basic problem of Christianity: the moral and intellectual *agnosia* of the merely natural man. Christianity, considered as a psychological phenomenon, contributed a great deal to the development of consciousness, and wherever this dialectical process has not come to a standstill we find new evidence of assimilation. Even in medieval Judaism a parallel process took place over the

centuries, independently of the Christian one, in the Kabbala. Its nearest analogy in the Christian sphere was philosophical alchemy, whose psychological affinities with Gnosticism can easily be demonstrated.

[1831] The urgent therapeutic necessity of confronting the individual with his own dark side is a secular continuation of the Christian development of consciousness and leads to phenomena of assimilation similar to those found in Gnosticism, the Kabbala, and Hermetic philosophy.

[1832] The reactions of the matrix that we observe these days are not only comparable, both in form and in content, with Gnostic and medieval symbols, but presumably are also of the same sort, and have the same purpose as well, in that they make the figure of *Hyios tou anthropou*, Son of Man, the innermost concern of the individual, and also expand it into a magnitude comparable with that of the Indian *purusha-atman*, the *anima mundi*. At this time, however, I would prefer not to go any further into these modern tendencies, which indeed were developing among the Gnostics.

[1833] Since comparison with these earlier historical stages is of the greatest importance in interpreting the modern phenomena, the discovery of authentic Gnostic texts is, especially for the direction our research is taking, of the greatest interest, all the more so in that it is not only of a theoretical but also of a practical nature. If we seek genuine psychological understanding of the human being of our own time, we must know his spiritual history absolutely. We cannot reduce him to mere biological data, since he is not by nature merely biological but is a product also of spiritual presuppositions.

[1834] I must unfortunately content myself with these bare outlines in attempting to explain our interest in a Gnostic text. Further proof of our interest in Gnosticism and detailed explanations may be found in a number of studies that have already been published.

BIBLIOGRAPHY

BIBLIOGRAPHY

The bibliography does not, as a rule, list works that are the source of contents of this volume. Details of such works are given in the initial footnote of the respective items of contents.

JUNG, CARL GUSTAV:

CASES IN SUMMARY in *order of presentation, numbered for reference*:

- [1] Widow with hysteria, wrongly diagnosed as sarcomatosis of the spinal cord.—58
- [2] Man aged 40 suffering from vertigo, with dream-series.— 78–82, 86–94, 96
- [3] Girl of 10 with mythological dreams, who gave her father a book of them for Christmas and died a year later.—96, 229–34, 239, 259
- [4] Schizophrenic woman who painted pictures to objectify her condition.—100–101
- [5] Young Frenchman whose depression began following journey to Spain and dream of Toledo cathedral.—112–23, 166
- [6] Young man with compulsion neurosis, living off a woman's savings, who wrote analysis of his case.— 128–30
- [7] Woman doctor aged 58 whose previous analyst had shown no emotions.—139
- [8] Man who bought Egyptian sculpture of cat, illustrating projection of feminine image.—141–42
- [9] Lady forced to come to consultation by transference.—143
- [10] Girl of 24, born in Java. Before her three attempts to start analysis she had three dreams of a customs house at the frontier. Jung's own dream of her in castle tower showed his misplaced devaluation of her sister of Case, 30.— 43–46, 150, 531n
- [11] American woman analyst threatened by her patient with a revolver, unable to accept her feelings as a woman.—147
- [12] Young artist who had difficulty in using active imagination.—169–71
- [13] University scientist who drank and was lonely: he recorded his own dream-series illustrating archetypal symbolism.— 173–76, 285&nn, 538, 540
- [14] Woman in stupor, who remembered events under hypnosis.—197
- [15] Professor of philosophy and psychology with cancer phobia.—206, 242
- [16] Man trying to “get above himself” whose dream foreshadows his death in mountain accident.—207
- [17] Woman whose dreams foreshadowed attack on her by sexual pervert.—208
- [18] Man whose cause of neurosis was circumvented for ten years.—224–25
- [19] Professor who had vision repeated in old woodcut.—229, 540
- [20] Alcoholic cured temporarily by Oxford Group, sent to Jung after relapse.—242, 272
- [21] Woman of the nobility who discussed her analysis with a Jesuit father-confessor.—269

- [22] Catholic lady from Rome who was helped back into full confession by Jung, after over-involvement with father-confessor.—271–72
- [23] Woman student of philosophy with father-transference to Jung.—277
- [24] Jewish girl with anxiety neurosis.—278–79
- [25] Somnambulistic girl.—309, 482
- [26] Boy aged, 9 who stabbed his sister after a “little man” appeared to him.—343–44
- [27] Man who murdered his family; his wife, a member of a religious sect, instilled the criminal impulse into him.—344–45
- [28] 35-year-old female hysteric with respiratory disturbances. —430–31
- [29] 34-year-old female neurotic with fantasy of man suspended by genitals.—446
- [30] Woman, later treated by van Helsing, whose paintings reflect her childhood divided between Indomalaysia and Holland (sister of Case 10).—530–31
- [31] Seven-year-old son of unhappy marriage who put pictures of mandalas round his bed.—538

THE COLLECTED WORKS OF C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*** 3. THE PSYCHOGENESIS OF MENTAL DISEASE**

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

† 4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡ 5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

* 6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

† 7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912);

The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡ 8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*** 9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS**

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*** 9. PART II. AION (1951)**

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

* 10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928, 1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933'1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to "Essays on Contemporary Events" (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff's "Studies in Jungian Psychology" (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling's "America Set Free" (1930) and "La Révolution
Mondiale" (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

† 11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

* 12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

† 13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡ 14. MYSTERIUM CONIUNCTIONIS (1955-56)

AN INQUIRY INTO THE SEPARATION AND SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

* 15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

† 16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)
The Practical Use of Dream-Analysis (1934)
The Psychology of the Transference (1946)
Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡ 17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)
Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)
Child Development and Education (1928)
Analytical Psychology and Education: Three Lectures (1926/1946)
The Gifted Child (1943)
The Significance of the Unconscious in Individual Education (1928)
The Development of Personality (1934)
Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

See also:

C. G. JUNG: LETTERS

Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé. Translations from the German by R.F.C. Hull.

VOL. 1: 1906–1950

VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS

Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

* The contents of each part are related to volumes of the Collected Works as indicated. Dates are of first publication or, when known, of writing.

¹ [The charts and diagrams have been re-executed, and photographs of the drawings (actually water-colours) have kindly been furnished by Dr. E. A. Bennet.]

