² Dorn, “Congeries Paracelsicae chemicae,” *Theatr. chem.*, I, p. 578. In the same place Dorn explains: “Mercurium istum componi corpore, spiritu et anima, eumque naturam elementorum omnium et proprietatem assumpsisse. Quapropter ingenio et intellectu validissimis adseverarunt suum lapidem esse animale, quem etiam vocaverunt suum Adamum, qui suam invisibilem Evam occultam in suo corpore gestaret. ...” (This Mercurius is composed of body, spirit, and soul, and has assumed the nature and quality of all the elements. Wherefore they affirmed with most powerful genius and understanding that their stone was a living thing, which they also called their Adam, who bore his invisible Eve hidden in his body. ...) Hoghelande (“De alch. diff.,” *Theatr. chem.*, I, pp. 178f.) says: “They have compared the *prima materia* to everything, to male and female, to the hermaphroditic monster, to heaven and earth, to body and spirit, chaos, microcosm, and the confused mass [*massa confusa*]; it contains in itself all colours and potentially all metals; there is nothing more wonderful in the world, for it begets itself, conceives itself and gives birth to itself.”

³ “Tractatus aureus,” *Mus. herm.*, p. 10, and many other passages.

⁴ Dee, “Monas hieroglyphica,” *Theatr. chem.*, II, p. 218. In Aegidius de Vadis (“Dialogus,” *Theatr. chem.*, II, p. 110) the monad is the effective *forma* in matter. Khunrath (*Amphitheatrum*, p. 203) writes: “In Cabala est hominis ad monadis simplicitatem reducti, cum Deo, Unio: id in Physico-Chemia ad Lapidis nostri ... cum Macrocosmo Fermentatio.” (In the Cabala it is the Union of man, reduced to the simplicity of the monad, with God; in Physico-Chemistry it is the Fermentation [of] man reduced to [the simplicity of] our stone, with the Macrocosm.) There is a similar passage in his *Von hyleal. Chaos* (pp. 33, 204), where the monad is more a symbol of the perfected *lapis*. Dorn (“De spagirico artificio Trithemii sententia,” *Theatr. chem.*, I, p. 441) says: “In uno est enim unum et non est unum, est simplex et in quaternario componitur” (For in the One there is and there is not the One; it is simple and it is composed in the quaternity). In his doctrine of the *res simplex* Dorn is very much influenced by the “Liber Platonis quartorum.” (On one occasion he even mentions magic.) In the same passage he also uses the term *monad* for the goal: “A ternario et quaternario fit ad monadem progressus” (The progression is from the ternary and the quaternary to the Monad). The term *lapis* is used all through the literature for the beginning and the goal.

⁵ *Theatr. chem.*, V, p. 130.

⁶ Mylius, *Philosophia reformata*, p. 174.

⁷ *Art. aurif.*, I, p. 66. Eximindus (Eximidius or Eximenus in the first version) is a corruption of Anaximenes or Anaximander.

⁸ *Turba* (ed. Ruska), p. 116.

⁹ Sudhoff/Matthiessen edn., XIII, p. 390: “Thus the supreme artist has prepared a great uncreated mystery and no mystery will ever be the same nor will it ever return, for, just as cheese will never again become milk, so generation will never return to its first state.” Dorn (“Physica genesis,” *Theatr. chem.*, I, p. 380) translates: “Increatum igitur mysterium hoc fuit ab altissimo opifice Deo praeparatum, ut ei simile nunquam futurum sit, nec ipsum unquam rediturum, ut fuit.”

¹⁰ Paracelsus continues (XIII, pp. 390f.): “This *mysterium magnum* was a mother to all the elements, and in them likewise a grandmother to all stars, trees, and creatures of the flesh; for all sentient and insentient creatures, and all others of a like form, are born from the *mysterium magnum*, just as children are born from a mother. And it is a

mysterium magnum, one unique mother of all mortal things, and they have all originated in her” and so on. “Now, whereas all other mortal beings grew out of and originated in the *mysterium increatum*, it is to be understood that no creature was created earlier, later, or in particular, but all were created together. For the highest arcanum and great treasure of the creator has fashioned all things in the *increatedum*, not in form, not in essence, not in quality, but they were in the *increatedum*, as an image is in the wood, although this same is not to be seen until the other wood is cut away: thus is the image recognized. Nor is the *mysterium increatum* to be understood in any other manner, save that through its separation the corporeal and the insentient severally took on the form and shape that are their own.”

¹¹ *Mus. herm.*, pp. 73ff. Here I must correct a mistake which crept into my *Paracelsica*. Not only the author referred to there (pp. 173f.) but the “Aquarium” as well is concerned with heresies, and in an equally negative way. [See “Paracelsus as a Spiritual Phenomenon,” par. 231.—EDITORS.]

¹² *Ibid.*, pp. 106f.

¹³ *Ibid.*, p. 111.

¹⁴ *Theatr. chem.*, V, p. 145.

¹⁵ Cf. Grenfell et al., *New Sayings of Jesus*, pp. 15f.: “Jesus saith, (Ye ask? who are those) that draw us (to the kingdom, if) the kingdom is in Heaven? ... the fowls of the air, and all beasts that are under the earth or upon the earth, and the fishes of the sea. ...”

¹⁶ Ripley, *Opera omnia chemica*, p. 10.

¹⁷ *Ibid.*, p. 130.

¹⁸ *Ibid.*, p. 369.

¹⁹ *Ibid.*, p. 427.

²⁰ *Ibid.*, p. 9.

²¹ In the “Ripley Scrowle” (British Museum, MS. Add. 5025), the sphere of water is represented with dragon’s wings (cf. fig. 228). In the “Verses belonging to an emblematicall scrowle” (*Theatr. chem. Brit.*, p. 376) the “spiritus Mercurii” says:

“Of my blood and water I wis,
Plenty in all the world there is.
It runneth in every place;

Who it findeth he hath grace:
In the world it runneth over all,
And goeth round as a ball.”

²² Ripley, *Opera omnia chemica*, p. 197.

²³ *Mus. herm.*, p. 606.

²⁴ “Hortulani commentarius” in *De alchemia*, p. 366.

²⁵ Cf. Aegidius de Vadis (“Dialogus,” *Theatr. chem.*, II, p. 101): “The chaos is the *materia confusa*. This *materia prima* is necessary to the art. Four elements are mixed in a state of disorder in the *materia prima*, because earth and water, which are heavier than the other elements, reached the sphere of the moon, while fire and air, which are lighter than the others, descended as far as the centre of the earth; for which reason such a *materia* is rightly called disordered. Only a part of this disordered material remained in the world, and this is known to everyone and is sold publicly.”

²⁶ Hortulanus, “Commentarius,” *De alchemia*, p. 371.

²⁷ Zeller, *Die Philosophie der Griechen*, III, p. 120.

²⁸ Ibid., p. 102; also p. 154.

²⁹ Ibid., p. 687.

³⁰ Also defined as “the round fish in the sea” (“Allegoriae super librum Turbae,” *Art. aurif.*, I, p. 141).

³¹ Maier, *Symbola aureae mensae*, pp. 379f.

³² Ibid., p. 380.

³³ Cf. the beginning of Parable VII in *Aurora* I, ch. XII: “Be turned to me with all your heart and do not cast me aside because I am black and swarthy, because the sun hath changed my colour [Cant. 1 : 5f.] and the waters have covered my face [Jonas 2 : 6] and the earth hath been polluted and defiled [Psalm 105 : 38] in my works, for there was darkness over it [Luc. 23 : 44] because I stick fast in the mire of the deep [Psalm 68 : 3] and my substance is not disclosed. Wherefore out of the depths have I cried [Psalm 129 : 1] and from the abyss of the earth with my voice to all you that pass by the way. Attend and see me, if any shall find one like unto me [Lam. 1 : 12], I will give into his hand the morning star [Apoc. 2 : 28].”

³⁴ *Art. aurif.*, I, pp. 146ff.

³⁵ Cf. Ruska, *Turba*, p. 23. Arisleus is a corruption of Archelaos, owing to Arabic transcription. This Archelaos may be a Byzantine alchemist of the 8th or 9th century. He has left us a poem on the sacred art. But since the *Turba*, which is ascribed to Arisleus, goes back to Arabic tradition—as Ruska points out—we must assume that Archelaos lived much earlier. Ruska, therefore, identifies him with the pupil of Anaxagoras (ibid., p. 23). The alchemists would have been particularly interested in his idea that the *νοῦς* is mixed with air: *ἀέρα καὶ νοῦν τὸν θεόν* (Stobaeus, *Eclogarum*, I, p. 56).

³⁶ The pairing of like with like is to be found as early as Heraclitus (Diels, *Fragmente der Vorsokratiker*, I, p. 79¹⁰).

³⁷ Also Gabricus, Cabricus, Cabritis, Kybric: Arabic *kibrit* = sulphur. Beja, Beya, Beua: Arabic *al-baida* = the white one. (Ruska, *Turba*, p. 324.)

³⁸ “Ego tamen filium et filiam meo in cerebro gestavi” (“Visio Arislei,” *Art. aurif.*, I, p. 147). In Maier, *Symbola aureae mensae*, pp. 343f. (see n. 42 infra), it is a question of mother-incest, for there Gabritius is married to his mother Isis because they were the only pair of this kind. Evidently a chthonic pair of gods (symbolizing the opposites latent in the *prima materia*) is celebrating the *hierosgamos*.

³⁹ The “whole” or “self” comprises both conscious and unconscious contents.

⁴⁰ There is ample evidence in the literature to show that *divitiae* and *salus* are spiritual *bona futura*, and refer as much to the salvation of the soul as to the well-being of the body. We must not forget that the alchemist is not in the least concerned to torment himself with moral scruples, on the assumption that man is a sinful nonentity who complies with God’s work of redemption by his irreproachable ethical behaviour. The alchemist finds himself in the role of a “redeemer” whose *opus divinum* is more a continuation of the divine work of redemption than a precautionary measure calculated to guard against possible damnation at the Last Judgment.

⁴¹ The antithetical nature of the *ens primum* is an almost universal idea. In China the opposites are *yang* and *yin*, odd and even numbers, heaven and earth, etc.; there is also a union of them in the hermaphrodite. (Cf. Hastings, *Encyclopaedia*, IV, p. 140.) Empedokles: *νεῖκος* and *φιλία* of the elements (Zeus-fire, Hera-air). The second period of creation saw the birth of hybrids, similar to the northern Ymir and Buri (Herrmann, *Nordische Mythologie*, p. 574). Neopythagoreans: Monad = masculine, Dyad = feminine (Zeller, *Die Philosophie der Griechen*, III, p. 98). In

Nicomachus, the Deity is the odd and even number, therefore male-female (ibid., p. 107). Hermes Trismegistus: The Nous is hermaphroditic. Bardesanes (A.D. 154–223?): Crucified hermaphrodite (Schultz, *Dokumente der Gnosis*, p. lv). Valentinus: The creator of the world is the mother-father, and in Marcion the Gnostic, the Primordial Father is hermaphroditic. Among the Ophites, the Pneuma is male-female (ibid., p. 171).

⁴² Maier, *Symbola aureae mensae*, p. 344: “Delphinus, anonymus philosophus in Secreti Maximi tractatu De Matre cum filio ex necessitate naturae conjungenda clarissime loquitur: si enim unus sit masculus et una foemina, eius mater, in mundo, annon hi duo conjungendi sint, ut genus humanum inde multiplicetur? ... eodem modo cum saltem in arte Chymica sint duo subjecta, quorum unus alterius mater est. haec copulanda. ...” (Delphinus, an anonymous philosopher in the treatise “The Greatest Secret,” speaks very clearly about the Mother who must by natural necessity be united with the son. For, if there were in the world only one male and only one female, and she his mother, would they not have to be united, in order that mankind might be multiplied? In the same way, at any rate in the Chemical Art, since there are two subjects of which one is the mother of the other, they must be united. ...)

On p. 515 of the same book there is an “Epithalamium honori nuptiarum Matris Beiae et filii Gabrici,” which begins as follows:

“Ipsa maritali dum nato foedere mater
Jungitur, incestum ne videatur opus.
Sic etenim Natura iubet, sic alma requirit
Lex Fati, nec ea est res male grata Deo.”

(When the mother is joined with the son in the covenant of marriage, count it not as incest. For so doth nature ordain, so doth the holy law of fate require, and the thing is not displeasing to God.)

⁴³ The fear of ghosts means, psychologically speaking, the overpowering of consciousness by the autonomous contents of the unconscious. This is equivalent to mental derangement.

⁴⁴ *Art. aurif.*, II, pp. 246ff.

⁴⁵ I, ch. IX, par. IV. [Originally from a sequence of Notker Balbulus (c. 840–912).—EDITORS.] The passage is apparently derived from the first *oratio* of the third Sunday in Advent: “et mentis nostrae tenebras gratia tuae visitationis illustra.”

⁴⁶ “Nonnulli perierunt in opere nostro” (Not a few have perished in our work), the *Rosarium* says. The element of torture is also emphasized in “Allegoriae super librum Turbae,” *Art. aurif.*, I, pp. 139ff.: “Accipe hominem, tonde eum, et trahe super lapidem ... donec corpus eius moriatur ...” (Take a man, shave him, and drag him over a stone ... until his body dies ...).

⁴⁷ For the quadratic enclosure as the domain of the psyche, cf. the motif of the square in Part II, supra. According to Pythagoras the soul is a square (Zeller, *Die Philosophie der Griechen*, III, p. 120).

⁴⁸ Symbolized by a sorceress or by wanton girls, as in *Poliphilo*. Cf. fig. 33, and Béroalde de Verville, *Le Songe de Poliphile*. Similar themes in Part II of this volume.

⁴⁹ *Art. aurif.*, II, p. 246: “Nam Beya ascendit super Gabricum, et includit eum in suo utero. quod nil penitus videri potest de eo. Tantoque amore amplexata est Gabricum, quod ipsum totum in sui naturam concepit, et in partes indivisibiles divisit. Unde Mercurinus ait: ...

“Per se solvuntur, per se quoque conficiuntur,

Ut duo qui fuerant, unum quasi corpore fiant.”

(Then Beya mounted upon Gabricus and enclosed him in her womb, so that nothing at all could be seen of him any more. And she embraced Gabricus with so much love that she absorbed him completely into her own nature, and divided him into indivisible parts. Wherefore Mercurinus says: Through themselves they are dissolved, through themselves they are put together, so that they who were two are made one, as though of one body.) (NOTE: “Mercurinus” is a correction of the text’s “Masculus.”) The King, like the King’s Son, is killed in a variety of ways. He may be struck down, or else he drinks so much water that he sickens and dissolves in it (Merlinus, “Allegoria de arcano lapidis,” *Art. aurif.*, I, pp. 392ff.).

⁵⁰ Valentinus, “Practica,” *Mus. herm.*, p. 394. In another version of the incorporation motif, Mars feeds the body of the King to the famished wolf (*fame acerrima occupatus*), the son of Saturn (lead). The wolf symbolizes the *prima materia*’s appetite for the King, who often takes the place of the Son (fig. 175; cf. also figs. 166, 168, 169).

⁵¹ Cf. *Symbols of Transformation*, passim.

⁵² Espagnet, “Arcanum hermeticae philosophiae,” *Bibl. chem. curiosa*, II, p. 655, §LXVII: “This first digestion takes place as if in a belly.”

⁵³ Frobenius, *Das Zeitalter des Sonnengottes*.

⁵⁴ *Turba philosophorum* (Sermo LXVIII): “Our work ... results from a generation in the sea.”

⁵⁵ Cf. the king’s sweat-bath, fig. XIV of the Lambspringk “Figurae,” *Mus. herm.*, p. 369, among others. We find exactly the same idea in the hatching of the egg in goldmaking, as described by Nikephorus Blemmides: *περὶ τῆς ψοχρυσοποιίας* (Berthelot, *Alch. grecs*, VI, xx).

⁵⁶ Cf. Jung, *Symbols of Transformation*, p. 380.

⁵⁷ Christopher, “Elucidarius,” *Theatr. chem.*, VI, p. 228. Cf. Mithras’ birth from a stone “solo aestu libidinis” (through the sole heat of libido).

⁵⁸ Cf. Sendivogius, “De sulphure,” *Mus. herm.*, p. 612: “extra leve et invisible, intus vero grave, visibile et fixum” (outside it [the element air] is light and invisible, but inside heavy, visible, and solid).

⁵⁹ Grasseus, “Area arcani,” *Theatr. chem.*, VI, p. 314. He mentions the Augustinian monk Degenhardus as the author of this image, which, as in *Aurora* (ch. V), is an obvious allusion to Sapientia.

⁶⁰ “Practica,” *Mus. herm.*, pp. 403f.

⁶¹ *De circulo physico quadrato*. There is a parallel idea in Emerson, *Essays*, I, pp. 301ff. [In Jung’s copy, “Circles”; but cf. also “Intellect.”—EDITORS.]

⁶² Heart and blood as seat of the soul.

⁶³ *Opera omnia*, p. 146.

⁶⁴ For instance, in Lambspringk’s “Figurae et emblemata,” *Mus. herm.*, p. 371. See fig. 179.

⁶⁵ A similar idea is to be found in the Indian *hamsa* (swan).

⁶⁶ Scott, *Hermetica*, I and II.

⁶⁷ Also defined as *calx viva* (quicklime).

⁶⁸ “Gloria mundi,” *Mus. herm.*, pp. 246f.

¹ For a discussion of this method see Jung, “The Transcendent Function,” and *Mysterium Coniunctionis*, pp. 494ff., 528ff.—EDITORS.]

² Harforetus = Horfoltus of the Codex Berolinensis (Ruska, *Turba*, p. 324). In Ruska’s opinion, he is identical with the Emperor Heraclius (610–641), but the mystical role he plays in the “Visio” points rather to some connection with Harpocrates.

³ The “Visio Arislei” (*Art. aurif.*, I, p. 149) has: “ad Regem dicentes: quod filius tuus vivit, qui morti fuerat deputatus” (they said to the king: your son is alive, who was accounted dead). The Codex Berolinensis (in Ruska, *Turba*) has: “et misimus ad regem, quod filius tuus commotus est” (and we sent [word] to the king: Your son has been moved). (NOTE: “Commotus” is evidently intended to mean that he “moves” again or is “quick,” alive.)

⁴ I use the edition of 1593 in *Artis auriferae*, I, pp. 146ff.

⁵ Ruska, *Turba*, p. 324. In the *Art. aurif.*, I, this passage is changed to “how to gather the fruits of that immortal tree.”

⁶ The tree is often a *coralium* or *coralius*, coral, therefore, a “sea-tree” (fig. 186) (“the living coral growing in the sea”—“Allegoriae super librum Turbae,” *Art. aurif.*, I, p. 141). Cf. the tree of paradise in the sea in Paracelsus, *Das Buch Azoth*, p. 529.

⁷ Hence the recurrent formulae, “Deo adiuvante,” “Deo concedente,” etc.

⁸ The Neopythagoreans regarded Pythagoras as God incarnate. Cf. Zeller, *Die Philosophie der Griechen*, III, p. 130.

⁹ As Hermes takes the place of Poimandres. Cf. Scott, *Hermetica*, I and II.

¹⁰ Melchior Cibinensis. (See pars. 480ff.)

¹¹ Cf. the quotation from Alphidius in Maier, *Symbola aureae mensae*, p. 65, and also in *Aurora consurgens* I, ch. I: “Qui hanc scientiam invenerit, cibus eius legitimus erit et sempiternus” (He who hath found this science, it shall be his rightful food for ever). Parable VII of *Aurora* says: “Ex his enim grani huius fructibus cibus vitae conficitur, qui de coelo descendit. Si quis ex eo manducaverit, vivet sine fame. De illo namque pane edent pauperes et saturabuntur et laudabunt Dominum, qui requirunt eum, et vivent corda eorum in saeculum.” (For from the fruits of this grain is made the food of life which cometh down from heaven. If any man shall eat of it, he shall live without hunger. For of that bread the poor shall eat and shall be filled, and they shall praise the Lord that seek him, and their hearts shall live for ever.)

¹² The rite of blessing the New Fire seems to have originated in France; at any rate it was already known there in the 8th century, although it was not yet practised in Rome, as is proved by a letter from Pope Zacharias to St. Boniface. It appears to have reached Rome only in the 9th century. (See “Feuerweihe” in Braun, *Liturgisches Handlexikon*.)

¹³ Although I take every available opportunity to point out that the concept of the self, as I have defined it, is not identical with the conscious, empirical personality, I am always meeting with the misunderstanding which equates the self with the ego. Owing to the fundamentally indefinable nature of human personality, the self must remain a borderline concept, expressing a reality to which no limits can be set.

¹⁴ Cf. for example Simon Magus, who belonged to the apostolic era and already possessed a richly developed system.

¹⁵ Wei Po-yang, “An Ancient Chinese Treatise on Alchemy.”

¹⁶ *The Secret Tradition in Alchemy*.

¹⁷ “Et ut Jesus Christus de stirpe Davidica pro liberatione et dissolutione generis humani, peccato captivati, ex transgressione Adae, naturam assumpsit humanam, sic etiam in arte nostra quod per unum nequiter maculatur, per aliud suum contrarium a turpitudine illa absolvitur, lavatur et resolvitur.”—*Bibl. chem.*, I, p. 884, 2.

¹⁸ Cf. the *lectio* for Wednesday in Holy Week (Isa. 62 : 11; 63 : 1–7). “Wherefore art thou red in thine apparel, and thy garments like him that treadeth in the wine-fat?” and ... “their blood shall be sprinkled upon my garments ...” (A.V., Isa. 63 : 2, 3). Cf. the *pallium sanguineum* of other authors.

¹⁹ *Ars chemica* (1566), pp. 21f.

²⁰ Berthelot, *Alch. grecs*, IV, xx. The text probably belongs to the 1st century.

²¹ From the Greek text in Berthelot. *Alch. grecs*, III, xlix, 4–12, translated there into French by Ruelle. Ruska (“*Tabula smaragdina*,” pp. 24–31) also gives a translation of pars. 2–19. Scott (*Hermetica*, IV, pp. 104ff.) gives this part of the text in Greek with a commentary. Cf. further Bousset, *Hauptprobleme der Gnosis*, pp. 190ff. The translation given here [i.e., the German version—TRANS.] was made by myself with the help of Dr. Marie-Louise von Franz and differs in several points from the Ruelle and Ruska versions.

²² Heimarmene = fate, natural necessity.

²³ The passage beginning with “behold” is omitted by Reitzenstein as a Christian interpolation. Cf. Reitzenstein, *Poimandres*, p. 103; also Ruska, “*Tab. smarag.*,” p. 25.

²⁴ *Ibid.*, p. 25: “dwelling in every body.” *διήκειν* has more the meaning of “penetrate.” Cf. Bousset, *Hauptprobleme der Gnosis*, p. 191.

²⁵ *ἑκάστης* Codd. The conjecture *ἑκάστου* is superfluous.

²⁶ *ἀνορμάω* can only be meant transitively. Ruelle and Ruska translate: “So he (i.e., the son of God) has ascended. ...” But this interpretation takes all sense from the following accusatives which refer to the object *νοῦν*

²⁷ The *νοῦς*. Cf. Reitzenstein, *Poimandres*, p. 103, note 11.

²⁸ Ruska: “before it put on the flesh.” But *τὸ σωματικὸν* as predicate to *γενέσθαι* could not have an article. The sense is rather “before the creation.” Cf. par. 9, where the men of light rescue their spiritual part by taking it *ἔπου καὶ πρὸ τοῦ κόσμου ἦσαν*.

²⁹ *ἀκολουθοῦντα*, *ὀρεγόμενον* and *ὀδηγούμενον* refer to *νοῦν* which is also the object of *ἀνώρμησεν*. Scott (*Hermetica*, IV, p. 119) transfers this whole paragraph to the end of par. 8, because, in his opinion, it is not suitable to a Hermetic doctrine. But it constitutes the proof of the preceding idea that man should not struggle outwardly against his destiny, but should only strive inwardly for self-knowledge, the outward submission of the Son of God to suffering being an example of this.

³⁰ Cf. Reitzenstein, *Poimandres*, pp. 107–8. Iamblichus (*De mysteriis Aegyptiorum*, VIII, 4) mentions a prophet Bitys as an interpreter of Hermes at the court of King Ammon. He is said to have found the writings of Hermes at Saïs. Cf. *ibid.*, X, 7: *αὐτὸ δὲ τὸ ἀγαθὸν τὸ μὲν θεῖον ἡγοῦνται τὸν πρὸς αὐτὸν ἔνωσιν. ὅπερ Βίτυς ἐκ τῶν πρὸς αὐτὸν ἔνωσιν. ὅπερ Βίτυς ἐκ τῶν Ἑρμαϊκῶν βιβλίων μεθηρμήνευσεν*. According to Dieterich (“*Papyrus magica musei Lugdunensis Batavi*,” p. 753) he is identical with the Thessalonian Pity of the Magic Papyrus (Wessely, “*Griechische Zauberpapyrus*,” pp. 95, 92, 98: Πίτυος ἀγωγή—βασιλεῖ Ὀσάνη Πίτυς χαίρειν—ἀγωγή Πίτυος βασιλέως—Πίτυος θεσσαλοῦ). He may also be identical, again, according to Dieterich, with Bithus of

Dyrrhachium mentioned by Pliny (Book XXVIII). Scott (*Hermetica*, IV, pp. 129–30) suggests inserting “Nikotheos” or “which I wrote,” and has a drawing in mind.

³¹ Cf. *Philebus* (18b), *Phaedrus* (274c).

³² Scott’s splitting up of this sentence is inadmissible. In *Philebus* (18), Thoth is not represented as the “first man” but actually as the “divine man” and the giver of names to all things.

³³ Ruska: “what Thoythos interprets is in the holy language.” But Thoythos must be gen. explicat. to *φωνή*. for in other places the nominative is “Thoyth.” Cf. Bousset, *Hauptprobleme der Gnosis*, p. 191.

³⁴ *πνρά* Codd.: probably *πνρρά* = “fire-coloured.” Cf. Scott, *Hermetica*, IV, p. 121: “The interpretation of Adam as *γῆ παρθένος* is clearly a combination of the derivation from the Hebrew ‘adamah’ = *γῆ* (Philo, i. 62) and from the Greek *ἀδμής* = *παρθένος*. Hesychius gives *ἀδάμα παρθενική γῆ*. The sense is doubtless Josephus, *Ant.*, I, i. 2: *σημαίνει δὲ τοῦτο (Ἰ Αδάμος) πνρρὸς ἐπειδήπερ ἀπὸ γῆς πνρρᾶς γῆς ἐγεγόνει, τοιαύτη γὰρ ἔστιν ἡ παρθένος γῆ*. Compare Olympiodorus (Berthelot, p. 89 [*Alch. grecs*, II, iv, 32]): *οὔτος (Ἰ Αδάμ) γὰρ πάντων ἀνθρώπων πρῶτος ἐγένετο ἐκ τῶν τεσσάρων στοιχείων, καλεῖται δὲ καὶ παρθένος γῆ, καὶ πνρ[ρ]ά γῆ, καὶ σαρκίνη γῆ, καὶ γῆ αἰματώδης*. Cf. Eusebius, *Evangelica praeeparatio*, 11, 6, 10, sq. ...”

³⁵ *δν* Codd.; Reitzenstein and Ruska: *ῶν*. It is also possible that *δν* refers to the first man: namely that they exhibited him as Osiris in every sanctuary. We find evidence for this in Lydus, *De mensibus*, IV, 53: “For there are many conflicting opinions among the theologians regarding the God who is worshipped by the Hebrews. For the Egyptians, and above all Hermes, maintain that he is Osiris, the one who exists, of whom Plato in the *Timaeus* says: ‘which is the being that has no origin.’” Cf. Reitzenstein, *Poimandres*, p. 185, concerning the alleged transmission of the Jewish ideas to Egypt.

³⁶ *παρεκάλεσεν*: ‘A ... Codd.; Reitzenstein and Ruska: *παρεκάλεσαν Ἀσενᾶν* “When they [the Ptolemies] sent for Asenas” (masc. or fem.). Ruelle, on the other hand, takes Asenas as subject of *παρεκάλεσεν*. Nothing is known concerning a high priest named Asenas. It is very probable—as Scott (*Hermetica*, IV, p. 122) remarks—that Asenath, the beautiful daughter of the Egyptian priest Potipherah of On (Heliopolis), is meant. She bore Joseph two sons during his Egyptian imprisonment, according to Gen. 41 : 50. In a midrash which has undergone a Christian revision, we find a legend of this Asenath falling in love with Joseph when he appeared as Pharaoh’s steward; he rejected her, however, on account of her being an unbeliever. She then became a convert and did penance, whereupon a male messenger from heaven (in the recension: Michael)—whom she received as a *δαίμων πάρεδρος*, *spiritus familiaris*, in truly pagan fashion—gave her a honeycomb of paradise to eat and thus endowed her with immortality. He announces that Joseph will come to court her, and that from now on she will be called the “place of refuge.”—Cf. also Batiffol, “Le Livre de la Prière d’Asenath,” and Reitzenstein. *Die hellenistischen Mysterienreligionen*, pp. 248f.; further, Oppenheim, *Fabula Josephi et Asenathae*; Wilken, *Urkunden der Ptolemäerzeit*; and Kerényi, *Die griechisch-orientalische Romanliteratur in religionsgeschichtlicher Beleuchtung*, pp. 104f. It is possible that the messenger from heaven was originally Hermes. Hence our text might read as follows: “At the time when Asenath went to the High Priest of Jerusalem for help, who sent Hermes, who translated. ...” W. Scott suggests replacing Asenath by “Eleazar,” who, according to the Aristeas Letter, put the translation of the LXX (Septuagint) in hand; in this case one would also have to change the messenger Hermes into *έρμηνέα*, “interpreter.” But it is more likely that we are dealing with an altogether different legend.

³⁷ *τῶν ἀρχιεροσολύμων* Codd. Conjecture *τὸν ἀρχιερέα Ἰεροσολύμων*. Cf. Reitzenstein, Ruska, and Scott.

³⁸ Κατά τὸ σῶμα might also be understood as “in the corporeal language” in contrast to the “angel language” mentioned before. Elsewhere Zosimos contrasts the spiritual language with an ἔνσωμος φρῖσις.

³⁹ Also letters (στοιχεῖα)

⁴⁰ Here we can probably assume a lacuna containing the element earth, or possibly the elements earth and water. Anyhow the text is corrupt here. Ruska suggests putting τὸ δεύτερον α τὸν ἀέρα instead of τὸν ἀέρα, to indicate the North. Scott is probably right to leave τὸν ἀέρα (the air), for the object was to combine the points of the compass with the elements; Scott therefore adds γῆ (earth) after the word δύσις (descent). As justification for inserting ἄρκτος Scott quotes the Sibylline Oracles, III, 24: αὐτὸς δὴ θεός, ἔσθ' ὁ πλάσας τετραγράμματον Ἀδάμ τὸν πρῶτον πλασθέντα καὶ οὖνομα πληρώσαντα ἀνατολίην **τε δύσιν τε μεσημβρίην τε τε καὶ ἄρκτον**, and the Slavonic Book of Enoch, ch. 30.

⁴¹ Ruska: “The midmost of these bodies is the ripening fire which points to the midst of the fourth region.” Reitzenstein omits all this part.

⁴² ἀγνοῶν Codd.; Reitzenstein conjectures ἀγνοῶ. διὰ τὸ τέως Codd., literally “with regard to the foregoing.”

⁴³ This is a pun on τὸ φῶς (light) and the Homeric ὁ φῶς (man). See Ruska.

⁴⁴ Reitzenstein: διαπνεομένῳ, referring to Paradise: “in Paradise where blew the breath of Fate.”

⁴⁵ Reitzenstein adds “the archons” in explanation. But it is more likely to be the elements (στοιχεῖα) mentioned above. Cf. Gal. 4 : 9, for instance.

⁴⁶ παρ' αὐτοῦ Codd.; Reitzenstein, Scott, and Ruska παρ' αὐτῶν “the Adam that was with them.”

⁴⁷ Cf. in particular Bousset, *Hauptprobleme*, p. 193.

⁴⁸ *Theogony*, 614.

⁴⁹ δν Codd. Reitzenstein conjectures ῶ.

⁵⁰ “Prometheus” Codd. is omitted by Reitzenstein, because it probably refers to the whole man.

⁵¹ Reitzenstein conj.: νοῦ.

⁵² Personified in Reitzenstein: Nous (as Poimandres).

⁵³ ὅτε Codd.; Reitzenstein has ὅτι (whatever he wills).

⁵⁴ Φαίνει Codd.; Ruska and Scott have Φαίνεται (appears). Possibly the next sentence sets forth the essential meaning of the Son of Man?

⁵⁵ Reitzenstein deletes this whole sentence as a Christian interpolation. According to Photius (*Bibliotheca*, 170: ed. Bekker. I, p. 11) Zosimos was later interpreted in a Christian sense. Scott deletes the words “Jesus Christ” and simply takes “the Son of God” as the subject.

⁵⁶ στήσας Codd.; Reitzenstein and Scott have στήσας. Ruska translates: “laying aside his own humanity.” Concerning the stealing, cf. Hegemonius, *Acta Archelai*, XII, where it is said of God: “Hac de causa ... furatur eis [the “principes”] animam suam” (For this reason ... he steals from them [i.e., the princes] their soul [or “his soul”]).

⁵⁷ Reitzenstein, too, relates this to what follows.

⁵⁸ τόποισι Codd.; Reitzenstein has ἔπεισι (“he goes to ...”).

⁵⁹ Conj.: συνῶν; Reitzenstein, Bousset, and Scott have συλῶν Codd.; συλλαῶν: “he converses” (Ruelle).

- ⁶⁰ Ruelle: “He counselled his own to exchange secretly their spirit with that of Adam which they had within them. ...” But this makes *διά* superfluous. Cf. also the passage *Φησὶ γὰρ ὁ νοῦς ἡμῶν ...* and the beginning of our text, where the Redeemer leads the soul back by enlightening the Nous of each soul.
- ⁶¹ *ἔχειν* can mean “to have to suffer.” The adversaries evidently mean to injure the Men of Light.
- ⁶² Reitzenstein eliminates the second *παρ’ αὐτῶν*. But *παρά* can also mean “away from someone’s side.”
- ⁶³ *δι’ οὗ ζηλούμενος* Codd.; Reitzenstein has *διαζηλούμενος*.
- ⁶⁴ Omitted by Reitzenstein. But the meaning is “before the coming of the Redeemer.”
- ⁶⁵ *πρὶν ἧ* can be construed with accusative and infinitive, and then Antimimos is subject of *τολμῆσαι* and not object of *ἀποστέλλει*. Ruska inserts *υἱὸς Θεοῦ* as subject of *τολμῆσαι*. But he has not been spoken of for a long time, because he has already appeared. It is more likely that Antimimos himself has a forerunner.
- ⁶⁶ Reitzenstein and Scott suggest *Μανιχαῖος* (Manichaeus).
- ⁶⁷ *περίοδον* Codd.; Reitzenstein has *περιόδους*.
- ⁶⁸ *ἐαντῷ* Codd.; Reitzenstein has *ἐαντοῦ*.
- ⁶⁹ Reitzenstein and Ruska conjecture a lacuna after “seeking the abode of bliss,” and connect “he” with Prometheus. This is unnecessary, since Epimetheus through his own fate “interprets”—*ἐρμηνεύει*—to those of spiritual understanding what is to be done.
- ⁷⁰ As Scott remarks, this is probably an inexact quotation of the *Odyssey*, VIII, 167—*οὕτως οὐ πάντεσσι θεοὶ χαριέντα δίδουσι ἄνδρασιν*” from a context showing how different individuals are differently gifted by the gods. Zosimos goes on to explain how in all arts men have an individual method of working.
- ⁷¹ *ἄγων* Codd.; Ruska conjectures *ἀργὸν*, Scott *ἄκρον*.
- ⁷² Ruska has *Φιλόπνοος* instead of *μόνος*, but it is drawbacks that are enumerated here.
- ⁷³ Berthelot, *Alch. grecs*, III, li, 8.
- ⁷⁴ Diodorus, *Bibliotheca*, I, p. 27.
- ⁷⁵ The Cretan bull led him to the south; the man-eating mares of Diomedes to the north (Thrace); Hippolytus to the east (Scythia); and the oxen of Geryon to the west (Spain). The Garden of the Hesperides (the western land of the dead) leads on to the twelfth labour, the journey to Hades (Cerberus).
- ⁷⁶ Book of Enoch 17–36 (Charles, *Apocrypha and Pseudepigrapha*, II, pp. 199ff.). The journeys lead to the four quarters of the earth. In the west he finds a fourfold underworld of which three parts are dark and one is light.
- ⁷⁷ The journey begins in Europe and leads to America, to Asia, and finally to Africa in search of Mercurius and the phoenix (*Symbola aureae mensae*, pp. 572ff.).
- ⁷⁸ In Marius Victorinus (Halm, *Rhetores Latini minores*, p. 223; quoted by Reitzenstein, *Poimandres*, p. 2653).
- ⁷⁹ “Super arborem Aristotelis,” *Theatr. chem.*, II, p. 527: “Alexander invenit sepulcrum Hermetis et quandam arborem sitam ab extra intus tenentem viriditatem gloriosam: super eam ciconia ibi sedebat, quasi se appellans circulum Lunarem: et ibi ipse aedificavit sedes aureas et posuit terminum itineribus suis idoneum.” (Alexander found the tomb of Hermes and outside it a certain tree with a glorious greenness inside. And on it there sat a stork, as it were calling itself the circle of the Moon. And there he built golden seats and put a fitting end to his travels.) The stork is an *avis Hermetis*, like the goose (fig. 198) and pelican.

- ⁸⁰ In the same treatise: Berthelot, *Alch. grecs*, III, xlix, 1.
- ⁸¹ Baynes, *A Coptic Gnostic Treatise*, pp. 84ff. Cf. also Bousset, *Hauptprobleme der Gnosis*, p. 189; Schmidt, “Gnostische Schriften,” pp. 135ff.; also Turfan Frag., sig. M 299a, in Henning, “Ein Manichäisches Henochbuch,” pp. 27f.
- ⁸² Puëch, “The Concept of Redemption in Manichaeism,” p. 257.
- ⁸³ Philalethes, “Metallorum metamorphosis,” p. 771: “Se pro libitu suo transformat, ut varias larvas induat” (He transforms himself as he pleases, assuming various shapes [masks]). Aegidius de Vadis, “Dialogus,” *Theatr. chem.*, II, p. 118: “Dicitur enim Mercurius propter suam mirabilem convertibilitatis adhaerentiam” (For he is called Mercurius because of his wonderful ability to transform himself).
- ⁸⁴ “Tab. smarag.”: “Omnem rem solidam penetrabit” (He will penetrate every solid thing). *Rosarium, Art. aurif.*, II, p. 259: “Est oleum mundissimum penetrativum in corporibus” (He is a most pure oil penetrating the bodies). “Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 302: “... spiritus vivus, et in mundo talis non est, qualis ipse est: et ipse penetrat omne corpus ...” (A living spirit such as there is none other in the world, as he is; and he penetrates all bodies).
- ⁸⁵ Geber, “Livre de la misericorde,” in Berthelot, *Chimie au moyen âge*, p. 181. “Then he spreads his poison” (Lambspringk, “Figurae,” *Mus. herm.*, p. 352); “Venenosus vapor” (Flamel, “Summarium philosophicum,” *Mus. herm.*, p. 173); “Spiritus venenum” (Ripley, *Opera omnia*, p. 24); “Mercurius lethalis est” (“Gloria mundi,” *Mus. herm.*, p. 250).
- ⁸⁶ *Pistis Sophia*: trans. Schmidt, pp. 46, 207.
- ⁸⁷ Printed in *Bibliotheca chemica curiosa*, II. Gessner mentions Bonus as a contemporary of Raymond Lully (1235–1315), but Mazzuchelli (1762) maintains that Pietro Antonio Boni lived about 1494. Ferguson (*Bibliotheca chemica*, I, p. 115) leaves the question undecided. Hence the above dates are given with reserve. The first edition of the *Pret. marg. nov.* is that of Lacinius (1546). fol. i ff.: “Quia consuevit non solum. ...” The introduction in *Bibliotheca chemica curiosa* is missing here. All the authors quoted in the text lived before the 14th century. Nor does the material supply any reasons for dating the text later than the first half of the 14th century.
- ⁸⁸ *Bibl. chem.*, II, ch. VI, pp. 29ff.
- ⁸⁹ The psychological equivalents of these two categories are conscious cognition based on sense-perception, and the projection of unconscious contents. For these latter *cor* is an apt designation, since the heart region (fig. 149) represents a more primitive localization of consciousness, and, even at a higher level, still harbours emotive thoughts, i.e., contents that are very much under the influence of the unconscious.
- ⁹⁰ “Quod verbum est philosophicum.” I feel impelled to translate this phrase as above, because of the later alchemical distinction between Christ as the “verbum scriptum” and the *lapis* as “verbum dictum et factum” (“Orthelii Epilogus,” *Bibl. chem.*, II, p. 526).
- ⁹¹ “subtilitatem fere incredibilem.”
- ⁹² As an analogy of God.
- ⁹³ Reputed to be an Arab philosopher of the 12th century.
- ⁹⁴ Presumably in the alchemical work, whose procedure resembles the creation and end of the world.
- ⁹⁵ Cf. the detailed later account in “Liber de arte chimica,” *Art. aurif.*, I, pp. 581, 613.

⁹⁶ Bonus is referring to an older Pseudo-Platonic text which I have not yet been able to trace. Evidently it contained a *lapis-Christ* parallel. Possibly—as in the case of the “Tractatus aureus”—the original source was Arabic (Sabaeen?).

⁹⁷ These are the *electi*. Manichean influences are not inconceivable in Morienus.

⁹⁸ Part I of the text has been translated and edited, with a commentary, by Marie-Louise von Franz. [Published in English under the title *Aurora Consurgens: A Document Attributed to Thomas Aquinas on the Problem of Opposites in Alchemy*.] *Aurora consurgens* is an extremely characteristic example of the mystical side of alchemy, affording deep insight into this extraordinary state of mind, which is sufficient justification for a separate publication of the whole of Part I.

⁹⁹ Decas II, pp. 175ff. Cf. Kopp, *Die Alchemie*, II, p. 343.

¹⁰⁰ Vulgate, Sap. 7 : 11: “Venerunt autem mihi omnia bona pariter cum illa [sapientia], et innumerabilis honestas per manus illius” (D.V.: “Now all good things came to me together with her, and innumerable riches through her hands”).

¹⁰¹ Vulgate, Prov. 1 : 20–21 verbatim (D.V.: “Wisdom preacheth abroad: she uttereth her voice in the streets, at the head of the multitudes she crieth out, in the entrance of the gates of the city she uttereth her words, saying ...”).

¹⁰² Vulgate, Ps. 33: 6: “Accedite ad eum [Dominum], et illuminamini: et facies vestrae non confundentur” (D.V.: “Come ye to him and be enlightened: and your faces shall not be confounded”). Also Vulgate, Ecclus. 24 : 30: “Qui audit me non confundetur, et qui operantur in me non peccabunt” (D.V.: “He that hearkeneth to me shall not be confounded: and they that work by me shall not sin”).

¹⁰³ Vulgate, Ecclus. 24 : 26: “Transite ad me, omnes qui concupiscitis me, et a generationibus meis implemini” (D.V.: “Come over to me, all ye that desire me: and be filled with my fruits”).

¹⁰⁴ Eucherius, *Formularium spiritualis intelligentiae*, and Rabanus, *Allegoriae*, among others. Cf. Vulgate, Hab. 3 : 3: “Deus ab austro veniet, et Sanctus de monte Pharan” (D.V.: “God will come from the south: and the holy one from Mount Pharan”).

¹⁰⁵ Vulgate, Matt. 12 : 42 (Luke 11 : 31 is almost identical): “Regina austri surget in iudicio cum generatione ista, et condemnabit eam: quia venit a finibus terrae audire sapientiam Salomonis, et ecce plus quam Salomon hic” (D.V.: “The queen of the south shall rise in judgment with this generation and shall condemn it: because she came from the ends of the earth to hear the wisdom of Solomon. And behold a greater than Solomon here”).

¹⁰⁶ Ch. V. Cf. Vulgate, Cant. 6 : 9: “Quae est ista quae progreditur quasi aurora consurgens, pulchra ut luna, electa ut sol ...” (D.V.: “Who is she that cometh forth as the morning rising, fair as the moon, bright as the sun ...”).

¹⁰⁷ *Art. aurif.*, II, p. 294.

¹⁰⁸ Sudhoff, XIII, p. 403.

¹⁰⁹ Cumont, *Textes et monuments*, I. p. 356.

¹¹⁰ Hegemonius, *Acta Archelai*, pp. 12f.: “Cum autem vidisset pater vivens adfligi animam in corpore, quia est miserator et misericors, misit filium suum dilectum ad salutem animae; haec enim causa et propter Homoforum misit eum. Et veniens filius transformavit se in speciem hominis; et adparebat quidem hominibus ut homo, cum non esset homo, et homines putabant eum natum esse. Cum ergo venisset, machinam quandam concinnatam ad salutem animarum, id est rotam, statuit, habentem duodecim urceos; quae per hanc spheram vertitur, hauriens animas morientium quasque luminare maius, id est sol, radiis suis adimens purgat et lunae tradit, et ita adimpletur lunae discus, qui a nobis ita appellatur.”

(But when the living father saw that the soul was tormented in the body, he sent—because he is charitable and compassionate—his beloved son for the salvation of the soul. For this cause he sent him, and on account of Homoforus. And the son came and changed into human form, and showed himself to men as a man, although he was no man, and the people thought that he had been born. And when he came he made a device for the redemption of souls, and set up a wheel with twelve buckets, which is turned by the rotation of the sphere and raises the souls of the dying; these are caught by the rays of the greater light, which is the sun, and purified and passed on to the moon, and thus is the disc of the moon filled, as we say.) The same passage is to be found in the *Panarium* of Epiphanius, Haer. LXVI.

¹¹¹ There are secret connections, or at least striking parallels, between alchemy and Manicheism which still need investigating.

¹¹² Ripley (d. 1490) describing the transformation of earth into water, water into air, and air into fire, says (*Opera omnia*, p. 23): “sic rotam elementorum circumrotasti” (Thus did you revolve the wheel of the elements).

¹¹³ “Philosophia chemica,” *Theatr. chem.*, I, p. 492: “A materia prima generationis rota sumit exordium, ad elementa simplicia transiens.” Cf. also Mylius. *Phil. ref.*, p. 104: “Toties ergo reiterandum est coelum super terram, donee terra fiat coelestis et spiritualis, et coelum fiat terrestre, et iungetur cum terra, tunc completum est opus” (So many times must the heaven above the earth be reproduced, until the earth becomes heavenly and spiritual, and heaven becomes earthly, and is joined to the earth: then the work will be finished).

¹¹⁴ Cumont, *Textes et monuments*, I, p. 178.

¹¹⁵ “Tractatus Aristotelis,” *Theatr. chem.*, V, p. 885.

¹¹⁶ Reference to the Vulgate. Ps. 18 : 6–7 (D.V.): “He hath set his tabernacle in the sun: and he, as a bridegroom coming out of his bride chamber, hath rejoiced as a giant to run the way. His going out is from the end of heaven.”

¹¹⁷ “Dum Heroes ille, tanquam gigas exultans, ab ortu exurgit, et in occasum properans demergitur, ut iterum ab ortu redeat continue, has circulationes causatur, inque materia splendida argenti vivi, velut in speculo, ideas relinquit, ut humana industria aurum inquiratur, ab adhaerentibus segregetur, igne, aqua examinetur, et in usum Deo Creatori placentem transferatur.” (*De circulo quadrato*, p. 15.)

¹¹⁸ Maier, *ibid.*, pp. 15f.

¹¹⁹ *Mus. herm.*, p. 661.

¹²⁰ “Nihilominus intemerata remanens” (nevertheless remaining undefiled). Cf. “mater amata, intemerata” (beloved mother, undefiled) of Latin hymnology; also the “virgo pulchra, ornata, ad persuadendum valde apta” (virgin beautiful, adorned, well suited for persuading), who appears sometimes as male and sometimes as female in the Manichean *Acta Archelai*.

¹²¹ Such parallels show, in spite of all assurances to the contrary, how much the alchemical work is a *mysterium iniquitatis* from the Christian point of view. On an objective view, however, it is simply a chthonic mystery which, as Part II of this volume shows, has its roots in the transformative processes of the unconscious.

¹²² The feminine nature of Mercurius is connected with the moon.

¹²³ The “male virgin” is also a Manichean idea in the writings of Theodoret.

¹²⁴ His work *De ratione conficiendi lapidis philosophici* was printed at Basel in 1571.

¹²⁵ Ezech. 1 : 15 (D.V.): “Now as I beheld the living creatures, there appeared upon the earth by the living creatures one wheel with four faces. And the appearance of the wheels and the work of them was like the appearance of the sea: and the four had all one likeness. And their appearance and their work was as it were a wheel in the midst of a wheel ... for the spirit of life was in the wheels.”

¹²⁶ *Theatr. chem.*, II, p. 259.

¹²⁷ As a matter of fact, there are two treatises known to me that are entitled “Lilium”: the “Lilium inter spinas” of Grasseus (*Bibl. chem.*, II), which belongs to the 17th century, and the “Lilium de spinis evulsum” of Guilhelmus Tecenensis (*Theatr. chem.*, IV), who lived at the end of the 16th and beginning of the 17th century. The date puts the former “Lilium” out of court; but the latter might be considered because it is highly probable that the treatise is wrongly ascribed to Guilhelmus. To judge by its contents and the authors quoted (there are numerous quotations from the *Turba*, “Tractatus Micreris” [*Theatr. chem.*, V], Geber, and so on, but Albertus, Lully, and Arnaldus are missing), it appears to be an old text which might perhaps belong to the time of the “Cons, coniug.” But the above passage is not to be found. “Lilium” or “Lilius” is also quoted in the *Rosarium*.

¹²⁸ Berthelot, *Alch. grecs*, IV, xx, 17.

¹²⁹ *Ibid.*, III, i.

¹³⁰ Holmyard, *Kitāb al-'ilm al-muktasab*, p. 43: “... but what of the speech of *Hermes* in which he says: ‘The great South wind when it acts makes the clouds to rise and raises the cloud of the sea’? He said, If the powdering is not successful the compound will not ascend into the top of the retort, and even if it does ascend it will not pour into the receiver. It is necessary to mix with it the first and second waters before it will ascend to the top of the retort. ‘That,’ he said, ‘is the Great South Wind?’ He said: ‘Yea, O King’” etc.

¹³¹ Roscher, *Hermes der Windgott*.

¹³² See next section.

¹³³ Psalm 44 (in A.V., Psalm 45) is defined as an *Epithalamium Christianum*—a Christian bridal song.

¹³⁴ Gal. (D.V.) 4 : 4.

¹³⁵ Heb. (D.V.) 1 : 2.

¹³⁶ Heb. (D.V.) 1 : 5; 5 : 5.

¹³⁷ Ruska, *Turba*, p. 178.

¹³⁸ Espagnet, “Arcanum,” *Bibl. chem.*, II, p. 656, §LXXIII: “Lapidis generatio fit ad exemplum generationis mundi, suum enim chaos et materiam suam primam habeat necesse est, in qua confusa fluctuant elementa donec spiritu igneo separantur.... Congregantur aquae in unum, et apparet Arida.” (The generation of the stone takes place on the model of the creation of the world. For it is necessary that it have its own chaos and its own prima materia, in which the elements are to float about in confusion until they are separated by the fiery spirit. The waters are gathered into one [place] and the dry land [Arida] appears.)

¹³⁹ *Ibid.*: “[in nigredine] denique separatur lapis in quatuor elementa confusa, quod contingit per retrogradationem luminarium” (Lastly [in the blackness] the stone is separated into the four elements mingled together, which is brought about by the retrograde movement of the stars). This refers to the *coniunctio* of Sol and Luna, who *post coitum* are overcome by death (see fig. 223). Cf. the illustrations in the *Rosarium*, reproduced in my “Psychology of

the Transference.” Espagnet (*Bibl. chem.*, II, p. 655, §LXIVf.): “Nigro colori succedit albus” (on the black follows the white). This white sulphur is the *lapis*.

¹⁴⁰ The “Sea” of the philosophers. “Mare sapientiae” was one of the titles of Hermes (Senior, *Tabula chymica*, p. 31)—evidently an allusion to Moses.

¹⁴¹ The healing water also flows from the stone whence the pneumatic spark is struck. In later alchemical literature this stone is often likened to Christ (as also in Church hermeneutics), from whom the miraculous water flows. Thus Justin Martyr says (“Dialogus cum Tryphone Judaeo,” Migne, *P.G.*, vol. 6, col. 639): “As a spring of living water from God, in the land of the heathen barren of all knowledge of God, has this Christ gushed forth [see fig. 213], who appeared also to your people, and healed them that from their birth and in the flesh were blind, dumb, and lame.... Also he awoke the dead.... This he did in order to convince those who are ready to believe in him that, even if a man be afflicted with any bodily infirmity and yet keeps the commandments given by Christ, he shall be awakened at the second coming with an uncrippled body, after Christ has made him immortal and incorruptible and without sorrow.”

¹⁴² A frequent image: Mercurial water (*rivuli aurei*), etc.

¹⁴³ Like the “pluviae et imbres” that drench and fertilize the thirsty earth. The king in alchemy is thirsty and drinks water until he dissolves. Cf. Merlinus, “Allegoria,” *Art. aurif.*, I, p. 392.

¹⁴⁴ Ps. 45 : 5 (D.V.): “The stream of the river maketh the city of God joyful.”

¹⁴⁵ I Cor. (D.V.) 15 : 53f.: “For this corruptible must put on incorruption: and this mortal must put on immortality. And when this mortal hath put on immortality, then shall come to pass the saying that is written: *Death is swallowed up in victory. O death, where is thy victory? O death, where is thy sting?*”

¹⁴⁶ Cf. Ruska, *Turba*, pp. 182f., 115f.

¹⁴⁷ A Hermes quotation in Senior. *De chemia*, p. 71 (see also *Bibl. chem.*, II, p. 227a): “Est mundus minor. Item est unum quod non moritur, quamdiu fuerit mundus, et vivificat quodlibet mortuum” etc. (It is the smaller world [i.e., the Microcosm = Man]. One thing there is that dieth not, so long as the world shall endure, and it bringeth alive anything dead.) The passage refers to the *aqua philosophica*. Senior is the Latin name for Mohammed ibn Umail (10th cent.), whose work was published by Stapleton in *Three Arabic Treatises on Alchemy*.

¹⁴⁸ The philosophers.

¹⁴⁹ Matt. 25 : 34, with “beginning of the Work” substituted for “foundation of the world.”

¹⁵⁰ A quotation from Pseudo-Aristotle; cf. *Rosarium*, *Art. aurif.*, II, p. 286.

¹⁵¹ Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 165ff., 203ff.

¹⁵² *Art. aurif.*, I, pp. 352ff. Kalid refers to the Omayyad prince Khalid ibn-Yazid (end of the 7th century), though there is good reason for believing that this treatise was not written by him at all. (Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 122, for the literature on this question.)

¹⁵³ Another name for the alchemists. Cf. “Les pures hommes évangélisants” in Rupescissa, *La Vertu et la propriété de la quinte essence*, p. 31.

¹⁵⁴ Here the process has three parts, in contrast to the four parts in Greek alchemy. But this may be due only to the analogy with the nine months of pregnancy. Cf. Kalid, *Art. aurif.*, I, pp. 358ff.

¹⁵⁵ Patrizi, *Nova de universis philosophia*.

¹⁵⁶ “Addam et processum sub forma missae, a Nicolao Cibinensi, Transilvano, ad Ladislaum Ungariae et Bohemiae regem olim missum,” *Theatr. chem.*, III, pp. 853ff.

¹⁵⁷ Not identical with Melchior, Cardinal Bishop of Brixen, to whom the treatise “Von dem gelben und rotten Mann,” in *Aureum vellus*, is attributed. Our author was the chaplain Nicolaus Melchior Szebeni, at the king’s court as astrologer from 1490. He remained there after the death of Ladislaus II in 1516, under Louis II (1506–26). Following the defeat of Mohács (1526) and the death of Louis II, Melchior fled to the court of Ferdinand I in Vienna. He was executed by the latter in 1531. Our document must therefore have been written before 1516. Ladislaus II became King of Bohemia in 1471 and of Hungary in 1490. We find the remark “ad extirpandum Turcam” in the text. It is true that Buda was conquered by the Turks only in 1541, but the land had long suffered from Turkish invasions. [Hermannstadt is the German name of the Romanian (formerly Hungarian) city of Sibiu or Cibiú (whence “Cibinensis”).—EDITORS.]

¹⁵⁸ *Aquilo* (north wind) is an allegory of the devil, *auster* an allegory of the Holy Ghost. Cf. Migne, *P.L.*, vol. 219: “Index de allegoriis.” Among the authorities quoted we meet Alain of Lille (Alanus de Insulis), who was well known to the alchemists (Maier, *Symbola aureae mensae*, p. 259).

¹⁵⁹ Perhaps he is enlarging on the “water of life” that has just been mentioned, or more probably the “salutary medicine” a little earlier, which is really the main theme.

¹⁶⁰ Pp. 129f.

¹⁶¹ See Gen. 30 : 32ff.

¹⁶² “Sequentia sancti evangelii, sub tono, Ave praeclara, cantetur; quam testamentum artis volo nuncupari, quoniam tota ars chemica, tropicis in ea verbis occultatur, et beatus,” etc.

¹⁶³ Cf. his “Codicillus,” *Bibl. chem.*, I, pp. 880ff.

¹⁶⁴ “Ἐλ σοι κέκρυπται ὄλον τὸ μυστήριον τὸ Φρικτὸ καὶ παράδοξον (Berthelot, *Alch. grecs*, IV, xx, 8).

¹⁶⁵ Sun.

¹⁶⁶ Reference to Venus and Mars, caught in the net of Vulcan.

¹⁶⁷ *Coniunctio* of Mercurius, but with whom? Or it is a *coniunctio* of two Mercurii, one male and one female? It seems to be a union of Sol with Luna, Mars, and Mercury.

¹⁶⁸ Ruska, “Tab. smarag.,” p. 2: “Hic est totius fortitudinis fortitudo fortis” (He is the strong strength of all strength).

¹⁶⁹ This is the substance which was the special concern of Maria, the “Prophetissa” and “sister of Moses.” *Art. aurif.*, I, p. 320: “Recipe alumen de Hispania, gummi album et gummi rubeum, quod est kibric Philosophorum ... et matrimonifica gummi cum gummi vero matrimonio” (Take alum from Spain, white gum and red gum, which is the kibric of the philosophers ... and join in true marriage gum with gum).

¹⁷⁰ Presumably Sol, perhaps in the form of “gum.” The coitus of Sol and Luna in the bath is a central mythologem in alchemy, and is celebrated in numerous illustrations (cf. figs. 159, 167, 218).

¹⁷¹ Namely the *caput mortuum*, the head of Osiris in the *nigredo* state. The Ethiopian comes from a treatise attributed to Albertus: “Super arborem Aristotelis,” *Theatr. chem.*, II. The passage runs (p. 526): “...quousque caput nigrum aethiopis portans similitudinem, fuerit bene lavatum et inceperit albescere. ...” (... until the black head bearing the resemblance of the Ethiopian is well washed and begins to turn white. ...). In Rosencreutz’s *Chymical Wedding* the presumptive queen of the drama is the temporary concubine of a Moor. Cf. also *Aurora consurgens*, ch. VI, parable 1.

¹⁷² The calcination probably corresponds to incineration, while the incandescent ash tends towards vitrification. This operation may likewise come from Maria Prophetissa: “Vitrifica super illud Kibrich et Zuboch [alias Zibeic] et ipsa sunt duo fumi complectentes duo lumina” (Vitrify over it Kibrich and Zuboch [alias Zibeic] and they are two vapours enveloping two lights). “Practica,” *Art. aurif.*, I, p. 321. “Zaibac, Zeida, Zaibar, Zibatam ... id est argentum vivum.” Zaibar = Mercurius. Ruland’s *Lexicon: zibag* (Arabic) = quicksilver. Lippmann, *Entstehung*, p. 409. *Kibric* = *kibrit* (Arabic) = sulphur. Cf. also Ruska, *Turba*, p. 348: “Arabisches Register.”

¹⁷³ *De chemia*, pp. 35f.

¹⁷⁴ Quotation from the “Tractatus aureus,” *Ars chemica*, p. 22. It should be mentioned that Melchior recommends reading the 10th chapter of Luke before the Creed. This chapter would appear to have no connection with his theme except for the fact that it ends with the significant words: “But *one thing* is necessary. *Mary* hath chosen the best part, which shall not be taken away from her” (D.V.).

¹⁷⁵ The subjective character of the experience comes out in the incidental remark of the author: “et scio quod verum est testimonium eius” (and I *know* that his testimony is true).

¹⁷⁶ *Bibl. chem. curiosa*, II, pp. 275ff., and *Theatr. chem.*, II, pp. 123ff.

¹⁷⁷ Ripley, *Opera omnia chemica*, pp. 421ff. [Professor Jung gives the “Cantilena” in prose paraphrase. For a complete translation in verse form, with commentary, see Jung, *Mysterium Coniunctionis*, pars. 370ff. In lines 7–8 of the paraphrase, the present reading replaces a reference to the “tree of Christ,” as the consequence of an emendation authorized by Professor Jung; cf. *ibid.*, par. 380, n. 88. Accordingly, a representation of “Christ on the tree of life” in fig. 222 has been replaced by another subject.—EDITORS.]

¹⁷⁸ The green lion is also a synonym for the unicorn. See fig. 242.

¹⁷⁹ *Opera omnia*, p. 81.

¹⁸⁰ John 12 : 32.

¹⁸¹ “Meo in cerebro gestavi”: “Visio Arislei,” *Art. aurif.*, I, p. 147.

¹⁸² *Art. aurif.*, II, p. 246: “Et includit eum in suo utero, quod nil penitus videri potest de eo. Tantoque amore amplexata est Gabricum, quod ipsum totum in sui naturam concepit et in partes indivisibiles divisit.” (And she enclosed him in her womb so that nothing at all could be seen of him any more. And she embraced Gabricus with so much love that she absorbed him completely in her own nature, and divided him into indivisible parts.)

¹⁸³ The feathers of the phoenix, and of other birds, play a great role in alchemy, particularly in the writings of Ripley. Cf. “Scrowle,” *Theatr. chem. Brit.* (See also figs. 229, 266, 270.)

¹⁸⁴ “Gloria mundi,” *Mus. herm.*, p. 221: “Lapis ... per Solem et Lunam generatus ... primum ... suum partum in terra accepit et tamen frangitur, destruitur, et mortificatur ... per vaporem generatur, et denuo nascitur, cum vento in mare venit ... atque cum vento ex mari in terram venit ... et cito iterum evanescit... Et quamvis cottidie denuo nascatur, nihilominus tamen ab initio mundi ille fuit. ...” (The stone ... begotten by the sun and the moon ... was first born ... on the earth, and yet it is broken, destroyed and mortified.... It is generated through vapour, and is born anew, with the wind it comes to the sea ... and with the wind it comes from the sea to the earth, ... and quickly evaporates again.... And though it is daily born anew, yet nevertheless it existed from the beginning of the world. ...) (Cf. John 1 : 1 and 14.)

¹⁸⁵ Cf. Caussin, *De symbolica Aegyptiorum sapientia*, p. 71: s.v. “phoenix.”

¹⁸⁶ The wounding of the lion refers to his sacrifice and mortification during the process. He is sometimes shown maimed, with his paws cut off. Cf. for instance Reusner, *Pandora*, p. 227. Note the wounded unicorn lying in the lap of the virgin. (Cf. fig. 242.)

¹⁸⁷ Ruland, *Lexicon*: “Leo viridis, quorundam opinione aurum” (The green lion; according to some people’s opinion, gold).

¹⁸⁸ p. 225.

¹⁸⁹ Cf. the vision of Guillaume de Digulleville (pars. 315ff.).

¹⁹⁰ This picture goes back to the Codex Germanicus (see fig. 224; cf. also figs. 233, 235).

¹⁹¹ In *Art. aurif.*, I, pp. 575ff.

¹⁹² The author is supposed to be no less a person than Marsilio Ficino (1433–99). Manget (*Bibl. chem. curiosa*, II, p. 172) is of this opinion. The treatise is said (Schmieder, *Geschichte der Alchemie*, p. 235) to be contained in the collected edition (Basel, 1561 and 1576) of Ficino’s works. (See also Ferguson, *Bibliotheca chemica*, I, p. 268, and Kopp, *Die Alchemie*, I, p. 212.) But it happens that the treatise (*Art. aurif.*, I, p. 596) mentions the murder of Pico della Mirandola—“Quis non intempestivam Pici Mirandulani necem lachrymis non madefaceret?” (Who would not shed tears over the untimely killing of Pico della Mirandola?)—which can only refer to the nephew of the great Pico, Gianfrancesco Pico della Mirandola, who was murdered in 1533. This *terminus a quo* occurred 34 years after the death of Ficino. The reference (*Art. aurif.*, I, p. 625) to the Minorite Father, Ulmannus, and his illustrated treatise makes it more probable that the author was a German writing in the middle of the 16th century. It is possible that the treatise of Ulmannus is connected with the *Dreifaltigkeitsbuch*. Schmieder’s statement is anyway incorrect, for I have ascertained that the treatise is *not* contained in the Basel edition.

¹⁹³ The text has a misprint: “auri” instead of “audi.” Cf. *Art. aurif.*, I, p. 608: “audi similitudinem arduam.”

¹⁹⁴ *Ibid.*, p. 582.

¹⁹⁵ *Ibid.*, p. 686.

¹⁹⁶ *Ibid.*, p. 627.

¹⁹⁷ According to Schmieder (*Geschichte der Alchemie*), the Emperor Maximilian ordered a search of the Benedictine monasteries in 1515 to find out whether a monk of this name was mentioned in their registers, but no such name was found. There does not seem to be any truth in this report. Nor do there seem to be any manuscripts that could be dated before the 17th century. (See Kopp, *Die Alchemie*, I, p. 31.)

¹⁹⁸ He also mentions the *lues Gallica*, which it appears was first described as the *morbis Gallicus* (French sickness) by the Italian physician, Fracastoro, in a didactic poem published in 1530.

¹⁹⁹ Valentinus, *Chymische Schriften*, p. 364.

²⁰⁰ *Die Alchemie*, I, p. 254.

²⁰¹ X, 76f., and XII, 10 (Bax, pp. 126f., 154).

²⁰² *Aurora consurgens* II, *Art. aurif.*, I, pp. 228f.: “... Et notandum quod duplex est sublimatio: una corporalis, alia spiritualis: corporalis quantum ad terreatem, spiritualis quantum ad igneatem.... Facite corpus spirituale et fixum volatile.... Senior dicit: Egrediatur spiritus a corpore qui est ignis.... Unde dicitur, quod tinctura fit a natura volantium: Et illud quod firmat et fixat ipsum spiritum, est fixum et perpetuum et incremabile et nominatur sulphur Philosophorum.” (... And it is to be noted that the sublimation is twofold: one corporeal, the other spiritual; corporeal

as regards earthliness, spiritual as regards fieriness.... Make the body spiritual, and the fixed volatile.... Senior says: Let the spirit which is fire go out of the body.... Whence it is said that the tincture arises from the nature of flying things. And that which makes the spirit itself firm and fixed, is fixed and eternal and cannot be burned and is called the sulphur of the Philosophers.)

²⁰³ “Epilogus et recapitulatio Orthelii,” *Bibl. chem. curiosa*, II, p. 527. We know of Orthelius only as a commentator on Michael Sendivogius, who lived in the second half of the 16th century.

²⁰⁴ “Archaeus est summus, exaltatus et invisibilis spiritus, qui separatur a corporibus, occulta naturae virtus” (The Archaeus is the highest exalted and invisible spirit, which is separated from the bodies, the hidden virtue [or quality] of nature). Cf. Ruland’s *Lexicon alchemiae*, which is strongly influenced by Paracelsus.

²⁰⁵ Cf. Maier, *Symbola aureae mensae*, p. 141. The words quoted do not come in this form from Morienus himself, but Maier uses them as a characteristic motto for Morienus in that section of his book dealing with this author. The original passage is to be found in Morienus, “De transmut. metall.,” *Art. aurif.*, II, pp. 35f.

¹ Abu'l Qāsim, in Holmyard, *Kitāb al-'ilm*, p. 24: “And this prime matter is found in a mountain containing an immense collection of created things. In this mountain is every sort of knowledge that is found in the world. There does not exist knowledge or understanding or dream or thought or sagacity or opinion or deliberation or wisdom or philosophy or geometry or government or power or courage or excellence or contentment or patience or discipline or beauty or ingenuity or journeying or orthodoxy or guidance or precision or growth or command or dominion or kingdom or vizierate or rule of a councillor or commerce that is not present there. And there does not exist hatred or malevolence or fraud or villainy or deceit or tyranny or oppression or perverseness or ignorance or stupidity or baseness or violence or cheerfulness or song or sport or flute or lyre or marriage or jesting or weapons or wars or blood or killing that is not present there.”

² Ibid., p. 22.

³ Sudhoff, XIII, p. 402.

⁴ *Kitāb al-'ilm*, p. 23.

⁵ “Cum igitur spiritus ille aquarum supracoelestium in cerebro sedem et locum acquisierit,” etc. (When therefore that spirit of the supra-celestial waters has taken up his abode and sea: in the brain ... etc.) (Steeb, *Coelum sephiroticum*, p. 117). The “stone that is no stone” is the λίθος ἔγκέφαλος, ‘brain-stone’ (Berthelot, *Alch. grecs*, I, iii, 1) and the ἀλαβάστρινος ἔγκέφαλος, ‘alabaster brain’ (ibid., I, iv, 1); Zosimos defines the despised, and at the same time precious, material as ἀδώρητον καὶ θεοδώρητον: “not given and given by God” (ibid., III, ii, 1). “Accipe cerebrum eius”: Hermes in the *Rosarium*, *Art. aurif.*, II, p. 264. The “os occiput” is used in the work because “cerebrum est mansio partis divinae” (the brain is the seat of the divine part) (“Liber Platonis quartorum,” *Theatr. chem.*, V, p. 124). The “occiput” is the “vas cerebri” (ibid., p. 148) (cf. figs. 75, 135). The brain is “... sedes animae rationalis. Nam est triangulus compositione et est propinquius omnibus membris corporis ad similitudinem simplicis ...” (... the seat of the rational soul. For it is triangular in composition [shape] and is nearer to simplicity than all other parts of the body ...) (ibid., p. 127). It is the organ which is nearest to the simplicity of the soul, and is therefore the bridge to spiritual transformation (ibid., p. 187).

^{5a} [The following translation, in verse 2, line 8, cites Job 39 : 9, where the passage actually is. The German versifier may have had in mind the references in Chapter 37 to the devastating power of God, signified allegorically by the unicorn.—EDITORS.

This is the Unicorn you see/
He is not found in our country.
Arlunnus says these animals
Lust greatly after pretty girls.
This way to catch him is the best/
A youth in women's clothes is dressed
And then with mincing steps he flaunts
About the Unicorn's bright haunts.
For when this creature spies a maid
Straight in her lap he lays his head.
The huntsman/ doffing his disguise/

Here is another Unicorn/
Churning the ground up with his horn.
No one can tame this animal/
He is so fierce/ so full of guile.
You have just heard how he is caught
Through his desire with maids to sport.
Even the patient Job observes/
In Chapter Thirty-Nine/ ninth verse:
That man hath never yet been born
Who'll bind and break the Unicorn/
Or fix the harness to his rib/

Saws off the horn and wins the prize.

And make him bide beside the crib.]

⁶ Rosencreutz, *Chymical Wedding*, p. 73. Concerning the dove, cf. *Aurora* I, Ch. VI: “Nive dealbabuntur in Selmon, et pennae columbae deargenteatae et posteriora dorsi eius in pallore auri: talis erit mihi filius dilectus. ...” (They shall be whited with snow in Selmon, and shall be as the wings of a dove covered with silver, and the hinder parts of her back with the paleness of gold. Such shall be to me a beloved son.) Grasseus, “Area arcani,” *Theatr. chem.*, VI, p. 314: “Plumbum philosophorum ... in quo splendida columba alba inest, quae sal metallorum vocatur, in quo magisterium operis consistit. Haec est casta sapiens et dives illa regina ex Saba velo albo induta. ...” (The lead of the philosophers in which is the shining white dove, which is called the salt of metals, in which consists the magistry of the work. This is that chaste, wise, and rich queen of Sheba clothed in a white veil.) *Aurora* I, Ch. XII: “Et dabit mihi pennas sicut columbae [Vulg., Ps. 54 : 7] et volabo cum ea in coelo et dicam tunc: Vivo ego in aeternum [Deut. 32 : 40]. ...” ([And she will] give me wings like a dove, and I will fly with her to heaven, and then say: I live for ever.)

⁷ *Mus. herm.*, pp. 338ff.; originally in Barnaud, *Triga chemica*.

⁸ The fourth illustration in *Musaeum Hermeticum*, placed before the first treatise.

⁹ *Philosophia reformata*, p. 316.

¹⁰ *Theatr. chem.*, II, p. 123.

¹¹ Medieval tradition associates the unicorn with the lion “because this animal is as strong, wild, and cruel as the lions.” “This,” says Andreas Baccius, “is the reason why they called this animal *lycornu* in France and Italy.” Here *lycornu* is evidently derived from “lion.” Cf. Catelanus, *Ein schöner neuer historischer Discurs, von der Natur, Tugenden, Eigenschafften, und Gebrauch dess Einhorns*, p. 22.

¹² Much the same is said of the unicorn as of the dragon, which as a denizen of the underworld lives in gorges and caverns. Thus unicorns “hide themselves and dwell in barren places on the high mountains, in the deepest, darkest, and most out-of-the-way caves and dens of wild beasts, amid toads and other noxious, loathly reptiles.” *Ibid.*, p. 23.

¹³ *Theatr. chem.*, IV, p. 286.

¹⁴ Vulgate: “... et comminuet eas tamquam vitulum Libani: et dilectus quemadmodum filius unicornium.” (D.V., Ps. 28 : 6: “And [he] shall reduce them to pieces; as a calf of Libanus, and as the beloved son of unicorns.”)

¹⁵ Vulgate: “Et exaltabitur sicut unicornis cornu meum. ...” (D.V., Ps. 91 : 11: “But my horn shall be exalted like that of the unicorn. ...”)

¹⁶ Vulgate: “Salva me ex ore leonis, et a cornibus unicornium humilitatem meam.” (D.V., Ps. 21 : 22: “Save me from the lion’s mouth; and my lowness from the horns of the unicorns.”)

¹⁷ “Tauri decor eius, cornua unicornis, cornua eius.” (Tertullian, *Adversus Judaeos*, Ch. X; Migne, *P.L.*, vol. 2, col. 626.)

¹⁸ “Dialogus cum Tryphone Judaeo,” ch. 91 (Migne, *P.G.*, vol. 6, col. 691).

¹⁹ “Unicornis est Deus, nobis petra Christus, nobis lapis angularis Jesus, nobis hominum homo Christus.” Priscillian, *Opera*, p. 24.

²⁰ *Vita*, Migne, *P.G.*, vol. 120, col. 69, ch. XCI. The hermit-nature of the unicorn is mentioned in Aelian, *De natura animalium*, xvi, 20.

²¹ *De symbolica Aegyptiorum sapientia*, p. 401. Cf. also p. 348: “[Dei] fortitudo similis est Rhinoceroti, Exod. 15. Unicornis non admittit in antro cohabitorem: filius Dei aedificavit in saecula, hoc est in utero B[eatae] V[irginis].”

(The strength of God is similar to [that of] the Rhinoceros, Exod. 15. The Unicorn does not admit of a fellow-dweller in his cave. The son of God has built for the centuries, i.e., in the womb of the Blessed Virgin.) Cf. Ps. 77 : 69: “Et aedificavit sicut unicornium sanctificium suum, in terra quam fundavit in saecula” (D.V.: “And he built his sanctuary as of unicorns, in the land which he founded for ever”; A.V., Ps. 78: 69: “And he built his sanctuary like high palaces, like the earth which he hath established for ever”). Pp. 348f.: “The horn of the unicorn acts as an alexipharmic, because it expels the poison from the water, and this refers allegorically to the baptism of Christ [i.e., the consecration of the baptismal water]: rightly is it applied to Christ baptized, who, like the chosen son of unicorns, sanctified the streams of water to wash away the filth of all our sins, as Bede says.” The wildness of the unicorn is emphasized in Job (A.V.) 39 : 9–10: “Will the unicorn be willing to serve thee, or abide by thy crib? Canst thou bind the unicorn with his band in the furrow? or will he harrow the valleys after thee?”

²² *Mundus symbolicus*, I, 419, b: “S. Bonaventura: Christus, inquit, per mansuetissimam Mariam mansuescit et placatur, ne se de peccatore per mortem aeternam ulciscatur.” The myth of the virgin and the unicorn is handed down by Isidore of Seville (*Etymologiarum*, xii, 62). The source book is the *Physiologus Graecus*: Πῶς δὲ ἀγρεύεται; παρθένον ἔμπροσθεν αὐτοῦ. Καὶ ἄλλεται εἰς τὸν κόλπον τῆς παρθένου καὶ ἡ παρθένον θάλπει τὸ ζῶον καὶ αἶρει εἰς τὸ παλάτιον τῶν βασιλέων. (How is it hunted? They cast a sacred virgin before it. And it leaps into the lap of the virgin, and the virgin warms the animal with love and bears it to the palace of the kings.)—Pitra, *Spicilegium solesmense*, III, p. 355 (“Veterum Gnosticorum in Physiologum allegoricae interpretationes”). The *Physiologus* may go back to Didymus of Alexandria, a Christian hermeneutic of the 4th cent.

²³ “Insuperabilis fortitudo,” cf. “Tab. smarag.,” “Totius fortitudinis fortitudo fortis” (Strong strength of all strength). Honorius, *Speculum*, Migne, *P.L.*, vol. 172, col. 847: “[Christus] ... cuius virtus ut unicornis fuit, quia omnia obstantia cornu supprimit, quia Christus principatus et potestates mundi cornibus crucis perdomuit” ([Christ] ... whose strength [virtue] was like that of the unicorn, because he crushed all that was in his way with his horn, for Christ subjugated the principalities and powers of the world with the horns of the cross).

²⁴ “Qui in uterum Virginis se reclinans captus est a venatoribus id est in humana forma inventus est a suis amatoribus.”

²⁵ *De Trinitate* (Migne, *P.L.*, vol. 167, col. 1739).

²⁶ *Expositio psalmorum* (Migne, *P.L.*, vol. 142, col. 182): “In te inimicos nostros ventilabimus cornu. Et in nomine tuo spernemus insurgentes in nobis ... cornu vero nostrum Christus est, idem et nomen Patris in quo adversarii nostri vel ventilantur vel spernuntur.” (In thee we shall crush our enemies with the horn. In thy name we shall scorn those that rise up against us ... but our horn is Christ, and also the name of the Father through whom our adversaries are crushed or scorned.)

²⁷ *Etymologiarum* (Migne, *P.L.*, vol. 82), xii, 62: “... aut ventilet aut perforet.”

²⁸ It is true that the son’s mother is the moon, but “nutrix eius terra est” (the earth is his nurse) (cf. fig. 163). “Ascendit a terra in coelum”: therefore he is of earthly origin, ascends to heaven and returns again to permeate the earth.

²⁹ Sbordone, *Physiologus*, p. 263, 1–8.

³⁰ The monstrous nature of the unicorn is described by Pliny (*Hist. nat.*, Lib. VIII, ch. 21): A horse’s body, an elephant’s feet, and the tail of a wild boar. There is a fantastic description, which might have been especially

interesting to alchemists, in the Ἰνδικὰ of Ctesias (c. 400 B.C.): “From what I hear, the wild ass in India is not much smaller than the horse. The head is of a purplish hue but the rest of the body is white, and the colour of the eyes is dark blue. There is a horn on the forehead, nearly one and a half cubits in length; the lower part of the horn is white, the upper part purple, but the middle is pitch black. I hear that the Indians drink out of these brightly coloured horns, but only the most aristocratic Indians. Moreover the horns are bound at intervals with gold rings for this purpose, as the beautiful arm of a statue is decorated with bracelets. They say that anyone who drinks from this horn is immune to incurable diseases, for he is not seized by spasms or killed by poisons and, if he has drunk anything harmful, he vomits and is cured.” (*Ancient India*, trans. McCrindle, p. 363.) Also Aelian, *De natura animalium*, IV, 52, III, 41, and XVI, 20. In the last passage, Aelian says that in India the animal is called the “Kartazonon”: “The strength of its horn is invincible. It is fond of lonely pastures and wanders about alone.... It seeks solitude.” Philostratus, in his *Vita Apollonii* (Book III, ch. 2), relates that when anyone drinks from a cup made of a unicorn’s horn, he is immune throughout the day to illness and pain, he can also walk through fire, and the strongest poison does him no harm. In the Χριστιανικὴ Τοπογραφία of Kosmas (beginning of the 6th century), it is related that the unicorn, in order to escape from its hunters, will plunge into an abyss and land on its horn, which is so strong that it breaks the fall (trans. McCrindle, p. 361). The complete patristic literature is to be found in Salzer, *Die Sinnbilder*, pp. 44ff.

³¹ See Jung, “Paracelsus the Physician,” pars. 27f., and “Paracelsus as a Spiritual Phenomenon,” par. 158.

³² Thales taught that water was the first principle.

³³ The passages quoted above are to be found in Hippolytus, *Elenchos*, V, 9, 12 to 15.

³⁴ *Ibid.*, V, 9, 8.

³⁵ From a Greek magic papyrus in Preisendanz, *Papyri Graecae Magicae*, II, p. 60, lines 44f.

³⁶ *Aureum vellus*.

³⁷ “Rosinus” is a corruption of Zosimos.

³⁸ This recalls the mysterious saying “Aufer caput, corpus ne tangito” (Carry away the head, but don’t touch the body).—Béroalde de Verville, *Le Songe de Poliphile*, Folio c, III.

³⁹ From a Greek magic papyrus in Preisendanz, *Papyri Graecae Magicae*, I, p. 185, line 99.

⁴⁰ *Χρυσέας κεφαλῆς παῖδες* (Berthelot, III, x, 1).

⁴¹ *Ars chem.*, p. 119.

⁴² I had better not enter into the question of whether the unicorn existed in Assyrian and Babylonian culture. Schrader (“Die Vorstellung vom Μονόκερωσ,” pp. 573ff.) tries to derive the whole idea of the unicorn from the representations of what appear to be one-horned animals, such as those of Persepolis, thus, in my opinion, falsely interpreting these monuments. He does not, however, take the Indian sources into account.

⁴³ Bloomfield, *Hymns of the Atharva-Veda*, p. 15.

⁴⁴ Eggeling, *Shatapatha-Brahmana*, pp. 216ff.

⁴⁵ “The fish then swam up to him, and to its horn he tied the rope of the ship and by that means he passed swiftly up to yonder northern mountain [Himalaya]” (*ibid.*, p. 217, 5).

⁴⁶ Bühler, *Laws of Manu*, Introduction, p. xiv. Manu “is the *heros eponymos* of the human race, and by his nature belongs both to gods and to men” (*ibid.*, p. lvii).

⁴⁷ *Ibid.*, pp. lvii f.

- ⁴⁸ *Vedic Hymns*, Part II, p. 96: “As thou didst perform sacrifice to the gods with the sacrificial food of the wise Manu, a sage together with sages, thus, O highly truthful Hotri,” etc.
- ⁴⁹ Chhandogya Upanishad, Part I, p. 44, 4.
- ⁵⁰ Eggeling, *Shatapatha-Brahmana*, p. 29, 14.
- ⁵¹ *Vedic Hymns*, Part I, p. 427, 13: “O Maruts, those pure medicines of yours, the most beneficent and delightful, O heroes, those which Manu, our father, chose, those I crave from Rudra, as health and wealth.”
- ⁵² Cf. my remarks on the Adech of Paracelsus (“Paracelsus as a Spiritual Phenomenon,” pars. 168, 203ff.).
- ⁵³ Holtzmann, *Indische Sagen*, pp. 131ff.; and Lüders, *Nachrichten*. The story is also to be found in the Buddhist Jataka 526 (trans. Cowell, V, pp. 100–106).
- ⁵⁴ West, *Pahlavi Texts*, pp. 67ff.
- ⁵⁵ Berthelot, *Chimie au moyen âge*, III, p. 120.
- ⁵⁶ West, *Pahlavi Texts*, p. 65 (XVIII, 1).
- ⁵⁷ *Ibid.*, pp. 65–66 (XVIII, 1, 9).
- ⁵⁸ In this connection we may note the curious fact that a lizard is concealed in the tree: “The evil spirit has formed therein, among those which enter as opponents, a lizard as an opponent in that deep water, so that it may injure the Hôm” (Bundahish, XVIII, 2 in West, *Pahlavi Texts*, p. 65). Hôm = Haoma, the plant of immortality. In alchemy, the *spiritus mercurii* that lives in the tree is represented as serpent, salamander, or Melusina. We find the last-mentioned in the “Ripley Scrowle,” where the lizard is half a woman and is celebrating the *coniunctio* (marriage) with the *filius philosophorum* (see fig. 257). The “Verses belonging to an Emblematicall Scrowle” (*Theatr. chem. Brit.*, p. 375) run as follows:

“And Azot is truly my Sister,
And Kibrick forsooth is my Brother:
The Serpent of Arabia is my name,
The which is leader of all this game.”

MANUFACTURED IN THE U.S.A.

EDITORIAL NOTE

When we compare the essays in the present volume with Jung's monumental *Mysterium Coniunctionis*, with *Psychology and Alchemy* and to a lesser extent *Aion*, we realize their special value as an introduction to his researches into alchemy. The three longer works, published earlier in this edition, have an impact which to the uninitiated is well-nigh overwhelming. After them these shorter and more manageable works will be turned to, if not for relaxation—their erudition forbids that—at least with a feeling of lively interest, as preliminary studies for the weightier volumes which they now appear to summarize. Much of the symbolic matter has been referred to in other earlier publications: the visions of Zosimos in “Transformation Symbolism in the Mass,” and Mercurius in all the above-mentioned works but more especially in “The Psychology of the Transference,” while “The Philosophical Tree” develops the theme of the tree symbol discussed sporadically in *Symbols of Transformation*. The “Commentary on *The Secret of the Golden Flower*” is of considerable historical interest. Jung says in *Memories, Dreams, Reflections* (ch. 7): “Light on the nature of alchemy began to come to me only after I had read the text of the *Golden Flower*, that specimen of Chinese alchemy which Richard Wilhelm sent me in 1928. I was stirred by the desire to become more closely acquainted with the alchemical texts.” “Paracelsus as a Spiritual Phenomenon” stands out as a separate study with a powerful appeal, perhaps because Jung could identify himself rather closely and sympathetically with that dynamic and explosive personage, his own countryman. Because of its emphasis on alchemical sources, it is included in the present volume rather than in Volume 15 with two shorter essays on Paracelsus as a personality and physician.

*

The Editors and the translator are greatly indebted to the late Mr. A. S. B. Glover for the translation of the Latin, Greek, and French passages in the text, as well as for his tireless work in checking the references and bibliographical data, which continued until shortly before his death in January 1966.

For assistance in explicating Noël Pierre's poem, grateful acknowledgment is made to Comte Pierre Crapon de Caprona (Noël Pierre), to Miss Paula Deitz, and to Mr. Jackson Mathews.

For help and co-operation in obtaining the photographs for the plates in this volume the Editors are much indebted to the late Mrs. Marianne Niehus-Jung, who made

materials available from Professor Jung's collection; to Dr. Jolande Jacobi and Dr. Rudolf Michel, in charge of the picture collection at the C. G. Jung Institute, Zurich; and to Mr. Hellmut Wieser, of Rascher Verlag, Zurich. The frontispiece, an almost exact coloured replica of a woodcut published by the author in *Paracelsica*, was discovered fortuitously in a manuscript in the Mellon Collection of the Alchemical and Occult. It is reproduced by courtesy of Mr. Paul Mellon and the Yale University Library. The Editors are indebted also to Mr. Laurence Witten for his advice and assistance in regard to it.

I

Commentary on “The Secret of the Golden Flower”

Translated from the “Europäischer Kommentar” to *Das Geheimnis der goldenen Blüte: Ein chinesisches Lebensbuch*, 5th edn. (Zurich: Rascher, 1957).

Foreword to the Second German Edition

1. Difficulties Encountered by a European in Trying to Understand the East
2. Modern Psychology Offers a Possibility of Understanding
3. The Fundamental Concepts
 - A. TAO
 - B. THE CIRCULAR MOVEMENT AND THE CENTRE
4. Phenomena of the Way
 - A. THE DISINTEGRATION OF CONSCIOUSNESS
 - B. ANIMUS AND ANIMA
5. The Detachment of Consciousness from the Object
6. The Fulfilment
7. Conclusion

Examples of European Mandalas

II

The Visions of Zosimos

Translated from “Die Visionen des Zosimos,” *Von den Wurzeln des Bewusstseins* (Zurich: Rascher, 1954).

I. The Texts

II. Commentary

1. GENERAL REMARKS ON THE INTERPRETATION
2. THE SACRIFICIAL ACT
3. THE PERSONIFICATIONS
4. THE STONE SYMBOLISM
5. THE WATER SYMBOLISM
6. THE ORIGIN OF THE VISION

III

Paracelsus as a Spiritual Phenomenon

Translated from “Paracelsus als geistige Erscheinung,” *Paracelsica: Zwei Vorlesungen über den Arzt und Philosophen Theophrastus* (Zurich: Rascher, 1942).

Foreword to *Paracelsica*

1. The Two Sources of Knowledge: The Light of Nature and the Light of Revelation

- A. MAGIC
- B. ALCHEMY
- C. THE ARCANES TEACHING
- D. THE PRIMORDIAL MAN

2. “De vita longa”: An Exposition of the Secret Doctrine

- A. THE ILIASTER
- B. THE AQUASTER
- C. ARES
- D. MELUSINA
- E. THE FILIUS REGIUS AS THE ARCANES SUBSTANCE (MICHAEL MAIER)
- F. THE PRODUCTION OF THE ONE, OR CENTRE, BY DISTILLATION

3. The Natural Transformation Mystery

- A. THE LIGHT OF THE DARKNESS
- B. THE UNION OF MAN'S TWO NATURES
- C. THE QUATERNITY OF THE HOMO MAXIMUS
- D. THE RAPPROCHEMENT WITH THE UNCONSCIOUS

4. The Commentary of Gerard Dorn

- A. MELUSINA AND THE PROCESS OF INDIVIDUATION
- B. THE HIEROSGAMOS OF THE EVERLASTING MAN
- C. SPIRIT AND NATURE
- D. THE ECCLESIASTICAL SACRAMENT AND THE OPUS ALCHYMICUM

5. Epilogue

IV

The Spirit Mercurius

Translated from "Der Geist Mercurius," *Symbolik des Geistes* (Zurich: Rascher, 1948).

Part I

- 1. The Spirit in the Bottle
- 2. The Connection between Spirit and Tree
- 3. The Problem of Freeing Mercurius

Part II

- 1. Introductory
- 2. Mercurius as Quicksilver and/or Water
- 3. Mercurius as Fire
- 4. Mercurius as Spirit and Soul
 - A. MERCURIUS AS AN AERIAL SPIRIT
 - B. MERCURIUS AS SOUL

5. The Dual Nature of Mercurius
6. The Unity and Trinity of Mercurius
7. The Relation of Mercurius to Astrology and the Doctrine of the Archons
8. Mercurius and Hermes
9. Mercurius as the Arcane Substance
10. Summary

V

The Philosophical Tree

Translated from “Der philosophische Baum,” *Von den Wurzeln des Bewusstseins* (Zurich: Rascher, 1954).

I. Individual Representations of the Tree Symbol

II. On the History and Interpretation of the Tree Symbol

1. THE TREE AS AN ARCHETYPAL IMAGE
2. THE TREE IN THE TREATISE OF JODOCUS GREVERUS
3. THE TETRASOMIA
4. THE IMAGE OF WHOLENESS
5. THE NATURE AND ORIGIN OF THE PHILOSOPHICAL TREE
6. DORN'S INTERPRETATION OF THE TREE
7. THE ROSE-COLOURED BLOOD AND THE ROSE
8. THE ALCHEMICAL MIND
9. VARIOUS ASPECTS OF THE TREE
10. THE HABITAT OF THE TREE
11. THE INVERTED TREE
12. BIRD AND SNAKE
13. THE FEMININE TREE-NUMEN
14. THE TREE AS THE LAPIS
15. THE DANGERS OF THE ART
16. UNDERSTANDING AS A MEANS OF DEFENCE
17. THE MOTIF OF TORTURE

18. THE RELATION OF SUFFERING TO THE CONIUNCTIO

19. THE TREE AS MAN

20. THE INTERPRETATION AND INTEGRATION OF THE UNCONSCIOUS

LIST OF ILLUSTRATIONS

For “Commentary on *The Secret of the Golden Flower*”

Four stages of meditation

Drawings from the *Hui Ming Ching*, as reproduced in the original Swiss edition of *Das Geheimnis der goldenen Blüte* (1929).

A1–A10. Examples of European mandalas

Drawings or paintings by patients in analysis. Author’s collection, except A4: C. G. Jung Institute.

For “Paracelsus as a Spiritual Phenomenon”

The *spiritus mercurialis* represented as a monstrous dragon

Illuminated drawing from a German alchemical ms., c. 1600, in the collection of Paul Mellon (now in the Yale University Library). It replaces an almost identical woodcut from Nazari, *Della tramutazione metallica sogni tre* (Brescia, 1599), reproduced in *Paracelsica*. P: Yale Univ. Library.

B1. A fish meal, with statue of the hermaphrodite

Miniature from “Le livre des ansienes estoires,” in British Museum MS. Add. 15268 (13th cent.), fol. 242^v. P: British Museum.

B2. The *filius* or *rex* in the form of a hermaphrodite

Woodcut from *Rosarium philosophorum* (second part of *De alchimia*, 1550), fol. X, iii^v (copy in author’s collection).

B3. The Rebis

Painting from “Das Buch der hl. Dreifaltigkeit . . . und Beschreibung der Heimlichkeit von Veränderung der Metallen” (1420), in the Codex Germanicus 598, Staatsbibliothek, Munich. P: Staatsbibliothek.

B4. Melusina as the *aqua permanens*

Woodcut in Reusner, *Pandora* (1588), p. 249 (copy in author’s collection).

B5. The anima as Melusina

Drawing from a variant of the Ripley *Scrowle* (1588), British Museum MS. Sloane 5025. P: British Museum.

B6. The King's Son and Hermes on a mountain

Engraving from Lambspringk, "De lapide philosophico," fig. XII, in *Musaeum hermeticum* (1678), p. 365. P: C. G. Jung Institute.

B7. The Pelican, in which the distillation takes place

Page from Rhenanus, *Solis e puteo* (1613), as reproduced in *Paracelsica*.

For "The Philosophical Tree"

Figs. 1–32. Drawings, paintings, etc., by patients in analysis

Author's collection, except Fig. 9: from Gerhard Adler, *Studies in Analytical Psychology*, pl. 12, reproduced by courtesy of Dr. Adler; Figs. 22, 25, 27, 30, and 31 (a design in embroidery): C. G. Jung Institute.

COMMENTARY ON “THE SECRET OF THE GOLDEN FLOWER”

[In late 1929, in Munich, Jung and the sinologist Richard Wilhelm published *Das Geheimnis der goldenen Blüte: Ein chinesisches Lebensbuch*, consisting of Wilhelm’s translation of an ancient Chinese text, *T’ai I Chin Hua Tsung Chih* (Secret of the Golden Flower), with his notes and discussion of the text, and a “European commentary” by Jung. Earlier the same year, the two authors had published in the *Europäische Revue* (Berlin), V: 2/8 (Nov.), 530-42, a much abbreviated version entitled “Tschang Scheng Schu; Die Kunst das menschliche Leben zu verlängern” (i.e., “Ch’ang Sheng Shu; The Art of Prolonging Life”), an alternative title of the “Golden Flower.”

[In 1931, Jung’s and Wilhelm’s joint work appeared in English as *The Secret of the Golden Flower: A Chinese Book of Life*, translated by Cary F. Baynes (London and New York), containing as an appendix Jung’s memorial address for Wilhelm, who had died in 1930. (For “In Memory of Richard Wilhelm,” see Vol. 15 of the *Collected Works*.)

[A second, revised edition of the German original was published in 1938 (Zurich), with a special foreword by Jung and his Wilhelm memorial address. Two more (essentially unaltered) editions followed, and in 1957 appeared a fifth, entirely reset edition (Zurich), which added a related text, the *Hui Ming Ching*, and a new foreword by Salome Wilhelm, the translator’s widow.

[Mrs. Baynes prepared a revision of her translation, and this appeared in 1962 (New York and London), including Jung’s foreword and the additional Wilhelm material. (Her revised translation of Jung’s commentary alone had appeared in an anthology, *Psyche and Symbol*, edited by Violet S. de Laszlo, Anchor Books, New York, 1958.)

[The following translation of Jung’s commentary and his foreword is based closely on Mrs. Baynes’ version, from which some of the editorial notes have also been taken over. Four pictures of the stages of meditation, from the *Hui Ming Ching*, which accompanied the “Golden Flower” text, have been reproduced because of their pertinence to Jung’s commentary; and the examples of European mandalas have been retained, though most of them were published, in a different context, in “Concerning

Mandala Symbolism,” Vol. 9, part i, of the *Collected Works*. The chapters have been given numbers.

—EDITORS.]

FOREWORD TO THE SECOND GERMAN EDITION

My deceased friend, Richard Wilhelm, co-author of this book, sent me the text of *The Secret of the Golden Flower* at a time that was crucial for my own work. This was in 1928. I had been investigating the processes of the collective unconscious since the year 1913, and had obtained results that seemed to me questionable in more than one respect. They not only lay far beyond everything known to “academic” psychology, but they also overstepped the bounds of any medical, purely personal, psychology. They confronted me with an extensive phenomenology to which hitherto known categories and methods could no longer be applied. My results, based on fifteen years of effort, seemed inconclusive, because no possibility of comparison offered itself. I knew of no realm of human experience with which I might have backed up my findings with some degree of assurance. The only analogies—and these, I must say, were far removed in time—I found scattered among the reports of the heresiologists. This connection did not in any way ease my task; on the contrary, it made it more difficult, because the Gnostic systems consist only in small part of immediate psychic experiences, the greater part being speculative and systematizing recensions. Since we possess only very few complete texts, and since most of what is known comes from the reports of Christian opponents, we have, to say the least, an inadequate knowledge of the history as well as the content of this strange and confused literature, which is so difficult to evaluate. Moreover, considering the fact that a period of not less than seventeen to eighteen hundred years separates us from that age, support from that quarter seemed to me extraordinarily risky. Again, the connections were for the most part of a subsidiary nature and left gaps at just the most important points, so that I found it impossible to make use of the Gnostic material.

The text that Wilhelm sent me helped me out of this difficulty. It contained exactly those items I had long sought for in vain among the Gnostics. Thus the text afforded me a welcome opportunity to publish, at least in provisional form, some of the essential results of my investigations.

At that time it seemed to me a matter of no importance that *The Secret of the Golden Flower* is not only a Taoist text concerned with Chinese yoga, but is also an alchemical treatise. A deeper study of the Latin treatises has taught me better and has shown me that the alchemical character of the text is of prime significance, though I shall not go into this point more closely here. I would only like to emphasize that it was the text of the *Golden Flower* that first put me on the right track. For in medieval alchemy we have

the long-sought connecting link between Gnosis and the processes of the collective unconscious that can be observed in modern man.¹

I would like to take this opportunity to draw attention to certain misunderstandings to which even well-informed readers of this book have succumbed. Not infrequently people thought that my purpose in publishing it was to put into the hands of the public a recipe for achieving happiness. In total misapprehension of all that I say in my commentary, these readers tried to imitate the “method” described in the Chinese text. Let us hope these representatives of spiritual profundity were few in number!

Another misunderstanding gave rise to the opinion that, in my commentary, I was to some extent describing my own therapeutic method, which, it was said, consisted in my instilling Eastern ideas into my patients for therapeutic purposes. I do not believe there is anything in my commentary that lends itself to that sort of superstition. In any case such an opinion is altogether erroneous, and is based on the widespread view that psychology was invented for a specific purpose and is not an empirical science. To this category belongs the superficial as well as unintelligent opinion that the idea of the collective unconscious is “metaphysical.” On the contrary, it is an *empirical* concept to be put alongside the concept of instinct, as is obvious to anyone who will read with some attention.

C. G. J.

Küsnacht / Zurich, 1938

1. DIFFICULTIES ENCOUNTERED BY A EUROPEAN IN TRYING TO UNDERSTAND THE EAST

[1] A thorough Westerner in feeling, I cannot but be profoundly impressed by the strangeness of this Chinese text. It is true that some knowledge of Eastern religions and philosophies helps my intellect and my intuition to understand these things up to a point, just as I can understand the paradoxes of primitive beliefs in terms of “ethnology” or “comparative religion.” This is of course the Western way of hiding one’s heart under the cloak of so-called scientific understanding. We do it partly because the *misérable vanité des savants* fears and rejects with horror any sign of living sympathy, and partly because sympathetic understanding might transform contact with an alien spirit into an experience that has to be taken seriously. Our so-called scientific objectivity would have reserved this text for the philological acumen of sinologists, and would have guarded it jealously from any other interpretation. But Richard Wilhelm penetrated too deeply into the secret and mysterious vitality of Chinese wisdom to allow such a pearl of intuitive insight to disappear into the pigeon-holes of specialists. I am greatly honoured that his choice of a psychological commentator has fallen upon me.

[2] This, however, involves the risk that this precious example of more-than-specialist insight will be swallowed by still another specialism. Nevertheless, anyone who belittles the merits of Western science is undermining the foundations of the Western mind. Science is not indeed a perfect instrument, but it is a superb and invaluable tool that works harm only when it is taken as an end in itself. Science must serve; it errs when it usurps the throne. It must be ready to serve all its branches, for each, because of its insufficiency, has need of support from the others. Science is the tool of the Western mind, and with it one can open more doors than with bare hands. It is part and parcel of our understanding, and it obscures our insight only when it claims that the understanding it conveys is the only kind there is. The East teaches us another, broader, more profound, and higher understanding—understanding through life. We know this only by hearsay, as a shadowy sentiment expressing a vague religiosity, and we are fond of putting “Oriental wisdom” in quotation marks and banishing it to the dim region of faith and superstition. But that is wholly to misunderstand the realism of the East. Texts of this kind do not consist of the sentimental, overwrought mystical intuitions of pathological cranks and

recluses, but are based on the practical insights of highly evolved Chinese minds, which we have not the slightest justification for undervaluing.

[3] This assertion may seem bold, perhaps, and is likely to cause a good deal of head-shaking. Nor is that surprising, considering how little people know about the material. Its strangeness is indeed so arresting that our puzzlement as to how and where the Chinese world of thought might be joined to ours is quite understandable. The usual mistake of Western man when faced with this problem of grasping the ideas of the East is like that of the student in *Faust*. Misled by the devil, he contemptuously turns his back on science and, carried away by Eastern occultism, takes over yoga practices word for word and becomes a pitiable imitator. (Theosophy is our best example of this.) Thus he abandons the one sure foundation of the Western mind and loses himself in a mist of words and ideas that could never have originated in European brains and can never be profitably grafted upon them.

[4] An ancient adept has said: "If the wrong man uses the right means, the right means work in the wrong way."¹ This Chinese saying, unfortunately only too true, stands in sharp contrast to our belief in the "right" method irrespective of the man who applies it. In reality, everything depends on the man and little or nothing on the method. The method is merely the path, the direction taken by a man; the way he acts is the true expression of his nature. If it ceases to be this, the method is nothing more than an affectation, something artificially pieced on, rootless and sapless, serving only the illegitimate goal of self-deception. It becomes a means of fooling oneself and of evading what may perhaps be the implacable law of one's being. This is far removed from the earthiness and self-reliance of Chinese thought. It is a denial of one's own nature, a self-betrayal to strange and unclean gods, a cowardly trick for the purpose of feigning mental superiority, everything in fact that is profoundly contrary to the spirit of the Chinese "method." For these insights spring from a way of life that is complete, genuine, and true to itself; from that ancient, cultural life of China which grew logically and organically from the deepest instincts, and which, for us, is forever inaccessible and impossible to imitate.

[5] Western imitation is a tragic misunderstanding of the psychology of the East, every bit as sterile as the modern escapades to New Mexico, the blissful South Sea islands, and central Africa, where "the primitive life" is played at in deadly earnest while Western man secretly evades his menacing duties, his *Hic Rhodus hic salta*. It is not for us to imitate what is foreign to our organism or to play the missionary; our task is to build up our Western civilization, which sickens with a thousand ills. This has to be done on the spot, and by the European just as he is, with all his Western ordinariness, his marriage problems, his neuroses, his social and political delusions, and his whole philosophical disorientation.

[6] We should do well to confess at once that, fundamentally, we do not understand the utter unworldliness of a text like this—that actually we do not want to understand it. Have we, perhaps, a dim suspicion that a mental attitude which can direct the glance inward to that extent is detached from the world only because these people have so completely fulfilled the instinctive demands of their natures that there is nothing to prevent them from glimpsing the invisible essence of things? Can it be that the precondition for such a vision is liberation from the ambitions and passions that bind us to the visible world, and does not this liberation come from the sensible fulfilment of instinctive demands rather than from the premature and fear-ridden repression of them? Are our eyes opened to the spirit only when the laws of the earth are obeyed? Anyone who knows the history of Chinese culture and has carefully studied the *I Ching*, that book of wisdom which for thousands of years has permeated all Chinese thought, will not lightly wave these doubts aside. He will be aware that the views set forth in our text are nothing extraordinary to the Chinese, but are actually inescapable psychological conclusions.

[7] For a long time the spirit, and the sufferings of the spirit, were positive values and the things most worth striving for in our peculiar Christian culture. Only in the course of the nineteenth century, when spirit began to degenerate into intellect, did a reaction set in against the unbearable dominance of intellectualism, and this led to the unpardonable mistake of confusing intellect with spirit and blaming the latter for the misdeeds of the former. The intellect does indeed do harm to the soul when it dares to possess itself of the heritage of the spirit. It is in no way fitted to do this, for spirit is something higher than intellect since it embraces the latter and includes the feelings as well. It is a guiding principle of life that strives towards superhuman, shining heights. Opposed to this *yang* principle is the dark, feminine, earthbound *yin*, whose emotionality and instinctuality reach back into the depths of time and down into the labyrinth of the physiological continuum. No doubt these are purely intuitive ideas, but one can hardly dispense with them if one is trying to understand the nature of the human psyche. The Chinese could not do without them because, as the history of Chinese philosophy shows, they never strayed so far from the central psychic facts as to lose themselves in a one-sided over-development and over-valuation of a single psychic function. They never failed to acknowledge the paradoxicality and polarity of all life. The opposites always balanced one another—a sign of high culture. One-sidedness, though it lends momentum, is a mark of barbarism. The reaction that is now beginning in the West against the intellect in favour of feeling, or in favour of intuition, seems to me a sign of cultural advance, a widening of consciousness beyond the narrow confines of a tyrannical intellect.

[8] I have no wish to depreciate the tremendous differentiation of the Western intellect; compared with it the Eastern intellect must be described as childish.

(Naturally this has nothing to do with intelligence.) If we should succeed in elevating another, and possibly even a third psychic function to the dignified position accorded to the intellect, then the West might expect to surpass the East by a very great margin. Therefore it is sad indeed when the European departs from his own nature and imitates the East or “affects” it in any way. The possibilities open to him would be so much greater if he would remain true to himself and evolve out of his own nature all that the East has brought forth in the course of the millennia.

[9] In general, and looked at from the incurably externalistic standpoint of the intellect, it would seem as if the things the East values so highly were not worth striving for. Certainly the intellect alone cannot comprehend the practical importance Eastern ideas might have for us, and that is why it can classify them as philosophical and ethnological curiosities and nothing more. The lack of comprehension goes so far that even learned sinologists have not understood the practical use of the *I Ching*, and consider the book to be no more than a collection of abstruse magic spells.

2. MODERN PSYCHOLOGY OFFERS A POSSIBILITY OF UNDERSTANDING

[10] Observations made in my practical work have opened out to me a quite new and unexpected approach to Eastern wisdom. In saying this I should like to emphasize that I did not have any knowledge, however inadequate, of Chinese philosophy as a starting point. On the contrary, when I began my career as a psychiatrist and psychotherapist, I was completely ignorant of Chinese philosophy, and only later did my professional experience show me that in my technique I had been unconsciously following that secret way which for centuries had been the preoccupation of the best minds of the East. This could be taken for a subjective fancy—which was one reason for my previous reluctance to publish anything on the subject—but Richard Wilhelm, that great interpreter of the soul of China, enthusiastically confirmed the parallel and thus gave me the courage to write about a Chinese text that belongs entirely to the mysterious shadow-land of the Eastern mind. At the same time—and this is the extraordinary thing—its content forms a living parallel to what takes place in the psychic development of my patients, none of whom is Chinese.

[11] In order to make this strange fact more intelligible to the reader, it must be pointed out that just as the human body shows a common anatomy over and above all racial differences, so, too, the human psyche possesses a common substratum transcending all differences in culture and consciousness. I have called this substratum the collective unconscious. This unconscious psyche, common to all mankind, does not consist merely of contents capable of becoming conscious, but of latent predispositions towards identical reactions. The collective unconscious is simply the psychic expression of the identity of brain structure irrespective of all racial differences. This explains the analogy, sometimes even identity, between the various myth motifs and symbols, and the possibility of human communication in general. The various lines of psychic development start from one common stock whose roots reach back into the most distant past. This also accounts for the psychological parallelisms with animals.

[12] In purely psychological terms this means that mankind has common instincts of ideation and action. All conscious ideation and action have developed on the basis of these unconscious archetypal patterns and always remain dependent on them. This is especially the case when consciousness has not attained any high degree of clarity,

when in all its functions it is more dependent on the instincts than on the conscious will, more governed by affect than by rational judgment. This ensures a primitive state of psychic health, but it immediately becomes lack of adaptation when circumstances arise that call for a higher moral effort. Instincts suffice only for a nature that remains more or less constant. An individual who is guided more by the unconscious than by conscious choice therefore tends towards marked psychic conservatism. This is the reason why the primitive does not change in the course of thousands of years, and also why he fears anything strange and unusual. It might easily lead to maladaptation, and thus to the greatest psychic dangers—to a kind of neurosis, in fact. A higher and wider consciousness resulting from the assimilation of the unfamiliar tends, on the other hand, towards autonomy, and rebels against the old gods who are nothing other than those mighty, primordial images that hitherto have held our consciousness in thrall.

[13] The stronger and more independent our consciousness becomes, and with it the conscious will, the more the unconscious is thrust into the background, and the easier it is for the evolving consciousness to emancipate itself from the unconscious, archetypal pattern. Gaining in freedom, it bursts the bonds of mere instinctuality and finally reaches a condition of instinctual atrophy. This uprooted consciousness can no longer appeal to the authority of the primordial images; it has Promethean freedom, but it also suffers from godless hybris. It soars above the earth and above mankind, but the danger of its sudden collapse is there, not of course in the case of every individual, but for the weaker members of the community, who then, again like Prometheus, are chained to the Caucasus of the unconscious. The wise Chinese would say in the words of the *I Ching*: When *yang* has reached its greatest strength, the dark power of *yin* is born within its depths, for night begins at midday when *yang* breaks up and begins to change into *yin*.

[14] The doctor is in a position to see this cycle of changes translated literally into life. He sees, for instance, a successful businessman attaining all his desires regardless of death and the devil, and then, having retired at the height of his success, speedily falling into a neurosis, which turns him into a querulous old woman, fastens him to his bed, and finally destroys him. The picture is complete even to the change from masculine to feminine. An exact parallel to this is the story of Nebuchadnezzar in the Book of Daniel, and Caesarean madness in general. Similar cases of one-sided exaggeration of the conscious standpoint, and the resultant yin-reaction from the unconscious, form no small part of the psychiatrist's clientele in our time, which so overvalues the conscious will as to believe that "where there's a will there's a way." Not that I wish to detract in the least from the high moral value of the will. Consciousness and the will may well continue to be considered the highest cultural achievements of humanity. But of what use is a morality that destroys the man? To

bring the will and the capacity to achieve it into harmony seems to me to require more than morality. Morality *à tout prix* can be a sign of barbarism—more often wisdom is better. But perhaps I look at this with the eyes of a physician who has to mend the ills following in the wake of one-sided cultural achievements.

[15] Be that as it may, the fact remains that a consciousness heightened by an inevitable one-sidedness gets so far out of touch with the primordial images that a breakdown ensues. Long before the actual catastrophe, the signs of error announce themselves in atrophy of instinct, nervousness, disorientation, entanglement in impossible situations and problems. Medical investigation then discovers an unconscious that is in full revolt against the conscious values, and that therefore cannot possibly be assimilated to consciousness, while the reverse is altogether out of the question. We are confronted with an apparently irreconcilable conflict before which human reason stands helpless, with nothing to offer except sham solutions or dubious compromises. If these evasions are rejected, we are faced with the question as to what has become of the much needed unity of the personality, and with the necessity of seeking it. At this point begins the path travelled by the East since the beginning of things. Quite obviously, the Chinese were able to follow this path because they never succeeded in forcing the opposites in man's nature so far apart that all conscious connection between them was lost. The Chinese owe this all-inclusive consciousness to the fact that, as in the case of the primitive mentality, the yea and the nay have remained in their original proximity. Nonetheless, it was impossible not to feel the clash of opposites, so they sought a way of life in which they would be what the Indians call *nirvandva*, free of opposites.

[16] Our text is concerned with this way, and the same problem comes up with my patients also. There could be no greater mistake than for a Westerner to take up the direct practice of Chinese yoga, for that would merely strengthen his will and consciousness against the unconscious and bring about the very effect to be avoided. The neurosis would then simply be intensified. It cannot be emphasized enough that we are not Orientals, and that we have an entirely different point of departure in these matters. It would also be a great mistake to suppose that this is the path every neurotic must travel, or that it is the solution at every stage of the neurotic problem. It is appropriate only in those cases where consciousness has reached an abnormal degree of development and has diverged too far from the unconscious. This is the *sine qua non* of the process. Nothing would be more wrong than to open this way to neurotics who are ill on account of an excessive predominance of the unconscious. For the same reason, this way of development has scarcely any meaning before the middle of life (normally between the ages of thirty-five and forty), and if entered upon too soon can be decidedly injurious.

[17] As I have said, the essential reason which prompted me to look for a new way was the fact that the fundamental problem of the patient seemed to me insoluble unless violence was done to one or the other side of his nature. I had always worked with the temperamental conviction that at bottom there are no insoluble problems, and experience justified me in so far as I have often seen patients simply outgrow a problem that had destroyed others. This “outgrowing,” as I formerly called it, proved on further investigation to be a new level of consciousness. Some higher or wider interest appeared on the patient’s horizon, and through this broadening of his outlook the insoluble problem lost its urgency. It was not solved logically in its own terms, but faded out when confronted with a new and stronger life urge. It was not repressed and made unconscious, but merely appeared in a different light, and so really did become different. What, on a lower level, had led to the wildest conflicts and to panicky outbursts of emotion, from the higher level of personality now looked like a storm in the valley seen from the mountain top. This does not mean that the storm is robbed of its reality, but instead of being in it one is above it. But since, in a psychic sense, we are both valley and mountain, it might seem a vain illusion to deem oneself beyond what is human. One certainly does feel the affect and is shaken and tormented by it, yet at the same time one is aware of a higher consciousness looking on which prevents one from becoming identical with the affect, a consciousness which regards the affect as an object, and can say, “I *know* that I suffer.” What our text says of indolence, “Indolence of which a man is conscious, and indolence of which he is unconscious, are a thousand miles apart,”¹ holds true in the highest degree of affect.

[18] Now and then it happened in my practice that a patient grew beyond himself because of unknown potentialities, and this became an experience of prime importance to me. In the meantime, I had learned that all the greatest and most important problems of life are fundamentally insoluble. They must be so, for they express the necessary polarity inherent in every self-regulating system. They can never be solved, but only outgrown. I therefore asked myself whether this outgrowing, this possibility of further psychic development, was not the normal thing, and whether getting stuck in a conflict was pathological. Everyone must possess that higher level, at least in embryonic form, and must under favourable circumstances be able to develop this potentiality. When I examined the course of development in patients who quietly, and as if unconsciously, outgrew themselves, I saw that their fates had something in common. The new thing came to them from obscure possibilities either outside or inside themselves; they accepted it and grew with its help. It seemed to me typical that some took the new thing from outside themselves, others from inside; or rather, that it grew into some persons from without, and into others from within. But the new thing never came exclusively either

from within or from without. If it came from outside, it became a profound inner experience; if it came from inside, it became an outer happening. In no case was it conjured into existence intentionally or by conscious willing, but rather seemed to be borne along on the stream of time.

[19] We are so greatly tempted to turn everything into a purpose and a method that I deliberately express myself in very abstract terms in order to avoid prejudicing the reader in one way or the other. The new thing must not be pigeon-holed under any heading, for then it becomes a recipe to be used mechanically, and it would again be a case of the “right means in the hands of the wrong man.” I have been deeply impressed by the fact that the new thing prepared by fate seldom or never comes up to conscious expectations. And still more remarkable, though the new thing goes against deeply rooted instincts as we have known them, it is a strangely appropriate expression of the total personality, an expression which one could not imagine in a more complete form.

[20] What did these people do in order to bring about the development that set them free? As far as I could see they did nothing (*wu wei*²) but let things happen. As Master Lü-tsu teaches in our text, the light circulates according to its own law if one does not give up one’s ordinary occupation. The art of letting things happen, action through non-action, letting go of oneself as taught by Meister Eckhart, became for me the key that opens the door to the way. We must be able to let things happen in the psyche. For us, this is an art of which most people know nothing. Consciousness is forever interfering, helping, correcting, and negating, never leaving the psychic processes to grow in peace. It would be simple enough, if only simplicity were not the most difficult of all things. To begin with, the task consists solely in observing objectively how a fragment of fantasy develops. Nothing could be simpler, and yet right here the difficulties begin. Apparently one has no fantasy fragments—or yes, there’s one, but it is too stupid! Dozens of good reasons are brought against it. One cannot concentrate on it—it is too boring—what would come of it anyway—it is “nothing but” this or that, and so on. The conscious mind raises innumerable objections, in fact it often seems bent on blotting out the spontaneous fantasy activity in spite of real insight and in spite of the firm determination to allow the psychic process to go forward without interference. Occasionally there is a veritable cramp of consciousness.

[21] If one is successful in overcoming the initial difficulties, criticism is still likely to start in afterwards in the attempt to interpret the fantasy, to classify it, to aestheticize it, or to devalue it. The temptation to do this is almost irresistible. After it has been faithfully observed, free rein can be given to the impatience of the conscious mind; in fact it must be given, or obstructive resistances will develop. But each time the

fantasy material is to be produced, the activity of consciousness must be switched off again.

[22] In most cases the results of these efforts are not very encouraging at first. Usually they consist of tenuous webs of fantasy that give no clear indication of their origin or their goal. Also, the way of getting at the fantasies varies with individuals. For many people, it is easiest to write them down: others visualize them, and others again draw or paint them with or without visualization. If there is a high degree of conscious cramp, often only the hands are capable of fantasy; they model or draw figures that are sometimes quite foreign to the conscious mind.

[23] These exercises must be continued until the cramp in the conscious mind is relaxed, in other words, until one can let things happen, which is the next goal of the exercise. In this way a new attitude is created, an attitude that accepts the irrational and the incomprehensible simply because it is happening. This attitude would be poison for a person who is already overwhelmed by the things that happen to him, but it is of the greatest value for one who selects, from among the things that happen, only those that are acceptable to his conscious judgment, and is gradually drawn out of the stream of life into a stagnant backwater.

[24] At this point, the way travelled by the two types mentioned earlier seems to divide. Both have learned to accept what comes to them. (As Master Lü-tsu teaches: “When occupations come to us, we must accept them; when things come to us, we must understand them from the ground up.”³) One man will now take chiefly what comes to him from outside, and the other what comes from inside. Moreover, the law of life demands that what they take from outside and inside will be the very things that were always excluded before. This reversal of one’s nature brings an enlargement, a heightening and enrichment of the personality, if the previous values are retained alongside the change—provided that these values are not mere illusions. If they are not held fast, the individual will swing too far to the other side, slipping from fitness into unfitness, from adaptedness into unadaptedness, and even from rationality into insanity. The way is not without danger. Everything good is costly, and the development of personality is one of the most costly of all things. It is a matter of saying yea to oneself, of taking oneself as the most serious of tasks, of being conscious of everything one does, and keeping it constantly before one’s eyes in all its dubious aspects—truly a task that taxes us to the utmost.

[25] A Chinese can always fall back on the authority of his whole civilization. If he starts on the long way, he is doing what is recognized as being the best thing he could possibly do. But the Westerner who wishes to set out on this way, if he is really serious about it, has all authority against him—intellectual, moral, and religious. That is why it is infinitely easier for him to imitate the Chinese way and leave the

troublesome European behind him, or else to seek the way back to the medievalism of the Christian Church and barricade himself behind the wall separating true Christians from the poor heathen and other ethnographic curiosities encamped outside. Aesthetic or intellectual flirtations with life and fate come to an abrupt halt here: the step to higher consciousness leaves us without a rearguard and without shelter. The individual must devote himself to the way with all his energy, for it is only by means of his integrity that he can go further, and his integrity alone can guarantee that his way will not turn out to be an absurd misadventure.

[26] Whether his fate comes to him from without or from within, the experiences and happenings on the way remain the same. Therefore I need say nothing about the manifold outer and inner events, the endless variety of which I could never exhaust in any case. Nor would this be relevant to the text under discussion. On the other hand, there is much to be said about the psychic states that accompany the process of development. These states are expressed symbolically in our text, and in the very same symbols that for many years have been familiar to me from my practice.

3. THE FUNDAMENTAL CONCEPTS

A. TAO

[27] The great difficulty in interpreting this and similar texts¹ for the European is that the author always starts from the central point, from the point we would call the goal, the highest and ultimate insight he has attained. Thus our Chinese author begins with ideas that demand such a comprehensive understanding that a person of discriminating mind has the feeling he would be guilty of ridiculous pretension, or even of talking utter nonsense, if he should embark on an intellectual discourse on the subtle psychic experiences of the greatest minds of the East. Our text, for example, begins: “That which exists through itself is called the Way.” The *Hui Ming Ching* begins with the words: “The subtlest secret of the Tao is human nature and life.”

[28] It is characteristic of the Western mind that it has no word for Tao. The Chinese character is made up of the sign for “head” and the sign for “going.” Wilhelm translates Tao by *Sinn* (Meaning). Others translate it as “way,” “providence,” or even as “God,” as the Jesuits do. This illustrates our difficulty. “Head” can be taken as consciousness,² and “going” as travelling a way, and the idea would then be: to go consciously, or the conscious way. This is borne out by the fact that the “light of heaven” which “dwells between the eyes” as the “heart of heaven” is used synonymously with Tao. Human nature and life are contained in the “light of heaven” and, according to the *Hui Ming Ching*, are the most important secrets of the Tao. “Light” is the symbolical equivalent of consciousness, and the nature of consciousness is expressed by analogies with light. The *Hui Ming Ching* is introduced with the verses:

If thou wouldst complete the diamond body with no outflowing,
Diligently heat the roots of consciousness³ and life.
Kindle light in the blessed country ever close at hand,
And there hidden, let thy true self always dwell.

[29] These verses contain a sort of alchemical instruction as to the method or way of producing the “diamond body,” which is also mentioned in our text. “Heating” is necessary; that is, there must be an intensification of consciousness in order that light may be kindled in the dwelling place of the true self. Not only consciousness, but life

itself must be intensified: the union of these two produces conscious life. According to the *Hui Ming Ching*, the ancient sages knew how to bridge the gap between consciousness and life because they cultivated both. In this way the *sheli*, the immortal body, is “melted out” and the “great Tao is completed.”⁴

[30] If we take the Tao to be the method or conscious way by which to unite what is separated, we have probably come close to the psychological meaning of the concept. At all events, the separation of consciousness and life cannot very well be understood as anything else than what I described earlier as an aberration or uprooting of consciousness. There can be no doubt, either, that the realization of the opposite hidden in the unconscious—the process of “reversal”—signifies reunion with the unconscious laws of our being, and the purpose of this reunion is the attainment of conscious life or, expressed in Chinese terms, the realization of the Tao.

B. THE CIRCULAR MOVEMENT AND THE CENTRE

[31] As I have pointed out, the union of opposites⁵ on a higher level of consciousness is not a rational thing, nor is it a matter of will; it is a process of psychic development that expresses itself in symbols. Historically, this process has always been represented in symbols, and today the development of personality is still depicted in symbolic form. I discovered this fact in the following way. The spontaneous fantasy products I discussed earlier become more profound and gradually concentrate into abstract structures that apparently represent “principles” in the sense of Gnostic *archai*. When the fantasies take the form chiefly of thoughts, intuitive formulations of dimly felt laws or principles emerge, which at first tend to be dramatized or personified. (We shall come back to these again later.) If the fantasies are drawn, symbols appear that are chiefly of the *mandala*⁶ type. *Mandala* means “circle,” more especially a magic circle. Mandalas are found not only throughout the East but also among us. The early Middle Ages are especially rich in Christian mandalas; most of them show Christ in the centre, with the four evangelists, or their symbols, at the cardinal points. This conception must be a very ancient one, because Horus and his four sons were represented in the same way by the Egyptians.⁷ It is known that Horus with his four sons has close connections with Christ and the four evangelists. An unmistakable and very interesting mandala can be found in Jakob Böhme’s book *XL Questions concerning the Soule*.⁸ It is clear that this mandala represents a psychocosmic system strongly coloured by Christian ideas. Böhme calls it the “Philosophical Eye”⁹ or the “Mirror of Wisdom,” by which is obviously meant a *summa* of secret knowledge. Most mandalas take the form of a flower, cross, or wheel, and show a distinct tendency towards a quaternary structure reminiscent of the Pythagorean *tetraktys*, the basic number. Mandalas of this sort also occur as sand paintings in the religious ceremonies of the Pueblo and Navaho Indians.¹⁰ But the

most beautiful mandalas are, of course, those of the East, especially the ones found in Tibetan Buddhism, which also contain the symbols mentioned in our text. Mandala drawings are often produced by the mentally ill, among them persons who certainly did not have the least idea of any of the connections we have discussed.¹¹

[32] Among my patients I have come across cases of women who did not draw mandalas but danced them instead. In India there is a special name for this: *mandala nrithya*, the mandala dance. The dance figures express the same meanings as the drawings. My patients can say very little about the meaning of the symbols but are fascinated by them and find that they somehow express and have an effect on their subjective psychic state.

[33] Our text promises to “reveal the secret of the Golden Flower of the great *One*.” The golden flower is the light, and the light of heaven is the Tao. The golden flower is a mandala symbol I have often met with in the material brought me by my patients. It is drawn either seen from above as a regular geometric pattern, or in profile as a blossom growing from a plant. The plant is frequently a structure in brilliant fiery colours growing out of a bed of darkness, and carrying the blossom of light at the top, a symbol recalling the Christmas tree. Such drawings also suggest the origin of the golden flower, for according to the *Hui Ming Ching* the “germinal vesicle” is the “dragon castle at the bottom of the sea.”¹² Other synonyms are the “yellow castle,” the “heavenly heart,” the “terrace of living,” the “square inch field of the square foot house,” the “purple hall of the city of jade,” the “dark pass,” the “space of former heaven.”¹³ It is also called the “boundary region of the snow mountains,” the “primordial pass,” the “kingdom of greatest joy,” the “boundless country,” the “altar upon which consciousness and life are made.” “If a dying man does not know this germinal vesicle,” says the *Hui Ming Ching*, “he will not find the unity of consciousness and life in a thousand births, nor in ten thousand aeons.”¹⁴

[34] The beginning, where everything is still one, and which therefore appears as the highest goal, lies at the bottom of the sea, in the darkness of the unconscious. In the germinal vesicle, consciousness and life (or human nature and life, *hsing-ming*) are still a “unity, inseparably mixed like the sparks in the refining furnace.” “Within the germinal vesicle is the fire of the ruler.” “All the sages began their work at the germinal vesicle.”¹⁵ Note the fire analogies. I know a series of European mandala drawings in which something like a plant seed surrounded by membranes is shown floating in the water. Then, from the depths below, fire penetrates the seed and makes it grow, causing a great golden flower to unfold from the germinal vesicle.

[35] This symbolism refers to a quasi-alchemical process of refining and ennobling. Darkness gives birth to light; out of the “lead of the water region” grows the noble gold; what is unconscious becomes conscious in the form of a living process of

growth. (Indian Kundalini yoga offers a perfect analogy.¹⁶) In this way the union of consciousness and life takes place.

[36] When my patients produce these mandala pictures, it is naturally not the result of suggestion; similar pictures were being made long before I knew their meaning or their connection with the practices of the East, which, at that time, were wholly unknown to me. The pictures arise quite spontaneously, and from two sources. One source is the unconscious, which spontaneously produces fantasies of this kind; the other is life, which, if lived with utter devotion, brings an intuition of the self, of one's own individual being. When the self finds expression in such drawings, the unconscious reacts by enforcing an attitude of devotion to life. For in complete agreement with the Eastern view, the mandala is not only a means of expression but also produces an effect. It reacts upon its maker. Age-old magical effects lie hidden in this symbol, for it is derived from the "protective circle" or "charmed circle," whose magic has been preserved in countless folk customs.¹⁷ It has the obvious purpose of drawing a *sulcus primigenius*, a magical furrow around the centre, the temple or *temenos* (sacred precinct), of the innermost personality, in order to prevent an "outflowing" or to guard by apotropaic means against distracting influences from outside. Magical practices are nothing but projections of psychic events, which then exert a counter-influence on the psyche and put a kind of spell upon the personality. Through the ritual action, attention and interest are led back to the inner, sacred precinct, which is the source and goal of the psyche and contains the unity of life and consciousness. The unity once possessed has been lost, and must now be found again.

[37] The unity of the two, life and consciousness, is the Tao, whose symbol would be the central white light, also mentioned in the *Bardo Thödol*.¹⁸ This light dwells in the "square inch" or in the "face," that is, between the eyes. It is a visualization of the "creative point," of that which has intensity without extension, in conjunction with the "field of the square inch," the symbol for that which has extension. The two together make the Tao. Human nature (*hsing*) and consciousness (*hui*) are expressed in light symbolism, and therefore have the quality of intensity, while life (*ming*) would coincide with extensity. The one is *yang*-like, the other *yin*-like. The aforementioned mandala of a somnambulist girl, aged fifteen and a half, whom I had under observation some thirty years ago, shows in its centre a spring of "Primary Force," or life energy without extension, whose emanations clash with a contrary spatial principle—in complete analogy with the basic idea of our Chinese text.

[38] The "enclosure," or *circumambulatio*, is expressed in our text by the idea of "circulation." The circulation is not merely movement in a circle, but means, on the one hand, the marking off of the sacred precinct and, on the other, fixation and concentration. The sun-wheel begins to turn; the sun is activated and begins its

course—in other words, the Tao begins to work and takes the lead. Action is reversed into non-action; everything peripheral is subordinated to the command of the centre. Therefore it is said: “Movement is only another name for mastery.” Psychologically, this circulation would be the “movement in a circle around oneself,” so that all sides of the personality become involved. “The poles of light and darkness are made to rotate,” that is, there is an alternation of day and night.

[39] The circular movement thus has the moral significance of activating the light and dark forces of human nature, and together with them all psychological opposites of whatever kind they may be. It is nothing less than self-knowledge by means of self-brooding (Sanskrit *tapas*). A similar archetypal concept of a perfect being is that of the Platonic man, round on all sides and uniting within himself the two sexes.

[40] One of the best modern parallels is the description which Edward Maitland, the biographer of Anna Kingsford,¹⁹ gave of his central experience. He had discovered that when reflecting on an idea, related ideas became visible, so to speak, in a long series apparently reaching back to their source, which to him was the divine spirit. By concentrating on this series, he tried to penetrate to their origin. He writes:

I was absolutely without knowledge or expectation when I yielded to the impulse to make the attempt. I simply experimented on a faculty . . . being seated at my writing-table the while in order to record the results as they came, and resolved to retain my hold on my outer and circumferential consciousness, no matter how far towards my inner and central consciousness I might go. For I knew not whether I should be able to regain the former if I once quitted my hold of it, or to recollect the facts of the experience. At length I achieved my object, though only by a strong effort, the tension occasioned by the endeavour to keep both extremes of the consciousness in view at once being very great.

Once well started on my quest, I found myself traversing a succession of spheres or belts . . . the impression produced being that of mounting a vast ladder stretching from the circumference towards the centre of a system, which was at once my own system, the solar system, the universal system, the three systems being at once diverse and identical. . . . Presently, by a supreme, and what I felt must be a final effort . . . I succeeded in polarizing the whole of the convergent rays of my consciousness into the desired focus. And at the same instant, as if through the sudden ignition of the rays thus fused into a unity, I found myself confronted with a glory of unspeakable whiteness and brightness, and of a lustre so intense as well-nigh to beat me back. . . . But though feeling that I had to explore further, I resolved to make assurance doubly sure by piercing if I could the almost blinding lustre, and seeing what it enshrined. With a great effort I succeeded, and the glance revealed to me that which I had felt must be there. . . . It was the dual form of the Son . . . the

unmanifest made manifest, the unformulate formulate, the unindividuate individuate, God as the Lord, proving through His duality that God is Substance as well as Force, Love as well as Will, Feminine as well as Masculine, Mother as well as Father.

[41] He found that God is two in one, like man. Besides this he noticed something that our text also emphasizes, namely “suspension of breathing.” He says ordinary breathing stopped and was replaced by an internal respiration, “as if by breathing of a distinct personality within and other than the physical organism.” He took this being to be the “entelechy” of Aristotle and the “inner Christ” of the apostle Paul, the “spiritual and substantial individuality engendered within the physical and phenomenal personality, and representing, therefore, the rebirth of man on a plane transcending the material.”

[42] This genuine²⁰ experience contains all the essential symbols of our text. The phenomenon itself, the vision of light, is an experience common to many mystics, and one that is undoubtedly of the greatest significance, because at all times and places it proves to be something unconditioned and absolute, a combination of supreme power and profound meaning. Hildegard of Bingen, an outstanding personality quite apart from her mysticism, writes in much the same way about her central vision:

Since my childhood I have always seen a light in my soul, but not with the outer eyes, nor through the thoughts of my heart; neither do the five outer senses take part in this vision. . . . The light I perceive is not of a local kind, but is much brighter than the cloud which supports the sun. I cannot distinguish height, breadth, or length in it. . . . What I see or learn in such a vision stays long in my memory. I see, hear, and know in the same moment. . . . I cannot recognize any sort of form in this light, although I sometimes see in it another light that is known to me as the living light. . . . While I am enjoying the spectacle of this light, all sadness and sorrow vanish from my memory.²¹

[43] I myself know a few individuals who have had personal experience of this phenomenon. So far as I have been able to understand it, it seems to have to do with an acute state of consciousness, as intense as it is abstract, a “detached” consciousness (see *infra*, pars. 64ff.), which, as Hildegard implies, brings into awareness areas of psychic happenings ordinarily covered in darkness. The fact that the general bodily sensations disappear during the experience suggests that their specific energy has been withdrawn and has apparently gone towards heightening the clarity of consciousness. As a rule, the phenomenon is spontaneous, coming and going on its own initiative. Its effect is astonishing in that it almost always brings about a solution of psychic complications and frees the inner personality from

emotional and intellectual entanglements, thus creating a unity of being which is universally felt as “liberation.”

[44] Such a symbolic unity cannot be attained by the conscious will because consciousness is always partisan. Its opponent is the collective unconscious, which does not understand the language of the conscious mind. Therefore it is necessary to have the magic of the symbol which contains those primitive analogies that speak to the unconscious. The unconscious can be reached and expressed only by symbols, and for this reason the process of individuation can never do without the symbol. The symbol is the primitive exponent of the unconscious, but at the same time an idea that corresponds to the highest intuitions of the conscious mind.

[45] The oldest mandala drawing known to me is a palaeolithic “sun-wheel,” recently discovered in Rhodesia. It, too, is based on the quaternary principle. Things reaching so far back into human history naturally touch upon the deepest layers of the unconscious, and can have a powerful effect on it even when our conscious language proves itself to be quite impotent. Such things cannot be thought up but must grow again from the forgotten depths if they are to express the supreme insights of consciousness and the loftiest intuitions of the spirit, and in this way fuse the uniqueness of present-day consciousness with the age-old past of life.

4. PHENOMENA OF THE WAY

A. THE DISINTEGRATION OF CONSCIOUSNESS

[46] The meeting between the narrowly delimited, but intensely clear, individual consciousness and the vast expanse of the collective unconscious is dangerous, because the unconscious has a decidedly disintegrating effect on consciousness. According to the *Hui Ming Ching*, this effect belongs to the peculiar phenomena of Chinese yoga. It says: “Every separate thought takes shape and becomes visible in colour and form. The total spiritual power unfolds its traces. . . .”¹ The relevant illustration in the text [stage 4] shows a sage sunk in contemplation, his head surrounded by tongues of fire, out of which five human figures emerge; these five again split up into twenty-five smaller figures.² This would be a schizophrenic process if it were to become a permanent state. Therefore the *Hui Ming Ching*, as though warning the adept, continues: “The shapes formed by the spirit-fire are only empty colours and forms. The light of human nature (*hsing*) shines back on the primordial, the true.”

[47] So we can understand why the figure of the protecting circle was seized upon. It is intended to prevent the “outflowing” and to protect the unity of consciousness from being burst asunder by the unconscious. The text seeks to mitigate the disintegrating effect of the unconscious by describing the thought-figures as “empty colours and forms,” thus depotentiating them as much as possible. This idea runs through the whole of Buddhism (especially the Mahayana form) and, in the instructions to the dead in *The Tibetan Book of the Dead*, it is even pushed to the point of explaining the favourable as well as the unfavourable gods as illusions still to be overcome. It is certainly not within the competence of the psychologist to establish the metaphysical truth or untruth of this idea; he must be content to determine so far as possible its psychic effect. He need not bother himself whether the shape in question is a transcendental illusion or not, since faith, not science, has to decide this point. In any case we are moving on ground that for a long time has seemed to be outside the domain of science and was looked upon as wholly illusory. But there is no scientific justification for such an assumption; the substantiality of these things is not a scientific problem since it lies beyond the range of human perception and judgment and thus beyond any possibility of proof. The psychologist is concerned not with the substantiality of these complexes but with psychic

experience. Without a doubt they are psychic contents that can be experienced, and their autonomy is equally indubitable. They are fragmentary psychic systems that either appear spontaneously in ecstatic states and evoke powerful impressions and effects, or else, in mental disturbances, become fixed in the form of delusions and hallucinations and consequently destroy the unity of the personality.

Stage 3: Separation of the spirit-body for independent existence

Stage 4: The centre in the midst of conditions

[48] Psychiatrists are always ready to believe in toxins and the like, and even to explain schizophrenia in these terms, putting next to no emphasis on the psychic contents as such. On the other hand, in psychogenic disturbances (hysteria, obsessional neurosis, etc.), where toxic effects and cell degeneration are out of the question, split-off complexes are to be found similar to those occurring in somnambulistic states. Freud would like to explain these spontaneous split-offs as due to unconscious repression of sexuality, but this explanation is by no means valid in all cases, because contents that the conscious mind cannot assimilate can emerge just as spontaneously out of the unconscious, and in these cases the repression theory is inadequate. Moreover, their autonomy can be observed in daily life, in affects that obstinately obtrude themselves against our will and, in spite of the most strenuous efforts to repress them, overwhelm the ego and force it under their control. No wonder the primitive sees in these moods a state of possession or sets them down to a loss of soul. Our colloquial speech reflects the same thing when we say: "I don't know what has got into him today," "he is possessed of the devil," "he is beside himself," etc. Even legal practice recognizes a degree of diminished responsibility in a state of affect. Autonomous psychic contents are thus quite common experiences for us. Such contents have a disintegrating effect upon consciousness.

[49] But besides the ordinary, familiar affects there are subtler, more complex emotional states that can no longer be described as affects pure and simple but are fragmentary psychic systems. The more complicated they are, the more they have the character of personalities. As constituents of the psychic personality, they necessarily have the character of “persons.” Such fragmentary systems are to be found especially in mental diseases, in cases of psychogenic splitting of the personality (double personality), and of course in mediumistic phenomena. They are also encountered in the phenomenology of religion. Many of the earlier gods developed from “persons” into personified ideas, and finally into abstract ideas. Activated unconscious contents always appear at first as projections upon the outside world, but in the course of mental development they are gradually assimilated by consciousness and reshaped into conscious ideas that then forfeit their originally autonomous and personal character. As we know, some of the old gods have become, via astrology, nothing more than descriptive attributes (martial, jovial, saturnine, erotic, logical, lunatic, and so on).

[50] The instructions of *The Tibetan Book of the Dead* in particular help us to see how great is the danger that consciousness will be disintegrated by these figures. Again and again the dead are instructed not to take these shapes for truth, not to confuse their murky appearance with the pure white light of *Dharmakaya* (the divine body of truth). That is to say, they are not to project the *one* light of highest consciousness into concretized figures and dissolve it into a plurality of autonomous fragmentary systems. If there were no danger of this, and if these systems did not represent menacingly autonomous and disintegrative tendencies, such urgent instructions would not be necessary. Allowing for the simpler, polytheistic attitude of the Eastern mind, these instructions would be almost the equivalent of warning a Christian not to let himself be blinded by the illusion of a personal God, let alone by the Trinity and the host of angels and saints.

[51] If tendencies towards dissociation were not inherent in the human psyche, fragmentary psychic systems would never have been split off; in other words, neither spirits nor gods would ever have come into existence. That is also the reason why our time has become so utterly godless and profane: we lack all knowledge of the unconscious psyche and pursue the cult of consciousness to the exclusion of all else. Our true religion is a monotheism of consciousness, a possession by it, coupled with a fanatical denial of the existence of fragmentary autonomous systems. But we differ from the Buddhist yoga doctrines in that we even deny that these systems are experienceable. This entails a great psychic danger, because the autonomous systems then behave like any other repressed contents: they necessarily induce wrong attitudes since the repressed material reappears in consciousness in a spurious form. This is strikingly evident in every case of neurosis and also holds true for the

collective psychic phenomena. Our time has committed a fatal error; we believe we can criticize the facts of religion intellectually. Like Laplace, we think God is a hypothesis that can be subjected to intellectual treatment, to be affirmed or denied. We completely forget that the reason mankind believes in the “daemon” has nothing whatever to do with external factors, but is simply due to a naïve awareness of the tremendous inner effect of autonomous fragmentary systems. This effect is not abolished by criticizing it—or rather, the name we have given it—or by describing the name as false. The effect is collectively present all the time; the autonomous systems are always at work, for the fundamental structure of the unconscious is not affected by the deviations of our ephemeral consciousness.

[52] If we deny the existence of the autonomous systems, imagining that we have got rid of them by a mere critique of the name, then the effect which they still continue to exert can no longer be understood, nor can they be assimilated to consciousness. They become an inexplicable source of disturbance which we finally assume must exist somewhere outside ourselves. The resultant projection creates a dangerous situation in that the disturbing effects are now attributed to a wicked will outside ourselves, which is naturally not to be found anywhere but with our neighbour *de l'autre côté de la rivière*. This leads to collective delusions, “incidents,” revolutions, war—in a word, to destructive mass psychoses.

[53] Insanity is possession by an unconscious content that, as such, is not assimilated to consciousness, nor can it be assimilated since the very existence of such contents is denied. This attitude is equivalent to saying: “We no longer have any fear of God and believe that everything is to be judged by human standards.” This hybris or narrowness of consciousness is always the shortest way to the insane asylum. I recommend the excellent account of this problem in H. G. Wells’s novel *Christina Alberta’s Father*, and Schreber’s *Memoirs of My Nervous Illness*.

[54] It must stir a sympathetic chord in the enlightened European when it is said in the *Hui Ming Ching* that the “shapes formed by the spirit-fire are only empty colours and forms.” That sounds thoroughly European and seems to suit our reason to a T. We think we can congratulate ourselves on having already reached such a pinnacle of clarity, imagining that we have left all these phantasmal gods far behind. But what we have left behind are only verbal spectres, not the psychic facts that were responsible for the birth of the gods. We are still as much possessed by autonomous psychic contents as if they were Olympians. Today they are called phobias, obsessions, and so forth; in a word, neurotic symptoms. The gods have become diseases; Zeus no longer rules Olympus but rather the solar plexus, and produces curious specimens for the doctor’s consulting room, or disorders the brains of politicians and journalists who unwittingly let loose psychic epidemics on the world.

[55] So it is better for Western man if he does not know too much about the secret insights of the Oriental sages to begin with, for, as I have said, it would be a case of the “right means in the hands of the wrong man.” Instead of allowing himself to be convinced once more that the daemon is an illusion, he ought to experience once more the reality of this illusion. He should learn to acknowledge these psychic forces anew, and not wait until his moods, nervous states, and delusions make it clear in the most painful way that he is not the only master in his house. His dissociative tendencies are actual psychic personalities possessing a differential reality. They are “real” when they are not recognized as real and consequently projected; they are relatively real when they are brought into relationship with consciousness (in religious terms, when a cult exists); but they are unreal to the extent that consciousness detaches itself from its contents. This last stage, however, is reached only when life has been lived so exhaustively and with such devotion that no obligations remain unfulfilled, when no desires that cannot safely be sacrificed stand in the way of inner detachment from the world. It is futile to lie to ourselves about this. Wherever we are still attached, we are still possessed; and when we are possessed, there is one stronger than us who possesses us. (“Verily I say unto thee, thou shalt by no means come out thence, until thou hast paid the uttermost farthing.”) It is not a matter of indifference whether one calls something a “mania” or a “god.” To serve a mania is detestable and undignified, but to serve a god is full of meaning and promise because it is an act of submission to a higher, invisible, and spiritual being. The personification enables us to see the relative reality of the autonomous system, and not only makes its assimilation possible but also depotentiates the daemonic forces of life. When the god is not acknowledged, egomania develops, and out of this mania comes sickness.

[56] Yoga takes acknowledgment of the gods as something self-evident. Its secret instruction is intended only for those whose consciousness is struggling to disentangle itself from the daemonic forces of life in order to enter into the ultimate undivided unity, the “centre of emptiness,” where “dwells the god of utmost emptiness and life,” as our text says.³ “To hear such a teaching is difficult to attain in thousands of aeons.” Evidently the veil of Maya cannot be lifted by a merely rational resolve; it requires a most thorough going and persevering preparation consisting in the full payment of all debts to life. For as long as unconditional attachment through *cupiditas* exists, the veil is not lifted and the heights of a consciousness free of contents and free of illusion are not attained; nor can any trick nor any deceit bring this about. It is an ideal that can ultimately be realized only in death. Until then there are the real and relatively real figures of the unconscious.

B. ANIMUS AND ANIMA

[57] According to our text, among the figures of the unconscious there are not only the gods but also the animus and anima. The word *hun* is translated by Wilhelm as animus. And indeed, the term “animus” seems appropriate for *hun*, the character for which is made up of the sign for “clouds” and that for “demon.” Thus *hun* means “cloud-demon,” a higher breath-soul belonging to the *yang* principle and therefore masculine. After death, *hun* rises upward and becomes *shen*, the “expanding and self-revealing” spirit or god. “Anima,” called *p’o*, and written with the characters for “white” and “demon,” that is, “white ghost,” belongs to the lower, earthbound, bodily soul, the *yin* principle, and is therefore feminine. After death, it sinks downward and becomes *kuei* (demon), often explained as “the one who returns” (i.e., to earth), a revenant, a ghost. The fact that the animus and anima part after death and go their ways independently shows that, for the Chinese consciousness, they are distinguishable psychic factors; originally they were united in “the one effective, true human nature,” but in the “house of the Creative” they are two. “The animus is in the heavenly heart.” “By day it lives in the eyes [i.e., in consciousness]; at night it houses in the liver.” It is “that which we have received from the great emptiness, that which is identical in form with the primal beginning.” The anima, on the other hand, is the “energy of the heavy and the turbid”; it clings to the bodily, fleshly heart. Its effects are “sensuous desires and impulses to anger.” “Whoever is sombre and moody on waking . . . is fettered to the anima.”⁴

[58] Many years ago, before Wilhelm acquainted me with this text, I used the term “anima”⁵ in a way quite analogous to the Chinese definition of *p’o*, and of course entirely apart from any metaphysical premise. To the psychologist, the anima is not a transcendental being but something quite within the range of experience, as the Chinese definition makes clear: affective states are immediate experiences. Why, then, speak of the anima and not simply of moods? The reason is that affects have an autonomous character, and therefore most people are under their power. But affects are delimitable contents of consciousness, parts of the personality. As such, they partake of its character and can easily be personified—a process that still continues today, as I have shown. The personification is not an idle invention, since a person roused by affect does not show a neutral character but a quite distinct one, entirely different from his ordinary character. Careful investigation has shown that the affective character of a man has feminine traits. From this psychological fact derives the Chinese doctrine of the *p’o* soul as well as my own concept of the anima. Deeper introspection or ecstatic experience reveals the existence of a feminine figure in the unconscious, hence the feminine name: anima, psyche, *Seele*. The anima can be defined as the image or archetype or deposit of all the experiences of man with woman. As we know, the poets have often sung the anima’s praises.⁶ The connection

of anima with ghost in the Chinese concept is of interest to parapsychologists inasmuch as mediumistic “controls” are very often of the opposite sex.

[59] Although Wilhelm’s translation of *hun* as “animus” seems justified to me, nonetheless I had important reasons for choosing the term “Logos” for a man’s “spirit,” for his clarity of consciousness and his rationality, rather than the otherwise appropriate expression “animus.” Chinese philosophers are spared certain difficulties that aggravate the task of the Western psychologist. Like all mental and spiritual activity in ancient times, Chinese philosophy was exclusively a component of the masculine world. Its concepts were never understood psychologically, and therefore were never examined as to how far they also apply to the feminine psyche. But the psychologist cannot possibly ignore the existence of woman and her special psychology. For these reasons I would prefer to translate *hun* as it appears in man by “Logos.” Wilhelm in his translation uses Logos for *hsing*, which can also be translated as “essence of human nature” or “creative consciousness.” After death, *hun* becomes *shen*, “spirit,” which is very close, in the philosophical sense, to *hsing*. Since the Chinese concepts are not logical in our sense of the word, but are intuitive ideas, their meanings can only be elicited from the ways in which they are used and from the constitution of the written characters, or from such relationships as obtain between *hun* and *shen*. *Hun*, then, would be the light of consciousness and reason in man, originally coming from the *logos spermatikos* of *hsing*, and returning after death through *shen* to the Tao. Used in this sense the expression “Logos” would be especially appropriate, since it includes the idea of a universal being, and thus covers the fact that man’s clarity of consciousness and rationality are something universal rather than individually unique. The Logos principle is nothing personal, but is in the deepest sense impersonal, and thus in sharp contrast to the anima, which is a personal demon expressing itself in thoroughly personal moods (“animosity”!).

[60] In view of these psychological facts, I have reserved the term “animus” strictly for women, because, to answer a famous question, *mulier non habet animam, sed animum*. Feminine psychology exhibits an element that is the counterpart of a man’s anima. Primarily, it is not of an affective nature but is a quasi-intellectual factor best described by the word “prejudice.” The conscious side of woman corresponds to the emotional side of man, not to his “mind.” Mind makes up the “soul,” or better, the “animus” of woman, and just as the anima of a man consists of inferior relatedness, full of affect, so the animus of woman consists of inferior judgments, or better, opinions. As it is made up of a plurality of preconceived opinions, the animus is far less susceptible of personification by a single figure, but appears more often as a group or crowd. (A good example of this from parapsychology is the “Imperator” group in the case of Mrs. Piper.⁷) On a low level the animus is an inferior Logos, a caricature of the differentiated masculine mind, just as on a low level the anima is a

caricature of the feminine Eros. To pursue the parallel further, we could say that just as *hun* corresponds to *hsing*, translated by Wilhelm as Logos, so the Eros of woman corresponds to *ming*, “fate” or “destiny,” interpreted by Wilhelm as Eros. Eros is an interweaving; Logos is differentiating knowledge, clarifying light. Eros is relatedness, Logos is discrimination and detachment. Hence the inferior Logos of woman’s animus appears as something quite unrelated, as an inaccessible prejudice, or as an opinion which, irritatingly enough, has nothing to do with the essential nature of the object.

[61] I have often been accused of personifying the anima and animus as mythology does, but this accusation would be justified only if it could be proved that I concretize these concepts in a mythological manner for psychological use. I must declare once and for all that the personification is not an invention of mine, but is inherent in the nature of the phenomena. It would be unscientific to overlook the fact that the anima is a psychic, and therefore a personal, autonomous system. None of the people who make the charge against me would hesitate for a second to say, “I dreamed of Mr. X,” whereas, strictly speaking, he dreamed only of a representation of Mr. X. The anima is nothing but a representation of the personal nature of the autonomous system in question. What the nature of this system is in a transcendental sense, that is, beyond the bounds of experience, we cannot know.

[62] I have defined the anima as a personification of the unconscious in general, and have taken it as a bridge to the unconscious, in other words, as a function of relationship to the unconscious. There is an interesting point in our text in this connection. The text says that consciousness (that is, the personal consciousness) comes from the anima. Since the Western mind is based wholly on the standpoint of consciousness, it must define the anima in the way I have done. But the East, based as it is on the standpoint of the unconscious, sees consciousness as an effect of the anima. And there can be no doubt that consciousness does originate in the unconscious. This is something we are apt to forget, and therefore we are always attempting to identify the psyche with consciousness, or at least to represent the unconscious as a derivative or an effect of consciousness (as in the Freudian repression theory). But, for the reasons given above, it is essential that we do not detract from the reality of the unconscious, and that the figures of the unconscious be understood as real and effective factors. The person who has understood what is meant by psychic reality need have no fear that he has fallen back into primitive demonology. If the unconscious figures are not acknowledged as spontaneous agents, we become victims of a one-sided belief in the power of consciousness, leading finally to acute tension. A catastrophe is then bound to happen because, for all our consciousness, the dark powers of the psyche have been overlooked. It is not we who personify them; they have a personal nature from the very beginning. Only when this

is thoroughly recognized can we think of depersonalizing them, of “subjugating the anima,” as our text expresses it.

[63] Here again we find an enormous difference between Buddhism and the Western attitude of mind, and again there is a dangerous semblance of agreement. Yoga teaching rejects all fantasy products and we do the same, but the East does so for entirely different reasons. In the East there is an abundance of conceptions and teachings that give full expression to the creative fantasy; in fact, protection is needed against an excess of it. We, on the other hand, regard fantasy as worthless subjective day-dreaming. Naturally the figures of the unconscious do not appear in the form of abstractions stripped of all imaginative trappings; on the contrary, they are embedded in a web of fantasies of extraordinary variety and bewildering profusion. The East can reject these fantasies because it has long since extracted their essence and condensed it in profound teachings. But we have never even experienced these fantasies, much less extracted their quintessence. We still have a large stretch of experience to catch up with, and only when we have found the sense in apparent nonsense can we separate the valuable from the worthless. We can be sure that the essence we extract from our experience will be quite different from what the East offers us today. The East came to its knowledge of inner things in childlike ignorance of the external world. We, on the other hand, shall explore the psyche and its depths supported by an immense knowledge of history and science. At present our knowledge of the external world is the greatest obstacle to introspection, but the psychological need will overcome all obstructions. We are already building up a psychology, a science that gives us the key to the very things that the East discovered—and discovered only through abnormal psychic states.

5. THE DETACHMENT OF CONSCIOUSNESS FROM THE OBJECT

[64] By understanding the unconscious we free ourselves from its domination. That is really also the purpose of the instructions in our text. The pupil is taught to concentrate on the light of the innermost region and, at the same time, to free himself from all outer and inner entanglements. His vital impulses are guided towards a consciousness void of content, which nevertheless permits all contents to exist. The *Hui Ming Ching*¹ says of this detachment:

A halo of light surrounds the world of the law.

We forget one another, quiet and pure, all-powerful and empty.

The emptiness is irradiated by the light of the heart of heaven.

The water of the sea is smooth and mirrors the moon in its surface.

The clouds disappear in blue space; the mountains shine clear.

Consciousness reverts to contemplation; the moon-disk rests alone.

[65] This description of fulfilment depicts a psychic state that can best be characterized as a detachment of consciousness from the world and a withdrawal to a point outside it, so to speak. Thus consciousness is at the same time empty and not empty. It is no longer preoccupied with the images of things but merely contains them. The fullness of the world which hitherto pressed upon it has lost none of its richness and beauty, but it no longer dominates. The magical claim of things has ceased because the interweaving of consciousness with world has come to an end. The unconscious is not projected any more, and so the primordial *participation mystique* with things is abolished. Consciousness is no longer preoccupied with compulsive plans but dissolves in contemplative vision.

[66] How did this effect come about? (We assume, of course, that the Chinese author was first of all not a liar; secondly, that he was of sound mind; and thirdly, that he was an unusually intelligent man.) To understand and explain this detachment, we must proceed by a roundabout way. It is an effect that cannot be simulated; nothing would be more childish than to make such a psychic state an object of aesthetic experiment. I know this effect very well from my practice; it is the therapeutic effect *par excellence*, for which I labour with my students and patients, and it consists in the dissolution of *participation mystique*. By a stroke of genius, Lévy-Bruhl singled out what he called *participation mystique* as being the hallmark of the primitive

mentality.² What he meant by it is simply the indefinitely large remnant of non-differentiation between subject and object, which is still so great among primitives that it cannot fail to strike our European consciousness very forcibly. When there is no consciousness of the difference between subject and object, an unconscious identity prevails. The unconscious is then projected into the object, and the object is introjected into the subject, becoming part of his psychology. Then plants and animals behave like human beings, human beings are at the same time animals, and everything is alive with ghosts and gods. Civilized man naturally thinks he is miles above these things. Instead of that, he is often identified with his parents throughout his life, or with his affects and prejudices, and shamelessly accuses others of the things he will not see in himself. He too has a remnant of primitive unconsciousness, of non-differentiation between subject and object. Because of this, he is magically affected by all manner of people, things, and circumstances, he is beset by disturbing influences nearly as much as the primitive and therefore needs just as many apotropaic charms. He no longer works magic with medicine bags, amulets, and animal sacrifices, but with tranquillizers, neuroses, rationalism, cult of the will, etc.

[67] But if the unconscious can be recognized as a co-determining factor along with consciousness, and if we can live in such a way that conscious and unconscious demands are taken into account as far as possible, then the centre of gravity of the total personality shifts its position. It is then no longer in the ego, which is merely the centre of consciousness, but in the hypothetical point between conscious and unconscious. This new centre might be called the self. If the transposition is successful, it does away with the *participation mystique* and results in a personality that suffers only in the lower storeys, as it were, but in its upper storeys is singularly detached from painful as well as from joyful happenings.

[68] The production and birth of this superior personality is what is meant when our text speaks of the “holy fruit,” the “diamond body,” or any other kind of incorruptible body. Psychologically, these expressions symbolize an attitude that is beyond the reach of emotional entanglements and violent shocks—a consciousness detached from the world. I have reasons for believing that this attitude sets in after middle life and is a natural preparation for death. Death is psychologically as important as birth and, like it, is an integral part of life. What happens to the detached consciousness in the end is a question the psychologist cannot be expected to answer. Whatever his theoretical position he would hopelessly overstep the bounds of his scientific competence. He can only point out that the views of our text in regard to the timelessness of the detached consciousness are in harmony with the religious thought of all ages and with that of the overwhelming majority of mankind. Anyone who thought differently would be standing outside the human order and would, therefore, be suffering from a disturbed psychic equilibrium. As a doctor, I make every effort to

strengthen the belief in immortality, especially with older patients when such questions come threateningly close. For, seen in correct psychological perspective, death is not an end but a goal, and life's inclination towards death begins as soon as the meridian is passed.

[69] Chinese yoga philosophy is based upon this instinctive preparation for death as a goal. In analogy with the goal of the first half of life—procreation and reproduction, the means of perpetuating one's physical existence—it takes as the goal of spiritual existence the symbolic begetting and birth of a "spirit-body," or "breath-body," which ensures the continuity of detached consciousness. It is the birth of the pneumatic man, known to the European from antiquity, but which he seeks to produce by quite other symbols and magical practices, by faith and a Christian way of life. Here again we stand on a foundation quite different from that of the East. Again the text sounds as though it were not so very far from Christian ascetic morality, but nothing could be more mistaken than to assume that it actually means the same thing. Behind our text is a civilization thousands of years old, one which is built up organically on primitive instincts and knows nothing of that brutal morality so suited to us as recently civilized Teutonic barbarians. For this reason the Chinese are without the impulse towards violent repression of the instincts that poisons our spirituality and makes it hysterically exaggerated. The man who lives with his instincts can also detach from them, and in just as natural a way as he lived with them. Any idea of heroic self-conquest would be entirely foreign to the spirit of our text, but that is what it would infallibly amount to if we followed the instructions literally.

[70] We must never forget our historical antecedents. Only a little more than a thousand years ago we stumbled out of the crudest beginnings of polytheism into a highly developed Oriental religion which lifted the imaginative minds of half-savages to a height that in no way corresponded to their spiritual development. In order to keep to this height in some fashion or other, it was inevitable that the instinctual sphere should be largely repressed. Thus religious practice and morality took on a decidedly brutal, almost malignant, character. The repressed elements naturally did not develop, but went on vegetating in the unconscious, in their original barbarism. We would like to scale the heights of a philosophical religion, but in fact are incapable of it. To grow up to it is the most we can hope for. The Amfortas wound and the Faustian split in the Germanic man are still not healed; his unconscious is still loaded with contents that must first be made conscious before he can be free of them. Recently I received a letter from a former patient which describes the necessary transformation in simple but trenchant words. She writes:

Out of evil, much good has come to me. By keeping quiet, repressing nothing, remaining attentive, and by accepting reality—taking things as they are, and not as I

wanted them to be—by doing all this, unusual knowledge has come to me, and unusual powers as well, such as I could never have imagined before. I always thought that when we accepted things they overpowered us in some way or other. This turns out not to be true at all, and it is only by accepting them that one can assume an attitude towards them.³ So now I intend to play the game of life, being receptive to whatever comes to me, good and bad, sun and shadow forever alternating, and, in this way, also accepting my own nature with its positive and negative sides. Thus everything becomes more alive to me. What a fool I was! How I tried to force everything to go according to the way I thought it ought to!

[71] Only on the basis of such an attitude, which renounces none of the Christian values won in the course of Christian development, but which, on the contrary, tries with Christian charity and forbearance to accept even the humblest things in one's own nature, will a higher level of consciousness and culture become possible. This attitude is religious in the truest sense, and therefore therapeutic, for all religions are therapies for the sorrows and disorders of the soul. The development of the Western intellect and will has given us an almost fiendish capacity for aping such an attitude, with apparent success, despite the protests of the unconscious. But it is only a matter of time before the counterposition asserts itself all the more harshly. Aping an attitude always produces an unstable situation that can be overthrown by the unconscious at any time. A safe foundation is found only when the instinctive premises of the unconscious win the same respect as the views of the conscious mind. No one should blind himself to the fact that this necessity of giving due consideration to the unconscious runs violently counter to our Western, and in particular the Protestant, cult of consciousness. Yet, though the new always seems to be the enemy of the old, anyone with a more than superficial desire to understand cannot fail to discover that without the most serious application of the Christian values we have acquired, the new integration can never take place.

6. THE FULFILMENT

[72] A growing familiarity with the spirit of the East should be taken merely as a sign that we are beginning to relate to the alien elements within ourselves. Denial of our historical foundations would be sheer folly and would be the best way to bring about another uprooting of consciousness. Only by standing firmly on our own soil can we assimilate the spirit of the East.

[73] Speaking of those who do not know where the true springs of secret power lie, an ancient adept says, "Worldly people lose their roots and cling to the treetops." The spirit of the East has grown out of the yellow earth, and our spirit can, and should, grow only out of our own earth. That is why I approach these problems in a way that has often been charged with "psychologism." If "psychology" were meant, I should indeed be flattered, for my aim as a psychologist is to dismiss without mercy the metaphysical claims of all esoteric teachings. The unavowed purpose of gaining power through words, inherent in all secret doctrines, ill accords with our profound ignorance, which we should have the modesty to admit. I quite deliberately bring everything that purports to be metaphysical into the daylight of psychological understanding, and do my best to prevent people from believing in nebulous power-words. Let the convinced Christian believe, by all means, for that is the duty he has taken upon himself; but whoever is not a Christian has forfeited the charisma of faith. (Perhaps he was cursed from birth with not being able to believe, but merely to know.) Therefore, he has no right to put his faith elsewhere. One cannot grasp anything metaphysically, one only can do so psychologically. Therefore I strip things of their metaphysical wrappings in order to make them objects of psychology. In that way I can at least extract something understandable from them and avail myself of it, and I also discover psychological facts and processes that before were veiled in symbols and beyond my comprehension. In doing so I may perhaps be following in the footsteps of the faithful, and may possibly have similar experiences; and if in the end there should be something ineffably metaphysical behind it all, it would then have the best opportunity of showing itself.

[74] My admiration for the great philosophers of the East is as genuine as my attitude towards their metaphysics is irreverent.¹ I suspect them of being symbolical psychologists, to whom no greater wrong could be done than to take them literally. If it were really metaphysics that they mean, it would be useless to try to understand

them. But if it is psychology, we can not only understand them but can profit greatly by them, for then the so-called “metaphysical” comes within the range of experience. If I assume that God is absolute and beyond all human experience, he leaves me cold. I do not affect him, nor does he affect me. But if I know that he is a powerful impulse of my soul, at once I must concern myself with him, for then he can become important, even unpleasantly so, and can affect me in practical ways—which sounds horribly banal, like everything else that is real.

[75] The epithet “psychologism” applies only to a fool who thinks he has his soul in his pocket. There are certainly more than enough such fools, for although we know how to talk big about the “soul,” the depreciation of everything psychic is a typically Western prejudice. If I make use of the concept “autonomous psychic complex,” my reader immediately comes up with the ready-made prejudice that it is “nothing but a psychic complex.” How can we be so sure that the soul is “nothing but”? It is as if we did not know, or else continually forgot, that everything of which we are conscious is an image, and that image *is* psyche. The same people who think that God is depreciated if he is understood as something moved in the psyche, as well as the moving force of the psyche—i.e., as an autonomous complex—can be so plagued by uncontrollable affects and neurotic states that their wills and their whole philosophy of life fail them miserably. Is that a proof of the impotence of the psyche? Should Meister Eckhart be accused of “psychologism” when he says, “God must be born in the soul again and again”? I think the accusation of “psychologism” can be levelled only at an intellect that denies the genuine nature of the autonomous complex and seeks to explain it rationalistically as the consequence of known causes, i.e., as something secondary and unreal. This is just as arrogant as the metaphysical assertion that seeks to make a God outside the range of our experience responsible for our psychic states. Psychologism is simply the counterpart of this metaphysical presumption, and is just as childish. Therefore it seems to me far more reasonable to accord the psyche the same validity as the empirical world, and to admit that the former has just as much “reality” as the latter. As I see it, the psyche is a world in which the ego is contained. Maybe there are fishes who believe that they contain the sea. We must rid ourselves of this habitual illusion of ours if we wish to consider metaphysical assertions from the standpoint of psychology.

[76] A metaphysical assertion of this kind is the idea of the “diamond body,” the incorruptible breath-body which grows in the golden flower or in the “field of the square inch.”² This body is a symbol for a remarkable psychological fact which, precisely because it is objective, first appears in forms dictated by the experience of biological life—that is, as fruit, embryo, child, living body, and so on. This fact could be best expressed by the words “It is not I who live, it lives me.” The illusion of the supremacy of consciousness makes us say, “I live.” Once this illusion is shattered by

a recognition of the unconscious, the unconscious will appear as something objective in which the ego is included. The attitude towards the unconscious is then analogous to the feeling of the primitive to whom the existence of a son guarantees continuation of life—a feeling that can assume grotesque forms, as when the old Negro, angered at his son's disobedience, cried out, "There he stands with my body, but does not even obey me!"

[77] It is, in fact, a change of feeling similar to that experienced by a father to whom a son has been born, a change known to us from the testimony of St. Paul: "Yet not I, but Christ liveth in me." The symbol "Christ" as "son of man" is an analogous psychic experience of a higher spiritual being who is invisibly born in the individual, a pneumatic body which is to serve us as a future dwelling, a body which, as Paul says, is put on like a garment ("For as many of you as have been baptized into Christ have put on Christ"). It is always a difficult thing to express, in intellectual terms, subtle feelings that are nevertheless infinitely important for the individual's life and well-being. It is, in a sense, the feeling that we have been "replaced." but without the connotation of having been "deposed." It is as if the guidance of life had passed over to an invisible centre. Nietzsche's metaphor, "in most loving bondage, free," would be appropriate here. Religious language is full of imagery depicting this feeling of free dependence, of calm acceptance.

[78] This remarkable experience seems to me a consequence of the detachment of consciousness, thanks to which the subjective "I live" becomes the objective "It lives me." This state is felt to be higher than the previous one; it is really like a sort of release from the compulsion and impossible responsibility that are the inevitable results of *participation mystique*. This feeling of liberation fills Paul completely; the consciousness of being a child of God delivers one from the bondage of the blood. It is also a feeling of reconciliation with all that happens, for which reason, according to the *Hui Ming Ching*, the gaze of one who has attained fulfilment turns back to the beauty of nature.

[79] In the Pauline Christ symbol the supreme religious experiences of West and East confront one another: Christ the sorrow-laden hero, and the Golden Flower that blooms in the purple hall of the city of jade. What a contrast, what an unfathomable difference, what an abyss of history! A problem fit for the crowning work of a future psychologist!

[80] Among the great religious problems of the present is one which has received scant attention, but which is in fact the main problem of our day: the evolution of the religious spirit. If we are to discuss it, we must emphasize the difference between East and West in their treatment of the "jewel," the central symbol. The West lays stress on the human incarnation, and even on the personality and historicity of Christ,

whereas the East says: “Without beginning, without end, without past, without future.”³ The Christian subordinates himself to the superior divine person in expectation of his grace; but the Oriental knows that redemption depends on the work he does on himself. The Tao grows out of the individual. The *imitatio Christi* has this disadvantage: in the long run we worship as a divine example a man who embodied the deepest meaning of life, and then, out of sheer imitation, we forget to make real our own deepest meaning—self-realization. As a matter of fact, it is not altogether inconvenient to renounce one’s own meaning. Had Jesus done so, he would probably have become a respectable carpenter and not a religious rebel to whom the same thing would naturally happen today as happened then.

[81] The imitation of Christ might well be understood in a deeper sense. It could be taken as the duty to realize one’s deepest conviction with the same courage and the same self-sacrifice shown by Jesus. Happily not everyone has the task of being a leader of humanity, or a great rebel; and so, after all, it might be possible for each to realize himself in his own way. This honesty might even become an ideal. Since great innovations always begin in the most unlikely places, the fact that people today are not nearly as ashamed of their nakedness as they used to be might be the beginning of a recognition of themselves as they really are. Hard upon this will follow an increasing recognition of many things that formerly were strictly taboo, for the reality of the earth will not forever remain veiled like the *virgines velandae* of Tertullian. Moral unmasking is but a step further in the same direction, and behold, there stands man as he is, and admits to himself that he is as he is. If he does this in a meaningless way he is just a muddled fool; but if he knows the significance of what he is doing he could belong to a higher order of man who makes real the Christ symbol, regardless of the suffering involved. It has often been observed that purely concrete taboos or magical rites in an early stage of a religion become in the next stage something psychic, or even purely spiritual symbols. An outward law becomes in the course of time an inward conviction. Thus it might easily happen to contemporary man, especially Protestants, that the person Jesus, now existing outside in the realm of history, might become the higher man within himself. Then we would have attained, in a European way, the psychological state corresponding to Eastern enlightenment.

[82] All this is a step in the evolution of a higher consciousness on its way to unknown goals, and is not metaphysics as ordinarily understood. To that extent it is only “psychology,” but to that extent, too, it is experienceable, understandable and—thank God—real, a reality we can do something with, a living reality full of possibilities. The fact that I am content with what can be experienced psychically, and reject the metaphysical, does not amount, as any intelligent person can see, to a gesture of scepticism or agnosticism aimed at faith and trust in higher powers, but means approximately the same as what Kant meant when he called the thing-in-itself a

“merely negative borderline concept.” Every statement about the transcendental is to be avoided because it is only a laughable presumption on the part of a human mind unconscious of its limitations. Therefore, when God or the Tao is named an impulse of the soul, or a psychic state, something has been said about the knowable only, but nothing about the unknowable, about which nothing can be determined.

7. CONCLUSION

[83] The purpose of my commentary is to attempt to build a bridge of psychological understanding between East and West. The basis of every real understanding is man, and therefore I had to speak of human beings. This must be my excuse for having dealt only with general aspects, and for not having entered into technical details. Technical directions are valuable for those who know, for example, what a camera is, or a combustion engine, but they are useless for anyone who has no idea of such apparatus. Western man for whom I write is in an analogous position. Therefore it seemed to me important above all to emphasize the agreement between the psychic states and symbolisms of East and West. These analogies open a way to the inner chambers of the Eastern mind, a way that does not require the sacrifice of our own nature and does not confront us with the threat of being torn from our roots. Nor is it an intellectual telescope or microscope offering a view of no fundamental concern to us because it does not touch us. It is the way of suffering, seeking, and striving common to all civilized peoples; it is the tremendous experiment of becoming conscious, which nature has laid upon mankind, and which unites the most diverse cultures in a common task.

[84] Western consciousness is by no means the only kind of consciousness there is; it is historically conditioned and geographically limited, and representative of only one part of mankind. The widening of our consciousness ought not to proceed at the expense of other kinds of consciousness; it should come about through the development of those elements of our psyche which are analogous to those of the alien psyche, just as the East cannot do without our technology, science, and industry. The European invasion of the East was an act of violence on a grand scale, and it has left us with the duty—*noblesse oblige*—of understanding the mind of the East. This is perhaps more necessary than we realize at present.

EXAMPLES OF EUROPEAN MANDALAS

The pictures that now follow were produced in the way described in the text, by patients during the course of treatment.¹ The earliest picture dates from 1916. All the pictures were done independently of any Eastern influence. The *I Ching* hexagrams in picture No. 4 come from Legge's translation in the Sacred Books of the East series, but they were put into the picture only because their content seemed, to the university-trained patient, especially meaningful for her life. No European mandalas known to me (I have a fairly large collection) achieve the conventionally and traditionally established harmony and perfection of the Eastern mandala. I have made a choice of ten pictures from among an infinite variety of European mandalas, and they ought, as a whole, to illustrate clearly the parallelism between Eastern philosophy and the unconscious mental processes in the West.