- ¹ [*Anthropologie in pragmatischer Hinsicht* (1798), Pt. I, Bk. I, sec. 5.]
- ² [“There is nothing in the mind that was not in the senses.” Cf. Leibniz, *Nouveaux Essais sur l’Entendement humain*, Bk. II, ch. 1, sec. 2, in response to Locke. The formula was scholastic in origin; cf. Duns Scotus, *Super universalibus Porphyrii*, qu. 3.]
- ³ [*In Johannis Evang.*, XXXIV, 2. Cf. *Symbols of Transformation* (C.W., vol. 5), par. 162 and n. 69.]
- ⁴ [Cf. “The Realities of Practical Psychotherapy” (C.W., vol. 16, 2nd edn.), pars. 558ff.]
- ⁵ [What Jung may have had in mind are the *melothesia*e, explained in “Psychology and Religion” (C.W., vol. 11), par. 113, n. 5; cf. *Psychology and Alchemy*, fig. 156.]
- ⁶ [*Psychological Types* (C.W., vol. 6), Definition 47.]
- ⁷ [*Ibid.*, Def. 53.]
- ⁸ [*Ibid.*, Def. 5.]
- ⁹ [*Ibid.*, Def. 21.]
- ¹⁰ [*Ibid.*, Def. 44.]
- ¹¹ [*Ibid.*, Def. 35.]
- ¹² [*Ibid.*, Def. 30.]
- ¹³ [*Ibid.*]

¹⁴ [The theory was independently advanced by William James and by the Danish physiologist C. G. Lange, and is commonly referred to by both their names.]

¹⁵ [Jung and Peterson, “Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals” (1907); Jung and Ricksher, “Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals” (1907); in C.W., vol. 2.]

¹⁶ [Possibly a stenographic slip for Jakob Freundlich, who conducted electrocardiogram experiments; see his article in *Deutsches Archiv für klinische Medizin* (Berlin), 177:4 (1934), 449–57.]

¹⁷ [According to a Japanese legend, the *namazu*, a kind of catfish of monstrous size, carries on its back most of Japan, and when annoyed it moves its head or tail, thus provoking earthquakes. The legend is often depicted in Japanese art.]

¹⁸ [Louis Victor de Broglie, French physicist, recipient of Nobel Prize for physics (1929), discovered the wave character of electrons. In the preceding sentence of the text, instead of “oscillations” and “corpuscles” the more usual terms would be “waves” and “particles.”]

¹⁹ [Cf. “Synchronicity: An Acausal Connecting Principle” (C.W., vol. 8).]

- ¹ [Cf. *The Archetypes and the Collective Unconscious* (C.W., vol. 9, i), par. 5.]
- ² See *Psychology of the Unconscious* [or *Symbols of Transformation* (C.W., vol. 5), index, s.v.].
- ³ [Henri Hubert and Marcel Mauss, *Mélanges d'histoire des religions*, p. xxix.]
- ⁴ [Cf. *Symbols of Transformation*, par. 154.]
- ⁵ [Cf. “Psychology and Literature” (C.W., vol. 15), par. 150; “Psychology and Religion” (C.W., vol. 11), par. 100, and “Brother Klaus” (ibid.), par. 484. Documentation of the Rhodesian “sun-wheels” has not been possible, though such rock-carved forms are noted in Angola and South Africa: cf. Willcox, *The Rock Art of South Africa*, fig. 23 and pls. xvii–xx. Their dating is in doubt. The “rhino with tick-birds” is from the Transvaal and is in a museum in Pretoria. It was discovered in 1928 and widely publicized.]
- ⁶ [Albrecht Dieterich, *Eine Mithrasliturgie*.]
- ⁷ [*Symbols of Transformation*, pars. 151ff.; *The Archetypes and the Collective Unconscious*, par. 105; *The Structure and Dynamics of the Psyche* (C.W. vol. 8), pars. 228 and 318f.]
- ⁸ *How Natives Think*, trans. by Lilian A. Clare.
- ⁹ For general description of types and functions, see *Psychological Types*, Chap. X.
- ¹⁰ [Cf. Terence, *Heauton Timorumenos*, 1.1.25: “Homo sum; humani nil a me alienum puto” (I am a man; I count nothing human alien to me).]
- ¹¹ [*Civilization in Transition* (C.W., vol. 10), pars. 94ff. and 946ff.]
- ¹² *Studies in Word Association*, trans. by Eder. [Also in *Experimental Researches* (C.W., vol. 2).]
- ¹³ *Two Essays on Analytical Psychology* (C.W., vol. 7), pars. 245f., 304f.

¹⁴ [Cf. supra, par. 48, n. 15.]

¹⁵ [Cf. T. M. Davie, “Comments upon a Case of ‘Periventricular Epilepsy,’ ” *British Medical Journal*, no. 3893 (Aug. 17, 1935), 293–297. The dream is reported by a patient of Davie as follows: “Someone beside me kept on asking me something about oiling some machinery. Milk was suggested as the best lubricant. Apparently I thought that oozy slime was preferable. Then a pond was drained, and amid the slime there were two extinct animals. One was a minute mastodon. I forgot what the other one was.”

Davie’s comment: “I thought it would be of interest to submit this dream to Jung to ask what his interpretation would be. He had no hesitation in saying that it indicated some organic disturbance, and that the illness was not primarily a psychological one, although there were numerous psychological derivatives in the dream. The drainage of the pond he interpreted as the damming-up of the cerebrospinal fluid circulation.”]

¹⁶ [*The Practice of Psychotherapy* (C.W., vol. 16), pars. 344f.]

¹⁷ [Cf. supra, par. 17, n. 4.]

¹⁸ [The mandala motif, in a lecture, “Traumsymbole des Individuationsprozesses,” that Jung delivered a few weeks previously at the Eranos Tagung. It was published the next year in *Eranos-Jahrbuch 1935*; in translation, as “Dream Symbols of the Process of Individuation,” *The Integration of the Personality*, 1939; revised as Part II of *Psychologie und Alchemie*, 1944 (= C.W., vol. 12). See also *infra*, par. 406, n. 15.]

¹⁹ *The Secret of the Golden Flower*. [The Chinese text was translated by Richard Wilhelm. The commentary by Jung is contained in *Alchemical Studies* (C.W., vol. 13).]

²⁰ [William McDougall (1871–1938). American psychiatrist. Cf. Jung’s “On the Psychogenesis of Schizophrenia” (C.W., vol. 3), par. 504, and “The Therapeutic Value of Abreaction” (C.W., vol. 16), par. 255.]

²¹ [Cf. *The I Ching, or Book of Changes*, trans. by Wilhelm/Baynes, 3rd edn., introduction, p. liii.]

¹ [Cf. “On the Importance of the Unconscious in Psychopathology,” and “On Psychological Understanding,” both delivered in 1914 (C.W., vol. 3).]

² For example, the figures of *anima* and *animus*. [See *Two Essays on Analytical Psychology* (C.W., vol. 7), pars. 296ff.]

³ “The Familial Constellations” (C.W., vol. 2) and “The Significance of the Father in the Destiny of the Individual” (C.W., vol. 4), pars. 698–702.

⁴ “On the Practical Use of Dream Analysis” (C.W., vol. 16). [Also “General Aspects of Dream Psychology” and “On the Nature of Dreams” (C.W., vol. 8).]

⁵ [The reference is to Wilhelm Wundt, of Leipzig (1832–1920).]

⁶ *Psychological Types*, Def. 48. See also *Two Essays*, pars. 296ff. [Also *Aion* (C.W., vol. 9, ii), ch. 3.]

⁷ [E.g., *Symbols of Transformation*, Part II, ch. V, especially par. 395.]

⁸ [The reference is to the disaster of 1908, when 90 per cent of the Sicilian city was destroyed, with a loss of 60,000 lives.]