♀ The Golden Flower represented as the most splendid of all flowers

♀ In the centre, the Golden Flower; radiating out from it, fishes as fertility symbols (corresponding to the thunderbolts of Lamaic mandalas)

♂ A luminous flower in the centre, with stars rotating about it. Around the flower, walls with eight gates. The whole conceived as a transparent window

♀ Separation of the air-world and the earth-world. (Birds and serpents.) In the centre, a flower with a golden star

♀ Separation of the light from the dark world; the heavenly from the earthly soul. In the centre, a representation of contemplation

♂ In the centre, the white light, shining in the firmament; in the first circle, protoplasmic life-seeds; in the second, rotating cosmic principles which contain the four primary colours; in the third and fourth, creative forces working inward and outward. At the cardinal points, the masculine and feminine souls, both again divided into light and dark

♀ Representation of the *tetraktys* in circular movement

♀ A child in the germinal vesicle with the form primary colours included in the circular movement

♀ In the centre, the germinal vesicle with a human figure nourished by blood vessels which have their origin in the cosmos. The cosmos rotates around the centre, which attracts its emanations. Around the outside is spread nerve tissue indicating that the process takes place in the solar plexus

♂ A mandala as a fortified city with wall and moat. Within, a broad moat surrounding a wall fortified with sixteen towers and with another inner moat. This moat encloses a central castle with golden roofs whose centre is a golden temple

THE VISIONS OF ZOSIMOS

[Originally given as a lecture to the Eranos Conference at Ascona, Switzerland, in August 1937, and published under the title “Einige Bemerkungen zu den Visionen des Zosimos,” *Eranos-Jahrbuch* 1937 (Zurich, 1938). Revised and considerably expanded, as “Die Visionen des Zosimos,” in *Von den Wurzeln des Bewusstseins: Studien über den Archetypus* (Psychologische Abhandlungen, Vol. IX; Zurich, 1954), which version is translated here.—EDITORS.]

THE TEXTS

[85] I must make clear at once that the following observations on the visions of Zosimos of Panopolis, an important alchemist and Gnostic of the third century A.D., are not intended as a final explanation of this extraordinarily difficult material. My psychological contribution is no more than an attempt to shed a little light on it and to answer some of the questions raised by the visions.

[86] The first vision occurs at the beginning of “The Treatise of Zosimos the Divine concerning the Art.”¹ Zosimos introduces the treatise with some general remarks on the processes of nature and, in particular, on the “composition of the waters” (θέσις ὑδάτων) and various other operations, and closes with the words: “... and upon this simple system of many colours is based the manifold and infinitely varied investigation of all things.” Thereupon the text begins:²

(III, i, 2.) And as I spoke thus I fell asleep, and I saw a sacrificer³ standing before me, high up on an altar, which was in the shape of a bowl. There were fifteen steps leading up to the altar. And the priest stood there, and I heard a voice from above saying to me: “I have performed the act of descending the fifteen steps into the darkness, and of ascending the steps into the light. And he who renews me is the sacrificer, by casting away the grossness of the body; and by compelling necessity I am sanctified as a priest and now stand in perfection as a spirit.” And on hearing the voice of him who stood upon the altar, I inquired of him who he was. And he answered me in a fine voice, saying: “I am Ion,⁴ the priest of the inner sanctuaries, and I submit myself to an unendurable torment.⁵ For there came one in haste at early morning, who overpowered me, and pierced me through with the sword, and dismembered me in accordance with the rule of harmony.⁶ And he drew off the skin of my head with the sword, which he wielded with strength, and mingled the bones with the pieces of flesh, and caused them to be burned upon the fire of the art, till I perceived by the transformation of the body that I had become spirit. And that is my unendurable torment.” And even as he spoke thus, and I held him by force to converse with me, his eyes became as blood. And he spewed forth all his own flesh. And I saw how he changed into the opposite of himself, into a mutilated anthroparion,⁷ and he tore his flesh with his own teeth, and sank into himself.

(III, i, 3.) Full of fear I awoke from sleep, and I thought to myself: “Is not this the composition of the waters?” And I was assured that I had well understood, and again I fell asleep. I saw the same bowl-shaped altar and, on the upper part, boiling water, and a numberless multitude of people in it. And there was no one near the altar whom I could question. Then I went up to the altar to see this sight. And I perceived an anthroparion, a barber⁸ grown grey with age, who said to me: “What are you looking at?” I replied that I was astonished to see the seething of the water, and the men burning and yet alive. He answered me thus: “The sight that you see is the entrance, and the exit, and the transformation.” I asked him: “What transformation?” and he answered: “This is the place of the operation called embalming. Those who seek to obtain the art⁹ enter here, and become spirits by escaping from the body.” Then I said to him: “And you, are you a spirit?” And he answered: “Yes, a spirit and a guardian of spirits.” As we spoke, while the boiling continued and the people uttered distressful cries, I saw a brazen man holding a leaden tablet in his hand. And he spoke with a loud voice, looking upon the tablet: “I command all those who are undergoing the punishment to be calm, to take each of them a leaden tablet, to write with their own hand, and to keep their eyes upraised in the air and their mouths open, until their uvula swell.”¹⁰ The deed followed the word, and the master of the house said to me: “You have beheld, you have stretched your neck upward and have seen what is done.” I replied that I had seen, and he continued: “This brazen man whom you see is the priest who sacrifices and is sacrificed, and spews forth his own flesh. Power is given him over this water and over the people who are punished.”¹¹

(III, v, 1.) At last I was overcome with the desire to mount the seven steps and to see the seven punishments, and, as was suitable, in a single day; so I went back in order to complete the ascent. Passing it several times, I at length came upon the path. But as I was about to ascend, I lost my way again; greatly discouraged, and not seeing in which direction I should go, I fell asleep. And while I was sleeping, I saw an anthroparion, a barber clad in a robe of royal purple, who stood outside the place of punishments. He said to me: “Man, what are you doing?” and I replied: “I have stopped here because, having turned aside from the road, I have lost my way.” And he said: “Follow me.” And I turned and followed him. When we came near to the place of punishments, I saw my guide, this little barber, enter that place, and his whole body was consumed by the fire.

(III, v, 2.) On seeing this, I stepped aside, trembling with fear; then I awoke, and said within myself: “What means this vision?” And again I clarified my understanding, and knew that this barber was the brazen man, clad in a purple garment. And I said to myself: “I have well understood, this is the brazen man. It is needful that first he must enter the place of punishments.”

(III, v, 3.) Again my soul desired to mount the third step also. And again I followed the road alone, and when I was near the place of punishments, I again went astray, not knowing my way, and I stopped in despair. And again, as it seemed, I saw an old man whitened by years, who had become wholly white, with a blinding whiteness. His name was Agathodaimon. Turning himself about, the old man with white hair gazed upon me for a full hour. And I urged him: "Show me the right way." He did not come towards me, but hastened on his way. But I, running hither and thither, at length came to the altar. And when I stood at the top of the altar, I saw the white-haired old man enter the place of punishments. O ye demiurges of celestial nature! Immediately he was transformed by the flame into a pillar of fire. What a terrible story, my brethren! For, on account of the violence of the punishment, his eyes filled with blood. I spoke to him, and asked: "Why are you stretched out there?" But he could barely open his mouth, and groaned: "I am the leaden man, and I submit myself to an unendurable torment." Thereupon, seized with great fear, I awoke and sought within myself the reason for what I had seen. And again I considered and said to myself: "I have well understood, for it means that the lead is to be rejected, and in truth the vision refers to the composition of the liquids."

(III, v^{bis}.) Again I beheld the divine and holy bowl-shaped altar, and I saw a priest clothed in a white robe reaching to his feet, who was celebrating these terrible mysteries, and I said: "Who is this?" And the answer came: "This is the priest of the inner sanctuaries. It is he who changes the bodies into blood, makes the eyes clairvoyant, and raises the dead." Then, falling again to earth, I again fell asleep. And as I was ascending the fourth step, I saw, to the east, one approaching, holding a sword in his hand. And another [came] behind him, bringing one adorned round about with signs, clad in white and comely to see, who was named the Meridian of the Sun.¹² And as they drew near to the place of punishments, he who held the sword in his hand [said]: "Cut off his head, immolate his body, and cut his flesh into pieces, that it may first be boiled according to the method,¹³ and then delivered to the place of punishments." Thereupon I awoke and said: "I have well understood, this concerns the liquids in the art of the metals." And he who bore the sword in his hand said again: "You have completed the descent of the seven steps." And the other answered, as he caused the waters to gush forth from all the moist places: "The procedure is completed."

(III, vi, 1.) And I saw an altar which was in the shape of a bowl, and a fiery spirit stood upon the altar, and tended the fire for the seething and the boiling and the burning of the men who rose up from it. And I inquired about the people who stood there, and I said: "I see with astonishment the seething and the boiling of the water, and the men burning and yet alive!" And he answered me, saying: "This boiling that you see is the place of the operation called embalming. Those who seek to obtain the

art enter here, and they cast their bodies from them and become spirits. The practice [of the art] is explained by this procedure; for whatever casts off the grossness of the body becomes spirit.”

[87] The Zosimos texts are in a disordered state. At III, i, 5 there is a misplaced but obviously authentic résumé or amplification of the visions, and at III, i, 4 a philosophical interpretation of them. Zosimos calls this whole passage an “introduction to the discourse that is to follow” (III, i, 6).

(III, i, 5.) In short, my friend, build a temple from a single stone, like to white lead, to alabaster, to Proconnesian marble,¹⁴ with neither end nor beginning in its construction.¹⁵ Let it have within it a spring of the purest water, sparkling like the sun. Note carefully on what side is the entrance to the temple, and take a sword in your hand; then seek the entrance, for narrow is the place where the opening is. A dragon lies at the entrance, guarding the temple. Lay hold upon him; immolate him first; strip him of his skin, and taking his flesh with the bones, separate the limbs; then, laying [the flesh of] the limbs¹⁶ together with the bones at the entrance of the temple, make a step of them, mount thereon, and enter, and you will find what you seek.¹⁷ The priest, that brazen man, whom you see seated in the spring and composing the substance, [look on] him not as the brazen man, for he has changed the colour of his nature and has become the silver man; and if you will, you will soon have him [as] the golden man.

(III, i, 4.) And after I had seen this apparition, I awoke, and I said to myself: “What is the cause of this vision? Is not that boiling white and yellow water the divine water?” And I found that I had well understood. And I said: “Beautiful it is to speak and beautiful to hear, beautiful to give and beautiful to receive, beautiful to be poor and beautiful to be rich. How does nature teach giving and receiving? The brazen man gives and the hydrolith receives; the metal gives and the plant receives; the stars give and the flowers receive; the heavens give and the earth receives; the thunderclaps give forth darting fire. And all things are woven together and all things are undone again; all things are mingled together and all things combine; and all things unite and all things separate; all things are moistened and all things are dried; and all things flourish and all things fade in the bowl of the altar. For each thing comes to pass with method and in fixed measure and by exact¹⁸ weighing of the four elements. The weaving together of all things and the undoing of all things and the whole fabric of things cannot come to pass without method. The method is a natural one, preserving due order in its inhaling and its exhaling; it brings increase and it brings decrease. And to sum up: through the harmonies of separating and combining, and if nothing of the method be neglected, all things bring forth nature. For nature

applied to nature transforms nature. Such is the order of natural law throughout the whole cosmos, and thus all things hang together.”

(III, i, 6.) This introduction is the key which shall open to you the flowers of the discourse that is to follow, namely, the investigation of the arts, of wisdom, of reason and understanding, the efficacious methods and revelations which throw light upon the secret words.

II

COMMENTARY

1. GENERAL REMARKS ON THE INTERPRETATION

[88] Although it looks as if this were a series of visions following one after the other, the frequent repetitions and striking similarities suggest rather that it was essentially a single vision which is presented as a set of variations on the themes it contains. Psychologically at least, there is no ground for supposing that it is an allegorical invention. Its salient features seem to indicate that for Zosimos it was a highly significant experience which he wished to communicate to others. Although alchemical literature contains a number of allegories which without doubt are merely didactic fables and are not based on direct experience,¹ the vision of Zosimos may well have been an actual happening. This seems to be borne out by the manner in which Zosimos himself interprets it as a confirmation of his own preoccupation: “Is not this the composition of the waters?” Such an interpretation seems—to us at any rate—to leave out of account the most impressive images in the vision, and to reduce a far more significant complex of facts to an all too simple common denominator. If the vision were an allegory, the most conspicuous images would also be the ones that have the greatest significance. But it is characteristic of any subjective dream interpretation that it is satisfied with pointing out superficial relationships which take no account of the essentials. Another thing to be considered is that the alchemists themselves testify to the occurrence of dreams and visions during the opus.² I am inclined to think that the vision or visions of Zosimos were experiences of this kind, which took place during the work and revealed the nature of the psychic processes in the background.³ In these visions all those contents emerge which the alchemists unconsciously projected into the chemical process and which were then perceived there, as though they were qualities of matter. The extent to which this projection was fostered by the conscious attitude is shown by the somewhat overhasty interpretation given by Zosimos himself.

[89] Even though his interpretation strikes us at first as somewhat forced, indeed as far-fetched and arbitrary, we should nevertheless not forget that while the conception of the “waters” is a strange one to us, for Zosimos and for the alchemists in general it had a significance we would never suspect. It is also possible that the mention of the

“water” opened out perspectives in which the ideas of dismemberment, killing, torture, and transformation all had their place. For, beginning with the treatises of Democritus and Komarios, which are assigned to the first century A.D., alchemy, until well into the eighteenth century, was very largely concerned with the miraculous water, the *aqua divina* or *permanens*, which was extracted from the lapis, or prima materia, through the torment of the fire. The water was the *humidum radicale* (radical moisture), which stood for the *anima media natura* or *anima mundi* imprisoned in matter,⁴ the soul of the stone or metal, also called the *anima aquina*. This anima was set free not only by means of the “cooking,” but also by the sword dividing the “egg,” or by the *separatio*, or by dissolution into the four “roots” or elements.⁵ The *separatio* was often represented as the dismemberment of a human body.⁶ Of the *aqua permanens* it was said that it dissolved the bodies into the four elements. Altogether, the divine water possessed the power of transformation. It transformed the *nigredo* into the *albedo* through the miraculous “washing” (*ablutio*); it animated inert matter, made the dead to rise again,⁷ and therefore possessed the virtue of the baptismal water in the ecclesiastical rite.⁸ Just as, in the *benedictio fontis*, the priest makes the sign of the cross over the water and so divides it into four parts,⁹ so the mercurial serpent, symbolizing the *aqua permanens*, undergoes dismemberment, another parallel to the division of the body.¹⁰

[90] I shall not elaborate any further this web of interconnected meanings in which alchemy is so rich. What I have said may suffice to show that the idea of the “water” and the operations connected with it could easily open out to the alchemist a vista in which practically all the themes of the vision fall into place. From the standpoint of Zosimos’ conscious psychology, therefore, his interpretation seems rather less forced and arbitrary. A Latin proverb says: *canis panem somniat, piscator pisces* (the dog dreams of bread, the fisherman of fish). The alchemist, too, dreams in his own specific language. This enjoins upon us the greatest circumspection, all the more so as that language is exceedingly obscure. In order to understand it, we have to learn the psychological secrets of alchemy. It is probably true what the old Masters said, that only he who knows the secret of the stone understands their words.¹¹ It has long been asserted that this secret is sheer nonsense, and not worth the trouble of investigating seriously. But this frivolous attitude ill befits the psychologist, for any “nonsense” that fascinated men’s minds for close on two thousand years—among them some of the greatest, e.g., Newton and Goethe¹²—must have something about it which it would be useful for the psychologist to know. Moreover, the symbolism of alchemy has a great deal to do with the structure of the unconscious, as I have shown in my book *Psychology and Alchemy*. These things are not just rare curiosities, and anyone who wishes to understand the symbolism of dreams cannot close his eyes to the fact that the dreams of modern men and women often contain the very images

and metaphors that we find in the medieval treatises.¹³ And since an understanding of the biological compensation produced by dreams is of importance in the treatment of neurosis as well as in the development of consciousness, a knowledge of these facts has also a practical value which should not be underestimated.

2. THE SACRIFICIAL ACT

[91] The central image in our dream-vision shows us a kind of sacrificial act undertaken for the purpose of alchemical transformation. It is characteristic of this rite that the priest is at once the sacrificer and the sacrificed. This important idea reached Zosimos in the form of the teachings of the “Hebrews” (i.e., Christians).¹ Christ was a god who sacrificed himself. An essential part of the sacrificial act is dismemberment. Zosimos must have been familiar with this motif from the Dionysian mystery-tradition. There, too, the god is the victim, who was torn to pieces by the Titans and thrown into a cooking pot,² but whose heart was saved at the last moment by Hera. Our text shows that the bowl-shaped altar was a cooking vessel in which a multitude of people were boiled and burned. As we know from the legend and from a fragment of Euripides,³ an outburst of bestial greed and the tearing of living animals with the teeth were part of the Dionysian orgy.⁴ Dionysius was actually called *ὁ ἀμέριστος καὶ μεμεριομένος νοῦς* (the undivided and divided spirit).⁵

[92] Zosimos must also have been familiar with the flaying motif. A well-known parallel of the dying and resurgent god Attis⁶ is the flayed and hanged Marsyas. Also, legend attributes death by flaying to the religious teacher Mani, who was a near-contemporary of Zosimos.⁷ The subsequent stuffing of the skin with straw is a reminder of the Attic fertility and rebirth ceremonies. Every year in Athens an ox was slaughtered and skinned, and its pelt stuffed with straw. The stuffed dummy was then fastened to a plough, obviously for the purpose of restoring the fertility of the land.⁸ Similar flaying ceremonies are reported of the Aztecs, Scythians, Chinese, and Patagonians.⁹

[93] In the vision, the skinning is confined to the head. It is a scalping as distinct from the total *ἀποδερμάτωσις* (skinning) described in III, i, 5. It is one of the actions which distinguish the original vision from the description of the process given in this résumé. Just as cutting out and eating the heart or brain of an enemy is supposed to endow one with his vital powers or virtues, so scalping is a *pars pro toto* incorporation of the life principle or soul.¹⁰ Flaying is a transformation symbol which I have discussed at greater length in my essay “Transformation Symbolism in the Mass.” Here I need only mention the special motif of torture or punishment (*κόλασις*), which is particularly evident in the description of the dismemberment and

scalping. For this there is a remarkable parallel in the Akhmim manuscript of the Apocalypse of Elijah, published by Georg Steindorff.¹¹ In the vision it is said of the leaden homunculus that “his eyes filled with blood” as a result of the torture. The Apocalypse of Elijah says of those who are cast “into eternal punishment”: “their eyes are mixed with blood”;¹² and of the saints who were persecuted by the Anti-Messiah: “he will draw off their skins from their heads.”¹³

[94] These parallels suggest that the *κόλασις* is not just a punishment but the torment of hell. Although *κόλασις* would have to be translated as *poena*, this word nowhere occurs in the Vulgate, for in all the places where the torments of hell are mentioned the word used is *cruciare* or *cruciatu*s, as in Revelation 14 : 10, “tormented with fire and brimstone,” or Revelation 9 : 5, “the torment of a scorpion.” The corresponding Greek word is *βασανίζειν* or *βασανισμ*, ‘torture’. For the alchemists it had a double meaning: *βασανίζειν* also meant ‘testing on the touchstone’ (*βάσσωσ*) The *lapis Lydius* (touchstone) was used as a synonym for the *lapis philosophorum*. The genuineness or incorruptibility of the stone is proved by the torment of fire and cannot be attained without it. This *leitmotiv* runs all through alchemy.

[95] In our text the skinning refers especially to the head, as though signifying an extraction of the soul (if the primitive equation *skin* = *soul* is still valid here). The head plays a considerable role in alchemy, and has done so since ancient times. Thus Zosimos names his philosophers the “sons of the Golden Head.” I have dealt with this theme elsewhere,¹⁴ and need not go into it again now. For Zosimos and the later alchemists the head had the meaning of the “omega element” or “round element” (*στοιχεῖον στρογγύλον*), a synonym for the arcane or transformative substance.¹⁵ The decapitation in section III, v^{bis} therefore signifies the obtaining of the arcane substance. According to the text, the figure following behind the sacrificer is named the “Meridian of the Sun,” and his head is to be cut off. This striking off of the golden head is also found in the manuscript of *Splendor solis* as well as in the Rorschach printing of 1598. The sacrifice in the vision is of an initiate who has undergone the experience of the *solificatio*. In alchemy; sun is synonymous with gold. Gold, as Michael Maier says, is the “circulatory work of the sun,” “shining clay moulded into the most beauteous substance, wherein the solar rays are gathered together and shine forth.”¹⁶ Mylius says that the “water comes from the rays of the sun and moon.”¹⁷ According to the “Aurelia occulta,” the sun’s rays are gathered together in the quicksilver.¹⁸ Dorn derives all metals from the “invisible rays” of heaven,¹⁹ whose spherical shape is a prototype of the Hermetic vessel. In view of all this, we shall hardly go wrong in supposing that the initiate named the “Meridian of the Sun” himself represents the arcane substance. We shall come back to this idea later.

[96] Let us turn now to other details of the vision. The most striking feature is the “bowl-shaped altar.” It is unquestionably related to the *krater* of Poimandres. This was the vessel which the demiurge sent down to earth filled with Nous, so that those who were striving for higher consciousness could baptize themselves in it. It is mentioned in that important passage where Zosimos tells his friend and *soror mystica*, Theosebeia: “Hasten down to the shepherd and bathe yourself in the *krater*, and hasten up to your own kind (γένοϋς).”²⁰ She had to go down to the place of death and rebirth, and then up to her “own kind,” i.e., the twice-born, or, in the language of the gospels, the kingdom of heaven.

[97] The *krater* is obviously a wonder-working vessel, a font or piscina, in which the immersion takes place and transformation into a spiritual being is effected. It is the *vas Hermetis* of later alchemy. I do not think there can be any doubt that the *krater* of Zosimos is closely related to the vessel of Poimandres in the *Corpus Hermeticum*.²¹ The Hermetic vessel, too, is a uterus of spiritual renewal or rebirth. This idea corresponds exactly to the text of the *benedictio fontis*, which I quoted earlier in a footnote.²² In “Isis to Horus,”²³ the angel brings Isis a small vessel filled with translucent or “shining” water. Considering the alchemical nature of the treatise, we could take this water as the divine water of the art,²⁴ since after the prima materia this is the real arcanum. The water, or water of the Nile, had a special significance in ancient Egypt: it was Osiris, the dismembered god *par excellence*.²⁵ A text from Edfu says: “I bring you the vessels with the god’s limbs [i.e., the Nile] that you may drink of them; I refresh your heart that you may be satisfied.”²⁶ The god’s limbs were the fourteen parts into which Osiris was divided. There are numerous references to the hidden, divine nature of the arcane substance in the alchemical texts.²⁷ According to this ancient tradition, the water possessed the power of resuscitation; for it was Osiris, who rose from the dead. In the “Dictionary of Goldmaking,”²⁸ Osiris is the name for lead and sulphur, both of which are synonyms for the arcane substance. Thus lead, which was the principal name for the arcane substance for a long time, is called “the sealed tomb of Osiris, containing all the limbs of the god.”²⁹ According to legend, Set (Typhon) covered the coffin of Osiris with lead. Petasios tells us that the “sphere of the fire is restrained and enclosed by lead.” Olympiodorus, who quotes this saying, remarks that Petasios added by way of explanation: “The lead is the water which issues from the masculine element.”³⁰ But the masculine element, he said, is the “sphere of fire.”

[98] This train of thought indicates that the spirit which is a water, or the water which is a spirit, is essentially a paradox, a pair of opposites like water and fire. In the *aqua nostra* of the alchemists, the concepts of water, fire, and spirit coalesce as they do in religious usage.³¹

[99] Besides the motif of water, the story that forms the setting of the Isis treatise also contains the motif of violation. The text says:³²

Isis the Prophetess to her son Horus: My child, you should go forth to battle against the faithless Typhon for the sake of your father's kingdom, while I retire to Hormanuthi, Egypt's [city] of the sacred art, where I sojourned for a while. According to the circumstances of the time and the necessary consequences of the movement of the spheres,³³ it came to pass that a certain one among the angels, dwelling in the first firmament, watched me from above and wished to have intercourse with me. Quickly he determined to bring this about. I did not yield, as I wished to inquire into the preparation of the gold and silver. But when I demanded it of him, he told me he was not permitted to speak of it, on account of the supreme importance of the mysteries; but on the following day an angel, Amnael, greater than he, would come, and he could give me the solution of the problem. He also spoke of the sign of this angel—he bore it on his head and would show me a small, unpitched vessel filled with a translucent water. He would tell me the truth. On the following day, as the sun was crossing the midpoint of its course, Amnael appeared, who was greater than the first angel, and, seized with the same desire, he did not hesitate, but hastened to where I was. But I was no less determined to inquire into the matter.³⁴

[100] She did not yield to him, and the angel revealed the secret, which she might pass only to her son Horus. Then follow a number of recipes which are of no interest here.

[101] The angel, as a winged or spiritual being, represents, like Mercurius, the volatile substance, the pneuma, the *ἀσώματον* (disembodied). Spirit in alchemy almost invariably has a relation to water or to the radical moisture, a fact that may be explained simply by the empirical nature of the oldest form of “chemistry,” namely the art of cooking. The steam arising from boiling water conveys the first vivid impression of “metasomatosi,” the transformation of the corporeal into the incorporeal, into spirit or pneuma. The relation of spirit to water resides in the fact that the spirit is hidden in the water, like a fish. In the “*Allegoriae super librum Turbae*”³⁵ this fish is described as “round” and endowed with “a wonder-working virtue.” As is evident from the text,³⁶ it represents the arcane substance. From the alchemical transformation, the text says, is produced a collyrium (eyewash) which will enable the philosopher to see the secrets better.³⁷ The “round fish” seems to be a relative of the “round white stone” mentioned in the *Turba*.³⁸ Of this it is said: “It has within itself the three colours and the four natures and is born of a living thing.” The “round” thing or element is a well-known concept in alchemy. In the *Turba* we encounter the *rotundum*: “For the sake of posterity I call attention to the *rotundum*, which changes the metal into four.”³⁹ As is clear from the context, the *rotundum* is identical with the *aqua permanens*. We meet the same train of thought in Zosimos. He says of the round or omega element: “It consists of two parts. It belongs to the

seventh zone, that of Kronos,⁴⁰ in the language of the corporeal (*κατὰ τὴν ἔνσωμον*); but in the language of the incorporeal it is something different, that may not be revealed. Only Nikotheos knows it, and he is not to be found.⁴¹ In the language of the corporeal it is named Okeanos, the origin and seed, so they say, of all the gods.”⁴² Hence the *rotundum* is outwardly water, but inwardly the arcanum. For the Peratics, Kronos was a “power having the colour of water,”⁴³ “for the water, they say, is destruction.”

[102] Water and spirit are often identical. Thus Hermolaus Barbarus⁴⁴ says: “There is also a heavenly or divine water of the alchemists, which was known both to Democritus and to Hermes Trismegistus. Sometimes they call it the divine water, and sometimes the Scythian juice, sometimes pneuma, that is spirit, of the nature of aether, and the quintessence of things.”⁴⁵ Ruland calls the water the “spiritual power, a spirit of heavenly nature.”⁴⁶ Christopher Steeb gives an interesting explanation of the origin of this idea: “The brooding of the Holy Spirit upon the waters above the firmament brought forth a power which permeates all things in the most subtle way, warms them, and, in conjunction with the light, generates in the mineral kingdom of the lower world the mercurial serpent, in the plant kingdom the blessed greenness, and in the animal kingdom the formative power; so that the supracelestial spirit of the waters, united with the light, may fitly be called the soul of the world.”⁴⁷ Steeb goes on to say that when the celestial waters were animated by the spirit, they immediately fell into a circular motion, from which arose the perfect spherical form of the *anima mundi*. The *rotundum* is therefore a bit of the world soul, and this may well have been the secret that was guarded by Zosimos. All these ideas refer expressly to Plato’s *Timaeus*. In the *Turba*, Parmenides praises the water as follows: “O ye celestial natures, who at a sign from God multiply the natures of the truth! O mighty nature, who conquers the natures and causes the natures to rejoice and be glad!⁴⁸ For she it is in particular, whom God has endowed with a power which the fire does not possess. . . . She is herself the truth, all ye seekers of wisdom, for, liquefied with her substances, she brings about the highest of works.”⁴⁹

[103] Socrates in the *Turba* says much the same: “O how this nature changes body into spirit! . . . She is the sharpest vinegar, which causes gold to become pure spirit.”⁵⁰ “Vinegar” is synonymous with “water,” as the text shows, and also with the “red spirit.”⁵¹ The *Turba* says of the latter: “From the compound that is transformed into red spirit arises the principle of the world,” which again means the world soul⁵² *Aurora consurgens* says: “Send forth thy Spirit, that is water . . . and thou wilt renew the face of the earth.” And again: “The rain of the Holy Spirit melteth. He shall send out his word . . . his wind shall blow and the waters shall run.”⁵³ Arnaldus de Villanova (1235–1313) says in his “Flos Florum”: “They have called water spirit, and it is in truth spirit.”⁵⁴ The *Rosarium philosophorum* says categorically: “Water is

spirit.”⁵⁵ In the treatise of Komarios (1st cent, A.D.), the water is described as an elixir of life which wakens the dead sleeping in Hades to a new springtime.⁵⁶ Apollonius says in the *Turba*:⁵⁷ “But then, ye sons of the doctrine, that thing needs the fire, until the spirit of that body is transformed and left to stand through the nights, and turns to dust like a man in his grave. After this has happened, God will give it back its soul and its spirit, and, the infirmity being removed, that thing will be stronger and better after its destruction, even as a man becomes stronger and younger after the resurrection than he was in the world.” The water acts upon the substances as God acts upon the body. It is coequal with God and is itself of divine nature.

[104] As we have seen, the spiritual nature of the water comes from the “brooding” of the Holy Spirit upon the chaos (Genesis 1 : 3). There is a similar view in the *Corpus Hermeticum*: “There was darkness in the deep and water without form; and there was a subtle breath, intelligent, which permeated the things in Chaos with divine power.”⁵⁸ This view is supported in the first place by the New Testament motif of baptism by “water and spirit,” and in the second place by the rite of the *benedictio fontis*, which is performed on Easter Eve.⁵⁹ But the idea of the wonder-working water derived originally from Hellenistic nature philosophy, probably with an admixture of Egyptian influences, and not from Christian or biblical sources. Because of its mystical power, the water animates and fertilizes but also kills.

[105] In the divine water, whose dyophysite nature (τὸ στοιχεῖον τὸ διμερές)⁶⁰ is constantly emphasized, two principles balance one another, active and passive, masculine and feminine, which constitute the essence of creative power in the eternal cycle of birth and death.⁶¹ This cycle was represented in ancient alchemy by the symbol of the uroboros, the dragon that bites its own tail.⁶² Self-devouring is the same as self-destruction,⁶³ but the union of the dragon’s tail and mouth was also thought of as self-fertilization. Hence the texts say: “The dragon slays itself, weds itself, impregnates itself.”⁶⁴

[106] This ancient alchemical idea reappears dramatically in the vision of Zosimos, much as it might in a real dream. In III, i, 2 the priest Ion submits himself to an “unendurable torment.” The “sacrificer” performs the act of sacrifice by piercing Ion through with a sword. Ion thus foreshadows that dazzling white-clad figure named the “Meridian of the Sun” (III, v^{bis}), who is decapitated, and whom we have connected with the *solificatio* of the initiate in the Isis mysteries. This figure corresponds to the kingly mystagogue or psychopomp who appears in a vision reported in a late medieval alchemical text, the “Declaratio et Explicatio Adolphi,” which forms part of the “Aurelia occulta.”⁶⁵ So far as one can judge, the vision has no connection whatever with the Zosimos text, and I also doubt very much whether one should attribute to it the character of a mere parable. It contains certain features that are not traditional but are entirely original, and for this reason it seems likely that it

was a genuine dream-experience. At all events, I know from my professional experience that similar dream-visions occur today among people who have no knowledge of alchemical symbolism. The vision is concerned with a shining male figure wearing a crown of stars. His robe is of white linen, dotted with many-coloured flowers, those of green predominating. He assuages the anxious doubts of the adept, saying: "Adolphus, follow me. I shall show thee what is prepared for thee, so that thou canst pass out of the darkness into the light." This figure, therefore, is a true Hermes Psychopompos and initiator, who directs the spiritual *transitus* of the adept. This is confirmed in the course of the latter's adventures, when he receives a book showing a "parabolic figure" of the Old Adam. We may take this as indicating that the psychopomp is the second Adam, a parallel figure to Christ. There is no talk of sacrifice, but, if our conjecture is right, this thought would be warranted by the appearance of the second Adam. Generally speaking, the figure of the king is associated with the motif of the *mortificatio*.

[107] Thus in our text the personification of the sun or gold is to be sacrificed,⁶⁶ and his head, which was crowned with the aureole of the sun, struck off, for this contains, or is, the arcanum.⁶⁷ Here we have an indication of the psychic nature of the arcanum, for the head of a man signifies above all the seat of consciousness.⁶⁸ Again, in the vision of Isis, the angel who bears the secret is connected with the meridian of the sun, for the text says that he appeared as "the sun was crossing the midpoint of its course." The angel bears the mysterious elixir on his head and, by his relationship to the meridian, makes it clear that he is a kind of solar genius or messenger of the sun who brings "illumination," that is, an enhancement and expansion of consciousness. His indecorous behaviour may be explained by the fact that angels have always enjoyed a dubious reputation as far as their morals are concerned. It is still the rule for women to cover their hair in church. Until well into the nineteenth century, especially in Protestant regions, they had to wear a special hood⁶⁹ when they went to church on Sundays. This was not because of the men in the congregation, but because of the possible presence of angels, who might be thrown into raptures at the sight of a feminine coiffure. Their susceptibility in these matters goes back to Genesis 6 : 2, where the "sons of God" displayed a particular penchant for the "daughters of men," and bridled their enthusiasm as little as did the two angels in the Isis treatise. This treatise is assigned to the first century A.D. Its views reflect the Judaeo-Hellenistic angelology⁷⁰ of Egypt, and it might easily have been known to Zosimos the Egyptian.

[108] Such opinions about angels fit in admirably with masculine as well as with feminine psychology. If angels are anything at all, they are personified transmitters of unconscious contents that are seeking expression. But if the conscious mind is not ready to assimilate these contents, their energy flows off into the affective and instinctual sphere. This produces outbursts of affect, irritation, bad moods, and sexual

excitement, as a result of which consciousness gets thoroughly disoriented. If this condition becomes chronic, a dissociation develops, described by Freud as repression, with all its well-known consequences. It is, therefore, of the greatest therapeutic importance to acquaint oneself with the contents that underlie the dissociation.

[109] Just as the angel Annael brings the arcane substance with him, so the “Meridian of the Sun” is himself a representation of it. In alchemical literature, the procedure of transfixing or cutting up with the sword takes the special form of dividing the philosophical egg. It, too, is divided with the sword, i.e., broken down into the four natures or elements. As an arcanum, the egg is a synonym for the water.⁷¹ It is also a synonym for the dragon (mercurial serpent)⁷² and hence for the water in the special sense of the microcosm or monad. Since water and egg are synonymous, the division of the egg with the sword is also applied to the water. “Take the vessel, cut it through with the sword, take its soul . . . thus is this water of ours our vessel.”⁷³ The vessel likewise is a synonym for the egg, hence the recipe: “Pour into a round glass vessel, shaped like a phial or egg.”⁷⁴ The egg is a copy of the World-Egg, the egg-white corresponding to the “waters above the firmament,” the “shining liquor,” and the yolk to the physical world.⁷⁵ The egg contains the four elements.⁷⁶

[110] The dividing sword seems to have a special significance in addition to those we have noted. The “Consilium coniugii” says that the marriage pair, sun and moon, “must both be slain by their own sword, imbibing immortal souls until the most hidden interior [i.e., the previous] soul is extinguished.”⁷⁷ In a poem of 1620, Mercurius complains that he is “sore tormented with a fiery sword.”⁷⁸ According to the alchemists, Mercurius is the old serpent who already in paradise possessed “knowledge,” since he was closely related to the devil. It is the fiery sword brandished by the angel at the gates of paradise that torments him,⁷⁹ and yet he himself is this sword. There is a picture in the “Speculum veritatis”⁸⁰ of Mercurius killing the king and the snake with the sword—“gladio proprio se ipsum interficiens.” Saturn, too, is shown pierced by a sword.⁸¹ The sword is well suited to Mercurius as a variant of the *telum passionis*, Cupid’s arrow.⁸² Dorn, in his “Speculativa philosophia,”⁸³ gives a long and interesting interpretation of the sword: it is the “sword of God’s wrath,” which, in the form of Christ the Logos, was hung upon the tree of life. Thus the wrath of God was changed to love, and “the water of Grace now bathes the whole world.” Here again, as in Zosimos, the water is connected with the sacrificial act. Since the Logos, the Word of God, is “sharper than any two-edged sword” (Hebrews 4 : 12), the words of the Consecration in the Mass were interpreted as the sacrificial knife with which the offering is slain.⁸⁴ One finds in Christian symbolism the same “circular” Gnostic thinking as in alchemy. In both the sacrificer is the sacrificed, and the sword that kills is the same as that which is killed.

[111] In Zosimos this circular thinking appears in the sacrificial priest's identity with his victim and in the remarkable idea that the homunculus into whom Ion is changed devours himself.⁸⁵ He spews forth his own flesh and rends himself with his own teeth. The homunculus therefore stands for the uroboros, which devours itself and gives birth to itself (as though spewing itself forth). Since the homunculus represents the transformation of Ion, it follows that Ion, the uroboros, and the sacrificer are essentially the same. They are three different aspects of the same principle. This equation is confirmed by the symbolism of that part of the text which I have called the "résumé" and have placed at the end of the visions. The sacrificed is indeed the uroboros serpent, whose circular form is suggested by the shape of the temple, which has "neither beginning nor end in its construction." Dismembering the victim corresponds to the idea of dividing the chaos into four elements or the baptismal water into four parts. The purpose of the operation is to create the beginnings of order in the *massa confusa*, as is suggested in III, i, 2: "in accordance with the rule of harmony." The psychological parallel to this is the reduction to order, through reflection, of apparently chaotic fragments of the unconscious which have broken through into consciousness. Without knowing anything of alchemy or its operations, I worked out many years ago a psychological typology based on the four functions of consciousness as the ordering principles of psychic processes in general. Unconsciously, I was making use of the same archetype which had led Schopenhauer to give his "principle of sufficient reason" a fourfold root.⁸⁶

[112] The temple built of a "single stone" is an obvious paraphrase of the lapis. The "spring of purest water" in the temple is a fountain of life, and this is a hint that the production of the round wholeness, the stone, is a guarantee of vitality. Similarly, the light that shines within it can be understood as the illumination which wholeness brings.⁸⁷ Enlightenment is an increase of consciousness. The temple of Zosimos appears in later alchemy as the *domus thesaurorum* or *gazophylacium* (treasure-house).⁸⁸

[113] Although the shining white "monolith" undoubtedly stands for the stone, it clearly signifies at the same time the Hermetic vessel. The *Rosarium* says: "One is the stone, one the medicine, one the vessel, one the procedure, and one the disposition."⁸⁹ The scholia to the "Tractatus aureus Hermetis" put it even more plainly: "Let all be one in one circle or vessel."⁹⁰ Michael Maier ascribes to Maria the Jewess ("sister of Moses") the view that the whole secret of the art lay in knowledge of the Hermetic vessel. It was divine, and had been hidden from man by the wisdom of the Lord.⁹¹ *Aurora consurgens* II⁹² says that the natural vessel is the *aqua permanens* and the "vinegar of the philosophers," which obviously means that it is the arcane substance itself. We should understand the "Practica Mariae"⁹³ in this sense when it says that the Hermetic vessel is "the measure of your fire" and that it

had been “hidden by the Stoics”;⁹⁴ it is the “toxic body” which transforms Mercurius and is therefore the water of the philosophers.⁹⁵ As the arcane substance the vessel is not only water but also fire, as the “*Allegoriae sapientum*” makes clear: “Thus our stone, that is the flask of fire, is created from fire.”⁹⁶ We can therefore understand why Mylius⁹⁷ calls the vessel the “root and principle of our art.” Laurentius Ventura⁹⁸ calls it “Luna,” the *foemina alba* and mother of the stone. The vessel that is “not dissolved by water and not melted by fire” is, according to the “*Liber quartorum*,”⁹⁹ “like the work of God in the vessel of the divine seed (*germinis divi*), for it has received the clay, moulded it, and mixed it with water and fire.” This is an allusion to the creation of man, but on the other hand it seems to refer to the creation of souls, since immediately afterwards the text speaks of the production of souls from the “seeds of heaven.” In order to catch the soul God created the *vas cerebri*, the cranium. Here the symbolism of the vessel coincides with that of the head, which I have discussed in my “Transformation Symbolism in the Mass.”¹⁰⁰

[114] The *prima materia*, as the radical moisture, has to do with the soul because the latter is also moist by nature¹⁰¹ and is sometimes symbolized by dew.¹⁰² In this way the symbol of the vessel gets transferred to the soul. There is an excellent example of this in Caesarius of Heisterbach:¹⁰³ the soul is a spiritual substance of spherical nature, like the globe of the moon, or like a glass vessel that is “furnished before and behind with eyes” and “sees the whole universe.” This recalls the many-eyed dragon of alchemy and the snake vision of Ignatius Loyola.¹⁰⁴ In this connection the remark of Mylius¹⁰⁵ that the vessel causes “the whole firmament to rotate in its course” is of special interest because, as I have shown, the symbolism of the starry heaven coincides with the motif of polyophtalmia.¹⁰⁶

[115] After all this we should be able to understand Dorn’s view that the vessel must be made “by a kind of squaring of the circle.”¹⁰⁷ It is essentially a psychic operation, the creation of an inner readiness to accept the archetype of the self in whatever subjective form it appears. Dorn calls the vessel the *vas pellicanicum*, and says that with its help the *quinta essentia* can be extracted from the *prima materia*.¹⁰⁸ The anonymous author of the scholia to the “*Tractatus aureus Hermetis*” says: “This vessel is the true philosophical Pelican, and there is none other to be sought for in all the world.”¹⁰⁹ It is the lapis itself and at the same time contains it; that is to say, the self is its own container. This formulation is borne out by the frequent comparison of the lapis to the egg or to the dragon which devours itself and gives birth to itself.

[116] The thought and language of alchemy lean heavily on mysticism: in the Epistle of Barnabas¹¹⁰ Christ’s body is called the “vessel of the spirit.” Christ himself is the pelican who plucks out his breast feathers for his young.¹¹¹ According to the teachings of Herakleon, the dying man should address the demiurgic powers thus: “I am a vessel more precious than the feminine being who made you. Whereas your

mother knew not her own roots, I know of myself, and I know whence I have come, and I call upon the imperishable wisdom which is in the Father¹¹² and is the Mother of your mother, which has no mother, but also has no male companion.”¹¹³

[117] In the abstruse symbolism of alchemy we hear a distant echo of this kind of thinking, which, without hope of further development, was doomed to destruction under the censorship of the Church. But we also find in it a groping towards the future, a premonition of the time when the projection would be taken back into man, from whom it had arisen in the first place. It is interesting to see the strangely clumsy ways in which this tendency seeks to express itself in the phantasmagoria of alchemical symbolism. The following instructions are given in Johannes de Rupescissa: “Cause a vessel to be made in the fashion of a Cherub, which is the face of God, and let it have six wings, like to six arms folding back upon themselves; and above, a round head. . . .”¹¹⁴ From this it appears that although the ideal distilling vessel should resemble some monstrous kind of deity, it nevertheless had an approximately human shape. Rupescissa calls the quintessence the “ciel humain” and says it is “comme le ciel et les étoiles.” The Book of El-Habib¹¹⁵ says: “Man’s head likewise resembles a condensing apparatus.” Speaking of the four keys for unlocking the treasure-house, the “Consilium coniugii”¹¹⁶ explains that one of them is “the ascent of the water through the neck to the head of the vessel, that is like a living man.” There is a similar idea in the “Liber quattorum”: “The vessel . . . must be round in shape, that the artifex may be the transformer of the firmament and the brain-pan, just as the thing which we need is a simple thing.”¹¹⁷ These ideas go back to the head symbolism in Zosimos, but at the same time they are an intimation that the transformation takes place in the head and is a psychic process. This realization was not something that was clumsily disguised afterwards; the laborious way in which it was formulated proves how obstinately it was projected into matter. Psychological knowledge through withdrawal of projections seems to have been an extremely difficult affair from the very beginning.

[118] The dragon, or serpent, represents the initial state of unconsciousness, for this animal loves, as the alchemists say, to dwell “in caverns and dark places.” Unconsciousness has to be sacrificed; only then can one find the entrance into the head, and the way to conscious knowledge and understanding. Once again the universal struggle of the hero with the dragon is enacted, and each time at its victorious conclusion the sun rises: consciousness dawns, and it is perceived that the transformation process is taking place inside the temple, that is, in the head. It is in truth the inner man, presented here as a homunculus, who passes through the stages that transform the copper into silver and the silver into gold, and who thus undergoes a gradual enhancement of value.

[119] It sounds very strange to modern ears that the inner man and his spiritual growth should be symbolized by metals. But the historical facts cannot be doubted, nor is the idea peculiar to alchemy. It is said, for instance, that after Zarathustra had received the drink of omniscience from Ahuramazda, he beheld in a dream a tree with four branches of gold, silver, steel, and mixed iron.¹¹⁸ This tree corresponds to the metallic tree of alchemy, the *arbor philosophica*, which, if it has any meaning at all, symbolizes spiritual growth and the highest illumination. Cold, inert metal certainly seems to be the direct opposite of spirit—but what if the spirit is as dead and as heavy as lead? A dream might then easily tell us to look for it in lead or quicksilver! It seems that nature is out to prod man's consciousness towards greater expansion and greater clarity, and for this reason continually exploits his greed for metals, especially the precious ones, and makes him seek them out and investigate their properties. While so engaged it may perhaps dawn on him that not only veins of ore are to be found in the mines, but also kobolds and little metal men, and that there may be hidden in lead either a deadly demon or the dove of the Holy Ghost.¹¹⁹

[120] It is evident that some alchemists passed through this process of realization to the point where only a thin wall separated them from psychological self-awareness. Christian Rosencreutz is still this side of the dividing line, but with *Faust* Goethe came out on the other side and was able to describe the psychological problem which arises when the inner man, or greater personality that before had lain hidden in the homunculus, emerges into the light of consciousness and confronts the erstwhile ego, the animal man. More than once Faust had inklings of the metallic coldness of Mephistopheles, who had first circled round him in the shape of a dog (uroboros motif). Faust used him as a familiar spirit and finally got rid of him by means of the motif of the cheated devil; but all the same he claimed the credit for the fame Mephistopheles brought him as well as for the power to work magic. Goethe's solution of the problem was still medieval, but it nevertheless reflected a psychic attitude that could get on without the protection of the Church. That was not the case with Rosencreutz: he was wise enough to stay outside the magic circle, living as he did within the confines of tradition. Goethe was more modern and therefore more incautious. He never really understood how dreadful was the Walpurgisnacht of the mind against which Christian dogma offered protection, even though his own masterpiece spread out this underworld before his eyes in two versions. But then, an extraordinary number of things can happen to a poet without having serious consequences. These appeared with a vengeance only a hundred years later. The psychology of the unconscious has to reckon with long periods of time like this, for it is concerned less with the ephemeral personality than with age-old processes, compared with which the individual is no more than the passing blossom and fruit of the rhizome underground.

3. THE PERSONIFICATIONS

[121] What I have taken as a résumé, namely the piece we have been discussing, Zosimos calls a *προοίμιον*, an introduction.¹ It is therefore not a dream-vision; Zosimos is speaking here in the conscious language of his art, and expresses himself in terms that are obviously familiar to his reader. The dragon, its sacrifice and dismemberment, the temple built of a single stone, the miracle of goldmaking, the transmutation of the anthroparia, are all current conceptions in the alchemy of his day. That is why this piece seems to us a conscious allegory, contrasting with the authentic visions, which treat the theme of transmutation in an unorthodox and original way, just as a dream might do. The abstract spirits of the metals are pictured here as suffering human beings; the whole process becomes like a mystic initiation and has been very considerably psychologized. But Zosimos' consciousness is still so much under the spell of the projection that he can see in the vision nothing more than the "composition of the waters." One sees how in those days consciousness turned away from the mystic process and fastened its attention upon the material one, and how the projection drew the mind towards the physical. For the physical world had not yet been discovered. Had Zosimos recognized the projection, he would have fallen back into the fog of mystic speculation, and the development of the scientific spirit would have been delayed for an even longer time. For us, matters are different. It is just the mystic content of his visions that is of special importance for us, because we are familiar enough with the chemical processes which Zosimos was out to investigate. We are therefore in a position to separate them from the projection and to recognize the psychic element they contain. The résumé also offers us a standard of comparison which enables us to discern the difference between its style of exposition and that of the visions. This difference supports our assumption that the visions are more like a dream than an allegory, though there is little possibility of our reconstructing the dream from the defective text that has come down to us.

[122] The representation of the "alchemystical" process by persons needs a little explanation. The personification of lifeless things is a remnant of primitive and archaic psychology. It is caused by unconscious identity,² or what Lévy-Bruhl called *participation mystique*. The unconscious identity, in turn, is caused by the projection of unconscious contents into an object, so that these contents then become accessible to consciousness as qualities apparently belonging to the object. Any object that is at all interesting provokes a considerable number of projections. The difference between primitive and modern psychology in this respect is in the first place qualitative, and in the second place one of degree. Consciousness develops in civilized man by the acquisition of knowledge and by the withdrawal of projections. These are recognized as psychic contents and are reintegrated with the psyche. The alchemists concretized or personified practically all their most important ideas—the

four elements, the vessel, the stone, the prima materia, the tincture, etc. The idea of man as a microcosm, representing in all his parts the earth or the universe,³ is a remnant of an original psychic identity which reflected a twilight state of consciousness. An alchemical text⁴ expresses this as follows:

Man is to be esteemed a little world, and in all respects he is to be compared to a world. The bones under his skin are likened to mountains, for by them is the body strengthened, even as the earth is by rocks, and the flesh is taken for earth, and the great blood vessels for great rivers, and the little ones for small streams that pour into the great rivers. The bladder is the sea, wherein the great as well as the small streams congregate. The hair is compared to sprouting herbs, the nails on the hands and feet, and whatever else may be discovered inside and outside a man, all according to its kind is compared to the world.

[123] Alchemical projections are only a special instance of the mode of thinking typified by the idea of the microcosm. Here is another example of personification:⁵

Now mark further Best Beloved / how you should do / you should go to the house / there you will find two doors / that are shut / you should stand a while before them / until one comes / and opens the door / and goes out to you / that will be a Yellow Man / and is not pretty to look upon / but you should not fear him / because he is unshapely / but he is sweet of word / and will ask you / my dear what seekest thou here / when truly I have long seen no man / so near this house / then you should answer him / I have come here and seek the Lapidem Philosophorum / the same Yellow Man will answer you and speak thus / my dear friend since you now have come so far / I will show you further / you should go into the house / until you come to a running fountain / and then go on a little while / and there will come to you a Red Man / he is Fiery Red and has Red eyes / you should not fear him on account of his ugliness / for he is gentle of word / and he also will ask you / my dear friend / what is your desire here / when to me you are a strange guest / and you should answer him / I seek the Lapidem Philosophorum. . . .

[124] Personifications of metals are especially common in the folktales of imps and goblins, who were often seen in the mines.⁶ We meet the metal men several times in Zosimos,⁷ also a brazen eagle.⁸ The “white man” appears in Latin alchemy: “Accipe illum album hominem de vase.” He is the product of the conjunction of the bridegroom and bride,⁹ and belongs to the same context of thought as the oft-cited “white woman” and “red slave,” who are synonymous with Beya and Gabricus in the “Visio Arislei.” These two figures seem to have been taken over by Chaucer:¹⁰

The statue of Mars upon a carte stood,
Armed, and looked grym as he were wood;

And over his heed ther shynen two figures

Of sterres, that been cleped in scriptures,

That oon Puella, that oother Rubeus.

[125] Nothing would have been easier than to equate the love story of Mars and Venus with that of Gabricus and Beya (who were also personified as dog and bitch), and it is likely that astrological influences also played a part. Thanks to his unconscious identity with it, man and cosmos interact. The following passage, of the utmost importance for the psychology of alchemy, should be understood in this sense: “And as man is composed of the four elements, so also is the stone, and so it is [dug] out of man, and you are its ore, namely by working; and from you it is extracted, namely by division; and in you it remains inseparably, namely through the science.”¹¹ Not only do things appear personified as human beings, but the macrocosm personifies itself as a man too. “The whole of nature converges in man as in a centre, and one participates in the other, and man has not unjustly concluded that the material of the philosophical stone may be found everywhere.”¹² The “Consilium coniugii”¹³ says: “Four are the natures which compose the philosophical man.” “The elements of the stone are four, which, when well proportioned to one another, constitute the philosophical man, that is, the perfect human elixir.” “They say that the stone is a man, because one cannot attain to it¹⁴ save by reason and human knowledge.” The above statement “you are its ore” has a parallel in the treatise of Komarios:¹⁵ “In thee [Cleopatra] is hidden the whole terrible and marvellous secret.” The same is said of the “bodies” (σώματα, i.e., ‘substances’): “In them the whole secret is concealed.”¹⁶

4. THE STONE SYMBOLISM

[126] Zosimos contrasts the body (σάρξ in the sense of ‘flesh’) with the spiritual man (πνευματικός).¹ The distinguishing mark of the spiritual man is that he seeks self-knowledge and knowledge of God.² The earthly, fleshly man is called Thoth or Adam. He bears within him the spiritual man, whose name is light (φῶς). This first man, Thoth-Adam, is symbolized by the four elements. The spiritual and the fleshly man are also named Prometheus and Epimetheus. But “in allegorical language” they “are but one man, namely soul and body.” The spiritual man was seduced into putting on the body, and was bound to it by “Pandora, whom the Hebrews call Eve.”³ She played the part, therefore, of the anima, who functions as the link between body and spirit, just as Shakti or Maya entangles man’s consciousness with the world. In the “Book of Krates” the spiritual man says: “Are you capable of knowing your soul completely? If you knew it as you should, and if you knew what could make it better, you would be capable of knowing that the names which the philosophers gave it of old are not its true names.”⁴ This last sentence is a standing phrase which is applied

to the names of the lapis. The lapis signifies the inner man, the ἄνθρωπος πνευματικός, the *natura abscondita* which the alchemists sought to set free. In this sense the *Aurora consurgens* says that through baptism by fire “man, who before was dead, is made a living soul.”⁵

[127] The attributes of the stone—incorruptibility, permanence, divinity, triunity, etc.—are so insistently emphasized that one cannot help taking it as the *deus absconditus* in matter. This is probably the basis of the lapis-Christ parallel, which occurs as early as Zosimos⁶ (unless the passage in question is a later interpolation). Inasmuch as Christ put on a “human body capable of suffering” and clothed himself in matter, he forms a parallel to the lapis, the corporeality of which is constantly stressed. Its ubiquity corresponds to the omnipresence of Christ. Its “cheapness,” however, goes against the doctrinal view. The divinity of Christ has nothing to do with man, but the healing stone is “extracted” from man, and every man is its potential carrier and creator. It is not difficult to see what kind of conscious situation the lapis philosophy compensates: far from *signifying* Christ, the lapis *complements* the common conception of the Christ figure at that time.⁷ What unconscious nature was ultimately aiming at when she produced the image of the lapis can be seen most clearly in the notion that it originated in matter and in man, that it was to be found everywhere, and that its fabrication lay at least potentially within man’s reach. These qualities all reveal what were felt to be the defects in the Christ image at that time: an air too rarefied for human needs, too great a remoteness, a place left vacant in the human heart. Men felt the absence of the “inner” Christ who belonged to every man. Christ’s spirituality was too high and man’s naturalness was too low. In the image of Mercurius and the lapis the “flesh” glorified itself in its own way; it would not transform itself into spirit but, on the contrary, “fixed” the spirit in stone, and endowed the stone with all the attributes of the three Persons. The lapis may therefore be understood as a symbol of the inner Christ, of God in man. I use the expression “symbol” on purpose, for though the lapis is a parallel of Christ, it is not meant to replace him. On the contrary, in the course of the centuries the alchemists tended more and more to regard the lapis as the culmination of Christ’s work of redemption. This was an attempt to assimilate the Christ figure into the philosophy of the “science of God.” In the sixteenth century Khunrath formulated for the first time the “theological” position of the lapis: it was the *filius macrocosmi* as opposed to the “son of man,” who was the *filius microcosmi*. This image of the “Son of the Great World” tells us from what source it was derived: it came not from the conscious mind of the individual man, but from those border regions of the psyche that open out into the mystery of cosmic matter. Correctly recognizing the spiritual one-sidedness of the Christ image, theological speculation had begun very early to concern itself with Christ’s body, that is, with his materiality, and had temporarily solved the problem

with the hypothesis of the resurrected body. But because this was only a provisional and therefore not an entirely satisfactory answer, the problem logically presented itself again in the Assumption of the Blessed Virgin, leading first to the dogma of the Immaculate Conception and finally to that of the Assumption. Though this only postpones the real answer, the way to it is nevertheless prepared. The assumption and coronation of Mary, as depicted in the medieval illustrations, add a fourth, feminine principle to the masculine Trinity. The result is a quaternity, which forms a real and not merely postulated symbol of totality. The totality of the Trinity is a mere postulate, for outside it stands the autonomous and eternal adversary with his choirs of fallen angels and the denizens of hell. Natural symbols of totality such as occur in our dreams and visions, and in the East take the form of mandalas, are quaternities or multiples of four, or else squared circles.

[128] The accentuation of matter is above all evident in the choice of the *stone* as a God-image. We meet this symbol in the very earliest Greek alchemy, but there are good reasons for thinking that the stone symbol is very much older than its alchemical usage. The stone as the birthplace of the gods (e.g., the birth of Mithras from a stone) is attested by primitive legends of stone-births which go back to ideas that are even more ancient—for instance, the view of the Australian aborigines that children’s souls live in a special stone called the “child-stone.” They can be made to migrate into a uterus by rubbing the “child-stone” with a *churinga*. *Churingas* may be boulders, or oblong stones artificially shaped and decorated, or oblong, flattened pieces of wood ornamented in the same way. They are used as cult instruments. The Australians and the Melanesians maintain that *churingas* come from the totem ancestor, that they are relics of his body or of his activity, and are full of *arunquiltha* or mana. They are united with the ancestor’s soul and with the spirits of all those who afterwards possess them. They are taboo, are buried in caches or hidden in clefts in the rocks. In order to “charge” them, they are buried among the graves so that they can soak up the mana of the dead. They promote the growth of field-produce, increase the fertility of men and animals, heal wounds, and cure sicknesses of the body and the soul. Thus, when a man’s vitals are all knotted up with emotion, the Australian aborigines give him a blow in the abdomen with a stone *churinga*.⁸ The *churingas* used for ceremonial purposes are daubed with red ochre, anointed with fat, bedded or wrapped in leaves, and copiously spat on (spittle = mana).⁹

[129] These ideas of magic stones are found not only in Australia and Melanesia but also in India and Burma, and in Europe itself. For example, the madness of Orestes was cured by a stone in Laconia.¹⁰ Zeus found respite from the sorrows of love by sitting on a stone in Leukadia. In India, a young man will tread upon a stone in order to obtain firmness of character, and a bride will do the same to ensure her own faithfulness. According to Saxo Grammaticus, the electors of the king stood on

stones in order to give their vote permanence.¹¹ The green stone of Arran was used both for healing and for taking oaths on.¹² A cache of “soul stones,” similar to *churingas*, was found in a cave on the river Birs near Basel, and during recent excavations of the pole-dwellings on the little lake at Burgaeschi, in Canton Solothurn, a group of boulders was discovered wrapped in the bark of birch trees. This very ancient conception of the magical power of stones led on a higher level of culture to the similar importance attached to gems, to which all kinds of magical and medicinal properties were attributed. The gems that are the most famous in history are even supposed to have been responsible for the tragedies that befell their owners.

[130] A myth of the Navaho Indians of Arizona gives a particularly graphic account of the primitive fantasies that cluster round the stone.¹³ In the days of the great darkness,¹⁴ the ancestors of the hero saw the Sky Father descending and the Earth Mother rising up to meet him. They united, and on the top of the mountain where the union took place the ancestors found a little figure made of turquoise.¹⁵ This turned into (or in another version gave birth to) Estsánatlehi, “the woman who rejuvenates or transforms herself.” She was the mother of the twin gods who slew the primordial monsters, and was called the mother or grandmother of the gods (*yéi*). Estsánatlehi is the most important figure in the matriarchal pantheon of the Navaho. Not only is she the “woman who transforms herself,” but she also has two shapes, for her twin sister, Yolkaíestsan, is endowed with similar powers. Estsánatlehi is immortal, for though she grows into a withered old woman she rises up again as a young girl—a true *Dea Natura*. From different parts of her body four daughters were born to her, and a fifth from her spirit. The sun came from the turquoise beads hidden in her right breast, and from white shell beads in her left breast the moon. She issues reborn by rolling a piece of skin from under her left breast. She lives in the west, on an island in the sea. Her lover is the wild and cruel Sun Bearer, who has another wife; but he has to stay at home with her only when it rains. The turquoise goddess is so sacred that no image may be made of her, and even the gods may not look on her face. When her twin sons asked her who their father was, she gave them a wrong answer, evidently to protect them from the dangerous fate of the hero.

[131] This matriarchal goddess is obviously an anima figure who at the same time symbolizes the self. Hence her stone-nature, her immortality, her four daughters born from the body, plus one from the spirit, her duality as sun and moon, her role as paramour, and her ability to change her shape.¹⁶ The self of a man living in a matriarchal society is still immersed in his unconscious femininity, as can be observed even today in all cases of masculine mother-complexes. But the turquoise goddess also exemplifies the psychology of the matriarchal woman, who, as an anima figure, attracts the mother-complexes of all the men in her vicinity and robs them of their independence, just as Omphale held Herakles in thrall, or Circe reduced her

captives to a state of bestial unconsciousness—not to mention Benoît's Atlantida, who made a collection of her mummified lovers. All this happens because the anima contains the secret of the precious stone, for, as Nietzsche says, "all joy wants eternity." Thus the legendary Ostanes, speaking of the secret of the "philosophy," says to his pupil Cleopatra: "In you is hidden the whole terrible and marvellous secret. . . . Make known to us how the highest descends to the lowest, and how the lowest ascends to the highest, and how the midmost draws near to the highest, and is made one with it."¹⁷ This "midmost" is the stone, the mediator which unites the opposites. Such sayings have no meaning unless they are understood in a profoundly psychological sense.

[132] Widespread as is the motif of the stone-birth (cf. the creation myth of Deucalion and Pyrrha), the American cycle of legends seems to lay special emphasis on the motif of the stone-body, or animated stone.¹⁸ We meet this motif in the Iroquois tale of the twin brothers. Begotten in a miraculous manner in the body of a virgin, a pair of twins were born, one of whom came forth in the normal way, while the other sought an abnormal exit and emerged from the armpit, thereby killing his mother. This twin had a body made of flint. He was wicked and cruel, unlike his normally born brother.¹⁹ In the Sioux version the mother was a tortoise. Among the Wichita, the saviour was the great star in the south, and he performed his work of salvation on earth as the "flint man." His son was called the "young flint." After completing their work, both of them went back into the sky.²⁰ In this myth, just as in medieval alchemy, the saviour coincides with the stone, the star, the "son," who is "super omnia lumina." The culture hero of the Natchez Indians came down to earth from the sun, and shone with unendurable brightness. His glance was death-dealing. In order to mitigate this, and to prevent his body from corrupting in the earth, he changed himself into a stone statue, from which the priestly chieftains of the Natchez were descended.²¹ Among the Taos Pueblos, a virgin was made pregnant by beautiful stones and bore a hero son,²² who, owing to Spanish influence, assumed the aspect of the Christ child.²³ The stone plays a similar role in the Aztec cycle of legends. For instance, the mother of Quetzalcoatl was made pregnant by a precious green stone.²⁴ He himself had the cognomen "priest of the precious stone" and wore a mask made of turquoise.²⁵ The precious green stone was an animating principle and was placed in the mouth of the dead.²⁶ Man's original home was the "bowl of precious stone."²⁷ The motif of transformation into stone, or petrification, is common in the Peruvian and Colombian legends and is probably connected with a megalithic stone-cult,²⁸ and perhaps also with the palaeolithic cult of *churinga*-like soul-stones. The parallels here would be the menhirs of megalithic culture, which reached as far as the Pacific archipelago. The civilization of the Nile valley, which originated in megalithic times, turned its divine kings into stone statues for the express purpose of making the king's

ka everlasting. In shamanism, much importance is attached to crystals, which play the part of ministering spirits.²⁹ They come from the crystal throne of the supreme being or from the vault of the sky. They show what is going on in the world and what is happening to the souls of the sick, and they also give man the power to fly.³⁰

[133] The connection of the lapis with immortality is attested from very early times. Ostanos (possibly 4th cent. B.C.) speaks of “the Nile stone that has a spirit.”³¹ The lapis is the panacea, the universal medicine, the alexipharmic, the tincture that transmutes base metals into gold and gravel into precious stones. It brings riches, power, and health; it cures melancholy and, as the *vivus lapis philosophicus*, is a symbol of the saviour, the Anthropos, and immortality. Its incorruptibility is also shown in the ancient idea that the body of a saint becomes stone. Thus the Apocalypse of Elijah says of those who escape persecution by the Anti-Messiah:³² “The Lord shall take unto him their spirit and their souls, their flesh shall be made stone, no wild beast shall devour them till the last day of the great judgment.” In a Basuto legend reported by Frobenius,³³ the hero is left stranded by his pursuers on the bank of a river. He changes himself into a stone, and his pursuers throw him across to the other side. This is the motif of the *transitus*: the “other side” is the same as eternity.

5. THE WATER SYMBOLISM

[134] Psychological research has shown that the historical or ethnological symbols are identical with those spontaneously produced by the unconscious, and that the lapis represents the idea of a transcendent totality which coincides with what analytical psychology calls the self. From this point of view we can understand without difficulty the apparently absurd statement of the alchemists that the lapis consists of body, soul, and spirit, is a living being, a homunculus or “homo.” It symbolizes man, or rather, the inner man, and the paradoxical statements about it are really descriptions and definitions of this inner man. Upon this connotation of the lapis is based its parallelism with Christ. Behind the countless ecclesiastical and alchemical metaphors may be found the language of Hellenistic syncretism, which was originally common to both. Passages like the following one from Priscillian, a Gnostic-Manichaean heretic of the fourth century, must have been extremely suggestive for the alchemists: “One-horned is God, Christ a rock to us, Jesus a cornerstone, Christ the man of men”¹—unless the matter was the other way round, and metaphors taken from natural philosophy found their way into the language of the Church via the Gospel of St. John.

[135] The principle that is personified in the visions of Zosimos is the wonder-working water, which is both water and spirit, and kills and vivifies. If Zosimos, waking from his dream, immediately thinks of the “composition of the waters,” this is the obvious

conclusion from the alchemical point of view. Since the long-sought water, as we have shown,² represents a cycle of birth and death, every process that consists of death and rebirth is naturally a symbol of the divine water.

[136] It is conceivable that we have in Zosimos a parallel with the Nicodemus dialogue in John 3. At the time when John's gospel was written, the idea of the divine water was familiar to every alchemist. When Jesus said: "Except a man be born of water and of the spirit . . .," an alchemist of that time would at once have understood what he meant. Jesus marvelled at the ignorance of Nicodemus and asked him: "Art thou a master in Israel, and knowest not these things?" He obviously took it for granted that a teacher (*διδάσκαλος*) would know the secret of water and spirit, that is, of death and rebirth. Whereupon he went on to utter a saying which is echoed many times in the alchemical treatises: "We speak that we do know, and testify that we have seen." Not that the alchemists actually cited this passage, but they thought in a similar way. They talk as if they had touched the arcanum or gift of the Holy Spirit with their own hands, and seen the workings of the divine water with their own eyes.³ Even though these statements come from a later period, the spirit of alchemy remained more or less the same from the earliest times to the late Middle Ages.

[137] The concluding words of the Nicodemus dialogue, concerning "earthly and heavenly things," had likewise been the common property of alchemy ever since Democritus had written of the "physika and mystika," also called "somata and asomata," "corporalia and spiritualia."⁴ These words of Jesus are immediately followed by the motif of the ascent to heaven and descent to earth.⁵ In alchemy this would be the ascent of the soul from the mortified body and its descent in the form of reanimating dew.⁶ And when, in the next verse, Jesus speaks of the serpent lifted up in the wilderness and equates it with his own self-sacrifice, a "Master" would be bound to think of the uroboros, which slays itself and brings itself to life again. This is followed by the motif of "everlasting life" and the panacea (belief in Christ). Indeed, the whole purpose of the opus was to produce the incorruptible body, "the thing that dieth not," the invisible, spiritual stone, or *lapis aethereus*. In the verse, "For God so loved the world that he gave his only begotten Son . . .," Jesus identifies himself with the healing snake of Moses; for the Monogenes is synonymous with the Nous, and this with the serpent-saviour or Agathodaimon. The serpent is also a synonym for the divine water. The dialogue may be compared with Jesus' words to the woman of Samaria in John 4 : 14: "... a well of water springing up into everlasting life."⁷ Significantly enough, the conversation by the well forms the context for the teaching that "God is Spirit" (John 4 : 24).⁸

[138] In spite of the not always unintentional obscurity of alchemical language, it is not difficult to see that the divine water or its symbol, the uroboros, means nothing other than the *deus absconditus*, the god hidden in matter, the divine Nous that came down

to Physis and was lost in her embrace.⁹ This mystery of the “god become physical” underlies not only classical alchemy but also many other spiritual manifestations of Hellenistic syncretism.¹⁰

6. THE ORIGIN OF THE VISION

[139] Since alchemy is concerned with a mystery both physical and spiritual, it need come as no surprise that the “composition of the waters” was revealed to Zosimos in a dream. His sleep was the sleep of incubation, his dream “a dream sent by God.” The divine water was the alpha and omega of the process, desperately sought for by the alchemists as the goal of their desire. The dream therefore came as a dramatic explanation of the nature of this water. The dramatization sets forth in powerful imagery the violent and agonizing process of transformation which is itself both the producer and the product of the water, and indeed constitutes its very essence. The drama shows how the divine process of change manifests itself to our human understanding and how man experiences it—as punishment, torment,¹ death, and transfiguration. The dreamer describes how a man would act and what he would have to suffer if he were drawn into the cycle of the death and rebirth of the gods, and what effect the *deus absconditus* would have if a mortal man should succeed by his “art” in setting free the “guardian of spirits” from his dark dwelling. There are indications in the literature that this is not without its dangers.²

[140] The mystical side of alchemy, as distinct from its historical aspect, is essentially a psychological problem. To all appearances, it is a concretization, in projected and symbolic form, of the process of individuation. Even today this process produces symbols that have the closest connections with alchemy. On this point I must refer the reader to my earlier works, where I have discussed the question from a psychological angle and illustrated it with practical examples.

[141] The causes that set such a process in motion may be certain pathological states (for the most part schizophrenic) which produce very similar symbols. But the best and clearest material comes from persons of sound mind who, driven by some kind of spiritual distress, or for religious, philosophical, or psychological reasons, devote particular attention to their unconscious. In the period extending from the Middle Ages back to Roman times, a natural emphasis was laid on the inner man, and since psychological criticism became possible only with the rise of science, the inner factors were able to reach consciousness in the form of projections much more easily than they can today. The following text³ may serve to illustrate the medieval point of view:

For as Christ says in Luke 11: The light of the body is the eye, but if your eye is evil or becomes so, then your body is full of darkness and the light within you becomes

darkness. Moreover, in the seventeenth chapter he says also: Behold, the kingdom of God is within you—from which it is clearly seen that knowledge of the light in man must emerge in the first place from within and cannot be placed there from without, and many passages in the Bible bear witness to this, namely, that the external object (as it is usually called), or the sign written to help us in our weakness, is in Matthew 24 merely a testimony of the inner light of grace planted in and imparted to us by God. So, too, the spoken word is to be heeded and considered only as an indication, an aid and a guide to this. To take an example: a white and a black board are placed in front of you and you are asked which is black and which is white. If the knowledge of the two different colours were not previously within you, you would never be able to answer from these mere mute objects or boards the question put to you, since this knowledge does not come from the boards themselves (for they are mute and inanimate), but originates in and flows forth from your innate faculties which you exercise daily. The objects (as stated earlier) indeed stimulate the senses and cause them to apprehend, but in no way do they give knowledge. This must come from within, from the apprehender, and the knowledge of such colours must emerge in an act of apprehension. Similarly, when someone asks you for a material and external fire or light from a flint (in which the fire or light is hidden) you cannot put this hidden and secret light into the stone, but rather you must arouse, awaken, and draw forth the hidden fire from the stone and reveal it by means of the requisite steel striker which must be necessarily at hand. And this fire must be caught and vigorously fanned up in good tinder well prepared for this purpose, if it is not to be extinguished and disappear again. Then, afterwards, you will obtain a truly radiant light, shining like fire, and as long as it is tended and preserved, you will be able to create, work, and do with it as you please. And, likewise hidden in man, there exists such a heavenly and divine light which, as previously stated, cannot be placed in man from without, but must emerge from within.

For not in vain and without reason has God bestowed on and given to man in the highest part of his body two eyes and ears in order to indicate that man has to learn and heed within himself a twofold seeing and hearing, an inward and an outward, so that he may judge spiritual things with the inward part and allot spiritual things to the spiritual (I Corinthians 2), but also give to the outward its portion.

[142] For Zosimos and those of like mind the divine water was a *corpus mysticum*.⁴ A personalistic psychology will naturally ask: how did Zosimos come to be looking for a *corpus mysticum*? The answer would point to the historical conditions: it was a problem of the times. But in so far as the *corpus mysticum* was conceived by the alchemists to be a gift of the Holy Spirit, it can be understood in a quite general sense as a visible gift of grace conferring redemption. Man's longing for redemption is universal and can therefore have an ulterior, personalistic motive only in exceptional

cases, when it is not a genuine phenomenon but an abnormal misuse of it. Hysterical self-deceivers, and ordinary ones too, have at all times understood the art of misusing everything so as to avoid the demands and duties of life, and above all to shirk the duty of confronting themselves. They pretend to be seekers after God in order not to have to face the truth that they are ordinary egoists. In such cases it is well worth asking: Why are you seeking the divine water?

[143] We have no reason to suppose that all the alchemists were self-deceivers of this sort. The deeper we penetrate into the obscurities of their thinking, the more we must admit their right to style themselves “philosophers.” Throughout the ages, alchemy was one of the great human quests for the unattainable. So, at least, we would describe it if we gave rein to our rationalistic prejudices. But the religious experience of grace is an irrational phenomenon, and cannot be discussed any more than can the “beautiful” or the “good.” Since that is so, no serious quest is without hope. It is something instinctive, that cannot be reduced to a personal aetiology any more than can intelligence or musicality or any other in born propensity. I am therefore of the opinion that our analysis and interpretation have done justice to the vision of Zosimos if we have succeeded in understanding its essential components in the light of how men thought then, and in elucidating the meaning and purpose of its *mise en scène*. When Kékulé had his dream of the dancing pairs and deduced from it the structure of the benzol ring, he accomplished something that Zosimos strove for in vain. His “composition of the waters” did not fall into as neat a pattern as did the carbon and hydrogen atoms of the benzol ring. Alchemy projected an inner, psychic experience into chemical substances that seemed to hold out mysterious possibilities but nevertheless proved refractory to the intentions of the alchemist.

[144] Although chemistry has nothing to learn from the vision of Zosimos, it is a mine of discovery for modern psychology, which would come to a sorry pass if it could not turn to these testimonies of psychic experience from ancient times. Its statements would then be without support, like novelties that cannot be compared with anything, and whose value it is almost impossible to assess. But such documents give the investigator an Archimedean point outside his own narrow field of work, and therewith an invaluable opportunity to find his bearings in the seeming chaos of individual events.

PARACELSUS AS A SPIRITUAL PHENOMENON

[Originally a lecture, “Paracelsus als geistige Erscheinung,” which, revised and expanded, was published in *Paracelsica: Zwei Vorlesungen über den Arzt und Philosophen Theophrastus* (Zurich, 1942).

[In the present translation, chapter and section headings have been added to elucidate the structure of the monograph. Two brief statements found among Jung’s posthumous papers have, because of their relevance to the subject-matter, been added as footnotes on pp. 136 and 144.—EDITORS.]

FOREWORD TO "PARACELSICA"

This little book comprises two lectures delivered this year on the occasion of the four-hundredth anniversary of the death of Paracelsus.¹ The first, "Paracelsus the Physician,"² was delivered to the Swiss Society for the History of Medicine and the Natural Sciences at the annual meeting of the Society for Nature Research, Basel, September 7, 1941; the second, "Paracelsus as a Spiritual Phenomenon," was given at the Paracelsus celebrations in Einsiedeln, October 5, 1941. The first lecture goes into print unaltered except for a few minor changes. But the special nature of the theme has obliged me to take the second lecture out of its original framework and to expand it into a proper treatise. The stylistic form and scope of a lecture are not suited to portray the unknown and enigmatic Paracelsus who stands beside or behind the figure we meet in his prolific medical, scientific, and theological writings. Only when they are taken together do they give a picture of this contradictory and yet so significant personality.

I am aware that the title of this lecture is somewhat presumptuous. The reader should take it simply as a contribution to our knowledge of the arcane philosophy of Paracelsus. I do not claim to have said anything final or conclusive on this difficult subject, and am only too painfully aware of gaps and inadequacies. My purpose was confined to providing clues that might point the way to the roots and psychic background of his philosophy, if such it can be called. Besides all the other things he was, Paracelsus was, perhaps most deeply of all, an alchemical "philosopher" whose religious views involved him in an unconscious conflict with the Christian beliefs of his age in a way that seems to us inextricably confused. Nevertheless, in this confusion are to be found the beginnings of philosophical, psychological, and religious problems which are taking clearer shape in our own epoch. Because of this, I have felt it almost an historical duty to contribute what I may in appreciation of prescient ideas which he left behind for us in his treatise *De vita longa*.

C. G. J.

October 1941

1. THE TWO SOURCES OF KNOWLEDGE: THE LIGHT OF NATURE AND THE LIGHT OF REVELATION

[145] The man whose death four hundred years ago we commemorate today exerted a powerful influence on all subsequent generations, as much by sheer force of his personality as by his prodigious literary activity. His influence made itself felt chiefly in the field of medicine and natural science. In philosophy, not only was mystical speculation stimulated in a fruitful way, but philosophical alchemy, then on the point of extinction, received a new lease of life and enjoyed a renaissance. It is no secret that Goethe, as is evident from the second part of *Faust*, still felt the impact of the powerful spirit of Paracelsus.

[146] It is not easy to see this spiritual phenomenon in the round and to give a really comprehensive account of it. Paracelsus was too contradictory or too chaotically many-sided, for all his obvious one-sidedness in other ways. First and foremost, he was a physician with all the strength of his spirit and soul, and his foundation was a firm religious belief. Thus he says in his *Paragranum*:¹ “You must be of an honest, sincere, strong, true faith in God, with all your soul, heart, mind, and thought, in all love and trust. On the foundation of such faith and love, God will not withdraw his truth from you, and will make his works manifest to you, believable, visible, and comforting. But if, not having such faith, you are against God, then you will go astray in your work and will have failures, and in consequence people will have no faith in you.” The art of healing and its demands were the supreme criterion for Paracelsus. Everything in his life was devoted to this goal of helping and healing. Around this cardinal principle were grouped all his experiences, all his knowledge, all his efforts. This happens only when a man is actuated by some powerful emotional driving force, by a great passion which, undeterred by reflection and criticism, overshadows his whole life. The driving force behind Paracelsus was his compassion. “Compassion,” he exclaims, “is the physician’s schoolmaster.”² It must be inborn in him. Compassion, which has driven many another great man and inspired his work, was also the supreme arbiter of Paracelsus’s fate.

[147] The instrument which he put at the service of his great compassion was his science and his art, which he took over from his father. But the dynamism at the back of his work, the compassion itself, must have come to him from the prime source of everything emotional, that is, from his mother, of whom he never spoke. She died young, and she probably left behind a great deal of unsatisfied longing in her son—so

much that, so far as we know, no other woman was able to compete with that far-distant mother-imago, which for that reason was all the more formidable. The more remote and unreal the personal mother is, the more deeply will the son's yearning for her clutch at his soul, awakening that primordial and eternal image of the mother for whose sake everything that embraces, protects, nourishes, and helps assumes maternal form, from the Alma Mater of the university to the personification of cities, countries, sciences, and ideals. When Paracelsus says that the mother of the child is the planet and star, this is in the highest degree true of himself. To the mother in her highest form, Mater Ecclesia, he remained faithful all his life, despite the very free criticism he levelled at the ills of Christendom in that epoch. Nor did he succumb to the great temptation of that age, the Protestant schism, though he may well have had it in him to go over to the other camp. Conflict was deeply rooted in Paracelsus's nature; indeed, it had to be so, for without a tension of opposites there is no energy, and whenever a volcano, such as he was, erupts, we shall not go wrong in supposing that water and fire have clashed together.

[148] But although the Church remained a mother for Paracelsus all his life, he nevertheless had two mothers: the other was Mater Natura. And if the former was an absolute authority, so too was the latter. Even though he endeavoured to conceal the conflict between the two maternal spheres of influence, he was honest enough to admit its existence; indeed, he seems to have had a very good idea of what such a dilemma meant. Thus he says: "I also confess that I write like a pagan and yet am a Christian."³ Accordingly he named the first five sections of his *Paramirum de quinque entibus morborum* "Pagoya." "Pagoyum" is one of his favourite neologisms, compounded of "paganum" and the Hebrew word "goyim." He held that knowledge of the nature of diseases was pagan, since this knowledge came from the "light of nature" and not from revelation.⁴ "Magic," he says, is "the preceptor and teacher of the physician,"⁵ who derives his knowledge from the *lumen naturae*. There can be no doubt the "light of nature" was a second, independent source of knowledge for Paracelsus. His closest pupil, Adam von Bodenstein, puts it like this: "The Spagyric has the things of nature not by authority, but by his own experience."⁶ The concept of the *lumen naturae* may derive from the *Occulta philosophia* of Agrippa von Nettesheim (1533), who speaks of a *luminositas sensus naturae* that extends even to the four-footed beasts and enables them to foretell the future.⁷ Paracelsus says accordingly:

It is, therefore, also to be known that the auguries of the birds are caused by these innate spirits, as when cocks foretell future weather and peacocks the death of their master and other such things with their crowing. All this comes from the innate spirit and is the Light of Nature. Just as it is present in animals and is natural, so also it dwells within man and he brought it into the world with himself. He who is chaste is

a good prophet, natural as the birds, and the prophecies of birds are not contrary to nature but are of nature. Each, then, according to his own state. These things which the birds announce can also be foretold in sleep, for it is the astral spirit which is the invisible body of nature.⁸ And it should be known that when a man prophesies, he does not speak from the Devil, not from Satan, and not from the Holy Spirit, but he speaks from the innate spirit of the invisible body which teaches *Magiam* and in which the *Magus* has his origin.⁹

The light of nature comes from the *Astrum*: “Nothing can be in man unless it has been given to him by the Light of Nature, and what is in the Light of Nature has been brought by the stars.”¹⁰ The pagans still possessed the light of nature, “for to act in the Light of Nature and to rejoice in it is divine despite being mortal.” Before Christ came into the world, the world was still endowed with the light of nature, but in comparison with Christ this was a “lesser light.” “Therefore we should know that we have to interpret nature according to the spirit of nature, the Word of God according to the spirit of God, and the Devil according to his spirit also.” “He who knows nothing of these things is a gorged pig and will not leave room for instruction and experience.” The light of nature is the *quinta essentia*, extracted by God himself from the four elements, and dwelling “in our hearts.”¹¹ It is enkindled by the Holy Spirit.¹² The light of nature is an intuitive apprehension of the facts, a kind of illumination.¹³ It has two sources: a mortal and an immortal, which Paracelsus calls “angels.”¹⁴ “Man,” he says, “is also an angel and has all the latter’s qualities.” He has a natural light, but also a light outside the light of nature by which he can search out supernatural things.¹⁵ The relationship of this supernatural light to the light of revelation remains, however, obscure. Paracelsus seems to have held a peculiar trichotomous view in this respect.

[149] The authenticity of one’s own experience of nature against the authority of tradition is a basic theme of Paracelsan thinking. On this principle he based his attack on the medical schools, and his pupils¹⁶ carried the revolution even further by attacking Aristotelian philosophy. It was an attitude that opened the way for the scientific investigation of nature and helped to emancipate natural science from the authority of tradition. Though this liberating act had the most fruitful consequences, it also led to that conflict between knowledge and faith which poisoned the spiritual atmosphere of the nineteenth century in particular. Paracelsus naturally had no inkling of the possibility of these late repercussions. As a medieval Christian, he still lived in a unitary world and did not feel the two sources of knowledge, the divine and the natural, as the conflict it later turned out to be. As he says in his “*Philosophia sagax*”: “There are, therefore, two kinds of knowledge in this world: an eternal and a temporal. The eternal springs directly from the light of the Holy Spirit, but the other directly from the Light of Nature.” In his view the latter kind is ambivalent: both

good and bad. This knowledge, he says, “is not from flesh and blood, but from the stars in the flesh and blood. That is the treasure, the natural *Summum Bonum*.” Man is twofold, “one part temporal, the other part eternal, and each part takes its light from God, both the temporal and the eternal, and there is nothing that does not have its origin in God. Why, then, should the Father’s light be considered pagan, and I be recognized and condemned as a pagan?” God the Father created man “from below upwards,” but God the Son “from above downwards.” Therefore Paracelsus asks: “If Father and Son are one, how then can I honour two lights? I would be condemned as an idolater: but the number one preserves me. And if I love two and accord to each its light, as God has ordained for everyone, how then can I be a pagan?”

[150] It is clear enough from this what his attitude was to the problem of the two sources of knowledge: both lights derive from the unity of God. And yet—why did he give the name “Pagoyum” to what he wrote in the light of nature? Was he playing with words, or was it an involuntary avowal, a dim presentiment of a duality in the world and the soul? Was Paracelsus really unaffected by the schismatic spirit of the age, and was his attack on authority really confined only to Galen, Avicenna, Rhazes, and Arnaldus de Villanova?

A. MAGIC

[151] Paracelsus’s scepticism and rebelliousness stop short at the Church, but he also reined them in before alchemy, astrology, and magic, which he believed in as fervently as he did in divine revelation, since in his view they proceeded from the authority of the *lumen naturae*. And when he speaks of the divine office of the physician, he exclaims: “I under the Lord, the Lord under me, I under him outside my office, and he under me outside his office.”¹⁷ What kind of spirit addresses us in these words? Do they not recall those of the later Angelus Silesius?

I am as great as God,
And he is small like me;
He cannot be above,
Nor I below him be.

[152] There is no denying that the human ego’s affinity with God here raises a distinct claim to be heard and also to be recognized as such. That is the spirit of the Renaissance—to give man in his mightiness, intellectual power, and beauty a visible place beside God. *Deus et Homo* in a new and unprecedented sense! Agrippa von Nettesheim, Paracelsus’s older contemporary and an authority on the Cabala, declares in his sceptical and contumacious book *De incertitudine et vanitate scientiarum*:¹⁸

Agrippa spares no man.

He contemns, knows, knows not, weeps, laughs, waxes wroth,
reviles, carps at all things;
being himself philosopher, demon, hero, God,
and all things.

Paracelsus to be sure did not rise to such unfortunate heights of modernity. He felt at one with God and with himself. Wholly and unremittingly engaged in the practical art of healing, his busy mind wasted no time on abstract problems, and his irrational, intuitive nature never pursued logical reflections so far that they resulted in destructive insights.

[153] Paracelsus had one father, whom he held in love and respect, but, as we have said, like every true hero he had two mothers, a heavenly one and an earthly one—Mother Church and Mother Nature. Can one serve two mothers? And even if, like Paracelsus, one feels oneself a physician created by God, is there not something suspicious about pressing God into one's service inside the physician's office, so to speak? One can easily object that Paracelsus said this, like so much else, only in passing and that it is not to be taken all that seriously. He himself would probably have been astonished and indignant if he had been taken at his word. The words that flowed into his pen came less from deep reflection than from the spirit of the age in which he lived. No one can claim to be immune to the spirit of his own epoch or to possess anything like a complete knowledge of it. Regardless of our conscious convictions, we are all without exception, in so far as we are particles in the mass, gnawed at and undermined by the spirit that runs through the masses. Our freedom extends only as far as our consciousness reaches. Beyond that, we succumb to the unconscious influences of our environment. Though we may not be clear in a logical sense about the deepest meanings of our words and actions, these meanings nevertheless exist and they have a psychological effect. Whether we know it or not, there remains in each of us the tremendous tension between the man who *serves* God and the man who *commands* God to do his bidding.

[154] But the greater the tension, the greater the potential. Great energy springs from a correspondingly great tension of opposites. It was to the constellation of the most powerful opposites within him that Paracelsus owed his almost daemonic energy, which was not an unalloyed gift of God but went hand in hand with his impetuous and quarrelsome temperament, his hastiness, impatience, discontentedness, and his arrogance. Not for nothing was Paracelsus the prototype of Faust, whom Jacob Burckhardt once called "a great primordial image" in the soul of every German. From Faust the line leads direct to Nietzsche, who was a Faustian man if ever there was one. What still maintained the balance in the case of Paracelsus and Angelus Silesius—"I under God and God under me"—was lost in the twentieth century, and

the scale sinks lower and lower under the weight of an ego that fancies itself more and more godlike. Paracelsus shared with Angelus Silesius his inner piety and the touching but dangerous simplicity of his relationship to God. But alongside this spirituality a countervailing chthonic spirit made itself felt to an almost frightening degree: there was no form of manticism and magic that Paracelsus did not practise himself or recommend to others. Dabbling in these arts—no matter how enlightened one thinks one is—is not without its psychological dangers. Magic always was and still is a source of fascination. At the time of Paracelsus, certainly, the world teemed with marvels: everyone was conscious of the immediate presence of the dark forces of nature. Astronomy and astrology were not yet separated. Kepler still cast horoscopes. Instead of chemistry there was only alchemy. Amulets, talismans, spells for healing wounds and diseases were taken as a matter of course. A man so avid for knowledge as Paracelsus could not avoid a thorough investigation of all these things, only to discover that strange and remarkable effects resulted from their use. But so far as I know he never uttered a clear warning about the psychic dangers of magic for the adept.¹⁹ He even scoffed at the doctors because they understood nothing of magic. But he does not mention that they kept away from it out of a quite justifiable fear. And yet we know from the testimony of Conrad Gessner, of Zurich, that the very doctors whom Paracelsus attacked shunned magic on religious grounds and accused him and his pupils of sorcery. Writing to Crato von Crafftheim²⁰ about Paracelsus's pupil Adam von Bodenstein, Gessner says: "I know that most people of this kind are Arians and deny the divinity of Christ . . . Oporin in Basel, once a pupil of Theophrastus and his private assistant [*familiaris*], reported strange tales concerning the latter's intercourse with demons. They are given to senseless astrology, geomancy, necromancy, and other forbidden arts. I myself suspect that they are the last of the Druids, those of the ancient Celts who were instructed for several years in underground places by demons. It is also certain that such things are done to this very day at Salamanca in Spain. From this school also arose the wandering scholars, as they are commonly called. The most famous of these was Faust, who died not so long ago." Elsewhere in the same letter Gessner writes: "Theophrastus has assuredly been an impious man and a sorcerer [*magus*], and has had intercourse with demons."²¹

[155] Although this judgment is based in part on the unreliable testimony of Oporin and is essentially unfair or actually false, it nevertheless shows how unseemly, in the opinion of contemporary doctors of repute, was Paracelsus's preoccupation with magic. He himself, as we have said, had no such scruples. He drew magic, like everything else worth knowing, into his orbit and tried to exploit it medically for the benefit of the sick, unperturbed by what it might do to him personally or what the implications might be from the religious point of view. For him magic and the wisdom of nature had their place within the divinely ordained order as a *mysterium et*

magnale Dei, and so it was not difficult for him to bridge the gulf into which half the world had plunged.²² Instead of experiencing any conflict in himself, he found his arch-enemy outside in the great medical authorities of the past, as well as in the host of academic physicians against whom he let fly like the proper Swiss mercenary he was. He was infuriated beyond measure by the resistance of his opponents and he made enemies everywhere. His writings are as turbulent as his life and his wanderings. His style is violently rhetorical. He always seems to be speaking importunately into someone's ear—someone who listens unwillingly, or against whose thick skin even the best arguments rebound. His exposition of a subject is seldom systematic or even coherent; it is constantly interrupted by admonitions, addressed in a subtle or coarse vein to an invisible auditor afflicted with moral deafness. Paracelsus was a little too sure that he had his enemy in front of him, and did not notice that it was lodged in his own bosom. He consisted of two persons who never really confronted one another. He nowhere betrays the least suspicion that he might not be at one with himself. He felt himself to be undividedly one, and all the things that constantly thwarted him had of course to be his external enemies. He had to conquer them and prove to them that he was the “Monarcha,” the sovereign ruler, which secretly and unknown to himself was the very thing he was not. He was so unconscious of the conflict within him that he never noticed there was a second ruler in his own house who worked against him and opposed everything he wanted. But every unconscious conflict works out like that: one obstructs and undermines oneself. Paracelsus did not see that the truth of the Church and the Christian standpoint could never get along with the thought implicit in all alchemy, “God under me.” And when one unconsciously works against oneself, the result is impatience, irritability, and an impotent longing to get one's opponent down whatever the means. Generally certain symptoms appear, among them a peculiar use of language: one wants to speak forcefully in order to impress one's opponent, so one employs a special, “bombastic” style full of neologisms which might be described as “power-words.”²³ This symptom is observable not only in the psychiatric clinic but also among certain modern philosophers, and, above all, whenever anything unworthy of belief has to be insisted on in the teeth of inner resistance: the language swells up, overreaches itself, sprouts grotesque words distinguished only by their needless complexity. The word is charged with the task of achieving what cannot be done by honest means. It is the old word magic, and sometimes it can degenerate into a regular disease. Paracelsus was afflicted with this malady to such a degree that even his closest pupils were obliged to compile “onomastica” (word-lists) and to publish commentaries. The unwary reader continually stumbles over these neologisms and is completely baffled at first, for Paracelsus never bothered to give any explanations even when, as often happens, the word was a *hapax legomenon* (one that occurs only once). Often it is only by comparing a number of passages that one can approximately make out the sense.

There are, however, mitigating circumstances: doctors have always loved using magically incomprehensible jargon for even the most ordinary things. It is part of the medical persona. But it is odd indeed that Paracelsus, who prided himself on teaching and writing in German, should have been the very one to concoct the most intricate neologisms out of Latin, Greek, Italian, Hebrew, and possibly even Arabic.

[156] Magic is insidious, and therein lies its danger. At one point, where Paracelsus is discussing witchcraft, he actually falls into using a magical witch-language without giving the least explanation. For instance, instead of “Zwirnfaden” (twine) he says “Swindafnerz,” instead of “Nadel” (needle) “Dallen,” instead of “Leiche” (corpse) “Chely,” instead of “Faden” (thread) “Daphne,” and so on.²⁴ In magical rites the inversion of letters serves the diabolical purpose of turning the divine order into an infernal disorder. It is remarkable how casually and unthinkingly Paracelsus takes over these magically distorted words and simply leaves the reader to make what he can of them. This shows that Paracelsus must have been thoroughly steeped in the lowest folk beliefs and popular superstitions, and one looks in vain for any trace of disgust at such squalid things, though in his case its absence was certainly not due to lack of feeling but rather to a kind of natural innocence and naïveté. Thus he himself recommends the magical use of wax manikins in cases of sickness,²⁵ and seems to have designed and used amulets and seals.²⁸ He was convinced that physicians should have an understanding of the magic arts and should not eschew sorcery if this might help their patients. But this kind of folk magic is not Christian, it is demonstrably pagan—in a word, a “Pagoyum.”

B. ALCHEMY

[157] Besides his manifold contacts with folk superstition there was another, more respectable source of “pagan” lore that had a great influence on Paracelsus. This was his knowledge of and intense preoccupation with alchemy, which he used not only in his pharmacology and pharmaceuticals but also for “philosophical” purposes. Since earliest times alchemy contained, or actually was, a secret doctrine. With the triumph of Christianity under Constantine the old pagan ideas did not vanish but lived on in the strange arcane terminology of philosophical alchemy. Its chief figure was Hermes or Mercurius, in his dual significance as quicksilver and the world soul, with his companion figures Sol (= gold) and Luna (= silver). The alchemical operation consisted essentially in separating the prima materia, the so-called chaos, into the active principle, the soul, and the passive principle, the body, which were then reunited in personified form in the *coniunctio* or “chymical marriage.” In other words, the *coniunctio* was allegorized as the hierosgamos, the ritual cohabitation of Sol and Luna. From this union sprang the *filius sapientiae* or *filius philosophorum*,

the transformed Mercurius, who was thought of as hermaphroditic in token of his rounded perfection. [Cf. [fig. B2.](#)]

[158] The *opus alchymicum*, in spite of its chemical aspects, was always understood as a kind of rite after the manner of an *opus divinum*. For this reason Melchior Cibirensis, at the beginning of the sixteenth century, could still represent it in the form of a Mass,²⁷ since long before this the *filius* or *lapis philosophorum* had been regarded as an allegory of Christ.²⁸ Many things in Paracelsus that would otherwise remain incomprehensible must be understood in terms of this tradition. In it are to be found the origins of practically the whole of his philosophy in so far as it is not Cabalistic. It is evident from his writings that he had a considerable knowledge of Hermetic literature.²⁹ Like all medieval alchemists he seems not to have been aware of the true nature of alchemy, although the refusal of the Basel printer Conrad Waldkirch, at the end of the sixteenth century, to print the first part of *Aurora consurgens* (a treatise falsely ascribed to St. Thomas Aquinas) on account of its “blasphemous character”³⁰ shows that the dubious nature of alchemy was apparent even to a layman. To me it seems certain that Paracelsus was completely naïve in these matters and, intent only on the welfare of the sick, used alchemy primarily for its practical value regardless of its murky background. Consciously, alchemy for him meant a knowledge of the *materia medica* and a chemical procedure for preparing medicaments, above all the well-loved arcana, the secret remedies. He also believed that one could make gold and engender homunculi.³¹ This aspect of it was so predominant that one is inclined to forget that alchemy meant very much more to him than that. We know this from a brief remark in the *Paragranum*, where he says that the physician himself is “ripened” by the art.³² This sounds as though the alchemical maturation should go hand in hand with the maturation of the physician. If we are not mistaken in this assumption, we must further conclude that Paracelsus not only was acquainted with the arcane teachings of alchemy but was convinced of their rightness. It is of course impossible to prove this without detailed investigation, for the esteem which he expressed for alchemy throughout his writings might in the end refer only to its chemical aspect. This special predilection of his made him a forerunner and inaugurator of modern chemical medicine. Even his belief in the transmutation of metals and in the *lapis philosophorum*, which he shared with many others, is no evidence of a deeper affinity with the mystic background of the *ars aurifera*. And yet such an affinity is very probable since his closest followers were found among the alchemical physicians.³³

C. THE ARCANES TEACHING

[159] In the course of our inquiry we shall have to scrutinize more closely the arcane teaching of alchemy, which is so important for an understanding of the spiritual side

of Paracelsus. I must ask the reader to forgive me in advance for putting his attention and patience to such a severe test. The subject is abstruse and wrapped in obscurity, but it constitutes an essential part of the Paracelsan spirit and exerted a profound influence on Goethe, so much so that the impressions he gained in his Leipzig days continued to engross him even in old age: indeed, they formed the matrix for *Faust*.

[160] When one reads Paracelsus, it is chiefly the technical neologisms that seem to give out mysterious hints. But when one tries to establish their etymology and their meaning, as often as not one ends up in a blind alley. For instance, one can guess that “Iliaster” or “Yliastrum” is composed etymologically of ὕλη (matter) and ἄστρον (star), and that it means about the same as the *spiritus vitae* of classical alchemy, or that “Cagastrium” is connected with κακὸς (bad) and ἄστήρ, or that “Anthos” and “Anthera” are embellishments of the alchemical *flores*. Even his philosophical concepts, such as the doctrine of the *astrum*, only lead us back to the known alchemical and astrological tradition, from which we can see that his doctrine of the *corpus astrale* was not a new discovery. We find this idea already in an old classic, the “Tractatus Aristotelis,” where it is said that the “planets in man” have a more powerful influence than the heavenly bodies,³⁴ and when Paracelsus says that the medicine is found in the *astrum*, we read in the same treatise that “in man, who is made in the image of God, can be found the cause and the medicine.”

[161] But that other pivot of Paracelsus’s teaching, his belief in the light of nature, allows us to surmise connections which illuminate the obscurities of his *religio medica*. The light hidden in nature and particularly in human nature likewise belongs to the stock of ancient alchemical ideas. Thus the “Tractatus Aristotelis” says: “See therefore that the light which is in thee be not darkness.” The light of nature is indeed of great importance in alchemy. Just as, according to Paracelsus, it enlightens man as to the workings of nature and gives him an understanding of natural things “by cagastic magic” (*per magiam cagasticam*),³⁵ so it is the aim of alchemy to beget this light in the shape of the *filius philosophorum*. An equally ancient treatise of Arabic provenance attributed to Hermes,³⁶ the “Tractatus aureus,” says (Mercurius is speaking): “My light excels all other lights, and my goods are higher than all other goods. I beget the light, but the darkness too is of my nature. Nothing better or more worthy of veneration can come to pass in the world than the union of myself with my son.”³⁷ In the “Dicta Belini” (Belinus is a pseudo-Apollonius of Tyana) Mercurius says: “I enlighten all that is mine, and I make the light manifest on the journey from my father Saturn.”³⁸ “I make the days of the world eternal, and I illumine all lights with my light.”³⁹ Another author says of the “chymical marriage” from which arises the *filius philosophorum*: “They embrace and the new light is begotten of them, which is like no other light in the whole world.”⁴⁰

[162] This idea of the light, with Paracelsus as with other alchemists, coincides with the concept of Sapiientia and Scientia. We can safely call the light the central mystery of philosophical alchemy. Almost always it is personified as the *filius*, or is at least mentioned as one of his outstanding attributes. It is a δαιμόνιον pure and simple. Often the texts refer to the need for a familiar spirit who should help the adept at his work. The Magic Papyri do not hesitate to enlist the services even of the major gods.⁴¹ The *filius* remains in the adept's power. Thus the treatise of Haly, king of Arabia, says: "And that son . . . shall serve thee in thy house in this world and in the next."⁴² Long before Paracelsus, as I have said, this *filius* was equated with Christ. The parallel comes out very clearly in the sixteenth-century German alchemists who were influenced by Paracelsus. For instance, Heinrich Khunrath says: "This [the *filius philosophorum*], the Son of the Macrocosm, is God and creature . . . that [Christ], is the son of God, the θεάνθρωπος, that is, God and man; the one conceived in the womb of the Macrocosm, the other in the womb of the Microcosm, and both of a virginal womb. . . . Without blasphemy I say: In the Book or Mirror of Nature, the Stone of the Philosophers, the Preserver of the Macrocosm, is the symbol of Christ Jesus Crucified, Saviour of the whole race of men, that is, of the Microcosm. From the stone you shall know in natural wise Christ, and from Christ the stone."⁴³

[163] To me it seems certain that Paracelsus was just as unconscious of the full implications of these teachings as Khunrath was, who also believed he was speaking "without blasphemy." But in spite of this unconsciousness they were of the essence of philosophical alchemy,⁴⁴ and anyone who practised it thought, lived, and acted in the atmosphere of these teachings, which perhaps had an all the more insidious effect the more naïvely and uncritically one succumbed to them. The "natural light of man" or the "star in man" sounds harmless enough, so that none of the authors had any notion of the possibilities of conflict that lurked within it. And yet that light or *filius philosophorum* was openly named the greatest and most victorious of all lights, and set alongside Christ as the Saviour and Preserver of the world! Whereas in Christ God himself became man, the *filius philosophorum* was extracted from matter by human art and, by means of the opus, made into a new light-bringer. In the former case the miracle of man's salvation is accomplished by God; in the latter, the salvation or transfiguration of the universe is brought about by the mind of man—"Deo concedente," as the authors never fail to add. In the one case man confesses "I under God," in the other he asserts "God under me." Man takes the place of the Creator. Medieval alchemy prepared the way for the greatest intervention in the divine world order that man has ever attempted: alchemy was the dawn of the scientific age, when the daemon of the scientific spirit compelled the forces of nature to serve man to an extent that had never been known before. It was from the spirit of alchemy that Goethe wrought the figure of the "superman" Faust, and this superman

led Nietzsche's Zarathustra to declare that God was dead and to proclaim the will to give birth to the superman, to "create a god for yourself out of your seven devils."⁴⁵ Here we find the true roots, the preparatory processes deep in the psyche, which unleashed the forces at work in the world today. Science and technology have indeed conquered the world, but whether the psyche has gained anything is another matter.

[164] Paracelsus's preoccupation with alchemy exposed him to an influence that left its mark on his spiritual development. The inner driving-force behind the aspirations of alchemy was a presumption whose daemonic grandeur on the one hand and psychic danger⁴⁶ on the other should not be underestimated. Much of the overbearing pride and arrogant self-esteem, which contrasts so strangely with the truly Christian humility of Paracelsus, comes from this source. What erupted like a volcano in Agrippa von Nettesheim's "himself demon, hero, God" remained, with Paracelsus, hidden under the threshold of a Christian consciousness and expressed itself only indirectly in exaggerated claims and in his irritable self-assertiveness, which made him enemies wherever he went. We know from experience that such a symptom is due to unadmitted feelings of inferiority, i.e., to a real failing of which one is usually unconscious. In each of us there is a pitiless judge who makes us feel guilty even if we are not conscious of having done anything wrong. Although we do not know what it is, it is as though it were known somewhere. Paracelsus's desire to help the sick at all costs was doubtless quite pure and genuine. But the magical means he used, and in particular the secret content of alchemy, were diametrically opposed to the spirit of Christianity. And that remained so whether Paracelsus was aware of it or not. Subjectively, he was without blame; but that pitiless judge condemned him to feelings of inferiority that clouded his life.

D. THE PRIMORDIAL MAN

[165] This crucial point, namely the arcane doctrine of the marvellous son of the philosophers, is the subject of unfriendly but perspicacious criticism by Conrad Gessner. Apropos the works of a pupil of Paracelsus, Alexander à Suchten,⁴⁷ he writes to Crato: "But look who it is whom he reveals to us as the son of God, namely none other than the spirit of the world and of nature, and the same who dwells in our bodies (it is a wonder that he does not add the spirit of the ox and the ass!). This spirit can be separated from matter or from the body of the elements by the technical procedures of the Theophrastus school. If anyone were to take him at his word, he would say that he had merely voiced a principle of the philosophers, but not his own opinion. He repeats it, however, in order to express his agreement. And I know that other Theophrastians besmirch such things with their writings, from which it is easy to conclude that they deny the divinity of Christ. I myself am entirely convinced that

Theophrastus has been an Arian. They endeavour to persuade us that Christ was a quite ordinary man, and that in him was no other spirit than in us.”⁴⁸

[166] Gessner’s charge against the Theophrastus school and against the Master himself applies to alchemy in general. The extraction of the world soul from matter was not a peculiarity of Paracelsan alchemy. But the charge of Arianism is unjustified. It was obviously prompted by the well-known parallel between the *filius philosophorum* and Christ, though so far as I know this nowhere occurs in Paracelsus’s own writings. On the other hand, in a treatise called “Apokalypsis Hermetis,” ascribed by Huser to Paracelsus, there is a complete alchemical confession of faith which lends Gessner’s charge a certain weight. There Paracelsus says of the “spirit of the fifth essence”: “This is the spirit of truth, whom the world cannot comprehend without the inspiration of the Holy Ghost, or without the instruction of those who know him.”⁴⁹ “He is the soul of the world,” moving all and preserving all. In his initial earthly form (that is, in his original Saturnine darkness) he is unclean, but he purifies himself progressively during the ascent through his watery, aerial, and fiery forms. Finally, in the fifth essence, he appears as the “clarified body.”⁵⁰ “This spirit is the secret that has been hidden since the beginning of things.”

[167] Paracelsus is speaking here as a true alchemist. Like his pupils, he draws the Cabala, which had been made accessible to the world at large through Pico della Mirandola and Agrippa, into the scope of his alchemical speculations. “All you who are led by your religion to prophesy future events and to interpret the past and the present to people, you who see abroad and read hidden letters and sealed books, who seek in the earth and in walls for what is buried, you who learn great wisdom and art—bear in mind if you wish to apply all these things, that you take to yourselves the religion of the Gabal and walk in its light, for the Gabal is well-founded. Ask and it will be granted to you, knock, you will be heard and it will be opened unto you. From this granting and opening there will flow what you desire: you will see into the lowest depths of the earth, into the depths of hell, into the third heaven. You will gain more wisdom than Solomon, you will have greater communion with God than Moses and Aaron.”⁵¹

[168] Just as the wisdom of the Cabala coincided with the Sapientia of alchemy, so the figure of Adam Kadmon was identified with the *filius philosophorum*. Originally this figure may have been the ἄνθρωπος φωτεινός, the “man of light” who was imprisoned in Adam, and whom we encounter in Zosimos of Panopolis (third century).⁶² But the man of light is an echo of the pre-Christian doctrine of the Primordial Man. Under the influence of Marsilio Ficino and Pico della Mirandola, these and other Neoplatonic ideas had already become popularized in the fifteenth century and were known to nearly every educated person. In alchemy they fell in with the remnants of classical tradition. Besides this there were the views of the

Cabala, which had been philosophically assessed by Pico.⁵³ He and Agrippa⁵⁴ were probably the sources for Paracelsus's somewhat scanty knowledge of the Cabala. For Paracelsus the Primordial Man was identical with the "astral" man: "The true man is the star in us."⁵⁵ "The star desires to drive man towards great wisdom."⁵⁶ In his *Paragranum* he says: "For heaven is man and man is heaven, and all men are one heaven, and heaven is only one man."⁵⁷ Man stands in the relationship of a son to the inner heaven,⁵⁸ which is the Father, whom Paracelsus calls the *homo maximus*⁵⁹ or Adech,⁶⁰ an arcane name derived from Adam. Elsewhere he is called Archeus: "He is therefore similar to man and consists of the four elements and is an Archeus and is composed of four parts; say then, he is the great Cosmos."⁶¹ Undoubtedly this is the Primordial Man, for Paracelsus says: "In the whole Ides there is but One Man, the same is extracted by the Iliastrum⁶² and is the Protoplast." Ides or Ideus is "the gate through which all created things have proceeded," the "globule or materia" from which man was created.⁶³ Other secret names for the Primordial Man are Idechtrum⁶⁴ and Protothoma.⁶³ The number of names alone shows how preoccupied Paracelsus was with this idea. The ancient teachings about the Anthropos or Primordial Man assert that God, or the world-creating principle, was made manifest in the form of a "first-created" (*protoplastus*) man, usually of cosmic size. In India he is Prajāpati or Purusha, who is also "the size of a thumb" and dwells in the heart of every man, like the Iliaster of Paracelsus. In Persia he is Gayomart (*gayō-maretan*, 'mortal life'), a youth of dazzling whiteness, as is also said of the alchemical Mercurius. In the *Zohar* he is Metatron, who was created together with light. He is the celestial man whom we meet in the visions of Daniel, Ezra, Enoch, and also in Philo Judaeus. He is one of the principal figures in Gnosticism, where, as always, he is connected with the question of creation and redemption.⁶⁶ This is the case with Paracelsus.

2. "DE VITA LONGA": AN EXPOSITION OF THE SECRET DOCTRINE

[169] The treatise *De vita longa*,¹ difficult as it is to understand in parts, gives us some information on this point, though we have to extricate it with an effort from the arcane terminology in which it is embedded. The treatise is one of the few that were written in Latin; the style is exceedingly strange, but all the same it contains so many significant hints that it is worth investigating more closely. Adam von Bodenstein, who edited it, says in a dedicatory letter² to Ludwig Wolfgang von Hapsberg, governor of Badenweiler, that it was "taken down from the mouth of Paracelsus and carefully revised." The obvious inference is that the treatise is based on notes of Paracelsus's lectures and is not an original text. As Bodenstein himself wrote fluent and easily understandable Latin, quite unlike that of the treatise, one must assume that he did not devote any particular attention to it and made no effort to put it into more intelligible form, otherwise much more of his own style would have crept in. Probably he left the lectures more or less in their original state, as is particularly apparent towards the end. It is also likely that he had no very clear understanding of what they were about, any more than had the supposed translator Oporin. This is not surprising, as the Master himself all too often lacks the necessary clarity when discussing these complicated matters. Under these circumstances it is difficult to say how much should be put down to incomprehension and how much to undisciplined thinking. Nor is the possibility of actual errors in transcription excluded.³ In our interpretation, therefore, we are on uncertain ground from the start, and much must remain conjecture. But as Paracelsus, for all his originality, was strongly influenced by alchemical thinking, a knowledge of the earlier and contemporary alchemical treatises, and of the writings of his pupils and followers, is of considerable help in interpreting some of the concepts and in filling out certain gaps. An attempt to comment on and to interpret the treatise, therefore, is not entirely hopeless, despite the admitted difficulties.

A. THE ILIASTER

[170] The treatise is mainly concerned with the conditions under which longevity, which in Paracelsus's opinion extends up to a thousand years or more, can be attained. In what follows I shall give chiefly the passages that relate to the secret doctrine and are of help in explaining it.⁴ Paracelsus starts by giving a definition of life, as follows: "Life, by Hercules, is nothing other than a certain embalmed Mumia, which preserves the mortal body from the mortal worms and from corruption⁵ by means of a mixed saline solution." Mumia was well known in the Middle Ages as a medicament, and it consisted of the pulverized parts of real Egyptian mummies, in which there was a flourishing trade. Paracelsus attributes incorruptibility to a special virtue or agent named "balsam." This was something like a natural elixir, by means of which the body was kept alive or, if dead, incorruptible.⁶ By the same logic, a scorpion or venomous snake necessarily had in it an alexipharmic, i.e., an antidote, otherwise it would die of its own poison.

[171] Paracelsus goes on to discuss a great many arcane remedies, since diseases shorten life and have above all to be cured. The chief among these remedies are gold and pearls, which latter can be transformed into the *quinta essentia*. A peculiar potency is attributed to *Cheyri*,⁷ which fortifies the microcosmic body so much that it "must necessarily continue in its conservation through the universal anatomy of the four elements."⁸ Therefore the physician should see to it that the "anatomy" (= structure) of the four elements "be contracted into the one anatomy of the microcosm, not out of the corporeal, but out of that which preserves the corporeal." This is the balsam, which stands even higher than the *quinta essentia*, the thing that ordinarily holds the four elements together. It "excels even nature herself" because it is produced by a "bodily operation."⁹ The idea that the art can make something higher than nature is typically alchemical. The balsam is the life principle, the *spiritus mercurii*, and it more or less coincides with the Paracelsan concept of the Iliaster. The latter is higher than the four elements and determines the length of life. It is therefore roughly the same as the balsam, or one could say that the balsam is the pharmacological or chemical aspect of the Iliaster.¹⁰ The Iliaster has three forms: *Iliaster sanctitus*,¹¹ *paratetus*,¹² and *magnus*. They are subordinate to man ("microcosmo subditi") and can be brought "into one gamonymus." Since Paracelsus attributes a special "vis ac potestas coniunctionis" to the Iliaster, this enigmatic "gamonymus" (γάμος = marriage, ὄνομα = name) must be interpreted as a kind of chymical wedding, in other words as an indissoluble, hermaphroditic union.¹³ There are as many Iliastri as there are men; that is to say in every man there is an Iliaster that holds together each individual's peculiar combination of qualities.¹⁴ It therefore seems to be a kind of universal formative principle and principle of individuation.

[172] The Iliaster forms the starting point for the arcane preparation of longevity. “We will explain what is most needful in this process regarding the Iliaster. In the first place, the impure animate body must be purified through the separation of the elements, which is done by your meditating upon it; this consists in the confirmation of your mind beyond all bodily and mechanic work.”¹⁵ In this way a “new form is impressed” on the impure body.

[173] I have translated *imaginatio* here by “meditating.” In the Paracelsist tradition *imaginatio* is the active power of the *astrum* (star) or *corpus coeleste sive supracoeleste* (Ruland), that is, of the higher man within. Here we encounter the psychic factor in alchemy: the artifex accompanies his chemical work with a simultaneous mental operation which is performed by means of the imagination. Its purpose is to cleanse away the impure admixture and at the same time to bring about the “confirmation” of the mind. The Paracelsan neologism *confirmamentum* is probably not without reference to the “firmament.” During this work man is “raised up in his mind, so that he is made equal to the Enochdiani” (those who enjoy an unusually long life, like Enoch).¹⁶ Hence his “interior anatomy” must be heated to the highest degree.¹⁷ In this way the impurities are consumed and only the solid is left, “without rust.” While the artifex heats the chemical substance in the furnace he himself is morally undergoing the same fiery torment and purification.¹⁸ By projecting himself into the substance he has become unconsciously identical with it and suffers the same process. Paracelsus does not fail to point out to his reader that this fire is not the same as the fire in the furnace. This fire, he says, contains nothing more of the “Salamandrine Essence or Melusinian Ares,” but is rather a “*retorta distillatio* from the midst of the centre, beyond all coal fire.” Since Melusina is a watery creature, the “Melusinian Ares”¹⁹ refers to the so-called “Aquaaster,”²⁰ which stands for the watery aspect of the Iliaster, i.e., the Iliaster which animates and preserves the liquids in the body. The Iliaster is without doubt a spiritual, invisible principle although it is also something like the *prima materia*, which, however, in alchemical usage by no means corresponds to what we understand by matter. For the alchemists the *prima materia* was the *humidum radicale* (radical moisture),²¹ the water,²² the *spiritus aquae*,²³ and *vapor terrae*;²⁴ it was also called the “soul” of the substances,²⁵ the *sperma mundi*,²⁶ Adam’s tree of paradise with its many flowers, which grows on the sea,²⁷ the round body from the centre,²⁸ Adam and the accursed man,²⁹ the hermaphroditic monster,³⁰ the One and the root of itself,³¹ the All,³² and so on. The symbolical names of the *prima materia* all point to the *anima mundi*, Plato’s Primordial Man, the Anthropos and mystic Adam, who is described as a sphere (= wholeness), consisting of four parts (uniting different aspects in itself),

hermaphroditic (beyond division by sex), and damp (i.e., psychic). This paints a picture of the self, the indescribable totality of man.

[174] The Aquaster, too, is a spiritual principle; for instance, it shows the adept the “way by which he can search out divine magic.” The adept himself is an “aquastric magician.” The “scayolic³³ Aquaster” shows him the “great cause” with the help of the *Trarames* (ghostly spirits). Christ took his body from the celestial Aquaster, and the body of Mary was “necrocomic”³⁴ and “aquastric.” Mary “came from the iliastic Aquaster.” There, Paracelsus emphasizes, she stood on the moon (the moon is always related to water). Christ was born in the celestial Aquaster. In the human skull there is an “aquastric fissure,” in men on the forehead, in women at the back of the head. Through this fissure women are liable to be invaded in their “cagastric” Aquaster by a crowd of diabolical spirits; but men, through their fissure, give birth, “not cagastrically but necrocomically, to the necrocomic *Animam vel spiritum vitae microcosmi*, the iliastic spirit of life in the heart.” In the “centre of the heart dwells the true soul, the breath of God.”³⁵

[175] From these quotations it is easy to see what the Aquaster means. Whereas the Iliaster seems to be a dynamic spiritual principle, capable of both good and evil, the Aquaster, because of its watery nature, is more a “psychic” principle with quasimaterial attributes (since the bodies of Christ and Mary partook of it). But it functions psychically as a “necrocomic” (i.e., telepathic) agent related to the spiritual world, and as the birthplace of the *spiritus vitae*. Of all the Paracelsan concepts, therefore, the Aquaster comes closest to the modern concept of the unconscious. So we can see why Paracelsus personifies it as the homunculus and describes the soul as the celestial Aquaster. Like a true alchemist, he thought of the Aquaster and Iliaster as extending both upwards and downwards: they assume a spiritual or heavenly form as well as a quasi-material or earthly one. This is in keeping with the axiom from “*Tabula smaragdina*”: “What is below is like what is above, that the miracle of the one thing may be accomplished.” This one thing is the lapis or *filius philosophorum*.³⁶ As the definitions and names of the prima materia make abundantly plain, matter in alchemy is material and spiritual, and spirit spiritual and material. Only, in the first case matter is *cruda, confusa, grossa, crassa, densa*, and in the second it is *subtilis*. Such, too, is the opinion of Paracelsus.

C. ARES

[176] Rather superficially, Adam von Bodenstein conceives “Ares” to be the “prime nature of things, determining their form and species.”³⁷ Ruland lumps it together with the Iliaster and Archeus. But whereas the Iliaster is the hypostasis of being in general (“*generis generalissimi substantia*”), Archeus is given the role of a “dispenser of nature” (*naturae dispensator*) and “initiator.” Ares, however, is the “assigner, who

extends the peculiar nature to each species, and gives individual form.”³⁸ It can therefore be taken as the principle of individuation in the strict sense. It proceeds from the supracelestial bodies, for “such is the property and nature of supracelestial bodies that they straightway produce out of nothing a corporeal imagination [*imaginationem corporalem*], so as to be thought a solid body. Of this kind is Ares, so that when one thinks of a wolf, a wolf appears.”³⁹ This world is like the creatures composed of the four elements. From the elements arise things which are in no way like their origins, but nonetheless Ares bears them all in himself.”⁴⁰

[177] Ares, accordingly, is an intuitive concept for a preconscious, creative, and formative principle which is capable of giving life to individual creatures. It is thus a more specific principle of individuation than the Iliaster, and as such it plays an important role in the purification of the natural man by fire and his transformation into an “Enochdianus.” The fire he is heated with is, as we have seen, no ordinary fire, since it does not contain either the “Melusinian Ares” or the “Salamandrine Essence.” The salamander symbolizes the fire of the alchemists. It is itself of the nature of fire, a fiery essence. According to Paracelsus, Salamandrini and Saldini are men or spirits of fire, fiery beings. It is an old tradition that, because they have proved their incorruptibility in the fire, such creatures enjoy a particularly long life. The salamander is also the “incombustible sulphur”—another name for the arcane substance from which the lapis or *filius* is produced. The fire for heating the artifex contains nothing more of the nature of the salamander, which is an immature, transitional form of the *filius*, that incorruptible being whose symbols indicate the self.

[178] Paracelsus endows Ares with the attribute “Melusinian.” Since Melusina undoubtedly belongs to the watery realm, the realm of the nymphs, this attribute imports a watery character into the concept of Ares, which in itself is spiritual. Ares is thus brought into relationship with the lower, denser region and is intimately connected with the body. As a result, Ares becomes so like the Aquaster that it is scarcely possible to distinguish them conceptually. It is characteristic of Paracelsan thinking, and of alchemy in general, that there are no clear-cut concepts, so that one concept can take the place of another *ad infinitum*. At the same time every concept behaves hypostatically, as though it were a substance that could not at the same time be another substance. This typical primitive phenomenon is found also in Indian philosophy, which swarms with hypostases. Examples of this are the myths of the gods, which, as in Greek and Egyptian mythology, make utterly contradictory statements about the same god. Despite their contradictions, however, the myths continue to exist side by side without disturbing one another.

D. MELUSINA

[179] As we shall meet with Melusina several times more in the course of our interpretation, we must examine more closely the nature of this fabulous creature, and in particular the role she plays in Paracelsus. As we know, she belongs to the realm of the Aquaster, and is a water-nymph with the tail of a fish or snake. In the original old French legend she appears as “mère Lusine,” the ancestress of the counts of Lusignan. When her husband once surprised her in her fish-tail, which she had to wear only on Saturdays, her secret was out and she was forced to disappear again into the watery realm. She reappeared only from time to time, as a presage of disaster.

[180] Melusina comes into the same category as the nymphs and sirens who dwell in the “Nymphidida,” the watery realm.⁴¹ In the treatise “De sanguine,”⁴² the nymph is specified as a *Schröttli*, ‘nightmare.’ Melusines, on the other hand, dwell in the blood.⁴³ Paracelsus tells us in “De pygmaeis”⁴⁴ that Melusina was originally a nymph who was seduced by Beelzebub into practising witchcraft. She was descended from the whale in whose belly the prophet Jonah beheld great mysteries. This derivation is very important: the birthplace of Melusina is the womb of the mysteries, obviously what we today would call the unconscious. Melusines have no genitals,⁴⁵ a fact that characterizes them as paradisaic beings, since Adam and Eve in paradise had no genitals either.⁴⁶ Moreover paradise was then beneath the water “and still is.”⁴⁷ When the devil glided into the tree of paradise the tree was “saddened,” and Eve was seduced by the “infernal basilisk.”⁴⁸ Adam and Eve “fell for” the serpent and became “monstrous,” that is, as a result of their slip-up with the snake they acquired genitals.⁴⁹ But the Melusines remained in the paradisaic state as water creatures and went on living in the human blood. Since blood is a primitive symbol for the soul,⁵⁰ Melusina can be interpreted as a spirit, or at any rate as some kind of psychic phenomenon. Gerard Dorn confirms this in his commentary on *De vita longa*, where he says that Melusina is a “vision appearing in the mind.”⁵¹ For anyone familiar with the subliminal processes of psychic transformation, Melusina is clearly an anima figure. She appears as a variant of the mercurial serpent, which was sometimes represented in the form of a snake-woman⁵² by way of expressing the monstrous, double nature of Mercurius. The redemption of this monstrosity was depicted as the assumption and coronation of the Virgin Mary.⁵³

E. THE FILIUS REGIUS AS THE ARCANUM SUBSTANCE (MICHAEL MAIER)

[181] It is not my intention to enter more closely into the relations between the Paracelsan Melusines and the mercurial serpent. I only wish to point out the alchemical prototypes that may have had an influence on Paracelsus, and to suggest that the longing of Melusina for a soul and for redemption has a parallel in that kingly substance which is hidden in the sea and cries out for deliverance. Of this *filius regius* Michael Maier says:⁵⁴ “He lives and calls from the depths:⁵⁵ Who shall

deliver me from the waters and lead me to dry land? Even though this cry be heard of many, yet none takes it upon himself, moved by pity, to seek the king. For who, they say, will plunge into the waters? Who will imperil his life by taking away the peril of another? Only a few believe his lament, and think rather that they hear the crashing and roaring of Scylla and Charybdis. Therefore they remain sitting indolently at home, and give no thought to the kingly treasure, nor to their own salvation.”

[182] We know that Maier can have had no access to the *Philosophumena* of Hippolytus, long believed lost, and yet it might well have served him as a model for the king’s lament. Treating of the mysteries of the Naassenes, Hippolytus says: “But what that form is which comes down from above, from the Uncharacterized [*ἀχαρακτηρίστου*], no man knows. It is found in earthly clay, and yet none recognize it. But that is the god who dwells in the great flood.⁵⁸ In the Psalter he calls and cries out from many waters.⁵⁷ The many waters, they say, are the multitude of mortal men, whence he calls and cries aloud to the uncharacterized Man:⁵⁸ Save mine Only-Begotten⁵⁹ from the lions.”⁶⁰ And he receives the reply [Isaiah 43 : 1ff.]: “And now thus saith the Lord that created thee, O Jacob, and formed thee, O Israel: Fear not, for I have redeemed thee, and called thee by thy name. Thou art mine. When thou shalt pass through the waters, I will be with thee, and the rivers shall not cover thee. When thou shalt walk through the fire, thou shalt not be burnt, and the flames shall not burn in thee.” Hippolytus goes on to quote Psalm 23 : 7ff., (DV), referring it to the ascent (*ἀνοδος*) or regeneration (*ἀναγέννησις*) of Adam: “Lift up your gates, O ye princes, and be ye lifted up, O eternal gates, and the King of Glory shall enter in. Who is this King of Glory? The Lord who is strong and mighty, the Lord mighty in battle. . . . But who, say the Naassenes, is this King of Glory? A worm and no man, the reproach of men and the outcast of the people.”⁶¹

[183] It is not difficult to see what Michael Maier means. For him the *filius regius* or *Rex marinus*, as is evident from a passage in the text not quoted here, means antimony,⁶² though in his usage it has only the name in common with the chemical element. In reality it is the secret transformative substance, which fell from the highest place into the darkest depths of matter where it awaits deliverance. But no one will plunge into these depths in order, by his own transformation in the darkness and by the torment of fire, to rescue his king. They cannot hear the voice of the king and think it is the chaotic roar of destruction. The sea (*mare nostrum*) of the alchemists is their own darkness, the unconscious. In his way, Epiphanius⁶³ correctly interpreted the “mire of the deep” (*limus profundi*) as “matter born of the mind, smutty reflections and muddy thoughts of sin.” Therefore David in his affliction had said (Psalm 68 : 3, DV): “I stick fast in the mire of the deep.” For the Church Father these dark depths could only be evil itself, and if a king got stuck in them it was on account of his own sinfulness. The alchemists took a more optimistic view: the dark

background of the soul contains not only evil but a king in need of, and capable of, redemption, of whom the *Rosarium* says: “At the end of the work the king will go forth for thee, crowned with his diadem, radiant as the sun, shining like the carbuncle . . . constant in the fire.”⁶⁴ And of the worthless prima materia they say: “Despise not the ash, for it is the diadem of thy heart, and the ash of things that endure.”⁶⁵

[184] These quotations give one an idea of the mystic aura that surrounded the figure of the *filius regius*, and I do not think it superfluous to have drawn attention to that distant period when the central ideas of philosophical alchemy were being freely discussed by the Gnostics. Hippolytus gives us perhaps the most complete insight into their analogical thinking, which is akin to that of the alchemists. Anyone who came into contact with alchemy during the first half of the sixteenth century could not fail to feel the fascination of these Gnostic ideas. Although Maier lived and wrote more than seventy years after Paracelsus, and we have no reason to suppose that Paracelsus was acquainted with the heresiologists, his knowledge of the alchemical treatises, and particularly of Hermes [Fig. B6] which he so often quotes, would have sufficed to impress upon him the figure of the *filius regius* and also that of the much lauded Mater Natura—a figure not entirely in accord with the views of Christianity. Thus the “Tractatus aureus Hermetis” says: “O mightiest nature of the natures, who containest and separatest the midmost of the natures, who comest with the light and art born with the light, who hast given birth to the misty darkness, who art the mother of all beings!”⁶⁶ This invocation echoes the classical feeling for nature, and its style is reminiscent of the oldest alchemical treatises, such as those of pseudo-Democritus, and of the Greek Magic Papyri. In this same treatise we encounter the *Rex coronatus* and *filius noster rex genitus*, of whom it is said: “For the son is a blessing and possesses wisdom. Come hither, ye sons of the wise, and let us be glad and rejoice, for death is overcome, and the son reigns; he is clothed with the red garment, and the purple [*chermes*] is put on.” He lives from “our fire,” and nature “nourishes him who shall endure for ever” with a “small fire.” When the son is brought to life by the opus, he becomes a “warrior fire” or a “fighter of fire.”⁶⁷

F. THE PRODUCTION OF THE ONE, OR CENTRE, BY DISTILLATION

[185] After this discussion of some of the basic concepts of alchemy, let us come back to the Paracelsan process of transforming the Iliaster. Paracelsus calls this process a *retorta distillatio*. The purpose of distillation in alchemy was to extract the volatile substance, or spirit, from the impure body. This process was a psychic as well as a physical experience. The *retorta distillatio* is not a known technical term, but presumably it meant a distillation that was in some way turned back upon itself. It might have taken place in the vessel called the Pelican [Fig. B7], where the distillate runs back into the belly of the retort. This was the “circulatory distillation,” much

favoured by the alchemists. By means of the “thousandfold distillation” they hoped to achieve a particularly “refined” result.⁶⁸ It is not unlikely that Paracelsus had something like this in mind, for his aim was to purify the human body to such a degree that it would finally unite with the *maior homo*, the inner spiritual man, and partake of his longevity. As we have remarked, this was not an ordinary chemical operation, it was essentially a psychological procedure. The fire to be used was a symbolical fire, and the distillation had to start “from the midst of the centre” (*ex medio centri*).

[186] The accentuation of the centre is again a fundamental idea in alchemy. According to Michael Maier, the centre contains the “indivisible point,” which is simple, indestructible, and eternal. Its physical counterpart is gold, which is therefore a symbol of eternity.⁶⁹ In Christianos the centre is compared to paradise and its four rivers. These symbolize the philosophical fluids (*ὕγρα*), which are emanations from the centre.⁷⁰ “In the centre of the earth the seven planets took root, and left their virtues there, wherefore in the earth is a germinating water,” says *Aurora consurgens*.⁷¹ Benedictus Figulus⁷² writes:

Visit the centre of the earth,
There you will find the global fire.
Rectify it of all dirt,
Drive it out with love and ire. . . .

He calls this centre the “house of fire” or “Enoch,” obviously borrowing the latter term from Paracelsus. Dorn says that nothing is more like God than the centre, for it occupies no space, and cannot be grasped, seen, or measured. Such, too, is the nature of God and the spirits. Therefore the centre is “an infinite abyss of mysteries.”⁷³ The fire that originates in the centre carries everything upward, but when it cools everything falls back again to the centre. “The physiochemists call this movement circular, and they imitate it in their operations.” At the moment of culmination, just before the descent, the elements “conceive the male seeds of the stars,” which enter into the elemental matrices (i.e., the non-sublimated elements) during the descent. Thus all created things have four fathers and four mothers. The conception of the seeds results from the “influxum et impressionem” of Sol and Luna, who thus function as nature gods, though Dorn does not say this quite as clearly.⁷⁴

[187] The creation of the elements and their ascent to heaven through the force of the fire serve as a model for the spagyric process. The lower waters, cleansed of their darkness, must be separated from the celestial waters by a carefully regulated fire. “In the end it will come to pass that this earthly, spagyric foetus clothes itself with heavenly nature by its ascent, and then by its descent visibly puts on the nature of the centre of the earth, but nonetheless the nature of the heavenly centre which it

acquired by the ascent is secretly preserved.”⁷⁵ The spagyric birth (*spagirica foetura*) is nothing other than the *filius philosophorum*, the inner, eternal man in the shell of the outer, mortal man. The *filius* is not only a panacea for all bodily defects, it also conquers the “subtle and spiritual sickness in the human mind.” “For in the One,” says Dorn,⁷⁶ “is the One and yet not the One; it is simple and consists of the number four. When this is purified by the fire in the sun,⁷⁷ the pure water⁷⁸ comes forth, and, having returned to simplicity,⁷⁹ it [the quaternity as unity] will show the adept the fulfilment of the mysteries. This is the centre of the natural wisdom, whose circumference, closed in itself, forms a circle: an immeasurable order reaching to infinity.” “Here is the number four, within whose bounds the number three, together with the number two combined into One, fulfils all things, which it does in miraculous wise.” In these relations between four, three, two, and one is found, says Dorn, the “culmination of all knowledge and of the mystic art, and the infallible midpoint of the centre (*infallibile medii centrum*).”⁸⁰ The One is the midpoint of the circle, the centre of the triad, and it is also the “novenary foetus” (*foetus novenarius*), i.e., it is as the number nine to the ogdoad, or as the quintessence to the quaternity.³¹

[188] The midpoint of the centre is fire. On it is modelled the simplest and most perfect form, which is the circle. The point is most akin to the nature of light,⁸² and light is a *simulacrum Dei*.⁸³ Just as the firmament was created in the midst of the waters above and below the heavens, so in man there is a shining body, the radical moisture, which comes from the sphere of the heavenly waters.⁸⁴ This body is the “sidereal balsam,” which maintains the animal heat. The spirit of the supracelestial waters has its seat in the brain, where it controls the sense organs. In the microcosm the balsam dwells in the heart,⁸⁵ like the sun in the macrocosm. The shining body is the *corpus astrale*, the “firmament” or “star” in man. Like the sun in the heavens, the balsam in the heart is a fiery, radiant centre. We meet this solar point in the *Turba*,⁸⁶ where it signifies the “germ of the egg, which is in the yolk, and that germ is set in motion by the hen’s warmth.” The “*Consilium coniugii*” says that in the egg are the four elements and the “red sun-point in the centre, and this is the young chick.”⁸⁷ Mylius interprets this chick as the bird of Hermes,⁸⁸ which is another synonym for the mercurial serpent.

[189] From this context we can see that the *retorta distillatio ex medio centri* results in the activation and development of a psychic centre, a concept that coincides psychologically with that of the self.

G. THE CONIUNCTIO IN THE SPRING

[190] At the end of the process, says Paracelsus, a “physical lightning” will appear, the “lightning of Saturn” will separate from the lightning of Sol, and what appears in this lightning pertains “to longevity, to that undoubtedly great Iliaster.”⁸⁹ This process does not take anything away from the body’s weight but only from its “turbulence,”

and that “by virtue of the translucent colours.”⁸⁰ “Tranquillity of mind”⁹¹ as a goal of the opus is stressed also by other alchemists. Paracelsus has nothing good to say about the body. It is “bad and putrid.” When it is alive, it lives only from the “Mumia.” Its “continual endeavour” is to rot and turn back into filth. By means of the Mumia the “peregrinus microcosmus” (wandering microcosm) controls the physical body, and for this the arcana are needed.⁹² Here Paracelsus lays particular stress on Thereniabin⁹³ and Nostoch⁹⁴ (as before on Cheyri) and on the “tremendous powers” of Melissa. Melissa is singled out for special honour because in ancient medicine it was considered to be a means of inducing happiness, and was used as a remedy for melancholia and for purging the body of “black, burnt-out blood.”⁹⁵ It unites in itself the powers of the “supracelestial coniunctio,” and that is “Iloch, which comes from the true Aniadus.” As Paracelsus had spoken just before of Nostoch, the Iliaster has changed under his eyes into Iloch. The Aniadus that now makes its appearance constitutes the essence of Iloch, i.e., of the coniunctio. But to what does the coniunctio refer? Before this Paracelsus had been speaking of a separation of Saturn and Sol. Saturn is the cold, dark, heavy, impure element, Sol is the opposite. When this separation is completed and the body has been purified by Melissa and freed from Saturnine melancholy, then the coniunctio can take place with the long-living inner, or astral, man,⁹⁶ and from this conjunction arises the “Enochdianus.” Iloch or Aniadus appears to be something like the virtue or power of the everlasting man. This “Magnale” comes about by the “exaltation of both worlds,” and “in the true May, when the exaltations of Aniada begin, these should be gathered.” Here again Paracelsus outdoes himself in obscurity, but this much at least is evident, that Aniadus denotes a springtime condition, the “efficacy of things,” as Dorn defines it.

A fish meal, with accompanying statue of the hermaphrodite. Though the picture is undoubtedly secular, it contains echoes of early Christian motifs. The significance of the hermaphrodite in this context is unknown to me. British Museum. MS. Add. 15268 (13th cent.)

The *filius* or *rex* in the form of a hermaphrodite. The axiom of Maria is represented by 1 + 3 snakes: the *filius*, as mediator, unites the one with the three. Characteristically, he has bat's wings. To the right is the Pelican, symbol of the *distillatio circulatoria*; to the left, the *arbor philosophica* with golden flowers; underneath, the chthonic triad as a three-headed serpent. From *Rosarium philosophorum* (1550), fol. X, iiiv

The Rebis: from “Book of the Holy Trinity and Description of the Secret of the Transmutation of Metals” (1420), in the Codex Germanicus 598 (Staatsbibliothek, Munich), fol. 105v. The illustration may have served as a model for the hermaphrodite in the *Rosarium* (pl. B2)

Melusina as the (*aqua permanens*, opening the side of the *filius* (an allegory of Christ) with the lance of Longinus. The figure in the middle is Eve (earth), who is reunited with Adam (Christ) in the coniunctio. From their union is born the hermaphrodite, the incarnate Primordial Man. To the right is the athanor (furnace) with the vessel in the

centre, from which the lapis (hermaphrodite) will arise. The vessels on either side contain Sol and Luna. Woodcut from Reusner's *Pandora: Das ist, die edelst Gab Gottes, oder der werde und heilsame Stein der Weysen* (Basel, 1588), p. 249

The anima as Melusina, embracing a man rising out of the sea (= unconscious): a *coniunctio animae cum corpore*. The gnomes are the planetary spirits in the form of *paredroi* (familiaris). British Museum. MS. Sloane 5025, a variant of the Ripley *Scrowle* (1588)

The King's Son (*filius regis*) and the mystagogue Hermes on a mountain, an obvious allusion to the Temptation (Luke, ch. 4). The accompanying text says: "Another mountain of India lies in the vessel, which the Spirit and Soul, as son and guide, have together ascended." The two are called spirit and soul because they represent volatile substances which rise up during the heating of the prima materia. From Lamspringk, "De lapide philosophico," fig.

XII. in *Musaeum hermeticum* (Frankfurt a. M., 1678), p. 365

P R I M V S.

Sed si simplicium partes spirituosæ essentia crassamentis, & terrenis fæcibus immeris, ut tenuiores, & puriores evadant, & crassis illis, & impuris exonerentur, & in fæcibus relinquunt, velut medicis usibus inepta, oportet multiplicatis viribus, in se ipsas resolvantur, & reducantur, ut assiduo motu circumgyrata nobiliorem vim, & magis egregiam sortiantur. Vas excogitatum est, quod Pelicanū vocant, quod ad avis Pelicani figuram adumbratum est, in quo simplicium partes magis tenues per collum ductæ, & per rostrum in apertū pectus infixum quasi in ventum super fæces regerantur, iterumque per collum sublata indefatigabili motu aquositate, crassitiam recipientem paulatim exhauriant, & simplicia assidua rotatione non solum depurentur: sed etiam altius virtutes exaltentur. Vas, E, litera insignitur.

Alii verò alio modo effingunt. Duo vasa capiunt, quod alteri alter innectatur & quod unum recipit alteri reddit, utrumque alterius altero alvo rostro infixitur, H

Picture of the Pelican. the vessel in which the circulatory distillation takes place. Page from Rhenanus, *Solis e puteo emergentis sive dissertationis chymotechnicae libri tres* (Frankfurt a. M., 1613)

[191] We meet this motif in one of the earliest Greek texts, entitled the “Instruction of Cleopatra by the Archpriest Komarios,”⁹⁷ where Ostanēs⁹⁸ and his companions say to Cleopatra:

Make known to us how the highest descends to the lowest, and the lowest ascends to the highest, and the midmost draws near to the lowest and the highest, so that they are made one with it;⁹⁹ how the blessed waters come down from above to awaken the dead, who lie round about in the midst of Hades, chained in the darkness; how the elixir of life comes to them and awakens them, rousing them out of their sleep. . . .

[192] Cleopatra answers:

When the waters come in, they awaken the bodies and the spirits, which are imprisoned and powerless. . . . Gradually they bestir themselves, rise up, and clothe themselves in bright colours,¹⁰⁰ glorious as the flowers in spring. The spring is glad and rejoices in the blossoming ripeness they have put on.

[193] Ruland defines Aniada¹⁰¹ as “fruits and powers of paradise and heaven; they are also the Christian Sacraments . . . those things which by thought, judgment, and imagination promote longevity in us.”¹⁰² They seem therefore to be powers that confer everlasting life, an even more potent *φάρμακον ἀθανασίας* than Cheyri, Thereniabin, Nostoch, and Melissa. They correspond to the blessed waters of Komarios and also, apparently, to the Communion substances. In the spring all the forces of life are in a state of festive exaltation, and the *opus alchymicum* should also begin in the spring¹⁰³ (already in the month of Aries, whose ruler is Mars). At that time the Aniada should be “gathered,” as though they were healing herbs. There is an ambiguity here: it could also mean the gathering together of all the psychic powers for the great transformation. The hierosgamos of Poliphilo likewise takes place in the month of May,¹⁰⁴ that is, the union with the soul, the latter embodying the world of the gods. At this marriage the human and the divine are made one; it is an “exaltation of both worlds,” as Paracelsus says. He adds significantly: “And the exaltations of the nettles burn too, and the colour of the little flame¹⁰⁵ sparkles and shines.” Nettles were used for medicinal purposes (the preparation of nettle water), and were collected in May because they sting most strongly when they are young. The nettle was therefore a symbol of youth, which is “most prone to the flames of lust.”¹⁰⁶ The allusion to the stinging nettle and the *flammula* is a discreet reminder that not only Mary but Venus, too, reigns in May. In the next sentence Paracelsus remarks that this power can be “changed into something else.” There are exaltations, he says, far more powerful than the nettle, namely the Aniada, and these are found not in the matrices, that is, in the physical elements, but in the heavenly ones. The Ideus would be nothing if it had not brought forth greater things. For it had made another May, when heavenly flowers bloomed. At this time Anachmus¹⁰⁷ must be extracted and preserved, even as “musk rests in the pomander¹⁰⁸ and the virtue of gold in laudanum.”¹⁰⁹ One can enjoy longevity only when one has gathered the powers of Anachmus. To my knowledge, there is no way of distinguishing Anachmus from Aniadus.

3. THE NATURAL TRANSFORMATION MYSTERY

[194] Aniadus (or Aniadam), interpreted by Bodenstein and Dorn as the “efficacy of things,” is defined by Ruland as “the regenerated spiritual man in us, the heavenly body implanted in us Christians by the Holy Ghost through the most Holy Sacraments.” This interpretation does full justice to the role which Aniadus plays in the writings of Paracelsus. Though it is clearly related to the sacraments and to the Communion in particular, it is equally clear that there was no question of arousing or implanting the inner man in the Christian sense, but of a “scientific” union of the natural with the spiritual man with the aid of arcane techniques of a medical nature. Paracelsus carefully avoids the ecclesiastical terminology and uses instead an esoteric language which is extremely difficult to decipher, for the obvious purpose of segregating the “natural” transformation mystery from the religious one and effectively concealing it from prying eyes. Otherwise the welter of esoteric terms in this treatise would have no explanation. Nor can one escape the impression that this mystery was in some sense opposed to the religious mystery: as the “nettle” and the *flammula* show, the ambiguities of Eros were also included in it.¹ It had far more to do with pagan antiquity, as is evidenced by the *Hypnerotomachia Poliphili*, than with the Christian mystery. Nor is there any reason to suppose that Paracelsus was sniffing out nasty secrets; a more cogent motive was his experience as a physician who had to deal with man as he is and not as he should be and biologically speaking never can be. Many questions are put to a doctor which he cannot honestly answer with “should” but only from his knowledge and experience of nature. In these fragments of a nature mystery there is nothing to suggest a misplaced curiosity or perverse interest on Paracelsus’s part; they bear witness rather to the strenuous efforts of a physician to find satisfactory answers to psychological questions which the ecclesiastical casuist is inclined to twist in his own favour.

[195] This nature mystery was indeed so much at odds with the Church—despite the superficial analogies—that the Hungarian alchemist Nicolaus Melchior Szebeny,² court astrologer to Ladislaus II (1471–1516), made the bold attempt to present the *opus alchymicum* in the form of a Mass.³ It is difficult to prove whether and to what extent the alchemists were aware that they were in conflict with the Church. Mostly they showed no insight into what they were *doing*. This is true also of Paracelsus—except for a few hints about the “Pagoyum.” It is the more understandable that no real self-criticism could come about, since they genuinely believed that they were

performing a work well-pleasing to God on the principle “quod natura relinquit imperfectum, ars perficit” (what nature left imperfect, the art perfects). Paracelsus himself was wholly filled with the godliness of his profession as a doctor, and nothing disquieted or disturbed his Christian faith. He took it for granted that his work supplemented the hand of God and that he was the faithful steward of the talent that had been entrusted to him. And as a matter of fact he was right, for the human soul is not something cut off from nature. It is a natural phenomenon like any other, and its problems are just as important as the questions and riddles which are presented by the diseases of the body. Moreover there is scarcely a disease of the body in which psychic factors do not play a part, just as physical ones have to be considered in many psychogenic disturbances. Paracelsus was fully alive to this. In his own peculiar way he took the psychic phenomena into account as perhaps none of the great physicians ever did before or after him. Although his homunculi, *Trarames*, *Durdales*, nymphs, Melusines, etc., are the grossest superstitions for us so-called moderns, for a man of Paracelsus’s time they were nothing of the sort. In those days these figures were living and effective forces. They were projections, of course; but of that, too, Paracelsus seems to have had an inkling, since it is clear from numerous passages in his writings that he was aware that homunculi and suchlike beings were creatures of the imagination. His more primitive cast of mind attributed a reality to these projections, and this reality did far greater justice to their psychological effect than does our rationalistic assumption of the absolute unreality of projected contents. Whatever their reality may be, functionally at all events they behave just like realities. We should not let ourselves be so blinded by the modern rationalistic fear of superstition that we lose sight completely of those little-known psychic phenomena which surpass our present scientific understanding. Although Paracelsus had no notion of psychology, he nevertheless affords—precisely because of his “benighted superstition”—deep insights into psychic events which the most up-to-date psychology is only now struggling to investigate again. Even though mythology may not be “true” in the sense that a mathematical law or a physical experiment is true, it is still a serious subject for research and contains quite as many truths as a natural science; only, they lie on a different plane. One can be perfectly scientific about mythology, for it is just as good a natural product as plants, animals or chemical elements.

[196] Even if the psyche were a product of the will, it would still not be outside nature. No doubt it would have been a greater achievement if Paracelsus had developed his natural philosophy in an age when the psyche had been discredited as an object of scientific study. As it was, he merely included in the scope of his investigations something that was already present, without being obliged to prove its existence anew. Even so his achievement is sufficiently great, despite the fact that we moderns

still find it difficult to estimate correctly the full psychological implications of his views. For what, in the end, do we know about the causes and motives that prompted man, for more than a thousand years, to believe in that “absurdity” the transmutation of metals and the simultaneous psychic transformation of the artifex? We have never seriously considered the fact that for the medieval investigator the redemption of the world by God’s son and the transubstantiation of the Eucharistic elements were not the last word, or rather, not the last answer to the manifold enigmas of man and his soul. If the *opus alchymicum* claimed equality with the *opus divinum* of the Mass, the reason for this was not grotesque presumption but the fact that a vast, unknown Nature, disregarded by the eternal verities of the Church, was imperiously demanding recognition and acceptance. Paracelsus knew, in advance of modern times, that this Nature was not only chemical and physical but also psychic. Even though his Trames and whatnot cannot be demonstrated in a test tube, they nevertheless had their place in his world. And even if, like all the rest of them, he never produced any gold, he was yet on the track of a process of psychic transformation that is incomparably more important for the happiness of the individual than the possession of the red tincture.

A. THE LIGHT OF THE DARKNESS

[197] So when we try to elucidate the riddles of the *Vita longa* we are following the traces of a psychological process that is the vital secret of all seekers after truth. Not all are vouchsafed the grace of a faith that anticipates all solutions, nor is it given to all to rest content with the sun of revealed truth. The light that is lighted in the heart by the grace of the Holy Spirit, that same light of nature, however feeble it may be, is more important to them than the great light which shines in the darkness and which the darkness comprehended not. They discover that in the very darkness of nature a light is hidden, a little spark without which the darkness would not be darkness.⁴ Paracelsus was one of these. He was a well-intentioned, humble Christian. His ethics and his professed faith were Christian, but his most secret, deepest passion, his whole creative yearning, belonged to the *lumen naturae*, the divine spark buried in the darkness, whose sleep of death could not be vanquished even by the revelation of God's son. The light from above made the darkness still darker; but the *lumen naturae* is the light of the darkness itself, which illuminates its own darkness, and this light the darkness comprehends. Therefore it turns blackness into brightness, burns away "all superfluities," and leaves behind nothing but "faecem et scoriam et terram damnatam" (dross and scoriae and the rejected earth).

[198] Paracelsus, like all the philosophical alchemists, was seeking for something that would give him a hold on the dark, body-bound nature of man, on the soul which, intangibly interwoven with the world and with matter, appeared before itself in the terrifying form of strange, demoniacal figures and seemed to be the secret source of life-shortening diseases. The Church might exorcise demons and banish them, but that only alienated man from his own nature, which, unconscious of itself, had clothed itself in these spectral forms. Not separation of the natures but union of the natures was the goal of alchemy. From the time of Democritus its *leitmotiv* had been: "Nature rejoices in nature, nature conquers nature, nature rules over nature."⁵ This principle is pagan in feeling and an expression of nature worship. Nature not only contains a process of transformation—it is itself transformation. It strives not for isolation but for union, for the wedding feast followed by death and rebirth. Paracelsus's "exaltation in May" is this marriage, the "gamonymus" or hierosgamos of light and darkness in the shape of Sol and Luna. Here the opposites unite what the light from above had sternly divided. This is not so much a reversion to antiquity as a continuation of that religious feeling for nature, so alien to Christianity, which is expressed most beautifully in the "Secret Inscription" in the Great Magic Papyrus of Paris:⁶

Greetings, entire edifice of the Spirit of the air, greetings, Spirit that penetratest from heaven to earth, and from earth, which abideth in the midst of the universe, to the

uttermost bounds of the abyss, greetings, Spirit that penetratest into me, and shakest me, and departest from me in goodness according to God's will; greetings, beginning and end of irremovable Nature, greetings, thou who revolvest the elements which untiringly render service, greetings, brightly shining sun, whose radiance ministereth to the world, greetings, moon shining by night with disc of fickle brilliance, greetings, all ye spirits of the demons of the air, greetings, ye for whom the greeting is offered in praise, brothers and sisters, devout men and women! O great, greatest, incomprehensible fabric of the world, formed in a circle! Heavenly One, dwelling in the heavens, aetherial spirit, dwelling in the aether, having the form of water, of earth, of fire, of wind, of light, of darkness, star-glittering, damp-fiery-cold Spirit! I praise thee, God of gods, who hast fashioned the world, who hast established the depths upon the invisible support of their firm foundation, who hast separated heaven and earth, and hast encompassed the heavens with golden, eternal wings, and founded the earth upon eternal bases, who hast hung the aether high above the earth, who hast scattered the air with the self-moving wind, who hast laid the waters round about, who callest forth the tempests, the thunder, the lightning, the rain: Destroyer, Begetter of living things, God of the Aeons, great art thou, Lord, God, Ruler of All!

[199] Just as this prayer has come down to us embedded in a mass of magical recipes, so does the *lumen naturae* rise up from a world of kobolds and other creatures of darkness, veiled in magical spells and almost extinguished in a morass of mystification. Nature is certainly equivocal, and one can blame neither Paracelsus nor the alchemists if, anxiously aware of their responsibilities, they cautiously expressed themselves in parables. This procedure is indeed the more appropriate one in the circumstances. What takes place between light and darkness, what unites the opposites, has a share in both sides and can be judged just as well from the left as from the right, without our becoming any the wiser: indeed, we can only open up the opposition again. Here only the symbol helps, for, in accordance with its paradoxical nature, it represents the "tertium" that in logic does not exist, but which in reality is the living truth. So we should not begrudge Paracelsus and the alchemists their secret language: deeper insight into the problems of psychic development soon teaches us how much better it is to reserve judgment instead of prematurely announcing to all and sundry what's what. Of course we all have an understandable desire for crystal clarity, but we are apt to forget that in psychic matters we are dealing with processes of experience, that is, with transformations which should never be given hard and fast names if their living movement is not to petrify into something static. The protean mythologem and the shimmering symbol express the processes of the psyche far more trenchantly and, in the end, far more clearly than the clearest concept; for the symbol not only conveys a visualization of the process but—and this is perhaps just as important—it also brings a re-experiencing of it, of that twilight which we can

learn to understand only through inoffensive empathy, but which too much clarity only dispels. Thus the symbolic hints of marriage and exaltation in the “true May,” when the heavenly flowers bloom and the secret of the inner man is made manifest, by the very choice and sound of the words convey a vision and experience of a climax whose significance could be amplified only by the finest flights of the poets. But the clear and unambiguous concept would find not the smallest place where it would fit. And yet something deeply significant has been said, for as Paracelsus rightly remarks: “When the heavenly marriage is accomplished, who will deny its superexcellent virtue?”

B. THE UNION OF MAN'S TWO NATURES

[200] Paracelsus is concerned here with something of great importance, and in recognition of this I have put in an apologia for the symbol, which unites what is divided. But he too felt the need of some explanation. Thus he says in the second chapter of Book V that man has two life forces: one of them natural, the other “aerial, wherein is nothing of the body.” (We would say that life has a physiological and a psychic aspect.) He therefore ends *De vita longa* with a discussion of incorporeal things. “Miserable in this respect are mortals to whom Nature has denied her first and best treasure, which the monarchy of Nature contains, namely, the *lumen naturae!*”⁷ he exclaims, leaving us in no doubt what the *lumen naturae* meant to him. He says that he will now go beyond Nature and consider Aniadus. Let no one take exception to what he will now set forth concerning the power of the Guarini, Saldini, Salamandrini, and Melusina. If any should be astonished at his words, he should not let that detain him, but should rather read to the end, when he will understand all.

[201] Those live longest, says Paracelsus, who have lived “the aerial life” (*vitam aeream*). Their life lasts anything from six hundred to a thousand or eleven hundred years, and this is because they have lived in accordance with the “rule of the Magnalia, which are easily understood.” One should therefore imitate Aniadus, “and that by means of the air alone”—that is, by psychic means—“whose power is so great that the end of life has nothing in common with it. Further, if the said air be wanting, that which lies hidden in the capsule will burst forth.” By the “capsule” Paracelsus probably means the heart. The soul or *anima iliastri* dwells in the fire of the heart. It is *impassibilis* (non-sentient, incapable of suffering), whereas the cagastric soul, which is *passibilis*, “floats” on the water of the capsule.⁸ The heart is also the seat of the imagination, and is the “sun in the Microcosm.”⁹ Hence the *anima iliastri* can burst forth from the heart when it lacks “air”; that is to say, if psychic remedies are not applied, death occurs prematurely.¹⁰ Paracelsus continues: “But if this [i.e., the *anima iliastri*] should be wholly filled with that [air] which renews itself again, and is then moved into the centre, that is, outside that under which it lay

hidden before and still lies hid [i.e., in the heart capsule], then as a tranquil thing it is not heard at all by anything corporeal, and resounds only as Aniadus, Adech, and Edochinum. Whence comes the birth of that great Aquaster, which is born beyond Nature” (i.e., supernaturally).¹¹

[202] The meaning of this laborious explanation seems to be that by psychic means the soul is not only prevented from escaping but is also brought back into the centre, the heart region. But this time it is not enclosed in the *capsula cordis*, where it lay hidden and as it were imprisoned till then; it is now outside its previous habitation. This indicates a certain degree of freedom from bondage to the body, hence the “tranquillity” of the soul, which, when it dwelt inside the heart, was too much exposed to the power of imagination, to Ares and the formative principle. The heart, for all its virtues, is a restless and emotional thing, all too easily swayed by the turbulence of the body. In it dwells that lower, earthbound, “cagastric” soul which has to be separated from the higher, more spiritual Iliaster. In this liberated and more tranquil sphere the soul, unheard by the body, can re-echo those higher entities, Aniadus, Adech, and Edochinum, who form the upper triad.

[203] We have seen already that Adech stands for the inner *homo maximus*. He is the astral man, the manifestation of the macrocosm in the microcosm. Since he is named along with Aniadus and Edochinum, they are probably parallel designations. Aniadus certainly has this meaning, as mentioned earlier. Edochinum seems to be a variant of Enochdianus: Enoch belonged to the race of protoplasts related to the Original Man, who “tasted not death,” or at any rate lived for several hundred years. The three different names are probably only amplifications of the same conception—that of the deathless Original Man, to whom the mortal man can be approximated by means of the alchemical opus. As a result of this approximation the powers and attributes of the *homo maximus* flow like a helpful and healing stream into the earthly nature of the microcosmic mortal man. Paracelsus’s conception of the *homo maximus* does much to elucidate the psychological motives of the alchemical opus in general, since it shows how the main product of the work, the *aurum non vulgi* or *lapis philosophorum*, came to have such a variety of names and definitions: elixir, panacea, tincture, quintessence, light, east, morning, Aries, living fount, fruit-tree, animal, Adam, man, *homo altus*, form of man, brother, son, father, *pater mirabilis*, king, hermaphrodite, *deus terrenus*, *salvator*, *servator*, *filius macrocosmi*, and so on.¹² In comparison with the “mille nomina” of the alchemists, Paracelsus used only about ten names for this entity, which exercised the speculative fantasy of the alchemists for more than sixteen hundred years.

[204] Dorn’s commentary lays particular emphasis on the significance of this passage. According to him, these three—Aniadus, Adech, and Edochinum—form the one “pure and well-tempered element” (*elementum purum temperatum*) as contrasted

with the four, impure, gross, and worldly elements, which are far removed from longevity. From these three comes the “mental vision” of that great Aquaster, which is born supernaturally. That is to say, from the Aniadic mother, with the aid of Adech and through the power of the imagination, comes the great vision, which impregnates the supernatural matrix so that it gives birth to the invisible foetus of longevity, that is created or begotten by the invisible or extrinsic Iliaster. Dorn’s insistence on three as opposed to four is based on his polemical attitude to the axiom of Maria and to the relation of the quaternity to the Trinity, which I have discussed elsewhere.¹³ Characteristically, Dorn overlooks the fact that the fourth is in this case the microcosmic mortal man, who complements the upper triad.¹⁴

[205] Union with the *homo maximus* produces a new life, which Paracelsus calls “vita cosmographica.” In this life “time appears as well as the body Jesahach” (*cum locus tum corpus Jesahach*).¹⁵ *Locus* can mean “time” as well as “space,” and since, as we shall see, Paracelsus is here concerned with a sort of Golden Age, I have translated it as “time.” The *corpus Jesahach* may thus be the *corpus glorificationis*, the resurrected body of the alchemists, and would coincide with the *corpus astrale*.

C. THE QUATERNITY OF THE HOMO MAXIMUS

[206] In this last chapter Paracelsus makes almost untranslatable allusions to the four Scaiolae, and it is not at all clear what could be meant. Ruland, who had a wide knowledge of the contemporary Paracelsist literature, defines them as “spiritual powers of the mind” (*spirituales mentis vires*), qualities and faculties which are fourfold, to correspond with the four elements. They are the four wheels of the fiery chariot that swept Elijah up to heaven. The Scaiolae, he says, originate in the mind of man, “from whom they depart and to whom they are turned back” (*a quo recedunt, et ad quem reflectuntur*).

[207] Like the four seasons and the four quarters of heaven, the four elements are a quaternary system of orientation which always expresses a totality. In this case it is obviously the totality of the mind (*animus*), which here would be better translated as “consciousness” (including its contents). The orienting system of consciousness has four aspects, which correspond to four empirical functions: thinking, feeling, sensation (sense-perception), intuition. This quaternity is an archetypal arrangement.¹⁶ As an archetype, it can be interpreted in any number of ways, as Ruland shows: he interprets the four first of all psychologically, as *phantasia*¹⁷ *imaginatio*,¹⁸ *speculatio*,¹⁹ and *agnata fides* (inborn faith). This interpretation is of value only so far as it alludes unmistakably to certain psychic functions. Since every archetype is psychologically a *fascinosum*, i.e., exerts an influence that excites and grips the imagination, it is liable to clothe itself in religious ideas (which are themselves of an archetypal nature). Accordingly Ruland says that the four Scaiolae

also stand for the four main articles²⁰ of the Christian faith: baptism, belief in Jesus Christ, the sacrament of the Last Supper, and love of one's neighbour.²¹ In Paracelsus, Scaiola are lovers of wisdom. He says: "Ye pious filii Scaiolae et Anachmi."²² The Anachmus (= Aniadus) is therefore closely connected with the four Scaiolae. So it would not be overbold to conclude that the four Scaiolae correspond to the traditional quadripartite man and express his all-encompassing wholeness. The quadripartite nature of the *homo maximus* is the basis and cause of all division into four: four elements, seasons, directions, etc.²³ In this last chapter, says Paracelsus, the Scaiolae caused him the greatest difficulties,²⁴ "for in them is nothing of mortality." But, he assures us, whoever lives "by reason of the Scaiolae" is immortal, and he proves this by the example of the Enochdiani and their descendants. Dorn explains the difficulty of the Scaiolae by saying that the mind must exercise itself with extraordinary labours (*mentem exercere miris laboribus*), and, as there is in the Scaiolae nothing of mortality, this work exceeds our mortal endeavours.²⁵

[208] Although Dorn, like Ruland, emphasizes the psychic nature of the Scaiolae ("mental powers and virtues, properties of the arts of the mind"), so that actually they are attributes of the natural man and must therefore be mortal, and although Paracelsus himself says in other writings that even the *lumen naturae* is mortal, it is nevertheless asserted here that the natural powers of the mind are immortal and belong to the *Archa*—the principle that existed before the world. We hear nothing more about the "mortality" of the *lumen naturae*, but rather of eternal principles, of the *invisibilis homo maximus* (Dorn) and his four Scaiolae, which appear to be interpreted as mental powers and psychological functions. This contradiction is resolved when we bear in mind that these concepts of Paracelsus were the result not of rational reflection but of intuitive introspection, which was able to grasp the quaternary structure of consciousness and its archetypal nature. The one is mortal, the other immortal.

[209] Dorn's explanation as to why the Scaiolae are "difficult" might also be extended to Adech (= Adam, Anthropos),²⁶ who is the ruler of the Scaiolae and/or their quintessence. Paracelsus actually calls him "that difficult Adech." Also, it is "that great Adech" who hinders our intentions.²⁷ The difficulties of the art play no small role in alchemy. Generally they are explained as technical difficulties, but often enough, in the Greek texts as well as in the later Latin ones, there are remarks about the psychic nature of the dangers and obstacles that complicate the work. Partly they are demonic influences, partly psychic disturbances such as melancholia. These difficulties find expression also in the names and definitions of the *prima materia*, which, as the raw material of the opus, provides ample occasion for wearisome trials of patience. The *prima materia* is, as one can so aptly say in English, "tantalizing": it is cheap as dirt and can be had everywhere, only nobody knows it; it is as vague and

evasive as the lapis that is to be produced from it; it has a “thousand names.” And the worst thing is that without it the work cannot even be begun. The task of the alchemist is obviously like shooting an arrow through a thread hung up in a cloud, as Spitteler says. The prima materia is “saturnine,” and the malefic Saturn is the abode of the devil, or again it is the most despised and rejected thing, “thrown out into the street,” “cast on the dunghill,” “found in filth.” These epithets reflect not only the perplexity of the investigator but also his psychic background, which animates the darkness lying before him, so that he discovers in the projection the qualities of the unconscious. This easily demonstrable fact helps to elucidate the darkness that shrouds his spiritual endeavours and the *labor Sophiae*: it is a process of coming to terms with the unconscious, which always sets in when a man is confronted with its darkness. This confrontation forced itself on the alchemist as soon as he made a serious effort to find the prima materia.

D. THE RAPPROCHEMENT WITH THE UNCONSCIOUS

[210] I do not know how many or how few people today can imagine what “coming to terms with the unconscious” means. I fear they are only too few. But perhaps it will be conceded that the second part of Goethe’s *Faust* presents only incidentally and in doubtful degree an aesthetic problem, but primarily and in far greater degree a human one. It was a preoccupation that accompanied the poet right into old age, an alchemical encounter with the unconscious, comparable to the *labor Sophiae* of Paracelsus. It is on the one hand an endeavour to understand the archetypal world of the psyche, on the other hand a struggle against the sanity-threatening danger of fascination by the measureless heights and depths and paradoxes of psychic truth. The denser, concretistic, daytime mind here reaches its limits; for the “Cedurini” (Paracelsus), the “men of crasser temperament” (Dorn), there is no way into “the untrodden, the untreadable regions”—“and in this place,” says Paracelsus, “the Aquaster does not break in” (the damp soul that is akin to matter). Here the human mind is confronted with its origins, the archetypes; the finite consciousness with its archaic foundations; the mortal ego with the immortal self, Anthropos, purusha, atman, or whatever else be the names that human speculation has given to that collective preconscious state from which the individual ego arose. Kinsman and stranger at once, it recognizes and yet does not recognize that unknown brother who steps towards it, intangible yet real. The more it is bound by time and space, the more it will feel the other as “that difficult Adech” who crosses its purpose at every misguided step, who gives fate an unexpected twist, and sets it as a task the very thing it feared. Here we must feel our way with Paracelsus into a question that was never openly asked before in our culture, and was never clearly put, partly from sheer unconsciousness, partly from holy dread. Moreover, the secret doctrine of the

Anthropos was dangerous because it had nothing to do with the teachings of the Church, since from that point of view Christ was a reflection—and only a reflection—of the inner Anthropos. Hence there were a hundred good reasons for disguising this figure in indecipherable secret names.

[211] That being so, we may perhaps be able to understand another dark passage from the concluding chapter, which runs: “If, therefore, I should count myself among the Scaiolae [or: Scaioli, ‘lovers of wisdom’] in the manner of the Necrolii [= adepts], that would be something which in my view should be undertaken, but it is hindered by that great Adech, who deflects our purpose but not the procedure. I leave this to you theoreticians to discuss.”²⁸

[212] One gets the impression that Adech is almost hostile to the adept, or at least intent on frustrating him in some way. From our above reflections, which are based on practical experience, we have seen how problematical is the relation of the ego to the self. We have only to make the further assumption that this is what Paracelsus meant. And this does indeed seem to be the case: he “counts himself” among the Scaioli, the philosophers, or “implants himself” in the Scaiolae, the quaternity of the Original Man—which seems to me a quite possible conception since another synonym for the quaternity is Paradise with its four rivers, or the eternal city, the Metropolis, with its four gates²⁹ (the alchemical equivalent is the *domus sapientiae* and the squared circle). He would thus find himself in the immediate vicinity of Adech and would be a citizen of the eternal city—another echo of Christian ideas. The fact that Adech does not deflect the work (*modus* here presumably means method, procedure, as contrasted with *propositum*, purpose, intention) is understandable since Paracelsus is no doubt speaking of the alchemical opus, which always remains the same as a general procedure though its goal may vary: sometimes it is the production of gold (*chrysopoea*), sometimes the elixir, sometimes the *aurum potabile* or, finally, the mysterious *filius unicus*. Also, the artifex can have a selfish or an idealistic attitude towards the work.

4. THE COMMENTARY OF GERARD DORN

[213] We now come to the end of the treatise *De vita longa*. Paracelsus here sums up the whole operation in an extremely condensed way which makes interpretation even more hazardous than usual. As with so many other passages in the *Vita longa*, we must ask ourselves: Is the author being intentionally obscure, or can't he help it? Or should we ascribe the confusion to his editor, Adam von Bodenstein? The obscurities of this last chapter have no parallel in all Paracelsus's writings. One would be inclined to let the whole treatise go hang did it not contain things which seem to belong to the most modern psychological insights.

[214] I now give the original text of Paracelsus together with Dorn's commentary for the benefit of readers who wish to form their own judgment:

Paracelsus: *De vita longa* (1562), Lib. V, cap. V, pp. 94f.

Atque ad hunc modum abiit e
nymphididica natura
intervenientibus Scaiolis in aliam
transmutationem permansura
Melosyne, si difficilis ille Adech
annuisset, qui utrunque existit, cum
mors tum vita Scaiolarum. Annuit
praeterea prima tempora, sed ad
finem seipsum immutat. Ex quibus
colligo supermonica¹ figmenta in
cyphantis aperire fenestram. Sed ut
ea figantur, recusant gesta
Melosynes, quae cuiusmodi sunt,
missa facimus. Sed ad naturam
nymphididicam. Ea ut in animis
nostris concipiatur, atque ita ad
annum aniadin² immortales
perveniamus arripimus characteres
Veneris, quos et si vos una cum aliis
cognoscitis, minime tamen
usurpatis. Idipsum autem
absolvimus eo quod in prioribus
capitibus indicavimus, ut hanc vitam

And in this manner, through the
intervention of the Scaiolae, Melusina
departs from her nymphididic nature, to
remain in another transmutation if that
difficult Adech permit, who rules over
both the death and life of the Scaiolae.
Moreover, he permits the first times, but
at the end he changes himself. From
which I conclude that the supermonic¹
figments in the Cyphanta open a window.
But in order to become fixed, they have to
oppose the acts of Melusina, which, of
whatever kind they may be, we dismiss to
the nymphididic realm. But in order that
[she] may be conceived in our minds, and
we arrive immortal at the year Aniadin,²
we take the characters of Venus, which,
even if you know yourselves one with
others, you have nevertheless put to little
use. With this we conclude what we
treated of in the earlier chapters, that we
may safely attain that life over which
Aniadinus dominates and reigns, and which

secure tandem adsequamur, in qua aniadus dominatur ac regnat, et cum eo, cui sine fine assistimus, permanet. Haec atque alia arcana, nulla re prorsus indigent.³ Et in hunc modum vitam longam conclusam relinquimus.

endures for ever with him, in whom we are present without end. This and other mysteries are in need of nothing whatever.³ And herewith we end our discourse on longevity.

Dorn: *De vita longa* (1583), p. 178

[Paracelsus] ait Melosinam, i.e. apparentem in mente visionem . . . e nymphididica natura, in aliam transmutationem abire, in qua permansura[m] esse, si modo difficilis ille Adech, interior homo vdl. annuerit, hoc est, faveret: qui quidem utrunque efficit, videlicet mortem, et vitam Scaiolearum, i.e. mentalium operationum. Harum tempora prima, i.e. initia annuit, i.e. admittit, sed ad finem seipsum immutat, intellige propter intervenientes ac impediens distractiones, quo minus consequantur effectum inchoatae, scl. operationes. Ex quibus [Paracelsus] colligit supermonica¹ figmenta, hoc est, speculationes aenigmaticas, in cyphantis [vas stillatorium], i.e. separationum vel praeparationum operationibus, aperire fenestram, hoc est, intellectum, sed ut figantur, i.e. ad finem perducantur, recusant gesta Melosines, hoc est, visionum varietates, et observationes, quae cuius modi sunt (ait) missa facimus.

[Paracelsus] says that Melusina, i.e., the vision appearing in the mind, departs from her nymphididic nature into another transmutation, in which she will remain if only that difficult Adech, that is, the inner man, permit, that is, approve: who brings about both, that is, death and life, of the Scaiolae, that is, the mental operations. The first times, that is, the beginnings, of these he permits, that is, favours; but at the end he changes himself, namely because of the distractions that intervene and impede, so that the things begun, that is, the operations, do not obtain their effect.

Ad naturam nymphididicam rediens, ut in animis nostris concipiatur, inquit atque hac via ad annum aniadin² perveniamus, hoc est, ad vitam longam per imaginationem, arripimus characteres Veneris, i.e. amoris scutum et lorica ad viriliter adversis resistendum obstaculis: amor enim

From which [Paracelsus] concludes that the supermonic¹ figments, that is, enigmatical speculations, in the Cyphanta [distilling vessel], open a window, that is, the understanding, by means of the operations of separation or preparation; but in order to become fixed, that is, brought to an end, they

omnem difficultatem superat: quos et si vos una cum aliis cognoscitis, putato characteres, minime tamen usurpatis. Absolvit itaque iam Paracelsus ea, quae prioribus capitibus indicavit in vitam hanc secure consequendam, in qua dominatur et regnat aniadus, i.e. rerum efficia et cum ea is, cui sine fine assistimus, permanet, aniadus nempe coelestis: Haec atque alia arcana nulla re prorsus indigent.³

have to oppose the acts of Melusina, that is, divers visions and observations, which of whatever kind they may be, he says, we dismiss. Returning to the nymphididic realm, in order that [she] may be conceived in our minds, and that in this way we may attain to the year Aniadin,² that is, to a long life by imagination, we take the characters, of Venus, that is, the shield and buckler of love, to resist manfully the obstacles that confront us, for love overcomes all difficulties; which characters, even if you know yourselves one with others, you have nevertheless put to little use. And thus Paracelsus brings to an end those things which he treated of in the earlier chapters, that we may safely obtain that life over which Aniadus, that is, the efficacy of things, dominates and reigns, and which endures for ever with him, namely the heavenly Aniadus, in whom we are present without end: this and other mysteries are in need of nothing whatever.³

A. MELUSINA AND THE PROCESS OF INDIVIDUATION

[215] The text certainly needs a commentary! The Scaiolae, as the four parts, limbs, or emanations of the Anthropos,⁴ are the organs with which he actively intervenes in the world of appearances or by which he is connected with it, just as the invisible *quinta essentia*, or aether, appears in this world as the four elements or, conversely, is composed out of them. Since the Scaiolae, as we have seen, are also psychic functions, these must be understood as manifestations or effluences of the One, the invisible Anthropos. As functions of consciousness, and particularly as *imaginatio*, *speculatio*, *phantasia*, and *fides*, they “intervene” and stimulate Melusina, the water-nixie, to change herself into human form. Dorn thinks of this as a “vision appearing in the mind” and not as a projection on a real woman. So far as our biographical knowledge extends, this latter possibility does not seem to have occurred to Paracelsus either. In Colonna’s *Hypnerotomachia Poliphili* the Lady Polia attains a high degree of reality (far more so than Dante’s ethereal Beatrice but still not as much

as Helen in *Faust II*), yet even she dissolves into a lovely dream as the sun rises on the first day of May:

... tears shone in her eyes like clear crystals, like round pearls, like the dew which Aurora strews on the clouds of dawn. Sighing like a heavenly image, like incense of musk and amber rising to give delight to the spirits of heaven, she dissolved into thin air, leaving nought behind her but a breath of heavenly fragrance. So, with my happy dream, she vanished from my sight, saying as she went: Poliphilo, most dear beloved, farewell!⁵

[216] Polia dissolves just before the long-desired union with her lover. Helen, on the other hand, vanishes only with the dissolution of her son Euphorion. Though Paracelsus gives clear indications of the nuptial mood with his “exaltation” in May and his allusion to the stinging nettle and the little flame, he disregards entirely the projection on a real person or a concretely visualized, personified image, but chooses instead the legendary figure of Melusina. Now this figure is certainly not an allegorical chimera or a mere metaphor: she has her particular psychic reality in the sense that she is a glamorous apparition who, by her very nature, is on one side a psychic vision but also, on account of the psyche’s capacity for imaginative realization (which Paracelsus calls Ares), is a distinct objective entity, like a dream which temporarily becomes reality. The figure of Melusina is eminently suited to this purpose. The anima belongs to those borderline phenomena which chiefly occur in special psychic situations. They are characterized by the more or less sudden collapse of a form or style of life which till then seemed the indispensable foundation of the individual’s whole career. When such a catastrophe occurs, not only are all bridges back into the past broken, but there seems to be no way forward into the future. One is confronted with a hopeless and impenetrable darkness, an abysmal void that is now suddenly filled with an alluring vision, the palpably real presence of a strange yet helpful being, in the same way that, when one lives for a long time in great solitude, the silence or the darkness becomes visibly, audibly, and tangibly alive, and the unknown in oneself steps up in an unknown guise.

[217] This peculiarity of the anima is found also in the Melusina legend: Emmerich, Count of Poitiers, had adopted Raymond, the son of a poor kinsman. The relation between adoptive father and son was harmonious. But once, on the hunt, when pursuing a wild boar, they got separated from the rest and went astray in the forest. Night fell and they lit a fire to warm themselves. Suddenly the Count was attacked by the boar, and Raymond struck at it with his sword. But by an unlucky accident the blade rebounded and dealt the Count a mortal blow. Raymond was inconsolable, and in despair mounted his horse to flee he knew not where. After a time he came to a meadow with a bubbling spring. There he found three beautiful women. One of them

was Melusina, who by her clever counsel saved him from dishonour and a homeless fate.

[218] According to the legend, Raymond found himself in the catastrophic situation we have described, when his whole way of life had collapsed and he faced ruin. That is the moment when the harbinger of fate, the anima, an archetype of the collective unconscious, appears. In the legend Melusina sometimes has the tail of a fish and sometimes that of a snake; she is half human, half animal. Occasionally she appears only in snake form. The legend apparently has Celtic roots,⁶ but the motif is found practically everywhere. It was not only extraordinarily popular in Europe during the Middle Ages, but occurs also in India, in the legend of Urvashi and Pururavas, which is mentioned in the Shatapatha-Brāhmaṇa.⁷ It also occurs among the North American Indians.⁸ The motif of half-man, half-fish is universally disseminated. Special mention should be made of Conrad Vecerius,⁹ according to whom Melusina, or Melyssina, comes from an island in the sea where nine sirens dwell, who can change into any shape they want. This is of particular interest as Paracelsus mentions Melusina along with “Syrena.”¹⁰ The tradition probably goes back to Pomponius Mela,¹¹ who calls the island “Sena” and the beings who dwell there “Senae.” They cause storms, can change their shape, cure incurable diseases, and know the future.¹² Since the mercurial serpent of the alchemists is not infrequently called *virgo* and, even before Paracelsus, was represented in the form of a Melusina, the latter’s capacity to change her shape and to cure diseases is of importance in that these peculiarities were also predicated of Mercurius, and with special emphasis. On the other hand, Mercurius was also depicted as the grey-bearded Mercurius *senex* or Hermes Trismegistus, from which it is evident that two empirically very common archetypes, namely the anima and the Wise Old Man,¹³ flow together in the symbolic phenomenology of Mercurius. Both are daemons of revelation and, in the form of Mercurius, represent the panacea. Again and again Mercurius is called *versatilis*, *versipellis*, *mutabilis*, *servus* or *cervus fugitivus*, Proteus, etc.

[219] The alchemists, and Paracelsus too, were no doubt confronted often enough with the dark abyss of not-knowing, and, unable to go forward, were on their own admission dependent on revelation or illumination or a helpful dream. For this reason they needed a “ministering spirit,” a familiar or *πάρεδρος*, to whose invocation the Greek Magic Papyri bear witness. The snake form of the god of revelation, and of spirits in general, is a universal type.

[220] Paracelsus seems to have known nothing of any psychological premises. He attributes the appearance and transformation of Melusina to the effect of the “intervening” Scaiolae, the driving spiritual forces emanating from the *homo maximus*. The opus was subordinated to them, for its aim was to raise man to the sphere of the Anthropos. There is no doubt that the goal of the philosophical

alchemist was higher self-development, or the production of what Paracelsus calls the *homo maior*, or what I would call individuation. This goal confronts the alchemist at the start with the loneliness which all of them feared, when one has “only” oneself for company. The alchemist, on principle, worked alone. He formed no school. This rigorous solitude, together with his preoccupation with the endless obscurities of the work, was sufficient to activate the unconscious and, through the power of imagination, to bring into being things that apparently were not there before. Under these circumstances “enigmatical speculations” arise in which the unconscious is visually experienced as a “vision appearing in the mind.” Melusina emerges from the watery realm and assumes human form—sometimes quite concretely, as in *Faust I*, where Faust’s hopelessness leads him straight into the arms of Gretchen, in which form Melusina would doubtless remain were it not for the catastrophe which drives Faust still deeper into magic: Melusina changes into Helen. But she does not remain even there, for all attempts at concretization are shattered like the retort of the homunculus against the throne of Galatea. Another power takes over, “that difficult Adech,” who “at the end changes himself.” The greater man “hinders our purpose,” for Faust has to change himself at death into a boy, the *puer aeternus*, to whom the true world will be shown only after all desirousness has fallen away from him. “Miserable mortals, to whom Nature has denied her first and best treasure, the *lumen naturae!*”

[221] It is Adech, the inner man, who with his Scaiolae guides the purpose of the adept and causes him to behold fantasy images from which he will draw false conclusions, devising out of them situations of whose provisional and fragile nature he is unaware. Nor is he aware that by knocking on the door of the unknown he is obeying the law of the inner, future man, and that he is disobedient to this law whenever he seeks to secure a permanent advantage or possession from his work. Not his ego, that fragment of a personality, is meant; it is rather that a wholeness, of which he is a part, wants to be transformed from a latent state of unconsciousness into an approximate consciousness of itself.

[222] The “acts of Melusina” are deceptive phantasms compounded of supreme sense and the most pernicious nonsense, a veritable veil of Maya which lures and leads every mortal astray. From these phantasms the wise man will extract the “supermonic” elements, that is, the higher inspirations; he extracts everything meaningful and valuable as in a process of distillation,¹⁴ and catches the precious drops of the *liquor Sophiae* in the ready beaker of his soul, where they “open a window” for his understanding. Paracelsus is here alluding to a discriminative process of critical judgment which separates the chaff from the wheat—an indispensable part of any rapprochement with the unconscious. It requires no art to become stupid; the whole art lies in extracting wisdom from stupidity. Stupidity is the

mother of the wise, but cleverness never. The “fixation” refers alchemically to the lapis but psychologically to the consolidation of feeling. The distillate must be fixed and held fast, must become a firm conviction and a permanent content.

B. THE HIEROSGAMOS OF THE EVERLASTING MAN

[223] Melusina, the deceptive Shakti, must return to the watery realm if the work is to reach its goal. She should no longer dance before the adept with alluring gestures, but must become what she was from the beginning: a part of his wholeness.¹⁵ As such she must be “conceived in the mind.” This leads to a union of conscious and unconscious that was always present unconsciously but was always denied by the one-sidedness of the conscious attitude. From this union arises that wholeness which the introspective philosophy of all times and climes has characterized with an inexhaustible variety of symbols, names, and concepts. The “mille nomina” disguise the fact that this coniunctio is not concerned with anything tangible or discursively apprehensible; it is an experience that simply cannot be reproduced in words, but whose very nature carries with it an unassailable feeling of eternity or timelessness.

[224] I will not repeat here what I have said elsewhere on this subject. It makes no difference anyway what one says about it. Paracelsus does, however, give one more hint which I cannot pass over in silence: this concerns the “characters of Venus.”¹⁶

[225] Melusina, being a water-nixie, is closely connected with Morgana, the “sea-born,” whose classical counterpart is Aphrodite, the “foam-born.” Union with the feminine personification of the unconscious is, as we have seen, a well-nigh eschatological experience, a reflection of which is to be found in the Apocalyptic Marriage of the Lamb, the Christian form of the hierosgamos. The passage runs (Revelation 19 : 6–10):

And I heard as it were the voice of a great multitude, and as the voice of many waters, and as the voice of mighty thunderings, saying, Alleluia; for the Lord God omnipotent reigneth.

Let us be glad and rejoice, and give honour to him: for the marriage of the Lamb is come, and his wife hath made herself ready.

And to her was granted that she should be arrayed in fine linen, clean and white: for the fine linen is the righteousness of saints.

And he saith unto me: Write, Blessed are they which are called unto the marriage supper of the Lamb. And he saith unto me, These are the true sayings of God.

And I fell at his feet to worship him. And he said unto me, See thou do it not: I am thy fellowservant, and of thy brethren . . .

[226] The “he” of the text is the angel that speaks to John; in the language of Paracelsus, he is the *homo maior*, Adech. I need hardly point out that Venus is closely related to the love-goddess Astarte, whose sacred marriage-festivals were known to everyone. The experience of union underlying these festivals is, psychologically, the embrace and coming together again of two souls in the exaltation of spring, in the “true May”; it is the successful reuniting of an apparently hopelessly divided duality in the wholeness of a single being. This unity embraces the multiplicity of all beings. Hence Paracelsus says: “If you know yourselves one with others.” Adech is not *my* self, he is also that of my brothers: “I am thy fellowservant, and of thy brethren.” That is the specific definition of this experience of the coniunctio: the self which includes me includes many others also, for the unconscious that is “conceived in our mind” does not belong to me and is not peculiar to me, but is everywhere. It is the quintessence of the individual and at the same time the collective.

[227] The participants in the marriage of the Lamb enter into eternal blessedness; they are “virgins, which were not defiled with women” and are “redeemed from among men” (Rev. 14 : 4). In Paracelsus the goal of redemption is “the year Aniadin,” or time of perfection, when the One Man reigns for ever.

C. SPIRIT AND NATURE

[228] Why did Paracelsus not avail himself of the Christian imagery, when it expresses the same thought so very clearly? Why does Venus appear in the place of Melusina, and why is it not the marriage of the Lamb, but a hierosgamos of Venus and Mars, as the text itself hints? The reason is probably the same as that which compelled Francesco Colonna to make Poliphilo seek his beloved Polia not with the Mother of God but with Venus. For the same reason the boy in Christian Rosencreutz's *Chymical Wedding*¹⁷ led the hero down to an underground chamber, on the door of which was a secret inscription graven in copper characters. Copper (*cuprum*) is correlated with the Cyprian (Aphrodite, Venus). In the chamber they found a three-cornered tomb containing a copper cauldron, and in it was an angel holding a tree that dripped continually into the cauldron. The tomb was supported by three animals: an eagle, an ox, and a lion.¹⁸ The boy explained that in this tomb Venus lay buried, who had destroyed many an upright man. Continuing their descent, they came to the bedchamber of Venus and found the goddess asleep on a couch. Indiscreetly, the boy twitched the coverlet away and revealed her in all her naked beauty.¹⁹

[229] The ancient world contained a large slice of nature and a number of questionable things which Christianity was bound to overlook if the security of a spiritual standpoint was not to be hopelessly compromised. No penal code and no moral code, not even the sublimest casuistry, will ever be able to codify and pronounce just judgment upon the confusions, the conflicts of duty, and the invisible tragedies of the natural man in collision with the exigencies of culture. "Spirit" is one aspect, "Nature" another. "You may pitch Nature out with a fork, yet she'll always come back again," says the poet.²⁰ Nature *must not* win the game, but she *cannot* lose. And whenever the conscious mind clings to hard and fast concepts and gets caught in its own rules and regulations—as is unavoidable and of the essence of civilized consciousness—nature pops up with her inescapable demands. Nature is not matter only, she is also spirit. Were that not so, the only source of spirit would be human reason. It is the great achievement of Paracelsus to have elevated the "light of nature" to a principle and to have emphasized it in a far more fundamental way than his predecessor Agrippa. The *lumen naturae* is the natural spirit, whose strange and significant workings we can observe in the manifestations of the unconscious now that psychological research has come to realize that the unconscious is not just a "subconscious" appendage or the dustbin of consciousness, but is a largely autonomous psychic system for compensating the biases and aberrations of the conscious attitude, for the most part functionally, though it sometimes corrects them by force. Consciousness can, as we know, be led astray by naturalness as easily as by spirituality, this being the logical consequence of its freedom of choice. The

unconscious is not limited only to the instinctual and reflex processes of the cortical centres; it also extends beyond consciousness and, with its symbols, anticipates future conscious processes. It is therefore quite as much a “supra-consciousness.”

[230] Convictions and moral values would have no meaning if they were not believed and did not possess exclusive validity. And yet they are man-made and time-conditioned assertions or explanations which we know very well are capable of all sorts of modifications, as has happened in the past and will happen again in the future. All that has happened during the last two thousand years shows that they are reliable signposts for certain stretches of the way, then comes a painful upheaval, which is felt as subversive and immoral, until a new conviction takes root. So far as the essential traits of human nature remain the same, certain moral values enjoy permanent validity. The most meticulous observance of the Ten Commandments, however, is no obstacle to the more refined forms of turpitude, and the far loftier principle of Christian love of one’s neighbour can lead to such tangled conflicts of duty that sometimes the Gordian knot can only be cut with a very unchristian sword.

D. THE ECCLESIASTICAL SACRAMENT AND THE OPUS ALCHYMICUM

[231] Paracelsus, like many others, was unable to make use of the Christian symbolism because the Christian formula inevitably suggested the Christian solution and would thus have conduced to the very thing that had to be avoided. It was nature and her particular “light” that had to be acknowledged and lived with in the face of an attitude that assiduously overlooked them. This could only be done under the protective aegis of the arcanum. But one should not imagine Paracelsus or any other alchemist settling down to invent an arcane terminology that would make the new doctrine a kind of private code. Such an undertaking would presuppose the existence of definite views and clearly defined concepts. But there is no question of that: none of the alchemists ever had any clear idea of what his philosophy was really about. The best proof of this is the fact that everyone with any originality at all coined his own terminology, with the result that no one fully understood anybody else. For one alchemist, Lully was an obscurantist and a charlatan and Geber the great authority; while for another, Geber was a Sphinx and Lully the source of all enlightenment. So with Paracelsus: we have no reason to suppose that behind his neologisms there was a clear, consciously disguised concept. It is on the contrary probable that he was trying to grasp the ungraspable with his countless esotericisms, and snatched at any symbolic hint that the unconscious offered. The new world of scientific knowledge was still in a nascent dream-state, a mist heavy with the future, in which shadowy figures groped about for the right words. Paracelsus was not reaching back into the past; rather, for lack of anything suitable in the present, he was using the old remnants to give new form to a renewed archetypal experience. Had the alchemists

felt any serious need to revive the past, their erudition would have enabled them to draw on the inexhaustible storehouse of the heresiologists. But except for the “*Aquarium sapientum*,”²¹ which likewise treats of heresies, I have found only one alchemist (of the sixteenth century) who shudderingly admits to having read the *Panarium* of Epiphanius. Nor are any secret traces of Gnostic usages to be found, despite the fact that the texts swarm with unconscious parallels.

[232] To return to our text: it is clear that it describes a procedure for attaining nothing less than immortality (“that we may arrive immortal at the year Aniadin”). There is, however, only one way to this goal, and that is through the sacraments of the Church. These are here replaced by the “sacrament” of the *opus alchymicum*, less by word than by deed, and without the least sign of any conflict with the orthodox Christian standpoint.

[233] Which way did Paracelsus hold to be the true one? Or were both of them true for him? Presumably the latter, and the rest he “leaves to the theoreticians to discuss.”

[234] What is meant by the “characters of Venus” remains obscure. The “sapphire”²² which Paracelsus prized so much, the *cheyri*, *ladanum*, *muscus*, and *ambra* belong, according to Agrippa,²³ to Venus. The goddess undoubtedly appears in our text on a higher level, in keeping with her classical cognomens: *docta*, *sublimis*, *magistra rerum humanarum divinarumque*, etc.²⁴ One of her characters is certainly love in the widest sense, so Dorn is not wrong when he interprets them as the “shield and buckler of love.” Shield and buckler are martial attributes, but there is also a *Venus armata*.²⁵ Mythologically, the personified Amor is a son of Venus and Mars, whose cohabitation in alchemy is a typical coniunctio.²⁶ Dorn, despite being a Paracelsist, had a decidedly polemical attitude towards certain fundamental tenets of alchemy,²⁷ so that a Christian love of one’s neighbour, well armed against evil, suited him very well. But so far as Paracelsus is concerned this interpretation is doubtful. The word Venus points in quite another direction, and since the Christian gifts of grace were included in his Catholic faith he had in any case no need of a christianized Amor. On the contrary, a Venus Magistra or Aphrodite Urania, or even a Sophia, would have seemed to him more appropriate to the mystery of the *lumen naturae*. The words “*minime tamen usurpatis*” might also be a hint at discretion.²⁸ Hence the Venus episode in the *Chymical Wedding* may have more bearing on the interpretation of this cryptic passage than Dorn’s well-meant circumlocution.

[235] The concluding reference to a “life without end” under the dominion of Aniadius is very reminiscent of Rev. 20 : 4: “... and they lived and reigned with Christ a thousand years.” The year Aniadin would thus correspond to the thousand-year reign in the Apocalypse.

[236] In conclusion I would remark that the survey of the secret doctrine which I have attempted to sketch here makes it seem likely that besides the physician and Christian

in Paracelsus there was also an alchemical philosopher at work who, pushing every analogy to the very limit, strove to penetrate the divine mysteries. The parallel with the mysteries of the Christian faith, which we can only feel as a most dangerous conflict, was no Gnostic heresy for him, despite the most disconcerting resemblances; for him as for every other alchemist, man had been entrusted with the task of bringing to perfection the divine will implanted in nature, and this was a truly sacramental work. To the question “Are you, as it would seem, an Hermetic?” he could have replied with Lazarello: “I am a Christian, O King, and it is no disgrace to be that and an Hermetic at the same time.”²⁹

5. EPILOGUE

[237] I had long been aware that alchemy is not only the mother of chemistry, but is also the forerunner of our modern psychology of the unconscious. Thus Paracelsus appears as a pioneer not only of chemical medicine but of empirical psychology and psychotherapy.

[238] It may seem that I have said too little about Paracelsus the self-sacrificing physician and Christian, and too much about his dark shadow, that other Paracelsus, whose soul was intermingled with a strange spiritual current which, issuing from immemorial sources, flowed beyond him into a distant future. But—*ex tenebris lux*—it was precisely because he was so fascinated by magic that he was able to open the door to the realities of nature for the benefit of succeeding centuries. The Christian and the primitive pagan lived together in him in a strange and marvellous way to form a conflicting whole, as in other great Renaissance figures. Although he had to endure the conflict, he was spared that agonizing split between knowledge and faith that has riven the later epochs. As a man he had one father, but as a spirit he had two mothers. His spirit was heroic, because creative, and as such was doomed to Promethean guilt. The secular conflict that broke out at the turn of the sixteenth century, and whose living image stands before our eyes in the figure of Paracelsus, is a prerequisite for higher consciousness; for analysis is always followed by synthesis, and what was divided on a lower level will reappear, united, on a higher one.

IV

THE SPIRIT MERCURIUS

[Given as two lectures at the Eranos Conference, Ascona, Switzerland, in 1942, the theme of which was “The Hermetic Principle in Mythology, Gnosis, and Alchemy.” Published as “Der Geist Mercurius,” *Eranos-Jahrbuch 1042* (Zurich, 1943); revised and expanded in *Symbolik des Geistes: Studien über psychische Phänomenologie . . .* (Psychologische Abhandlungen, VI; Zurich, 1948). An English translation by Gladys Phelan and Hildegard Nagel, titled *The Spirit Mercury*, was published as a book by the Analytical Psychology Club of New York, Inc., in 1953, and forms the basis of the present translation. Some brief chapters have been combined.—EDITORS.]

Ἑρμῆ κοσμοκράτωρ, ἐγκάρδιε, κύκλε σελήνης,
στρογγύλε καὶ τετράγωνε, λόγων ἀρχηγέτα γλώσσης,
πειθοδικαιόσυνε, χλαμυδηφόρε, πτηνοπέδιλε,
παμφώνου γλώσσης μεδέων, θνητοῖσι προφῆτα . . .

(Hermes, ruler of the world, dweller in the heart, circle of the moon, Round and square, inventor of the words of the tongue, Obedient to justice, wearer of the chlamys, shod in winged sandals, Guardian of the many-sounding tongue, prophet to mortals.)

—A Magic Papyrus (Preisendanz, II, p. 139)

Part I

1. THE SPIRIT IN THE BOTTLE

[239] In my contribution¹ to the symposium on Hermes I will try to show that this many-hued and wily god did not by any means die with the decline of the classical era, but on the contrary has gone on living in strange guises through the centuries, even into recent times, and has kept the mind of man busy with his deceptive arts and healing gifts. Children are still told Grimm's fairytale of "The Spirit in the Bottle," which is ever-living like all fairytales, and moreover contains the quintessence and deepest meaning of the Hermetic mystery as it has come down to us today:

Once upon a time there was a poor woodcutter. He had an only son, whom he wished to send to a high school. However, since he could give him only a little money to take with him, it was used up long before the time for the examinations. So the son went home and helped his father with the work in the forest. Once, during the midday rest, he roamed the woods and came to an immense old oak. There he heard a voice calling from the ground, "Let me out, let me out!" He dug down among the roots of the tree and found a well-sealed glass bottle from which, clearly, the voice had come. He opened it and instantly a spirit rushed out and soon became half as high as the tree. The spirit cried in an awful voice: "I have had my punishment and I will be revenged! I am the great and mighty spirit Mercurius, and now you shall have your reward. Who so releases me, him I must strangle." This made the boy uneasy and, quickly thinking up a trick, he said, "First, I must be sure that you are the same spirit that was shut up in that little bottle." To prove this, the spirit crept back into the bottle. Then the boy made haste to seal it and the spirit was caught again. But now the spirit promised to reward him richly if the boy would let him out. So he let him out and received as a reward a small piece of rag. Quoth the spirit: "If you spread one end of this over a wound it will heal, and if you rub steel or iron with the other end it will turn into silver." Thereupon the boy rubbed his damaged axe with the rag, and the axe turned to silver and he was able to sell it for four hundred thaler. Thus father and son were freed from all worries. The young man could return to his studies, and later, thanks to his rag, he became a famous doctor.²

[240] Now, what insight can we gain from this fairytale? As you know, we can treat fairytales as fantasy products, like dreams, conceiving them to be spontaneous statements of the unconscious about itself.

[241] As at the beginning of many dreams something is said about the scene of the dream action, so the fairytale mentions the forest as the place of the magic happening. The forest, dark and impenetrable to the eye, like deep water and the sea, is the container of the unknown and the mysterious. It is an appropriate synonym for the unconscious. Among the many trees—the living elements that make up the forest—one tree is especially conspicuous for its great size. Trees, like fishes in the water, represent the living contents of the unconscious. Among these contents one of special significance is characterized as an “oak.” Trees have individuality. A tree, therefore, is often a symbol of personality.³ Ludwig II of Bavaria is said to have honoured certain particularly impressive trees in his park by having them saluted. The mighty old oak is proverbially the king of the forest. Hence it represents a central figure among the contents of the unconscious, possessing personality in the most marked degree. It is the prototype of the *self*, a symbol of the source and goal of the individuation process. The oak stands for the still unconscious core of the personality, the plant symbolism indicating a state of deep unconsciousness. From this it may be concluded that the hero of the fairytale is profoundly unconscious of himself. He is one of the “sleepers,” the “blind” or “blindfolded,” whom we encounter in the illustrations of certain alchemical treatises.⁴ They are the unawakened who are still unconscious of themselves, who have not yet integrated their future, more extensive personality, their “wholeness,” or, in the language of the mystics, the ones who are not yet “enlightened.” For our hero, therefore, the tree conceals a great secret.⁵

[242] The secret is hidden not in the top but in the roots of the tree;⁶ and since it is, or has, a personality it also possesses the most striking marks of personality—voice, speech, and conscious purpose, and it demands to be set free by the hero. It is caught and imprisoned against its will, down there in the earth among the roots of the tree. The roots extend into the inorganic realm, into the mineral kingdom. In psychological terms, this would mean that the self has its roots in the body, indeed in the body’s chemical elements. Whatever this remarkable statement of the fairytale may mean in itself, it is in no way stranger than the miracle of the living plant rooted in the inanimate earth. The alchemists described their four elements as *radices*, corresponding to the Empedoclean *rhizomata*, and in them they saw the constituents of the most significant and central symbol of alchemy, the *lapis philosophorum*, which represents the goal of the individuation process.

[243] The secret hidden in the roots is a spirit sealed inside a bottle. Naturally it was not hidden away among the roots to start with, but was first confined in a bottle, which was then hidden. Presumably a magician, that is, an alchemist, caught and imprisoned it. As we shall see later, this spirit is something like the numen of the tree, its *spiritus vegetativus*, which is one definition of Mercurius. As the life principle of the tree, it is a sort of spiritual quintessence abstracted from it, and could also be

described as the *principium individuationis*. The tree would then be the outward and visible sign of the realization of the self. The alchemists appear to have held a similar view. Thus the “Aurelia occulta” says: “The philosophers have sought most eagerly for the centre of the tree which stands in the midst of the earthly paradise.”⁷ According to the same source, Christ himself is this tree.⁸ The tree comparison occurs as early as Eulogius of Alexandria (c. A.D. 600), who says: “Behold in the Father the root, in the Son the branch, and in the Spirit the fruit: for the substance [*οὐσία*] in the three is one.”⁹ Mercurius, too, is *trinus et unus*.

[244] So if we translate it into psychological language, the fairytale tells us that the mercurial essence, the *principium individuationis*, would have developed freely under natural conditions, but was robbed of its freedom by deliberate intervention from outside, and was artfully confined and banished like an evil spirit. (Only evil spirits have to be confined, and the wickedness of this spirit was shown by its murderous intent.) Supposing the fairytale is right and the spirit was really as wicked as it relates, we would have to conclude that the Master who imprisoned the *principium individuationis* had a good end in view. But who is this well-intentioned Master who has the power to banish the principle of man’s individuation? Such power is given only to a ruler of souls in the spiritual realm. The idea that the principle of individuation is the source of all evil is found in Schopenhauer and still more in Buddhism. In Christianity, too, human nature is tainted with original sin and is redeemed from this stain by Christ’s self-sacrifice. Man in his “natural” condition is neither good nor pure, and if he should develop in the natural way the result would be a product not essentially different from an animal. Sheer instinctuality and naïve unconsciousness untroubled by a sense of guilt would prevail if the Master had not interrupted the free development of the natural being by introducing a distinction between good and evil and outlawing the evil. Since without guilt there is no moral consciousness and without awareness of differences no consciousness at all, we must concede that the strange intervention of the master of souls was absolutely necessary for the development of any kind of consciousness and in this sense was for the good. According to our religious beliefs, God himself is this Master—and the alchemist, in his small way, competes with the Creator in so far as he strives to do work analogous to the work of creation, and therefore he likens his microcosmic opus to the work of the world creator.¹⁰

[245] In our fairytale the natural evil is banished to the “roots,” that is, to the earth, in other words the body. This statement agrees with the historical fact that Christian thought in general has held the body in contempt, without bothering much about the finer doctrinal distinctions.¹¹ For, according to doctrine, neither the body nor nature in general is evil *per se*: as the work of God, or as the actual form in which he manifests himself, nature cannot be identical with evil. Correspondingly, the evil spirit in the

fairytale is not simply banished to the earth and allowed to roam about at will, but is only hidden there in a safe and special container, so that he cannot call attention to himself anywhere except right under the oak. The bottle is an artificial human product and thus signifies the intellectual purposefulness and artificiality of the procedure, whose obvious aim is to isolate the spirit from the surrounding medium. As the *vas Hermeticum* of alchemy, it was “hermetically” sealed (i.e., sealed with the sign of Hermes);¹² it had to be made of glass, and had also to be as round as possible, since it was meant to represent the cosmos in which the earth was created.¹³ Transparent glass is something like solidified water or air, both of which are synonyms for spirit. The alchemical retort is therefore equivalent to the *anima mundi*, which according to an old alchemical conception surrounds the cosmos. Caesarius of Heisterbach (thirteenth century) mentions a vision in which the soul appeared as a spherical glass vessel.¹⁴ Likewise the “spiritual” or “ethereal” (*aethereus*) philosophers’ stone is a precious *vitrum* (sometimes described as *malleabile*) which was often equated with the gold glass (*aurum vitreum*) of the heavenly Jerusalem (Rev. 21 : 21).

[246] It is worth noting that the German fairytale calls the spirit confined in the bottle by the name of the pagan god, Mercurius, who was considered identical with the German national god, Wotan. The mention of Mercurius stamps the fairytale as an alchemical folk legend, closely related on the one hand to the allegorical tales used in teaching alchemy, and on the other to the well-known group of folktales that cluster round the motif of the “spellbound spirit.” Our fairytale thus interprets the evil spirit as a pagan god, forced under the influence of Christianity to descend into the dark underworld and be morally disqualified. Hermes becomes the demon of the mysteries celebrated by all *tenebriones* (obscurantists), and Wotan the demon of forest and storm; Mercurius becomes the soul of the metals, the metallic man (*homunculus*), the dragon (*serpens mercurialis*), the roaring fiery lion, the night raven (*nycticorax*), and the black eagle—the last four being synonyms for the devil. In fact the spirit in the bottle behaves just as the devil does in many other fairytales: he bestows wealth by changing base metal into gold; and like the devil, he also gets tricked.

2. THE CONNECTION BETWEEN SPIRIT AND TREE

[247] Before continuing our discussion of the spirit Mercurius, I should like to point out a not unimportant fact. The place where he lies confined is not just any place but a very essential one—namely, under the oak, the king of the forest. In psychological terms, this means that the evil spirit is imprisoned in the roots of the self, as the secret hidden in the principle of individuation. He is not identical with the tree, nor with its roots, but has been put there by artificial means. The fairytale gives us no reason to think that the oak, which represents the self, has grown out of the spirit in the bottle; we may rather conjecture that the oak presented a suitable place for concealing a secret. A treasure, for instance, is preferably buried near some kind of landmark, or else such a mark is put up afterwards. The tree of paradise serves as a prototype for this and similar tales: it, too, is not identical with the voice of the serpent which issued from it.¹ However, it must not be forgotten that these mythical motifs have a significant connection with certain psychological phenomena observed among primitive peoples. In all such cases there is a notable analogy with primitive animism: certain trees are animated by souls—have the character of personality, we would say—and possess a voice that gives commands to human beings. Amaury Talbot² reports one such case from Nigeria, where a native soldier heard an *oji* tree calling to him, and tried desperately to break out of the barracks and hasten to the tree. Under cross-examination he alleged that all those who bore the name of the tree now and then heard its voice. Here the voice is undoubtedly identical with the tree. These psychic phenomena suggest that originally the tree and the daemon were one and the same, and that their separation is a secondary phenomenon corresponding to a higher level of culture and consciousness. The original phenomenon was nothing less than a nature deity, a *tremendum* pure and simple, which is morally neutral. But the secondary phenomenon implies an act of discrimination which splits man off from nature and thus testifies to the existence of a more highly differentiated consciousness. To this is added, as a tertiary phenomenon testifying to a still higher level, the moral qualification which declares the voice to be an evil spirit under a ban. It goes without saying that this third level is marked by a belief in a “higher” and “good” God who, though he has not finally disposed of his adversary, has nevertheless rendered him harmless for some time to come by imprisonment (Rev. 20: 1–3).

[248] Since at the present level of consciousness we cannot suppose that tree daemons exist, we are forced to assert that the primitive suffers from hallucinations, that he hears his own unconscious which has projected itself into the tree. If this theory is correct—and I do not know how we could formulate it otherwise today—then the second level of consciousness has effected a differentiation between the object “tree” and the unconscious content projected into it, thereby achieving an act of enlightenment. The third level rises still higher and attributes “evil” to the psychic content which has been separated from the object. Finally a fourth level, the level reached by our consciousness today, carries the enlightenment a stage further by denying the objective existence of the “spirit” and declaring that the primitive has heard nothing at all, but merely had an auditory hallucination. Consequently the whole phenomenon vanishes into thin air—with the great advantage that the evil spirit becomes obviously non-existent and sinks into ridiculous insignificance. A fifth level, however, which is bound to take a quintessential view of the matter, wonders about this conjuring trick that turns what began as a miracle into a senseless self-deception—only to come full circle. Like the boy who told his father a made-up story about sixty stags in the forest, it asks: “But what, then, was all the rustling in the woods?” The fifth level is of the opinion that something did happen after all: even though the psychic content was not the tree, nor a spirit in the tree, nor indeed any spirit at all, it was nevertheless a phenomenon thrusting up from the unconscious, the existence of which cannot be denied if one is minded to grant the psyche any kind of reality. If one did not do that, one would have to extend God’s *creatio ex nihilo*—which seems so obnoxious to the modern intellect—very much further to include steam engines, automobiles, radios, and every library on earth, all of which would presumably have arisen from unimaginably fortuitous conglomerations of atoms. The only thing that would have happened is that the Creator would have been renamed Conglomeratio.

[249] The fifth level assumes that the unconscious exists and has a reality just like any other existent. However odious it may be, this means that the “spirit” is also a reality, and the “evil” spirit at that. What is even worse, the distinction between “good” and “evil” is suddenly no longer obsolete, but highly topical and necessary. The crucial point is that so long as the evil spirit cannot be proved to be a subjective psychic experience, then even trees and other suitable objects would have, once again, to be seriously considered as its lodging places.

3. THE PROBLEM OF FREEING MERCURIUS

[250] We will not pursue the paradoxical reality of the unconscious any further now, but will return to the fairytale of the spirit in the bottle. As we have seen, the spirit Mercurius bears some resemblance to the “cheated devil.” The analogy, however, is only a superficial one, since, unlike the gifts of the devil, the gold of Mercurius does not turn to horse droppings but remains good metal, and the magic rag does not turn to ashes by morning but retains its healing power. Nor is Mercurius tricked out of a soul that he wanted to steal. He is only tricked into his own better nature, one might say, in that the boy succeeds in bottling him up again in order to cure his bad mood and make him tractable. Mercurius becomes polite, gives the young fellow a useful ransom and is accordingly set free. We now hear about the student’s good fortune and how he became a wonder-working doctor, but—strangely enough—nothing about the doings of the liberated spirit, though these might be of some interest in view of the web of meanings in which Mercurius, with his many-sided associations, entangles us. What happens when this pagan god, Hermes-Mercurius-Wotan, is let loose again? Being a god of magicians, a *spiritus vegetativus*, and a storm daemon, he will hardly have returned to captivity, and the fairytale gives us no reason to suppose that the episode of imprisonment has finally changed his nature to the pink of perfection. The bird of Hermes has escaped from the glass cage, and in consequence something has happened which the experienced alchemist wished at all costs to avoid. That is why he always sealed the stopper of his bottle with magic signs and set it for a very long time over the lowest fire, so that “he who is within may not fly out.” For if he escapes, the whole laborious opus comes to nothing and has to be started all over again. Our lad was a Sunday’s child and possibly one of the poor in spirit, on whom was bestowed a bit of the Kingdom of Heaven in the shape of the self-renewing tincture, with reference to which it was said that the opus needed to be performed only once.¹ But if he had lost the magic rag he would certainly never have been able to produce it a second time, by himself. It looks as though some Master had succeeded in capturing the mercurial spirit and then hid him in a safe place, like a treasure—perhaps putting him aside for some future use. He may even have planned to tame the wild Mercurius to serve him as a willing “familiar,” like Mephisto—such trains of thought are not strange to alchemy. Perhaps he was disagreeably surprised when he returned to the oak tree and found that his bird had flown. At any rate, it might have been better not to have left the fate of the bottle to chance.

[251] Be that as it may, the behaviour of the boy—successfully as it worked out for him—must be described as alchemically incorrect. Apart from the fact that he may have infringed upon the legitimate claims of an unknown Master by setting Mercurius free, he was also totally unconscious of what might follow if this turbulent spirit were let loose upon the world. The golden age of alchemy was the sixteenth and the first half of the seventeenth century. At that time a storm bird did indeed escape from a spiritual vessel which the daemons must have felt was a prison. As I have said, the alchemists were all for not letting Mercurius escape. They wanted to keep him in the bottle in order to transform him: for they believed, like Petasios, that lead (another arcane substance) was “so bedevilled and shameless that all who wish to investigate it fall into madness through ignorance.”² The same was said of the elusive Mercurius who evades every grasp—a real trickster who drove the alchemists to despair.³

Part II

1. INTRODUCTORY

[252] The interested reader will want, as I do, to find out more about this spirit—especially what our forefathers believed and said about him. I will therefore try with the aid of text citations to draw a picture of this versatile and shimmering god as he appeared to the masters of the royal art. For this purpose we must consult the abstruse literature of alchemy, which has not yet been properly understood. Naturally, in later times, the history of alchemy was mainly of interest to the chemist. The fact that it recorded the discovery of many chemical substances and drugs could not, however, reconcile him to the pitiful meagreness, so it seemed to him, of its scientific content. He was not in the position of the older authors, such as Schmieder, who could look on the possibility of goldmaking with hopeful esteem and sympathy; instead he was irritated by the futility of the recipes and the fraudulence of alchemical speculation in general. To him alchemy was bound to seem a gigantic aberration that lasted for more than two thousand years. Had he only asked himself whether the chemistry of alchemy was authentic or not, that is, whether the alchemists were really chemists or merely spoke a chemical jargon, then the texts themselves would have suggested a line of observation other than the purely chemical. The scientific equipment of the chemist does not, however, fit him to pursue this other line, since it leads straight into the history of religion. Thus it was a philologist, Reitzenstein, whom we have to thank for preliminary researches of the greatest value in this field. It was he who recognized the mythological and Gnostic ideas embedded in alchemy, thereby opening up the whole subject from an angle which promises to be most fruitful. For alchemy, as the earliest Greek and Chinese texts show, originally formed part of Gnostic philosophical speculations which also included a detailed knowledge of the techniques of the goldsmith and ironsmith, the faker of precious stones, the druggist and apothecary. In East and West alike, alchemy contains as its core the Gnostic doctrine of the Anthropos and by its very nature has the character of a peculiar doctrine of redemption. This fact necessarily escaped the chemist, although it is expressed clearly enough in the Greek and Latin texts as well as in the Chinese of about the same period.

[253] To begin with, of course, it is almost impossible for our scientifically trained minds to feel their way back into that primitive state of *participation mystique* in

which subject and object are identical. Here the findings of modern psychology stood me in very good stead. Practical experience shows us again and again that any prolonged preoccupation with an unknown object acts as an almost irresistible bait for the unconscious to project itself into the unknown nature of the object and to accept the resultant perception, and the interpretation deduced from it, as objective. This phenomenon, a daily occurrence in practical psychology and more especially in psychotherapy, is without doubt a vestige of primitivity. On the primitive level, the whole of life is governed by animistic assumptions, that is, by projections of subjective contents into objective situations. For example, Karl von den Steinen says that the Bororos think of themselves as red cockatoos, although they readily admit that they have no feathers.¹ On this level, the alchemists' assumption that a certain substance possesses secret powers, or that there is a *prima materia* somewhere which works miracles, is self-evident. This is, however, not a fact that can be understood or even thought of in chemical terms, it is a psychological phenomenon. Psychology, therefore, can make an important contribution towards elucidating the alchemists' mentality. What to the chemist seem to be the absurd fantasies of alchemy can be recognized by the psychologist without too much difficulty as psychic material contaminated with chemical substances. This material stems from the collective unconscious and is therefore identical with fantasy products that can still be found today among both sick and healthy people who have never heard of alchemy. On account of the primitive character of its projections, alchemy, so barren a field for the chemist, is for the psychologist a veritable gold-mine of materials which throw an exceedingly valuable light on the structure of the unconscious.

[254] Since in what follows I shall often refer to the original texts, it might be as well to say a few words about this literature, some of which is not easily accessible. I shall leave out of account the few Chinese texts that have been translated, and shall only mention that *The Secret of the Golden Flower*, published by Richard Wilhelm and myself, is representative of its class. Nor can I consider the Indian "Quicksilver System."² The Western literature I have used falls into four groups:

1. *Texts by ancient authors.* This group comprises mainly Greek texts, which have been edited by Berthelot, and those transmitted by the Arabs, likewise edited by him. They date from the period between the first and eighth centuries.

2. *Texts by the early Latinists.* The most important of these are translations from the Arabic (or Hebrew?). Recent research shows that most of these texts derive from the Harranite school, which flourished until about 1050, and was also, probably, the source of the *Corpus Hermeticum*. To this group belong certain texts whose Arabic origin is doubtful but which at least show Arabic influence—for instance, the "Summa perfectionis" of Geber and the Aristotle and Avicenna treatises. This period extends from the ninth to the thirteenth century.

3. *Texts by the later Latinists.* These comprise the principal group and range from the fourteenth to the seventeenth century.

4. *Texts in modern European languages.* Sixteenth to seventeenth century. After that, alchemy fell into decline, which is why I have only occasionally used eighteenth-century texts.

2. MERCURIUS AS QUICKSILVER AND/OR WATER

[255] Mercurius was first understood pretty well everywhere as *hydrargyrum*¹ (Hg), quicksilver or *argentum vivum* (Fr. *vifargent* or *argent vive*). As such, it was called *vulgaris* (common) and *crudus*. As a rule, *mercurius philosophicus* was specifically distinguished from this, as an avowedly arcane substance that was sometimes conceived to be present in *mercurius crudus*, and then, again, to differ from it completely. It was the true object of the alchemical procedure. Quicksilver, because of its fluidity and volatility, was also defined as water. A popular saying is: “Aqua manus non madefaciens” (the water that does not make the hands wet).² Other designations are *aqua vitae*,³ *aqua alba*,⁴ *aqua sicca*.⁵ The last designation, dry water, is paradoxical, for which reason I should like to call special attention to it as characterizing the nature of the object described. *Aqua septies distillata* (seven times distilled water) and *aqueum subtile*⁶ point to the sublimated (“spiritual”) nature of the philosophic Mercurius. Many treatises simply speak of Mercurius as water.⁷ The doctrine of the *humidum radicale* (root-moisture or radical moisture) underlies such designations as *humidum album*,⁸ *humiditas maxime permanens incombustibilis et unctuosa*,⁹ and *humiditas radicalis*.¹⁰ Mercurius is also said to arise from the moisture like a vapour¹¹ (which again points to his spiritual nature), or to rule the water.¹² The “divine water” (ὕδωρ θεῖον) so often mentioned in the Greek texts is quicksilver.¹³ Mercurius as the arcane substance and golden tincture is indicated by the designation *aqua aurea*¹⁴ and by the description of the water as *Mercurii caduceus*.¹⁵

3. MERCURIUS AS FIRE

[256] Many treatises define Mercurius simply as fire.¹ He is *ignis elementaris*² *noster naturalis ignis certissimus*,³ which again indicates his “philosophic” nature. The *aqua mercurialis* is even a divine fire.⁴ This fire is “highly vaporous” (*vaporosus*).⁵ Indeed, Mercurius is really the only fire in the whole procedure.⁶ He is an “invisible fire, working in secret.”⁷ One text says that the “heart” of Mercurius is at the North Pole and that he is like a fire (northern lights).⁸ He is, in fact, as another text says, “the universal and scintillating fire of the light of nature, which carries the heavenly spirit within it.”⁹ This passage is particularly important as it relates Mercurius to the *lumen naturae*, the source of mystical knowledge second only to the holy revelation of the Scriptures. Once more we catch a glimpse of the ancient role of Hermes as the god of revelation. Although the *lumen naturae*, as originally bestowed by God upon his creatures, is not by nature ungodly, its essence was nevertheless felt to be abysmal, since the *ignis mercurialis* was also connected with the fires of hell. It seems, however, that the alchemists did not understand hell, or its fire, as absolutely outside of God or opposed to him, but rather as an internal component of the deity, which must indeed be so if God is held to be a *coincidentia oppositorum*. The concept of an all-encompassing God must necessarily include his opposite. The *coincidentia*, of course, must not be too radical or too extreme, otherwise God would cancel himself out.¹⁰ The principle of the coincidence of opposites must therefore be completed by that of absolute opposition in order to attain full paradoxicality and hence psychological validity.

[257] The mercurial fire is found in the “centre of the earth,” or dragon’s belly, in fluid form. Benedictus Figulus writes: “Visit the centre of the earth, there you will find the global fire.”¹¹ Another treatise says that this fire is the “secret, infernal fire, the wonder of the world, the system of the higher powers in the lower.”¹² Mercurius, the revelatory light of nature, is also hell-fire, which in some miraculous way is none other than a rearrangement of the heavenly, spiritual powers in the lower, chthonic world of matter, thought already in St. Paul’s time to be ruled by the devil. Hell-fire, the true energetic principle of evil, appears here as the manifest counterpart of the spiritual and the good, and as essentially identical with it in substance. After that, it can surely cause no offence when another treatise says that the mercurial fire is the “fire in which God himself burns in divine love.”¹³ We are not deceiving ourselves if we feel in scattered remarks of this kind the breath of true mysticism.

[258] Since Mercurius is himself of fiery nature, fire does not harm him: he remains unchanged within it, rejoicing like the salamander.¹⁴ It is unnecessary to point out that quicksilver does not behave like this but vaporizes under heat, as the alchemists themselves knew from very early times.

4. MERCURIUS AS SPIRIT AND SOUL

[259] If Mercurius had been understood simply as quicksilver, there would obviously have been no need for any of the appellations I have listed. The fact that this need arose points to the conclusion that one simple and unmistakable term in no way sufficed to designate what the alchemists had in mind when they spoke of Mercurius. It was certainly quicksilver, but a very special quicksilver, “our” Mercurius, the essence, moisture, or principle behind or within the quicksilver—that indefinable, fascinating, irritating, and elusive thing which attracts an unconscious projection. The “philosophic” Mercurius, this *servus fugitivus* or *cervus fugitivus* (fugitive slave or stag), is a highly important unconscious content which, as may be gathered from the few hints we have given, threatens to ramify into a set of far-reaching psychological problems. The concept swells dangerously and we begin to perceive that the end is nowhere in sight. Therefore we would rather not tie this concept prematurely to any special meaning, but shall content ourselves with stating that the philosophic Mercurius, so dear to the alchemist as the transformative substance, is obviously a projection of the unconscious, such as always takes place when the inquiring mind lacks the necessary self-criticism in investigating an unknown quantity.

[260] As has already been indicated, the psychic nature of the arcane substance did not escape the alchemists; indeed, they actually defined it as “spirit” and “soul.” But since these concepts—especially in earlier times—were always ambiguous, we must approach them with caution if we want to gain a moderately clear idea of what the terms *spiritus* and *anima* meant in alchemical usage.

A. MERCURIUS AS AN AERIAL SPIRIT

[261] Hermes, originally a wind god, and his counterpart the Egyptian Thoth, who “makes the souls to breathe,”¹ are the forerunners of the alchemical Mercurius in his aerial aspect. The texts often use the terms *pneuma* and *spiritus* in the original concrete sense of “air in motion.” So when Mercurius is described in the *Rosarium philosophorum* (fifteenth century) as *aereus* and *volans*² (winged), and in Hoghelande (sixteenth century) as *totus aereus et spiritualis*,³ what is meant is nothing more than a gaseous state of aggregation. Something similar is meant by the poetic expression *serenitas aerea* in the Ripley *Scrowle*,⁴ and by the same author’s statement that Mercurius is changed into wind.⁵ He is the *lapis elevatus cum vento* (the stone uplifted by the wind).⁶ The expressions *spirituale corpus*⁷ and *spiritus visibilis, tamen*

*impalpabilis*⁸ (visible yet impalpable spirit) might also mean little more than “air” if one recalls the aforementioned vapour-like nature of Mercurius, and the same is probably true even of the *spiritus prae cunctis valde purus*⁹ (pre-eminently pure spirit). The designation *incombustibilis*¹⁰ is more doubtful, since this was often synonymous with *incompactibilis* and then meant “eternal,” as we shall see later. Penotus (sixteenth century), a pupil of Paracelsus, stresses the corporeal aspect when he says that Mercurius is “nothing other than the spirit of the world become body within the earth.”¹¹ This expression shows better than anything else the contamination—inconceivable to the modern mind—of two separate realms, spirit and matter; for to people in the Middle Ages the *spiritus mundi* was also the spirit which rules nature, and not just a pervasive gas. We find ourselves in the same dilemma when another author, Mylius, in his *Philosophia reformata*,¹² describes Mercurius as an “intermediate substance” (*media substantia*), which is evidently synonymous with his concept of the *anima media natura*¹³ (soul as intermediate nature), for to him Mercurius was the “spirit and soul of the bodies.”¹⁴

B. MERCURIUS AS SOUL

[262] “Soul” represents a higher concept than “spirit” in the sense of air or gas. As the “subtle body” or “breath-soul” it means something non-material and finer than mere air. Its essential characteristic is to animate and be animated; it therefore represents the life principle. Mercurius is often designated as *anima* (hence, as a feminine being, he is also called *foemina* or *virgo*), or as *nostra anima*.¹⁵ The *nostra* here does not mean “our own” soul but, as in *aqua nostra*, *Mercurius noster*, *corpus nostrum*, refers to the arcane substance.

[263] However, *anima* often appears to be connected with *spiritus*, or is equated with it.¹⁶ For the spirit shares the living quality of the soul, and for this reason Mercurius is often called the *spiritus vegetativus*¹⁷ (spirit of life) or *spiritus seminalis*.¹⁸ A peculiar appellation is found in that seventeenth-century forgery which purports to be the secret book of Abraham le Juif, mentioned by Nicolas Flamel (fourteenth century). The epithet is *spiritus Pythonis* (from *φύω*, ‘to procreate,’ *φυτόν*, ‘creature,’ *φύτωρ*, ‘procreator,’ and *Python*, the Delphic serpent), and is accompanied by the serpent sign: Ω,¹⁹ Very much more material is the definition of Mercurius as a “life-giving power like a glue, holding the world together and standing in the middle between body and spirit.”²⁰ This concept corresponds to Mylius’ definition of Mercurius as the *anima media natura*. From here it is but a step to the identification of Mercurius with the *anima mundi*,²¹ which is how Avicenna had defined him very much earlier (twelfth to thirteenth century). “He is the spirit of the Lord which fills the whole world and in the beginning swam upon the waters. They call him also the spirit of Truth, which is hidden from the world.”²² Another text says that Mercurius is the

“supracelestial spirit which is conjoined with the light, and rightly could be called the *anima mundi*.”²³ It is clear from a number of texts that the alchemists related their concept of the *anima mundi* on the one hand to the world soul in Plato’s *Timaeus* and on the other to the Holy Spirit, who was present at the Creation and played the role of procreator (*φύτωρ*), impregnating the waters with the seed of life just as, later, he played a similar role in the *obumbratio* (overshadowing) of Mary.²⁴ Elsewhere we read that a “life-force dwells in *Mercurius non vulgaris*, who flies like solid white snow. This is a spirit of the macrocosmic as of the microcosmic world, upon whom, after the *anima rationalis*, the motion and fluidity of human nature itself depends.”²⁵ The snow represents the purified Mercurius in the state of *albedo* (= spirituality); here again matter and spirit are identical. Worth noting is the duality of soul caused by the presence of Mercurius: on the one hand the immortal *anima rationalis* given by God to man, which distinguishes him from animals; on the other hand the mercurial life-soul, which to all appearances is connected with the *inflatio* or *inspiratio* of the Holy Spirit. This fundamental duality forms the psychological basis of the two sources of illumination.

C. MERCURIUS AS SPIRIT IN THE INCORPOREAL, METAPHYSICAL SENSE

[264] In many of the passages it remains doubtful whether *spiritus* means spirit in an abstract sense.²⁰ It is moderately certain that this is so in Dorn, for he says that “Mercurius possesses the quality of an incorruptible spirit, which is like the soul, and because of its incorruptibility is called intellectual”²⁷—i.e., pertaining to the *mundus intelligibilis*. One text expressly calls him “spiritual and hyperphysical,”²⁸ and another says that the spirit of Mercurius comes from heaven.²⁹ Laurentius Ventura (sixteenth century) may well have been associating himself with the “Platonis liber quartorum” and hence with the neo-Platonist ideas of the Harranite school when he defined the spirit of Mercurius as “completely and entirely like itself” (*sibi omnino similis*) and *simplex*,³⁰ for this Harranite text defines the arcane substance as the *res simplex* and equates it with God.³¹

[265] The oldest reference to the mercurial *pneuma* occurs in an Ostanes quotation of considerable antiquity (possibly pre-Christian), which says: “Go to the streamings of the Nile, and there you will find a stone that has a spirit.”³² In Zosimos Mercurius is characterized as incorporeal (*ἀσώματον*),³³ and by another author as ethereal (*αἰθερῶδες πνεῦμα*) and as having become rational or wise (*σώφρων γενομένη*).³⁴ In the very old treatise “Isis to Horus” (first century) the divine water is brought by an angel and is clearly of celestial or possibly daemonic origin, since according to the text the angel Annael who brings it is not a morally irreproachable figure.³⁵ For the alchemists, as we know not only from the ancient but also from the later writers, Mercurius as the arcane substance had a more or less secret connection with the

goddess of love. In the “Book of Krates,” which was transmitted by the Arabs and is possibly of Alexandrian origin, Aphrodite appears with a vessel from the mouth of which pours a ceaseless stream of quicksilver,³⁶ and in the *Chymical Wedding* of Christian Rosencreutz the central mystery is his visit to the secret chamber of the sleeping Venus.

[266] The fact that Mercurius is interpreted as spirit and soul, in spite of the spirit-body dilemma which this involves, indicates that the alchemists themselves conceived of their arcane substance as something that we today would call a psychic phenomenon. Indeed, whatever else spirit and soul may be, from the phenomenological point of view they are psychic structures. The alchemists never tired of drawing attention to the psychic nature of Mercurius. So far we have concerned ourselves with, statistically, the commonest synonyms such as water and fire, spirit and soul, and it is now possible for us to conclude that these exemplify a psychological state of affairs best characterized by (or, indeed, actually demanding) an antinomian nomenclature. Water and fire are classic opposites and can be valid definitions of one and the same thing only if this thing unites in itself the contrary qualities of water and fire. The psychologem “Mercurius” must therefore possess an essentially antinomian dual nature.

5. THE DUAL NATURE OF MERCURIUS

[267] Mercurius, following the tradition of Hermes, is many-sided, changeable, and deceitful. Dorn speaks of “that inconstant Mercurius,”¹ and another calls him *versipellis* (changing his skin, shifty).² He is *duplex*³ and his main characteristic is duplicity. It is said of him that he “runs round the earth and enjoys equally the company of the good and the wicked.”⁴ He is “two dragons,”⁵ the “twin,”⁶ made of “two natures”⁷ or “two substances.”⁸ He is the “giant of twofold substance,” in explanation of which the text⁹ cites the twenty-sixth chapter of Matthew, where the sacrament of the Last Supper is instituted. The Christ analogy is thus made plain. The two substances of Mercurius are thought of as dissimilar, sometimes opposed; as the dragon he is “winged and wingless.”¹⁰ A parable says: “On this mountain lies an ever-waking dragon, who is called Pantophthalmos, for he is covered with eyes on both sides of his body, before and behind, and he sleeps with some open and some closed.”¹¹ There is the “common and the philosophic” Mercurius;¹² he consists of “the dry and earthy, the moist and viscous.”¹³ Two of his elements are passive, earth and water, and two active, air and fire.¹⁴ He is both good and evil.¹⁵ The “Aurelia occulta” gives a graphic description of him:¹⁶

I am the poison-dripping dragon, who is everywhere and can be cheaply had. That upon which I rest, and that which rests upon me, will be found within me by those who pursue their investigations in accordance with the rules of the Art. My water and fire destroy and put together; from my body you may extract the green lion and the red. But if you do not have exact knowledge of me, you will destroy your five senses with my fire. From my snout there comes a spreading poison that has brought death to many. Therefore you should skilfully separate the coarse from the fine, if you do not wish to suffer utter poverty. I bestow on you the powers of the male and the female, and also those of heaven and of earth. The mysteries of my art must be handled with courage and greatness of mind if you would conquer me by the power¹⁷ of fire, for already very many have come to grief, their riches and labour lost. I am the egg of nature, known only to the wise, who in piety and modesty bring forth from me the microcosm, which was prepared for mankind by Almighty God, but given only to the few, while the many long for it in vain, that they may do good to the poor with my treasure and not fasten their souls to the perishable gold. By the philosophers I am named Mercurius; my spouse is the [philosophic] gold; I am the old dragon, found everywhere on the globe of the earth, father and mother, young and

old, very strong and very weak, death and resurrection, visible and invisible, hard and soft; I descend into the earth and ascend to the heavens, I am the highest and the lowest, the lightest and the heaviest; often the order of nature is reversed in me, as regards colour, number, weight, and measure; I contain the light of nature; I am dark and light; I come forth from heaven and earth; I am known and yet do not exist at all,¹⁸ by virtue of the sun's rays all colours shine in me, and all metals. I am the carbuncle of the sun, the most noble purified earth, through which you may change copper, iron, tin, and lead into gold.

[268] Because of his united double nature Mercurius is described as hermaphroditic. Sometimes his body is said to be masculine and his soul feminine, sometimes the reverse. The *Rosarium philosophorum*, for example, has both versions.¹⁹ As *vulgaris* he is the dead masculine body, but as “our” Mercurius he is feminine, spiritual, alive and life-giving.²⁰ He is also called husband and wife,²¹ bridegroom and bride, or lover and beloved.²² His contrary natures are often called *Mercurius sensu strictiori* and sulphur, the former being feminine, earth, and Eve, and the latter masculine, water, and Adam.²³ In Dorn he is the “true hermaphroditic Adam,”²⁴ and in Khunrath he is “begotten of the hermaphroditic seed of the Macrocosm” as “an immaculate birth from the hermaphroditic matter” (i.e., the *prima materia*).²⁵ Mylius calls him the “hermaphroditic monster.”²⁶ As Adam he is also the microcosm, or even “the heart of the microcosm,”²⁷ or he has the microcosm “in himself, where are also the four elements and the *quinta essentia* which they call Heaven.”²⁸ The term *coelum* for Mercurius does not, as one might think, derive from the *firmamentum* of Paracelsus, but occurs earlier in Johannes de Rupescissa (fourteenth century).²⁹ The term *homo* is used as a synonym for “microcosm,” as when Mercurius is named the “Philosophic ambisexual Man.”³⁰ In the very old “Dicta Belini” (Belinus or Balinus is a corruption of Apollonius of Tyana), he is the “man rising from the river,”³¹ probably a reference to the vision of Ezra.³² In Trismosin's *Splendor solis* (sixteenth century) there is an illustration of this.³³ The idea itself may go back to the Babylonian teacher of wisdom, Oannes. The designation of Mercurius as the “high man”³⁴ does not fit in badly with such a pedigree. The terms Adam and microcosm occur frequently in the texts,³⁵ but the Abraham le Juif forgery unblushingly calls Mercurius Adam Kadmon.³⁶ As I have discussed this unmistakable continuation of the Gnostic doctrine of the Anthropos elsewhere,³⁷ there is no need for me to go more closely now into this aspect of Mercurius.³⁸ Nevertheless, I would like to emphasize once again that the Anthropos idea coincides with the psychological concept of the self. The atman and purusha doctrine as well as alchemy give clear proofs of this.

[269] Another aspect of the dual nature of Mercurius is his characterization as *senex*³⁹ and *puer*.⁴⁰ The figure of Hermes as an old man, attested by archaeology, brings him into direct relation with Saturn—a relationship which plays a considerable role in

alchemy (see *infra*, pars. 274ff.). Mercurius truly consists of the most extreme opposites; on the one hand he is undoubtedly akin to the godhead, on the other he is found in sewers. Rosinus (Zosimos) even calls him the *terminus ani*.⁴¹ In the Bundahish,⁴² the anus of Garotman is “like hell on earth.”

6. THE UNITY AND TRINITY OF MERCURIUS

[270] In spite of his obvious duality the unity of Mercurius is also emphasized, especially in his form as the lapis. “In all the world he is One.”¹ The unity of Mercurius is at the same time a trinity, with clear reference to the Holy Trinity, although his triadic nature does not derive from Christian dogma but is of earlier date. Triads occur as early as the treatise of Zosimos, *περὶ ἀρετῆς* (Concerning the Art).² Martial calls Hermes *omnia solus el ter unus* (All and Thrice One).³ In Monakris (Arcadia), a three-headed Hermes was worshipped, and in Gaul there was a three-headed Mercurius.⁴ This Gallic god was also a psychopomp. The triadic character is an attribute of the gods of the underworld, as for instance the three-bodied Typhon, three-bodied and three-faced Hecate,⁵ and the “ancestors” (*τριτοπάτορες*) with their serpent bodies. According to Cicero,⁶ these latter are the three sons of Zeus the King, the *rex antiquissimus*.⁷ They are called the “forefathers” and are wind-gods;⁸ obviously by the same logic the Hopi Indians believe that snakes are at the same time flashes of lightning auguring rain. Khunrath calls Mercurius *triunus*⁹ and *ternarius*.¹⁰ Mylius represents him as a three-headed snake.¹¹ The “Aquarium sapientum” says that he is a “triune, universal essence which is named Jehova.¹² He is divine and at the same time human.”¹³

[271] From all this one must conclude that Mercurius corresponds not only to Christ, but to the triune divinity in general. The “Aurelia occulta” calls him “Azoth,” and explains the term as follows: “For he is the A and O that is everywhere present. The philosophers have adorned [him] with the name Azoth, which is compounded of the A and Z of the Latins, the alpha and omega of the Greeks, and the aleph and tau of the Hebrews:

$$A \left\{ \begin{array}{c} Z \\ \omega \\ \aleph \end{array} \right\} \text{Azoth.}''^{14}$$

The parallel with the Trinity could not be more clearly indicated. The anonymous commentator of the “Tractatus aureus” puts the parallel with Christ as Logos just as unmistakably. All things proceed from the “philosophic heaven adorned with an infinite multitude of stars,”¹⁵ from the creative Word incarnate, the Johannine Logos, without which “was not any thing made that was made.” The commentator says: “Thus the Word of renewal is invisibly inherent in all things, but it is not evident in elementary solid bodies unless they have been brought back to the fifth, or heavenly

and astral essence. Hence this Word of renewal is the seed of promise, or the philosophic heaven refulgent with the infinite lights of the stars.”¹⁶ Mercurius is the Logos become world. The description given here may point to his basic identity with the collective unconscious, for as I tried to show in my essay “On the Nature of the Psyche,”¹⁷ the image of the starry heaven seems to be a visualization of the peculiar nature of the unconscious. Since Mercurius is often called *filius*, his sonship is beyond question.¹⁸ He is therefore like a brother to Christ and a second son of God, though in point of time he must be accounted the elder and the first-born. This idea goes back to the conceptions of the Euchites reported in Michael Psellus,¹⁹ who believed that God’s first son was Satanaël²⁰ and that Christ was the second.²¹ However, Mercurius is not only the counterpart of Christ in so far as he is the “son”; he is also the counterpart of the Trinity as a whole in so far as he is conceived to be a chthonic triad. According to this view he would be equal to one half of the Christian Godhead. He is indeed the dark chthonic half, but he is not simply evil as such, for he is called “good *and* evil,” or a “system of the higher powers in the lower.” He calls to mind that double figure which seems to stand behind both Christ and the devil—that enigmatic Lucifer whose attributes are shared by both. In Rev. 22 : 16 Christ says of himself: “I am the root and the offspring of David, the bright and the morning star.”

[272] One peculiarity of Mercurius which undoubtedly relates him to the Godhead and to the primitive creator god is his ability to beget himself. In the “*Allegoriae super librum Turbae*” he says: “The mother bore me and is herself begotten of me.”²² As the uroboros dragon, he impregnates, begets, bears, devours, and slays himself, and “himself lifts himself on high,” as the *Rosarium* says,²³ so paraphrasing the mystery of God’s sacrificial death. Here, as in many similar instances, it would be rash to assume that the alchemists were as conscious of their reasoning processes as perhaps we are. But man, and through him the unconscious, expresses a great deal that is not necessarily conscious in all its implications. Nevertheless I should like to avoid giving the impression that the alchemists were absolutely unconscious of their thought-processes. How little this was so is proved by the above quotations. But although Mercurius, in many texts, is stated to be *trinus et unus*, this does not prevent him from sharing very strongly the *quaternity* of the lapis, with which he is essentially identical. He thus exemplifies that strange dilemma which is posed by the problem of three and four—the well-known axiom of Maria Prophetissa. There is a classical *Hermes tetracephalus* as well as the *Hermes tricephalus*.²⁴ The ground-plan of the Sabaeen temple of Mercurius was a triangle inside a square.²⁵ In the scholia to the “*Tractatus aureus*” the sign for Mercurius is a square inside a triangle surrounded by a circle (symbol of totality).²⁶

7. THE RELATION OF MERCURIUS TO ASTROLOGY AND THE DOCTRINE OF THE ARCHONS

[273] One of the roots of the peculiar philosophy relating to Mercurius lies in ancient astrology and in the Gnostic doctrine of the archons and aeons, which is derived from it. Between Mercurius and the planet there is a relation of mystical identity due either to contamination or to an actual spiritual identity. In the first case quicksilver is simply the planet Mercury as it appears in the earth (just as gold is simply the sun in the earth);¹ in the second, the “spirit” of quicksilver is identical with the planetary spirit. Both spirits individually, or the two as one spirit, were personified and called upon for aid or magically conjured into service as a *paredros* or “familiar.” Within the alchemical tradition we find directions for such procedures in the Harranite treatise “*Clavis maioris sapientiae*” of Artefius,² which agree with descriptions of the invocations mentioned by Dozy and de Goeje.³ There are also references to procedures of this kind in the “*Liber Platonis quatorum*.”⁴ Parallel with this is the account according to which Democritus received the secret of the hieroglyphs from the genius of the planet Mercury.⁵ The spirit Mercurius appears here in the role of a mystagogue, as in the *Corpus Hermeticum* or the visions of Zosimos. He plays the same role in the remarkable dream-vision recorded in “*Aurelia occulta*,” where he appears as the Anthropos with a crown of stars.⁶ As the little star near the sun, he is the child of sun and moon.⁷ But contrariwise he is also the begetter of his parents;⁸ or, as the treatise of Wei Po-yang (c. A.D. 142) remarks, the gold (sun) gets its qualities from Mercurius.⁹ (Owing to the contamination, the astrological myth is always thought of in chemical terms as well.) Because of his half-feminine nature, Mercurius is often identified with the moon¹⁰ and Venus.¹¹ As his own divine consort he easily turns into the goddess of love, just as in his role of Hermes he is ithyphallic. But he is also called the “most chaste virgin.”¹² The relation of quicksilver to the moon (silver) is obvious enough. Mercurius as the shining and shimmering planet, appearing like Venus close to the sun in the morning or evening sky, is like her a Lucifer, a light-bringer (*φωσφόροζ*). He heralds, as the morning star does, only much more directly, the coming of the light.

[274] But the most important of all for an interpretation of Mercurius is his relation to Saturn. Mercurius *senex* is identical with Saturn, and to the earlier alchemists especially, it is not quicksilver, but the lead associated with Saturn, which usually represents the prima materia. In the Arabic text of the *Turba*¹³ quicksilver is identical

with the “water of the moon and of Saturn.” In the “Dicta Belini” Saturn says: “My spirit is the water that loosens the rigid limbs of my brothers.”¹⁴ This refers to the “eternal water” which is just what Mercurius is. Raymund Lully remarks that “a certain oil of a golden colour is extracted from the philosophic lead.”¹⁵ In Khunrath Mercurius is the “salt of Saturn,”¹⁶ or Saturn is simply Mercurius. Saturn “draws the eternal water.”¹⁷ Like Mercurius, Saturn is hermaphroditic.¹⁸ Saturn is “an old man on a mountain, and in him the natures are bound with their complement [i.e., the four elements], and all this is in Saturn.”¹⁹ The same is said of Mercurius. Saturn is the father and origin of Mercurius, therefore the latter is called “Saturn’s child.”²⁰ Quicksilver comes “from the heart of Saturn or is Saturn,”²¹ and a “bright water” is extracted from the plant Saturnia, “the most perfect water and flower in the world.”²² This statement of Sir George Ripley, Canon of Bridlington, is a most remarkable parallel to the Gnostic teaching that Kronos (Saturn) is a “power of the colour of water” (ὕδατόχρους) which destroys everything, since “water is destruction.”²³

[275] Like the planetary spirit of Mercurius, the spirit of Saturn is “very suited to this work.”²⁴ One of the manifestations of Mercurius in the alchemical process of transformation is the lion, now green and now red. Khunrath calls this transformation “luring the lion out of Saturn’s mountain cave.” From ancient times the lion was associated with Saturn.²⁵ Khunrath calls him “the lion of the Catholic tribe,”²⁶ paraphrasing the “lion of the tribe of Judah”—an allegory of Christ.²⁷ He calls Saturn “the lion green and red.”²⁸ In Gnosticism Saturn is the highest archon, the lion-headed Ialdabaoth,²⁹ meaning “child of chaos.” But in alchemy the child of chaos is Mercurius.³⁰

[276] The relation to and identity with Saturn is important because Saturn is not only a *maleficus* but actually the dwelling-place of the devil himself. Even as the highest archon and demiurge his Gnostic reputation was not the best. According to one Cabalistic source, Beelzebub was associated with him.³¹ Mylius says that if Mercurius were to be purified, then Lucifer would fall from heaven.³² A contemporary marginal note in a seventeenth-century treatise in my possession explains the term sulphur, the masculine principle of Mercurius,³³ as *diabolus*. If Mercurius is not exactly the Evil One himself, he at least contains him—that is, he is morally neutral, good and evil, or as Khunrath says: “Good with the good, evil with the evil.”³⁴ His nature is more exactly defined, however, if one conceives him as a *process* that begins with evil and ends with good. A rather deplorable but picturesque poem in *Verus Hermes* (1620) summarizes the process as follows:

A weakling babe, a greybeard old,
Surnamed the Dragon: me they hold
In darkest dungeon languishing

That I may be reborn a king.

A fiery sword makes me to smart,
Death gnaws my flesh and bones apart.
My soul and spirit fast are sinking,
And leave a poison, black and stinking.

To a black crow am I akin,
Such be the wages of all sin.
In deepest dust I lie alone,
O that the Three would make the One!

O soul, O spirit with me stay,
That I may greet the light of day.
Hero of peace, come forth from me,
Whom the whole world would like to see!

[277] In this poem Mercurius is describing his own transformation, which at the same time signifies the mystic transformation of the artifex; for not only Mercurius but also what happens to him is a projection of the collective unconscious. This, as can easily be seen from what has gone before, is the projection of the individuation process, which, being a natural psychic occurrence, goes on even without the participation of consciousness. But if consciousness participates with some measure of understanding, then the process is accompanied by all the emotions of a religious experience or revelation. As a result of this, Mercurius was identified with Sapiaientia and the Holy Ghost. It is therefore very probable that those heresies which began with the Euchites, Paulicians, Bogomils, and Cathars, and which developed the concept of the Paraclete very much in the spirit of the founder of Christianity, were continued in alchemy, partly unconsciously and partly under a deliberate disguise.³⁵

8. MERCURIUS AND HERMES

[278] We have already met with a number of alchemical statements which show plainly that the character of the classical Hermes was faithfully reproduced later in the figure of Mercurius. This is in part an unconscious repetition, in part a spontaneous re-experience, and finally also a conscious reference to the pagan god. There can be no doubt that Michael Maier was consciously alluding to Hermes as pointer of the way (*ὁδηγός*) when he said that he found on his mystic peregrination a statue of Mercurius pointing the way to paradise,¹ and that he was referring to Hermes the mystagogue when he made the Erythraean Sibyl say of Mercurius: “He will make you a witness of the mysteries of God and the secrets of nature.”² Again, as the *divinus ternarius*, Mercurius is the revealer of divine secrets,³ or in the form of gold is conceived to be the soul of the arcane substance (magnesia),⁴ or the fructifier of the philosophical tree.⁵ In the “Epigramma Mercurio philosophico dicatum”⁶ he is called the messenger of the gods, the hermeneut (interpreter), and the Egyptian “Theutius” (Thoth). Maier even goes so far as to relate him to Hermes Kyllenios when he calls him “this faithless and all too elusive Arcadian youth,”⁷ for in Arcadia was the sanctuary of Kyllenios, the ithyphallic Hermes. In the scholia to the “Tractatus aureus” Mercurius is named outright the “Kyllenian hero.”⁸ Maier’s words might also be a reference to Eros. And in fact, in Rosencreutz’s *Chymical Wedding*, Mercurius does appear in the form of Cupid,⁹ and punishes the adept for his curiosity in visiting the Lady Venus by wounding him in the hand with an arrow. The arrow is the “dart of passion” (*telum passionis*), which is also an attribute of Mercurius.¹⁰ He is an “archer,” and indeed one who “shoots without a bowstring” and is “nowhere to be found on earth,”¹¹ so is obviously a daemon. In the Table of Symbols in Penotus¹² he is associated with nymphs, which reminds one of the pastoral god, Pan. His lasciviousness is borne out by an illustration in the *Tripus chemicus* of Sendivogius,¹³ where he appears on a triumphal chariot drawn by a cock and a hen, and behind him is a naked pair of embracing lovers. In this connection may also be mentioned the numerous somewhat obscene pictures of the coniunctio in old prints, often preserved merely as pornographica. Pictures in old manuscripts of excretory acts, including vomiting, likewise belong to this sphere of the “underworldly Hermes.”¹⁴ Again, Mercurius represents the “continuous cohabitation”¹⁵ which is found in unalloyed form in the Tantric Shiva-Shakti concept. Connections between Greek and Arabic alchemy and India are not unlikely. Reitzenstein¹⁶ reports the story of Padmanaba

from a Turkish book of folklore¹⁷ about the forty viziers, which may date back to the time of the Moguls. Already in the first centuries of our era, Indian religious influences were at work in southern Mesopotamia, and in the second century B.C. there were Buddhist monasteries in Persia. In the royal temple of Padmanabhapura in Travancore (c. fifteenth century) I found two reliefs representing an entirely non-Indian *senex ithyphallicus* with wings. In one of them he stands up to his waist in the bowl of the moon. One is reminded of the winged ithyphallic old man who pursues the “blue” or “doglike”¹⁸ woman in Hippolytus. Kyllenios does in fact appear in Hippolytus¹⁹ as identical on the one hand with the Logos and on the other with the wicked Korybas, the phallus, and the demiurgic principle in general.²⁰ Another aspect of this dark Mercurius is the mother-son incest, which may be traceable to Mandaean influences: there Nabu (Mercurius) and Istar (Astarte) form a syzygy. Astarte is the mother and love goddess throughout the whole Near East, where she is also tainted with the incest motif. Nabu is the “Messiah of the Lie,” who because of his malice is punished and kept in prison by the sun.²¹ The texts remind us again and again that Mercurius is “found in the dung-heaps,” but they add ironically that “many have grubbed in the dung-heaps, but extracted nothing thereby.”²²

[279] This dark Mercurius must once again be understood as representing the initial *nigredo* state, the lowest being a symbol of the highest and vice versa:

Anfang und Ende

Reichen sich die Hände.²³

He is the uroboros, the One and All, the union of opposites accomplished during the alchemical process, of which Penotus says:²⁴

Mercurius is begotten by nature as the son of nature and the fruit of the liquid element. But even as the Son of Man is begotten by the philosopher and created as the fruit of the Virgin, so must he [Mercurius] be raised from the earth and cleansed of all earthiness, then he ascends entire into the air, and is changed into spirit. Thus is fulfilled the word of the philosopher: He ascends from earth to heaven and receives the power of Above and Below, and puts off his earthy and impure nature and clothes himself in the heavenly nature.

[280] Since Penotus is here referring to the “Tabula smaragdina,” it must be emphasized that he departs from the spirit of the “Tabula” in one essential point. In the version of Penotus, the ascent of Mercurius is in entire accord with the Christian transformation of the hylic into the pneumatic man. The “Tabula,” on the other hand, says: “He ascends from earth to heaven and descends again to earth, and receives the power of Above and Below. His power is complete when he has returned to earth.” So it is not a question of a one-way ascent to heaven, but, in contrast to the route followed by the Christian Redeemer, who comes from above to below and from there

returns to the above, the *filius macrocosmi* starts from below, ascends on high, and, with the powers of Above and Below united in himself, returns to earth again. He carries out the reverse movement and thereby manifests a nature contrary to that of Christ and the Gnostic Redeemers, while on the other hand he displays a certain affinity with the Basilidian concept of the third sonship. Mercurius has the circular nature of the uroboros, hence he is symbolized by the *circulus simplex* of which he is at the same time the centre.²⁵ He can therefore say of himself: “I am One and at the same time Many in myself.”²⁶ This same treatise says that the centre of the circle in man is the earth, and calls it the “salt” to which Christ referred when he said: “Ye are the salt of the earth.”²⁷

[281] Hermes is a god of thieves and cheats, but also a god of revelation who gave his name to a whole philosophy. Seen in historical retrospect, it was a moment of the utmost significance when the humanist Patrizi proposed to Pope Gregory XIV that Hermetic philosophy should take the place of Aristotle in ecclesiastical doctrine. At that moment two worlds came into contact, which—after heaven knows what happenings!—must yet be united in the future. At that time it was obviously impossible. A psychological differentiation of religious as well as scientific views is still needed before a union can begin to be brought about.²⁸

9. MERCURIUS AS THE ARCANE SUBSTANCE

[282] Mercurius, it is generally affirmed, is the arcanum,¹ the prima materia,² the “father of all metals,”³ the primeval chaos, the earth of paradise, the “material upon which nature worked a little, but nevertheless left imperfect.”⁴ He is also the ultima materia, the goal of his own transformation, the stone,⁵ the tincture, the philosophic gold, the carbuncle, the philosophic man, the second Adam, the analogue of Christ, the king, the light of lights, the *deus terrestris*, indeed the divinity itself or its perfect counterpart. Since I have already discussed the synonyms and meanings of the stone elsewhere there is no need for me to go into further details now.

[283] Besides being the prima materia of the lowly beginning as well as the lapis as the highest goal, Mercurius is also the process which lies between, and the means by which it is effected. He is the “beginning, middle, and end of the work.”⁶ Therefore he is called the Mediator,⁷ Servator, and Salvator. He is a mediator like Hermes. As the *medicina catholica* and *alexipharmakon* he is the “preserver [*servator*] of the world.” He is the “healer [*salvator*] of all imperfect bodies”⁸ and the “image of Christ’s incarnation,”⁹ the *unigenitus* “consubstantial with the parental hermaphrodite.”¹⁰ Altogether, in the macrocosm of nature he occupies the position which Christ holds in the *mundus rationalis* of divine revelation. But as the saying “My light surpasses all other lights”¹¹ shows, the claim of Mercurius goes even further, which is why the alchemists endowed him with the attributes of the Trinity¹² in order to make clear his complete correspondence to God. In Dante, Satan is three-headed and therefore three-in-one. He is the counterpart of God in the sense that he is God’s antithesis. The alchemists did not hold this view of Mercurius; on the contrary, they saw him as a divine emanation harmonious with God’s own being. The stress they laid on his capacity for self-generation, self-transformation, self-reproduction, and self-destruction contradicts the idea that he is a created being. It is therefore only logical when Paracelsus and Dorn state that the prima materia is an “increatedum” and a principle coeternal with God. This denial of *creatio ex nihilo* is supported by the fact that in the beginning God found the Tehom already in existence, that same maternal world of Tiamat whose son we encounter in Mercurius.¹³

10. SUMMARY

[284] The multiple aspects of Mercurius may be summarized as follows:

(1) Mercurius consists of all conceivable opposites. He is thus quite obviously a duality, but is named a unity in spite of the fact that his innumerable inner contradictions can dramatically fly apart into an equal number of disparate and apparently independent figures.

(2) He is both material and spiritual.

(3) He is the process by which the lower and material is transformed into the higher and spiritual, and vice versa.

(4) He is the devil, a redeeming psychopomp, an evasive trickster, and God's reflection in physical nature.

(5) He is also the reflection of a mystical experience of the artifex that coincides with the *opus alchymicum*.

(6) As such, he represents on the one hand the self and on the other the individuation process and, because of the limitless number of his names, also the collective unconscious.¹

* * *

[285] Certainly goldmaking, as also chemical research in general, was of great concern to alchemy. But a still greater, more impassioned concern appears to have been—one cannot very well say the “investigation”—but rather the *experience* of the unconscious. That this side of alchemy—the *μυστικά*—was for so long misunderstood is due solely to the fact that nothing was known of psychology, let alone of the supra-personal, collective unconscious. So long as one knows nothing of psychic actuality, it will be projected, if it appears at all. Thus the first knowledge of psychic law and order was found in the stars, and was later extended by projections into unknown matter. These two realms of experience branched off into sciences: astrology became astronomy, and alchemy chemistry. On the other hand, the peculiar connection between character and the astronomical determination of time has only very recently begun to turn into something approaching an empirical science. The really important psychic facts can neither be measured, weighed, nor seen in a test tube or under a microscope. They are therefore supposedly indeterminable, in other words they must be left to people who have an inner sense for them, just as colours must be shown to the seeing and not to the blind.

[286] The store of projections found in alchemy is, if possible, even less known, and there is a further drawback which makes closer investigation extremely difficult. For, unlike the astrological constituents of character which, if negative, are at most unpleasant for the individual, though amusing to his neighbour, the alchemical projections represent collective contents that stand in painful contrast—or rather, in compensatory relation—to our highest rational convictions and values. They give the strange answers of the natural psyche to the ultimate questions which reason has left untouched. Contrary to all progress and belief in a future that will deliver us from the sorrowful present, they point back to something primeval, to the apparently hopelessly static, eternal sway of matter that makes our fondly believed-in world look like a phantasmagoria of shifting scenes. They show us, as the redemptive goal of our active, desirous life, a symbol of the inorganic—the stone—something that does not live but merely exists or “becomes,” the passive subject of a limitless and unfathomable play of opposites. “Soul,” that bodiless abstraction of the rational intellect, and “spirit,” that two-dimensional metaphor of dry-as-dust philosophical dialectic, appear in alchemical projection in almost physical, plastic form, like tangible breath-bodies, and refuse to function as component parts of our rational consciousness. The hope for a psychology without the soul is brought to nothing, and the illusion that the unconscious has only just been discovered vanishes: in a somewhat peculiar form, admittedly, it has been known for close on two thousand years. Let us, however, not delude ourselves: no more than we can separate the constituents of character from the astronomical determinants of time are we able to separate that unruly and evasive Mercurius from the autonomy of matter. Something of the projection-carrier always clings to the projection, and even if we succeed to some degree in integrating into our consciousness the part we recognize as psychic, we shall integrate along with it something of the cosmos and its materiality; or rather, since the cosmos is infinitely greater than we are, we shall have been assimilated by the inorganic. “Transform yourselves into living philosophical stones!” cries an alchemist, but he did not know how infinitely slowly the stone “becomes.” Anyone who gives serious thought to the “natural light” that emanates from the projections of alchemy will certainly agree with the Master who spoke of the “wearisomeness of the interminable meditation” demanded by the work. In these projections we encounter the phenomenology of an “objective” spirit, a true matrix of psychic experience, the most appropriate symbol for which is matter. Nowhere and never has man controlled matter without closely observing its behaviour and paying heed to its laws, and only to the extent that he did so could he control it. The same is true of that objective spirit which today we call the unconscious: it is refractory like matter, mysterious and elusive, and obeys laws which are so non-human or suprahuman that they seem to us like a *crimen laesae majestatis humanae*. If a man puts his hand to the opus, he

repeats, as the alchemists say, God's work of creation. The struggle with the unformed, with the chaos of Tiamat, is in truth a primordial experience.

[287] Since the psyche, when directly experienced, confronts us in the "living" substance it has animated and appears to be one with it, Mercurius is called *argentum vivum*. Conscious discrimination, or consciousness itself, effects that world-shattering intervention which separates body from soul and divides the spirit Mercurius from the *hydrargyrum*, as if drawing off the spirit into the bottle, to speak in terms of our fairytale. But since body and soul, in spite of the artificial separation, are united in the mystery of life, the mercurial spirit, though imprisoned in the bottle, is yet found in the roots of the tree, as its quintessence and living numen. In the language of the Upanishads, he is the personal atman of the tree. Isolated in the bottle, he corresponds to the ego and the principle of individuation, which in the Indian view leads to the illusion of individual existence. Freed from his prison, Mercurius assumes the character of the supra-personal atman. He becomes the *one* animating principle of all created things, the *hiranyagarbha* (golden germ),² the supra-personal self, represented by the *filius macrocosmi*, the *one* stone of the wise. "Rosinus ad Sarratantam" cites a saying of "Malus Philosophus"³ which attempts to formulate the psychological relation of the lapis to consciousness: "This stone is below thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals."⁴ Applied to the self, this would mean: "The self is subordinate to you, yet on the other hand rules you. It is dependent on your own efforts and your knowledge, but transcends you and embraces all those who are of like mind." This refers to the collective nature of the self, since the self epitomizes the wholeness of the personality. By definition, wholeness includes the collective unconscious, which as experience seems to show is everywhere identical.

[288] The encounter of the poor student with the spirit in the bottle portrays the spiritual adventure of a blind and unawakened human being. The same motif underlies the tale of the swineherd who climbed the world-tree,⁵ and also forms the *leitmotiv* of alchemy. For what it signifies is the individuation process as it prepares itself in the unconscious and gradually enters consciousness. The commonest alchemical symbol for this is the tree, the *arbor philosophica*, which derives from the paradisaical tree of knowledge. Here, as in our fairytale, a demonic serpent, an evil spirit, prods and persuades to knowledge. In view of the Biblical precedent, it is not surprising that the spirit Mercurius has, to say the least, a great many connections with the dark side. One of his aspects is the female serpent-daemon, Lilith or Melusina, who lives in the philosophical tree. At the same time, he not only partakes of the Holy Spirit but, according to alchemy, is actually identical with it. We have no choice but to accept this shocking paradox after all we have learnt about the ambivalence of the spirit archetype. Our ambiguous Mercurius simply confirms the

rule. In any case, the paradox is no worse than the Creator's whimsical notion of enlivening his peaceful, innocent paradise with the presence of an obviously rather dangerous tree-snake, "accidentally" located on the very same tree as the forbidden apples.

[289] It must be admitted that the fairytale and alchemy both show Mercurius in a predominantly unfavourable light, which is all the more striking because his positive aspect relates him not only to the Holy Spirit, but, in the form of the lapis, also to Christ and, as a triad, even to the Trinity. It looks as if it were precisely these relationships which led the alchemists to put particular stress on the dark and dubious quality of Mercurius, and this militates strongly against the assumption that by their lapis they really meant Christ. If this had been their meaning, why should they have renamed Christ the *lapis philosophorum*? The lapis is at most a counterpart or analogy of Christ in the physical world. Its symbolism, like that of Mercurius who constitutes its substance, points, psychologically speaking, to the self, as also does the symbolic figure of Christ.⁶ In comparison with the purity and unity of the Christ symbol, Mercurius-lapis is ambiguous, dark, paradoxical, and thoroughly pagan. It therefore represents a part of the psyche which was certainly not moulded by Christianity and can on no account be expressed by the symbol "Christ." On the contrary, as we have seen, in many ways it points to the devil, who is known at times to disguise himself as an angel of light. The lapis formulates an aspect of the self which stands apart, bound to nature and at odds with the Christian spirit. It represents all those things which have been eliminated from the Christian model. But since they possess living reality, they cannot express themselves otherwise than in dark Hermetic symbols. The paradoxical nature of Mercurius reflects an important aspect of the self—the fact, namely, that it is essentially a *complexio oppositorum*, and indeed can be nothing else if it is to represent any kind of totality. Mercurius as *deus terrestris* has something of that *deus absconditus* (hidden god) which is an essential element of the psychological self, and the self cannot be distinguished from a God-image (except by incontestable and unprovable faith). Although I have stressed that the lapis is a symbol embracing the opposites, it should not be thought of as a—so to speak—more complete symbol of the self. That would be decidedly incorrect, for actually it is an image whose form and content are largely determined by the unconscious. For this reason it is never found in the texts in finished and well-defined form; we have to combine all the scattered references to the various arcane substances, to Mercurius, to the transformation process and the end product. Although the lapis in one aspect or another is almost always the subject discussed, there is no real consensus of opinion in regard to its actual form. Almost every author has his own special allegories, synonyms, and metaphors. This makes it clear that the stone, though indeed an object of general experiment, was to an even greater extent

an outcropping of the unconscious, which only sporadically crossed the borderline of subjectivity and gave rise to the vague general concept of the *lapis philosophorum*.

[290] Opposed to this figure veiled in the twilight of more or less secret doctrines there stands, sharply outlined by dogma, the Son of Man and Salvator Mundi, Christ the Sol Novus, before whom the lesser stars pale. He is the affirmation of the daylight of consciousness in trinitarian form. So clear and definite is the Christ figure that whatever differs from him must appear not only inferior but perverse and vile. This is not the result of Christ's own teaching, but rather of what is taught about him, and especially of the crystal purity which dogma has bestowed upon his figure. As a result, a tension of opposites such as had never occurred before in the whole history of Christianity beginning with the Creation arose between Christ and the Antichrist, as Satan or the fallen angel. At the time of Job, Satan is still found among the sons of God. "Now there was a day," it says in Job 1 : 6, "when the sons of God came to present themselves before the Lord, and Satan came also among them." This picture of a celestial family reunion gives no hint of the New Testament "Get thee hence, Satan" (Matthew 4 : 10), nor yet of the dragon chained in the underworld for a thousand years (Rev. 20 : 2). It looks as if the superabundance of light on one side had produced an all the blacker darkness on the other. One can also see that the uncommonly great diffusion of black substance makes a sinless being almost impossible. A loving belief in such a being naturally involves cleansing one's own house of black filth. But the filth must be dumped somewhere, and no matter where the dump lies it will plague even the best of all possible worlds with a bad smell.

[291] The balance of the primordial world is upset. What I have said is not intended as a criticism, for I am deeply convinced not only of the relentless logic but of the expediency of this development. The emphatic differentiation of opposites is synonymous with sharper discrimination, and that is the *sine qua non* for any broadening or heightening of consciousness. The progressive differentiation of consciousness is the most important task of human biology and accordingly meets with the highest rewards—vastly increased chances of survival and the development of power technology. From the phylogenetic point of view, the effects of consciousness are as far-reaching as those of lung-breathing and warm-bloodedness. But clarification of consciousness necessarily entails an obscuration of those dimmer elements of the psyche which are less capable of becoming conscious, so that sooner or later a split occurs in the psychic system. Since it is not recognized as such it is projected, and appears in the form of a metaphysical split between the powers of light and the powers of darkness. The possibility of this projection is guaranteed by the presence of numerous archaic vestiges of the original daemons of light and darkness in any age. It seems likely, therefore, that the tension of opposites in Christianity is

derived to a still unclarified degree from the dualism of ancient Persia, though the two are not identical.

[292] There can be no doubt that the moral consequences of the Christian development represent a very considerable advance compared with the ancient Israelite religion of law. The Christianity of the synoptic gospels signifies little more than a coming to terms with issues inside Judaism, which may fairly be compared with the much earlier Buddhist reformation inside Hindu polytheism. Psychologically, both reformations resulted in a tremendous strengthening of consciousness. This is particularly evident in the maieutic method employed by Shakyamuni. But the sayings of Jesus manifest the same tendency, even if we discard as apocryphal the clearest formulation of this kind, the logion in Codex Bezae to Luke 6 : 4: "Man, if thou knowest what thou doest, thou art blessed. If thou knowest it not, thou art accursed and a transgressor of the law." At all events, the parable of the unjust steward (Luke 16) has not found its way into the Apocrypha, where it would have fitted so well.

[293] The rift in the metaphysical world has slowly risen into consciousness as a split in the human psyche, and the struggle between light and darkness moves to the battleground within. This shift of scene is not entirely self-evident, for which reason St. Ignatius Loyola considered it necessary to open our eyes to the conflict and impress it on our feelings by means of the most drastic spiritual exercises.⁷ These efforts, for obvious reasons, had only a very limited range of application. And so, strangely enough, it was the medical men who, at the turn of the nineteenth century, were forced to intervene and get the obstructed process of conscious realization going again. Approaching the problem from a scientific angle, and innocent of any religious aim, Freud uncovered the abysmal darkness of human nature which a would-be enlightened optimism had striven to conceal. Since then psychotherapy, in one form or another, has persistently explored the extensive area of darkness which I have called the shadow. This attempt of modern science opened the eyes of only a few. However, the historic events of our time have painted a picture of man's psychic reality in indelible colours of blood and fire, and given him an object lesson which he will never be able to forget if—and this is the great question—he has today acquired enough consciousness to keep up with the furious pace of the devil within him. The only other hope is that he may learn to curb a creativity which is wasting itself in the exploitation of material power. Unfortunately, all attempts in that direction look like bloodless Utopias.

[294] The figure of Christ the Logos has raised the *anima rationalis* in man to a level of importance which remains unobjectionable so long as it knows itself to be below and subject to the *κύριος*, the Lord of Spirits. Reason, however, has set itself free and proclaimed itself the ruler. It has sat enthroned in Notre Dame as *Déesse Raison* and

heralded events that were to come. Our consciousness is no longer confined within a sacred temenos of otherworldly, eschatological images. It was helped to break free by a force that did not stream down from above—like the *lumen de lumine*—but came up with tremendous pressure from below and increased in strength as consciousness detached itself from the darkness and climbed into the light. In accordance with the principle of compensation which runs through the whole of nature, every psychic development, whether individual or collective, possesses an optimum which, when exceeded, produces an enantiodynamia, that is, turns into its opposite. Compensatory tendencies emanating from the unconscious may be noted even during the approach to the critical turning-point, though if consciousness persists in its course they are completely repressed. The stirrings in the darkness necessarily seem like a devilish betrayal of the ideal of spiritual development. Reason cannot help condemning as unreasonable everything that contradicts it or deviates from its laws, in spite of all evidence to the contrary. Morality can permit itself no capacity for change, for whatever it does not agree with is inevitably immoral and has therefore to be repressed. It is not difficult to imagine the multitude of energies which must flow off into the unconscious under such conscious domination.

[295] Hesitantly, as in a dream, the introspective brooding of the centuries gradually put together the figure of Mercurius and created a symbol which, according to all the psychological rules, stands in a compensatory relation to Christ. It is not meant to take his place, nor is it identical with him, for then indeed it could replace him. It owes its existence to the law of compensation, and its object is to throw a bridge across the abyss separating the two psychological worlds by presenting a subtle compensatory counterpoint to the Christ image. The fact that in *Faust* the compensatory figure is not, as one might almost have expected from the author's classical predilections, the wily messenger of the gods, but, as the name "Mephistopheles"⁸ shows, a *familiaris* risen from the cesspits of medieval magic, proves, if anything, the ingrained Christian character of Goethe's consciousness. To the Christian mentality, the dark antagonist is always the devil. As I have shown, Mercurius escapes this prejudice by only a hair's breadth. But he escapes it, thanks to the fact that he scorns to carry on opposition at all costs. The magic of his name enables him, in spite of his ambiguity and duplicity, to keep outside the split, for as an ancient pagan god he possesses a natural undividedness which is impervious to logical and moral contradictions. This gives him invulnerability and incorruptibility, the very qualities we so urgently need to heal the split in ourselves.

[296] If one makes a synopsis of all the descriptions and alchemical pictures of Mercurius, they form a striking parallel to the symbols of the self derived from other sources. One can hardly escape the conclusion that Mercurius as the lapis is a symbolic expression for the psychological complex which I have defined as the self.

Similarly, the Christ figure must be viewed as a self symbol, and for the same reasons. But this leads to an apparently insoluble contradiction, for it is not at first clear how the unconscious can shape two such different images from one and the same content, which moreover possesses the character of totality. Certainly the centuries have done their spiritual work upon these two figures, and one is inclined to assume that both have been in large measure anthropomorphized during the process of assimilation. For those who hold that both figures are inventions of the intellect, the contradiction is quickly resolved. It then merely reflects the subjective psychic situation: the two figures would stand for man and his shadow.

[297] This very simple and obvious solution is, unfortunately, founded on premises that do not stand up to criticism. The figures of Christ and the devil are both based on archetypal patterns, and were never invented but rather *experienced*. Their existence preceded all cognition of them,⁹ and the intellect had no hand in the matter, except to assimilate them and if possible give them a place in its philosophy. Only the most superficial intellectualism can overlook this fundamental fact. We are actually confronted with two different images of the self, which in all likelihood presented a duality even in their original form. This duality was not invented, but is an autonomous phenomenon.

[298] Since we naturally think from the standpoint of consciousness, we inevitably come to the conclusion that the split between consciousness and the unconscious is the sole cause of this duality. But experience has demonstrated the existence of a preconscious psychic functioning and of corresponding autonomous factors, the archetypes. Once we can accept the fact that the voices and delusions of the insane and the phobias and obsessions of the neurotic are beyond rational control, and that the ego cannot voluntarily fabricate dreams but simply dreams what it has to, then we can also understand that the gods came first and theology later. Indeed, we must go a step further and assume that in the beginning there were two figures, one bright and one shadowy, and only afterwards did the light of consciousness detach itself from the night and the uncertain shimmer of its stars.

[299] So if Christ and the dark nature-deity are autonomous images that can be directly experienced, we are obliged to reverse our rationalistic causal sequence, and instead of deriving these figures from our psychic conditions, must derive our psychic conditions from these figures. This is expecting a good deal of the modern intellect but does not alter the logic of our hypothesis. From this standpoint Christ appears as the archetype of consciousness and Mercurius as the archetype of the unconscious. As Cupid and Kyllenios, he tempts us out into the world of sense; he is the *benedicta viriditas* and the *multi flores* of early spring, a god of illusion and delusion of whom it is rightly said: "Invenitur in vena / Sanguine plena" (He is found in the vein swollen with blood). He is at the same time a Hermes Chthonios and an Eros, yet it is

from him that there issues the “light surpassing all lights,” the *lux moderna*, for the lapis is none other than the figure of light veiled in matter.¹⁰ It is in this sense that St. Augustine quotes I Thessalonians 5 : 5, “Ye are all the children of light, and the children of the day: we are not of the night, nor of darkness,” and distinguishes two forms of knowledge, a *cognitio vespertina* and a *cognitio matutina*, the first corresponding to the *scientia creaturae* and the second to the *scientia Creatoris*.¹¹ If we equate *cognitio* with consciousness, then Augustine’s thought would suggest that the merely human and natural consciousness gradually darkens, as at nightfall. But just as evening gives birth to morning, so from the darkness arises a new light, the *stella matutina*, which is at once the evening and the morning star—Lucifer, the light-bringer.

[300] Mercurius is by no means the Christian devil—the latter could rather be said to be a “diabolization” of Lucifer or of Mercurius. Mercurius is an adumbration of the primordial light-bringer, who is never himself the light, but a *φωσφόρος* who brings the light of nature, the light of the moon and the stars which fades before the new morning light. Of this light St. Augustine says that it will never turn to darkness unless the Creator is abandoned by the love of his creatures. But this, too, belongs to the rhythm of day and night. As Hölderlin says in “Patmos”;

and shamefully

A power wrests away the heart from us;

For the Heavenly each demand sacrifice,

But if it should be withheld,

Never has that led to good.

[301] When all visible lights are extinguished one finds, according to the words of the wise Yajñavalkya, the light of the self. “What then is the light of man? Self is his light. It is by the light of the self that a man rests, goes forth, does his work and returns.”¹² Thus, with Augustine, the first day of creation begins with self-knowledge, *cognitio sui ipsius*,¹³ by which is meant a knowledge not of the ego but of the self, that objective phenomenon of which the ego is the subject.¹⁴ Then, following the order of the days of creation in Genesis, comes knowledge of the firmament, of the earth, the sea, the plants, the stars, the animals of the water and air, and finally, on the sixth day, knowledge of the land animals and of *ipsius hominis*, of man himself. The *cognitio matutina* is self-knowledge, but the *cognitio vespertina* is knowledge of man.¹⁵ As Augustine describes it, the *cognitio matutina* gradually grows old as it loses itself in the “ten thousand things” and finally comes to man, although one would expect this to have happened already with the onset of self-knowledge. But if this were true, Augustine’s parable would have lost its meaning by contradicting itself. Such an obvious lapse cannot be ascribed to so gifted a man. His real meaning

is that self-knowledge is the *scientia Creatoris*,¹⁶ a morning light revealed after a night during which consciousness slumbered, wrapped in the darkness of the unconscious. But the knowledge arising with this first light finally and inevitably becomes the *scientia hominis*, the knowledge of man, who asks himself: "Who is it that knows and understands everything? Why, it is myself." That marks the coming of darkness,¹⁷ out of which arises the seventh day, the day of rest: "But the rest of God signifies the rest of those who rest in God."¹⁸ The Sabbath is therefore the day on which man returns to God and receives anew the light of the *cognitio matutina*. And this day has no evening.¹⁹ From the symbological standpoint it may not be without significance that Augustine had in mind the pagan names of the days of the week. The growing darkness reaches its greatest intensity on the day of Venus (Friday), and changes into Lucifer on Saturn's day. Saturday heralds the light which appears in full strength on Sun-day. As I have shown, Mercurius is closely related not only to Venus but more especially to Saturn. As Mercurius he is *juvenis*, as Saturn *senex*.

[302] It seems to me that Augustine apprehended a great truth, namely that every spiritual truth gradually turns into something material, becoming no more than a tool in the hand of man. In consequence, man can hardly avoid seeing himself as a knower, yes, even as a creator, with boundless possibilities at his command. The alchemist was basically this sort of person, but much less so than modern man. An alchemist could still pray: "Purge the horrible darkneses of our mind," but modern man is already so darkened that nothing beyond the light of his own intellect illuminates his world. "Occasus Christi, passio Christi."²⁰ That surely is why such strange things are happening to our much lauded civilization, more like a *Götterdämmerung* than any normal twilight.

[303] Mercurius, that two-faced god, comes as the *lumen naturae*, the Servator and Salvator, only to those whose reason strives towards the highest light ever received by man, and who do not trust exclusively to the *cognitio vespertina*. For those who are unmindful of this light, the *lumen naturae* turns into a perilous *ignis fatuus*, and the psychopomp into a diabolical seducer. Lucifer, who could have brought light, becomes the father of lies whose voice in our time, supported by press and radio, revels in orgies of propoganda and leads untold millions to ruin.

V

THE PHILOSOPHICAL TREE

[Originally written for a Festschrift planned to mark the 70th birthday of Gustav Senn, professor of botany at the University of Basel. Owing to the untimely death of Professor Senn, the Festschrift did not appear, and Jung's essay, entitled "Der philosophische Baum," was published in the *Verhandlungen der Naturforschenden Gesellschaft Basel*, LVI (1945): 2, 411-23. A revised and expanded version appeared in *Von den Wurzeln des Bewusstseins: Studien über den Archetypus* (Psychologische Abhandlungen, Vol. IX; Zurich, 1954), from which the present translation is made.—EDITORS.]

All theory, my friend, is grey,
But green life's golden tree.

Faust I

INDIVIDUAL REPRESENTATIONS OF THE TREE SYMBOL

[304] An image which frequently appears among the archetypal configurations of the unconscious is that of the tree or the wonder-working plant. When these fantasy products are drawn or painted, they very often fall into symmetrical patterns that take the form of a mandala. If a mandala may be described as a symbol of the self seen in cross section, then the tree would represent a profile view of it: the self depicted as a process of growth. I shall not discuss here the conditions under which these pictures are produced, for I have already said all that is necessary in my essays “A Study in the Process of Individuation” and “Concerning Mandala Symbolism.” The examples I now propose to give all come from a series of pictures in which my patients tried to express their inner experiences.

[305] In spite of the diversity of the tree symbol, a number of basic features may be established. In the first part of my essay I shall comment on the pictures that have been reproduced and then, in the second part, give an account of the philosophical tree in alchemy and its historical background. My case material has not been influenced in any way, for none of the patients had any previous knowledge of alchemy or of shamanism. The pictures were spontaneous products of creative fantasy, and their only conscious purpose was to express what happens when unconscious contents are taken over into consciousness in such a way that it is not overwhelmed by them and the unconscious not subjected to any distortion. Most of the pictures were done by patients who were under treatment, but some by persons who were not, or were no longer, under any therapeutic influence. I must emphasize that I carefully avoided saying anything in advance that might have had a suggestive effect. Nineteen of the thirty-two pictures were done at a time when I myself knew nothing of alchemy, and the rest before my book *Psychology and Alchemy* was published.

Figure 1

[306] The tree stands by itself on an island in the sea. Its great size is indicated by the fact that the upper part of it is cut off by the edge of the picture. The buds and the little white flowers suggest the coming of spring, when the great tree, whose age far

exceeds the span of human existence, will awaken to new life. The solitariness of the tree and its axial position in the centre of the picture bring to mind the world-tree and the world-axis—attributes with which the tree symbol is almost universally endowed. These traits give expression to the inner process at work in the painter, and show that it has nothing to do with his personal psychology. Here the tree represents a symbol that is universal and alien to the personal consciousness. It is possible, however, that the painter was making conscious use of the Christmas tree in order to illustrate his inner state.

Figure 2

[307] The abstract stylization and the position of the tree on the globe of the earth illustrate the feeling of spiritual isolation. To make up for this, the perfect symmetry of the crown points to a union of opposites. This is the motivating force and the goal of the individuation process. If the painter of such a picture neither identifies with the tree nor is assimilated by it,¹ he will not succumb to the danger of an auto-erotic isolation, but will only be intensely aware that his ego personality is confronted with a symbolical process he must come to terms with because it is just as real and undeniable as his ego. One can deny and nullify this process in all sorts of ways, but in doing so all the values represented by the symbol are lost. A naïvely curious mind will naturally cast round for a rational explanation, and if it does not find one at once it either makes do with a facile and completely inadequate hypothesis or else turns away in disappointment. It seems to be very hard for people to live with riddles or to let them live, although one would think that life is so full of riddles as it is that a few more things we cannot answer would make no difference. But perhaps it is just this that is so unendurable, that there are irrational things in our own psyche which upset the conscious mind in its illusory certainties by confronting it with the riddle of its existence.

Figure 3

[308] The picture shows a tree of light that is at the same time a candelabrum. The abstract form of the tree points to its spiritual nature. The ends of the branches are lighted candles illuminating the darkness of an enclosed space, perhaps a cave or vault. The secret and hidden nature of the process is thus emphasized and its function made clear: the illumination of consciousness.

Figure 4

[309] Although cut out of gold-foil, the tree is realistic. It is still in the wintry, leafless state of sleep. It rises up against a cosmic background and bears in its branches a

large golden ball, probably the sun. The gold indicates that though the painter does not yet have a living, conscious relation to this content, she nevertheless has an emotional intuition of its great value.

Figure 5

[310] The tree is leafless but bears little red flowers, harbingers of spring. The branches are tipped with flames, and fire leaps up from the water out of which the tree is growing. So the tree is also something like the jet of a fountain. The symbol of the fountain, the *fontina*, is known in alchemy; in the alchemical pictures it is often shown as a medieval town fountain,² and the upright part in the middle would correspond to the tree. The union of fire and water expresses the union of opposites. The picture bears out the alchemical saying: “Our water is fire.”

Figure 6

[311] The tree is red and looks like a branch of coral. It is not reflected in the water, but grows simultaneously downwards and upwards. The four mountains in the lower half of the picture are not reflections either, for their opposites are five mountains. This suggests that the lower world is not a mere reflection of the upper world, but that each is a world in itself. The tree stands in the middle between two walls of rock, representing the opposites. The four mountains also appear in [Figure 24](#).

Figure 7

[312] The tree has broken with irresistible force through the earth’s crust, heaving up mountainous boulders on either side. The painter is expressing an analogous process in himself, which runs its course of necessity and cannot be checked by any amount of resistance. Since the boulders are snow-capped mountains, the tree has the cosmic character of the world-tree.

Figure 8

[313] The tree is leafless, but its branches end in little flames like a Christmas tree. Instead of growing from the earth or water, it grows out of the body of a woman. The painter was a Protestant and was not familiar with the medieval symbolism of Mary as earth and *stella maris*.

Figure 9

[314] The tree is old and huge and stands on a tangle of roots which is strongly emphasized. Two dragons are approaching from left and right. In the tree there is a

boy who has climbed up to watch the dragons. We are reminded of the dragons that guard the tree of the Hesperides, and of the snakes that guard the hoard. The conscious side of the boy is in a rather precarious situation because the modicum of security it has just acquired is liable to be devoured again by the unconscious. The turmoil of the unconscious is indicated by the tangled roots as well as by the evidently enormous dragons and the tininess of the child. The tree itself is not threatened inasmuch as its growth is independent of human consciousness. It is a natural process, and it is even dangerous to risk disturbing it since it is guarded by dragons. But because this is a natural and ever-present process it can give man protection provided that he summons up courage enough to climb into the tree despite its guardians.

Figure 10

[315] Once again we meet the two dragons, but in the form of crocodiles. The tree is abstract and doubled, and is loaded with fruit. For all its duality it gives the impression of being a single tree. This, besides the ring that unites the two trees, points to the union of opposites which are also represented by the two crocodiles. In alchemy, Mercurius is symbolized by the tree as well as by the dragon. He is notoriously “duplex,” is both masculine and feminine, and is made one in the hierogamos of the chymical wedding. The synthesis of Mercurius forms an important part of the alchemical procedure.

Figure 11

[316] Although tree and snake are both symbols of Mercurius, they stand for two different aspects on account of the latter’s dual nature. The tree corresponds to the passive, vegetative principle, the snake to the active, animal principle. The tree symbolizes earthbound corporeality, the snake emotionality and the possession of a soul. Without the soul the body is dead, and without the body the soul is unreal. The union of the two, which is plainly imminent in this picture, would mean the animation of the body and the materialization of the soul. Similarly, the tree of paradise is an earnest of the real life which awaits the first parents when they emerge from their initial childlike (i.e., pleromatic) state.

Figure 12

[317] Tree and snake are united. The tree bears leaves, and the sun rises in its midst. The roots are snakelike.

Figure 13

[318] The stylized tree has in its trunk a locked door leading to a hidden recess. The middle branch is decidedly snakelike and bears a luminous body like a sun. The simple-minded bird, representing the painter, weeps because it has forgotten the key to the door. It obviously suspects that there is something valuable inside the tree.

Figure 14

[319] The same painter did a number of variations on the treasure motif. Here and in the next picture it takes the form of a hero myth: the hero discovers a sealed coffer in a hidden vault, with a wonderful tree growing out of it. The little green dragon that follows the hero like a dog corresponds to the familiar spirit of the alchemists, the mercurial serpent or *draco viridis*. Mythlike fantasies of this kind are not infrequent, and are more or less the equivalent of alchemical parables or didactic tales.

Figure 15

[320] The tree does not want to yield up the treasure and clasps the coffer all the tighter. When the hero touches the tree, a flame springs out at him. It is a fire-tree, like that of the alchemists, and like the world-tree of Simon Magus.

Figure 16

[321] Many birds are sitting on the leafless tree, a motif found also in alchemy. The tree of wisdom (Sapientia) is surrounded by numerous birds, as in Reusner's *Pandora* (1588), or else the birds fly round the figure of Hermes Trismegistus, as in *Dechemia* (1566).³ The tree is shown guarding a treasure. The precious stone hidden in its roots recalls Grimm's fairytale of the bottle hidden in the roots of the oak tree, which contained the spirit Mercurius. The stone is a dark blue sapphire, but its connection with the sapphire stone in Ezekiel, which played a great role in ecclesiastical allegory, was not known to the painter. The special virtue of the sapphire is that it endows its wearer with chastity, piety, and constancy. It was used as a medicament for "comforting the heart."⁴ The lapis was called the "sapphirine flower."⁵ Birds, as winged beings, have always symbolized spirit or thoughts. So the many birds in our picture mean that the thoughts of the painter are circling round the secret of the tree, the treasure hidden in its roots. This symbolism underlies the parables of the treasure in the field, the pearl of great price, and the grain of mustard seed. Only, the alchemists were not referring to the Kingdom of Heaven, but to the "admirandum Mundi Maioris Mysterium" (the wondrous mystery of the macrocosm), and it looks as though the sapphire in the picture has a similar meaning.

Figure 17

[322] This was done by the same painter, but at a much later stage, when the same idea reappeared in differentiated form. Her technical ability has also improved. The birds have been replaced by heart-shaped blossoms, for the tree has now come alive. Its four branches correspond to the square-cut sapphire, whose “constancy” is emphasized by the little uroboros encircling it. In Horapollo the uroboros is the hieroglyph of eternity.^{5a} For the alchemists the self-devouring dragon was hermaphroditic because it begot and gave birth to itself. They therefore called the sapphirine flower (i.e., the lapis) “Hermaphroditum flos saphyricus.” Constancy and permanence are expressed not only in the age of the tree but also in its fruit, the lapis. Like a fruit, the lapis is at the same time a seed, and although the alchemists constantly stressed that the “seed of corn” dies in the earth, the lapis despite its seedlike nature is incorruptible. It represents, just as man does, a being that is forever dying yet eternal.

Figure 18

[323] The picture shows an initial state in which the tree is unable to raise itself from the earth in spite of its cosmic nature. It is a case of regressive development, probably due to the fact that while the tree has a natural tendency to grow away from the earth into a cosmic space filled with strange astronomical and meteorological phenomena, this would mean reaching up into an eerie unearthly world and making contact with otherworldly things which are terrifying to the earthbound rationality of the natural man. The upward growth of the tree would not only endanger the supposed security of his earthly existence but would be a threat to his moral and spiritual inertia, because it would carry him into a new time and a new dimension where he could not get along without making considerable efforts at readaptation. The patient in these cases is held back not by mere cowardice, but by a largely justifiable fear that warns him of the exacting demands of the future, without his being aware of what these demands are or knowing the dangers of not fulfilling them. His anxious resistance and aversion seem quite groundless, and it is only too easy for him to rationalize them away and, with a little assistance, brush them aside like a troublesome insect. The result is just the psychic situation shown by our picture: an inturned growth which throws the supposedly solid earth into increasing turmoil. Secondary fantasies then arise which, according to the patient’s disposition, revolve round sexuality or the power drive or both. This leads sooner or later to the formation of neurotic symptoms and to the almost unavoidable temptation for both patient and analyst to take these fantasies seriously as causative factors and thus to overlook the real task.

Figure 19

[324] This picture, done by a different patient, shows that [Figure 18](#) is not unique. It is, however, no longer a case of unconscious regression, but of one that is becoming conscious, which is why the tree has a human head. We cannot tell from the picture whether the witchlike tree nymph is clutching at the earth or rising unwillingly from it. This is in complete accord with the divided state of the patient's consciousness. But the upright trees standing around show that within or outside herself she has perceived living examples of the way trees ought to grow. She has interpreted the tree as a witch and the regressive growth as the cause of magical effects of a sinister nature.

Figure 20

[325] The tree stands in isolation dominating the top of a mountain. It is thick with leaves and has in its trunk a doll swathed in multicoloured wrappings. The painter was reminded of the harlequin motif. The fool's motley shows that she felt she was dealing with something crazy and irrational. She was conscious of having thought of Picasso, whose style was apparently suggested by the harlequin's dress. The association probably has a deeper meaning and is not just a superficial combination of ideas. It was this same impression of irrationality that led to the regressive development in the two previous pictures. All three cases are concerned with a process which the modern mind finds extremely disturbing, and not a few of my patients have openly confessed their fear of any such autonomous development of their psychic contents. In these cases it is of the greatest therapeutic value if one can demonstrate to them the historicity of their apparently unique and unassimilable experiences. When a patient begins to feel the inescapable nature of his inner development, he may easily be overcome by a panic fear that he is slipping helplessly into some kind of madness he can no longer understand. More than once I have had to reach for a book on my shelves, bring down an old alchemist, and show my patient his terrifying fantasy in the form in which it appeared four hundred years ago. This has a calming effect, because the patient then sees that he is not alone in a strange world which nobody understands, but is part of the great stream of human history, which has experienced countless times the very things that he regards as a pathological proof of his craziness.

Figure 21

[326] The doll in the previous picture contained a sleeping human figure undergoing metamorphosis like the larva of an insect. Here as well the tree acts as a mother to the human figure hidden in its trunk. This accords with the traditional maternal significance of the tree.

Figure 22

[327] The development has gone a stage further. The sleeping figure awakes, half emerges from the tree and makes contact with the animal world. The “tree-born” is thus characterized not only as a child of nature but as an autochthonous primordial being growing treelike out of the earth. The tree nymph is an Eve who, instead of being taken from Adam’s side, has come into existence independently. This symbol is evidently intended to compensate not merely the one-sidedness and unnaturalness of the ultra-civilized man but also, and in particular, the biblical myth of the secondary creation of Eve.

Figure 23

[328] The tree nymph carries the sun and is a figure composed of light. The wavy band in the background is red, and consists of living blood that flows round the grove of transformation. This indicates that the transformation is not just an airy fantasy, but is a process that reaches down into the somatic sphere or even arises from it.

Figure 24

[329] This drawing combines various motifs from the preceding pictures but lays particular stress on the light- or sun-symbol, which is represented as a quaternity. It is watered by four rivers each done in a different colour. They flow down from what the patient called four heavenly or “metaphysical” mountains. We met the four mountains earlier in [Figure 6](#). They also appear in the drawing of a male patient which I mentioned in *Psychology and Alchemy*,⁶ where the four rivers are reproduced in Figs. 62 and 109. In all these cases I am as little responsible for the number four as I am for all the other alchemical, Gnostic, and mythological quaternities. My critics seem to have the funny idea that I have a special liking for the number four and therefore find it everywhere. Just for once, they should look into an alchemical treatise—but that is evidently too much of an effort. Since “scientific” criticism is ninety per cent prejudice, it invariably takes a very long time for the facts to be recognized.

[330] The number four, like the squaring of the circle, is not accidental, which is why—to take an example known even to my critics—there are not three or, for that matter, five directions, but precisely four. I will only mention in passing that, besides this, the number four possesses special mathematical properties. The quaternary elements in our picture, as well as accentuating the light-symbol, amplify it in such a way that it is not difficult to see what is meant: an acceptance of wholeness by the little female figure, an intuitive apprehension of the self.

Figure 25

[331] A still later stage is shown here. The female figure is no longer just the recipient or bearer of the light-symbol but has been drawn into it. The personality is more powerfully affected than in the previous picture. This increases the danger of identification with the self—a danger not to be taken lightly. Anyone who has passed through such a development will feel tempted to see the goal of his experiences and efforts in union with the self. Indeed, there are suggestive precedents for this, and in the present case it is altogether possible. But there are certain factors in the picture which enable the painter to distinguish her ego from the self. She was an American woman who was influenced by the mythology of the Pueblo Indians: the corn-cobs characterize the female figure as a goddess. She is fastened to the tree by a snake, and thus forms an analogy to the crucified Christ, who, as the self, was sacrificed for earthly humanity, just as Prometheus was chained to the rock. Man’s efforts to achieve wholeness correspond, as the divine myth shows, to a voluntary sacrifice of

the self to the bondage of earthly existence. Here I will only point out this correspondence without going into it further.

[332] In this picture, then, there are so many elements of the divine myth that unless the patient's consciousness were utterly blinded (and there are no signs of this) she could easily discriminate between ego and self. At this stage it is important not to succumb to an inflation, such as would inevitably supervene with all its very unpleasant consequences if, at the moment when the self became recognizable, she identified with it and thus blinded herself to the insight she had attained. If the natural impulse to identify with the self is recognized, one then has a good chance of freeing oneself from a state of unconsciousness. But if this opportunity is overlooked or not used, the situation does not remain the same as before but gives rise to a repression coupled with dissociation of the personality. The development of consciousness which the realization of the self might have led to turns into a regression. I must emphasize that this realization is not just an intellectual act but is primarily a moral one, in comparison with which intellectual understanding is of secondary importance. For this reason, the symptoms I have described can also be observed in patients who, from inferior motives which they will not admit, refuse a task that has been laid upon them by fate.

[333] I would like to draw attention to a further peculiarity: the tree has no leaves, and its branches could just as well be roots. All its vitality is concentrated in the centre, in the human figure that represents its flower and fruit. A person whose roots are above as well as below is thus like a tree growing simultaneously downwards and upwards. The goal is neither height nor depth, but the centre.

Figure 26

[334] The idea developed in the previous picture reappears here in slightly variant form. This idea may truly be said to be in the process of delineating itself, for the conscious mind of the patient follows only a vague feeling which gradually takes shape in the act of drawing. She would have been quite unable to formulate beforehand, in a clear concept, what she wanted to express. The structure of the picture is a mandala divided into four, with the midpoint displaced downwards, beneath the feet of the figure. The figure stands in the upper section and thus belongs to the realm of light. This mandala is an inversion of the traditional Christian cross, whose long upright is below the cross-beam. We must conclude from the picture that the self was realized first of all as an ideal figure of light which nonetheless takes the form of an inverted Christian cross. Whereas the latter's point of intersection is near the top, so that the goal of unconscious striving towards the centre is displaced upwards, the downward glance of the figure shows that her goal should lie below. The short upright beam of the cross of light rests on the black earth, and the figure

holds in her left hand a black fish drawn from the dark sphere. The *mudrā*-like,⁷ hesitant gesture of the right hand, directed towards the fish coming from the left (i.e., from the unconscious), is characteristic of the patient, who had studied theosophy and was therefore under Indian influence. The fish has a soteriological significance whether conceived in Christian or in Indian terms (as the fish of Manu and as an avatar of Vishnu). There is reason to conjecture (see [Figure 29](#)) that the patient was acquainted with the Bhagavadgītā, which says (X, 31): “Among fishes I am Makara.” Makara is a dolphin or a species of Leviathan, and is one of the symbols of the *svādhīsthāna-chakra* in Tantric yoga. This centre is localized in the bladder and is characterized as the water region by the fish and moon symbols. As the *chakras* are presumably equivalent to earlier localizations of consciousness (the *anāhata-chakra*, for instance, corresponding to the *φρῆνες* of the Greeks),⁸ *svādhīsthāna* is probably the earliest localization of all. From this region comes the fish symbol with its age-old numen. We are reminded of the “days of Creation,” of the time when consciousness arose, when the primordial unity of being was barely disturbed by the twilight of reflection,⁹ and man swam like a fish in the ocean of the unconscious. In this sense the fish signifies a restoration of the pleromatic paradisaic state or, in the language of Tibetan Tantrism, of the Bardo.¹⁰

[335] The plants at the foot of the figure are really rooted in the air. Tree, tree nymph, and plants are all lifted up from the earth or, more probably, are on the point of coming down to it. This is also suggested by the fish as emissary of the deep. The situation is in my experience an unusual one and may be due to theosophical influences. Filling the conscious mind with ideal conceptions is a characteristic feature of Western theosophy, but not the confrontation with the shadow and the world of darkness. One does not become enlightened by imagining figures of light, but by making the darkness conscious. The latter procedure, however, is disagreeable and therefore not popular.

Figure 27

[336] Unlike the previous picture, this one is thoroughly Western, although it comes into the archetypal category of the god’s birth from the tree or lotus blossom. The archaic plant world of the carboniferous era illustrates the mood the painter was in when she intuitively apprehended the birth of the self. The human figure growing out of the archaic plant represents the union and quintessence of the four heads at its base, in agreement with the alchemical view that the lapis is composed of four elements. Awareness of the archetype imbues the experience with a primeval character. The division of the plant into six segments, like so much else in the realm of fantasy, may be purely accidental. Nevertheless, it should not be forgotten that the

number six (the *senarius*) was considered in ancient times “aptissimus generationi” (most fit for generation).¹¹

Figure 28

[337] Drawn by the same patient as [Figure 26](#). The female figure wearing a tree-crown is in a sitting position—again a displacement downwards. The black earth that was previously far below her feet is now in her body as a black ball, in the region of the *manipūra-chakra*, which coincides with the solar plexus. (The alchemical parallel to this is the “black sun.”)¹² This means that the dark principle, or shadow, has been integrated and is now felt as a kind of centre in the body. Possibly this integration is connected with the eucharistic significance of the fish: eating the fish brings about a *participation mystique* with God.¹³

[338] Numerous birds are flying round the tree. As birds represent winged thoughts, we must conclude that the female figure progressively detached itself from the world of thought as the centre was displaced downwards, and that the thoughts have consequently returned to their natural element. She and her thoughts were identical before, with the result that she was raised above the earth as though she were an aerial being, while her thoughts lost their freedom of flight, since they had to support the whole weight of a human being in the air.

Figure 29

[339] The process of separation from the world of thought continues. A masculine daemon,¹⁴ who has obviously woken up all of a sudden, reveals himself with an air of triumph: he is the animus, the personification of masculine thinking in a woman (and of her masculine side in general). The patient’s previous state of suspension turns out to have been an animus possession, which is now sloughed off. Differentiation between her feminine consciousness and her animus means liberation for both. The sentence “I am the Game of the gambler” probably refers to Bhagavadgītā X, 36: “I am the game of dice.”¹⁰ Krishna says this of himself. The section in which it occurs begins with the words (X, 20-21): “I am the self, O Gudākesha! seated in the hearts of all beings. I am the beginning and the middle and the end also of all beings. I am Vishnu among the Adityas;¹⁶ the beaming sun among the shining bodies.”

[340] Like Krishna, Agni is the game of dice in the Shatapatha-Brāhmaṇa of the Yajur-Veda: “He (the Adhvaryu)¹⁷ throws down the dice, with ‘Hallowed by Svāhā,¹⁸ strive ye with Surya’s¹⁰ rays for the middlemost place among brethren!’ For that gaming ground is the same as ‘ample Agni,’ and those dice are his coals, thus it is him (Agni) he thereby pleases.”²⁰

[341] Both texts relate light, sun, and fire, as well as the god, to the game of dice. Similarly the Atharva-Veda speaks of the “brilliance that is in the chariot, in the dice, in the strength of the bull, in the wind, Parjanya,²¹ and in the fire of Varuna.”²² The “brilliance” corresponds to what is known in primitive psychology as “mana,” and in the psychology of the unconscious as “libido investment” or “emotional value” or “feeling tone.” In point of emotional intensity, which is a factor of decisive importance for the primitive consciousness, the most heterogeneous things—rain, storm, fire, the strength of the bull, and the passionate game of dice—can be identical. In emotional intensity, game and gambler coincide.

[342] This train of thought may help to explain the mood of the picture, which expresses liberation and relief. The patient evidently felt this moment as a breath of the divine numen. As the Bhagavadgītā text makes clear, Krishna is the self, with which the patient’s animus identifies. This identification is a regular occurrence when the shadow, the dark side, has not been sufficiently realized. Like every archetype, the animus has a Janus face, and besides this the limitation of being a merely masculine principle. He is therefore quite unfitted to represent totality, whether of God or the self. He must be content with an intermediate position. The generalizations characteristic of Indian theosophy, however, induced the patient, by a kind of psychological short-circuit, to identify the animus at least provisionally with wholeness, and to put him in the place of the self.

Figure 30

[343] The same motif as in [Figure 29](#) is shown here in differentiated form by the painter of [Figure 2](#). The stylization of the leafless tree is highly abstract, and so is the gnomelike figure in a monkish robe. The outstretched arms express balance and the cross motif. The ambiguity of the figure is emphasized on the one hand by the bird coming down from above,²³ painted like a fantastic flower, and on the other by the obviously phallic arrow rising up from the roots below. The daemon thus represents an equilibrium of left and right as well as a union of intellect and sexuality, just as the alchemical Mercurius duplex, in the form of the lapis, is a quaternity composed of the four elements. The striped band running down the globe recalls the mercurial band which I discussed in “A Study in the Process of Individuation.”²⁴ There the patient herself took it to be quicksilver.

[344] The concept of the alchemical Mercurius derives exclusively from masculine psychology and symbolizes the typical opposition in a man between *Nous* and sex, owing to the absence of the feminine Eros which would unite them. The animus figure in the picture is a piece of purely masculine psychology that has crystallized out of a woman’s psyche during the process of individuation.

Figure 31

[345] Embroidery by the same patient as before. The tree has turned into a blossoming lotus plant, with the gnomelike figure sitting in the flower, reminding us that the lotus is the birthplace of the gods. Eastern influences are evident in these two figures, but of a different kind from those we met in [Figures 28](#) and [29](#). It is not a matter of Indian theosophy learnt and imitated in the West, for the present patient was born in the East without, however, consciously absorbing its theosophy. But inwardly she was permeated by it so thoroughly that it had a very disturbing effect on her psychic balance.

[346] In this figure the daemon has visibly taken a back place, but the crown of the tree has undergone a rich development: leaves and blossoms appear, forming a wreath, a corona, round a flowerlike centre. The alchemists used the term *corona* or *diadema cordis tui* (diadem of thy heart), meaning by it a symbol of perfection. The crown appears in the figure as the crowning point or culmination of the developmental process symbolized by the tree. It has taken the form of a mandala, the “golden flower” of Chinese and the “sapphirine flower” of Western alchemy. The animus no longer usurps the place of the self, but has been transcended by it.

Figure 32

[347] I reproduce this picture with some hesitation because, unlike the others, its material is not “pure” in the sense of being uninfluenced by what the patient read or picked up by hearsay. It is nevertheless “authentic” in so far as it was produced spontaneously and expresses an inner experience in the same way as all the others, only much more clearly and graphically because the patient was able to avail herself of ideas that fitted her theme better. Consequently, it combines a great deal of material which I do not want to comment on here, as its essential components have already been discussed or will be found in the relevant literature. The actual composition of the tree is at any rate original. I reproduce the picture only to show what kind of influence a knowledge of the symbolism can have on such configurations.

[348] I will bring my picture series to a close with a literary example of spontaneous tree symbolism. In his poem “Soleil Noir” (1952), Noël Pierre, a modern French poet who is personally unknown to me, has described an authentic experience of the unconscious:

J’arrivais de la sorte sur une crape

D’où baïllait un aven embué.

Une foule compacte s'y pressait
Des quatre directions. Je m'y mêlais.
Je remarquais que nous roulions en spirale,
Un tourbillon dans l'entonnoir nous aspirait.
Dans l'axe, un catalpa gigantesque
Où pendaient les cœurs des morts,
A chaque fourche avait élu résidence
Un petit sage qui m'observait en clignotant.
... ..
Jusqu'au fond, où s'étalent les lagunes.
Quelle quiétude, au Nœud des Choses!
Sous l'Arbre de ma Vie, le Dernier Fleuve
Entoure une Ile où s'érige
Dans les brumes un cube de roche grise,
Une Forteresse, la Capitale des Mondes.²⁵

[349] The main characteristics of this description are: (1) Universal midpoint of mankind. (2) Spiral rotation.²⁶ (3) Tree of life and death. (4) The heart as the centre of man's vitality in conjunction with the tree.²⁷ (5) Natural wisdom in the form of a dwarf. (6) The island as seat of the tree of life. (7) Cube = philosophers' stone = treasure guarded by the tree.

II

ON THE HISTORY AND INTERPRETATION OF THE TREE SYMBOL

1. THE TREE AS AN ARCHETYPAL IMAGE

[350] After having given some examples of spontaneously produced, modern tree symbols in the first part of this essay, I should like, in the second part, to say something about the historical background of the tree symbol in order to justify my title “The Philosophical Tree.” Although it will be obvious to anyone acquainted with the material that my examples are nothing more than special instances of a widely disseminated tree symbolism, it is nevertheless of importance, in interpreting the individual symbols, to know something about their historical antecedents. Like all archetypal symbols, the symbol of the tree has undergone a development of meaning in the course of the centuries. It is far removed from the original meaning of the shamanistic tree, even though certain basic features prove to be unalterable. The psychoid form underlying any archetypal image retains its character at all stages of development, though empirically it is capable of endless variations. The outward form of the tree may change in the course of time, but the richness and vitality of a symbol are expressed more in its change of meaning. The aspect of meaning is therefore essential to the phenomenology of the tree symbol. Taken on average, the commonest associations to its meaning are growth, life, unfolding of form in a physical and spiritual sense, development, growth from below upwards and from above downwards, the maternal aspect (protection, shade, shelter, nourishing fruits, source of life, solidity, permanence, firm-rootedness, but also being “rooted to the spot”), old age, personality,¹ and finally death and rebirth.

The tree bears buds and white blossoms. It stands on an island. In the background is the sea

The tree stands on the globe, and reminded the painter of the baobab whose roots burst the planetoid on which St. Exupéry's *Little Prince* dwelt. It also recalls the world-tree of Pherekydes, the shamanic tree, and the world-axis

Abstract tree represented as seven-branched candelabrum or Christmas tree. The lights symbolize the illumination and expansion of consciousness

Montage in gold-foil, analogous to the alchemical *arbor aurea* and cosmic tree. The golden globes are heavenly bodies

The tree grows in water. It bears red flowers, but it consists also of fire licking up from the water, and the branches are tipped with flame

The tree is painted bright red, and grows in the water simultaneously upwards and downwards

The tree thrusts up from below and breaks through the earth's surface

Its branches tipped with flame, the tree grows out of the body of a woman. She is synonymous with earth and water, an embodiment of the idea that the tree is a process originating in the unconscious. Cf. the Mexican world-tree which grows in the belly of the earth goddess (Lewis Spence. *The Gods of Mexico*, p. 58)

Drawing by an eleven-year-old boy

Union of opposites represented by two trees growing into one another and joined by a ring. The crocodiles in the water are the separated opposites, which are therefore dangerous

The vertical growth of the tree contrasts with the horizontal movement of the snake. The snake is about to take up its abode in the tree of knowledge

Corresponding to the sun in the branches, the snake in the roots of the tree wears a halo, an indication of the successful union of tree and snake

The tree has 4 + 1 branches. The central branch bears the sun, the other four bear stars. The tree is hollow inside and is shut by a door. The bird weeps “because it has forgotten the key”

This and the following picture come from a series depicting the hero myth. The hero is accompanied by a familiar in the form of a small, green, crowned dragon. The tree grows out of a coffer containing the secret treasure

The tree clasps the coffer in its roots, and a flame springs out of a leaf as the hero touches it

Done by the same patient at an earlier stage. In the roots of the tree a sapphire lies hidden

Done later by the same patient. A blossoming tree with sun disk grows out of a magic circle enclosing the uroboros with the sapphire at the centre

The cosmic tree is caught by the earth and cannot grow upwards

The same regressive state (depicted by a different painter), but coupled with greater consciousness

The tree has a cosmic character, with a multicoloured doll hidden in its trunk

The same motif done by a different patient. The sleeping figure is now visible

The hidden figure awakens and half emerges from the tree. The snake whispers in her ear: bird, lion, lamb, and pig complete the paradisaical scene

The tree itself assumes human form and carries the sun. In the background is a wavy band of blood, surging rhythmically round the island

Done by the same painter as [Figures 13-17](#). A female figure has taken the place of the tree. The sun disk is now a symbol of individuation, and is characterized as such by the quaternity fed by four different-coloured rivers flowing down from four mountains, and flanked by four animals. The scene is paradisaical

The tree is a female figure encircled by a snake and holding two globes of light. The cardinal points are marked by corn-cobs and four animals: bird, tortoise, lion, and grasshopper

Most of the tree has been replaced by a female figure, the lower part taking the form of a cross. Below is the earth, in the sky a rainbow

The tree stands in a forest of prehistoric mare's-tails. It grows like the pistil of a flower (in six stages) from a calyx bearing four human heads. A woman's head rises out of the petals

Drawn by the same patient as [Figure 26](#). The foliage growing out of the woman's head is surrounded by flying birds

Awake my Soul
stretch every nerve.

"I am the Game of the gambler."

Drawn by the same patient, but here the tree grows out of a man's head rising above the rainbow

Painted by the same patient as [Figure 2](#). A stylized world-tree surmounting a globe with a multicoloured band running down it. The trunk is a daemonic masculine figure with a bird coming down from above and a phallic symbol rising up from below

Made by the same patient. The tree has turned into a lotus with a gnomelike figure inside. His head is encircled by a mandala with a flowerlike centre, surrounded by a wreath or corona

Here again the tree is painted like a flower, and symbolizes the union of a number of opposites. Below, a swan and a catlike creature; then Adam and Eve, hiding their faces in shame; then a kingfisher with fish and a three-headed snake; in the centre, the four cherubim of Ezekiel, flanked by sun and moon; then the flower of light with a crowned boy inside; at the top, a bird with a shining egg and a crowned serpent, and two hands pouring water out of a jug

[351] This characterization is the deposit of many years of research into the statements of individual patients. Even the layman reading this essay will be struck by the amount of material from fairytale, myth, and poetry that appears in the illustrations. In this connection it is astonishing how relatively seldom the persons I interrogated were conscious of sources of this kind. The main reasons for this are: (1) In general, people think little, if at all, about the origins of dream images, and still less about myth motifs. (2) The sources have been forgotten. (3) The sources were never in any sense conscious; that is to say, the images are new, archetypal creations.

[352] The third possibility is much less rare than one might suppose. On the contrary, it occurs so frequently that comparative research into symbols becomes unavoidable in elucidating the spontaneous products of the unconscious. The widely held view that mythologems or myth motifs² are always connected with a tradition proves untenable, since they may reappear anywhere, at any time, and in any individual regardless of tradition. An image can be considered archetypal when it can be shown to exist in the records of human history, in identical form and with the same meaning. Two extremes must be distinguished here: (1) The image is clearly defined and is

consciously connected with a tradition. (2) The image is without doubt autochthonous, there being no possibility let alone probability of a tradition.³ Every degree of mutual contamination may be found between these two extremes.

[353] In consequence of the collective nature of the image it is often impossible to establish its full range of meaning from the associative material of a single individual. But since it is of importance to do this for practical therapeutic purposes, the necessity of comparative research into symbols for medical psychology becomes evident on these grounds also.⁴ For this purpose the investigator must turn back to those periods in human history when symbol formation still went on unimpeded, that is, when there was still no epistemological criticism of the formation of images, and when, in consequence, facts that in themselves were unknown could be expressed in definite visual form. The period of this kind closest to us is that of medieval natural philosophy, which reached its zenith in the seventeenth century, and in the eighteenth century gradually left the field to science. It attained its most significant development in alchemy and Hermetic philosophy. Here, as in a reservoir, were collected the most enduring and the most important mythologems of the ancient world. It is significant that Hermetic philosophy was, in the main, practised by physicians.⁵

2. THE TREE IN THE TREATISE OF JODOCUS GREVERUS

[354] I would now like to show how the phenomenology of the tree is reflected in the medium of the epoch immediately preceding the one just mentioned. Holmberg,¹ who wrote a comprehensive study of the tree of life, says that it is “mankind’s most magnificent legend,” thus confirming that the tree occupies a central position in mythology and is so widespread that its ramifications are to be found everywhere. The tree appears frequently in the medieval alchemical texts and in general represents the growth of the arcane substance and its transformation into the philosophical gold (or whatever the name of the goal may be). We read in the treatise of Pelagios that Zosimos had said the transformation process was like “a well-tended tree, a watered plant, which, beginning to ferment because of the plentiful water, and sprouting in the humidity and warmth of the air, puts forth blossoms and fruits by virtue of the great sweetness and special quality (*ποιότητι*) of nature.”²

[355] A typical example of this process is to be found in the treatise of Jodocus Greverus, which was first printed in Leiden, 1588.³ The whole opus is depicted as the sowing and nurturing of the tree in a well-tended garden, into which nothing extraneous might enter. The soil consists of purified Mercurius; Saturn, Jupiter, Mars, and Venus form the trunk (or trunks)⁴ of the tree, and the sun and moon supply their seeds. These planetary names refer partly to the corresponding metals, but we can see what they meant from the author’s qualifying remark: “For there enters into this work not the common gold, nor the common Mercurius, nor the common silver, nor

anything else that is common, but [the metals] of the Philosophers.”⁵ The ingredients of the work might therefore be anything. At any rate they are imaginary ones, even though they were expressed outwardly by chemical substances. The planetary names refer ultimately not only to metals but, as every alchemist knew, to the (astrological) temperaments, that is, to psychic factors. These consist of instinctive dispositions which give rise to specific fantasies and desires and so reveal their character. Avarice as one of the original motives of the royal art is still apparent in the term *aurum non vulgi*, though it is just here that we discern the change of motivation and the displacement of the goal to another plane. In the parable that comes at the end of the treatise the wise old man says to the adept: “Son, lay aside the snares of worldly appetites.”⁶ Even when, as is often undoubtedly the case, the procedure given by an author has no other aim than the production of the common gold, the psychic meaning of the opus nevertheless comes through in the symbolic nomenclature he employs in spite of his conscious attitude. In the treatise of Greverus this stage has been overcome and it is openly admitted that the goal of the opus is “not of this world.” Accordingly, at the conclusion of his treatise on the “universal process of our work,”⁷ the author avows that it is a “gift of God, containing the secret of the undivided oneness of the Holy Trinity. O most excellent science, theatre of all nature and its anatomy, earthly astrology,⁸ proof of God’s omnipotence, testimony to the resurrection of the dead, example of the remission of sins, infallible proof of the judgment to come and mirror of eternal blessedness.”⁹

[356] A modern reader of this hymnlike paean of praise cannot help feeling that it is exaggerated and out of key, for one cannot imagine how the science of alchemy could, for instance, contain the Holy Trinity. Such enthusiastic comparisons with the mysteries of religion had already caused offence in the Middle Ages.¹⁰ Far from being rarities, they even became a *leitmotiv* of certain treatises in the seventeenth century, which however had their precursors in the thirteenth and fourteenth centuries. In my view they should not always be taken as spurious mystification, for the authors had something definite in mind. They obviously saw a parallel between the alchemical process and religious ideas—a parallel which is certainly not immediately perceptible to us. A bridge between two such very different realms of thought can be constructed only when we take into account the factor common to both: the *tertium comparationis* is the psychological element. Naturally an alchemist would have defended himself just as indignantly against the charge that his ideas about chemical substances were fantasies as would a metaphysician today, who still thinks that his statements amount to more than anthropomorphisms. Just as the alchemist was unable to distinguish between things as they are and the notions he had about them, so the modern metaphysician still believes that his views give valid expression to their metaphysical object. It obviously never occurred to either of them

that a great diversity of views concerning their respective objects has been held since earliest times. But unlike metaphysicians, and unlike theologians in particular, the alchemists displayed no polemical tendencies; at most they lamented the obscurity of the authors whom they could not understand.

[357] It is clear to every reasonable person that in both cases we are concerned primarily with ideas born of fantasy—which is not to say that their unknown object does not exist. No matter what the ideas refer to, they are always organized by the same psychic laws, that is, by the archetypes. In their way the alchemists realized this when they insisted on the parallelism between their ideas and religious ones, as when Greverus compares his synthetic process with the Trinity. The common archetype in this case is the number three. As a Paracelsist, he must have been acquainted with the Paracelsan triad of sulphur, salt, and Mercurius. Sulphur belongs to the sun or represents it, and salt stands in the same relation to the moon. However, he says nothing about a synthesis of this kind.¹¹ Sun and moon supply the seeds that are planted in the earth (= Mercurius), and presumably the four other planets form the trunk of the tree. The four that are to be united into one refer to the tetrasomia of Greek alchemy, where, corresponding to the planets, they stand for lead, tin, iron, and copper.¹² Hence in his process of *henosis* (unification or synthesis), as Michael Maier correctly understood it,¹³ what Greverus had in mind was not the three basic Paracelsan substances but the ancient tetrasomia, which at the end of his treatise he compares with the “union of persons in the Holy Trinity.” For him the triad of sun, moon, and Mercurius was the starting point, the initial material as it were, in so far as it signified the seed of the tree and the earth in which it was sown. This is the so-called *coniunctio triptativa*. But here he is concerned with the *coniunctio tetraptiva*,¹⁴ whereby the four are joined in the “union of persons.” This is a characteristic example of the dilemma of three and four, which plays a great role in alchemy as the well-known axiom of Maria Prophetissa.¹⁵

3. THE TETRASOMIA

[358] The aim of the tetrasomia is the reduction (or synthesis) of a quaternio of opposites to unity. The names of the planets themselves indicate two dyads, one benevolent (Jupiter and Venus), the other malefic (Saturn and Mars), and such dyads often constitute an alchemical quaternity.¹ Zosimos gives the following description of the transformation process that is needed for the preparation of the tincture:

You have need of an earth formed from two bodies and a water formed from two natures to water it. When the water has been mingled with the earth . . . the sun must act on this clay and transform it into stone. This stone must be burnt, and that burning will bring out the secret of this matter, that is to say its spirit, which is the tincture² sought by the philosophers.³

As the text shows, the synthesis depends on the unification of a double dyad. This is expressed particularly clearly in another archetypal form of the same idea: in the structure of the royal marriage, which follows that of the cross-cousin marriage.⁴

[359] As a rule, the lapis is synthesized from the quaternity of the elements or from the ogdoad of elements plus qualities (cold/warm, moist/dry). Similarly Mercurius, known from ancient times as *quadratus*, is the arcane substance through whose transformation the lapis, or goal of the opus, is produced. Thus in the love-magic of Astrampsychos the invocation to Hermes says:

Your names . . . are in the four corners of the heavens. I know also your forms, which are: in the East you have the form of an ibis, in the West you have the form of a dog-headed baboon, in the North you have the form of a serpent, but in the South you have the form of a wolf. Your plant is the grape,⁵ which in that place is the olive.⁶ I know also your wood: it is ebony, etc.⁷

[360] The fourfold Mercurius is also the tree or its *spiritus vegetativus*. The Hellenistic Hermes is on the one hand an all-encompassing deity, as the above attributes show, but on the other hand, as Hermes Trismegistus, he is the arch-authority of the alchemists. The four forms of Hermes in Egyptian Hellenism are clearly derived from the four sons of Horus. A god with four faces is mentioned as early as the Pyramid Texts of the fourth and fifth dynasties.⁸ The faces obviously refer to the four quarters of heaven—that is, the god is all-seeing. Budge points out that in chapter CXII of the Egyptian Book of the Dead the same god appears as the ram of Mendes with four heads.⁹ The original Horus, who represented the face of heaven, had long hair hanging down over his face, and these strands of hair were associated with the four pillars of Shu, the air god, which supported the four-cornered plate of the sky. Later the four pillars became associated with the four sons of Horus, who replaced the old gods of the four quarters of heaven. Hapi corresponded to the North, Tuamutef to the East, Amset to the South, and Qebhsennuf to the West. They played a large role in the cult of the dead, watching over the life of the dead man in the underworld. His two arms corresponded to Hapi and Tuamutef, his legs to Amset and Qebhsennuf. The Egyptian quaternity consisted of two dyads, as is evident from the text of the Book of the Dead: “Then said Horus to Re, Give me two divine brethren in the city of Pe and two divine brethren in the city of Nekhen, who [have sprung] from my body.”¹⁰ The quaternity is in fact a *leitmotiv* in the ritual for the dead: four men carry the coffin with the four Canopic jars, there are four sacrificial animals, all instruments and vessels are fourfold. Formulas and prayers are repeated four times, etc.¹¹ It is evident from this that the quaternity was of special importance for the dead man: the four sons of Horus had to see to it that the four parts (i.e., the wholeness) of the body were preserved. Horus begot his sons with his mother Isis. The incest motif,

which was continued in Christian tradition and extended into late medieval alchemy, thus begins far back in Egyptian antiquity. The four sons of Horus are often shown standing on a lotus before their grandfather Osiris, Mestha¹² having a human head, Hapi the head of an ape, Tuamutef the head of a jackal, and Qebhsennuf the head of a hawk.

[361] The analogy with the vision of Ezekiel (chapters 1 and 10) is at once apparent. There the four cherubim had “the likeness of a man.” Each of them had four faces, a man’s, a lion’s, an ox’s, and an eagle’s, so that, as with the four sons of Horus, one quarter was human and three quarters animal. In the love-magic of Astrampsychos, on the other hand, all four forms are animal, probably because of the magic purport of the incantation.¹³

[362] In keeping with the Egyptian predilection for multiples of four, there are 4×4 faces in the vision of Ezekiel.¹⁴ Moreover each of the cherubim has a wheel. In later commentaries the four wheels were interpreted as Merkabah, the chariot.¹⁵ Corresponding to the four pillars of Shu and the four sons of Horus as gods of the four quarters, who bear up the floor of the sky, there was “a firmament as the colour of terrible crystal, stretched forth over the heads” of the cherubim. On it stood the throne of him who had “the appearance of a man,” the counterpart of Osiris, who with the help of the older Horus and of Set had climbed up to heaven.

[363] The four wings of the cherubim recall the winged female genies who protect the coffin of Pharaoh. Each of the Horus sons had a female counterpart who fulfilled this same tutelary function. The cherubim, too, were protective genies, as is apparent from Ezekiel 28 : 14 and 16.¹⁶ The apotropaic significance of the quaternity is borne out by Ezekiel 9 : 4, where the prophet, at the behest of the Lord, sets a cross¹⁷ on the foreheads of the righteous to protect them from punishment. It is evidently the sign of God, who himself has the attribute of quaternity. The cross is the mark of his protégés. As attributes of God and also symbols in their own right, the quaternity and the cross signify wholeness. Thus Paulinus of Nola says:

Extended on the four arms of the wood of the cross, he reached out to the four quarters of the world, that he might draw together unto life the peoples from every shore; and because Christ our God by the death of the cross shows himself all things to all men, that life may come into being and evil be destroyed, A and Ω stand beside the cross, each letter by its three strokes displaying a different figure in threefold wise, a single meaning perfected in triple form.¹⁸

[364] In the spontaneous symbolism of the unconscious the cross as quaternity refers to the self, to man’s wholeness.¹⁹ The sign of the cross is thus an indication of the healing effect of wholeness, or of becoming whole.

[365] Four animals also appear in the vision of Daniel. The first was like a lion and was “made stand upon the feet as a man, and a man’s heart was given to it.” The second was like a bear, the third like a leopard, and the fourth was a beast “dreadful and terrible,” with “great iron teeth” and “ten horns.”²⁰ Only the special treatment of the lion in any way recalls the human quarter of the tetramorph. All four of them are beasts of prey or, in psychological terms, functions that have succumbed to desire, lost their angelic character, and become daemonic in the worst sense. They represent the negative and destructive aspect of the four angels of God who, as the Book of Enoch shows, form his inner court. This regression has nothing to do with magic (see n. 13) but rather expresses the daemonization of man, or of certain powerful individuals. Accordingly Daniel interprets the four beasts as four kings which shall arise out of the earth (7 : 17, A.V.). The interpretation continues (7 : 18): “But the saints of the most High shall take the kingdom, and possess the kingdom for ever, even for ever and ever.” Like the lion with the human heart, this surprising interpretation is based on the positive aspect of the quaternity and refers to a blessed, protected state of things when four guardian angels reign in heaven and four just kings on earth, and the saints possess the kingdom. But this happy state is about to disappear, for the fourth beast in the quaternity has assumed monstrous form, has ten horns and represents “the fourth kingdom upon earth, which shall be diverse from all kingdoms, and shall devour the whole earth” (7 : 23). In other words, a monstrous lust for power will make the human quarter unconscious again. This is a psychological process which can be observed only too often both individually and collectively. It has recurred countless times in the history of mankind.

[366] Via Daniel and Enoch, the quaternity of God’s sons penetrated very early into Christian ideology. There are the three synoptic gospels and the one gospel of St. John, to which were assigned as emblems the symbols of the cherubim. The four gospels are as it were the pillars of Christ’s throne, and in the Middle Ages the tetramorph became the riding animal of the Church. But it was Gnostic speculation in particular that appropriated the quaternity. This theme is so far-reaching that it cannot be dealt with more closely here. I would only draw attention to the synonymy of Christ, Logos, and Hermes,²¹ and the derivation of Jesus from the so-called “second tetrad”²² among the Valentinians. “Thus our Lord in his fourfoldness preserves the form of the tetraktys and is composed of (1) the spiritual, which comes from Achamoth, (2) the psychic, which comes from the world-creator, (3) the body prepared with ineffable art, and (4) the divine, the saviour.”²³

[367] The alchemical tetrasomia and its reduction to unity therefore have a long prehistory which reaches back far beyond the Pythagorean tetraktys into Egyptian antiquity. From all this we can see without difficulty that we are confronted with the archetype of a *totality image divided into four*. The resultant conceptions are always

of a central nature, characterize divine figures, and carry over those qualities to the arcane substances of alchemy.

[368] It is not the task of empirical psychology to speculate about the possible metaphysical significance of this archetype. We can only point out that in spontaneous psychic products such as dreams and fantasies the same archetype is at work and in principle produces over and over again the same figures, meanings, and values *autochthonously*. Anyone who studies impartially the above series of dream pictures will be able to convince himself of the validity of my conclusions.

4. THE IMAGE OF WHOLENESS

[369] After this excursus into the history of the Hermetic quaternity, let us turn back to the image of wholeness in alchemy.

[370] One of the commonest and most important of the arcana is the *aqua permanens*, the ὕδωρ θεῖον of the Greeks. This, according to the unanimous testimony of both the ancient and the later alchemists, is an aspect of Mercurius, and of this divine water Zosimos says in his fragment περὶ τοῦ θείου ὕδατος:

This is the great and divine mystery which is sought, for it is the whole [τοῦτο γὰρ ἔστι τὸ πᾶν]. And from it is the whole and through the same is the whole. Two natures, one substance [οὐσία]. But the one [substance] attracts the one, and the one rules the one. This is the silver water, male and female, which forever flees. . . . For it is not to be ruled. It is the whole in all things. And it has life and spirit and is destructive [ἀναιρετικόν].¹

[371] With regard to the central significance of the *aqua permanens* I must refer the reader to my earlier writings.² The “water” is just as much the arcanum of alchemy as are Mercurius, the lapis, the *filius philosophorum*, etc. Like them it is a totality image, and as the above Zosimos quotation shows, this was so even in the Greek alchemy of the third century A.D. The text leaves no doubt in this respect: the water is wholeness. It is the “silver water” (= *hydrargyrum*), but not the ὕδωρ ἀεικίνητον, ‘ever-moving water,’ i.e., ordinary quicksilver which in Latin alchemy was called *Mercurius crudus* as distinct from *Mercurius nonvulgi*. In Zosimos the quicksilver is a πνεῦμα (spirit).³

[372] Zosimos’s “whole” is a microcosm, a reflection of the universe in the smallest particle of matter, and is therefore found in everything organic and inorganic. Because the microcosm is identical with the macrocosm, it attracts the latter and thus brings about a kind of apocatastasis, a restoration of all individua to the original wholeness. Thus “every grain becomes wheat, and all metal gold,” as Meister Eckhart says; and the little, single individual becomes the “great man,” the *homo*

maximus or *Anthropos*, i.e., the self. The moral equivalent of the physical transmutation into gold is *self-knowledge*, which is a re-remembering of the *homo totus*.⁴ Olympiodorus, citing Zosimos's exhortation to Theosebeia, says:

If thou wilt calmly humble thyself in relation to thy body, thou wilt calm thyself also in relation to the passions, and by acting thus, thou wilt summon the divine to thyself, and in truth the divine, which is everywhere⁵ will come to thee. But when thou knowest thyself, thou knowest also the God who is truly one.⁶

Hippolytus bears this out in his account of the Christian doctrine:

But thou shalt speak with God and be joint heir with Christ. . . . For thou wilt have become God [*γέγονας γὰρ θεός*]. For whatever sufferings thou didst undergo as a man, thou hast shown that thou art a man; but whatever is appurtenant to a God, that God has promised to bestow, because thou hast been made divine [*θεοποιηθῆς*], since thou hast been begotten immortal [*γεννηθείς*]. That is the "Know thyself," the knowing of the God who made thee. For to him who knoweth himself it is given to be known of Him by whom he is called.⁷

[373] The foregoing account of the associative background of the tree, prompted by the treatise of Jodocus Greverus, seemed to me a necessary prelude to a discussion of the significance of the tree in alchemy. A general survey of this kind may help the reader not to lose sight of the whole amid the unavoidable confusion of alchemical opinions and fantasies. Unfortunately my exposition will not be rendered any easier by my having to give numerous parallels from other fields of study. These, however, cannot be dispensed with, because the views of the alchemists were derived to a large extent from unconscious archetypal assumptions which also underlie other domains of human thought.

5. THE NATURE AND ORIGIN OF THE PHILOSOPHICAL TREE

[374] In my book *Psychology and Alchemy* I devoted a special chapter¹ to the projection of psychic contents (hallucinations, visions, etc.) and therefore need not dwell here on the spontaneous production of the tree symbol among the alchemists. Suffice to say that the adept saw branches and twigs² in the retort, where his tree grew and blossomed.³ He was advised to contemplate its growth, that is, to reinforce it with active imagination. The vision was the thing to be sought (*res quaerenda*).⁴ The tree was "prepared" in the same way as salt.⁵ And just as the tree grew in the water, so also it was putrefied in it, "burnt" or "cooled" with the water.⁶ It was called oak,⁷ vine,⁸ myrtle.⁹ Djēbir ibn Hayyēn says of the myrtle: "Know that the myrtle is the leaf and the twig; it is a root yet no root. It is both a root and a branch. As a root, it is unquestionably a root if it be set over against the leaves and the fruits. It is

separate from the trunk and forms part of the deep roots.” The myrtle, he says, is “what Maria¹⁰ calls the golden rungs, what Democritus calls the green bird. . . . It has been so called because of its green colour and because it is like the myrtle, in that it keeps its green colour for a long time despite the alternations of heat and cold.”¹¹ It has seven branches.¹²

[375] Gerard Dorn says of the tree:

After nature has planted the root of the metallic tree in the midst of her womb, viz., the stone which shall bring forth the metals, the gem, the salt, the alum, the vitriol, the salty spring, sweet, cold, or warm, the tree of coral or the Marcasita,¹³ and has set its trunk in the earth, this trunk is divided into different branches, whose substance is a liquid, not after the manner of water, nor of oil, nor of clay,¹⁴ nor of slime, but is not to be thought of otherwise than as the wood born of the earth, which is not earth although growing from it. The branches spread in such a way that the one is separated from the other by a space of two or three climates and as many regions: from Germany even as far as Hungary and beyond. In this way the branches of different trees spread through the whole globe of the earth, as in the human body the veins spread through the different limbs, which are separated from one another.

The fruits of this tree drop off, and the tree itself dies and vanishes in the earth. “Afterwards, in accordance with natural conditions, another new [tree] is there.”¹⁵

[376] In this text Dorn draws an impressive picture of the growth, expansion, death, and rebirth of the philosophical tree. Its branches are veins running through the earth, and although they spread to the most distant points of the earth’s surface they all belong to the same immense tree, which apparently renews itself. The tree is obviously thought of as a system of blood vessels. It consists of a liquid like blood, and when this comes out it coagulates into the fruit of the tree.¹⁶ Strangely enough, in ancient Persian tradition the metals are connected with the blood of Gayomart: his blood, soaking into the earth, turned into the seven metals.

[377] Dorn appends to his description of the tree a brief observation which I would not like to withhold from the reader since it affords an important insight into what is in its way the classic mode of alchemical thinking. He says:

This and suchlike things proceed from the true physics and from the springs of the true philosophy, from which, by meditative contemplation of the wondrous works of God, the true knowledge of the supreme author and of his powers dawns upon the spiritual eyes of the philosophers, even as to the fleshly eyes the light is made visible. To those eyes the hidden is revealed. But that Greek Satan has implanted in the philosophic field of the true wisdom the tares¹⁷ and their false seeds, namely Aristotle, Albertus, Avicenna,¹⁸ Rasis,¹⁹ and men of that kidney, who are inimical to

the light of God and the light of nature, and have perverted the whole physical truth from the time when they turned the name Sophia into Philosophia.²⁰

[378] Dorn was a Platonist and a fanatical opponent of Aristotle and, quite obviously, of the scientific empiricists as well. His attitude was essentially the same as that of Robert Fludd in respect of John Kepler.²¹ Basically, it was the old controversy about universals, the opposition between realism and nominalism, which in our scientific age has been decided in favour of a nominalistic tendency. Whereas the scientific attitude seeks, on the basis of careful empiricism, to explain nature in her own terms, Hermetic philosophy had for its goal an explanation that included the psyche in a total description of nature. The empiricist tries, more or less successfully, to forget his archetypal explanatory principles, that is, the psychic premises that are a *sine qua non* of the cognitive process, or to repress them in the interests of “scientific objectivity.” The Hermetic philosopher regarded these psychic premises, the archetypes, as inalienable components of the empirical world-picture. He was not yet so dominated by the object that he could ignore the palpable presence of psychic premises in the form of eternal ideas which he felt to be real. The empirical nominalist, on the other hand, already had the modern attitude towards the psyche, namely, that it had to be eliminated as something “subjective,” and that its contents were nothing but ideas formulated *a posteriori*, mere *flatus vocis*. His hope was to be able to produce a picture of the world that was entirely independent of the observer. This hope has been fulfilled only in part, as the findings of modern physics show: the observer cannot be finally eliminated, which means that the psychic premises remain operative.

[379] In the case of Dorn we can see how the archetypal tree, which consisted of the ramifications of the bronchi, blood vessels, and veins of ore, was projected upon the empirical world and gave rise to a totalistic view which embraced the whole of organic and inorganic nature and the “spiritual” world as well. The fanatical defence of his standpoint shows that Dorn was gnawed by inner doubt and was fighting a lost battle. Neither he nor Fludd could hold up the march of events, and today we see how the spokesmen of so-called objectivity are defending themselves with similar outbursts of affect against a psychology that demonstrates the necessity of psychic premises.

6. DORN'S INTERPRETATION OF THE TREE

[380] In his treatise “Congeries Paracelsicae chemicae de transmutatione metallorum” Dorn writes:¹

On account of likeness alone, and not substance, the Philosophers compare their material to a golden tree with seven branches, thinking that it encloses in its seed the

seven metals, and that these are hidden in it, for which reason they call it a living thing. Again, even as natural trees bring forth divers blossoms in their season, so the material of the stone causes the most beautiful colours to appear² when it puts forth its blossoms.³ Likewise they have said that the fruit of their tree strives up to heaven, because out of the philosophic earth there arises a certain substance, like to the branches of a loathsome sponge.⁴ Whence they have put forward the opinion that the point about which the whole art turns lies in the living things of nature [*in vegetabilibus naturae*] and not in the living things of matter; and also because their stone contains within it soul, body, and spirit, as do living things. From a likeness not altogether remote they have called this material virgin's milk and blessed rose-coloured blood, although that belongs only to the prophets and sons of God. For this reason the Sophists have supposed that the philosophic matter consists of animal or human blood.

[381] Dorn then enumerates the substances with which "frivolous triflers" operate, such as urine, milk, eggs, hair, and various kinds of salts and metals. These "Sophists" take the symbolical names concretely and attempt to make the magistry out of the most unsuitable ingredients. They were obviously the chemists of those days, who, as a result of their concretistic misunderstanding, worked with common materials, whereas the philosophers called their stone animate because, at the final operations, by virtue of the power of this most noble fiery mystery, a dark red liquid, like blood, sweats out drop by drop from their material and their vessel. And for this reason they have prophesied that in the last days a most pure⁵ man, through whom the world will be freed, will come to earth and will sweat bloody drops of a rosy or red hue, whereby the world will be redeemed from its Fall. In like manner, too, the blood of their stone will free the leprous metals⁶ and also men from their diseases.⁷ Wherefore they have said, not without good reason, that their stone is animate [*animalem*]. Concerning this, Mercurius speaks as follows to King Calid, "To know this mystery is permitted only to the prophets of God,"⁸ and that is the reason why the stone is called animate. For in the blood of this stone is hidden its soul. It is also composed of body, spirit, and soul. For a like reason they have called it their microcosm, because it contains the similitude of all things of this world, and therefore again they say that it is animate, as Plato calls the macrocosm animate. But now the ignorant have come, who believe that the stone is threefold and is hidden in threefold kind [*genere*], namely vegetable, animal, and mineral, whence it has come to pass that they themselves have sought for it in minerals.⁹ But this teaching is far removed from the opinion of the Philosophers, who maintain that their stone is vegetable, animal, and mineral in one and the same form.

[382] This remarkable text explains the tree as a metaphorical form of the arcane substance, a living thing that comes into existence according to its own laws, and

grows, blossoms, and bears fruit like a plant. This plant is likened to the sponge, which grows in the depths of the sea and seems to have an affinity with the mandrake (n. 4). Dorn then makes a distinction between the “living things of nature” and those of matter. By the last-named are obviously meant concrete, material organisms. But it is not so clear what the former are meant to be. A sponge that bleeds and a mandrake that shrieks when pulled up are neither “vegetabilia materiae” nor are they found in nature, at least not in nature as we know it, though they may occur in that more comprehensive, Platonic nature as Dorn understood it, that is, in a nature that includes psychic “animalia,” i.e., mythologems and archetypes. Such are the mandrake and similar organisms. How concretely Dorn visualized them is a moot point. At any rate the “stone that is no stone, nor of the nature of stone” (n. 9) comes into this category.

7. THE ROSE-COLOURED BLOOD AND THE ROSE

[383] The mysterious rose-coloured blood occurs in several other authors. In Khunrath, for instance, the “lion lured forth from the Saturnine mountain” had rose-coloured blood.¹ This lion, signifying “all and conquering all,” corresponds to the $\pi\tilde{\alpha}\nu$ or $\pi\acute{\alpha}\nu\tau\alpha$ of Zosimos, i.e., totality. Khunrath further mentions (p. 276) the costly Catholick Rosy-Coloured Blood and Aetheric Water that flows forth Azothically² from the side of the innate Son of the Great World when opened by the power of the Art. Through the same alone, and by no other means, are Vegetable, Animal, and Mineral things, by the ablution of their impurities, raised to the highest Natural perfection, in accordance with Nature and by the Art.

[384] In the “Aquarium sapientum” the “son of the great world” (*filius macrocosmi*, the lapis) is correlated with Christ,³ who is the *filius microcosmi*, and his blood is the quintessence, the red tincture. This is the true and authentic duplex Mercurius or Giant⁴ of twofold substance....⁵ God by nature, man, hero, etc., who hath the celestial Spirit in him, which quickeneth all things . . . he is the sole and perfect Healer of all imperfect bodies and men, the true and heavenly physician of the soul . . . the triune universal essence,⁶ which is called Jehovah.⁷

[385] These panegyrics of the alchemists have often been regretted as examples of bad taste or ridiculed as exuberant fantasies—most unfairly, it seems to me. They were serious people, the alchemists, and they can be understood only when taken seriously, however hard this may hit our own prejudices. It was never their intention to exalt their stone into a world saviour, nor did they purposely smuggle into it a whole lot of known and unknown mythology any more than we do in our dreams. They simply found these qualities in their idea of a body composed of the four elements and capable of uniting all opposites, and were just as amazed at this discovery as anyone would be who had a singularly impressive dream and then came across an unknown

myth which fitted it exactly. No wonder, therefore, that they endowed the stone or the red tincture, which they really believed could be produced, with all the qualities they had discovered in their idea of such an object. This makes it easier for us to understand a statement that is entirely characteristic of the alchemical way of thinking. It occurs on the same page as the above quotation from “*Aquarium sapientum*” and runs:

Even as, I say, this earthly and philosophic stone, together with its material, has many different names, indeed it is said almost a thousand, for which reason it is also called wonderful, even so can these and other afore-mentioned names and titles be applied much more properly, and indeed in the highest degree, to Almighty God and the Supreme Good.

It obviously never occurred to the author, as we with our prejudiced view are quick to assume, that he had simply transferred God’s attributes to the stone.

[386] It is evident from this that the stone for the alchemists was nothing less than a primordial religious experience which, as good Christians, they had to reconcile with their beliefs. This accounts for that ambiguous identity or parallelism between Christ as the *filius microcosmi* and the *lapis philosophorum* as the *filius macrocosmi*, or even the substitution of the one for the other.

[387] The lapis-Christ parallel was presumably the bridge by which the mystique of the Rose entered into alchemy. This is evident first of all from the use of “Rosarium” or “Rosarius” (rose-gardener) as a book title. The first *Rosarium* (there are several), first printed in 1550, is for the greater part ascribed to Arnaldus de Villanova. It is a compilation whose historical components have not yet been sorted out. Arnaldus lived in the second half of the thirteenth century. He is also credited with the *Rosarium cum figuris*, where the rose is the symbol of relationship between king and queen. The reader will find a detailed account of this in my “Psychology of the Transference,” which reproduces the *Rosarium* illustrations.

[388] The rose has the same meaning in Mechthild of Magdeburg. The Lord spoke to her, saying: “Look at my heart, and see!” A most beautiful rose with five petals covered his whole breast, and the Lord said: “Praise me in my five senses, which are indicated by this rose.” As is explained later, the five senses are the vehicles of Christ’s love for man (e.g., “through the sense of smell he has always a certain loving affection directed towards man”).⁸

[389] In the spiritual sense the rose, like the *hortus aromatum* (garden of spices),⁹ *hortus conclusus*,¹⁰ and *rosa mystica*,¹¹ is an allegory of Mary, but in the worldly sense it is the beloved, the rose of the poets, the “fedeli d’amore” of that time. And just as Mary is allegorized in St. Bernard¹² as the *medium terrae* (centre of the earth), in Rabanus Maurus¹³ as the “city,” in Godfrey, Abbot of Admont, as the “fortress”¹⁴

and the “house of divine wisdom,”¹⁵ and in Alan of Lille as the *acies castrorum* (army with banners),¹⁶ so the rose has the significance of a mandala, as is clear from the heavenly rose in Dante’s *Paradiso*. Like its equivalent, the Indian lotus, the rose is decidedly feminine. In Mechthild of Magdeburg it must be understood as a projection of her own feminine Eros upon Christ.¹⁷

[390] It seems as though the rose-coloured blood of the alchemical redeemer¹⁸ was derived from a rose mysticism that penetrated into alchemy, and that, in the form of the red tincture, it expressed the healing or whole-making effect of a certain kind of Eros. The strange concretism of this symbol is explained by the total absence of psychological concepts. Dorn was therefore bound to understand the rose-coloured blood as a “*vegetabile naturae*,” in contrast to ordinary blood, which was a “*vegetabile materiae*.” As he says, the soul of the stone is in its blood. Since the stone represents the *homo totus*,¹⁹ it is only logical for Dorn to speak of the “*putissimus homo*” when discussing the arcane substance and its bloody sweat, for that is what it is all about. *He* is the arcanum, and the stone and its parallel or prefiguration is Christ in the garden of Gethsemane.²⁰ This “most pure” or “most true” man must be no other than what he is, just as “*argentum putum*” is unalloyed silver; he must be entirely man, a man who knows and possesses everything human and is not adulterated by any influence or admixture from without. This man will appear on earth only “in the last days.” He cannot be Christ, for Christ by his blood has already redeemed the world from the consequences of the Fall.²¹ Christ may be the “*purissimus homo*,” but he is not “*putissimus*.” Though he is man, he is also God, not pure silver but gold as *well*, and therefore not “*putus*.” On no account is it a question here of a future Christ and *salvator microcosmi*, but rather of the alchemical *servator cosmi* (preserver of the cosmos), representing the still unconscious idea of the whole and complete man, who shall bring about what the sacrificial death of Christ has obviously left unfinished, namely the deliverance of the world from evil. Like Christ he will sweat a redeeming blood, but, as a “*vegetabile naturae*,” it is “rose-coloured”; not natural or ordinary blood, but symbolic blood, a psychic substance, the manifestation of a certain kind of Eros which unifies the individual as well as the multitude in the sign of the rose and makes them whole, and is therefore a panacea and an alexipharmic.