⁹ Cf. W. Y. Evans-Wentz. *The Tibetan Book of the Dead*.

¹⁰ [Cf. infra, pars. 525ff. The case is also discussed in Jacobi, *Complex/Archetype Symbol*, pp. 139ff.]

¹¹ ["Brother Klaus" (C.W., vol. 11).]

¹² [*Psychology and Alchemy* (C.W., vol. 12), pars. 315ff.]

¹ “And Isis, the great lady of enchantments, said, ‘Flow on, poison, and come forth from Rā. ... I have worked, and I make the poison to fall on the ground, for the venom hath been mastered.... Let Rā live, and let the poison die; and if the poison live then Rā shall die.’ And similarly, a certain man, the son of a certain man, shall live, and the poison shall die.” E. A. Wallis Budge, *Egyptian Literature*, I, p. 55.

² [*Symbols of Transformation*, pars. 375ff.]

³ R. Campbell Thompson, *The Epic of Gilgamesh*.

⁴ [Josephus, *The Jewish War* 2.111–115.]

⁵ [Cf. *The Structure and Dynamics of the Psyche* (C.W., vol. 8), frontispiece and refs. with it.]

⁶ [Thus far, the dream is documented in the “Life of Sophocles,” sec. 12, in *Sophoclis Fabulae*, ed. Pearson, p. xix.]

⁷ [The people of ancient Phocaea, on the western coast of Asia Minor, founded Massilia (Marseilles) and colonies on the east coast of Spain.]

⁸ [Cf. *Psychological Types*, ch. V, 4a.]

⁹ [*Symbols of Transformation*, pars. 572f.]

¹⁰ [Cf. *Psychology and Alchemy*, par. 105, n. 35, citing Foucart, *Les Mystères d’Eleusis*. According to classicists, Asterios’ report referred to rituals of Demeter celebrated at Alexandria in which a priest (not of Apollo) and a priestess performed the *hierosgamos*. The narration of *aischrologia* to please Demeter occurred during the Thesmophoria, an autumn festival in her honour, the Stenia, celebrating her return, and the mid-winter Haloa, sacred to Demeter and Dionysus. Cf. Harrison, *Prolegomena*, ch. IV, esp. pp. 136, 148f.]

¹¹ [Herodotus 2.60 (Penguin edn., pp. 125f.).]

¹² [See *Aion* (C.W., vol. 9, ii), frontispiece, and *Symbols of Transformation*, index, s.v.]

¹³ *New Sayings of Jesus and Fragment of a Lost Gospel*, ed. by Grenfell and Hunt [pp. 36 and 15].

¹⁴ [It is MS. Bruce 96, Bodleian Library, Oxford. Cf. *Psychology and Alchemy*, par. 138f.]

¹⁵ [For further analysis of this dream, from the Basel Seminar (supra, p. 3), see Jung's *L'Homme à la découverte de son âme*, pp. 214ff.]

15 [*Jahrbuch für psychoanalytische und psychopathologische Forschungen* (Leipzig and Vienna); Jung withdrew from the editorship in 1913.]

¹⁶ W. M. Kranefeldt, *Secret Ways of the Mind*; G. R. Heyer, *The Organism of the Mind*; Gerhard Adler, *Entdeckung der Seele*.

¹⁷ [Luke 18:19.]

¹⁸ [See supra, par. 135, n. 15.]

- ¹ [The case is discussed more fully in “The Realities of Practical Psychotherapy” (C.W., vol. 16, 2nd edn.), appendix. See also “Concerning Mandala Symbolism” (C.W., vol. 9, i), pars. 656–659 and figs. 7, 8, and 9, showing mandalas painted by this patient.]
- ² [Supra, pars. 322f.]
- ³ [This is actually the same case that was discussed supra, pars. 334f.]
- ⁴ [For Jung’s later views on this problem, see “The Psychology of the Transference” (C.W., vol. 16).]
- ⁵ *Two Essays* (C.W., vol. 7), pars. 374ff.
- ⁶ *Two Essays*, pars. 206ff.
- ⁷ “The Role of the Unconscious” (C.W., vol. 10), par. 17.
- ⁸ “Wotan” (C.W., vol. 10).
- ⁹ [Act III. in a speech by Don Juan (Penguin edn., 1952, p. 149).]
- ¹⁰ [Cf. Virgil, *Eclogue V*, 64: “ipsa sonant arbusta: ‘deus, deus ille, Menalca!’” (the very groves ring out: “A god is he, a god, Menalcas!”).]
- ¹¹ See particularly the “Commentary on *The Secret of the Golden Flower*” (C.W., vol. 13, and “The Aims of Psychotherapy” (C.W., vol. 16).
- ¹² See *Psychological Types*, Def. 29, and *Two Essays*, pars, 266ff. [Also “A Study in the Process of Individuation” C.W., vol. 9. iv.]
- ¹³ [Cf. *Psychology and Alchemy*, pars. 44, 126, 129, 135, 325ff.]
[Cf. *Psychology and Alchemy* (C.W., vol. 12), par. 360.]

¹⁴ This case provided the material for Part II of *Psychology and Alchemy*.]

¹⁵ “Traumsymbole des Individuationsprozesses,” in the *Eranos-Jahrbuch 1935*. [Now Part II of *Psychology and Alchemy*.]

¹⁶ [Cf. “Commentary on *The Secret of the Golden Flower*” (C.W., vol. 13) and “Concerning Mandala Symbolism” (C.W. vol. 9, 1).]

¹ [Dominicus Gnosius, *Hermetis Trismegisti Tractatus vere Aureus de Lapide philosophici secreto* (1610), p. 101.—
EDITORS.]

² Lévy-Bruhl later retracted this term under the pressure of adverse criticism, to which he unfortunately succumbed.
His critics were wrong inasmuch as unconscious identity is a well-known psychological fact.

¹ Ch. XL, “Great Events” (trans. Common, p. 180, slightly modified). [For other discussions, see *Psychiatric Studies*, pars. 140ff. and 180ff.—EDITORS.]

² Vol. IV. p. 57, headed “An Extract of Awe-Inspiring Import from the Log of the Ship *Sphinx* in the Year 1686, in the Mediterranean.”

³ [In 1925; see *Memories, Dreams, Reflections*, ch. IX, iii.]

⁴ [In 1924–25; *ibid.*, ch. IX, ii.]

⁵ [Cf. "Concerning Rebirth" (C.W., vol. 9, i), par. 250.]

¹ [(“Contemporary Psychic Problems.”) *Psychologische Abhandlungen*, III. Thirteen articles by Jung, originally published from 1925 on, and assigned to seven C.W. vols.; and one essay, “‘Komplex’ und Mythos,” by W. M. Kranefeldt.]

² [*Il problema dell’inconscio nella psicologia moderna*, trans. by Arrigo Vita and Giovanni Bollea (Turin), originally published 1942; new edn., 1959, with the present foreword, here trans. from the German original.]

¹ [With an introduction by Bronislaw Malinowski (London and New York, 1931). Aldrich's trans. of the foreword is reproduced here with minor changes. The original appears to have been lost. See Jung's letter to the author, 5 Jan. 1931, in *Letters*, ed. G. Adler, vol. 1. Charles Roberts Aldrich, who resided in California, died in 1933.]