[391] The second half of the sixteenth century saw the beginning of the Rosicrucian movement, whose motto—*per crucem ad rosam*—was anticipated by the alchemists. Goethe caught the mood of this Eros very well in his poem “*Die Geheimnisse*.” Such movements, as also the emergence of the idea of Christian charity with its emotional overtones,²² are always indicative of a corresponding social defect which they serve to compensate. In the perspective of history, we can see clearly enough what this defect was in the ancient world; and in the Middle Ages as well, with its cruel and

unreliable laws and feudal conditions, human rights and human dignity were in a sorry plight. One would think that in these circumstances Christian love would be very much to the point. But what if it is blind and without insight? Solicitude for the spiritual welfare of the erring sheep can explain even a Torquemada. Love alone is useless if it does not also have understanding. And for the proper use of understanding a wider consciousness is needed, and a higher standpoint to enlarge one's horizon. That is why Christianity as a historical force has not rested content with admonishing man to love his neighbour, but has also performed a higher cultural task which it is impossible to overestimate. It has educated man to a higher consciousness and responsibility. Certainly love is needed for that, but a love combined with insight and understanding. Their function is to illuminate regions that are still dark and to add them to consciousness—regions in the outside world as well as those within, in the interior world of the psyche. The blinder love is, the more it is instinctual, and the more it is attended by destructive consequences, for it is a dynamism that needs form and direction. Therefore a compensatory Logos has been joined to it as a light that shines in the darkness. A man who is unconscious of himself acts in a blind, instinctive way and is in addition fooled by all the illusions that arise when he sees everything that he is not conscious of in himself coming to meet him from outside as projections upon his neighbour.

8. THE ALCHEMICAL MIND

[392] The alchemists seem to have had an inkling of this state of mind; at any rate it got mixed up with their opus. Already in the fourteenth century they had discovered that what they were searching for reminded them not only of all manner of mysterious substances, remedies, and poisons, but of various living things, plants and animals, and, finally, of some strange mythological figure, a dwarf, earth-spirit or metal-spirit, or even of something like a God-man. Thus in the first half of the fourteenth century, Petrus Bonus of Ferrara wrote that in a certain letter Rhazes had said:

With this red stone the philosophers exalted themselves above all others and foretold the future. They prophesied not only in general but also in particular. Thus they knew that the day of judgment and the end of the world must come, and the resurrection of the dead, when each soul will be united with its former body and will no more be separated from it for ever. Then each glorified body will be changed, possess incorruptibility and brightness, and an almost unbelievable subtlety, and it will penetrate all solids,¹ because its nature will then be of the nature of spirit as well as body. . . . It is a nature which, when it is moistened and left for many nights in that condition, is like a dead man, and then that thing needs the fire, until the spirit of that body is extracted and left to stand through the nights, and falls to dust like a man in his grave. And when all this has happened, God will give it back its soul and its body,

and take away its imperfection; then will that thing be strengthened and improved, as after the resurrection a man becomes stronger and younger than he was in this world. . . . Thus the philosophers have beheld the Last Judgment in this art, namely the germination and birth of this stone, which is miraculous rather than rational; for on that day the soul to be beatified unites with its former body through the mediation of the spirit, to eternal glory. . . . So also the old philosophers of this art knew and maintained that a virgin must conceive and bring forth, because in their art the stone conceives of itself, becomes pregnant, and brings itself forth. . . . And because they beheld the miraculous conception, pregnancy, birth, and nourishment of this stone, they concluded that a woman who is a virgin will conceive without a man, become pregnant and give birth in miraculous wise, and remain a virgin as before. . . . As Alphidius says, this stone is cast out into the streets, is lifted up into the clouds, dwells in the air, feeds in the streams and rests on the tops of the mountains. Its mother is a virgin, its father knows not woman. . . . The philosophers also knew that God must become man on the last day of this art, whereon is the fulfilment of the work; begetter and begotten become altogether one; old man and boy, father and son, become altogether one; thus all old things are made new.² God himself has entrusted this magistry to his philosophers and prophets, for whose souls he has prepared a dwelling place in his paradise.³

[393] As this text makes very plain, Petrus Bonus discovered that the alchemical opus anticipated, feature for feature, the sacred myth of the generation, birth, and resurrection of the Redeemer, for he was quite convinced that the ancient authorities of the art, Hermes Trismegistus, Moses, Plato, and others knew the whole process long ago and consequently had prophetically anticipated the coming salvation in Christ. He was not in any way conscious that the situation might be the reverse and that the alchemists were drawing on ecclesiastical tradition and subsequently approximated their operations to the sacred legend. The degree of his unconsciousness is more than merely astonishing: it is instructive. This extraordinary blindness shows us that there must have been an equally powerful motive behind it. Bonus was not the only one to make this declaration, though he was the first; in the next three hundred years it became increasingly widespread and caused offence. Bonus was an erudite scholastic and, quite apart from his religious beliefs, was intellectually well in a position to recognize his error. But what impelled him to this view was the fact that he was indeed drawing on a source more ancient than ecclesiastical tradition: when contemplating the chemical changes that took place during the opus, his mind became suffused with archetypal, mythological parallels and interpretations, just as had happened to the old pagan alchemists, and as still happens today when the imagination is given free play in the observation and investigation of the products of the unconscious. Under these conditions forms of

thought emerge in which one can afterwards discover parallels with mythological motifs, including Christian ones; parallels and similarities which perhaps one would never have suspected at first sight. So it was with the old adepts who, not knowing anything about the nature of chemical substances, reeled from one perplexity to the next: willy-nilly they had to submit to the overwhelming power of the numinous ideas that crowded into the empty darkness of their minds. From these depths a light gradually dawned upon them as to the nature of the process and its goal. Because they were ignorant of the laws of matter, its behaviour did not do anything to contradict their archetypal conception of it. Occasionally they made chemical discoveries in passing, as was only to be expected; but what they really discovered, and what was an endless source of fascination to them, was the symbolism of the individuation process.

[394] Petrus Bonus could not but recognize that the alchemical symbols which had been discovered in an entirely different way agreed in a remarkable manner with those of the Christian story of salvation. In their efforts to fathom the secrets of matter the alchemists had unexpectedly blundered into the unconscious, and thus, without at first being aware of it, they became the discoverers of a process which underlies Christian symbolism among others. It did not take more than a couple of centuries for the more reflective among them to realize what the quest for the stone was actually about. Hesitantly at first, hint by hint, and then with unmistakable clarity, the stone revealed to them its identity with man himself, with a supraordinate factor that could actually be found within him, with Dorn's "quid," which today can be identified without difficulty with the self, as I have shown elsewhere.⁴

[395] In their various ways, the alchemists struggled to come to terms with the lapis-Christ parallel. They did not find a solution, nor was this possible so long as their conceptual language was not freed from projection into matter and did not become psychological. Only in the following centuries, with the growth of natural science, was the projection withdrawn from matter and entirely abolished together with the psyche. This development of consciousness has still not reached its end. Nobody, it is true, any longer endows matter with mythological properties. This form of projection has become obsolete. Projection is now confined to personal and social relationships, to political Utopias and suchlike. Nature has nothing more to fear in the shape of mythological interpretations, but the realm of the spirit certainly has, more particularly that realm which commonly goes by the name of "metaphysics." There mythologems claiming to utter the absolute truth still tumble over one another, and anyone who dresses up his mythologem in solemn enough words believes that he has made a valid statement, and even makes a virtue of not possessing the modesty becoming to our limited human intelligence, which knows that it does not know. Such people even think that God himself is menaced whenever anyone dares to

interpret their archetypal projections for what they are, namely, human statements, which no reasonable person supposes signify nothing, seeing that even the most preposterous statements of the alchemists have their meaning, though not the one which they themselves, with but few exceptions, sought to give their symbols, but one which only the future could formulate. Whenever we have to do with mythologems it is advisable to assume that they mean more than what they appear to say. Just as dreams do not conceal something already known, or express it under a disguise, but try rather to formulate an as yet unconscious fact as clearly as possible, so myths and alchemical symbols are not euhemeristic allegories that hide artificial secrets. On the contrary, they seek to translate natural secrets into the language of consciousness and to declare the truth that is the common property of mankind. By becoming conscious, the individual is threatened more and more with isolation, which is nevertheless the *sine qua non* of conscious differentiation. The greater this threat, the more it is compensated by the production of collective and archetypal symbols which are common to all men.

[396] This fact is expressed in a general way by the religions, where the relation of the individual to God or the gods ensures that the vital link with the regulating images and instinctual powers of the unconscious is not broken. Naturally this is true only so long as the religious ideas have not lost their numinosity, i.e., their thrilling power. Once this loss has occurred, it can never be replaced by anything rational. Compensating primordial images then appear in the form of mythological ideas such as alchemy produced in abundance and as may also be found in our own dreams. In both cases, consciousness reacts to these revelations in the same characteristic way: the alchemist reduced his symbols to the chemical substances he worked with, while the modern man reduces them to personal experiences, as Freud also does in his interpretation of dreams. Both of them act as though they knew to what known quantities the meaning of their symbols could be reduced. And both, in a sense, are right: for just as the alchemist was caught in his own alchemical dream language, so modern man, caught in the toils of egohood, uses his personal psychological problems as a *façon de parler*. In both cases the representational material is derived from already existing conscious contents. The result of this reduction, however, is not very satisfactory—so little, in fact, that Freud saw himself obliged to go back as far as possible into the past. In so doing he finally hit upon an uncommonly numinous idea, the archetype of incest. He thus found something that to some extent expressed the real meaning and purpose of symbol production, which is to bring about an awareness of those primordial images that belong to all men and can therefore lead the individual out of his isolation. Freud's dogmatic rigidity is explained by the fact that he succumbed to the numinous effect of the primordial image he had discovered. If we assume with him that the incest motif is the source of all modern man's

psychological problems as well as of alchemical symbolism, this gets us nowhere as regards the *meaning* of the symbols. On the contrary, we have landed ourselves in a blind alley, for we shall only be able to say that all symbolism, present and future, derives from the primal incest. That is what Freud actually thought, for he once said to me: “I only wonder what neurotics will do in the future when it is generally known what their symbols mean.”

[397] Luckily for us, symbols mean very much more than can be known at first glance. Their meaning resides in the fact that they compensate an unadapted attitude of consciousness, an attitude that does not fulfil its purpose, and that they would enable it to do this if they were understood.⁵ But it becomes impossible to interpret their meaning if they are reduced to something else. That is why some of the later alchemists, particularly in the sixteenth century, abhorred all vulgar substances and replaced them by “symbolic” ones which allowed the nature of the archetype to glimmer through. This does not mean that the adept ceased to work in the laboratory, only that he kept an eye on the symbolic aspect of his transmutations. This corresponds exactly to the situation in the modern psychology of the unconscious: while personal problems are not overlooked (the patient himself takes very good care of that!), the analyst keeps an eye on their symbolic aspects, for healing comes only from what leads the patient beyond himself and beyond his entanglement in the ego.

9. VARIOUS ASPECTS OF THE TREE

[398] What the tree meant to the alchemists cannot be ascertained either from a single interpretation or from a single text. In order to discover this, a great many sources must be compared. We shall therefore turn to further statements about the tree. Pictures of the tree are often given in the medieval texts. Some of them are reproduced in *Psychology and Alchemy*. Sometimes the prototype is the tree of paradise, hung not with apples but with sun-and-moon fruit, like the trees in the treatise of Michael Maier in the *Musaeum hermeticum*,¹ or else it is a sort of Christmas tree, adorned with the seven planets and surrounded by allegories of the seven phases of the alchemical process. Standing beneath the tree are not Adam and Eve but Hermes Trismegistus as an old man and the adept as a youth. Behind Hermes Trismegistus is King Sol sitting on a lion accompanied by a fire-spitting dragon, and behind the adept is the moon goddess Diana sitting on a whale accompanied by an eagle.² The tree is generally in leaf and living, but sometimes it is quite abstract and expressly stands for the phases of the process.³

[399] In the Ripley *Scrowle*⁴ the serpent of paradise dwells in the top of the tree in the shape of Melusina—“desinit in [anguem] mulier formosa superne.”⁵ This is combined with a motif that is not in the least Biblical but is primitive and shamanistic: a man, presumably the adept, is halfway up the tree and meets Melusina,

or Lilith, coming down from above. The climbing of the magical tree is the heavenly journey of the shaman, during which he encounters his heavenly spouse. In medieval Christianity the shamanistic anima was transformed into Lilith,⁶ who according to tradition was the serpent of paradise and Adam's first wife, with whom he begot a horde of demons. In this picture primitive traditions cross with Judaeo-Christian ones. I have never come across the climbing of the tree in the pictures done by my patients, and have met it only as a dream motif. The motif of ascent and descent occurs in modern dreams chiefly in connection with a mountain or a building, or sometimes a machine (lift, aeroplane, etc.).

[400] The motif of the leafless or dead tree is not common in alchemy, but is found in Judaeo-Christian tradition as the tree of paradise that died after the Fall. An old English legend⁷ reports what Seth saw in the Garden of Eden. In the midst of paradise there rose a shining fountain, from which four streams flowed, watering the whole world. Over the fountain stood a great tree with many branches and twigs, but it looked like an old tree, for it had no bark and no leaves. Seth knew that this was the tree of whose fruit his parents had eaten, for which reason it now stood bare. Looking more closely, Seth saw that a naked snake without a skin⁸ had coiled itself round the tree. It was the serpent by whom Eve had been persuaded to eat of the forbidden fruit. When Seth took a second look at paradise he saw that the tree had undergone a great change. It was now covered with bark and leaves, and in its crown lay a little newborn babe wrapped in swaddling clothes, that wailed because of Adam's sin. This was Christ, the second Adam. He is found in the top of the tree that grows out of Adam's body in representations of Christ's genealogy.

[401] Another alchemical motif is the truncated tree. In the frontispiece to the French edition (1600) of Francesco Colonna's *Hypnerotomachia Poliphili* (Venice, 1499), it forms the counterpart to the lion with cut-off paws,⁹ which appears as an alchemical motif in Reusner's *Pandora* (1588). Blaise de Vigenère (1523–?1569), who was influenced by the Cabala, speaks of the "caudex arboris mortis" (trunk of the tree of death) that sent out a red death-ray.¹⁰ "Tree of death" is synonymous with "coffin." The strange recipe, "Take the tree and place in it a man of great age,"¹¹ should probably be understood in this sense. This motif is a very ancient one, and occurs in the ancient Egyptian tale of Bata, preserved in a papyrus of the nineteenth dynasty. There the hero placed his soul on the topmost blossom of an acacia-tree. When the tree was cut down with treacherous intent, his soul was found again in the form of a seed. With this the dead Bata was restored to life. When he was killed a second time in the form of a bull, two persea trees grew out of the blood. But when these were cut down, a chip of the wood fertilized the queen, who bore a son: he was the reborn Bata, who then became Pharaoh, a divine being. It is evident that the tree here is an instrument of transformation.¹² Vigenère's "caudex" is similar to the truncated tree in

Poliphilo. This image probably goes back to Cassiodorus, who allegorizes Christ as a “tree cut down in his passion.”¹³

[402] More frequently the tree appears bearing flowers and fruit. The Arabian alchemist Abu'l Qēsīm (13th cent.) describes its four kinds of blossoms as red, midway between white and black, black, and midway between white and yellow.¹⁴ The four colours refer to the four elements that are combined in the opus. The quaternity as a symbol of wholeness means that the goal of the opus is the production of an all-embracing unity. The motif of the double quaternity, the ogdoad, is associated in shamanism with the world-tree: the cosmic tree with eight branches was planted simultaneously with the creation of the first shaman. The eight branches correspond to the eight great gods.¹⁵

[403] The *Turba* has much to say about the fruit-bearing tree.¹⁶ Its fruits are of a special kind. The “Visio Arislei” speaks of “this most precious tree, of whose fruit he who eats shall never hunger.”¹⁷ The parallel to this in the *Turba* runs: “I say that that old man does not cease to eat of the fruits of that tree . . . until that old man becomes a youth.”¹⁸ These fruits are here equated with the bread of life in John 6 : 35, but they go back beyond that to the Ethiopic Book of Enoch (second century B.C.), where it is said that the fruits of the tree in the Western Land will be the food of the elect.¹⁹ This is a clear hint of death and renewal. It is not always the fruit of the tree, but of the *granum frumenti*, the grain of wheat, from which the food of immortality is prepared, as in *Aurora consurgens* I: “For from the fruits of this grain is made the food of life, which cometh down from heaven.”²⁰ Manna, Host, and panacea form here an unfathomable mixture. The same idea of a miraculous spiritual food is mentioned in the Arisleus vision. There it is said that Harforetus (Harpokrates), a “disciple of Pythagoras” and the “author of nourishment,” came to the help of Arisleus and his companions, evidently with the fruits of the tree that are mentioned in Ruska’s edition of Berlin Codex Q. 584.²¹ In the Book of Enoch the fruits of the tree of wisdom are likened to grapes, and this is of interest inasmuch as in the Middle Ages the philosophical tree was sometimes called a vine,²² with reference to John 15 : 1, “I am the true vine.” The fruits and seeds of the tree were also called sun and moon,²³ to which the two trees of paradise corresponded.²⁴ The sun-and-moon fruits presumably go back to Deuteronomy 33 : 13f. (DV): “[Blessed] of the Lord be his land . . . [for] the fruits brought forth by the sun and by the moon . . .²⁵ and [for] the fruits of the everlasting hills.” Laurentius Ventura²⁶ says: “Sweet of smell is this apple, rich in colour this little apple,” and pseudo-Aristotle says in his “Tractatus ad Alexandrum Magnum”:²⁷ “Gather the fruits, for the fruit of this tree has led us into the darkness and through the darkness.” This ambiguous advice evidently alludes to a knowledge which was not on the best of terms with the prevailing world-view.

[404] Benedictus Figulus calls the fruit “the golden apple of the Hesperides, to be pluck’t from the blest philosophic tree,”²⁸ the tree representing the opus and the fruit its results, i.e., the gold of which it is said: “Our gold is not the common gold.”²⁹ A special light is thrown on the meaning of the fruit by a saying in “Gloria mundi”: “Take the fire, or quicklime, of which the philosophers speak, which grows on trees, for in that [fire] God himself burns with divine love.”³⁰ God himself dwells in the fiery glow of the sun and appears as the fruit of the philosophical tree and thus as the product of the opus, whose course is symbolized by the growth of the tree. This remarkable saying loses its strangeness if we remember that the goal of the opus was to deliver the *anima mundi*, the world-creating spirit of God, from the chains of Physis. Here this idea has activated the archetype of the tree-birth, which is known to us chiefly from the Egyptian and Mithraic spheres of culture. A conception prevalent in shamanism is that the ruler of the world lives in the top of the world-tree,³¹ and the Christian representation of the Redeemer at the top of his genealogical tree might be taken as a parallel. In [Figure 27](#), the woman’s head rising “like the pistil of a flower” might be compared with the Mithras relief from Osterburken (Germany).³²

[405] Sometimes the tree is small and young, something like the “grani tritici arbuscula” (little trees of wheat grains),³³ sometimes large and old, taking the form of an oak³⁴ or the world-tree, in so far as it bears the sun and moon as its fruits.

10. THE HABITAT OF THE TREE

[406] The philosophical tree usually grows alone and, according to Abu’l Qēsim, “on the sea” in the Western Land, which presumably means on an island. The secret moon-plant of the adepts is “like a tree planted in the sea.”¹ In a parable in Mylius² the sun-and-moon tree stands on an island in the sea and grows out of the wonderful water that is extracted by the power of the magnet from the rays of the sun and moon. Khunrath says: “From this little salty fountain grows also the tree of the sun and moon, the red and white coral tree of our sea.”³ Salt and sea-water signify in Khunrath among other things the maternal Sophia from whose breasts the *filii Sapientiae*, the philosophers, drink. Abu’l Qēsim might well have been acquainted with Persian traditions (his surname al-Iraqi also brings him geographically nearer to Persia), and more particularly with the legend of the tree in the Bundahish that grows in the sea named Vourukasha, or of the tree of life that grows in the fountain of Ardvī Sūra Anēhita.⁴

[407] The tree (or wonderful plant) also has its habitat on the mountains. Since the imagery of the Book of Enoch was often taken as a model, it should be mentioned that there the tree in the Western Land stood on a mountain.⁵ In the “Practica Mariae Prophetissae”⁶ the wonderful plant is described as “growing on hills.” The Arabic treatise of Ostanēs in the “Kitâb el Foçul”⁷ says: “It is a tree that grows on the tops of

mountains.” The relation of tree to mountain is not accidental, but is due to the original and widespread identity between them: both are used by the shaman for the purpose of his heavenly journey.⁸ Mountain and tree are symbols of the personality and of the self, as I have shown elsewhere; Christ, for instance, is symbolized by the mountain⁹ as well as by the tree.¹⁰ Often the tree stands in a garden, as an obvious reminder of Genesis. Thus the trees of the seven planets grow in the “private garden” of the blessed isles.¹¹ In Nicolas Flamel (1330?–?1418) the “most highly praised tree” grows in the garden of the philosophers.¹²

[408] As we have seen, the tree has a special connection with water, salt, and seawater, and thus with the *aqua permanens*, the true arcanum of the adepts. This as we know is Mercurius, who is not to be confused with Hg, the *mercurius crudus sive vulgaris*.¹³ Mercurius is the tree of the metals.¹⁴ He is the prima materia,¹⁵ or else its source.¹⁶ The god Hermes (= Mercurius) “watered his tree with that water, and with his glass made the flowers grow high.”¹⁷ I cite this passage because it expresses the subtle alchemical idea that the artifex and the arcanum are one and the same. The water that makes the tree grow but also consumes it¹⁸ is Mercurius, who is called “duplex” because he unites the opposites in himself, being both a metal and a liquid. Hence he is called both water and fire. As the sap of the tree he is therefore also fiery (cf. Fig. 15), that is to say the tree is of a watery and a fiery nature. In Gnosticism we encounter the “great tree” of Simon Magus, which consists of “supracelestial fire.” “From it all flesh is fed.”¹⁹ It is a tree like the one that appeared to Nebuchadnezzar in a dream. Its branches and leaves are consumed, but “the fruit, when it is ready formed and has received its shape, is brought into a barn and not cast into the fire.”²⁰ This image of the “supracelestial fire” accords on the one hand with the much earlier “ever-living fire” of Heraclitus, and on the other with the much later interpretation of Mercurius as fire and as the *spiritus vegetativus* that pervades the whole of nature, both animating and destructive. The fruit that is “not cast into the fire” is naturally the man who has stood the test, the “pneumatic” man of the Gnostics. One of the synonyms for the lapis, which likewise signifies the inner, integrated man, is “frumentum nostrum” (our grain).²¹

[409] The tree is often represented as metallic,²² usually golden.²³ Its connection with the seven metals implies a connection with the seven planets, so that the tree becomes the world-tree, whose shining fruits are the stars. Michael Maier attributes the woody parts to Mercurius, the (fourfold) flowers to Saturn, Jupiter, Venus, and Mars, and the fruits to Sol and Luna.²⁴ The tree with seven branches (= seven planets) is mentioned in *Aurora consurgens* II²⁵ and identified with the Lunatica or Berissa,²⁶ “whose root is the metallic earth, its trunk red tinged with a certain blackness; its leaves are like the leaves of Marjoram, and are thirty in number according to the age of the moon in its waxing and waning; its flower is yellow.” It is clear from this

description that the tree symbolizes the whole opus. Accordingly Dorn says:²⁷ “Let therefore the tree [of the planets or metals] be planted and its root be ascribed to Saturn, and let that inconstant Mercurius and Venus, arising in the trunk and branches, offer to Mars²⁸ the leaves and fruit-bearing flowers.” The relation to the world-tree is also apparent when Dorn says that “nature has planted the root of the [metallic] tree in the midst of her womb.”²⁹

11. THE INVERTED TREE

[410] The tree is frequently called the “inverted tree” (*arbor inversa*).¹ Laurentius Ventura (16th cent.) says: “The roots of its ores are in the air and the summits in the earth. And when they are torn from their places, a terrible sound is heard and there follows a great fear.”² Ventura is obviously thinking of the mandrake, which, when tied to the tail of a black dog, shrieks when it is torn out of the earth. The “Gloria mundi” likewise mentions that the philosophers had said that “the root of its minerals is in the air and its head in the earth.”³ Sir George Ripley says that the tree has its roots in the air and, elsewhere, that it is rooted in the “glorified earth,” in the earth of paradise or in the future world.

[411] Similarly, Vigenère states that a “Rabbi, the son of Josephus Carnitolus,” had said: “The foundation of every lower structure is affixed above and its summit is here below, like an inverted tree.”⁴ Vigenère had some knowledge of the Cabala and is here comparing the philosophical tree with the tree of the Sefiroth, which is actually a mystical world-tree. But for him this tree also signifies man. He substantiates the singular idea that man is implanted in paradise by the roots of his hair with a reference to Song of Songs 7 : 5 (DV): “Thy head is like Carmel, and the hairs of thy head as the purple of the king bound in the channels” (... *comae capitis tui sicut purpura Regis vincta*⁵ *canalibus*). The “canales” are little tubes, perhaps some kind of head ornament.⁶ Knorr von Rosenroth is of the opinion that the “great tree” refers to Tifereth, the bridegroom of Malchuth.⁷ The upper Sefira Binah is named the “root of the tree,”⁸ and in Binah is rooted the tree of life. Because this stood in the middle of the garden, it was called the *linea media* (middle line). Through this middle line, which was as it were the trunk of the Sefiroth system, it brought life down to earth from Binah.⁹

[412] The idea that man is an inverted tree seems to have been current in the Middle Ages. The humanist Andrea Alciati (d. 1550) says in his *Emblemata cum commentariis*: “It pleased the Physicists to see man as a tree standing upside down, for what in the one is the root, trunk, and leaves, in the other is the head and the rest of the body with the arms and feet.”¹⁰ The link with Indian conceptions is provided by Plato.¹¹ Krishna says in the Bhagavadgītē (ch. 15): “I am the Himalaya among

mountains and the *ashvattha* among trees.” The *ashvattha* (*Ficus religiosa*) pours down from above the drink of immortality, soma.¹² The Bhagavadgītē continues:

There is a fig tree
In ancient story,
The giant Ashvattha,
The everlasting,
Rooted in heaven,
Its branches earthward;
Each of its leaves
Is a song of the Vedas,
And he who knows it
Knows all the Vedas.

Downward and upward
Its branches bending
Are fed by the gunas,
The buds it puts forth
Are the things of the senses,
Roots it has also
Reaching downward
Into this world,
The roots of man’s action.¹³

[413] The alchemical illustrations showing the opus as a tree and its phases as the leaves¹⁴ are very reminiscent of the Indian conception of deliverance through the Veda, i.e., through knowledge. In Hindu literature the tree grows from above downwards, whereas in alchemy (at least according to the pictures) it grows from below upwards. In the illustrations to the *Pretiosa margarita novella* of 1546,¹⁵ it looks very like an asparagus plant. [Figure 27](#) in my picture series contains the same motif, and indeed the upthrusting stalks of asparagus are a graphic representation of the way previously unconscious contents push into consciousness. In East and West alike, the tree symbolizes a living process as well as a process of enlightenment, which, though it may be grasped by the intellect, should not be confused with it.

[414] The tree as guardian of the treasure appears in the alchemical fairytale of “The Spirit in the Bottle.” As it contains the treasure which appears in its fruit, the tree is a symbol of the *chrysopoea* (goldmaking) or *ars aurifera* in general, in accordance

with the principle laid down by “Hercules”:¹⁶ “This magistry arises in the beginning from one root, which afterwards expands into several substances and then returns to the one.”¹⁷ Ripley likens the artifex to Noah cultivating the vine,¹⁸ in Djēbir the tree is the “mystic myrtle,”¹⁹ and in Hermes the “vine of the wise.”²⁰ Hoghelande says: “But the fruits go forth from the most perfect tree in early spring and flower at the beginning of the end.”²¹ It is clear from this that the life of the tree represents the opus, which as we know coincides with the seasons.²² The fact that the fruits appear in the spring and the flowers in the autumn may be connected with the motif of reversal (*arbor inversa!*) and the *opus contra naturam*. The “Allegoriae sapientum supra librum Turbae” give the following recipe: “Again, plant this tree on the stone, that it fear not the buffetings of the winds; that the birds of heaven may come and multiply on its branches, for thence cometh wisdom.”²³ Here too the tree is the true foundation and arcanum of the opus. This arcanum is the much-praised *thesaurus thesaurorum*. Just as the tree of the metals has seven branches, so also has the tree of contemplation, as a treatise entitled “De arbore contemplationis” shows.²⁴ There the tree is a palm with seven branches and on each branch sits a bird: “pavo, [illegible word], cignus, [h]arpia, filomena, hyrundo, fenix,” and on each a flower: “viola, gladiola, lilium, rosa, crocus, solsequium, flos [... ?],” all of which have a moral significance. These ideas are very much like those of the alchemists. They contemplated their tree in the retort, where, according to the *Chymical Wedding*, it was held in the hand of an angel.²⁵

12. BIRD AND SNAKE

[415] Birds, as I have said, have a special relation to the tree. The “Scriptum Alberti” says that Alexander, on his great journey, found a tree which had its “glorious greenness” (*viriditas gloriosa*) within. On this tree sat a stork, and there Alexander built a golden palace to “set a fitting end to his travels.”¹ The tree with the bird stands for the opus and its consummation. The motif also appears in picture form.² The fact that the leaves of the tree (the *viriditas gloriosa*) grew inwards is another instance of the *opus contra naturam* and at the same time a concrete expression of introversion in the contemplative state.

[416] The snake, too, with obvious reference to the Bible story, is connected with the tree, first of all in a general way since it is properly speaking the mercurial serpent which, as the chthonic *spiritus vegetativus*, rises from the roots into the branches, and then more specifically because it represents the tree-numen and appears as Melusina.³ The mercurial serpent is the arcane substance that transforms itself inside the tree and thus constitutes its life. This is substantiated by the “Scriptum Alberti.” The text is probably a commentary on a picture which unfortunately is not given in the edition of 1602. It begins with the statement: “This is a picture of heaven, which is named the

heavenly sphere, and contains eight most noble figures, viz., the first figure, which is named the first circle and is the circle of the Deity,” etc.⁴ It is clear from this that it was a picture of concentric circles. The first, outermost, circle contains the “*verba divinitatis*,” the divine world order; the second the seven planets; the third the “corruptible” and “creative” elements (*generabilia*); the fourth a raging dragon issuing from the seven planets; the fifth “the head and the death” of the dragon. The head of the dragon “lives in eternity,” is named the “*vita gloriosa*,” and “the angels serve it.” The *caput draconis* is here obviously identified with Christ, for the words “the angels serve it” refer to Matthew 4 : 11, where Christ has just repudiated Satan. But if the dragon’s head is identified with Christ, then the dragon’s tail must be identical with Antichrist or the devil. According to our text the whole of the dragon’s body is absorbed by the head, so that the devil is integrated with Christ. For the dragon fought against the *imago Dei*, but by the power of God it was implanted in the dragon and formed its head: “The whole body obeys the head, and the head hates the body, and slays it beginning from the tail, gnawing it with its teeth, until the whole body enters into the head and remains there for ever.”⁵ The sixth circle contains six figures and two birds, namely storks. The figures are presumably human, for the text says one of them looked like an Ethiopian.⁶ It appears that the stork is a *vas circulatorium* (a vessel for circular distillation), like the Pelican.⁷ Each of the six figures represents three phases of transformation and together with the two birds they form an ogdoad as a symbol of the transformation process. The seventh circle, says the text, shows the relation of the “*verba divinitatis*” and the seven planets to the eighth circle, which contains the golden tree. The author states he would rather keep quiet about the content of the seventh circle, because this is where the great secret begins, which can be revealed only by God himself. Here is found the stone which the king wears in his crown. “Wise women hide it, foolish virgins show it in public, because they wish to be plundered.” “Popes, certain priests, and monks revile it, because it was so commanded of them by God’s law.”

[417] The golden tree in the eighth circle shines “like lightning.” Lightning in alchemy, as in Jakob Böhme, signifies sudden rapture and illumination.⁸ On the tree sits a stork. Whereas the two storks in the sixth circle represent the distilling apparatus for two transformations of three phases each, the stork sitting on the golden tree has a far wider significance. Since ancient times it was held to be the “*pia avis*” (devout bird), and appears as such in Haggadic tradition,⁹ despite being listed among the unclean beasts in Leviticus 11 : 19. Its piety may go back to Jeremiah 8 : 7: “Yea, the stork in the heaven knoweth her appointed times . . . but my people know not the judgment of the Lord.” In imperial Rome the stork was an allegory of piety, and in Christian tradition it is an allegory of Christ the judge, because it destroys snakes. Just as the snake or dragon is the chthonic numen of the tree, so the stork is its spiritual principle

and thus a symbol of the Anthropos.¹⁰ Among the forerunners of the alchemical stork must be counted the stork Adebar in Teutonic mythology, which brings back to earth the souls of the dead that were renewed in the fountain of Hulda.¹¹ The attribution of the “Scriptum” to Albertus Magnus is highly questionable. To judge by its style, its discussion of the philosophical tree can hardly be dated earlier than the sixteenth century.

13. THE FEMININE TREE-NUMEN

[418] As the seat of transformation and renewal, the tree has a feminine and maternal significance. We have seen from Ripley’s *Scrowle* that the tree-numen is Melusina. In *Pandora* the trunk of the tree is a crowned, naked woman holding a torch in each hand, with an eagle sitting in the branches on her head,¹ On Hellenistic monuments Isis has the form of Melusina and one of her attributes is the torch. Other attributes are the vine and the palm. Leto and Mary² both gave birth under a palm, and Maya at the birth of the Buddha was shaded by the holy tree. Adam, “so the Hebrews say,” was created out of the “earth of the tree of life,” the “red Damascene earth.”³ According to this legend, Adam stood in the same relation to the tree of life as Buddha to the Bodhi tree.

[419] The feminine-maternal nature of the tree appears also in its relation to Sapientia. The tree of knowledge in Genesis is in the Book of Enoch the tree of wisdom, whose fruit resembles the grape.⁴ In the teachings of the Barbeliots, reports Irenaeus,⁵ the Autogenes finally created “the man perfect and true, whom they also called Adamas.” With him was created perfect knowledge: “From [the perfect] man and gnosis is born the tree, which they also call gnosis.”⁶ Here we find the same connection of man with the tree as in the case of Adam and the Buddha. A similar connection is found in the *Acta Archelai*: “But that tree which is in paradise, whereby the good is known, is Jesus and the knowledge of him which is in the world.”⁷ “For thence [i.e., from the tree] cometh wisdom,” says the “*Allegoriae sapientum*.”⁸

[420] Similar ideas of the tree are found in alchemy. We have already met the conception of man as an inverted tree, a view found also in the Cabala. The *Pirke de Rabbi Eliezer*⁹ says: “R. Zehira said, ‘Of the fruit of the tree’—here ‘tree’ only means man, who is compared to the tree, as it is said, ‘For man is the tree of the field’ (Deuteronomy 20 : 19).” In the gnosis of Justin the trees in the Garden of Eden are angels, while the tree of knowledge of good and evil is the third of the motherly angels, the Naas.¹⁰ This division of the tree-soul into a masculine and a feminine figure corresponds to the alchemical Mercurius as the life principle of the tree, for as an hermaphrodite he is duplex.¹¹ The picture in *Pandora*, where the tree trunk is a woman’s body, refers to Mercurius in his feminine role of wisdom, who in his

masculine aspect is symbolized by the figure of Mercurius Senex or Hermes Trismegistus.

14. THE TREE AS THE LAPIS

[421] Just as the tree and man are central symbols in alchemy, so also is the lapis in its double significance as the prima and ultima materia. The above-mentioned quotation from the “Allegoriae sapientum”—“Plant this tree on the stone, that it fear not the buffetings of the winds”—seems to be an allusion to the parable of the house that was built on sand and fell when the floods came and the winds blew (Matthew 7 : 26-27). The stone might therefore mean simply the sure foundation afforded by the right prima materia. But the context points to the symbolic significance of the stone, as the preceding sentence makes clear: “Take wisdom with all thy power, for from it thou shalt drink eternal life, until thy [stone] is congealed and thy sluggishness depart, for thence cometh life.”¹

[422] “The prima materia is an oily water and is the philosophic stone, from which branches multiply into infinity,” says Mylius.² Here the stone is itself the tree and is understood as the “fiery substance” (the *ὕγρὰ οὐσία* of the Gnostics) or as the “oily water.” As water and oil do not mix, this represents the double or contrary nature of Mercurius.

[423] Similarly the “Consilium coniugii,” commenting on Senior, says: “Thus the stone is perfected of and in itself. For it is the tree whose branches, leaves, flowers, and fruits come from it and through it and for it, and it is itself whole or the whole [*tota vel totum*] and nothing else.”³ Hence the tree is identical with the stone and, like it, a symbol of wholeness. Khunrath says:

Of itself, from, in, and through itself is made and perfected the stone of the wise. For it is one thing only: like a tree (says Senior), whose roots, stem, branches, twigs, leaves, flowers, and fruit are of it and through it and from it and on it, and all come from one seed. It is itself everything, and nothing else makes it.⁴

[424] In the Arabic “Book of Ostanès” there is a description of the arcane substance, or the water, in its various forms, first white, then black, then red, and finally a combustible liquid or a fire which is struck from certain stones in Persia. The text continues:

It is a tree that grows on the tops of the mountains, a young man born in Egypt, a prince from Andalusia, who desires the torment of the seekers. He has slain their leaders. . . . The sages are powerless to oppose him. I can see no weapon against him save resignation, no charger but knowledge, no buckler but understanding. If the seeker finds himself before him with these three weapons, and slays him, he [the

prince] will come to life again after his death, will lose all power against him, and will give the seeker the highest power, so that he will arrive at his desired goal.⁵

[425] The chapter in which this passage occurs begins with the words: “The sage has said, what the student needs first of all is to know the stone, the object of the aspirations of the ancients.” The water, the tree, the young Egyptian, and the Andalusian prince all refer to the stone. Water, tree, and man appear here as its synonyms. The prince is an important symbol that needs a little elucidation, for it seems to echo an archetypal motif that is found in the Gilgamesh epic. There Enkidu, the chthonic man and shadow of Gilgamesh, is created by the gods at the behest of the insulted Ishtar, so that he may kill the hero. In the same way the prince “desires the torment of the seekers.” He is their enemy and “has slain their leaders,” that is, the masters and authorities of the art.

[426] This motif of the hostile stone is formulated in the “*Allegoriae sapientum*” as follows: “Unless thy stone shall be an enemy, thou wilt not attain to thy desire.”⁶ This enemy appears in alchemy in the guise of the poisonous or fire-spitting dragon and also as the lion. The lion’s paws must be cut off,⁷ and the dragon must be killed, or else it kills or devours itself on the principle of Democritus: “Nature rejoices in nature, nature rules over nature, and nature conquers nature.”⁸

[427] The slaying of the alchemical authorities cannot fail to remind us of the intriguing picture in *Pandora* of Melusina stabbing Christ’s side with a lance.⁹ Melusina corresponds to the Edem of the Gnostics and represents the feminine aspect of Mercurius, i.e., the female Nous (Naas of the Naassenes), which in the form of the serpent seduced our first parents. A parallel to this would be the aforementioned quotation from the “*Tractatus ad Alexandrum Magnum*”: “Gather the fruits, for the fruit of the tree has led us into the darkness and through the darkness.”¹⁰ As this admonition clearly contradicts the authority of the Bible and the Church, one can only suppose that it was uttered by someone who was consciously opposed to the ecclesiastical tradition.

[428] The connection with the Gilgamesh epic is of interest because Ostanés was thought to be a Persian and a contemporary of Alexander the Great. As a further parallel to the initial hostility of Enkidu and the Andalusian prince and of the stone in general we might cite the Khidr legend.¹¹ Khidr, the messenger of Allah, at first frightens Moses by his misdeeds. Considered as a visionary experience or as a didactic tale, the legend sets forth the relation of Moses on the one hand to his shadow, his servant Joshua ben Nun, and on the other hand to the self, Khidr.¹² The lapis and its synonyms are likewise symbols of the self. Psychologically, this means that at the first meeting with the self all those negative qualities can appear which almost invariably characterize an unexpected encounter with the unconscious.¹³ The danger is that of an inundation by the unconscious, which in a bad case may take the

form of a psychosis if the conscious mind is unable to assimilate, either intellectually or morally, the invasion of unconscious contents.

15. THE DANGERS OF THE ART

[429] *Aurora consurgens* I says in regard to the dangers which threaten the artifex: “O how many understand not the sayings of the wise; these have perished because of their foolishness, for they lacked spiritual understanding.”¹ Hoghelande is of the opinion that “the whole art is rightly to be held both difficult and dangerous, and anyone who is not improvident will eschew it as most pernicious.”² Aegidius de Vadis feels the same when he says: “I shall keep silent about this science, which has led most of those who work in it into confusion, because there are few indeed who find what they seek, but an infinite number who have plunged to their ruin.”³ Hoghelande, citing Haly, says: “Our stone is life to him who knows it and *how* it is made, and he who knows not and has not made it and to whom no assurance⁴ is given when it will be born, or who thinks it another stone, has already prepared himself for death.”⁵ Hoghelande makes it clear that it is not just the danger of poisoning⁶ or of possible explosions but of mental aberrations: “Let him take care to recognize and guard against the deceptions of the devil, who often insinuates himself into the chemical operations, that he may hold up the laborants with vain and useless things to the neglect of the works of nature.”⁷ He authenticates this danger by a quotation from Alphidius: “This stone proceeds from a sublime and most glorious place of great terror, which has given over many sages to death.”⁸ He also cites Moyses: “This work comes about as suddenly as the clouds come from heaven,” adding a quotation from Micreris: “If you should suddenly see this transformation, wonder, fear, and trembling will befall you; therefore work with caution.”⁹

[430] The danger of daemonic agencies is likewise mentioned in the “Liber Platonis quartorum”: “At a certain hour during the preparation certain kinds of spirits will oppose the work, and at another time this opposition will not be present.”¹⁰ The clearest of all is Olympiodorus (sixth century): “And all the while the demon Ophiuchos instils negligence, impeding our intentions; everywhere he creeps about, within and without, causing oversights, fear, and unpreparedness, and at other times he seeks by harassments and injuries to make us abandon the work.”¹¹ He also mentions that lead is possessed of a demon which drives men mad.¹²

[431] The miracle of the stone which the alchemist expected or experienced must have been intensely numinous, and this would explain his holy dread of profaning the mystery. “No one can disclose the name of the stone without damning his soul, for he cannot justify himself before God,” says Hoghelande.¹³ This conviction should be taken seriously. His treatise is the work of an honest and reasonable man, and differs very much to its advantage from the pretentious obscurantism of other treatises,

particularly those of Lully. Since the stone had “a thousand names,” one only wonders which of them it was that Hoghelande did not wish to disclose. The stone was indeed a great embarrassment to the alchemists, for since it had never been made no one could say what it really was. The most probable hypothesis, it seems to me, is that it was a psychic experience, which would account for the repeatedly expressed fear of mental disturbance.

[432] Wei Po-yang, the oldest Chinese alchemist known to us (2nd cent, A.D.), gives an instructive account of the dangerous consequences of making mistakes during the opus. After a brief résumé of the latter he describes the *chên-yên*, the true or complete man, who is the beginning and end of the work: “He is and he is not. He resembles a vast pool of water, suddenly sinking and suddenly floating.” He appears as a material substance, like Dorn’s *Veritas*,¹⁴ and in it are “mixed the squareness, the roundness, the diameter, and the dimensions, which restrain one another, having been in existence before the beginning of the heavens and the earth: lordly, lordly, high and revered.”¹⁵ This again conveys that impression of extreme numinosity which we found in Western alchemy.

[433] The author goes on to speak of a region “closed on all sides, its interior made up of intercommunicating labyrinths. The protection is so complete as to turn back all that is devilish and undesirable. . . . Cessation of thought is desirable and worries are preposterous. The divine *ch’i* (air, spirit, ethereal essence) fills the quarters and it cannot be held back. Whoever retains it will prosper and he who loses it, will perish.” For the latter will employ the “false method”: he will direct himself in all things by the course of the sun and the stars, in other words will lead a rationally ordered life in accordance with the rules of Chinese conduct. But this is not pleasing to the *tao* of the feminine principle (*yin*), or, as we should say, the ordering principles of consciousness are not in harmony with the unconscious (which in a man has a feminine character). If the adept at this point orders his life according to rules traditionally regarded as rational he brings himself into danger. “Disaster will come to the black mass.” The black mass is the *massa confusa*, the chaos or *nigredo* of Western alchemy, the prima materia, which is black outside and white inside, like lead. It is the *chên-yên* hidden in the darkness, the whole man, who is threatened by the rational and correct conduct of life, so that individuation is hindered or deflected into the wrong path. The *ch’i*, the quintessence (the rose-coloured blood of Western alchemy) cannot be “held back”: the self struggles to make itself manifest and threatens to overpower consciousness.¹⁶ This danger was particularly great for the Western alchemist, because the ideal of the *imitatio Christi* led him to regard the sweating out of the soul-substance in the form of the rose-coloured blood as a task that had actually been enjoined upon him. He felt morally obliged to realize the demands of the self regardless of whether these demands taxed him too highly. It

seemed to him that God and his highest moral principles required this self-sacrifice. It is indeed a self-sacrifice, a true *θυσία* of the self, when a man gives way to the urgency of these demands and perishes, for then the self has lost the game as well, having destroyed the human being who should have been its vessel. This danger, as the Chinese Master rightly observes, occurs when the traditional, moral, and rational principles of conduct are put into force at a moment when something other than social life is in question, namely, the integration of the unconscious and the process of individuation.

[434] Wei Po-yang gives a graphic description of the physiological and psychic consequences of error: “Gases from food consumed will make noises inside the intestines and stomach. The right essence (*ch’i*) will be exhaled and the evil one inhaled. Days and nights will be passed without sleep, moon after moon. The body will then be tired out, giving rise to an appearance of insanity. The hundred pulses will stir and boil so violently as to drive away peace of mind and body.” Nor will it be of any avail (following conscious morality) to build a temple, to watch diligently and bring gifts to the altar morning and night. “Ghostly things will make their appearance, at which he will marvel even in his sleep. He is then led to rejoice, thinking that he is assured of longevity.¹⁷ But all of a sudden he is seized by an untimely death.” The author adds the moral: “A slight error has thus led to a grave disaster.” The insights of Western alchemy did not penetrate to these depths. Nevertheless, the alchemists were aware of the subtle dangers of the work, and they knew that high demands were made not only on the intelligence of the adept but also on his moral qualities. Thus the invitation to the royal marriage in Christian Rosencreutz¹⁸ runs:

Keep watch, and ward,
Thyself regard;
Unless with diligence thou bathe,
The Wedding can’t thee harmless save;
He’ll damage have that here delays;
Let him beware, too light that weighs.

[435] It is clear from what happens in the *Chymical Wedding* that it was not concerned solely with the transformation and union of the royal pair, but also with the individuation of the adept. The union with the shadow and the anima is a difficulty not to be taken lightly. The problem of opposites that then makes its appearance and the unanswerable questions that this entails lead to the constellation of compensating archetypal contents in the form of numinous experiences. What complex psychology discovered only late was known long ago to the alchemists—*symbolice*—despite their limited intellectual equipment. Laurentius Ventura expresses this insight in a few succinct words: “The perfection of the work does not lie in the power of the

artifex, but God the most merciful himself bestows it upon whom he will. And in this point lies all the danger.”¹⁹ We might add that the words “the most merciful” should probably be taken as an apotropaic euphemism.

16. UNDERSTANDING AS A MEANS OF DEFENCE

[436] After this discussion of the dangers that threaten the adept, let us turn back to the Ostances quotation in section 14. The adepts knew that they could offer no resistance to the lapis in the form of the Andalusian prince. It seemed to be stronger than they, and the text says that they had only three weapons—“resignation,” the charger of “knowledge,” and the buckler of “understanding.” It is evident from this that on the one hand they thought themselves well advised to adopt a policy of nonresistance, while on the other they sought refuge in intelligence and understanding. The superior power of the lapis is attested by the saying: “The philosopher is not the master of the stone, but rather its minister.”¹ Obviously they had to submit to its power, but with a reserve of understanding which would finally enable them to slay the prince. We shall probably not go wrong if we assume that the adepts tried as best they could to understand that apparently invincible thing and thereby break its power. It is not only a well-known fairytale motif (Rumpelstiltskin!) but also a very ancient primitive belief that he who can guess the secret name has power over its possessor. In psychotherapy it is a well-known fact that neurotic symptoms which seem impossible to attack can often be rendered harmless by conscious understanding and experience of the contents underlying them. This is obvious enough, because the energy which maintained the symptom is then put at the disposal of consciousness, causing an increase of vitality on the one hand and a reduction of useless inhibitions and suchlike disturbances on the other.

[437] In order to understand the Ostances text, one must bear such experiences in mind. They occur whenever previously unconscious, numinous contents emerge into consciousness either spontaneously or through the application of a method. As in all magic texts, it is supposed that the power of the conquered daemon will pass into the adept. Our modern consciousness can hardly resist the temptation to think in the same way. We readily assume that psychic contents can be completely disposed of by insight. This is true only of contents that do not mean very much anyway. Numinous complexes of ideas may be induced to change their form, but since their content can take any number of forms it does not vanish in the sense of being rendered wholly ineffective. It possesses a certain autonomy, and when it is repressed or systematically ignored it reappears in another place in a negative and destructive guise. The devil whom the magician fancies he has bound to his service fetches him in the end. It is a waste of effort to try to use the daemon as a familiar for one’s own purposes; on the contrary, the autonomy of this ambivalent figure should be

religiously borne in mind, for it is the source of that fearful power which drives us towards individuation. Consequently the alchemists did not hesitate to endow their stone with positively divine attributes and to put it, as a microcosm and a man, on a par with Christ—“and in this point lies all the danger.” We neither can nor should try to force this numinous being, at the risk of our own psychic destruction, into our narrow human mould, for it is greater than man’s consciousness and greater than his will.

[438] Just as the alchemists occasionally betrayed a tendency to use the symbols produced by the unconscious as spellbinding names, so does modern man make analogous use of intellectual concepts for the opposite purpose of denying the unconscious, as though with reason and intellect its autonomy could be conjured out of existence. Curiously enough, I have critics who think that I of all people want to replace the living psyche by intellectual concepts. I do not understand how they have managed to overlook the fact that my concepts are based on empirical findings and are nothing but names for certain areas of experience. Such a misunderstanding would be comprehensible if I had omitted to present the facts on which I base my statements. My critics assiduously overlook the obvious truth that I speak of the facts of the living psyche and have no use for philosophical acrobatics.

17. THE MOTIF OF TORTURE

[439] The Ostanes text gives us valuable insight into the phenomenology of the individuation process as the alchemists experienced it. The reference to the “torment” which the prince desires for the artifex is particularly interesting. This motif appears in the Western texts but in inverse form, the tormented one being not the artifex but Mercurius, or the lapis or tree. The reversal of roles shows that the artifex imagines he is the tormentor whereas in fact he is the tormented. This becomes clear to him only later, when he discovers the dangers of the work to his own cost. A typical example of the projected torture is the vision of Zosimos.¹ The *Turba* says: “Take the old black spirit and destroy and torture² with it the bodies, until they are changed.”³ Elsewhere a philosopher tells the assembled sages: “The tortured thing, when it is immersed in the body, changes it into an unalterable and indestructible nature.”⁴ Mundus in Sermo XVIII says: “How many there be who search out these applications⁵ and [even] find some, but yet cannot endure the torments.”⁶

[440] These quotations show that the concept of torture is an ambiguous one. In the first case it is the bodies, the raw materials of the work, that are tormented; in the second case the tormented thing is without doubt the arcane substance, which is often called *res*; and in the third case it is the investigators themselves who cannot endure the torments. This ambiguity is no accident and has its deeper reasons.

[441] In the old texts that are contemporaneous with the Latin translation of the *Turba* there are gruesome recipes in the manner of the Magic Papyri, as for instance the disembowelling⁷ or plucking of a live cock,⁸ the drying of a man over a heated stone,⁹ the cutting off of hands and feet,¹⁰ etc. Here the torture is applied to the body. But we find another version in the equally old “Tractatus Micreris.”¹¹ There it is said that just as the Creator separates souls from bodies and judges and rewards them, “so we also must use flattery [*adulatio uti*]¹² on these souls and condemn them to the heaviest punishments [*poenis*, with marginal note: *laboribus*].” At this point an interlocutor raises the doubt as to whether the soul can be treated in this way, since it is “tenuous” and no longer inhabits the body. The Master replies: “It must be tormented with the most subtle spiritual thing, namely with the fiery nature which is akin to it. For if its body were tormented, the soul would not be tormented, and the torment would not reach it; for it is of spiritual nature, to be touched only by something spiritual.”¹³

[442] Here it is not the raw material that is tortured but the soul which has been extracted from it and must now suffer a spiritual martyrdom. The “soul” corresponds as a rule to the arcane substance, either the *prima materia* or the means by which it is transformed. Petrus Bonus, who, as we have seen, was one of the first medieval alchemists to wonder about the scope of his art, says that just as Geber met with difficulties “we also were plunged into stupor [*in stuporem adducti*] for a long time and were hidden under the cloak of despair. But when we came back to ourselves and tormented our thoughts with the torment of unlimited reflection, we beheld the substances.” He then cites Avicenna, who had said that it was necessary for us “to discover this operation [the *solutio*] through ourselves [*per nos ipsos*].” “These things were known to us before the experiment, as a consequence of long, intense, and scrupulous meditation.”¹⁴

[443] Petrus Bonus puts the suffering back into the investigator by stressing his mental torments. In this he is right, because the most important discoveries of the alchemists sprang from their meditations on their own psychic processes, which, projected in archetypal form into the chemical substances, dazzled their minds with unlimited possibilities. The same prior knowledge of the results is generally admitted, as when Dorn says: “It is not possible for any mortal to understand this art unless he is previously enlightened by the divine light.”¹⁵

[444] The tormenting of the substances also occurs in Sir George Ripley: “The unnatural fire must torment the bodies, for it is the dragon violently burning, like the fire of hell.”¹⁶ With Ripley the projection of the torments of hell is explicit and complete, as with so many others. Only with the authors of the sixteenth and seventeenth centuries does the insight of Petrus Bonus break through again. Dorn’s view is emphatic: “Wherefore the Sophists . . . have persecuted this Mercurius with various torments, some with sublimations, coagulations, precipitations, mercurial

aquae fortes, etc., all of which are mistaken courses to be avoided.”¹⁷ Among the Sophists he reckons also Geber and Albertus, “surnamed the Great,” as he mockingly adds. In his “*Physica Trismegisti*” he even declares that the time-honoured blackness (*melanosis, nigredo*) is a projection: “For Hermes saith, ‘From thee shall all obscurity flee away,’¹⁸ he saith not ‘from the metals.’ By obscurity naught else is to be understood save the darkness of disease, and sickness of body and mind.”¹⁹

[445] Many passages in *Aurora consurgens* I are significant in this respect. In the “Book of Ostanès” the philosophers shed tears over the stone, which is enclosed in another stone, so that, bedewed by their tears, it loses its blackness and becomes white as a pearl.²⁰ A Gratianus quotation in the *Rosarium* says: “In alchemy there is a certain noble substance . . . in the beginning whereof is wretchedness with vinegar, but in the end joy with gladness.”²¹ The “*Consilium coniugii*” equates the *nigredo* with melancholia.²² Vigenère says of the Saturnine lead: “Lead signifies the vexations and aggravations with which God afflicts us and troubles our senses.”²³ This adept was aware that lead, which had always been considered an arcane substance, was identical with the subjective state of depression. Similarly, the personified *prima materia* in the “*Aurelia occulta*” says of her brother Saturn that his spirit was “overcome by the passion of melancholy.”²⁴

[446] In this context of thought, where suffering and sadness play so great a role, it is not surprising that the tree was brought into connection with the cross of Christ. This analogy was supported by the old legend that the wood of the cross came from the tree of paradise.²⁵ Another thing that contributed to it was the quaternity, whose symbol is the cross;²⁶ for the tree possesses a quaternary quality by reason of the fact that it represents the process by which the four elements are united. The quaternity of the tree goes back beyond the Christian era. It is found in Zarathustra’s vision of the tree with four branches made of gold, silver, steel, and “mixed iron.”²⁷ This image reappears later in the alchemical tree of the metals, which was then compared with the cross of Christ. In Ripley the royal pair, the supreme opposites, are crucified for the purpose of union and rebirth.²⁸ “If I be lifted up, [as Christ says,] then I will draw all men unto me. . . . From that time forward, when both parts, having been crucified and exanimated, are espoused, man and woman shall be buried together and are afterward quickened again by the spirit of life.”²⁹

[447] The tree also appears as a symbol of transformation in a passage in Dorn’s “*Speculativa philosophia*,” which is very interesting from the point of view of the psychology of religion: “[God] hath determined to snatch the sword of his wrath from the hands of the angel, substituting in place thereof a three-pronged hook of gold, hanging the sword on a tree: and so God’s wrath is turned into love.”³⁰ Christ as Logos is the two-edged sword, which symbolizes God’s wrath, as in Revelation 1 : 16.

[448] The³¹ somewhat unusual allegory of Christ as the sword hanging on a tree is almost certainly an analogy of the serpent hanging on the cross. In St. Ambrose³² the “serpent hung on the wood” is a “*typus Christi*,” as is the “brazen serpent on the cross” in Albertus Magnus.³³ Christ as Logos is synonymous with the Naas, the serpent of the Nous among the Ophites. The Agathodaimon (good spirit) had the form of a snake, and in Philo the snake was considered the “most spiritual” animal. On the other hand, its cold blood and inferior brain-organization do not suggest any noticeable degree of conscious development, while its unrelatedness to man makes it an alien creature that arouses his fear and yet fascinates him. Hence it is an excellent symbol for the two aspects of the unconscious: its cold and ruthless instinctuality, and its Sophia quality or natural wisdom, which is embodied in the archetypes. The Logos-nature of Christ represented by the chthonic serpent is the maternal wisdom of the divine mother, which is prefigured by Sapiientia in the Old Testament. The snake-symbol thus characterizes Christ as a personification of the unconscious in all its aspects, and as such he is hung on the tree in sacrifice (“wounded by the spear” like Odin).

[449] Psychologically, this snake sacrifice must be understood as an overcoming of unconsciousness and, at the same time, of the attitude of the son who unconsciously hangs on his mother. The alchemists used the same symbol to represent the transformation of Mercurius,³⁴ who is quite definitely a personification of the unconscious, as I have shown.³⁵ I have come across this motif several times in dreams, once as a crucified snake (with conscious reference to John 3 : 14), then as a black spider hung on a pole which changed into a cross, and finally as the crucified body of a naked woman.

18. THE RELATION OF SUFFERING TO THE CONIUNCTIO

[450] In the above quotation from Dorn, the three-pronged hook of gold refers to Christ, for in medieval allegory the hook with which God the Father catches the Leviathan is the crucifix. The golden trident is, of course, an allusion to the Trinity, and the fact that it is “golden” is an alchemical *sous-entendu*, just as the idea of God’s transformation in this strange allegory of Dorn’s is intimately bound up with the alchemical *mysterium*. The notion of God throwing out a hook is of Manichaeic origin: he used the Primordial Man as a bait for catching the powers of darkness. The Primordial Man was named “Psyche,” and in Titus of Bostra he is the world soul (*ψυχῆ ἀπάντων*).¹ This psyche corresponds to the collective unconscious, which, itself of unitary nature, is represented by the unitary Primordial Man.

[451] These ideas are closely related to the Gnostic conception of Sophia-Achamoth in Irenaeus. He reports that

the *Ἐνθύμησις* [reflection] of the Sophia who dwells above, compelled by necessity, departed with suffering from the Pleroma into the darkness and empty spaces of the void. Separated from the light of the Pleroma, she was without form or figure, like an untimely birth, because she comprehended nothing [i.e., became unconscious]. But the Christ dwelling on high, outstretched upon the cross, took pity on her, and by his power gave her a form, but only in respect of substance, and not so as to convey intelligence [i.e., consciousness]. Having done this, he withdrew his power, and returned [to the Pleroma], leaving Achamoth to herself, in order that she, becoming sensible of the suffering caused by separation from the Pleroma, might be influenced by the desire for better things, while possessing in the meantime a kind of odour of immortality left in her by Christ and the Holy Spirit.²

[452] According to these Gnostics, it was not the Primordial Man who was cast out as a bait into the darkness, but the feminine figure of Wisdom, Sophia-Achamoth. In this way the masculine element escaped the danger of being swallowed by the dark powers and remained safe in the pneumatic realm of light, while Sophia, partly by an act of reflection and partly driven by necessity, entered into relation with the outer darkness. The sufferings that befell her took the form of various emotions—sadness, fear, bewilderment, confusion, longing; now she laughed and now she wept. From these affects (*διαθέσεις*) arose the entire created world.

[453] This strange creation myth is obviously “psychological”: it describes, in the form of a cosmic projection, the separation of the feminine anima from a masculine and spiritually oriented consciousness that strives for the final and absolute victory of the spirit over the world of the senses, as was the case in the pagan philosophies of that epoch no less than in Gnosticism. This development and differentiation of consciousness left a literary deposit in the *Metamorphoses* of Apuleius, and more particularly in his tale of *Amor and Psyche*, as Erich Neumann has shown in his study of that work.

[454] The emotional state of Sophia sunk in unconsciousness (*αγνοία*), her formlessness, and the possibility of her getting lost in the darkness characterize very clearly the anima of a man who identifies himself absolutely with his reason and his spirituality. He is in danger of becoming dissociated from his anima and thus losing touch altogether with the compensating powers of the unconscious. In a case like this the unconscious usually responds with violent emotions, irritability, lack of control, arrogance, feelings of inferiority, moods, depressions, outbursts of rage, etc., coupled with lack of self-criticism and the misjudgments, mistakes, and delusions which this entails.

[455] In such a state a man soon loses touch with reality. His spirituality becomes ruthless, arrogant, and tyrannical. The more unadapted his ideology is, the more it demands recognition and is determined to gain it if necessary by force. This state is a

definite *πάθος*, a suffering of the soul, though at first it is not perceived as such because of lack of introspection, and only gradually comes to consciousness as a vague malaise. Eventually this feeling forces the mind to recognize that something is wrong, that one is indeed suffering. This is the moment when physical or psychological symptoms appear which can no longer be banished from consciousness. Expressed in the language of myth, Christ (the principle of masculine spirituality) perceives the sufferings of Sophia (i.e., the psyche) and thereby gives her form and existence. But he leaves her to herself so that she should feel the full force of her sufferings. What this means psychologically is that the masculine mind is content merely to perceive psychic suffering, but does not make itself conscious of the reasons behind it, and simply leaves the anima in a state of *agnoia*. This process is typical and can be observed today not only in all masculine neuroses but among so-called normal people who have come into conflict with the unconscious thanks to their one-sidedness (usually intellectual) and psychological blindness.

[456] Although, in this psychologem, the Primordial Man (Christ) is still the means for conquering the darkness, he nevertheless shares his role with a feminine being, Sophia, who coexisted with him in the Pleroma. Moreover, the Crucified no longer appears as the bait on God's fishing rod; instead, he "takes pity" on the formless feminine half, revealing himself to her outstretched upon the cross. The Greek text uses here a strong expression: *ἔπεκταθέντα*, which lays particular emphasis on stretching and extension. This image of torment is held before her so that she may recognize his sufferings, and he hers. But before this recognition can take place, Christ's masculine spirituality withdraws into the world of light. This *dénouement* is typical: as soon as the light catches a glimpse of the darkness and there is a possibility of uniting with it, the power drive that is inherent in the light as well as in the darkness asserts itself and will not budge from its position. The one will not darken its radiance, and the other will not give up its gratifying emotions. Neither of them notices that their suffering is one and the same and is due to the process of becoming conscious, whereby an original unity is split into two irreconcilable halves. There can be no consciousness without this act of discrimination, nor can the resultant duality be reunified without the extinction of consciousness. But the original wholeness remains a desideratum (*ὄρεχθῆ τῶν διαφερόνων*) for which Sophia longs more than does the Gnostic Christ. It is still the case today that discrimination and differentiation mean more to the rationalistic intellect than wholeness through the union of opposites. That is why it is the unconscious which produces the symbols of wholeness.³

[457] These symbols are usually quaternary and consist of two pairs of opposites crossing one another (e.g., left/right, above). The four points demarcate a circle, which, apart from the point itself, is the simplest symbol of wholeness and therefore

the simplest God-image.⁴ This reflection has some bearing on the emphasis laid on the cross in our text, since the cross as well as the tree is the medium of conjunction. Hence St. Augustine likened the cross to a bridal bed, and in the fairytale the hero finds his bride in the top of a great tree,⁵ where also the shaman finds his heavenly spouse, as does the alchemist. The coniunctio is a culminating point of life and at the same time a death, for which reason our text mentions the “fragrance of immortality.” On the one hand the anima is the connecting link with the world beyond and the eternal images, while on the other hand her emotionality involves man in the chthonic world and its transitoriness.

19. THE TREE AS MAN

[458] Like the vision of Zarathustra, the dream of Nebuchadnezzar, and the report of Bardesanes (A.D. 154–222) on the god of the Indians,¹ the old Rabbinic idea that the tree of paradise was a man² exemplifies man’s relationship to the philosophical tree. According to ancient tradition men came from trees or plants.³ The tree is as it were an intermediate form of man, since on the one hand it springs from the Primordial Man and on the other hand it grows into a man.⁴ Naturally the patristic conception of Christ as a tree or vine⁵ exerted a very great influence. In *Pandora*, as we have said, the tree is represented in the form of a woman, in agreement with the pictures reproduced in the first part of this essay, which, unlike the alchemical pictures, were done mostly by women. This raises the question of how the feminine tree-numen should be interpreted. The results of our investigation of the historical material have shown that the tree can be interpreted as the Anthropos or self. This interpretation is particularly obvious in the symbolism of the “Scriptum Alberti”⁶ and is confirmed by the fantasy material expressed in our pictures. The interpretation of the feminine tree-numen as the self therefore holds good for women, but for the alchemists and humanists the feminine representation of the tree is an obvious projection of the anima figure.⁷ The anima personifies the femininity of a man but not the self. Correspondingly, the patients who drew [Figures 29](#) and [30](#) depict the tree-numen as the animus. In all these cases the contrasexual symbol has covered up the self. This is what regularly happens when the man’s femininity, the anima, or the woman’s masculinity, the animus, is not differentiated enough to be integrated with consciousness, so that the self is only potentially present as an intuition but is not yet actualized.

[459] In so far as the tree symbolizes the opus and the transformation process “tam ethice quam physice” (both morally and physically), it also signifies the life process in general. Its identity with Mercurius, the *spiritus vegetativus*, confirms this view. Since the opus is a life, death, and rebirth mystery, the tree as well acquires this significance and in addition the quality of wisdom, as we have seen from the view of

the Barbeliots reported in Irenaeus: "From man [= Anthropos] and gnosis is born the tree, which they also call gnosis."⁸ In the Gnosis of Justin, the angel Baruch, named the "wood of life,"⁹ is the angel of revelation, just as the sun-and-moon tree in the Romance of Alexander foretells the future.¹⁰ However, the cosmic associations of the tree as world-tree and world-axis take second place among the alchemists as well as in modern fantasies, because both are more concerned with the individuation process, which is no longer projected into the cosmos. An exception to this rule may be found in the rare case, reported by Nelken,¹¹ of a schizophrenic patient in whose cosmic system the Father-God had a tree of life growing out of his breast. It bore red and white fruits, or spheres, which were worlds. Red and white are alchemical colours, red signifying the sun and white the moon. On the top of the tree sat a dove and an eagle, recalling the stork on the sun-and-moon tree in the "Scriptum Alberti." Any knowledge of the alchemical parallels was quite out of the question in this case.

[460] On the evidence of the material we have collected, we can see that the spontaneous products of the unconscious in modern man depict the archetype of the tree in a way that brings out quite plainly the historical parallels. So far as I can judge, the only historical models of which my patients might have made conscious use are the Biblical tree of paradise and one or two fairytales. But I cannot recall a single case in which it was spontaneously admitted that the patient was consciously thinking of the Bible story. In every case the image of the tree presented itself spontaneously, and whenever a feminine being attached itself to the tree, none of the patients associated it with the snake on the tree of knowledge. The pictures show more of an affinity with the ancient idea of the tree nymph than with the Biblical prototype. In Jewish tradition the snake is also interpreted as Lilith. There is a strong prejudice in favour of the assumption that certain forms of expression exist only because a pattern for them may be found in the respective sphere of culture. If that were so in the present instance, all expressions of this type would have to be modelled on the tree of paradise. But that, as we have seen, is not the case: the long obsolete concept of the tree nymph predominates over the tree of paradise or Christmas tree; in fact there are even allusions to the equally obsolete cosmic tree and even to the *arbor inversa*, which, although it found its way into alchemy via the Cabala, nowhere plays a role in our culture. Our material is, however, fully in accord with the widespread, primitive shamanistic conceptions of the tree and the heavenly bride,¹² who is a typical anima projection. She is the *ayami* (familiar, protective spirit) of the shaman ancestors. Her face is half black, half red. Sometimes she appears in the form of a winged tiger.¹³ Spitteler also likens the "Lady Soul" to a tiger.¹⁴ The tree represents the life of the shaman's heavenly bride,¹⁵ and has a maternal significance.¹⁶ Among the Yakuts a tree with eight branches is the birthplace

of the first man. He is suckled by a woman the top part of whose body grows out of the trunk.¹⁷ This motif is also found among my examples (Figure 22).

[461] As well as with a feminine being, the tree is also connected with the snake, the dragon, and other animals, as in the case of Yggdrasil,¹⁸ the Persian tree Gaokerena in the lake of Vourukasha, or the tree of the Hesperides, not to mention the holy trees of India, in whose shadow may often be seen dozens of *naga* (= snake) stones.¹⁹

[462] The inverted tree plays a great role among the East Siberian shamans. Kagarow has published a photograph of one such tree, named Nakassä, from a specimen in the Leningrad Museum. The roots signify hairs, and on the trunk, near the roots, a face has been carved, showing that the tree represents a man.²⁰ Presumably this is the shaman himself, or his greater personality. The shaman climbs the magic tree in order to find his true self in the upper world. Eliade says in his excellent study of shamanism: “The Eskimo shaman feels the need for these ecstatic journeys because it is above all during trance that he becomes truly himself: the mystical experience is necessary to him as a constituent of his true personality.”²¹ The ecstasy is often accompanied by a state in which the shaman is “possessed” by his familiars or guardian spirits. By means of this possession he acquires his “‘mystical organs,’ which in some sort constitute his true and complete spiritual personality.”²² This confirms the psychological inference that may be drawn from shamanistic symbolism, namely that it is a projection of the individuation process. This inference, as we have seen, is true also of alchemy, and in modern fantasies of the tree it is evident that the authors of such pictures were trying to portray an inner process of development independent of their consciousness and will. The process usually consists in the union of two pairs of opposites, a lower (water, blackness, animal, snake, etc.) with an upper (bird, light, head, etc.), and a left (feminine) with a right (masculine). The union of opposites, which plays such a great and indeed decisive role in alchemy, is of equal significance in the psychic process initiated by the confrontation with the unconscious, so the occurrence of similar or even identical symbols is not surprising.

20. THE INTERPRETATION AND INTEGRATION OF THE UNCONSCIOUS

[463] It has not yet been understood in many quarters—nor, I am sorry to say, by my medical colleagues—how a series of fantasies such as I have described comes into existence in the first place, and secondly why I concern myself so much with comparative research into a symbolism that is unknown to them. I am afraid that all sorts of uncorrected prejudices still impede understanding, above all the arbitrary assumption that neuroses as well as dreams consist of nothing but repressed infantile memories and wishes, and that psychic contents are either purely personal or, if impersonal, are derived from the collective consciousness.

[464] Psychic disturbances, like somatic disturbances, are highly complex phenomena which cannot be explained by a purely aetiological theory. Besides the cause and the unknown X of the individual's disposition, we must also take into account the teleological aspect of fitness in biology, which in the psychic realm would have to be formulated as *meaning*. In psychic disturbances it is by no means sufficient in all cases merely to bring the supposed or real causes to consciousness. The treatment involves the integration of contents that have become dissociated from consciousness—not always as a result of repression, which very often is only a secondary phenomenon. Indeed, it is usually the case that, in the course of development following puberty, consciousness is confronted with affective tendencies, impulses, and fantasies which for a variety of reasons it is not willing or not able to assimilate. It then reacts with repression in various forms, in the effort to get rid of the troublesome intruders. The general rule is that the more negative the conscious attitude is, and the more it resists, devalues, and is afraid, the more repulsive, aggressive, and frightening is the face which the dissociated content assumes.

[465] Every form of communication with the split-off part of the psyche is therapeutically effective. This effect is also brought about by the real or merely supposed discovery of the causes. Even when the discovery is no more than an assumption or a fantasy, it has a healing effect at least by suggestion if the analyst himself believes in it and makes a serious attempt to understand. If on the other hand he doubts his aetiological theory, his chances of success sink at once, and he then feels compelled to look at least for real causes which would be convincing to an intelligent patient as well as to himself. If he is inclined to be critical, this task may become a heavy burden, and often he will not succeed in overcoming his doubts. The success of the treatment is then in jeopardy. This dilemma explains the fanatical doctrinairism of Freudian orthodoxy.

[466] I will illustrate the problem by means of an example which I came across recently. A certain Mr. X, who was unknown to me, wrote that he had read my book *Answer to Job*, which had interested him very much and put him in a great commotion. He had given it to his friend Y to read, and Y had thereupon had the following dream: *He was back in the concentration camp and saw a mighty eagle circling above it, looking for prey. The situation became dangerous and frightening, and Y wondered how he was to protect himself. He thought he might be able to fly up in a rocket-propelled aircraft and shoot down the eagle.* X described Y as a rationalistic intellectual who had spent a long time in a concentration camp. X and Y both referred the dream to the affects that had been released by the reading of my book on the previous day. Y went to X for advice about the dream. X was of the opinion that the eagle spying on Y referred to himself, whereupon Y rejoined that he didn't believe it, but thought the eagle referred to me, the author of the book.

[467] X now wanted to hear my opinion. It is in general a tricky business to try to interpret the dreams of people one does not know personally, and in the absence of amplificatory material. We must therefore content ourselves with asking a few questions which are suggested by what material there is. Why, for instance, should X think he knew that the eagle referred to himself? From what I could gather from the letter, it appeared that X had imparted a certain amount of psychological knowledge to his friend and therefore felt himself in the role of a mentor who could, as it were, see through his friend's game from above. At any rate he was toying with the idea that it was disagreeable for Y to be spied upon by him, the psychologist. X was thus in the position of a psychotherapist who by means of the sexual theory knows in advance what is lurking behind neuroses and dreams, and who, from the lofty watchtower of superior insight, gives the patient the feeling that he is being seen through. In the dreams of his patient he always expects himself to appear in whatever disguise may be invented by the mystic "censor." In this way X readily came to conjecture that he was the eagle.

[468] Y was of a different opinion. He seems not to have been conscious of being invigilated or seen through by X, but, reasonably enough, went back to the obvious source of his dream, namely my book, which had evidently made an impression on him. For this reason he named me the eagle. We can conclude from this that he felt he was being somehow meddled with, as though someone had found him out, or had put his finger on a sore spot in a way that wasn't entirely to his liking. There was no need for him to be conscious of this feeling, for otherwise it would hardly have been represented in a dream.

[469] Here interpretation clashes against interpretation, and the one is as arbitrary as the other. The dream itself does not give the least indication in either direction. One might perhaps hazard the view that Y was rather afraid of the superior insight of his friend and therefore disguised him under the façade of the eagle so as not to recognize him. But did Y himself make his dream? Freud supposes the existence of a censor who is responsible for these transmogrifications. As against this I take the view, reinforced by experience, that a dream is quite capable, if it wants to, of naming the most painful and disagreeable things without the least regard for the feelings of the dreamer. If the dream does not in fact do so, there is no sufficient reason for supposing that it means something other than what it says. I therefore maintain that when our dream says "eagle" it means an eagle. Thus I insist on the very aspect of dreams which makes them appear so nonsensical to our reason. It would be so much simpler and more reasonable if the eagle meant Mr. X.

[470] In my view, then, the task of the interpretation is to find out what the eagle, aside from our personal fantasies, might mean. I would therefore advise the dreamer to start investigating what the eagle is *qua* eagle, and what general meanings may be

attributed to it. The solution of this task leads straight into the history of symbols, and here we find the concrete reason why I concern myself with researches which are apparently so remote from the doctor's consulting room.

[471] Once the dreamer has established the general meanings of the eagle which are new and unknown to him (for he will have been familiar with many of them from literature and common speech), he must investigate in what relationship the experience of the previous day, namely the reading of my book, stands to the symbol of the eagle. The question is: what was it that affected him so much that it gave rise to the fairytale motif of a great eagle capable of injuring or making off with a grown man? The image of an obviously gigantic (i.e., mythical) bird, circling high in the sky and surveying the earth with all-seeing eye, is indeed suggestive in view of the content of my book, which is concerned with the fate of man's idea of God.

[472] In the dream Y is back in the concentration camp, which is supervised by an "eagle eye." This points clearly enough to a situation which is feared by the dreamer and which makes his energetic defence measures seem plausible. In order to shoot down the mythical bird, he wants to employ the most advanced technological invention—a rocket-propelled aircraft. This is one of the greatest triumphs of the rationalistic intellect and is diametrically opposed to the mythical bird, whose menacing presence is to be averted with its help. But what kind of danger lurks in my book for such a personality? The answer to this is not difficult when one knows that Y is a Jew. At all events a door is opened to problems that lead into regions that have nothing to do with personal resentments. It is rather a question of those principles, dominants, or ruling ideas which regulate our attitude to life and the world, of convictions and beliefs which, as experience shows, are indispensable psychic phenomena. Indeed they are so indispensable that when the old systems of thought collapse new ones instantly take their place.

[473] Neuroses, like all illnesses, are symptoms of maladjustment. Because of some obstacle—a constitutional weakness or defect, wrong education, bad experiences, an unsuitable attitude, etc.—one shrinks from the difficulties which life brings and thus finds oneself back in the world of the infant. The unconscious compensates this regression by producing symbols which, when understood objectively, that is, by means of comparative research, reactivate general ideas that underlie all such natural systems of thought. In this way a change of attitude is brought about which bridges the dissociation between man as he is and man as he ought to be.

[474] Something of the sort is taking place in our dream: Y may well be suffering from a dissociation between a highly rationalistic, intellectualized consciousness and an equally irrational background which is anxiously repressed. The anxiety appears in the dream and should be acknowledged as a real fact belonging to the personality, for it is nonsense to assert that one has no anxiety only because one is incapable of

discovering the reason for it. Yet that is what one generally does. If the anxiety could be accepted, there would also be a chance of discovering and understanding the reason. This reason is vividly portrayed by the eagle in the dream.

[475] Assuming that the eagle is an archaic God-image whose power a person cannot escape, then it makes very little difference in practice whether he believes in God or not. The fact that his psyche is so constituted as to produce such phenomena should be enough for him, for he can no more get rid of his psyche than he can get rid of his body, neither of which can be exchanged for another. He is a prisoner of his own psychophysical constitution, and must reckon with this fact whether he will or no. One can of course live in defiance of the demands of the body and ruin its health, and the same can be done in regard to the psyche. Anyone who wants to live will refrain from these tricks and will at all times carefully inquire into the body's and the psyche's needs. Once a certain level of consciousness and intelligence has been reached, it is no longer possible to live one-sidedly, and the whole of the psychosomatic instincts, which still function in a natural way among primitives, must consciously be taken into account.

[476] In the same way that the body needs food, and not just any kind of food but only that which suits it, the psyche needs to know the meaning of its existence—not just any meaning, but the meaning of those images and ideas which reflect its nature and which originate in the unconscious. The unconscious supplies as it were the archetypal form, which in itself is empty and irrepresentable. Consciousness immediately fills it with related or similar representational material so that it can be perceived. For this reason archetypal ideas are locally, temporally, and individually conditioned.

[477] The integration of the unconscious takes place spontaneously only in rare cases. As a rule special efforts are needed in order to understand the contents spontaneously produced by the unconscious. Where certain general ideas, which are regarded as valid or are still efficacious, already exist, they act as a guide to understanding, and the newly acquired experience is articulated with or subordinated to the existing system of thought. A good example of this is afforded by the life of the patron saint of Switzerland, Niklaus von der Flüe, who, by dint of long meditation and with the help of a little book written by a German mystic, gradually turned his terrifying vision of God into an image of the Trinity. Or again, the traditional system may be understood in a new way as a result of the new experiences.

[478] It goes without saying that all personal affects and resentments participate in the making of a dream and can therefore be read from its imagery. The analyst, especially at the beginning of a treatment, will have to be satisfied with this, since it seems reasonable to the patient that his dreams come from his personal psyche. He would be completely bewildered if the collective aspect of his dreams were pointed

out to him. Freud himself, as we know, tried to reduce myth motifs to personal psychology, in defiance of his own insight that dreams contain archaic residues. These are not personal acquisitions, but vestiges of an earlier collective psyche. There are, however, not a few patients who, as if to prove the reversibility of psychological rules, not only understand the universal significance of their dream symbols but also find it therapeutically effective. The great psychic systems of healing, the religions, likewise consist of universal myth motifs whose origin and content are collective and not personal; hence Lévy-Bruhl rightly called such motifs *représentations collectives*. The conscious psyche is certainly of a personal nature, but it is by no means the whole of the psyche. The foundation of consciousness, the psyche *per se*, is unconscious, and its structure, like that of the body, is common to all, its individual features being only insignificant variants. For the same reason it is difficult or almost impossible for the inexperienced eye to recognize individual faces in a crowd of coloured people.

[479] When, as in the dream of the eagle, symbols appear which have nothing about them that would point to a particular person, there is no ground for assuming that such a person is being disguised. On the contrary, it is much more probable that the dream means just what it says. So when a dream apparently disguises something and a particular person therefore seems indicated, there is an obvious tendency at work not to allow this person to appear, because, in the sense of the dream, he represents a mistaken way of acting or thinking. When, for instance, as not infrequently happens in women's dreams, the analyst is represented as a hairdresser (because he "fixes" the head), the analyst is being not so much disguised as devalued. The patient, in her conscious life, is only too ready to acknowledge any kind of authority because she cannot or will not use her own head. The analyst (says the dream) should have no more significance than the hairdresser who puts her head right so that she can then use it herself.

[480] If, therefore, instead of reducing the dream symbols to circumstances, things, or persons which the analyst presumes to know in advance, we regard them as real symbols pointing to something unknown, then the whole character of analytical therapy is altered. The unconscious is then no longer reduced to known, conscious factors (this procedure, incidentally, does *not* abolish the dissociation between conscious and unconscious) but is recognized as in fact unconscious, and the symbol is not reduced either but is amplified by means of the context which the dreamer supplies and by comparison with similar mythologems so that we can see what the unconscious intends it to mean. In this way the unconscious can be integrated and the dissociation overcome. The reductive procedure, on the other hand, leads away from the unconscious and merely reinforces the one-sidedness of the conscious mind. The more rigorous of Freud's pupils have failed to follow up the Master's lead with a

deeper exploration of the unconscious and have remained satisfied with reductive analysis.

[481] As I have said, the confrontation with the unconscious usually begins in the realm of the personal unconscious, that is, of personally acquired contents which constitute the shadow, and from there leads to archetypal symbols which represent the collective unconscious. The aim of the confrontation is to abolish the dissociation. In order to reach this goal, either nature herself or medical intervention precipitates the conflict of opposites without which no union is possible. This means not only bringing the conflict to consciousness; it also involves an experience of a special kind, namely, the recognition of an alien “other” in oneself, or the objective presence of another will. The alchemists, with astonishing accuracy, called this barely understandable thing Mercurius, in which concept they included all the statements which mythology and natural philosophy had ever made about him: he is God, daemon, person, thing, and the innermost secret in man; psychic as well as somatic. He is himself the source of all opposites, since he is duplex and *utriusque capax* (“capable of both”). This elusive entity symbolizes the unconscious in every particular, and a correct assessment of symbols leads to direct confrontation with it.

[482] As well as being an irrational experience, this confrontation is a process of realization. Accordingly the alchemical opus consisted of two parts: the work in the laboratory, with all its emotional and daemonic hazards, and the *scientia* or *theoria*, the guiding principle of the opus by which its results were interpreted and given their proper place. The whole process, which today we understand as psychological development, was designated the “philosophical tree,” a “poetic” comparison that draws an apt analogy between the natural growth of the psyche and that of a plant. For this reason it seemed to me desirable to discuss in some detail the processes which underlie both alchemy and the modern psychology of the unconscious. I am aware, and hope I have also made it clear to the reader, that merely intellectual understanding is not sufficient. It supplies us only with verbal concepts, but it does not give us their true content, which is to be found in the living experience of the process as applied to ourselves. We would do well to harbour no illusions in this respect: no understanding by means of words and no imitation can replace actual experience. Alchemy lost its vital substance when some of the alchemists abandoned the laboratorum for the oratorium, there to befuddle themselves with an ever more nebulous mysticism, while others converted the oratorium into a laboratorum and discovered chemistry. We feel sorry for the former and admire the latter, but no one asks about the fate of the psyche, which thereafter vanished from sight for several hundred years.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the ancient volumes are printed in capital letters.

A. COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum. ... Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Hortulanus: Commentariolum in Tabulam Smaragdinam [pp. 33–47]
- iii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consilium coniugii”]

ARTIS AURIFERAE quam chemiam vocant. ... Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Allegoriae super librum Turbae [pp. 139–45]
- ii Aenigmata ex visione Arislei philosophi et allegoriis sapientum [pp. 146–54; usually referred to as “Visio Arislei”]
- iii In Turbam philosophorum exercitationes [pp. 154–82]
- iv Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
- v [Zosimos:] Rosinus ad Sarratantam episcopum [pp. 277–319]
- vi Maria Prophetissa: Practica . . . in artem alchemicam [pp. 319–24]
- vii Calid: Liber secretorum alchemiae [pp. 325–51]
- viii Opusculum authoris ignoti [pp. 389–92]
- ix Tractatulus Avicennae [pp. 405–37]
- x Liber de arte chymica [pp. 575–632]

VOLUME II

- x*i* Morienus Romanus: Sermo de transmutatione metallorum [pp. 7–54]
- x*ii* Scala philosophorum [pp. 107–70]
- x*iii* Rosarium philosophorum [pp. 204–384]
- x*iv* Arnold of Villanova: Flos florum [pp. 470–88]

AUREUM VELLUS, oder Guldin Schatz und Kunstkammer . . . von dem . . . bewehrten Philosopho Salomone Trismosino. Rorschach, 1598.

Contents quoted in this volume:

- i* Trismosin: Splendor solis [Tract. III, pp. 3–59]
- ii* Melchior, Cardinal Bishop of Brixen; Vom dem Gelben und Roten Mann [Tract. III, pp. 177–91]

DE ALCHEMIA. Nuremberg, 1541.

Contents quoted in this volume:

- i* Geber: Summae perfectionis metallorum sive perfecti magisterii libri duo [pp. 20–205]
- ii* Tabula smaragdina [p. 363]
- iii* Hortulanus: Super Tabulam Smaragdinam Commentarius [pp. 364–73]

DE ALCHIMIA opuscula complura. Frankfurt a. M., 1550. 2 vols. *Contents quoted in this volume:*

VOLUME II

Rosarium philosophorum [whole volume]

MANGETUS, JOHANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus.* . . . Geneva, 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

- i* Hermes Trismegistus: Tractatus aureus [pp. 400–45]
- ii* Dicta Belini [pp. 478–79]
- iii* Lully: Codicillus seu vade mecum aut Cantilena [pp. 880–911]
- iv* Braceschus: Lignum vitae [pp. 911–38]
- v* [Altus:] Mutus liber [pp. 938–53]

VOLUME II

- vi* Bonus: Margarita pretiosa novella correctissima [pp. 1–80]

- viii* Sendivogius: Parabola, seu Aenigma philosophicum [pp. 474–75]

MUSAEUM HERMETICUM reformatum et amplificatum . . . continens tractatus chimicos XXI praestantissimos . . .

Francofurti [Frankfurt a. M.], 1678. For translation, see ARTHUR EDWARD WAITE (ed. and trans.). *The Hermetic Museum restored and enlarged*. London, 1893. 2 vols.

Contents quoted in this volume:

(The entries in parentheses show the title and pagination of the treatises in the Waite translation)

- i [Hermes Trismegistus:] Tractatus aureus de lapide philosophorum [pp. 1–52] (“The Golden Tract,” I, 7–56)
- ii [Siebmacher:] Hydrolithus sophicus, seu Aquarium sapientum [pp. 73–144] (“The Sophie Hydrolith,” I, 7–120)
- iii Flamel: Tractatus brevis seu Summarium philosophicum [pp. 172–79] (“A Short Tract, or Philosophical Summary,” I, 141–47)
- iv Via veritatis unicae [pp. 181–202] (“The Only True Way,” I, 151–64)
- v [Barcius (F. von Sternberg):] Gloria mundi [pp. 203–304] (“The Glory of the World,” I, 167–243)
- vi Lambspringk: De lapide philosophico figurae et emblemata [pp. 337–72] (“The Book of Lambspring,” I, 273–306)
- vii Basilius Valentinus: Practica [pp. 377–432] (“Practica,” I, 312–57)
- viii Norton: Crede mihi, seu Ordinale [pp. 433–532] (“Believe-Me, or The Ordinal of Alchemy,” II, 2–67)
- ix Sendivogius: Novum lumen chemicum [pp. 545–600] (“The New Chemical Light,” II, 81–158)
- x Philalethes: Introitus apertus [pp. 647–700] (“An Open Entrance to the Closed Palace of the King,” II, 163–98)
- xi Maier: Subtilis allegoria super secreta chymiae [pp. 701–40] (“A Subtle Allegory Concerning the Secrets of Alchemy,” II, 201–23)
- xii Philalethes: Metallorum metamorphosis [pp. 741–74] (“The Metamorphosis of Metals,” II, 225–45)
- xiii Philalethes: Brevis manuductio. ad rubinum caelestem [pp. 775–98] (“A Brief Guide to the Celestial Ruby,” II, 246–60)
- xiv Philalethes: Fons chymicae veritatis [pp. 799–814] (“The Fount of Chemical Truth,” II 261–69)

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus . . . continens. Argentorati [Strasbourg], Vols. I–IV, 1659; Vol. V, 1660; Vol. VI, 1661.

Contents quoted in this volume:

VOLUME I

- i Hoghelande: De alchemiae difficultatibus [pp. 109–91]
- ii Dorn: Speculativa philosophia [pp. 228–76]
- iii Dorn: Physica genesis [pp. 326–61]
- iv Dorn: Physica Trismegisti [pp. 362–87]
- v Dorn: Physica Trithemii [pp. 388–99]
- vi Dorn: Philosophia chemica [pp. 418–57]

- vii Dorn: De tenebris contra naturam et vita brevi [pp. 457–72]
- viii Dorn: Duellum animi cum corpore [pp. 472–85]
- ix Dorn: Congeries Paracelsicae chemicae [pp. 491–568]
- x Dorn: De genealogia mineralium [pp. 568–91]
- xi Penotus: De medicamentis chemicis [pp. 592–682]
- xii Bernardus Trevisanus: De chemico miraculo (De alchimia) [pp. 683–709]

VOLUME II

- xiii Aegidius de Vadis: Dialogus inter naturam et filium philosophiae [pp. 85–109]
- xiv Penotus: Table of Symbols [facing p. 109]
- xv Ripley: Duodecim portarum axiomata philosophica [pp. 109–23]
- xvi Dee: Monas hieroglyphica [pp. 192–215]
- xvii Ventura: De ratione conficiendi lapidis (De lapide philosophico) [pp. 215–312]
- xviii Albertus Magnus: De alchimia [pp. 423–58]
- xix Albertus Magnus: Scriptum super arborem Aristotelis [in *ibid.*]

VOLUME III

- xx Jodocus Greverus: Secretum nobillissimum et verissimum [pp. 699–722]
- xxi Melchior Cibinensis: Addam et processum sub forma missae [pp. 758–61]

VOLUME IV

- xxii Artefius: Clavis maioris sapientiae [pp. 198–213]
- xxiii Happelius: Aphorismi Basiliani [pp. 327–30]
- xxiv Sendivogius: Dialogus Mercurii alchymistae et naturae [pp. 449–56]
- xxv Aenigma philosophorum sive symbolum Saturni [pp. 457–61]
- xxvi [Beatus:] Aurelia occulta [pp. 462–512]
- xxvii Hermes Trismegistus: Tractatus aureus cum scholiis [pp. 592–705]

VOLUME V

- xxviii Allegoriae sapientum supra librum Turbae [pp. 57–89]
- xxix Tractatus Micreris [pp. 90–101]
- xxx Platonis liber quartorum [pp. 101–85]
- xxxix Tractatus Aristotelis alchymistae ad Alexandrum magnum [pp. 787–98]
- xxxii Epistola ad Hermannum [pp. 799–805]

- xxxiii Vigenerus: De igne et sale [pp. 1–139]
 xxxiv Anonymi Galli Instructio de arbore solari [pp. 166–94]
 xxxv Orthelius: Epilogus et recapitulatio in Novum lumen chymicum Sendivogii [pp. 430–58]

THEATRUM CHEMICUM BRITANNICUM. Containing Severall Poeticall Pieces of Our Famous English Philosophers, Who Have Written the Hermetique Mysteries in Their Owne Ancient Language. Collected with annotations by Elias Ashmole. London, 1652.

Contents quoted in this volume:

- i Norton: The Ordinall of Alchemy [pp. 1–106]
 ii Ripley: Verses belonging to an Emblematicall Scrowle [pp. 375–79]
 iii Ripley: Preface to “Medulla” [pp. 389–92]

INDEX

INDEX

Under alchemical collections, when cross reference is made to “individual treatises in Bibl. A,” see above pp. 353ff, where names of these and their authors are listed.

A

Aaron, 130

aberrations, mental, 323

ablutio, 68

ablution, 292

abortifacient, 135n

above and below, 104n, 140, 233, 264, 336

 growth from, 272

Abraham le Juif, 213, 220; *see also* Eleazar

Abu'l Qāsim al-'Irāqī, 139n, 226n, 305, 308, 309n, 310n

acacia tree, 305

Achamoth, 283, 334

action and non-action, 16n, 25

Adam, 81n, 94, 113n, 131&n, 137n, 139, 143, 146, fig. B4, 166, 169, 219, 220, 318

 earthly, 169n

 and Eve, fig. 32, 303

 first wife of, 303

 genitals of, 143

 heavenly, 169n

 man of light imprisoned in, 130

 mystic, 139

 Old, 80

 parable, 83n

 second, 80

 —, Christ as, 304

—, Mercurius as, 235
sin of, 304
tree of paradise of, 138
true hermaphroditic, 219
with Venus in bath, 226n
Adam Kadmon, 130, 220, 220n
Adamas, 283n, 318
Adam von Bodenstein, *see* Bodenstein
adaptation, lack of, 12
adaptedness, 18
Adebar (stork), 317
Adech, 131&n, 164, 165&n, 166, 169, 172
 difficult, 170, 171, 173, 174, 179
 great, 170, 171
 homo maior, 182
adept(s), 126, 139, 151, 171f, 172n, 179f, 231, 275, 299, 302f, 309, 327, 331
 individuation of, 326
 moon-plant of, 308
Adhvaryu, 267
Adityas, 267
Adler, Gerhard, xiv
Admont, Godfrey Abbot of, *see* Godfrey
adulatio, 329n
Aegidius de Vadis, 217n, 322
“Aenigma VI,” 68n, 93n, 105n; *see also* “Visio Arislei”
“Aenigma Bononiense,” 199n
“Aenigma philosophorum,” 227n
Aeons, 162
aer elementalis, 136n
aerial life, 163
aesthetic experiment, 45
aestphara, 134n
aether, 76, 162, 176
 soul rooted in, 312n

aetiology, 108, 342

affect(s), 12, 15, 34, 35, 41, 45, 82, 334, 343

- autonomous character of, 39
- outbursts of, 289
- personal, 346
- uncontrollable, 50

affective: nature of man, Mars characterizes, 141n

- states, 39

Agathodaimon (good spirit), 62, 67n, 74n, 104, 333

age, old, 272

aggregation, gaseous, 212

agnata fides, 167

Agni, 267

agnoia, 336

agnosticism, 54

Agricola, Georg, 93n

Agrippa von Nettesheim, 114&n, 115n, 117, 128, 130f, 131n, 155n, 156n, 181n, 184, 187

Ahuramazda, 89

air, 164, 165n, 213 217, 226n, 232, 236n, 265, 311n, 324

- demons spirits of, 161
- god, 279
- in motion, 212
- synonym for spirit, 197
- world, fig. A4

aircraft, rocket-propelled, 343, 345

Akhmim manuscript, 71

Al-Irāqī, *see* Abu'l Qāsim

alabaster, 64

Alan of Lille, 294n, 295

albedo, 68, 214; *see also* spirituality

Albertus Magnus, 123n, 138n, 288, 331, 333

- “Scriptum,” 310n, 315, 317, 338, 339

alchemical: and astrological tradition, 125

- authorities, slaying of, 321

confession of faith, 129
dream language, 301
fantasies, 285
and Freudian reduction of symbols, 301
language, 104
literature, 60*n*, 66, 82, 105*n*
maturation, 124
Mercurius, 269
metaphors, 102
opus, 166, 172
philosophy, 206*n*
physician, 124
process, 303
projections, 92, 238
quaternity, 278
redeemer, 295
retort, 197
speculation, fraudulence of, 204
stork, 317
symbols, 299, 301
thinking, 288, 293
transformation, 70, 75, 227
tree, 285

alchemist(s), 59, 66-69, 71, 74, 83, 92, 96, 102, 107, 178
Arabic, 150*n*
Chinese, 126*n*
fantasies of, 285, 293
German, 126
goal of, 161
Latin, 150*n*, 154*n*
pagan, 299
philosophical, 124*n*, 161
water of, 76

alchemy, 67*f*, 72*f*, 78*n*, 84, 89, 91, 116, 119, 121*f*

absurd fantasies of, 205
aim of, 125
ancient, 79
arcane teaching of, 124
chemistry of, 204
Chinese, 1ff
—, golden flower of, 269
classical, 104, 125
connections between Greek/Arabic and India, 231
doctrine of redemption in, 205
gigantic aberration, 204
goal of, 161
golden age of, 203
Greek, 97, 284
—, tetrasomia of, 277
Latin, 64n, 93, 287n
literature of, 204
matter in, 140
medieval, 4, 100, 127, 280
metallic tree of, 89
mystical side of, 105
mythological and gnostic ideas in, 204
Paracelsan, 129
philosophical, 111, 122, 126f, 147
philosophical aim of, 135n
projections of, 239
psychic danger of, 128
psychic factor in, 137
psychological secrets of, 69
psychology of, 93
secret content of, 129
a secret doctrine, 122
spirit of, 103, 128
spiritual trends of, 144n

symbolism of, 69, 80, 88
thought and language of, 87
true nature of, 123
Western, 324f
—, sapphirine flower of, 269
“alchemystical” process, 91
alcheringa time, 98n
“Alchymistisches MS,” *see* Codices and Manuscripts
Alciati, Andrea, 273n, 312
Aldrovandus, Ulysses, 338n
aleph and tau, 222
Alexander, Romance of, 306n, 339
Alexander à Suchten, 129
Alexander the Great, 315, 321

 caricature of feminine Eros, [41](#)
 as Chinese *p'o* soul, [39](#)
 connection with ghost, [40](#)
 consciousness as effect of, [42](#)
 contains secret of precious stone, [99](#)
 definition of, [40](#)
 emotionality of, [337](#)
 figure, [99](#)
 —, tree a projection of, [338](#)
 function of, [180n](#)
 inferior Eros of, [41](#)
 as link with eternal images, [337](#)
 — with world beyond, [337](#)
 Melusina as, [fig. B5](#), [144](#)
 personification of unconscious, [42](#)
 possession, [180n](#)
 projection, [340](#)
 psychic, personal autonomous system, [42](#)
 shamanistic, [303](#)
 as soul, [132n](#)
 subjugating, [42](#)

union with, 326

anima: aquina, 68

iliastri, 164

media natura, 67, 213f, 266n

mundi, 67, 77, 128n, 129, 139, 197, 214, 307

rationalis, 214, 244

animal(s), 12, 45, 114, 159, 166, 196, 248, 297, 341

body, 103n

fertility of, 97

four, 282, fig. 24, fig. 25

—, sacrificial, 280

heat, 151

helpful, 195n

or human blood, 290

kingdom, 77

principle, 257

riding, of the Church, 283

sacred, 63n

sacrifices, 45

snake, most spiritual, 333

tearing of living, 70

three, 183

triad of, 141n; *see also* ape; baboon; bat; bear; birds; bitch; bull; cat; chick; cock; cockatoo; crocodile; crow; dog; dolphin; dove; dragon; eagle; fish; fox; grasshopper; hawk; hen; horse; ibis; jackal; kingfisher; leopard; lion; ox; peacock; phoenix; pig; puppy; ram; raven; salamander; scorpion; serpent; snake; spider; squirrel; stag; stork; swan; tiger; tortoise; whale; wolf

animate stone, 291

animation of body, 257

animism, primitive, 199

animosity, 41

animus, 38, 268f

as Chinese *hun* soul, 38

figure, 269

inferior Logos, 41

opinions, 41
possession, 267

Anthera, 125

Anthos, 125, 135n

anthroparion / anthroparia, 60&n, 62
transmutation of, 91

anthropomorphism(s), 276

Anthropos, 101, 132, 139, 169, 171, 179, 225, 284, 338
Gnostic doctrine of, 205, 220
invisible, 176
secret doctrine of, 171
or self, tree as, 338
stork a symbol of the, 317

Antichrist, 242
dragon's tail identical with, 316
as fallen angel, 242
as Satan, 242

antidote, 135

Anti-Messiah, 71, 101

Antimimos, 105n

antimony, as transformative substance, 146

antiquity, 46, 161
pagan, 157

anus, 220

anxiety, in dream, 345

Anyadei, 154n; *see also* spring, eternal; Paradise

Apastamba, 267n

ape, 280

Aphrodite, 182f, 216
day of, 226n
Urania, 187

Apocalypse, 188
of Elijah, 71, 101

Apocalyptic Marriage of Lamb, 182

apocatastasis, 284

Apocrypha, 244

Apollonius, 78

Apollonius of Tyana (pseudo-), 126, 219; *see also* “Dicta Belini”

apostle, 113n

apothecary, 205

apotropaic, 24

 charms, 45

 euphemism, 326

 significance of quaternity, 281

apparatus, distilling, 88, 317; *see also* Pelican

apple(s), 302, 306f

 forbidden, 241

 of the Hesperides, 307

 of the Holy Spirit, 309n

Apuleius, Lucius, 63n, 183n, 335

aqua(e): alba, 207

aurea, 208

divina/permanens, 67f, 76, 78n, 85, 132n, 150n, fig. B4, 284, 329n

 —, connection of tree with, 309

fortes, 331

mercurialis, 141n, 209

nostra, 74, 77n, 213

pura, 150n

septies distillata, 207

sicca, 207

vitae, 207

 —, *perennis*, 79n

“Aquarium sapientum,” 186, 207n, 209n, 214n, 217n, 222, 235n, 292f, 293n

Aquaster, 137-140, 142f, 171

 close to concept of the unconscious, 140

 great, 164

 —, vision of, 166

aqueum subtile, 207

Arab(s), 206

Arabic alchemy, 231

arbor: aurea, 310n, fig. 4

inversa, 340

philosophica, 89, 131, 240; see also tree(s)

Arcadia, 230; see also Monakris

arcane: doctrine, 129

name, 131

philosophy of Paracelsus, 110: remedy (-ies), 135, 156n

substance(s), 72, 74f, 82, 83n, 85, 142, 145, 203, 207f, 211, 213, 216, 226n, 230, 242, 274, 278, 283, 291, 315, 320, 329f

—, bloody sweat of, 290, 295

—, lead as, 331

—, Mercurius as, 216, 235ff

—, as *res simplex* and God, 215

teachings of alchemy, 124

terminology, 122, 133, 186

arcanum(-a), 73, 76, 81f, 102, 104n, 123, 135n, 153n, 185, 187n, 309

identical with artifex, 309

Mercurius as, 235

Archa, 169

archai, Gnostic, 22

archaic: God-image, 345

residues in dreams, 347

Archelaus, 123n

archetypal: and collective symbols, 301 (see also symbols);

concept of perfect being, 26

configurations of the unconscious, 253

dreams, 69n

explanatory principles, 288f

ideas, 346

image, 272

patterns, unconscious, 12

projections, 300

symbols, 272, 302, 348

tree, 272, 289

archetype(s), 84, 139n, 171, 177, 178, 246, 266, 277, 283, 289, 292, 302, 333

- anima as, 40
- of consciousness, Christ as, 247
- a *fascinosum*, 168
- of incest, 301
- of self, 87
- of tree, 339
- of tree-birth, 307
- of unconscious, Mercurius as, 247

Archeus, 131, 140

- dispenser of nature, 140

Archimedean point, 108

archon(s): and aeons, Gnostic doctrine of, 225

- in Athens, 98n
- Saturn, the highest, 228

Ardvī Sūra Anāhita, fountain of, 308

Ares, 138n, 140-42, 165, 177

- a formative principle, 141
- as Mars, 141n
- Melusinian, 138, 142
- as principle of individuation, 140

argent vive/argentum vivum, 207, 239

argentum putum (unalloyed silver), 290n, 295

Arianism, 119, 129

Aries, 141n, 166, 311n

- month of, 154

Arisleus, 306; see also “Visio Arislei”

Aristotelian philosophy, 115

Aristotle, 27, 206, 288

Aristotle, pseudo-, 125, 146n, 220n, 307, 321

army with banners (*acies castrorum*), 295

Arnaldus de Villanova, 78, 116, 123n, 294

arrow, 231

phallic, 263

ars aurifera, 124, 314

Ars chemica, 82n, 83n, 85n, 88n, 94n, 103n, 128n, 138n, 147n, 152n, 217n, 236n, 310n, 320n, 331n; *see also individual treatises in Bibl. A*

Art, the, 61, 64, 124, 135, 292, 300

- dangers of, 322ff
- and *deus absconditus*, 105
- rules of, 218
- secret(s) of, 75n, 85

art(s): forbidden, 119

- of healing, 111, 117
- kabbalistic, 113n
- magic, 122
- of metals, 63
- royal, 204, 275
- sacred, 74

Artefius, 225

artifex, 67n, 88, 137f, 142, 314, 322, 326, 328f

- attitude towards the work, 172
- identical with arcanum, 309
- Mercurius, reflection of mystical experience of, 237
- mystic transformation of, 229

Artis auriferae, 60n, 66n, 68nf, 73n, 75n, 78nf, 85n, 93nf, 103n, 105n, 123n, 126n, 139n, 147n, 207n, 209n, 212n, 215n, 217n, 223n, 226nf, 232n, 235nf, 240n 276n, 278n, 286nf, 290n, 291n, 304n, 308n, 310n, 314n, 327n, 329n, 331n; *see also individual treatises in Bibl. A*

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and, in most cases, a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7)

The Associations of Normal Subjects (by Jung and F. Riklin)

Experimental Observations on Memory

The Psychological Diagnosis of Evidence

An Analysis of the Associations of an Epileptic

The Association Method (1910)

The Family Constellation (1910)

Reaction-Time in the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Psychopathological Significance of the Association Experiment

Psychoanalysis and Association Experiments

Association, Dream, and Hysterical Symptom

PSYCHOPHYSICAL RESEARCHES (1907–8)

On Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

†3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

*4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

†5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

***7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY**

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendices: New Paths in Psychology (1912): The Structure of the Unconscious (1916) (new versions, with variants, 1966)

†8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)
On the Nature of the Psyche (1947/1954)
General Aspects of Dream Psychology (1916/1948)
On the Nature of Dreams (1945/1948)
The Psychological Foundations of Belief in Spirits (1920/1948)
Spirit and Life (1926)
Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930—1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

***9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS**

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)
A Study in the Process of Individuation (1934/1950)
Concerning Mandala Symbolism (1950)
Appendix: Mandalas (1955)

***9. PART II. AION (1951)**

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

*10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff’s “Studies in Jungian Psychology” (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling's "America Set Free" (1930) and "La Révolution Mondiale" (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory Note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on “The Secret of the Golden Flower” (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND

SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyse der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18. MISCELLANY

Posthumous and Other Miscellaneous Works

19. BIBLIOGRAPHY AND INDEX

Complete Bibliography of C. G. Jung's Writings

General Index to the Collected Works

¹ The reader will find more about this in two essays published by me in the *Eranos Jahrbuch* 1936 and 1937. [This material is now contained in *Psychology and Alchemy*, Parts II and III.—EDITORS.]

¹ [*The Secret of the Golden Flower* (1962 edn.), p. 63.]

¹ [*The Golden Flower* (1962 edn.), p. 42.]

² [The Taoist idea of action through non-action.—C.F.B.]

³ [*The Golden Flower* (1962 edn.), p. 51.]

- ¹ Cf. the *Hui Ming Ching* (Book of Consciousness and Life) in *The Secret of the Golden Flower* (1962 edn.), pp. 69ff.
- ² The head is also the “seat of heavenly light.”
- ³ In the *Hui Ming Ching*, “human nature” (*hsing*) and “consciousness” (*hui*) are used interchangeably.
- ⁴ *The Golden Flower* (1962 edn.), p. 70.
- ⁵ Cf. *Psychological Types*, ch. V.
- ⁶ [For a fuller discussion of the *mandala*, see “A Study in the Process of Individuation” and “Concerning Mandala Symbolism” in *The Archetypes and the Collective Unconscious*. For examples of European mandalas, see below, after p. 56.—EDITORS.]
- ⁷ Cf. Wallis Budge, *The Gods of the Egyptians*.
- ⁸ [The mandala is reproduced in “A Study in the Process of Individuation,” p. 297.]
- ⁹ Cf. the Chinese concept of the heavenly light between the eyes.
- ¹⁰ Matthews, “The Mountain Chant: A Navajo Ceremony” (1887), and Stevenson, “Ceremonial of Hasjelti Dailjis” (1891).
- ¹¹ The mandala of a somnambulist is reproduced in *Psychiatric Studies*, p. 40.
- ¹² *The Golden Flower* (1962 edn.), p. 70.
- ¹³ [Ibid., p. 22.]
- ¹⁴ [Ibid., p. 70.]
- ¹⁵ [Ibid., p. 71.]
- ¹⁶ Cf. Avalon, *The Serpent Power*.
- ¹⁷ Cf. the excellent collection in Knuchel, *Die Umwandlung in Kult, Magie und Rechtsbrauch*.
- ¹⁸ Evans-Wentz, *The Tibetan Book of the Dead*.
- ¹⁹ Anna Kingsford, *Her Life, Letters, Diary, and Work*, pp. 129f. I am indebted for this reference to my colleague, Dr. Beatrice Hinkle, New York.
- ²⁰ Such experiences are genuine, but their genuineness does not prove that all the conclusions or convictions forming their content are necessarily sound. Even in cases of lunacy one comes across perfectly valid psychic experiences. [Author’s note added in the first (1931) English edition.]
- ²¹ [Acta S. Hildegardis, in Migne, *P.L.*, vol. 197, col. 18.]

¹ *The Golden Flower* (1962 edn.), pp. 76f. [For elucidation of the four pictures from the *Hui Ming Ching* reproduced here, see *ibid.*, pp. 75–77.—EDITORS.]

² These are recollections of earlier incarnations that arise during contemplation.

³ [*The Golden Flower*, p. 22.]

⁴ [*The Golden Flower*, pp. 26 and 28.]

⁵ Cf. *Two Essays on Analytical Psychology*, pars. 296ff.

⁶ Cf. *Psychological Types*, ch. V.

⁷ Cf. Hyslop, *Science and a Future Life*, pp. 113ff. [Mrs. Leonora Piper, an American psychic medium active about 1890–1910 in the U.S. and England, was studied by William James, Mrs. Henry Sidgwick, Hyslop, and others. A group of five of her psychic controls had the collective name “Imperator.”—EDITORS.]

¹ [*The Golden Flower* (1962 edn.), pp. 77f.]

² Lévy-Bruhl, *Primitive Mentality*.

³ Dissolution of *participation mystique*.

¹ The Chinese philosophers—in contrast to the dogmatists of the West—are only grateful for such an attitude, because they also are masters of their gods. [Note by Richard Wilhelm in original edn.]

² Our text is somewhat unclear as to whether by “continuation of life” a survival after death or a prolongation of physical existence is meant. Expressions such as “elixir of life” and the like are exceedingly ambiguous. In the later additions to the text it is evident that the yoga instructions were also understood in a purely physical sense. To a primitive mind, there is nothing disturbing in this odd mixture of the physical and the spiritual, because life and death are by no means the complete opposites they are for us. (Particularly interesting in this connection, apart from the ethnological material, are the communications of the English “rescue circles” with their thoroughly archaic ideas.) The same ambiguity with regard to survival after death is found in early Christianity, where immortality depends on very similar assumptions, i.e., on the idea of a breath-body as the carrier of life. (Geley’s parapsychological theory would be the latest incarnation of this ancient idea.) But since in our text there are warnings about the superstitious use of it—warnings, for example, against the making of gold—we can safely insist on the spiritual purport of the instructions without contradicting their meaning. In the states which the instructions seek to induce the physical body plays an increasingly unimportant part anyway, since it is replaced by the breath-body (hence the importance of breath control in all yoga exercises). The breath-body is not something “spiritual” in our sense of the word. It is characteristic of Western man that he has split apart the physical and the spiritual for epistemological purposes. But these opposites exist together in the psyche and psychology must recognize this fact. “Psychic” means physical *and* spiritual. The ideas in our text all deal with this “intermediate” world which seems unclear and confused because the concept of psychic reality is not yet current among us, although it expresses life as it actually is. Without soul, spirit is as dead as matter, because both are artificial abstractions; whereas man originally regarded spirit as a volatile body, and matter as not lacking in soul.

³ *The Golden Flower* (1962 edn.), p. 77.

¹ [The following mandalas are also published, with more detailed comments, in “Concerning Mandala Symbolism”: A1 (fig. 9), A3 (fig. 6), A5 (fig. 25). A6 (fig. 28), A7 (fig. 38), A8 (fig. 37), A9 (fig. 26), A10 (fig. 36); in “A Study of the Process of Individuation”: A4 (Picture 9). A2 is not republished. In *Memories, Dreams, Reflections*, Jung tells of painting the pictures reproduced in A3 and A10 (see the N.Y. edn., p. 197 and Pl. XI; London edn., pp. 188f. and facing p. 241). Cross reference in “Concerning Mandala Symbolism” indicates that he also painted the picture in A6. —EDITORS.]

¹ “Ζωσίρον τοῦ θείου περί ἀρετῆς.” ‘Αρετή here should not be translated as “virtue” or “power” (“vertu” in Berthelot) but as “the Art,” corresponding to the Latin *ars nostra*. The treatise has nothing whatever to do with virtue.

² Berthelot, *Collection des anciens alchimistes grecs*, with translations into French by C. E. Ruelle. [The present translation is by A. S. B. Glover from the Greek text in Berthelot, with reference also to Ruelle’s French and Jung’s German. The section numeration is Berthelot’s.—EDITORS.]

³ The *ἱερονργός* is the sacrificial priest who performs the ceremonies. The *ἱερεύς* is rather the *ἱεροφάντης* the prophet and revealer of the mysteries. No difference is made between them in the text.

⁴ Ion occurs in the Sabaeen tradition as Jûnân ben Merqûlius (son of Mercury), the ancestor of the Ionians (el-Jûnâniûn). [Cf. Eutychius, *Annales*, in Migne, *P.G.*, vol. 111, col. 922.] The Sabaeans consider him the founder of their religion. Cf. Chwolsohn, *Die Ssabier und der Ssabismus*, I, pp. 205, 796, and II, p. 509. Hermes, too, was considered a founder (I, p. 521).

⁵ Κόλασις, literally ‘punishment.’ Here it means the torment which the prima materia has to undergo in order to be transformed. This procedure is called *mortificatio*. [For an example, see the *mortificatio* of the “Ethiopian” in *Psychology and Alchemy*, par. 484. Also infra, “The Philosophical Tree,” ch. 17.—EDITORS.]

⁶ Διασπάσας κατὰ ἀύστασιν ἀρρονίας. Berthelot has “démembrant, suivant les règles de la combinaison.” It refers to the division into four bodies, natures, or elements. Cf. Berthelot, *Alch. grecs*, II, iii, 11 and *Chimie au moyen âge*, III, p. 92. Also “Visio Arislei,” *Artis auriferae*, I, p. 151, and “Exercitationes in Turbam IX,” *ibid.*, p. 170.

⁷ εἶδον αὐτόν ὡς τούναντίον ἀνθρωπάριον κολοβόν. If I am not mistaken, the concept of the *homunculus* appears here for the first time in alchemical literature.

⁸ I read ξνρουργός instead of the meaningless ξηρουργός in the text. Cf. III, v, 1, where the barber does in fact appear as an anthroparion. (Or should it be taken adjectivally: ξνρουργὸν ἀνθρωπάριον?) The anthroparion is grey because, as we shall see, he represents the lead.

⁹ Or “moral perfection.”

¹⁰ Evidently a particularly convulsive opening of the mouth is meant, coupled with a violent contraction of the pharynx. This contraction was a kind of retching movement for bringing up the inner contents. These had to be written down on the tablets. They were inspirations coming from above that were caught, as it were, by the upraised eyes. The procedure might be compared with the technique of active imagination.

¹¹ [In the Swiss edition (*Von den Wurzeln des Bewusstseins*, pp. 141–45) this section, though numbered III, i, 3 only, continues into III, i, 4, 5, and 6 without a break, the whole being run together as a single section. III, i, 5, then reappears at the end of the sequence of visions (par. 87), but in variant form, as a “résumé,” and the reasons for its placement there are explained in the commentary (pars. 93, 111, 121). As no explanation is given for its duplication under III, i, 3, and the variations are in the main merely stylistic, we have omitted it at this point and reconstituted III, i, 4–6 at the end of the sequence. The wording of Jung’s interpolation at par. 87 has been altered to account for this change. The sections are presented in the order III, i, 5, III, i, 4, III, i, 6 on the assumption that III, i, 4 is not meant to form a part of the “résumé” proper, but, as stated in the Eranos version of “Transformation Symbolism in the Mass,” is rather “Zosimos” own commentary on his visions” and “a general philosophical conclusion” (*The Mysteries*, pp. 311f.).—EDITORS.]

¹² Καὶ ἄλλος ὀπζσω αὐτοῦ φέρων περιηκονισμένον τινά λευκοφόρον καὶ ὠραῖον τήν ὄψιν, οὐ τὸ ὄνομα ἔκαλεῖο μεσουράννισμα ἡλίου. Berthelot: “Un autre, derrière lui, portait un objet circulaire, d’une blancheur éclatante, et très beau à voir appelé Méridien du Cinnabre.” It is not clear why μεσουράννισμα ἡλίου is translated as “meridian of the cinnabar,” thus making it a chemical analogy, περιηκονισμένον τινά must refer to a person and not to a thing. Dr. M.-L. von Franz has drawn my attention to the following parallels in Apuleius. He calls the *stola olympiaca* with which the initiate was clad a “precious scarf with sacred animals worked in colour on every part of it; for instance, Indian serpents and Hyperborean griffins.” “I . . . wore a white palm-tree chaplet with its leaves sticking out all round like rays of light.” The initiate was shown to the people “as when a statue is unveiled, dressed like the sun.” The sun, which he now was, he had seen the previous night, after his figurative death. “At midnight I saw the sun shining as if it were noon.” (*The Golden Ass*, trans. Graves, p. 286.)

¹³ Literally, δργανικῶς.

¹⁴ The island of Prokonnesos was the site of the famous Greek marble quarry, now called Marmara (Turkey).

¹⁵ That is, circular.

¹⁶ The Greek has only μέλος. I follow the reading of codex Gr. 2252 (Paris).

¹⁷ The *res quaesita* or *quaerenda* is a standing expression in Latin alchemy.

¹⁸ Οὐγγιασμῶ.

¹ For example, the “Visio Arislei” (*Art. aurif.*, I, pp. 146ff.) and the visions in the “Book of Krates” (Berthelot, *Chimie au moyen âge*, III, pp. 44–75).

² Cf. *Psychology and Alchemy*, pars. 347ff.

³ The opus extended over a period with no fixed limits. During this time the artifex had to devote himself “religiously” to the process of transformation. Since the process was subjective as well as objective, it is not surprising that it included dream-experiences. G. Battista Nazari (*Della tramutatione metallica sogni tre*, 1599) actually represented the opus in the form of (allegorical) dreams. “The philosophic water is sometimes manifested to thee in sleep,” says the “Parabola” of Sendivogius (*Bibliotheca chemica*, II, p. 475). We cannot suppose that the author had any knowledge of the visions of Zosimos; the reference is probably to the “Visio Arislei,” as suggested by the following (p. 475 b): “Solum fructum arboris Solaris vidi in somniis Saturnum Mercurio nostro imponere” (I saw in dreams the sole fruit of the tree of the sun impose Saturn on our Mercurius). Cf. the end of the “Visio Arislei”: “Vidimus te magistrum in somniis. Petiimus ut nobis subsidium Horfolto discipulo tuo offeras, qui nutrimenti auctor est” (We saw thee, the master, in dreams. We besought that thou wouldst offer us for our help thy disciple Horfoltus, who is the author of nourishment).—Codex Q. 584 (Berlin), fol 21^v. Ruska, ed., *Turba Philosophorum*, pp. 327f. The beginning of the “Visio” shows how the fruit of “that immortal tree” may be gathered.

⁴ In our text (III, v. 3) it is the Agathodaimon itself that suffers transformation.

⁵ Division into four elements after the *mortificatio* occurs in “Exercitationes in Turbam IC” (*Art. aurif.*, I, p. 170), also in “Aenigma” VI (*ibid.*, p. 151). For division of the egg into four, see the Book of El-Habib (Berthelot, *Moyen âge*, III, p. 92). The division into four was known as *τετραμερὲς τῆν φιλοσοφίαν* (Berthelot, *Alch. grecs*, III, xlv, 5).

⁶ For example, in Trismosin, *Splendor solis (Aureum vellus*, p. 27). The same in *Splendor Solis* (London, 1920, repr.), Pl. X, and Lacinius, *Pretiosa margarita novella* (Venice, 1546), fol. *** xii.

⁷ “It is the water that kills and vivifies” (*Rosarium philosophorum*, in *Art. aurif.*, II, p. 214).

⁸ Just as baptism is a pre-Christian rite, according to the testimony of the gospels, so, too, the divine water is of pagan and pre-Christian origin. The Praefatio of the *Benedictio Fontis* on Easter Eve says: “May this water, prepared for the rebirth of men, be rendered fruitful by the secret inpouring of his divine power; may a heavenly offering, conceived in holiness and reborn into a new creation, come forth from the stainless womb of this divine font; and may all, however distinguished by age in time or sex in body, be brought forth into one infancy by the motherhood of grace” (*The Missal in Latin and English*, p. 429).

⁹ “The priest divides the water crosswise with his hand” (*ibid.*).

¹⁰ Cf. *Psychology and Alchemy*, pars. 334, 530.

¹¹ Cf. “Hortulanus super Epistolam Hermetis” in *Rosarium*, *Art. aurif.*, II, p. 270. *Aurora Consurgens* (ed. von Franz), pp. 39–41: “For she [this science] is clear to them that have understanding . . . she seemeth easy to them that have knowledge of her.” Maier, *Symbola aureae mensae*, p. 146: “. . . that they should not understand his words, save those who are judged worthy of this very great magistry.”

¹² Cf. Gray, *Goethe the Alchemist*.

¹³ It has often been objected that symbols of this sort do not occur in dreams at all. Naturally they do not occur in all dreams or in just any dreams, but only in special ones. The differences between dreams are as great as those between individuals. A particular constellation of the unconscious is needed to produce such dreams, i.e., archetypal dreams

containing mythological motifs. (Examples in *Psychology and Alchemy*, Part II.) But they cannot be recognized without a knowledge of mythology, which not all psychologists possess.

- ¹ Provided, of course, that the passages in question are not interpolations by copyists, who were mostly monks.

²⁹ Ὀσιρίς ἔστιν ἡ ταφή ἐσφιγμένη, κρύπτουσα πάντα πάντα τὰ Ὀσίριδος μέλη: Treatise of Olympiodorus of Alexandria (ibid., II, iv, 42). Here Osiris is the “principle of all moisture” in agreement with Plutarch. This refers to the relatively low melting point of lead.

³⁰ Ibid., II, iv, 43.

³¹ Cf. the hymn of St. Romanus on the theophany: “... him who was seen of old in the midst of three children as dew in the fire, now a fire flickering and shining in the Jordan, himself the light inaccessible” (Pitra, *Analecta sacra*, I, 21).

³² Berthelot, *Alch. grecs*, I, xiii, 1–4.

³³ Instead of φενρικῆς in the text.

³⁴ The secrets of the art.

³⁵ *Art. aurif.*, I, pp. 141f.

³⁶ “There is in the sea a round fish, lacking bones and scales [?], and it has in itself a fatness, a wonder-working virtue, which if it be cooked on a slow fire until its fatness and moisture have wholly disappeared, and then be thoroughly cleansed, is steeped in sea water until it begins to shine. . . .” This is a description of the transformation process. [Cf. *Aion*, pars. 195ff.]

³⁷ “... whose anointed eyes could easily look upon the secrets of the philosophers.”

³⁸ Codex Vadiensis 390 (St. Gall), 15th cent. (mentioned by Ruska, *Turba*, p. 93). Concerning the fish, see *Aion*, ch. X.

³⁹ Sermo XLI.

⁴⁰ That is, Saturn, who was regarded as the dark “counter-sun.” Mercurius is the child of Saturn, and also of the sun and moon.

⁴¹ Cf. *Psychology and Alchemy*, par. 456, §6.

⁴² Berthelot, *Alch. grecs*, III, xix, 1.

⁴³ Δύναρις γάρ φησὶν ὑδατόχρους, ἦντινα δύναμιν, φησί, τοντέστι τόν κρόνον. Hippolytus, *Elenchos*, V, 16, 2 (trans. Legge, *Philosophumena*, I, p. 154).

⁴⁴ 1454–1493. Cardinal archbishop of Aquileia, and a great humanist.

⁴⁵ *Corollarium in Dioscoridem*. Cited in Maier, *Symb. aur. mens.*, p. 174.

⁴⁶ *Lexicon alchemiae*, pp. 46f.

⁴⁷ *Coelum Sephiroticum*, p. 33.

⁴⁸ An allusion to the axiom of pseudo-Democritus.

⁴⁹ Ruska, p. 190.

⁵⁰ P. 197.

⁵¹ Pp. 200f. *Aqua nostra* is “fire, because it burns all things and reduces them to powder; quicksilver is vinegar” (Quotation from Calid in *Rosarium*, p. 218). “Our water is mightier than fire. . . . And fire in respect thereto is like water in respect to common fire. Therefore the philosophers say: Burn our metal in the mightiest fire” (ibid., p. 250). Hence the “water” is a kind of superfire, an *ignis coelestis*.

⁵² Contrary to Ruska (*Turba*, p. 201, n. 3), I adhere to the reading in the MSS. because it is simply a synonym for the moist soul of the prima materia, the radical moisture. Another synonym for the water is “spiritual blood” (ibid., p. 129), which Ruska rightly collates with *πυρρόν αἷμα* (fire-coloured blood) in the Greek sources. The equation fire = spirit is common in alchemy. Thus, as Ruska himself remarks (p. 271), Mercurius (a frequent synonym for the *aqua permanens*, cf. Ruland’s *Lexicon*) is called *φάρμακον πύρινον* (fiery medicine).

⁵³ Cf. *Aurora Consurgens* (ed. von Franz), pp. 85, 91.

⁵⁴ *Art. aurif.*, II, p. 482.

⁵⁵ Ibid., II, p. 239.

⁵⁶ Berthelot, *Alch. grecs*, IV, xx, 8: “Make known to us how the blessed waters come down from above to awaken the dead, who lie round about in the midst of Hades, chained in the darkness; how the elixir of life comes to them and awakens them, rousing them out of their sleep. . . .”

⁵⁷ P. 139.

⁵⁸ Scott, *Hermetica*, I, p. 147.

⁵⁹ Praefatio: “May the power of the Holy Ghost descend into this brimming font, and may it make the whole substance of the water fruitful in regenerative power” (*Missal*, p. 431).

⁶⁰ It shares this quality with Mercurius duplex.

⁶¹ “In the floods of life, in the storm of work,
In ebb and flow,
In warp and weft,
Cradle and grave,
An eternal sea,
A changing patchwork,
A glowing life,
At the whirring loom of Time I weave
The living clothes of the Deity.”

Thus the Earth Spirit, the *spiritus mercurialis*, to Faust. (Trans. by MacNeice, p. 23.)

⁶² In Egypt the darkness of the soul was represented as a crocodile (Budge, *The Gods of the Egyptians*, I, p. 286).

⁶³ In the Book of Ostanès (Berthelot, *Chimie au moyen âge*, III, p. 120) there is a description of a monster with wings of a vulture, an elephant’s head, and a dragon’s tail. These parts mutually devour one another.

⁶⁴ Of the quicksilver (*aqua vitae, perennis*) it is said: “This is the serpent which rejoices in itself, impregnates itself, and brings itself forth in a single day; it slays all things with its venom, and will become fire from the fire (*et ab igne ignis fuerit*).” (“Tractatulus Avicennae,” *Art. aurif.*, I, p. 406.) “The dragon is born in the *nigredo* and feeds upon its Mercurius and slays itself” (*Rosarium*, ibid., II, p. 230). “The living Mercurius is called the scorpion, that is, venom; for it slays itself and brings itself back to life” (ibid., pp. 271f.). The oft-cited saying, “The dragon dieth not save with its brother and sister,” is explained by Maier (*Symb. aur. mens.*, p. 466) as follows: “For whenever the heavenly sun and moon meet in conjunction, this must take place in the head and tail of the dragon; in this comes about the conjunction and uniting of sun and moon, when an eclipse takes place.”

⁶⁵ *Theatr. chem.*, IV (1659), pp. 509ff.

⁶⁶ The killing (*mortificatio*) of the king occurs in later alchemy (cf. *Psychology and Alchemy*, Fig. 173). The king's crown makes him a kind of sun. The motif belongs to the wider context of the sacrifice of the god, which developed not only in the West but also in the East, and particularly in ancient Mexico. There the personifier of Tezcatlipoca ("fiery mirror") was sacrificed at the festival of Toxcatl (Spence, *The Gods of Mexico*, pp. 97ff.). The same thing happened in the cult of Uitzilopochtli, the sun-god (*ibid.*, p. 73), who also figured in the eucharistic rite of the *teoqualo*, "god-eating" (cf. "Transformation Symbolism in the Mass," pp. 223f.).

⁶⁷ The solar nature of the victim is confirmed by the tradition that the man destined to be beheaded by the priests of Harran had to have fair hair and blue eyes (*ibid.*, p. 240).

⁶⁸ Cf. my remarks on the Harranite head mystery and the legendary head oracle of Pope Sylvester II (*ibid.*, pp. 240f.).

⁶⁹ Its form can still be seen in the deacon's hood.

⁷⁰ According to Rabbinic tradition the angels (including Satan) were created on the second day of Creation (the day of the moon). They were immediately divided on the question of creating man. Therefore God created Adam in secret, to avoid incurring the displeasure of the angels.

⁷¹ "They compared the water to an egg, because it surrounds everything that is within it, and has in itself all that is necessary" ("Consilium coniugii," *Ars chemica*, p. 140). "Having all that is necessary" is one of the attributes of God.

⁷² Maier, *Symb. aur. mens.*, p. 466. Cf. Senior, *De chemia*, p. 108: "The dragon is the divine water."

⁷³ *Mus. herm.*, p. 785.

⁷⁴ *Ibid.*, p. 90.

⁷⁵ Steeb, *Coelum Sephiroticum*, p. 33.

⁷⁶ *Turba*, Sermo IV, p. 112. Cf. also the "nomenclature of the egg" in Berthelot, *Alch. grecs*, I, iv, and Olympiodorus on the egg, the tetrasomia, and the spherical phial (II, iv, 44). Concerning the identity of uroboros and egg, and the division into four, see the Book of El-Habib (Berthelot, *Moyen âge*, III, pp. 92, 104). There is a picture of the egg being divided with the sword in Emblem VIII of Maier's *Scrutinium chymicum* (p. 22), with the inscription: "Take the egg and pierce it with a fiery sword." Emblem XXV shows the killing of the dragon. Killing with the sword is also shown in Lambspringk's Symbol II (*Musaeum hermeticum*, p. 345), titled "Putrefactio." Killing and division into four go together. "Mortificatio (scl. Lapidis) separatio elementorum" ("Exercit. in Turb. IX"). Cf. the dramatic fights with the dragon in the visions of Krates (Berthelot, *Moyen âge*, III, pp. 73ff.).

⁷⁷ *Ars chemica*, p. 259.

⁷⁸ *Verus Hermes*, p. 16. [Cf. *infra*, par. 276.]

⁷⁹ This motif also occurs in the Adam parable in "Aurelia occulta" (*Theatr. chem.*, IV, 1659, pp. 511f.), which describes how the angel had to deal Adam several bloody wounds with his sword because he refused to move out of Paradise. Adam is the arcane substance, whose "extraction from the garden" of Eve is finally accomplished by means of blood magic.

⁸⁰ Codex Vat. Lat. 7286 (17th cent.). Fig. 150 in *Psychology and Alchemy*.

- ¹¹¹ Honorius of Autun, *Speculum de myst. eccl.* (Migne, *P.L.*, vol. 172, col. 936). Christ’s tearing of the breast, the wound in his side, and his martyr’s death are parallels of the alchemical *mortificatio*, dismemberment, flaying, etc., and pertain like these to the birth and revelation of the inner man. Cf. the report in Hippolytus (*Elenchos*, V, 9, 1–6) of the Phrygian system. The Phrygians taught that the Father of all things was called Amygdalos (almond-tree), was pre-existent, and bore in himself the “perfect fruit pulsating and stirring in the depths.” He “tore his breast and gave birth to his invisible, nameless and unnameable child.” That was the “Invisible One, through whom all things were

made, and without whom nothing was made” (an allusion to John 1 : 3). He was “Syriktes, the piper.” i.e., the wind (pneuma). He was “thousand-eyed, not to be comprehended,” the Word (ῥῆμα) of God, the Word of annunciation and great power.” He was “hidden in the dwelling where the roots of all things are established.” He was the “Kingdom of Heaven, the grain of mustard-seed, the indivisible point . . . which none know save the spiritual alone.” (Cf. Legge trans., *Philosophumena*, I, pp. 140f.)

¹¹² Herakleon taught that the Ground of the world was a Primordial Man named Bythos (depths of the sea), who was neither male nor female. From this being was produced the inner man, his counterpart, who “came down from the Pleroma on high.”

¹¹³ Epiphanius, *Panarium* (ed. Holl), II, pp. 46f.

² See supra, par. 105.

³ "... which I have seen with my own eyes and touched with my hands" (*Rosarium*, in *Art. aurif.*, II, p. 205).

⁴ It must be remembered, however, that John uses other terms than those found in the alchemy of the time: *τᾶ ἑπίγεια* and *τᾶ ἑπιουράνια* (*terrena* and *coelestia* in the Vulgate).

⁵ The source for this is Hermes Trismegistus in the "Tabula smaragdina": "It ascends from earth to heaven and descends again to earth. . . . The wind hath borne it in his belly." This text was always interpreted as referring to the stone (cf. Hortulanus, "Commentariolum," *Ars chemica*). But the stone comes from the "water." A perfect alchemical parallel to the Christian mystery is the following passage from the "Consilium coniug." (ibid., p. 128): "And if I ascend naked into heaven, then will I come clothed to earth and perfect all minerals. And if we are baptized in the fountain of gold and silver, and the spirit of our body ascends to heaven with the father and the son, and descends again, our souls will revive, and my animal body will remain white." The anonymous author of "Liber de arte chymica" (*Art. aurif.*, I, pp. 612f.) speaks in the same way: "It is certain that the earth cannot ascend, except first the heaven descend, for the earth is said to be raised up to heaven, when, dissolved in its own spirit, it is at last united therewith. I will satisfy thee with this parable: The Son of God descending into the Virgin, and there clothed with flesh, is born as man, who having shown us the way of truth for our salvation, suffered and died for us, and after his resurrection returned into heaven, where the earth, that is mankind, is exalted above all the circles of the world, and is placed in the intellectual heaven of the most holy Trinity. In like manner, when I die, my soul, helped by the grace and the merits of Christ, will return to the fount of life whence it descended. The body returns to earth, and at the last judgment of the world the soul, descending from heaven, will carry it with her, purified, to glory."

⁶ The motif of ascent and descent is based partly on the motion of water as a natural phenomenon (clouds, rain, etc.).

⁷ Justin Martyr says: "As a fount of living water from God . . . this Christ gushed forth" (cited in Preuschen, *Antilegomena*, p. 129). Gaudentius (Sermo XIX) compares Christ's humanity to water (Migne, *P.L.*, vol. 20, col. 983). Eucherius of Lyons (*Liber formularum spiritalis intelligentiae*) says that Christ "carried up to heaven the flesh he assumed for us" (ibid., vol. 50, col. 734). This idea coincides with the saying in the "Tab. smarag." that the arcanum "ascends from earth to heaven, and descends again to earth, and receives the power of Above and Below."

⁸ "Spirit" in alchemy means anything volatile, all evaporable substances, oxides, etc., but also, as a projected psychic content, a *corpus mysticum* in the sense of a "subtle body." (Cf. Mead, *The Doctrine of the Subtle Body in Western Tradition*.) It is in this sense that the definition of the lapis as a *spiritus humidus et aereus* should be understood. There are also indications that spirit was understood as "mind," which could be refined by "sublimation."

⁹ Cf. the fate of the "man of light" in Zosimos (*Psychology and Alchemy*, par. 456).

¹⁰ In the oldest sources this mystery is expressed in symbolical terms. But from the 13th cent. on there are more and more texts which reveal the mystical side of the arcanum. One of the best examples is the German treatise *Der Wasserstein der Weysen*, "A Chymical Tract, wherein the Way is Shown, the Materia Named, and the Process Described."

¹ The element of torture, so conspicuous in Zosimos, is not uncommon in alchemical literature. “Slay the mother, cutting off her hands and feet” (“Aenigma” VI, *Art. aurif.*, I, p. 151). Cf. *Turba*, Sermones XVIII, XLVII, LXIX. “Take a man, shave him, and drag him over a stone . . . until his body dies.” “Take a cock, pluck it alive, then put its head in a glass vessel” (“Alleg. sup. lib. Turb.,” *Art. aurif.*, I, pp. 139ff.). In medieval alchemy the torturing of the materia was an allegory of Christ’s passion (cf. *Der Wasserstein der Weysen*, p. 97).

² “The foundation of this art, for whose sake many have perished” (*Turba*, Sermo XV). Zosimos mentions Antimimos, the demon of error (*Alch. grecs*, III, xlix, 9). Olympiodorus quotes the saying of Petasios that lead (prima materia) was so “shameless and bedevilled” that it drove the adepts mad (ibid., II, iv, 43). The devil caused impatience, doubt, and despair during the work (*Mus. herm.*, p. 461). Hoghelande describes how the devil deceived him and his friend with delusions (“De difficult. alchem.,” *Theatr. chem.*, I, 1659, pp. 152ff.). The dangers that threatened the alchemists were obviously psychic. Cf. *infra*, pars. 429ff.

³ *Der wasserstein der Weysen*, pp. 73ff. [For this translation I am indebted to Dr. R. T. Llewellyn.—TRANSLATOR.]

⁴ This term occurs in alchemy, e.g.: “Congeal [the quicksilver] with its mystic body” (“Consilium coniug.,” *Theatr. chem.*, I, 1659, p. 137).

¹ [Philippus Aureolus Theophrastus Bombastus von Hohenheim, known as Paracelsus, born 1493, in Einsiedeln, died Sept. 21, 1541, in Salzburg.—EDITORS.]

² “De caducis,” ed. Huser, I, p. 589.

³ “Therefore Christian knowledge is better than natural knowledge, and a prophet or an apostle better than an astronomer or a physician . . . but I am compelled to add that the sick need a physician not apostles, just as prognostications require an astronomer not a prophet” (“Von Erkantnus des Gestirns,” ed. Sudhoff, XII, pp. 496f.).

⁴ He says in the fourth treatise of *Paramirum primum* (ed. Sudhoff, I, p. 215), speaking of the “ens spirituale” of diseases: “If we are to talk of the *Ens Spirituale*, we admonish you to put aside the style which you call theological. For not everything which is called *Theologia* is holy and also not everything it treats of is holy. And, moreover, not everything is true which the uncomprehending deal with in theology. Now although it is true that theology describes this *Ens* most powerfully, it does not do so under the name and text of our fourth *Pagoyum*. And, in addition, they deny what we are proving. But there is one thing which you must understand from us. namely, that the ability to recognize this *Ens* does not come from Christian belief, for it is a *Pagoyum* to us. It is, however, not contrary to the belief in which we shall depart from this life. Accordingly, you must recognize that in no way are you to understand an *Ens* as being of the spirits, by saying they are all devils, for then you are talking nonsensically and foolishly like the Devil.”

⁵ Cf. “Labyrinthus medicorum,” ed. Sudhoff, XI, pp. 207f.: “And as the Magi from the East found Christ in the star by means of this sign, so is fire found in the flint. Thus are the arts found in nature, and it is easier to see the latter than it was to look for Christ.”

⁶ *De vita longa* (1562), p. 56. In “Caput de morbis somnii” (ed. Sudhoff, IX, p. 360), Paracelsus says of the *lumen naturae*: “Look at Adam and Moses and others. They sought in themselves what was in man and have revealed it and all kabbalistic arts and they knew nothing alien to man neither from the Devil nor from the spirits, but derived their knowledge from the Light of Nature. This they nurtured in themselves . . . it comes from nature which contains its manner of activity within itself. It is active during sleep and hence things must be used when dormant and not awake—sleep is waking for such arts—for things have a spirit which is active for them in sleep. Now it is true that Satan in his wisdom is a Kabbalist and a powerful one. So, too, are these innate spirits in man . . . for it is the Light of Nature which is at work during sleep and is the invisible body and was nevertheless born like the visible and natural body. But there is more to be known than the mere flesh, for from this very innate spirit comes that which is visible . . . the Light of Nature which is man’s mentor dwells in this innate spirit.” Paracelsus also says that though men die, the mentor goes on teaching (*Astronomia magna*, ed. Sudhoff, XII, p. 23; “De podagricis,” ed. Huser, I, p. 566).

⁷ *Occulta philosophia*, p. lxxviii. The *lumen naturae* also plays a considerable role in Meister Eckhart.

⁸ Cf. the fine saying in “Fragmenta medica” (ed. Huser, I, p. 141): “Great is he whose dreams are right, that is, who lives and moves harmoniously in this kabbalistic, innate spirit.”

⁹ “Caput de morbis somnii,” ed. Sudhoff, IX, p. 361.

¹⁰ *Astronomia magna*, ed. Sudhoff, XII, p. 23; also “Lab. med.,” ed. Sudhoff, ch. II. and “De pestilitate,” Tract. I (ed. Huser, I, p. 327). The *astrum* theory had been foreshadowed in the *Occulta philosophia* of Agrippa, to whom Paracelsus was much indebted.

¹¹ *Astronomia magna*, ed. Sudhoff, XII, pp. 36 and 304.

¹² *Paramirum*, pp. 35f.

¹³ “Lab. med.,” ed. Sudhoff, ch. VIII.

¹⁵ “De nymphis,” prologue (ed. Sudhoff, XIV, p. 115).

¹⁶ Adam von Bodenstein and Gerard Dorn, for instance.

¹⁷ “De caducis,” ed. Sudhoff, VIII, p. 267.

¹⁸ I used the edition of 1584, “as finally revised by the author.”

¹⁹ He did, however, once remark that he had found the stone which others sought “to their own hurt.” But many other alchemists say the same.

²⁰ [Personal physician to Ferdinand I. Cf. Jung, “Paracelsus the Physician,” pars. 21f.—EDITORS.]

²¹ *Epistolarum medicinalium Conradi Gessneri*, fol. IV.

²²

“I’m left to struggle still towards the light:
Could I but break the spell, all magic spurning,
And clear my path, all sorceries unlearning,
Free then, in Nature’s sight, from evil ban,
I’d know at last the worth of being man.”

(*Faust: Part Two*, trans. Wayne, pp. 263f.) Faust’s belated insight never dawned on Paracelsus.

²³ This expression was in fact used by an insane patient to describe her own neologisms. [See “The Psychology of Dementia Praecox,” pars. 155, 208—EDITORS]

²⁴ He calls this procedure likewise a “pagoyum.” “De pestilitate,” Tract. IV, ch. II (ed. Huser, I, p. 353).

²⁵ For instance, the violent form of St. Vitus’s Dance is cured by “a wax manikin into which oaths are stuck.” “De morbis amentium,” Tract. II, ch. III (ed. Huser, I, p. 501); also *Paramirum*, ch. V.

²⁶ “Archidoxis magicae,” ed. Huser, II, p. 546.

²⁷ *Theatrum chemicum*, III (1659), pp. 758ff. Cf. *Psychology and Alchemy*, pars. 480ff.; *Aurora Consurgens* (ed. von Franz), p. 43: “For [the science] is a gift and sacrament of God and a divine matter.”

²⁸ Cf. *Psychology and Alchemy*, Part III, ch. 5: “The Lapis-Christ Parallel.”

²⁹ He mentions Hermes, Archelaus, Morienus, Lully, Arnaldus, Albertus Magnus, Helia Artista, Rupescissa, and others.

³⁰ *Artis auriferae* (1593), I, p. 185.

³¹ “De natura rerum,” ed. Sudhoff, XI, p. 313.

³² *Das Buch Paragranum*, ed. Strunz, p. 13.

³³ His influence showed itself not so much in any essential modification of alchemical methods as in deepened philosophical speculation. The most important of these philosophical alchemists was the physician Gerard Dorn, of Frankfurt am Main. He wrote a detailed commentary on one of Paracelsus’s rare Latin treatises, *De vita longa*. See *infra*, pars. 213ff.

³⁴ “Nam Planetae Sphaerae et elementa in homine per revolutionem sui Zodiaci verius et virtuosius operantur, quam aliena corpora seu signa superiora corporalia” (For the planets, spheres, and elements in man work more truly and powerfully through the revolution of their zodiac than foreign bodies or the higher bodily signs). *Theatr. chem.*, V (1660), p. 790.

³⁵ “Liber Azoth,” ed. Huser, II, p. 522. The *Cagastrium* is an inferior or “bad” form of the *Yliastrum*. That it is this “cagastic” magic which opens the understanding is worth noting.

³⁶ Hermes is an authority often cited by Paracelsus.

³⁷ Quoted from the version in *Rosarium philosophorum*, vol. II of *De alchimia* (1550), p. 133. Reprinted in *Bibliotheca chemica curiosa*, II, pp. 87ff.

³⁸ The light arises from the darkness of Saturn.

³⁹ Quoted from the version of *Rosarium* in *Art. aurif.*, II, pp. 379 and 381. The original (1550) edition of the *Rosarium* is based on a text that dates back to about the middle of the 15th cent.

⁴⁰ Mylius. *Philosophia reformata*, p. 244. (Mylius was the greatest of the alchemical compilers and gave extracts from numerous ancient texts, mostly without naming the sources.) Significantly, the oldest of the Chinese alchemists, Wei-Po-yang, who lived about A.D. 140, was familiar with this idea. He says: “He who properly cultivates his innate nature will see the yellow light shine forth as it should.” (Lu-ch’iang Wu and T. L. Davis, “An Ancient Chinese Treatise on Alchemy,” p. 262.)

⁴¹ Preisendanz, *Papyri Graecae Magicae*, I, p. 137, Pap. IV, line 2081, concerning the acquisition of a *paredros*.

⁴² Quoted in *Rosarium* (*Art. aurif.*, II, p. 248). Cf. Preisendanz, II, pp. 45-46. line 48: “I know thee, Hermes, and thou knowest me. I am thou and thou art I, and thou shouldst serve me in all things.”

⁴³ *Amphitheatrum sapientiae aeternae*, p. 197: “Hie, filius mundi maioris, Deus et creatura . . . ille (scl. Christus) filius Dei θεάνθρωπος, h. e. Deus et homo: Unus in utero mundi maioris; alter in utero mundi minoris, uterque Virgineo, conceptus. . . . Absque blasphemia dico: Christi crucifixi, salvatoris totius generis humani, i.e., mundi minoris, in Naturae libro, et ceu Speculo, typus est Lapis Philosophorum servator mundi maioris. Ex lapide Christum naturaliter cognoscito et ex Christo lapidem.”

⁴⁴ Mylius (*Phil. ref.*, p. 97) says of the *filius ignis*: “Here lies all our philosophy.”

⁴⁵ *Thus Spake Zarathustra* (trans. Kaufmann), p. 176: “Lonely one, you are going the way to yourself. And your way leads past yourself and your seven devils. . . . You must consume yourself in your own flame; how could you wish to become new unless you had first become ashes! Lonely one, you are going the way of the creator: you would create a god for yourself out of your seven devils.” Cf. “Consilium coniugii,” *Ars chemica*, p. 237: “Our stone slays itself with its own dart”; and the role of the *incineratio* and the phoenix among the alchemists. The devil is the Saturnine form of the *anima mundi*.

⁴⁶ These were known to the alchemists since earliest times. Olympiodorus, for instance, says that in lead (Saturn) there is a shameless demon (the *spiritus mercurii*) who drives men mad. (Berthelot, *Alchimistes grecs*, II, iv, 43.)

⁴⁷ Born in Danzig at the beginning of the 16th cent., studied in Basel.

⁴⁸ *Epistolarum medicinalium Conradi Gessneri*, Lib. I, fol. 2^r.

⁴⁹ This is a recurrent formula in alchemical treatises.

⁵⁰ The *corpus glorificationis* of other authors.

⁵¹ “De religione perpetua,” ed. Sudhoff, Part 2, I, pp. 100f. An equally presumptuous view is expressed in “De podagricis” (ed. Huser, I, p. 565): “Thus man acquires his angelic qualities from heaven and is heavenly. He who knows the angels knows the *astra*, he who knows the *astra* and the *horoscopum* knows the whole world, and knows how to bring together man and the angels.” [This and the above passage in the text are translated by Dr. R. T. Llewellyn.—TRANSLATOR.]

⁵² In Zosimos the “man of light” ($\phi\acute{\omega}\varsigma$ = man, $\phi\tilde{\omega}\varsigma$ = light) is simply called $\phi\tilde{\omega}\varsigma$. He is the spiritual man who has clothed himself in Adam’s body. Christ let Adam approach ($\pi\rho\omicron\sigma\eta\tilde{\nu}$) and accepted him into paradise (Berthelot, *Alch. grecs*, III, xlix, 5-10). Cf. *Psychology and Alchemy*, par. 456.

⁵³ “De arte cabalistica,” *Opera omnia*, I.

⁵⁴ *Occulta philosophia*.

⁵⁵ *Astronomia magna*, ed. Sudhoff, XII, p. 55.

⁵⁶ *Ibid.*, p. 62.

⁵⁷ Ed. Strunz, p. 56; also “Von der Astronomie,” ed. Huser, I, p. 215.

⁵⁸ Strunz, p. 55.

⁵⁹ Pico della Mirandola also uses this term in *Heptaplus*, I, ch. VII (*Opera omnia*, I, p. 59).

⁶⁰ *De vita longa* (ed. Dorn), pp. 169ff. Adech is the “interior man,” presumably identical with Aniadus and Edochinum (see *infra*). Concerning the *homo maximus* see *Paragranum*, pp. 45, 59. Dorn calls Adech the “invisibilem hominem maximum.”

⁶¹ “Von den dreyen ersten essentiis.” ch. IX, ed. Huser, I, p. 325. The idea that the Primordial Man consists of four parts is found also in Gnosticism (Barbelo = “God is four”).

⁶² The Iliastrum (or Iliaster) is something like the *spiritus vitae* or *spiritus mercurialis* of the alchemists. This is the occult agent in quicksilver, which, extracted in the form of the *aqua permanens*, serves, in highly paradoxical fashion, to separate the occult agent, the anima (soul), from the body (or substance). The contradiction is due to the fact that Mercurius is a self-transforming being, represented as a dragon that devours itself from the tail (uroboros = tail-eater), or else as two dragons eating each other. The function of the Iliaster is just as paradoxical: it is itself a created thing, but it brings all creatures out of a potential state of existence in the world of ideas (which is probably the meaning of Paracelsus’s Neoplatonic “Ides”) into actual existence. [See also *infra*, pars. 170ff.]

⁶³ “De tartaro: Fragmenta anatomiae,” ed. Sudhoff. III. p. 462.

⁶⁴ *Ibid.*, p. 465: “He is the first man and the first tree and the first created of everything whatsoever.”

⁶⁵ = “First Thomas,” i.e., the first unbeliever and doubter.

⁶⁶ Bousset, *Hauptprobleme der Gnosis*, pp. 16ff.

¹ Ed. Sudhoff, III.

² Fol. d2^r of the 1st edn. (1562).

³ To give but one example: one passage says that “there is nothing of mortality in the Scaiolae,” while another speaks of the “death and life of the Scaiolae” (infra, pars. 207, 214). Not much reliance should therefore be placed on Bodenstein’s “revision.” As against my view that the *Vita longa* consists of lecture notes, one must consider the fact that there are original fragments written in German (ed. Sudhoff, III, pp. 295ff.). These may be Paracelsus’s drafts for a German version. The date of composition of the *Vita longa* is perhaps 1526. No original MSS. of Paracelsus have been preserved (ibid., pp. xxxiiff.).

⁴ The following discussion makes no attempt to evaluate the treatise as a whole, for which reason I have not considered the *De vita libri tres* of Marsilio Ficino an important contribution in this respect.

⁵ The word *aestphara* in the Latin may be of Arabic origin. Dorn translates it as *corruptio*. Another possible derivation is $\phi\acute{\alpha}\rho\omega$, ‘to render invisible,’ ‘to kill,’ and $\alpha\lambda\sigma\acute{\tau}\acute{o}\omega$, ‘to cleave,’ ‘to dismember.’ Corruption or putrefaction involves decomposition and hence the disappearance of the previous form. “Nihil mehercle vita est aliud, nisi Mummia quaedam Balsamita, conservans mortale corpus a mortalibus vermibus et aestphara, cum impressa liquoris sallium commistura.”

⁶ Ruland, *A Lexicon of Alchemy*, p. 69 (s.v. *Balsamum s. Balsamus*): “It is the liquor of an interior salt most carefully and naturally preserving its body from corruption. . . . In German the term [is] Baldzamen [‘soon together’], i.e., quickly joined [*celeriter coniunctum*: hence a means of promoting the coniunctio, see infra]. External Balsam of the Elements is liquor of external Mercury . . . the firmamental essence of existences, the Quintessence.” Hence *B. internus* is a *liquor Mercurii interni*.

⁷ *Cheyri* is the yellow wallflower [*Cheiranthus cheiri*, incorrectly given as] *Viola petraea lutea* [mountain pansy] in the *Herbal* of Tabernaemontanus; it is abortifacient and restorative. The plant bears four-petalled yellow blossoms. Galen (*De simplicium medicamentorum facultatibus*, Lib. VII) says it has a carminative and warming effect. In Ruland (*Lexicon*, p. 98), *Cheyri Paracelsicum*, as applied to minerals, is quicksilver; *Flos cheiri* is the white elixir of silver, also the essence of gold. “Others say it is potable gold,” hence it is an arcanum subserving the philosophical aim of alchemy. Paracelsus himself alludes to its fourfold nature: “. . . and the Spagyric makes a temperate being out of the four [elements], as the flower Cheiri shows.” “Fragmenta medica,” ed. Sudhoff, III, p. 301.

⁸ “Quod per universam quatuor elementorum anatomiam perdurare in sua conservatione debet” (Lib. IV, ch. I). In the German fragments to the *Vita longa* Paracelsus says: “For Cheiri is more than Venus, Anthos more than Mars.”

⁹ Probably by a process of extraction.

¹⁰ [The following passage is a slight condensation of a note entitled “The Concept of Mercurius in Hermetic Philosophy,” dated Einsiedeln, Oct. 11, 1942, discovered among Jung’s posthumous papers:

“This concept—if one can call it such—not only has a wealth of meanings but appears in variant form as Iliastrum, Iliastes, Iliadus, Yleides, Yleidus, etc. Such an intensification of Paracelsus’s etymological proclivities indicates that a special importance attaches to an idea so variously named. Sometimes the Iliaster is the *principium*, the *prima materia*, the *chaos*, the *prima compositio*, consisting of the three basic substances, Mercurius, sulphur, and salt; sometimes it is the *aer elementalis* or *coelum*, ‘the true spirit in man, which pervades all his limbs’; sometimes the ‘occult virtue of nature, by which all thing[s] increase, are nourished, multiply, and quicken,’ as Ruland, a pupil

of Paracelsus, defines it (*Lexicon*, p. 181); sometimes the *spiritus vitae*, which is none other than *vis Mercurii*. It is thus identical with the Mercurial spirit, which was the central concept of alchemy from the oldest times to its heyday in the seventeenth century. Like the *Mercurius philosophorum*, the Paracelsan Mercurius is a child of Sol and Luna, born with the help of sulphur and salt, the ‘strange son of chaos,’ as Goethe calls Mephistopheles. Paracelsus names it ‘omne fumosum et humidum in quovis corpore,’ the moist, breathlike or vaporous soul dwelling in all bodies. In its highest form the Iliaster signifies the passage of the mind or soul into another world, as took place with Enoch, Elias, and others. (Ruland, *Lexicon*, p. 181. Cf. Ezek. 1 : 13 and Luke 10 : 18.) Not only is it the life-giver, it is the psychopomp in the mystic transformation, leading the way to incorruptibility or immortality. The ‘seed of the Iliastic soul’ is the spirit of God himself, and on it is imprinted ‘God’s likeness.’”—EDITORS.]

¹¹ *Sanctitus* from *sancire*, ‘to make unalterable or inviolable’; *sanctitus* = *affirmatus*, ‘made firm.’ Ruland (*Lexicon*, p. 181): “The first, or implanted [Iliaster] is the span of life.”

¹² Probably derived from *παραιτέομαι*, ‘to obtain by prayer,’ ‘to entreat.’ Ruland: “The second Iliaster, prepared Iliaster.”

¹³ The product of Sol and Luna was represented as a hermaphrodite.

¹⁴ *De vita longa*, Lib. IV, cap. IV: “Eius ultra mille sunt species . . . potius iuxta hoc, ut quilibet microcosmus peculiarem suam, atque adeo perfectam coniunctionem habeat, quilibet, inquam, utrinque perfectam suam ac propriam virtutem” (There are more than a thousand species thereof . . . so that each microcosm may have its own special and even perfect conjunction, each, I say, its own perfect and peculiar virtue).

¹⁵ Lib. IV, cap. VI: “Quod maxime necessarium est in hoc processu erga iliastrium, describamus: Principio ut impurum animatum depuretur citra separationem elementorum, quod fit per tuam ipsius imaginationem, cum ea in animi tui confirmamento consistit, praeter omnem corporalem ac mechanicum laborem.”

¹⁶ Cf. Gen. 5: 23-24: “And all the days of Enoch were three hundred sixty and five years. And Enoch walked with God: and he was not; for God took him.” According to the chronologist Scaliger (*Animadversiones in chronologia Eusebii*) Enoch was responsible for the division of the year. Enoch was also considered a prefiguration of Christ, like Melchisedek. Cf. Pico della Mirandola (“De arte cabalistica,” *Opera omnia*, I, p. 3020): “Denuo Simon ait, pater noster Adam, rursus ex Seth nepotem suscepit, memor eius Cabalae, quam sibi Raziel tradiderat, quod ex sua propagatione nasceretur homo futurus salvator. Quare vocatus est Enos, id est, homo.” (Again Simon says that our father Adam received another grandchild from Seth, having in mind that Cabala which Raziel had handed down to him, that of his seed should be born a man who would be a saviour. Wherefore he was called Enos, that is, Man.)

¹⁷ Lib. IV, ch. VI: “Quare microcosmum in sua interiore anatomia reverberari oportet in supremam usque reverberationem” (Wherefore the microcosm in its interior anatomy must be reverberated up to the highest reverberation). This takes place in the *reverberatorium*, a calcining furnace. “Reverberation is ignition, reducing substances under the influence of a potent fire, and by means of reverberation and repercussion, into a fine calx” (Ruland, p. 276).

¹⁸ The “Tractatus aureus” says (ch. IV): “Burn up the body of the air with very much fire, and it will imbue you with the grace you seek” (*Ars chemica*, p. 24).

¹⁹ Arcs is sometimes masculine, too.

²⁰ From *aqua* and *astrum* = ‘water star.’

- ³⁸ Ruland, *Lexicon*, p. 38.
- ³⁹ Arcs = Mars. The reference to the wolf supports this interpretation, for the wolf is the animal of Mars. Johannes Braceschus of Brixen, a contemporary of Paracelsus, states in his “Lignum vitae” (*Bibl. chem.*, I, pp. 911ff.) that the principle of the life-prolonging medicine is Mars, to which he refers the saying of Rhazes: “Accipe petram post ingressum Solis in arietem” (Take the stone after the sun’s entry into Aries). Braceschus continues: “This thing [Mars] is a man whose complexion is choleric. . . . This hot and bilious man is iron . . . it is called a man because it has soul, body, and spirit. . . . That metal, although it is begotten by the virtue of all the stars and planets, is nevertheless especially begotten in the earth by virtue of the most high and mighty Pole Star called the Great Bear.” Mars is also called the Daemogorgon, “ancestor of all the gods of the Gentiles.” “Surrounded on all sides by thick clouds and darkness, he walks in the midmost bowels of the earth, and is there hidden . . . not begotten of any, but eternal and the father of all things.” He is a “shapeless chimaera.” Daemogorgon is explained as the “god of the earth, or a terrible god, and iron.” (For Paracelsus, as we saw, the body purified by the fire was associated with iron, in so far as the residue was “without rust.”) “The ancients attributed to him eternity and chaos for companions: eternity and the prepared quicksilver, which is . . . the eternal liquor.” He is the serpent, the *aqua mercurialis*. “The first son of Daemogorgon was Litigius, that is, the sulphur which is called Mars.” “Chaos is that earthly salt called Saturn; for it is matter and in it everything is without form.” All living and dead things are contained in it, or proceed from it. Daemogorgon, or Mars, thus corresponds to the Ares of Paracelsus. Pernety (*Dictionnaire mytho-hermétique*) defines

“Daimorgon” as the “genius of the earth,” “the fire which quickens nature, and in particular that innate and life-giving spirit of the earth of the sages, which acts throughout the whole course of the operations of the great work.” Pernety also mentions “Demorgon” and a treatise of the same name by Raymund Lully. This treatise is not mentioned in Ferguson’s *Bibliotheca chemica* (1906), but it might be a reference to the “Lignum vitae” of Braceschus, which is a dialogue between Lully and a pupil. Roscher (*Lexicon*, I, col. 987) defines Demogorgon as “an enigmatic god. Might be derived from δημιουργός.” Astrologically. Mars characterizes the instinctual and affective nature of man. The subjugation and transformation of this nature seems to be the theme of the alchemical opus. It is worth noting that Colonna’s *Hypnerotomachia* begins with the wolf as the initiating animal; he also has this significance in Canto I of Dante’s *Inferno*, where he appears in a triad of animals. This lower triad corresponds to the upper Trinity; therefore we meet it again as the tricephalous Satan in Canto XXXIV.

⁵² As in Reusner’s *Pandora* (1588), Codex Germanicus Alchemicus Vadiensis (St. Gall, 16th cent.), and Codex Rhenoviensis (Zurich, 15th cent). [Cf. Figs. B 3-5.]

[The following (undated) note on *Pandora* was found among Jung’s posthumous papers:

“*Pandora* is one of the earliest synoptic accounts of alchemy, and it may be the first that was written in German. It was first published by Henric Petri in Basel, 1588. It is apparent from the foreword that the author was the physician Hieronymus Reusner, who, however, hides under the pseudonym Franciscus Epimetheus, by whom the book was allegedly ‘made.’ Reusner dedicates it to Dr. Ruland, the well-known compiler of the *Lexicon alchemiae sive Dictionarium alchemisticum* (Frankfurt a. M., 1612). The text of *Pandora* is a compilation in the manner of the *Rosarium philosophorum* (1550), which is copiously cited. But other sources are used besides this, for instance the ‘Tractatus aureus Hermetis.’ Reusner was a pupil of Paracelsus. His book, being written in German, is a contribution to the Germanization of medicine that was started by Paracelsus, and, as the foreword shows, to Paracelsus’s revival of the spiritual trends of alchemy. The actual text remains uninfluenced by these innovations and runs along the traditional lines. It contains nothing that is not found in the earlier authors, though the long list of synonyms at the end deserves special mention. This contains a number of Arabic and quasi-Arabic terms which, it appears, multiplied greatly during the 16th century. But the chief value of *Pandora* lies in the series of eighteen symbolical pictures at

the end of the volume. As usual, they do not explain the text, or only very indirectly, but they are of considerable interest as regards the secret content of alchemy. Some of the pictures date from the 15th century and are taken from the *Dreifaltigkeitsbuch* (Codex Germanicus 598, 1420, Staatsbibliothek, Munich), but most are from the 16th century. The chief source is probably the ‘Alchymistisches Manuscript’ in the Universitätsbibliothek, Basel. One of the pictures (the Echidna symbol of Mercurius) may come from a 16th-century MS. in St. Gall.”—EDITORS.]

⁵³ See *Psychology and Alchemy*, Figs. 224 and 232.

⁵⁴ *Symbola aureae mensae*, p. 380.

⁵⁵ Psalm 129 : 1 (DV): “Out of the depth I have cried to thee, O Lord.”

⁵⁶ Psalm 29: 10 (AV): “The Lord sitteth upon the flood: yea, the Lord sitteth King for ever.”

⁵⁷ Psalm 28 : 3 (DV): “The voice of the Lord is upon the waters; the God of majesty hath thundered; the Lord is upon many waters.”

⁵⁸ *In the sense of θεός ἄνθρωπος.*

⁵⁹ τῆν μονογενῆ μου. This feminine “only-begotten” seems to refer to a daughter, or to the soul, as Psalm 34: 17 (DV) affirms: “Rescue thou my soul from their malice: my only one from the lions.”

⁶⁰ Psalm 21 : 22 (DV): “Save me from the lion’s mouth. . . .”

⁶¹ Hippolytus, *Elenchos*, V, 8. The extreme lowliness of the redeemer’s origin is expressed even more strongly in alchemy: the stone is “cast on the dunghill,” “found in filth,” etc. The “Tractatus Aristotelis” says (*Theatr. chem.*, V, 1660, p. 787): “Lapidem animale esse, qui tanquam serpens ex corruptione perfectissimae naturae humanae de industria inter duos montes emissus gignitur, scinditur et prolabitur, et in fossa cavernae clauditur” (The living stone which is industriously brought forth as a serpent between the two mountains from the corruption of the most perfect human nature, is torn away and slips forth, and is shut up in a hollow cave). σκώληξ in conjunction with ἔξουδένημα, ‘outcast.’ might therefore be interpreted as an intestinal worm.

⁶² From ἀνθεμόνιον, the efflorescence of metallic salts. Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 40.

⁶³ *Panarium* (ed. Holl), Haer. 36, cap. 4 (II, pp. 47ff).

⁶⁴ *Art. aurif.*, II, p. 329, quotation from Lilius. Cf. The vision of the “man coming up from the midst of the sea” (II Esdras 13 : 25 and 51).

⁶⁵ *Rosarium philosophorum (De alchimia, 1550)*, fol. L3^v.

⁶⁶ *Ars chemica*, p. 21. The “Tractatus aureus” is of Arabic origin, but its content dates back to much older sources. It may have been transmitted by the Harranite school.

⁶⁷ *Bellator ignis* is ambiguous. *Chermes* = arab. *kermes* = ‘purple,’ L. *carmesinus* = Ital. *chermisi*, whence F. *cramoisi*, E. carmine, crimson. Cf. Du Cange, *Glossarium*, s.v. “carmesinus.”

⁶⁸ Rupescissa, *La Vertu et propriété de la quinte essence de toutes choses*, p. 26.

⁶⁹ *De circulo physico quadrato*, pp. 27ff.

⁷⁰ Berthelot, *Alch. grecs*, VI, i, 2.

⁷¹ Ed. von Franz, p. 125.

⁷² *Rosarium novum olympicum*, Pars. I, p. 71. Enoch is the “son of man” (Book of Enoch, in Charles, *Apocrypha and Pseudepigrapha*, II, p. 237).

⁷³ “Nam ut ipsa [Divinitas] incomprehensibilis, invisibilis, non mensurabilis, infinita, indeterminata, et siquid ultra dici potest, omnia similiter in centro quadrare convenireque certum est. Hoc enim quia locum nullum occupat ob quantitatis carentiam, comprehendi non potest, videri nec mensurari. Tum etiam cum ea de causa infinitum sit, et absque terminis, locum non occupat, nec depingi potest, vel imitatione fingi, Nihilominus omnia quae locum etiam non implent ob carentiam corpulentiae, ut sunt spiritus omnes, centro comprehendi possunt, quod utraque sint incomprehensibilia.” (For it is certain that it [the Divinity] is incomprehensible, invisible, immeasurable, infinite, indeterminable, and if aught more may be said, that it squares and brings all things together in a centre. For this, because it occupies no space, since it lacks quantity, cannot be comprehended, seen, or measured. Also because for that reason it is infinite and has no bounds, it occupies no space, nor can it be depicted, nor can any likeness of it be made. Nevertheless all things which likewise fill no place because they lack body, as is the case with all spirits, can be comprehended in the centre, for both are incomprehensible. As therefore there is no end of the centre, no pen can rightly describe its power and the infinite abyss of its mysteries.) (“Physica genesis,” *Theatr. chem.*, I, 1659, pp. 339f.)

⁷⁴ *Ibid.*, p. 349. In “Physica Trismegisti” (*ibid.*, p. 375) Dorn says: “[Sol] primus post Deum pater ac parens omnium vocatus est, cum in eo quorumvis seminaria virtus atque formalis delitescit.” (The Sun is called after God the father and parent of all things, since in him lies hidden the seminal and formal virtue of everything whatever.) P. 376: “Lunam esse matrem et uxorem solis, quae foetum spagiricum a sole conceptum in sua matrice uteroque, vento gestat in aere.” (The moon is the mother and wife of the sun, who bears in her aerial womb the spagyric foetus conceived from the sun.) From this it is evident that the *filius* is begotten of nature gods in a very unchristian manner.

⁷⁵ *Ibid.*, p. 363.

⁷⁶ “Physica Trithemii,” *Theatr. chem.*, I (1659), p. 391

⁷⁷ The sun is the birthplace of the “spiritual fire,” mentioned above. Light-symbols always refer psychologically to consciousness or to a content that is becoming conscious.

⁷⁸ The *aqua pura* is the *aqua permanens* of the Latin and Arabic alchemists and the ὕδωρ θεῖον of the Greeks. It is the *spiritus mercurialis* in water form, which in turn serves to extract the “soul” of the substance. The *spiritus mercurialis* corresponds to the spiritual fire, hence *aqua* = *ignis*. Although these terms are used indiscriminately, they are not the same, since fire is active, spiritual, emotional, close to consciousness, whereas water is passive, material, cool, and of the nature of the unconscious. Both are necessary to the alchemical process since this is concerned with the union of opposites. Cf. *Psychology and Alchemy*, Fig. 4.

⁷⁹ Khunrath (*Von hylealischen Chaos*, p. 203) says that the *ternarius*, purified “by the Circumrotation or Circular Philosophical revolving of the Quaternarius . . . is brought back to the highest and most pure Simplicity . . . of the plusquamperfect Catholic Monad. . . . The impure, crude One becomes an exceeding pure and subtle One, through the manifestation of the occult and the occultation of the manifest.”

⁸⁰ “Physica Trithemii,” p. 391.

⁸¹ Dorn, “Duellum animi cum corpore,” *Theatr. chem.*, I (1659), p. 482. This number symbolism refers to the axiom of Maria: “One becomes Two, Two becomes Three, and out of the Third comes One as the Fourth” (Berthelot, *Alch. greccs*, VI, v, 6). This axiom runs through the whole of alchemy, and is not unconnected with Christian speculations

regarding the Trinity. Cf. my “Psychology and Religion,” p. 60, and “A Psychological Approach to the Dogma of the Trinity,” pp. 164ff.

⁸² Steeb, *Coelum Sephiroticum*, p. 19.

⁸³ *Ibid.*, p. 38.

⁸⁴ p. 42.

⁸⁵ p. 117.

⁸⁶ Ed. Ruska, p. 94. Cf. Codex Berolinensis 532, fol. 154^v: “... the sun-point, that is the germ of the egg, which is in the yolk.”

⁸⁷ *Ars chemica*. The “Consilium coniugii” may date from the 13th cent.

⁸⁸ *Phil. ref.*, p. 131.

⁸⁹ There is only *one* flash of lightning, which changes the darkness of Saturn into the brightness of Jupiter. Ruland (*Lexicon*, p. 153) states: “Metallic fulmination is, with the higher metals, a process of purging. . . . Fulmination is a metallic gradation, with excoction, educing the pure part, the perfection thereof being indicated by an irradiating splendour.”

⁹⁰ The colours refer to the *cauda pavonis*, which appears just before the completion of the opus.

⁹¹ Cf. *infra*, pars. 201f.

⁹² “For from mortal man can nothing be called forth which produces longevity, for longevity is outside the body.” “Fragmenta medica,” ed. Sudhoff, III, p. 291.

⁹³ *Theraniabin* is a favourite arcanum of Paracelsus. It is *pinguedo mannae* (the fat or oil of manna), popularly known as honeydew—a sticky, resinous coating on leaves, with a sweetish taste. This honey, Paracelsus says, falls from the air. Being a heavenly food, it assists sublimation. He also calls it “maydew.” [For a possible connection between ergot-based honeydew and Coleridge’s image in “Kubla Khan,” see Todd, “Coleridge and Paracelsus, Honeydew and LSD.”—EDITORS.]

⁹⁴ *Nostoch* is not, as Bodenstein supposes, a species of fire, but a gelatinous alga that appears after continuous rain. These algae are still known as Nostocs in modern botany. It was earlier supposed that Nostocs fell from the air, or from the stars. (They are also called star jelly and witches’-butter.) Ruland (*Lexicon*, p. 240) defines it as “a ray or radiation of a certain star, or its offscouring, superfluity, etc. cast on earth.” Hence, like *theraniabin*, it is a sublimating arcanum, because it comes from heaven.

⁹⁵ Tabernaemontanus. *Herbal*, s.v. “Melissa.”

⁹⁶ For this reason the coniunctio is depicted as the embrace of two winged beings, as in the *Rosarium*. Cf. *Psychology and Alchemy*, Fig. 268.