² [*Wandlungen und Symbole der Libido* (1912).]

¹ [Unpublished typescript, written in English. While it apparently was intended for the New York press, no instance of its publication or quotation has been discovered. For an interview that Jung gave the *New York Times* (4 Oct. 1936) upon leaving New York, see “The 2,000,000 Year Old Man,” in *C. G. Jung Speaking*.]

² [For Jung’s contribution, under this title, see C.W., vol. 8. The symposium at Harvard was actually entitled *Factors Determining Human Behavior*.]

- ¹ [A lecture delivered in English at the Institute of Medical Psychology (The Tavistock Clinic), London, 14 Oct. 1936, when Jung had just returned from his visit to the United States (see the preceding article). He had written the lecture during the voyage, according to his daughter Marianne Niehus-Jung. The text, based on a holograph MS, has not been previously published, though similar ideas are found in an interview with Jung in the *Observer* (London, date undetermined), reprinted in *Time*, 9 Nov. 1936, *The Living Age* (New York), Dec. 1936, and as “The Psychology of Dictatorship” in *C. G. Jung Speaking*.]
- ² [Arrival of a German warship at the port of Agadir, Morocco, which precipitated an international crisis in 1911.]
- ³ [Jung evidently elaborated this schema in his lecture.]
- ⁴ [As examples of regression, presumably elaborated in the lecture, the holograph itemizes: 1. Father and mother complex. 2. Complex of infantile religion. 3. Regression to infantile criminality. 4. Regression to archetypes: schizophrenia, mystical experience, and analytical experience.]
- ⁵ [Cf. “The Role of the Unconscious” (C.W., vol. 10), pars. 17ff.]
- ⁶ [Cf. Price, *An Account of Some Further Experiments with Willy Schneider* (1925), *The Phenomena of Rudi Schneider* (1926), and other books on these Austrian mediums.]
- ⁷ [Mosley founded the British Union of Fascists (“Blackshirts”) in 1932. Col. François de la Rocque was leader of the French reactionary group “Croix de Feu.”]
- ⁸ [National Recovery Administration, established to administer the National Industrial Recovery Act (13 June 1933), recognizing a “national emergency” and vesting in the President (F. D. Roosevelt) authority to approve codes of fair competition for various trades and industries, regulate wages, hours of labour, etc.]
- ⁹ [Sir Samuel Hoare, later Viscount Templewood (1880–1959), British foreign secretary in 1935, when he sought to appease Italy in its conquest of Ethiopia.]
- ¹⁰ [Cf. “Wotan” (C.W., vol. 10), par. 373.]
- ¹¹ [Cf. “A Study in the Process of Individuation” and “Concerning Mandala Symbolism” (C.W., vol. 9, i).]
- ¹² [Cf. “The Realities of Practical Psychotherapy” (C.W., vol. 16, 2nd edn., Appendix), par. 560. Also Arthur Avalon, *The Serpent Power*.]
- ¹³ [Concerning the persona, cf. *Two Essays on Analytical Psychology*, C.W., vol. 7, pars. 243ff., 305ff.]
- ¹⁴ [Source unidentifiable. MacDonald (1886–1937) was Great Britain’s first Labour prime minister, 1924, and again 1929–1935.]
- ¹⁵ [*The Observer* (London), 11 Oct. 1936, in an article written from Salamanca 3 Oct. 1936. Unamuno (1891–1936) repudiated the Franco regime in a moving speech at Salamanca on 12 Oct. 1936.]
- ¹⁶ [Illegible in holograph.]

¹ [Translated from “Rückkehr zum einfachen Leben,” *DU: Schweizerische Monatsschrift*, Jhg. I, no. 3 (May 1941). An editorial note in *DU* states that it is a summation of Jung’s reply to a questionnaire sent out by the Schweizer Feuilleton-Dienst (features service) to various eminent Swiss, on the effects of wartime conditions in Switzerland.]

² [*Faust II*, Act 5.]

¹ [(Translated from the French by A.S.B.G.) The volume for which this was written (in the series Collection Action et Pensée, no. 10, Geneva, 1944) contained five essays by Jung, translated, with a preface, by Roland Cahen-Salabelle, together with extracts from Jung's Basel Seminar (1934) and "Tavistock Lectures" (supra, pars. 1ff.), edited by Dr. Cahen (later form of his name). Only two of the essays are among the eleven that composed *Modern Man in Search of a Soul* (New York and London, 1933).]

¹ [Translated from a typescript, “Randglossen zur Zeitgeschichte,” dated 1945, unpublished except for the last nine paragraphs (see below, par. 1374, n. 5). Cf. Jung, *Aufsätze zur Zeitgeschichte* (1946); trans. as *Essays on Contemporary Events* (1947); its contents (in C.W., vols. 10 and 16) were published originally 1936–45.]

² This can be disputed, since it is the Christian *organizations* that have demonstrated their impotence. But if you identify the Church with Christianity, this distinction collapses.

³ All -isms that promise a “better” world are to be distrusted on principle, for this world only becomes different, but not better. Man can, however, to a certain extent adopt a better or worse *attitude*, one that is more reasonable or less. Of the basic evils of existence, inner and outer, he will never be freed. He would do better to realize that this world is a battleground, and at any time only a short span between birth and death.

⁴ [Nazi concentration camp of World War II, near Lublin, Poland.]

⁵ [Pars. 1375–83 were published in the *Basler Nachrichten*, no. 486 (16 Nov. 1946), under the title “Zur Umerziehung des deutschen Volkes” (“On the Re-education of the German People”).]

⁶ [“Wotan” C. W., vol. 10, par. 391.]

⁷ [*Works*, trans. by C. de B. Evans. II, pp. 18f.]

⁸ In view of the most recent events in Europe one must guard against the assumption that a Christian education has penetrated to the marrow.

⁹ [Ludwig Büchner (1824–99), German physician and philosopher, apostle of extreme materialism.]

¹ [Not published until 15 Nov. 1974, when Kolb's and Jung's letters were printed in *Mishmar* (in Hebrew), with editorial comments, under the heading, "What Did Jung Say to Mishmar's Correspondent in Switzerland 29 Years Ago?" The publication was the consequence of an inquiry sent to *Mishmar* by the editors of the C.W., attempting to learn whether the late Eugen Kolb had published Jung's letter.]

¹ [From a holograph, with typescript passages, written (in English) in 1948 in response to a request from the United Nations Educational, Scientific and Cultural Organization (Unesco). The Second General Conference of Unesco, in Nov.–Dec. 1947, had adopted a resolution instructing the Director General to promote “enquiries into modern methods which have been developed in education, political science, philosophy and psychology for changing mental attitudes and into the social and political circumstances which favour the employment of particular techniques.” Accordingly, memoranda were commissioned from individuals at specialized institutes, including the International Psychoanalytic Association, the Tavistock Institute of Human Relations, and the C. G. Jung Institute for Analytical Psychology. Mr. P. W. Martin, an official of Unesco, conducted the arrangements with the Jung Institute. Jung’s memorandum, published here (with minor stylistic revisions), was later partially incorporated in a text prepared by Dr. Jolande Jacobi on behalf of the Jung Institute, which was sent to Unesco on 23 June 1948 for discussion at the Conference on Methods of Attitude Change Conducive to International Understanding in October 1948, at Royaumont (near Paris). The Jung Institute’s memorandum was not, however, included in the agenda of the Royaumont Conference. Acknowledgment is made to the Unesco Press for permission to publish this memorandum and to Mr. J. Havet, Director of the Unesco Department of Social Sciences, for his advice and assistance in 1974.]