⁹⁷ The text is assigned to the 1st cent. A.D. Berthelot, *Alch. grecs*, IV, xx, 8.

⁹⁸ An already legendary (Persian) alchemist of perhaps the 4th cent. B.C.

⁹⁹ I insert in Berthelot’s text the reading of MS. Paris 2250 (καὶ κατώτατον ὥστε), which makes better sense.

¹⁰⁰ The *cauda pavonis* of the Latin alchemists.

¹⁰¹ The nominative plural corresponding to *aniadorum* is presumably *aniada* rather than *aniadi*.

¹⁰² *Lexicon*, p. 30.

¹⁰³ A derivation that would come closest in meaning to the term *Aniadus* would be from ἄνύειν, “to perfect, complete.” The form *Anyadei*, defined by Ruland (*Lexicon*, p. 32) as “eternal spring, the new world, the Paradise to come,” argues in favour of this.

¹⁰⁴ Taurus, the zodiacal sign of May, is the House of Venus. In the Greek-Egyptian zodiac the bull carries the sun-disk, which rests in the sickle moon (the ship of Venus), an image of the coniunctio. (Cf. Budge, *Amulets and Superstitions*, p. 410.) The Taurus sign is composed of the sun-disk with the moon’s horns: ☉. Cf. the alchemical parallel in Dee, “Monas hieroglyphica,” *Theatr. chem.*, II (1659), pp. 200ff.

¹⁰⁵ I have given a literal translation of “nitetque ac splendet flammulae color.” But since Paracelsus was familiar with Agrippa’s *De occulta philosophia*, he may have been referring to, or quoting, a passage from this work. In Book I, ch. XXVII, we read of trees and plants that “are armed with sharp thorns, or burn, prick, or cut the skin by their contact, such as the thistle, nettle, and little flame (*flammula*).” Here *flammula* is the name for various kinds of crowfoot (*ranunculus*), which was used as a corrosive and vesicant and is mentioned as such in Dioscorides (*Medica materia*, p. 295).

¹⁰⁶ Picinellus, *Mundus symbolicus*, s.v. “urtica.”

¹⁰⁷ Anachmus is mentioned along with the Scaiolae; see *infra*, par. 207.

¹⁰⁸ Pomander = *pomambra* = *pomum ambrae*. *Ambra* is a bezoar of the pot-fish or sperm-whale, prized on account of its perfume (ambergris). These and other aromatics were used as “plague balls” to drive away the fetid vapours of sick rooms. *Muscus* is mentioned as an aromatic in Dioscorides (*Medica materia*, p. 42). In Agrippa (*Occult. phil.*, I, p. xxxiv) the aromatics subordinated to Venus include “ladanum, ambra muscus.” In our text “muscus in pomambra” is immediately followed by “laudanum.” According to Dioscorides (*Med. mat.*, p. 106), *ladanum* is the juice of an exotic plant whose leaves “acquire in the spring a certain fattiness . . . out of which is made what is called ladanum.” Tabernaemontanus says this juice is aromatic.

¹⁰⁹ *Laudanum* is the arcane remedy of Paracelsus. It has nothing to do with opium, though it may be derived from the above-mentioned *ladanum*. Adam von Bodenstein (*De vita longa*, p. 98) mentions two *laudanum* recipes of Paracelsus.

- ¹ Confirmation of this may be found in the work of the alchemist and mystic John Pordage (1607–1681), “Ein Philosophisches Send-Schreiben vom Stein der Weissheit,” printed in Roth-Scholtz, *Deutsches Theatrum chemicum*, I, pp. 557-596. For text, see my “Psychology of the Transference,” pars. 507ff.

- ¹⁰ “Nihil enim aliud mors est, nisi dissolutio quaedam, quae ubi accidit, tum demum moritur corpus. . . . Huic corpori Deus adiunxit aliud quoddam, puta coeleste, id quod in corpore vitae existit. Hoc opus, hic labor est, ne in dissolutionem, quae mortalium est et huic soli adiuncta, erumpat.” (For death is nothing but a kind of dissolution which takes place when the body dies. . . . To this body God has added a certain other thing of a heavenly nature, that of the life which exists in the body. This is the task, this the toil: that it burst not forth at the dissolution which is the lot of mortals, but is joined to this [body] alone.) “Fragmenta,” ed. Sudhoff, III, p. 292.
- ¹¹ “Sequuntur ergo qui vitam aeream vixerunt, quorum alii a 600 annis ad 1000 et 1 too annum pervenerunt, id quod iuxta praescriptum magnalium quae facile deprehenduntur, ad hunc modum accipe: Compara aniadum, idque per solum aera, cuius vis tanta est, ut nihil cum illo commune habeat terminus vitae. Porro si abest iam dictus aer, erumpit extrinsecus id, quod in capsula delitescit. Jam si idem ab illo, quod denuo renovatur fuerit refertum, ac denuo in medium perlatum, scilicet extra id sub quo prius delitescibat, imo adhuc delitescit, iam ut res tranquilla prorsus non audiat a re corporali, et ut solum aniadum adech, denique et edochinum resonet.” Lib. V, cap. III.

Dorn (*De vita longa*, p. 167) comments on this passage as follows:

a) The *imitation of Aniadus* is effected under the influence of “imaginationis, aestimationis vel phantasiae,” which is equivalent to “air” = spirit. By this is obviously meant the kind of active imagination that takes place in yoga or in the spiritual exercises of Ignatius Loyola, who employs the terms *consideratio*, *contemplatio*, *meditatio*, *ponderatio*, and *imaginatio per sensus* for the “realization” of the imagined content. (Cf. *The Spiritual Exercises of St. Ignatius Loyola*, trans. Rickaby, in particular pp. 40ff., the meditation on Hell.) The realization of Aniadus has about the same purpose as the contemplation of the life of Jesus in these exercises, with the difference that in the former case it is the unknown Primordial Man who is assimilated through individual experience, whereas in the later it is the known, historical personality of the Son of Man.

b) The *lack of air* is explained by Dorn as due to the fact that it was “exhausted” by the efforts required for the realization.

c) That which *bursts forth from the heart* is evil, which dwells in the heart. Dorn continues: “Indeed it is constrained under the vehicle under which it still lies hid.” His conjecture of evil and constraint is not supported by the text. On the contrary, Dorn overlooks the preceding *depuratio* as a result of which the operation takes place in an already purified (“calcined”) body. The *reverberatio* and the subsequent subliming processes have already removed the denser elements, including the *nigredo* and evil.

d) As a result of his conjecture Dorn is obliged to read “intranquilla” for “tranquilla.”

e) Dorn here defines Adech as the “imaginary inner man” and Edochinum as Enochdianum.

¹² “Lapidis philosophorum nomina,” MS. 2263-64, Ste. Geneviève, Paris, vol. II, fol. 129, and Pernety, *Fables égyptiennes et grecques*, I, pp. 136ff.

¹³ “Psychology and Religion,” p. 60.

¹⁴ Cf. “A Psychological Approach to the Dogma of the Trinity,” pp. 164ff.

¹⁵ Lib. V, cap. V. Jesahach is not a known Hebrew word.

¹⁶ Concerning the logical aspect of this arrangement see Schopenhauer, “On the Fourfold Root of the Principle of Sufficient Reason.”

¹⁷ Even at that time *phantasia* meant a subjective figment of the mind without objective validity.

^{18, 19} See p. 168.

¹⁸ An image-making, form-giving, creative activity of the mind. For Paracelsus it was the *corpus astrale*, or the creative power of the astral man.

¹⁹ By this is meant “philosophical” thinking.

²⁰ Ruland was a Protestant.

²¹ “Whereby we attain not merely prolonged but eternal life,” adds Ruland. Dorn (*De vita longa*, pp. 176f.) agrees with Ruland’s psychological interpretation.

²² [Sudhoff, XIV, p. 644. This could be translated either as “Ye pious sons, Scaiolae and Anachmi” (nom. pl.) or as “Ye pious sons of Scaiola (gen. fem. sing.) and Anachmus” (gen. masc. sing.). Scaiolae must be fem. and therefore can hardly be in apposition to “filii.” The quotation has been located and checked, and begins: “Now mark well in this my philosophy: I have written a special treatise on the nymphis, pygmaeis, silvestribus, gnomis for the love and delectation of the true Scaiolis (*den waren Scaiolis zuliebe und gefallen*). Therefore, ye pious filii Scaiolae et Anachmi . . .” This may be Jung’s source for the statement that the “Scaioli are lovers of wisdom.” (If Scaiolis is taken as masc. in this context, the nom. sing. would be Scaiolus and the nom. pl. Scaioli.) Cf. *Psychology and Alchemy*, par. 422, n. 50: “Scayolus . . . means the adept.” Neither Scaiolus nor Scaioli can be traced from the *Registerband* to the Sudhoff edn., compiled by Martin Müller (Einsiedeln, 1960).—TRANSLATOR.]

²³ For this reason it is said that the lapis or *filius* contains the four elements or is their quintessence, which can be extracted from them, like Aniadus.

²⁴ “In quo me plurimum offendunt Scaiolae” (Dorn, p. 174).

²⁵ *Ibid.*, p. 177.

²⁶ The following passages from Pico della Mirandola (*Opera omnia*, I, p. 3018), on the Cabalistic interpretation of Adam, may have been known to Paracelsus: “Dixit namque Deus: Ecce Adam sicut unus ex nobis, non ex vobis inquit, sed unus ex nobis. Nam in vobis angelis, numerus est et alteritas. In nobis, id est, Deo, unitas infinita, aeterna, simplicissima et absolutissima. . . . Hinc sane coniiicimus alterum quendam esse Adam coelestem, angelis in coelo demonstratum, unum ex Deo, quem verbo fecerat, et alterum esse Adam terrenum. . . . Iste, unus est cum Deo, hic non modo alter est, verumetiam alius et aliud a Deo. . . . Quod Onkelus . . . sic interpretatur. . . . Ecce Adam fuit unigenitus meus.” (And God said, Lo, Adam is as one of us—he said not “of you,” but “of us.” For in you angels there is number and difference; but in us, that is, in God, there is unity, infinite, eternal, simple, and absolute. . . . Hence we clearly conjecture that there is a certain other heavenly Adam, shown to the angels in heaven, the one from God, whom he made by his word, and the other, earthly Adam. . . . The former is one with God, the latter not only second, but other and separate from God. . . . Which Onkelos thus interprets: Lo, Adam was my only begotten son.)

²⁷ See next note and par. 214.

²⁸ “Porro si pro ratione Necroliorum Scaiolis insereret, esset quod excipiendum ducerem, id quod maximus ille Adech antevertit et propositum nostrum, at non modum deducit: Quod vobis Theoricis discutiendum relinquo” (*De vita longa*, ed. Dorn, pp. 174f). *Necrolii* are the adepts (“Liber Azoth,” p. 524). *Necrolia* or *necrolica* means “medicine conserving life” (*De vita longa*, p. 173).

²⁹ The Monogenes (*filius unigenitus*) is identical with the city, and his limbs with its gates. Cf. Baynes, *A Coptic Gnostic Treatise*, pp. 58 and 89; also *Psychology and Alchemy*, pars. 138f.

¹ From *super* = ‘above,’ and *monere* = ‘inspire,’ hence ‘inspired from above.’

² Not found anywhere else. May be interpreted as the “time of perfection.”

³ A favourite saying of the alchemists, applied to the lapis.

¹ See above.

^{2, 3} See above.

⁴ For a parallel, cf. Enoch 40 : 2, where God has four faces and is surrounded by the four angels of the Face.

¹¹ Fl. 1st cent. A.D.

¹² *Chronographia*, ed. Frick, p. 67.

¹³ Cf. my “Archetypes of the Collective Unconscious” and “Concerning the Archetypes, with Special Reference to the Anima Concept.”

¹⁴ “And so this spirit is extracted and separated from the other spirit, and then the Spagyric has the wine of health.” (“Fragmenta,” ed. Sudhoff, III, p. 305.)

¹⁵ The apparent contradiction between the rejection of the *gesta Melosines* and the assimilation of the anima is due to the fact that the *gesta* occur in a state of anima possession, for which reason they must be prevented. The anima is thereby forced into the inner world, where she functions as the medium between the ego and the unconscious, as does the persona between the ego and the environment.

¹⁶ This recalls the “signs and characters of the planets” in Agrippa, which are imprinted on man at birth as on everything else. But man has, conversely, the faculty of re-approximating himself to the stars: “Potest enim animus noster per imaginationem vel rationem quandam imitatione, ita alicui stellae conformari, ut subito cuiusdam stellae muneribus impleatur. . . . Debemus igitur in quovis opere et rerum applicatione vehementer affectare, imaginari, sperare firmissimeque credere, id enim plurimum erit adiumento . . . animum humanum quando per suas passiones et effectus ad opus aliquod attentissimus fuerit, coniungi ipsum cum stellarum animis, etiam cum intelligentiis: et ita quoque coniunctum causam esse ut mirabilis quaedam virtus operibus ac rebus nostris infundatur, cum quia est in eo rerum omnium apprehensio et potestas, tum quia omnes res habent naturalem obedientiam ad ipsum, et de necessitate efficaciam et movent ad id quod desiderat nimis forti desiderio. Et secundum hoc verificatur artificium characterum, imaginum, incantationum et sermonum, etc. . . . Animus enim noster quando fertur in aliquem magnum excessum alicuius passionis vel virtutis, arripit saepissime ex se ipso horam vel opportunitatem fortiorem, etc. . . . hie est modus per quem invenitur efficacia [operationum].” (For through a certain mental faculty our spirit can thus by imitation be made like to some star, so that it is suddenly filled with the functions of a star. . . . We ought therefore in every work and application of things eagerly to aspire, imagine, hope, and most firmly believe, for that will be a very great help. . . . [*De occult, phil.*, Lib. I, cap. 66.] The human spirit, when through its passions and operations it is highly intent upon any work, should join itself with the spirits of the stars, yea, with their intelligences; and when thus conjoined, be the cause that a certain wonderful virtue is infused into our works and affairs, both because there is in it a grasping of and power over all things, and because all things have a natural and necessarily efficacious obedience to it, and move towards what it desires with an extremely strong desire. And according to this is verified the work of the characters, images, incantations, and words, etc. . . . For when our spirit is moved to any great excess of any passion or virtue, it very often snatches for itself a more effective hour or opportunity, etc. . . . This is the way by which the efficacy [of the operations] is found.) (Lib. I, cap. 67.)

¹⁷ Trans. Foxcroft, pp. 126ff.

¹⁸ The lower triad, corresponding to the upper Trinity, and consisting of the theriomorphic symbols of the three evangelists. The angel as the fourth symbol occupies a special position, which in the Trinity is assigned to the devil. Reversal of moral values: what is evil above is good below, and vice versa.

¹⁹ In the *Golden Ass* of Apuleius the process of redemption begins at the moment when the hero, who has been changed into an ass because of his dissolute life, succeeds in snatching a bunch of roses from the hand of the priest of Isis, and eating them. Roses are the flowers of Venus. The hero is then initiated into the mysteries of Isis, who, as a mother goddess, corresponds to the Mater Gloriosa in *Faust II*. It is of interest to note the analogies between the prayer to the Mater Gloriosa at the end of *Faust* and the prayer to Isis at the end of the *Golden Ass*:

(*Faust II*, trans. Wayne, p. 288)

O contrite hearts, seek with your eyes
The visage of salvation;

Blissful in that gaze, arise
Through glad regeneration.

Now may every pulse of good
Seek to serve before thy face;

Virgin, Queen of Motherhood,
Keep us, Goddess, in thy grace.

(*Golden Ass*)

You are indeed the holy preserver of humankind,
Offering amid the evil chances of the unfortunate the kindly
protection of a mother,
And no smallest moment that passes is devoid of your favours,
But both by land and by sea you care for men, driving off life's
storms and stretching out to them your saving hand; wherewith
you unravel the most tangled webs of fate, and calm the temp
of fortune, and control the varied wanderings of the stars.

Wherefore, poor though I am, I will do what I may as a devotee.

To keep ever hidden in my heart the vision of your divine face at
most holy godhead.

²⁰ Horace, *Epist.* I. x. 24.

²¹ *Musaeum hermeticum*, pp. 73ff. [This sentence has been altered in accordance with the correction given in *Psychology and Alchemy*, 2nd edn., par. 431, n. 11.—TRANSLATOR.]

²² “For before the sapphire existed, there was no arcanum” (*Paragranum*, p. 77). *De vita longa*, ed. Dorn, p. 72: “They are to be referred to the cheyri and the sapphirine flower, i.e., to those two precious stones of the philosophers.” Bodenstein (*Onomasticon*, p. 64): “The sapphirine material: that liquid in which there is no harmful matter.”

²³ *Occult. phil.*, I, cap. 28, p. xxxiv.

²⁴ Carter, *Epitheta Deorum*, s.v. “Venus.”

²⁵ *Ibid.*

²⁶ The hermaphroditic Venus was regarded as typifying the coniunctio of Sulphur and Mercurius. Cf. Pernety, *Fables égyptiennes et grecques*, II, p. 119.

²⁷ Cf. “Psychology and Religion,” p. 60.

²⁸ It could be translated as “you have mentioned not at all.”

²⁹ Lazarello, *Crater Hermetis* (1505), fol. 32^{r-v}. (As in Reitzenstein, *Poimandres*, p. 320.)

¹ I give only a general survey of the Mercurius concept in alchemy and by no means an exhaustive exposition of it. The illustrative material cited should therefore be taken only as examples and makes no claim to completeness. [For the “symposium on Hermes” see the editorial note on p. 191.—EDITORS.]

² [Author’s paraphrase. Cf. “The Spirit in the Bottle,” *Grimm’s Fairy Tales* (trans. Hunt, rev. Stern), pp. 458-62.—EDITORS.]

³ Concerning personification of trees, see Frazer, *The Magic Art*, II, ch. 9. Trees are also the dwelling places of spirits of the dead or are identical with the life of the newborn child (ibid., I, p. 184).

⁴ Cf. the title-page of *Mutus liber*, showing an angel waking the sleeper with a trumpet (“The Psychology of the Transference,” Fig. 11). Also the illustration in Michelspacher’s *Cabala, speculum artis et naturae (Psychology and Alchemy*, Fig. 93). In the foreground, before a mountain upon which is a temple of the initiates, stands a blindfolded man, while further back another man runs after a fox which is disappearing into a hole in the mountain. The “helpful animal” shows the way to the temple. The fox or hare is itself the “evasive” Mercurius as guide (ὁδηγός).

⁵ For additional material on the tree symbol, see infra, “The Philosophical Tree,” Part II.

⁶ This motif was used in the same sense by the Gnostics. Cf. Hippolytus, *Elenchos*, V, 9, 15, where the many-named and thousand-eyed “Word of God” is “hidden in the root of All.”

⁷ *Theatrum chemicum*, IV (1659), p. 500.

⁸ Ibid., p. 478: “(Christ), who is the tree of life both spiritual and bodily.”

⁹ Krueger, *Das Dogma von der Dreieinigheit und Gottmenschheit*, p. 207.

¹⁰ In the “Dicta Belini” Mercurius even says: “Out of me is made the bread from which comes the whole world, and the world is formed from my mercy, and it fails not, because it is the gift of God” (Distinctio XXVIII, in *Theatr. chem.*, V, 1660, p. 87).

¹¹ Cf. the doctrine of the *status iustitiae originalis* and *status naturae integrae*.

¹² Cf. Rev. 20 : 3: “and set a seal upon him.”

¹³ “The Fift is of Concord and of Love, / Betweene your Warkes and the Spheare above.”—Norton’s “Ordinall of Alchimy,” *Theatrum chemicum Britannicum*, ch. 6, p. 92.

¹⁴ *Dialogus miraculorum*, trans. by Scott and Bland, I, pp. 42, 236.

¹ Mercurius, in the form of Lilith or Melusina, appears in the tree in the Ripley Scrowle. To this context belongs also the hamadryad as an interpretation of the so-called “Aenigma Bononiense.” Cf. *Mysterium Coniunctionis*, pp. 68f.

² *In the Shadow of the Bush*, pp. 31f.

¹ “For he that shall end it once for certeyne, / Shall never have neede to begin againe.”—Norton’s “Ordinall of Alchimy,” *Theatr. chem. Brit.*, ch. 4, p. 48.

² Olympiodorus in Berthelot, *Alchimistes grecs*, II, iv, 43.

³ Cf. the entertaining “Dialogus Mercurii alchymistae et naturae,” in *Theatr. chem.*, IV (1659), pp. 449ff.

¹ Von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens*, pp. 352f., 512.

² Cf. Deussen, *Allgemeine Geschichte der Philosophie*, I, Part 3, pp. 336ff. This undoubtedly alchemical philosophy belongs to the fairly late (medieval) *Upa-Puranas*, more particularly to the *Maheshvarapurana*, hence to a doctrine principally concerned with Shiva. “Pāra-da” (bestowing the Other Shore) signifies quicksilver.

- ¹⁰ Khunrath, *Hyl. Chaos*, p. 59.
- ¹¹ “Septem Tract. hermet.,” *Ars chemica*, p. 22. *Rosarium*, p. 381: “I illumine the air with my light and warm the earth with my heat, I bring forth and nourish the things of nature, plants and stones, and with my power I take away the darkness of night, and cause day to endure in the world, and I lighten all lights with my light, even those in which there is no splendour nor greatness. For all these arc of my work, when I put upon me my garments; and those who seek me, let them make peace between me and my bride.” This is cited from the “Dicta Belini” (printed in Manget’s *Bibl. chem.*, I, p. 478). There are variations in the text. I have quoted the passage in full because of its psychological interest.
- ¹² “For in the Stone arc body, soul, and spirit, and yet it is one stone” (“Exercit. in Turb.,” *Art. aurif.*, I, p. 170).
- ¹³ Cf. *Psychology and Alchemy*, par. 26.

¹ Hence the designation of Mercurius as *mare nostrum*.

² Cf. Maitrayana-Brāhmana Upanishad, V, 8 (Sacred Books of the East, vol. 15, p. 311). He occurs as the *spiritus vegetativus* and collective soul in the Vedānta-Sūtras (ibid., vol. 34, p. 173, and vol. 48, p. 578).

³ The treatise of Rosinus (Zosimos) is probably of Arabic origin. “Malus” might be a corruption of “Magus.” The *Fihrist* of Ibn al-Nadīm (A.D. 987) lists, along with writings of Rimas (Zosimos), two works by Magus one of which is entitled “The Book of the Wise Magus (?) on the Art” (Ruska, *Turba*, p. 272).

⁴ *Art. aurif.*, I, p. 310.

⁵ Cf. “The Phenomenology of the Spirit in Fairytales,” pp. 231ff.

⁶ [Cf. *Psychology and Alchemy*, ch. 5, “The Lapis-Christ Parallel,” and *Aion*, ch. 5, “Christ, a Symbol of the Self.”—EDITORS.]

⁷ *The Spiritual Exercises* (trans. Rickaby), pp. 75ff.

⁸ [From *L. mephitis*, a noxious exhalation from the earth.—TRANSLATOR.]

⁹ Evidence for this is the widespread motif of the two hostile brothers.

¹⁰ Cf. the saying of Ostanēs concerning the stone that has a spirit.

¹¹ “For the knowledge of the creature, in comparison with the knowledge of the Creator, is but a twilight; and so it dawns and breaks into morning when the creature is drawn to the love and praise of the Creator. Nor is it ever darkened, save when the Creator is abandoned by the love of the creature.”—*The City of God*, XI, vii.

¹² Brihadāranyaka Upanishad, IV, 3, 6 (cf. Hume, *The Thirteen Principal Upanishads*, p. 133).

¹³ “And when it [the creature’s knowledge] comes to the knowledge of itself, that is one day” (Et hoc cum facit in cognitione sui ipsius, dies unus est).—*The City of God*, XI, vii. This may be the source for the strange designation of the lapis as “filius unius diei.” [Cf. *Mysterium Coniunctionis*, pp. 335, 504.]

¹⁴ “Since no knowledge is better than that by which man knows himself, let us examine our thoughts, words, and deeds. For what does it avail us if we are to investigate carefully and understand rightly the nature of all things, yet do not understand ourselves?”—*Liber de Spiritu et Anima*, LI (Migne, *P.L.*, vol. 40, cols. 816-17). This book is a very much later treatise falsely attributed to Augustine.

¹⁵ “Wherefore the knowledge of the creature, which is in itself evening knowledge, was in God morning knowledge; for the creature is more plainly seen in God than it is seen in itself.”—*Dialogus Quaestionum LXV*, Quaest. XXVI (Migne, *P.L.*, vol. 40, col. 741).

¹⁶ The *Liber de Spiritu et Anima* attributes very great importance to self-knowledge, as being an essential condition for union with God. “There are some who seek God through outward things, forsaking that which is in them, and in them is God. Let us therefore return to ourselves, that we may ascend to ourselves. . . . At first we ascend to ourselves from these outward and inferior things. Secondly, we ascend to the high heart. . . . In the third ascent we ascend to God” (chs. LI–LII; Migne, *P.L.*, vol. 40, col. 817). The “high heart” (*cor altum*; also “deep heart”) is the mandala divided into four, the *imago Dei*, or self. The *Liber de Spiritu et Anima* is in the mainstream of Augustinian tradition. Augustine himself says (*De vera religione LXXII*, Migne, *P.L.*, vol. 34, col. 154): “Go not outside, return into yourself; truth dwells in the inner man. And if you find that you are by nature changeable, transcend yourself. But remember that when you transcend yourself, you must transcend yourself as a reasoning soul.”

¹⁷ “Evening descends when the sun sets. Now the sun has set for man, that is to say, that light of justice which is the presence of God.”—*Enarrationes in Ps. XXIX*, II, 16 (trans. Hobgin and Corrigan, I, p. 308). These words refer to Ps. 30 : 5 (A.V.): “Weeping may tarry for the night but joy cometh in the morning.”

¹⁸ *The City of God*, XI, viii. Cf. also *Dialog. Quaest. LXV*, Quaest. XXVI,

¹⁹ *Confessions* (trans. Sheed), p. 289.

- ²⁴ P. 292, Picture 3.
- ²⁵ [From verses XXVI-XXVII; with kind permission of Editions Pierre Seghers.

“And then I came upon an outcropping of rock
From which yawned a mist-covered pit.
A dense crowd was hastening thither
From the four quarters. I mingled among them.
I noticed that we were turning in a spiral.

A vortex in the funnel sucked us in.
In the centre, a colossal catalpa
On which hung the hearts of the dead.
At each fork had chosen to settle
A little sage who winked as he saw me.

... ..

At the very bottom, where the lagoons spread out,
What quietness, at the hub of things!
Beneath the tree of my life, the last river
Surrounds an island where there rises
In the mists a cube of grey rock,
A Fortress, the Capital of the Worlds.”]

²⁶ Often represented by a snake.

²⁷ Cf. the heart-shaped leaves and flowers in Figs. 14, 15, 17.

¹ In the dream of Nebuchadnezzar the king himself is a tree. There is a very ancient, indeed primitive idea that the tree actually represents the life of a man; for instance, a tree is planted at the birth of a child, and its and the child's fates are identical. "Therefore the tree is the image and mirror of our condition" (Alciati, *Emblemata cum commentariis*, p. 888b).

² Including figures of speech.

³ It is not always easy to prove this, because the tradition is often unconscious yet is recalled cryptomnesically.

⁴ The relation is similar to that between comparative anatomy and human anatomy. with the difference that in psychology the comparative findings have a practical as well as a theoretical importance.

⁵ We can say this not only because very many well-known alchemists were physicians, but also because chemistry in those days was essentially a pharmacopeia. The object of the quest was not merely the *aurum philosophicum seu potabile*, but the *medicina catholica*, the panacea and alexipharmic.

¹ Holmberg, *Der Baum des Lebens*, p. 9.

² Berthelot, *Collection des anciens alchimistes grecs*, IV, i, 12.

³ “Secretum nobilissimum et verissimum Venerabilis Viri Domini Iodoci Greveri Presbyteri,” as reprinted in *Theatrum chemicum*, III (1659), pp. 699-722.

⁴ The text has: “Saturnus, Jupiter, etc. sunt trunci,” which might mean that there are several trunks, or that the trunk consists of the four. Evidently Michael Maier, who cites Greverus (*Symbola aureae mensae*, p. 269), was not clear about this either, for he ascribes to Greverus the view that Mercurius is the root, Saturn, Jupiter, Mars, and Venus are the trunk and branches, sun and moon the leaves and flowers of the tree. In my opinion he correctly understands the four as the classical tetrasomia (see *infra*).

⁵ “Secretum,” p. 700.

⁶ p. 720.

⁷ p. 721.

⁸ “Anatomia” and “astrologia terrestris” are specifically Paracelsan concepts. Accordingly the *terminus a quo* for the treatise is the second half of the 16th cent. “Astrologia terrestris” might also be translated as the “earthly firmament” of Paracelsus.

⁹ ... argumentum omnipotentiae Dei, testimonium resurrectionis mortuorum, exemplum remissionis peccatorum, infallibile futuri iudicii experimentum et speculum aeternae beatitudinis.” “Secretum,” p. 721.

¹⁰ Cf. the refusal of the Basel printer, Conrad Waldkirch, to include *Aurora consurgens* I in *Artis auriferae*. See *Psychology and Alchemy*, par. 464.

¹¹ He does mention, however, gold, silver, and mercury as initial ingredients which have to be prepared and purified first, so that “common substances” (*vulgaria*) may become “physical ones” (*physica*) (p. 702). Here “physical” means *non vulgi*, i.e., symbolic.

¹² Berthelot, *Les Origines de l'alchimie*, p. 59.

¹³ *Supra*, par. 355. 11. 4.

¹⁴ “Triptativa coniunctio: id est, Trinitatis unio fit ex corpore, spiritu et anima. . . . Sic ista Trinitas in essentia est unitas: quia coaeternae simul sunt et coaequales. Tetraptiva coniunctio dicitur principiorum correctio.” (The threefold coniunctio: that is, the union of the Trinity is composed of body, spirit, and soul. . . . Thus the Trinity is in its essence a unity for they are coeternal and coequal. The fourfold coniunctio is called the correction of the principles.)—“Scala philosophorum,” *Art. aurif.*, II, p. 138. The *coniunctio tetraptiva* is called the “noblest coniunctio” because it produces the lapis by uniting the four elements.

¹⁵ *Psychology and Alchemy*, pars. 26, 209.

- ¹ “And in our opus there are two earths and two waters.”—“Scala phil.,” *Art. aurif.*, II, p. 137.
- ² According to the “Book of Krates,” the tincture is a “fiery and gaseous poison.”—Berthelot, *La Chimie au moyen âge*, III, p. 67.
- ³ *Ibid.*, p. 82.
- ⁴ Cf. “The Psychology of the Transference,” ch. 2.
- ⁵ *Vitis* was the name given to the philosophical tree in late antiquity, and the opus was called the “vintage” (*vindemia*). An Ostanos quotation in Zosimos (Berthelot, *Alch. grecs*, III, vi, 5) says: “Press the grape.” Cf. Hoghelande in *Theatr. chem.*, I (1659), p. 180: “Man’s blood and the red juice of the grape is our fire.” *Uvae Hermetis* = “philosophical water” (Ruland, *Lexicon*, p. 325). Concerning the “true vine” see the interpretation in *Aurora consurgens* II (*Art. aurif.*, I, p. 186). *Vinum* is a frequent synonym for the *aqua permanens*. Cf. “Hermes the vintager” in Berthelot, *Alch. grecs*, VI, v. 3.
- ⁶ The olive is the equivalent of the grape inasmuch as both are pressed and yield a precious juice.
- ⁷ Preisendanz, *Papyri Graecae Magicae*. II, pp. 45f.
- ⁸ Pyramid Text of Pepi I: “Homage to thee, O thou who hast four faces which rest and look in turn upon what is in Kenset. . . .” (Budge, *The Gods of the Egyptians*, I, p. 85). Kensest was the first nome (district) of ancient Egypt, the region of the first cataract (*ibid.*, II, p. 42).
- ⁹ *Ibid.*, I, p. 496. For illustration, see *ibid.*, II, p. 311.
- ¹⁰ *Ibid.*, I, p. 497; cf. p. 210.
- ¹¹ I, p. 491.
- ¹² A later form of Amset.
- ¹³ The one human head would indicate consciousness of an aspect or function of the individual psyche. Horus as the rising sun is the enlightener, just as the vision of Ezekiel signifies enlightenment. On the other hand magic, if it is to be effective, always presupposes unconsciousness. This would explain the absence of the human face.
- ¹⁴ Cf. the symbolism of the self, whose totality is characterized by four quaternions: *Aion*, pp. 242ff.
- ¹⁵ The old pagodas in India are actually stone chariots on which the gods are enthroned. In Daniel 7 : 9, the Ancient of Days sits on a throne.
- ¹⁶ “A cherub stretched out and protecting,” “covering cherub.”
- ¹⁷ [“Mark” in DV, AV, RSV, and Hebrew Bible. Vulgate: “signa Than.” Cf. *La Sainte Bible, traduit en français sous la direction de l’Ecole Biblique de Jérusalem* (Paris, 1956), where the word is translated as “croix,” with a note: “literally Tav, as Vulgate translates. This letter had, in the ancient alphabet, exactly the shape of a cross.”—TRANSLATOR.]
- ¹⁸ *Carmina*, XIX, verse 640 (Migne, *P.L.*, vol. 61, cols. 546f.):

“Qui cruce dispensa per quattuor extima ligni
 Quattuor attingit dimensum partibus orbem
 Ut trahat ad vitam populos ex omnibus oris
 Et quia morte crucis cunctis deus omnia Christus
 Extat in exortum vitae finemque malorum,

Alpha crucem circumstat et Ω , tribus utraque virgis

Littera diversam trina ratione figuram

Perficiens, quia perfectum est mens una, triplex vis.”

¹⁹ Cf. “Concerning Mandala Symbolism.”

³ Berthelot, *Alch. grecs*, III, vi, 5. Cf. supra, “The Spirit Mercurius,” pars. 264f.

⁴ Cf. *Aion*, pp. 162ff.

⁵ The immediately preceding passage remarks that God “is everywhere” and “not in the smallest place, like the daemon” (οὐκ ἐν τόπῳ ἐλαχίστῳ ὡς τὸ δαιμόνιον). Thus one of God’s attributes is infinity, whereas the distinguishing mark of the daemon is limitation in space, Man as microcosm would then be included in the concept of the daemonic, and psychologically this would mean that the ego, separated and split off from God, is likely to become daemonic as soon as it accentuates its independence of God by its egocentricity. The divine dynamism of the self, which is identical with the dynamism of the cosmos, is then placed at the service of the ego, and the latter is daemonized. This would account for the magically effective personality of those historical figures whom Burckhardt called the “great despoilers.” *Exempla sunt odiosa*.

⁶ Berthelot, *Alch. grecs*, II, iv, 26.

⁷ *Elenchos*, X, 34, 4 (cf. Legge, *Philosophumena*, II, p. 178).

¹ Pars. 342ff.

² “When the body is dissolved, there will sometimes appear two branches, sometimes three, sometimes more. . . .” (*Theatr. chem.*, I, 1659, pp. 147f.).

³ “... that it may grow within the glass like a tree,” “it made it grow upward in its glass with discoloured flowers” (Ripley, *Opera*, p. 86). “The philosophical tree flourished with its branches” (“Introitus apertus,” *Musaeum hermeticum*, p. 694).

⁴ “Senior, the author of *Lilium*, says that the sight of it [the vessel] is more to be desired than the scripture” (Hoghelande, *Theatr. chem.*, I, 1659, p. 177). Cf. also *Psychology and Alchemy*, par. 360.

⁵ “The salt and the tree can be made in any moist and convenient place” (“Gloria mundi,” *Mus. herm.*, p. 216).

For Christ the Son of God followed this method, and said, I am the true vine.” (*Aurora consurgens* II, *Art. aurif.*, I, p. 186.) *Vitis sapientum* (ibid., p. 193, and “Hermetis Trismegisti Tractatus aureus,” *Theatr. chem.*, IV, 1659, p. 613).

⁹ Djābir ibn Hayyān, “Le Livre du Mercure oriental, occidental, et du feu de la pierre,” in Berthelot, *Moyen âge*, III, pp. 214f.

¹⁰ Maria Prophetissa.

¹¹ Referring to the *viriditas benedicta* of Latin alchemy, here an allusion to the incorruptibility of the fruit of the tree.

¹² “Galen speaks of the Philosophical tree, which has seven branches” (*Art. aurif.*, I, p. 222).

¹³ “Marcasita = an imperfect metallic substance” (Ruland, *Lexicon*, p. 217). In chemistry, a collective name for various pyrites (Lippmann, *Entstehung und Ausbreitung der Alchemie*, indices).

¹⁴ *Lutum* is gypsum or clay; mixed with hair, it was used for sealing the lids of vessels (Lippmann, I, p. 663).

¹⁵ “De genealogia mineralium,” *Theatr. chem.*, I (1659), p. 574.

¹⁶ “Their [the fruits’] coagulation takes place instantaneously.” The fruits are “sent forth at the extremities of the *locustae*.” *Locustae* are the tips of the branches (Ruland, p. 209: “tops or young shoots of trees”). The form *lūcusta* in MS. seems to derive from *lucus*, ‘grove’ (Walde, *Lateinisches Etymologisches Wörterbuch*, I, p. 818).

¹⁷ In text, *Lolium temulentum* L.

¹⁸ Ibn Sina (980-1037), a physician and opponent of alchemy.

¹⁹ abu-Bakr Muhammad ibn-Zakāriya’ al-Rāzi (d. 925), also named Rasis or Rhazes, physician and alchemist. Known in the West by his “Excerpta ex libro luminis luminum” in Lacinius, *Pretiosa margarita novella*, pp. 167ff.

²⁰ *Theatr. chem.*, I (1659), p. 574.

²¹ Pauli, “The Influence of Archetypal Ideas on the Scientific Theories of Kepler,” in Jung and Pauli, *Interpretation of Nature and the Psyche*.

¹ *Theatr. chem.*, I (1659), pp. 513ff.

² An allusion to the many colours of the *cauda pavonis* (peacock's tail), whose appearance heralds the attainment of the goal.

³ Cf. the awakened dead in Hades, who grow like the flowers in spring. Berthelot, *Alch. grecs*, IV, xx, 9.

⁴ The terrestrial equivalent of the sponge was said to be the puff-ball. Sponges could hear and were sentient. When torn up, they exuded a juice like blood. Cf. the mandrake, which shrieks when it is torn up. "When they are torn from their places, it is heard and there will be a great noise." (Calid, "Liber secretorum," *Art. aurif.*, I, p. 343.) For the sponge, see *Mysterium Coniunctionis*. p. 134 and n. 205.

⁵ *Putus* can also mean 'genuine' or 'unadulterated.' *Argentum putum* is unalloyed silver. *Putus* instead of *purus* is significant, see next section.

⁶ Impure metals, oxides, and salts.

⁷ Human diseases are the equivalent of the *leprositae* of the metals. The text has *liberabat*, but the sense requires *liberabit*, as the prophecy is not yet fulfilled.

⁸ The quotation is not literal. Calid ("Liber secretorum," *Art. aurif.*, I, p. 325) says: "You must know, brother, that this magistry of ours concerning the secret stone, and our honoured office, is a great secret of God, which he has hidden from his people, and has willed to reveal to none save those who have faithfully deserved well as sons and have known his *goodness* and greatness." Dorn interprets the speaker, perhaps rightly, as Hermes (Trismegistus), who later on in the text speaks of "my own disciple, Musa." Moses, who was counted as an alchemist, was identified with Musaios, the teacher of Orpheus.

⁹ Here too Dorn may be referring to Calid, who says (*ibid.*, p. 342): "Take this stone that is no stone nor of the nature of stone. Moreover, it is a stone whose substance is generated on the top of the mountains [*in capite montium*], and the philosopher chose to say 'mountains' instead of 'living things' [*animalia*]." (The text is corrupt.) The stone is found in the head of a snake or a dragon, or is the "head-element" itself, as in Zosimos. World-mountain, world-axis, world-tree, and *homo maximus* are synonymous. Cf. Holmberg, *Der Baum des Lebens*, pp. 20, 21, 25.

- ¹ Von hylealischen Chaos, p. 93; cf. also p. 197.
- ² For Azoth, see “The Spirit Mercurius,” supra, par. 271.
- ³ *Mus. herm.*, p. 118: “Christ is compared and united with the earthly stone . . . it is an outstanding type and lifelike image of the incarnation of Christ.”
- ⁴ Psalm 18: 6: “he, as a bridegroom coming out of his bride chamber, hath rejoiced as a giant to run the way” was referred by the Church Fathers to Christ.
- ⁵ The text refers here to Matth. 26, obviously meaning verses 26ff., the institution of the Last Supper. [The phrase “giant of twofold substance” (*geminae gigas substantiae*) seems to have been first used by St. Ambrose, in line 19 of his Christmas hymn beginning “Intende qui regis Israel.” The relevant stanza is translated by J. M. Neale, *Collected Hymns, Sequences and Carols*, p. 104: “Proceeding from His chamber free,/ The royal hall of chastity,/Giant of twofold substance, straight/His destined way He runs elate.”—A.S.B.G.]
- ⁶ The anonymous author of “Aquarium sapientum” was not altogether clear about the triune essence, for he says it is “of one, a divine essence, then of two, of God and man, that is, of three persons, of four, namely of three persons and one divine essence, as also of five, of three persons and two essences, namely one divine and one human” (p. 112). The *filius macrocosmi* seems to have loosened up the dogma quite considerably.
- ⁷ “Aquarium sapientum,” pp. 111f.
- ⁸ *Liber gratiae spiritualis* (Venice, 1578), pp. 107f.
- ⁹ Alan of Lille, *Elucidatio in Cant. Cant.* 6 (Migne, *P.L.*, vol. 210, col. 95).
- ¹⁰ *Ibid.*, col. 82.
- ¹¹ Litany of Loreto.
- ¹² *Sermo II in Fesio Pentecostes* (Migne, *P.L.*, vol. 183, col. 327).
- ¹³ *Allegoriae in Sacram Scripturam* (Migne, *P.L.*, vol. 112, col. 897).
- ¹⁴ *Homilia III in Dominicam I Adventus* (Migne, *P.L.*, vol. 174, col. 32).
- ¹⁵ *Homilia LXIII in Vigiliam Assumptionis* (*ibid.*, col. 957).
- ¹⁶ *Elucidatio* (Migne, *P.L.*, vol. 210, col. 94).
- ¹⁷ Cf. the chapter on the kiss of the Lord, where there is a similar projection (*Liber gratiae*, p. 90).
- ¹⁸ The blood, that is, of the lion, which is equated with the lion of the tribe of Judah (= Christ).
- ¹⁹ Cf. *Psychology and Alchemy*, “The Lapis-Christ Parallel,” and *Aion*, ch. 5.
- ²⁰ Luke 22 : 44: “... and his sweat was as it were great drops of blood falling down to the ground.”
- ²¹ [The text continues: “and one has never heard that his blood was rose-coloured.” There is, however, an interesting reference to “cruore ejus roseo gustando vivimus Deo” (by tasting his rosy blood we live to God) in a very well-known hymn, beginning “Ad coenam agni providi,” formerly attributed to St. Ambrose, but though now denied him, known to date back to the 6th or early 7th century. For centuries past it has been the liturgical hymn sung at Vespers in the Easter season in the Roman church. Cf. Neale, *Collected Hymns*, p. 194. —A.S.B.G.]
- ²² Cf. I Cor. 13 : 4ff.

¹ Allusion to “Tabula smaragdina”: “This is the strong strength of all strength, for it will overcome every subtle thing, and penetrate every solid thing” (*De alchemia*, p. 363).

² Of *Alphidius* nothing is known. He is an oft-cited author, who may have lived in the 12th–13th cents. (Cf. Kopp, *Die Alchemie*, II, pp. 339. 363).

³ “Pret. marg. nov.,” *Bibliotheca chemica*, II, p. 30. Alleged date of composition is 1330. Janus Lacinius, who first printed the treatise in 1546, says (fol. 701) that Bonus “was living in the city of Pola in Istria about the year 1338,” and (fol. 46^v) that he was a contemporary (*coaetaneus*) of Raymund Lully (1235–1315).

⁴ *Aion*, pp. 164f.

⁵ As archetypal symbols are numinous, they have an effect even though they cannot be grasped intellectually.

¹ P. 702. Cf. “Symbolum Saturni,” in Mylius, *Phil. ref.*, p. 313: “Not far from there I was conducted to a meadow, in which was planted a remarkable garden with various kinds of trees, most excellent to behold. And among these trees he showed me seven that were distinguished by name; among these I perceived two outstanding ones, higher than the others, of which one bore a fruit like to the brightest and most refulgent sun, and its leaves were like gold. But the other brought forth the whitest fruits, more brightly shining than lilies, and its leaves were like quicksilver. They were named by Neptune the tree of the sun and the tree of the moon.”

² *Psychology and Alchemy*, Fig. 188.

³ *Ibid.*, Figs. 122, 221.

⁴ *Ibid.*, Fig. 257. [Cf. also *supra*, Fig. B5.]

⁵ “A beautiful woman in her upper part, she passes into a [snake].” (“Anguis” is my adaptation for “piscis.”) A late Hellenistic statue of Isis shows her as a beautiful goddess wearing the mural crown and carrying a torch, but whose lower half changes into a *uraeus*.

⁶ The classic representation is to be found in the *Scrowle* of Sir George Ripley, Canon of Bridlington, probably the most important English alchemist (1415–90).

⁷ Horstmann, *Sammlung altenglischer Legenden*, I, pp. 124ff.

⁸ The tree’s lack of bark and the snake’s lack of skin indicate the identity between them.

⁹ *Psychology and Alchemy*, Fig. 4. The motif of mutilation occurs in “Allegoriae super librum Turbae,” *Art. aurif.*, I, pp. 140, 151. These amputations have nothing to do with a so-called castration complex, but refer to the motif of dismemberment.

¹⁰ “De igne et sale,” *Theatr. chem.*, VI (1661), p. 119.

¹¹ Hoghelande (*Theatr. chem.*, I, 1659, p. 145), referring to *Turba*, Sermo LVIII (ed. Ruska, p. 161): “Take that white tree and build around it a round dark house covered with dew, and place in it a man of great age, a hundred years old,” etc. The old man is Saturn = lead as prima materia.

¹² Flinders Petrie, *Egyptian Tales*, 2nd series, XVIIIth to XIXth dynasty, pp. 36ff.

¹³ A parallel to the pine tree of Attis.

¹⁴ *Kitāb al-’ilm al-muktasab*, ed. Holmyard, p. 23.

¹⁵ Eliade, *Shamanism*, pp. 70-187.

¹⁶ Pp. 127, 147, 162.

¹⁷ Codex Q. 584 (Berlin), fol. 21^V (Ruska, *Turba*, p. 324).

¹⁸ Sermo. LVIII, Ruska, p. 161.

¹⁹ Charles, *Apocrypha and Pseudepigrapha*, II, pp. 204f. From the fruits of the sun-and-moon tree is prepared “the immortal fruit, which has life and blood.” “The blood causes all unfruitful trees to bear fruit of the same nature as the apple” (Mylius, *Phil. ref.*, p. 314).

²⁰ *Aurora Consurgens* (ed. von Franz), p. 143.

²¹ *Turba* p. 324. Cf. *Psychology and Alchemy*, par. 449 and n. 2.

²² As in Ripley’s *Scrowle*: “vitis arborea.”

- ²³ Maier, *Symb. aur. mens.*, p. 269, also the “Secretum” of Greverus (*Theatr. chem.*, III, 1659, p. 700) and the “Summarium philosophicum” of Flamel (*Mus. herm.*, p. 175). Cf. Pordage, *Sophia*, p. 10: “Here I saw the fruits and herbs of paradise, whereof my eternal man should thenceforward eat, and live.”
- ²⁴ These trees also occur in the Romance of Alexander as the “most holy trees of the sun and moon, which will declare the future to you” (Hilka, *Der altfranzösische Prosa-Alexander-Roman*, p. 204).
- ²⁵ Vulgate: “de pomis fructuum solis ac lunae.” The alchemists naturally took this version as authoritative. The original text has, as in AV: “... The precious fruits brought forth by the sun, and the precious things put forth by the moon.”
- ²⁶ *Theatr. chem.*, II (1659), p. 241. (“Dulce pomum est odorum, floridus hie pomulus.”)
- ²⁷ *Ibid.*, V (1660), p. 790. (“Collige fructus quia fructus arboris seduxit nos in et per obscurum.”)
- ²⁸ The title of this book runs in part: *Paradisus aureolus hermeticus ... in cuius . . . offertur instructio, quomodo aureola Hesperidum poma, ab arbore benedicta philosophica sint decerpenda, etc.*
- ²⁹ Senior, *De chemia*, p. 92.

- ¹⁵ “The Spirit Mercurius,” *supra*, pars. 282ff.
- ¹⁶ Abu’l Qāsim, *Kitāb al-’ilm al-muktasab*, ed. Holmyard, p. 23.
- ¹⁷ Ripley, “Duodecim portarum,” *Theatr. chem.*, II (1659), p. 113, and *Opera omnia*, p. 86.
- ¹⁸ The tree of Hermes is burnt to ashes with the “humiditas maxime permanens,” as Ripley says (*ibid.*, p. 39). Cf. p. 46: “That water has fire within it.”
- ¹⁹ Hippolytus, *Elenchos*, VI, 9, 8ff. (Legge, II, p. 5).
- ²⁰ *Ibid.* Cf. the Indian parallel in Coomaraswamy, “The Inverted Tree,” p. 126: “The tree is a fiery pillar as seen from below, a solar pillar as seen from above, and a pneumatic pillar throughout; it is a tree of light.” The reference to the motif of the pillar is significant.
- ²¹ “Gloria mundi,” *Mus. herm.*, p. 240.
- ²² Mercurius is named “arbor metallorum.” For an interpretation of this symbol see Dorn, “Congeries Paracelsicae,” *Theatr. chem.*, I (1659), p. 508.
- ²³ *Arbor aurea* in “Scriptum Alberti,” *ibid.*, II (1659), p. 456; also Abu’l Qāsim, ed. Holmyard, p. 54, and “Consilium coniugii,” *Ars chemica*, p. 211.
- ²⁴ *Symb. aur. mens.*, p. 269, with reference to Greverus.
- ²⁵ *Art. aurif.*, I, p. 222.

²⁶ This plant derives ultimately from the Homeric $\mu\tilde{\omega}\lambda\nu$ (see *Mysterium Coniunctionis*, p. 133 and n. 200). Cf. Rahner, “Die seelenheilende Blume,” *Eranos-Jahrbuch* XII (1945), 117ff.

²⁷ “De tenebris contra naturam,” *Theatr. chem.*, I (1659), p. 470. (“Plantetur itaque arbor ex eis [planetis s. metallis], cuius radix adscribatur Saturno, per quam varius ille Mercurius ac Venus truncum et ramos ascendentes, folia floresque fructum ferentes Marti praebent.”)

²⁸ That is, to Aries, whose ruler is Mars; hence to the first spring zodiac.

²⁹ “De genealogia mineralium,” *Theatr. chem.*, I (1659), p. 574.

- ¹ Presumably Dante means this in *Purgatorio*, XXII, 131ff.
- ² “Radices suarum mincrarum sunt in aere et summitates in terra. Et quando evelluntur a suis locis, auditur sonus terribilis et sequitur timor magnus.” (“De ratione conficiendi lapidis,” *Theatr. chem.*, II, 1659, p. 226.)
- ³ *Mus. herm.*, pp. 240, 270
- ⁴ “Rabbi Josephi Carnitoli filius . . . inquit: fundamentum omnis structurae inferioris supra est affixum et eius culmen hic infra est sicut arbor inversa.” (“De igne et sale,” *Theatr. chem.*, VI, 1661, p. 39.) It is also said in the *Prodromas Rhodostauroticus* (fol. Vv) that the ancients called man an inverted tree.
- ⁵ The text has, erroneously, “iuncta” for “vincta.”
- ⁶ More accurate translation, as in RSV: “your flowing locks are like purple; a king is held captive in the tresses.”
- ⁷ *Cabbala denudata*, I, p. 166.
- ⁸ *Ibid.*, p. 77.
- ⁹ *Ibid.*, p. 629.
- ¹⁰ P. 888: “Inversam arborem stantem videri hominem placet Physicis, quod enim radix ibi, truncus et frondes, hic caput est et corpus reliquum cum brachiis et pedibus.”
- ¹¹ Cf. Chwolsohn, *Die Ssabier und der Ssabismus*, II, p. 373. *Timaeus* 90A: “... seeing that we are not an earthly but a heavenly plant.” Vettius Valens, *Anthologiarum* IX, p. 330, 23. Orphic fragment. Kern, No. 228a: “But the soul in man is rooted in the aether.”
- ¹² Chhāndogya Upanishad, VIII, 5, 3 (SBE, I, p. 131). Shatapatha-Brāhmana (SBE, XLIV, p. 317): “The Nyagrodha with cups—for when the gods were performing sacrifice, they tilted over those Soma cups, and turned downwards they took root, whence the Nyagrodhas, when turned downwards (*nyak*) take root (*roha*).” The *ashvattha* is the seat of the gods (*Hymns of the Atharva-Veda*, V, 4; SBE, XLII, p. 4). Cf. Coomaraswamy, “The Inverted Tree,” pp. 122f.

EDITORIAL NOTE*

Volume 14 of the Collected Works presents Jung's last great work, on which he was engaged for more than a decade, from 1941 to 1954. He finished it in his eightieth year. As is to be expected from its culminating position in his writings and from its subject matter, the book gives a final account of his lengthy researches into alchemy.

Jung's interest in the symbolical significance of alchemy for modern depth psychology first found expression, in 1929, in his commentary to *The Secret of the Golden Flower*. The theme was taken up again in his Eranos lectures of 1935 and 1936, which formed the basis of *Psychology and Alchemy*, originally published in 1944. Further researches led to the publication of essays now included in *Alchemical Studies*, Volume 13 of the Collected Works. A preliminary study of the special symbolism of the *coniunctio* in relation to psychotherapeutic problems appeared in *The Psychology of the Transference* (1946), while the connection between philosophical alchemy and Christianity was elaborated in *Aion* (1951). All these themes are brought together in *Mysterium Coniunctionis*, where Jung continues his work of interpretation by examining in detail a number of texts taken from the alchemical classics. The scope of the book is indicated in its subtitle: "An Inquiry into the Separation and Synthesis of Psychic Opposites in Alchemy." This process, summed up in the trenchant formula *solve et coagula*—"dissolve and coagulate"—underlies the *opus alchymicum* and may be symbolically understood as the process of psychic integration.

The focus of the book is on the symbolism of the *coniunctio* and the preceding stages of dissociation. These are known in alchemy as the *chaos* or *prima materia*, and they lead via the intermediate stages to a resolution of the conflict of opposites in the production of the *lapis philosophorum*. Fresh evidence is brought to bear upon Jung's thesis that the *lapis* is not only a parallel of the Christ figure, but a symbolical prefiguration of psychic totality, or the self.

Jung's inquiry is of a highly advanced character and necessitates a wide knowledge of the concepts of analytical psychology in general and Jung's previous publications on alchemy in particular. The reader who follows Jung in his search for a deeper understanding of the *opus alchymicum* will not only discover in this book new and fascinating aspects of the history of the European mind but will also be rewarded by fresh insights into such basic psychological problems as the structure of the self and the ego and their relation to one another, the nature of transference and countertransference, and the process of active imagination. In many ways this book is the summing up of all Jung's later work.

The English edition differs from the Swiss in the following particulars. It comprises Volumes I and II of that version. Volume III is an edition and study by Marie-Louise von Franz of *Aurora Consurgens*, a thirteenth-century treatise traditionally attributed to Thomas Aquinas and rediscovered by Jung, which has been issued in English as a companion volume to *Mysterium Coniunctionis*, but outside the Collected Works. The paragraph numbers of the present work do not correspond to those in the two Swiss volumes, which run in separate sequence. Further, many of the longer paragraphs have been broken up, and in certain instances the material has been rearranged within the chapters to facilitate the exposition. The most important of these changes were made with the author's consent.

In order not to overload the footnotes, the Latin and Greek passages have been put into an appendix. An asterisk in a footnote indicates that the quotation translated there or in the main text will be found in the appendix under the corresponding footnote number of the chapter in question.

Two sections of this work were previously published: [Chapter II, section 3](#), appeared as “Das Rätsel von Bologna” in *Beitrag zur Festschrift Albert Oeri* (Basel, 1945), pp. 265–79 (translated as “The Bologna Enigma,” *Ambix*, London, II, 1946, 182–91); [Chapter III, section 3](#), appeared as “De Sulphure” in *Nova Acta Paracelsica* (Einsiedeln), V (1948), 27–40.

For the second edition, numerous corrections and revisions have been made in cross-references to other volumes of the Collected Works now available, and likewise in the Bibliography.

The *Gesammelte Werke* edition of the present work appeared in 1968 as, in effect, a reprint of the 1955/1956 Swiss edition, retaining its textual arrangement and paragraph numbering. In order to facilitate cross-reference between the English and German text, a table has been added to this edition, correlating the paragraph numbers: see below, pp. 697ff.

One paragraph (183 in Vol. II, p. 124 of the *Gesammelte Werke* edition) was inadvertently omitted in the first edition of the present volume. It should follow paragraph 518 on page 368 and is translated here as paragraph 518a.

[518a] The reader must pardon my use of metaphors that are linguistically analogous to dogmatic expressions. If you have conceptions of things you can have no conceptions of, then the conception and the thing appear to coincide. Nor can two different things you know nothing of be kept apart. I must therefore expressly emphasize that I do not go in for either metaphysics or theology, but am concerned with psychological facts on the borderline of the knowable. So if I make use of certain expressions that are

reminiscent of the language of theology, this is due solely to the poverty of language, and not because I am of the opinion that the subject-matter of theology is the same as that of psychology. Psychology is very definitely not a theology; it is a natural science that seeks to describe experienceable psychic phenomena. In doing so it takes account of the way in which theology conceives and names them, because this hangs together with the phenomenology of the contents under discussion. But as empirical science it has neither the capacity nor the competence to decide on questions of truth and value, this being the prerogative of theology.

TRANSLATOR'S NOTE

Standard translations of Latin and Greek texts have been used where they conformed more or less to the author's own versions, and they are referred to in the footnotes. Where such translations were unsuitable or nonexistent, as is particularly the case with the texts in the appendix, an English version has been supplied by Mr. A. S. B. Glover. To him I would like to express my deepest thanks for his tireless help in preparing this book. My thanks are also due to Miss Barbara Hannah and Dr. Marie-Louise von Franz, for reading through the typescript and making many valuable suggestions.

FOREWORD

This book—my last—was begun more than ten years ago. I first got the idea of writing it from C. Kerényi's essay on the Aegean Festival in Goethe's *Faust*.¹ The literary prototype of this festival is *The Chymical Wedding* of Christian Rosencreutz, itself a product of the traditional hierogamos symbolism of alchemy. I felt tempted, at the time, to comment on Kerényi's essay from the standpoint of alchemy and psychology, but soon discovered that the theme was far too extensive to be dealt with in a couple of pages. Although the work was soon under way, more than ten years were to pass before I was able to collect and arrange all the material relevant to this central problem.

As may be known, I showed in my book *Psychology and Alchemy*, first published in 1944,² how certain archetypal motifs that are common in alchemy appear in the dreams of modern individuals who have no knowledge of alchemical literature. In that book the wealth of ideas and symbols that lie hidden in the neglected treatises of this much misunderstood "art" was hinted at rather than described in the detail it deserved; for my primary aim was to demonstrate that the world of alchemical symbols definitely does not belong to the rubbish heap of the past, but stands in a very real and living relationship to our most recent discoveries concerning the psychology of the unconscious. Not only does this modern psychological discipline give us the key to the secrets of alchemy, but, conversely, alchemy provides the psychology of the unconscious with a meaningful historical basis. This was hardly a popular subject, and for that reason it remained largely misunderstood. Not only was alchemy almost entirely unknown as a branch of natural philosophy and as a religious movement, but most people were unfamiliar with the modern discovery of the archetypes, or had at least misunderstood them. Indeed, there were not a few who regarded them as sheer fantasy, although the well-known example of whole numbers, which also were discovered and not invented, might have taught them better, not to mention the "patterns of behaviour" in biology. Just as numbers and instinctual forms do exist, so there are many other natural configurations or types which are exemplified by Lévy-Bruhl's *représentations collectives*. They are not "metaphysical" speculations but, as we would expect, symptoms of the uniformity of *Homo sapiens*.

Today there is such a large and varied literature describing psychotherapeutic experiences and the psychology of the unconscious that everyone has had an opportunity to familiarize himself with the empirical findings and the prevailing theories about them. This is not true of alchemy, most accounts of which are vitiated by the erroneous assumption that it was merely the precursor of chemistry. Herbert

Silberer³ was the first to try to penetrate its much more important psychological aspect so far as his somewhat limited equipment allowed him to do so. Owing to the paucity of modern expositions and the comparative inaccessibility of the sources, it is difficult to form an adequate conception of the problems of philosophical alchemy. It is the aim of the present work to fill this gap.

As is indicated by the very name which he chose for it—the “spagyric”⁴ art—or by the oft-repeated saying “solve et coagula” (dissolve and coagulate), the alchemist saw the essence of his art in separation and analysis on the one hand and synthesis and consolidation on the other. For him there was first of all an initial state in which opposite tendencies or forces were in conflict; secondly there was the great question of a procedure which would be capable of bringing the hostile elements and qualities, once they were separated, back to unity again. The initial state, named the *chaos*, was not given from the start but had to be sought for as the *prima materia*. And just as the beginning of the work was not self-evident, so to an even greater degree was its end. There are countless speculations on the nature of the end-state, all of them reflected in its designations. The commonest are the ideas of its permanence (prolongation of life, immortality, incorruptibility), its androgyny, its spirituality and corporeality, its human qualities and resemblance to man (*homunculus*), and its divinity.

The obvious analogy, in the psychic sphere, to this problem of opposites is the dissociation of the personality brought about by the conflict of incompatible tendencies, resulting as a rule from an inharmonious disposition. The repression of one of the opposites leads only to a prolongation and extension of the conflict, in other words, to a neurosis. The therapist therefore confronts the opposites with one another and aims at uniting them permanently. The images of the goal which then appear in dreams often run parallel with the corresponding alchemical symbols. An instance of this is familiar to every analyst: the phenomenon of the transference, which corresponds to the motif of the “chymical wedding.” To avoid overloading this book, I devoted a special study to the psychology of the transference,⁵ using the alchemical parallels as a guiding thread. Similarly, the hints or representations of wholeness, or the self, which appear in the dreams also occur in alchemy as the numerous synonyms for the *lapis Philosophorum*, which the alchemists equated with Christ. Because of its great importance, this last relationship gave rise to a special study, *Aion*. Further offshoots from the theme of this book are my treatises “The Philosophical Tree,” “Synchronicity: An Acausal Connecting Principle,” and “Answer to Job.”

The first and second parts of this work⁶ are devoted to the theme of the opposites and their union. The third part is an account of, and commentary on, an alchemical text, which, evidently written by a cleric, probably dates from the thirteenth century and discloses a highly peculiar state of mind in which Christianity and alchemy interpenetrate. The author tries, with the help of the mysticism of the Song of Songs, to

fuse apparently heterogeneous ideas, partly Christian and partly derived from natural philosophy, in the form of a hymnlike incantation. This text is called *Aurora consurgens* (also *Aurea hora*), and traditionally it is ascribed to St. Thomas Aquinas. It is hardly necessary to remark that Thomist historians have always reckoned it, or wanted to reckon it, among the spurious and false writings, no doubt because of the traditional depreciation of alchemy. This negative evaluation of alchemy was due, in the main, to ignorance. People did not know what it meant to its adepts because it was commonly regarded as mere gold-making. I hope I have shown in my book *Psychology and Alchemy* that, properly understood, it was nothing of the sort. Alchemy meant a very great deal to people like Albertus Magnus and Roger Bacon, and also to St. Thomas Aquinas. We have not only the early testimony of Zosimos of Panopolis from the third century, but that of Petrus Bonus of Ferrara from the beginning of the fourteenth century, which both point to the parallelism of the alchemical arcanum and the God-man. *Aurora consurgens* tries to amalgamate the Christian and alchemical view, and I have therefore chosen it as an example of how the spirit of medieval Christianity came to terms with alchemical philosophy, and as an illustration of the present account of the alchemical problem of opposites.⁷

Today, once again, we hear tendentious voices still contesting the hypothesis of the unconscious, declaring that it is nothing more than the personal prejudice of those who make use of this hypothesis. Remarkably enough, no consideration is given to the proofs that have been put forward; they are dismissed on the ground that all psychology is nothing more than a preconceived subjective opinion. It must be admitted that probably in no other field of work is there so great a danger of the investigator's falling a victim to his own subjective assumptions. He of all people must remain more than ever conscious of his "personal equation." But, young as the psychology of unconscious processes may be, it has nevertheless succeeded in establishing certain facts which are gradually gaining general acceptance. One of these is the polaristic structure of the psyche, which it shares with all natural processes. Natural processes are phenomena of energy, constantly arising out of a "less probable state" of polar tension. This formula is of special significance for psychology, because the conscious mind is usually reluctant to see or admit the polarity of its own background, although it is precisely from there that it gets its energy.

The psychologist has only just begun to feel his way into this structure, and it now appears that the "alchemystical" philosophers made the opposites and their union one of the chief objects of their work. In their writings, certainly, they employed a symbolical terminology that frequently reminds us of the language of dreams, concerned as these often are with the problem of opposites. Since conscious thinking strives for clarity and demands unequivocal decisions, it has constantly to free itself from counterarguments and contrary tendencies, with the result that especially incompatible contents either

remain totally unconscious or are habitually and assiduously overlooked. The more this is so, the more the unconscious will build up its counterposition. As the alchemists, with but few exceptions, did not know that they were bringing psychic structures to light but thought that they were explaining the transformations of matter, there were no psychological considerations to prevent them, for reasons of sensitiveness, from laying bare the background of the psyche, which a more conscious person would be nervous of doing. It is because of this that alchemy is of such absorbing interest to the psychologist. For this reason, too, it seemed necessary to my co-worker and myself to subject the alchemical conception of opposites, and their union or reconciliation, to a thoroughgoing investigation. However abstruse and strange the language and imagery of the alchemists may seem to the uninitiated, they become vivid and alive as soon as comparative research reveals the relationship of the symbols to processes in the unconscious. These may be the material of dreams, spontaneous fantasies, and delusional ideas on the one hand, and on the other hand they can be observed in works of creative imagination and in the figurative language of religion. The heterogeneous material adduced for comparison may seem in the highest degree baffling to the academically educated reader who has met these items only in an impersonal context—historical, ethnic, or geographical—but who does not know their psychological affinities with analogous formations, themselves derived from the most varied sources. He will naturally be taken aback, at first, if certain symbols in ancient Egyptian texts are brought into intimate relationship with modern findings concerning the popular religion of India and at the same time with the dreams of an unsuspecting European. But what is difficult for the historian and philologist to swallow is no obstacle for the physician. His biological training has left him with far too strong an impression of the comparability of all human activities for him to make any particular to-do about the similarity, indeed the fundamental sameness, of human beings and their psychic manifestations. If he is a psychiatrist, he will not be astonished at the essential similarity of psychotic contents, whether they come from the Middle Ages or from the present, from Europe or from Australia, from India or from the Americas. The processes underlying them are instinctive, therefore universal and uncommonly conservative. The weaver-bird builds his nest in his own peculiar fashion no matter where he may be, and just as we have no grounds for assuming that he built his nest differently three thousand years ago, so it is very improbable that he will alter his style in the next three thousand. Although contemporary man believes that he can change himself without limit, or be changed through external influences, the astounding, or rather the terrifying, fact remains that despite civilization and Christian education, he is still, morally, as much in bondage to his instincts as an animal, and can therefore fall victim at any moment to the beast within. This is a more universal truth than ever before, guaranteed independent of education, culture, language, tradition, race, and locality.

Investigation of alchemical symbolism, like a preoccupation with mythology, does not lead one away from life any more than a study of comparative anatomy leads away from the anatomy of the living man. On the contrary, alchemy affords us a veritable treasure-house of symbols, knowledge of which is extremely helpful for an understanding of neurotic and psychotic processes. This, in turn, enables us to apply the psychology of the unconscious to those regions in the history of the human mind which are concerned with symbolism. It is just here that questions arise whose urgency and vital intensity are even greater than the question of therapeutic application. Here there are many prejudices that still have to be overcome. Just as it is thought, for instance, that Mexican myths cannot possibly have anything to do with similar ideas found in Europe, so it is held to be a fantastic assumption that an uneducated modern man should dream of classical myth-motifs which are known only to a specialist. People still think that relationships like this are far-fetched and therefore improbable. But they forget that the structure and function of the bodily organs are everywhere more or less the same, including those of the brain. And as the psyche is to a large extent dependent on this organ, presumably it will—at least in principle—everywhere produce the same forms. In order to see this, however, one has to abandon the widespread prejudice that the psyche is identical with consciousness.

MYSTERIUM CONIUNCTIONIS

AN INQUIRY

INTO THE SEPARATION AND SYNTHESIS

OF PSYCHIC OPPOSITES IN ALCHEMY

THE COMPONENTS OF THE CONIUNCTIO

1. THE OPPOSITES

[1] The factors which come together in the coniunctio are conceived as opposites, either confronting one another in enmity or attracting one another in love.¹ To begin with they form a dualism; for instance the opposites are *humidum* (moist) / *siccum* (dry), *frigidum* (cold) / *calidum* (warm), *superiora* (upper, higher) / *inferiora* (lower), *spiritus-anima* (spirit-soul) / *corpus* (body), *coelum* (heaven) / *terra* (earth), *ignis* (fire) / *aqua* (water), bright / dark, *agens* (active) / *patiens* (passive), *volatile* (volatile, gaseous) / *fixum* (solid), *pretiosum* (precious, costly; also *carum*, dear) / *vile* (cheap, common), *bonum* (good) / *malum* (evil), *manifestum* (open) / *occultum* (occult; also *celatum*, hidden), *oriens* (East) / *occidens* (West), *vivum* (living) / *mortuum* (dead, inert), *masculus* (masculine) / *foemina* (feminine), Sol / Luna. Often the polarity is arranged as a quaternio (quaternity), with the two opposites crossing one another, as for instance the four elements or the four qualities (moist, dry, cold, warm), or the four directions and seasons,² thus producing the cross as an emblem of the four elements and symbol of the sublunary physical world.³ This fourfold Physis, the cross, also appears in the signs for earth ♁, Venus ♀, Mercury ☿, Saturn ♄, and Jupiter ♃.⁴

[2] The opposites and their symbols are so common in the texts that it is superfluous to cite evidence from the sources. On the other hand, in view of the ambiguity of the alchemists' language, which is "tam ethice quam physice" (as much ethical as physical), it is worth while to go rather more closely into the manner in which the texts treat of the opposites. Very often the masculine-feminine opposition is personified as King and Queen (in the *Rosarium philosophorum* also as Emperor and Empress), or as *servus* (slave) or *vir rubeus* (red man) and *mulier candida* (white woman);⁵ in the "Visio Arislei" they appear as Gabricus (or Thabritius) and Beya, the King's son and daughter.⁶ Theriomorphic symbols are equally common and are often found in the illustrations.⁷ I would mention the eagle and toad ("the eagle flying through the air and the toad crawling on the ground"), which are the "emblem" of Avicenna in Michael Maier,⁸ the eagle representing Luna "or Juno, Venus, Beya, who is fugitive and winged like the eagle, which flies up to the clouds and receives the rays of the sun in his eyes." The toad "is the opposite of air, it is a contrary element, namely earth, whereon alone it moves by slow steps, and does not trust itself to

another element. Its head is very heavy and gazes at the earth. For this reason it denotes the philosophic earth, which cannot fly [i.e., cannot be sublimated], as it is firm and solid. Upon it as a foundation the golden house⁹ is to be built. Were it not for the earth in our work the air would fly away, neither would the fire have its nourishment, nor the water its vessel.”¹⁰

[3] Another favourite theriomorphic image is that of the two birds or two dragons, one of them winged, the other wingless. This allegory comes from an ancient text, *De Chemia Senioris antiquissimi philosophi libellus*.¹¹ The wingless bird or dragon prevents the other from flying. They stand for Sol and Luna, brother and sister, who are united by means of the art.¹² In Lamspringk's "Symbols"¹³ they appear as the astrological Fishes which, swimming in opposite directions, symbolize the spirit / soul polarity. The water they swim in is *mare nostrum* (our sea) and is interpreted as the body.¹⁴ The fishes are "without bones and cortex."¹⁵ From them is produced a *mare immensum*, which is the *aqua permanens* (permanent water). Another symbol is the stag and unicorn meeting in the "forest."¹⁶ The stag signifies the soul, the unicorn spirit, and the forest the body. The next two pictures in Lamspringk's "Symbols" show the lion and lioness,¹⁷ or the wolf and dog, the latter two fighting; they too symbolize soul and spirit. In Figure VII the opposites are symbolized by two birds in a wood, one fledged, the other unfledged. Whereas in the earlier pictures the conflict seems to be between spirit and soul, the two birds signify the conflict between spirit and body, and in Figure VIII the two birds fighting do in fact represent that conflict, as the caption shows. The opposition between spirit and soul is due to the latter having a very fine substance. It is more akin to the "hylical" body and is *densior et crassior* (denser and grosser) than the spirit.

[4] The elevation of the human figure to a king or a divinity, and on the other hand its representation in subhuman, theriomorphic form, are indications of the *transconscious character* of the pairs of opposites. They do not belong to the ego-personality but are supraordinate to it. The ego-personality occupies an intermediate position, like the "anima inter bona et mala sita" (soul placed between good and evil). The pairs of opposites constitute the phenomenology of the paradoxical *self*, man's totality. That is why their symbolism makes use of cosmic expressions like *coelum / terra*.¹⁸ The intensity of the conflict is expressed in symbols like fire and water,¹⁹ height and depth,²⁰ life and death.²¹

2. THE QUATERNIO AND THE MEDIATING ROLE OF MERCURIUS

[5] The arrangement of the opposites in a quaternity is shown in an interesting illustration in Stolcenberg's *Viridarium chymicum* (Fig. XLII), which can also be

found in the *Philosophia reformata* of Mylius (1622, p. 117). The goddesses represent the four seasons of the sun in the circle of the Zodiac (Aries, Cancer, Libra, Capricorn) and at the same time the four degrees of heating,²² as well as the four elements “combined” around the circular table.²³ The synthesis of the elements is effected by means of the circular movement in time (*circulatio, rota*) of the sun through the houses of the Zodiac. As I have shown elsewhere,²⁴ the aim of the *circulatio* is the production (or rather, reproduction) of the Original Man, who was a sphere. Perhaps I may mention in this connection a remarkable quotation from Ostanes in Abu’l-Qasim, describing the intermediate position between two pairs of opposites constituting a quaternio:

Ostanes said, Save me, O my God, for I stand between two exalted brilliancies known for their wickedness, and between two dim lights; each of them has reached me and I know not how to save myself from them. And it was said to me, Go up to Agathodaimon the Great and ask aid of him, and know that there is in thee somewhat of his nature, which will never be corrupted. . . . And when I ascended into the air he said to me, Take the child of the bird which is mixed with redness and spread for the gold its bed which comes forth from the glass, and place it in its vessel whence it has no power to come out except when thou desirest, and leave it until its moistness has departed.²⁵

[6] The quaternio in this case evidently consists of the two *malefici*, Mars and Saturn (Mars is the ruler of Aries, Saturn of Capricorn); the two “dim lights” would then be feminine ones, the moon (ruler of Cancer) and Venus (ruler of Libra). The opposites between which Ostanes stands are thus masculine / feminine on the one hand and good / evil on the other. The way he speaks of the four luminaries—he does not know how to save himself from them—suggests that he is subject to Heimarmene, the compulsion of the stars; that is, to a transconscious factor beyond the reach of the human will. Apart from this compulsion, the injurious effect of the four planets is due to the fact that each of them exerts its specific influence on man and makes him a diversity of persons, whereas he should be *one*.²⁶ It is presumably Hermes who points out to Ostanes that something incorruptible is in his nature which he shares with the Agathodaimon,²⁷ something divine, obviously the germ of unity. This germ is the gold, the *aurum philosophorum*,²⁸ the bird of Hermes or the son of the bird, who is the same as the *filius philosophorum*.²⁹ He must be enclosed in the *vas Hermeticum* and heated until the “moistness” that still clings to him has departed, i.e., the *humidum radicale* (radical moisture), the prima materia, which is the original chaos and the sea (the unconscious). Some kind of coming to consciousness seems indicated. We know that the synthesis of the four was one of the main preoccupations of alchemy, as was, though to a lesser degree, the synthesis of the seven (metals, for instance). Thus in the same text Hermes says to the Sun:

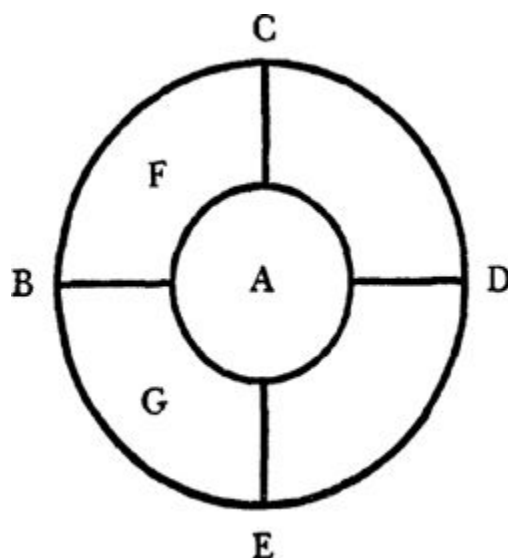

. . . I cause to come out to thee the spirits of thy brethren [the planets], O Sun, and I make them for thee a crown the like of which was never seen; and I cause thee and them to be within me, and I will make thy kingdom vigorous.³⁰

This refers to the synthesis of the planets or metals with the sun, to form a crown which will be “within” Hermes. The crown signifies the kingly totality; it stands for unity and is not subject to Heimarmene. This reminds us of the seven- or twelve-rayed crown of light which the Agathodaimon serpent wears on Gnostic gems,³¹ and also of the crown of Wisdom in the *Aurora Consurgens*.³²

[7] In the “Consilium coniugii” there is a similar quaternio with the four qualities arranged as “combinations of two contraries, cold and moist, which are not friendly to heat and dryness.”³³ Other quaternions are: “The stone is first an old man, in the end a youth, because the *albedo* comes at the beginning and the *rubedo* at the end.”³⁴ Similarly the elements are arranged as two “manifesta” (water and earth), and two “occulta” (air and fire).³⁵ A further quaternio is suggested by the saying of Bernardus Trevisanus: “The upper has the nature of the lower, and the ascending has the nature of the descending.”³⁶ The following combination is from the “Tractatus Micreris”: “In it [the Indian Ocean]³⁷ are images of heaven and earth, of summer, autumn, winter, and spring, male and female. If thou callest this spiritual, what thou doest is probable; if corporeal, thou sayest the truth; if heavenly, thou liest not; if earthly, thou hast well spoken.”³⁸ Here we are dealing with a double quaternio having the structure shown in the diagram on page 10.

[8] The double quaternio or ogdoad stands for a totality, for something that is at once heavenly and earthly, spiritual or corporeal, and is found in the “Indian Ocean,” that is to say in the unconscious. It is without doubt the Microcosm, the mystical Adam and bisexual Original Man in his prenatal state, as it were, when he is identical with the unconscious. Hence in Gnosticism the “Father of All” is described not only as masculine and feminine (or neither), but as Bythos, the abyss. In the scholia to the “Tractatus aureus Hermetis”³⁹ there is a quaternio consisting of *superius / inferius*, *exterius / interius*. They are united into one thing by means of the circular distillation, named the Pelican:⁴⁰ “Let all be one in one circle or vessel.” “For this vessel is the true philosophical Pelican, nor is any other to be sought after in all the world.” The text gives the following diagram:

[9] B C D E represent the outside, A is the inside, “as it were the origin and source from which the other letters flow, and likewise the final goal to which they flow back,”⁴¹ F G stands for Above and Below. “Together the letters A B C D E F G clearly signify the hidden magical Septenary.” The central point A, the origin and goal, the “Ocean or great sea,” is also called a *circulus exiguus*, very small circle, and a “mediator making peace between the enemies or elements, that they may love one another in a meet embrace.”⁴² This little inner circle corresponds to the Mercurial Fountain in the *Rosarium*, which I have described in my “Psychology of the Transference.” The text calls it “the more spiritual, perfect, and nobler Mercurius,”⁴³ the true arcane substance, a “spirit,” and goes on:

For the spirit alone penetrates all things, even the most solid bodies.⁴⁴ Thus the catholicity of religion, or of the true Church, consists not in a visible and bodily gathering together of men, but in the invisible, spiritual concord and harmony of those who believe devoutly and truly in the one Jesus Christ. Whoever attaches himself to a particular church outside this King of Kings, who alone is the shepherd of the true spiritual church, is a sectarian, a schismatic, and a heretic. For the

Kingdom of God cometh not with observation, but is within us, as our Saviour himself says in the seventeenth chapter of St. Luke.⁴⁵

That the Ecclesia spiritualis is meant is clear from the text: “But you will ask, where then are those true Christians, who are free from all sectarian contagion?” They are “neither in Samaria, nor in Jerusalem, nor in Rome, nor in Geneva, nor in Leipzig,” but are scattered everywhere through the world, “in Turkey, in Persia, Italy, Gaul, Germany, Poland, Bohemia, Moravia, England, America, and even in farthest India.” The author continues: “God is Spirit,⁴⁶ and those who worship him must worship him in the spirit and in truth. After these examinations and avowals I leave it to each man to judge who is of the true Church, and who not.”⁴⁷

[10] From this remarkable excursus we learn, first of all, that the “centre” unites the four and the seven into one.⁴⁸ The unifying agent is the spirit Mercurius, and this singular spirit then causes the author to confess himself a member of the Ecclesia spiritualis, for the spirit is God. This religious background is already apparent in the choice of the term “Pelican” for the circular process, since this bird is a well-known allegory of Christ.⁴⁹ The idea of Mercurius as a peacemaker, the mediator between the warring elements and producer of unity, probably goes back to Ephesians 2 : 13ff.:

But now in Christ Jesus you who once were far off have been brought near in the blood of Christ. For he is our peace, who has made both one, and has broken down the dividing wall of hostility, by abolishing in his flesh the law of commandments and ordinances, that he might create in himself one new man in place of two, so making peace, and might reconcile both to God in one body through the cross, thereby bringing the hostility to an end. And he came and preached peace to you who were far off and peace to those who were near; for through him we both have access in one Spirit to the Father. So then you are no longer strangers and sojourners, but you are fellow citizens with the saints and members of the household of God, built upon the foundation of the apostles and prophets, Christ himself being the chief cornerstone, in whom the whole structure is joined together and grows into a holy temple in the Lord; in whom you are also built into it for a dwelling place of God in the Spirit. [RSV]⁵⁰

[11] In elucidating the alchemical parallel we should note that the author of the scholia to the “Tractatus aureus Hermetis” prefaces his account of the union of opposites with the following remark:

Finally, there will appear in the work that ardently desired blue or cerulean colour, which does not darken or dull the eyes of the beholder by the healing power of its brilliance, as when we see the splendour of the outward sun. Rather does it sharpen

and strengthen them, nor does he [Mercurius] slay a man with his glance like the basilisk, but by the shedding of his own blood he calls back those who are near to death, and restores to them unimpaired their former life, like the pelican.⁵¹

Mercurius is conceived as “spiritual blood,”⁵² on the analogy of the blood of Christ. In Ephesians those who are separated “are brought near in the blood of Christ.” He makes the two one and has broken down the dividing wall “in his flesh.” *Caro* (flesh)⁵³ is a synonym for the prima materia and hence for Mercurius. The “one” is a “new man.” He reconciles the two “in one body,”⁵⁴ an idea which is figuratively represented in alchemy as the two-headed hermaphrodite. The two have one spirit, in alchemy they have one soul. Further, the lapis is frequently compared to Christ as the *lapis angularis* (cornerstone).⁵⁵ As we know, the temple built upon the foundation of the saints inspired in the *Shepherd of Hermas* a vision of the great building into which human beings, streaming from the four quarters, inserted themselves as living stones, melting into it “without seam.”⁵⁶ The Church is built upon the rock that gave Peter his name (Matthew 16 : 18).

[12] In addition, we learn from the scholia that the circle and the Hermetic vessel are one and the same, with the result that the mandala, which we find so often in the drawings of our patients, corresponds to the vessel of transformation. Consequently, the usual quaternary structure of the mandala⁵⁷ would coincide with the alchemists’ quaternio of opposites. Lastly, there is the interesting statement that an *Ecclesia spiritualis* above all creeds and owing allegiance solely to Christ, the Anthropos, is the real aim of the alchemists’ endeavours. Whereas the treatise of Hermes is, comparatively speaking, very old, and in place of the Christian Anthropos mystery⁵⁸ contains a peculiar paraphrase of it, or rather, its antique parallel,⁵⁹ the scholia cannot be dated earlier than the beginning of the seventeenth century.⁶⁰ The author seems to have been a Paracelsist physician. Mercurius corresponds to the Holy Ghost as well as to the Anthropos; he is, as Gerhard Dorn says, “the true hermaphroditic Adam and Microcosm”:

Our Mercurius is therefore that same [Microcosm], who contains within him the perfections, virtues, and powers of Sol [in the dual sense of sun and gold], and who goes through the streets [*vicos*] and houses of all the planets, and in his regeneration has obtained the power of Above and Below, wherefore he is to be likened to their marriage, as is evident from the white and the red that are conjoined in him. The sages have affirmed in their wisdom that all creatures are to be brought to one united substance.⁶¹

Accordingly Mercurius, in the crude form of the prima materia, is in very truth the Original Man disseminated through the physical world, and in his sublimated form he is that reconstituted totality.⁶² Altogether, he is very like the redeemer of the

Basilidians, who mounts upward through the planetary spheres, conquering them or robbing them of their power. The remark that he contains the powers of Sol reminds us of the above-mentioned passage in Abu'l-Qasim, where Hermes says that he unites the sun and the planets and causes them to be within him as a crown. This may be the origin of the designation of the lapis as the “crown of victory.”⁶³ The “power of Above and Below” refers to that ancient authority the “Tabula smaragdina,” which is of Alexandrian origin.⁶⁴ Besides this, our text contains allusions to the Song of Songs: “through the streets and houses of the planets” recalls Song of Songs 3 : 2: “I will . . . go about the city in the streets, and in the broad ways I will seek him whom my soul loveth.”⁶⁵ The “white and red” of Mercurius refers to 5 : 10: “My beloved is white and ruddy.” He is likened to the “matrimonium” or coniunctio; that is to say he is this marriage on account of his androgynous form.

3. THE ORPHAN, THE WIDOW, AND THE MOON

[13] In the text cited at the end of the last section Dorn continues: “Hermes Trismegistus called the stone ‘orphan’.”⁶⁶ “Orphan” as the name of a precious stone is found in Albertus Magnus. The stone was called “orphan” because of its uniqueness—“it was never seen elsewhere”—and it was said to be in the Emperor’s crown. It was “wine-coloured” and sometimes shone in the night, “but nowadays it does not shine [any more] in the darkness.”⁶⁷ As Albertus Magnus was an authority on alchemy, he may have been the direct source both for Dorn and for Petrus Bonus (see n. 66). “Orphan” as the name of a gem may therefore mean something like the modern “solitaire”—a very apt name for the unique lapis Philosophorum. Apart from Dorn and Petrus Bonus, it seems that this name is found only in the *Carmina Heliodori*.⁶⁸ There it refers to the ὀρφανὸς ἑξέοικος (homeless orphan) who is slain at the beginning of the work for purposes of transformation.

[14] The terms “son of the widow” and “children of the widow” appear to be of Manichaean origin. The Manichaeans themselves were called “children of the widow.”⁶⁹ The “orphan” referred to by Hermes must therefore have for his counterpart a *vidua* (widow) as the prima materia. For this there are synonyms such as *mater*, *matrix*, *Venus*, *regina*, *femina*, *virgo*, *puella praegnans*, “virgin in the centre of the earth,”⁷⁰ *Luna*,⁷¹ *meretrix* (whore), *vetula* (old woman), more specifically *vetula extenuata* (enfeebled, exhausted),⁷² *Mater Alchimia*, “who is dropsical in the lower limbs and paralysed from the knees down,”⁷³ and finally *virago*. All these synonyms allude to the virginal or maternal quality of the prima materia, which exists without a man⁷⁴ and yet is the “matter of all things.”⁷⁵ Above all, the prima materia is the mother of the lapis, the *filius philosophorum*. Michael Maier⁷⁶ mentions the treatise of an anonymous author Delphinus, which he dates to some time before

1447.⁷⁷ He stresses that this author insisted particularly on the mother-son incest. Maier even constructs a genealogical tree showing the origin of the seven metals. At the top of the tree is the lapis. Its father is “Gabritius,” who in turn was born of Isis and Osiris. After the death of Osiris Isis married their son Gabritius;⁷⁸ she is identified with Beya—“the widow marries her son.” The widow appears here as the classical figure of the mourning Isis. To this event Maier devotes a special “Epithalamium in Honour of the Nuptials of the Mother Beya and Her Son Gabritius.”⁷⁹ “But this marriage, which was begun with the expression of great joyfulness, ended in the bitterness of mourning,” says Maier, adding the verses:

Within the flower itself there grows the gnawing canker:

Where honey is, there gall, where swelling breast, the chancre.⁸⁰

For, “when the son sleeps with the mother, she kills him with the stroke of a viper” (*viperino conatu*). This viciousness recalls the murderous role of Isis,⁸¹ who laid the “noble worm” in the path of the heavenly Father, Ra.⁸² Isis, however, is also the healer, for she not only cured Ra of the poisoning but put together the dismembered Osiris. As such she personifies that arcane substance, be it dew⁸³ or the *aqua permanens*⁸⁴ which unites the hostile elements into one. This synthesis is described in the myth of Isis, “who collected the scattered limbs of his body and bathed them with her tears and laid them in a secret grave beneath the bank of the Nile.”⁸⁵ The cognomen of Isis was *χημεία*, the Black One.⁸⁶ Apuleius stresses the blackness of her robe (*palla nigerrima*, ‘robe of deepest black’),⁸⁷ and since ancient times she was reputed to possess the elixir of life⁸⁸ as well as being adept in sundry magical arts.⁸⁹ She was also called the Old One,⁹⁰ and she was rated a pupil of Hermes,⁹¹ or even his daughter.⁹² She appears as a teacher of alchemy in the treatise “Isis the Prophetess to her Son Horus.”⁹³ She is mentioned in the role of a whore in Epiphanius, where she is said to have prostituted herself in Tyre.⁹⁴ She signifies earth, according to Firmicus Maternus,⁹⁵ and was equated with Sophia.⁹⁶ She is *μυριώνυμος*, ‘thousand-named’, the vessel and the matter (*χώρα καὶ ἕλη*) of good and evil.⁹⁷ She is the moon.⁹⁸ An inscription invokes her as “the One, who art All.”⁹⁹ She is named *σώτεια*, the redemptrix.¹⁰⁰ In Athenagoras she is “the nature of the Aeon, whence all things grew and by which all things are.”¹⁰¹

[15] All these statements apply just as well to the prima materia in its feminine aspect: it is the moon, the mother of all things, the vessel, it consists of opposites, has a thousand names, is an old woman and a whore, as Mater Alchimia it is wisdom and teaches wisdom, it contains the elixir of life in potentia and is the mother of the Saviour and of the *filius Macrocosmi*, it is the earth and the serpent hidden in the earth, the blackness and the dew and the miraculous water which brings together all that is divided. The water is therefore called “mother,” “my mother who is my

enemy,” but who also “gathers together all my divided and scattered limbs.”¹⁰² The *Turba* says (Sermo LIX):

Nevertheless the Philosophers have put to death the woman who slays her husbands, for the body of that woman is full of weapons and poison. Let a grave be dug for that dragon, and let that woman be buried with him, he being chained fast to that woman; and the more he winds and coils himself about her, the more will he be cut to pieces by the female weapons which are fashioned in the body of the woman. And when he sees that he is mingled with the limbs of the woman, he will be certain of death, and will be changed wholly into blood. But when the Philosophers see him changed into blood, they leave him a few days in the sun, until his softness is consumed, and the blood dries, and they find that poison. What then appears, is the hidden wind.¹⁰³

The coniunctio can therefore take more gruesome forms than the relatively harmless one depicted in the *Rosarium*.¹⁰⁴

- [16] It is clear from these parallels that Maier was fully justified in giving the name Isis to the prima materia or feminine transformative substance.¹⁰⁵ As Kerényi has brilliantly shown, using the example of Medea,¹⁰⁶ there is in that myth a typical combination of various motifs: love, trickery, cruelty, motherliness, murder of relatives and children, magic, rejuvenation, and—gold.¹⁰⁷ This same combination appears in Isis and in the prima materia and forms the core of the drama instigated by the mother-world, without which no union seems possible.
- [17] In Christian tradition the widow signifies the Church; in St. Gregory¹⁰⁸ the analogy is the story of the widow’s cruse of oil (II Kings 4). St. Augustine says: “The whole Church is one widow, desolate in this world.”¹⁰⁹ She “lacketh a husband, lacketh a man,” for her bridegroom has not yet come. So too the soul is “destitute in the world.” “But,” Augustine continues, “thou art not an orphan, thou art not reckoned as a widow . . . Thou hast a friend . . . Thou art God’s orphan, God’s widow.”¹¹⁰
- [18] Another tradition to be considered in regard to the widow is the Cabala. There the abandoned Malchuth is the widow, as Knorr von Rosenroth says: “[Almanah] Widow. This is Malchuth, when Tifereth is not with her.”¹¹¹ Tifereth¹¹² is the son¹¹³ and is interpreted by Reuchlin as the Microcosm. Malchuth¹¹⁴ is Domina, the Mistress.¹¹⁵ She is also called Shekinah,¹¹⁶ the “indwelling” (of God), and virago.¹¹⁷ The Sefira Tifereth is the King, and in the usual arrangement of the Sefiroth he occupies the second place:

Kether

Tifereth

Yesod
Malchuth.

Kether, the Crown, corresponds to the upward-growing root of the Tree of the Sefiroth.¹¹⁸ Yesod¹¹⁹ signifies the genital region of the Original Man, whose head is Kether. Malchuth, conforming to the archetypal pattern, is the underlying feminine principle.¹²⁰ In this wicked world ruled by evil Tifereth is *not* united with Malchuth.¹²¹ But the coming Messiah will reunite the King with the Queen, and this mating will restore to God his original unity.¹²² The Cabala develops an elaborate hierosgamos fantasy which expatiates on the union of the soul with the Sefiroth of the worlds of light and darkness, “for the desire of the upper world for the God-fearing man is as the loving desire of a man for his wife, when he woos her.”¹²³ Conversely, the Shekinah is present in the sexual act:

The *absconditus sponsus* enters into the body of the woman and is joined with the *abscondita sponsa*. This is true also on the reverse side of the process, so that two spirits are melted together and are interchanged constantly between body and body. . . . In the indistinguishable state which arises it may be said almost that the male is with the female, neither male nor female,¹²⁴ at least they are both or either. So is man affirmed to be composed of the world above, which is male, and of the female world below. The same is true of woman.¹²⁵

[19] The Cabala also speaks of the *thalamus* (bride chamber) or nuptial canopy beneath which sponsus and sponsa are consecrated, Yesod acting as *paranympus* (best man).¹²⁶ Directly or indirectly the Cabala was assimilated into alchemy. Relationships must have existed between them at a very early date, though it is difficult to trace them in the sources. Late in the sixteenth century we come upon direct quotations from the *Zohar*, for instance in the treatise “De igne et sale” by Blasius Vigenerus.¹²⁷ One passage in this treatise is of especial interest to us as it concerns the mythologem of the coniunctio:

[The Sefiroth] end in Malchuth or the moon, who is the last to descend and the first to ascend from the elemental world. For the moon is the way to heaven, so much so that the Pythagoreans named her the heavenly earth and the earthly heaven or star,¹²⁸ because in the elemental world all inferior nature in respect to the heavenly, and the heavenly in respect to the intelligible world, is, as the *Zohar* says, feminine and passive, and is as the moon to the sun. In the same measure as [the moon] withdraws from the sun, until she is in opposition to him, so does her light increase in relation to us in this lower world, but diminishes on the side that looks upwards. Contrariwise, in her conjunction, when she is totally darkened for us, she is fully illuminated on that side which faces the sun. This should teach us that the more our intellect

descends to the things of sense, the more it is turned away from intelligible things, and the reverse likewise.¹²⁹

The identification of Malchuth with Luna forms a link with alchemy, and is another example of the process by which the patristic symbolism of sponsus and sponsa had been assimilated much earlier. At the same time, it is a repetition of the way the originally pagan hierosgamos was absorbed into the figurative language of the Church Fathers. But Vigenerus adds something that seems to be lacking in patristic allegory, namely the darkening of the other half of the moon during her opposition. When the moon turns upon us her fullest radiance, her other side is in complete darkness. This strict application of the Sol-Luna allegory might have been an embarrassment to the Church, although the idea of the “dying” Church does take account, to a certain extent, of the transience of all created things.¹³⁰ I do not mention this fact in order to criticize the significance of the ecclesiastical Sol-Luna allegory. On the contrary I want to emphasize it, because the moon, standing on the borders of the sublunary world ruled by evil, has a share not only in the world of light but also in the daemonic world of darkness, as our author clearly hints. That is why her changefulness is so significant symbolically: she is duplex and mutable like Mercurius, and is like him a mediator; hence their identification in alchemy.¹³¹ Though Mercurius has a bright side concerning whose spirituality alchemy leaves us in no doubt, he also has a dark side, and its roots go deep.

[20] The quotation from Vigenerus bears no little resemblance to a long passage on the phases of the moon in Augustine.¹³² Speaking of the unfavourable aspect of the moon, which is her changeability, he paraphrases Ecclesiasticus 27 : 12 with the words: “The wise man remaineth stable as the sun, but a fool is changed as the moon,”¹³³ and poses the question: “Who then is that fool who changeth as the moon, but Adam, in whom all have sinned?”¹³⁴ For Augustine, therefore, the moon is manifestly an ally of corruptible creatures, reflecting their folly and inconstancy. Since, for the men of antiquity and the Middle Ages, comparison with the stars or planets tacitly presupposes astrological causality, the sun causes constancy and wisdom, while the moon is the cause of change and folly (including lunacy).¹³⁵ Augustine attaches to his remarks about the moon a moral observation concerning the relationship of man to the spiritual sun,¹³⁶ just as Vigenerus did, who was obviously acquainted with Augustine’s epistles. He also mentions (Epistola LV, 10) the Church as Luna, and he connects the moon with the wounding by an arrow: “Whence it is said: They have made ready their arrows in the quiver, to shoot in the *darkness of the moon* at the upright of heart.”¹³⁷ It is clear that Augustine did not understand the wounding as the activity of the new moon herself but, in accordance with the principle “omne malum ab homine,” as the result of man’s wickedness. All the same, the addition “in obscura luna,” for which there is no warrant in the original text,

shows how much the new moon is involved. This hint of the admitted dangerousness of the moon is confirmed when Augustine, a few sentences later on, cites Psalm 71 : 7: “In his days justice shall flourish, and abundance of peace, until the moon shall be destroyed.”¹³⁸ Instead of the strong “interficiatur” the Vulgate has the milder “auferatur”—shall be taken away or fail.¹³⁹ The violent way in which the moon is removed is explained by the interpretation that immediately follows: “That is, the abundance of peace shall grow until it consumes all changefulness of mortality.” From this it is evident that the moon’s nature expressly partakes of the “changefulness of mortality,” which is equivalent to death, and therefore the text continues: “For then the last enemy, death, shall be destroyed, and whatever resists us on account of the weakness of the flesh shall be utterly consumed.” Here the destruction of the moon is manifestly equivalent to the destruction of death.¹⁴⁰ The moon and death significantly reveal their affinity. Death came into the world through original sin and the seductiveness of woman (= moon), and mutability led to corruptibility.¹⁴¹ To eliminate the moon from Creation is therefore as desirable as the elimination of death. This negative assessment of the moon takes full account of her dark side. The “dying” of the Church is also connected with the mystery of the moon’s darkness.¹⁴² Augustine’s cautious and perhaps not altogether unconscious disguising of the sinister aspect of the moon would be sufficiently explained by his respect for the Ecclesia-Luna equation.

[21] All the more ruthlessly, therefore, does alchemy insist on the dangerousness of the new moon. Luna is on the one hand the brilliant whiteness of the full moon, on the other hand she is the blackness of the new moon, and especially the blackness of the eclipse, when the sun is darkened. Indeed, what she does to the sun comes from her own dark nature. The “Consilium coniugii”¹⁴³ tells us very clearly what the alchemists thought about Luna:

The lion, the lower sun,¹⁴⁴ grows corrupt through the flesh. [His flesh is weak because he suffers from “quartan fever.”¹⁴⁵] Thus is the lion¹⁴⁶ corrupted in his nature through his flesh, which follows the times of the moon,¹⁴⁷ and is eclipsed. For the moon is the *shadow of the sun*, and with corruptible bodies she is consumed, and through her corruption is the lion eclipsed with the help of the moisture of Mercurius,¹⁴⁸ yet his eclipse is changed to usefulness and to a better nature, and one more perfect than the first.

The changefulness of the moon and her ability to grow dark are interpreted as her corruptibility, and this negative quality can even darken the sun. The text continues:

During the increase, that is during the fullness of the blackness of the lead, which is our ore, my light¹⁴⁹ is absent, and my splendour is put out.

Then comes a passage which may have inspired the picture of the death of the royal pair in the *Rosarium*, but which is also significant as regards the dark side of the conjunction of Sol and Luna:¹⁵⁰

After this¹⁵¹ is completed, you will know that you have the substance which penetrates all substances, and the nature which contains nature, and the nature which rejoices in nature.¹⁵² It is named the Tyriac¹⁵³ of the Philosophers, and it is also called the poisonous serpent, because, like this, it bites off the head of the male in the lustful heat of conception, and giving birth it dies and is divided through the midst. So also the moisture of the moon,¹⁵⁴ when she receives his light, slays the sun, and at the birth of the child of the Philosophers she dies likewise, and at death the two parents yield up their souls to the son, and die and pass away. *And the parents are the food of the son . . .*

[22] In this psychologem all the implications of the Sol-Luna allegory are carried to their logical conclusion. The daemonic quality which is connected with the dark side of the moon, or with her position midway between heaven and the sublunary world,¹⁵⁵ displays its full effect. Sun and moon reveal their antithetical nature, which in the Christian Sol-Luna relationship is so obscured as to be unrecognizable, and the two opposites cancel each other out, their impact resulting—in accordance with the laws of energetics—in the birth of a third and new thing, a son who resolves the antagonisms of the parents and is himself a “united double nature.” The unknown author of the “Consilium”¹⁵⁶ was not conscious of the close connection of his psychologem with the process of transubstantiation, although the last sentence of the text contains clearly enough the motif of *teoqualo*, the “god-eating” of the Aztecs.¹⁵⁷ This motif is also found in ancient Egypt. The Pyramid text of Unas (Vth dynasty) says: “Unas rising as a soul, like a god who liveth upon his fathers and feedeth upon his mothers.”¹⁵⁸ It should be noted how alchemy put in the place of the Christian sponsus and sponsa an image of totality that on the one hand was material, and on the other was spiritual and corresponded to the Paraclete. In addition, there was a certain trend in the direction of an *Ecclesia spiritualis*. The alchemical equivalent of the God-Man and the Son of God was Mercurius, who as an hermaphrodite contained in himself both the feminine element, Sapiencia and matter, and the masculine, the Holy Ghost and the devil. There are relations in alchemy with the Holy Ghost Movement which flourished in the thirteenth and fourteenth centuries and was chiefly connected with the name of Joachim of Flora (1145–1202), who expected the imminent coming of the “third kingdom,” namely that of the Holy Ghost.¹⁵⁹

[23] The alchemists also represented the “eclipse” as the descent of the sun into the (feminine) Mercurial Fountain,¹⁶⁰ or as the disappearance of Gabricus in the body of Beya. Again, the sun in the embrace of the new moon is treacherously slain by the

snake-bite (*conatu viperino*) of the mother-beloved, or pierced by the *telum passionis*, Cupid's arrow.¹⁶¹ These ideas explain the strange picture in Reusner's *Pandora*,¹⁶² showing Christ being pierced with a lance by a crowned virgin whose body ends in a serpent's tail.¹⁶³ The oldest reference to the mermaid in alchemy is a quotation from Hermes in Olympiodorus: "The virginal earth is found in the tail of the virgin."¹⁶⁴ On the analogy of the wounded Christ, Adam is shown in the Codex Ashburnham pierced in the side by an arrow.¹⁶⁵

[24] This motif of wounding is taken up by Honorius of Autun in his commentary on the Song of Songs.¹⁶⁶ "Thou hast wounded my heart, my sister, my spouse; thou hast wounded my heart with one of thy eyes, and with one hair of thy neck" (DV).¹⁶⁷ The sponsa says (1 : 4): "I am black, but comely," and (1 : 5) "Look not upon me because I am black, because the sun hath scorched me." This allusion to the *nigredo* was not missed by the alchemists.¹⁶⁸ But there is another and more dangerous reference to the bride in 6 : 4f.: "Thou art beautiful, O my love, as Tirzah, comely as Jerusalem, terrible as an army with banners. Turn away thine eyes from me, for they have overcome me . . . 10: Who is this that looketh forth as the rising dawn [*quasi aurora consurgens*],¹⁶⁹ fair as the moon, bright as the sun, terrible as an army with banners?"¹⁷⁰ The bride is not only lovely and innocent, but witch-like and terrible, like the side of Selene that is related to Hecate. Like her, Luna is "all-seeing," an "all-knowing" eye.¹⁷¹ Like Hecate she sends madness, epilepsy, and other sicknesses. Her special field is love magic, and magic in general, in which the new moon, the full moon, and the moon's darkness play a great part. The animals assigned to her—stag, lion, and cock¹⁷²—are also symbols of her male partner in alchemy. As the chthonic Persephone her animals, according to Pythagoras, are dogs,¹⁷³ i.e., the planets. In alchemy Luna herself appears as the "Armenian bitch."¹⁷⁴ The sinister side of the moon plays a considerable role in classical tradition.

[25] The sponsa is the dark new moon—in Christian interpretation the Church in the nuptial embrace¹⁷⁵—and this union is at the same time a wounding of the sponsus, Sol or Christ. Honorius comments on "Thou hast wounded my heart" as follows:

By heart is signified love, which is said to be in the heart, and the container is put in the place of the contained; and this metaphor is taken from the lover who loves his beloved exceeding much, so that his heart is wounded with love. So was Christ upon the cross wounded for love of his Church.¹⁷⁶ "Thou didst first wound my heart when I was scourged for thy love, that I might make thee my sister. . . . Again thou didst wound my heart with one of thine eyes¹⁷⁷ when, hanging upon the cross, I was wounded for love of thee, that I might make thee my bride to share my glory."¹⁷⁸

[26] The moment of the eclipse and mystic marriage is death on the cross. In the Middle Ages the cross was therefore logically understood as the mother. Thus in the

Middle English “Dispute between Mary and the Cross,” the cross is a “false tree” that destroyed Mary’s fruit with a deadly drink. She laments: “My sonys stepmodir I thee calle.” Sancta Crux replies:

Lady, to thee I owe honour . . .

Thi fruyt me florysschith in blood colour.¹⁷⁹

[27] The motif of wounding in alchemy goes back to Zosimos (3rd cent.) and his visions of a sacrificial drama.¹⁸⁰ The motif does not occur in such complete form again. One next meets it in the *Turba*: “The dew is joined to him who is wounded and given over to death.”¹⁸¹ The dew comes from the moon, and he who is wounded is the sun.¹⁸² In the treatise of Philaletha, “Introitus apertus ad occlusum Regis palatium,”¹⁸³ the wounding is caused by the bite of the rabid “Corascene” dog,¹⁸⁴ in consequence of which the hermaphrodite child suffered from hydrophobia.¹⁸⁵ Dorn, in his “De tenebris contra naturam,” associates the motif of wounding and the poisonous snake-bite with Genesis 3: “For the sickness introduced into nature by the serpent, and the deadly wound she inflicted, a remedy is to be sought.”¹⁸⁶ Accordingly it is the task of alchemy to root out the original sin, and this is accomplished with the aid of the *balsamum vitae* (balsam of life), which is “a true mixture of the natural heat with its radical moisture.” “The life of the world is the light of nature and the celestial sulphur,¹⁸⁷ whose substance is the aetheric moisture and heat of the firmament, like to the sun and moon.”¹⁸⁸ The conjunction of the moist (= moon) and the hot (= sun) thus produces the balsam, which is the “original and incorrupt” life of the world. Genesis 3 : 15, “he shall bruise your head, and you shall bruise his heel” (RSV), was generally taken as a prefiguration of the Redeemer. But since Christ was free from the stain of sin the wiles of the serpent could not touch him, though of course mankind was poisoned. Whereas the Christian belief is that man is freed from sin by the redemptory act of Christ, the alchemist was evidently of the opinion that the “restitution to the likeness of original and incorrupt nature” had still to be accomplished by the art, and this can only mean that Christ’s work of redemption was regarded as incomplete. In view of the wickednesses which the “Prince of this world,”¹⁸⁹ undeterred, goes on perpetrating as liberally as before, one cannot withhold all sympathy from such an opinion. For an alchemist who professed allegiance to the *Ecclesia spiritualis* it was naturally of supreme importance to make himself an “unspotted vessel” of the Paraclete and thus to realize the idea “Christ” on a plane far transcending a mere imitation of him. It is tragic to see how this tremendous thought got bogged down again and again in the welter of human folly. A shattering example of this is afforded not only by the history of the Church, but above all by alchemy itself, which richly merited its own condemnation—in ironical fulfilment of the dictum “In sterquiliniis invenitur” (it is found in cesspools). Agrippa von Nettesheim

was not far wrong when he opined that “Chymists are of all men the most perverse.”¹⁹⁰

- [28] In his “Mysterium Lunae,” an extremely valuable study for the history of alchemical symbolism, Rahner¹⁹¹ mentions that the “waxing and waning” of the bride (Luna, Ecclesia) is based on the *kenosis*¹⁹² of the bridegroom, in accordance with the words of St. Ambrose:¹⁹³

Luna is diminished that she may fill the elements. Therefore is this a great mystery. To her it was given by him who confers grace upon all things. He emptied her that he might fill her, as he also emptied himself that he might fill all things. He emptied himself that he might come down to us. He came down to us that he might rise again for all. . . . Thus has Luna proclaimed the mystery of Christ.¹⁹⁴

- [29] Thus the changefulness of the moon is paralleled by the transformation of the pre-existent Christ from a divine into a human figure through the “emptying,” that passage in Philippians (2 : 6) which has aroused so much comment: “. . . who, though he was in the form of God, did not count equality with God a thing to be clung to, but emptied himself, taking the form of a servant, being born in the likeness of men” (RSV / DV).¹⁹⁵ Even the most tortuous explanations of theology have never improved on the lapidary paradox of St. Hilary: “Deus homo, immortalis mortuus, aeternus sepultus” (God-man, immortal-dead, eternal-buried).¹⁹⁶ According to Ephraem Syrus, the *kenosis* had the reverse effect of unburdening Creation: “Because the creatures were weary of bearing the prefigurations of his glory, he disburdened them of those prefigurations, even as he had disburdened the womb that bore him.”¹⁹⁷

- [30] St. Ambrose’s reference to the *kenosis* makes the changing of the moon causally dependent on the transformation of the bridegroom. The darkening of Luna then depends on the sponsus, Sol, and here the alchemists could refer to the darkening of the beloved’s countenance in Song of Songs 1 : 4–5. The sun, too, is equipped with darts and arrows. Indeed, the secret poisoning that otherwise emanates from the coldness and moisture of the moon is occasionally attributed to the “cold dragon,” who contains a “volatile fiery spirit” and “spits flames.” Thus in Emblem L of the *Scrutinium*¹⁹⁸ he is given a masculine role: he wraps the woman in the grave in a deadly embrace. The same thought occurs again in Emblem V, where a toad is laid on the breast of the woman so that she, suckling it, may die as it grows.¹⁹⁹ The toad is a cold and damp animal like the dragon. It “empties” the woman as though the moon were pouring herself into the sun.²⁰⁰

4. ALCHEMY AND MANICHAISM

[31] At the beginning of the last section I mentioned the term “orphan” for the lapis. Here the motif of the unknown or absent father seems to be of special importance. Mani is the best-known example of the “son of the widow.” His original name was said to be *Κούβρικος* (Cubricus); later he changed it to Manes, a Babylonian word meaning “vessel.”²⁰¹ As a four-year-old boy he was sold as a slave to a rich widow. She came to love him, and later adopted him and made him her heir. Together with her wealth he inherited the “serpent’s poison” of his doctrine—the four books of Scythianos, the original master of his adoptive father Terebinthos, named “Budda.”²⁰² Of this Scythianos there is a legendary biography which equates him with Simon Magus;²⁰³ like him, he is said to have come to Jerusalem at the time of the apostles. He propounded a dualistic doctrine which, according to Epiphanius,²⁰⁴ was concerned with pairs of opposites: “white and black, yellow and green, moist and dry, heaven and earth, night and day, soul and body, good and evil, right and wrong.” From these books Mani concocted his pernicious heresy which poisoned the nations. “Cubricus” is very like the alchemical Kybrius,²⁰⁵ Gabricus,²⁰⁶ Kibrich,²⁰⁷ Kybrich, Kibric,²⁰⁸ Kybrig, Kebrick,²⁰⁹ Alkibric,²¹⁰ Kibrit,²¹¹ Kibrith,²¹² Gabricius, Gabrius,²¹³ Thabritius, Thabritis,²¹⁴ and so on.²¹⁵ The Arabic word *kibrit* means sulphur.

[32] In the *Aurora consurgens* “sulphur nigrum” stands side by side with “vetula,” the first being a synonym for spirit and the second for soul. Together they form a pair roughly comparable to the devil and his grandmother. This relationship also occurs in Rosencreutz’s *Chymical Wedding*,²¹⁶ where a black king sits beside a veiled old woman. The “black sulphur” is a pejorative name for the active, masculine substance of Mercurius and points to its dark, saturnine nature, which is evil.²¹⁷ This is the wicked Moorish king of the *Chymical Wedding*, who makes the king’s daughter his concubine (*meretrix*), the “Ethiopian” of other treatises,²¹⁸ analogous to the “Egyptian” in the “Passio Perpetuae,”²¹⁹ who from the Christian point of view is the devil. He is the activated darkness of matter, the *umbra Solis* (shadow of the sun), which represents the virginal-maternal prima materia. When the doctrine of the “Increatum”²²⁰ began to play a role in alchemy during the sixteenth century, it gave rise to a dualism which might be compared with the Manichaeon teaching.²²¹

[33] In the Manichaeon system matter (*hyle*) is personified by the dark, fluid, human body of the evil principle. As St. Augustine says, the substance of evil “had its own hideous and formless bulk, either gross which they called earth, or thin and tenuous like the air; for they imagine it to be some malignant mind creeping over the earth.”²²² The Manichaeon doctrine of the Anthropos shares the dual form of its Christ figure with alchemy, in so far as the latter also has a dualistic redeemer: Christ as saviour of man (Microcosm), and the lapis Philosophorum as saviour of the Macrocosm. The doctrine presupposes on the one hand a Christ incapable of suffering (*impatibilis*), who takes care of souls, and on the other hand a Christ

capable of suffering (*patibilis*),²²³ whose role is something like that of a *spiritus vegetativus*, or of Mercurius.²²⁴ This spirit is imprisoned in the body of the princes of darkness and is freed as follows by angelic beings who dwell in the sun and moon: assuming alternately male and female form they excite the desires of the wicked and cause them to break out in a sweat of fear, which falls upon the earth and fertilizes the vegetation.²²⁵ In this manner the heavenly light-material is freed from the dark bodies and passes into plant form.²²⁶

[34] The inflammation by desire has its analogy in the alchemist's gradual warming of the substances that contain the arcanum. Here the symbol of the sweat-bath plays an important role, as the illustrations show.²²⁷ Just as for the Manichaeans the sweat of the archons signified rain,²²⁸ so for the alchemists sweat meant dew.²²⁹ In this connection we should also mention the strange legend reported in the *Acta Archelai*, concerning the apparatus which the "son of the living Father" invented to save human souls. He constructed a great wheel with twelve buckets which, as they revolved, scooped up the souls from the deep and deposited them on the moon-ship.²³⁰ In alchemy the *rota* is the symbol of the *opus circulatorium*. Like the alchemists, the Manichaeans had a "virago," the male virgin Joel,²³¹ who gave Eve a certain amount of the light-substance.²³² The role she plays in regard to the princes of darkness corresponds to that of Mercurius duplex, who like her sets free the secret hidden in matter, the "light above all lights," the *filius philosophorum*. I would not venture to decide how much in these parallels is to be ascribed directly to Manichaean tradition, how much to indirect influence, and how much to spontaneous revival.

[35] Our starting-point for these remarks was the designation of the lapis as "orphan," which Dorn mentions apparently out of the blue when discussing the union of opposites. The material we have adduced shows what an archetypal drama of death and rebirth lies hidden in the coniunctio, and what immemorial human emotions clash together in this problem. It is the moral task of alchemy to bring the feminine, maternal background of the masculine psyche, seething with passions, into harmony with the principle of the spirit—truly a labour of Hercules! In Dorn's words:

Learn therefore, O Mind, to practise sympathetic love in regard to thine own body, by restraining its vain appetites, that it may be apt with thee in all things. To this end I shall labour, that it may drink with thee from the fountain of strength,²³³ and, when the two are made one, that ye find peace *in* their union. Draw nigh, O Body, to this fountain, that with thy Mind thou mayest drink to satiety and hereafter thirst no more after vanities. O wondrous efficacy of this fount, which maketh one of two, and peace between enemies! The fount of love can make *mind* out of spirit and soul, but this maketh *one man* of mind and body.²³⁴

THE PARADOXA

1. THE ARCANE SUBSTANCE AND THE POINT

[36] The tremendous role which the opposites and their union play in alchemy helps us to understand why the alchemists were so fond of paradoxes. In order to attain this union, they tried not only to visualize the opposites together but to express them in the same breath.¹ Characteristically, the paradoxes cluster most thickly round the arcane substance, which was believed to contain the opposites in uncombined form as the prima materia, and to amalgamate them as the lapis Philosophorum. Thus the lapis² is called on the one hand base, cheap, immature, volatile, and on the other hand precious, perfect, and solid; or the prima materia is base and noble,³ or precious and *parvi momenti* (of little moment). The materia is visible to all eyes, the whole world sees it, touches it, loves it, and yet no one knows it.⁴ “This stone therefore is no stone,”⁵ says the *Turba*, “that thing is cheap and costly, dark, hidden, and known to everyone, having one name and many names.”⁶ The stone is “thousand-named” like the gods of the mystery religions, the arcane substance is “One and All” (ἐν τὸ πᾶν). In the treatise of Komarios, where “the philosopher Komarios teaches the Philosophy to Cleopatra,” it is said: “He showed with his hand the unity of the whole.”⁷ Pelagios asks: “Why speak ye of the manifold matter? The substance of natural things is one, and of one nature that which conquers all.”⁸

[37] Further paradoxes: “I am the black of the white and the red of the white and the yellow of the red”;⁹ or “The principle of the art is the raven, who flies without wings in the blackness of night and in the brightness of day.”¹⁰ The stone is “cold and moist in its manifest part, and in its hidden part is hot and dry.”¹¹ “In lead is the dead life,”¹² or “Burn in water and wash in fire.”¹³ The “*Allegoriae sapientum*” speak of two figures, one of which is “white and lacking a shadow, the other red and lacking the redness.”¹⁴ A quotation from “Socrates” runs: “Seek the coldness of the moon and ye shall find the heat of the sun.”¹⁵ The opus is said to be “a running without running, moving without motion.”¹⁶ “Make mercury with mercury.”¹⁷ The philosophical tree has its roots in the air¹⁸ (this is probably a reference to the tree of the Sefiroth). That paradox and ambivalence are the keynotes of the whole work is shown by *The Chymical Wedding*: over the main portal of the castle two words are written: “Congratulor, Condoleo.”¹⁹

[38] The paradoxical qualities of Mercurius have already been discussed in a separate study.²⁰ As Mercurius is the principal name for the arcane substance, he deserves mention here as the paradox *par excellence*. What is said of him is obviously true of the lapis, which is merely another synonym for the “thousand-named” arcane substance. As the “Tractatus aureus de Lapide” says: “Our matter has as many names as there are things in the world.”²¹ The arcane substance is also synonymous with the Monad and the Son of Man mentioned in Hippolytus:

Monoïmos . . . thinks that there is some such Man of whom the poet speaks as Oceanus, when he says: Oceanus, origin of gods and origin of men.²² Putting this into other words, he says that the Man is all, the source of the universe, unbegotten, incorruptible, everlasting; and that there is a Son of the aforesaid Man, who is begotten and capable of suffering, and whose birth is outside time, neither willed nor predetermined. . . .²³ This Man is a single Monad, uncompounded and indivisible, yet compounded and divisible; loving and at peace with all things yet warring with all things and at war with itself in all things; unlike and like itself, as it were a musical harmony containing all things; . . . showing forth all things and giving birth to all things. It is its own mother, its own father, the two immortal names. The emblem of the whole man (τελείου ἀνθρώπου), says Monoïmos, is the jot or tittle.²⁴ This one tittle is the uncompounded, simple, unmixed Monad, having its composition from nothing whatsoever, yet composed of many forms, of many parts. That single, undivided jot is the many-faced, thousand-eyed, and thousand-named jot of the iota. This is the emblem of that perfect and invisible Man. . . . The Son of the Man is the one iota, the one jot flowing from on high, full and filling all things, containing in himself everything that is in the Man, the Father of the Son of the Man.²⁵

[39] The alchemists seem to have visualized their lapis or prima materia in a similar manner. At any rate they were able to cap the paradoxes of Monoïmos. Thus they said of Mercurius: “This spirit is generated from the substances of the sea²⁶ and calls himself moist, dry, and fiery,”²⁷ in close agreement with the invocation to Hermes in the magic papyrus entitled “The Secret Inscription,” where Hermes is addressed as a “damp-fiery-cold spirit” (ὕγροπυρινοψυχρὸν πνεῦμα).²⁸

[40] The mystery of the smallest written sign, the point, is also known to alchemy. The point is the symbol of a mysterious creative centre in nature. The author of the “Novum lumen”²⁹ admonishes his reader:

But you, dear reader, you will have above all to consider the point in nature . . . and you need nothing else, but take care lest you seek that point in the vulgar metals, where it is not. For these metals, the common gold more especially, are dead. But our metals are alive, they have a spirit, and they are the ones you must take. For know that fire is the life of the metals.

The point is identical with the *prima materia* of the metals, which is a “fatty water” (*aqua pinguis*), the latter being a product of the moist and the hot.

[41] John Dee (1527–1607) speculates as follows: “It is not unreasonable to suppose, that by the four straight lines which run in opposite directions from a single, individual point, the mystery of the four elements is indicated.” According to him, the quaternity consists of four straight lines meeting in a right angle. “Things and beings have their first origin in the point and the monad.”³⁰ The centre of nature is “the point originated by God,”³¹ the “sun-point” in the egg.³² This, a commentary on the *Turba* says, is the “germ of the egg in the yolk.”³³ Out of this little point, says Dorn in his “*Physica Genesis*,” the wisdom of God made with the creative Word the “huge machine” of the world.³⁴ The “*Consilium coniugii*” remarks that the point is the chick (*pullus*).³⁵ Mylius adds that this is the bird of Hermes,³⁶ or the spirit Mercurius. The same author places the soul in the “midpoint of the heart” together with the spirit, which he compares with the angel who was “infused with the soul at this point” (i.e., in the womb).³⁷ Paracelsus says that the “*anima iliastris*” dwells in the fire in the heart. It is “incapable of suffering,” whereas the “*anima cagastis*” is capable of suffering and is located in the water of the pericardium.³⁸ Just as earth corresponds to the triangle and water to the line, so fire corresponds to the point.³⁹ Democritus stresses that fire consists of “fiery globules.”⁴⁰ Light, too, has this round form, hence the designation “sun-point.” This point is on the one hand the world’s centre, “the salt-point in the midst of the great fabric of the whole world,” as Khunrath calls it (salt = *Sapientia*). Yet it is “not only the bond but also the destroyer of all destructible things.” Hence this “world-egg is the ancient Saturn, the . . . most secret lead of the sages,” and the “ambisexual Philosophic Man of the Philosophers, the Catholick Androgyne of the Sophists,” the *Rebis*, etc.⁴¹ The most perfect form is round, because it is modelled on the point. The sun is round and so is fire, since it is composed of the “fiery globules” of Democritus. God fashioned the sphere of light round himself. “God is an intelligible sphere whose centre is everywhere and whose circumference is nowhere.”⁴² The point symbolizes light and fire, also the Godhead in so far as light is an “image of God” or an “exemplar of the Deity.” This spherical light modelled on the point is also the “shining or illuminating body” that dwells in the heart of man. The light of nature is the “radical moisture” (*humidum radicale*) which, as “balsam,” works from the heart, like the sun in the macrocosm and, we must conclude, like God in the “supracelestial world.” Thus does Steeb describe the *δεύτερος θεός*, the “second God” in man.⁴³ The same author derives the gold from the dew or supracelestial balsam sinking into the earth. Here he is probably referring to the older formulations of Maier,⁴⁴ where the sun generates the gold in the earth. Hence the gold, as Maier says, obtains a “simplicity” approaching that of the circle (symbol of eternity) and the indivisible point. The gold has a “circular form.”⁴⁵ “This is the

line which runs back upon itself, like the snake that with its head bites its own tail, wherein that supreme and eternal painter and potter, God, may rightly be discerned.”⁴⁶ The gold is a “twice-bisected circle,” i.e., one divided into four quadrants and therefore a quaternity, a division made by nature “that contraries may be bound together by contraries.”⁴⁷ It can therefore, he says, be compared to the “sacred city,” Jerusalem⁴⁸ (cf. Revelation 21 : 10ff.). It is “a golden castle engirt with a triple wall,”⁴⁹ “a visible image of eternity.”⁵⁰ “Though gold be mute so far as sound or voice is concerned, yet by virtue of its essence it proclaims and everywhere bears witness to God.” And just as God is “one in essence,” so the gold is “one homogeneous substance.”⁵¹ For Dorn the unity of God,⁵² the “unarius,” is the “centre of the ternarius,” the latter corresponding to the circle drawn round the centre.⁵³ The point as the centre of the quaternio of the elements is the place where Mercurius “digests and perfects.”⁵⁴

2. THE SCINTILLA

[42] The point is identical with the *σπινθήρ*,⁵⁵ scintilla, the “little soul-spark” of Meister Eckhart.⁵⁶ We find it already in the teachings of Saturninus.⁵⁷ Similarly Heraclitus, “the physicist,” is said to have conceived the soul as a “spark of stellar essence.”⁵⁸ Hippolytus says that in the doctrine of the Sethians the darkness “held the brightness and the spark of light in thrall,”⁵⁹ and that this “smallest of sparks” was finely mingled in the dark waters⁶⁰ below.⁶¹ Simon Magus⁶² likewise teaches that in semen and milk there is a very small spark which “increases and becomes a power⁶³ boundless and immutable.”⁶⁴

[43] Alchemy, too, has its doctrine of the scintilla. In the first place it is the fiery centre of the earth, where the four elements “project their seed in ceaseless movement.” “For all things have their origin in this source, and nothing in the whole world is born save from this source.” In the centre dwells the Archaeus, “the servant of nature,” whom Paracelsus also calls Vulcan, identifying him with the Adech, the “great man.”⁶⁵ The Archaeus, the creative centre of the earth, is hermaphroditic like the Protanthropos, as is clear from the epilogue to the “Novum lumen” of Sendivogius: “When a man is illuminated by the light of nature, the mist vanishes from his eyes, and without difficulty he may behold the point of our magnet, which corresponds to both centres of the rays, that is, those of the sun and the earth.” This cryptic sentence is elucidated by the following example: When you place a twelve-year-old boy side by side with a girl of the same age, and dressed the same, you cannot distinguish between them. But take their clothes off⁶⁶ and the difference will become apparent.⁶⁷ According to this, the centre consists in a conjunction of male and

female. This is confirmed in a text by Abraham Eleazar,⁶⁸ where the arcane substance laments being in the state of *nigredo*:

Through Cham,⁶⁹ the Egyptian, I must pass. . . . Noah must wash me . . . in the deepest sea, that my blackness may depart. . . . I must be fixed to this black cross, and must be cleansed therefrom with wretchedness and vinegar, and made white, that . . . my heart may shine like a carbuncle, and the old Adam come forth from me again. O! Adam Kadmon, how beautiful art thou! . . . Like Kedar I am black henceforth, ah! how long! O come, my Mesech,⁷⁰ and disrobe me, that mine inner beauty may be revealed. . . . O Shulamite, afflicted within and without, the watchmen of the great city will find thee and wound thee, and rob thee of thy garments . . . and take away thy veil. Who then will lead me out from Edom, from thy stout wall? . . . Yet shall I be blissful again when I am delivered from the poison wherewith I am accursed, and my inmost seed and first birth comes forth. . . . For its father is the sun, and its mother the moon.⁷¹

[44] It is clear from this text that the “hidden” thing, the invisible centre, is Adam Kadmon, the Original Man of Jewish gnosis. It is he who laments in the “prisons” of the darkness,⁷² and who is personified by the black Shulamite of the Song of Songs. He is the product of the conjunction of sun and moon.

[45] The scintillae often appear as “golden and silver,” and are found in multiple form in the earth.⁷³ They are then called “oculi piscium” (fishes’ eyes).⁷⁴ The fishes’ eyes are frequently mentioned by the authors, probably first by Morienus Romanus⁷⁵ and in the “Tractatus Aristotelis,”⁷⁶ and then by many later ones.⁷⁷ In Manget there is a symbol, ascribed to the “philosopher Malus,”⁷⁸ which shows eyes in the stars, in the clouds, in the water and in the earth. The caption says: “This stone is under you, and near you, and above you, and around you.”⁷⁹ The eyes indicate that the lapis is in the process of evolution and grows from these ubiquitous eyes.⁸⁰ Ripley remarks that at the “desiccation of the sea” a substance is left over that “shines like a fish’s eye.”⁸¹ According to Dorn, this shining eye is the sun,⁸² which plunges the “centre of its eye” into the heart of man, “as if it were the secret of warmth and illumination.” The fish’s eye is always open, like the eye of God.⁸³ Something of the sort must have been in the mind of the alchemists, as is evidenced by the fact that Eirenaeus Orandus⁸⁴ used as a motto for his edition of Nicolas Flamel⁸⁵ the words of Zechariah 4 : 10: “And they shall rejoice and see the plummet [*lapidem stanneum*] in the hand of Zorobabel. These are the seven eyes of the Lord that run to and fro through the whole earth.” 3 : 9 is also relevant: “Upon one stone there are seven eyes” (DV). Firmicus Maternus may be referring to the latter passage when he says:⁸⁶ “The sign of one profane sacrament is *θεὸς ἐκ πέτρας* . . . [god from the rock].⁸⁷ The other is the stone which God promised to send to strengthen the foundations of the promised Jerusalem.⁸⁸ Christ is

signified to us by the venerable stone.”⁸⁹ Just as the “one stone” meant, for the alchemists, the lapis,⁹⁰ so the fishes’ eyes meant the seven eyes or the one eye of God, which is the sun.

[46] The Egyptians held that the eye is the seat of the soul; for example, Osiris is hidden in the eye of Horus.⁹¹ In alchemy the eye is the *coelum* (heaven): “It is like an eye and a seeing of the soul, whereby the state of the soul and her intentions are oftentimes made known to us, and through the rays and the glance [of heaven] all things take form.”⁹² In Steeb’s view, which agrees with that of Marsilius Ficinus,⁹³ the “coelum” is a “virtus,” indeed a “certain perfect, living being.”⁹⁴ Hence the alchemists called their *quinta essentia* “coelum.” The idea of a *virtus* is borne out by the description of the Holy Ghost as an eye,⁹⁵ a parallel to the invocation to Hermes: “Hermes . . . the eye of heaven.”⁹⁶ The eye of God emits power and light,⁹⁷ likewise the fishes’ eyes are tiny soul-sparks from which the shining figure of the filius is put together. They correspond to the particles of light imprisoned in the dark Physis, whose reconstitution was one of the chief aims of Gnosticism and Manichaeism. There is a similar nexus of ideas in the *siddhaśila* of Jainism: “The *loka* [world] is held in the middle of the *aloka* [void], in the form of the trunk of a man, with *siddhaśila* at the top, the place where the head should be. This *siddhaśila* is the abode of the omniscient souls, and may be called the spiritual eye of the universe.”⁹⁸

[47] The eye, like the sun, is a symbol as well as an allegory of consciousness.⁹⁹ In alchemy the *scintillulae* are put together to form the gold (Sol), in the Gnostic systems the atoms of light are reintegrated. Psychologically, this doctrine testifies to the personality- or ego-character of psychic complexes: just as the distinguishing mark of the ego-complex is consciousness, so it is possible that other, “unconscious” complexes may possess, as splinter psyches, a certain luminosity of their own.¹⁰⁰ From these atoms is produced the Monad (and the lapis in its various significations), in agreement with the teachings of Epicurus, who held that the concourse of atoms even produced God.¹⁰¹

[48] In his chapter on knowledge,¹⁰² Dorn uses the concept of the scintillae in moral form: “Let every man consider diligently in his heart what has been said above, and thus little by little he will come to see with his mental eyes a number of sparks shining day by day and more and more and growing into such a great light that thereafter all things needful to him will be made known.” This light is the “light of nature.” As Dorn says in his “Philosophia meditativa”:

What madness deludes you? For in you, and not proceeding from you, he wills all this to be found, which you seek outside you and not within yourselves. Such is the vice of the common man, to despise everything his own, and always to lust after the strange. . . . The life, the light of men, shineth in us, albeit dimly, and as though in

darkness.¹⁰³ It is not to be sought as proceeding from us, though it is in us and not of us,¹⁰⁴ but of Him to Whom it belongeth, Who hath deigned to make us his dwelling place. . . . He hath implanted that light in us that we may see in its light the light of Him who dwelleth in light inaccessible, and that we may excel his other creatures. In this especially we are made like unto Him, that He hath given us a spark of His light. Thus the truth is to be sought not in ourselves, but in the image of God¹⁰⁵ which is within us.¹⁰⁶

[49] In Dorn's view there is in man an "invisible sun," which he identifies with the Archeus.¹⁰⁷ This sun is identical with the "sun in the earth" (in agreement with the passage from "Novum lumen," supra, par. 43). The invisible sun enkindles an elemental fire which consumes man's substance¹⁰⁸ and reduces his body to the prima materia. It is also compared with "salt" or "natural balsam," "which has in itself corruption and protection against corruption." This paradoxical aspect is borne out by a curious saying: "Man is the bait, wherein the sparks struck by the flint, i.e., Mercurius, and by the steel,¹⁰⁹ i.e., heaven, seize upon the tinder and show their power."¹¹⁰ Mercurius as the "flint" is evidently thought of here in his feminine, chthonic form, and "heaven" stands for his masculine, spiritual quintessence. From the (nuptial) impact between the two the spark is struck, the Archeus, which is a "corrupter of the body," just as the "chemist" is a "corrupter of metals." This negative aspect of the scintilla is remarkable, but it agrees very well with the alchemists' less optimistic, medico-scientific view of the world.¹¹¹ For them the dark side of the world and of life had not been conquered, and this was the task they set themselves in their work. In their eyes the fire-point, the divine centre in man, was something dangerous, a powerful poison which required very careful handling if it was to be changed into the panacea. The process of individuation, likewise, has its own specific dangers. Dorn expresses the standpoint of the alchemists in his fine saying: "There is nothing in nature that does not contain as much evil as good."¹¹²

[50] In Khunrath¹¹³ the scintilla is the same as the elixir: "Now the elixir is well and truly called a shining splendour, or perfect scintilla of him who alone is the Mighty and Strong. . . . It is the true Aqua Permanens, eternally living."¹¹⁴ The "radical moisture" is "animated . . . by a fiery spark of the World-Soul, for the spirit of the Lord filleth the whole world."¹¹⁵ He also speaks of a plurality of sparks: "There are . . . fiery sparks of the World-Soul, that is of the light of nature, dispersed or scattered at God's command in and through the fabric of the great world into all fruits of the elements everywhere."¹¹⁶ The scintilla is associated with the doctrine of the Anthropos: "The Son of the Great World . . . is filled, animated and impregnated . . . with a fiery spark of Ruach Elohim, the spirit, breath, wind or blowing of the triune God, from . . . the Body, Spirit, and Soul of the World, or . . . Sulphur and Salt, Mercury and the universal fiery spark of the light of nature."¹¹⁷ The "fiery sparks of

the World-Soul” were already in the chaos, the prima materia, at the beginning of the world.¹¹⁸ Khunrath rises to Gnostic heights when he exclaims: “And our Catholick Mercury, by virtue of his universal fiery spark of the light of nature, is beyond doubt Proteus, the sea god of the ancient pagan sages, who hath the key to the sea and . . . power over all things: son of Oceanos and Tethys.”¹¹⁹ Many centuries lie between Monoïmos and Khunrath. The teachings of Monoïmos were completely unknown in the Middle Ages,¹²⁰ and yet Khunrath hit upon very similar thoughts which can hardly be ascribed to tradition.

3. THE ENIGMA OF BOLOGNA¹²¹

[51] These paradoxes culminate in an allegedly ancient “monument,” an epitaph said to have been found in Bologna, known as the Aelia-Laelia-Crispis Inscription. It was appropriated by the alchemists, who claimed, in the words of Michael Maier, that “it was set up by an artificer of old to the honour of God and in praise of the chymic art.”¹²² I will first give the text of this highly remarkable inscription:

D. M.

Aelia Laelia Crispis, nec mulier, nec androgyna, nec puella, nec iuvenis, nec anus, nec casta, nec meretrix, nec pudica, sed omnia.

Sublata neque fame, nec ferro, nec veneno, sed omnibus.—Nec coelo, nec aquis, nec terris, sed ubique iacet.

Lucius Agatho Priscius, nec maritus, nec amator, nec necessarius, neque moerens, neque gaudens, neque flens, hanc neque molem, nec pyramidem, nec sepulchrum, sed omnia.

Scit et nescit, (quid) cui posuerit.

(Hoc est sepulchrum, intus cadaver non habens.

Hoc est cadaver, sepulchrum extra non habens.

Sed cadaver idem est et sepulchrum

D. M.

Aelia Laelia Crispis, neither man nor woman, nor mongrel, nor maid, nor boy, nor crone, nor chaste, nor whore, nor virtuous, but all.

Carried away neither by hunger, nor by sword, nor by poison, but by all.—Neither in heaven, nor in earth, nor in water, but everywhere is her resting place.

Lucius Agatho Priscius, neither husband, nor lover, nor kinsman, neither mourning, nor rejoicing, nor weeping, (raised up) neither mound, nor pyramid, nor tomb, but all.

He knows and knows not (what)¹²³ he raised up to whom.

(This is a tomb that has no body in it.

This is a body that has no tomb round it.

But body and tomb are the same.)

sibi.)

[52] Let it be said at once: this epitaph is sheer nonsense, a joke,¹²⁴ but one that for centuries brilliantly fulfilled its function as a flypaper for every conceivable projection that buzzed in the human mind. It gave rise to a “cause célèbre,” a regular psychological “affair” that lasted for the greater part of two centuries and produced a spate of commentaries, finally coming to an inglorious end as one of the spurious texts of the *Corpus Inscriptionum Latinarum*, and thereafter passing into oblivion. The reason why I am digging up this curiosity again in the twentieth century is that it serves as a paradigm for that peculiar attitude of mind which made it possible for the men of the Middle Ages to write hundreds of treatises about something that did not exist and was therefore completely unknowable. The interesting thing is not this futile stalking-horse but the projections it aroused. There is revealed in them an extraordinary propensity to come out with the wildest fantasies and speculations—a psychic condition which is met with today, in a correspondingly erudite milieu, only as an isolated pathological phenomenon. In such cases one always finds that the unconscious is under some kind of pressure and is charged with highly affective contents. Sometimes a differential diagnosis as between tomfoolery and creativity is difficult to make, and it happens again and again that the two are confused.

[53] Such phenomena, whether historical or individual, cannot be explained by causality alone, but must also be considered from the point of view of what happened afterwards. Everything psychic is pregnant with the future. The sixteenth and seventeenth centuries were a time of transition from a world founded on metaphysics to an era of immanentist explanatory principles, the motto no longer being “omne animal a Deo” but “omne vivum ex ovo.” What was then brewing in the unconscious came to fruition in the tremendous development of the natural sciences, whose youngest sister is empirical psychology. Everything that was naively presumed to be a knowledge of transcendental and divine things, which human beings can never know with certainty, and everything that seemed to be irretrievably lost with the decline of the Middle Ages, rose up again with the discovery of the psyche. This premonition of future discoveries in the psychic sphere expressed itself in the phantasmagoric speculations of philosophers who, until then, had appeared to be the arch-pedlars of sterile verbiage.

[54] However nonsensical and insipid the Aelia-Laelia epitaph may look, it becomes significant when we regard it as a question which no less than two centuries have asked themselves: What is it that you do not understand and can only be expressed in unfathomable paradoxes?

[55] Naturally I do not lay this question at the door of that unknown humorist who perpetrated this “practical joke.” It existed long before him in alchemy. Nor would he

ever have dreamt that his joke would become a *cause célèbre*, or that it would lead his contemporaries and successors to question the nature of the psychic background—a question which, in the distant future, was to replace the certainties of revealed truth. He was only a *causa instrumentalis*, and his victims, as naïve and innocent as himself, made their first, involuntary steps as psychologists.

[56] It seems that the first report of the Aelia-Laelia inscription appeared in the treatise of a certain Marius L. Michael Angelus, of Venice, in the year 1548, and as early as 1683¹²⁵ Caesar Malvasius¹²⁶ had collected no less than forty-five¹²⁷ attempts at interpretation. In alchemical literature, the treatise of the physician Nicholas Barnaud, of Crest (Dauphiné), who lived in the second half of the sixteenth century, has been preserved. He gave an alchemical interpretation of the inscription in, it appears, 1597.¹²⁸ To begin with, I shall keep to his interpretation and that of the learned Michael Maier.

[57] Maier maintains that Aelia and Laelia represent two persons who are united in a single subject, named Crispis. Barnaud calls Aelia “solar,” presumably a derivation from *ἄελιος*, ‘sun.’ Laelia he interprets as “lunar.” Crispis (curly-haired), thinks Maier, comes from the curly hairs which are converted into a “very fine powder.”¹²⁹ Maier obviously has in mind the tincture, the arcane substance. Barnaud on the other hand says that “our materia” is “obvoluta, intricata,” therefore curly. These two persons, says Maier, *are* neither man nor woman, but they once *were*; similarly, the subject *was* in the beginning an hermaphrodite but no longer *is* so, because though the arcane substance is composed of sponsus and sponsa, and is thus as it were bisexual, as a third thing it is new and unique. Neither is the subject a maid or virgin, because she would be “intact.” In the opus, however, the virgin is called a mother although she has remained a virgin. Nor is the subject a boy, because the consummation of the coniunctio contradicts this, nor a crone,¹³⁰ because it still retains its full strength, nor a whore,¹³¹ because it has nothing to do with money, nor is it virtuous, because the virgin has cohabited with a man. The subject, he says, is a man and a woman, because they have completed the conjugal act, and an hermaphrodite because two bodies are united in one. It is a girl because it is not yet old, and a youth because it is in full possession of its powers. It is an old woman because it outlasts all time (i.e., is incorruptible). It is a whore because Beya¹³² prostituted herself to Gabritius before marriage. It is virtuous because the subsequent marriage gave absolution.¹³³

[58] “But all” is the real explanation of the enigma: all these designations refer to qualities of the *one thing*, and these were thought of as existing, but they are not entities in themselves. The same is true of the “Carried away” passage. The substance (uroboros) devours itself and thus suffers no hunger; it does not die by the sword but “slays itself with its own dart,” like the scorpion, which is another synonym for the

arcane substance.¹³⁴ It is not killed by poison because, as Barnaud says, it is a “good poison,” a panacea with which it brings itself to life again.¹³⁵ At the same time it is killed by all three: by hunger for itself, by the sword of Mercurius,¹³⁶ and by its own poison as snake or scorpion. “By all” again points to the arcane substance, as Barnaud says: “This is everything, it has within itself everything needful for its completion, everything can be predicated of it, and it of everything.”¹³⁷ “For the One is the whole, as the greatest Chymist saith: because [of the One] everything is, and if the whole had not the whole [in itself], the whole would not be.”¹³⁸

[59] That the arcanum is neither in heaven, nor on earth, nor in water is explained by Maier as a reference to the lapis, which “is found everywhere.” It is found in all the elements and not only in one of them. Here Barnaud is rather more subtle, for he equates heaven with the soul, earth with the body, and water with the spirit,¹³⁹ and thus arrives at the idea of the wholeness of a living organism. “Our material,” he says, “is simultaneously in heaven, on earth, and in the water, as if wholly in the whole and wholly in each part; so that those parts, though otherwise divisible, can no longer be separated from one another after they are made one: the whole Law and Prophets of alchemy seem to depend upon this.”¹⁴⁰

[60] Barnaud explains the name of him who raised the tomb, Lucius Agatho Priscius, as follows: Lucius is “lucid,” “endowed with the most lucid intellect”,¹⁴¹ Agatho is “good-natured” (Gk. *ἀγαθός*, ‘good’), “upright”; Priscius is “priscus” (pristine), “senior” (of ancient time), “reckoned among those upright Philosophers of old.” Maier maintains that these names “signified the chief requisite necessary for the fulfilment of the art.”

[61] “Neither husband nor lover” etc. means that Aelia Laelia drew him to herself “as the magnet the iron” and changed him into her “nebulous and black nature.” In the coniunctio he became her husband, and was “necessary”¹⁴² to the work. But Maier does not tell us to what extent he was *not* the husband etc. Barnaud says: “These are the chief causes, namely marriage, love, and consanguinity, which move a man to raise a column to the dead in the temple of memory, and none of these can here be considered.” Lucius had another purpose in mind: he wished the art, “which teaches everything, which is of all things the most precious and is concealed under this enigma, to appear upon the scene,” so that the investigators might “apply themselves to the art and true science, which surpasses all else in worth.” True, he makes an exception of “that holiest investigation [*agnitionem*] of God and Christ, whereon our salvation depends,”¹⁴³ a proviso we often meet in the texts.

[62] Maier ignores the negative in “neither mourning” etc. just as he did in “neither husband.” “In truth,” he says, “all this can as well be said positively of Lucius and not negatively.” On the other hand Barnaud remarks that it draws a picture of an

“intrepid philosopher, smooth and rounded.”¹⁴⁴ “Neither mound” etc. is again explained positively by Maier: Aelia is herself the mound, which endures as something firm and immovable. This is a reference to the incorruptibility which the opus sought to achieve. He says the pyramid signifies a “flame to eternal remembrance,” and this was Aelia herself. She was buried because Lucius “did everything he had to do in her name.” He takes her place, as it were, just as the *filius philosophorum* takes the place of the maternal *prima materia*, which till then had been the only effective arcane substance. Barnaud declares that though Lucius is a building, it does not fulfil its purpose (since it is a symbol). “But all” he refers to the “*Tabula smaragdina*,” because the epitaph as a whole points to the “*medicina summa et catholica*.”

[63] By “He knows and knows not” Maier thinks that Lucius knew it at first but no longer knew it afterwards, because he himself was ungratefully forgotten. It is not clear to me what this is intended to mean. Barnaud takes the monument as an allegory of the lapis, of which Lucius knew. He explains the “quid” as “quantum,” for Lucius probably did not know how much the stone weighed. Neither, of course, did he know for what future discoverer he had made the inscription. Barnaud’s explanation of “quid” is decidedly feeble. It would be more to the point to remember that the lapis is a fabulous entity of cosmic dimensions which surpasses human understanding. Consideration for the prestige of the alchemist may have prevented him from indulging this suggestive thought, for as an alchemist he could not very well admit that the artifex himself did not know what he was producing with his art. Had he been a modern psychologist he might have realized, with a little effort, that man’s totality, the self, is by definition¹⁴⁵ beyond the bounds of knowledge.

[64] With “This is a tomb” etc. we reach the first *positive* statement (barring the names) of the inscription. Maier’s opinion is that this has nothing to do with the tomb, which was no tomb, but that Aelia herself is meant. “For she herself is the container, converting into herself the contained; and thus she is a tomb or receptacle that has no body or content in it, as was said of Lot’s wife, who was her own tomb without a body, and a body without a tomb.”¹⁴⁶ He is evidently alluding to the second version of the “Arisleus Vision,” which says: “With so much love did Beya embrace Gabricus that she absorbed him wholly into her own nature and dissolved him into indivisible particles.”¹⁴⁷ Ripley says that at the death of the king all his limbs were torn into “atoms.”¹⁴⁸ This is the motif of dismemberment which is well known in alchemy.¹⁴⁹ The atoms are or become “white sparks” shining in the *terra foetida*.¹⁵⁰ They are also called the “fishes’ eyes.”¹⁵¹

[65] The explanation of Aelia herself as the “tomb” would naturally appeal to an alchemist, as this motif plays a considerable role in the literature. He called his vessel

a “tomb,”¹⁵² or, as in the *Rosarium*, a “red tumulus of rock.” The *Turba* says that a tomb must be dug for the dragon and the woman.¹⁵³ Interment is identical with the *nigredo*.¹⁵⁴ A Greek treatise describes the alchemical process as the “eight graves.”¹⁵⁵ Alexander found the “tomb of Hermes” when he discovered the secret of the art.¹⁵⁶ The “king” is buried in Saturn,¹⁵⁷ an analogy of the buried Osiris.¹⁵⁸ “While the *nigredo* of the burial endures, the woman rules,”¹⁵⁹ referring to the eclipse of the sun or the conjunction with the new moon.

[66] Thus, concludes Maier, tomb and body are the same. Barnaud says:

Bury, they say, each thing in the grave of the other. For when Sulphur, Sal and Aqua, or Sol, Luna and Mercurius, are in our material, they must be extracted, conjoined, buried and mortified, and turned into ashes. Thus it comes to pass that the nest of the birds becomes their grave, and conversely, the birds absorb the nest and unite themselves firmly with it. This comes to pass, I say, that soul, spirit and body, man and woman, active and passive, in one and the same subject, when placed in the vessel, heated with their own fire and sustained by the outward magistry of the art, may in due time escape [to freedom].¹⁶⁰

In these words the whole secret of the union of opposites is revealed, the *summa medicina*, which heals not only the body but the spirit. The word “escape” presupposes a state of imprisonment which is brought to an end by the union of opposites. The Hindus described this as *nirdvandva*, “free from the opposites,” a conception that, in this form at least, is alien to the Christian West because it relativizes the opposites and is intended to mitigate, or even heal, the irreconcilable conflict in the militant Christian attitude.¹⁶¹

[67] The interpretation here given of this enigmatic inscription should be taken for what it is: a testament to the alchemical way of thinking, which in this instance reveals more about itself than the epitaph would seem to warrant. But here we must tread carefully, for a good many other explanations are possible and have, in fact, been given.¹⁶² Above all, we have to consider the genuineness of the monument and its origin. None of the three authors so far mentioned actually saw the inscription. At the time of Malvasius, in 1683, there were apparently only two original transcripts of it, one in Bologna, the other in Milan. The one in Bologna ends with the words “cui posuerit.” The other, in Milan, adds “Hoc est sepulcrum” etc., and also a “quid” to the “Scit et nescit” of the Bologna version. Further, at the head of the Milan version there is an unelucidated “A.M.P.P.D.” in place of the “D.M.” (Diis Manibus) at the head of the other. Malvasius states that the monument was destroyed,¹⁶³ but he cites eyewitnesses who claimed to have seen the inscription and copied it, in particular Joannes Turrius of Bruges, who in January 1567 wrote a letter to Richardus Vitus (Richard White of Basingstoke) saying that he had “read the epitaph with his own

eyes” in the villa of Marcus Antonius de la Volta, “at the first milestone outside the Porta Mascharella,” Bologna. It was, as the eyewitness and commentator Joannes Casparius Gevartius reports, let into the wall joining the villa to the church. A few of the chiselled letters were “worn with time and corroded by a kind of rust,” which, he says, testified to its antiquity.¹⁶⁴ Malvasius endeavoured to prove its genuineness with the help of numerous other Roman epitaphs,¹⁶⁵ and advanced the following theory:

The inscription speaks of a daughter who is to be born to Laelius and who is destined for Agatho as a bride; but she is neither daughter nor bride, because, though conceived, she is not born, and not born, because she miscarried. Therefore Agatho, long chosen as the husband, disappointed in such great hope and betrayed by fate, rightly mocks himself, or pretends to mock himself, with this enigmatic inscription.¹⁶⁶

[68] Malvasius goes out of his way to be fair to the author of the epitaph. He calls Agatho “very skilled in this science and that”;¹⁶⁷ indeed he compares him, as being a “pre-eminent worshipper of the exceedingly auspicious number Three,”¹⁶⁸ to Hermes Trismegistus, and calls him “Thrice-Greatest,” an allusion to the concluding sentence of the “Tabula smaragdina.”¹⁶⁹ He does this because the inscription is divided into three parts,¹⁷⁰ to which he devotes a long dissertation. Here he gets into difficulties with the four elements and the four qualities, and, like all the alchemists, flounders about in his attempts to interpret the axiom of Maria.¹⁷¹ His idea of a miscarriage likewise comes within the sphere of alchemy (not to mention Gnosticism),¹⁷² for we read in the “Tractatus Aristotelis”:¹⁷³ “This serpent is impetuous, seeking the issue [death] before birth, wishing to lose the foetus and desiring a miscarriage.”¹⁷⁴ This refers, of course, to the Mercurial serpent or prima materia, which, the treatise maintains,¹⁷⁵ strives to pass quickly through the transformation process and to force the light-seeds of the *anima mundi* hidden within it into flower.

[69] Of the numerous interpretations made by the commentators I would like to mention one which seems to me worth rescuing from oblivion. This is the view expressed by the two friends of Malvasius (see n. 127), namely that Lucius Agatho was a real person, but that Aelia was a “fictitious woman,” or perhaps an “evil genius” in female form or an “ungodly spirit,” who in the opinion of one of them “flies about in the air,” and according to the other dwells in the earth and was “enclosed and affixed in a Junonian oak”; a “sylvan sprite, nymph, or hamadryad” who, when the oak was cut down and burnt, was obliged to seek another dwelling-place and so was found, “as if dead, in this sarcophagus.” Thus it was that she was “praised, described, and commemorated by the loved and loving Agatho.”¹⁷⁶

[70] According to this interpretation, Aelia is Agatho’s anima, projected into a “Junonian oak.” The oak is the tree of Jupiter, but it is also sacred to Juno.¹⁷⁷ In a metaphorical sense, as the feminine carrier of the anima projection, it is Jupiter’s

spouse and Agatho's beloved. Mythologically, nymphs, dryads, etc. are nature- and tree-numina, but psychologically they are anima projections,¹⁷⁸ so far as masculine statements are concerned.

[71] This interpretation can be found in the *Dendrologia* of one of the above-mentioned friends, Ulysses Aldrovandus:

I maintain that Aelia Laelia Crispis was one of the Hamadryads . . . who was tied to an oak in the neighbourhood of the city of Bologna, or shut up inside it. She appeared to him both in the tenderest and in the harshest form, and while for some two thousand years she had made a show of inconstant looks like a Proteus, she bedevilled the love of Lucius Agatho Priscius, then a citizen of Bologna, with anxious cares and sorrows, which assuredly were conjured up from chaos, or from what Plato calls Agathonian confusion.¹⁷⁹

One can hardly imagine a better description of the feminine archetype that typifies a man's unconscious than the figure of this "most hazardous beloved" (*incertissima amasia*), who pursues him like a teasing sprite amid the stillness of the "groves and springs." It is clear from the text of the inscription that it gives no ground for interpreting Aelia as a wood nymph. Aldrovandus tells us, however, that the Porta Mascharella in Bologna, near which the inscription was alleged to have been found, was called "Junonia" in Roman times, from which he concludes that Juno was obviously the spiritus loci. In support of his hypothesis that Aelia was a dryad, the learned humanist cites a Roman epitaph that was found in this region:

CLODIA PLAVTILLA
SIBI ET
QVERCONIO AGATHONI
MARITO OPTIMO

This epitaph does in fact occur in the *Corpus Inscriptionum Latinarum*,¹⁸⁰ but there the operative words are:

Q. VERCONIO AGATHONI

So Quintus Verconius must suffer his name to be changed to Querconius to suit the author.

[72] Aldrovandus explains the puzzling "hoc est sepulcrum" by saying that the oak supplied the necessary building material for the tomb! In substantiation of this he adds that there was in that locality a village with the name of "Casaralta,"¹⁸¹ which he analyses into *casa* (house), *ara* (altar), *alta* (high).

[73] As a further contribution he quotes an Italian poem about a great oak, "representing," he says, "the world of the elements, planted as it were in a heavenly

garden, where Sun and Moon are spread out like two flowers.”¹⁸² This allusion to the world-oak of Pherecydes leads us straight to the sun-and-moon tree of alchemy, to the red and white lily,¹⁸³ the red slave and the white woman (or white dove),¹⁸⁴ and the four-hued blossoms of the Tree in the Western Land.¹⁸⁵ Reusner’s *Pandora* portrays the tree as a torch-bearing woman, its top sprouting out of her crowned head.¹⁸⁶ Here the tree is personified by its feminine numen.

[74] Aldrovandus’s interpretation is essentially alchemical, as we can see from the treatise of Bernardus Trevisanus (Count of the March and Trevis, 1406–90).¹⁸⁷ He tells the parable¹⁸⁸ of an adept who finds a clear spring set about with the finest stone and “secured to the trunk of an oak-tree,” the whole surrounded by a wall. This is the King’s bath in which he seeks renewal. An old man, Hermes the mystagogue, explains how the King had this bath built: he placed in it an old oak, “cloven in the midst.”¹⁸⁹ The fountain was surrounded by a thick wall, and “first it was enclosed in hard, bright stone, then in a hollow oak.”¹⁹⁰

[75] The point of the parable, evidently, is to bring the oak into connection with the bath. Usually this is the nuptial bath of the royal pair. But here the Queen is missing, for it is only the King who is renewed. This unusual version¹⁹¹ of the motif suggest that the oak, as the feminine numen, has taken the place of the Queen. If this assumption is correct, it is particularly significant that the oak is first said to be “cloven” and later to be “hollow.” Now it seems to be the upright trunk or “stock” of the fountain,¹⁹² now a living tree casting a shadow, now the trough of the fountain. This ambiguity refers to the different aspects of the tree: as the “stock,” the oak is the source of the fountain, so to speak; as the trough it is the vessel, and as the protecting tree it is the mother.¹⁹³ From ancient times the tree was man’s birthplace;¹⁹⁴ it is therefore a source of life. The alchemists called both the vessel and the bath the “womb.”¹⁹⁵ The cloven or hollow trunk bears out this interpretation.¹⁹⁶ The King’s bath is itself a matrix, the tree serving as an attribute of the latter. Often, as in the Ripley Scrowle,¹⁹⁷ the tree stands in the nuptial bath, either as a pillar or directly as a tree in whose branches the numen appears in the shape of a mermaid (= anima) with a snake’s tail.¹⁹⁸ The analogy with the Tree of Knowledge is obvious.¹⁹⁹ The Dodonian oak was the abode of an oracle, the anima here playing the role of prophetess.²⁰⁰ The snake-like Mercurius appears as a tree numen in Grimm’s fairytale of “The Spirit in the Bottle.”²⁰¹

[76] The tree has a remarkable relation to the old man in the *Turba*:

Take that white tree and build around it a round dark house covered with dew, and place in it²⁰² a man of great age, a hundred years old, and close the house upon them and make it fast, so that no wind or dust can get in. Then leave them for one hundred and eighty days in their house. I say that that old man ceases not to eat of the fruits of

that tree until the completion of that number [180], and that old man becomes a youth. O what wondrous natures, which have changed the soul of that old man into a youthful body, and the father is become the son.²⁰³

[77] In this context we may perhaps cite a rather obscure text from Senior:²⁰⁴

Likewise Marchos²⁰⁵ said, It is time for this child to be born, and he related the following parable: We shall build him a house, which is called the grave of Sihoka. He [or Mariyah]²⁰⁶ said, There is an earth²⁰⁷ near us, which is called 'tormos,'²⁰⁸ where there are serpents [or witches]²⁰⁹ that eat the darkness²¹⁰ out of the burning stones, and on these stones they drink the blood of black goats.²¹¹ While they remain in the darkness, they conceive in the baths²¹² and give birth²¹³ in the air, and they stride on the sea,²¹⁴ and they inhabit vaults and sepulchres, and the serpent fights with the male, and the male continues forty nights in the grave, and forty nights in the little house.²¹⁵

[78] The Latin translation "serpent" for "witch" is connected with the widespread primitive idea that the spirits of the dead are snakes. This fits in with the offering of goat's blood, since the sacrifice of black animals to the chthonic numina was quite customary. In the Arabic text the "witches" refer to the female demons of the desert, the jinn. The grave-haunting numen is likewise a widespread idea that has lingered on into Christian legend. I have even met it in the dream of a twenty-two-year-old theological student, and I give this dream again so that those of my readers who are familiar with the language of dreams will be able to see the full scope of the problem we are discussing.²¹⁶

[79] *The dreamer was standing in the presence of a handsome old man dressed entirely in black. He knew it was the white magician. This personage had just addressed him at considerable length, but the dreamer could no longer remember what it was about. He recalled only the closing words: "And for this we need the help of the black magician." At that moment the door opened and in came another old man exactly like the first, except that he was dressed in white. He said to the white magician, "I need your advice," but threw a sidelong, questioning glance at the dreamer, whereupon the white magician answered: "You can speak freely, he is an innocent." The white-clad black magician then related his story. He had come from a distant land where something extraordinary had happened. The country was ruled by an old king who felt his death near and had therefore sought out a worthy tomb for himself. There were in that land a great number of tombs from ancient times, and the king had chosen the finest for himself. According to legend, it was the tomb of a virgin who had died long ago. The king caused it to be opened, in order to get it ready for use. But when the bones were exposed to the light of day they suddenly took on life and changed into a black horse, which galloped away into the desert. The*

black magician had heard this story and immediately set forth in pursuit of the horse. After a journey of many days through the desert he reached the grasslands on the other side. There he met the horse grazing, and there also he came upon the find on account of which he now needed the advice of the white magician. For he had found the lost keys of paradise, and he did not know what to do with them. Here the dream ended.

[80] The tomb was obviously haunted by the spirit of the virgin, who played the part of the king's anima. Like the nymph in Malvasius, she was forced to leave her old dwelling-place. Her chthonic and sombre nature is shown by her transformation into a black horse, a kind of demon of the desert. We have here the widespread conception of the anima as horsewoman and nightmare, a real "ungodly spirit," and at the same time the well-known fairytale motif of the aging king whose vitality is at an end. As a *sous-entendu* a magical, life-renewing marriage with the nymph seems to be planned (somewhat in the manner of the immortal Merlin's marriage with his fairy), for in paradise, the garden of love with the apple-tree, all opposites are united. As Isaiah says:

He will make her wilderness like Eden, and her desert like the garden of the Lord [51 : 3].

There the wolf shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them. And the cow and the bear shall feed; their young ones shall lie down together; and the lion shall eat straw like the ox. And the suckling child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice's den [11 : 6f.].

There white and black come together in kingly marriage, "as a bridegroom decketh himself with ornaments, and as a bride adorneth herself with her jewels" (61 : 10). The two antithetical magicians are obviously making ready the work of union, and what this must mean for a young theologian can be conceived only as that colossal problem whose solution was considered by the more speculative alchemists to be their chief task. Therefore the Senior text continues:

He [the male] will be roused,²¹⁷ like the white doves,²¹⁸ and his step shall rejoice, and he shall cast his seed upon the marble²¹⁹ into the image [or spirit that dwells in the marble], and the ravens will come flying, and will fall upon it and gather it up. Then they will fly to the tops of the mountains, whither none can climb, and they will become white,²²⁰ and multiply. . . . Likewise no man hath known this, unless he himself hath conceived it in his head.

[81] This text describes the resurrection after death, and if we are not deceived, it takes the form of a coniunctio, a coming together of the white (dove) and the black (raven), the latter being the spirit that dwells in the tombstone (see n. 219). Since, as often happens, theriomorphic symbols (snakes and doves) are used for the male and female elements, this points to the union of unconscious factors.²²¹ The ravens that gather up the seed (or the product of the union?) and then fly with it to the tops of the mountains²²² represent the helpful spirits or familiars who complete the work when the skill of the artifex has failed him. They are not, as in *Faust*, beautiful angels but dark messengers of heaven, who at this point themselves become white.²²³ Even in *Faust* the angels are not entirely innocent of the arts of seduction,²²⁴ and the angels' inability to sin is, as we know, to be taken so relatively that women have to keep their heads covered in church on account of the moral frailty of these winged messengers, which has more than once proved disastrous in ancient times (e.g., Genesis 6 : 2).

[82] Similar motifs occur in modern dreams, and can be found in persons who have never been remotely concerned with alchemy. For instance, a patient had the following dream: "*A large pile of wood was burning at the foot of a high wall of rock; the flames shot up with clouds of smoke. It was a lonely and romantic spot. High in the air, a flock of great black birds circled round the fire. From time to time one of the birds plunged straight into the blaze and was joyfully burnt to death, turning white in the process.*"²²⁵ As the dreamer himself remarked, the dream had a numinous quality, and this is quite understandable in view of its meaning: it repeats the miracle of the phoenix, of transformation and rebirth (the transformation of the *nigredo* into the *albedo*, of unconsciousness into "illumination") as described in the verses from the *Rosarium philosophorum*:

Two eagles fly up with feathers aflame,
Naked they fall to earth again.
Yet in full feather they rise up soon . . .²²⁶

[83] After this digression on transformation and resurrection, let us turn back to the motif of the oak-tree, whose discussion was started by the commentators on the Enigma.

[84] We come across the oak in yet another alchemical treatise, the "Introitus apertus" of Philaletha.²²⁷ There he says: "Learn, then, who are the companions of Cadmus; who is the serpent that devoured them; and what the hollow oak to which Cadmus spitted the serpent."

[85] In order to clarify this passage, I must go back to the myth of Cadmus, a kinsman of the Pelasgian Hermes Ithyphallikos.²²⁸ The hero set out to find his lost sister Europa, whom Zeus had carried away with him after turning himself into a bull.

Cadmus, however, received the divine command to give up the search, and instead to follow a cow, with moon markings on both her sides, until she lay down, and there to found the city of Thebes. At the same time he was promised Harmonia, the *daughter* of Ares and Aphrodite as a wife. When the cow had lain down, he wanted to sacrifice her, and he sent his companions to fetch water. They found it in a grove sacred to Ares, which was guarded by a dragon, the *son* of Ares. The dragon killed most of the companions, and Cadmus, enraged, slew it and sowed the dragon's teeth.

Immediately armed men sprang up, who fell to fighting among themselves until only five remained. Cadmus was then given Harmonia to wife. The spitting of the snake (dragon) to the oak seems to be an addition of Philaetha's. It represents the banishment of the dangerous daemon into the oak,²²⁹ a point made not only by the commentary on the Aelia inscription in Malvasius but by the fairytale of "The Spirit in the Bottle."

[86] The psychological meaning of the myth is clear: Cadmus has lost his sister-anima because she has flown with the supreme deity into the realm of the suprahuman and the subhuman, the unconscious. At the divine command he is not to regress to the incest situation, and for this reason he is promised a wife. His sister-anima, acting as a psychopomp in the shape of a cow (to correspond with the bull of Zeus), leads him to his destiny as a dragon-slayer, for the transition from the brother-sister relationship to an exogamous one is not so simple. But when he succeeds in this, he wins "Harmonia," who is the *dragon's sister*. The dragon is obviously "disharmony," as the armed men sprung from its teeth prove. These kill one another off as though exemplifying the maxim of Pseudo-Democritus, "nature subdues nature," which is nothing less than the *uroboros* conceptually formulated. Cadmus holds fast to Harmonia while the opposites in projected form slaughter one another. This image is a representation of the way in which a split-off conflict behaves: it is its own battleground. By and large this is also true of yang and yin in classical Chinese philosophy. Hand in hand with this self-contained conflict there goes an unconsciousness of the moral problem of opposites. Only with Christianity did the "metaphysical" opposites begin to percolate into man's consciousness, and then in the form of an almost dualistic opposition that reached its zenith in Manichaeism. This heresy forced the Church to take an important step: the formulation of the doctrine of the *privatio boni*, by means of which she established the identity of "good" and "being." Evil as a *μη ὄν* (something that does not exist) was laid at man's door—*omne bonum a Deo, omne malum ab homine*.²³⁰ This idea together with that of original sin formed the foundation of a moral consciousness which was a novel development in human history: one half of the polarity, till then essentially metaphysical, was reduced to a psychic factor, which meant that the devil had lost the game if he could not pick on some moral weakness in man. Good, however, remained a metaphysical substance

that originated with God and not with man. Original sin had corrupted a creature originally good. As interpreted by dogma, therefore, good is still wholly projected but evil only partly so, since the passions of men are its main source. Alchemical speculation continued this process of integrating metaphysical projections in so far as it began to dawn on the adept that both opposites were of a psychic nature. They expressed themselves first of all in the duplicity of Mercurius, which, however, was cancelled out in the unity of the stone. The lapis was—*Deo concedente*—made by the adept and was recognized as an equivalent of the *homo totus*. This development was extremely important, because it was an attempt to integrate opposites that were previously projected.

[87] Cadmus is interpreted alchemically as Mercurius in his masculine form (Sol). He seeks his feminine counterpart, the quicksilver, which is his sister (Luna), but she meets him in the shape of the Mercurial serpent, which he must first kill because it contains the furious conflict of warring elements (the chaos). From this arises the harmony of the elements, and the coniunctio can now take place. The spoils of the struggle, in this case the dragon's skin, are, according to ancient custom, offered to the hollow oak, the mother, who is the representative of the sacred grove and the fount. In other words, it is offered up to the unconscious as the source of life, which produces harmony out of disharmony.²³¹ Out of the hostility of the elements there arises the bond of friendship between them, sealed in the stone, and this bond guarantees the indissolubility and incorruptibility of the lapis. This piece of alchemical logic is borne out by the fact that, according to the myth, Cadmus and Harmonia *turned to stone* (evidently because of an *embarras de richesse*: perfect harmony is a dead end). In another version, they turn into *snakes*, “and even into a basilisk,” Dom Pernety²³² remarks, “for the end-product of the work, incorporated with its like, acquires the power ascribed to the basilisk, so the philosophers say.” For this fanciful author Harmonia is naturally the prima materia, and the marriage of Cadmus,²³³ which took place with all the gods assisting, is the coniunctio of Sol and Luna, followed by the production of the tincture or lapis. Pernety's interpretation of Harmonia would be correct only if she were still allied with the dragon. But since she lost the reptile, she had logically to change herself and her husband into snakes.

[88] Thus Malvasius, as well as the more interesting of the commentators, remain within the magic circle of alchemical mythologems. This is not surprising, since Hermetic philosophy, in the form it then took, was the only intellectual instrument that could help fill the dark gaps in the continuity of understanding. The Enigma of Bologna and its commentaries are, in fact, a perfect paradigm of the method of alchemy in general. It had exactly the same effect as the unintelligibility of chemical processes: the philosopher stared at the paradoxes of the Aelia inscription, just as he stared at the retort, until the archetypal structures of the collective unconscious began

to illuminate the darkness.²³⁴ And, unless we are completely deluded, the inscription itself seems to be a fantasy sprung from that same paradoxical *massa confusa* of the collective unconscious. The contradictoriness of the unconscious is resolved by the archetype of the nuptial coniunctio, by which the chaos becomes ordered. Any attempt to determine the nature of the unconscious state runs up against the same difficulties as atomic physics: the very act of observation alters the object observed. Consequently, there is at present no way of objectively determining the real nature of the unconscious.

[89] If we are not, as Malvasius was, convinced of the antiquity of the Aelia inscription, we must look round in the medieval literature for possible sources or at least analogies. Here the motif of the triple prediction, or triple cause, of death might put us on the right trail.²³⁵ This motif occurs in the “Vita Merlini” in the old French romance *Merlin*, as well as in its later imitations in the Spanish and English literature of the fifteenth century. But the most important item, it seems to me, is the so-called “Epigram of the Hermaphrodite,” attributed to Mathieu de Vendôme (ca. 1150):

When my pregnant mother bore me in her womb,
they said she asked the gods what she would bear.
A boy, said Phoebus, a girl, said Mars, neither, said Juno.
And when I was born, I was a hermaphrodite.
Asked how I was to meet my end, the goddess replied: By arms;
Mars: On the cross; Phoebus: By water. All were right.
A tree overshadowed the waters, I climbed it;
the sword I had with me slipped, and I with it.
My foot caught in the branches, my head hung down in the stream;
And I—male, female, and neither—suffered by water, weapon, and cross.²³⁶

[90] Another parallel, but dating from late antiquity, is mentioned by Maier. It is one of the “Platonic Riddles” and runs: “A man that was not a man, seeing yet not seeing, in a tree that was not a tree, smote but did not smite with a stone that was not a stone a bird that was not a bird, sitting yet not sitting.”²³⁷ The solution is: A one-eyed eunuch grazed with a pumice-stone a bat hanging from a bush.²³⁸ This joke was, of course, too obvious to lend itself to alchemical evaluation. Similarly, the Epigram of the Hermaphrodite was not, so far as I know, taken up by the alchemists, though it might have been a more suitable subject for exegesis. This kind of jest probably underlies the Aelia inscription. The seriousness with which the alchemists took it, however, is justified not only because there is something serious in every joke, but because paradox is the natural medium for expressing transconscious facts. Hindu philosophy, which likewise struggled to formulate transcendental concepts, often comes very near to the paradoxes so beloved of the alchemists, as the following

example shows: “I am not a man, neither am I a god, a goblin, a Brahmin, a warrior, a merchant, a shudra, nor disciple of a Brahmin, nor householder, nor hermit of the forest, nor yet mendicant pilgrim: Awakener to Myself is my name.”²³⁹

[91] Another source that needs seriously considering is mentioned by Richard White of Basingstoke.²⁴⁰ He maintains that Aelia Laelia is “Niobe transformed,” and he supports this interpretation by referring to an epigram attributed to Agathias Scholasticus, a Byzantine historian:²⁴¹

This tomb has no body in it.

This body has no tomb round it.

But it is itself body and tomb.²⁴²

White, convinced that the monument was genuine, thinks that Agathias wrote his epigram in imitation of it, whereas in fact the epigram must be its predecessor or at least have derived from the same source on which the unknown author of the Aelia inscription drew.

[92] Niobe seems to have an anima-character for Richard White, for, continuing his interpretation, he takes Aelia (or Haelia, as he calls her) to be the soul, saying with Virgil: “Fiery is her strength, and heavenly her origin. From this Haelia takes her name.”²⁴³ She was called Laelia, he says, on account of Luna, who exerts a hidden influence on the souls of men. The human soul is “androgynous,” “because a girl has a masculine and a man a feminine soul.”²⁴⁴ To this remarkable psychological insight he adds another: the soul is also called an “old woman,” because the spirit of young people is weak. This aptly expresses the psychological fact that, in people with an all too youthful attitude of consciousness, the anima is often represented in dreams as an old woman.

[93] It is clear that Richard White points even more plainly to the anima in the psychological sense than Aldrovandus. But whereas the latter stressed her mythological aspect, White stresses her philosophical aspect. In his letter of February 1567 to Johannes Turrius, he writes that the soul is an idea “of such great power that she creates the forms and things themselves,” also “she has within herself the ‘selfness’ of all mankind.”²⁴⁵ She transcends all individual differences. “Thus, if the soul would know herself, she must contemplate herself, and gaze into that place where the power of the soul, Wisdom, dwells.”²⁴⁶ This is just what happened to the interpreters of the Bolognese inscription: in the darkness of the enigma, the psyche gazed at herself and perceived the wisdom immanent in her structure—the wisdom that is her strength. And, he adds, “man is nothing other than his soul.”²⁴⁷ It should be noted that he describes this soul quite differently from the way it would be described by a biological or personalistic psychology today: it is devoid of all individual

differences, it contains the “selfness of all mankind,” it even creates the objective world by the power of its wisdom. This description is far better suited, one would think, to the *anima mundi* than to the *anima vagula* of the personal man, unless he means that enigmatic background of everything psychic, the collective unconscious. White comes to the conclusion that the inscription means nothing less than the soul, the form imprinted on and bound to matter.²⁴⁸ This, again, is what happened to the interpreters: they formulated the baffling inscription in accordance with the imprint set upon it by the psyche.

[94] White’s interpretation is not only original but profoundly psychological. His deserts are certainly not diminished by his having, so it would seem, arrived at his deeper view only after he received Turrius’s letter of January 1567. Turrius was of the opinion that “Aelia and Laelia” stood for “form and matter.” He interprets “neither in heaven, nor on earth, nor in water” as follows: “Since the *prima materia* is *nothing*, but is conceived solely by the imagination, it cannot be contained in any of these places.”²⁴⁹ It is not an object of the senses, but is “conceived solely by the intellect,” therefore we cannot know how this material is constituted. It is evident that Turrius’s interpretation likewise describes the projection of the psyche and its contents, with the result that his secondary explanations are a *petitio principii*.

[95] As is clear from the title of his book, *Allegoria peripatetica de generatione, amicitia, et privatione in Aristotelicum Aenigma Elia Lelia Crispis*,²⁵⁰ Fortunius Licetus reads the whole philosophy of Aristotle into the monument. He mentions the report that it was “sculptured in stone, formerly set in a high position on the walls of St. Peter’s,” but he does not say that he saw it with his own eyes, for in his day it was no longer in existence, if ever it existed at all. He thinks the inscription contains the summation of a serious philosophical theory about the origin of mundane things, a theory that was “scientifico-moralis” or “ethico-physica.” “It is the author’s intention to combine in a way to be marvelled at the attributes of generation, friendship, and privation.”²⁵¹ That is why, he says, the monument is a true treasure-house.

[96] After reviewing a number of earlier authors who had devoted themselves to the same theme, Licetus mentions the work of Joannes Casparius Gevartius,²⁵² who propounded the theory that the inscription described the nature of Love. This author cites the comic poet Alexis in Athenaeus:

I think that the painters, or, to put it more concisely, all who make images of this god, are unacquainted with Eros. For he is neither female nor male; again, neither god nor man, neither stupid nor yet wise, but rather composed of elements from everywhere, and bearing many qualities under a single form. For his audacity is that of a man, his timidity a woman’s; his folly argues madness, his reasoning good sense; his

impetuosity is that of an animal, his persistence that of adamant, his love of honour that of a god.²⁵³

[97] Unfortunately I was unable to get hold of the original treatise of Gevartius. But there is a later author, Caietanus Felix Veranius, who takes up the Eros theory apparently as his own discovery in his book, *Pantheon argenteae Elocutionis*.²⁵⁴ He mentions a number of earlier commentators, amongst whom Gevartius is conspicuously absent. As Gevartius is named in the earlier lists, it is scarcely likely that Veranius was unacquainted with him. The suspicion of plagiarism is almost unescapable. Veranius defends his thesis with a good deal of skill, though considering the undeniable paradoxicality of Eros the task he sets himself is not too difficult. I will mention only one of his arguments, concerning the end of the inscription. “The inscription ends,” he says, “with ‘scit et nescit quid cui posuerit,’ because though the author of this enigmatic inscription knows that he has dedicated it to Love, he does not know what Love really is, since it is expressed by so many contradictions and riddles. Therefore he knows and does not know know to whom he dedicated it.”

[98] I mention the interpretation of Veranius mainly because it is the forerunner of a theory which was very popular at the end of the nineteenth and the beginning of the twentieth century, namely Freud’s sexual theory of the unconscious. Veranius even goes so far as to conjecture that Aelia Laelia had a special talent for eroticism (therein anticipating Aldrovandus). He says: “Laelia was a whore; Crispis comes from ‘curly-haired,’ because curly-haired people are frailer than others and more prone to the allurements of Love.” Here he quotes Martial: “Who’s that curly-headed fellow who’s always running round with your wife, Marianus? Who *is* that curly-headed fellow?”²⁵⁵

[99] Now it is, as a matter of fact, true that apart from the personal striving for power, or *superbia*, love, in the sense of *concupiscentia*, is the dynamism that most infallibly brings the unconscious to light. And if our author was of the type whose besetting sin is concupiscence, he would never dream that there is any other power in heaven or earth that could be the source of his conflicts and confusions. Accordingly, he will cling to his prejudice as if it were a universal theory, and the more wrong he is the more fanatically he will be convinced of its truth. But what can love mean to a man with a hunger for power! That is why we always find two main causes of psychic catastrophes: on the one hand a disappointment in love and on the other hand a thwarting of the striving for power.

[100] The last interpretation I shall mention is one of the most recent. It dates from 1727, and though its argument is the stupidest its content is the most significant. How it can be both is explained by the fact that the discovery of significance is not always coupled with intelligence. The spirit bloweth where it listeth. . . . Despite the

inadequacy of his equipment, the author, C. Schwartz,²⁵⁶ managed to get hold of a brilliant idea whose import, however, entirely escaped him. His view was that Lucius Agatho Priscius meant his monument to be understood as the *Church*. Schwartz therefore regards the inscription as being not of classical but of Christian origin, and in this, as compared with the others, he is undoubtedly right. His arguments, however, are threadbare—to take but one example, he tries to twist “D.M.” into “Deo Magno.” Although his interpretation is not in the least convincing, it nevertheless remains a significant fact that the symbol of the Church in part expresses and in part substitutes for all the secrets of the soul which the humanistic philosophers projected into the Aelia inscription. In order not to repeat myself, I must refer the reader to what I said about the protective function of the Church in “Psychology and Religion.”²⁵⁷

[101] The interpretive projections we have been examining are, with the exception of the last, identical with the psychic contents that dropped out of their dogmatic framework at the time of the Renaissance and the Great Schism, and since then have continued in a state of secularization where they were at the mercy of the “immanentist” principle of explanation, that is, a naturalistic and personalistic interpretation. The discovery of the collective unconscious did something to alter this situation, for, within the limits of psychic experience, the collective unconscious takes the place of the Platonic realm of eternal ideas. Instead of these models giving form to created things, the collective unconscious, through its archetypes, provides the *a priori* condition for the assignment of meaning.

[102] In conclusion, I would like to mention one more document that seems relevant to our context, and that is the anecdote about Meister Eckhart’s “daughter”:

A daughter came to the Dominican convent asking for Meister Eckhart. The porter said, Who shall I tell him? She answered, I do not know. Why do you not know? he inquired. Because, she said, I am neither virgin nor spouse, nor man nor wife nor widow nor lady nor lord nor wench nor thrall. The porter went off to Meister Eckhart. Do come out, he said, to the strangest wight that ever I heard, and let me come too and put your head out and say, Who is asking for me? He did so. She said to him what she had said to the porter. Quoth he, My child, thou hast a shrewd and ready tongue, I prithee now thy meaning? An I were a virgin, she replied, I were in my first innocence; spouse, I were bearing the eternal word within my soul unceasingly; were I a man I should grapple with my faults; wife, should be faithful to my husband. Were I a widow I should be ever yearning for my one and only love; as lady I should render fearful homage; as wench I should be living in meek servitude to God and to all creatures; and as thrall I should be working hard, doing my best tamely to serve my master. Of all these things I am no single one, and am the one thing and the other

running thither. The Master went away and told his pupils, I have been listening to the most perfect person I ween I ever met.²⁵⁸

[103] This story is more than two hundred years older than the earliest reference to the Aelia inscription, and therefore, if there is any literary influence at all, it could at most be derived from Mathieu de Vendôme, which seems to me just as unlikely as that Meister Eckhart's vision of the "naked boy" was derived from the classical *puer aeternus*. In both cases we are confronted with a significant archetype, in the first that of the divine maiden (anima), in the second that of the divine child (the self).²⁵⁹ As we know, these primordial images can rise up anywhere at any time quite spontaneously, without the least evidence of any external tradition. This story could just as well have been a visionary rumour as a fantasy of Meister Eckhart or of one of his pupils. It is, however, rather too peculiar to have been a real happening. But occasionally reality is quite as archetypal as human fantasy, and sometimes the soul seems to "imagine things outside the body,"²⁶⁰ where they fall to playing, as they do in our dreams.

III

THE PERSONIFICATION OF THE OPPOSITES

1. INTRODUCTION

[104] The alchemist's endeavours to unite the opposites culminate in the "chymical marriage," the supreme act of union in which the work reaches its consummation. After the hostility of the four elements has been overcome, there still remains the last and most formidable opposition, which the alchemist expressed very aptly as the relationship between male and female. We are inclined to think of this primarily as the power of love, of passion, which drives the two opposite poles together, forgetting that such a vehement attraction is needed only when an equally strong resistance keeps them apart. Although enmity was put only between the serpent and the woman (Genesis 3 : 15), this curse nevertheless fell upon the relationship of the sexes in general. Eve was told: "Thy desire shall be to thy husband, and he shall rule over thee." And Adam was told: "Cursed is the ground for thy sake . . . because thou hast hearkened unto the voice of thy wife" (3 : 16f.). Primal guilt lies between them, an *interrupted state of enmity*, and this appears unreasonable only to our rational mind but not to our psychic nature. Our reason is often influenced far too much by purely physical considerations, so that the union of the sexes seems to it the only sensible thing and the urge for union the most sensible instinct of all. But if we conceive of nature in the higher sense as the totality of all phenomena, then the physical is only one of her aspects, the other is pneumatic or spiritual. The first has always been regarded as feminine, the second as masculine. The goal of the one is union, the goal of the other is discrimination. Because it overvalues the physical, our contemporary reason lacks spiritual orientation, that is, *pneuma*. The alchemists seem to have had an inkling of this, for how otherwise could they have come upon that strange myth of the country of the King of the Sea, where only like pairs with like and the land is unfruitful?¹ It was obviously a realm of innocent friendship, a kind of paradise or golden age, to which the "Philosophers," the representatives of the physical, felt obliged to put an end with their good advice. But what happened was not by any means a natural union of the sexes; on the contrary it was a "royal" incest, a sinful deed that immediately led to imprisonment and death and only afterwards restored the fertility of the country. As a parable the myth is certainly ambiguous; like alchemy in general, it can be understood spiritually as well as physically, "tam moralis quam chymica."² The physical goal of alchemy was gold, the *panacea*, the

elixir of life; the spiritual one was the rebirth of the (spiritual) light from the darkness of Physis: healing self-knowledge and the deliverance of the pneumatic body from the corruption of the flesh.

[105] A subtle feature of the “*Visio Arislei*” is that the very one who is meditating a pairing of the sexes is king of the land of innocence. Thus the *rex marinus* says: “Truly I have a son and a daughter, and therefore I am king over my subjects, because they possess nothing of these things. Yet I have borne a son and a daughter in my brain.”³ Hence the king is a potential traitor to the paradisaic state of innocence because he can generate “in his head,” and he is king precisely because he is capable of this sin against the previous state of innocence. Since he can be different from them he is *more* than any of his subjects and therefore rightly their king, although, from the physical standpoint, he is counted a bad ruler.⁴

[106] Here again we see the contrast between alchemy and the prevailing Christian ideal of attempting to restore the original state of innocence by monasticism and, later, by the celibacy of the priesthood. The conflict between worldliness and spirituality, latent in the love-myth of Mother and Son, was elevated by Christianity to the mystic marriage of sponsus (Christ) and sponsa (Church), whereas the alchemists transposed it to the physical plane as the coniunctio of Sol and Luna. The Christian solution of the conflict is purely pneumatic, the physical relations of the sexes being turned into an allegory or—quite illegitimately—into a sin that perpetuates and even intensifies the original one in the Garden. Alchemy, on the other hand, exalted the most heinous transgression of the law, namely incest, into a symbol of the union of opposites, hoping in this way to bring back the golden age. For both trends the solution lay in extrapolating the union of sexes into another medium: the one projected it into the spirit, the other into matter. But neither of them located the problem in the place where it arose—the soul of man.

[107] No doubt it would be tempting to assume that it was more convenient to shift such a supremely difficult question on to another plane and then represent it as having been solved. But this explanation is too facile, and is psychologically false because it supposes that the problem was asked consciously, found to be painful, and consequently moved on to another plane. This stratagem accords with our modern way of thinking but not with the spirit of the past, and there are no historical proofs of any such neurotic operation. Rather does all the evidence suggest that the problem has always seemed to lie outside the psyche as known to us. Incest was the hierogamos of the gods, the mystic prerogative of kings, a priestly rite, etc. In all these cases we are dealing with an archetype of the collective unconscious which, as consciousness increased, exerted an ever greater influence on conscious life. It certainly seems today as if the ecclesiastical allegories of the bridegroom and bride,

not to mention the now completely obsolete alchemical coniunctio, had become so faded that one meets with incest only in criminology and the psychopathology of sex. Freud's discovery of the Oedipus complex, a special instance of the incest problem in general, and its universal incidence have, however, reactivated this ancient problem, though mostly only for doctors interested in psychology. Even though laymen know very little about certain medical anomalies or have a wrong idea of them, this does not alter the facts any more than does the layman's ignorance of the actual percentage of cases of tuberculosis or psychosis.

[108] Today the medical man knows that the incest problem is practically universal and that it immediately comes to the surface when the customary illusions are cleared away from the foreground. But mostly he knows only its pathological side and leaves it steeped in the odium of its name, without learning the lesson of history that the painful secret of the consulting-room is merely the embryonic form of a perennial problem which, in the suprapersonal sphere of ecclesiastical allegory and in the early phases of natural science, created a symbolism of the utmost importance. Generally he sees only the "materia vilis et in via eiecta" from the pathological side and has no idea of its spiritual implications. If he saw this, he could also perceive how the spirit that has disappeared returns in each of us in unseemly, indeed reprehensible guise, and in certain predisposed cases causes endless confusion and destruction in great things as in small. The psychopathological problem of incest is the aberrant, natural form of the union of opposites, a union which has either never been made conscious at all as a psychic task or, if it was conscious, has once more disappeared from view.

[109] The persons who enact the drama of this problem are man and woman, in alchemy King and Queen, Sol and Luna. In what follows I shall give an account of the way in which alchemy describes the symbolic protagonists of the supreme opposition.

2. SOL

[110] In alchemy, the sun signifies first of all gold, whose sign it shares. But just as the "philosophical" gold is not the "common" gold,⁵ so the sun is neither just the metallic gold⁶ nor the heavenly orb.⁷ Sometimes the sun is an active substance hidden in the gold and is extracted as the *tinctura rubea* (red tincture). Sometimes, as the heavenly body, it is the possessor of magically effective and transformative rays. As gold and a heavenly body⁸ it contains an active sulphur of a red colour, hot and dry.⁹ Because of this red sulphur the alchemical sun, like the corresponding gold, is red.¹⁰ As every alchemist knew, gold owes its red colour to the admixture of Cu (copper), which he interpreted as Kypris (the Cyprian, Venus), mentioned in Greek alchemy as the

transformative substance.¹¹ Redness, heat, and dryness are the classical qualities of the Egyptian Set (Gk. Typhon), the evil principle which, like the alchemical sulphur, is closely connected with the devil. And just as Typhon has his kingdom in the forbidden sea, so the sun, as *sol centralis*, has its sea, its “crude perceptible water,” and as *sol coelestis* its “subtle imperceptible water.” This sea water (*aqua pontica*) is extracted from sun and moon. Unlike the Typhonian sea, the life-giving power of this water is praised, though this does not mean that it is invariably good.¹² It is the equivalent of the two-faced Mercurius, whose poisonous nature is often mentioned. The Typhonian aspect of the active sun-substance, of the red sulphur, of the water “that does not make the hands wet,”¹³ and of the “sea water” should not be left out of account. The author of the “*Novum lumen chemicum*” cannot suppress a reference to the latter’s paradoxical nature: “Do not be disturbed because you sometimes find contradictions in my treatises, after the custom of the philosophers; these are necessary, if you understand that no rose is found without thorns.”¹⁴

[111] The active sun-substance also has favourable effects. As the so-called “balsam” it drips from the sun and produces lemons, oranges, wine, and, in the mineral kingdom, gold.¹⁵ In man the balsam forms the “radical moisture, from the sphere of the supracelestial waters”; it is the “shining” or “lucent body” which “from man’s birth enkindles the inner warmth, and from which come all the motions of the will and the principle of all appetition.” It is a “vital spirit,” and it has “its seat in the brain and its governance in the heart.”¹⁶

[112] In the “*Liber Platonis Quartorum*,” a Sabaeen treatise, the *spiritus animalis* or solar sulphur is still a *πνεῦμα παρέδρον*, a ministering spirit or familiar who can be conjured up by magical invocations to help with the work.¹⁷

[113] From what has been said about the active sun-substance it should be clear that Sol in alchemy is much less a definite chemical substance than a “virtus,” a mysterious power¹⁸ believed to have a generative¹⁹ and transformative effect. Just as the physical sun lightens and warms the universe, so, in the human body, there is in the heart a sunlike arcanum from which life and warmth stream forth.²⁰ “Therefore Sol,” says Dorn, “is rightly named the first after God, and the father and begetter of all,²¹ because in him the seminal and formal virtue of all things whatsoever lies hid.”²² This power is called “sulphur.”²³ It is a hot, daemonic principle of life, having the closest affinities with the sun in the earth, the “central fire” or “*ignis gehennalis*” (fire of hell). Hence there is also a *Sol niger*, a black sun, which coincides with the *nigredo* and *putrefactio*, the state of death.²⁴ Like Mercurius, Sol in alchemy is ambivalent.

[114] The miraculous power of the sun, says Dorn, is due to the fact that “all the simple elements are contained in it, as they are in heaven and in the other heavenly bodies.”

“We say that the sun is a single element,” he continues, tacitly identifying it with the quintessence. This view is explained by a remarkable passage from the “*Consilium coniugii*”: “The Philosophers maintained that the father of the gold and silver is the animating principle [*animal*] of earth and water, or man or part of a man, such as hair, blood, menstruum, etc.”²⁵ The idea at the back of this is that primitive conception of a universal power of growth, healing, magic, and prestige,²⁶ which is to be found as much in the sun as in men and plants, so that not only the sun but man too, and especially the enlightened man, the adept, can generate the gold by virtue of this universal power. It was clear to Dorn (and to other alchemists as well) that the gold was not made by the usual chemical procedures,²⁷ for which reason he called gold-making (*chrysopoeia*) a “miracle.” The miracle was performed by a *natura abscondita* (hidden nature), a metaphysical entity “perceived not with the outward eyes, but solely by the mind.”²⁸ It was “infused from heaven,²⁹ provided that the adept had approached as closely as possible to things divine and at the same time had extracted from the substances the subtlest powers “fit for the miraculous act.” “There is in the human body a certain aethereal substance, which preserves its other elemental parts and causes them to continue,”³⁰ he says. This substance or virtue is hindered in its operations by the “corruption of the body”; but “the Philosophers, through a kind of divine inspiration, knew that this virtue and heavenly vigour can be freed from its fetters, not by its contrary . . . but by its like.”³¹ Dorn calls it “*veritas*.” “It is the supreme power, an unconquerable fortress, which hath but very few friends, and is besieged by innumerable enemies.” It is “defended by the immaculate Lamb,” and signifies the heavenly Jerusalem in the inner man. “In this fortress is the true and indubitable treasure, which is not eaten into by moths, nor dug out by thieves, but remaineth for ever, and is taken hence after death.”³²

[115] For Dorn, then, the spark of divine fire implanted in man becomes what Goethe in his original version of *Faust* called Faust’s “entelechy,” which was carried away by the angels. This supreme treasure “the animal man understandeth not. . . . We are made like stones, having eyes and seeing not.”³³

[116] After all this, we can say that the alchemical Sol, as a “certain luminosity” (*quaedam luminositas*), is in many respects equal to the *lumen naturae*. This was the real source of illumination in alchemy, and from alchemy Paracelsus borrowed this same source in order to illuminate the art of medicine. Thus the concept of Sol has not a little to do with the growth of modern consciousness, which in the last two centuries has relied more and more on the observation and experience of natural objects. Sol therefore seems to denote an important psychological fact. Consequently, it is well worth while delineating its peculiarities in greater detail on the basis of the very extensive literature.

[117] Generally Sol is regarded as the masculine and active half of Mercurius, a supraordinate concept whose psychology I have discussed in a separate study.³⁴ Since, in his alchemical form, Mercurius does not exist in reality, he must be an unconscious projection, and because he is an absolutely fundamental concept in alchemy he must signify the unconscious itself. He is by his very nature the unconscious, where nothing can be differentiated; but, as a *spiritus vegetativus* (living spirit), he is an active principle and so must always appear in reality in differentiated form. He is therefore fittingly called “duplex,” both active and passive. The “ascending,” active part of him is called Sol, and it is only through this that the passive part can be perceived. The passive part therefore bears the name of Luna, because she borrows her light from the sun.³⁵ Mercurius demonstrably corresponds to the cosmic Nous of the classical philosophers. The human mind is a derivative of this and so, likewise, is the diurnal life of the psyche, which we call consciousness.³⁶ Consciousness requires as its necessary counterpart a dark, latent, non-manifest side, the unconscious, whose presence can be known only by the light of consciousness.³⁷ Just as the day-star rises out of the nocturnal sea, so, ontogenetically and phylogenetically, consciousness is born of unconsciousness and sinks back every night to this primal condition. This duality of our psychic life is the prototype and archetype of the Sol-Luna symbolism. So much did the alchemist sense the duality of his unconscious assumptions that, in the face of all astronomical evidence, he equipped the sun with a shadow: “The sun and its shadow bring the work to perfection.”³⁸ Michael Maier, from whom this saying is taken, avoids the onus of explanation by substituting the shadow of the earth for the shadow of the sun in the forty-fifth discourse of his *Scrutinium*. Evidently he could not wholly shut his eyes to astronomical reality. But then he cites the classical saying of Hermes: “Son, extract from the ray its shadow,”³⁹ thus giving us clearly to understand that the shadow is contained in the sun’s rays and hence could be extracted from them (whatever that might mean). Closely related to this saying is the alchemical idea of a black sun, often mentioned in the literature.⁴⁰ This notion is supported by the self-evident fact that without light there is no shadow, so that, in a sense, the shadow too is emitted by the sun. For this physics requires a dark object interposed between the sun and the observer, a condition that does not apply to the alchemical Sol, since occasionally it appears as black itself. It contains both light and darkness. “For what, in the end,” asks Maier, “is this sun without a shadow? The same as a bell without a clapper.” While Sol is the most precious thing, its shadow is *res vilissima* or *quid vilius alga* (more worthless than seaweed). The antinomian thinking of alchemy counters every position with a negation and vice versa. “Outwardly they are bodily things, but inwardly they are spiritual,” says Senior.⁴¹ This view is true of all alchemical qualities, and each thing bears in itself its opposite.⁴²

[118] To the alchemical way of thinking the shadow is no mere *privatio lucis*; just as the bell and its clapper are of a tangible substantiality, so too are light and shadow. Only thus can the saying of Hermes be understood. In its entirety it runs: “Son, extract from the ray its shadow, and the corruption that arises from the mists which gather about it, befoul it and veil its light; for it is consumed by necessity and by its redness.”⁴³ Here the shadow is thought of quite concretely; it is a mist that is capable not only of obscuring the sun but of befouling it (“coinquinare”—a strong expression). The redness (*rubedo*) of the sun’s light is a reference to the red sulphur in it, the active burning principle, destructive in its effects. In man the “natural sulphur,” Dorn says, is identical with an “elemental fire” which is the “cause of corruption,” and this fire is “enkindled by an invisible sun unknown to many, that is, the sun of the Philosophers.” The natural sulphur tends to revert to its first nature, so that the body becomes “sulphurous” and fitted to receive the fire that “corrupts man back to his first essence.”⁴⁴ The sun is evidently an instrument in the physiological and psychological drama of return to the *prima materia*, the death that must be undergone if man is to get back to the original condition of the simple elements and attain the incorrupt nature of the pre-worldly paradise. For Dorn this process was spiritual and moral as well as physical.

[119] Sol appears here in a dubious, indeed a “sulphurous” light: it corrupts, obviously because of the sulphur it contains.⁴⁵

[120] Accordingly, Sol is the transformative substance, the *prima materia* as well as the gold tincture. The anonymous treatise “*De arte chymica*” distinguishes two parts or stages of the lapis. The first part is called the *sol terrenus* (earthly sun). “Without the earthly sun, the work is not perfected.”⁴⁶ In the second part of the work Sol is joined with Mercurius.

On earth these stones are dead, and they do nothing unless the activity of man is applied to them. [Consider]⁴⁷ the profound analogy of the gold: the aethereal heaven was locked to all men, so that all men had to descend into the underworld, where they were imprisoned for ever. But Christ Jesus unlocked the gate of the heavenly Olympus and threw open the realm of Pluto, that the souls might be freed, when the Virgin Mary, with the cooperation of the Holy Ghost in an unutterable mystery and deepest sacrament, conceived in her virgin womb that which was most excellent in heaven and upon earth, and finally bore for us the Redeemer of the whole world, who by his overflowing goodness shall save all who are given up to sin, if only the sinner shall turn to him. But the Virgin remained incorrupt and inviolate: therefore not without good reason is Mercurius made equal [*aequiparatur*] to the most glorious and worshipful Virgin Mary.⁴⁸

It is evident from this that the coniunctio of Sol and Mercurius is a hierosgamos, with Mercurius playing the role of bride. If one does not find this analogy too offensive, one may ask oneself with equanimity whether the arcanum of the opus alchymicum, as understood by the old masters, may not indeed be considered an equivalent of the dogmatic mystery. For the psychologist the decisive thing here is the subjective attitude of the alchemist. As I have shown in *Psychology and Alchemy*, such a profession of faith is by no means unique.⁴⁹

[121] The metaphorical designation of Christ as Sol⁵⁰ in the language of the Church Fathers was taken quite literally by the alchemists and applied to their *sol terrenus*. When we remember that the alchemical Sol corresponds psychologically to consciousness, the diurnal side of the psyche, we must add the Christ analogy to this symbolism. Christ appears essentially as the *son*—the son of his mother-bride. The role of the son does in fact devolve upon ego-consciousness since it is the offspring of the maternal unconscious. Now according to the arch authority, the “*Tabula smaragdina*,” Sol is the father of Mercurius, who in the above quotation appears as feminine and as the mother-bride. In that capacity Mercurius is identical with Luna, and—via the Luna-Mary-Ecclesia symbolism—is equated with the Virgin. Thus the treatise “*Exercitationes in Turbam*” says: “As blood is the origin of flesh, so is Mercurius the origin of Sol . . . and thus Mercurius is Sol and Sol is Mercurius.”⁵¹ Sol is therefore father and son at once, and his feminine counterpart is mother and daughter in one person; furthermore, Sol and Luna are merely aspects of the same substance that is simultaneously the cause and the product of both, namely Mercurius duplex, of whom the philosophers say that he contains everything that is sought by the wise. This train of thought is based on a quaternity:

[122] Although the Sol symbolism is reminiscent of the dogmatic models, its basic schema is very different; for the dogmatic schema is a Trinity embracing only the Deity but not the universe.⁵² The alchemical schema appears to embrace only the

material world, yet, on account of its quaternary character, it comes near to being a representation of totality as exemplified in the symbol of the cross erected between heaven and earth. The cross is by implication the Christian totality symbol: as an instrument of torture it expresses the sufferings on earth of the incarnate God, and as a quaternity it expresses the universe, which also includes the material world. If we now add to this cruciform schema the four protagonists of the divine world-drama—the Father as *auctor rerum*, the Son, his counterpart the Devil (to fight whom he became man), and the Holy Ghost, we get the following quaternity:

[123] I will not discuss the various aspects of this quaternity more closely here, as I have already done so in a separate study.⁵³ I mention it only for comparison with the alchemical one. Quaternities such as these are logical characteristics of Gnostic thinking, which Koepgen has aptly called “circular.”⁵⁴ We have already met similar figures in our account of the opposites, which were often arranged in quaternities. The rhythm of both schemas is divided into three steps:

[124] The alchemical drama leads from below upwards, from the darkness of the earth to the winged, spiritual *filius macrocosmi* and to the *lux moderna*; the Christian drama, on the other hand, represents the descent of the Kingdom of Heaven to earth. One has the impression of a mirror-world, as if the God-man coming down from above—as in the Gnostic legend—were reflected in the dark waters of Physis. The relation of the unconscious to the conscious mind is to a certain extent complementary, as elementary psychogenic symptoms and dreams caused by simple somatic stimuli prove.⁵⁵ (Hence the strange idea, taught for instance by Rudolf Steiner, that the Hereafter possesses qualities complementary to those of this world.) Careful observation and analysis show, however, that not all dreams can be regarded

mechanically as mere complementary devices but must be interpreted rather as attempts at *compensation*, though this does not prevent very many dreams from having, on a superficial view, a distinct complementary character. Similarly, we could regard the alchemical movement as a reflection of the Christian one.⁵⁶ Koepgen makes a significant distinction between two aspects of Christ: the descending, incarnate God, and the ascending, Gnostic Christ who returns to the Father. We cannot regard the latter as the same as the alchemical *filius regius*, although Koepgen's schema offers an exact parallel to the alchemical situation.⁵⁷ The redeemer figure of alchemy is not commensurable with Christ. Whereas Christ is God and is begotten by the Father, the *filius regius* is the soul of nature, born of the world-creating Logos, of the Sapiaientia Dei sunk in matter. The *filius regius* is also a son of God, though of more distant descent and not begotten in the womb of the Virgin Mary but in the womb of Mother Nature: he is a "third sonship" in the Basilidian sense.⁵⁸ No traditional influences should be invoked in considering the conceptual structure of this filius; he is more an autochthonous product deriving from an unconscious, logical development of trends which had already reached the field of consciousness in the early Christian era, impelled by the same unconscious necessity as produced the later development of ideas. For, as our modern experience has shown, the collective unconscious is a living process that follows its own inner laws and gushes up like a spring at the appointed time. That it did so in alchemy in such an obscure and complicated way was due essentially to the great psychological difficulties of antinomian thinking, which continually came up against the demand for the logical consistency of the metaphysical figures, and for their emotional absoluteness. The "bonum superexcedens" of God allows no integration of evil. Although Nicholas Cusanus ventured the bold thought of the *coincidentia oppositorum*, its logical consequence—the relativity of the God-concept—proved disastrous for Angelus Silesius, and only the withered laurels of the poet lie on his grave. He had drunk with Jacob Boehme at the fount of Mater Alchimia. The alchemists, too, became choked in their own confusions.

[125] Once again, therefore, it is the medical investigators of nature who, equipped with new means of knowledge, have rescued these tangled problems from projection by making them the proper subject of psychology. This could never have happened before, for the simple reason that there was no psychology of the unconscious. But the medical investigator, thanks to his knowledge of archetypal processes, is in the fortunate position of being able to recognize in the abstruse and grotesque-looking symbolisms of alchemy the nearest relatives of those serial fantasies which underlie the delusions of paranoid schizophrenia as well as the healing processes at work in the psychogenic neuroses. The overweening contempt which other departments of science have for the apparently negligible psychic processes of "pathological

individuals” should not deter the doctor in his task of helping and healing the sick. But he can help the sick psyche only when he meets it as the unique psyche of that particular individual, and when he knows its earthly and unearthly darknesses. He should also consider it just as important a task to defend the standpoint of consciousness, clarity, “reason,” and an acknowledged and proven good against the raging torrent that flows for all eternity in the darkness of the psyche—a πάντα ῥεῖ that leaves nothing unaltered and ceaselessly creates a past that can never be retrieved. He knows that there is nothing purely good in the realm of human experience, but also that for many people it is better to be convinced of an absolute good and to listen to the voice of those who espouse the superiority of consciousness and unambiguous thinking. He may solace himself with the thought that one who can join the shadow to the light is the possessor of the greater riches. But he will not fall into the temptation of playing the law-giver, nor will he pretend to be a prophet of the truth: for he knows that the sick, suffering, or helpless patient standing before him is not the public but is Mr or Mrs X, and that the doctor has to put something tangible and helpful on the table or he is no doctor. His duty is always to the individual, and he is persuaded that nothing has happened if this individual has not been helped. He is answerable to the individual in the first place and to society only in the second. If he therefore prefers individual treatment to collective ameliorations, this accords with the experience that social and collective influences usually produce only a mass intoxication, and that only man’s action upon man can bring about a real transformation.⁵⁹

[126] It cannot have escaped the alchemists that their Sol had something to do with man. Thus Dorn says: “From the beginning man was sulphur.” Sulphur is a destructive fire “enkindled by the invisible sun,” and this sun is the Sol Philosophorum,⁶⁰ which is the much sought-after and highly praised philosophic gold, indeed the goal of the whole work.⁶¹ In spite of the fact that Dorn regards the sun and its sulphur as a kind of physiological component of the human body, it is clear that we are dealing with a piece of physiological mythology, i.e., a projection.

[127] In the course of our inquiry we have often seen that, despite the complete absence of any psychology, the alchemical projections sketch a picture of certain fundamental psychological facts and, as it were, reflect them in matter. One of these fundamental facts is the primary pair of opposites, consciousness and unconsciousness, whose symbols are Sol and Luna.

[128] We know well enough that the unconscious appears personified: mostly it is the anima⁶² who in singular or plural form represents the collective unconscious. The personal unconscious is personified by the shadow.⁶³ More rarely, the collective unconscious is personified as a Wise Old Man.⁶⁴ (I am speaking here only of

masculine psychology, which alone can be compared with that of the alchemists.) It is still rarer for Luna to represent the nocturnal side of the psyche in dreams. But in the products of active imagination the symbol of the moon appears much more often, as also does the sun, which represents the luminous realm of the psyche and our diurnal consciousness. The modern unconscious has little use for sun and moon as dream-symbols.⁶⁵ Illumination (“a light dawns,” “it is becoming clear,” etc.) can be expressed just as well or even better in modern dreams by switching on the electric light.

[129] It is therefore not surprising if the unconscious appears in projected and symbolized form, as there is no other way by which it might be perceived. But this is apparently not the case with consciousness. Consciousness, as the essence of all conscious contents, seems to lack the basic requirements for a projection. Properly understood, projection is not a voluntary happening; it is something that approaches the conscious mind from “outside,” a kind of sheen on the object, while all the time the subject remains unaware that he himself is the source of light which causes the cat’s eye of the projection to shine. Luna is therefore conceivable as a projection; but Sol as a projection, since it symbolizes consciousness, seems at first glance a contradiction in terms, yet Sol is no less a projection than Luna. For just as we perceive nothing of the real sun but light and heat and, apart from that, can know its physical constitution only by inference, so our consciousness issues from a dark body, the ego, which is the indispensable condition for all consciousness, the latter being nothing but the association of an object or a content with the ego. The ego, ostensibly the thing we know most about, is in fact a highly complex affair full of unfathomable obscurities. Indeed, one could even define it as a *relatively constant personification of the unconscious itself*, or as the Schopenhauerian mirror in which the unconscious becomes aware of its own face.⁶⁶ All the worlds that have ever existed before man were physically *there*. But they were a nameless happening, not a definite actuality, for there did not yet exist that minimal concentration of the psychic factor, which was also present, to speak the word that outweighed the whole of Creation: That is the world, and this is I! That was the first morning of the world, the first sunrise after the primal darkness, when that inchoately conscious complex, the ego, the son of the darkness, knowingly sundered subject and object, and thus precipitated the world and itself into definite existence,⁶⁷ giving it and itself a voice and a name. The refulgent body of the sun is the ego and its field of consciousness—*Sol et eius umbra*: light without and darkness within. In the source of light there is darkness enough for any amount of projections, for the ego grows out of the darkness of the psyche.

[130] In view of the supreme importance of the ego in bringing reality to light, we can understand why this infinitesimal speck in the universe was personified as the sun,

with all the attributes that this image implies. As the medieval mind was incomparably more alive than ours to the divine quality of the sun, we may assume that the totality character of the sun-image was implicit in all its allegorical or symbolic applications. Among the significations of the sun as totality the most important was its frequent use as a God-image, not only in pagan times but in the sphere of Christianity as well.

[131] Although the alchemists came very close to realizing that the ego was the mysteriously elusive arcane substance and the longed-for lapis, they were not aware that with their sun symbol they were establishing an intimate connection between God and the ego. As already remarked, projection is not a voluntary act; it is a natural phenomenon beyond the interference of the conscious mind and peculiar to the nature of the human psyche. If, therefore, it is this nature that produces the sun symbol, nature herself is expressing an identity of God and ego. In that case only unconscious nature can be accused of blasphemy, but not the man who is its victim. It is the rooted conviction of the West that God and the ego are worlds apart. In India, on the other hand, their identity was taken as self-evident. It was the nature of the Indian mind to become aware of the world-creating significance of the consciousness⁶⁸ manifested in man.⁶⁹ The West, on the contrary, has always emphasized the littleness, weakness, and sinfulness of the ego, despite the fact that it elevated one man to the status of divinity. The alchemists at least suspected man's hidden godlikeness, and the intuition of Angelus Silesius finally expressed it without disguise.

[132] The East resolves these confusing and contradictory aspects by merging the ego, the personal atman, with the universal atman and thus explaining the ego as the veil of Maya. The Western alchemist was not consciously aware of these problems. But when his unspoken assumptions and his symbols reached the plane of conscious gnosis, as was the case with Angelus Silesius, it was precisely the littleness and lowliness of the ego⁷⁰ that impelled him to recognize its identity with its extreme opposite.⁷¹ It was not the arbitrary opinions of deranged minds that gave rise to such insights, but rather the nature of the psyche itself, which, in East and West alike, expresses these truths either directly or clothed in transparent metaphors. This is understandable when we realize that a world-creating quality attaches to human consciousness as such. In saying this we violate no religious convictions, for the religious believer is at liberty to regard man's consciousness (through which, as it were, a second world-creation was enacted) as a divine instrument.

[133] I must point out to the reader that these remarks on the significance of the ego might easily prompt him to charge me with grossly contradicting myself. He will perhaps remember that he has come across a very similar argument in my other writings. Only there it was not a question of ego but of the *self*, or rather, of the

personal atman in contradistinction and in relation to the suprapersonal atman. I have defined the self as the totality of the conscious and the unconscious psyche, and the ego as the central reference-point of consciousness. It is an essential part of the self, and can be used *pars pro toto* when the significance of consciousness is borne in mind. But when we want to lay emphasis on the psychic totality it is better to use the term “self.” There is no question of a contradictory definition, but merely of a difference of standpoint.

3. SULPHUR⁷²

[134] Because of the singular role it plays in alchemy, sulphur deserves to be examined rather more closely. The first point of interest, which we have already touched on, is its relation to Sol: it was called the prima materia of Sol, Sol being naturally understood as the gold. As a matter of fact, sulphur was sometimes identified with gold.⁷³ Sol therefore derives from sulphur. The close connection between them explains the view that sulphur was the “companion of Luna.”⁷⁴ When the gold (Sol) and his bride (Luna) are united, “the coagulating sulphur, which in the corporal gold was turned outwards [*extroversion*], is turned inwards” (i.e., introverted).⁷⁵ This remark indicates the psychic double nature of sulphur (*sulphur duplex*); there is a red and a white sulphur, the white being the active substance of the moon, the red that of the sun.⁷⁶ The specific “virtue” of sulphur is said to be greater in the red variety.⁷⁷ But its duplicity also has another meaning: on the one hand it is the prima materia, and in this form it is burning and corrosive (*adurens*), and “hostile” to the matter of the stone; on the other hand, when “cleansed of all impurities, it is the matter of our stone.”⁷⁸ Altogether, sulphur is one of the innumerable synonyms for the prima materia⁷⁹ in its dual aspect, i.e., as both the initial material and the end-product. At the beginning it is “crude” or “common” sulphur, at the end it is a sublimation product of the process.⁸⁰ Its fiery nature is unanimously stressed,⁸¹ though this fieriness does not consist merely in its combustibility but in its occult fiery nature. As always, an allusion to occult qualities means that the material in question was the focus of projections which lent it a numinous significance.

[135] In keeping with its dual nature sulphur is on the one hand corporal and earthly,⁸² and on the other an occult, spiritual principle. As an earthly substance it comes from the “fatness of the earth,”⁸³ by which was meant the radical moisture as prima materia. Occasionally it is called “cinis extractus a cinere” (ash extracted from ash).⁸⁴ “Ash” is an inclusive term for the scoriae left over from burning, the substance that “remains below”—a strong reminder of the chthonic nature of sulphur. The red variety is thought of as masculine,⁸⁵ and under this aspect it represents the gold or Sol.⁸⁶ As a chthonic being it has close affinities with the dragon, which is called “our

secret sulphur.”⁸⁷ In that form it is also the *aqua divina*, symbolized by the uroboros.⁸⁸ These analogies often make it difficult to distinguish between sulphur and Mercurius, since the same thing is said of both. “This is our natural, most sure fire, our Mercurius, our sulphur,” says the “Tractatus aureus de lapide.”⁸⁹ In the *Turba* quicksilver is a fiery body that behaves in exactly the same way as sulphur.⁹⁰ For Paracelsus sulphur, together with Sal (salt), is the begetter of Mercurius, who is born of the sun and moon.⁹¹ Or it is found “in the depths of the nature of Mercurius,”⁹² or it is “of the nature of Mercurius,”⁹³ or sulphur and Mercurius are “brother and sister.”⁹⁴ Sulphur is credited with Mercurius’ “power to dissolve, kill, and bring metals to life.”⁹⁵

[136] This intimate connection with Mercurius makes it evident that sulphur is a spiritual or psychic substance of universal import, of which nearly everything may be said that is said of Mercurius. Thus sulphur is the soul not only of metals but of all living things; in the “Tractatus aureus” it is equated with “nostra anima” (our soul).⁹⁶ The *Turba* says: “The sulphurs are souls that were hidden in the four bodies.”⁹⁷ Paracelsus likewise calls sulphur the soul.⁹⁸ In Mylius sulphur produces the “ferment” or “soul which gives life to the imperfect body.”⁹⁹ The “Tractatus Micreris” says: “. . . until the green son appears, who is its¹⁰⁰ soul, which the Philosophers have called the green bird and bronze and sulphur.”¹⁰¹ The soul is also described as the “hidden part [*occultum*] of the sulphur.”¹⁰²

[137] In the sphere of Christian psychology, green has a spermatic, procreative quality, and for this reason it is the colour attributed to the Holy Ghost as the creative principle.¹⁰³ Accordingly Dorn says: “The male and universal seed, the first and most potent, is the solar sulphur, the first part and most potent cause of all generation.”¹⁰⁴ It is the life-spirit itself. In his “De tenebris contra naturam” Dorn says: “We have said before that the life of the world is the light of nature and the celestial sulphur, whose substrate [*subiectum*] is the aetheric moisture and the heat of the firmament, namely Sol and Luna.”¹⁰⁵ Sulphur has here attained cosmic significance and is equated with the light of nature, the supreme source of knowledge for the natural philosophers. But this light does not shine unhindered, says Dorn. It is obscured by the darkness of the elements in the human body. For him, therefore, sulphur is a shining, heavenly being. Though this sulphur is a “son who comes from imperfect bodies,” he is “ready to put on the white and purple garments.”¹⁰⁶ In Ripley he is a “spirit of generative power, who works in the moisture.”¹⁰⁷ In the treatise “De sulphure” he is the “virtue of all things” and the source of illumination and of all knowledge.¹⁰⁸ He knows, in fact, everything.¹⁰⁹

[138] In view of the significance of sulphur it is worth our while to take a look at its effects as described by the alchemists. Above all, it burns and consumes: “The little

power of this sulphur is sufficient to consume a strong body.”¹¹⁰ The “strong body” is the sun, as is clear from the saying: “Sulphur blackens the sun and consumes it.” Then, it causes or signifies the putrefactio, “which in our day was never seen,” says the *Rosarium*.¹¹¹ A third capacity is that of coagulating,¹¹² and a fourth and fifth those of tincturing (*tingere, colorare*) and maturing (*maturare*).¹¹³ Its “putrefying” effect is also understood as its ability to “corrupt.” Sulphur is the “cause of imperfection in all metals,” the “corrupter of perfection,” “causing the blackness in every operation”; “too much sulphurousness is the cause of corruption,” it is “bad and not well mixed,” of an “evil, stinking odour and of feeble strength.” Its substance is dense and tough, and its corruptive action is due on the one hand to its combustibility and on the other to its “earthy feculence.” “It hinders perfection in all its works.”¹¹⁴

[139] These unfavourable accounts evidently impressed one of the adepts so much that, in a marginal note, he added “diabolus” to the *causae corruptionis*.¹¹⁵ This remark is illuminating: it forms the counterpoint to the luminous role of sulphur, for sulphur is a “Lucifer” or “Phosphorus” (light-bringer), from the most beautiful star in the chymic firmament down to the *candelulae*, “little bits of sulphurous tow such as old women sell for lighting fires.”¹¹⁶ In addition to so many other qualities, sulphur shares this extreme paradox with Mercurius, besides having like him a connection with Venus, though here the allusion is veiled and more discreet: “Our Venus is not the common sulphur, which burns and is consumed with the combustion of the fire and of the corruption; but the whiteness of the Venus of the Sages is consumed with the combustion of the white and the red [*albedinis et rubedinis*], and this combustion is the entire whitening [*dealbatio*] of the whole work. Therefore two sulphurs are mentioned and two quicksilvers,¹¹⁷ and these the Philosophers have named one and one,¹¹⁸ and they rejoice in one another,¹¹⁹ and the one contains the other.”¹²⁰

[140] Another allusion to Venus occurs in one of the parables in “De sulphure,”¹²¹ about an alchemist who is seeking the sulphur. His quest leads him to the grove of Venus, and there he learns through a voice, which later turns out to be Saturn’s, that Sulphur is held a prisoner at the command of his own mother. He is praised as the “artificer of a thousand things,” as the heart of all things, as that which endows living things with understanding, as the begetter of every flower and blossom on herb and tree, and finally as the “painter of all colours.”¹²² This might well be a description of Eros. In addition we learn that he was imprisoned because in the view of the alchemists he had shown himself too obliging towards his mother. Although we are not told who his mother was, we may conjecture that it was Venus herself who shut up her naughty Cupid.¹²³ This interpretation is corroborated by the fact, firstly, that Sulphur, unknown to the alchemist, was in the grove of Venus¹²⁴ (woods, like trees, have a maternal significance); secondly, that Saturn introduced himself as the “governor of the prison,” and all alchemists with knowledge of astrology would have been familiar

with the secret nature of Saturn;¹²⁵ thirdly, that after the disappearance of the voice the alchemist, falling asleep, saw in the same grove a fountain and near it the personified Sulphur; and, finally, that the vision ends with the chymical “embrace in the bath.” Here Venus is undoubtedly the *amor sapientiae* who puts a check on Sulphur’s roving charms. The latter may well derive from the fact that his seat in the Uroboros is in the tail of the dragon.¹²⁶ Sulphur is the masculine element par excellence, the “sperma homogeneum”;¹²⁷ and since the dragon is said to “impregnate himself,” his tail is the masculine and his mouth the feminine organ. Like Beya,¹²⁸ who engulfed her brother in her own body and dissolved him into atoms, the dragon devours himself from the tail upwards until his whole body has been swallowed into his head.¹²⁹ Being the inner fire of Mercurius,¹³⁰ Sulphur obviously partakes of his most dangerous and most evil nature, his violence being personified in the dragon and the lion, and his concupiscence in Hermes Kyllenios.¹³¹ The dragon whose nature sulphur shares is often spoken of as the “dragon of Babel” or, more accurately, the “dragon’s head” (*caput draconis*), which is a “most pernicious poison,” a poisonous vapour breathed out by the flying dragon. The dragon’s head “comes with great swiftness from Babylon.” However, the “winged dragon” that stands for quicksilver becomes a poison-breathing monster only after its union with the “wingless dragon,” which corresponds to sulphur.¹³² Sulphur here plays an evil role that accords well with the sinful “Babel.” Furthermore, this dragon is equated with the human-headed serpent of paradise, which had the “*imago et similitudo Dei*” in its head, this being the deeper reason why the dragon devours its hated body. “His head lives in eternity, and therefore it is called glorious life, and the angels serve him.”¹³³ This is a reference to Matthew 4: 11: “Then the devil leaveth him, and behold, angels came and ministered unto him.”

[141] Hence we get the parallel of the dragon’s head with Christ, corresponding to the Gnostic view that the son of the highest divinity took on the form of the serpent in paradise in order to teach our first parents the faculty of discrimination, so that they should see that the work of the demiurge was imperfect. As the son of the seven planets the dragon is clearly the *filius macrocosmi* and, as such, a parallel figure to Christ and at the same time his rival.¹³⁴ The dragon’s head contains the precious stone, which means that consciousness contains the symbolic image of the self, and just as the lapis unites the opposites so the self assimilates contents of consciousness and the unconscious. This interpretation fully accords with the traditional significance of the dragon’s head as a favourable omen.

[142] From what has been said it should be evident that sulphur is the essence of an active substance. It is the “spirit of the metals,”¹³⁵ forming with quicksilver, the other “spirit of nature,” the two principles and the matter of the metals, since these two principles are themselves metals *in potentia*.¹³⁶ Together with Mercurius it also forms

the lapis.¹³⁷ In fact, it is the “heart of all things”¹³⁸ and the “virtue of all things.”¹³⁹ Enumerating, along with water and moisture, the synonyms for the lapis as the “whole secret and life of all things whatsoever,” the “*Consilium coniugii*” says: “The oil that takes up the colour, that is, the radiance of the sun, is itself sulphur.”¹⁴⁰ Mylius compares it to the rainbow: “The sulphur shines like the rainbow above the waters . . . the bow of Isis stands half on the pure, liquid, and flowing water and half on the earth . . . hence the whole property of sulphur and its natural likeness are expressed by the rainbow.” Thus sulphur, so far as it is symbolized by the rainbow, is a “divine and wonderful experience.” A few lines further on, after mentioning sulphur as one of the components of the water, Mylius writes that Mercurius (i.e., the water) must be cleansed by distillation “from all foulness of the earth, and then Lucifer, the impurity and the accursed earth, will fall from the golden heaven.”¹⁴¹ Lucifer, the most beautiful of the angels, becomes the devil, and sulphur is “of the earth’s foulness.” Here, as in the case of the dragon’s head, the highest and the lowest are close together. Although a personification of evil, sulphur shines above earth and water with the splendour of the rainbow, a “natural vessel”¹⁴² of divine transformation.

[143] From all this it is apparent that for the alchemists sulphur was one of the many synonyms for the mysterious transformative substance.¹⁴³ This is expressed most plainly in the *Turba*:¹⁴⁴ “Therefore roast it for seven days, until it becomes shining like marble, because, when it does, it is a very great secret [*arcanum*], since sulphur has been mixed with sulphur; and thereby is the greatest work accomplished, by mutual affinity, because natures meeting their nature mutually rejoice.”¹⁴⁵ It is a characteristic of the arcane substance to have “everything it needs”; it is a fully autonomous being, like the dragon that begets, reproduces, slays, and devours itself. It is questionable whether the alchemists, who were anything but consistent thinkers, ever became fully conscious of what they were saying when they used such images. If we take their words literally, they would refer to an “*Increatum*,” a being without beginning or end, and in need of “no second.” Such a thing can by definition only be God himself, but a God, we must add, seen in the mirror of physical nature and distorted past recognition. The “One” for which the alchemists strove corresponds to the *res simplex*, which the “*Liber quartorum*” defines as God.¹⁴⁶ This reference, however, is unique, and in view of the corrupt state of the text I would not like to labour its significance, although Dorn’s speculations about the “One” and the “unarius” are closely analogous. The *Turba* continues: “And yet they are not different natures, nor several, but a single one, which unites their powers in itself, through which it prevails over the other things. See you not that the Master has begun with the One and ended with the One? For he has named those unities the water of the sulphur, which conquers the whole of nature.”¹⁴⁷ The peculiarity of sulphur is also expressed in the paradox that it is “*incredibile*” (incombustible), “ash extracted from

ash.”¹⁴⁸ Its effects as *aqua sulfurea* are infinite.¹⁴⁹ The “Consilium coniugii” says: “Our sulphur is not the common sulphur,”¹⁵⁰ which is usually said of the philosophical gold. Paracelsus, in his “Liber Azoth,” describes sulphur as “lignum” (wood), the “linea vitae” (line of life), and “fourfold” (to correspond with the four elements); the spirit of life is renewed from it.¹⁵¹ Of the philosophical sulphur Mylius says that such a thing is not to be found on earth except in Sol and Luna, and it is known to no man unless revealed to him by God.¹⁵² Dorn calls it the “son begotten of the imperfect bodies,” who, when sublimated, changes into the “highly esteemed salt of four colours.” In the “Tractatus Micreris” it is even called the “treasure of God.”¹⁵³

[144] These references to sulphur as the arcane and transformative substance must suffice. I would only like to stress Paracelsus’ remark about its fourfold nature, and that of his pupil Dorn about the four colours as symbols of totality. The psychic factor which appears in projection in all similarly characterized arcane substances is the unconscious self. It is on this account that the well-known Christ-lapis¹⁵⁴ parallel reappears again and again, as for instance in the above-mentioned parable of the adept’s adventure in the grove of Venus. As we saw, he fell asleep after having a long and instructive conversation with the voice of Saturn. In his dream he beholds the figures of two men by the fountain in the grove, one of them Sulphur, the other Sal. A quarrel arises, and Sal gives Sulphur an “incurable wound.” Blood pours from it in the form of “whitest milk.” As the adept sinks deeper into sleep, it changes into a river. Diana emerges from the grove and bathes in the miraculous water. A prince (Sol), passing by, espies her, they are inflamed for love of one another, and she falls down in a swoon and sinks beneath the surface. The prince’s retinue refuse to rescue her for fear of the perilous water,¹⁵⁵ whereupon the prince plunges in and is dragged down by her to the depths. Immediately their souls appear above the water and explain to the adept that they will not go back into “bodies so polluted,” and are glad to be quit of them. They would remain afloat until the “fogs and clouds” have disappeared. At this point the adept returns to his former dream, and with many other alchemists he finds the corpse of Sulphur by the fountain. Each of them takes a piece and operates with it, but without success.¹⁵⁶ We learn, further, that Sulphur is not only the “medicina” but also the “medicus”—the wounded physician.¹⁵⁷ Sulphur suffers the same fate as the body that is pierced by the lance of Mercurius. In Reusner’s *Pandora*¹⁵⁸ the body is symbolized as Christ, the second Adam, pierced by the lance of a mermaid, or a Lilith or Edem.¹⁵⁹

[145] This analogy shows that sulphur as the arcane substance was set on a par with Christ, so that for the alchemists it must have meant something very similar. We would turn away in disgust from such an absurdity were it not obvious that this analogy, sometimes in clear and sometimes in veiled form, was thrust upon them by the unconscious. Certainly there could be no greater disparity than that between the

holiest conception known to man's consciousness and sulphur with its evil-smelling compounds. The analogy therefore is in no sense evidential but can only have arisen through intense and passionate preoccupation with the chemical substance, which gradually formed a *tertium comparationis* in the alchemist's mind and forced it upon him with the utmost insistence. The common denominator of these two utterly incommensurable conceptions is the self, the image of the whole man, which reached its finest and most significant development in the "Ecce Homo," and on the other hand appears as the meanest, most contemptible, and most insignificant thing, and manifests itself to consciousness precisely in that guise. As it is a concept of human totality, the self is by definition greater than the ego-conscious personality, embracing besides this the personal shadow and the collective unconscious. Conversely, the entire phenomenon of the unconscious appears so unimportant to ego-consciousness that we would rather explain it as a *privatio lucis*¹⁶⁰ than allow it an autonomous existence. In addition, the conscious mind is critical and mistrustful of everything hailing from the unconscious, convinced that it is suspect and somehow dirty. Hence the psychic phenomenology of the self is as full of paradoxes as the Hindu conception of the atman, which on the one hand embraces the universe and on the other dwells "no bigger than a thumb" in the heart. The Eastern idea of atman-purusha corresponds psychologically to the Western figure of Christ, who is the second Person of the Trinity and God himself, but, so far as his human existence is concerned, conforms exactly to the suffering servant of God in Isaiah¹⁶¹—from his birth in a stable among the animals to his shameful death on the cross between two thieves.

[146] The contrast is even sharper in the Naassene picture of the Redeemer, as reported by Hippolytus:¹⁶² "Lift up your heads, O ye gates, and be ye lift up, ye everlasting doors, and the King of glory shall come in."¹⁶³ This is the wonder of wonders. 'For who,' saith he [the Naassene], 'is this King of glory? A worm and no man, a reproach of men, and despised of the people;¹⁶⁴ this same is the King, and mighty in battle.'" But the battle, say the Naassenes, refers to the warring elements in the body. This association of the passage from the Psalms with the idea of conflict is no accident, for psychological experience shows that the symbols of the self appear in dreams and in active imagination at moments of violent collision between two opposite points of view, as compensatory attempts to mitigate the conflict and "make enemies friends." Therefore the lapis, which is born of the dragon, is extolled as a saviour and mediator since it represents the equivalent of a redeemer sprung from the unconscious. The Christ-lapis parallel vacillates between mere analogy and far-reaching identity, but in general it is not thought out to its logical conclusion, so that the dual focus remains. This is not surprising since even today most of us have not got round to understanding Christ as the psychic reality of an archetype, regardless of his

historicity. I do not doubt the historical reality of Jesus of Nazareth, but the figure of the Son of Man and of Christ the Redeemer has archetypal antecedents. It is these that form the basis of the alchemical analogies.

[147] As investigators of nature the alchemists showed their Christian attitude by their “pistis” in the object of their science, and it was not their fault if in many cases the psyche proved stronger than the chemical substance and its well-guarded secrets by distorting the results. It was only the acuter powers of observation in modern man which showed that weighing and measuring provided the key to the locked doors of chemical combination, after the intuition of the alchemists had stressed for centuries the importance of “measure, number, and weight.”¹⁶⁵ The prime and most immediate experience of matter was that it is animated, which for medieval man was self-evident; indeed every Mass, every rite of the Church, and the miraculous effect of relics all demonstrated for him this natural and obvious fact. The French Enlightenment and the shattering of the metaphysical view of the world were needed before a scientist like Lavoisier had the courage finally to reach out for the scales. To begin with, however, the alchemists were fascinated by the soul of matter, which, unknown to them, it had received from the human psyche by way of projection. For all their intensive preoccupation with matter as a concrete fact they followed this psychic trail, which was to lead them into a region that, to our way of thinking, had not the remotest connection with chemistry. Their mental labours consisted in a predominantly intuitive apprehension of psychic facts, the intellect playing only the modest role of a famulus. The results of this curious method of research proved, however, to be beyond the grasp of any psychology for several centuries. If one does not understand a person, one tends to regard him as a fool. The misfortune of the alchemists was that they themselves did not know what they were talking about. Nevertheless, we possess witnesses enough to the high esteem in which they held their science and to the wonderment which the mystery of matter instilled into them. For they discovered—to keep to sulphur as our example—in this substance, which was one of the customary attributes of hell and the devil, as well as in the poisonous, crafty, and treacherous Mercurius, an analogy with the most sacrosanct figure of their religion. They therefore imbued this arcanum with symbols intended to characterize its malicious, dangerous, and uncanny nature, choosing precisely those which in the positive sense were used for Christ in the patristic literature. These were the snake, the lion, the eagle, fire, cloud, shadow, fish, stone, the unicorn and the rhinoceros, the dragon, the night-raven, the man encompassed by a woman, the hen, water, and many others. This strange usage is explained by the fact that the majority of the patristic allegories have in addition to their positive meaning a negative one. Thus in St. Eucherius¹⁶⁶ the rapacious wolf “in its good part” signifies the apostle Paul, but “in its bad part” the devil.

[148] From this we would have to conclude that the alchemists had discovered the psychological existence of a shadow which opposes and compensates the conscious, positive figure. For them the shadow was in no sense a *privatio lucis*; it was so real that they even thought they could discern its material density, and this concretism led them to attribute to it the dignity of being the matrix of an incorruptible and eternal substance. In the religious sphere this psychological discovery is reflected in the historical fact that only with the rise of Christianity did the devil, the “eternal counterpart of Christ,” assume his true form, and that the figure of Antichrist appears on the scene already in the New Testament. It would have been natural for the alchemists to suppose that they had lured the devil out of the darkness of matter. There were indeed indications of this, as we have seen, but they are exceptions. Far more prevalent and truly characteristic of alchemy was the optimistic notion that this creature of darkness was destined to be the *medicina*, as is proved by the use of the term “*medicina et medicus*” for the untrustworthy sulphur. The very same appellation appears as an allegory of Christ in St. Ambrose.¹⁶⁷ The Greek word *φάρμακον* (poison and antidote) is indicative of this ambivalence. In our parable of the sulphur the river of “most dangerous” water, which caused so many deaths, is analogous to the water from the side of Christ and the streams that flowed from his belly. What in one place is a river of grace is a deadly poison in another—harbouring within it, however, the potentialities of healing.

[149] This is not mere euphemism or propitiatory optimism, but rather an intuitive perception of the compensating effect of the counter-position in the unconscious, which should not be understood dualistically as an absolute opposite but as a helpful though nonetheless dangerous complement to the conscious position. Medical experience shows that the unconscious is indeed actuated by a compensatory tendency, at any rate in normal individuals. In the domain of pathology I believe I have observed cases where the tendency of the unconscious would have to be regarded, by all human standards, as essentially destructive. But it may not be out of place to reflect that the self-destruction of what is hopelessly inefficient or evil can be understood in a higher sense as another attempt at compensation. There are murderers who feel that their execution is condign punishment, and suicides who go to their death in triumph.

[150] So, although the alchemists failed to discover the hidden structure of matter, they did discover that of the psyche, even if they were scarcely conscious of what this discovery meant. Their naive Christ-lapis parallel is at once a symbolization of the chemical arcanum and of the figure of Christ. The identification or paralleling of Christ with a chemical factor, which was in essence a pure projection from the unconscious, has a reactive effect on the interpretation of the Redeemer. For if A (Christ) = B (lapis), and B = C (an unconscious content), then A = C. Such

conclusions need not be drawn consciously in order to be made effective. Given the initial impulse, as provided for instance by the Christ-lapis parallel, the conclusion will draw itself even though it does not reach consciousness, and it will remain the unspoken, spiritual property of the school of thought that first hit upon the equation. Not only that, it will be handed down to the heirs of that school as an integral part of their mental equipment, in this case the natural scientists. The equation had the effect of channelling the religious numen into physical nature and ultimately into matter itself, which in its turn had the chance to become a self-subsistent “metaphysical” principle. In following up their basic thoughts the alchemists, as I have shown in *Psychology and Alchemy*, logically opposed to the son of the spirit a son of the earth and of the stars (or metals), and to the Son of Man or *filius microcosmi* a *filius macrocosmi*, thus unwittingly revealing that in alchemy there was an autonomous principle which, while it did not replace the spirit, nevertheless existed in its own right. Although the alchemists were more or less aware that their insights and truths were of divine origin, they knew they were not sacred revelations but were vouchsafed by individual inspiration or by the *lumen naturae*, the *sapientia Dei* hidden in nature. The autonomy of their insights showed itself in the emancipation of science from the domination of faith. Human intolerance and shortsightedness are to blame for the open conflict that ultimately broke out between faith and knowledge. Conflict or comparison between incommensurables is impossible. The only possible attitude is one of mutual toleration, for neither can deprive the other of its validity. Existing religious beliefs have, besides their supernatural foundation, a basis in psychological facts whose existence is as valid as those of the empirical sciences. If this is not understood on one side or the other it makes no difference to the facts, for these exist whether man understands them or not, and whoever does not have the facts on his side will sooner or later have to pay the price.

[151] With this I would like to conclude my remarks on sulphur. This arcane substance has provided occasion for some general reflections, which are not altogether fortuitous in that sulphur represents the active substance of the sun or, in psychological language, the *motive factor in consciousness*: on the one hand the will, which can best be regarded as a dynamism subordinated to consciousness, and on the other hand compulsion, an involuntary motivation or impulse ranging from mere interest to possession proper. The unconscious dynamism would correspond to sulphur, for compulsion is the great mystery of human life. It is the thwarting of our conscious will and of our reason by an inflammable element within us, appearing now as a consuming fire and now as life-giving warmth.

[152] The *causa efficiens et finalis* of this lack of freedom lies in the unconscious and forms that part of the personality which still has to be added to the conscious man in order to make him whole. At first sight it is but an insignificant fragment—a *lapis*

exilis, in via eiectus, and often inconvenient and repellent because it stands for something that demonstrates quite plainly our secret inferiority. This aspect is responsible for our resistance to psychology in general and to the unconscious in particular. But together with this fragment, which could round out our consciousness into a whole, there is in the unconscious an already existing wholeness, the “homo totus” of the Western and the *Chên-yên* (true man) of Chinese alchemy, the round primordial being who represents the greater man within, the Anthropos, who is akin to God. This inner man is of necessity partly unconscious, because consciousness is only part of a man and cannot comprehend the whole. But the whole man is always present, for the fragmentation of the phenomenon “Man” is nothing but an effect of consciousness, which consists only of supraliminal ideas. No psychic content can become conscious unless it possesses a certain energy-charge. If this falls, the content sinks below the threshold and becomes unconscious. The possible contents of consciousness are then sorted out, as the energy-charge separates those capable of becoming conscious from those that are not. This separation gives rise on the one hand to consciousness, whose symbol is the sun, and on the other hand to the shadow, corresponding to the *umbra solis*.

[153] Compulsion, therefore, has two sources: the shadow and the Anthropos. This is sufficient to explain the paradoxical nature of sulphur: as the “corrupter” it has affinities with the devil, while on the other hand it appears as a parallel of Christ.

4. LUNA

a. The Significance of the Moon

[154] Luna, as we have seen, is the counterpart of Sol, cold,¹⁶⁸ moist, feebly shining or dark, feminine, corporeal, passive. Accordingly her most significant role is that of a partner in the coniunctio. As a feminine deity her radiance is mild; she is the lover. Pliny calls her a “womanly and gentle star.” She is the sister and bride, mother and spouse of the sun.¹⁶⁹ To illustrate the sun-moon relationship the alchemists often made use of the Song of Songs (Canticles),¹⁷⁰ as in the “confabulation of the lover with the beloved” in *Aurora Consurgens*.¹⁷¹ In Athens the day of the new moon was considered favourable for celebrating marriages, and it still is an Arabian custom to marry on this day; sun and moon are marriage partners who embrace on the twenty-eighth day of the month.¹⁷² According to these ancient ideas the moon is a vessel of the sun: she is a universal receptacle, of the sun in particular¹⁷³; and she was called “infundibulum terrae” (the funnel of the earth), because she “receives and pours out”¹⁷⁴ the powers of heaven. Again, it is said that the “moisture of the moon” (*lunaris humor*) takes up the sunlight,¹⁷⁵ or that Luna draws near to the sun in order to

“extract from him, as from a fountain, universal form and natural life”;¹⁷⁶ she also brings about the conception of the “universal seed of the sun” in the quintessence, in the “belly and womb of nature.”¹⁷⁷ In this respect there is a certain analogy between the moon and the earth, as stated in Plutarch and Macrobius.¹⁷⁸ *Aurora Consurgens* says that “the earth made the moon,”^{178a} and here we should remember that Luna also signifies silver. But the statements of the alchemists about Luna are so complex that one could just as well say that silver is yet another synonym or symbol for the arcanum “Luna.” Even so, a remark like the one just quoted may have been a reference to the way in which ore was supposed to have been formed in the earth: the earth “receives” the powers of the stars, and in it the sun generates the gold, etc. The *Aurora consurgens* therefore equates the earth with the bride: “I am that land of the holy promise,”¹⁷⁹ or at any rate it is in the earth that the hierosgamos takes place.¹⁸⁰ Earth and moon coincide in the *albedo*, for on the one hand the sublimated or calcined earth appears as *terra alba foliata*, the “sought-for good, like whitest snow,”¹⁸¹ and on the other hand Luna, as mistress of the *albedo*,¹⁸² is the *femina alba* of the coniunctio¹⁸³ and the “mediatrix of the whitening.”¹⁸⁴ The lunar sulphur is white, as already mentioned. The *plenilunium* (full moon) appears to be especially important: When the moon shines in her fulness the “rabid dog”, the danger that threatens the divine child,¹⁸⁵ is chased away. In Senior the full moon is the arcane substance.

[155] In ancient tradition Luna is the giver of moisture and ruler of the water-sign Cancer (♋). Maier says that the *umbra solis* cannot be destroyed unless the sun enters the sign of Cancer, but that Cancer is the “house of Luna, and Luna is the ruler of the moistures”¹⁸⁶ (juice, sap, etc.). According to *Aurora consurgens* II, she is herself the water,¹⁸⁷ the “bountiful nurse of the dew.”¹⁸⁸ Rahner, in his “Mysterium Lunae,” shows the extensive use which the Church Fathers made of the allegory of the moon-dew in explaining the effects of grace in the ecclesiastical sacraments. Here again the patristic symbolism exerted a very strong influence on the alchemical allegories. Luna secretes the dew or sap of life. “This Luna is the sap of the water of life, which is hidden in Mercurius.”¹⁸⁹ Even the Greek alchemists supposed there was a principle in the moon (τὴν τῆς σελήνης οὐσίαν), which Christianos¹⁹⁰ calls the “ichor of the philosopher” (τά ἕγρὰ τοῦ φιλοσόφου).¹⁹¹ The relation of the moon to the soul, much stressed in antiquity,¹⁹² also occurs in alchemy though with a different nuance. Usually it is said that from the moon comes the dew, but the moon is also the *aqua mirifica*¹⁹³ that extracts the souls from the bodies or gives the bodies life and soul. Together with Mercurius, Luna sprinkles the dismembered dragon with her moisture and brings him to life again, “makes him live, walk, and run about, and change his colour to the nature of blood.”¹⁹⁴ As the water of ablution, the dew falls from heaven, purifies the body, and makes it ready to receive the soul;¹⁹⁵ in other words, it brings

about the *albedo*, the white state of innocence, which like the moon and a bride awaits the bridegroom.

[156] As the alchemists were often physicians, Galen's views must surely have influenced their ideas about the moon and its effects. Galen calls Luna the "princeps" who "rightly governs this earthly realm, surpassing the other planets not in potency, but in proximity." He also makes the moon responsible for all physical changes in sickness and health, and regards its aspects as decisive for prognosis.

[157] The age-old belief that the moon promotes the growth of plants led in alchemy not only to similar statements but also to the curious idea that the moon is itself a plant. Thus the *Rosarium* says that Sol is called a "great animal" whereas Luna is a "plant."¹⁹⁶ In the alchemical pictures there are numerous sun-and-moon trees.¹⁹⁷ In the "Super arborem Aristotelis," the "circle of the moon" perches in the form of a stork on a wonderworking tree by the grave of Hermes.¹⁹⁸ Galen¹⁹⁹ explains the *arbor philosophica* as follows: "There is a certain herb or plant, named Lunatica or Berissa,²⁰⁰ whose roots are metallic earth, whose stem is red, veined with black, and whose flowers are like those of the marjoram; there are thirty of them, corresponding to the age of the moon in its waxing and waning. Their colour is yellow."²⁰¹ Another name for Lunatica is Lunaria, whose flowers Dorn mentions, attributing to them miraculous powers.²⁰² Khunrath says: "From this little salty fountain grows also the tree of the sun and moon, the red and white coral-tree of our sea," which is that same Lunaria and whose "salt" is called "Luna Philosophorum et dulcedo sapientum" (sweetness of the sages).²⁰³ The "Allegoriae super librum Turbae" describe the moon-plant thus: "In the lunar sea²⁰⁴ there is a sponge planted, having blood and sentience [*sensum*],²⁰⁵ in the manner of a tree that is rooted in the sea and moveth not from its place. If thou wouldst handle the plant, take a sickle to cut it with, but have good care that the blood floweth not out, for it is the poison of the Philosophers."²⁰⁶

[158] From all this it would seem that the moon-plant is a kind of mandrake and has nothing to do with the botanical Lunaria (honesty). In the herbal of Tabernaemontanus, in which all the magico-medicinal properties of plants are carefully listed, there is no mention of the alchemical Lunatica or Lunaria. On the other hand it is evident that the Lunatica is closely connected with the "tree of the sea" in Arabian alchemy²⁰⁷ and hence with the *arbor philosophica*,²⁰⁸ which in turn has parallels with the Cabalistic tree of the Sefiroth²⁰⁹ and with the tree of Christian mysticism²¹⁰ and Hindu philosophy.²¹¹

[159] Ruland's remark that the sponge "has understanding" (see n. 205) and Khunrath's that the essence of the Lunaria is the "sweetness of the sages" point to the general idea that the moon has some secret connection with the human mind.²¹² The alchemists have a great deal to say about this, and this is the more interesting as we

know that the moon is a favourite symbol for certain aspects of the unconscious—though only, of course, in a man. In a woman the moon corresponds to consciousness and the sun to the unconscious. This is due to the contrasexual archetype in the unconscious: anima in a man, animus in a woman.

[160] In the gnosis of Simon Magus, Helen (Selene) is *πρώτη ἔννοια*,²¹³ *sapientia*,²¹⁴ and *ἐπίνοια*.²¹⁵ The last designation also occurs in Hippolytus: “For Epinoia herself dwelt in Helen at that time.”²¹⁶ In his ‘*Απόφασις μεγάλη* (“Great Explanation”), Simon says:

There are two offshoots from all the Aeons, having neither beginning nor end, from one root, and this root is a certain Power [*δύναμις*], an invisible and incomprehensible Silence [*σιγή*]. One of them appears on high and is a great power, the mind of the whole [*νοῦς τῶν ὅλων*], who rules all things and is a male; the other below is a great Thought [*ἐπίνοια μεγάλη*], a female giving birth to all things. Standing opposite one another, they pair together and cause to arise in the space between them an incomprehensible Air, without beginning or end; but in it is a Father who upholds all things and nourishes that which has beginning and end. This is he who stood, stands, and shall stand, a masculo-feminine Power after the likeness of the pre-existing boundless Power which has neither beginning nor end, abiding in solitude [*μονότητι*].²¹⁷

[161] This passage is remarkable for several reasons. It describes a *coniunctio Solis et Lunae* which Simon, it seems, concretized in his own life with Helen, the harlot of Tyre, in her role as Ishtar. As a result of the pairing with the *soror* or *filia mystica*, there was begotten a masculo-feminine pneuma, curiously designated “Air.” Since pneuma, like spirit, originally meant air in motion, this designation sounds archaic or else deliberately physcistic. It is evident, however, that air is used here in the spiritual sense of pneuma since its progenitors bear names—*νοῦς*, *ἔννοια*, *ἐπίνοια*—which have a noetic character and thus pertain to the spiritual sphere. Of these three names Nous is the most general concept, and in Simon’s day it was used indiscriminately with pneuma. Ennoia and Epinoia mean nothing that could not be rendered just as well by Nous; they differ from the latter only in their special character, emphasizing the more specific contents of the inclusive term Nous. Further, they are both of the feminine gender required in this context, whereas Nous is masculine. All three indicate the essential similarity of the components of the syzygy and their “spiritual” nature.

[162] Anyone familiar with alchemy will be struck by the resemblance between Simon’s views and the passage in the “*Tabula smaragdina*”:

And as all things proceed from the One, through the meditation of the One, so all things proceed from this one thing, by adaptation.²¹⁸

Its father is the Sun, its mother the Moon; the wind hath carried it in his belly.²¹⁹

[163] Since “all things” proceed from the meditation of the One, this is true also of Sol and Luna, who are thus endowed with an originally pneumatic character. They stand for the primordial images of the spirit, and their mating produces the *filius macrocosmi*. Sol and Luna in later alchemy are undoubtedly arcane substances and volatilia, i.e., spirits.²²⁰

[164] We will now see what the texts have to say about Luna’s noetic aspect. The yield is astonishingly small; nevertheless there is the following passage in the *Rosarium*:

Unless ye slay me, your understanding will not be perfect, and in my sister the moon the degree of your wisdom increases, and not with another of my servants, even if ye know my secret.²²¹

Mylius copies out this sentence uncritically in his *Philosophia reformata*.²²² Both he and the *Rosarium* give the source as the “Metaphora Belini de sole.”²²³ The “Dicta Belini” are included in the “Allegoriae sapientum,” but there the passage runs:

I announce therefore to all you sages, that unless ye slay me, ye cannot be called sages. But if ye slay me, your understanding will be perfect, and it increases in my sister the moon according to the degree of our wisdom, and not with another of my servants, even if ye know my secret.²²⁴

Belinus, as Ruska is probably right in conjecturing, is the same as Apollonius of Tyana,²²⁵ to whom some of the sermons in the *Turba* are attributed. In Sermo 32, “Bonellus” discusses the problem of death and transformation, likewise touched on in our text. The other sermons of Bonellus have nothing to do with our text, however, nor does the motif of resurrection, on account of its ubiquity, signify much, so that the “Dicta” in all probability have no connection with the *Turba*. A more likely source for the “Dicta” would be the (Harranite?) treatise of Artefius, “Clavis maioris sapientiae”:²²⁶ “Our master, the philosopher Belenius, said, Set your light in a vessel of clear glass, and observe that all the wisdom of this world revolves round the following three . . .”²²⁷ And again: “But one day my master, the philosopher Bolemus, called me and said, Eh! my son, I hope that thou art a man of spiritual understanding and canst attain to the highest degree of wisdom.”²²⁸ Then follows an explanation about how two contrary natures, active and passive, arose from the first simple substance. In the beginning God said “without uttering a word,” “Let there be such a creature,” and thereupon the simple (*simplex*) was there. Then God created nature or the prima materia, “the first passive or receptive [principle], in which everything was present in principle and in potency.” In order to end this state of suspension God created the “*causa agens*, like to the circle of heaven, which he resolved to call Light. But this Light received a certain sphere, the first creature, within its

hollowness.” The properties of this sphere were heat and motion. It was evidently the sun, whereas the cold and passive principle would correspond to the moon.²²⁹

[165] It seems to me not unlikely that the “Dicta Belini” are connected with this passage from Artefius rather than with the *Turba*, since they have nothing to do with the sermons of Apollonius. They may therefore represent a tradition independent of the *Turba*, and this is the more likely since Artefius seems to have been a very ancient author of Arabic provenance.²³⁰ He shares the doctrine of the “simplex” with the “Liber quatorum,”²³¹ which too is probably of Harranite origin. I mention his theory of the creation here despite the fact that it has no parallels in the “Dicta.” It seemed to me worth noting because of its inner connection with the “Apophysis megale” of Simon Magus. The “Dicta” are not concerned with the original separation of the natures but rather with the synthesis which bears much the same relation to the sublimation of the human mind (*exaltatio intellectus*) as the procedures of the “Liber quatorum.”²³²

[166] Besides the connection between Luna and intellect we must also consider their relation to Mercurius, for in astrology and mythology Mercurius is the divine factor that has most to do with Epinoia. The connections between them in alchemy have classical antecedents. Leaving aside the relation of Hermes to the Nous, I will only mention that in Plutarch Hermes sits in the moon and goes round with it (just as Heracles does in the sun).²³³ In the magic papyri, Hermes is invoked as follows: “O Hermes, ruler of the world, thou who dwellest in the heart, circle of the moon, round and square.”²³⁴

[167] In alchemy Mercurius is the rotundum *par excellence*. Luna is formed of his cold and moist nature, and Sol of the hot and dry;²³⁵ alternatively she is called “the proper substance of Mercurius.”²³⁶ From Luna comes the *aqua Mercurialis* or *aqua permanens*;²³⁷ with her moisture, like Mercurius, she brings the slain dragon to life.²³⁸ As we have seen, the circle of the moon is mentioned in the “Super arborem Aristotelis,” where “a stork, as it were calling itself the circle of the moon,” sits on a tree that is green within instead of without.²³⁹ Here it is worth pointing out that the soul, whose connection with the moon has already been discussed, was also believed to be round. Thus Caesarius of Heisterbach says that the soul has a “spherical nature,” “after the likeness of the globe of the moon.”²⁴⁰

[168] Let us now turn back to the question raised by the quotation in the *Rosarium* from the “Dicta Belini.” It is one of those approximate quotations which are typical of the *Rosarium*.²⁴¹ In considering the quotation as a whole it should be noted that it is not clear who the speaker is. The *Rosarium* supposes that it is Sol. But it can easily be shown from the context of the “Dicta” that the speaker could just as well be the filius Philosophorum, since the woman is sometimes called “soror,” sometimes

“mater,” and sometimes “uxor.” This strange relationship is explained by the primitive fact that the son stands for the reborn father, a motif familiar to us from the Christian tradition. The speaker is therefore the father-son, whose mother is the son’s sister-wife. “According to the degree of our wisdom” is contrasted with “your understanding;” it therefore refers to the wisdom of the *Sol redivivus*, and presumably also to his sister the moon, hence “our” and not “my” wisdom. “The degree” is not only plausible but is a concept peculiar to the opus, since Sol passes through various stages of transformation from the dragon, lion, and eagle²⁴² to the hermaphrodite. Each of these stages stands for a new degree of insight, wisdom, and initiation, just as the Mithraic eagles, lions, and sun-messengers signify grades of initiation. “Unless ye slay me” usually refers to the slaying of the dragon, the *mortificatio* of the first, dangerous, poisonous stage of the anima (= Mercurius), freed from her imprisonment in the prima materia.²⁴³ This anima is also identified with Sol.²⁴⁴ Sol is frequently called Rex, and there is a picture showing him being killed by ten men.²⁴⁵ He thus suffers the same *mortificatio* as the dragon, with the difference that it is never a suicide. For Sol, in so far as the dragon is a preliminary form of the *filius Solis*, is in a sense the father of the dragon, although the latter is expressly said to beget itself and is thus an increatum.²⁴⁶ At the same time Sol, being his own son, is also the dragon. Accordingly there is a *coniugium* of the dragon and the woman, who can only be Luna or the lunar (feminine) half of Mercurius.²⁴⁷ As much as Sol, therefore, Luna (as the mother) must be contained in the dragon. To my knowledge there is never any question of her *mortificatio* in the sense of a slaying. Nevertheless she is included with Sol in the death of the dragon, as the *Rosarium* hints: “The dragon dieth not, except with his brother and his sister.”²⁴⁸

[169] The idea that the dragon or Sol must die is an essential part of the mystery of transformation. The *mortificatio*, this time only in the form of a mutilation, is also performed on the lion, whose paws are cut off,²⁴⁹ and on the bird, whose wings are clipped.²⁵⁰ It signifies the overcoming of the old and obsolete as well as of the dangerous preliminary stages which are characterized by animal-symbols.

[170] In interpreting the words “your understanding increases in my sister,” etc., it is well to remember that a philosophical interpretation of myths had already grown up among the Stoics, which today we should not hesitate to describe as psychological. This work of interpretation was not interrupted by the development of Christianity but continued to be assiduously practised in a rather different form, namely in the hermeneutics of the Church Fathers, which was to have a decided influence on alchemical symbolism. The Johannine interpretation of Christ as the pre-worldly Logos is an early attempt of this kind to put into other words the “meaning” of Christ’s essence. The later medievalists, and in particular the natural philosophers, made the Sapientia Dei the nucleus of their interpretation of nature and thus created a

new nature-myth. In this they were very much influenced by the writings of the Arabs and of the Harranites, the last exponents of Greek philosophy and gnosis, whose chief representative was Tabit ibn Qurra in the tenth century. One of these writings, the “Liber Platonis quartorum,” is a dialogue in which Thebed (Tabit) speaks in person. In this treatise the intellect as a tool of natural philosophy plays a role that we do not meet again until the sixteenth century, in Gerhard Dorn. Pico della Mirandola appeals to the psychological interpretation of the ancients and mentions that the “Greek Platonists” described Sol as *διάνοια*²⁵¹ and Luna as *δόξα*,²⁵² terms that are reminiscent of Simon’s Nous and Epinoia.²⁵³ Pico himself defines the difference as that between “scientia” and “opinio.”²⁵⁴ He thinks that the mind (*animus*), turning towards the spirit (*spiritus*) of God, shines and is therefore called Sol. The spirit of God corresponds to the *aquae superiores*, the “waters above the firmament” (Gen. 1 : 7). But in so far as the human mind turns towards the “waters under the firmament” (*aquae inferiores*), it concerns itself with the “sensuales potentiae,” “whence it contracts the stain of infection” and is called Luna.²⁵⁵ In both cases it is clearly the human spirit or psyche, both of which have, however, a double aspect, one facing upwards to the light, the other downwards to the darkness ruled by the moon (“The sun to rule the day, the moon also to govern the night”). “And while,” says Pico, “we wander far from our fatherland and abide in this night and darkness of our present life, we make most use of that which turns us aside to the senses, for which reason we think many things rather than know them,”²⁵⁶—a pessimistic but no doubt accurate view that fully accords with the spiritual benightedness and sinful darkness of this sublunary world, which is so black that the moon herself is tarnished by it.

[171] The moon appears to be in a disadvantageous position compared with the sun. The sun is a concentrated luminary: “The day is lit by a single sun.” The moon, on the other hand—“as if less powerful”—needs the help of the stars when it comes to the task of “composition and separation, rational reflection, definition,” etc.²⁵⁷ The appetites, as “potentiae sensuales,” pertain to the sphere of the moon; they are anger (*ira*) and desire (*libido*) or, in a word, *concupiscentia*. The passions are designated by animals because we have these things in common with them, and, “what is more unfortunate, they often drive us into leading a bestial life.”²⁵⁸ According to Pico, Luna “has an affinity with Venus, as is particularly to be seen from the fact that she is sublimated in Taurus, the House of Venus, so much that she nowhere else appears more auspicious and more beneficent.”²⁵⁹ Taurus is the house of the hierogamy of Sol and Luna.²⁶⁰ Indeed, Pico declares that the moon is “the lowest earth and the most ignoble of all the stars,”²⁶¹ an opinion which recalls Aristotle’s comparison of the moon with the earth. The moon, says Pico, is inferior to all the other planets.²⁶² The novilunium is especially unfavourable, as it robs growing bodies of their nourishment and in this way injures them.²⁶³

[172] Psychologically, this means that the union of consciousness (Sol) with its feminine counterpart the unconscious (Luna) has undesirable results to begin with: it produces poisonous animals such as the dragon, serpent, scorpion, basilisk, and toad;²⁶⁴ then the lion, bear, wolf, dog,²⁶⁵ and finally the eagle²⁶⁶ and the raven. The first to appear are the cold-blooded animals, then warm-blooded predators, and lastly birds of prey or ill-omened scavengers. The first progeny of the *matrimonium luminarium* are all, therefore, rather unpleasant. But that is only because there is an evil darkness in both parents which comes to light in the children, as indeed often happens in real life. I remember, for instance, the case of a twenty-year-old bank clerk who embezzled several hundred francs. His old father, the chief cashier at the same bank, was much pitied, because for forty years he had discharged his highly responsible duties with exemplary loyalty. Two days after the arrest of his son he decamped to South America with a million. So there must have been “something in the family.” We have seen in the case of Sol that he either possesses a shadow or is even a *Sol niger*. As to the position of Luna, we have already been told what this is when we discussed the new moon. In the “Epistola Solis ad Lunam crescentem”²⁶⁷ Sol cautiously says: “If you do me no hurt, O moon.”²⁶⁸ Luna has promised him complete dissolution while she herself “coagulates,” i.e., becomes firm, and is clothed with his blackness (*induta fuero nigredine tua*).²⁶⁹ She assumes in the friendliest manner that her blackness comes from *him*. The matrimonial wrangle has already begun. Luna is the “shadow of the sun, and with corruptible bodies she is consumed, and through her corruption . . . is the Lion eclipsed.”²⁷⁰

[173] According to the ancient view, the moon stands on the border-line between the eternal, aethereal things and the ephemeral phenomena of the earthly, sublunar realm.²⁷¹ Macrobius says: “The realm of the perishable begins with the moon and goes downwards. Souls coming into this region begin to be subject to the numbering of days and to time. . . . There is no doubt that the moon is the author and contriver of mortal bodies.”²⁷² Because of her moist nature, the moon is also the cause of decay.²⁷³ The loveliness of the new moon, hymned by the poets and Church Fathers, veils her dark side, which however could not remain hidden from the fact-finding eye of the empiricist.²⁷⁴ The moon, as the star nearest to the earth, partakes of the earth and its sufferings, and her analogy with the Church and the Virgin Mary as mediators has the same meaning.²⁷⁵ She partakes not only of the earth’s sufferings but of its daemonic darkness as well.²⁷⁶

b. The Dog

[174] This dark side of the moon is hinted at in the ancient invocation to Selene as the “dog” or “bitch” (*κυών*), in the Magic Papyri.²⁷⁷ There it is also said that in the second hour Helios appears as a dog.²⁷⁸ This statement is of interest in so far as the

“symbolizatio”²⁷⁹ by the dog²⁸⁰ entered Western alchemy through Kalid’s “Liber secretorum,” originally, perhaps, an Arabic treatise. All similar passages that I could find go back, directly or indirectly, to Kalid.²⁸¹ The original passage runs:

Hermes²⁸² said, My son, take a Corascene dog and an Armenian bitch, join them together, and they will beget a dog of celestial hue, and if ever he is thirsty, give him sea water to drink: for he will guard your friend, and he will guard you from your enemy, and he will help you wherever you may be, always being with you, in this world and in the next. And by dog and bitch, Hermes meant things which preserve bodies from burning and from the heat of the fire.²⁸³

Some of the quotations are taken from the original text, others from the variant in the *Rosarium*, which runs:

Hali, philosopher and king of Arabia, says in his Secret: Take a Coetanean²⁸⁴ dog and an Armenian bitch, join them together, and they two will beget for you a puppy [*filius canis*] of celestial hue: and that puppy will guard you in your house from the beginning, in this world and in the next.²⁸⁵

As explanatory parallels, the *Rosarium* mentions the union of the white and red, and cites Senior: “The red slave has wedded the white woman.” It is clear that the mating must refer to the royal marriage of Sol and Luna.

[175] The theriomorphic form of Sol as a lion and dog and of Luna as a bitch shows that there is an aspect of both luminaries which justifies the need for a “symbolizatio” in animal form. That is to say the two luminaries are, in a sense, animals or appetites, although, as we have seen, the “*potentiae sensuales*” are ascribed only to Luna. There is, however, also a *Sol niger*, who, significantly enough, is contrasted with the daytime sun and clearly distinguished from it. This advantage is not shared by Luna, because she is obviously sometimes bright and sometimes dark. Psychologically, this means that consciousness by its very nature distinguishes itself from its shadow, whereas the unconscious is not only contaminated with its own negative side but is burdened with the shadow cast off by the conscious mind. Although the solar animals, the lion and the eagle, are nobler than the bitch, they are nevertheless animals and beasts of prey at that, which means that even our sun-like consciousness has its dangerous animals. Or, if Sol is the spirit and Luna the body, the spirit too may be corrupted by pride or concupiscence, a fact which we are inclined to overlook in our one-sided admiration of the “spirit.”

[176] Kalid’s “son of the dog” is the same as the much extolled “son of the philosophers.” The ambiguity of this figure is thus stressed: it is at once bright as day and dark as night, a perfect *coincidentia oppositorum* expressing the divine nature of the self. This thought, which seems an impossible one for our Christian feelings, is

nevertheless so logical and so irresistible that, by however strange and devious a route, it forced its way into alchemy. And because it is a natural truth it is not at all surprising that it became articulate very much earlier. We are told in the *Elenchos* of Hippolytus that, according to Aratus,

Cynosura²⁸⁶ is the [little] Bear, the Second Creation, the small, narrow way,²⁸⁷ and not the great Bear [ἡ ἑλίκη]. For it leads not backward, but guides those who follow it forward to the straight way, being the tail of the Dog. *For the Logos is a dog* [κύων γὰρ ὁ λόγος] who guards and protects the sheep against the wiles of the wolves, and chases the wild beasts from Creation and slays them, and begets all things. For Cyon [κύων], they say, means the Begetter.²⁸⁸

Aratus associates the Dog with the growth of plants, and continues:

But with the rising of the Dog-star, the living are distinguished by the Dog from the dead, for in truth everything withers that has not taken root. *This Dog, they say, being a certain divine Logos*, has been established judge of the quick and the dead, and as the Dog is seen to be the star of the plants, so is the Logos, they say, in respect of the heavenly plants, which are men. For this reason the Second Creation Cynosura stands in heaven as an image of the rational creature [λογικῆς κτίσεως]. But between the two Creations stretches the Dragon, hindering anything of the Great Creation from entering the lesser, and watching over everything that exists [τὰ καθεστηκότα] in the Great Creation, like the Kneeler,²⁸⁹ observing how and in what manner each thing exists [καθέστηκε] in the Lesser Creation.

[177] Kalid's *filius canis*²⁹⁰ is “of celestial hue,” an indication of its heavenly origin from the great luminaries. The blue colour or likeness to a dog²⁹¹ is also attributed to the woman who in Hippolytus is described as *περεηφικόλα*,²⁹² and who is pursued by a grey-haired, winged, ithyphallic old man (*πρεσβύτης*). He is named *φάος ρύντης*, Flowing Light, and she is *ἡ φικόλα*, “which means Dark Water” (*τὸ σκοτεινὸν ὕδωρ*).²⁹³ Behind these figures may be discerned a *coniunctio Solis et Lunae*, both the sun and the new moon appearing in their unfavourable aspect. Here too there arises between them the “harmony” of an intermediary spirit (*πνεῦματος*), roughly corresponding to the position of the *filius philosophorum*.^{293a} Kalid's *filius* plays the role of a guiding spirit or familiar whose invocation by magic is so typical of the Harranite texts. A parallel to the dog-spirit is the poodle in *Faust*, out of whom Mephistopheles emerges as the familiar of Faust the alchemist.

[178] In this connection I would like to mention the incest dream of a woman patient: *Two dogs were copulating. The male went head first into the female and disappeared in her belly.*²⁹⁴ Theriomorphic symbolism is always an indication of a psychic process occurring on an animal level, i.e., in the instinctual sphere. The dream depicts a

reversed birth as the goal of a sexual act. This archetypal situation underlies the incest motif in general and was present in modern man long before any consciousness of it. The archetype of incest is also at the back of the primitive notion that the father is reborn in the son, and of the heirosgamos of mother and son in its pagan and Christian form;²⁹⁵ it signifies the highest and the lowest, the brightest and the darkest, the best and the most detestable. It represents the pattern of renewal and rebirth, the endless creation and disappearance of symbolic figures.

[179] The motif of the dog is a necessary counterbalance to the excessively praised “light-nature” of the stone. Apart from the saying of Kalid there is still another aspect of the dog, of which, however, we find only sporadic hints in the literature. One such passage occurs in the “De ratione conficiendi lapidis philosophici” of Laurentius Ventura:²⁹⁶

Therefore pull down the house, destroy the walls, extract therefrom the purest juice²⁹⁷ with the blood, and cook that thou mayest eat. Wherefore Arnaldus saith in the Book of Secrets:²⁹⁸ Purify the stone, grind the door to powder, tear the bitch to pieces, choose the tender flesh, and thou wilt have the best thing. In the one thing are hidden all parts, in it all metals shine. Of these [parts], two are the artificers, two the vessels, two the times, two the fruits, two the ends, and one the salvation.²⁹⁹

[180] This text abounds in obscurities. In the preceding section Ventura discusses the unity of the lapis and the medicina, mentioning the axioms “Introduce nothing alien” and “Nothing from outside”³⁰⁰ with quotations from Geber, the *Turba*, and the “Thesaurus thesaurorum” of Arnaldus.³⁰¹ Then he turns to the “superfluities to be removed.”³⁰² The lapis, he says, is “by nature most pure.” It is therefore sufficiently purified when it is “led out of its proper house and enclosed in an alien house.” The text continues:

In the proper house the flying bird is begotten, and in the alien house³⁰³ the tincturing stone. The two flying birds³⁰⁴ hop on to the tables and heads of the kings,³⁰⁵ because both, the feathered bird and the plucked,³⁰⁶ have given [us] this visible art³⁰⁷ and cannot relinquish the society of men.³⁰⁸ The father³⁰⁹ of [the art] urges the indolent to work, its mother³¹⁰ nourishes the sons who are exhausted by their labours, and quickens and adorns their weary limbs.

Then follows the passage “Therefore pull down the house,” etc. If the reader has perused the foregoing passage with the footnotes he will see that these instructions are the typical alchemical procedure for extracting the spirit or soul, and thus for bringing unconscious contents to consciousness. During the *solutio*, *separatio*, and *extractio* the *succus lunariae* (juice of the moon-plant), blood, or *aqua permanens* is either applied or extracted. This “liquid” comes from the unconscious but is not

always an authentic content of it; often it is more an effect of the unconscious on the conscious mind. The psychiatrist knows it as the indirect effect of constellated unconscious contents which attracts or diverts attention to the unconscious and causes it to be assimilated. This process can be observed not only in the gradual formation of hypochondriac obsessions, phobias, and delusions, but also in dreams, fantasies, and creative activities when an unconscious content enforces the application of attention. This is the *succus vitae*,³¹¹ the blood, the vital participation which the patient unconsciously forces on the analyst too, and without which no real therapeutic effect can be achieved. The attention given to the unconscious has the effect of incubation, a brooding³¹² over the slow fire needed in the initial stages of the work;³¹³ hence the frequent use of the terms *decoctio*, *digestio*, *putrefactio*, *solutio*. It is really as if attention warmed the unconscious and activated it, thereby breaking down the barriers that separate it from consciousness.

[181] In order to set free the contents hidden in the “house”³¹⁴ of the unconscious (*anima in compedibus!*) the “matrix” must be opened. This matrix is the “canicula,” the moon-bitch, who carries in her belly that part of the personality which is felt to be essential, just as Beya did Gabricus. She is the vessel which must be broken asunder in order to extract the precious content, the “tender flesh,”³¹⁵ for this is the “one thing” on which the whole work turns. In this one thing all parts of the work are contained.³¹⁶ Of these parts two are the artificers, who in the symbolical realm are Sol and Luna, in the human the adept and his *soror mystica*,³¹⁷ and in the psychological realm the masculine consciousness and the feminine unconscious (*anima*). The two vessels are again Sol and Luna,³¹⁸ the two times are probably the two main divisions of the work, the *opus ad album et ad rubeum*.³¹⁹ The former is the *opus Lunae*, the latter the *opus Solis*.³²⁰ Psychologically they correspond to the constellation of unconscious contents in the first part of the analytical process and to the integration of these contents in actual life. The two fruits³²¹ are the fruit of the sun-and-moon tree,³²² gold and silver, or the reborn and sublimated Sol and Luna. The psychological parallel is the transformation of both the unconscious and the conscious, a fact known to everyone who methodically “has it out” with his unconscious. The two ends or goals are these transformations. But the salvation is one, just as the thing is one: it is the same thing at the beginning as at the end, it was always there and yet it appears only at the end. This thing is the self, the indescribable totality, which though it is inconceivable and “irrepresentable” is none the less necessary as an intuitive concept. Empirically we can establish no more than that the ego is surrounded on all sides by an unconscious factor. Proof of this is afforded by the association experiment, which gives a graphic demonstration of the frequent failure of the ego and its will. The psyche is an equation that cannot be “solved” without the factor of the unconscious;

it is a totality which includes both the empirical ego and its transconscious foundation.

[182] There is still another function of the dog in alchemy which has to be considered. In the “Introitus apertus” of Philaletha we find the following passage:

This Chamaeleon is the infant hermaphrodite, who is infected from his very cradle by the bite of the rabid Corascene dog, whereby he is maddened and rages with perpetual hydrophobia; nay, though of all natural things water is the closest to him, yet he is terrified of it and flees from it. O fate! Yet in the grove of Diana there is a pair of doves, which assuage his raving madness. Then will the impatient, swarthy, rabid dog, that he may suffer no return of his hydrophobia and perish drowned in the waters, come to the surface half suffocated; but do thou chase him off with pails of water and blows, and keep him at a distance, and the darkness will disappear. When the moon is at the full, give him wings and he will fly away as an eagle, leaving Diana’s birds dead behind him.³²³

[183] Here the connection with the moon tells us that the dark, dangerous, rabid dog changes into an eagle at the time of the plenilunium. His darkness disappears and he becomes a solar animal. We may therefore assume that his sickness was at its worst at the novilunium. It is clear that this refers to a psychic disturbance³²⁴ which at one stage also infected the “infant hermaphrodite.” Probably that too occurred at the novilunium,³²⁵ i.e., the stage of *nigredo*. Just how the mad dog with its terror of water got into the water at all is not clear, unless perhaps it was in the *aquae inferiores* from the beginning. The text is preceded by the remark: “Whence will come the Chamaeleon or our Chaos, in which all secrets are hid in their potential state.” The chaos as prima materia is identical with the “waters” of the beginning. According to Olympiodorus lead (also the prima materia) contains a demon that drives the adept mad.³²⁶ Curiously enough, Wei Po-yang, a Chinese alchemist of the second century, compares lead to a madman clothed in rags.³²⁷ Elsewhere Olympiodorus speaks of the “one cursed by God” who dwells in the “black earth.” This is the mole, which, as Olympiodorus relates from a Hermetic book, had once been a man who divulged the mysteries of the sun and was therefore cursed by God and made blind. He “knew the shape of the sun, as it was.”³²⁸

[184] It is not difficult to discern in these allusions the dangers, real or imaginary, which are connected with the unconscious. In this respect the unconscious has a bad reputation, not so much because it is dangerous in itself as because there are cases of latent psychosis which need only a slight stimulus to break out in all their catastrophic manifestations. An anamnesis or the touching of a complex may be sufficient for this. But the unconscious is also feared by those whose conscious attitude is at odds with their true nature. Naturally their dreams will then assume an

unpleasant and threatening form, for if nature is violated she takes her revenge. In itself the unconscious is neutral, and its normal function is to compensate the conscious position. In it the opposites slumber side by side; they are wrenched apart only by the activity of the conscious mind, and the more one-sided and cramped the conscious standpoint is, the more painful or dangerous will be the unconscious reaction. There is no danger from this sphere if conscious life has a solid foundation. But if consciousness is cramped and obstinately one-sided, and there is also a weakness of judgment, then the approach or invasion of the unconscious can cause confusion and panic or a dangerous inflation, for one of the most obvious dangers is that of identifying with the figures in the unconscious. For anyone with an unstable disposition this may amount to a psychosis.

[185] The raving madness of the infected “infant” is assuaged (we should really say “with caresses,” for that is the meaning of “mulcere”) by the doves of Diana. These doves form a pair—a love pair, for doves are the birds of Astarte.³²⁹ In alchemy they represent, like all winged creatures, spirits or souls, or, in technical terms, the *aqua*, the extracted transformative substance.³³⁰ The appearance of a pair of doves points to the imminent marriage of the *filius regius* and to the dissolution of the opposites as a result of the union. The *filius* is merely infected by the evil, but the evil itself, the mad dog, is sublimated and changed into an eagle at the plenilunium. In the treatise of Abraham Eleazar, the lapis in its dark, feminine form appears instead of the dog and is compared to the Shulamite in the Song of Songs. The lapis says: “But I must be like a dove.”³³¹

[186] There is another passage in the “Introitus apertus” which is relevant in this context:

If thou knowest how to moisten this dry earth with its own water, thou wilt loosen the pores of the earth, and this thief from outside will be cast out with the workers of wickedness, and the water, by an admixture of the true Sulphur, will be cleansed from the leprous filth and from the superfluous dropsical fluid, and thou wilt have in thy power the fount of the Knight of Treviso, whose waters are rightfully dedicated to the maiden Diana. Worthless is this thief, armed with the malignity of arsenic, from whom the winged youth fleeth, shuddering. And though the central water is his bride, yet dare he not display his most ardent love towards her, because of the snares of the thief, whose machinations are in truth unavoidable. Here may Diana be propitious to thee, who knoweth how to tame wild beasts, and whose twin doves will temper the malignity of the air with their wings, so that the youth easily entereth in through the pores, and instantly shaketh the foundations of the earth,³³² and raises up a dark cloud. But thou wilt lead the waters up even to the brightness of the moon, and the

darkness that was upon the face of the deep shall be scattered by the spirit moving over the waters. Thus by God's command shall the Light appear.³³³

[187] It is evident that this passage is a variation on the theme of the preceding text. Instead of the infant hermaphrodite we have the winged youth, whose bride is the fountain of Diana (Luna as a nymph). The parallel to the mad dog is the thief or ne'er-do-well who is armed with the "malignity of arsenic." His malignity is assuaged by the wings of the doves, just as the dog's rabies was. The youth's wings are a token of his aerial nature; he is a pneuma that penetrates through the pores of the earth and activates it—which means nothing less than the connubium of the living spirit with the "dry, virgin earth," or of the wind with the waters dedicated to the maiden Diana. The winged youth is described as the "spirit moving over the waters," and this may be a reference not only to Genesis but to the angel that troubled the pool of Bethesda.³³⁴ His enemy, the thief who lies in wait for him, is, we are told earlier, the "outward burning vaporous sulphur," in other words *sulphur vulgi*, who is armed with the evil spirit, the devil, or is held captive by him in hell,³³⁵ and is thus the equivalent of the dog choked in the water. That the dog and the thief are identical is clear from the remark that Diana knows how to tame wild beasts. The two doves do in fact turn out to be the pair of lovers who appear in the love-story of Diana and the shepherd Endymion. This legend originally referred to Selene.

[188] The appearance of Diana necessarily brings with it her hunting animal the dog, who represents her dark side. Her darkness shows itself in the fact that she is also a goddess of destruction and death, whose arrows never miss. She changed the hunter Actaeon, when he secretly watched her bathing, into a stag, and his own hounds, not recognizing him, thereupon tore him to pieces. This myth may have given rise first to the designation of the lapis as the *cervus fugitivus* (fugitive stag),³³⁶ and then to the rabid dog, who is none other than the vindictive and treacherous aspect of Diana as the new moon. The parable we discussed in the chapter on sulphur likewise contains the motif of the "surprise in the bath." But there it is Helios himself who spies her, and the relationship is a brother-sister incest that ends with their both being drowned. This catastrophe is inherent in the incest, for through incest the royal pair is produced after animals have been killed or have killed one another.³³⁷ The animals (dragon, lion, snake, etc.) stand for evil passions that finally take the form of incest. They are destroyed by their own ravenous nature, just as are Sol and Luna, whose supreme desire culminates apparently in incest. But since "all that passes is but a parable," incest, as we have said before, is nothing but a preliminary form of the unio oppositorum.³³⁸ Out of chaos, darkness, and wickedness there rises up a new light once death has atoned for the "unavoidable machinations" of the Evil One.

c. An Alchemical Allegory

[189] The newcomer to the psychology of the unconscious will probably find the two texts about the mad dog and the thief very weird and abstruse. Actually they are no more so than the dreams which are the daily fare of the psychotherapist; and, like dreams, they can be translated into rational speech. In order to interpret dreams we need some knowledge of the dreamer's personal situation, and to understand alchemical parables we must know something about the symbolic assumptions of the alchemists. We amplify dreams by the personal history of the patient, and the parables by the statements found in the text. Armed with this knowledge, it is not too difficult in either case to discern a meaning that seems sufficient for our needs. An interpretation can hardly ever be convincingly proved. Generally it shows itself to be correct only when it has proved its value as a heuristic hypothesis. I would therefore like to take the second of Philaletha's texts, which is rather clearer than the first, and try to interpret it as if it were a dream.

Tu si aridam hanc Terram, aqua sui If thou knowest how to moisten this dry
generis rigare sciveris, poros Terrae earth with its own water, thou wilt
laxabis, loosen the pores of the earth,

[190] If you will contemplate your lack of fantasy, of inspiration and inner aliveness, which you feel as sheer stagnation and a barren wilderness, and impregnate it with the interest born of alarm at your inner death, then something can take shape in you, for your inner emptiness conceals just as great a fulness if only you will allow it to penetrate into you. If you prove receptive to this "call of the wild," the longing for fulfilment will quicken the sterile wilderness of your soul as rain quickens the dry earth. (Thus the Soul to the Laborant, staring glumly at his stove and scratching himself behind the ear because he has no more ideas.)

et externus hic fur cum Operatoribus and this thief from outside will be cast
nequitiae foras projicietur, out with the workers of wickedness,

[191] You are so sterile because, without your knowledge, something like an evil spirit has stopped up the source of your fantasy, the fountain of your soul. The enemy is your own crude sulphur, which burns you with the hellish fire of desirousness, or *concupiscentia*. You would like to make gold because "poverty is the greatest plague, wealth the highest good."³³⁹ You wish to have results that flatter your pride, you expect something useful, but there can be no question of that as you have realized with a shock. Because of this you no longer even *want* to be fruitful, as it would only be for God's sake but unfortunately not for your own.

purgabitur aqua per additamentum and the water, by an admixture of the
Sulphuris veri a sorde leprosa, et ab true Sulphur, will be cleansed from the
humore hydropico superfluo leprous filth and from the superfluous
dropsical fluid,

[192] Therefore away with your crude and vulgar desirousness, which childishly and shortsightedly sees only goals within its own narrow horizon. Admittedly sulphur is a vital spirit, a “Yetser Ha-ra,”³⁴⁰ an evil spirit of passion, though like this an active element; useful as it is at times, it is an obstacle between you and your goal. The water of your interest is not pure, it is poisoned by the leprosy of desirousness which is the common ill. You too are infected with this collective sickness. Therefore bethink you for once, “extrahe cogitationem,” and consider: What is behind all this desirousness? A thirsting for the eternal, which as you see can never be satisfied with the best because it is “Hades” in whose honour the desirous “go mad and rave.”³⁴¹ The more you cling to that which all the world desires, the more you are Everyman, who has not yet discovered himself and stumbles through the world like a blind man leading the blind with somnambulistic certainty into the ditch. Everyman is always a multitude. Cleanse your interest of that collective sulphur which clings to all like a leprosy. For desire only burns in order to burn itself out, and in and from this fire arises the true living spirit which generates life according to its own laws, and is not blinded by the shortsightedness of our intentions or the crude presumption of our superstitious belief in the will. Goethe says . . .

That livingness I praise

Which longs for flaming death.³⁴²

This means burning in your own fire and not being like a comet or a flashing beacon, showing others the right way but not knowing it yourself. The unconscious demands your interest for its own sake and wants to be accepted for what it is. Once the existence of this opposite is accepted, the ego can and should come to terms with its demands. Unless the content given you by the unconscious is acknowledged, its compensatory effect is not only nullified³⁴³ but actually changes into its opposite, as it then tries to realize itself literally and concretely.

habebisque in posse Comitum a Trevis and thou wilt have in thy power the
Fontinam, cujus Aquae sunt proprie Fount of the Knight of Treviso, whose
Dianae Virgini dicatae. waters are rightfully dedicated to the
maiden Diana.

[193] The fountain of Bernardus Trevisanus is the bath of renewal that was mentioned earlier. The ever-flowing fountain expresses a continual flow of interest toward the unconscious, a kind of constant attention or “religio,” which might also be called devotion. The crossing of unconscious contents into consciousness is thus made considerably easier, and this is bound to benefit the psychic balance in the long run. Diana as the numen and nymph of this spring is an excellent formulation of the figure we know as the anima. If attention is directed to the unconscious, the unconscious will yield up its contents, and these in turn will fructify the conscious like a fountain

of living water. For consciousness is just as arid as the unconscious if the two halves of our psychic life are separated.

Hic fur est nequam arsenicali malignitate Worthless is this thief, armed with the
armatus, quem juvenis alatus horret et malignity of arsenic, from whom the
fugit. winged youth fleeth, shuddering.

[194] It is evidently a difficult thing, this “cleansing from leprous filth”; indeed, d’Espagnet calls it a labour of Hercules. That is why the text turns back to the “thief” at this point. The thief, as we saw, personifies a kind of self-robbery. He is not easily shaken off, as it comes from a habit of thinking supported by tradition and milieu alike: anything that cannot be exploited in some way is uninteresting—hence the devaluation of the psyche. A further reason is the habitual depreciation of everything one cannot touch with the hands or does not understand. In this respect our conventional system of education—necessary as it was—is not entirely free from the blame of having helped to give the empirical psyche a bad name. In recent times this traditional error has been made even worse by an allegedly biological point of view which sees man as being no further advanced than a herd-animal and fails to understand any of his motivations outside the categories of hunger, power, and sex. We think in terms of thousands and millions of units, and then naturally there are no questions more important than whom the herd belongs to, where it pastures, whether enough calves are born and sufficient quantities of milk and meat are produced. In the face of huge numbers every thought of individuality pales, for statistics obliterate everything unique. Contemplating such overwhelming might and misery the individual is embarrassed to exist at all. Yet the real carrier of life is the individual. He alone feels happiness, he alone has virtue and responsibility and any ethics whatever. The masses and the state have nothing of the kind. Only man as an individual human being lives; the state is just a system, a mere machine for sorting and tabulating the masses. Anyone, therefore, who thinks in terms of men minus the individual, in huge numbers, atomizes himself and becomes a thief and a robber to himself. He is infected with the leprosy of collective thinking and has become an inmate of that insalubrious stud-farm called the totalitarian State. Our time contains and produces more than enough of that “crude sulphur” which with “arsenical malignity” prevents man from discovering his true self.

[195] I was tempted to translate *arsenicalis* as ‘poisonous’. But this translation would be too modern. Not everything that the alchemists called “arsenic” was really the chemical element As. “Arsenic” originally meant ‘masculine, manly, strong’ (ἀρσην) and was essentially an arcanum, as Ruland’s *Lexicon* shows. There arsenic is defined as an “hermaphrodite, the means whereby Sulphur and Mercury are united. It has communion with both natures and is therefore called Sun and Moon.”³⁴⁴ Or arsenic is

“Luna, our Venus, Sulphur’s companion” and the “soul.” Here arsenic is no longer the masculine aspect of the arcane substance but is hermaphroditic and even feminine. This brings it dangerously close to the moon and the crude sulphur, so that arsenic loses its solar affinity. As “Sulphur’s companion” it is poisonous and corrosive. Because the arcane substance always points to the principal unconscious content, its peculiar nature shows in what relation that content stands to consciousness. If the conscious mind has accepted it, it has a positive form, if not, a negative one. If on the other hand the arcane substance is split into two figures, this means that the content has been partly accepted and partly rejected; it is seen under two different, incompatible aspects and is therefore taken to be two different things.

[196] This is what has happened in our text: the thief is contrasted with the winged youth, who represents the other aspect, or personifies the “true sulphur,” the spirit of inner truth which measures man not by his relation to the mass but by his relation to the mystery of the psyche. This winged youth (the spiritual Mercurius) is obviously aware of his own weakness and flees “shuddering” from the crude sulphur. The standpoint of the inner man is the more threatened the more overpowering that of the outer man is. Sometimes only his invisibility saves him. He is so small that no one would miss him if he were not the *sine qua non* of inner peace and happiness.³⁴⁵ In the last resort it is neither the “eighty-million-strong nation” nor the State that feels peace and happiness, but the individual. Nobody can ever get round the simple computation that a million noughts in a row do not add up to 1, just as the loudest talk can never abolish the simple psychological fact that the larger the mass the more nugatory is the individual.

[197] The shy and delicate youth stands for everything that is winged in the psyche or that would like to sprout wings. But it dies from the poison of organizational thinking and mass statistics; the individual succumbs to the madness that sooner or later overtakes every mass—the death-instinct of the lemmings. In the political sphere the name for this is war.

Et licet Aqua centralis sit hujus Sponsa, And though the central Water is his
tamen Amorem suum erga illam bride, yet dare he not display his most
ardentissimum non audet exerere, ob ardent love towards her, because of the
latronis insidias, cujus technae sunt vere snares of the thief, whose machinations
inevitabiles. are in truth unavoidable.

[198] The goal of the winged youth is a higher one than the fulfilment of collective ideals, which are all nothing but makeshifts and conditions for bare existence. Since this is the absolute foundation, nobody will deny their importance, but collective ideals are not by a long way the breath of life which a man needs in order to live. If his soul does not live nothing can save him from stultification. His life is the soil in

which his soul can and must develop. He has only the mystery of his living soul to set against the overwhelming might and brutality of collective convictions.

[199] It is the age-old drama of opposites, no matter what they are called, which is fought out in every human life. In our text it is obviously the struggle between the good and the evil spirit, expressed in alchemical language just as today we express it in conflicting ideologies. The text comes close to the mystical language of the Baroque—the language of Jacob Boehme (1575–1624), Abraham of Franckenberg (1593–1652), and Angelus Silesius (1624–1677).

[200] We learn that the winged youth is espoused to the “central Water.” This is the fountain of the soul or the fount of wisdom,³⁴⁶ from which the inner life wells up. The nymph of the spring is in the last analysis Luna, the mother-beloved, from which it follows that the winged youth is Sol, the *filius solis, lapis, aurum philosophicum, lumen luminum, medicina catholica, una salus*, etc. He is the best, the highest, the most precious *in potentia*. But he will become real only if he can unite with Luna, the “mother of mortal bodies.” If not, he is threatened with the fate of the puer aeternus in *Faust*, who goes up in smoke three times.³⁴⁷ The adept must therefore always take care to keep the Hermetic vessel well sealed, in order to prevent what is in it from flying away. The content becomes “fixed” through the mystery of the coniunctio, in which the extreme opposites unite, night is wedded with day, and “the two shall be one, and the outside as the inside, and the male with the female neither male nor female.”³⁴⁸ This apocryphal saying of Jesus from the beginning of the second century is indeed a paradigm for the alchemical union of opposites. Obviously this problem is an eschatological one, but, aside from the somewhat tortuous language of the times, it cannot be called abstruse since it has universal validity, from the *tao* of Lao-tzu to the *coincidentia oppositorum* of Cusanus. The same idea penetrated into Christianity in the form of the apocalyptic marriage of the Lamb (Rev. 22 : 9ff.), and we seldom find a high point of religious feeling where this eternal image of the royal marriage does not appear.

[201] I can do no more than demonstrate the existence of this image and its phenomenology. What the union of opposites really “means” transcends human imagination. Therefore the worldly-wise can dismiss such a “fantasy” without further ado, for it is perfectly clear: *tertium non datur*. But that doesn’t help us much, for we are dealing with an eternal image, an archetype, from which man can turn away his mind for a time but never permanently.³⁴⁹ Whenever this image is obscured his life loses its proper meaning and consequently its balance. So long as he knows that he is the carrier of life and that it is therefore important for him to live, then the mystery of his soul lives also—no matter whether he is conscious of it or not. But if he no longer sees the meaning of his life in its fulfilment, and no longer believes in man’s eternal

right to this fulfilment, then he has betrayed and lost his soul, substituting for it a madness which leads to destruction, as our time demonstrates all too clearly.

[202] The “machinations of the thief,” our text says, are “unavoidable.” They are an integral part of the fateful drama of opposites, just as the shadow belongs to the light. Reason, however, cannot turn this into a convenient recipe, for inevitability does not diminish the guilt of what is evil any more than the merit of what is good. Minus remains minus, and guilt, as ever, has to be avenged. “Evil follows after wrong,” says the Capuchin friar in Wallenstein’s camp—a banal truth that is too readily forgotten, and because of this the winged youth cannot lead his bride home as quickly as he would wish. Evil cannot be eradicated once and for all; it is an inevitable component of life and is not to be had without paying for it. The thief whom the police do not catch has, nonetheless, robbed himself, and the murderer is his own executioner.

[203] The thief in our text is armed with all evil, but in reality it is merely the ego with its shadow where the abysmal depths of human nature begin to appear. Increasing psychological insight hinders the projection of the shadow, and this gain in knowledge logically leads to the problem of the union of opposites. One realizes, first of all, that one cannot project one’s shadow on to others, and next that there is no advantage in insisting on their guilt, as it is so much more important to know and possess one’s own, because it is part of one’s own self and a necessary factor without which nothing in this sublunary world can be realized. Though it is not said that Luna personifies the dark side, there is as we have seen something very suspicious about the new moon. Nevertheless the winged youth loves his moon-bride and hence the darkness to which she belongs, for the opposites not only flee one another but also attract one another. We all know that evil, especially if it is not scrutinized too closely, can be very attractive, and most of all when it appears in idealistic garb. Ostensibly it is the wicked thief that hinders the youth in his love for the chaste Diana, but in reality the evil is already lurking in the ideal youth and in the darkness of the new moon, and his chief fear is that he might discover himself in the role of the common sulphur. This role is so shocking that the noble-minded youth cannot see himself in it and puts the blame on the wiles of the enemy. It is as if he dared not know himself because he is not adult enough to accept the fact that one must be thankful if one comes across an apple without a worm in it and a plate of soup without a hair.

Esto hic tibi Diana propitia, quae feras Here may Diana be propitious to thee,
domare novit, who knoweth how to tame wild beasts,

[204] The darkness which is opposed to the light is the unbridled instinctuality of nature that asserts itself despite all consciousness. Anyone who seeks to unite the opposites certainly needs Diana to be propitious to him, for she is being considered

as a bride and it has yet to be seen what she has to present in the way of wild animals. Possibly the thief will appear quite insignificant by comparison.

cujus binae columbae pennis suis aeris and whose twin doves will temper the malignitatem temperabunt, malignity of the air with their wings,

[205] The tender pair of doves is an obviously harmless aspect of the same instinctuality, though in itself the theriomorphic symbol would be capable of an “interpretation from above downwards.” Nonetheless, it should not be interpreted in this sense because the aspect of untamed animality and evil is represented in the previous quotation by the mad dog and in this one by the thief. In contrast to this, the doves are emblems of innocence and of marital love as well as of the Holy Ghost and Sapientia, of Christ and his Virgin Mother.³⁵⁰ From this context we can see what the dove is intended to represent: it is the exact counterpart to the malignity of the thief. Together they represent the attack, first from one side and then from the other, of a dualistic being on the more restricted consciousness of man. The purpose or result of this assault is the widening of consciousness, which has always, it seems, followed the pattern laid down in Genesis 3 : 4f.: “Ye shall not surely die, for God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil.”

[206] It is obviously a moment of supreme possibilities both for good and for evil. Usually, however, it is first one and then the other: the good man succumbs to evil, the sinner is converted to good, and that, to an uncritical eye, is the end of the matter. But those endowed with a finer moral sense or deeper insight cannot deny that this seeming one-after-another is in reality a happening of events side-by-side, and perhaps no one has realized this more clearly than St. Paul, who knew that he bore a thorn in the flesh and that the messenger of Satan smote him in the face lest he be “exalted above measure.”³⁵¹ The one-after-another is a bearable prelude to the deeper knowledge of the side-by-side, for this is an incomparably more difficult problem. Again, the view that good and evil are spiritual forces outside us, and that man is caught in the conflict between them, is more bearable by far than the insight that the opposites are the ineradicable and indispensable preconditions of all psychic life, so much so that life itself is guilt. Even a life dedicated to God is still lived by an ego, which speaks of an ego and asserts an ego in God’s despite, which does not instantly merge itself with God but reserves for itself a freedom and a will which it sets up outside God and against him. How *can* it do this against the overwhelming might of God? Only through self-assertion, which is as sure of its free will as Lucifer. All distinction from God is separation, estrangement, a falling away. The Fall was inevitable even in paradise. Therefore Christ is “without the stain of sin,” because he stands for the whole of the Godhead and is not distinct from it by reason of his

manhood.³⁵² Man, however, is branded by the stain of separation from God. This state of things would be insupportable if there were nothing to set against evil but the law and the Decalogue, as in pre-Christian Judaism—until the reformer and rabbi Jesus tried to introduce the more advanced and psychologically more correct view that not fidelity to the law but love and kindness are the antithesis of evil. The wings of the dove temper the malignity of the air, the wickedness of the aerial spirit (“the prince of the power of the air”—Ephesians 2 : 2), and they alone have this effect.

quod per poros facile ingreditur so that the youth easily entereth in
adolescens, concutit statim (terrae through the pores, and instantly shaketh
sedes), nubemque tetricam suscitatur. the foundations of the earth,³⁵³ and
raiseth up a dark cloud.

[207] Once the malignity is tempered, sinfulness and its evil consequences are mitigated too, and that which has wings can embrace the earth. For now we come to the consummation of the hierosgamos, the “earthing” of the spirit and the spiritualizing of the earth, the union of opposites and reconciliation of the divided (Ephesians 2 : 14),³⁵⁴ in a word the longed-for act of redemption whereby the sinfulness of existence, the original dissociation, will be annulled in God. The earthquake is on the one hand an allusion to Christ’s descent into hell and his resurrection, and on the other hand a shaking of the humdrum earthly existence of man, into whose life and soul meaning has at last penetrated, and by which he is at once threatened and uplifted.

[208] This is always an intuitive experience that is felt as a concrete reality. It is the prefiguration and anticipation of a future condition, a glimmering of an unspoken, half-conscious union of ego and non-ego. Rightly called a *unio mystica*, it is the fundamental experience of all religions that have any life in them and have not yet degenerated into confessionalism; that have safeguarded the mystery of which the others know only the rites it produced—empty bags from which the gold has long since vanished.

[209] The earthquake sends up a dark cloud: consciousness, because of the revolution of its former standpoint, is shrouded in darkness, just as the earth was at Christ’s death, which was followed by a resurrection. This image tells us that the widening of consciousness is at first upheaval and darkness, then a broadening out of man to the whole man. This “Man,” being indescribable, is an intuitive or “mystical” experience, and the name “Anthropos” is therefore very apt because it demonstrates the continuity of this idea over the millennia.

tu undas superinduces ad Lunae usque But thou wilt lead the waters up even to
candorem, the brightness of the moon,

[210] As we have seen, water here has the meaning of “fructifying interest,” and its leading upwards means that it now turns towards the plenilunium, the gracious and serene complement of the sinister new moon and its perils.

atque ita Tenebrae, quae supra abyssi and the darkness that was upon the face
faciem erant, per spiritum se in aquis of the deep shall be scattered by the
moventem discutientur. Sic jubente Deo spirit moving over the waters. Thus by
Lux apparebit. God’s command shall the Light appear.

[211] The eye that hitherto saw only the darkness and danger of evil turns towards the circle of the moon, where the ethereal realm of the immortals begins, and the gloomy deep can be left to its own devices, for the spirit now moves it from within, convulses and transforms it. When consciousness draws near to the unconscious not only does *it* receive a devastating shock but something of its light penetrates into the darkness of the unconscious. The result is that the unconscious is no longer so remote and strange and terrifying, and this paves the way for an eventual union. Naturally the “illumination” of the unconscious does not mean that from now on the unconscious is less unconscious. Far from it. What happens is that its contents cross over into consciousness more easily than before. The “light” that shines at the end is the *lux moderna* of the alchemists, the new widening of consciousness, a further step in the realization of the Anthropos, and every one of these steps signifies a rebirth of the deity.

[212] Herewith we end our contemplation of the text. The question now arises: Did the alchemists really have such thoughts and conceal them in their ornate metaphors? In other words, did Philaletha, the pseudonymous author of our text, have anything like the thoughts and ideas which I have put forward by way of interpretation? I regard this as out of the question, and yet I believe that these authors invariably said the best, most apposite, and clearest thing they could about the matter in hand. For our taste and our intellectual requirements this performance is, however, so unsatisfactory that we ourselves feel compelled to make a renewed attempt to say the same thing in still clearer words. It seems obvious to us that what we think about it was never thought by the alchemists, for if it had been it would doubtless have come out long ago. The “philosophers” took the greatest pains to unearth and reveal the secret of the stone, accusing the ancients of having written too copiously and too obscurely. If they, on their own admission, wrote “typice, symbolice, metaphoricæ,” this was the best they could do, and it is thanks to their labours that we are today in a position to say anything at all about the secrets of alchemy.

[213] All understanding that is not directly of a mathematical nature (which, incidentally, understands nothing but merely formulates) is conditioned by its time. Fundamental to alchemy is a true and genuine mystery which since the seventeenth

century has been understood unequivocally as psychic. Nor can we moderns conceive it to be anything except a psychic product whose meaning may be elicited by the methods and empirical experience of our twentieth century medical psychology. But I do not imagine for a moment that the psychological interpretation of a mystery must necessarily be the last word. If it is a mystery it must have still other aspects. Certainly I believe that psychology can unravel the secrets of alchemy, but it will not lay bare the secret of these secrets. We may therefore expect that at some time in the future our attempt at explanation will be felt to be just as “metaphorical and symbolical” as we have found the alchemical one to be, and that the mystery of the stone, or of the self, will then develop an aspect which, though still unconscious to us today, is nevertheless foreshadowed in our formulations, though in so veiled a form that the investigator of the future will ask himself, just as we do, whether we knew what we meant.

d. *The Moon-Nature*

[214] We have treated at some length of the sinister and dangerous aspect of the new moon. In this phase the climax of the moon’s waning, which in folklore is not always considered auspicious, is reached. The new moon is dangerous at childbirth and weddings. If a father dies at the waning moon, this brings the children bad luck. One also has to bow to the sickle moon or it will bring bad luck. Even the light of the moon is dangerous as it causes the moon-sickness, which comes from the “moon-wolf.” The marriage bed, pregnant women, and small children should be protected from the moonlight. Whoever sews by moonlight sews the winding-sheet, and so on.³⁵⁵

[215] The passage on the moon in Paracelsus’ “De pestilitate” (III, 95) catches very aptly the atmosphere which hangs round the pale moonlight:

Now mark this: Wherever there is a disheartened and timid man in whom imagination has created the great fear and impressed it on him, the moon in heaven aided by her stars is the *corpus* to bring this about. When such a disheartened timid man looks at the moon under the full sway of his imagination, he looks into the *speculum venenosum magnum naturae* [great poisonous mirror of nature], and the sidereal spirit and *magnes hominis* [magnet of man] will thus be poisoned by the stars and the moon. But we shall expound this more clearly to you as follows. Through his imagination the timid man has made his eyes basilisk-like, and he infects the mirror, the moon, and the stars, through himself at the start, and later on so that the moon is infected by the imagining man; this will happen soon and easily, by dint of the magnetic power which the sidereal body and spirit exerts upon the celestial bodies [viz.] the moon and the stars in great Nature [viz., the Macrocosm]. Thus man in turn will be poisoned by this mirror of the moon and the stars which he has looked at; and

this because (for, as you can see, it happens quite naturally) a pregnant woman at the time of menstruation similarly stains and damages the mirror by looking into it. For at such a time she is poisonous and has basilisk's eyes *ex causa menstrui et venenosi sanguinis* [because of the menstrual and poisonous blood] which lies hidden in her body and nowhere more strongly than in her eyes. For there the sidereal spirit of the stained body lies open and naked to the sidereal magnet. *Quia ex menstruo et venenoso sanguine mulieris causatur et nascitur basiliscus, ita luna in coelo est oculus basilisci coeli* [Because as the basilisk is caused and born from the menstrual and poisonous blood of a woman, thus the moon in the sky is the eye of the basilisk of heaven]. And as the mirror is defiled by the woman, thus conversely the eyes, the sidereal spirit, and the body of man are being defiled by the moon, for the reason that at such time the eyes of the timid imagining man are weak and dull, and the sidereal spirit and body draw poison out of the mirror of the moon into which you have looked. But not so that only one human being has the power thus to poison the moon with his sight, no; hence I say that, mostly, menstruating women do poison the moon and the stars much more readily and also more intensely than any man, easily so. Because as you see that they poison and stain the mirror made of metallic material—and what is even more, the glass mirror—much more and sooner they defile the moon and the stars at such a time. And even if at such time the moon only shines on water and the woman looks at the water, the moon will be poisoned, and by still many more means, but it would not do to reveal all this clearly. And such poisoning of the moon happens for this reason: it is the naked eye of the spirit and of the sidereal body and it often grows new and young as you can see. Just as a young child who looks into a mirror which was looked at by a menstruating woman will become long-sighted and cross-eyed and his eyes will be poisoned, stained, and ruined, as the mirror was stained by the menstruating woman; and so also the moon, and also the human being, is poisoned. And as the moon, when it grows new and young, is of a poisonous kind, this you shall notice in two ways, namely in the element of water and also in wood, loam, etc.: as this, when it is gathered at the wrong time will not burn well, but be worm-eaten, poisonous, bad, and putrid, so is also the moon, and that is why it can be poisoned so easily by merely looking at it and the moon with its light is the *humidum ignis* [moisture of fire], of a cold nature, for which reason it is capable of receiving the poison easily.³⁵⁶

[216] In the Table of Correspondences in Penotus³⁵⁷ the following are said to pertain to the moon: the snake, the tiger, the Manes, the Lemurs, and the *dei infernales*. These correlations show clearly how Penotus was struck by the underworld nature of the moon.³⁵⁸ His “heretical” empiricism led him beyond the patristic allegories to a recognition of the moon's dark side, an aspect no longer suited to serve as an allegory of the beautiful bride of Christ. And just as the bitch was forgotten in the lunar

allegory of the Church, so too our masculine judgment is apt to forget it when dealing with an over-valued woman. We should not deceive ourselves about the sinister “tail” of the undoubtedly desirable “head”: the baying of Hecate is always there, whether it sound from near or from far. This is true of everything feminine and not least of a man’s anima. The mythology of the moon is an object lesson in female psychology.³⁵⁹

[217] The moon with her antithetical nature is, in a sense, a prototype of individuation, a prefiguration of the self: she is the “mother and spouse of the sun, who carries in the wind and the air the spagyric embryo conceived by the sun in her womb and belly.”³⁶⁰ This image corresponds to the psychologem of the pregnant anima, whose child is the self, or is marked by the attributes of the hero. Just as the anima represents and personifies the collective unconscious, so Luna represents the six planets or spirits of the metals. Dorn says:

From Saturn, Mercury, Jupiter, Mars and Venus nothing and no other metal can arise except Luna [i.e., silver]. . . . For Luna consists of the six spiritual metals and their powers, of which each has two. . . . From the planet Mercury, from Aquarius and Gemini, or from Aquarius and Pisces, Luna has her liquidity [*liquatio*] and her white brightness . . ., from Jupiter, Sagittarius, and Taurus her white colour and her great stability in the fire . . ., from Mars, Cancer, and Aries her hardness and fine resonance . . ., from Venus, Gemini, and Libra her degree of solidity [*coagulationis*] and malleability . . ., from Sol, Leo, and Virgo her true purity and great endurance against the strength of the fire . . ., from Saturn, Virgo, and Scorpio, or from Capricorn, her homogeneous body, her pure cleanness [*puram munditiem*], and steadfastness against the force of the fire.³⁶¹

[218] Luna is thus the sum and essence of the metals’ natures, which are all taken up in her shimmering whiteness. She is multi-natured, whereas Sol has an exceptional nature as the “seventh from the six spiritual metals.” He is “in himself nothing other than pure fire.”³⁶² This role of Luna devolves upon the anima, as she personifies the plurality of archetypes, and also upon the Church and the Blessed Virgin, who, both of lunar nature, gather the many under their protection and plead for them before the *Sol iustitiae*. Luna is the “universal receptacle of all things,” the “first gateway of heaven,”³⁶³ and William Mennens³⁶⁴ says that she gathers the powers of all the stars in herself as in a womb, so as then to bestow them on sublunary creatures.³⁶⁵ This quality seems to explain her alleged effect in the *opus ad Lunam*, when she gives the tincture the character and powers of all the stars. The “Fragment from the Persian Philosophers” says: “With this tincture all the dead are revived, so that they live for ever, and this tincture is the first-created ferment,³⁶⁶ namely that ‘to the moon,’³⁶⁷ and it is the light of all lights and the flower and fruit of all lights,³⁶⁸ which lighteth all things.”³⁶⁹

[219] This almost hymn-like paean to the *materia lapidis* or the tincture refers in the first instance to Luna, for it is during her work of whitening that the illumination takes place. She is the “mother in this art.” In her water “Sol is hidden like a fire”³⁷⁰—a parallel to the conception of Selene as the *μήτηρ τοῦ κόσμου* in Plutarch. On the first day of the month of Phamenoth, Osiris enters into Selene, and this is evidently equivalent to the synodos in the spring. “Thus they make the power of Osiris to be fixed in the moon.”³⁷¹ Selene, Plutarch says, is male-female and is impregnated by Helios. I mention these statements because they show that the moon has a double light, outside a feminine one but inside a masculine one which is hidden in it as a fire. Luna is really the mother of the sun, which means, psychologically, that the unconscious is pregnant with consciousness and gives birth to it. It is the night, which is older than the day:

Part of the darkness which gave birth to light,
That proud light which is struggling to usurp
The ancient rank and realm of Mother Night.³⁷²

[220] From the darkness of the unconscious comes the light of illumination, the *albedo*. The opposites are contained in it *in potentia*, hence the hermaphroditism of the unconscious, its capacity for spontaneous and autochthonous reproduction. This idea is reflected in the “Father-Mother” of the Gnostics,³⁷³ as well as in the naïve vision of Brother Klaus³⁷⁴ and the modern vision of Maitland.³⁷⁵ the biographer of Anna Kingsford.

[221] Finally, I would like to say a few words about the psychology of the moon, which is none too simple. The alchemical texts were written exclusively by men, and their statements about the moon are therefore the product of masculine psychology. Nevertheless women did play a role in alchemy, as I have mentioned before, and this makes it possible that the “symbolization” will show occasional traces of their influence. Generally the proximity as well as the absence of women has a specifically constellating effect on the unconscious of a man. When a woman is absent or unattainable the unconscious produces in him a certain femininity which expresses itself in a variety of ways and gives rise to numerous conflicts. The more one-sided his conscious, masculine, spiritual attitude the more inferior, banal, vulgar, and biological will be the compensating femininity of the unconscious. He will, perhaps, not be conscious at all of its dark manifestations, because they have been so overlaid with saccharine sentimentality that he not only believes the humbug himself but enjoys putting it over on other people. An avowedly biological or coarse-minded attitude to women produces an excessively lofty valuation of femininity in the unconscious, where it is pleased to take the form of Sophia or of the Virgin. Frequently, however, it gets distorted by everything that misogyny can possibly

devise to protect the masculine consciousness from the influence of women, so that the man succumbs instead to unpredictable moods and insensate resentments.

[222] Statements by men on the subject of female psychology suffer principally from the fact that the projection of unconscious femininity is always strongest where critical judgment is most needed, that is, where a man is involved emotionally. In the metaphorical descriptions of the alchemists, Luna is primarily a reflection of a man's unconscious femininity, but she is also the principle of the feminine psyche, in the sense that Sol is the principle of a man's. This is particularly obvious in the astrological interpretation of sun and moon, not to mention the age-old assumptions of mythology. Alchemy is inconceivable without the influence of her elder sister astrology, and the statements of these three disciplines must be taken into account in any psychological evaluation of the luminaries. If, then, Luna characterizes the feminine psyche and Sol the masculine, consciousness would be an exclusively masculine affair, which is obviously not the case since woman possesses consciousness too. But as we have previously identified Sol with consciousness and Luna with the unconscious, we would now be driven to the conclusion that a woman cannot possess a consciousness.

[223] The error in our formulation lies in the fact, firstly, that we equated the moon with the unconscious as such, whereas the equation is true chiefly of the unconscious of a man; and secondly, that we overlooked the fact that the moon is not only dark but is also a giver of light and can therefore represent consciousness. This is indeed so in the case of woman: her consciousness has a lunar rather than a solar character. Its light is the "mild" light of the moon, which merges things together rather than separates them. It does not show up objects in all their pitiless discreteness and separateness, like the harsh, glaring light of day, but blends in a deceptive shimmer the near and the far, magically transforming little things into big things, high into low, softening all colour into a bluish haze, and blending the nocturnal landscape into an unsuspected unity.

[224] For purely psychological reasons I have, in other of my writings, tried to equate the masculine consciousness with the concept of Logos and the feminine with that of Eros. By Logos I meant discrimination, judgment, insight, and by Eros I meant the capacity to relate. I regarded both concepts as intuitive ideas which cannot be defined accurately or exhaustively. From the scientific point of view this is regrettable, but from a practical one it has its value, since the two concepts mark out a field of experience which it is equally difficult to define.

[225] As we can hardly ever make a psychological proposition without immediately having to reverse it, instances to the contrary leap to the eye at once: men who care nothing for discrimination, judgment, and insight, and women who display an almost

excessively masculine proficiency in this respect. I would like to describe such cases as the regular exceptions. They demonstrate, to my mind, the common occurrence of a psychically predominant contrasexuality. Wherever this exists we find a forcible intrusion of the unconscious, a corresponding exclusion of the consciousness specific to either sex, predominance of the shadow and of contrasexuality, and to a certain extent even the presence of symptoms of possession (such as compulsions, phobias, obsessions, automatisms, exaggerated affects, etc.). This inversion of roles is probably the chief psychological source for the alchemical concept of the hermaphrodite. In a man it is the lunar anima, in a woman the solar animus, that influences consciousness in the highest degree. Even if a man is often unaware of his own anima-possession, he has, understandably enough, all the more vivid an impression of the animus-possession of his wife, and vice versa.

[226] Logos and Eros are intellectually formulated intuitive equivalents of the archetypal images of Sol and Luna. In my view the two luminaries are so descriptive and so superlatively graphic in their implications that I would prefer them to the more pedestrian terms Logos and Eros, although the latter do pin down certain psychological peculiarities more aptly than the rather indefinite “Sol and Luna.” The use of these images requires at any rate an alert and lively fantasy, and this is not an attribute of those who are inclined by temperament to purely intellectual concepts. These offer us something finished and complete, whereas an archetypal image has nothing but its naked fullness, which seems inapprehensible by the intellect. Concepts are coined and negotiable values; images are life.

[227] If our formula regarding the lunar nature of feminine consciousness is correct—and in view of the *consensus omnium* in this matter it is difficult to see how it should not be—we must conclude that this consciousness is of a darker, more nocturnal quality, and because of its lower luminosity can easily overlook differences which to a man’s consciousness are self-evident stumbling-blocks. It needs a very moon-like consciousness indeed to hold a large family together regardless of all the differences, and to talk and act in such a way that the harmonious relation of the parts to the whole is not only not disturbed but is actually enhanced. And where the ditch is too deep, a ray of moonlight smoothes it over. A classic example of this is the conciliatory proposal of St. Catherine of Alexandria in Anatole France’s *Penguin Island*. The heavenly council had come to a deadlock over the question of baptism, since although the penguins were animals they had been baptized by St. Maël. Therefore she says: “That is why, Lord, I entreat you to give old Maël’s penguins a human head and breast so that they can praise you worthily. And grant them also an immortal soul—but only a little one!”³⁷⁶

[228] This “lunatic” logic can drive the rational mind to the white heat of frenzy. Fortunately it operates mostly in the dark or cloaks itself in the shimmer of innocence. The moon-nature is its own best camouflage, as at once becomes apparent when a woman’s unconscious masculinity breaks through into her consciousness and thrusts her Eros aside. Then it is all up with her charm and the mitigating half-darkness; she takes a stand on some point or other and captiously defends it, although each barbed remark tears her own flesh, and with brutal short-sightedness she jeopardizes everything that is the dearest goal of womanhood. And then, for unfathomable reasons—or perhaps simply because it is time—the picture changes completely: the new moon has once more been vanquished.

[229] The Sol who personifies the feminine unconscious is not the sun of the day but corresponds rather to the *Sol niger*. It is not the real *Sol niger* of masculine psychology, the alter ego, the Brother Medardus of E. T. A. Hoffmann’s story “The Devil’s Elixir,” or the crass identity of opposites which we meet with in Jekyll and Hyde. The unconscious Sol of woman may be dark, but it is not “coal black” (*ἀνθρακώδης*), as was said of the moon; it is more like a chronic eclipse of the sun, which in any case is seldom total. Normally a woman’s consciousness emits as much darkness as light, so that, if her consciousness cannot be entirely light, her unconscious cannot be entirely dark either. At any rate, when the lunar phases are repressed on account of too powerful solar influences, her consciousness takes on an overbright solar character, while on the other hand her unconscious becomes darker and darker—*nigrum nigrius nigro*—and both are unendurable for both in the long run.

[230] Her *Sol niger* is as void of light and charm as the gentling moonlight is all heavenly peace and magic. It protests too much that it is a light, because it is no light, and a great truth, because it invariably misses the mark, and a high authority, which nevertheless is always wrong, or is only as right as the blind tom-cat who tried to catch imaginary bats in broad daylight, but one day caught a real one by mistake and thereafter became completely unteachable. I do not want to be unfair, but that is what the feminine Sol is like when it obtrudes too much. (And it has to obtrude a bit if the man is to understand it!)

[231] As a man normally gets to know his anima only in projected form, so too a woman in the case of her dark sun. When her Eros is functioning properly her sun will not be too dark, and the carrier of the projection may even produce some useful compensation. But if things are not right with her Eros (in which case she is being unfaithful to Love itself), the darkness of her sun will transfer itself to a man who is anima-possessed and who dispenses inferior spirit, which as we know is as intoxicating as the strongest alcohol.

[232] The dark sun of feminine psychology is connected with the father-*imago*, since the father is the first carrier of the *animus-image*. He endows this virtual image with substance and form, for on account of his *Logos* he is the source of “spirit” for the daughter. Unfortunately this source is often sullied just where we would expect clean water. For the spirit that benefits a woman is not mere intellect, it is far more: it is an attitude, the spirit by which a man lives.³⁷⁷ Even a so-called “ideal” spirit is not always the best if it does not understand how to deal adequately with nature, that is, with the animal man. This really would be ideal. Hence every father is given the opportunity to corrupt, in one way or another, his daughter’s nature, and the educator, husband, or psychiatrist then has to face the music. For “what has been spoiled by the father”³⁷⁸ can only be made good by a father, just as “what has been spoiled by the mother” can only be repaired by a mother. The disastrous repetition of the family pattern could be described as the psychological original sin, or as the curse of the *Atrides* running through the generations. But in judging these things one should not be too certain either of good or of evil. The two are about equally balanced. It should, however, have begun to dawn on our cultural optimists that the forces of good are not sufficient to produce either a rational world-order or the faultless ethical behaviour of the individual, whereas the forces of evil are so strong that they imperil any order at all and can imprison the individual in a devilish system that commits the most fearful crimes, so that even if he is ethical-minded he must finally forget his moral responsibility in order to go on living. The “malignity” of collective man has shown itself in more terrifying form today than ever before in history, and it is by this objective standard that the greater and the lesser sins should be measured. We need more casuistic subtlety, because it is no longer a question of extirpating evil but of the difficult art of putting a lesser evil in place of a greater one. The time for the “sweeping statements” so dear to the evangelizing moralist, which lighten his task in the most agreeable way, is long past. Nor can the conflict be escaped by a denial of moral values. The very idea of this is foreign to our instincts and contrary to nature. Every human group that is not actually sitting in prison will follow its accustomed paths according to the measure of its freedom. Whatever the intellectual definition and evaluation of good and evil may be, the conflict between them can never be eradicated, for no one can ever forget it. Even the Christian who feels himself delivered from evil will, when the first rapture is over, remember the thorn in the flesh, which even St. Paul could not pluck out.

[233] These hints may suffice to make clear what kind of spirit it is that the daughter needs. They are the truths which speak to the soul, which are not too loud and do not insist too much, but reach the individual in stillness—the individual who constitutes the meaning of the world. It is this knowledge that the daughter needs, in order to pass it on to her son.

5. SAL

a. Salt as the Arcane Substance

[234] In this section I shall discuss not only salt but a number of symbolisms that are closely connected with it, such as the “bitterness” of the sea, sea-water and its baptismal quality, which in turn relates it to the “Red Sea.” I have included the latter in the scope of my observations but not the symbol of the sea as such. Since Luna symbolizes the unconscious, Sal, as one of its attributes, is a special instance of the lunar symbolism. This explains the length of the present entire chapter: extensive digressions are necessary in order to do justice to the various aspects of the unconscious that are expressed by salt, and at the same time to explain their psychological meaning.

[235] Owing to the theory of “correspondentia,” regarded as axiomatic in the Middle Ages, the principles of each of the four worlds—the intelligible or divine, the heavenly, the earthly, and the infernal³⁷⁹—corresponded to each other. Usually, however, there was a division into three worlds to correspond with the Trinity: heaven, earth, hell.³⁸⁰ Triads were also known in alchemy. From the time of Paracelsus the most important triad was Sulphur-Mercurius-Sal, which was held to correspond with the Trinity. Georg von Welling, the plagiarist of Johann Rudolf Glauber, still thought in 1735 that his triad of fire, sun, and salt³⁸¹ was “in its root entirely one thing.”³⁸² The use of the Trinity formula in alchemy is so common that further documentation is unnecessary. A subtle feature of the Sulphur-Mercurius-Sal formula is that the central figure, Mercurius, is by nature androgynous and thus partakes both of the masculine red sulphur and of the lunar salt.³⁸³ His equivalent in the celestial realm is the planetary pair Sol and Luna, and in the “intelligible” realm Christ in his mystical androgyny, the “man encompassed by the woman,”³⁸⁴ i.e., sponsus and sponsa (Ecclesia). Like the Trinity, the alchemical “triunity” is a quaternity in disguise owing to the duplicity of the central figure: Mercurius is not only split into a masculine and a feminine half, but is the poisonous dragon and at the same time the heavenly lapis. This makes it clear that the dragon is analogous to the devil and the lapis to Christ, in accordance with the ecclesiastical view of the devil as an autonomous counterpart of Christ. Furthermore, not only the dragon but the negative aspect of sulphur, namely *sulphur comburens*, is identical with the devil, as Glauber says: “Verily, sulphur is the true black devil of hell, who can be conquered by no element save by salt alone.”³⁸⁵ Salt by contrast is a “light” substance, similar to the lapis, as we shall see.

[236] From all this we get the following schema:

[237] Here we have another of those well-known quaternities of opposites which are usually masked as a triad, just as the Christian Trinity is able to maintain itself as such only by eliminating the fourth protagonist of the divine drama. If he were included there would be, not a Trinity, but a Christian Quaternity. For a long time there had been a psychological need for this, as is evident from the medieval pictures of the Assumption and Coronation of the Virgin; it was also responsible for elevating her to the position of mediatrix, corresponding to Christ's position as the mediator, with the difference that Mary only transmits grace but does not generate it. The recent promulgation of the dogma of the Assumption emphasizes the taking up not only of the soul but of the body of Mary into the Trinity, thus making a dogmatic reality of those medieval representations of the quaternity which are constructed on the following pattern:

Only in 1950, after the teaching authority in the Church had long deferred it, and almost a century after the declaration of the dogma of the Immaculate Conception, did the Pope, moved by a growing wave of popular petitions,³⁸⁶ feel compelled to

declare the Assumption as a revealed truth. All the evidence shows that the dogmatization was motivated chiefly by the religious need of the Catholic masses. Behind this stands the archetypal numen of feminine deity,³⁸⁷ who, at the Council of Ephesus in 431, imperiously announced her claim to the title of “Theotokos” (God-bearer), as distinct from that of a mere “Anthropotokos” (man-bearer) accorded to her by the Nestorian rationalists.

[238] The taking up of the body had long been emphasized as an historical and material event, and the alchemists could therefore make use of the representations of the Assumption in describing the glorification of matter in the opus. The illustration of this process in Reusner’s *Pandora*³⁸⁸ shows, underneath the coronation scene, a kind of shield between the emblems of Matthew and Luke, on which is depicted the extraction of Mercurius from the prima materia. The extracted spirit appears in monstrous form: the head is surrounded by a halo, and reminds us of the traditional head of Christ, but the arms are snakes and the lower half of the body resembles a stylized fish’s tail.³⁸⁹ This is without doubt the *anima mundi* who has been freed from the shackles of matter, the *filius macrocosmi* or Mercurius-Anthropos, who, because of his double nature, is not only spiritual and physical but unites in himself the morally highest and lowest.³⁹⁰ The illustration in *Pandora* points to the great secret which the alchemists dimly felt was implicit in the Assumption. The proverbial darkness of sublunary matter has always been associated with the “prince of this world,” the devil. He is the metaphysical figure who is excluded from the Trinity but who, as the counterpart of Christ, is the *sine qua non* of the drama of redemption.³⁹¹ His equivalent in alchemy is the dark side of Mercurius duplex and, as we saw, the active sulphur. He also conceals himself in the poisonous dragon, the preliminary, chthonic form of the *lapis aethereus*. To the natural philosophers of the Middle Ages, and to Dorn in particular, it was perfectly clear that the triad must be complemented by a fourth, as the lapis had always been regarded as a quaternity of elements. It did not disturb them that this would necessarily involve the evil spirit. On the contrary, the dismemberment and self-devouring of the dragon probably seemed to them a commendable operation. Dorn, however, saw in the quaternity the absolute opposite of the Trinity, namely the female principle, which seemed to him “of the devil,” for which reason he called the devil the “four-horned serpent.” This insight must have given him a glimpse into the core of the problem.³⁹² In his refutation he identified woman with the devil because of the number two, which is characteristic of both. The devil, he thought, was the binarius itself, since it was created on the second day of Creation, on Monday, the day of the moon, on which God failed to express his pleasure, this being the day of “doubt” and separation.³⁹³ Dorn puts into words what is merely hinted at in the *Pandora* illustration.

[239] If we compare this train of thought with the Christian quaternity which the new dogma has virtually produced (but has not defined as such), it will immediately be apparent that we have here an “upper” quaternio which is supraordinate to man’s wholeness and is psychologically comparable to the Moses quaternio of the Gnostics.³⁹⁴ Man and the dark abyss of the world, the *deus absconditus*, have not yet been taken up into it. Alchemy, however, is the herald of a still-unconscious drive for maximal integration which seems to be reserved for a distant future, even though it originated with Origen’s doubt concerning the ultimate fate of the devil.³⁹⁵

[240] In philosophical alchemy, salt is a cosmic principle. According to its position in the quaternity, it is correlated with the feminine, lunar side and with the upper, light half. It is therefore not surprising that Sal is one of the many designations for the arcane substance. This connotation seems to have developed in the early Middle Ages under Arabic influence. The oldest traces of it can be found in the *Turba*, where salt-water and sea-water are synonyms for the *aqua permanens*,³⁹⁶ and in Senior, who says that Mercurius is made from salt.³⁹⁷ His treatise is one of the earliest authorities in Latin alchemy. Here “Sal Alkali” also plays the role of the arcane substance, and Senior mentions that the *dealbatio* was called “salsatura” (marination).³⁹⁸ In the almost equally old “Allegoriae sapientum” the lapis is described as “salsus” (salty).³⁹⁹ Arnaldus de Villanova (1235?—1313) says: “Whoever possesses the salt that can be melted, and the oil that cannot be burned, may praise God.”⁴⁰⁰ It is clear from this that salt is an arcane substance. The *Rosarium*, which leans very heavily on the old Latin sources, remarks that the “whole secret lies in the prepared common salt,”⁴⁰¹ and that the “root of the art is the soap of the sages” (*sapo sapientum*), which is the “mineral” of all salts and is called the “bitter salt” (*sal amarum*).⁴⁰² Whoever knows the salt knows the secret of the old sages.⁴⁰³ “Salts and alums are the helpers of the stone.”⁴⁰⁴ Isaac Hollandus calls salt the medium between the *terra sulphurea* and the water. “God poured a certain salt into them in order to unite them, and the sages named this salt the salt of the wise.”⁴⁰⁵

[241] Among later writers, salt is even more clearly the arcane substance. For Mylius it is synonymous with the tincture;⁴⁰⁶ it is the earth-dragon who eats his own tail, and the “ash,” the “diadem of thy heart.”⁴⁰⁷ The “salt of the metals” is the lapis.⁴⁰⁸ Basilus Valentinus speaks of a “sal spirituale.”⁴⁰⁹ It is the seat of the virtue which makes the “art” possible,⁴¹⁰ the “most noble treasury,”⁴¹¹ the “good and noble salt,” which “though it has not the form of salt from the beginning, is nevertheless called salt”; it “becomes impure and pure of itself, it dissolves and coagulates itself, or, as the sages say, locks and unlocks itself”;⁴¹² it is the “quintessence, above all things and in all creatures.”⁴¹³ “The whole magistry lies in the salt and its solution.”⁴¹⁴ The “permanent radical moisture” consists of salt.⁴¹⁵ It is synonymous with the “incombustible oil,”⁴¹⁶ and is altogether a mystery to be concealed.⁴¹⁷

[242] As the arcane substance, it is identified with various synonyms for the latter. Above all it is an “ens centrale.” For Khunrath salt is the “physical centre of the earth.”⁴¹⁸ For Vigenerus it is a component of “that virginal and pure earth which is contained in the centre of all composite elementals, or in the depths of the same.”⁴¹⁹ Glauber calls salt the “concentrated centre of the elements.”⁴²⁰

[243] Although the arcane substance is usually identified with Mercurius, the relation of salt to Mercurius is seldom mentioned. Senior, as we noted, says that “by divers operations” Mercurius is made from salt,⁴²¹ and Khunrath identifies Mercurius with common salt.⁴²² The rarity of the identification strikes us just because the “salt of the wise” really implies its relation to Mercurius. I can explain this only on the supposition that salt did not acquire its significance until later times and then at once appeared as an independent figure in the Sulphur-Mercurius-Sal triad.

[244] Salt also has an obvious relation to the earth, not to the earth as such, but to “our earth,” by which is naturally meant the arcane substance.⁴²³ This is evident from the aforementioned identification of salt with the earth-dragon. The full text of Mylius runs:

What remains below in the retort is our salt, that is, our earth, and it is of a black colour, a dragon that eats his own tail. For the dragon is the matter that remains behind after the distillation of water from it, and this water is called the dragon’s tail, and the dragon is its blackness, and the dragon is saturated with his water and coagulated, and so he eats his tail.⁴²⁴

The rarely mentioned relation of salt to the *nigredo*⁴²⁵ is worth noting here, for because of its proverbial whiteness salt is constantly associated with the *albedo*. On the other hand we would expect the close connection between salt and water, which is in fact already implicit in the sea-water. The *aqua pontica* plays an important role as a synonym for the *aqua permanens*, as also does “mare” (sea). That salt, as well as Luna, is an essential component of this is clear from Vigenerus: “There is nothing wherein the moisture lasts longer, or is wetter, than salt, of which the sea for the most part consists. Neither is there anything wherein the moon displays her motion more clearly than the sea, as can be seen . . . from its ebb and flow.” Salt, he says, has an “inexterminable humidity,” and “that is the reason why the sea cannot be dried up.”⁴²⁶ Khunrath identifies the *femina alba* or *candida* with the “crystalline salt,” and this with the white water.⁴²⁷ “Our water” cannot be made without salt,⁴²⁸ and without salt the opus will not succeed.⁴²⁹ According to Rupescissa (ca. 1350), salt is “water, which the dryness of the fire has coagulated.”⁴³⁰

b. The Bitterness

[245] Inseparable from salt and sea is the quality of *amaritudo*, ‘bitterness’. The etymology of Isidore of Seville was accepted all through the Middle Ages: “Mare ab amaro.”⁴³¹ Among the alchemists the bitterness became a kind of technical term. Thus, in the treatise “Rosinus ad Euthicium,”⁴³² there is the following dialogue between Zosimos and Theosebeia: “This is the stone that hath in it glory and colour. And she: Whence cometh its colour? He replied: From its exceeding strong bitterness. And she: Whence cometh its bitterness and intensity? He answered: From the impurity of its metal.” The treatise “Rosinus ad Sarratantam episcopum”⁴³³ says: “Take the stone that is black, white, red, and yellow, and is a wonderful bird that flies without wings in the blackness of the night and the brightness of the day: in the bitterness that is in its throat the colouring will be found.” “Each thing in its first matter is corrupt and bitter,” says Ripley. “The bitterness is a tincturing poison.”⁴³⁴ And Mylius: “Our stone is endowed with the strongest spirit, bitter and brazen (*aeneus*)”;⁴³⁵ and the *Rosarium* mentions that salt is bitter because it comes from the “mineral of the sea.”⁴³⁶ The “Liber Alze”⁴³⁷ says: “O nature of this wondrous thing, which transforms the body into spirit! . . . When it is found alone it conquers all things, and is an excellent, harsh, and bitter acid, which transmutes gold into pure spirit.”⁴³⁸

[246] These quotations clearly allude to the sharp taste of salt and sea-water. The reason why the taste is described as bitter and not simply as salt may lie first of all in the inexactness of the language, since *amarus* also means ‘sharp’, ‘biting’, ‘harsh’, and is used metaphorically for acrimonious speech or a wounding joke. Besides this, the language of the Vulgate had an important influence as it was one of the main sources for medieval Latin. The moral use which the Vulgate consistently makes of *amarus* and *amaritudo* gives them, in alchemy as well, a nuance that cannot be passed over. This comes out clearly in Ripley’s remark that “each thing in its first matter is corrupt and bitter.” The juxtaposition of these two attributes indicates the inner connection between them: corruption and bitterness are on the same footing, they denote the state of imperfect bodies, the initial state of the *prima materia*. Among the best known synonyms for the latter are the “chaos” and the “sea,” in the classical, mythological sense denoting the beginning of the world, the sea in particular being conceived as the *παμμήτηρ*, ‘matrix of all creatures’.⁴³⁹ The *prima materia* is often called *aqua pontica*. The salt that “comes from the mineral of the sea” is by its very nature bitter, but the bitterness is due also to the impurity of the imperfect body. This apparent contradiction is explained by the report of Plutarch that the Egyptians regarded the sea as something impure and untrustworthy (*μηδὲ σύμφυλον αὐτῆς*), and as the domain of Typhon (Set); they called salt the “spume of Typhon.”⁴⁴⁰ In his *Philosophia reformata*, Mylius mentions “sea-spume” together with the “purged or purified” sea, rock-salt, the bird, and Luna as equivalent

synonyms for the *lapis occultus*.⁴⁴¹ Here the impurity of the sea is indirectly indicated by the epithets “purged” or “purified.” The sea-spume is on a par with the salt and—of particular interest—with the bird, naturally the bird of Hermes, and this throws a sudden light on the above passage from Rosinus, about the bird with bitterness in its throat. The bird is a parallel of salt because salt is a spirit,⁴⁴² a volatile substance, which the alchemists were wont to conceive as a bird.

[247] As the expulsion of the spirit was effected by various kinds of burning (*combustio, adustio, calcinatio, assatio, sublimatio, incineratio*, etc.), it was natural to call the end-product “ash”—again in a double sense as *scoria, faex*, etc., and as the spirit or bird of Hermes. Thus the *Rosarium* says: “Sublime with fire, until the spirit which thou wilt find in it [the substance] goeth forth from it, and it is named the bird or the ash of Hermes. Therefore saith Morienus: Despise not the ashes, for they are the diadem of thy heart, and the ash of things that endure.”⁴⁴³ In other words, the ash is the spirit that dwells in the glorified body.

[248] This bird or spirit is associated with various colours. At first the bird is black, then it grows white feathers, which finally become coloured.⁴⁴⁴ The Chinese cousin of the *avis Hermetis*, the “scarlet bird,” moults in a similar way.⁴⁴⁵ We are told in the treatise of Wei Po-yang: “The fluttering Chu-niao flies the five colours.”⁴⁴⁶ They are arranged as follows:

[249] Earth occupies the central position as the fifth element, though it is not the quintessence and goal of the work but rather its basis, corresponding to terra as the arcane substance in Western alchemy.⁴⁴⁷

[250] As regards the origin and meaning of the *avis Hermetis*, I would like to mention the report of Aelian that the ibis is “dear to Hermes, the father of words, since in its form it resembles the nature of the Logos; for its blackness and swift flight could be compared to the silent and introverted [ἐνδον ἐπιστρεφόμενῳ] Logos, but its whiteness to the Logos already uttered and heard, which is the servant and messenger of the inner word.”⁴⁴⁸

[251] It is not easy for a modern mind to conceive salt, a cold-damp, lunar-terrestrial substance, as a bird and a spirit. Spirit, as the Chinese conceive it, is yang, the fiery and dry element, and this accords with the views of Heraclitus as well as with the Christian concept of the Holy Ghost as tongues of fire. Luna, we have seen, is unquestionably connected with *mens*, *manas*, mind, etc. But these connections are of a somewhat ambiguous nature. Although the earth can boast of an earth-spirit and other daemons, they are after all “spirits” and not “spirit.” The “cold” side of nature is not lacking in spirit, but it is a spirit of a special kind, which Christianity regarded as demonic and which therefore found no acclaim except in the realm of the magical arts and sciences. This spirit is the snake-like *Nous* or *Agathodaimon*, which in Hellenistic syncretism merges together with *Hermes*. Christian allegory and iconography also took possession of it on the basis of John 3 : 14: “And as Moses lifted up the serpent in the wilderness, even so must the Son of man be lifted up.” The mercurial serpent or “spirit *Mercurius*” is the personification and living continuation of the spirit who, in the prayer entitled the “Secret Inscription” in the Great Magic Papyrus of Paris, is invoked as follows:

Greetings, entire edifice of the Spirit of the air, greetings, Spirit that penetratest from heaven to earth, and from earth, which abideth in the midst of the universe, to the uttermost bounds of the abyss, greetings, Spirit that penetratest into me, and shakest me. . . . Greetings, beginning and end of irremovable Nature, greetings, thou who revolvest the elements that untiringly render service, greetings, brightly shining sun, whose radiance ministereth to the world, greetings, moon shining by night with disc of fickle brilliance, greetings, all ye spirits of the demons of the air. . . . O great, greatest, incomprehensible fabric of the world, formed in a circle! . . . dwelling in the aether, having the form of water, of earth, of fire, of wind, of light, of darkness, star-glittering, damp-fiery-cold Spirit! [ὕγροπυρινοψυχρὸν πνεῦμα].⁴⁴⁹

[252] Here is a magnificent description of a spirit that is apparently the exact opposite of the Christian *pneuma*. This antique spirit is also the spirit of alchemy, which today we can interpret as the unconscious projected into heavenly space and external objects. Although declared to be the devil by the early Christians, it should not be identified outright with evil; it merely has the uncomfortable quality of being beyond good and evil, and it gives this perilous quality to anyone who identifies with it, as

we can see from the eloquent case of Nietzsche and the psychic epidemic that came after him. This spirit that is “beyond good and evil” is not the same as being “six thousand feet above good and evil,” but rather the same distance below it, or better, before it. It is the spirit of the chaotic waters of the beginning, before the second day of Creation, before the separation of the opposites and hence before the advent of consciousness. That is why it leads those whom it overcomes neither upwards nor beyond, but back into chaos. This spirit corresponds to that part of the psyche which has not been assimilated to consciousness and whose transformation and integration are the outcome of a long and wearisome opus. The artifex was, in his way, conscious enough of the dangers of the work, and for this reason his operations consisted largely of precautions whose equivalents are the rites of the Church.

[253] The alchemists understood the return to chaos as an essential part of the opus. It was the stage of the *nigredo* and *mortificatio*, which was then followed by the “purgatorial fire” and the *albedo*. The spirit of chaos is indispensable to the work, and it cannot be distinguished from the “gift of the Holy Ghost” any more than the Satan of the Old Testament can be distinguished from Yahweh. The unconscious is both good and evil and yet neither, the matrix of all potentialities.

[254] After these remarks—which seemed to me necessary—on the “salt-spirit,” as Khunrath calls it, let us turn back to the *amaritudo*. As the bitter salt comes from the impure sea, it is understandable that the “Gloria mundi” should call it “mostly black and evil-smelling in the beginning.”⁴⁵⁰ The blackness and bad smell, described by the alchemists as the “stench of the graves,” pertain to the underworld and to the sphere of moral darkness. This impure quality is common also to the *corruptio*, which, as we saw, Ripley equates with bitterness. Vigenerus describes salt as “corruptible,” in the sense that the body is subject to corruption and decay and does not have the fiery and incorruptible nature of the spirit.⁴⁵¹

[255] The moral use of qualities that were originally physical is clearly dependent, particularly in the case of a cleric like Ripley, on ecclesiastical language. About this I can be brief, as I can rely on Rahner’s valuable “Antenna Crucis II: Das Meer der Welt.” Here Rahner brings together all the patristic allegories that are needed to understand the alchemical symbolism. The patristic use of “mare” is defined by St. Augustine: “Mare saeculum est” (the sea is the world).⁴⁵² It is the “essence of the world, as the element . . . subject to the devil.” St. Hilary says: “By the depths of the sea is meant the seat of hell.”⁴⁵³ The sea is the “gloomy abyss,” the remains of the original pit,⁴⁵⁴ and hence of the chaos that covered the earth. For St. Augustine this abyss is the realm of power allotted to the devil and demons after their fall.⁴⁵⁵ It is on the one hand a “deep that cannot be reached or comprehended”⁴⁵⁶ and on the other the “depths of sin.”⁴⁵⁷ For Gregory the Great the sea is the “depths of eternal death.”⁴⁵⁸

Since ancient times it was the “abode of water-demons.”⁴⁵⁹ There dwells Leviathan (Job 3 : 8),⁴⁶⁰ who in the language of the Fathers signifies the devil. Rahner documents the patristic equations: *diabolus* = *draco* = Leviathan = *cetus magnus* = *aspis* (adder, asp) = *draco*.⁴⁶¹ St. Jerome says: “The devil surrounds the seas and the ocean on all sides.”⁴⁶² The bitterness of salt-water is relevant in this connection, as it is one of the peculiarities of hell and damnation which must be fully tasted by the meditant in Loyola’s *Exercises*. Point 4 of Exercise V says he must, in imagination, “taste with the taste bitter things, as tears, sadness, and the worm of conscience.”⁴⁶³ This is expressed even more colourfully in the Spiritual Exercises of the Jesuit Sebastian Izquierdo (1686): “Fourthly, the taste will be tormented with a rabid hunger and thirst, with no hope of alleviation; and its food will be bitter wormwood, and its drink water of gall.”⁴⁶⁴

c. The Red Sea

[256] It might almost be one of the alchemical paradoxes that the Red Sea, in contrast to the significance ordinarily attached to “mare,” is a term for the healing and transforming baptismal water,⁴⁶⁵ and is thus an equivalent of the alchemical *aqua pontica*. St. Augustine says, “The Red Sea signifies baptism”;⁴⁶⁶ and, according to Honorius of Autun, “the Red Sea is the baptism reddened by the blood of Christ, in which our enemies, namely our sins, are drowned.”⁴⁶⁷

[257] We must also mention the Peratic interpretation of the Red Sea. The Red Sea drowned the Egyptians, but the Egyptians were all “non-knowers” (οἱ ἀγνοοῦντες). The exodus from Egypt signifies the exodus from the body, which is Egypt in miniature, being the incarnation of sinfulness, and the crossing (περᾶσαι)⁴⁶⁸ of the Red Sea is the crossing of the water of corruption, which is Kronos. The other side of the Red Sea is the other side of Creation. The arrival in the desert is a “genesis outside of generation” (ἐξω γενέσεως γενέσθαι). There the “gods of destruction” and the “god of salvation” are all together.⁴⁶⁹ The Red Sea is a water of death for those that are “unconscious,” but for those that are “conscious” it is a baptismal water of rebirth and transcendence.⁴⁷⁰ By “unconscious” are meant those who have no gnosis, i.e., are not enlightened as to the nature and destiny of man in the cosmos. In modern language it would be those who have no knowledge of the contents of the personal and collective unconscious. The personal unconscious is the shadow and the inferior function,⁴⁷¹ in Gnostic terms the sinfulness and impurity that must be washed away by baptism. The collective unconscious expresses itself in the mythological teachings, characteristic of most mystery religions, which reveal the secret knowledge concerning the origin of all things and the way to salvation. “Unconscious” people who attempt to cross the sea without being purified and without the guidance of enlightenment are drowned; they get stuck in the

unconscious and suffer a spiritual death in so far as they cannot get beyond their one-sidedness. To do this they would have to be more conscious of what is unconscious to them and their age, above all of the inner opposite, namely those contents to which the prevailing views are in any way opposed. This continual process of getting to know the counterposition in the unconscious I have called the “transcendent function,”⁴⁷² because the confrontation of conscious (rational) data with those that are unconscious (irrational) necessarily results in a modification of standpoint. But an alteration is possible only if the existence of the “other” is admitted, at least to the point of taking conscious cognizance of it. A Christian of today, for instance, no longer ought to cling obstinately to a one-sided credo, but should face the fact that Christianity has been in a state of schism for four hundred years, with the result that every single Christian has a split in his psyche. Naturally this lesion cannot be treated or healed if everyone insists on his own standpoint. Behind those barriers he can rejoice in his absolute and consistent convictions and deem himself above the conflict, but outside them he keeps the conflict alive by his intransigence and continues to deplore the pig-headedness and stiff-neckedness of everybody else. It seems as if Christianity had been from the outset the religion of chronic squabblers, and even now it does everything in its power never to let the squabbles rest. Remarkably enough, it never stops preaching the gospel of neighbourly love.