² Here a list of “books of reference” was appended: (1) Attitude: *Psychological Types*. (2) Method: *The Relations between the Ego and the Unconscious*; *L’Homme à la découverte de son âme*; Baynes, *Mythology of the Soul*; Wickes, *Inner World of Childhood* and *Inner World of Man*; *Psychologie und Erziehung*. (3) Psychology: *Über die Psychologie des Unbewussten*; *Psychology and Religion*; *Über psychische Energetik und das Wesen der Träume*; *Psychologie der Übertragung*; Jacobi, *The Psychology of C. G. Jung*.

¹ [Letter, of 14 Sept. 1949, to the editors of the *Zürcher Student* (Eidgenössische Technische Hochschule = Federal Polytechnic Institute), published in the Nov. 1949 issue, Jhg. 27.]

¹ [Written in 1949 for a proposed English edition of Erich Neumann, *Tiefenpsychologie und neue Ethik* (Zurich, 1949). An English edition was published only in 1969 (New York and London), trans. by Eugene Rolfe, with the present trans. of the foreword by R.F.C. Hull (here slightly revised). For Jung's appraisal of the book when it was published in German, see *Letters*, ed. G. Adler, vol. 1, to Neumann, Dec. 1948, and to J. Fierz, 13 Jan. 49.]

² "The most wretched of inventors are those who invent a new morality: they are always immoralists," says a French aphorist. [Untraceable.]

¹ [London, 1950. The foreword was written in English. Helton Godwin Baynes (1882–1943), English analytical psychologist, accompanied Jung on his expedition to East Africa in 1925–26.]

² [London and New York, 1923. The version in C.W., vol. 6, is the Baynes trans. revised by R.F.C. Hull. Baynes also translated, in collaboration with his then wife Cary F. Baynes, Jung's *Contributions to Analytical Psychology* (London and New York, 1928) and *Two Essays on Analytical Psychology* (London and New York, 1928).]

³ [London, 1940.]

⁴ [London, 1941.]

¹ [*Weltwoche* (Zurich), Jhg. 22, no. 1100 (10 Dec. 1954). Jung was one of several prominent persons asked to comment on this subject.]

¹ [Letter to *Weltwoche* (Zurich), Jhg. 22, no. 1078 (9 July 1954), in reply to the editor's request for an interview by Georg Gerster. It was followed by further questions and answers, printed in the same issue. Extracts subsequently appeared as an article (not submitted to Jung before publication) in the *Flying Saucer Review* (London), May–June 1955, which was reprinted by the Aerial Phenomena Research Organization in the *APRO Bulletin* (Alamogordo, New Mexico), July 1958. The extracted version of the *Weltwoche* letters resulted in misunderstandings which were given much publicity, and on 13 August Jung released a statement to the United Press International (UPI) and to the National Investigations Committee on Aerial Phenomena (NICAP), of which an English version was published in the Sept. issue of the *APRO Bulletin*. A further statement, in the form of a letter to the director of NICAP, Major Donald E. Keyhoe (infra. pars. 1447f.), was published by NICAP in the *UFO Investigator*, 1:5 (Aug.–Sept. 1958). All these documents were republished in *CSI of New York*, Publication No. 27 (July 1959).]

² George Adamski's book (with Desmond Leslie), *Flying Saucers Have Landed*, appeared in 1953 (London). In it he tells the story of how he met a saucer-man in the California desert.

³ [*The War of the Worlds*, adapted by Orson Welles (1938) from H. G. Wells's novel. It is about Martians invading the United States.]

⁴ The report by Major Donald E. Keyhoe concerning his struggle with the Pentagon for recognition of the interplanetary origin of the Ufos was published in 1953 under the title *Flying Saucers from Outer Space*.

⁵ [See above, n. 1. This text is translated from the *Badener Tageblatt*, 29 Aug. 1958, and differs in some respects from the translation in the *APRO Bulletin*.]

⁶ [Trans. by R.F.C. Hull as *Flying Saucers: A Modern Myth of Things Seen in the Skies* (New York and London, 1959) : in C.W., vol. 10.]

⁷ [Original in English. See above, n. 1.]

¹ [Written in English as an invited comment on an article, “Analysis and Faith,” by William H. Roberts, which together with comments by Jung and others—including Gregory Zilboorg, Erich Fromm, and Karl Menninger—was published in *The New Republic* (Washington), 132:20 (16 May 1955). The article was subtitled: “How close are religion and psychiatry in their approaches to sin and salvation?” Roberts was professor of philosophy and religion at Philander Smith College, a Black college in Little Rock, Arkansas.]

¹ [Contributions to symposia: (I) “Das geistige Europa und die ungarische Revolution,” *Die Kultur* (Munich), Jhg. 5, no. 73 (1 Dec. 1956); (II) *Aufstand der Freiheit: Dokumente zur Erhebung des ungarischen Volkes* (Zurich, 1957).]

¹ [Letter of 27 June 1958, answering questions from the editors of the *Zürcher Student* (see above, par. 1403, n. 1) and published in the July 1958 issue, Jhg. 36.]

¹ [Contribution, written in English, to a symposium published in *Cosmopolitan* (New York), CXLV:6 (Dec. 1958), and consisting of “ten highly individual opinions from noted thinkers who have devoted their lives to problems of the spirit.” These also included Norman Vincent Peale, Aldous Huxley, Pitirim A. Sorokin, and Billy Graham.]

¹ [The book (Dorchester, 1961) had the subtitle “A Personal Memoir by His Friends and Family.” The foreword, written in English, is published here with minor stylistic changes.]

¹ [(Translated by H. N.) Written as part of a letter to H. Irringer of Zurich, 22 Sept. 1944, but not sent; instead, Jung retained it in his literary papers. For the letter to Irringer, see *Jung: Letters*, ed. G. Adler, vol. 1.]

¹ [Written July 1945, at the request of Encyclios-Verlag, Zurich, publishers of the *Schweizer Lexikon*. The first sentence and the references at the end of the article were published (without attribution) as the definition of “Dämonie” in the *Lexikon* (1949), vol. I.]

⁹ [“until the coming of Helyas Artista, in whose time all that is hidden will be revealed”]

¹⁰ [Following this letter. Bruno quoted another letter from Jung of 22 Dec. 1954 (misdated by Bruno 1953; here trans. by J.A.P.) :

“So far as concerns the Helias of the alchemists, let me remind you of the text by Gerardus Dorneus [quoted as above]. Instead of saying ‘usque ad adventum Christi,’ the alchemist prefers an earlier form of the anthropos, Elijah, who is one of the four persons raised to heaven with their bodies: Enoch, Elijah, Christ, and Mary.

“The reason why the alchemist preferred Elijah, a figure or condition prior to Christ, is probably because in Paracelsus Elijah, like Enoch, belongs among the ‘Enochdiani and Heliezati,’ that is, among those whose bodies are capable of longevity (up to a thousand years) or else incorruptible, like the bodies of Enoch and Elijah. The prolongation of life was a very special interest of the master’s, whereas the premature death of Christ did not seem interesting to him. (Certainly Paracelsus verged on the scientific materialism of the eighteenth century! Cf. *Theophrasti Paracelsi Tract. De Vita Longa*, edit. by Adam v. Bodenstein, 1562.)

“Jewish tradition says that Elijah remained in the corporeal state so as to be visible to mortal eyes during his peregrinations on earth. After reading a little book I had just written (which had to do among other things with the archetypal nature of Yahweh as revealed in the Book of Job), an intellectual and agnostic (or materialistic) Jew had a dream which was sent to me. In his dream he was back in a concentration camp (where he had actually been during the war). Suddenly he perceived an extraordinarily large eagle circling over the camp. He felt spied upon and watched by the menacing bird and, in a highly emotional state, wanted to defend himself by attacking it. To this end, he was looking for a combat plane with which to bring the animal down.

“Thanks to my book, he had realized that in reality it is possible to abolish the idea of a god by means of reason, yet not possible to free oneself from it when one is dealing with an archetype innate in the structure of the psyche itself. (This dream is discussed in “The Philosophical Tree” [C.W. 13], pars. 466ff.) Elijah in the shape of an eagle represents the eye of Yahweh which sees all—‘oculi Dei qui discurrent in universam terram’ (Zach. 4:10). The fear of God had seized him. Thus the theriomorphic attribute of the ancient prophet still plays its part in our time.”]

¹ [Written in English, 19 Feb. 1954, in reply to an inquiry from Martha Dana, Peggy Gerry, and Marian Reith, members of a seminar on Jung's *Aion* led by Dr. James Kirsch, Los Angeles, 1953–54, during which (Dr. Kirsch has stated) “every line of the book was read and commented upon. While the seminar was in progress Mrs. Dana, Mrs. Gerry, and Mrs. Reith became curious about the fact that in all of the writings of Jung they had not found any commentary on the idea of Resurrection ... [which] seemed to be the central event in the Christ story, and they therefore wondered why Jung had not said anything about it.”]

² [Evidently an error for 16:9ff.]

³ “If Christ be not risen, then is our preaching vain, and your faith is also vain” (I Cor. 15:14).

⁶ Their condition was worse than that of the Egyptians in the last pre-Christian centuries: these had already acquired an individual Osiris. As a matter of fact, Egypt turned Christian at once with no hesitation.

¹ [Statement in the publisher's prospectus for *Die Reden Gotamo Buddhos*, translated from the Pali Canon by Karl Eugen Neumann, 3 vols. Zurich, Stuttgart, Vienna, 1956). Statements were also contributed to the prospectus by Thomas Mann and Albert Schweitzer. Neumann (1865–1915) had published an earlier version of his translation in 1911, which Jung cited in *Wandlungen und Symbole der Libido* (1911–12): cf. *Psychology of the Unconscious* (New York, 1916), p. 538, n. 25. The present statement was published as “Zu *Die Reden Gotamo Buddhos*” in *Gesam. Werke*, XI, Anhang.]

¹ [Göttingen, 1957. By Felicia Froboese-Thiele. (“Dreams—a Source of Religious Experience?”)]

¹ [Extracts from H. L. Philp, *Jung and the Problem of Evil* (London, 1958). The book consists of correspondence between the author and Jung in the form of questions and answers (in English), and an extended critical attack of 175 pages on Jung's writings on religion, with particular reference to *Answer to Job*. It concludes with Jung's answers to questions sent by another correspondent, the Rev. David Cox (author of *Jung and St. Paul*, 1959). In both cases the answers are reproduced here with minor stylistic revisions and additional footnotes. The bibliographical references to Jung's works have been brought up to date. For other letters from Jung to Philp, see *Letters*, ed. G. Adler, vol. 2.]

² [Philp, pp. 8–21. (9 Nov. 1956.)]

³ [In his question, Philp quoted the following passage from Fromm, *Psychoanalysis and Religion*, pp. 23f.: “Before I present Jung's analysis of religion a critical examination of these methodological premises seems warranted. Jung's use of the concept of truth is not tenable. He states that ‘truth is a fact and not a judgment,’ that ‘an elephant is true because it exists.’ But he forgets that truth always and necessarily refers to a judgment and not to a description of a phenomenon which we perceive with our senses and which we denote with a word symbol. Jung then states that an idea is ‘psychologically true inasmuch as it exists.’ But an idea ‘exists’ regardless of whether it is a delusion or whether it corresponds to fact. The existence of an idea does not make it ‘true’ in any sense. Even the practising psychiatrist could not work were he not concerned with the truth of an idea, that is, with its relation to the phenomena it tends to portray. Otherwise, he could not speak of a delusion or a paranoid system. But Jung's approach is not only untenable from a psychiatric standpoint; he advocates a standpoint of relativism which though on the surface more friendly to religion than Freud's, is in its spirit fundamentally opposed to religions like Judaism, Christianity, and Buddhism. These consider the striving for truth as one of man's cardinal virtues and obligations and insist that their doctrines whether arrived at by revelation or only by the power of reason are subject to the criterion of truth.”]

² [*Casti Connubii* of Pius XI, 31 Dec. 1930.]

¹ [Written in answer to questions from Dr. Jolande Jacobi. Published in *DU: Schweizerische Monatsschrift* (Zurich), III: 9 (Sept. 1943), and in an English trans. by an unknown hand in *Horizon* (London), VIII:48 (Dec. 1943). This trans. is reproduced here in revised form. It was previously published in *Spring*, 1969.]

¹ [Translated from a German MS by Victor Grove for the English trans. of Julius Spier, *The Hands of Children: An Introduction to Psycho-chirology* (London, 1944); 2nd edn., 1955, with an appendix, “The Hands of the Mentally Diseased,” by Herta Levi. The trans. has been revised.]

² [Rodolphus Goelenius, *Uranoscopiae, chiroscopiae, metoposcopiae et ophthalmoscopiae contemplatio* (Frankfurt, 1608).

¹ [Tel-Aviv. 1958. Trans. here from the original German MS.]

² ["Psychic Conflicts in a Child," "Analytical Psychology and Education," and "The Gifted Child" (C.W., vol. 17), the contents of *Psychologie und Erziehung* (1946).]