[258] We should get along a lot better if we realized that the majority views of “others” are condoned by a minority in ourselves. Armed with this psychological insight, which today no longer has the character of revelation since common sense can grasp it, we could set out on the road to the union of the opposites and would then, as in the Peratic doctrine, come to the place where the “gods of destruction and the god of salvation are together.” By this is obviously meant the destructive and constructive powers of the unconscious. This *coincidentia oppositorum* forms a parallel to the Messianic state of fulfilment described in Isaiah 11 : 6ff. and 35 : 5ff., though with one important difference: the place of “genesis outside of generation”—presumably an *opus contra naturam*— is clearly not paradise but ἡ ἔρημος the desert and the wilderness. Everyone who becomes conscious of even a fraction of his unconscious gets outside his own time and social stratum into a kind of solitude, as our text remarks. But only there is it possible to meet the “god of salvation.” Light is manifest in the darkness, and out of danger the rescue comes. In his sermon on Luke 19: 12 Meister Eckhart says: “And who can be nobler than the man who is born half of the highest and best the world has to offer, and half of the innermost ground of God’s nature and God’s loneliness? Therefore the Lord speaks in the prophet Hosea: I will lead the noble souls into the wilderness, and speak into their hearts. One with the One, One from the One, and in the One itself the One, eternally!”⁴⁷³

[259] I have gone into this Hippolytus text at some length because the Red Sea was of special significance to the alchemists. Sermo LXII of the *Turba* mentions the “Tyrian dye, which is extracted from our most pure Red Sea.” It is the parallel of the *tinctura philosophorum*, which is described as black and is extracted “from the sea.”⁴⁷⁴ The old treatise “Rosinus ad Euthiciam” says: “And know that our Red Sea is more tincturing than all seas, and that the poison,⁴⁷⁵ when it is cooked and becomes foul and discoloured, penetrates all bodies.”⁴⁷⁶ The tincture is the “dip” and the baptismal water of the alchemists, here asserted to come from the Red Sea. This idea is understandable in view of the patristic and Gnostic interpretation of the Red Sea as the blood of Christ in which we are baptized; hence the paralleling of the tincture, salt, and *aqua pontica* with blood.⁴⁷⁷

[260] The Red Sea appears in a very peculiar manner in the “Tractatus Aristotelis ad Alexandrum Magnum,” where a recipe says:

Take the serpent, and place it in the chariot with four wheels, and let it be turned about on the earth until it is immersed in the depths of the sea, and nothing more is visible but the blackest dead sea. And there let the chariot with the wheels remain, until so many fumes rise up from the serpent that the whole surface [*planities*] becomes dry, and by desiccation sandy and black. All that is the earth which is no earth, but a stone lacking all weight. . . . [And when the fumes are precipitated in the form of rain,] you should bring the chariot from the water to dry land, and then you have placed the four wheels upon the chariot, and will obtain the result if you will advance further to the Red Sea, running without running, moving without motion [*currens sine cursu, movens sine motu*].⁴⁷⁸

[261] This curious text requires a little elucidation. The serpent is the *prima materia*, the *Serpens Hermetis*, “which he [Hermes] sent to King Antiochus, that he might do battle with thee [Alexander] and thine army.”⁴⁷⁹ The serpent is placed “in the chariot of its vessel and is led hither and thither by the fourfold rotation of the natures, but it should be securely enclosed.” The wheels are the “wheels of the elements.” The vessel or vehicle is the “spherical tomb” of the serpent.⁴⁸⁰ The fourfold rotation of the natures corresponds to the ancient tetrameria of the opus (its division into four parts), i.e., transformation through the four elements, from earth to fire. This symbolism describes in abbreviated form the essentials of the opus: the serpent of Hermes or the *Agathodaimon*, the *Nous* that animates the cold part of nature—that is, the unconscious—is enclosed in the spherical vessel of diaphanous glass which, on the alchemical view, represents the world and the soul.⁴⁸¹ The psychologist would see it rather as the psychic reflection of the world, namely, *consciousness* of the world and the psyche.⁴⁸² The transformation corresponds to the psychic process of assimilation and integration by means of the transcendent function.⁴⁸³ This function unites the

pairs of opposites, which, as alchemy shows, are arranged in a quaternio when they represent a totality. The totality appears in quaternary form only when it is not just an unconscious fact but a conscious and differentiated totality; for instance, when the horizon is thought of not simply as a circle that can be divided into any number of parts but as consisting of four clearly defined points. Accordingly, one's given personality could be represented by a continuous circle, whereas the conscious personality would be a circle divided up in a definite way, and this generally turns out to be a quaternity. The quaternity of basic functions of consciousness meets this requirement. It is therefore only to be expected that the chariot should have four wheels,⁴⁸⁴ to correspond with the four elements or natures. The chariot as a spherical vessel and as consciousness rests on the four elements or basic functions,⁴⁸⁵ just as the floating island where Apollo was born, Delos, rested on the four supports which Poseidon made for it. The wheels, naturally, are on the outside of the chariot and are its motor organs, just as the functions of consciousness facilitate the relation of the psyche to its environment. It must, however, be stressed that what we today call the schema of functions is archetypally prefigured by one of the oldest patterns of order known to man, namely the quaternity, which always represents a consciously reflected and differentiated totality. Quite apart from its almost universal incidence it also appears spontaneously in dreams as an expression of the total personality. The "chariot of Aristotle" can be understood in this sense as a symbol of the self.

[262] The recipe goes on to say that this symbolic vehicle should be immersed in the sea of the unconscious for the purpose of heating and incubation,⁴⁸⁶ corresponding to the state of *tapas*,⁴⁸⁷ incubation by means of "self-heating." By this is obviously meant a state of introversion in which the unconscious content is brooded over and digested. During this operation all relations with the outside world are broken off; the feelers of perception and intuition, discrimination and valuation are withdrawn. The four wheels are "placed upon the chariot": outside everything is quiet and still, but deep inside the psyche the wheels go on turning, performing those cyclic evolutions which bring the mandala of the total personality,⁴⁸⁸ the ground-plan of the self, closer to consciousness. But so long as consciousness has not completed the process of integration it is covered by the "blackest dead sea," darkened by unconsciousness and oppressed by heat, as was the hero in the belly of the whale during the night sea journey.⁴⁸⁹ Through the incubation the snake-like content is vapourized, literally "sublimated," which amounts to saying that it is recognized and made an object of conscious discrimination.

[263] The "evaporatio" is followed by the "desiccation of the surface," which then appears "sandy and black." Here the imagery changes: the allusion to the subsiding flood means psychologically that the black blanket of unconsciousness hiding the nascent symbol is drawn away. "Arena" (sand) is defined as the "pure substance of

the stone,”⁴⁹⁰ and accordingly the text describes the regenerated earth as a “stone lacking all weight.” The text does not explain just why it is weightless, but it is evident that nothing material, which alone has weight, is left over, and all that remains is the psychic content of the projection.

[264] The opus is far from having come to an end at this point, for the *nigredo* (*terra nigra*) still prevails and the substance of the stone is still black. It is therefore necessary for the “fumes” (*evaporationes*) to precipitate and wash off the blackness, “whence the whole earth becomes white.” The rain now falls so copiously that the earth is almost turned into a sea. Hence the direction that the chariot should be brought to dry land. This is clearly another allusion to Noah’s Ark and the flood.⁴⁹¹ With the coming of the flood the previous state of chaos would be restored, and the result of the opus would again be swamped by unconsciousness. This motif recurs in the form of the dragon that pursued Leto and the woman crowned with stars (Rev. 12 : 1f.).

[265] If the chariot reaches dry land, this obviously means that the content has become visible and remains conscious, “and then,” says the text, “you have placed the wheels upon the chariot.”⁴⁹² The four natures or elements are gathered together and are contained in the spherical vessel, i.e., the four aspects or functions are integrated with consciousness, so that the state of totality has almost been attained. Had it really been attained the opus would be consummated at this point, but the “result” (*effectus*) is obtained only by advancing further. The “result” therefore means something more than integration of the four natures. If we take the loading of the chariot as the conscious realization of the four functions, this does in fact denote only the possibility of remaining conscious of the whole previous material, that is, of the principal aspects of the psyche. The question then arises as to how all these divergent factors, previously kept apart by apparently insuperable incompatibilities, will behave, and what the ego is going to do about it.

[266] The singular image of the Nous-serpent enthroned on a chariot reminds us of the chariot-driving, snake-shaped gods of southern India, for instance on the immense black temple at Puri, which is itself a chariot of stone. I certainly don’t want to suggest that there is any direct Indian influence in our text, for there is another model closer to hand, and that is Ezekiel’s vision of the four creatures, with the faces respectively of a man, a lion, an ox, and an eagle. These four figures are associated with four wheels, “their construction being as it were a wheel within a wheel. When they went, they went in any of their four directions without turning as they went.”⁴⁹³ Together they formed the moving throne of a figure having “the appearance of a man.” In the Cabala this chariot (Merkabah) plays an important role as the vehicle on which the believers mount up to God and the human soul unites with the world-soul.

[267] An interpretation of the four wheels as the *quadriga* and vehicle of divinity is found in a window medallion by Suger, the twelfth-century maker of stained glass for the Abbey of Saint-Denis.⁴⁹⁴ The chariot which is depicted bears the inscription “QUADRIGE AMINADAB,” referring to the Song of Songs 6: 11 (DV): “My soul troubled me for the chariots of Aminadab.”⁴⁹⁵ God the Father stands on a four-wheeled chariot holding the crucifix before him. In the corners of the medallion are the four emblems of the evangelists, the Christian continuation of Ezekiel’s winged creatures. The four gospels form, as it were, a quaternary podium on which the Redeemer stands.

[268] Still another source might be Honorius of Autun. In his commentary on Song of Songs 6 : 11, he says that his “animalis vita” was troubled because the chariot signified the four evangelists. It was this chariot that the apostles and their followers had driven through the world. For Christ had said in the gospels: “Except ye repent, ye shall all likewise perish” (Luke 13: 3). And it was to him, Honorius, that the words were addressed: “Return, return, O Shulamite” (Song of Songs 6 : 13).⁴⁹⁶

[269] Psychologically the vision of Ezekiel is a symbol of the self consisting of four individual creatures and wheels, i.e., of different functions. Three of the faces are theriomorphic and only one anthropomorphic, which presumably means that only one function has reached the human level, whereas the others are still in an unconscious or animal state. The problem of three and four (trinity and quaternity) plays a great role in alchemy as the “axiom of Maria”⁴⁹⁷ and, like the vision of Ezekiel, is concerned with the God-image. The symbols of the self are as a rule symbols of totality, but this is only occasionally true of God-images. In the former the circle and the quaternity predominate, in the latter the circle and the trinity—and this, moreover, only in the case of abstract representations, which are not the only ones to occur.

[270] These hints may throw a little light on the strange idea of the serpent-chariot. It is a symbol of the arcane substance and the quintessence, of the aether that contains all four elements, and at the same time a God-image or, to be more accurate, an image of the *anima mundi*. This is indicated by the Mercurial serpent, which in its turn was interpreted by the alchemists as the “spirit of life that was in the wheels” (DV).⁴⁹⁸ We should also mention that according to Ezekiel 1 : 18 the inter-revolving wheels “were full of eyes round about.” The old illustrators therefore produced something like an astrolabe in their attempts to depict the vision. The notion of wheels is naturally connected with movement in all directions, for the “eyes of the Lord run to and fro through the whole earth” (Zech. 4 : 10). It is said of the horses, too, that they “walk to and fro through the earth” (Zech. 6 : 7). Eyes are round and in common speech are likened to “cart-wheels.” They also seem to be a typical symbol for what I have called the “multiple luminosities of the unconscious.” By this I mean the seeming

possibility that complexes possess a kind of consciousness, a luminosity of their own, which, I conjecture, expresses itself in the symbol of the soul-spark, multiple eyes (*polyophtalmia*), and the starry heaven.⁴⁹⁹

[271] By reason of its “solar” nature the eye is a symbol of consciousness, and accordingly multiple eyes would indicate a multiplicity of conscious centres which are co-ordinated into a unity like the many-faceted eye of an insect. As Ezekiel’s vision can be interpreted psychologically as a symbol of the self, we may also mention in this connection the Hindu definition of the self—here *hiranyagarbha*—as the “collective aggregate of all individual souls.”⁵⁰⁰

[272] Ezekiel’s vision is of psychological importance because the quaternity embodied in it is the vehicle or throne of him who had the “appearance of a man.” Together with the “spirit of life” in the wheels it represents the empirical self, the totality of the four functions. These four are only partly conscious. The auxiliary functions are partly, and the “inferior” or subliminal function is wholly, autonomous; they cannot be put to conscious use and they reach consciousness only indirectly as a *fait accompli*, through their sometimes disturbing effects. Their specific energy adds itself to the normal energy of the unconscious and thereby gives it an impulse that enables it to irrupt spontaneously into consciousness. As we know, these invasions can be observed systematically in the association experiment.⁵⁰¹

[273] The quaternity of the self appears in Ezekiel’s vision as the true psychological foundation of the God-concept. God uses it as his vehicle. It is possible for the psychologist to verify the structure of this foundation, but beyond that the theologian has the last word. In order to clear up any misunderstandings, especially from the theological side, I would like to emphasize yet again that it is not the business of science to draw conclusions which go beyond the bounds of our empirical knowledge. I do not feel the slightest need to put the self in place of God, as short-sighted critics have often accused me of doing. If Indian philosophers equate the atman with the concept of God and many Westerners copy them, this is simply their subjective opinion and not science. A *consensus generalis* on this point would in itself be yet another fact which, for the empirical psychologist, is as well worth considering as the remarkable view of many theologians that religious statements have nothing to do with the psyche. Similarly, it is characteristic of the mystical philosophy of the alchemists that the Mercurial serpent is enthroned on the chariot. He is a living spirit who uses as his chariot the body that consists of the four elements. In this sense the chariot is the symbol of earthly life. A Georgian fairytale closes with the verses:

I have dragged a cart up the mountain,

It has become like a mountain.

[274] As I have said, the process of transformation does not come to an end with the production of the quaternity symbol. The continuation of the opus leads to the dangerous crossing of the Red Sea, signifying death and rebirth. It is very remarkable that our author, by his paradox “running without running, moving without motion,” introduces a coincidence of opposites just at this point, and that the Hippolytus text speaks, equally paradoxically, of the “gods of destruction and the god of salvation” being together. The quaternity, as we have seen, is a quaternio of opposites, a synthesis of the four originally divergent functions. Their synthesis is here achieved in an image, but in psychic reality becoming conscious of the whole psyche⁵⁰³ faces us with a highly problematical situation. We can indicate its scope in a single question: What am I to do with the unconscious?

[275] For this, unfortunately, there are no recipes or general rules. I have tried to present the main outlines of what the psychotherapist can observe of this wearisome and all too familiar process in my study “The Relations between the Ego and the Unconscious.” For the layman these experiences are a *terra incognita* which is not made any more accessible by broad generalizations. Even the imagination of the alchemists, otherwise so fertile, fails us completely here. Only a thorough investigation of the texts could shed a little light on this question. The same task challenges our endeavours in the field of psychotherapy. Here too are thousands of images, symbols, dreams, fantasies, and visions that still await comparative research. The only thing that can be said with some certainty at present is that there is a gradual process of approximation whereby the two positions, the conscious and the unconscious, are both modified. Differences in individual cases, however, are just as great as they were among the alchemists.

d. The Fourth of the Three

[276] In the course of his mystic peregrination⁵⁰⁴ Maier reached the Red (“Erythraean”) Sea, and in the following way: he journeyed to the four directions, to the north (Europe), to the west (America), to the east (Asia).⁵⁰⁵ Leaving Asia and turning south to Africa, he found a statue of Mercury, made of silver, and with a golden head. The statue pointed to Paradise, which he espied far off. Now because of its four rivers, and because it was the abode of the originally androgynous Primordial Man (Adam), the Garden of Eden was a favourite mandala in Christian iconography, and is therefore a symbol of totality and—from the psychological point of view—of the self. If we take the four directions and the four elements (see note 505) as a symbolical equivalent of the four basic functions of consciousness, we can say that

Maier had become conscious of three of them by the time he reached Asia. This brings him to the fourth and last, the “inferior” function, which is the darkest and the most unconscious of all. “Africa” is not a bad image for this. But just as Maier was about to direct his steps thither, he had a vision of paradise as the primordial image of wholeness, which showed him that the goal of his journey lay in the attainment of this wholeness. By the time he reached Africa, he says, the sun was in its house, Leo, and the moon was in Cancer, “the moon having Cancer for the roof of its house”. The proximity of the two houses indicates a *coniunctio Solis et Lunae*, the union of supreme opposites, and this is the crowning of the opus and the goal of the peregrination. He adds: “And this gave me great hope of the best augury.”

[277] The fourth function has its seat in the unconscious. In mythology the unconscious is portrayed as a great animal, for instance Leviathan, or as a whale, wolf, or dragon. We know from the myth of the sun-hero that it is so hot in the belly of the whale that his hair falls out.⁵⁰⁶ Arisleus and his companions likewise suffer from the great heat of their prison under the sea.⁵⁰⁷ The alchemists were fond of comparing their fire to the “fire of hell” or the flames of purgatory. Maier gives a description of Africa which is very like a description of hell: “uncultivated, torrid, parched,⁵⁰⁸ sterile and empty.”⁵⁰⁹ He says there are so few springs that animals of the most varied species assemble at the drinking-places and mingle with one another, “whence new births and animals of a novel appearance are born,” which explained the saying “Always something new out of Africa.” Pans dwelt there, and satyrs, dog-headed baboons, and half-men, “besides innumerable species of wild animals.” According to certain modern views, this could hardly be bettered as a description of the unconscious. Maier further reports that in the region of the Red Sea an animal is found with the name of “Ortus” (rising, origin). It had a red head with streaks of gold reaching to its neck, black eyes, a white face, white forepaws, and black hindpaws. He derived the idea of this animal from the remark of Avicenna: “That thing whose head is red, its eyes black and its feet white, is the magistry.”⁵¹⁰ He was convinced that the legend of this creature referred to the phoenix, which was likewise found in that region. While he was making inquiries about the phoenix he “heard a rumour” that not far off a prophetess, known as the Erythraean Sibyl, dwelt in a cave. This was the sibyl who was alleged to have foretold the coming of Christ. Maier is probably referring here not to the eighth book of the Sibylline Oracles, verse 217, at which point thirty-four verses begin with the following letters: IHΣΟΥΣ ΧΡΕΙΣΤΟΣ ΘΕΟΥ ΥΙΟΣ ΣΩΤΗΡ ΣΤΑΥΡΟΣ,⁵¹¹ but to the report of St. Augustine in *Decivitate dei*,⁵¹² which was well known in the Middle Ages. He also cites the passage about the sibyl in the *Constantini Oratio* of Eusebius and emphasizes that the sibylline prophecy referred to the “coming of Christ in the flesh.”^{512a}

[278] We have seen earlier that the “Erythraean Sea” is a mysterious place, but here we meet with some noteworthy details. To begin with, our author reaches this sea just when he has completed the journey through the three continents and is about to enter the critical fourth region. We know from the Axiom of Maria and from *Faust* the crucial importance of that seemingly innocent question at the beginning of the *Timaeus*:

SOCRATES: One, two, three—but where, my dear Timaeus, is the fourth of those guests of yesterday who were to entertain me today?

TIMAEUS: He suddenly felt unwell, Socrates; he would not have failed to join our company if he could have helped it.⁵¹³

[279] The transition from three to four is a problem⁵¹⁴ on which the ambiguous formulation of Maria does not shed very much light.⁵¹⁵ We come across the dilemma of three and four in any number of guises, and in Maier’s *Symbola aureae mensae* as well the step from three to four proves to be an important development presaged by the vision of paradise. The region of the Red Sea is proverbially hot, and Maier reached it at the end of July, “in the intense heat of summer.” He was, in fact, “getting hot,” uncommonly hot, as hot as hell, for he was approaching that region of the psyche which was not unjustly said to be inhabited by “Pans, Satyrs, dog-headed baboons, and half-men.” It is not difficult to see that this region is the animal soul in man. For just as a man has a body which is no different in principle from that of an animal, so also his psychology has a whole series of lower storeys in which the spectres from humanity’s past epochs still dwell, then the animal souls from the age of Pithecanthropus and the hominids, then the “psyche” of the cold-blooded saurians, and, deepest down of all, the transcendental mystery and paradox of the sympathetic and parasymphathetic psychoid processes.

[280] So it is not surprising that our world-voyager felt that he had landed in the hottest place—he was in Arabia Felix—in the sweltering heat of summer! He was painfully aware that he was risking his skin: “It’s your concern when your neighbour’s wall is on fire.”⁵¹⁶ He was the banquet-giver and the guest, the eater and the eaten in one person.

[281] “The innumerable species of animals” begin to show up already by the Red Sea, headed by the fabulous four-footed “Ortus,” which combines in itself the four alchemical colours, black, white, red, and yellow⁵¹⁷ (the gold streaks on head and neck). Maier does not hesitate to identify the Ortus with the phoenix, the other legendary inhabitant of Arabia Felix,⁵¹⁸ less perhaps on account of its appearance than on account of its name; for the phoenix, too, after consuming itself in the land of Egypt, each time rose renewed, like the reborn sun in Heliopolis.

[282] The Ortus is the alchemical “animal” which represents the living quaternity in its first synthesis. In order to become the ever-living bird of the spirit it needs the transforming fire, which is found in “Africa,” that is, in the encounter with and investigation of the fourth function and the animal soul represented by the Ortus. By interpreting it as the phoenix, Maier gave it a far-reaching change of meaning, as we shall see. For besides his animal soul he also discovered in its vicinity a kind of feminine soul, a virgin, to whom he at first appeared like an importunate guest.⁵¹⁹ This was the sibyl who foretold the coming of Christ. Thus, by the Red Sea, he met the animal soul in the form of a monstrous quaternity, symbolizing, so to speak, the prima materia of the self and, as the phoenix, rebirth. The mystery alluded to here is not only the encounter with the animal soul but, at the same time and in the same place, the meeting with the anima, a feminine psychopomp who showed him the way to Mercurius and also how to find the phoenix.⁵²⁰

[283] It is worth noting that the animal is the symbolic carrier of the self. This hint in Maier is borne out by modern individuals who have no notion of alchemy.⁵²¹ It expresses the fact that the structure of wholeness was always present but was buried in profound unconsciousness, where it can always be found again if one is willing to risk one’s skin to attain the greatest possible range of consciousness through the greatest possible self-knowledge—a “harsh and bitter drink” usually reserved for hell. The throne of God seems to be no unworthy reward for such trials. For self-knowledge—in the total meaning of the word—is not a one-sided intellectual pastime but a journey through the four continents, where one is exposed to all the dangers of land, sea, air, and fire. Any total act of recognition worthy of the name embraces the four—or 360!—aspects of existence. Nothing may be “disregarded.” When Ignatius Loyola recommended “imagination through the five senses”⁵²² to the meditant, and told him to imitate Christ “by use of his senses,”⁵²³ what he had in mind was the fullest possible “realization” of the object of contemplation. Quite apart from the moral or other effects of this kind of meditation, its chief effect is the training of consciousness, of the capacity for concentration, and of attention and clarity of thought. The corresponding forms of Yoga have similar effects. But in contrast to these traditional modes of realization, where the meditant projects himself into some prescribed form, the self-knowledge alluded to by Maier is a projection into the empirical self as it actually is. It is not the “self” we like to imagine ourselves to be after carefully removing all the blemishes, but the empirical ego just as it is, with everything that it does and everything that happens to it. Everybody would like to be quit of this odious adjunct, which is precisely why in the East the ego is explained as illusion and why in the West it is offered up in sacrifice to the Christ figure.

[284] By contrast, the aim of the mystical peregrination is to understand all parts of the world, to achieve the greatest possible extension of consciousness, as though its

guiding principle were the Carpocratic⁵²⁴ idea that one is delivered from no sin which one has not committed. Not a turning away from its empirical “so-ness,” but the fullest possible experience of the ego as reflected in the “ten thousand things”—that is the goal of the peregrination.⁵²⁵ This follows logically from the psychological recognition that God cannot be experienced at all unless this futile and ridiculous ego offers a modest vessel in which to catch the effluence of the Most High and name it with his name. The significance of the vas-symbol in alchemy shows how concerned the artifex was to have the right vessel for the right content: “One is the lapis, one the medicament, one the vessel, one the procedure, and one the disposition.” The *aqua nostra*, the transformative substance, is even its own vessel.⁵²⁶ From this it is but a step to the paradoxical statement of Angelus Silesius:

God is my centre when I close him in,
And my circumference when I melt in him.⁵²⁷

[285] Maier’s Erythraean quadruped, the Ortus, corresponds to the four-wheeled chariot of Pseudo-Aristotle. The tetramorph, too, is a product of early medieval iconography,⁵²⁸ combining the four winged creatures of Ezekiel’s vision into a four-footed monster. The interpretation of the Ortus as the phoenix connects it with Christ, whose coming was prophesied by the Sibyl; for the phoenix is a well-known allegory of the resurrection of Christ and of the dead in general.⁵²⁹ It is the symbol of transformation *par excellence*. In view of this well-known interpretation of the phoenix and of the Erythraean oracle, it is amazing that any author at the beginning of the seventeenth century should dare to ask the sibyl, not to show him the way to Christ, but to tell him where he could find Mercurius! This passage offers another striking proof of the parallelism between Mercurius and Christ. Nor does the phoenix appear here as a Christ allegory but as the bearer and birthplace of the universal medicine, the “remedy against wrath and pain.” As the sibyl once foretold the coming of the Lord, so now she is to point the way to Mercurius. Christ is the Anthropos, the Primordial Man; Mercurius has the same meaning, and the Primordial Man stands for the round, original wholeness, long ago made captive by the powers of this world. In Christ’s case the victory and liberation of the Primordial Man were said to be complete, so that the labours of the alchemists would seem to be superfluous. We can only assume that the alchemists were of a different opinion, and that they sought their remedy against wrath and pain in order to complete what they considered to be Christ’s unfinished work of redemption.

[286] It is characteristic of Maier’s views that the idea of most importance is not Mercurius, who elsewhere appears strongly personified, but a substance brought by the phoenix, the bird of the spirit. It is this inorganic substance, and not a living being, which is used as a symbol of wholeness, or as a means towards wholeness, a

desideratum apparently not fulfilled by the Christ-symbol.⁵³⁰ Involuntarily one asks oneself whether the intense personalization of the divine figures, as is customary in Christianity and quite particularly in Protestantism,⁵³¹ is not in the end compensated, and to some extent mitigated, by a more objective point of view emanating from the unconscious.

e. Ascent and Descent

[287] In his quest for wholeness so far, Michael Maier, besides crossing three continents and travelling in three directions, has discovered a statue of Mercurius pointing the way to paradise; he has glimpsed paradise from afar, he has found the animal soul and the sibylline anima, who now counsels him to journey to the seven mouths of the Nile (Ostia Nili), in order to seek for Mercurius. The continuation of his pilgrimage recalls the flight of the phoenix from Arabia, where it lives, to Egypt, where it dies and arises anew. We may therefore expect that something similar will befall the author. We are not told anything of his crossing of the Red Sea and of his recapitulation, in the reverse direction, of the miraculous wanderings of the children of Israel. We do, however, soon learn that something like a rebirth mystery is to take place, because Maier compares the seven mouths of the Nile to the seven planets. He first reaches the Canopic Gate, the western mouth of the delta, where he finds Saturn domiciled. Of the remaining planets we can recognize only Mars with certainty, as the description of the cities where the others dwell is not very clear. Amid innumerable hazards he traverses the seven regions without meeting Mercurius. He does not find him even in his own city. Finally he has to turn back and retrace his steps until he reaches the Canopic Gate, where this time he finds Mercurius. Although he learns from him all sorts of secrets, he fails to find the phoenix. Later, he will return again in order to discover the panacea. In his “Epigramma ad Phoenicem” he begs the wonderful bird to give the wise man its feathers,⁵³² and in his epigram to the “Medicina Phoeniciae” he rates it above “riches and gold, and he who does not think so is not a man but a beast.”⁵³³

[288] The experience of the fourth quarter, the region of fire (i.e., the inferior function), is described by Maier as an ascent and descent through the seven planetary spheres. Even if the peregrination up to this point was not an allegory of the opus alchymicum, from now on it certainly is. The opus is a “transitus,” a *πέρασις* in the Gnostic sense, a “transcension” and transformation whose subject and object is the elusive Mercurius. I will not discuss the nature of the transitus here in any great detail, as this would be the proper concern of an account of the opus itself. One aspect of the transitus, however, is the ascent and descent through the planetary spheres, and to this we must devote a few words. As the “Tabula smaragdina” shows, the purpose of the ascent and descent is to unite the powers of Above and Below. A

feature worthy of special notice is that in the opus there is an ascent followed by a descent, whereas the probable Gnostic-Christian prototype depicts first the descent and then the ascent. There are numerous evidences of this in the literature and I do not need to cite them here. I will quote only the words of one of the great Greek Fathers, St. Basil, who says in his explanation of Psalm 17 : 10⁵³⁴ (“And he bowed the heavens and came down, and a black cloud was under his feet”): “David says here: God came down from heaven to help me and to chastise his enemies. But he clearly prophesies the incarnation [ἐνανθρωπήσας] of Christ when he says: He bowed the heavens and came down. For he did not break through the heavens and did not make the mystery manifest, but came down to earth secretly, like rain upon the fleece,⁵³⁵ because the incarnation was secret and unknown, and his coming into the world-order [ἐν τῇ οἰκονομίᾳ] was hidden.”⁵³⁶ Commenting on the next verse (“And he was borne upon the cherubim, and he flew”), Basil says: “For in ascending he rose above the Cherubim, whom David named also the wings of the wind, on account of their winged and stormy nature. By the wings of the wind is also meant the cloud which took him up.”⁵³⁷ Irenaeus sums up the mystery in the lapidary saying: “For it is He who descended and ascended for the salvation of men.”⁵³⁸

[289] In contrast to this, in alchemy the ascent comes first and then the descent. I would mention the ascent and descent of the soul in the *Rosarium* illustrations⁵³⁹ and above all the exordium in the “Tabula smaragdina,” whose authority held sway throughout the Middle Ages:

IV. Its father is the sun, its mother the moon; the wind hath carried it in his belly; its nurse is the earth.

VI. Its power is complete when it is turned towards the earth.

VIII. It ascendeth from the earth to heaven, and descendeth again to the earth, and receiveth the power of the higher and lower things. So wilt thou have the glory of the whole world.⁵⁴⁰

[290] These articles (whose subject is sometimes masculine and sometimes neuter) describe the “sun-moon child” who is laid in the cradle of the four elements, attains full power through them and the earth, rises to heaven and receives the power of the upper world, and then returns to earth, accomplishing, it seems, a triumph of wholeness (“gloria totius mundi”). The words “So wilt thou have” are evidently addressed to the Philosopher, for he is the artifex of the *filius philosophorum*. If he succeeds in transforming the arcane substance he will simultaneously accomplish his own wholeness, which will manifest itself as the glory of the whole world.

[291] There can be no doubt that the arcane substance, whether in neuter or personified form, rises from the earth, unites the opposites, and then returns to earth, thereby achieving its own transformation into the elixir. “He riseth up and goeth down in the

tree of the sun,” till he becomes the elixir, says the “Consilium coniugii.”⁵⁴¹ The text continues:

Someone hath said,⁵⁴² And when I rise naked to heaven, then shall I come clothed upon the earth, and shall perfect all minerals.⁵⁴³ And if we are baptized in the fountain of gold and silver, and the spirit of our body [i.e., the arcane substance] ascends into heaven with the father and the son, and descends again, then shall our souls revive, and my animal body will remain white, that is, [the body] of the moon.⁵⁴⁴

[292] Here the union of opposites consists in an ascent to heaven and a descent to earth in the bath of the tincture. The earthly effect is first a perfection of minerals, then a resuscitation of souls and a transfiguration of the animal body, which before was dark. A parallel passage in the “Consilium” runs:

His soul rises up from it⁵⁴⁵ and is exalted to the heavens, that is, to the spirit, and becomes the rising sun (that is, red), in the waxing moon, and of solar nature.⁵⁴⁶ And then the lantern with two lights,⁵⁴⁷ which is the water of life, will return to its origin, that is, to earth. And it becomes of low estate, is humbled and decays, and is joined to its beloved,⁵⁴⁸ the terrestrial sulphur.⁵⁴⁹

[293] This text describes the ascent of the soul of the arcane substance, the incombustible sulphur. The soul as Luna attains its plenilunium, its sunlike brilliance, then wanes into the novilunium and sinks down into the embrace of the terrestrial sulphur, which here signifies death and corruption. We are reminded of the gruesome conjunction at the new moon in Maier’s *Scrutinium chymicum*, where the woman and the dragon embrace in the grave.⁵⁵⁰ The description Dorn gives in his “Physica Trismegisti” is also to the point: “In the end it will come to pass that this earthly, spagyric birth clothes itself with heavenly nature by its ascent, and then by its descent visibly puts on the nature of the centre of the earth, but nonetheless the nature of the heavenly centre which it acquired by the ascent is secretly preserved.”⁵⁵¹ This “birth” (*foetura*) conquers the “subtile and spiritual sickness in the human mind and also all bodily defects, within as well as without.” The medicament is produced “in the same way as the world was created.” Elsewhere Dorn remarks that the “foetus spagyricus” is forced by the fire to rise up to heaven (*caelum*), by which he means from the bottom of the vessel to the top, and from there it descends again after attaining the necessary degree of ripeness, and returns to earth: “This spirit becomes corporeal again, after having become spirit from a body.”⁵⁵²

[294] As if in contradiction to the “Tabula smaragdina,” whose authority he follows here, Dorn writes in his “Philosophia speculativa”: “No one ascends into the heaven which ye seek, unless he who descends from the heaven which ye do not seek, enlighten him.”⁵⁵³ Dorn was perhaps the first alchemist to find certain statements of his “art” problematical,⁵⁵⁴ and it was for this reason that he provided his *foetus*

spagyricus, who behaves in an all too Basilidian manner, with a Christian alibi. At the same time he was conscious that the artifex was indissolubly one with the opus.⁵⁵⁵ His speculations are not to be taken lightly as they are occasionally of the greatest psychological interest, e.g.: “The descent to the four and the ascent to the monad are simultaneous.”⁵⁵⁶ The “four” are the four elements and the monad is the original unity which reappears in the “denarius” (the number 10), the goal of the opus; it is the unity of the personality projected into the unity of the stone. The descent is analytic, a separation into the four components of wholeness; the ascent synthetic, a putting together of the denarius. This speculation accords with the psychological fact that the confrontation of conscious and unconscious produces a dissolution of the personality and at the same time regroups it into a whole. This can be seen very clearly in moments of psychic crisis, for it is just in these moments that the symbol of unity, for instance the mandala, occurs in a dream. “Where danger is, there / Arises salvation also,” says Hölderlin.

[295] While the older authors keep strictly to the “Tabula smaragdina,”⁵⁵⁷ the more modern ones, under the leadership of Dorn, tend to present the process the other way round. For instance, Mylius says that the earth cannot ascend unless heaven comes down first. And even then the earth can be sublimated to heaven only if it is “dissolved in its own spirit⁵⁵⁸ and becomes one substance therewith.”⁵⁵⁹ The Paracelsist Penotus is even more emphatic. Speaking of Mercurius, he says:

As to how the son of man [*filius hominis*] is generated by the philosopher and the fruit of the virgin is produced, it is necessary that he be exalted from the earth and cleansed of all earthliness; then he rises as a whole into the air and is changed into spirit. Thus the word of the philosopher is fulfilled: He ascends from earth to heaven and puts on the power of Above and Below, and lays aside his earthly and uncleanly nature.”⁵⁶⁰

This complete identification of the lapis with the “son of man” must obviously end with its ascension. But that contradicts the original and widespread conception of the lapis as the tincture or medicine, which has meaning and value only if it applies itself to the base substances of the lower world. The upper world is in need of no medicine, since it is incorruptible anyway. A redeemer who proceeds from matter and returns to matter gradually became unthinkable. Those who identified the lapis absolutely with Christ stopped working in the laboratory, and those who preferred laboratory work slowly gave up their mystic language.

[296] Ascent and descent, above and below, up and down, represent an emotional realization of opposites, and this realization gradually leads, or should lead, to their equilibrium. This motif occurs very frequently in dreams, in the form of going up- and downhill, climbing stairs, going up or down in a lift, balloon, aeroplane, etc.⁵⁶¹ It

corresponds to the struggle between the winged and the wingless dragon, i.e., the uroboros. Dorn describes it also as the “circular distillation”⁵⁶² and as the “spagyric vessel” which has to be constructed after the likeness of the natural vessel, i.e., in the form of a sphere. As Dorn interprets it, this vacillating between the opposites and being tossed back and forth means being contained *in* the opposites. They become a vessel in which what was previously now one thing and now another floats vibrating, so that the painful suspension between opposites gradually changes into the bilateral activity of the point in the centre.⁵⁶³ This is the “liberation from opposites,” the *nirvandva* of Hindu philosophy, though it is not really a philosophical but rather a psychological development. The “Aurelia occulta” puts this thought in the words of the dragon: “Many from one and one from many, issue of a famous line, I rise from the lowest to the highest. The nethermost power of the whole earth is united with the highest. I therefore am the One and the Many within me.”⁵⁶⁴ In these words the dragon makes it clear that he is the chthonic forerunner of the self.

f. The Journey through the Planetary Houses

[297] Returning now to Michael Maier’s journey to the seven mouths of the Nile, which signify the seven planets, we bring to this theme a deepened understanding of what the alchemists meant by ascent and descent. It was the freeing of the soul from the shackles of darkness, or unconsciousness; its ascent to heaven, the widening of consciousness; and finally its return to earth, to hard reality, in the form of the tincture or healing drink, endowed with the powers of the Above. What this means psychologically could be seen very clearly from the *Hypnerotomachia*⁵⁶⁵ were its meaning not overlaid by a mass of ornate detail. It should therefore be pointed out that the whole first part of the book is a description of the dreamer’s ascent to a world of gods and heroes, of his initiation into a Venus mystery, followed by the illumination and semi-apotheosis of Poliphilo and his Polia. In the second, smaller part this leads to disenchantment and the cooling off of the lovers, culminating in the knowledge that it was all only a dream. It is a descent to earth, to the reality of daily life, and it is not altogether clear whether the hero managed to “preserve in secret the nature of the heavenly centre which he acquired by the ascent.”⁵⁶⁶ One rather doubts it. Nevertheless, his exciting adventure has left us a psychological document which is a perfect example of the course and the symbolism of the individuation process. The spirit, if not the language, of alchemy breathes through it and sheds light even on the darkest enigmas and riddles of the Masters.⁵⁶⁷

[298] Maier’s journey through the planetary houses begins with Saturn, who is the coldest, heaviest, and most distant of the planets, the maleficus and abode of evil, the mysterious and sinister Senex (Old Man), and from there he ascends to the region of the sun, to look for the Boy Mercurius, the longed-for and long-sought goal of the

adept. It is an ascent ever nearer to the sun, from darkness and cold to light and warmth, from old age to youth, from death to rebirth. But he has to go back along the way he came, for Mercurius is not to be found in the region of the sun but at the point from which he originally started. This sounds very psychological, and in fact life never goes forward except at the place where it has come to a standstill.⁵⁶⁸ The sought-for Mercurius is the *spiritus vegetativus*, a living spirit, whose nature it is to run through all the houses of the planets, i.e., the entire Zodiac. We could just as well say through the entire horoscope, or, since the horoscope is the chronometric equivalent of individual character, through all the characterological components of the personality. Individual character is, on the old view, the curse or blessing which the gods bestowed on the child at its birth in the form of favourable or unfavourable astrological aspects. The horoscope is like the “chirographum,” the “handwriting of the ordinances against us . . . which Christ blotted out; and he took it out of the way, nailing it to his cross. And after having disarmed the principalities and powers he made a show of them openly, and triumphed over them.”⁵⁶⁹

[299] This very ancient idea of what we might call an inborn bill of debt to fate is the Western version of a prenatal karma. It is the archons, the seven rulers of the planets, who imprint its fate upon the soul. Thus Priscillian (d. c. 385) says that the soul, on its descent to birth, passes through “certain circles” where it is made captive by evil powers, “and in accordance with the will of the victorious prince is forced into divers bodies, and his handwriting inscribed upon it.”⁵⁷⁰ Presumably this means that the soul is imprinted with the influences of the various planetary spheres. The descent of the soul through the planetary houses corresponds to its passage through the gates of the planets as described by Origen: the first gate is of lead and is correlated with Saturn,⁵⁷¹ from which it is clear that Maier is following an old tradition.⁵⁷² His peregrinatio chymica repeats the old “heavenly journey of the soul,” an idea which seems to have been developed more particularly in Persia.

[300] I shall not go more closely here into the transitus through the planetary houses;⁵⁷³ it is sufficient to know that Michael Maier, like Mercurius, passes through them on his mystic journey.⁵⁷⁴ This journey is reminiscent of the voyage of the hero, one motif of which becomes evident in the archetypal meeting at the critical place (the “ford”) with the Ortus, its head showing the four colours. There are other motifs too. Where there is a monster a beautiful maiden is not far away, for they have, as we know, a secret understanding so that the one is seldom found without the other. The sibyl, the guide of souls, shows the hero the way to Mercurius, who in this case is Hermes Trismegistus, the supreme mystagogue.

[301] In the *Shepherd of Hermas* it is related that the hero, while travelling along the Via Campana, met a monster resembling a dragon of the sea (κῆτος):

And the beast had on its head four colours, black, then the colour of flame and blood, then golden, then white. After I had passed the beast by and had gone about thirty feet further, lo! a maiden met me, ‘adorned as if coming forth from the bridal chamber,’ all in white and with white sandals, veiled to the forehead, and a turban for a head-dress, but her hair was white.⁵⁷⁵

[302] The similarity between the two stories is so complete that one is tempted to assume that Maier had read the *Shepherd of Hermas*. This is not very likely. Though he had a good education in the humanities I can see in his writings no evidence that he was familiar with the patristic literature, and in his references to the writings of Albertus and Thomas Aquinas⁵⁷⁶ he might easily have let slip a remark of this kind. But one finds nothing, and it does not seem very probable, either, that Maier had direct knowledge of the New Testament Apocrypha.

[303] Hermas interprets the maiden as the Church, and Maier, fifteen hundred years later, as the Erythraean Sibyl, which only goes to show once more that the newer is the older. The “supreme mistress” led Hermas to the kingdom of the triune God, but Maier she leads to Hermes Trismegistus and Trisomatos, the triadic Mercurius, who would reveal to him the secret of the phoenix’s resurrection.⁵⁷⁷ He can find Mercurius only through the rite of the ascent and descent, the “circular distillation,” beginning with the black lead, with the darkness, coldness, and malignity of the malefic Saturn; then ascending through the other planets to the fiery Sol, where the gold is heated in the hottest fire and cleansed of all impurities; and finally returning to Saturn, where this time he meets Mercurius and receives some useful teachings from him. Saturn has here changed from a star of ill omen into a “domus barbae” (House of the Beard), where the “wisest of all,” Thrice-Greatest Hermes, imparts wisdom.⁵⁷⁸ Hermas too begins with the blackness; his mistress gives him the following explanation:

The black is this world in which you are living; the colour of fire and blood means that this world must be destroyed in blood and fire. The golden part is you, who have fled from this world, for even as gold is tried in the fire and becomes valuable, so also you who live among them are tried. . . . The white part is the world to come, in which the elect of God shall dwell; for those who have been chosen by God for eternal life will be without spot and pure.⁵⁷⁹

[304] In alchemy the fire purifies, but it also melts the opposites into a unity. He who ascends unites the powers of Above and Below and shows his full power when he returns again to earth.⁵⁸⁰ By this is to be understood the production on the one hand of the panacea or *Medicina Catholica*, and on the other, of a living being with a human form, the *filius philosophorum*, who is often depicted as a youth or hermaphrodite or child. He is a parallel of the Gnostic Anthropos, but he also appears as an Anthroparion, a kind of goblin, a familiar who stands by the adept in his work and

helps the physician to heal.⁵⁸¹ This being ascends and descends and unites Below with Above, gaining a new power which carries its effect over into everyday life. His mistress gives Hermas this advice: “Therefore do not cease to speak to the ears of the saints”⁵⁸²—in other words, work among your fellow men by spreading the news of the Risen.

[305] Just as Maier on his return met Mercurius, so Hermas in his next vision met the Poimen, the shepherd, “a white fleece round his shoulders, a knapsack on his back, and a staff in his hand.” Hermas recognized that “it was he to whom I was handed over,”⁵⁸³ namely the shepherd of the lamb, which was himself. In iconography the good shepherd has the closest connections with Hermes Kriophoros (the lamb-bearer); thus even in antiquity these two saviour figures coalesced. Whereas Hermas is “handed over” to his shepherd, Hermes hands over his art and wisdom to his pupil Maier and thus equips him to do something himself and to work with the aid of the magic caduceus. This, for a physician who was an alchemist, took the place of the staff of Asklepios, which had only one snake. The sacred snake of the Asklepieion signified: The god heals; but the caduceus, or Mercurius in the form of the coniunctio in the retort, means: In the hands of the physician lie the magic remedies granted by God.⁵⁸⁴

[306] The numerous analogies between two texts so far apart in time enable us to take a psychological view of the transformations they describe. The sequence of colours coincides by and large with the sequence of the planets. Grey and black correspond to Saturn⁵⁸⁵ and the evil world; they symbolize the beginning in darkness, in the melancholy, fear, wickedness, and wretchedness of ordinary human life. It is Maier from whom the saying comes about the “noble substance which moves from lord to lord, in the beginning whereof is wretchedness with vinegar.”⁵⁸⁶ By “lord” he means the archon and ruler of the planetary house. He adds: “And so it will fare with me.” The darkness and blackness can be interpreted psychologically as man’s confusion and lostness; that state which nowadays results in an anamnesis, a thorough examination of all those contents which are the cause of the problematical situation, or at any rate its expression. This examination, as we know, includes the irrational contents that originate in the unconscious and express themselves in fantasies and dreams. The analysis and interpretation of dreams confront the conscious standpoint with the statements of the unconscious, thus widening its narrow horizon. This loosening up of cramped and rigid attitudes corresponds to the solution and separation of the elements by the *aqua permanens*, which was already present in the “body” and is lured out by the art. The water is a soul or spirit, that is, a psychic “substance,” which now in its turn is applied to the initial material. This corresponds to using the dream’s meaning to clarify existing problems. “Solutio” is defined in this sense by Dorn.⁵⁸⁷

[307] The situation is now gradually illuminated as is a dark night by the rising moon. The illumination comes to a certain extent from the unconscious, since it is mainly dreams that put us on the track of enlightenment. This dawning light corresponds to the *albedo*, the moonlight which in the opinion of some alchemists heralds the rising sun. The growing redness (*rubedo*) which now follows denotes an increase of warmth and light coming from the sun, consciousness. This corresponds to the increasing participation of consciousness, which now begins to react emotionally to the contents produced by the unconscious. At first the process of integration is a “fiery” conflict, but gradually it leads over to the “melting” or synthesis of the opposites. The alchemists termed this the *rubedo*, in which the marriage of the red man and the white woman, Sol and Luna, is consummated. Although the opposites flee from one another they nevertheless strive for balance, since a state of conflict is too inimical to life to be endured indefinitely. They do this by wearing each other out: the one eats the other, like the two dragons or the other ravenous beasts of alchemical symbolism.

[308] Astrologically, as we have said, this process corresponds to an ascent through the planets from the dark, cold, distant Saturn to the sun. To the alchemists the connection between individual temperament and the positions of the planets was self-evident, for these elementary astrological considerations were the common property of any educated person in the Middle Ages as well as in antiquity. The ascent through the planetary spheres therefore meant something like a shedding of the characterological qualities indicated by the horoscope, a retrogressive liberation from the character imprinted by the archons. The conscious or unconscious model for such an ascent was the Gnostic redeemer, who either deceives the archons by guile or breaks their power by force. A similar motif is the release from the “bill of debt to fate.” The men of late antiquity in particular felt their psychic situation to be fatally dependent on the compulsion of the stars, *Heimarmene*, a feeling which may be compared with that inspired by the modern theory of heredity, or rather by the pessimistic use of it. A similar demoralization sets in in many neuroses when the patient takes the psychic factors producing the symptoms as though they were unalterable facts which it is useless to resist. The journey through the planetary houses, like the crossing of the great halls in the Egyptian underworld, therefore signifies the overcoming of a psychic obstacle, or of an autonomous complex, suitably represented by a planetary god or demon. Anyone who has passed through all the spheres is free from compulsion; he has won the crown of victory and become like a god.

[309] In our psychological language today we express ourselves more modestly: the journey through the planetary houses boils down to becoming conscious of the good and the bad qualities in our character, and the apotheosis means no more than

maximum consciousness, which amounts to maximal freedom of the will. This goal cannot be better represented than by the alchemical symbol of the *μεσουράνισμα ἡλίου* (position of the sun at noon) in Zosimos.⁵⁸⁸ But at the zenith the descent begins. The mystic traveller goes back to the Nile mouth from which he started. He repeats, as it were, the descent of the soul which had led in the first place to the imprinting of the “chirographum.” He retraces his steps through the planetary houses until he comes back to the dark Saturn. This means that the soul, which was imprinted with a horoscopic character at the time of its descent into birth, conscious now of its godlikeness, beards the archons in their lairs and carries the light undisguised down into the darkness of the world.

[310] Here again psychology makes no special claims. What before was a burden unwillingly borne and blamed upon the entire family, is seen by the greatest possible insight (which can be very modest!) to be no more than the possession of one’s own personality, and one realizes—as though this were not self-evident!—that one cannot live from anything except what one is.

[311] On returning to the house of Saturn our pilgrim finds the long-sought Mercurius.⁵⁸⁹ Maier passes remarkably quickly over this highly significant encounter and mentions merely their “numerous conversations” without, however, disclosing their content. This is the more surprising in that Mercurius either personifies the great teacher or else has the character of the arcane substance, both of which would be a fruitful source for further revelations. For Mercurius is the light-bringing Nous, who knows the secret of transformation and of immortality.

[312] Let us assume that Maier’s sudden silence is no mere accident but was intentional or even a necessity. This assumption is not entirely without justification since Maier was one of the founders of the international Rosicrucian Society,⁵⁹⁰ and would therefore have no doubt been in a position to expatiate at length upon the Hermetic arcana. What we know of the so-called Rosicrucian secrets does nothing to explain why they were hushed up. This, incidentally, is true of most “mysteries” of this kind. It is very significant that the “mysteries” of the early Church turned soon enough into “sacraments.” The word “mystery” became a misnomer, since everything lay open in the rite. Andreas Rosencreutz used as a motto for his *Chymical Wedding*: “Mysteries profaned and made public fade and lose their grace. Therefore, cast not pearls before swine, nor spread roses for the ass.” This attitude might have been a motive for silence. People had so often got to know of things that were kept secret in the mysteries under the most fearsome oaths and had wondered why on earth they should ever have been the object of secrecy. Self-importance or the prestige of the priesthood or of the initiates seemed the obvious deduction. And there can be no doubt that the mysteries often were abused in this way. But the real reason was the

imperative need to participate in *a* or perhaps *the* secret without which life loses its supreme meaning. The secret is not really worth keeping, but the fact that it is still obstinately kept reveals an equally persistent psychic motive for keeping secrets, and that is the real secret, the real mystery. It is indeed remarkable and “mysterious” that this gesture of keeping something secret should be made at all. Why does man need to keep a secret, and for what purpose does he invent an artificial one which he even decks out as an ineffably holy rite? The thing hidden is always more or less irrelevant, for in itself it is no more than an image or sign pointing to a content that cannot be defined more closely. This content is certainly not a matter for indifference since it indicates the living presence of a numinous archetype. The essential thing is the hiding, an expressive gesture which symbolizes something unconscious and “not to be named” lying behind it; something, therefore, that is either not yet conscious or cannot or will not become conscious. It points, in a word, to the presence of an unconscious content, which exacts from consciousness a tribute of constant regard and attention. With the application of interest the continual perception and assimilation of the effects of the “secret” become possible. This is beneficial to the conduct of life, because the contents of the unconscious can then exert their compensatory effect and, if taken note of and recognized, bring about a balance that promotes health. On a primitive level, therefore, the chief effect of the mysteries is to promote health, growth, and fertility. If there were nothing good in the rite it would presumably never have come into existence or would long since have perished. The tremendous psychic effect of the Eleusinian mysteries, for instance, is beyond question. Psychotherapeutic experience has made the meaning of secrets once more a topical question, not only from the religious or philosophical point of view but also in respect of the demands of conscience with which individuation confronts a man.

[313] Maier’s silence is eloquent, as we soon find when we try to see the psychological equivalent of the descent and of the discovery of Mercurius. The maximal degree of consciousness confronts the ego with its shadow, and individual psychic life with a collective psyche. These psychological terms sound light enough but they weigh heavy, for they denote an almost unendurable conflict, a psychic strait whose terrors only he knows who has passed through it. What one then discovers about oneself and about man and the world is of such a nature that one would rather not speak of it; and besides, it is so difficult to put into words that one’s courage fails at the bare attempt. So it need not be at all a frivolous evasion if Maier merely hints at his conversations with Mercurius. In the encounter with life and the world there are experiences that are capable of moving us to long and thorough reflection, from which, in time, insights and convictions grow up—a process depicted by the alchemists as the philosophical tree. The unfolding of these experiences is regulated, as it were, by two archetypes: the anima, who expresses *life*, and the “Wise Old Man,” who personifies

meaning.⁵⁹¹ Our author was led in the first place by the anima-sibyl to undertake the journey through the planetary houses as the precondition of all that was to follow. It is therefore only logical that, towards the end of the descent, he should meet Thrice-Greatest Hermes, the fount of all wisdom. This aptly describes the character of that spirit or thinking which you do not, like an intellectual operation, perform yourself, as the “little god of this world,” but which happens to you as though it came from another, and greater, perhaps the great spirit of the world, not inappositely named Trismegistus. The long reflection, the “immensa meditatio” of the alchemists is defined as an “internal colloquy with another, who is invisible.”⁵⁹²

[314] Possibly Maier would have revealed to us something more if Mercurius had not been in such a hurry to take upon himself “the role of arbiter between the owl and the birds who were fighting it.”⁵⁹³ This is an allusion to a work of Maier’s entitled *Jocus severus* (Frankfurt a. M., 1617), where he defends the wisdom of alchemy against its detractors, a theme that also plays an important part in his *Symbola aureae mensae* in the form of argument and counterargument. One is therefore justified in assuming that Maier got into increasing conflict with himself and his environment the more he buried himself in the secret speculations of Hermetic philosophy. Indeed nothing else could have been expected, for the world of Hermetic images gravitates round the unconscious, and the unconscious compensation is always aimed at the conscious positions which are the most strongly defended because they are the most questionable, though its apparently hostile aspect merely reflects the surly face which the ego turns towards it. In reality the unconscious compensation is not intended as a hostile act but as a necessary and helpful attempt to restore the balance. For Maier it meant an inner and outer conflict which was not abolished, but only embittered, by the firmness of his convictions. For every one-sided conviction is accompanied by the voice of doubt, and certainties that are mere beliefs turn into uncertainties which may correspond better with the truth. The truth of the “sic et non” (yes and no), almost, but not quite, recognized by Abelard, is a difficult thing for the intellect to bear; so it is no wonder that Maier got stuck in the conflict and had to postpone his discovery of the phoenix until doomsday. Fortunately he was honest enough not to assert that he had ever made the lapis or the philosophical gold, and for this reason he never spread a veil of deception over his work. Thanks to his scrupulousness his late successors are at least able to guess how far he had progressed in the art, and where his labours came to a standstill. He never succeeded, as we can now see, in reaching the point where conflict and argument become logically superfluous, where “yes and no” are two aspects of the same thing. “Thou wilt never make the One which thou seekest,” says the master, “except first there be made one thing of thyself.”⁵⁹⁴

[315] After these long digressions on the interrelated symbols that branch out from the sea and its various aspects, we will resume our discussion of salt and salt-water.

[316] The *aqua pontica* (or *aqua permanens*) behaves very much like the baptismal water of the Church. Its chief function is ablution, the cleansing of the sinner, and in alchemy this is the “lato,” the impure body;⁵⁹⁵ hence the oft-repeated saying attributed to Elbo Interfecto: ⁵⁹⁶ “Whiten the lato⁵⁹⁷ and rend the books, lest your hearts be rent asunder.”⁵⁹⁸ In the *Rosarium* the ablution⁵⁹⁹ of the lato occurs in variant form: it is cleansed not by water but by “Azoth and fire,”⁶⁰⁰ that is, by a kind of baptism in fire, which is often used as a synonym for water.⁶⁰¹ The equivalent of this in the Catholic rite is the plunging of a burning candle into the font, in accordance with Matthew 3 : 11: “He shall baptize you with the Holy Ghost, and with fire.”⁶⁰² The alchemists did not hesitate to call the transformative process a “baptism.” Thus the “Consilium coniugii” says: “And if we are baptized in the fountain of gold and silver, and the spirit of our body ascends into heaven with the father and the son, and descends again, then our souls shall revive and my animal body will remain white, that is, [the body] of the moon.”⁶⁰³ The subject of this sentence is Sol and Luna. The *Aurora consurgens* I distinguishes three kinds of baptism, “in water, in blood, and in fire,”⁶⁰⁴ the Christian ideas being here transferred directly to the chemical procedure. The same is true of the idea that baptism is a submersion in death, following Colossians 2 : 12: “(Ye are) buried with him in baptism, wherein also ye are risen with him.” In his Table of Symbols, Penotus⁶⁰⁵ correlates the “moon, the spirits and ghosts of the dead [*Manes et Lemures*], and gods of the underworld” with the “mystery of baptism,” and the corresponding stage in the opus is the *solutio*, which signifies the total dissolution of the imperfect body in the *aqua divina*, its submersion, mortification,⁶⁰⁶ and burial. The putrefaction takes place in the grave, and the foul smell that accompanies it is the stench of the graves.⁶⁰⁷ The motif of imprisonment in the underworld is found in Greek alchemy, in the treatise of Komarios: “Lock them [the substances] in Hades.”⁶⁰⁸ The rebirth from the floods (*κλύδωνες*) of Hades and from the grave recurs in Cyril of Jerusalem: “That saving flood is both your sepulchre and your mother,”⁶⁰⁹ and in St. Augustine: “The water leads him down, as if dying, into the grave; the Holy Spirit brings him up, as if rising again, into heaven.”⁶¹⁰

[317] The treatise of Ostanus⁶¹¹ says that when preparing the *ὑδωρ θεϊον*, the vessel with the ingredients should be immersed in sea-water, and then the divine water will be perfected. It is, so to speak, gestated in the womb of the sea-water. The text says: “This [divine] water makes the dead living and the living dead, it lights the darkness and darkens the light, concentrates [*δράσεται*] the sea-water and quenches fire.” As this miraculous water occurs even in the oldest texts, it must be of pagan rather than of Christian origin. The oldest Chinese treatise known to us (A.D. 142) likewise

contains this idea of the divine water: it is the “flowing pearl” (quicksilver), and the divine *ch’i*, meaning ‘air, spirit, ethereal essence’. The various essences are likened to “spring showers in abundance,”⁶¹² and this recalls the “blessed water” in the treatise of Komarios, which brings the spring.⁶¹³ The age-old use of water at sacrifices and the great role it played in Egypt, where Western alchemy originated, may well have foreshadowed the water symbolism of later times. Folk ideas and superstitions such as we find in the Magic Papyri may have made their contribution, too; the following words might just as well have been taken from an alchemical treatise: “I am the plant named Baïs, I am a spout of blood . . . , the outgrowth of the abyss.⁶¹⁴ . . . I am the sacred bird Phoenix.⁶¹⁵ . . . I am Helios. . . . I am Aphrodite. . . . I am Kronos, who has showed forth the light. . . . I am Osiris, named water, I am Isis, named dew, I am Esenephys, named spring.”⁶¹⁶ The personified ὕδωρ θεῖον might well have spoken like that.

[318] The effect of Christian baptism is the washing away of sin and the acceptance of the neophyte into the Church as the earthly kingdom of Christ, sanctification and rebirth through grace, and the bestowal of an “indelible character” on the baptized. The effect of the *aqua permanens* is equally miraculous. The “Gloria mundi” says: “The mystery of every thing is life, which is water; for water dissolves the body into spirit and summons a spirit from the dead.”⁶¹⁷ Dissolution into spirit, the body’s volatilization or sublimation, corresponds chemically to evaporation, or any rate to the expulsion of evaporable ingredients like quicksilver, sulphur, etc. Psychologically it corresponds to the conscious realization and integration of an unconscious content. Unconscious contents lurk somewhere in the body like so many demons of sickness, impossible to get hold of, especially when they give rise to physical symptoms the organic causes of which cannot be demonstrated. The “spirit” summoned from the dead is usually the spirit Mercurius, who, as the *anima mundi*, is inherent in all things in a latent state. It is clear from the passage immediately following that it is salt of which it is said: “And that is the thing which we seek: all our secrets are contained in it.” Salt, however, “takes its origin from Mercurius,” so salt is a synonym for the arcane substance. It also plays an important part in the Roman rite: after being blessed it is added to the consecrated water, and in the ceremony of baptism a few grains of the consecrated salt are placed in the neophyte’s mouth with the words: “Receive the salt of wisdom: may it be a propitiation for thee unto eternal life.”

[319] As the alchemists strove to produce an incorruptible “glorified body,” they would, if they were successful, attain that state in the *albedo*, where the body became spotless and no longer subject to decay. The white substance of the ash⁶¹⁸ was therefore described as the “diadem of the heart,” and its synonym, the white foliated earth (*terra alba foliata*), as the “crown of victory.”⁶¹⁹ The ash is identical with the “pure water” which is “cleansed from the darkness of the soul, and of the black

matter, for the wickedness (*malitia*) of base earthiness has been separated from it.”⁶²⁰ This “*terrestreitas mala*” is the “*terra damnata*” (accursed earth) mentioned by other authors; it is what Goethe calls the “trace of earth painful to bear,” the moral turpitude that cannot be washed off. In Senior the ash is synonymous with *vitrum* (glass), which, on account of its incorruptibility and transparency, seemed to resemble the glorified body. Glass in its turn was associated with salt, for salt was praised as “that virgin and pure earth,” and the “finest crystalline glass” is composed mainly of *sal Sodae* (soda salts), with sand added as a binding agent. Thus the raw material of glass-making (technically known as the “batch”) is “formed from two incorruptible substances.”⁶²¹ Furthermore, glass is made in the fire, the “pure” element. In the sharp or burning taste of salt the alchemists detected the fire dwelling within it, whose preservative property it in fact shares. Alexander of Macedon is cited as saying: “Know that the salt is fire and dryness.”⁶²² Or, “the salts are of fiery nature.”⁶²³ Salt has an affinity with sulphur, whose nature is essentially fiery.⁶²⁴ Glauber maintains that “fire and salt are in their essential nature one thing” and are therefore “held in high esteem by all sensible Christians, but the ignorant know no more of these things than a cow, a pig, or a brute, which live without understanding.” He also says the “Abyssinians” baptized with water and fire. Without fire and salt the heathen would not have been able to offer sacrifice, and the evangelist Mark had said that “every one shall be salted with fire, and every sacrifice shall be salted with salt.”⁶²⁵

h. The Interpretation and Meaning of Salt

[320] Salt as much as ash is a synonym for the *albedo* (or *dealbatio*), and is identical with “the white stone, the white sun, the full moon, the fruitful white earth, cleansed and calcined.”⁶²⁶ The connecting link between ash and salt is potash, and the burning and corrosive property of lye (caustic solution) is well known.⁶²⁷ Senior mentions that the *dealbatio* was known as “*salsatura*” (marination).⁶²⁸

[321] Some light is thrown on the numerous overlapping significations of salt, and the obscurity begins to clear up, when we are informed, further, that one of its principal meanings is *soul*. As the white substance it is the “white woman,” and the “salt of our magnesia”⁶²⁹ is a “spark of the *anima mundi*.”⁶³⁰ For Glauber the salt is feminine and corresponds to Eve.⁶³¹ The “*Gloria mundi*” says: “The salt of the earth is the soul.”⁶³² This pregnant sentence contains within it the whole ambiguity of alchemy. On the one hand the soul is the “*aqua permanens*, which dissolves and coagulates,” the arcane substance which is at once the transformer and the transformed, the nature which conquers nature. On the other hand it is the human soul imprisoned in the body as the *anima mundi* is in matter, and this soul undergoes the same transformations by death and purification, and finally by glorification, as the lapis. It is the tincture

which “coagulates” all substances, indeed it even “fixes” (*figit*) itself; it comes “from the centre of the earth and is the destroyed earth, nor is there anything on the earth like to the tincture.”⁶³³ The soul is therefore not an earthly but a transcendental thing, regardless of the fact that the alchemists expected it to appear in a retort. This contradiction presented no difficulties to the medieval mind. There was a good reason for this: the philosophers were so fascinated by their own psychisms that, in their naïveté, they faithfully reproduced the inner psychic situation externally. Although the unconscious, personified by the *anima*, is in itself transcendental, it can appear in the sphere of consciousness, that is, in this world, in the form of an “influence” on conscious processes.

[322] Just as the world-soul pervades all things, so does salt. It is ubiquitous and thus fulfils the main requirement of an arcane substance, that it can be found everywhere. No doubt the reader will be as conscious as I am of how uncommonly difficult it is to give an account of salt and its ubiquitous connections. It represents the feminine principle of Eros, which brings everything into relationship, in an almost perfect way. In this respect it is surpassed only by Mercurius, and the notion that salt comes from Mercurius is therefore quite understandable. For salt, as the soul or spark of the *anima mundi*, is in very truth the daughter of the *spiritus vegetativus* of creation. Salt is far more indefinite and more universal than sulphur, whose essence is fairly well defined by its fiery nature.

[323] The relationship of salt to the *anima mundi*, which as we know is personified by the Primordial Man or Anthropos, brings us to the analogy with Christ. Glauber himself makes the equation $\text{Sal: Sol} = \text{A} : \Omega$,⁶³⁴ so that salt becomes an analogue of God. According to Glauber, the sign for salt \ominus was originally \oplus ,⁶³⁵ a double totality symbol; the circle representing non-differentiated wholeness, and the square discriminated wholeness.⁶³⁶ As a matter of fact there is another sign for salt, ♁ in contradistinction to ♀ Venus, who certainly has less to do with understanding and wisdom than has salt. Salt, says Glauber, was the “first fiat” at the creation.⁶³⁷ Christ is the salt of wisdom which is given at baptism.⁶³⁸ These ideas are elaborated by Georg von Welling: Christ is the salt, the fiat is the Word that is begotten from eternity for our preservation. Christ is the “sweet, fixed salt of silent, gentle eternity.” The body, when salted by Christ, becomes tinctured and therefore incorruptible.⁶³⁹

[324] The Christ parallel runs through the late alchemical speculations that set in after Boehme, and it was made possible by the *sal: sapientia* equation. Already in antiquity salt denoted wit, good sense, good taste, etc., as well as spirit. Cicero, for instance, remarks: “In wit [*sale*] and humour Caesar . . . surpassed them all.”⁶⁴⁰ But it was the Vulgate that had the most decisive influence on the formation of alchemical concepts. In the Old Testament, even the “salt of the covenant”⁶⁴¹ has a moral

meaning. In the New Testament, the famous words “Ye are the salt of the earth” (Matthew 5 : 13) show that the disciples were regarded as personifications of higher insight and divine wisdom, just as, in their role of ἀπόστολοι (proclaimers of the message), they functioned as “angels” (ἄγγελοι, ‘messengers’), so that God’s kingdom on earth might approximate as closely as possible to the structure of the heavenly hierarchy. The other well-known passage is at Mark 9 : 50, ending with the words: “Have salt in yourselves, and have peace one with another.” The earliest reference to salt in the New Testament (Colossians 4 : 6) likewise has a classical flavour: “Let your speech be alway with grace, and seasoned with salt, that ye may know how ye ought to answer every man.”

[325] Here salt undoubtedly means insight, understanding, wisdom. In both Matthew and Mark the salt is liable to lose its savour. Evidently this salt must keep its tang, just as the wise virgins kept their lamps trimmed. For this purpose a flexibility of mind is needed, and the last thing to guarantee this is rigid insistence on the necessity of faith. Everyone will admit that it is the task of the Church to safeguard her store of wisdom, the *aqua doctrinae*, in its original purity, and yet, in response to the changing spirit of the times, she must go on altering it and differentiating it just as the Fathers did. For the cultured Greco-Roman world early Christianity was among other things a message in philosophical disguise, as we can see quite plainly from Hippolytus. It was a competing philosophical doctrine that reached a certain peak of perfection in St. Thomas. Until well into the sixteenth century the degree of philosophical truth of Christian doctrine corresponded to that of scientific truth today.

[326] The physicians and natural philosophers of the Middle Ages nevertheless found themselves faced with problems for which the Church had no answer. Confronted with sickness and death, the physicians did not hesitate to seek counsel with the Arabs and so resuscitate that bit of the ancient world which the Church thought she had exterminated for ever, namely the Mandaean and Sabaeen remnants of Hellenistic syncretism. From them they derived a *sal sapientiae* that seemed so unlike the doctrine of the Church that before long a process of mutual assimilation arose which put forth some very remarkable blossoms. The ecclesiastical allegories kept, so far as I can judge, to the classical usage of Sal. Only St. Hilary (d. 367) seems to have gone rather more deeply into the nature of salt when he remarks that “salt contains in itself the element of water and fire, and by this is one out of two.”⁶⁴² Picinellus observes: “Two elements which stir up an implacable enmity between themselves are found in wondrous alliance in salt. For salt is wholly fire and wholly water.”⁶⁴³ For the rest he advises a sparing use of salt: “Let the word be sprinkled with salt, not deluged with it,”⁶⁴⁴ and another, earlier allegorist, the Jesuit Nicholas Caussin,⁶⁴⁵ does not mention salt at all.

[327] This is not altogether surprising, for how do wisdom and revelation square with one another? As certain books of the Old Testament canon show, there is, besides the wisdom of God which expresses itself in revelation, a human wisdom which cannot be had unless one works for it. Mark 9 : 50 therefore exhorts us to make sure that we always have enough salt in us, and he is certainly not referring to divine revelation, for this is something no man can produce on his own resources. But at least he can cultivate and increase his own human wisdom. That Mark should offer this warning, and that Paul should express himself in a very similar way, is in accord with the traditional Judeo-Hellenism of the Jewish communities at that time. An authoritarian Church, however, leaves very little room for the salt of human wisdom. Hence it is not surprising that the *sal sapientiae* plays an incomparably greater role outside the Church. Irenaeus, reporting the views of the Gnostics, says: “The spiritual, they say, [is] sent forth to this end, that, being united here below with the psychic, it may take form, and be instructed simultaneously by intercourse with it. And this they declare to be the salt and the light of the world.”⁶⁴⁶ The union of the spiritual, masculine principle with the feminine, psychic principle is far from being just a fantasy of the Gnostics: it has found an echo in the Assumption of the Virgin, in the union of Tifereth and Malchuth, and in Goethe’s “the Eternal Feminine leads us upward and on.” Hippolytus mentions this same view as that of the Sethians. He says:

But when this wave is raised from the water by the wind and made pregnant in its nature, and has received within itself the reproductive power of the feminine, it retains the light scattered from on high together with the fragrance of the spirit [*πνεύματος*],⁶⁴⁷ and that is Nous given shape in various forms. This [light] is a perfect God, who is brought down from the unbegotten light on high and from the spirit into man’s nature as into a temple, by the power of nature and the movement of the wind. It is engendered from the water and commingled and mixed with the bodies as if it were the salt of all created things, and a light of the darkness struggling to be freed from the bodies, and not able to find a way out. For some very small spark of the light is mingled with the fragrance from above. . . . [Here follows a corrupt and controversial passage which I pass over.] . . . Therefore every thought and care of the light from above is how and in what way the Nous may be delivered from the death of the sinful and dark body, from the father below [*τοῦ κάτωθεν*],⁶⁴⁸ who is the wind which raised up the waves in tumult and terror, and begot Nous his own perfect son, who is yet not his own son in substance. For he was a ray of light from on high, from that perfect light overpowered in the dark and terrible, bitter polluted water, and a shining spirit carried away over the water ...⁶⁴⁹

[328] This strangely beautiful passage contains pretty well everything that the alchemists endeavoured to say about salt: it is the spirit, the turning of the body into light (*albedo*), the spark of the *anima mundi*, imprisoned in the dark depths of the sea

and begotten there by the light from above and the “reproductive power of the feminine.” It should be noted that the alchemists could have known nothing of Hippolytus, as his *Philosophumena*, long believed lost, was rediscovered only in the middle of the nineteenth century in a monastery on Mount Athos. Anyone familiar with the spirit of alchemy and the views of the Gnostics in Hippolytus will be struck again and again by their inner affinity.

[329] The clue to this passage from the *Elenchos*, and to other similar ones, is to be found in the phenomenology of the self.⁶⁵⁰ Salt is not a very common dream-symbol, but it does appear in the cubic form of a crystal,⁶⁵¹ which in many patients’ drawings represents the centre and hence the self; similarly, the quaternary structure of most mandalas reminds one of the sign for salt  mentioned earlier. Just as the numerous synonyms and attributes of the lapis stress now one and now another of its aspects, so do the symbols of the self. Apart from its preservative quality salt has mainly the metaphorical meaning of sapientia. With regard to this aspect the “Tractatus aureus” states: “It is said in the mystic language of our sages, He who works without salt will never raise dead bodies. . . . He who works without salt draws a bow without a string. For you must know that these sayings refer to a very different kind of salt from the common mineral. . . . Sometimes they call the medicine itself ‘Salt.’”⁶⁵² These words are ambiguous: here salt means “wit” as well as wisdom. As to the importance of salt in the opus, Johannes Grasseus says of the arcane substance: “And this is the Lead of the Philosophers, which they also call the lead of the air. In it is found the shining white dove, named the salt of the metals, wherein is the whole magistry of the work. This [dove] is the pure, chaste, wise, and rich Queen of Sheba.”⁶⁵³ Here salt, arcane substance (the paradoxical “lead of the air”), the white dove (*spiritus sapientiae*), wisdom, and femininity appear in one figure. The saying from the “Gloria mundi” is quite clear: “No man can understand this Art who does not know the salt and its preparation.”⁶⁵⁴ For the “Aquarium sapientum” the *sal sapientiae* comes from the *aqua benedicta* or *aqua pontica*, which, itself an extract, is named “heart, soul, and spirit.” At first the *aqua* is contained in the prima materia and is “of a blood-red colour; but after its preparation it becomes of a bright, clear, transparent white, and is called by the sages the Salt of Wisdom.”⁶⁵⁵ Khunrath boldly summarizes these statements about the salt when he says: “Our water cannot be made without the salt of wisdom, for it is the salt of wisdom itself, say the philosophers; a fire, and a salt fire, the true Living Universal Menstruum.” “Without salt the work has no success.”⁶⁵⁶ Elsewhere he remarks: “Not without good reason has salt been adorned by the wise with the name of Wisdom.” Salt is the lapis, a “mystery to be hidden.”⁶⁵⁷ Vigenerus says that the Redeemer chose his disciples “that they might be the salt of men and proclaim to them the pure and incorruptible doctrine of the gospel.” He reports the “Cabalists” as saying that the “computatio”⁶⁵⁸ of the Hebrew word for salt

(*melach*) gives the number 78. This number could be divided by any divisor and still give a word that referred to the divine Name. We will not pursue the inferences he draws from this but will only note that for all those reasons salt was used “for the service of God in all offerings and sacrifices.”⁶⁵⁹ Glauber calls Christ the *sal sapientiae* and says that his favourite disciple John was “salted with the salt of wisdom.”⁶⁶⁰

[330] Apart from its lunar wetness and its terrestrial nature, the most outstanding properties of salt are bitterness and wisdom. As in the double quaternio of the elements and qualities, earth and water have coldness in common, so bitterness and wisdom would form a pair of opposites with a third thing between. (See diagram on facing page.) The factor common to both, however incommensurable the two ideas may seem, is, psychologically, the function of *feeling*. Tears, sorrow, and disappointment are bitter, but wisdom is the comforter in all psychic suffering. Indeed, bitterness and wisdom form a pair of alternatives: where there is bitterness wisdom is lacking, and where wisdom is there can be no bitterness. Salt, as the carrier of this fateful alternative, is co-ordinated with the nature of woman. The masculine, solar nature in the right half of the quaternio knows neither coldness, nor a shadow, nor heaviness, melancholy, etc., because, so long as all goes well, it identifies as closely as possible with consciousness, and that as a rule is the idea which one has of oneself. In this idea the shadow is usually missing: first because nobody likes to admit to any inferiority, and second because logic forbids something white to be called black. A good man has good qualities, and only the bad man has bad qualities. For reasons of prestige we pass over the shadow in complete silence. A famous example of masculine prejudice is Nietzsche’s Superman, who scorns compassion and fights against the “Ugliest Man”—the ordinary man that everyone is. The shadow must not be seen, it must be denied, repressed, or twisted into something quite extraordinary. The sun is always shining and everything smiles back. There is no room for any prestige-diminishing weakness, so the *sol niger* is never seen. Only in solitary hours is its presence feared.

[331] Things are different with Luna: every month she is darkened and extinguished; she cannot hide this from anybody, not even from herself. She knows that this same Luna is now bright and now dark—but who has ever heard of a dark sun? We call this quality of Luna “woman’s closeness to nature,” and the fiery brilliance and hot air that plays round the surface of things we like to call “the masculine mind.”

[332] Despite all attempts at denial and obfuscation there is an unconscious factor, a black sun, which is responsible for the surprisingly common phenomenon of masculine split-mindedness, when the right hand mustn’t know what the left is doing. This split in the masculine psyche and the regular darkening of the moon in woman together explain the remarkable fact that the woman is accused of all the darkness in a man, while he himself basks in the thought that he is a veritable fount of vitality and illumination for all the females in his environment. Actually, he would be better advised to shroud the brilliance of his mind in the profoundest doubt. It is not difficult for this type of mind (which besides other things is a great trickster like Mercurius) to admit a host of sins in the most convincing way, and even to combine it with a spurious feeling of ethical superiority without in the least approximating to a genuine insight. This can never be achieved without the participation of feeling; but the intellect admits feeling only when it is convenient. The novilunium of woman is a source of countless disappointments for man which easily turn to bitterness, though they could equally well be a source of wisdom if they were understood. Naturally this is possible only if he is prepared to acknowledge his black sun, that is, his shadow.

[333] Confirmation of our interpretation of salt as Eros (i.e., as a feeling relationship) is found in the fact that the bitterness is the origin of the *colours* (par. 245). We have only to look at the drawings and paintings of patients who supplement their analysis by active imagination to see that colours are feeling-values. Mostly, to begin with, only a pencil or pen is used to make rapid sketches of dreams, sudden ideas, and fantasies. But from a certain moment on the patients begin to make use of colour, and this is generally the moment when merely intellectual interest gives way to emotional participation. Occasionally the same phenomenon can be observed in dreams, which at such moments are dreamt in colour, or a particularly vivid colour is insisted upon.

[334] Disappointment, always a shock to the feelings, is not only the mother of bitterness but the strongest incentive to a differentiation of feeling. The failure of a pet plan, the disappointing behaviour of someone one loves, can supply the impulse either for a more or less brutal outburst of affect or for a modification and adjustment of feeling, and hence for its higher development. This culminates in wisdom if feeling is supplemented by reflection and rational insight. Wisdom is never violent: where wisdom reigns there is no conflict between thinking and feeling.

[335] This interpretation of salt and its qualities prompts us to ask, as in all cases where alchemical statements are involved, whether the alchemists themselves had such thoughts. We know from the literature that they were thoroughly aware of the moral meaning of the *amaritudo*, and by *sapientia* they did not mean anything essentially different from what we understand by this word. But how the wisdom comes from the bitterness, and how the bitterness can be the source of the colours, on these points they leave us in the dark. Nor have we any reason to believe that these connections were so self-evident to them that they regarded any explanation as superfluous. If that were so, someone would have been sure to blurt it out. It is much more probable that they simply said these things without any conscious act of cognition. Moreover, the sum of all these statements is seldom or never found consistently formulated in any one author; rather one author mentions one thing and another another, and it is only by viewing them all together, as we have tried to do here, that we get the whole picture.⁶⁶¹ The alchemists themselves suggest this method, and I must admit that it was their advice which first put me on the track of a psychological interpretation. The *Rosarium* says one should “read from page to page,” and other sayings are “He should possess many books” and “One book opens another.” Yet the complete lack, until the nineteenth century, of any psychological viewpoint (which even today meets with the grossest misunderstandings) makes it very unlikely that anything resembling a psychological interpretation penetrated into the consciousness of the alchemists. Their moral concepts moved entirely on the plane of synonym and analogy, in a word, of “correspondence.” Most of their statements spring not from a conscious but from an unconscious act of thinking, as do dreams, sudden ideas, and fantasies, where again we only find out the meaning afterwards by careful comparison and analysis.

[336] But the greatest of all riddles, of course, is the ever-recurring question of what the alchemists really meant by their substances. What, for instance, is the meaning of a “sal spirituale”? The only possible answer seems to be this: chemical matter was so completely unknown to them that it instantly became a carrier for projections. Its darkness was so loaded with unconscious contents that a state of *participation mystique*,⁶⁶² or unconscious identity, arose between them and the chemical substance, which caused this substance to behave, at any rate in part, like an unconscious content. Of this relationship the alchemists had a dim presentiment—enough, anyway, to enable them to make statements which can only be understood as psychological.

[337] Khunrath says: “And the Light was made Salt, a body of salt, the salt of wisdom.”⁶⁶³ The same author remarks that the “point in the midst of the salt” corresponds to the “Tartarus of the greater world,” which is hell.⁶⁶⁴ This coincides with the conception of the fire hidden in the salt. Salt must have the paradoxical

double nature of the arcane substance. Thus the “Gloria mundi” says that “in the salt are two salts,” namely sulphur and the “radical moisture,” the two most potent opposites imaginable, for which reason it was also called the Rebis.⁶⁶⁵ Vigenerus asserts that salt consists of two substances, since all salts partake of sulphur and quicksilver.⁶⁶⁶ These correspond to Khunrath’s “king and queen,” the two “waters, red and white.”⁶⁶⁷ During the work the salt “assumes the appearance of blood.”⁶⁶⁸ “It is certain,” says Dorn, “that a salt, the natural balsam of the body, is begotten from human blood. It has within it both corruption and preservation against corruption, for in the natural order there is nothing that does not contain as much evil as good.”⁶⁶⁹ Dorn was a physician, and his remark is characteristic of the empirical standpoint of the alchemists.

[338] The dark nature of salt accounts for its “blackness and foetid smell.”⁶⁷⁰ At the dissolution of living bodies it is the “last residue of corruption,” but it is the “prime agent in generation.”⁶⁷¹ Mylius expressly identifies salt with the uroboros-dragon.⁶⁷² We have already mentioned its identification with the sea of Typhon; hence one could easily identify it with the sea-monster Leviathan.⁶⁷³ At all events there is an amusing relationship between salt and the Leviathan in Abraham Eleazar, who says with reference to Job 40 : 15:⁶⁷⁴ “For Behemoth is a wild ox, whom the Most High has salted up with Leviathan and preserved for the world to come,”⁶⁷⁵ evidently as food for the inhabitants of paradise,⁶⁷⁶ or whatever the ‘world to come’ may mean.

[339] Another direful aspect of salt is its relation to the malefic Saturn, as is implied by Grasseus in that passage about the white dove and the philosophical lead. Speaking of the identity of sea and salt, Vigenerus points out that the Pythagoreans called the sea the “tear of Kronos,” because of its “bitter saltness.”⁶⁷⁷ On account of its relation to Typhon salt is also endowed with a murderous quality,⁶⁷⁸ as we saw in the chapter on Sulphur, where Sal inflicts on Sulphur an “incurable wound.” This offers a curious parallel to Kundry’s wounding of Amfortas in *Parsifal*. In the parable of Sulphur Sal plays the sinister new-moon role of Luna.

[340] As a natural product, salt “contains as much evil as good.” As the sea it is the *παμμήτηρ*, ‘mother of all things’; as the tear of Kronos it is bitterness and sadness; as the “sea-spume” it is the scum of Typhon, and as the “clear water” it is Sapiencia herself.

[341] The “Gloria mundi” says that the aqua permanens is a “very limpid water, so bitter as to be quite undrinkable.”⁶⁷⁹ In a hymn-like invocation the text continues: “O water of bitter taste, that preservest the elements! O nature of propinquity, that dissolvest nature! O best of natures, which overcomest nature herself! . . . Thou art crowned with light and art born . . . and the quintessence ariseth from thee.”⁶⁸⁰ This water is like none on earth, with the exception of that “fount in Judaea” which is

named the “Fount of the Saviour or of Blessedness.” “With great efforts and by the grace of God the philosophers found that noble spring.” But the spring is in a place so secret that only a few know of its “gushing,” and they know not the way to Judaea where it might be found. Therefore the philosopher⁶⁸¹ cries out: “O water of harsh and bitter taste! For it is hard and difficult for any man to find that spring.”⁶⁸² This is an obvious allusion to the arcane nature and moral significance of the water, and it is also evident that it is not the water of grace or the water of the doctrine but that it springs from the *lumen naturae*. Otherwise the author would not have emphasized that Judaea was in a “secret place,” for if the Church’s teachings were meant no one would need to find them in a secret place, since they are accessible to everyone. Also, it would be quite incomprehensible why the philosopher should exclaim: “O water, held worthless by all! By reason of its worthlessness and tortuousness⁶⁸³ no one can attain perfection in the art, or perceive its mighty virtue; for all four elements are, as it were, contained in it.” There can be no doubt that this is the *aqua permanens* or *aqua pontica*, the primal water which contains the four elements.

[342] The psychological equivalent of the chaotic water of the beginning⁶⁸⁴ is the unconscious, which the old writers could grasp only in projected form, just as today most people cannot see the beam in their own eye but are all too well aware of the mote in their brother’s. Political propaganda exploits this primitivity and conquers the naive with their own defect. The only defence against this overwhelming danger is recognition of the shadow. The sight of its darkness is itself an illumination, a widening of consciousness through integration of the hitherto unconscious components of the personality. Freud’s efforts to bring the shadow to consciousness are the logical and salutary answer to the almost universal unconsciousness and projection-proneness of the general public. It is as though Freud, with sure instinct, had sought to avert the danger of nation-wide psychic epidemics that threatened Europe. What he did not see was that the confrontation with the shadow is not just a harmless affair that can be settled by “reason.” The shadow is the primitive who is still alive and active in civilized man, and our civilized reason means nothing to him. He needs to be ruled by a higher authority, such as is found in the great religions. Even when Reason triumphed at the beginning of the French Revolution it was quickly turned into a goddess and enthroned in Notre-Dame.

[343] The shadow exerts a dangerous fascination which can be countered only by another *fascinosum*. It cannot be got at by reason, even in the most rational person, but only by illumination, of a degree and kind that are equal to the darkness but are the exact opposite of “enlightenment.” For what we call “rational” is everything that seems “fitting” to the man in the street, and the question then arises whether this “fitness” may not in the end prove to be “irrational” in the bad sense of the word. Sometimes, even with the best intentions this dilemma cannot be solved. This is the

moment when the primitive trusts himself to a higher authority and to a decision beyond his comprehension. The civilized man in his closed-in environment functions in a fitting and appropriate manner, that is, rationally. But if, because of some apparently insoluble dilemma, he gets outside the confines of civilization, he becomes a primitive again; then he has irrational ideas and acts on hunches; then he no longer thinks but “it” thinks in him; then he needs “magical” practices in order to gain a feeling of security; then the latent autonomy of the unconscious becomes active and begins to manifest itself as it has always done in the past.

[344] The good tidings announced by alchemy are that, as once a fountain sprang up in Judaea, so now there is a secret Judaea the way to which is not easily found, and a hidden spring whose waters seem so worthless⁶⁸⁵ and so bitter that they are deemed of no use at all. We know from numerous hints⁶⁸⁶ that man’s inner life is the “secret place” where the *aqua solvens et coagulans*, the *medicina catholica* or panacea, the spark of the light of nature,⁶⁸⁷ are to be found. Our text shows us how much the alchemists put their art on the level of divine revelation and regarded it as at least an essential complement to the work of redemption. True, only a few of them were the elect who formed the golden chain linking earth to heaven, but still they were the fathers of natural science today. They were the unwitting instigators of the schism between faith and knowledge, and it was they who made the world conscious that the revelation was neither complete nor final. “Since these things are so,” says an ecclesiastic of the seventeenth century, “it will suffice, after the light of faith, for human ingenuity to recognize, as it were, the refracted rays of the Divine majesty in the world and in created things.”⁶⁸⁸ The “refracted rays” correspond to the “certain luminosity” which the alchemists said was inherent in the natural world.

[345] Revelation conveys general truths which often do not illuminate the individual’s actual situation in the slightest, nor was it traditional revelation that gave us the microscope and the machine. And since human life is not enacted exclusively, or even to a noticeable degree, on the plane of the higher verities, the source of knowledge unlocked by the old alchemists and physicians has done humanity a great and welcome service—so great that for many people the light of revelation has been extinguished altogether. Within the confines of civilization man’s wilful rationality apparently suffices. Outside of this shines, or should shine, the light of faith. But where the darkness comprehendeth it not (this being the prerogative of darkness!) those labouring in the darkness must try to accomplish an opus that will cause the “fishes’ eyes” to shine in the depths of the sea, or to catch the “refracted rays of the divine majesty” even though this produces a light which the darkness, as usual, does not comprehend. But when there is a light in the darkness which comprehends the darkness, darkness no longer prevails. The longing of the darkness for light is fulfilled only when the light can no longer be rationally explained by the darkness.

For the darkness has its own peculiar intellect and its own logic, which should be taken very seriously. Only the “light which the darkness comprehendeth not” can illuminate the darkness. Everything that the darkness thinks, grasps, and comprehends by itself is dark; therefore it is illuminated only by what, to it, is unexpected, unwanted, and incomprehensible. The psychotherapeutic method of active imagination offers excellent examples of this; sometimes a numinous dream or some external event will have the same effect.

[346] Alchemy announced a source of knowledge, parallel if not equivalent to revelation, which yields a “bitter” water by no means acceptable to our human judgment. It is harsh and bitter or like vinegar,⁶⁸⁹ for it is a bitter thing to accept the darkness and blackness of the *umbra solis* and to pass through this valley of the shadow. It is bitter indeed to discover behind one’s lofty ideals narrow, fanatical convictions, all the more cherished for that, and behind one’s heroic pretensions nothing but crude egotism, infantile greed, and complacency. This painful corrective is an unavoidable stage in every psychotherapeutic process. As the alchemists said, it begins with the *nigredo*, or generates it as the indispensable prerequisite for synthesis, for unless the opposites are constellated and brought to consciousness they can never be united. Freud halted the process at the reduction to the inferior half of the personality and tended to overlook the daemonic dangerousness of the dark side, which by no means consists only of relatively harmless infantilisms. Man is neither so reasonable nor so good that he can cope *eo ipso* with evil. The darkness can quite well engulf him, especially when he finds himself with those of like mind. Mass-mindedness increases unconsciousness and then the evil swells like an avalanche, as contemporary events have shown. Even so, society can also work for good; it is even necessary because of the moral weakness of most human beings, who, to maintain themselves at all, must have some external good to cling on to. The great religions are psychotherapeutic systems that give a foothold to all those who cannot stand by themselves, and they are in the overwhelming majority.

[347] In spite of their undoubtedly “heretical methods” the alchemists showed by their positive attitude to the Church that they were cleverer than certain modern apostles of enlightenment. Also—very much in contrast to the rationalistic tendencies of today—they displayed, despite its “tortuousness,” a remarkable understanding of the imagery upon which the Christian cosmos is built. This world of images, in its historical form, is irretrievably lost to modern man; its loss has spiritually impoverished the masses and compelled them to find pitiful substitutes, as poisonous as they are worthless. No one can be held responsible for this development. It is due rather to the restless tempo of spiritual growth and change, whose motive forces go far beyond the horizon of the individual. He can only hope to keep pace with it and try to understand it so far that he is not blindly swallowed up by it. For that is the alarming thing about mass

movements, even if they are good, that they demand and must demand blind faith. The Church can never explain the truth of her images because she acknowledges no point of view but her own. She moves solely within the framework of her images, and her arguments must always beg the question. The flock of harmless sheep was ever the symbolic prototype of the credulous crowd, though the Church is quick to recognize the wolves in sheep's clothing who lead the faith of the multitude astray in order to destroy them. The tragedy is that the blind trust which leads to perdition is practised just as much inside the Church and is praised as the highest virtue. Yet our Lord says: "Be ye therefore wise as serpents,"⁶⁹⁰ and the Bible itself stresses the cleverness and cunning of the serpent. But where are these necessary if not altogether praiseworthy qualities developed and given their due? The serpent has become a by-word for everything morally abhorrent, and yet anyone who is not as smart as a snake is liable to land himself in trouble through blind faith.

[348] The alchemists knew about the snake and the "cold" half of nature,⁶⁹¹ and they said enough to make it clear to their successors that they endeavoured by their art to lead that serpentine Nous of the darkness, the *serpens mercurialis*, through the stages of transformation to the goal of perfection (*telesmus*).⁶⁹² The more or less symbolical or projected integration of the unconscious that went hand in hand with this evidently had so many favourable effects that the alchemists felt encouraged to express a tempered optimism.

IV

REX AND REGINA

1. INTRODUCTION

[349] We have already met the royal pair, and particularly the figure of the King, several times in the course of our inquiry, not to mention the material which was presented under this head in *Psychology and Alchemy*. Conforming to the prototype of Christ the King in the Christian world of ideas, the King plays a central role in alchemy and cannot, therefore, be dismissed as a mere metaphor. In the "Psychology of the Transference" I have discussed the deeper reasons for a more comprehensive treatment of this symbol. Because the king in general represents a superior personality exalted above the ordinary, he has become the carrier of a myth, that is to say, of the statements of the collective unconscious. The outward paraphernalia of kingship show this very clearly. The crown symbolizes his relation to the sun, sending forth its rays; his bejewelled mantle is the starry firmament; the orb is a replica of the world; the lofty throne exalts him above the crowd; the address "Majesty" approximates him to the gods. The further we go back in history the more evident does the king's divinity become. The divine right of kings survived until quite recent times, and the Roman Emperors even usurped the title of a god and demanded a personal cult. In the Near East the whole essence of kingship was based far more on theological than on political assumptions. There the psyche of the whole nation was the true and ultimate basis of kingship: it was self-evident that the king was the magical source of welfare and prosperity for the entire organic community of man, animal, and plant; from him flowed the life and prosperity of his subjects, the increase of the herds, and the fertility of the land. This signification of kingship was not invented *a posteriori*; it is a psychic *a priori* which reaches far back into prehistory and comes very close to being a natural revelation of the psychic structure. The fact that we explain this phenomenon on rational grounds of expediency means something only for us; it means nothing for primitive psychology, which to a far higher degree than our objectively oriented views is based on purely psychic and unconscious assumptions.

[350] The theology of kingship best known to us, and probably the most richly developed, is that of ancient Egypt, and it is these conceptions which, handed down by the Greeks, have permeated the spiritual history of the West. Pharaoh was an incarnation of God¹ and a son of God.² In him dwelt the divine life-force and

procreative power, the *ka*: God reproduced himself in a human mother of God and was born from her as a God-man.³ As such he guaranteed the growth and prosperity of the land and the people,⁴ also taking it upon himself to be killed when his time was fulfilled, that is to say when his procreative power was exhausted.⁵

[351] Father and son were consubstantial,⁶ and after his death Pharaoh became the father-god again,⁷ because his *ka* was consubstantial with the father.⁸ The *ka* consisted, as it were, of Pharaoh's ancestral souls, fourteen of which were regularly worshipped by him,⁹ corresponding to the fourteen *kas* of the creator-god.¹⁰ Just as Pharaoh corresponded on the human plane to the divine son, so his *ka* corresponded to the divine Procreator, the *ka-mutef*,¹¹ the "bull of his mother," and his mother corresponded to the mother of the gods (e.g., Isis).

[352] This gives rise to a peculiar double trinity, consisting on the one hand of a divine series, father-god, divine son, the *ka-mutef*, and on the other hand a human series, father-god, human divine son (Pharaoh), and Pharaoh's *ka*. In the first series the father changes into the son and the son into the father through the procreative power of the *ka-mutef*. All three figures are consubstantial. The second, divine-human series, which is likewise bound into a unity by consubstantiality, represents the manifestation of God in the earthly sphere.¹² The divine mother is not included in either triunity; she stands outside it, a figure now wholly divine, now wholly human. We should mention in this connection a late Egyptian trinity amulet discussed by Spiegelberg: Horus and Hathor sit facing one another, and between them and over them hovers a winged serpent. The three deities all hold the *ankh* (symbol of life). The inscription says: "Baït is one, Hathor one, Akori one, one is their power. Greetings, Father of the World, greetings, three-formed God."¹³ Baït is Horus. The amulet, which is three-cornered, may date from the first or second century A.D. Spiegelberg writes: "For my feeling this epigram, despite its Greek form, breathes an Egyptian spirit of Hellenistic nature and contains nothing Christian. But it is born of a spirit that made its contribution to the development of the dogma of the Trinity in Christianity."¹⁴ The illustrations of the coniunctio in the *Rosarium*, showing King, Queen, and the dove of the Holy Ghost, correspond to the figures on the amulet exactly.¹⁵

2. GOLD AND SPIRIT

[353] The striking analogy between certain alchemical ideas and Christian dogma is not accidental but in accordance with tradition. A good part of the symbolism of the king derives from this source. Just as Christian dogma derives in part from Egypto-Hellenistic folklore, as well as from the Judaeo-Hellenistic philosophy of writers like

Philo, so, too, does alchemy. Its origin is certainly not purely Christian, but is largely pagan or Gnostic. Its oldest treatises come from that sphere, among them the treatise of Komarios (1st cent.?) and the writings of Pseudo-Democritus (1st to 2nd cent.) and Zosimos (3rd cent.). The title of one of the latter's treatises is "The True Book of Sophe¹⁶ the Egyptian and Divine Lord of the Hebrews, [and] of the Powers of Sabaoth."¹⁷ Berthelot thinks that Zosimos really was the author, and this is quite possible. The treatise speaks of a knowledge or wisdom that comes from the Aeons:

Ungoverned (*ἀβασιλευτος*) and autonomous is its origin; it is non-material (*αἴλος*) and it seeks none of the material and wholly corruptible¹⁸ bodies. For it acts without being acted upon (*ἀπαθῶς*) But, on their asking for a gift, the symbol of the chymic art comes forth from creation for those who rescue and purify the divine soul chained in the elements, that is, the divine Pneuma mingled with the flesh. For as the sun is the blossom of fire, and the heavenly sun is the right eye of the world, so also the copper, when purification makes it to blossom, is an earthly sun, a king upon earth, like the sun in heaven.¹⁹

[354] It is clear from this and from the text that follows that the "symbol of the chymic art" (*τὸ συμβολὸν τῆς χημείας*), the king, is none other than gold, the king of metals.²⁰ But it is equally clear that the gold comes into being only through the liberation of the divine soul or pneuma from the chains of the "flesh." No doubt it would have suited our rational expectations better if the text had said not "flesh" but "ore" or "earth." Although the elements are mentioned as the prison of the divine psyche, the whole of nature is meant, *Physis* in general; not just ore and earth but water, air, and fire, and besides these the "flesh," an expression that already in the third century meant the "world" in a moral sense as opposed to the spirit, and not simply the human body. Consequently, there can be no doubt that the *chrysopoeia* (gold-making) was thought of as a psychic operation running parallel to the physical process and, as it were, independent of it. The moral and spiritual transformation was not only independent of the physical procedure but actually seemed to be its *causa efficiens*. This explains the high-flown language, which would be somewhat out of place in a merely chemical recipe. The psyche previously imprisoned in the elements and the divine spirit hidden in the flesh overcome their physical imperfection and clothe themselves in the noblest of all bodies, the royal gold. Thus the "philosophic" gold is an embodiment of psyche and pneuma, both of which signify "life-spirit." It is in fact an "aurum non vulgi," a living gold, so to speak, which corresponds in every respect to the lapis. It, too, is a living being with a body, soul, and spirit, and it is easily personified as a divine being or a superior person like a king, who in olden times was considered to be God incarnate.²¹ In this connection Zosimos availed himself of a primordial image in the form of the divine Anthropos, who at that time had attained a crucial significance in philosophy and religion, not only in Christianity but also in

Mithraism. The Bible as well as the Mithraic monuments and the Gnostic writings bear witness to this. Zosimos has, moreover, left us a long testimony on this theme.²² The thoughts of this writer, directly or indirectly, were of decisive importance for the whole philosophical and Gnostic trend of alchemy in the centuries that followed. As I have dealt with this subject in considerable detail in *Psychology and Alchemy* I need not go into it here. I mention it only because the above passage from Zosimos is, to my knowledge, the earliest reference to the king in alchemy. As an Egyptian, Zosimos would have been familiar with the mystique of kingship, which at that time was enjoying a new efflorescence under the Caesars, and so it was easy for him to carry over the identity of the divine pneuma with the king into alchemical practice, itself both physical and pneumatic, after the older writings of Pseudo-Democritus had paved the way with their views on *Θεία φύσις* (divine nature).²³

[355] The definition of the king as pneuma carried considerably more weight than his interpretation as gold. Ruland's *Lexicon* defines Rex as follows: "Rex—King, Soul, Spiritual Water which gives Moisture to the Female and is restored to the Fountain whence it was derived. The Spirit is Water."²⁴ Here Rex is still the divine soul, the moist Osiris,²⁵ a life-giving, fertilizing pneuma and not primarily the physical gold. The mystique of the king comes out even more clearly in Khunrath: "When at last," he says, "the ash-colour, the whitening, and the yellowing are over, you will see the Philosophical Stone, our King and Lord of Lords, come forth from the couch and throne of his glassy sepulchre²⁶ onto the stage of this world, in his glorified body, regenerated and more than perfect, shining like a carbuncle, and crying out, Behold, I make all things new."²⁷ In his story of how the lapis is made, Khunrath describes the mystic birth of the king. Ruach Elohim (the spirit of God) penetrated to the lowest parts and to the centre (*meditullium*) of the virginal *massa confusa*, and scattered the sparks and rays of his fruitfulness. "Thus the form impressed itself [*forma informavit*], and the purest soul quickened and impregnated the tohu-bohu, which was without form and void." This was a "mysterium typicum" (a "symbolical" mystery), the procreation of the "Preserver and Saviour of the Macrocosm and the Microcosm. The Word is become flesh . . . and God has revealed himself in the flesh, the spirit of God has appeared in the body. This, the son of the Macrocosm . . . that, the son of God, the God-man . . . the one in the womb of the Macrocosm, the other in the womb of the Microcosm," and both times the womb was virginal. "In the Book or Mirror of Nature, the Stone of the Wise, the Preserver of the Macrocosm, is the symbol of Christ Jesus Crucified, Saviour of the whole race of men, that is, of the Microcosm."²⁸ The "son of the Macrocosm" begotten by the divine pneuma (the Egyptian *ka-mutef*) is "of like kind and consubstantial with the Begetter." His soul is a spark of the world-soul. "Our stone is three and one, which is to say triune, namely earthly, heavenly, and divine." This reminds us of the Egyptian sequence: Pharaoh,

ka, God. The triune stone consists of “three different and distinct substances: Sal-Mercurius-Sulphur.”²⁹

3. THE TRANSFORMATION OF THE KING

[356] As the Egyptian mystique of kingship shows, the king, like every archetype, is not just a static image; he signifies a dynamic process whereby the human carrier of the mystery is included in the mysterious drama of God’s incarnation. This happened at the birth of Pharaoh, at his coronation,³⁰ at the Heb-Sed festival, during his reign, and at his death. The texts and illustrations of the “birth-chamber” in the temple depict the divine procreation and birth of Pharaoh in the form of the mystic marriage of the Queen Mother and the Father-God. The Heb-Sed festival served to associate his *ka* with the cultivation of the soil and, presumeably, to preserve or strengthen his powers.³¹ The identity of his *ha* with the Father-God was finally confirmed at his death and sealed for all time. The transformation of the king from an imperfect state into a perfect, whole, and incorruptible essence is portrayed in a similar manner in alchemy. It describes either his procreation and birth, in the form of a hierosgamos, or else his imperfect initial state and his subsequent rebirth in perfect form. In what follows I shall give a few examples of this transformation.

[357] Among the older medieval treatises there is the so-called “Allegoria Merlini.”³² So far as the name Merlinus is concerned, I must leave it an open question whether it refers to the magician Merlin³³ or is a corruption of Mercurinus.³⁴ The allegory tells us of a certain king who made ready for battle. As he was about to mount his horse he wished for a drink of water. A servant asked him what water he would like, and the king answered: “I demand the water which is closest to my heart, and which likes me above all things.” When the servant brought it the king drank so much that “all his limbs Avere filled and all his veins inflated, and he himself became discoloured.” His soldiers urged him to mount his horse, but he said he could not: “I am heavy and my head hurts me, and it seems to me as though all my limbs were falling apart.” He demanded to be placed in a heated chamber where he could sweat the water out. But when, after a while, they opened the chamber he lay there as if dead. They summoned the Egyptian and the Alexandrian physicians, who at once accused one another of incompetence. Finally the Alexandrian physicians gave way to the Egyptian physicians, who tore the king into little pieces, ground them to powder, mixed them with their “moistening” medicines, and put the king back in his heated chamber as before. After some time they fetched him out again half-dead. When those present saw this, they broke out into lamentation, crying: “Alas, the king is dead.” The physicians said soothingly that he was only sleeping. They then washed him with sweet water until the juice of the medicines departed from him, and mixed

him with new substances. Then they put him back in the chamber as before. When they took him out this time he was really dead. But the physicians said: “We have killed him that he may become better and stronger in this world after his resurrection on the day of judgment.” The king’s relatives, however, considered them mountebanks, took their medicines away from them, and drove them out of the kingdom. They now wanted to bury the corpse, but the Alexandrian physicians, who had heard of these happenings, counselled them against it and said they would revive the king. Though the relatives were very mistrustful they let them have a try. The Alexandrian physicians took the body, ground it to powder a second time, washed it well until nothing of the previous medicines remained, and dried it. Then they took one part of sal ammoniac and two parts of Alexandrian nitre, mixed them with the pulverized corpse, made it into a paste with a little linseed oil, and placed it in a crucible-shaped chamber with holes bored in the bottom; beneath it they placed a clean crucible and let the corpse stand so for an hour. Then they heaped fire upon it and melted it, so that the liquid ran into the vessel below. Whereupon the king rose up from death and cried in a loud voice: “Where are my enemies? I shall kill them all if they do not submit to me!” All the kings and princes of other countries honoured and feared him. “And when they wished to see something of his wonders, they put an ounce of well-purified mercury in a crucible, and scattered over it as much as a millet-seed of finger-nails or hair or of their blood, blew up a light charcoal fire, let the mercury cool down with these, and found the stone, as I do know.”

[358] This parable contains the primitive motif of the murder or sacrifice of the king for the purpose of renewing his kingly power and increasing the fertility of the land. Originally it took the form of killing the old and impotent king. In this tale the king was afflicted with a “dropsy” both real and metaphorical: he suffered from a general plethora and a total oedema because he drank too much of the special “water.” One would be inclined to think that the “water closest to his heart which liked him above all things” was *eau de vie* and that he suffered from cirrhosis of the liver, were it not that the extraction of the moist psyche from the elements was a preoccupation of alchemy long before the distillation of alcohol.³⁵ The idea was to extract the *pneuma* or psyche or “virtue” from matter (e.g., from gold) in the form of a volatile or liquid substance, and thereby to mortify the “body.” This *aqua permanens*³⁶ was then used to revive or reanimate the “dead” body and, paradoxically, to extract the soul again.³⁷ The old body had to die; it was either sacrificed or simply killed, just as the old king had either to die or to offer sacrifice to the gods (much as Pharaoh offered libations to his own statue). Something of this kind was celebrated at the Sed festival. Moret thinks the Sed ceremony was a kind of humanized regicide.³⁸

[359] Water has always played a role at sacrifices as the “animating” principle. A text from Edfu says: “I bring thee the vessels with the limbs of the gods [i.e., the Nile],

that thou mayest drink of them; I refresh my heart that thou mayest rejoice.” The water of the Nile was the real “consolamentum” of Egypt. In the Egyptian fairytale, Anubis found that the heart of his dead brother Bata, which Bata had placed on a cedar-flower, had turned into a cedar-cone. He put it in a vessel of cold water, and the heart soaked it up and Bata began to live again.³⁹ Here the water is life-giving. But of the *aqua permanens* it was said: “It kills and vivifies.”

[360] The king has numerous connections with water. In the parable of Sulphur cited earlier, the king drowns in it with Diana.⁴⁰ The hierosgamos was often celebrated in water. The motif of drowning also takes the form of an inward drowning, namely dropsy. Mater Alchimia is dropsical in the lower limbs.⁴¹ Or the king is dropsical and conceals himself in the “belly of the horse” in order to sweat out the water.⁴² The water appears also as a bath, as in the “Dicta Alani,” where the “old man” sits in the bath.⁴³ Here I would recall the king’s bath in Bernardus Trevisanus, which I have discussed earlier.⁴⁴ Water is used for baptism, immersion, and cleansing. The cleansing of Naaman (II Kings 5 : 10ff.) is often cited as an allegory of this.⁴⁵

[361] In our parable the wonderful water already has that decomposing and dissolving property which anticipates the king’s dismemberment.⁴⁶ The dissolution of the initial material plays a great role in alchemy as an integral part of the process. Here I will mention only the unique interpretation of the *solutio* given by Dorn. In his “Speculativa philosophia” he discusses the seven stages of the work. The first stage begins with the “study of the philosophers,” which is the way to the investigation of truth.

But the truth is that from which nothing can be missing, to which nothing can be added, nay more, to which nothing can be opposed. . . . The truth therefore is a great strength and an impregnable fortress . . . , an unconquerable pledge to them that possess it. In this citadel is contained the true and undoubted stone and treasure of the philosophers, which is not eaten into by moths, nor dug out by thieves, but remaineth for ever when all things else are dissolved, and is appointed for the ruin of many, but for the salvation of others. This is a thing most worthless to the vulgar, spurned above all things and hated exceedingly, yet it is not hateful but lovable, and to philosophers precious above gems.⁴⁷

[362] In his “Recapitulation of the First Stage” Dorn says:

It is the study of the Chemists to liberate that unsensual truth⁴⁸ from its fetters in things of sense, for through it the heavenly powers are pursued with subtle understanding. . . .⁴⁹ Knowledge is the sure and undoubted resolution [*resolutio*] by experiment of all opinions concerning the truth. . . . Experiment is manifest demonstration of the truth, and resolution the putting away of doubt. We cannot be resolved of any doubt save by experiment, and there is no better way to make it than

on ourselves. Let us therefore verify what we have said above concerning the truth, beginning with ourselves. We have said above that piety consists in knowledge of ourselves,⁵⁰ and hence it is that we make philosophical knowledge begin from this also. But no man can know himself unless he know *what* and not *who* he is,⁵¹ on whom he depends and whose he is (for by the law of truth no one belongs to himself), and to what end he was made. With this knowledge piety begins, which is concerned with two things, namely, with the Creator and the creature that is made like unto him. For it is impossible for the creature to know himself of himself, unless he first know his Creator. . . .⁵² No one can better know the Creator, than the workman is known by his work.⁵³

[363] Later Dorn says:

The chemical putrefaction is compared to the study of the philosophers, because as the philosophers are disposed to knowledge by study, so natural things are disposed by putrefaction to solution [*ad solutionem*]. To this is compared philosophical knowledge, for as by solution bodies are dissolved [*solvuntur*], so by knowledge are the doubts of the philosophers resolved [*resolvuntur*].⁵⁴

He says in his “*Physica Trithemii*”:

The first step in the ascent to higher things is the study of faith, for by this is the heart of man disposed to solution in water [*ad solutionem in aquam*].⁵⁵

Finally, in his “*Philosophia chemica*,” Dorn asserts:

Dissolution is knowledge, or the spagyric⁵⁶ union of the male with the female, the latter receiving from him all that ought to be received. This is the beginning of the special generation whereby the effect of our spagyric marriage is sensually apprehended, namely, the union of the twofold seed to form the embryo.⁵⁷

[364] It is evident from these statements that Dorn understood the alchemical *solutio* primarily as a spiritual and moral phenomenon and only secondarily as a physical one. The first part of the work is a psychic “solution” of doubts and conflicts, achieved by self-knowledge, and this is not possible without knowledge of God. The spiritual and moral *solutio* is conceived as a “spagyric marriage,” an inner, psychic union which by analogy and magic correspondence unites the hostile elements into *one* stone. By inquiring into the “quid,” and by spiritual understanding, the selfish hardness of the heart—caused by original sin—is dissolved: the heart turns to water. The ascent to the higher stages can then begin. Egocentricity is a necessary attribute of consciousness and is also its specific sin.⁵⁸ But consciousness is confronted by the objective fact of the unconscious, often enough an avenging deluge. Water in all its forms—sea, lake, river, spring—is one of the commonest typifications of the unconscious, as is also the lunar femininity that is closely associated with water. The dissolution of the heart in water would therefore correspond to the union of the male

with the female, and this in turn to the union of conscious and unconscious, which is precisely the meaning of the “spagyric marriage.”⁵⁹ Similarly, the citadel or fortress is a feminine symbol, containing within it the treasure of the “truth,” also personified as Wisdom.⁶⁰ This wisdom corresponds to salt, which is co-ordinated with the moon. The spagyric union produces an embryo whose equivalents are the homunculus and the lapis. The lapis, of course, is a symbol of the self.⁶¹

[365] If after this glimpse into the psychology of the *solutio* we turn back to the “Allegoria Merlini,” several things will become clear: the king personifies a hypertrophy of the ego which calls for compensation. He is about to commit an act of violence—a sure sign of his morally defective state. His thirst is due to his boundless concupiscence and egotism. But when he drinks he is overwhelmed by the water, i.e., by the unconscious, and medical help becomes necessary. The two groups of doctors further assist his dissolution by dismemberment and pulverization.⁶² The original of this may be the dismemberment of Osiris and Dionysus.⁶³ The king is subjected to various forms of dissolution: dismemberment, trituration, dissolution in water.⁶⁴ His transfer to the heated chamber is the prototype of the “laconicum” (sweat-bath) of the king, often shown in later illustrations; it is a therapeutic method which we meet again in the American Indian “sweat-lodge.” The chamber also signifies the grave. The difference between the Egyptian and the Alexandrian physicians seems to be that the former moistened the corpse but the latter dried it (or embalmed or pickled it). The technical error of the Egyptians, therefore, was that they did not separate the conscious from the unconscious sufficiently, whereas the Alexandrians avoided this mistake.⁶⁵ At any rate they succeeded in reviving the king and evidently brought about his rejuvenation.

[366] If we examine this medical controversy from the standpoint of alchemical hermeneutics many of the allusions can be understood in a deeper sense. For instance the Alexandrians, though making just as thorough use of the Typhonian technique of dismemberment, avoided the (Typhonian) sea-water and dried the pulverized corpse, using instead the other constituent of the *aqua pontica*, namely salt in the form of *sal ammoniac* (mineral salt or rock-salt, also called *sal de Arabia*) and *sal nitri* (saltpetre).⁶⁶ Primarily the preservative quality of both salts is meant, but secondarily, in the mind of the adepts, “marination” meant the “in-forming” penetration of *sapientia* (Dorn’s “veritas”) into the ignoble mass, whereby the corruptible form was changed into an incorruptible and immutable one.

[367] Certainly there is little trace of this in our somewhat crude parable. Also, the transformation of the king seems to betoken only the primitive renewal of his life-force, for the king’s first remark after his resuscitation shows that his bellicosity is undiminished. In the later texts, however, the end-product is never just a

strengthening, rejuvenation or renewal of the initial state but a transformation into a higher nature. So we are probably not wrong in attributing a fairly considerable age to this parable. One ground for this assumption is the conflict between the Alexandrian and Egyptian physicians, which may hark back to pre-Islamic times when the old-fashioned, magical remedies of the Egyptians still led to skirmishes with the progressive, more scientific medicine of the Greeks. Evidence for this is the “technical” blunder of the Egyptian method—contamination of conscious and unconscious—which the more highly differentiated consciousness of the Greeks was able to avoid.

4. THE REGENERATION OF THE KING (Ripley's "Cantilena")

[368] It should not be overlooked that no reason was given why the king was in need of renewal. On a primitive level the need for renewal was self-evident, since the magic power of the king decreased with age. This is not so in later parables, where the original imperfection of the king itself becomes a problem.

[369] Thus the author of the following parable, Sir George Ripley (1415–90), Canon of Bridlington, was already revolving in his mind the problem of the “sick king.” I must leave to one side the question of how far this idea was influenced by the Grail Legend. It is conceivable that Ripley, as an Englishman, would have been acquainted with this tradition. Apart from the rather doubtful evidence of the “lapis exillis” (“lapsit exiliis” in Wolfram von Eschenbach), I have not been able to find any more likely traces of the Grail cycle in alchemical symbolism, unless one thinks of the mystic vessel of transformation, the *tertium comparationis* for which would be the chalice in the Mass.

The first five verses of the *Cantilena*⁶⁷ are as follows:

Behold! And in this *Cantilena* see

The hidden Secrets of Philosophy:

What Joy arises from the Merry Veines

Of Minds elated by such dulcid Straines!

Through Roman Countreys as I once did passe,

Where Mercuries Nuptiall celebrated was,

And feeding Stoutly (on the Bride-Groomes score)

I learn'd these Novelties unknown before.

There was a certaine Barren King by birth,

Composèd of the Purest, Noblest Earth,
By nature Sanguine and Devoute, yet hee
Sadly bewailèd his Authoritie.

Wherefore am I a King, and Head of all
Those Men and Things that be Corporeall?
I have no Issue, yet I'le not deny
'Tis Mee both Heaven and Earth are Rulèd by.

Yet there is either a Cause Naturall
Or some Defect in the Originall,
Though I was borne without Corruption
And nourished 'neath the Pinions of the Sunne.⁶⁸

[371] The cleric's language betrays him: "original defect" is a paraphrase of "original sin," and the "pinions of the sun" are the "wings of the sun of justice" (Malachi 4 : 2: "The sun of justice shall arise with healing in his wings"). Possibly there is a connection here between the *Cantilena* and the remark of Senior that the male without wings is under the winged female.⁶⁹ The *Cantilena* condenses the winged female on the one hand with the winged sun-disk of Malachi and on the other with the idea of the nourishing mother—a kind of dreamlike contamination.

[372] *Verses 6 and 7*

Each Vegetative which from the Earth proceeds
Arises up with its own proper Seeds;
And Animalls, at Seasons, speciously
Abound with Fruit and strangly Multiply.

Alas, my Nature is Restricted so
No Tincture from my Body yet can flow.
It therefore is Infoecund: neither can
It ought availe, in Generating Man.⁷⁰

Here again the ecclesiastical language is noticeable: the tincture is identical with the *aqua permanens*, the wonderful water of transformation which corresponds to the Church's "water of grace." The water that should flow from the body may be analogous to the "rivers from the belly of Christ," an idea that plays a great role not only in ecclesiastical metaphor but also in alchemy.⁷¹ With regard to the ecclesiastical language I would call attention to Hugo Rahner's most instructive essay, "Flumina de ventre Christi." Origen speaks of "the river our saviour" (*salvator noster fluvius*).⁷² The analogy of the pierced Redeemer with the rock from which Moses struck water

was used in alchemy to denote the extraction of the *aqua permanens* or of the soul from the lapis; or again, the king was pierced by Mercurius.⁷³ For Origen water meant the “water of doctrine” and the “fount of science.” It was also a “fountain of water springing up in the believer.” St. Ambrose speaks of the “fountains of wisdom and knowledge.”⁷⁴ According to him paradise, with its fourfold river of the Logos, is the ground of the soul;⁷⁵ he also calls this river the innermost soul, since it is the “principle,” the *κοιλία* (*venter*), and the *νοῦς*.⁷⁶ These few examples from the many collected by Rahner may suffice to put the significance of the *aqua permanens*, the arcane substance par excellence, in the right perspective. For the alchemists it was wisdom and knowledge, truth and spirit, and its source was in the inner man, though its symbol was common water or sea-water. What they evidently had in mind was a ubiquitous and all-pervading essence, an *anima mundi* and the “greatest treasure,” the innermost and most secret numinosum of man. There is probably no more suitable psychological concept for this than the collective unconscious, whose nucleus and ordering “principle” is the self (the “monad” of the alchemists and Gnostics).

[373]

Verses 8 and 9

My Bodies Masse is of a Lasting-Stuffe,
 Exceeding delicate, yet hard enough;
 And when the Fire Assays to try my Sprite,
 I am not found to Weigh a Graine too light.

My Mother in a Sphaere gave birth to mee,
 That I might contemplate Rotunditie;
 And be more Pure of kind than other things,
 By Right of Dignity the Peer of Kings.⁷⁷

The “house of the sphere” is the *vas rotundum*, whose roundness represents the cosmos and, at the same time, the world-soul, which in Plato surrounds the physical universe from outside. The secret content of the Hermetic vessel is the original chaos from which the world was created. As the *filius Macrocosmi* and the first man the king is destined for “rotundity,” i.e., wholeness, but is prevented from achieving it by his original defect.

[374]

Verse 10

Yet to my Griefe I know, unlesse I feed
 On the Specifics I so sorely need
 I cannot Generate: to my Amaze
 The End draws near for me, Ancient of Daies.⁷⁸

This verse confirms the decrepit condition of the king, who apart from his original defect, or because of it, is also suffering from senile debility. It was a bold stroke for a canon to identify the king with the “Ancient of Days” from Daniel 7 : 9: “I beheld till the thrones were cast down, and the Ancient of Days did sit, whose garments were white as snow, and the hair of his head like pure wool: his throne was like the fiery flame, and his wheels as burning fire.” There can be no doubt that Ripley the alchemist was here speculating over the head of Ripley the cleric to hit upon an idea that in the Middle Ages must have seemed like blasphemy: the identification of the transformative substance with God. To our way of thinking this kind of allegory or symbolization is the height of absurdity and unintelligibility. It was even hard for the Middle Ages to swallow.⁷⁹ But where it met with acceptance, as in philosophical alchemy, it does much to explain the hymnlike or at any rate highly emotional language of some of the treatises. We have here, in fact, a new religious declaration: God is not only in the unspotted body of Christ and continually present in the consecrated Host but—and this is the novel and significant thing—he is also hidden in the “cheap,” “despised,” common-or-garden substance, even in the “uncleanness of this world, in filth.”⁸⁰ He is to be found only through the art, indeed he is its true object and is capable of progressive transformation—“Deo adjuvante.” This strange theologem did not, of course, mean that for the alchemists God was nothing but a substance that could be obtained by chemical transformation—far from it. Such an aberration was reserved rather for those moderns who put matter or energy in the place of God. The alchemists, so far as they were still pagans, had a more mystical conception of God dating from late antiquity, which, as in the case of Zosimos, could be described as Gnostic; or if they were Christians, their Christianity had a noticeable admixture of heathenish magical ideas about demons and divine powers and an *anima mundi* inherent or imprisoned in physical nature. The *anima mundi* was conceived as that part of God which formed the quintessence and real substance of Physis, and which was to God—to use an apt expression of Isidore⁸¹—as the “accrescent soul” (προσφύνης ψυχή, ‘grown-on’) was to the divine soul of man. This accrescent soul was a second soul that grew through the mineral, vegetable, and animal kingdoms up to man, pervading the whole of nature, and to it the natural forms were attached like appendages (προσαρτήματα). This strange idea of Isidore’s is so much in keeping with the phenomenology of the collective unconscious that one is justified in calling it a projection of this empirically demonstrable fact in the form of a metaphysical hypostasis.

[375] It will not have escaped the reader how primitive the idea of God’s ageing and need of renewal is. It does in fact derive from ancient Egypt, though one is at a loss to imagine from what sources, other than the Bible, a Canon of Bridlington in the fifteenth century could have borrowed such a theology. His writings at any rate allow

no conjectures in this respect. There is something of a clue, however, in the alchemical tradition itself, in the idea of a corrupt arcane substance whose corruption is due to original sin. A similar idea appears in the Grail tradition of the sick king, which has close connections with the transformation mystery of the Mass. The king is the forbear of Parsifal, whom one could describe as a redeemer figure, just as in alchemy the old king has a redeemer son or becomes a redeemer himself (the lapis is the same at the beginning and at the end). Further, we must consider certain medieval speculations concerning God's need of improvement and the transformation of the wrathful God of the Old Testament into the God of Love in the New: for, like the unicorn, he was softened by love in the lap of a virgin. Ideas of this kind are found as early as Bonaventure, the Franciscan saint, who died in 1274.⁸² We should also remember that, in the figurative language of the Church, God the Father was represented as an old man and his birth as a rejuvenation in the Son. In a hymn to the Church as an analogy of the Mother of God Paulinus of Nola says:

Sister and wife at once; for without the use of the body

Mentally she unites, for the Spouse is God, not a man.

Out of this mother is born the Ancient as well as the infant ...⁸³

[376] Although the candidate for baptism ("reborn into a new infancy") is meant here, the point of the analogy is that God the Father, a bearded old man, is worshipped *in* God the Son as a newborn child.

[377] The contrast between *senex* and *puer* touches at more than one point on the archetype of God's renewal in Egyptian theology, especially when the underlying homoousia comes out as clearly as in the verses of Ephraem Syrus: "The Ancient of Days, in his sublimity, dwelt as a babe in the womb."⁸⁴ "Thy Babe, O Virgin, is an old man; he is the Ancient of Days and precedes all time."⁸⁵

[378] Nowhere in this material, however, do we find the very specific motif of God's senescence, and the source Ripley could have used remains obscure. Even so, there is always the possibility of an autochthonous revival of the mythologem from the collective unconscious. Nelken has published a case of this kind. His patient was a primary-school teacher who suffered from paranoia. He developed a theory about a Father-God with immense procreative powers. Originally he had 550 *membra virilia*, but in the course of time they were reduced to three. He also possessed two scrota with three testicles each. His colossal sperm production weakened him in the end, and finally he shrank to a five-ton lump and was found chained up in a ravine. This psychologem contains the motif of ageing and loss of procreative power. The patient was the rejuvenated Father-God or his avatar.⁸⁶ The embellishment of the archetypal theme is in this case completely original, so that we can safely take it as an autochthonous product.

[379] In Ripley's case there is the more immediate possibility that he modified for his own purpose the conception of the Ancient of Days and his youthful son the Logos, who in the visions of Valentinus the Gnostic and of Meister Eckhart was a small boy. These concepts are closely related to those of Dionysus, youngest of the gods, and of the Horus-child, Harpocrates, Aion, etc. All naturally imply the renewal of the ageing god. The step from the world of Christian ideas back into paganism is not a long one,⁸⁷ and the naturalistic conclusion that the father dwindles when the son appears, or that he is rejuvenated in the son, is implicit in all these age-old conceptions, whose effect is all the stronger the more they are consciously denied. Such a combination of ideas is almost to be expected in a cleric like Ripley, even though, like all alchemists, he may not have been conscious of their full import.

[380] *Verses 11–12*

Utterly perish'd is the Flower of Youth,
Through all my Veines there courses naught but Death.
Marvelling I heard Christ's voice,⁸⁸ that from above
I'le be Reborne, I know not by what Love.

Else I God's Kingdom cannot enter in:
And therefore, that I may be Borne agen,
I'le Humbled be into my Mother's Breast,
Dissolve to my First Matter, and there rest.⁸⁹

[381] In order to enter into God's Kingdom the king must transform himself into the *prima materia* in the body of his mother, and return to the dark initial state which the alchemists called the "chaos." In this *massa confusa* the elements are in conflict and repel one another; all connections are dissolved. Dissolution is the prerequisite for redemption. The celebrant of the mysteries had to suffer a figurative death in order to attain transformation. Thus, in the Arisleus vision, Gabricus is dissolved into atoms in the body of his sister-wife. We have seen from the analogy with the Ancient of Days what the alchemist's goal was: both artifex and substance were to attain a perfect state, comparable to the Kingdom of God. I will not discuss, for the moment, the justification for this seemingly presumptuous comparison, but would remind the reader that in the opinion of the alchemists themselves the transformation was a miracle that could take place only with God's help.

[382] *Verse 13*

Hereto the Mother Animates the King,
Hasts his Conception, and does forthwith bring
Him closely hidden underneath her Traine,

Till, from herself, she'd made him Flesh againe.⁹⁰

[383] Here the “chymical wedding” takes the form of the ancient rite of adoption, when the child to be adopted was hidden under the skirts of the adoptive mother and then drawn forth again.⁹¹

In this way Ripley circumvented the scandal of the customary incest.

[384] The adoption was represented in ancient times either by a figurative act of birth or by the suckling of the adoptive child. In this manner Heracles was “adopted” by Hera. In a hymn to Nebo⁹² the god says to Asurbanipal:

Small wert thou, Asurbanipal, when I left thee with the divine Queen of Nineveh,
Feeble wert thou, Asurbanipal, when thou didst sit in the lap of the divine Queen of Nineveh,
Of the four udders that were placed in thy mouth thou didst suck from two,
And in two thou didst bury thy face ...⁹³

[385] Concealment under the skirt is a widely disseminated rite, and until quite recently was still practised by the Bosnian Turks. The motif of the “tutelary Madonna” in a mantle has a similar meaning, namely, the adoption of the believer.

[386] Ripley's adoption scene may derive from the “lion-hunt” of Marchos,⁹⁴ where mention is made of a fire which “comes out over the coals, even as the pious mother steps over the body of her son.” And again: “He likened the subtlety of the fire's heat to the stepping of the pious mother over the body of her son.”⁹⁵ These sentences form part of a dialogue between King Marchos and his mother. In contrast to the *Cantilena*, however, it is not the king who is to be transformed but the lion (see pars. 409f.).

[387] *Verses 14–17*

'Twas wonderfull to see with what a Grace
This Naturall Union made at one Imbrace
Did looke; and by a Bond both Sexes knitt,
Like to a Hille and Aire surrounding it.

The Mother unto her Chast Chamber⁹⁶ goes,
Where in a Bed of Honour she bestowes
Her weary'd selfe, 'twixt Sheets as white as Snow
And there makes Signes of her approaching Woe.

Ranke Poison issuing from the Dying Man
Made her pure Orient face look foule and wan:
Hence she commands all Strangers to be gone,

Seals upp her Chamber doore, and lyes Alone.

Meanwhile she of the Peacocks Flesh did Eate

And Dranke the Greene-Lyons Blood with that fine Meate,

Which Mercurie, bearing the Dart of Passion,

Brought in a Golden Cupp of Babilon.⁹⁷

[388] The pregnancy diet described here is the equivalent of the “cibatio,” the “feeding” of the transformative substance. The underlying idea is that the material to be transformed had to be impregnated and saturated, either by imbibing the tincture, the *aqua propria* (its “own water,” the soul), or by eating its “feathers” or “wings” (volatile spirit), or its own tail (uroboros), or the fruit of the philosophical tree. Here it is “peacock’s flesh.” The peacock is an allusion to the *cauda pavonis* (peacock’s tail). Immediately before the *albedo* or *rubedo*⁹⁸ “all colours” appear, as if the peacock were spreading his shimmering fan. The basis for this phenomenon may be the iridescent skin that often forms on the surface of molten metal (e.g., lead).⁹⁹ The “omnes colores” are frequently mentioned in the texts as indicating something like totality. They all unite in the *albedo*, which for many alchemists was the climax of the work. The first part was completed when the various components separated out from the chaos of the *massa confusa* were brought back to unity in the *albedo* and “all become one.” Morally this means that the original state of psychic disunity, the inner chaos of conflicting part-souls which Origen likens to herds of animals,¹⁰⁰ becomes the “vir unus,” the unified man. Eating the peacock’s flesh is therefore equivalent to integrating the many colours (or, psychologically, the contradictory feeling-values) into a single colour, white. Norton’s “Ordinall of Alchimy” says:

For everie Colour whiche maie be thought,

Shall heere appeare before that White be wrought.¹⁰¹

[389] The lapis contains or produces all colours.¹⁰² Hoghelande says that the “Hermaphroditic monster” contains all colours.¹⁰³ Poetic comparisons are also used, such as Iris, the rainbow,¹⁰⁴ or the iris of the eye.¹⁰⁵ The eye and its colours are mentioned by Hippolytus. He calls attention to the Naassene analogy between the four rivers of paradise and the senses. The river Pison, which waters Havilah, the land of gold, corresponds to the eye: “This, they say, is the eye, which by its bearing and its colours bears witness to what is said.”¹⁰⁶ Abu’l-Qasim speaks of the tree with multicoloured blossoms.¹⁰⁷ Mylius says: “Our stone is the star-strewn Sol, from whom every colour proceeds by transformation, as flowers come forth in the spring.”¹⁰⁸ The “Tractatus Aris-totelis” gives a more elaborate description: “Everything that is contained beneath the circle of the moon . . . is made into one at the quadrangular ending,¹⁰⁹ as if it were a meadow decked with colours and sweet-smelling flowers of divers kinds, which were conceived in the earth by the dew of heaven.”¹¹⁰

[390] The stages of the work are marked by seven colours which are associated with the planets.¹¹¹ This accounts for the relation of the colours to astrology, and also to psychology, since the planets correspond to individual character components. The *Aurora Consurgens* relates the colours to the soul.¹¹² Lagneus associates the four principal colours with the four temperaments.¹¹³ The psychological significance of the colours comes out quite clearly in Dorn: “Truly the form which is the intellect of man is the beginning, middle, and end of the preparations, and this form is indicated by the yellow colour, which shows that man is the greater and principal form in the spagyric work, and one mightier than heaven.”¹¹⁴ Since the gold colour signifies intellect, the principal “informer” (formative agent) in the alchemical process, we may assume that the other three colours also denote psychological functions, just as the seven colours denote the seven astrological components of character. Consequently the synthesis of the four or seven colours would mean nothing less than the integration of the personality, the union of the four basic functions, which are customarily represented by the colour quaternio blue-red-yellow-green.¹¹⁵

[391] The *cauda pavonis* was a favourite theme for artistic representation in the old prints and manuscripts. It was not the tail alone that was depicted, but the whole bird. Since the peacock stands for “all colours” (i.e., the integration of all qualities), an illustration in Khunrath’s *Amphitheatrum sapientiae* logically shows it standing on the two heads of the Rebis, whose unity it obviously represents. The inscription calls it the “bird of Hermes” and the “blessed greenness,” both of which symbolize the Holy Ghost or the Ruach Elohim, which plays a great role in Khunrath.¹¹⁶ The *cauda pavonis* is also called the “soul of the world, nature, the quintessence, which causes all things to bring forth.”¹¹⁷ Here the peacock occupies the highest place as a symbol of the Holy Ghost, in whom the male-female polarity of the hermaphrodite and the Rebis is integrated.

[392] Elsewhere Khunrath says that at the hour of conjunction the blackness and the raven’s head and all the colours in the world will appear, “even Iris, the messenger of God, and the peacock’s tail.” He adds: “Mark the secrets of the rainbow in the Old and New Testament.”¹¹⁸ This is a reference to the sign of God’s covenant with Noah after the flood (Gen. 10 : 12f.) and to the “one in the midst of the four and twenty elders,” who “was to look upon like a jasper and a sardine-stone, and there was a rainbow round about the throne, in sight like unto an emerald” (Rev. 4 : 3f.),¹¹⁹ and to the vision of the angel with a rainbow on his head (Rev. 10 : 1).¹²⁰ Iris as the “messenger of God” is of special importance for an understanding of the opus, since the integration of all colours points, as it were, to a coming of God, or even to his presence.

[393] The colour green, stressed by Khunrath, is associated with Venus. The “Introitus apertus” says: “But in the gentle heat the mixture will liquefy and begin to swell up, and at God’s command will be endowed with spirit, which will soar upward carrying the stone with it, and will produce new colours, first of all the green of Venus, which will endure for a long time.”¹²¹ Towards the end of this procedure, which was known as the regimen of Venus, the colour changes into a livid purple, whereupon the philosophical tree will blossom. Then follows the regimen of Mars, “which displays the ephemeral colours of the rainbow and the peacock at their most glorious.” In “these days” the “hyacinthine colour”¹²² appears, i.e., blue.

[394] The livid purple that appears towards the end of the regimen of Venus has something deathly about it. This is in accord with the ecclesiastical view of purple, which expresses the “mystery of the Lord’s passion.”¹²³ Hence the regimen of Venus leads by implication to passion and death, a point I would emphasize in view of the reference to the “dart of passion” in the *Cantilena*. A passage from the “*Aquarium sapientum*” shows that colours are a means of expressing moral qualities and situations: “While the digestion¹²⁴ and coction of the dead spiritual body goes forward in man, there may be seen, as in the earthly opus, many variegated colours and signs, i.e., all manner of sufferings, afflictions, and tribulations, the chiefest of which . . . are the ceaseless assaults of the world, the flesh, and the devil.”¹²⁵

[395] These statements concerning the regimen of Venus are confirmed in Penotus’s Table of Symbols, where the peacock is correlated with the “mysterium coniugii” and with Venus, as is also the green lizard. Green is the colour of the Holy Ghost, of life, procreation and resurrection. I mention this because Penotus correlates the *coniugium* with the “*dii mortui*” (dead gods), presumably because they need resurrecting. The peacock is an ancient Christian symbol of resurrection, like the phoenix. According to a late alchemical text,¹²⁶ the bronze tablets in the labyrinth at Meroë showed Osiris, after his regeneration by Isis, mounting a chariot drawn by peacocks, in which he drives along triumphing in his resurrection, like the sun.

[396] In Dorn the “dead spiritual body” is the “bird without wings.” It “changes into the raven’s head and finally into the peacock’s tail, after which it attains to the whitest plumage of the swan and, last of all, to the highest redness, the sign of its fiery nature.”¹²⁷ This plainly alludes to the phoenix, which, like the peacock, plays a considerable role in alchemy as a symbol of renewal and resurrection,¹²⁸ and more especially as a synonym for the lapis.

[397] The *cauda pavonis* announces the end of the work, just as Iris, its synonym, is the messenger of God. The exquisite display of colours in the peacock’s fan heralds the imminent synthesis of all qualities and elements, which are united in the “rotundity” of the philosophical stone. For seventeen hundred years, as I have shown in

Psychology and Alchemy, the lapis was brought into more or less clear connection with the ancient idea of the Anthropos. In later centuries this relationship extended to Christ, who from time immemorial was this same Anthropos or Son of Man, appearing in the gospel of St. John as the cosmogonic Logos that existed before the world was: "In the beginning was the Word, and the Word was with God, and the Word was God . . . All things were made by him, and without him was not any thing made that was made." According to the teachings of the Basilidians, the "God who is not" cast down a certain seed which, like a grain of mustard-seed, contained the whole plant, or, "like a peacock's egg, had in itself a varied multitude of colours."¹²⁹ In this seed was a "threefold sonship, consubstantial with the God who is not." In alchemy, the end of the work announced by the *cauda pavonis* was the birth of the *filius regius*. The display of colours in the Basilidian doctrine therefore occurred at the right place. Again one must ask: tradition—or spontaneous generation?

[398] The peacock is an attribute of Juno, and one of the cognomens of Iris is Junonia. Just as the Queen Mother or the mother of the gods grants renewal, so the peacock annually renews his plumage, and therefore has a relation to all the changes in nature. De Gubernatis says:

The serene and starry sky and the shining sun are peacocks. The deep-blue firmament shining with a thousand brilliant eyes, and the sun rich with the colours of the rainbow, present the appearance of a peacock in all the splendour of its eye-bespangled feathers. When the sky or the thousand-rayed sun (*sahasrânśu*) is hidden by clouds, or veiled by autumnal mists, it again resembles the peacock, which, in the dark part of the year, like a great number of vividly coloured birds, sheds its beautiful plumage, and becomes drab and unadorned; the crow which had put on the peacock's feathers then caws with the other crows in funereal concert. In winter the peacock-crow has nothing left to it except its shrill disagreeable cry, which is not dissimilar to that of the crow. It is commonly said of the peacock that it has an angel's feathers, a devil's voice, and a thief's walk.¹³⁰

This would explain Dorn's connecting the peacock with the raven's head (*caput corvi*).

[399] Certain subsidiary meanings of the peacock in medieval literature are worth mentioning. Picinellus says that the peacock, contrasted with the sun, signifies the "righteous man, who, although adorned with the colours of a thousand virtues, yet has a share in the greater glory of the divine presence"; it also signifies the man who, "spotted by repeated sins, rises again to integrity of spirit." The peacock expresses the "inner beauty and perfection of the soul."¹³¹ Merula mentions that the peacock will empty and destroy a vessel containing poison,¹³² yet another peculiarity which may account for the peacock's position in alchemy, since it brings about and betokens

the transformation of the poisonous dragon into the healing medicine. Merula also asserts that the peahen does not introduce her young to their father until they are fully grown, from which Picinellus drew an analogy with the Blessed Virgin, who likewise presents her charges to God only in the perfect state. Here again the motif of renewal through the mother is struck.¹³³

[400] If, therefore, the Queen Mother eats peacock flesh during her pregnancy, she is assimilating an aspect of herself, namely, her capacity to grant rebirth, whose emblem the peacock is. According to Augustine, peacock flesh has the peculiarity of not turning rotten.¹³⁴ It is, as the alchemists would say, a “cibus immortalis,” like the fruits of the philosophical tree with which Arisleus and his companions were fed in the house of rebirth at the bottom of the sea. Peacock flesh was just the right food for the mother in her attempt to rejuvenate the old king and to give him immortality.

[401] While peacock flesh¹³⁵ was the queen’s diet, her drink was the blood of the green lion. Blood¹³⁶ is one of the best-known synonyms for the *aqua permanens*, and its use in alchemy is often based on the blood symbolism and allegories of the Church.¹³⁷ In the *Cantilena* the *imbibitio* (saturation)¹³⁸ of the “dead”¹³⁹ arcane substance is performed not on the king, as in the “Allegoria Merlini,” but on the queen. The displacement and overlapping of images are as great in alchemy as in mythology and folklore. As these archetypal images are produced directly by the unconscious, it is not surprising that they exhibit its contamination of content¹⁴⁰ to a very high degree. This is what makes it so difficult for us to understand alchemy. Here the dominant factor is not logic but the play of archetypal motifs, and although this is “illogical” in the formal sense, it nevertheless obeys natural laws which we are far from having explained. In this respect the Chinese are much in advance of us, as a thorough study of the *I Ching* will show. Called by short-sighted Westerners a “collection of ancient magic spells,” an opinion echoed by the modernized Chinese themselves, the *I Ching* is a formidable psychological system that endeavours to organize the play of archetypes, the “wondrous operations of nature,” into a certain pattern, so that a “reading” becomes possible. It was ever a sign of stupidity to depreciate something one does not understand.

[402] Displacement and overlapping of images would be quite impossible if there did not exist between them an essential similarity of substance, a homoousia. Father, mother, and son are of the same substance, and what is said of one is largely true of the other. This accounts for the variants of incest—between mother and son, brother and sister, father and daughter, etc. The uroboros is one even though in the twilight of the unconscious its head and tail appear as separate figures and are regarded as such. The alchemists, however, were sufficiently aware of the homoousia of their basic substances not only to call the two protagonists of the coniunctio drama the *one*

Mercurius, but to assert that the prima materia and the vessel were identical. Just as the *aqua permanens*, the moist soul-substance, comes from the body it is intended to dissolve, so the mother who dissolves her son in herself is none other than the feminine aspect of the father-son. This view current among the alchemists cannot be based on anything except the essential similarity of the substances, which were not chemical but psychic; and, as such, appurtenances not of consciousness, where they would be differentiated concepts, but of the unconscious, in whose increasing obscurity they merge together in larger and larger contaminations.

[403] If, then, we are told that the queen drank blood, this image corresponds in every respect to the king drinking water,¹⁴¹ to the king's bath in the trough of the oak, to the king drowning in the sea, to the act of baptism, to the passage through the Red Sea, and to the suckling of the child by the mother of the gods. The water and the containing vessel always signify the mother, the feminine principle best characterized by *yin*, just as in Chinese alchemy the king is characterized by *yang*.¹⁴²

[404] In alchemy the lion, the "royal" beast, is a synonym for Mercurius,¹⁴³ or, to be more accurate, for a stage in his transformation. He is the warm-blooded form of the devouring, predatory monster who first appears as the dragon. Usually the lion-form succeeds the dragon's death and eventual dismemberment. This in turn is followed by the eagle. The transformations described in Rosencreutz's *Chymical Wedding* give one a good idea of the transformations and symbols of Mercurius. Like him, the lion appears in dual form as lion and lioness,¹⁴⁴ or he is said to be Mercurius duplex.¹⁴⁵ The two lions are sometimes identified with the red and white sulphur.¹⁴⁶ The illustrations show a furious battle between the wingless lion (red sulphur) and the winged lioness (white sulphur). The two lions are prefigurations of the royal pair, hence they wear crowns. Evidently at this stage there is still a good deal of bickering between them, and this is precisely what the fiery lion is intended to express—the passionate emotionality that precedes the recognition of unconscious contents.¹⁴⁷ The quarrelling couple also represent the uroboros.¹⁴⁸ The lion thus signifies the arcane substance, described as *terra*,¹⁴⁹ the body or unclean body.¹⁵⁰ Further synonyms are the "desert place,"¹⁵¹ "poison, because it [this earth] is deadly," "tree, because it bears fruit," or "hidden matter [hyle], because it is the foundation of all nature and the substance [*subiectum*] of all elements."¹⁵² In apparent contradiction to this Maier cites from Ripley's "Tractatus duodecim portarum" the remark that the green lion is a "means of conjoining the tinctures between sun and moon."¹⁵³ It is, however, psychologically correct to say that emotion unites as much as it divides. Basilius Valentinus takes the lion as the arcane substance, calling it the trinity composed of Mercurius, Sal, and Sulphur, and the equivalent of draco, aquila, rex, spiritus, and corpus.¹⁵⁴ The "Gloria Mundi" calls the green lion the mineral stone that "consumes a

great quantity of its own spirit,”¹⁵⁵ meaning self-impregnation by one’s own soul (imbibitio, cibatio, nutritio, penetratio, etc.).¹⁵⁶

[405] Besides the green lion there was also, in the later Middle Ages, a red lion.¹⁵⁷ Both were Mercurius.¹⁵⁸ The fact that Artefius mentions a magic use of the lion (and of the snake) throws considerable light on our symbol: he is “good” for battle,¹⁵⁹ and here we may recall the fighting lions and the fact that the king in the “Allegoria Merlini” began drinking the water just when he was venturing forth to war. We shall probably not be wrong if we assume that the “king of beasts,” known even in Hellenistic times as a transformation stage of Helios,¹⁶⁰ represents the old king, the *Antiquus dierum* of the *Cantilena*, at a certain stage of renewal, and that perhaps in this way he acquired the singular title of “*Leo antiquus*.”¹⁶¹ At the same time he represents the king in his theriomorphic form, that is, as he appears in his unconscious state. The animal form emphasizes that the king is overpowered or overlaid by his animal side and consequently expresses himself only in animal reactions, which are nothing but emotions. Emotionality in the sense of uncontrollable affects is essentially bestial, for which reason people in this state can be approached only with the circumspection proper to the jungle,¹⁶² or else with the methods of the animal-trainer.

[406] According to the statements of the alchemists the king changes into his animal attribute, that is to say he returns to his animal nature, the psychic source of renewal. Wieland made use of this psychologem in his fairytale “*Der Stein der Weisen*,”¹⁶³ in which the dissipated King Mark is changed into an ass, though of course the conscious model for this was the transformation of Lucius into a golden ass in Apuleius.¹⁶⁴

[407] Hoghelande ranks the lion with the dog.¹⁶⁵ The lion has indeed something of the nature of the rabid dog we met with earlier, and this brings him into proximity with sulphur, the fiery dynamism of Sol. In the same way the lion is the “potency” of King Sol.¹⁶⁶

[408] The aggressive strength of the lion has, like sulphur, an evil aspect. In Honorius of Autun the lion is an allegory of Antichrist and the devil,¹⁶⁷ in accordance with I Peter 5 : 8: “... your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour.” But in so far as the lion and lioness are forerunners of the (incestuous) *coniunctio*, they come into the category of those theriomorphic pairs who spend their time fighting and copulating, e.g., cock and hen, the two serpents of the caduceus, the two dragons, etc. The lion has among other things an unmistakable erotic aspect. Thus the “*Introitus apertus*” says: “Learn what the doves of Diana are,¹⁶⁸ who conquer the lion with caresses; the green lion, I say, who in truth is the Babylonish dragon, who kills all with his venom. Learn, lastly, what the caduceus of Mercury is, wherewith he works miracles, and what are those nymphs whom he

holds enchanted, if thou wouldst fulfil thy wish” (i.e., the completion of the work).¹⁶⁹ The reference to the “Babylonish” dragon is not altogether accidental, since in ecclesiastical language “Babylon” is thoroughly ambiguous.¹⁷⁰ Nicholas Flamel likewise alludes to Babylon when he says that the stink and poisonous breath of burning mercury are nothing other than the “dragon’s head which goes forth with great haste from Babylon, which is surrounded by two or three milestones.”¹⁷¹

[409] In the “lion hunt” of Marchos¹⁷² the lion, as we have seen, takes the place of the king. Marchos prepares a trap and the lion, attracted by the sweet smell of a stone that is obviously an eye-charm,¹⁷³ falls into it and is swallowed by the magic stone. “And this stone, which the lion loves, is a woman.”¹⁷⁴ The trap was covered by a “glass roof,” and the interior, called by Senior the “*cucurbita*,” is here called the “*thalamus*” (bridal chamber). The lion therefore falls like a bridegroom into the bridal chamber, where the magic stone that is “good for the eyes” and is a woman, lies on a bed of coals. This stone swallows (*transglutit*) the lion “so that nothing more of him was to be seen.” This is a parallel of the Arisleus vision, where Beya causes Gabricus to disappear into her body.

[410] In the “lion hunt” the incest, though veiled, is clear enough. The love-affair is projected on the lion, the animal nature or “accrescent soul” of the king; in other words it is enacted in his unconscious or in a dream. Because of his ambiguous character the lion is well suited to take over the role of this indecorous lover. As the king is represented by his animal and his mother by the magic stone, the royal incest can take place as though it were happening somewhere “outside,” in quite another sphere than the personal world of the king and his mother. Indeed the marriage not only seems to be “unnatural” but is actually intended to be so. The tabooed incest is imposed as a task and, as the wealth of allegories shows, it is always in some symbolical form and never concrete. One has the impression that this “sacral” act, of whose incestuous nature the alchemists were by no means unconscious, was not so much banished by them into the *cucurbita* or glass-house but was taking place in it all the time. Whoever wished to commit this act in its true sense would therefore have to get outside himself as if into an external glasshouse, a round *cucurbita* which represented the microcosmic space of the psyche. A little reason would teach us that we do not need to get “outside ourselves” but merely a little deeper *into* ourselves to experience the reality of incest and much else besides, since in each of us slumbers the “beastlike” primitive who may be roused by the doves of Diana (n. 168). This would account for the widespread suspicion that nothing good can come out of the psyche. Undoubtedly the hierogamos of the substances is a projection of unconscious contents. These contents, it is usually concluded, therefore belong to the psyche and, like the psyche itself, are “inside” man, Q.E.D. As against this the fact remains that only a very few people are or ever were conscious of having any

incestuous fantasies worth mentioning. If such fantasies are present at all they are *not yet* conscious, like the collective unconscious in general. An analysis of dreams and other products of the unconscious is needed to make these fantasies visible. To that end considerable resistances have to be overcome, as though one were entering a strange territory, a region of the psyche to which one feels no longer related, let alone identical with it; and whoever has strayed into that territory, either out of negligence or by mistake, feels outside himself and a stranger in his own house. I think one should take cognizance of these facts and not attribute to our personal psyche everything that appears as a psychic content. After all, we would not do this with a bird that happened to fly through our field of vision. It may well be a prejudice to restrict the psyche to being “inside the body.” In so far as the psyche has a non-spatial aspect, there may be a psychic “outside-the-body,” a region so utterly different from “my” psychic space that one has to get outside oneself or make use of some auxiliary technique in order to get there. If this view is at all correct, the alchemical consummation of the royal marriage in the *cucurbita* could be understood as a synthetic process in the psyche “outside” the ego.¹⁷⁵

[411] As I have said, the fact that one can get into this territory somehow or other does not mean that it belongs to me personally. The ego is Here and Now, but the “outside-of-the-ego” is an alien There, both earlier and later, before and after.¹⁷⁶ So it is not surprising that the primitive mind senses the psyche outside the ego as an alien country, inhabited by the spirits of the dead. On a rather higher level it takes on the character of a shadowy semi-reality, and on the level of the ancient cultures the shadows of that land beyond have turned into ideas. In Gnostic-Christian circles these were developed into a dogmatic, hierarchically arranged cosmogonic and chiliastic system which appears to us moderns as an involuntary, symbolic statement of the psyche concerning the structure of the psychic non-ego.¹⁷⁷

[412] This region, if still seen as a spectral “land beyond,” appears to be a whole world in itself, a macrocosm. If, on the other hand, it is felt as “psychic” and “inside,” it seems like a microcosm of the smallest proportions, on a par with the race of dwarfs in the casket, described in Goethe’s poem “The New Melusine,” or like the interior of the *cucurbita* in which the alchemists beheld the creation of the world, the marriage of the royal pair, and the homunculus.¹⁷⁸ Just as in alchemical philosophy the Anthroparion or homunculus corresponds, as the lapis, to the Anthropos, so the chymical weddings have their dogmatic parallels in the marriage of the Lamb, the union of sponsus and sponsa, and the hierosgamos of the mother of the gods and the son.

[413] This apparent digression from our theme seemed to me necessary in order to give the reader some insight into the intricate and delicate nature of the lion-symbol,

whose further implications we must now proceed to discuss.

[414] The blood of the green lion drunk by the queen is handed to her in a “golden cup of Babylon.” This refers to the “great whore” in Rev. 17 : 1ff., “that sitteth upon many waters, with whom the kings of the earth have committed fornication, and the inhabitants of the earth have been made drunk with the wine of her fornication . . . having a golden cup in her hand full of abominations and filthiness of her fornication . . .”

[415] The whore (*meretrix*) is a well-known figure in alchemy. She characterizes the arcane substance in its initial, “chaotic,” maternal state. The “Introitus apertus” says that the chaos is like a mother of the metals. It is also called “our Luna” before the royal diadem is extracted from the “menstruum of our whore,”¹⁷⁹ i.e., before the king is reborn from the moon-mother. The “Tractatus aureus de lapide” says of the arcane substance: “That noble whore Venus¹⁸⁰ is clothed and enveloped in abounding colour.” This colour “has a reddish appearance.”¹⁸¹ The nobility of this Venus derives from the fact that she is also the queen, the “chaste bride” of the king.¹⁸² In his “Practica de lapide” Basilus Valentinus says: “This tincture is the rose¹⁸³ of our Masters, of Tyrian hue, called also the red blood of the dragon, described by many, and the purple cloak¹⁸⁴ . . . with which the queen is covered.”¹⁸⁵ A variant says: “That precious substance is the Venus of the ancients, the hermaphrodite, who has two sexes.”¹⁸⁶ Maier writes: “In our chemistry there is Venus and Cupid. For Psyche is the female, Cupid the male, who is held to be the dragon.”¹⁸⁷ The “opus ad rubeum” (reddening) takes place in the second house of Venus (Libra).¹⁸⁸ Accordingly the *Turba* remarks that Venus “precedes the sun.”¹⁸⁹ Flamel takes Venus as an important component of the arcane substance; in an apostrophe to the Magnesia he says: “Thou bearest within thee the many-formed image of Venus, the cupbearer and fire-spitting servant,”¹⁹⁰ the latter referring to the sulphurous aspect of Mercurius. Mercurius also plays the role of cup-bearer in the *Cantilena*. In Flamel the lapis is born of the conjunction of “Venus pugnax” (fighting Venus)¹⁹¹ and Mercurius—evidently a reference to the quarrelling that precedes their union (cf. the fighting lions). In Valentinus’s poem on the *prima materia lapidis* Venus is identified with the fountain, the mother and bride of the king, in which her “fixed” father is drowned:

A stone there is, and yet no stone,
In it doth Nature work alone.
From it there welleth forth a fount
In which her Sire, the Fixed, is drown’d:
His body and life absorbed therein
Until the soul’s restored agen.¹⁹²

[416] In other texts Venus represents the queen at the wedding, as in the “Introitus apertus”: “See to it that you prepare the couch of Venus carefully, then lay her on the marriage bed,” etc.¹⁹³ In general, Venus appears as the feminine aspect of the king, or as we should say, his anima. Thus Valentinus says of Adam and Venus in the bath:

So saith the Wise Man: Nought they be
Except the Double Mercurie!

The King in the bath and the *connubium* with Venus¹⁹⁴ or with the mother are the same thing: the “man encompassed by the woman.” Sometimes he and sometimes she is hermaphroditic,¹⁹⁵ because at bottom they are nothing other than Mercurius duplex. Venus or the whore corresponds to the erotic aspect of the lion, who in turn is an attribute of the king. As in the Apocalypse the seven-headed dragon is the riding-animal of the Great Whore, so in Valentinus the lion is the mount of Mercurius duplex (portrayed in his feminine aspect).¹⁹⁶ Khunrath equates Venus with the green lion.¹⁹⁷ Since Sulphur is to Sol as Leo is to Rex, we can see why Khunrath regards Venus as the *anima vegetativa* of sulphur.¹⁹⁸ The most subtle substance must, when mixed with Sol, be preserved in a bottle whose stopper is marked with the sign of the cross,¹⁹⁹ just as an evil spirit is banished by a crucifix.²⁰⁰ The relation of the stone to Venus occurs as early as the Greek texts, which speak of the “Cytherean stone” and the “pearl of Cythera.”²⁰¹ In the Arabic “Book of Krates”²⁰² Venus is endowed with tincturing power; she is therefore called “scribe.” Since she holds the vessel from which quicksilver continually flows, the word “écrivain” very probably refers to Thoth-Mercurius. In the vision of Krates Venus appears surrounded by a number of Indians who shoot arrows at him. This image occurs again in Senior’s vision of Hermes Trismegistus, at whom nine eagles shot their arrows. Mercurius is the archer who, chemically, dissolves the gold, and, morally, pierces the soul with the dart of passion. As Kyllenios he is identical with Cupid, who likewise shoots arrows in Rosencreutz’s *Chymical Wedding*.²⁰³

[417] The corrupt nature of Venus is stressed in “Rosinus ad Sarratantam”:

And mark that Nature in the beginning of her origin intends to make the Sun or the Moon, but cannot, because of Venus, [who is] a corrupt [and] mixed quicksilver, or because of the foetid earth. Wherefore, as a child in its mother’s womb accidentally contracts a weakness and a corruption by reason of the place, although the sperm was clean, [and] the child is nevertheless leprous and unclean because of the corrupt womb, so it is with all imperfect metals, which are corrupted by Venus and the foetid earth.²⁰⁴

[418] Lastly, I would mention the king’s daughter in the play in the *Chymical Wedding*, who was chosen as the bride but because of her coquetry was made captive by the

King of the Moors. She agrees to be his concubine, and thus proves herself a regular *meretrix*. Rosencreutz's visit to the sleeping Venus shows that this two-faced goddess is somehow secretly connected with the opus.²⁰⁵

[419] Evidently on account of its close connection with Venus the green lion has, surprisingly enough, rose-coloured blood, as mentioned by Dorn²⁰⁶ and by his contemporary, Khunrath.²⁰⁷ The latter ascribes rose-coloured blood to the *filius macrocosmi* as well.²⁰⁸ This peculiarity of the green lion's blood establishes its connection not only with the filius, a well-known Christ parallel, but above all with the rose, whose symbolism produced not only the popular title "Rosarium" (rose-garden) but also the "Rosen-creuz" (Rosie Cross). The white and the red rose²⁰⁹ are synonyms for the *albedo*²¹⁰ and *rubedo*. The tincture is "of a rosy colour" and corresponds to the blood of Christ, who is "compared and united" with the stone.²¹¹ He is the "heavenly foundation-stone and corner-stone."²¹² The rose-garden is a "garden enclosed" and, like the rose, a soubriquet of Mary, the parallel of the "locked" prima materia.²¹³

[420] The relation of the love-goddess to red dates back to ancient times.²¹⁴ Scarlet²¹⁵ is the colour of the Great Whore of Babylon and her beast. Red is the colour of sin.²¹⁶ The rose is also an attribute of Dionysus. Red and rose-red are the colour of blood, a synonym for the *aqua permanens* and the soul, which are extracted from the prima materia and bring "dead" bodies to life.²¹⁷ The prima materia is called "meretrix" and is equated with "Great Babylon," just as are the dragon and the lion with the dragon of "Babel." The stone, the *filius regius*, is the son of this whore. In ecclesiastical tradition the son of the whore is Antichrist, begotten by the devil, as we read in the "Elucidarium" of Honorius of Autun.²¹⁸

[421] Certain of the ecclesiastical symbols prove to be acutely dualistic, and this is also true of the rose. Above all it is an allegory of Mary and of various virtues. Its perfume is the odour of sanctity, as in the case of St. Elizabeth and St. Teresa. At the same time it symbolizes human beauty (*venustas*), indeed the lust of the world (*voluptas mundi*).²¹⁹

[422] Like the rose, the figure of the mother-beloved shines in all the hues of heavenly and earthly love. She is the chaste bride and whore who symbolizes the prima materia, which "nature left imperfected." It is clear from the material we have cited that this refers to the anima. She is that piece of chaos which is everywhere and yet hidden, she is that vessel of contradictions and many colours—a totality in the form of a *massa confusa*, yet a substance endowed with every quality in which the splendour of the hidden deity can be revealed.

[423] The food of the Queen Mother—peacock's flesh and lion's blood—consists of the goddess's own attributes, that is to say she eats and drinks herself. The

“Consilium coniugii” formulates this as follows: “And so at length it sinks down into one content through saturation with the one ferment, water, for water is the ferment of water.”²²⁰ It is always the same idea, which is best expressed by the uroboros. Unexpectedly but not surprisingly we come across a similar formulation in ecclesiastical literature, in the remark of St. John Chrysostom that Christ was the first to eat his own flesh and drink his own blood (at the institution of the Last Supper).²²¹ Tertullian says: “In the same way the Lord applied to himself two Greek letters, the first and the last, as figures of the beginning and end which are united in himself. For just as Alpha continues on until it reaches Omega, and Omega completes the cycle back again to Alpha, so he meant to show that in him is found the course of all things from the beginning to the end and from the end back to the beginning, so that every divine dispensation should end in him through whom it began.”²²² This thought corresponds exactly to what the alchemists sought to express by the uroboros, the *ὄφις τὸ πᾶν*. The uroboros is a very ancient pagan symbol, and we have no reason to suppose that the idea of a self-generating and self-devouring being was borrowed from Christianity, e.g., from Tertullian, although the analogy with Christ, who as the one God begets himself and voluntarily offers himself for sacrifice, and then in the rite of the Eucharist, through the words of the consecration, performs his own immolation, is very striking. The concept of the uroboros must be much older, and may ultimately go back to ancient Egyptian theology, to the doctrine of the homoousia of the Father-God with the divine son, Pharaoh.

[424] In the *Cantilena*, the mythologem of the uroboros is unexpectedly, and most unusually, translated into feminine form: it is not the father and son who merge into one another, but the mother who merges with her own substance, “eating her own tail” or “impregnating herself,” as the king in the “Allegoria Merlini” drank his “own” water.²²³ The queen is in a condition of psychic pregnancy: the anima has become activated and sends her contents into consciousness. These correspond to the peacock’s flesh and the lion’s blood. If the products of the anima (dreams, fantasies, visions, symptoms, chance ideas, etc.) are assimilated, digested, and integrated, this has a beneficial effect on the growth and development (“nourishment”) of the psyche. At the same time the *cibatio* and *imbibitio* of the anima-mother indicate the integration and completion of the entire personality. The anima becomes creative when the old king renews himself in her. Psychologically the king stands first of all for Sol, whom we have interpreted as consciousness. But over and above that he represents a dominant of consciousness, such as a generally accepted principle or a collective conviction or a traditional view. These systems and ruling ideas “age” and thereby forcibly bring about a “metamorphosis of the gods” as described in Spitteler’s *Olympian Spring*. It seldom occurs as a definite collective phenomenon. Mostly it is a change in the individual which may, under certain conditions, affect

society “when the time is fulfilled.” In the individual it only means that the ruling idea is in need of renewal and alteration if it is to deal adequately with the changed outer or inner conditions.

[425] The fact that the king played a large role in medieval alchemy for several hundred years proves that, from about the thirteenth century onwards, the traces of the king’s renewal surviving from Egyptian and Hellenistic times began to gain in importance because they had acquired a new meaning. For as the West started to investigate nature, till then completely unknown, the doctrine of the *lumen naturae* began to germinate too. Ecclesiastical doctrine and scholastic philosophy had both proved incapable of shedding any light on the nature of the physical world. The conjecture thereupon arose that just as the mind revealed its nature in the light of divine revelation, so nature herself must possess a “certain luminosity” which could become a source of enlightenment. It is therefore understandable that for those individuals whose particular interest lay in the investigation of natural things the dogmatic view of the world should lose its force as the *lumen naturae* gained in attraction, even though the dogma itself was not directly doubted. The more serious alchemists, if we are to believe their statements, were religious people who had no thought of criticizing revealed truth. There is in the literature of alchemy, so far as I can judge, no attack on dogma. The only thing of this kind is a depreciation of the Aristotelian philosophy sponsored by the Church in favour of Hermetic Neoplatonism.²²⁴ Not only were the old Masters not critical of ecclesiastical doctrine, they were, on the contrary, convinced that their discoveries, real or imaginary, would enrich the doctrine of the correspondence of heavenly and earthly things, since they endeavoured to prove that the “mystery of faith” was reflected in the world of nature.²²⁵ They could not guess that their passion for investigating nature would detract as much as it did from revealed truth, and that their scientific interests could be aroused only as the fascination of dogma began to pall. And so, as in dreams, there grew up in their unconscious the compensating image of the king’s renewal.

[426] These considerations make it the more comprehensible that it was a cleric who wrote the *Cantilena*. It is indeed something of a descent to the underworld when he makes Mercurius, “bearing the dart of passion,” the emblem of Cupid,²²⁶ hand the queen the blood-potion in a “golden cup of Babylon.” This, as we have seen, is the golden cup “full of the abomination and filthiness of fornication,” and it is quite obvious that she is being ruthlessly regaled with her own psychic substances. These are animal substances she has to integrate, the “accrescent soul”-peacock and lion with their positive and negative qualities; and the draught is given to her in the cup of fornication, which emphasizes still more the erotic nature of the lion, his lust and greed. Such an integration amounts to a widening of consciousness through profound insight.

[427] But why should such an unpalatable diet be prescribed for the queen? Obviously because the old king lacked something, on which account he grew senile: the dark, chthonic aspect of nature. And not only this but the sense that all creation was in the image of God, the antique feeling for nature, which in the Middle Ages was considered a false track and an aberration. Dark and unfathomable as the earth is, its theriomorphic symbols do not have only a reductive meaning, but one that is prospective and spiritual. They are paradoxical, pointing upwards and downwards at the same time. If contents like these are integrated in the queen, it means that her consciousness is widened in both directions. This diet will naturally benefit the regeneration of the king by supplying what was lacking before. Contrary to appearances, this is not *only* the darkness of the animal sphere, but rather a spiritual nature or a natural spirit which even has its analogies with the mystery of faith, as the alchemists were never tired of emphasizing.

[428] During her pregnancy, therefore, the queen undergoes something akin to a psychotherapeutic treatment, whereby her consciousness is enriched by a knowledge of the collective unconscious and, we may assume, by her inner participation in the conflict between her spiritual and chthonic nature. Often the law governing the progressive widening of consciousness makes the evaluation of the heights and depths into a moral task transcending the limits of convention. Failure to know what one is doing acts like guilt and must be paid for as dearly. The conflict may even turn out to be an advantage since, without it, there could be no reconciliation and no birth of a supraordinate third thing. The king could then be neither renewed nor reborn. The conflict is manifested in the long sickness of the queen.

[429]

Verse 18

Thus great with Child, nine months she languishèd
And Bath'd her with the Teares which she had shed
For his sweete sake, who from her should be Pluckt
Full-gorg'd with Milke which now the Greene-Lyon suckt.²²⁷

The uroboric relationship between queen and lion is quite evident here: she drinks his blood while he sucks her milk. This singular notion is explained by what we would consider an offensive identification of the queen with the mother of God, who, personifying humanity, takes God into her lap and suckles him at her breast. The lion, as an allegory of Christ, returns the gift by giving humanity his blood. This interpretation is confirmed in the later verses. Angelus Silesius makes use of a similar image in his epigram on the “humanized” God:

God drank the Virgin's milk, left us his wine;

[430]

Verse 19

Her Skin in divers Colours did appeare,
Now Black, then Greene, anon 'twas Red and Cleare.
Oft-times she would sit upright in her Bed,
And then again repose her Troubled Head.²²⁹

This display of colours is an indication of the queen's Venus and peacock nature (*cauda pavonis*). Psychologically it means that during the assimilation of the unconscious the personality passes through many transformations, which show it in different lights and are followed by ever-changing moods. These changes presage the coming birth.

[431]

Verse 20

Thrice Fifty Nights she lay in grievous Plight,
As many Daies in Mourning sate upright.
The King Revivèd was in Thirty more,
His Birth was Fragrant as the Prim-Rose Flower.²³⁰

[432] There are, in alchemy, two main kinds of smell, the "stench of graves" and the perfume of flowers, the latter being a symbol of resurgent life. In ecclesiastical allegory and in the lives of the saints a sweet smell is one of the manifestations of the Holy Ghost, as also in Gnosticism. In alchemy the Holy Ghost and Sapiientia are more or less identical; hence the smell of flowers attests that the rebirth of the king is a gift of the Holy Ghost or of Sapiientia, thanks to whom the regeneration process could take place.

[433]

Verses 21–24

Her Wombe which well proportion'd was at first
Is now Enlarg'd a Thousand fold at least,
That it bear Witnessse to his Genesis:
The End by Fires the best Approved is.

Her Chamber without Corners smoothly stands,
With Walls erected like her outstretched hands;
Or else the Fruit of her ripe Womb should spoil,
And a sicke Son reward her labouring Toil.

A burning Stove was plac'd beneath her Bed,

And on the same another Flourished:
Trimm'd up with Art, and very Temperate,
Lest her fine Limbes should freeze for lack of Heate.

Her Chamber doore was Lock'd and Bolted fast,
Admitting none to Vex her, first or last;
The Furnace-mouth was likewise Fasten'd so
That thence no Vaporous Matter forth could go.²³¹

This is the image of the homunculus in the Hermetic vessel!

[434]

Verse 25

And when the Child's Limbs there had putrefy'd,
The Foulness of the Flesh was laid aside,
Making her²³² fair as Luna, when anon
She coils towards²³³ the Splendour of the Sun.²³⁴

This is an attempt to describe the transformation in the sealed chamber. It is not clear whether the mother has already given birth to the child, and whether “there” (*ibi*) refers to the chamber or to the gravid uterus. The latter seems to me more probable in view of the next verse. Altogether verse 25 is obscure and clumsy in the extreme. The only thing to emerge with any clarity is the death and decomposition of the foetus in the uterus or in the chamber, and then the sudden appearance of Luna in the place of the mother after the “foulness of the flesh” had fallen away. Anyhow there is a tangle of thoughts here such as is frequently found in the texts. We must suppose that the poet meant something sensible with his apparent jumble of words, and that only his limited capacity for poetic expression prevented him from making himself intelligible. He was in fact trying to express a very difficult thought, namely the nature of the critical transformation. Chemically speaking, the “mother” overflowing with milk and tears is the solution, the “mother liquid” or matrix. She is the “water” in which the old king, as in the Arisleus vision, is dissolved into atoms. Here he is described as a *foetus in utero*. The dissolution signifies his death, and the uterus or *cucurbita* becomes his grave, that is, he disappears in the solution. At this moment something in the nature of a miracle occurs: the material solution loses its earthy heaviness, and solvent and solute together pass into a higher state immediately following the *cauda pavonis*, namely the *albedo*. This denotes the first stage of completion and is identified with Luna. Luna in herself is spirit, and she at once joins her husband Sol, thus initiating the second and usually final stage, the *rubedo*. With that the work is completed, and the lapis, a living being endowed with soul and spirit and an incorruptible body, has taken shape.

[435] We know that what hovered before the mind of the alchemist during this transformation was the almost daily miracle of transubstantiation at the Mass. This would very definitely have been the case with Canon Ripley. We have already seen from a number of examples how much religious conceptions were mixed up with his alchemical interests. The queen in the *Cantilena* is neither a wife nor mother in the first place but a “tutelary madonna” who adopts the king as her son—an indication that she stands in the same relationship to the king as Mater Ecclesia to the believer. He dies and is buried as if in the Church or in consecrated ground, where he awaits resurrection in a glorified body.

[436] The elevation of the “matrix,” the chemical solution, from the state of materiality to Luna is the classic allegory of the Church, as Ripley doubtless knew. The goddess who suddenly intervenes in the opus is depicted in the *Mutus liber*, where she appears equally suddenly during the procedure, as a naked female figure crowned with the sign of the moon and bearing a child in her arms. The miracle is there described as an intervention of the gods,²³⁵ who, like god-parents, take the place of the earthly parents and arrange for the spiritual procreation of the *foetus spagyricus*. It is inevitable that Luna should stand for the Virgin and/or the Church in the *Cantilena* because the *senex-puer* is described by Ripley himself as the “Ancient of Days.” Since the mother at this moment has brought about the histolysis of the old king, so that only a single homogeneous solution remains, we must assume that Luna, appearing in the place of the mother, has become identical with the solution and now carries the king in her body as her adopted son. This gives the king immortality in a divine and incorruptible body. In the *Mutus liber* there then follows an adoption by Sol and after that a *coniunctio Solis et Lunae*, and the adoptive child, now consubstantial with Sol and Luna, is included in the ceremony.

[437] Something of this sort seems to occur in the *Cantilena*: Luna and her adoptive son are at first identical in one and the Same solution. When Luna takes over this condition she is presumably in her novilunium and hastens to her union with Sol. The new moon is associated with uncanniness and snakiness, as we saw earlier.²³⁶ I therefore interpret “spirificans in splendorem Solis” as “winding like a snake into the radiance of the sun.” Woman is morally suspect in alchemy and seems closely akin to the serpent of paradise, and for this and other reasons Canon Ripley might easily think of the new moon’s approach to the sun as a “spiram facere.”²³⁷ It should not be forgotten that a learned alchemist of the fifteenth century would have a knowledge of symbols at least as great as our own in the present exposition (if you discount the psychology), and in some cases perhaps greater. (There are still numerous unpublished MSS. in existence to which I have had no access.)

Her time being come, the Child Conceiv'd before
Issues re-borne out of her Wombe once more;
And thereupon resumes a Kingly State,
Possessing fully Heaven's Propitious Fate.

The Mother's Bed which erstwhile was a Square
Is shortly after made Orbicular;
And everywhere the Cover, likewise Round
With Luna's Lustre brightly did abound.²³⁸

[439] The second strophe confirms that the entire solution has changed into Luna, and not only is *it* transformed, but the vessel containing the matrix. The “bed,” which before was a square, now becomes round like the full moon. The “cooperculum” (cover) points more to a vessel than a bed, and this cover shines like the moon. As the cover is obviously the top part of the vessel it indicates the place where the moon rises, that is, where the content of the vessel is sublimated. The squaring of the circle, a favourite synonym for the magistry, has been accomplished. Anything angular is imperfect and has to be superseded by the perfect, here represented by the circle.²³⁹ The mother is both content (mother liquid) and container, the two being often identified; for instance, the vessel is equated with the *aqua permanens*.²⁴⁰ The production of the round and perfect means that the son issuing from the mother has attained perfection, i.e., the king has attained eternal youth and his body has become incorruptible. As the square represents the quaternio of mutually hostile elements, the circle indicates their reduction to unity. The One born of the Four is the Quinta Essentia. I need not go into the psychology of this process here as I have done so already in *Psychology and Alchemy*.