¹[(Translated by L. R.) Leipzig and Vienna: Deuticke, 1914. The volume contained papers by Josef Lang, J. Vodoz, Hans Schmid, and C. Schneiter. The series was not used again until 1928, when Jung published *Über die Energetik der Seele* as vol. II (Zurich: Rascher, henceforward). This and the succeeding volumes were devoted to Jung's writings, sometimes with contributions by colleagues: III (1931), *Seelenprobleme der Gegenwart*, with a contribution by W. M. Kranefeldt; IV (1934), *Wirklichkeit der Seele*, with contributions by Hugo Rosenthal, Emma Jung, and W. M. Kranefeldt; V (1944), *Psychologie und Alchemie*; VI (1948), *Symbolik des Geistes*, with a contribution by R. Schärf; VII (1950), *Gestaltungen des Unbewussten*, with a contribution by Aniela Jaffé; VIII (1951), *Aion*, with a contribution by M.-L. von Franz; IX (1954), *Von den Wurzeln des Bewusstseins*; X–XII (1955–56), *Mysterium Coniunctionis*, with a contribution by M.-L. von Franz (= an edition of *Aurora Consurgens*, constituting vol. XII).]

¹ [(Translation revised and augmented by L. R.) The text of this address given above, pars. 1514–1517 (q.v.), was obtained by the Editors from the Jung archives at Küsnacht in the early 1960's and was assigned to R.F.C. Hull for translation on the assumption that it represented the text that Jung read at the convocation in Zurich, 15 Nov. 1953. In 1975, when the present vol. was in page proof, a considerably augmented version was published (in German) by Professor Gilles Quispel as an appendix to the volume *C. G. Jung: een mens voor deze tijd* (Rotterdam), consisting of essays (in Dutch) on Jung's work by Quispel ("Jung and Gnosis"), C. Aalders, and J. H. Plokker. Quispel had obtained this text of the Address some years earlier from one of the persons who had arranged the convocation. Subsequently, Professor C. A. Meier provided an even fuller version of Jung's actual remarks, and that is translated here (the added material being indicated by a vertical line in the left margin). Jung had first written the shorter version, then had expanded it prior to the occasion, but the shorter version had been circulated.

George H. Page, of Switzerland, donated funds that enabled the Jung Institute to purchase the Codex from the estate of Albert Eid, a Belgian dealer in antiquities who had acquired it in Egypt. Professor Meier, then director of the Institute, had played the leading role in tracing and negotiating for the Codex. In accordance with the original agreement, the Codex was eventually given to the Coptic Museum in Cairo.]

MANUFACTURED IN THE U.S.A.

EDITORIAL NOTE

In the compilation of the following list of published writings, it has been the intention to record (through 1975) the initial publication of each original work of C. G. Jung, each translation, and subsequent substantial revisions and/or expansions thereof, with reciprocal cross-references. The items are ordered chronologically by years of publication, and within the year to the best of our knowledge (books first); items that cannot be dated closely enough appear at the end of the year's listings. Unless otherwise indicated (by an initial asterisk), each publication in German, English, and French has been examined by the compilers and described accordingly. This principle could not, practically, be observed for works in other languages, though these have been examined insofar as possible. Translations are related by cross-references to the work from which the translation was made, though it has not been possible to ascertain this in every case.

Unrevised reprintings of a text are not recorded unless brought out by a different publisher or altered in format, as in the case of a paperback edition. In such instances, the reissue is noted under the original entry. Separately reprinted brief extracts have generally been omitted as well. The proliferation of reprints, particularly in paperback, and of extract and anthologized use of Jung's writings both in brief and in extenso has made a policy of inclusiveness unrealistic.

In addition to all books and articles written by Jung solely or in collaboration with others, it has been the intention to record all forewords and the like written for other authors' works, letters included in other writers' publications, book reviews, newspaper articles both popular and scholarly, published texts of lectures appearing either in full or as summarized by their author ("Autoreferat"), and announcements issued in his capacity as editor.

In order to give as nearly complete a record as possible of Jung's publication, as well as to throw light on the sequence of development of his ideas, we have included, duly distinguished and with the permission of the responsible organizations, those items issued initially for private circulation. For the same reasons, we have included whatever information became available to us in regard to the delivery of a publication on some occasion in lecture form, and other useful secondary information. A separate list records chronologically the volumes of Seminar Notes, for the most part issued privately and under restriction. The numerous interviews with Jung—either published in periodicals and books or recorded for radio, television, or film, or by tape—have not been listed. Those of most interest and value are published in a volume, outside the *Collected Works*, entitled *C. G. Jung Speaking: Interviews and Encounters*.

The *Collected Works* (in English) and the *Gesammelte Werke* (in German) are separately listed, in volume sequence, with the necessary reciprocal cross-references. (Lists of contents of volumes 2 and 13 in the *Gesammelte Werke*, though still in press, were added in proof but could not be included in the indexes.)

While we have aimed at citing every substantial publication of Jung's writings, we are aware that in the case of items appearing in newspapers, books by other authors, etc., and particularly in the case of translations, omissions undoubtedly have occurred. We shall be grateful to be informed of these—and of any omissions and errors whatever—looking toward a revised edition of the General Bibliography.

*

This bibliography of Jung's writings was originally compiled, as a working tool for the English collection edition at the outset, by Michael Fordham, who based it on a list published by Jolande Jacobi in her *The Psychology of C. G. Jung*; he was indebted also, for advice, to Professor Jung's secretary at that time, Marie-Jeanne Schmid. This "draft bibliography," more or less in the form of the present publication, underwent revision and augmentation by the Editors and staff in a printed version that was privately distributed to workers in the field. The project of compiling a definitive General Bibliography was undertaken by A.S.B. Glover. After his death, in 1966, the work was carried on, under William McGuire's supervision, first by Jasna P. Heurtley and then by Lisa Ress, who is responsible for the present comprehensive state of the Bibliography.

The editors and publishers of the *Gesammelte Werke*, in Switzerland, have been of assistance throughout. Others to whom the compilers are especially indebted are Doris Albrecht, Roland Cahen, Aldo Carotenuto, G. Dreifuss, Aniela Jaffé, and Mihoko Okamura. The resources of two collections have been of particular value: the library of Professor C. G. Jung, at his house in Küsnacht/Zürich, subsequently in the care of Mr. and Mrs. Franz Jung, and the Kristine Mann Library of the Analytical Psychology Club of New York.

*

ABBREVIATIONS AND SYMBOLS. The bibliographical abbreviations will, it is assumed, be obvious to users of the Bibliography. Abbreviations of titles of periodicals are explained in the index of periodicals. CW = *Collected Works*; GW = *Gesammelte Werke* (both listed by volumes in [Part II](#)). BS = Bollingen Series. An asterisk preceding an entry in the German, English, and French sections indicates that the publication could not be examined.

 15. "New Paths in Psychology." (352–77) Trans. from G. 1912d by Dora Hecht. Pub., rev. and exp., with title change, as E. 1917a,15. Pub. in a dif. trans. as CW 7,3.

TR.—Japanese: (7 articles only) 1926a.

1916b *Psychology of the Unconscious. A Study of the Transformation and Symbolisms of the Libido. A Contribution to the History of the Evolution of Thought.* New York: Moffat, Yard; London: Kegan Paul, Trench, Trubner. pp. Ivi + 566. (Lengthy front matter contains intro. by the translator.) Trans. from G. 1912a by Beatrice M. Hinkle. The American edn. was imported, presumably as sheets, into Great Britain by Kegan Paul, who substituted their title page. Publication date for the London edn. is considered to be 1917, although copies bear only the 1916 copyright date by Moffat Yard. In 1919, Moffat Yard issued a “new edn.,” xxxvi + 339 pp. Kegan Paul reprinted this last version in 1921, continuing to do so through the 6th impression, 1951. (In 1947, the imprint became Routledge & Kegan Paul.) Dodd Mead (New York) acquired the book from Moffat Yard in 1925, reprinting the 1916 edn. which was in print until 1972. Contents (the first pagination given is that of the 1916 edn., the second, that of the 1919 edn.):

1. Author’s Note. (xlvii) (xxix) Cf. CW 5, 2d edn., 2d pr.

Part I.

2. Introduction. (3–7) (1–3)

3. Concerning the Two Kinds of Thinking. (8–41) (4–21)

4. The Miller Phantasies. (42–48) (22–25)

5. The Hymn of Creation. (49–86) (26–46)

6. The Song of the Moth. (87–126) (47–69)

Part II.

7. Aspects of the Libido. (127–38) (70–76)

8. The Conception and the Genetic Theory of Libido. (139–56) (77–86)

9. The Transformation of the Libido. A Possible Source of Primitive Human Discoveries. (157–90) (87–105)

10. The Unconscious Origin of the Hero. (191–232) (106–28)

11. Symbolism of the Mother and of Rebirth. (233–306) (129–168)

12. The Battle for Deliverance from the Mother. (307–40) (169–87)

13. The Dual Mother Role. (341–427) (188–236)

14. The Sacrifice. (428–83) (237–67)

Entire work pub., rev. and expanded, in a dif. trans. with change of title, as CW 5. TR.—Japanese: 1931b.

1917a *Collected Papers on Analytical Psychology.* Ed. by Constance E. Long. 2d edn. New York: Moffat, Yard; London: Baillière, Tindall & Cox. pp. 492.

Contents conform to those of the 1st edn. (cf. E. 1916a) with the following addns. and substitution:

- 1a. Author's Preface to the Second Edition. (ix-xii) Probably trans. from the German ms. by Constance E. Long. Dated June 1917. Repub. in a dif. trans. as CW 4,13,b.
15. "The Psychology of the Unconscious Processes." (352–444) Trans. from G. 1917a by Dora Hecht. Replaces E. 1916a,15, of which this is a rev. and exp. version. Cf. E. 1928b,1 and CW 7,1 for trans.'s of further rev. versions.
16. "The Conception of the Unconscious." (445–74) Trans. from a German ms. subsequently lost, a French trans. of which was pub. as Fr. 1916a. The orig. ms. was found posthumously and a dif. trans. pub. as CW 7,4 (2d edn.). Cf. E. 1928,2 and CW 7,2 for trans. of further rev. versions. Delivered as a lecture to the Zurich School of Analytical Psychology, 1916.

1918a *Studies in Word-Association. Experiments in the Diagnosis of Psychopathological Conditions Carried Out at the Psychiatric Clinic of the University of Zurich, under the direction of C. G. Jung.* New York: Moffat, Yard; London: Heinemann, 1919. pp. 575. 1969: New York: Russell & Russell; London: Routledge & Kegan Paul. Trans. by M. D. Eder. Contains the following works by Jung:

- 1967a *Jaget och det omedvetna*. Stockholm: Wahlström & Widstrand. pp. 149. Trans. from G. 1935a by Heidi Parland.

TURKISH

- 1954a “Remiz (Symbole).” *Mason Dergisi*, IV:16 (4 Oct.), 803–09. Trans. from E. 1955g by S. T. Türk.
- 1964a “Psikoloji ve edebiyat.” *Psikanaliz acisinden edebiyat*. pp. 52–78. Istanbul: Atac Kitabevi. pp. 78. Trans. from Fr. 1955a by Selâhattin Hilâv. Also contains an article by Freud and one by Adler.
- 1965a *Psikoloji ve din*. Istanbul: Olus Yayınevi. pp. 128. Trans. from E. 1938a by Ender Gürol.

II

THE COLLECTED WORKS OF C. G. JUNG DIE GESAMMELTEN WERKE VON C. G. JUNG

The contents of the two editions are coordinated on facing pages. Paragraph numbers (column at right) are given only for the *Collected Works*; they are the same for the *Gesammelte Werke* except for discrepancies in volumes 6, 8, 11, and 14, which are explained in each volume. Page numbers are given in () following each title. The cross-references indicate, in general, the immediate derivation of each work, with further references as may be useful. Republications (chiefly paperback reprints) derived *from* the texts in the collected volumes are also indicated.

The Collected Works of C. G. Jung. Edited by †Herbert Read, Michael Fordham, and Gerhard Adler; executive editor (from 1967), William McGuire. Translated by †R.F.C. Hull, except as otherwise noted. New York: Pantheon Books for Bollingen Foundation, 1953–1960; Bollingen Foundation (distributed by Pantheon Books, a Division of Random House), 1961–1967. Princeton, New Jersey: Princeton University Press, 1967–1978. (Bollingen Series XX.) London: Routledge & Kegan Paul, 1953–1978. (The New York/Princeton and London edns. are identical except for title-pages and binding. Reprintings vary.)

1975d *La libido. Simboli e trasformazioni*. Rome: Newton Compton. pp. 389. Trans. from G. 1912a by Girolamo Mancuso. Cf. It. 1965b and 1970a.

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses
(1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in
Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in
Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal
Psychology (1908); The Psychological Methods of Investigation Used in the
Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of
Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence
(1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)
Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)
The Significance of the Father in the Destiny of the Individual (1909/1949)
Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)
Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth

PART II

Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

*9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego
The Shadow
The Syzygy: Anima and Animus
The Self
Christ, a Symbol of the Self
The Sign of the Fishes
The Prophecies of Nostradamus
The Historical Significance of the Fish
The Ambivalence of the Fish Symbol
The Fish in Alchemy
The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism
Gnostic Symbols of the Self
The Structure and Dynamics of the Self
Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)
Mind and Earth (1927/1931)
Archaic Man (1931)
The Spiritual Problem of Modern Man (1928/1931)
The Love Problem of a Student (1928)
Woman in Europe (1927)
The Meaning of Psychology for Modern Man (1933/1934)
The State of Psychotherapy Today (1934)
Preface and Epilogue to “Essays on Contemporary Events” (1946)
Wotan (1936)
After the Catastrophe (1945)
The Fight with the Shadow (1946)
The Undiscovered Self (Present and Future) (1957)
Flying Saucers: A Modern Myth (1958)
A Psychological View of Conscience (1958)
Good and Evil in Analytical Psychology (1959)
Introduction to Wolff’s “Studies in Jungian Psychology” (1959)
The Swiss Line in the European Spectrum (1928)
Reviews of Keyserling’s “America Set Free” (1930) and “La Révolution
Mondiale” (1934)
The Complications of American Psychology (1930)
The Dreamlike World of India (1939)
What India Can Teach Us (1939)
Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)
A Psychological Approach to the Dogma of the Trinity (1942/1948)
Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND

SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve
The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes’s “Analyse der Kinderseele” (1927/1931)

Child Development and Education (1928)