[440] *Verse 28*

Thus from a Square, the Bed a Globe is made,
And Purest Whiteness from the Blackest Shade;
While from the Bed the Ruddy Son doth spring
To grasp the Joyful Sceptre of a King.²⁴¹

[441] Vessel and content and the mother herself, who contains the father, have become the son, who has risen up from “blackest shade” to the pure whiteness of Luna and attained his redness (*rubedo*) through the *solificatio*. In him all opposites are fused together.

[442] *Verse 29*

Hence God unlock'd the Gates of Paradise,
Rais'd him like Luna to th'Imperiall Place,

Sublim'd him to the Heavens, and that being done,
Crown'd him in Glory, aequall with the Sun.²⁴²

[443] Here Ripley describes the renewal of the king and the birth of the son as the manifestation of a new redeemer—which sounds very queer indeed in the mouth of a medieval ecclesiastic. The sublimation of Luna (“uti Luna”) to the “imperial place” is an unmistakable paraphrase on the one hand of the Assumption of the Virgin and on the other of the marriage of the bride, the Church. The unlocking of paradise means nothing less than the advent of God’s Kingdom on earth. The attributes of sun and moon make the *filius regius* into the rearsen Primordial Man, who is the cosmos. It would be wrong to minimize the importance of this jubilee or to declare it is nonsense. One cannot dismiss all the alchemists as insane. It seems to me more advisable to examine the motives that led a cleric, of all people, to postulate a divine revelation outside his credo. If the lapis were nothing but gold the alchemists would have been wealthy folk; if it were the panacea they would have had a remedy for all sickness; if it were the elixir they could have lived a thousand years or more. But all this would not oblige them to make religious statements about it. If nevertheless it is praised as the second coming of the Messiah one must assume that the alchemists really did mean something of the kind. Although they regarded the art as a charisma, a gift of the Holy Ghost or of the *Sapientia Dei*,²⁴³ it was still man’s work, and, even though a divine miracle was the decisive factor, the mysterious filius was still concocted artificially in a retort.

[444] In the face of all this one is driven to the conjecture that medieval alchemy, which evolved out of the Arabic tradition sometime in the thirteenth century, and whose most eloquent witness is the *Aurora consurgens*, was in the last resort a continuation of the doctrine of the Holy Ghost, which never came to very much in the Church.²⁴⁴ The Paraclete descends upon the single individual, who is thereby drawn into the Trinitarian process.²⁴⁵ And if the spirit of procreation and life indwells in man, then God can be born in him—a thought that has not perished since the time of Meister Eckhart.²⁴⁶ The verses of Angelus Silesius are in this respect quite unequivocal:

If by God’s Holy Ghost thou art beguiled,
There will be born in thee the Eternal Child.

If it’s like Mary, virginal and pure,
Then God will impregnate your soul for sure.

God make me pregnant, and his Spirit shadow me,
That God may rise up in my soul and shatter me.

What good does Gabriel’s ‘Ave, Mary’ do

[445] Here Angelus expresses as a religious and psychological experience what the alchemists experienced in and through matter, and what Ripley is describing in his tortuous allegory. The nature of this experience is sufficient to explain the rapt language of certain verses in the *Cantilena*. He was speaking of something greater than the effects of grace in the sacraments: God himself, through the Holy Ghost, enters the work of man, in the form of inspiration as well as by direct intervention in the miraculous transformation. In view of the fact that such a miracle never did occur in the retort, despite repeated assertions that someone had actually succeeded in making gold, and that neither a panacea nor an elixir has demonstrably prolonged a human life beyond its due, and that no homunculus has ever flown out of the furnace—in view of this totally negative result we must ask on what the enthusiasm and infatuation of the adepts could possibly have been based.

[446] In order to answer this difficult question one must bear in mind that the alchemists, guided by their keenness for research, were in fact on a hopeful path since the fruit that alchemy bore after centuries of endeavour was chemistry and its staggering discoveries. The emotional dynamism of alchemy is largely explained by a premonition of these then-unheard-of possibilities. However barren of useful or even enlightening results its labours were, these efforts, notwithstanding their chronic failure, seem to have had a psychic effect of a positive nature, something akin to satisfaction or even a perceptible increase in wisdom. Otherwise it would be impossible to explain why the alchemists did not turn away in disgust from their almost invariably futile projects. Not that such disillusionments never came to them; indeed the futility of alchemy brought it into increasing disrepute. There remain, nevertheless, a number of witnesses who make it quite clear that their hopeless fumbling, inept as it was from the chemical standpoint, presents a very different appearance when seen from a psychological angle. As I have shown in *Psychology and Alchemy*, there occurred during the chemical procedure psychic projections which brought unconscious contents to light, often in the form of vivid visions. The medical psychologist knows today that such projections may be of the greatest therapeutic value. It was not for nothing that the old Masters identified their *nigredo* with melancholia and extolled the opus as the sovereign remedy for all “afflictions of the soul”; for they had discovered, as was only to be expected, that though their purses shrank their soul gained in stature—provided of course that they survived certain by no means inconsiderable psychic dangers. The projections of the alchemists were nothing other than unconscious contents appearing in matter, the same contents that modern psychotherapy makes conscious by the method of active imagination before they unconsciously change into projections. Making them conscious and giving form to what is unformed has a specific effect in cases where

the conscious attitude offers an overcrowded unconscious no possible means of expressing itself. In these circumstances the unconscious has, as it were, no alternative but to generate projections and neurotic symptoms. The conscious milieu of the Middle Ages provided no adequate outlet for these things. The immense world of natural science lay folded in the bud, as also did that questing religious spirit which we meet in many of the alchemical treatises and which, we may well conjecture, was closely akin to the empiricism of scientific research.

[447] Perhaps the most eloquent witness to this spirit was Meister Eckhart, with his idea of the birth of the son in human individuals and the resultant affiliation of man to God.²⁴⁸ Part of this spirit was realized in Protestantism, another part was intuited by the mystics who succeeded Boehme, in particular by Angelus Silesius, who quite literally “perished in the work.” He advanced even beyond Protestantism to an attitude of mind that would have needed the support of Indian or Chinese philosophy and would therefore not have been possible until the end of the nineteenth century at the earliest. In his own age Angelus could only wither away unrecognized, and this was the tragedy that befell him. A third part took shape in the empirical sciences that developed independently of all authority, and a fourth appropriated to itself the religious philosophies of the East and transplanted them with varying degrees of skill and taste in the West.

[448] No thinking person will wish to claim that the present state of affairs represents a durable end-state. On the contrary, everyone is convinced that the tempo of change and transition has speeded up immeasurably. Everything has become fragmented and dissolved, and it is impossible to see how a “higher” synthesis could take place in any of the spiritual organizations that still survive without their having to be modified to an almost intolerable degree. One of the greatest obstacles to such a synthesis is sectarianism, which is always right and displays no tolerance, picking and fomenting quarrels for the holiest of reasons in order to set itself up in the place of religion and brand anyone who thinks differently as a lost sheep, if nothing worse. But have any human beings the right to totalitarian claims? This claim, certainly, is so morally dangerous that we would do better to leave its fulfilment to Almighty God rather than presume to be little gods ourselves at the expense of our fellow-men.

[449] *Verse 30*

Four Elements, Brave Armes, and Polish'd well
God gave him, in the midst whereof did dwell
The Crownèd Maid, ordainèd for to be
In the Fifth Circle of the Myserie.²⁴⁹

[450] To the regenerated king, now endowed with the qualities of the cosmic Anthropos, God gives the four elements as the weapons with which he shall conquer the world. It is a figure that reminds us of the Manichaeon “First Man,” who, armed with the five elements, came down to fight against the darkness.²⁵⁰ The elements are evidently conceived as circles, for the Quinta Essentia, the “Maid,” appears in the fifth. The circular representation of the elements was well known in medieval alchemy.²⁵¹ The Maid is “crowned” (*redimita*), and in her we recognize the crowned Virgin, the Queen of Heaven, who recalls the old pictures of the *anima media natura*

or *anima mundi*. She is the divine life indwelling in the world, or the pneuma that moved over the waters, implanted its seed in them, and so was held captive in the body of Creation. The *anima mundi* is the feminine half of Mercurius.²⁵²

[451] In the *Cantilena* the Maid is the rejuvenated Queen Mother who now appears as the bride. Her redemption is achieved through the long sufferings of the mother, i.e., through the pains of the opus, which are compared to the Passion.²⁵³

[452] The establishment of the Maid in the fifth circle is an indication that the quintessence, portraying the disharmonious elements as a unity, is equivalent to aether, the finest and most subtle substance. She therefore participates in the world of the spirit and at the same time represents the material, sublunary world. Her position corresponds on the one hand to that of Luna and on the other to that of the Blessed Virgin.

[453]

Verses 31–35

With all delicious Unguent flowèd she
When Purg'd from Bloody Menstruosity:
On every side her Count'nance Brightly shone,
She being Adorn'd with every Precious Stone.

A Lyon Greene did in her Lapp reside
(The which an Eagle²⁵⁴ fed), and from his side
The Blood gush'd out: The Virgin drunck it upp,
While Mercuries Hand did th'Office of a Cupp.

The wondrous Milk she hasten'd from her Breast,
Bestow'd it frankly on the Hungry Beast,
And with a Sponge his Furry Face she dry'd
Which her own Milk had often Madefy'd.

Upon her Head a Diadem she did weare,
With fiery Feet sh'Advanced into the Aire;
And glittering Bravelly in her Golden Robes
She took her Place amidst the Starry Globes.

The Dark Clouds being Dispers'd, so sate she there,
And woven to a Network in her Haire
Were Planets, Times, and Signes, the while the King
With his Glad Eyes was her Beleagering.²⁵⁵

[454] Here the apotheosis of the Queen is described in a way that instantly reminds us of its prototype, the coronation of the Virgin Mary. The picture is complicated by the images of the Pietà on the one hand and the mother, giving the child her breast, on the other. As is normally the case only in dreams, several images of the Mother of God have contaminated one another, as have also the allegories of Christ as child and lion, the latter representing the body of the Crucified with the blood flowing from his side. As in dreams, the symbolism with its grotesque condensations and overlappings of contradictory contents shows no regard for our aesthetic and religious feelings; it is as though trinkets made of different metals were being melted in a crucible and their contours flowed into one another. The images have lost their pristine force, their clarity and meaning. In dreams it often happens—to our horror—that our most cherished convictions and values are subjected to just this iconoclastic mutilation. It also happens in the psychoses, when the patients sometimes come out with the most appalling blasphemies and hideous distortions of religious ideas. We find the same thing in “belles” lettres—I need only mention Joyce’s *Ulysses*, a book which E. R. Curtius has not unjustly described as a work of Antichrist.²⁵⁶ But such products spring more from the spirit of the age than from the perverse inventive gifts of the author. In our time we must expect “prophets” like James Joyce. A similar spirit prevailed at the time of the Renaissance, one of its most striking manifestations being the *Hexastichon* of Sebastian Brant.²⁵⁷ The illustrations in this little book are freakish beyond belief. The main figure in each is an evangelical symbol, for instance the eagle of St. John, and round it and on it are allegories and emblems of the principal events, miracles, parables, etc., in the gospel in question. These creations may be compared with the fantasies of George Ripley, for neither author had any inkling of the dubious nature of what he was doing. Yet in spite of their dreamlike quality these products seem to have been constructed with deliberate intent. Brant even numbered the main components of his pictures according to the chapters of the Gospel, and again in Ripley’s paraphrase of the sacred legend each item can easily be enucleated from its context. Brant thought of his pictures as mnemotechnical exercises that would help the reader to recall the contents of the gospels, whereas in fact their diabolical freakishness stamps itself on the mind far more than the recollection, say, that John 2 coincides with the marriage at Cana. The image of the Virgin with the wounded lion in her lap has the same kind of unholy fascination, precisely because it deviates so strangely from the official image to which we are accustomed.

[455] I have compared the tendency to fantastic distortion to a melting down of images, but this gives the impression that it is an essentially destructive process. In reality—and this is especially so in alchemy—it is a process of assimilation between revealed truth and knowledge of nature. I will not attempt to investigate what the unconscious motives were that animated Sebastian Brant, and I need say nothing more about

James Joyce here, as I have discussed this question in my essay “Ulysses: A Monologue.” These melting processes all express a relativization of the dominants of consciousness prevailing in a given age. For those who identify with the dominants or are absolutely dependent on them the melting process appears as a hostile, destructive attack which should be resisted with all one’s powers. Others, for whom the dominants no longer mean what they purport to be, see the melting as a longed-for regeneration and enrichment of a system of ideas that has lost its vitality and freshness and is already obsolete. The melting process is therefore either something very bad or something highly desirable, according to the standpoint of the observer.²⁵⁸

[456] In the latter category we must distinguish two kinds of alchemists: those who believed that the revealed truth represented by the Church could derive nothing but gain if it were combined with a knowledge of the God in nature; and those for whom the projection of the Christian mystery of faith into the physical world invested nature with a mystical significance, whose mysterious light outshone the splendid incomprehensibilities of Church ceremonial. The first group hoped for a rebirth of dogma, the second for a new incarnation of it and its transformation into a natural revelation.

[457] I lay particular stress on the phenomena of assimilation in alchemy because they are, in a sense, a prelude to the modern approximation between empirical psychology and Christian dogma—an approximation which Nietzsche clearly foresaw. Psychology, as a science, observes religious ideas from the standpoint of their psychic phenomenology without intruding on their theological content. It puts the dogmatic images into the category of psychic contents, because this constitutes its field of research. It is compelled to do so by the nature of the psyche itself; it does not, like alchemy, try to explain psychic processes in theological terms, but rather to illuminate the darkness of religious images by relating them to similar images in the psyche. The result is a kind of amalgamation of ideas of—so it would seem—the most varied provenience, and this sometimes leads to parallels and comparisons which to an uncritical mind unacquainted with the epistemological method may seem like a devaluation or a false interpretation. If this were to be construed as an objection to psychology one could easily say the same thing about the hermeneutics of the Church Fathers, which are often very risky indeed, or about the dubious nature of textual criticism. The psychologist has to investigate religious symbols because his empirical material, of which the theologian usually knows nothing, compels him to do so. Presumably no one would wish to hand over the chemistry of albuminous bodies to some other department of science on the ground that they are organic and that the investigation of life is a matter for the biologist. A rapprochement between empirical science and religious experience would in my opinion be fruitful for both. Harm can result only if one side or the other remains unconscious of the limitations

of its claim to validity. Alchemy, certainly, cannot be defended against the charge of unconsciousness. It is and remains a puzzle whether Ripley ever reflected on his theological enormities and what he thought about them. From a scientific point of view, his mentality resembles that of a dream-state.

[458] The coronation of the Virgin and the heavenly marriage bring us to the final strophes of the *Cantilena*.

[459] *Verses 36–3*

Thus He of all Triumphant Kings is Chiefe,
Of Bodies sicke the only Grand Reliefe:
Such a Reformist of Defects, that hee
Is worshipp'd both by King and Commonalty.

To Princes, Priests he yields an Ornament,
The Sicke and Needy Sort he doth content:
What man is there this Potion will not bless,
As banishes all thought of Neediness?²⁵⁹

[460] This is the apotheosis of the *filius regius*, as we find it in numerous treatises. Thus the “Tractatus aureus”²⁶⁰ says: “The king comes forth from the fire and rejoices in the marriage. The son is become a warrior of the fire and surpasses the tinctures, for he himself is the treasure and himself is attired in the philosophic matter. Come hither, ye sons of wisdom, let us be glad and rejoice, for the dominion of death is over, and the son reigns; he is clothed with the red garment, and the purple is put on.” The reborn king is the “wonder of the world,” “an exceeding pure spirit”;²⁶¹ he is, the “Aquarium sapientum” assures us, “the most elect, the most subtile, the purest, and noblest of all the heavenly spirits, to whom all the Test yield obedience as to their King, who bestows on men all health and prosperity, heals all sickness, gives to the God-fearing temporal honour and long life, but to the wicked who abused him, eternal punishment. . . . In sum, they have designated him the chief of all things under heaven, and the marvellous end and epilogue of all philosophic works. Hence some devout philosophers of old have affirmed that he was divinely revealed to Adam, the first man, and thereafter was awaited with peculiar longing by all the holy Patriarchs.”²⁶² “The Almighty,” remarks the “Introitus,” “has made him known by a most notable sign, whose birth²⁶³ is declared throughout the East on the horizon of his hemisphere. The wise Magi saw it at the beginning of the era, and were astonished, and straightway they knew that the most serene King was born in the world. Do you, when you see his star, follow it to the cradle, and there you shall behold the fair infant. Cast aside your defilements, honour the royal child, open your treasure, offer a

gift of gold; and after death he will give you flesh and blood, the supreme Medicine in the three monarchies of the earth.”²⁶⁴ The clothing of the elixir with the “kingly garment” is also found in the *Turba*.²⁶⁵ The “Consilium coniugii” describes the king as “descending from heaven.”²⁶⁶ Mylius says of King Sol that “Phoebus with shining hair of gold sits in the midst, like a king and emperor of the world, grasping the sceptre and the helm.” In him are “all the powers of heaven.”²⁶⁷ In another place he cites the following quotation: “And at last the king will go forth crowned with his diadem, radiant as the sun, bright as the carbuncle.”²⁶⁸ Khunrath speaks of the “wondrous natural triune Son of the Great World,” whom the sages name “their Son and crowned King, artificially hatched from the egg of the world.”²⁶⁹ Elsewhere he says of the *filius Mundi Maioris*:

The Son of the great World [Macrocosm] who is Theocosmos, i.e., a divine power and world (but whom even today, unfortunately, many who teach nature in a pagan spirit and many builders of medical science reject in the high university schools), is the exemplar of the stone which is Theanthropos, i.e., God and man (whom, as Scripture tells us, the builders of the Church have also rejected); and from the same, in and from the Great World Book of Nature, [there issues] a continuous and everlasting doctrine for the wise and their children: indeed, it is a splendid living likeness of our Saviour Jesus Christ, in and from the Great World which by nature is very similar to him (as to miraculous conception, birth, inexpressible powers, virtues, and effects); so God our Lord, besides his Son’s Biblical histories, has also created a specific image and natural representation for us in the Book of Nature.²⁷⁰

[461] These few examples, together with those already quoted in *Psychology and Alchemy*, may give the reader some idea of the way in which the alchemists conceived the triumphant king.

[462]

Verse 38

Wherefore, O God, graunt us a Peece of This,²⁷¹
That through the Encrease²⁷² of its own Species
The Art may be Renew’d, and Mortal Men
Enjoy for aye its Thrice-Sweet Fruits. AMEN.²⁷³

[463] Here ends the *Cantilena*, one of the most perfect parables of the renewal of the king. It does not, of course, compare with the much more elaborate development of the myth in Christian Rosencreutz. (His *Chymical Wedding* is so rich in content that I could touch on it only lightly here.) The latter part of *Faust II* likewise contains the same motif of the transformation of the old man into a boy, together with all the necessary indicia of the heavenly marriage. This theme, too, as in alchemy, runs through the whole of *Faust* and repeats itself on three different levels (Gretchen,

Helen, Queen of Heaven), just as the king's renewal takes a form that was destined to fail three times before Faust's death (the Boy Charioteer, the Homunculus, and Euphorion).

5. THE DARK SIDE OF THE KING

[464] Besides the *Cantilena*, there are various other descriptions²⁷⁴ of the king's renewal, enriched with numerous details, which I will not discuss here so as not to overburden this chapter. The material we have adduced may suffice to illustrate the essential features of the transformation process. Nevertheless, the myth of the king's renewal has so many ramifications that our exposition so far does not cover the entire range of the symbol. In this section, therefore, I shall try to shed a little more light on the critical phase of the *nigredo*, the phase of decay and death.

[465] The king's decline, as we saw, was due to imperfection or sickness. In the *Cantilena* his sickness was sterility. The figure of the sterile king may perhaps come from the "Arisleus Vision,"²⁷⁵ where the King of the Sea rules over an unfruitful country, although he himself is not sterile. Usually the king is connected in some way with the world of darkness. Thus, in the "Introitus," he is at first the "secret, infernal fire,"²⁷⁶ but as the reborn *puellus regius* (kingly boy) he is an allegory of Christ. In Michael Maier the king is dead and yet imprisoned alive in the depths of the sea, whence he calls for help.²⁷⁷ The following story of the king is from Trismosin's *Splendor solis*:

The old Philosophers declared they saw a Fog rise, and pass over the whole face of the earth, they also saw the impetuosity of the Sea, and the streams over the face of the earth, and how these same became foul and stinking in the darkness. They further saw the king of the Earth sink, and heard him cry out with eager voice,²⁷⁸ "Whoever saves me shall live and reign with me for ever in my brightness on my royal throne," and Night enveloped all things. The day after, they saw over the King an apparent Morning Star, and the light of Day clear up the darkness, and bright Sunlight pierce through the clouds, with manifold coloured rays of brilliant brightness, and a sweet perfume from the earth, and the Sun shining clear. Herewith was completed the Time when the King of the Earth was released and renewed, well apparelled, and quite handsome, surprising with his beauty the Sun and Moon. He was crowned with three costly crowns, the one of Iron, the other of Silver, and the third of pure Gold. They saw in his right hand a Sceptre with Seven Stars, all of which gave a golden Splendour [etc., etc.].²⁷⁹

[466] The seven stars are a reference to Rev. 1 : 16: "And he had in his right hand seven stars." He who held them was "like unto the Son of man," in agreement with the *puellus regius* in the "Introitus." The king sinking in the sea is the arcane substance, which Maier calls the "antimony of the philosophers."²⁸⁰ The arcane substance corresponds to the Christian dominant, which was originally alive and present in consciousness but then sank into the unconscious and must now be restored in renewed form. Antimony is associated with blackness: antimony trisulphide is a widely used Oriental hair-dye (*kohl*). On the other hand antimony pentasulphide, "gold-sulphur" (*Sulphur auratum antimonii*) is orange-red.

[467] The sunken king of alchemy went on living as the "metal king," the "regulus" of metallurgy. This is the name for the lumps of metal formed beneath the slag in melting and reducing ores. The term *Sulphur auratum antimonii*, like gold-sulphur, indicates the strong predominance of sulphur in combination with antimony. Sulphur, as we have seen, is the active substance of Sol and is foul-smelling: sulphur dioxide and sulphuretted hydrogen give one a good idea of the stink of hell. Sulphur is an

attribute of Sol as Leo is of Rex. Leo, too, is ambiguous: on the one hand he is an allegory of the devil and on the other is connected with Venus. The antimony compounds known to the alchemists (Sb_2S_5 , Sb_2S_3) therefore contained a substance which clearly exemplified the nature of Rex and Leo, hence they spoke of the “triumph of antimony.”²⁸¹

[468] As I have shown in *Psychology and Alchemy*,²⁸² the sunken king forms a parallel to Parable VII of *Aurora Consurgens*:^{282a} Be turned to me with all your heart and do not cast me aside because I am black and swarthy, because the sun hath changed my colour and the waters have covered my face and the land hath been polluted and defiled in my works; for there was darkness over it, because I stick fast in the mire of the deep and my substance is not disclosed. Wherefore out of the depths have I cried, and from the abyss of the earth with my voice to all you that pass by the way. Attend and see me, if any shall find one like unto me, I will give into his hand the morning star.

[469] The “mire of the deep” refers to Psalm 68 : 3 (Vulgate) : “Infixus sum in limo profundi et non est substantia” (AV 69 : 2: “I sink in deep mire, where there is no standing”). David’s words are interpreted by Epiphanius²⁸³ as follows: there is a material which consists of “miry reflections” and “muddy thoughts of sin.” But of Psalm 130 : 1: “Out of the depths have I cried to thee, O Lord,” he gives the following interpretation: “After the saints are so graced that the Holy Ghost dwells within them, he gives them, after having made his habitation in the saints, the gift to look into the deep things of God, that they may praise him from the depths, as also David declares: ‘Out of the depths,’ he says, ‘have I cried to thee, O Lord.’”²⁸⁴

[470] These contradictory interpretations of the “depths” (*profunda*) come much closer together in alchemy, often so close that they seem to be nothing more than two different aspects of the same thing. It is natural that in alchemy the depths should mean now one and now the other, to the despair of all lovers of consistency. But the eternal images are far from consistent in meaning. It is characteristic of the alchemists that they never lost sight of this polarity, thereby compensating the world of dogma, which, in order to avoid ambiguity, emphasizes the one pole to the exclusion of the other. The tendency to separate the opposites as much as possible and to strive for singleness of meaning is absolutely necessary for clarity of consciousness, since discrimination is of its essence. But when the separation is carried so far that the complementary opposite is lost sight of, and the blackness of the whiteness, the evil of the good, the depth of the heights, and so on, is no longer seen, the result is one-sidedness, which is then compensated from the unconscious without our help. The counterbalancing is even done against our will, which in consequence must become more and more fanatical until it brings about a

catastrophic enantiodromia. Wisdom never forgets that all things have two sides, and it would also know how to avoid such calamities if ever it had any power. But power is never found in the seat of wisdom; it is always the focus of mass interests and is therefore inevitably associated with the illimitable folly of the mass man.

[471] With increasing one-sidedness the power of the king decays, for originally it had consisted just in his ability to unite the polarity of all existence in a symbol. The more distinctly an idea emerges and the more consciousness gains in clarity, the more monarchic becomes its content, to which everything contradictory has to submit. This extreme state has to be reached, despite the fact that the climax always presages the end. Man's own nature, the unconscious, immediately tries to compensate, and this is distasteful to the extreme state, which always considers itself ideal and is moreover in a position to prove its excellence with the most cogent arguments. We cannot but admit that it is ideal, but for all that it is imperfect because it expresses only one half of life. Life wants not only the clear but also the muddy, not only the bright but also the dark; it wants all days to be followed by nights, and wisdom herself to celebrate her carnival, of which indeed there are not a few traces in alchemy. For these reasons, too, the king constantly needs the renewal that begins with a descent into his own darkness, an immersion in his own depths, and with a reminder that he is related by blood to his adversary.

[472] According to the *Ancoratus* of Epiphanius, the phoenix emerges from his ashes first in the form of a worm:

When the bird is dead, indeed utterly consumed, and the flames are extinguished, there are left only the crude remnants of the flesh. From this there comes forth in one day an unseemly worm, which puts on wings and becomes as new; but on the third day it matures, and after growing to full stature with the aid of the medicines found in that place, it shows itself, and hastens upward once more to its own country, and there rests.²⁸⁵

So, too, the king rises from his "infernal fire" as a crowned dragon.²⁸⁶ He is the Mercurial serpent, which is especially connected with evil-smelling places ("it is found on the dunghills").²⁸⁷ The fact that the passage in the *Ancoratus* stresses the "one day" may perhaps throw some light on the apparently unique reference in Khunrath's *Amphitheatrum* to the "filius unius (SVI) diei"²⁸⁸ as a designation for the "Hermaphrodite of nature," i.e., the arcane substance. He is there synonymous with "Saturn,"²⁸⁹ the ambisexual Philosophic Man of the philosophers, the lead of the sages, the Philosophic World-Egg . . . the greatest wonder of the world, the Lion, green and red . . . A lily among thorns."²⁹⁰

[473] As we have seen, the *filius regius* is identical with Mercurius and at this particular stage also with the Mercurial serpent. This stage is indicated in Khunrath

by Saturn, the dark, cold *maleficus*; by the world-egg, obviously signifying the initial state, and finally by the green and red lion, representing the animal soul of the king. All this is expressed by the dragon or serpent as the *summa summarum*. The dragon as the lowest and most inchoate form of the king is, we are constantly told, at first a deadly poison but later the alexipharmic itself.

[474] In the myth of the phoenix as reported by Pliny we again meet the worm: "... from its bones and marrow is born first a sort of maggot, and this grows into a chicken."²⁹¹ This version is repeated in Clement of Rome,²⁹² Artemidorus,²⁹³ Cyril of Jerusalem,²⁹⁴ St. Ambrose,²⁹⁵ and Cardan.²⁹⁶ In order to understand the phoenix myth it is important to know that in Christian hermeneutics the phoenix is made an allegory of Christ, which amounts to a reinterpretation of the myth.²⁹⁷ The self-burning of the phoenix corresponds to Christ's self-sacrifice, the ashes to his buried body, and the miraculous renewal to his resurrection.²⁹⁸ According to Horapollo (4th cent.), whose views were taken over by later writers,²⁹⁹ the phoenix signifies the soul and its journey to the land of rebirth.³⁰⁰ It stands for the "long-lasting restitution of things" (*ἀποκατάστασιν πολυχρόνιον*); indeed, it is renewal itself.³⁰¹ The idea of apocatastasis or restitution (Acts 3 : 21) and re-establishment in Christ (Ephesians 1 : 10, DV)³⁰² may well have helped the assimilation of the phoenix allegory, quite apart from the main motif of renewal.

[475] Khunrath's insertion of the word "SVI," in capital letters, after "unius" plainly indicates that he was referring to something divine. This can only be some analogy of God or Christ. Nowhere else in the alchemical texts is this "one" day mentioned, except for an occasional remark that by the special grace of God the opus could be completed in one day. Khunrath's "SVI" seems to refer rather to God, in the sense that the *filius regius* is born on "His" day, the day that belongs to God or is chosen by him. Since the phoenix is mainly an allegory of resurrection, this one day of birth and renewal must be one of the three days of Christ's burial and descent into hell. But there is nothing about this one day in Christian dogma, unless Khunrath, who had a speculative mind, was anticipating the arguments of certain Protestant dogmaticians who, following Luke 23 : 43,³⁰³ propounded the theory that after his death Christ did not immediately descend into hell (as in Catholic dogma), but remained in paradise until Easter morning. And just as there was an earthquake at the moment when Christ's soul separated from his body in death, so there was another earthquake on Easter morning (Matthew 28 : 2). During this earthquake Christ's soul was reunited with his body,³⁰⁴ and only then did he descend into hell to "preach to the spirits in prison" (I Peter 3 : 19). Meanwhile the angel at the tomb appeared in his place and spoke to the women. The descent into hell is supposed to be limited to this short space of time.³⁰⁵

[476] On this view the “one day” would be Easter Day. In alchemy the uniting of the soul with the body is the miracle of the coniunctio, by which the lapis becomes a living body. The phoenix signifies precisely this moment.³⁰⁶ The alchemical transformation was often compared to the rising of the sun. But apart from the fact that there is not the slightest ground for supposing that such speculations ever entered Khunrath’s head, the Easter morning hypothesis does not seem very satisfactory. The special element of the *worm* is missing, which Epiphanius stresses in connection with the one day. It seems as though this element should not be overlooked in explaining the *filius unius diei*. The one day probably refers to Genesis 1:5: “And there was evening and there was morning, one day” (RSV).³⁰⁷ This was after the separation of light from darkness (or the creation of light), and here it should be remembered that darkness precedes the light and is its mother.³⁰⁸ The son of this one day is the Light, the Logos (John 1:5), who is the Johannine Christ.³⁰⁹ So interpreted, the son of one day immediately becomes related to the “Hermaphrodite of nature,”³¹⁰ the Philosophic Man, and to Saturn, the tempter and oppressor,³¹¹ who, as Ialdabaoth and the highest archon, is correlated with the lion. All these figures are synonyms for Mercurius.

[477] There is a didactic poem, *Sopra la composizione della pietra dei Philosophic* by Fra Marcantonio Crasselame, which was published in a work significantly entitled *La Lumière sortant par soi-mesme des Ténèbres*.³¹² As the title shows, this is not the light that was created by the Logos, but a spontaneous, self-begotten light. The poem begins with the creation of the world and declares that the Word created chaos:

At the Omnipotent’s first word, shadowy Chaos, formless mass, came from the void.

But who knows how all things were made? Only the “sons of the Art”:

O emulous Sons of Divine Hermes, to whom the paternal Art makes Nature visible without any veil, you, you alone, know how the eternal Hand fashioned earth and Heaven out of shapeless Chaos. Your own great Work clearly shows you that God made Everything in the same manner as the Physical Elixir is produced.

[478] The *opus alchymicum* recapitulates the secret of creation which began with the incubation of the waters. Mercurius, a living and universal spirit, descends into the earth and mingles with the impure sulphurs, thus becoming fixed:

If I be clearly understood, your unknown Mercury is nothing other than a living innate universal Spirit which, ever agitated in aerial vapour, descends from the Sun to fill the empty Centre of the Earth; whence it later issues forth from the impure Sulphurs and, from volatile, becomes fixed and, having taken form, imparts its form to the radical moisture.

[479] But through his descent Mercurius is made captive and can be freed only by the art:

But where is this golden Mercury, this radical moisture, which, dissolved in sulphur and salt, becomes the animated seed of the metals? Ah, he is incarcerated and held so fast that even Nature cannot release him from the harsh prison, unless the Master Art open the way.

[480] It is a spirit of light that descends from the sun,³¹³ a living spirit that lives in all creatures as the spirit of wisdom,³¹⁴ and teaches man the art whereby the “soul enchained in the elements” may be freed. From Mercurius comes the illumination of the adept, and it is through his work that Mercurius is freed from his chains. This Mercurius duplex, who ascends and descends, is the uroboros, by definition an “increatum.”³¹⁵ It is the snake that begets itself from itself.³¹⁶ Although the poem takes Mercurius chiefly as a spirit of light, the uroboros is a *Ἑρμῆς καταχθόνιος* (subterranean Hermes). Mercurius is a compound of opposites, and the alchemists were primarily concerned with his dark side, the serpent.

[481] It is an age-old mythological idea that the hero, when the light of life is extinguished, goes on living as a snake and is worshipped as a snake.³¹⁷ Another widespread primitive idea is the snake-form of the spirits of the dead. This may well have given rise to the worm version of the phoenix myth.

[482] In Amente, the Egyptian underworld, dwells the great seven-headed snake,³¹⁸ and in the Christian underworld is the most celebrated snake of all, the devil, “that old serpent.”³¹⁹ Actually it is a pair of brothers that inhabit hell, namely death and the devil, the devil being characterized by the snake and death by worms. In old German the concepts of worm, snake, and dragon coalesce, as they do in Latin (*vermis*, *serpens*, *draco*). The underworld signifies hell³²⁰ and the grave.³²¹ The worm or serpent is all-devouring death. The dragon-slayer is therefore always a conqueror of death. In Germanic mythology, too, hell is associated with worms. The *Edda* says:

A hall did I see
Far from the sun,
On the shore of death,
The door to the north.
Dripping poison
Drops from the roof;
The chamber walls
Are bodies of worms.³²²

Hell in Old English is called the “worm’s hall” (*wyrmsele*) and in Middle High German it is the “worm-garden.”³²³

[483] Like the heroes and spirits of the dead, the gods too (particularly the earth-gods), are associated with the snake, as are Hermes and Asklepios.³²⁴ Indeed, the Greek god of healing, on being hatched from the egg, seems to have taken the form of a snake.³²⁵ An inscription on the temple of Hathor at Denderah reads:³²⁶

The sun, who has existed from the beginning, rises up like a falcon out of the midst of his lotus-bud. When the doors of his petals open in sapphire-coloured splendour, he has sundered the night from the day. Thou risest up like the sacred snake as a living spirit, creating the beginnings and shining in thy glorious form in the barge of the sunrise. The divine Lord whose image dwells in secret in the temple at Denderah is made the creator of the world by his work. Coming as one, he multiplies himself a millionfold when the light goes forth from him in the form of a child.³²⁷

The comparison of the god to a snake reminds us of his chthonic form in the underworld, just as the rejuvenated phoenix (falcon) first takes the form of a worm.³²⁸ As Christianity borrowed a good deal from the Egyptian religion it is not surprising that the allegory of the snake found its way into the world of Christian ideas (John 3 : 14) and was readily seized on by the alchemists.³²⁹ The dragon is an allegory of Christ as well as of the Antichrist.³³⁰ A remarkable parallel occurs in the anonymous treatise, “De promissionibus” (5th cent.).³³¹ It concerns a version of the legend of St. Sylvester, according to which this saint imprisoned a dragon in the Tarpeian Rock and so rendered him harmless. The other version of this story is related by a “certain monk” who discovered that the alleged dragon, to whom offerings of virgins were made, was nothing but a mechanical device. St. Sylvester locked the dragon up with a chain, as in Rev. 20 : 1; but in the parallel story the artificial dragon “brandished a sword in its mouth,” like the Son of Man in Rev. 1 : 16.³³²

6. THE KING AS ANTHROPOS

[484] I have drawn attention earlier³³³ to the passage in Hippolytus where the Gnostic interpretation of Psalm 24 : 7–10 is discussed. The rhetorical question of the psalm, “Who is this king of glory?” is answered in Hippolytus thus: “A worm and no man, the reproach of men and the outcast of the people.”³³⁴ He is the king of glory, mighty in battle.” This passage, says Hippolytus, refers to Adam and his “ascension and rebirth, that he may be born spiritual, not fleshly.”³³⁵ The worm therefore signifies the second Adam, Christ. Epiphanius also mentions the worm as an allegory of Christ,³³⁶ though without substantiating it further.

[485] This train of thought is consciously or unconsciously continued in alchemy. The “Aquarium sapientum” says:³³⁷

And firstly it is here to be noted, that the Sages have called this decomposed product, on account of its blackness (Cant. 1), the raven's head. In the same way Christ (Isa. 53) had no form nor comeliness, was the vilest of all men, full of griefs and sicknesses, and so despised that men even hid their faces from him, and he was esteemed as nothing. Yea, in the 22nd Psalm [Vulgate] he complains of this, that he is a worm and no man, the laughing-stock and contempt of the people; indeed, it is not unfitly compared with Christ when the putrefied body of the Sun lies dead, inactive, like ashes, in the bottom of the phial, until, as a result of greater heat, its soul by degrees and little by little descends to it again, and once more infuses, moistens, and saturates the decaying and all but dead body, and preserves it from total destruction. So also did it happen to Christ himself, when at the Mount of Olives, and on the cross, he was roasted³³⁸ by the fire of the divine wrath³³⁹ (Matt. 26, 27), and complained that he was utterly deserted by his heavenly Father, yet none the less was always (as is wont to happen also to an earthly body through assiduous care and nourishing) comforted and strengthened (Matt. 4, Luke 22) and, so to speak, imbued, nourished, and supported with divine nectar; yea, when at last, in his most sacred passion, and at the hour of death, his strength and his very spirit were completely withdrawn from him, and he went down to the lowest and deepest parts below the earth (Acts 1, Eph. 1, I Peter 3), yet even there he was preserved, refreshed, and by the power of the eternal Godhead raised up again, quickened, and glorified (Rom. 14), when finally his spirit, with its body dead in the sepulchre, obtained a perfect and indissoluble union, through his most joyful resurrection and victorious ascension into heaven, as Lord and Christ (Matt. 28) and was exalted (Mark 16) to the right hand of his Father; with whom through the power and virtue of the Holy Spirit as true God and man he reigns and rules over all things in equal power and glory (Ps. 8), and by his most powerful word preserveth and upholdeth all things (Hebr. 1) and maketh all things one (Acts 17). And this wondrous Union and divine Exaltation angels and men, in heaven and on earth and under the earth (Philipp. 2, 1 Peter 1) can scarce comprehend, far less meditate upon, without fear and terror; and his virtue, power, and roseate Tincture³⁴⁰ is able even now to change, and tint, and yet more, perfectly to cure and heal us sinful men in body and soul: of which things we shall have more to say below . . . Thus, then, we have briefly and simply considered the unique heavenly foundation and corner-stone Jesus Christ, that is to say, *how he is compared and united with the earthly philosophical stone of the Sages, whose material and preparation, as we have heard, is an outstanding type and lifelike image of the incarnation of Christ.*

[486] The various fatalities which the old king has to suffer—immersion in the bath or in the sea, dissolution and decomposition, extinction of his light in the darkness, incineration in the fire, and renewal out of the chaos—are derived by the alchemists

from the dissolution of the “matter” in acids, from the roasting of ores, the expulsion of sulphur or mercury, the reduction of metallic oxides, and so forth, as if these chemical procedures yielded a picture which, with a little straining of the imagination, could be compared with Christ’s sufferings and his final triumph. The fact that they projected the Passion as an unconscious premise into the chemical transformations was not at all clear to the alchemists.³⁴¹ Naturally, under these circumstances, they were able to prove with complete success that their alleged observations coincided with the Passion. Only, it was not a question of their making observations on matter, but of introspection. Since, however, genuine projections are never voluntarily made but always appear as preconscious factors, there must have been something in the unconscious of the alchemists which lent itself to projection (i.e., had a tendency to become conscious because of its energy charge), and on the other hand found in the alchemical operations a “hook” that attracted it, so that it could express itself in some way. Projection is always an indirect process of becoming conscious—indirect because of the check exercised by the conscious mind, by the pressure of traditional or conventional ideas which take the place of real experience and prevent it from happening. One feels that one possesses a valid truth concerning the unknown, and this makes any real knowledge of it impossible. The unconscious factor must necessarily have been something that was incompatible with the conscious attitude. What it was in reality we learn from the statements of the alchemists: a myth that had much in common not only with many mythologems of pagan origin but above all with Christian dogma. If it were identical with the dogma and appeared in projection it would show that the alchemists had a thoroughly anti-Christian attitude (which was not the case). Lacking such an attitude a projection of this kind would be psychologically impossible. But if the unconscious complex represented a figure that deviated from the dogma in certain essential features, then its projection becomes possible, for it would then be in opposition to the dogma approved by consciousness and would have arisen by way of compensation.

[487] In this and my other writings I have constantly stressed the peculiar nature of the alchemists’ statements and need not recapitulate what I have said. I should only like to point out that the central idea of the *filius philosophorum* is based on a conception of the Anthropos in which the “Man” or the “Son of Man” does not coincide with the Christian, historical redeemer figure. The alchemical Anthropos comes closer to the Basilidian conception of him as reported by Hippolytus: “For he [the Redeemer] . . . is in their view the inner spiritual man in the psychic . . . which is the Sonship that left the soul here not to die but to remain according to its nature, just as the first Sonship left behind on high the Holy Ghost, who is conterminous with him, in the appropriate place, clothing himself in his own soul.”³⁴²

[488] The inner spiritual man bears a resemblance to Christ—that is the unconscious premise for the statements about the *filius regius*.³⁴³ This idea contradicts the dogmatic view and therefore has every reason to be repressed and projected. At the same time it is the logical consequence of a spiritual situation in which the historical figure had long since disappeared from consciousness, while his spiritual presence was stressed all the more strongly in the form of the inner Christ or God who is born in the soul of man. The outward fact of the dogmatic Christ was answered from within by that inner primordial image which had produced a Purusha or a Gayomart long before the Christian era and made the assimilation of the Christian revelation possible. The ultimate fate of every dogma is that it gradually becomes soulless. Life wants to create new forms, and therefore, when a dogma loses its vitality, it must perforce activate the archetype that has always helped man to express the mystery of the soul. Note that I do not go so far as to say that the archetype actually *produces* the divine figure. If the psychologist were to assert that, he would have to possess a sure knowledge of the motives that underlie all historical development and be in a position to demonstrate this knowledge. But there is no question of that. I maintain only that the psychic archetype makes it possible for the divine figure to take form and become accessible to understanding. But the supremely important motive power which is needed for this, and which sets the archetypal possibilities in motion at a given historical moment, cannot be explained in terms of the archetype itself. Only experience can establish which archetype has become operative, but one can never predict that it *must* enter into manifestation. Who, for instance, could logically have foretold that the Jewish prophet Jesus would give the decisive answer to the spiritual situation in the age of Hellenistic syncretism, or that the slumbering image of the Anthropos would waken to world dominion?

[489] The limitations of human knowledge which leave so many incomprehensible and wonderful things unexplained do not, however, exempt us from the task of trying to understand the revelations of the spirit that are embodied in dogma, otherwise there is a danger that the treasures of supreme knowledge which lie hidden in it will evaporate into nothing and become a bloodless phantom, an easy prey for all shallow rationalists. It would be a great step forward, in my opinion, if at least it were recognized how far the truth of dogma is rooted in the human psyche, which is not the work of human hands.

[490] The inner spiritual man of the Gnostics is the Anthropos, the man created in the image of the Nous, the ἀληθινὸς ἄνθρωπος (true man).³⁴⁴ He corresponds to the *chên-yên* (true man) of Chinese alchemy. The *chên-yên* is the product of the opus. On the one hand he is the adept who is transformed by the work,³⁴⁵ on the other he is the homunculus or filius of Western alchemy, who also derives from the true man.³⁴⁶ The treatise of Wei Po-yang says:

The ear, the eye, and the mouth constitute the three precious things. They should be closed, to stop communication. The True Man living in a deep abyss, floats about the centre of the round vessel . . . The mind is relegated to the realm of Nonexistence so as to acquire an enduring state of thoughtlessness. When the mind is integral, it will not go astray. In its sleep, it will be in God's embrace, but during its waking hours it is anxious about the continuation or termination of its existence.³⁴⁷

This true man is Dorn's "vir unus" and at the same time the lapis Philosophorum.³⁴⁸

[491] The "true man" expresses the Anthropos in the individual human being. Compared with the revelation of the Son of Man in Christ this seems like a retrograde step, for the historical uniqueness of the Incarnation was *the* great advance which gathered the scattered sheep about one shepherd. The "Man" in the individual would mean, it is feared, a scattering of the flock. This would indeed be a retrograde step, but it cannot be blamed on the "true man"; its cause is rather all those bad human qualities which have always threatened and hindered the work of civilization. (Often, indeed, the sheep and the shepherd are just about equally inept.) The "true man" has nothing to do with this. Above all he will destroy no valuable cultural form since he himself is the highest form of culture. Neither in the East nor in the West does he play the game of shepherd and sheep, because he has enough to do to be a shepherd to himself.

[492] If the adept experiences his own self, the "true man," in his work, then, as the passage from the "Aquarium sapientum" shows, he encounters the analogy of the true man—Christ—in new and direct form, and he recognizes in the transformation in which he himself is involved a similarity to the Passion. It is not an "imitation of Christ" but its exact opposite: an assimilation of the Christ-image to his own self, which is the "true man."³⁴⁹ It is no longer an effort, an intentional straining after imitation, but rather an involuntary experience of the reality represented by the sacred legend. This reality comes upon him in his work, just as the stigmata come to the saints without being consciously sought. They appear spontaneously. The Passion *happens to* the adept, not in its classic form—otherwise he would be consciously performing spiritual exercises—but in the form expressed by the alchemical myth. It is the arcane substance that suffers those physical and moral tortures; it is the king who dies or is killed, is dead and buried and on the third day rises again. And it is not the adept who suffers all this, rather *it* suffers in him, *it* is tortured, *it* passes through death and rises again. All this happens not to the alchemist himself but to the "true man," who he feels is near him and in him and at the same time in the retort. The passion that vibrates in our text and in the *Aurora* is genuine, but would be totally incomprehensible if the lapis were nothing but a chemical substance. Nor does it originate in contemplation of Christ's Passion; it is the real experience of a man who has got involved in the compensatory contents of the unconscious by investigating

the unknown, seriously and to the point of self-sacrifice. He could not but see the likeness of his projected contents to the dogmatic images, and he might have been tempted to assume that his ideas were nothing else than the familiar religious conceptions, which he was using in order to explain the chemical procedure. But the texts show clearly that, on the contrary, a real experience of the opus had an increasing tendency to assimilate the dogma or to amplify itself with it. That is why the text says that Christ was “compared and united” with the stone. The alchemical Anthropos showed itself to be independent of any dogma.³⁵⁰

[493] The alchemist experienced the Anthropos in a form that was imbued with new vitality, freshness and immediacy, and this is reflected in the enthusiastic tone of the texts. It is therefore understandable that every single detail of the primordial drama would be realized in quite a new sense. The *nigredo* not only brought decay, suffering, death, and the torments of hell visibly before the eyes of the alchemist, it also cast the shadow of its melancholy over his own solitary soul.³⁵¹ In the blackness of a despair which was not his own, and of which he was merely the witness, he experienced how *it* turned into the worm and the poisonous dragon.³⁵² From inner necessity the dragon destroyed itself (*natura naturam vincit*) and changed into the lion,³⁵³ and the adept, drawn involuntarily into the drama, then felt the need to cut off its paws³⁵⁴ (unless there were two lions who devoured one another). The dragon ate its own wings as the eagle did its feathers.³⁵⁵ These grotesque images reflect the conflict of opposites into which the researcher’s curiosity had led him. His work began with a *katabasis*, a journey to the underworld as Dante also experienced it,³⁵⁶ with the difference that the adept’s soul was not only impressed by it but radically altered. *Faust I* is an example of this: the transformation of an earnest scholar, through his pact with the devil, into a worldly cavalier and crooked careerist. In the case of the fanciful Christian Rosencreutz the descent to Venus led only to his being slightly wounded in the hand by Cupid’s arrow. The texts, however, hint at more serious dangers. Olympiodorus says:³⁵⁷ “Without great pains this work is not perfected; there will be struggles, violence, and war. And all the while the demon Ophiuchos³⁵⁸ instils negligence (*ὀλιγωρίαν*), impeding our intentions; everywhere he creeps about, both within and without, causing oversights, anxiety, and unexpected accidents, or else keeping us from the work by harassments (*λύπαις*) and injuries.” The philosopher Petasios (Petesis), quoted by Olympiodorus, expresses himself even more strongly: “So bedevilled (*δαιμονοπληξίας*) and shameless (*ἀναιδείας*) is the lead³⁵⁹ that all who wish to investigate it fall into madness through ignorance.” That this is not just empty talk is shown by other texts, which often emphasize how much the psyche of the laborant was involved in the work. Thus Dorn, commenting on the quotation from Hermes, “All obscurity shall yield before thee,” says:

For he saith, All obscurity shall yield before thee; he saith not, before the metals. By obscurity is to be understood naught else but the darkness of diseases and sickness of body and mind . . . The author's intention is, in sum, to teach them that are adepts in spagyric medicine how with a very small dose, such as is suggested by a grain of mustard seed,³⁶⁰ however it be taken, to cure all diseases indifferently, by reason of the simplicity of union³⁶¹ effective in the medicine, so that no variety of the multitude of maladies may resist it. But manifold as are the obscurities of the weaknesses of the mind, as insanity [*vesania*], mania, frenzy [*furia*], stupidity [*stoliditas*], and others like, by which the spirit [*animus*] is darkened and impaired, yet by this single spagyric medicine they are perfectly cured. And it not only restores health to the spirit [*animo*], but also sharpens the ingenuity and mind of men, that all things may be miraculously easy³⁶² for them in understanding [*intellectu*] and perception [*perceptu*], and nothing be hid from them which is in the upper or lower world.³⁶³

The sentence from the “Tabula smaragdina,” “He will conquer every subtle thing,” Dorn interprets as follows: the subtle thing is Mercurius, or the “spiritual obscurities that occupy the mind”; in other words it is spirit. Hence the darkness is a demon that possesses the spirit (as in Olympiodorus) and can be cast out by the work (“it expels every subtle thing”).³⁶⁴ Sickness is an imprinting of evil (*impressio mali*) and is healed through the “repression of evil by the action of the true and universal centre upon the body.” This centre is the unarius or the One, in which the unitary man (*unicus homo*) is rooted. If, therefore, he is to recover from his bodily and spiritual sicknesses, “let him study to know and to understand exactly the centre, and apply himself wholly thereto, and the centre will be freed from all imperfections and diseases,³⁶⁵ that it may be restored to its state of original monarchy.”³⁶⁶

[494] These passages from Dorn refer less to the dangers of the work than to the healing through the outcome of the work. But the means of healing come from Mercurius, that spirit³⁶⁷ of whom the philosophers said: “Take the old black spirit, and destroy therewith the bodies until they are changed.”^{367a} The destruction of the bodies is depicted as a battle, as in Sermo 42 of the *Turba*: “Excite war between the copper and the quicksilver, since they strive to perish and first become corrupt.” “Excite the battle between them and destroy the body of the copper, till it becomes powder.”³⁶⁸ This battle is the *separatio*, *divisio*, *putrefactio*, *mortificatio*, and *solntio*, which all represent the original chaotic state of conflict between the four hostile elements. Dorn describes this vicious, warlike quaternity allegorically as the four-horned serpent, which the devil, after his fall from heaven, sought to “infix” in the mind of man.³⁶⁹ Dorn puts the motif of war on a moral plane³⁷⁰ and thereby approximates it to the modern concept of psychic dissociation, which, as we know, lies at the root of the psychogenic psychoses and neuroses. In the “furnace of the cross” and in the fire, says the “Aquarium sapientum,” “man, like the earthly gold,

attains to the true black Raven's Head; that is, he is utterly disfigured and is held in derision by the world,³⁷¹ and this not only for forty days and nights, or years,³⁷² but often for the whole duration of his life; so much so that he experiences more heartache in his life than comfort and joy, and more sadness than pleasure . . . Through this spiritual death his soul is entirely freed."³⁷³ Evidently the *nigredo* brought about a deformation and a psychic suffering which the author compared to the plight of the unfortunate Job. Job's unmerited misfortune, visited on him by God, is the suffering of God's servant and a prefiguration of Christ's Passion. One can see from this how the figure of the Son of Man gradually lodged itself in the ordinary man who had taken the "work" upon his own shoulders.

[495] In the second century of our era Wei Po-yang, quite uninfluenced by Western alchemy and unhampered by the preconceptions of our Christian psychology, gave a drastic account of the sufferings caused by a technical blunder during the opus:

Disaster will come to the black mass: gases from food consumed will make noises inside the intestines and stomach. The right essence will be exhaled and the evil one inhaled. Days and nights will be passed without sleep, moon after moon. The body will then be tired out, giving rise to an appearance of insanity. The hundred pulses will stir and boil so violently as to drive away peace of mind and body . . . Ghostly things will make their appearance, at which he will marvel even in his sleep. He is then led to rejoice, thinking that he is assured of longevity. But all of a sudden he is seized by an untimely death.³⁷⁴

So we can understand why Khunrath writes:

But chiefly pray to God . . . for the good gift of discretion, the good spirit of discriminating good from evil, who may lead thee into true knowledge and understanding of the Light of Nature, into her Great Book. So wilt thou extricate thyself from the labyrinth of very very many deceitful Papers, and even books of Parchment, and arrive right well at the ground of truth.³⁷⁵

[496] The depressions of the adept are also described in the "Tractatus aureus":

My son, this is the hidden stone of many colours, which is born in one colour; know this and conceal it. By this, the Almighty favouring, the greatest diseases are escaped, and every sorrow,³⁷⁶ distress, evil, and hurtful thing is made to depart. It leads from darkness to light, from this desert wilderness to a secure habitation, and from poverty and straits into freedom.³⁷⁷

[497] These testimonies suffice to show that the adept was not only included in his work but also knew it.

7. THE RELATION OF THE KING-SYMBOL TO CONSCIOUSNESS

[498] The apotheosis of the king, the renewed rising of the sun, means, on our hypothesis, that a new dominant of consciousness has been produced and that the psychic potential is reversed. Consciousness is no longer under the dominion of the unconscious, in which state the dominant is hidden in the darkness, but has now glimpsed and recognized a supreme goal. The apotheosis of the king depicts this change, and the resultant feeling of renewal is expressed nowhere more plainly than in some of our loveliest chorals. Ripley's *Cantilena* includes mother Luna, the maternal aspect of night, in this transfiguration, which reminds us of the apotheosis at the end of *Faust II*. It is as though the moon had risen in the night with as much splendour as the sun. And just as the Queen "flows with all delicious unguent" so, in the Acts of Thomas,³⁷⁸ a sweet smell pours from the heavenly goddess. She is not only the mother but the "Kore, daughter of the light." She is the Gnostic Sophia,³⁷⁹ who corresponds to the alchemical mother. If our interpretation of King Sol is correct,³⁸⁰ then the apotheosis must also have made mother Luna visible, that is to say made the unconscious conscious. What at first sight seems a contradiction in terms resolves itself, on closer examination, as the coming into consciousness of an essential content of the unconscious. It is primarily the feminine element in man, the anima,³⁸¹ that becomes visible; secondly the moonlight, which enables us to see in the dark, and represents an illumination of the unconscious, or its permeability to light; and thirdly, the moon stands for the rotundum, about which I have written in *Psychology and Alchemy*.³⁸² In the sublunary world her roundness (*plenilunium, circulus lunaris*)³⁸³ corresponds, as the mirror-image of the sun, to the Anthropos, the psychological self, or psychic totality.

[499] The moon is the connecting-link between the concept of the Virgin Mother and that of the child, who is round, whole, and perfect. The new birth from the moon can therefore be expressed as much by the Christian's joy at Eastertide as by the mystic dawn, the *aurora consurgens*; for the risen king is the "soul, which is infused into the dead stone."³⁸⁴ The idea of roundness is also found in the crown, symbol of kingship. "Corona regis" is cited as synonymous with ashes, body, sea, salt, mother and Blessed Virgin,³⁸⁵ and is thus identified with the feminine element.

[500] This peculiar relationship between rotundity and the mother is explained by the fact that the mother, the unconscious, is the place where the symbol of wholeness appears. The fact that the rotundum is, as it were, contained in the anima and is prefigured by her lends her that extraordinary fascination which characterizes the "Eternal Feminine" in the good as well as the bad sense. At a certain level, therefore, woman appears as the true carrier of the longed-for wholeness and redemption.

[501] The starting-point of our explanation is that the king is essentially synonymous with the sun and that the sun represents the daylight of the psyche, consciousness,

which as the faithful companion of the sun's journey rises daily from the ocean of sleep and dream, and sinks into it again at evening. Just as in the round-dance of the planets, and in the star-strewn spaces of the sky, the sun journeys along as a solitary figure, like any other one of the planetary archons, so consciousness, which refers everything to its own ego as the centre of the universe, is only one among the archetypes of the unconscious, comparable to the King Helios of post-classical syncretism, whom we meet in Julian the Apostate, for instance. This is what the complex of consciousness would look like if it could be viewed from one of the other planets, as we view the sun from the earth. The subjective ego-personality, i.e., consciousness and its contents, is indeed seen in its various aspects by an unconscious observer, or rather by an observer placed in the "outer space" of the unconscious. That this is so is proved by dreams, in which the conscious personality, the ego of the dreamer, is seen from a standpoint that is "toto coelo" different from that of the conscious mind. Such a phenomenon could not occur at all unless there were in the unconscious other standpoints opposing or competing with ego-consciousness. These relationships are aptly expressed by the planet simile. The king represents ego-consciousness, the subject of all subjects, as an object. His fate in mythology portrays the rising and setting of this most glorious and most divine of all the phenomena of creation, without which the world would not exist as an object. For everything that is only is because it is directly or indirectly known, and moreover this "known-ness" is sometimes represented in a way which the subject himself does not know, just as if he were being observed from another planet, now with benevolent and now with sardonic gaze.

[502] This far from simple situation derives partly from the fact that the ego has the paradoxical quality of being both the subject and the object of its own knowledge, and partly from the fact that the psyche is not a unity but a "constellation" consisting of other luminaries besides the sun. The ego-complex is not the only complex in the psyche.³⁸⁶ The possibility that unconscious complexes possess a certain luminosity, a kind of consciousness, cannot be dismissed out of hand, for they can easily give rise to something in the nature of secondary personalities, as psychopathological experience shows. But if this is possible, then an observation of the ego-complex from another standpoint somewhere in the same psyche is equally possible. As I have said, the critical portrayal of the ego-complex in dreams and in abnormal psychic states seems to be due to this.

[503] The conscious mind often knows little or nothing about its own transformation, and does not want to know anything. The more autocratic it is and the more convinced of the eternal validity of its truths, the more it identifies with them. Thus the kingship of Sol, which is a natural phenomenon, passes to the human king who personifies the prevailing dominant idea and must therefore share its fate. In the

phenomenal world the Heraclitan law of everlasting change, *πάντα ῥεῖ*, prevails; and it seems that all the true things must change and that only that which changes remains true.

[504] Pitilessly it is seen from another planet that the king is growing old, even before he sees it himself: ruling ideas, the “dominants,” change, and the change, undetected by consciousness, is mirrored only in dreams. King Sol, as the archetype of consciousness, voyages through the world of the unconscious, one of its multitudinous figures which may one day be capable of consciousness too. These lesser lights are, on the old view, identical with the planetary correspondences in the psyche which were postulated by astrology. When, therefore, an alchemist conjured up the spirit of Saturn as his familiar, this was an attempt to bring to consciousness a standpoint outside the ego, involving a relativization of the ego and its contents. The intervention of the planetary spirit was besought as an aid. When the king grows old and needs renewing, a kind of planetary bath is instituted—a bath into which all the planets pour their “influences.”³⁸⁷ This expresses the idea that the dominant, grown feeble with age, needs the support and influence of those subsidiary lights to fortify and renew it. It is, as it were, dissolved in the substance of the other planetary archetypes and then put together again. Through this process of melting and recasting there is formed a new amalgam of a more comprehensive nature, which has taken into itself the influences of the other planets or metals.³⁸⁸

[505] In this alchemical picture we can easily recognize the projection of the transformation process: the aging of a psychic dominant is apparent from the fact that it expresses the psychic totality in ever-diminishing degree. One can also say that the psyche no longer feels wholly contained in the dominant, whereupon the dominant loses its fascination and no longer grips the psyche so completely as before. On the other hand its content and meaning are no longer properly understood, or what is understood fails to touch the heart. A “sentiment d’incomplétude” of this kind produces a compensatory reaction which attracts other regions of the psyche and their contents, so as to fill up the gap. As a rule this is an unconscious process that always sets in when the attitude and orientation of the conscious mind have proved inadequate. I stress this point because the conscious mind is a bad judge of its own situation and often persists in the illusion that its attitude is just the right one and is only prevented from working because of some external annoyance. If the dreams were observed it would soon become clear why the conscious assumptions have become unworkable. And if, finally, neurotic symptoms appear, then the attitude of consciousness, its ruling idea, is contradicted, and in the unconscious there is a stirring up of those archetypes that were the most suppressed by the conscious attitude. The therapist then has no other course than to confront the ego with its adversary and thus initiate the melting and recasting process. The confrontation is

expressed, in the alchemical myth of the king, as the collision of the masculine, spiritual father-world ruled over by King Sol with the feminine, chthonic mother-world symbolized by the *aqua permanens* or by the chaos.

[506] The illegitimate aspect of this relationship appears as incest, veiled, in the *Cantilena*, by adoption—which nevertheless results in the pregnancy of the mother. As I have explained elsewhere, incest expresses the union of elements that are akin or of the same nature; that is to say the adversary of Sol is his own feminine chthonic aspect which he has forgotten. Sol's reflected light is the feminine Luna, who dissolves the king in her moistness. It is as though Sol had to descend into the watery deep of the sublunary world in order to unite the "powers of Above and Below" (as in Faust's journey to the Mothers). The unworkable conscious dominant disappears in menacing fashion among the contents rising up from the unconscious, thus bringing about a darkening of the light. The warring elements of primeval chaos are unleashed, as though they had never been subjugated. The battle is fought out between the dominant and the contents of the unconscious so violently that reason would like to clamp down on unreason. But these attempts fail, and go on failing until the ego acknowledges its impotence and lets the furious battle of psychic powers go its own way. If the ego does not interfere with its irritating rationality, the opposites, just *because* they are in conflict, will gradually draw together, and what looked like death and destruction will settle down into a latent state of concord, suitably expressed by the symbol of pregnancy.³⁸⁹ In consequence the king, the previous dominant of consciousness, is transformed into a real and workable whole, whereas before he had only pretended to wholeness.

[507] The *Cantilena* shows us what that dominant was which is subjected to transformation not only in Ripley but in many other alchemists: it was the Christian view of the world in the Middle Ages. This problem is of such dimensions that one cannot expect a medieval man to have been even remotely conscious of it. It was bound to work itself out in projection, unconsciously. For this reason, too, it can hardly be grasped even today—which is why the psychological interpretation of the One, the *filius regius*, meets with the greatest difficulties. From the hymnlike manner in which the alchemists praised their "son" it is quite evident that they meant by this symbol either Christ himself or something that corresponded to him. Naturally they were not concerned with the historical personality of Jesus, which at that time was completely covered up by the dogmatic figure of the second Person of the Trinity. The latter symbol had slowly crystallized out in the course of the centuries, though it was clearly prefigured in the Logos of St. John. Nor was the conception of God as *senex* and *puer* peculiar to the alchemists, for many clerics who were not alchemists took it as a transformation of the wrathful and vindictive Yahweh of the Old Testament into the God of Love of the New. Thus the archetype of the king's renewal

manifested itself not only among the “philosophers” but also in ecclesiastical circles.³⁹⁰

[508] There can be a psychological explanation of the *filius regius* only when this image has sloughed off its projected form and become a purely psychic experience. The Christ-lapis parallel shows clearly enough that the *filius regius* was more a psychic event than a physical one, since as a physical event it can demonstrably never occur and as a religious experience it is beyond question. There are many passages in the texts that can be interpreted—strange as this may sound—as an experience of Christ in matter. Others, again, lay so much emphasis on the lapis that one cannot but see in it a renewal and completion of the dogmatic image. An unequivocal substitution of the *filius regius* for Christ does not, to my knowledge, occur in the literature, for which reason one must call alchemy Christian even though heretical. The Christ-lapis remains an ambiguous figure.

[509] This is of considerable importance as regards a psychological interpretation of the *filius regius*. In any such view the place of matter, with its magical fascination, is taken by the unconscious, which was projected into it. For our modern consciousness the dogmatic image of Christ changed, under the influence of evangelical Protestantism, into the personal Jesus, who in liberal rationalism, which abhorred all “mysticism,” gradually faded into a mere ethical prototype. The disappearance of the feminine element, namely the cult of the Mother of God, in Protestantism was all that was needed for the spirituality of the dogmatic image to detach itself from the earthly man and gradually sink into the unconscious. When such great and significant images fall into oblivion they do not disappear from the human sphere, nor do they lose their psychic power. Anyone in the Middle Ages who was familiar with the mysticism of alchemy remained in contact with the living dogma, even if he was a Protestant. This is probably the reason why alchemy reached its heyday at the end of the sixteenth and in the seventeenth century: for the Protestant it was the only way of still being Catholic. In the opus alchymicum he still had a completely valid transformation rite and a concrete mystery. But alchemy did not flourish only in Protestant countries; in Catholic France it was still widely practised during the eighteenth century, as numerous manuscripts and published works testify, such as those of Dom Pernety (1716–1800?), Lenglet du Fresnoy (1674–1752?), and the great compilation of Manget, published 1702. This is not surprising, as in France at that time the modern anti-Christian “schism” was brewing which was to culminate in the Revolution—that relatively harmless prelude to the horrors of today. The decline of alchemy during the Enlightenment meant for many Europeans a descent of all dogmatic images—which till then had been directly present in the ostensible secrets of chemical matter—to the underworld.

[510] Just as the decay of the conscious dominant is followed by an irruption of chaos in the individual,³⁹¹ so also in the case of the masses (Peasant Wars, Anabaptists, French Revolution, etc.), and the furious conflict of elements in the individual psyche is reflected in the unleashing of primeval blood-thirstiness and lust for murder on a collective scale. This is the sickness so vividly described in the *Cantilena*. The loss of the eternal images is in truth no light matter for the man of discernment. But since there are infinitely many more men of no discernment, nobody, apparently, notices that the truth expressed by the dogma has vanished in a cloud of fog, and nobody seems to miss anything. The discerning person knows and feels that his psyche is disquieted by the loss of something that was the life-blood of his ancestors. The undiscerning *ἀνοοι* miss nothing, and only discover afterwards in the papers (much too late) the alarming symptoms that have now become “real” in the outside world because they were not perceived before inside, in oneself, just as the presence of the eternal images was not noticed. If they had been, a threnody for the lost god would have arisen, as once before in antiquity at the death of Great Pan.³⁹² Instead, all well-meaning people assure us that one has only to believe he is still there—which merely adds stupidity to unconsciousness. Once the symptoms are really outside in some form of sociopolitical insanity, it is impossible to convince anybody that the conflict is in the psyche of every individual, since he is now quite sure where his enemy is. Then, the conflict which remains an intrapsychic phenomenon in the mind of the discerning person, takes place on the plane of projection in the form of political tension and murderous violence. To produce such consequences the individual must have been thoroughly indoctrinated with the insignificance and worthlessness of his psyche and of psychology in general. One must preach at him from all the pulpits of authority that salvation always comes from outside and that the meaning of his existence lies in the “community.” He can then be led docilely to the place where of his own natural accord he would rather go anyway: to the land of childhood, where one makes claims exclusively on others, and where, if wrong is done, it is always somebody else who has done it. When he no longer knows by what his soul is sustained, the potential of the unconscious is increased and takes the lead. Desirousness overpowers him, and illusory goals set up in the place of the eternal images excite his greed. The beast of prey seizes hold of him and soon makes him forget that he is a human being. His animal affects hamper any reflection that might stand in the way of his infantile wish-fulfillments, filling him instead with a feeling of a new-won right to existence and intoxicating him with the lust for booty and blood.

[511] Only the living presence of the eternal images can lend the human psyche a dignity which makes it morally possible for a man to stand by his own soul, and be convinced that it is worth his while to persevere with it. Only then will he realize that the conflict is *in him*, that the discord and tribulation are his riches, which should not

be squandered by attacking others; and that, if fate should exact a debt from him in the form of guilt, it is a debt to himself. Then he will recognize the worth of his psyche, for nobody can owe a debt to a mere nothing. But when he loses his own values he becomes a hungry robber, the wolf, lion, and other ravening beasts which for the alchemists symbolized the appetites that break loose when the black waters of chaos—i.e., the unconsciousness of projection—have swallowed up the king.³⁹³

[512] It is a subtle feature of the *Cantilena* that the pregnancy cravings of the mother are stilled with peacock's flesh and lion's blood, i.e., with her own flesh and blood.³⁹⁴ If the projected conflict is to be healed, it must return into the psyche of the individual, where it had its unconscious beginnings. He must celebrate a Last Supper with himself, and eat his own flesh and drink his own blood; which means that he must recognize and accept the other in himself. But if he persists in his one-sidedness, the two lions will tear each other to pieces. Is this perhaps the meaning of Christ's teaching, that each must bear his own cross? For if you have to endure yourself, how will you be able to rend others also?

[513] Such reflections are justified by the alchemical symbolism, as one can easily see if one examines the so-called allegories a little more closely and does not dismiss them at the start as worthless rubbish. The miraculous feeding with one's own substance—so strangely reflecting its prototype, Christ—means nothing less than the integration of those parts of the personality which are still outside ego-consciousness. Lion and peacock, emblems of concupiscence and pride, signify the overweening pretensions of the human shadow, which we so gladly project on our fellow man in order to visit our own sins upon him with apparent justification. In the age-old image of the uroboros lies the thought of devouring oneself and turning oneself into a circulatory process, for it was clear to the more astute alchemists that the prima materia of the art was man himself.³⁹⁵ The uroboros is a dramatic symbol for the integration and assimilation of the opposite, i.e., of the shadow. This "feed-back" process is at the same time a symbol of immortality, since it is said of the uroboros that he slays himself and brings himself to life, fertilizes himself and gives birth to himself. He symbolizes the One, who proceeds from the clash of opposites, and he therefore constitutes the secret of the prima materia which, as a projection, unquestionably stems from man's unconscious. Accordingly, there must be some psychic datum in it which gives rise to such assertions, and these assertions must somehow characterize that datum even if they are not to be taken literally. What the ultimate reason is for these assertions or manifestations must remain a mystery, but a mystery whose inner kinship with the mystery of faith was sensed by the adepts, so that for them the two were identical.

8. THE RELIGIOUS PROBLEM OF THE KING'S RENEWAL

[514] Medical psychology has recognized today that it is a therapeutic necessity, indeed, the first requisite of any thorough psychological method, for consciousness to confront its shadow.³⁹⁶ In the end this must lead to some kind of union, even though the union consists at first in an open conflict, and often remains so for a long time. It is a struggle that cannot be abolished by rational means.³⁹⁷ When it is wilfully repressed it continues in the unconscious and merely expresses itself indirectly and all the more dangerously, so no advantage is gained. The struggle goes on until the opponents run out of breath. What the outcome will be can never be seen in advance. The only certain thing is that both parties will be changed; but what the product of the union will be it is impossible to imagine. The empirical material shows that it usually takes the form of a subjective experience which, according to the unanimous testimony of history, is always of a religious order. If, therefore, the conflict is consciously endured and the analyst follows its course without prejudice, he will unfailingly observe compensations from the unconscious which aim at producing a unity. He will come across numerous symbols similar to those found in alchemy—often, indeed, the very same. He will also discover that not a few of these spontaneous formations have a numinous quality in harmony with the mysticism of the historical testimonies. It may happen, besides, that a patient, who till then had shut his eyes to religious questions, will develop an unexpected interest in these matters. He may, for instance, find himself getting converted from modern paganism to Christianity or from one creed to another, or even getting involved in fundamental theological questions which are incomprehensible to a layman. It is unnecessary for me to point out here that not every analysis leads to a conscious realization of the conflict, just as not every surgical operation is as drastic as a resection of the stomach. There is a minor surgery, too, and in the same way there is a minor psychotherapy whose operations are harmless and require no such elucidation as I am concerned with here. The patients I have in mind are a small minority with certain spiritual demands to be satisfied, and only these patients undergo a development which presents the doctor with the kind of problem we are about to discuss.

[515] Experience shows that the union of antagonistic elements is an irrational occurrence which can fairly be described as “mystical,” provided that one means by this an occurrence that cannot be reduced to anything else or regarded as in some way unauthentic. The decisive criterion here is not rationalistic opinions or regard for accepted theories, but simply and solely the value for the patient of the solution he has found and experienced. In this respect the doctor, whose primary concern is the preservation of life, is in an advantageous position, since he is by training an empiricist and has always had to employ medicines whose healing power he knew

even though he did not understand how it worked. Equally, he finds all too often that the scientifically explained and attested healing power of his medicines does not work in practice.

[516] If, now, the alchemists meant by their old king that he was God himself, this also applies to his son. They themselves must have shrunk from thinking out the logical consequences of their symbolism, otherwise they would have had to assert that God grows old and must be renewed through the art. Such a thought would have been possible at most in the Alexandrian epoch, when gods sprang up like mushrooms. But for medieval man it was barely conceivable.³⁹⁸ He was far more likely to consider that the art would change something in himself, for which reason he regarded its product as a kind of *φάρμακον*. Had he had any idea of “psychology,” he would almost certainly have called his healing medicament “psychic” and would have regarded the king’s renewal as a transformation of the conscious dominant—which naturally has nothing to do with a magical intervention in the sphere of the gods.

[517] Man’s ideas and definitions of God have followed one another kaleidoscopically in the course of the millennia, and the evangelist Mark would have been very much astonished if he could have taken a look at Harnack’s *History of Dogma*. And yet it is not a matter of indifference which definitions of his conscious dominant man considers to be binding, or what sort of views he happens to have in this regard. For on this depends whether consciousness will be king or not. If the unconscious rules to the exclusion of all else, everything is liable to end in destruction, as the present state of things gives us reason to fear. If the dominant is too weak, life is wasted in fruitless conflict because Sol and Luna will not unite. But if the son is the dominant, then Sol is his right eye and Luna his left. The dominant must contain them both, the standpoint of ego-consciousness and the standpoint of the archetypes in the unconscious. The binding force that inevitably attaches to a dominant should not mean a prison for one and a *carte-blanche* for the other, but duty and justice for both.

[518] What the nature is of that unity which in some incomprehensible way embraces the antagonistic elements eludes our human judgment, for the simple reason that nobody can say what a being is like that unites the full range of consciousness with that of the unconscious. Man knows no more than his consciousness, and he knows himself only so far as this extends. Beyond that lies an unconscious sphere with no assignable limits, and it too belongs to the phenomenon Man. We might therefore say that perhaps the One is like a man, that is, determined and determinable and yet undetermined and indeterminable. Always one ends up with paradoxes when knowledge reaches its limits. The ego knows it is part of this being, but only a part. The symbolic phenomenology of the unconscious makes it clear that although consciousness is accorded the status of spiritual kingship with all its attendant

dangers, we cannot say what kind of king it will be. This depends on two factors: on the decision of the ego and the assent of the unconscious. Any dominant that does not have the approval of the one or the other proves to be unstable in the long run. We know how often in the course of history consciousness has subjected its highest and most central ideas to drastic revision and correction, but we know little or nothing about the archetypal processes of change which, we may suppose, have taken place in the unconscious over the millennia, even though such speculations have no firm foundation. Nevertheless the possibility remains that the unconscious may reveal itself in an unexpected way at any time.*

[519] The alchemical figure of the king has provoked this long discussion because it contains the whole of the hero myth including the king's—and God's—renewal, and on the other hand because, as we conjecture, it symbolizes the dominant that rules consciousness. "King Sol" is not a pleonasm; it denotes a consciousness which is not only conscious as such but is conscious in a quite special way. It is controlled and directed by a dominant that, in the last resort, is the arbiter of values. The sun is the common light of nature, but the king, the dominant, introduces the human element and brings man nearer to the sun, or the sun nearer to man.³⁹⁹

[520] Consciousness is renewed through its descent into the unconscious, whereby the two are joined. The renewed consciousness does not *contain* the unconscious but forms with it a totality symbolized by the son. But since father and son are of one being, and in alchemical language King Sol, representing the renewed consciousness, *is* the son, consciousness would be absolutely identical with the King as dominant. For the alchemists this difficulty did not exist, because the King was projected into a postulated substance and hence behaved merely as an object to the consciousness of the artifex. But if the projection is withdrawn by psychological criticism, we encounter the aforesaid difficulty that the renewed consciousness apparently coincides with the renewed king, or son. I have discussed the psychological aspect of this problem in the second of the *Two Essays on Analytical Psychology*, in the chapter on the "mana personality." The difficulty cannot be resolved by purely logical argument but only by careful observation and analysis of the psychic state itself. Rather than launch out into a detailed discussion of case-histories I would prefer to recall the well-known words of Paul, "I live, yet not I, but Christ liveth in me" (Gal. 2 : 20), which aptly describe the peculiar nature of this state. From this we can see that that other, earlier state, when the king aged and disappeared, is marked by a consciousness in which a critical ego knowingly took the place of the sick king, looking back to an earlier "mythical" time when this ego still felt absolutely dependent on a higher and mightier non-ego. The subsequent disappearance of the feeling of dependence and the simultaneous strengthening of criticism are felt as progress, enlightenment, liberation, indeed as redemption, although a one-sided and

limited being has usurped the throne of a king. A personal ego seizes the reins of power to its own destruction; for mere egohood, despite possessing an *anima rationalis*, is not even sufficient for the guidance of personal life, let alone for the guidance of men. For this purpose it always needs a “mythical” dominant, yet such a thing cannot simply be invented and then believed in. Contemplating our own times we must say that though the need for an effective dominant was realized to a large extent, what was offered was nothing more than an arbitrary invention of the moment. The fact that it was also believed in goes to prove the gullibility and cluelessness of the public and at the same time the profoundly felt need for a spiritual authority transcending egohood. An authority of this kind is never the product of rational reflection or an invention of the moment, which always remains caught in the narrow circle of ego-bound consciousness; it springs from traditions whose roots go far deeper both historically and psychologically. Thus a real and essentially religious renewal can be based, for us, only on Christianity. The extremely radical reformation of Hinduism by the Buddha assimilated the traditional spirituality of India in its entirety and did not thrust a rootless novelty upon the world. It neither denied nor ignored the Hindu pantheon swarming with millions of gods, but boldly introduced Man, who before that had not been represented at all. Nor did Christ, regarded simply as a Jewish reformer, destroy the law, but made it, rather, into a matter of conviction. He likewise, as the regenerator of his age, set against the Greco-Roman pantheon and the speculations of the philosophers the figure of Man, not intending it as a contradiction but as the fulfilment of a mythologem that existed long before him—the conception of the Anthropos with its complex Egyptian, Persian, and Hellenistic background.

[521] Any renewal not deeply rooted in the best spiritual tradition is ephemeral; but the dominant that grows from historical roots act like a living being within the ego-bound man. He does not possess it, it possesses him; therefore the alchemists said that the artifex is not the master but rather the minister of the stone—clearly showing that the stone is indeed a king towards whom the artifex behaves as a subject.

[522] Although the renewed king corresponds to a renewed consciousness, this consciousness is as different from its former state as the *filius regius* differs from the enfeebled old king. Just as the old king must forgo his power and make way for the little up start ego, so the ego, when the renewed king returns, must step into the background. It still remains the *sine qua non* of consciousness,⁴⁰⁰ but it no longer imagines that it can settle everything and do everything by the force of its will. It no longer asserts that where there’s a will there’s a way. When lucky ideas come to it, it does not take the credit for them, but begins to realize how dangerously close it had been to an inflation. The scope of its willing and doing becomes commensurate with reality again after an Ash Wednesday has descended upon its pre-sumptuousness.⁴⁰¹

[523] We can compare the logical sequence of psychological changes with the alchemical symbolism as follows:

Ego-bound state with feeble dominant	Sick king, enfeebled by age, about to die
Ascent of the unconscious and/or descent of the ego into the unconscious	Disappearance of the king in his mother's body, or his dissolution in water
Conflict and synthesis of conscious and unconscious	Pregnancy, sick-bed, symptoms, display of colours
Formation of a new dominant; circular symbols (e.g., mandala) of the self	King's son, hermaphrodite, rotundum ⁴⁰²

[524] Though the comparison holds good on average, the symbolism of the *Cantilena* differs from the above schema in that the apotheosis of the *filius regius* takes place simultaneously with that of Queen Luna, thus paralleling the marriage in the Apocalypse. The Christian prototype gained the upper hand in Ripley, whereas usually the coniunctio precedes the production of the lapis and the latter is understood as the child of Sol and Luna. To that extent the lapis exactly corresponds to the psychological idea of the self, the product of conscious and unconscious. In Christian symbolism, on the other hand, there is a marriage of the Lamb (the Apocalyptic Christ) with the bride (Luna-Ecclesia). Because the lapis is itself androgynous, a synthesis of male and female, there is no need for another coniunctio. The symbolical androgyny of Christ does not, curiously enough, eliminate the marriage of the Lamb—the two things exist side by side.

[525] We have here a discrepancy between the alchemical and psychological symbolism and the Christian. It is indeed difficult to imagine what kind of coniunctio beyond the union of conscious (male) and unconscious (female) in the regenerated dominant could be meant, unless we assume, with the dogmatic tradition, that the regenerated dominant also brings the *corpus mysticum* of mankind (Ecclesia as Luna) into glorious reality. Among the alchemists, who were mostly solitaries by choice, the motif of the Apocalyptic marriage, characterized as the marriage of the Lamb (Rev. 19 : 7ff.), is missing, the accent here lying on the sacrificial appellation "lamb." According to the oldest and most primitive tradition the king, despite his dignity and power, was a victim offered up for the prosperity of his country and his people, and in his godlike form he was even eaten. As we know, this archetype underwent an extremely complicated development in Christianity. From the standpoint of Christian symbolism the alchemists' conception of the goal lacked, firstly, the motif of the heavenly marriage and, secondly, the almost more important motif of sacrifice and the totem meal. (The mourned gods of Asia Minor—Tammuz, Adonis, etc.—were, in all probability, originally sacrifices for the fruitfulness of the year.) The lapis was

decidedly an ideal for hermits, a goal for isolated individuals. Besides that, it was a food (*cibus immortalis*), could be multiplied indefinitely, was a living being with body, soul, and spirit, an androgyne with incorruptible body, etc. Though likened to King Sol and even named such, it was not a sponsus, not a victim, and belonged to no community; it was like the “treasure hid in a field, the which when a man hath found, he hideth” (Matt. 13 : 44), or like “one pearl of great price,” for which a man “went and sold all that he had, and bought it” (Matt. 13 : 46). It was the well-guarded, precious secret of the individual.⁴⁰³ And though the old Masters emphasized that they would not hide their secret “jealously”⁴⁰⁴ and would reveal it to all seekers, it was perfectly clear that the stone remained the preoccupation of the individual.

[526] In this connection it should not be forgotten that in antiquity certain influences, evidently deriving from the Gnostic doctrine of the hermaphroditic Primordial Man,⁴⁰⁵ penetrated into Christianity and there gave rise to the view that Adam had been created an androgyne.⁴⁰⁶ And since Adam was the prototype of Christ, and Eve, sprung from his side, that of the Church, it is understandable that a picture of Christ should develop showing distinctly feminine features.⁴⁰⁷ In religious art the Christ-image has retained this character to the present day.⁴⁰⁸ Its veiled androgyny reflects the hermaphroditism of the lapis, which in this respect has more affinity with the views of the Gnostics.

[527] In recent times the theme of androgyny has been subjected to quite special treatment in a book by a Catholic writer which merits our attention. This is *Die Gnosis des Christentums*, by Georg Koepgen, an important work that appeared in 1939 with the episcopal imprimatur in Salzburg, and since then has been placed on the Index. Of the Apollinian-Dionysian conflict in antiquity, Koepgen says it found its solution in Christianity because “in the person of Jesus the male is united with the female.” “Only in him do we find this juxtaposition of male and female in unbroken unity.” “If men and women can come together as equals in Christian worship, this has more than an accidental significance: it is the fulfilment of the androgyny that was made manifest in Christ” (p. 316). The change of sex in the believer is suggested in Rev. 14 : 4: “These are they that were not defiled with women; for they are virgins.” Koepgen says of this passage: “Here the new androgynous form of existence becomes visible. Christianity is neither male nor female, it is male-female in the sense that the male paired with the female in Jesus’s soul. In Jesus the tension and polaristic strife of sex are resolved in an androgynous unity. And the Church, as his heir, has taken this over from him: she too is androgynous.” As regards her constitution the Church is “hierarchically masculine, yet her soul is thoroughly feminine.” “The virgin priest . . . fulfils in his soul the androgynous unity of male and female; he renders visible again the psychic dimension which Christ showed us for the first time when he revealed the ‘manly virginity’ of his soul.”⁴⁰⁹

[528] For Koepgen, therefore, not only Christ is androgynous but the Church as well, a remarkable conclusion the logic of which one cannot deny. The consequence of this is a special emphasis on bisexuality and then on the peculiar identity of the Church with Christ, which is based also on the doctrine of the *corpus mysticum*. This certainly forestalls the marriage of the Lamb at the end of time, for the androgyne “has everything it needs”⁴¹⁰ and is already a *complexio oppositorum*. Who is not reminded here of the fragment from the Gospel according to the Egyptians cited by Clement of Alexandria: “When ye have trampled on the garment of shame, and when the two become one and the male with the female is neither male nor female.”⁴¹¹

[529] Koepgen introduces his book with a dedication and a motto. The first is: “Renatis praedestinatione” (To those who are reborn out of predestination), and the second is from John 14 : 12: “He that believeth on me, the works that I do he shall do also, and greater works than these shall he do.” The dedication echoes the motif of election, which the author shares with the alchemists. For Morienus had said of alchemy:

God vouchsafes this divine and pure science to his faithful and his servants, that is, to those on whom nature made it proper to confer it from the beginning of things. For this thing can be naught else but the gift of God most high, who commits and shows it as he will, and to whom he will of his faithful servants. For the Lord selects of his servants those whom he wills and chooses, to seek after this divine science which is concealed from man, and having sought it to keep it with them.⁴¹²

Dorn says much the same: “For it sometimes comes about, after many years, many labours, much study . . . that some are chosen, when much knocking,⁴¹³ many prayers, and diligent enquiry have gone before.”⁴¹⁴

[530] The quotation from John is taken from the fourteenth chapter, where Christ teaches that whoever sees him sees the Father. He is in the Father and the Father is in him. The disciples are in him and he in them, moreover they will be sent the Holy Ghost as Paraclete and will do works that are greater than his own. This fourteenth chapter broaches a question that was to have great repercussions for the future: the problem of the Holy Ghost who will remain when Christ has gone, and who intensifies the interpenetration of the divine and the human to such a degree that we can properly speak of a “Christification” of the disciples. Among the Christian mystics this identity was carried again and again to the point of stigmatization. Only the mystics bring creativity into religion. That is probably why they can feel the presence and the workings of the Holy Ghost, and why they are nearer to the experience of brotherhood in Christ.

[531] Koepgen thinks along the same lines, as his dedication and motto show. It is easy to see what happens when the logical conclusion is drawn from the fourteenth chapter of John: the *opus Christi* is transferred to the individual. He then becomes the

bearer of the mystery, and this development was unconsciously prefigured and anticipated in alchemy, which showed clear signs of becoming a religion of the Holy Ghost and of the Sapientia Dei. Koepgen's standpoint is that of creative mysticism, which has always been critical of the Church. Though this is not obviously so in Koepgen, his attitude betrays itself indirectly in the living content of his book, which consistently presses for a deepening and broadening of the dogmatic ideas. Because he remained fully conscious of his conclusions, he does not stray so very far outside the Church, whereas the alchemists, because of their unconsciousness and naive lack of reflection, and unhampered by intellectual responsibility, went very much further in their symbolism. But the point of departure for both is the procreative, revelatory working of the Holy Ghost, who is a "wind that bloweth where it listeth," and who advances beyond his own workings to "greater works than these." The creative mystic was ever a cross for the Church, but it is to him that we owe what is best in humanity.⁴¹⁵

9. REGINA

[532] We have met the figure of the Queen so often in the course of our exposition that we need say only a few words about her here. We have seen that as Luna she is the archetypal companion of Sol. Together they form the classic alchemical syzygy, signifying on the one hand gold and silver, or something of the kind,⁴¹⁶ and on the other the heavenly pair described in *Aurora Consurgens*:

Therefore I will rise and go into the city, seeking in the streets and the broad ways a chaste virgin to espouse, comely in face, more comely in body, most comely in her garments, that she may roll back the stone from the door of my sepulchre and give me wings like a dove, and I will fly with her into heaven and then say: I live for ever, and will rest in her, for the Queen stood on my right hand in gilded clothing, surrounded with variety. . . . O Queen of the heights, arise, make haste, my love, my spouse, speak, beloved, to thy lover, who and of what kind and how great thou art. . . . My beloved, who is ruddy, hath spoken to me, he hath sought and besought: I am the flower of the field and the lily of the valleys, I am the mother of fair love and of fear and of knowledge and of holy hope. As the fruitful vine I have brought forth a pleasant odour, and my flowers are the fruit and honour and riches. I am the bed of my beloved, . . . wounding his heart with one of my eyes and with one hair of my neck. I am the sweet smell of ointments giving an odour above all aromatical spices, and like unto cinnamon and balsam and chosen myrrh.⁴¹⁷

[533] The prototype of this spiritual *Minne* is the relationship of King Solomon to the Queen of Sheba. Johannes Grasseus says of the white dove that is hidden in the lead:

“This is the chaste, wise, and rich Queen of Sheba, veiled in white, who was willing to give herself to none but King Solomon. No human heart can sufficiently investigate all this.”⁴¹⁸ Penotus says:

You have the virgin earth, give her a husband who is fitting for her! She is the Queen of Sheba, hence there is need of a king crowned with a diadem—where shall we find him? We see how the heavenly sun gives of his splendour to all other bodies, and the earthly or mineral sun will do likewise, when he is set in his own heaven, which is named the “Queen of Sheba,” who came from the ends of the earth to behold the glory of Solomon. So, too, our Mercury has left his own lands and clothed himself with the fairest garment of white, and has given himself to Solomon, and not to any other who is a stranger [*extraneo*] and impure.⁴¹⁹

[534] Here Mercurius in feminine form is the queen, and she is the “heaven” wherein the sun shines. She is thus thought of as a medium surrounding the sun—“a man encompassed by a woman,” as was said of Christ⁴²⁰—or as Shiva in the embrace of Shakti. This medium has the nature of Mercurius, that paradoxical being, whose one definable meaning is the unconscious.⁴²¹ The queen appears in the texts as the maternal vessel of Sol and as the aureole of the king, i.e., as a crown.⁴²² In the “Tractatus aureus de Lapide”⁴²³ the queen, at her apotheosis,⁴²⁴ holds a discourse in which she says:

After death is life restored to me. To me, poor as I am, were entrusted the treasures of the wise and mighty. Therefore I, too, can make the poor rich, give grace to the humble, and restore health to the sick. But I am not yet equal to my most beloved brother, the mighty king, who has yet to be raised from the dead. But when he comes, he will verily show that my words are the truth.

[535] In this “soror et sponsa” we can easily discern the analogy with the Church, which, as the *corpus mysticum*, is the vessel for the *anima Christi*. This vessel is called by Penotus the “Queen of Sheba,” referring to the passage in Matthew 12 :42 (also Luke 11 : 31): “For she [the queen of the south] came from the uttermost parts of the earth to hear the wisdom of Solomon.” In this connection I would like to mention a passage in the “Speculum de Mysteriis” of Honorius of Autun, which likewise refers to the “queen of the south.” He says:⁴²⁵

John abandoned his bride and, himself a virgin, followed the son of a virgin. And because for love of her he despised the bond of the flesh, Christ loved him before all the disciples. For while the Queen of the South gave her body and her blood to the disciples, John lay in the bosom of Jesus and drank from that fount of wisdom; which secret of the Word he afterward committed to the world; the Word, namely, which is hidden in the Father, because in the bosom of Jesus are hidden all the treasures of wisdom and knowledge.⁴²⁶

[536] In the passage from the “Tractatus aureus” it is the Queen of the South who is entrusted with the treasures of the wise and mighty, and in Honorius she gives her body and blood to the disciples. In both cases she seems to be identified with Jesus. We can see from this how close was the thought of Christ’s androgyny, and how very much the queen and the king are one, in the sense that body and soul or spirit and soul are one.⁴²⁷ As a matter of fact the queen corresponds to the soul (anima) and the king to spirit, the dominant of consciousness.⁴²⁸ In view of this interpretation of the queen we can understand why the secret of the work was sometimes called the “Reginae Mysteria.”⁴²⁹

[537] The close connection between king and queen is due to the fact that occasionally they both suffer the same fate: she is dissolved with him in the bath (in another version she is the bath itself). Thus Eleazar says of the king’s bath: “For in this fiery sea the king cannot endure; it robs the old Albaon⁴³⁰ of all his strength and consumes his body and turns it to blood-red blood. Nor is the queen freed; she must perish in this fiery bath.”⁴³¹

[538] Further, it is not surprising that king and queen form as it were a unity, since they are in effect its forerunners. The situation becomes worthy of note only because of the interpretation we have given it: that in the mythologem the king, as the dominant of consciousness, is almost identical with the archetypal figure that personifies the unconscious, namely the anima. The two figures are in some respects diametrically opposed to one another, as are conscious and unconscious; but, just as male and female are united in the human organism, so the psychic material remains the same whether in the conscious or in the unconscious state. Only, sometimes it is associated with the ego, sometimes not.

[539] The anima in her negative aspect—that is, when she remains unconscious and hidden—exerts a possessive influence on the subject. The chief symptoms of this possession are blind moods and compulsive entanglements on one side, and on the other cold, unrelated absorption in principles and abstract ideas. The negative aspect of the anima indicates therefore a special form of psychological maladjustment. This is either compensated from the conscious side or else it compensates a consciousness already marked by a contrary (and equally incorrect) attitude. For the negative aspect of the conscious dominant is far from being a “God-given” idea; it is the most egoistic intention of all, which seeks to play an important role and, by wearing some kind of mask, to appear as something favourable (identification with the persona!). The anima corresponding to this attitude is an intriguer who continually aids and abets the ego in its role, while digging in the background the very pits into which the infatuated ego is destined to fall.

[540] But a conscious attitude that renounces its ego-bound intentions—not in imagination only, but in truth—and submits to the suprapersonal decrees of fate, can claim to be serving a king. This more exalted attitude raises the status of the anima from that of a temptress to a psychopomp.⁴³² The transformation of the kingly substance from a lion into a king has its counterpart in the transformation of the feminine element from a serpent into a queen. The coronation, apotheosis, and marriage signalize the equal status of conscious and unconscious that becomes possible at the highest level—a *coincidentia oppositorum* with redeeming effects.

[541] It would certainly be desirable if a psychological explanation and clarification could be given of what seems to be indicated by the mythologem of the marriage. But the psychologist does not feel responsible for the existence of what cannot be known; as the handmaid of truth he must be satisfied with establishing the existence of these phenomena, mysterious as they are. The union of conscious and unconscious symbolized by the royal marriage is a mythological idea which on a higher level assumes the character of a psychological concept. I must expressly emphasize that the psychological concept is definitely not derived from the mythologem, but solely from practical investigation of both the historical and the case material. What this empirical material looks like has been shown in the dream-series given in *Psychology and Alchemy*. It serves as a paradigm in place of hundreds of examples, and it may therefore be regarded as more than an individual curiosity.

[542] The psychological union of opposites is an intuitive idea which covers the phenomenology of this process. It is not an “explanatory” hypothesis for something that, by definition, transcends our powers of conception. For, when we say that conscious and unconscious unite, we are saying in effect that this process is inconceivable. The unconscious is unconscious and therefore can neither be grasped nor conceived. The union of opposites is a transconscious process and, in principle, not amenable to scientific explanation. The marriage must remain the “mystery of the queen,” the secret of the art, of which the *Rosarium* reports King Solomon as saying:

This is my daughter, for whose sake men say that the Queen of the South came out of the east, like the rising dawn, in order to hear, understand, and behold the wisdom of Solomon. Power, honour, strength, and dominion are given into her hand; she wears the royal crown of seven glittering stars, like a bride adorned for her husband, and on her robe is written in golden lettering, in Greek, Arabic, and Latin: “I am the only daughter of the wise, utterly unknown to the foolish.”⁴³³

[543] The Queen of Sheba, Wisdom, the royal art, and the “daughter of the philosophers” are all so interfused that the underlying psychologem clearly emerges: the art is queen of the alchemist’s heart, she is at once his mother, his daughter, and

his beloved, and in his art and its allegories the drama of his own soul, his individuation process, is played out.

V

ADAM AND EVE

1. ADAM AS THE ARCANE SUBSTANCE

[544] Like the King and Queen, our first parents are among those figures through whom the alchemists expressed the symbolism of opposites. Adam is mentioned far more frequently than Eve, and for this reason we shall have to concern ourselves first and principally with him. He will give us plenty to get on with, as he figures in a great variety of significations which enter the world of alchemical ideas from the most heterogeneous sources.

[545] Ruland defines Adam as a synonym for the *aqua permanens*, in contradistinction to Eve, who signifies earth. Water is the prime arcane substance, and is therefore the agent of transformation as well as the substance to be transformed. As “water” is synonymous with Mercurius, we can understand the remark of John Dee that “that other Mercurius” who appears in the course of the work is the “Mercurius of the Philosophers, that most renowned Microcosm and Adam.”¹ Adam is mentioned as the arcane substance in Rosinus. His correlates are lead and “Azoch,”² both, like Adam,³ of hermaphroditic nature. Similarly, Dorn says that the lapis was called “Adam, who bore his invisible Eve hidden in his body.”⁴ This archaic idea occasionally turns up in the products of the insane today.⁵ The dual nature of Adam is suggested in the “Gloria mundi”: “When Almighty God had created Adam and set him in paradise, he showed him two things in the future, saying, ‘Behold, Adam, here are two things: one fixed and constant, the other fugitive.’”⁶

[546] As the transformative substance, therefore, Adam is also the king⁷ who is renewed in the bath. Basilus Valentinus says in his poem: “Adam sat in the bath which the old Dragon had prepared, and in which Venus found her companion.”⁸

[547] It was a bold stroke, even for a Baroque imagination, to bring together Adam and Venus. In the poem Venus is the “fountain that flows from the stone and submerges her father, absorbing his body and life into herself.” She is thus a parallel figure to Beya, who dissolved Gabricus into atoms in her body. In the same section in which Ruland mentions Adam as a synonym for water he states that he was also called the “tall man.”⁹ Ruland was a Paracelsist, so this expression may well coincide with the “great man” of Paracelsus, the Adech,¹⁰ whom Ruland defines as “our inner and invisible man.”¹¹

[548] Accordingly the arcane substance would appear to be the “inner” man or Primordial Man, known as Adam Kadmon in the Cabala. In the poem of Valentinus, this inner man is swamped by the goddess of love—an unmistakable psychologem for a definite and typical psychic state, which is also symbolized very aptly by the Gnostic love-affair between Nous and Physis. In both cases the “higher spiritual man” is the more comprehensive, supra-ordinate totality which we know as the self. The bath, submersion, baptism, and drowning are synonymous, and all are alchemical symbols for the unconscious state of the self, its embodiments, as it were—or, more precisely, for the unconscious process by which the self is “reborn” and enters into a state in which it can be experienced. This state is then described as the “*filius regius*.” The “old dragon” who prepared the bath, a primeval creature dwelling in the caverns of the earth, is, psychologically, a personification of the instinctual psyche, generally symbolized by reptiles. It is as though the alchemists were trying to express the fact that the unconscious itself initiates the process of renewal.

[549] Adam’s bath is also mentioned in a Latin manuscript in my possession, where an unspecified being or creature addresses Adam thus: “Hear, Adam, I will speak with you. You must go with me into the bath; you know in what manner we are influenced the one by the other, and how you must pass through me. Thus I step up to you with my sharpened arrows, aiming them at your heart ...”¹²

[550] Here again Adam is the transformative substance, the “old Adam” who is to renew himself. The arrows recall the *telum passionis* of Mercurius and the shafts of Luna, which the alchemists, via the mysticism of Hugh of St. Victor¹³ and others, referred to that well-known passage in the Song of Songs: “Thou hast wounded my heart,” as we have seen earlier.¹⁴ The speaker in the manuscript must be feminine, as immediately before there is a reference to the cohabitation of man and woman.

[551] Both texts point to a hierosgamos which presupposes a kind of consanguineous relationship between *sponsus* and *sponsa*. The relationship between Adam and Eve is as close as it is difficult to define. According to an old tradition Adam was androgynous before the creation of Eve.¹⁵ Eve therefore was more himself than if she had been his sister. Adam’s highly unbiblical marriage is emphasized as a hierosgamos by the fact that God himself was present at the ceremony as best man (*paranympus*).¹⁶ Traces of cabalistic tradition are frequently noticeable in the alchemical treatises from the sixteenth century on. Both our texts are fairly late and so fall well within this tradition.

[552] We must now turn to the question of why it was that Adam should have been selected as a symbol for the prima materia or transformative substance. This was probably due, in the first place, to the fact that he was made out of clay, the “ubiquitous” *materia vilis* that was axiomatically regarded as the prima materia and

for that very reason was so tantalizingly difficult to find, although it was “before all eyes.” It was a piece of the original chaos, of the *massa confusa*, not yet differentiated but capable of differentiation; something, therefore, like shapeless, embryonic tissue. Everything could be made out of it.¹⁷ For us the essential feature of the prima materia is that it was defined as the “massa confusa” and “chaos,” referring to the original state of hostility between the elements, the disorder which the artifex gradually reduced to order by his operations. Corresponding to the four elements there were four stages of the process (*tetrameria*), marked by four colours, by means of which the originally chaotic arcane substance finally attained to unity, to the “One,” the lapis, which at the same time was an homunculus.¹⁸ In this way the Philosopher repeated God’s work of creation described in Genesis 1. No wonder, therefore, that he called his prima materia “Adam” and asserted that it, like him, consisted or was made out of the four elements. “For out of the four elements were created our Father Adam and his children,” says the *Turba*.¹⁹ And Gabir ibn Hayyan (Jabir)²⁰ says in his “Book of Balances”:

The Pentateuch says, regarding the creation of the first being, that his body was composed of four things, which thereafter were transmitted by heredity: the warm, the cold, the moist, and the dry. He was in fact composed of earth and water, a body and a soul. Dryness came to him from the earth, moisture from the water, heat from the spirit, and cold from the soul.²¹

The later literature often mentions Adam as a *compositio elementorum*.²² Because he was composed out of the four cosmic principles he was called the Microcosm.²³ The “Tractatus Micreris” says:²⁴

Even so is man called the lesser world [*mundus minor*], because in him is the figure of the heavens, of the earth, of the sun and moon, a visible figure upon earth and [at the same time] invisible, wherefore he is named the lesser world. Therefore the old Philosophers said of him, When the water fell upon the earth, Adam was created, who is the lesser world.²⁵

Similar views of Adam are found elsewhere; thus the *Pirke de Rabbi Eliezer* says that God collected the dust from which Adam was made from the four corners of the earth.²⁶ Rabbi Meir (2nd cent.) states that Adam was made from dust from all over the world. In Mohammedan tradition Tabari, Masudi, and others say that when the earth refused to provide the material for Adam’s creation the angel of death came along with three kinds of earth: black, white, and red.²⁷ The Syrian “Book of the Cave of Treasures” relates:

And they saw God take a grain of dust from the whole earth, and a drop of water from the whole sea, and a breath of wind from the upper air, and a little warmth from the nature of fire. And the angels saw how these four weak elements, the dry, the

moist, the cold, and the warm, were laid in the hollow of his hand. And then God made Adam.²⁸

The poet Jalal-ud-din Rumi says that the earth from which Adam was made had seven colours.²⁹ A collection of English riddles from the fifteenth century asks the following questions concerning Adam's creation:

Questions bitwene the Maister of Oxinford and his scoler: Whereof was Adam made? Of VIII thingis: the first of earthe, the second of fire, the IIIrd of wynde, the IIIIth of clowdys, the Vth of aire where thorough he speketh and thinketh, the VIth of dewe whereby hi sweteth, the VIIth of flowres wherof Adam hath his ien, the VIIIth is salte wherof Adam hath salt teres.³⁰

[553] This material clearly shows the tetradic and ogdoadic nature of Adam, and there is also that characteristic uncertainty as to three and seven: four elements, four colours, four qualities, four humours,³¹ and three and seven colours.³²

[554] Dorn calls the ternarius (the number three) "peculiar to Adam" (*Adamo proprius*). And because the ternarius was the "offspring of the unarius" (the number one), the devil, whose nature is binary, could do nothing against him, but had to make his attack upon Eve,³³ "who was divided from her husband as a natural binarius from the unity of his ternarius."³⁴ Vigenerus, commenting on I Cor. 15 : 47,³⁵ writes:

For the elements are circular [in their arrangement], as Hermes makes clear, each being surrounded by two others with which it agrees in one of those qualities peculiar to itself, as [for instance] earth is between fire and water, partaking in the dryness of fire and the coldness of water. . . .³⁶ Man, therefore, who is an image of the great world, and is called the microcosm or little world (as the little world, made after the similitude of its archetype, and compounded of the four elements, is called the great man), has also his heaven and his earth. For the soul and the understanding are his heaven; his body and senses his earth. Therefore, to know the heaven and earth of man, is the same as to have a full and complete knowledge of the whole world and of the things of nature.³⁷

[555] The circular arrangement of the elements in the world and in man is symbolized by the mandala and its quaternary structure. Adam would then be a quaternarius, as he was composed of red, black, white, and green dust from the four corners of the earth, and his stature reached from one end of the world to the other.³⁸ According to one Targum, God took the dust not only from the four quarters but also from the sacred spot, the "centre of the world."³⁹ The four quarters reappear in the (Greek) letters of Adam's name: *anatole* (sunrise, East), *dysis* (sunset, West), *arktos* (Great Bear, North), *mesembria* (noon, South).⁴⁰ The "Book of the Cave of Treasures" states that Adam stood on the spot where the cross was later erected, and that this spot was the centre of the earth. Adam, too, was buried at the centre of the earth—on

Golgotha. He died on a Friday, at the same hour as the Redeemer.⁴¹ Eve bore two pairs of twins—Cain and Lebhûdhâ, Abel and Kelîmath—who later married each other (marriage quaternio). Adam's grave is the "cave of treasures." All his descendants must pay their respects to his body and "not depart from it." When the Flood was approaching, Noah took Adam's body with him into the ark. The ark flew over the flood on the wings of the wind from east to west and from north to south, thus describing a cross upon the waters.

[556] At the midpoint where Adam was buried, the "four corners come together; for when God created the earth his power ran along in front of it, and the earth ran after his power from four sides like winds and gentle breezes, and there his power stopped and came to rest. And there will be accomplished the redemption for Adam and all his children." Over the grave where the cross would stand there grew a tree, and there too was the altar of Melchizedek. When Shem laid the body on the ground,

the four sides moved away from one another, the earth opened in the form of a cross, and Shem and Melchizedek laid the body inside. And as soon as they had done this, the four sides moved together again and covered the body of our Father Adam, and the doors of the earth were closed. And the same spot was named the Place of the Skull, because the head of all men was laid there, and Golgotha, because it was round . . . and Gabbatha, because all the nations were gathered in it.⁴²

"There the power of God will appear, for the four corners of the world have there become one," say the Ethiopic *Clementines*.⁴³ God said to Adam: "I shall make thee God, but not now; only after the passing of a great number of years."⁴⁴ The apocryphal "Life of Adam and Eve" says that the east and north of paradise were given to Adam, but the west and south to Eve.⁴⁵ The *Pirke de Rabbi Eliezer* relates that Adam was buried in the double cave Machpelah, and that Eve, Abraham and Sara, Isaac and Rebecca, Jacob and Leah were buried there too. "Therefore the cave was named Kiriath Arba', the City of Four, because four husbands and wives were buried there."⁴⁶

[557] I do not want to pile up proofs of Adam's quaternary nature, but only to give it due emphasis. Psychologically the four are the four orienting functions of consciousness, two of them perceptive (irrational), and two discriminative (rational). We could say that all mythological figures who are marked by a quaternity have ultimately to do with the structure of consciousness. We can therefore understand why Isaac Luria attributed every psychic quality to Adam: he is the psyche *par excellence*.⁴⁷

[558] The material I have presented is so suggestive that no detailed commentary is needed. Adam stands not only for the psyche but for its totality; he is a symbol of the self, and hence a visualization of the "irrepresentable" Godhead. Even if all the texts

here cited were not available to the alchemists, a knowledge of the Zosimos treatises or of certain Cabalistic traditions would have been sufficient to make quite clear to them what was meant when the arcane substance was called Adam. I need hardly point out how important these historical statements are from the psychological point of view: they give us valuable indications of the way in which the corresponding dream-symbols should be evaluated. We do not devalue statements that originally were intended to be metaphysical when we demonstrate their psychic nature; on the contrary, we confirm their factual character. But, by treating them as psychic phenomena, we remove them from the inaccessible realm of metaphysics, about which nothing verifiable can be said, and this disposes of the impossible question as to whether they are “true” or not. We take our stand simply and solely on the facts, recognizing that the archetypal structure of the unconscious will produce, over and over again and irrespective of tradition, those figures which reappear in the history of all epochs and all peoples, and will endow them with the same significance and numinosity that have been theirs from the beginning.

2. THE STATUE

[559] An old tradition says that Adam was created “a lifeless statue.” It is worthy of remark that the statue plays a mysterious role in ancient alchemy. One of the earliest Greek treatises, the Book of Komarios,⁴⁸ says:

After the body had been hidden in the darkness, [the spirit] found it full of light. And the soul united with the body, since the body had become divine through its relation to the soul, and it dwelt in the soul. For the body clothed itself in the light of divinity, and the darkness departed from it, and all were united in love, body, soul, and spirit, and all became one; in this the mystery is hidden. But the mystery was fulfilled in their coming together, and the house was sealed, and the statue [*ἀνδρίας*] was erected, filled with light and divinity.⁴⁹

Here the statue evidently denotes the end-product of the process, the lapis Philosophorum or its equivalent.

[560] The statue has a somewhat different significance in the treatise of Senior,⁵⁰ who speaks of the “water that is extracted from the hearts of statues.” Senior is identical with the Arabian alchemist Ibn ‘Umail al-Tamimi. He is reported to have opened tombs and sarcophagi in Egypt and to have removed the mummies.⁵¹ Mummies were supposed to possess medicinal virtues, and for this reason bits of corpses had long been mentioned in European pharmacy under the name of “mumia.”⁵² It is possible that “mumia” was also used for alchemical purposes. It is mentioned in Khunrath as synonymous with the prima materia.⁵³ In Paracelsus, who may have been Khunrath’s

source for this, “Mumia balsamita” has something to do with the elixir, and is even called the physical life-principle itself.⁵⁴ Senior’s statues may well have been Egyptian sarcophagi, which as we know were portrait-statues. In the same treatise there is a description of a statue (of Hermes Trismegistus) in an underground chapel. Senior says: “I shall now make known to you what that wise man who made the statue has hidden in that house; in it he has described that whole science, as it were, in the figure, and taught his wisdom in the stone, and revealed it to the discerning.” Michael Maier comments: “That is the statue from whose heart the water is extracted.” He also mentions that a stone statue which pronounced oracles was dedicated to Hermes in Achaia Pharis.

[561] In Raymond Lully (Ramon Llull) there is an “oil that is extracted from the heart of statues,” and moreover “by the washing of water and the drying of fire.”⁵⁵ This is an extremely paradoxical operation in which the oil evidently serves as a mediating and uniting agent.

[562] There is an allusion to the statues in Thomas Norton’s “Ordinall of Alkimy”:

But holy *Alkimy* of right is to be loved,
Which treateth of a precious Medicine,
Such as trewly maketh *Gold* and *Silver* fine:
Whereof example for Testimonie
Is in a Citty of *Catilyony*.
Which *Raymund Lully*, *Knight*, men [do] suppose,
Made in seaven Images the trewth to disclose;
Three were good *Silver*, in shape like Ladies bright,
Everie each of Foure were *Gold* and like a Knight:
In borders of their Clothing Letters did appeare,
Signifying in Sentence as it sheweth here.⁵⁶

[563] The “seven” refer to the gods of the planets, or the seven metals.⁵⁷ The correlation of the “three” (Venus, moon, earth) with silver (Luna) and of the “four” with gold (Sol) is remarkable in that three is usually considered a masculine and four a feminine number.⁵⁸ As Lully was undoubtedly acquainted with Senior this legend seems like a concretization of Senior’s saying.⁵⁹

[564] The idea of a precious substance hidden in the “statue” is an old tradition and is particularly true of the statues of Hermes or Mercurius. Pseudo-Dionysius⁶⁰ says that the pagans made statues (*ἀνδριάντας*) of Mercurius and hid in them a simulacrum of the god. In this way they worshipped not the unseemly herm but the image hidden inside.⁶¹ Plato is referring to these statues when he makes Alcibiades say that Socrates “bears a strong resemblance to those figures of Silenus in statuaries’ shops,

represented holding pipes or flutes; they are hollow inside, and when they are taken apart you see that they contain little figures [αγάλματα] of gods.”⁶²

[565] It must have appealed very much to the imagination of the alchemists that there were statues of Mercurius with the real god hidden inside. Mercurius was their favourite name for that being who changed himself, during the work, from the prima materia into the perfected lapis Philosophorum. The figure of Adam readily lent itself as a biblical synonym for the alchemical Mercurius, first because he too was androgynous, and second because of his dual aspect as the first and second Adam. The second Adam is Christ, whose mystical androgyny is established in ecclesiastical tradition.⁶³ I shall come back to this aspect of Adam later.

[566] According to the tradition of the Mandaeans, Adam was created by the seven in the form of a “lifeless bodily statue” which could not stand erect. This characteristic expression “bodily statue” frequently recurs in their literature and recalls the Chaldaean myth handed down by the Naassenes, that man’s body was created by the demons and was called a statue (ἀνδριάς).⁶⁴ Ptahil, the world-creator, tried to “throw the soul into the statue,” but Manda d’Hayye, the redeemer, “took the soul in his arms” and completed the work without Ptahil.⁶⁵ In this connection we may note that there is a description of the statue of Adam in Cabalistic literature.⁶⁶

[567] As Adam has always been associated with the idea of the second Adam in the minds of Christian writers,⁶⁷ it is readily understandable that this idea should reappear among the alchemists. Thus Mylius says:

There now remains the second part of the philosophical practice, by far the more difficult, by much the more sublime. In this we read that all the sinews of talent, all the mental efforts of many philosophers have wearied themselves. For it is more difficult to make a man live again, than to slay him. Here is God’s work besought: for it is a great mystery to create souls, and to mould the lifeless body into a living statue.⁶⁸

This living statue refers to the end-result of the work; and the work, as we have seen, was on the one hand a repetition of the creation of the world, and on the other a process of redemption, for which reason the lapis was paraphrased as the risen Christ. The texts sometimes strike a chiliastic note with their references to a golden age when men will live forever without poverty and sickness.⁶⁹ Now it is remarkable that the statue is mentioned in connection with the eschatological ideas of the Manichaeans as reported by Hegemonius: the world will be consumed with fire and the souls of sinners chained for all eternity, and “then shall these things be, when the statue shall come.”⁷⁰ I would not venture to say whether the Manichaeans influenced the alchemists or not, but it is worth noting that in both cases the statue is connected

with the end-state. The tradition reported by Hegemonius has been confirmed by the recently discovered original work of Mani, the *Kephalaia*.⁷¹ This says:

At that time [the Father of Greatness] made the messenger and Jesus the radiant and the Virgin of Light and the Pillar of Glory and the gods. . . .⁷² The fourth time, when they shall weep, is the time when the statue [*ἀνδριάς*] shall raise itself on the last day. . . .⁷³ At that same hour, when the last statue shall rise, they shall weep. . . .⁷⁴ The first rock is the pillar [*στῦλος*] of glory, the perfect man, who has been summoned by the glorious messenger. . . . He bore the whole world and became the first of all bearers. . . .⁷⁵ The intellectual element [*νοερόν*] [gathered itself] into the pillar of glory, and the pillar of glory into the first man. . . .⁷⁶ The garments, which are named the Great Garments, are the five intellectual elements, which have [made perfect] the body of the pillar of glory, the perfect man.⁷⁷

It is clear from these extracts that the statue or pillar is either the perfect Primordial Man (*τέλειος ἄνθρωπος*) or at least his body, both at the beginning of creation and at the end of time.

[568] The statue has yet another meaning in alchemy which is worth mentioning. In his treatise “De Igne et Sale” Vigenerus calls the sun the “eye and heart of the sensible world and the image of the invisible God,” adding that St. Dionysius called it the “clear and manifest statue of God.”⁷⁸ This statement probably refers to Dionysius’s *De divinis nominibus* (ch. IV): “The sun is the visible image of divine goodness.”⁷⁹ Vigenerus translated *εἰκών* not by “imago” but by “statua,” which does not agree with the Latin text of the collected edition brought out by Marsilio Ficino in 1502–3, to which he may have had access. It is not easy to see why he rendered *εἰκών* by “statua,” unless perhaps he wished to avoid repeating the word “imago” from the end of the preceding sentence. But it may also be that the word “cor” recalled to his mind Senior’s phrase “from the hearts of statues,” as might easily happen with so learned an alchemist. There is, however, another source to be considered: it is evident from this same treatise that Vigenerus was acquainted with the *Zohar*. There the Haye Sarah on Genesis 28:22 says that Malchuth is called the “statue” when she is united with Tifereth.⁸⁰ Genesis 28 : 22 runs: “And this stone, which I have set for a pillar, shall be God’s house.”⁸¹ The stone is evidently a reminder that here the upper (Tifereth) has united with the lower (Malchuth): Tifereth the son⁸² has come together with the “Matrona”⁸³ in the hierosgamos. If our conjecture is correct, the statue could therefore be the Cabalistic equivalent of the lapis Philosophorum, which is likewise a union of male and female. In the same section of Vigenerus’s treatise the sun does in fact appear as the bridegroom.⁸⁴ As Augustine is quoted a few lines later, it is possible that Vigenerus was thinking of that passage where Augustine says:

Like a bridegroom Christ went forth from his chamber, he went out with a presage of his nuptials into the field of the world. He ran like a giant exulting on his way, and

came to the marriage bed of the cross, and there, in mounting it, he consummated his marriage. And when he perceived the sighs of the creature, by a loving exchange he gave himself up to the torment in place of his bride. He yielded up also the carbuncle, as the jewel of his blood, and he joined the woman to himself for ever. “I have espoused you to one husband,” says the apostle, “that I may present you as a chaste virgin to Christ” [2 Cor. 11 : 2].⁸⁵

[569] Since Adam signifies not only the beginning of the work, the *prima materia*, but also the end, the *lapis*, and the *lapis* is the product of the royal marriage, it is possible that Vigenerus’s “*statua Dei*,” replacing the more usual “*imago Dei*,” has some connection with the Cabalistic interpretation of the stone of Bethel, which in turn marked the union of Tifereth and Malchuth. The statue stands for the inert materiality of Adam, who still needs an animating soul; it is thus a symbol for one of the main preoccupations of alchemy.

3. ADAM AS THE FIRST ADEPT

[570] Not always in alchemy is Adam created out of the four elements. The “*Introitus apertus*,” for instance, says that the soul of the gold is united with Mercurius in lead, “that they may bring forth Adam and his wife Eve.”⁸⁶ Here Adam and Eve take the place of King and Queen. But in general Adam, being composed of the four elements, either *is* the *prima materia* and the arcane substance itself,⁸⁷ or he brought it with him from paradise, at the beginning of the world, as the first adept. Maier mentions that Adam brought antimony (then regarded as an arcane substance)⁸⁸ from paradise.⁸⁹ The long line of “Philosophers” begins with him. The “*Aquarium sapientum*” asserts that the secret of the stone was revealed to Adam from above and was subsequently “sought after with singular longing by all the Holy Patriarchs.”⁹⁰ The “*Gloria mundi*” says: “The Lord endowed Adam with great wisdom, and such marvellous insight that he immediately, without the help of any teacher—simply by virtue of his original righteousness—had a perfect knowledge of the seven liberal arts, and of all animals, plants, stones, metals, and minerals. Nay, what is more, he had a perfect understanding of the Holy Trinity, and of the coming of Christ in the flesh.”⁹¹ This curious opinion is traditional and comes mainly from Rabbinic sources.⁹² Aquinas, too, thought that Adam, because of his perfection, must have had a knowledge of all natural things.⁹³ In Arabian tradition Shîth (Seth) learnt medicine from him.⁹⁴ Adam also built the Ka’ba, for which purpose the angel Gabriel gave him the ground-plan and a precious stone. Later the stone turned black because of the sins of men.⁹⁵

[571] The Jewish sources are even more explicit. Adam understood all the arts,⁹⁶ he invented writing, and from the angels he learnt husbandry and all the professions including the art of the smith.⁹⁷ A treatise from the eleventh century lists thirty kinds of fruit which he brought with him from paradise.⁹⁸ Maimonides states that Adam wrote a book on trees and plants.⁹⁹ Rabbi Eliezer credits Adam with the invention of the leap-year.¹⁰⁰ According to him, the tables on which God later inscribed the law came from Adam.¹⁰¹ From Eliezer, probably, derives the statement of Bernardus Trevisanus that Hermes Trismegistus found seven stone tables in the vale of Hebron, left over from antediluvian times. On them was a description of the seven liberal arts. Adam had put these tables there after his expulsion from paradise.¹⁰² According to Dorn, Adam was the first “practitioner and inventor of the arts.” He had a knowledge of all things “before and after the Fall,” and he also prophesied the renewal and chastening of the world by the flood.¹⁰³ His descendants set up two stone tables on which they recorded all the “natural arts” in hieroglyphic script. Noah found one of these tables at the foot of Mount Ararat, bearing a record of astronomy.¹⁰⁴

[572] This legend probably goes back to Jewish tradition, to stories like the one mentioned in the *Zohar*:

When Adam was in paradise, God sent the holy angel Raziel,¹⁰⁵ the keeper of the higher secrets, to him with a book, in which the higher holy wisdom was set forth. In this book two and seventy kinds of wisdom were described in six hundred and seventy sections. By means of this book there were given to him fifteen hundred keys to wisdom, which were known to none of the higher holy men, and all remained secret until this book came to Adam. . . . Henceforth he kept this book hid and secret, daily using this treasure of the Lord, which discovered to him the higher secrets of which even the foremost angels knew nothing, until he was driven out of paradise. But when he sinned and transgressed the command of the Lord, this book fled from him. . . . He bequeathed it to his son Seth. And from Seth it came to Enoch, and from him . . . to Abraham.¹⁰⁶

[573] In the *Clementine Homilies* (2nd cent.) Adam is the first of a series of eight incarnations of the “true prophet.” The last is Jesus.¹⁰⁷ This idea of a pre-existent seer may spring from Jewish or Judaeo-Christian tradition, but in China it is vividly realized in the figure of P’an Ku.¹⁰⁸ He is represented as a dwarf clad in a bear-skin or in leaves; on his head he has two horns.¹⁰⁹ He proceeded from *yang* and *yin*, fashioned the chaos, and created heaven and earth. He was helped by four symbolic animals—the unicorn, the phoenix, the tortoise, and the dragon.¹¹⁰ He is also represented with the sun in one hand and the moon in the other. In another version he has a dragon’s head and a snake’s body. He changed himself into the earth with all its creatures and thus proved to be a real *homo maximus* and Anthropos. P’an Ku is of

Taoist origin and nothing seems to be known of him before the fourth century A.D.¹¹¹ He reincarnated himself in Yüan-shih T'ien-tsun, the First Cause and the highest in heaven.¹¹² As the fount of truth he announces the secret teaching, which promises immortality, to every new age. After completing the work of creation he gave up his bodily form and found himself aimlessly floating in empty space. He therefore desired rebirth in visible form. At length he found a holy virgin, forty years old, who lived alone on a mountain, where she nourished herself on air and clouds. She was hermaphroditic, the embodiment of both *yang* and *yin*. Every day she collected the quintessence of sun and moon. P'an Ku was attracted by her virgin purity, and once, when she breathed in, he entered into her in the form of a ray of light, so that she became pregnant. The pregnancy lasted for twelve years, and the birth took place from the spinal column. From then on she was called T'ai-yüan Sheng-mu, "the Holy Mother of the First Cause."¹¹³ The relatively late date of the legend leaves the possibility of Christian influence open. All the same, its analogy with Christian and Persian ideas does not prove its dependence on these sources.

[574] The series of eight incarnations of the "true prophet" is distinguished by the special position of the eighth, namely Christ. The eighth prophet is not merely the last in the series; he corresponds to the first and is at the same time the fulfilment of the seven, and signifies the entry into a new order. I have shown in *Psychology and Alchemy* (pars. 200ff.), with the help of a modern dream, that whereas the seven form an uninterrupted series, the step to the eighth involves hesitation or uncertainty and is a repetition of the same phenomenon that occurs with three and four (the Axiom of Maria). It is very remarkable that we meet it again in the Taoist series of "eight immortals" (*hsien-yên*): the seven are great sages or saints who dwell in heaven or on the earth, but the eighth is a *girl* who sweeps up the fallen flowers at the southern gate of heaven.¹¹⁴ The parallel to this is Grimm's tale of the seven ravens: there the seven brothers have one sister.¹¹⁵ One is reminded in this connection of Sophia, of whom Irenaeus says: "This mother they also call the Ogdoad, Sophia, Terra, Jerusalem, Holy Spirit, and, with a masculine reference, Lord."¹¹⁶ She is "below and outside the Pleroma." The same thought occurs in connection with the seven planets in Celsus's description of the "diagram of the Ophites," attacked by Origen.¹¹⁷ This diagram is what I would call a mandala—an ordering pattern or pattern of order which is either consciously devised or appears spontaneously as a product of unconscious processes.¹¹⁸ The description Origen gives of the diagram is unfortunately not particularly clear, but at least we can make out that it consisted of ten circles, presumably concentric, since he speaks of a circumference and a centre.¹¹⁹ The outermost circle was labelled "Leviathan" and the innermost "Behemoth," the two apparently coinciding, for "Leviathan" was the name for the centre as well as the

circumference.¹²⁰ At the same time, “the impious diagram said that the Leviathan . . . is the soul that has permeated the universe.”¹²¹

[575] Origen had got hold of a diagram like the one used by Celsus and discovered in it the names of the seven angels Celsus alludes to. The prince of these angels was called the “accursed God,” and they themselves were called sometimes gods of light and sometimes “archons.” The “accursed God” refers to the Judaeo-Christian world-creator, as Origen duly notes. Yahweh appears here obviously as the prince and father of the seven archons.¹²² The first of them had a “lion’s form” and was named Michael; the second was a bull and was named Suriel, the bull-formed; the third, Raphael, had the form of a snake; the fourth, named Gabriel, the form of an eagle; the fifth, Thauthabaoth, the form of a bear; the sixth, Erataoth, the form of a dog; and the seventh had the form of an ass and was called Onoël or Taphabaoth or Tharthataoth.¹²³

[576] It is to be presumed that these names were distributed among the eight inner circles. The seven archons correspond to the seven planets and represent so many spheres with doors which the celebrant has to pass through on his ascent. Here, says Origen, is the origin of the Ogdoad, which, clearly, must consist of the seven and their father Yahweh. At this point Origen mentions, as the “first and seventh,” Ialdabaoth, of whom we have not heard before. This supreme archon, as we know from other sources too, is lion-headed or lion-like.¹²⁴ He would therefore correspond to Michael in the Ophitic diagram, the first in the list of archons. “Ialdabaoth” means “child of chaos”; thus he is the first-born of a new order that supersedes the original state of chaos. As the first son, he is the last of the series,¹²⁵ a feature he shares with Adam and also with Leviathan, who, as we have seen, is both circumference and centre. These analogies suggest that the diagram showed a series of concentric circles.¹²⁶ The old world-picture, with the earth as the centre of the universe, consisted of various “heavens”—spherical layers or spheres—arranged concentrically round the centre and named after the planets. The outermost planetary sphere or archon was Saturn. Outside this would be the sphere of the fixed stars (corresponding to Leviathan as the tenth circle in the diagram), unless we postulated some place for the demiurge or for the father or mother of the archons. It is evident from the text that an Ogdoad is meant,¹²⁷ as in the system of Ptolemy reported by Irenaeus.¹²⁸ There the eighth sphere was called Achamoth (Sophia, Sapientia),¹²⁹ and was of feminine nature, just as in Damascius the hebdomad was attributed to Kronos and the ogdoad to Rhea.¹³⁰ In our text the virgin Prunicus is connected with the mandala of seven circles:¹³¹ “They have further added on top of one another sayings of the prophets, circles included in circles . . . and a power flowing from a certain Prunicus, a virgin, a living soul.”¹³²

[577] The “circles included in circles” point decisively to a concentric arrangement, as we find it, significantly enough, in Herodotus’s description¹³³ of the seven circular walls of Ecbatana.¹³⁴ The ramparts of these walls were all painted in different colours; of the two innermost and highest walls one was silvered and the other gilded. The walls obviously represented the concentric circles of the planets, each characterized by a special colour.

[578] In the introduction to his diagram Celsus reports on the idea, found among the Persians and in the Mithraic mysteries, of a stairway with seven doors and an eighth door at the top. The first door was Saturn and was correlated with lead, and so on. The seventh door was gold and signified the sun. The colours are also mentioned.¹³⁵ The stairway represents the “passage of the soul” (*animae transitus*). The eighth door corresponds to the sphere of the fixed stars.

[579] The archetype of the seven appears again in the division of the week and the naming of its days, and in the musical octave, where the last note is always the beginning of a new cycle. This may be a cogent reason why the eighth is feminine: it is the *mother* of a new series. In Clement’s line of prophets the eighth is Christ. As the first and second Adam he rounds off the series of seven, just as, according to Gregory the Great, he, “coming in the flesh, joined the Pleiades, for he had within himself, at once and for ever, the works of the sevenfold Holy Spirit.”¹³⁶ These references should suffice to show the special nature of the eighth and its tendency to be feminine in Christian gnosis.

[580] Adam’s dual nature reappears in Christ: he is male-female. Boehme expresses this by saying that Christ was a “virgin in mind.”¹³⁷ She is “an image of the holy number Three,”¹³⁸ “eternally uncreated and ungenerated.”¹³⁹ Where the “Word” is, there is the virgin, for the “Word” is in her.¹⁴⁰ She is the “woman’s seed,”¹⁴¹ which shall bruise the head of the serpent (Gen. 3 : 15).¹⁴² He who shall tread on its head is Christ, who thus appears identical with the seed of the woman or with the virgin. In Boehme the virgin has the character of an anima, for “she is given to be a companion to thee in thy soul,”¹⁴³ and at the same time, as divine power and wisdom, she is in heaven and in paradise.¹⁴⁴ God took her to him to be his “spouse.”¹⁴⁵ She expresses all the profundity and infinity of the Godhead,¹⁴⁶ thus corresponding to the Indian Shakti.¹⁴⁷ The androgynous unity of Shiva and Shakti is depicted in Tantric iconography as permanent cohabitation.¹⁴⁸

[581] Boehme’s ideas had a strong influence on Franz von Baader, who asserted that God gave Adam a helpmeet (*adjutor*) through whom Adam “was to have brought forth without an external woman,” as Mary did without a man. But Adam “fell for”¹⁴⁹ the bestial act of copulation and was in danger of himself sinking to the level of a beast. God, recognizing this possibility, thereupon created Eve as a “salutary counter-

institution [*rettende Gegenanstalt*], to prevent an otherwise unavoidable and deeper descent of man . . . into animal nature.”¹⁵⁰ When Adam threatened to sink into it nevertheless, his divine androgyny departed from him, but was preserved in Eve as the “woman’s seed,” with the help of which man would free himself from the “seed of the serpent.” For “he who was born in the Virgin Mary is the same who had to depart from Adam on account of his fall.”¹⁵¹

[582] The presence of a divine pair or androgyne in the human soul is touched upon by Origen: “They say that as the sun and moon stand as the two great lights in the firmament of heaven, so in us Christ and the Church.”¹⁵² And thus, too, Adam and Eve are in each of us, as Gregory the Great says; Adam standing for the spirit, Eve for the flesh.¹⁵³

[583] Origen, like Clement of Rome, credits Adam with the gift of prophecy, “for he prophesied a great mystery in Christ and the Church, saying, ‘Therefore shall a man leave his father and mother, and shall cleave unto his wife, and they shall be one flesh.’”¹⁵⁴ (Gen. 2 : 24; cf. Matt. 19 : 5 and Mark 10 : 7.)

[584] I shall end this account of the excellent equipment of the first man with an Arabian legend, which is not without a deeper meaning. When Adam left Paradise, God sent the angel Gabriel to him with an offer of three gifts of which he should choose one: modesty, intelligence, and religion. Without hesitation Adam chose intelligence. Thereupon Gabriel commanded modesty and religion to return at once to heaven. But they refused, invoking God’s own command never to part from intelligence, wherever it might be found. For the Prophet had said: “Never submit to one who has no trace of intelligence.”¹⁵⁵

4. THE POLARITY OF ADAM

[585] There has always existed a widely felt need to think of the first man as having a “light” nature; hence the frequent comparison with the sun. The alchemists did not insist on this aspect, so I need say only a few words about it here. Usually, however, in the non-chemical literature Adam is a “light” figure whose splendour even outshines that of the sun. He lost his radiance owing to the Fall.¹⁵⁶ Here we have a hint of his dual nature: on the one hand shining and perfect, on the other dark and earthy. Haggadic interpretation derives his name from *adamah*, earth.¹⁵⁷

[586] His dual nature is confirmed by Origen: one Adam was made out of earth, the other “after the image and likeness of God. He is our inner man, invisible, incorporeal, unspotted, and immortal.”¹⁵⁸ Similar views are expressed by Philo.¹⁵⁹ It is worth noting that in Colossians 1:15 Christ is this “image of the invisible God, the firstborn of every creature.”

[587] Adam’s dual nature is reflected in his hermaphroditism. Thus Dorn says that the “fiery and perfect Mercurius” is the “true hermaphroditic Adam.”¹⁶⁰ This idea occurs among the Naassenes. “These men,” says Hippolytus, “worship as the beginning of all things, according to their own statement, a Man and a Son of Man. But this Man is masculo-feminine [*ἀρσενόθηλυς*] and is called by them Adamas; and hymns to him are many and various.” He quotes as an example: “From thee the father, through thee the mother, the two immortal names, parents of the Aeons, O citizen of heaven, O Man of the Great Name!”¹⁶¹ Adam is masculo-feminine also in Jewish tradition. In *Midrash Rabbah* VIII, 1¹⁶² he is an androgyne, or a man and woman grown into one body with two faces. God sawed the body in two and made each half a back.¹⁶³ Through his androgyny Adam has affinities with Plato’s sphere-shaped Original Being as well as with the Persian Gayomart. This idea has left a few traces in alchemy. For instance, Glauber attributes the sign of the circle to Adam and the square to Eve.¹⁶⁴ The circle is usually the sign for gold and sun. It is found in the latter sense in the “Book of the Cave of Treasures”: “Then God made Adam. . . . And when the angels saw his glorious appearance, they were moved by the beauty of the sight; for they saw the form of his countenance, while it was enkindled, in shining splendour like to the ball of the sun, and the light of his eyes like to the sun, and the form of his body like to the light of a crystal.”¹⁶⁵ An Arabic Hermes-text on the creation of Adam relates that, when the virgin (Eve) came to power, the angel Harus (Horus) arose from the unanimous will of the planets. This Harus took sixty spirits from the planets, eighty-three from the zodiac, ninety from the highest heaven, one hundred and twenty-seven from the earth, three hundred and sixty spirits in all,

mixed them together and created out of them Adamanus, the first man, “after the form of the highest heaven.”¹⁶⁶ The number 360 and the “form of heaven” both indicate his circular shape.

[588] Aside, however, from his androgyny there is a fundamental polarity in Adam which is based on the contradiction between his physical and spiritual nature. This was felt very early, and is expressed in the view of Rabbi Jeremiah ben Eleazar that Adam must have had two faces, in accordance with his interpretation of Psalm 139 : 5: “Thou hast beset me behind and before”,¹⁶⁷ and in the Islamic view that Adam’s soul was created thousands of years before his body and then refused to enter the figure made of clay, so that God had to put it in by force.¹⁶⁸

[589] According to a Rabbinic view Adam even had a tail.¹⁶⁹ His condition at first was altogether most inauspicious. As he lay, still inanimate, on the ground, he was of a greenish hue, with thousands of impure spirits fluttering round who all wanted to get into him. But God shooed them away till only one remained, Lilith, the “mistress of spirits,” who succeeded in so attaching herself to Adam’s body that she became pregnant by him. Only when Eve appeared did she fly away again.¹⁷⁰ The daemonic Lilith seems to be a certain aspect of Adam, for the legend says that she was created with him from the same earth.¹⁷¹ It throws a bad light on Adam’s nature when we are told that countless demons and spooks arose from his nocturnal emissions (*ex nocturno seminis fluxu*). This happened during the one hundred and thirty years which he had to spend apart from Eve, banished from the heavenly court “under the anathema of excommunication.”¹⁷² In Gnosticism the original man Adamas, who is nothing but a paraphrase of Adam,¹⁷³ was equated with the ithyphallic Hermes and with Korybas, the pederastic seducer of Dionysus,¹⁷⁴ as well as with the ithyphallic Cabiri.¹⁷⁵ In the *Pistis Sophia* we meet a Sabaoth Adamas, the ruler (*τύραννος*) of the Aeons, who fights against the light of Pistis Sophia¹⁷⁶ and is thus wholly on the side of evil. According to the teachings of the Bogomils, Adam was created by Satanaël, God’s first son and the fallen angel, out of mud. But Satanael was unable to bring him to life, so God did it for him.¹⁷⁷ Adam’s inner connection with Satan is likewise suggested in Rabbinic tradition, where Adam will one day sit on Satan’s throne.¹⁷⁸

[590] As the first man, Adam is the *homo maximus*, the Anthropos, from whom the macrocosm arose, or who is the macrocosm. He is not only the prima materia but a universal soul which is also the soul of all men.¹⁷⁹ According to the Mandaeans he is the “mystery of the worlds.”¹⁸⁰ The conception of the Anthropos first penetrated into alchemy through Zosimos, for whom Adam was a dual figure—the fleshly man and the “man of light.”¹⁸¹ I have discussed the significance of the Anthropos idea at such length in *Psychology and Alchemy* that no further documentation is needed here. I

shall therefore confine myself to material that is of historical interest in following the thought-processes of the alchemists.

[591] Already in Zosimos¹⁸² three sources can be distinguished: Jewish, Christian, and pagan. In later alchemy the pagan-syncretistic element naturally fades into the background to leave room for the predominance of the Christian element. In the sixteenth century, the Jewish element becomes noticeable again, under the influence of the Cabala, which had been made accessible to a wider public by Johann Reuchlin¹⁸³ and Pico della Mirandola.¹⁸⁴ Somewhat later the humanists then made their contribution from the Hebrew and Aramaic sources, and especially from the *Zohar*. In the eighteenth century an allegedly Jewish treatise appeared, Abraham Eleazar's *Uraltes Chymisches Werck*,¹⁸⁵ making copious use of Hebraic terminology and claiming to be the mysterious "Rindenbuch" of Abraham the Jew, which, it was said, had revealed the art of gold-making to Nicholas Flamel (1330–1417).¹⁸⁶ In this treatise there is the following passage:

For Noah must wash me in the deepest sea, with pain and toil, that my blackness may depart; I must lie here in the deserts among many serpents, and there is none to pity me; I must be fixed to this black cross, and must be cleansed therefrom with wretchedness and vinegar¹⁸⁷ and made white, that the inwards of my head may be like the sun or Marez,¹⁸⁸ and my heart may shine like a carbuncle, and the old Adam come forth again from me. O! Adam Kadmon, how beautiful art thou! And adorned with the rikmah¹⁸⁹ of the King of the World! Like Kedar¹⁹⁰ I am black henceforth; ah! how long! O come, my Mesech,¹⁹¹ and disrobe me, that mine inner beauty may be revealed. . . . O that the serpent roused up Eve! To which I must testify with my black colour that clings to me, and that is become mine by the curse of this persuasion, and therefore am I unworthy of all my brothers. O Sulamith afflicted within and without, the watchmen of the great city will find thee and wound thee, strip thee of thy garments and smite thee, and take away thy veil. . . . Yet shall I be blest again when I am delivered from the poison brought upon me by the curse, and mine inmost seed and first birth comes forth. For its father is the sun, and its mother the moon. Yea, I know else of no other bridegroom who should love me, because I am so black. Ah! do thou tear down the heavens and melt my mountains! For thou didst crumble the mighty kingdoms of Canaan like dust, and crush them with the brazen serpent of Joshua and offer them up to Algir Δ [fire], that she who is encompassed by many mountains may be freed.¹⁹²

[592] It is evident that the speaker is the feminine personification of the prima materia in the *nigredo* state. Psychologically this dark figure is the unconscious anima. In this condition she corresponds to the *nefesh* of the Cabalists.¹⁹³ She is "desire"; for as Knorr von Rosenroth trenchantly remarks: "The mother is nothing but the inclination

of the father for the lower.”^{193a} The blackness comes from Eve’s sin. Sulamith (the Shulamite)¹⁹⁴ and Eve (Hawa, earth) are contaminated into a single figure, who contains in herself the first Adam, like the mother her child, and at the same time awaits the second Adam, i.e., Adam before the Fall, the perfect Original Man, as her lover and bridegroom. She hopes to be freed by him from her blackness. Here again we encounter the mysticism of the Song of Songs as in the *Aurora consurgens* I. Jewish gnosis (Cabala) combines with Christian mysticism: sponsus and sponsa are called on the one hand Tifereth and Malchuth and on the other Christ and the Church.¹⁹⁵ The mysticism of the Song of Songs¹⁹⁶ appeared in Jewish-Gnostic circles during the third and fourth centuries, as is proved by the fragments of a treatise called *Shiur Koma* (“The Measure of the Body”). It concerns a “mysticism only superficially Judaicized by references to the description of the Beloved in the Song of Songs.”¹⁹⁷ The figure of Tifereth belongs to the Sefiroth system, which is conceived to be a tree. Tifereth occupies the middle position. Adam Kadmon is either the whole tree or is thought of as the mediator between the supreme authority, En Soph, and the Sefiroth.¹⁹⁸ The black Shulamite in our text corresponds to Malchuth as a widow, who awaits union with Tifereth and hence the restoration of the original wholeness. Accordingly, Adam Kadmon here takes the place of Tifereth. He is mentioned in Philo and in the midrashic tradition. From the latter source comes the distinction between the heavenly and earthly Adam in I Cor. 15 : 47: “The first man was of the earth, earthy; the second man is from heaven, heavenly” (DV), and verse 45: “The first man, Adam, became a living soul; the last Adam became a life-giving spirit” (DV). Thus the original hylicpsychic man is contrasted with the later pneumatic man.

[593] The *Tractatus de Revolutionibus Animarum*, of Knorr von Rosenroth, [Part I](#), ch. 1, § 10, contains a passage which is of importance for the psychological interpretation of Adam:

Ezekiel 34 : 31 says, “Ye are Adam.”¹⁹⁹ This means, you are rightly called by the name of Adam. The meaning is: If the text were to be understood literally, it could rightly be objected that all the peoples of the world or the Gentiles are men after the same manner as the Israelites, that is, of upright stature. Wherefore it would have to be said: Ye are men. But in truth (the meaning is this: out of your souls was composed the microcosm of Adam). . . .²⁰⁰ § 11. Ye are Adam. (He says, as it were, that all the souls of the Israelites were in truth nothing but the first-created Adam.) And you were his sparks and his limbs.²⁰¹

Here Adam appears on the one hand as the body of the people of Israel²⁰² and on the other as its “general soul.” This conception can be taken as a projection of the interior Adam: the *homo maximus* appears as a totality, as the “self” of the people. As the inner man, however, he is the totality of the individual, the synthesis of all parts of the psyche, and therefore of the conscious and the unconscious. § 20 says: “And

therefore our masters have said: The son of David shall not come until all the souls that were in the body (of the first-created) have fully gone out.”²⁰³ The “going out” of the souls from the Primordial Man can be understood as the projection of a psychic integration process: the saving wholeness of the inner man—i.e., the “Messiah”—cannot come about until all parts of the psyche have been made conscious. This may be sufficient to explain why it takes so long for the second Adam to appear.

[594] The same treatise says: “From En Soph, from the most general One, was produced the universe, which is Adam Kadmon, who is One and Many, and of whom and in whom are all things.” “The differences of genera are denoted by concentric circles” which proceed from him or are contained in him. He is thus something like a schema of the psychic structure, in which the “specific differences [those characterizing species] are denoted by a straight line”²⁰⁴ (i.e., in a concentric system, by the radius). “Thus in Adam Kadmon are represented all the orders of things, both genera and species and individuals.”²⁰⁵

[595] Among the pagan sources we must distinguish an Egyptian one, concerned with the very ancient tradition of the God-man Osiris and the theology of kingship; a Persian one, derived from Gayomart; and an Indian one, derived from Purusha.²⁰⁶ The Christian source for alchemical ideas is the aforementioned Pauline doctrine of the first and second Adam.

5. THE “OLD ADAM”

[596] After these preliminary remarks we can turn back to Eleazar’s text, beginning with the significant passage in the middle where Adam appears. The reader is immediately struck by the expression “the old Adam,” who is evidently equated with Adam Kadmon. Rather than “the old” Adam we would expect “the second” or “the original” Adam, chiefly because “the old Adam” means above all the old, sinful, unredeemed man, in accordance with Romans 6 : 6: “Knowing this, that our old man is crucified with him, that the body of sin might be destroyed, that henceforth we should not serve sin.” That this passage must have been at the back of the author’s mind is shown by the sentence: “I must be fixed to this black cross, and must be cleansed therefrom with wretchedness and vinegar.”

[597] The author purports to be a Jew, but was clumsy enough not only to perpetrate anachronisms but to reveal his own unquestionably Christian psychology. He had a good knowledge of the Bible and was familiar with “Biblical” language. The language of his book is the stylistically and grammatically fluid German of the eighteenth century. He has a liking for edifying rhetoric (could he have been a theologian?) One thing is clear, at any rate, and that is that the expression “the old

Adam” on the lips of such a person can have only one meaning, namely, the “old man” whom we are to put off (Eph. 4 : 22) in accordance with the command in Colossians 3 : 9: “Put off the old man with his deeds.” These passages must have been known to the author, and he could easily have avoided the resultant contradiction or ambiguity by putting, instead of “old,” “original,” or something of that kind.

[598] I must beg the reader’s indulgence for apparently splitting hairs and harping somewhat pedantically on this little defect in the style of a none too careful author. But it is more than a question of a mere slip of the pen: a text that is riddled with ambiguities, that sets up the most unexpected relationships (Adam and the Shulamite!) and blends together the most heterogeneous situations, has unquestionable affinities with the structure of a dream and consequently necessitates a careful examination of its figures. A cliché like “the old Adam,” which can have no other meaning, does not occur in a dream-text without a very good reason, even though the author might have excused it as a mere “slip.” Even if—as seems to be the case here—he understood the “old” Adam as the “Ur-” or “original” Adam, he was compelled by some obscure intention to pick on “the old Adam,” which in this context is thoroughly ambiguous. Had it occurred in a real dream it would be a technical blunder for the interpreter to overlook this ostensible slip. As we know, these *quid pro quos* invariably happen at the critical places, where two contrary tendencies cross.

[599] Our suspicions have been aroused, and in what follows we shall pursue them on the assumption that “the old Adam” is not a mere accident but is one of those irritating ambiguities of which there is no lack in the alchemical texts. They are irritating because seldom if ever can it be ascertained with any certainty whether they arose from a conscious intention to deceive or from an unconscious conflict.

[600] The “old” Adam, evidently, can “come forth again” from the Shulamite, the black mother, only because he had once got into her in some way. But that can only have been the old, sinful Adam, for the blackness of the Shulamite is an expression for sin, the original sin, as the text shows. Behind this idea lies the archetype of the Anthropos who had fallen under the power of Physis, but it seems doubtful whether our author had any conscious knowledge of this myth. Had he really been familiar with Cabalistic thought he would have known that Adam Kadmon, the spiritual First Man, was an “Idea” in the Platonic sense, which could never be confused with the sinful man. By his equation “old Adam” = Adam Kadmon the author has contaminated two opposites. The interpretation of this passage must therefore be: from the black Shulamite comes forth the antithesis “old Adam”: Adam Kadmon. Her obvious connection with the earth as the mother of all living things makes it

clear that her son was the sinful Adam, but not Adam Kadmon, who, as we have seen, is an emanation of En Soph. Nevertheless, by contaminating the two, the text makes both of them issue from the Shulamite. The “old” Adam and the Primordial Man appear to be identical, and the author could excuse himself by saying that by “old” he meant the first or original Adam—a point which it is not easy to deny.

[601] As high as the Primordial Man stands on the one side, so low on the other is the sinful, empirical man. The phenomenon of contamination, which we meet so frequently in the psychology of dreams and of primitives, is no mere accident but is based on a common denominator; at some point the opposites prove to be identical, and this implies the possibility of their contamination. One of the commonest instances of this is the identity of the god and his animal attribute. Such paradoxes derive from the non-human quality of the god’s and the animal’s psychology. The divine psyche is as far above the human as the animal psyche reaches down into subhuman depths.

[602] The “old Adam” corresponds to the primitive man, the “shadow” of our present-day consciousness, and the primitive man has his roots in the animal man (the “tailed” Adam),²⁰⁷ who has long since vanished from our consciousness. Even the primitive man has become a stranger to us, so that we have to rediscover his psychology. It was therefore something of a surprise when analytical psychology discovered in the products of the unconscious of modern man so much archaic material, and not only that but the sinister darkness of the animal world of instinct. Though “instincts” or “drives” can be formulated in physiological and biological terms they cannot be pinned down in that way, for they are also psychic entities which manifest themselves in a world of fantasy peculiarly their own. They are not just physiological or consistently biological phenomena, but are at the same time, even in their content, meaningful fantasy structures with a symbolic character. An instinct does not apprehend its object blindly and at random, but brings to it a certain psychic “viewpoint” or interpretation; for every instinct is linked *a priori* with a corresponding image of the situation, as can be proved indirectly in cases of the symbiosis of plant and animal. In man we have direct insight into that remarkable world of “magical” ideas which cluster round the instincts and not only express their form and mode of manifestation but “trigger them off.”²⁰⁸ The world of instinct, simple as it seems to the rationalist, reveals itself on the primitive level as a complicated interplay of physiological facts, taboos, rites, class-systems, and tribal lore, which impose a restrictive form on the instinct from the beginning, preconsciously, and make it serve a higher purpose. Under natural conditions a spiritual limitation is set upon the unlimited drive of the instinct to fulfil itself, which differentiates it and makes it available for different applications. Rites on a primitive level are uninterpreted gestures; on a higher level they become mythologized.

[603] The primary connection between image and instinct explains the interdependence of instinct and religion in the most general sense. These two spheres are in mutually compensatory relationship, and by “instinct” we must understand not merely “Eros” but everything that goes by the name of “instinct.”²⁰⁹ “Religion” on the primitive level means the psychic regulatory system that is coordinated with the dynamism of instinct. On a higher level this primary interdependence is sometimes lost, and then religion can easily become an antidote to instinct, whereupon the originally compensatory relationship degenerates into conflict, religion petrifies into formalism, and instinct is vitiated. A split of this kind is not due to a mere accident, nor is it a meaningless catastrophe. It lies rather in the nature of the evolutionary process itself, in the increasing extension and differentiation of consciousness. For just as there is no energy without the tension of opposites, so there can be no consciousness without the perception of differences. But any stronger emphasis of differences leads to polarity and finally to a conflict which maintains the necessary tension of opposites. This tension is needed on the one hand for increased energy production and on the other for the further differentiation of differences, both of which are indispensable requisites for the development of consciousness. But although this conflict is unquestionably useful it also has very evident disadvantages, which sometimes prove injurious. Then a counter-movement sets in, in the attempt to reconcile the conflicting parties. As this process has repeated itself countless times in the course of the many thousand years of conscious development, corresponding customs and rites have grown up for the purpose of bringing the opposites together. These reconciling procedures are rites performed by man, but their content is an act of help or reconciliation emanating from the divine sphere, whether in the present or in the past. Generally the rites are linked up with the original state of man and with events that took place in the age of the heroes or ancestors. This is as a rule a defective state, or a situation of distress, which is helped by divine intervention, and the intervention is repeated in the rite. To take a simple example: When the rice will not grow, a member of the rice-totem clan builds himself a hut in the rice-field and tells the rice how it originally grew from the rice-ancestor. The rice then remembers its origin and starts growing again. The ritual anamnesis of the ancestor has the same effect as his intervention.

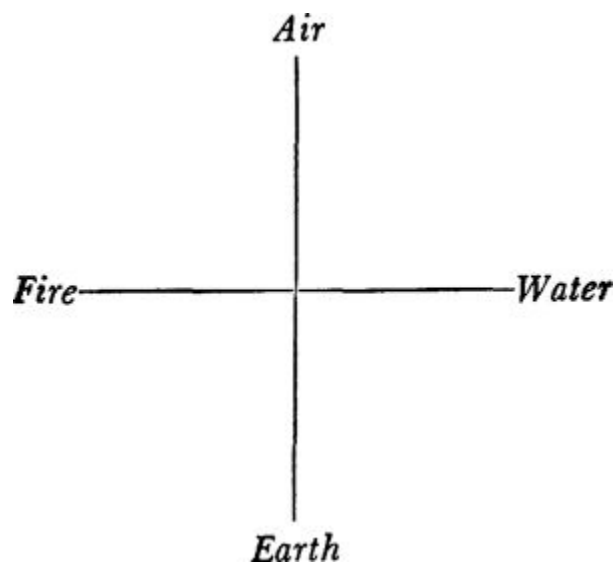

[604] The prime situation of distress consists either in a withdrawal of the favourable gods and the emergence of harmful ones, or in the alienation of the gods by man’s negligence, folly, or sacrilege, or else (as in the Taoist view) in the separation²¹⁰ of heaven and earth for unfathomable reasons, so that they can now come together again only if the wise man re-establishes Tao in himself by ritual meditation. In this way he brings his own heaven and earth into harmony.²¹¹

[605] Just as the rice spoils in the defective state, so too man degenerates, whether from the malignity of the gods or from his own stupidity or sin, and comes into conflict with his original nature. He forgets his origination from the human ancestor, and a ritual anamnesis is therefore required. Thus the archetype of Man, the Anthropos, is constellated and forms the essential core of the great religions. In the idea of the *homo maximus* the Above and Below of creation are reunited.

6. THE TRANSFORMATION

[606] The appearance of Adam Kadmon has characteristic consequences for the Shulamite: it brings about a *solificatio*, an illumination of the “inwards of the head.” This is a veiled but, for the psychology of alchemy, typical allusion to the “transfiguration” (*glorificatio*) of the adept or of his inner man. For Adam is “interior homo noster,” the Primordial Man in us.

[607] Seen in the light of the above remarks, Eleazar’s text assumes a by no means uninteresting aspect and, since its train of thought is characteristic of the basic ideas of alchemy, a meaning with many facets. It depicts a situation of distress corresponding to the alchemical *nigredo*: the blackness of guilt has covered the bridal earth as with black paint. The Shulamite comes into the same category as those black goddesses (Isis, Artemis, Parvati, Mary) whose names mean “earth.” Eve, like Adam, ate of the tree of knowledge and thereby broke into the realm of divine privileges—“ye shall be as gods, knowing good and evil.” In other words she inadvertently discovered the possibility of *moral* consciousness, which until then had been outside man’s range. As a result, a polarity was torn open with momentous consequences. There was a sundering of earth from heaven, the original paradise was shut down, the glory of the First Man was extinguished, Malchuth became a widow, the fiery *yang* went back aloft, and the damp *yin* enveloped humanity with darkness, degenerated through ever-increasing wantonness, and finally swelled into the black waters of the Deluge, which threatened to drown every living thing but on the other hand could be understood more hopefully as an ablution of the blackness. Noah, too, appears in a different light: he is no longer seen as someone running away from the catastrophe but as Lord of the Waters, the minister of the ablution. This operation does not seem to be enough, however, for the Shulamite promptly gets herself into the opposite kind of pickle—into the dry desert, where, like the children of Israel, she is menaced by evil in the form of poisonous serpents.²¹² This is an allusion to the tribulations of the Exodus, which in a sense was a repetition of the expulsion from paradise, since bidding farewell to the fleshpots of Egypt was quite as painful a prospect as the stony ground from which our first parents had to wrest a living in the sweat of their brows. But even with this last extremity the goal is not reached, for the Shulamite has still to be fixed to a black cross. The idea of the cross points beyond the simple antithesis to a double antithesis, i.e., to a quaternio. To the mind of the alchemist this meant primarily the intercrossing elements:

or the four qualities:

We know that this fastening to a cross denotes a painful state of suspension, or a tearing asunder in the four directions.²¹³ The alchemists therefore set themselves the task of reconciling the warring elements and reducing them to unity. In our text this state is abolished when the distressing blackness is washed off with “wretchedness and vinegar.” This is an obvious allusion to the “hyssop and gall” which Christ was given to drink. In the oft-quoted text of Maier, “wretchedness and vinegar” stand for the melancholia of the *nigredo*, as contrasted with the “joy and gladness” of the redeemed state. The washing with wretchedness and vinegar finally brings about the whitening as well as a *solificatio* of the “inwards of the head,” presumably the brain or even the soul. We can only interpret this as meaning that the Shulamite experienced a transformation similar to Parvati’s, who, saddened by her blackness, was given a golden skin by the gods. Here we must emphasize that it is the lapis or hermaphrodite which, as the god who is quartered or torn asunder or crucified on the Four, represents and suffers the discord of the elements, and at the same time brings about the union of the Four and besides that is identical with the product of the union. The alchemists could not help identifying their Primordial Man with Christ, for whom our author substitutes Adam Kadmon.

[608] Since sun and gold are equivalent concepts in alchemy, the *solificatio* means that the “inwards of the head”—whatever we are to understand by that—are transformed into light, or “Marez,” the precious white earth. The Shulamite’s heart, too, will shine “like a carbuncle.” From the time of the Middle Ages the carbuncle was regarded as a synonym for the lapis.²¹⁴ Here the allegory is transparent: as the head is illuminated, so the heart burns in love.

[609] The difference between Parvati and the Shulamite is, therefore, that whereas Parvati is transformed outwardly the Shulamite is transformed inwardly. Outwardly she remains as black as ever. Unlike the Shulamite of the Song of Songs, whose skin is “swarthy,” our Shulamite declares that her blackness “clings” to her as if painted on, and that one has only to disrobe her to bring her “inner beauty” to light. By the sin of Eve she is plunged, as it were, in ink, in the “tincture,” and blackened, just as in Islamic legend the precious stone that Allah gave Adam was blackened by his sin. If the poison of the curse is taken from her—which will obviously happen when the Beloved appears—then her “innermost seed,” her “first birth,” will come forth. According to the text this birth can refer only to the appearance of Adam Kadmon. He is the only one who loves her despite her blackness. But this blackness seems to be rather more than a veneer, for it will not come off; it is merely compensated by her inner illumination and by the beauty of the bridegroom. As the Shulamite symbolizes the earth in which Adam lay buried, she also has the significance of a maternal progenitrix. In this capacity the black Isis put together again the limbs of her dismembered brother-spouse, Osiris. Thus Adam Kadmon appears here in the classic form of the son-lover, who, in the hierosgamos of sun and moon, reproduces himself in the mother-beloved. Consequently the Shulamite takes over the ancient role of the hierodule of Ishtar. She is the sacred harlot (*meretrix*), which is one of the names the alchemist gave his arcane substance.

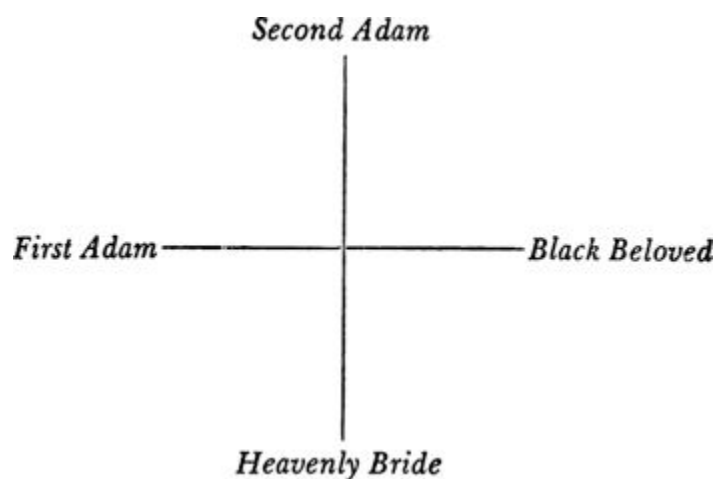

[610] The Shulamite’s reversion to type is not a stroke of genius on the part of our author, but merely the traditional alchemical view that “our infant,” the son of the Philosophers, is the child of sun and moon. But in so far as he represents the hermaphroditic Primordial Man himself, the son is at the same time the father of his parents. Alchemy was so saturated with the idea of the mother-son incest that it automatically reduced the Shulamite of the Song of Songs to her historical prototype.²¹⁵

[611] We have paid due attention to the recalcitrant nature of the Shulamite’s blackness. Now it is significant that the “old Adam” is mentioned at the very moment when the perfect, prelapsarian Adam, the shining Primordial Man, is obviously meant. Just as the black Shulamite misses the final apotheosis, the total *albedo*, so we lack the necessary confirmation that the first Adam is changed into the second, who at the

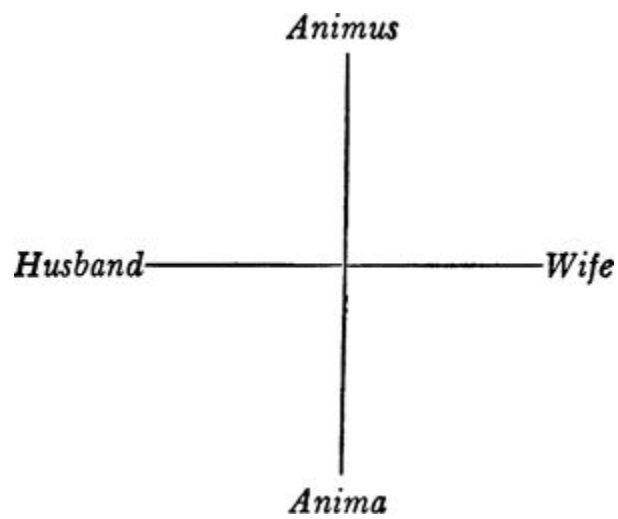

same time is the father of the first. We cannot suppress the suspicion that, just as the blackness will not disappear, so the old Adam will not finally change. This may be the deeper reason why the expression “the old Adam” did not worry the author but, on the contrary, seemed just right. It is, unfortunately, far truer to say that a change for the better does *not* bring a total conversion of darkness into light and of evil into good, but, at most, is a compromise in which the better slightly exceeds the worse. The complication introduced by the “old” Adam, therefore, does not seem to be merely fortuitous, since it forms a factor in an archetypal quaternio composed as follows:

OR

[612] This structure corresponds to the marriage quaternio discussed in the “Psychology of the Transference,”²¹⁶ which is based on certain psychic facts and has the following structure:

OR

[613] Although this quaternio plays a considerable role in alchemy, it is not a product of alchemical speculation but an archetype which can be traced back to the primitive marriage-class system (four-kin system). As a quaternity it represents a whole judgment and formulates the psychic structure of man's totality. This expresses on the one hand the structure of the individual, i.e., a male or female ego in conjunction with the contrasexual unconscious, and on the other hand the ego's relation to the other sex, without which the psychological individual remains incomplete. (By this I mean primarily a *psychic* relationship.) But in this schema the idea of *transformation*, so characteristic of alchemy, is missing. As a scientific discipline, empirical psychology is not in a position to establish whether the conscious ego ranks "higher" or "lower" than the anima, which, like the ego, has a positive and a negative aspect. Science does not make value-judgments, and though psychology has a concept of "value" it is nothing but a concept of "intensity": one complex of ideas has a higher value when its power of assimilation proves stronger than that of another.²¹⁷ The alchemical idea of transformation is rooted in a spiritual concept of value which takes the "transformed" as being *more* valuable, better, higher, more spiritual, etc., and the empirical psychologist has nothing to set against this. But since evaluating and estimating are functions of feeling and nevertheless do play a role in psychology,

value must somehow be taken into account. This happens when an assertion or value-judgment is accepted as an intrinsic part of the description of an object.

[614] The moral as well as the energetic value of the conscious and the unconscious personality is subject to the greatest individual variations. Generally the conscious side predominates, though it suffers from numerous limitations. The schema of the psychological structure, if it is to be compared with the alchemical schema, must therefore be modified by the addition of the idea of transformation. This operation is conceivable in principle, as the process of making the anima and animus conscious does in fact bring about a transformation of personality. Hence it is the psychotherapist who is principally concerned with this problem. The foremost of his therapeutic principles is that conscious realization is an important agent for transforming the personality. The favourable aspect of any such transformation is evaluated as “improvement”—primarily on the basis of the patient’s own statements. The improvement refers in the first place to his psychic health, but there can also be a moral improvement. These statements become increasingly difficult or impossible to verify when the evaluation imperceptibly encroaches upon territory hedged about with philosophical or theoretical prejudices. The whole question of “improvement” is so delicate that it is far easier to settle it by arbitrary decision than by careful deliberation and comparison, which are an affront to all those “terrible simplifiers” who habitually cultivate this particular garden.

[615] Although the fact of transformation and improvement cannot be doubted, it is nevertheless very difficult to find a suitable term for it which is not open to misunderstanding and can be fitted into our schema. Medieval man, like our own simplifiers, was naive enough always to know what was “better.” We are not so sure, and besides this we feel to some extent answerable to those who hold a different opinion. We cannot cherish the joyful belief that everybody else is in the wrong. For this reason we shall probably have to give up the idea of expressing in the terminology of our schema the kind of transformation which is bound up with conscious realization and the wholeness (individuation) it brings in its train.

[616] For a naive-minded person the imperfect, corrupt old Adam is simply contrasted with the perfect “Primordial Man,” and the dark Eve with an illuminated and altogether nobler being. The modern viewpoint is much more realistic, as it withdraws the archetypal schema, which referred originally to a mythological situation, back from projection, and peoples the stage not with mythical lay-figures but with real human beings and their psyches. The man, or the masculine ego-consciousness, is then contrasted with an animus, the masculine figure in a woman’s unconscious, who compels her either to overvalue him or to protest against him. The corresponding figure that contrasts with the woman and her feminine ego-

consciousness is the anima, the source of all the illusions, over- and under-valuations of which a man makes himself guilty in regard to a woman. There is nothing to indicate in this schema that the man is better than the animus or vice versa, or that the anima is a “higher” being than the woman. Nor does it indicate in which direction the line of development is moving. Only one thing is clear, that when, as a result of a long, technical and moral procedure the patient obtains a knowledge of this structure, based on experience, and accepts the responsibility entailed by this knowledge, there follows an integration or *completeness* of the individual, who in this way approaches *wholeness* but not *perfection*, which is the ideal of certain world philosophies. In the Middle Ages “philosophy” prevailed over fact to such an extent that the base metal lead was credited with the power to turn into gold under certain conditions, and the dark, “psychic” man with the capacity to turn himself into the higher “pneumatic” man. But just as lead, which theoretically could become gold, never did so in practice, so the sober-minded man of our own day looks round in vain for the possibility of final perfection. Therefore, on an objective view of the facts, which alone is worthy of the name of science, he sees himself obliged to lower his pretensions a little, and instead of striving after the ideal of perfection to content himself with the more accessible goal of approximate completeness. The progress thereby made possible does not lead to an exalted state of spiritualization, but rather to a wise self-limitation and modesty, thus balancing the disadvantages of the lesser good with the advantage of the lesser evil.

[617] What prevents us from setting up a psychological schema fully corresponding to the alchemical one is ultimately, therefore, the difference between the old and the modern view of the world, between medieval romanticism and scientific objectivity.

[618] The more critical view which I have outlined here on the objective basis of scientific psychology is, however, implied in the alchemical schema. For even as the old Adam comes forth again and is present in the schema just as much as Adam Kadmon, so the blackness does not depart from the Shulamite, an indication that the transformation process is not complete but is still going on. That being so, the old Adam is not yet put off and the Shulamite has not yet become white.

[619] In the Cabalistic view Adam Kadmon is not merely the universal soul or, psychologically, the “self,” but is himself the process of transformation, its division into three or four parts (trimeria or tetrameria). The alchemical formula for this is the Axiom of Maria: “One becomes two, two becomes three, and out of the Third comes the One as the Fourth.”²¹⁸ The treatise of Rabbi Abraham Cohen Irija (Hacohen Herrera) says: “Adam Kadmon proceeded from the Simple and the One, and to that extent he is Unity; but he also descended and fell into his own nature, and to that extent he is Two. And again he will return to the One, which he has in him, and to the

Highest; and to that extent he is Three and Four.”²¹⁹ This speculation refers to the “essential Name,” the Tetragrammaton, which is the four letters of God’s name, “three different, and the fourth a repetition of the second.”²²⁰ In the Hebrew word YHVH (written without vowels), *he* is feminine and is assigned as a wife to *yod*²²¹ and to *vau*. As a result *yod*²²² and *vau*²²³ are masculine, and the feminine *he*, though doubled, is identical and therefore a single unit. To that extent the essential Name is a triad. But since *he* is doubled, the Name is also a tetrad or quaternity²²⁴—a perplexity which coincides most strangely with the Axiom of Maria. On the other hand the Tetragrammaton consists of a double marriage and thus agrees in an equally remarkable manner with our Adam diagrams. The doubling of the feminine *he* is archetypal,²²⁵ since the marriage quaternio presupposes both the difference and the identity of the feminine figures. This is true also of the two masculine figures, as we have seen, though here their difference usually predominates—not surprisingly, as these things are mostly products of the masculine imagination. Consequently the masculine figure coincides with man’s consciousness, where differences are practically absolute. Though the feminine figure is doubled it is so little differentiated that it appears identical. This double yet identical figure corresponds exactly to the anima, who, owing to her usually “unconscious” state, bears all the marks of non-differentiation.

[620] If we apply these considerations to the alchemical schema, we shall be able to modify it in a way that was not possible with the psychological one. We thus arrive at a formula which reduces both to the same denominator:

[621] The critical point, namely the fact that the transformation is not complete, comes out in the text itself; the desired perfection is relegated to the future, “that she who is encompassed by many mountains shall be freed.” For this a divine miracle is needed, the crushing and burning of Canaan, the tearing down of heaven, and the melting of mountains. One can see from these tours de force the magnitude of the difficulties that have to be overcome before perfection is reached.

[622] The reference to the mountains which encompass the Shulamite has a strange parallel in Parvati, whose name means “mountain dweller” and who was deemed the daughter of Himavat (Himalaya).²²⁶ Grieving over her blackness, for which her husband Shiva reproached her, she left him and withdrew to the solitude of the forest. And in her loneliness and seclusion the Shulamite exclaims:

What shall I say? I am alone among the hidden; nevertheless I rejoice in my heart, because I can live privily, and refresh myself in myself. But under my blackness I have hidden the fairest green.²²⁷

[623] The state of imperfect transformation, merely hoped for and waited for, does not seem to be one of torment only, but of positive, if hidden, happiness. It is the state of someone who, in his wanderings among the mazes of his psychic transformation, comes upon a secret happiness which reconciles him to his apparent loneliness. In communing with himself he finds not deadly boredom and melancholy but an inner partner; more than that, a relationship that seems like the happiness of a secret love, or like a hidden springtime, when the green seed²²⁸ sprouts from the barren earth, holding out the promise of future harvests. It is the alchemical *benedicta viriditas*, the blessed greenness, signifying on the one hand the “leprosy of the metals” (verdigris), but on the other the secret immanence of the divine spirit of life in all things. “O blessed greenness, which generatest all things!” cries the author of the *Rosarium*.²²⁹ “Did not the spirit of the Lord,” writes Mylius, “which is a fiery love, give to the waters when it was borne over them a certain fiery vigour, since nothing can be generated without heat? God breathed into created things . . . a certain germination or greenness, by which all things should multiply . . . They called all things green, for to be green means to grow . . . Therefore this virtue of generation and the preservation of things might be called the Soul of the World.”²³⁰

[624] Green signifies hope and the future, and herein lies the reason for the Shulamite’s hidden joy, which otherwise would be difficult to justify. But in alchemy green also means perfection. Thus Arnaldus de Villanova says: “Therefore Aristotle says in his book, Our gold, not the common gold, because the green which is in this substance signifies its total perfection, since by our magistry that green is quickly turned into truest gold.”²³¹ Hence the Shulamite continues:

But I must be like a dove with wings, and I shall come and be free at vespertime, when the waters of impurity are abated, with a green olive leaf; then is my head of the fairest Asophol,²³² and my hair curly-gleaming as the ☽. And Job says (27 : 5),²³³ that out of my ☿²³⁴ shall come forth blood. For it is all as △,²³⁵ shining red Adamah,²³⁶ mingled with a glowing △. Though I am poisonous, black, and hateful without, yet when I am cleansed I shall be the food of heroes; as out of the lion which Samson slew there afterward came forth honey. Therefore says Job 28 : 7: *Semitam non*

*cognovit ille avis, neque aspicit earn oculus vulturis.*²³⁷ For this stone belongeth only to the proven and elect of God.²³⁸

[625] It is the hope of the dark Shulamite that one day, at “vespertime,” probably in the evening of life, she will become like Noah’s dove, which, with the olive leaf in its beak, announced the end of the flood and appeared as the sign of God’s reconciliation with the children of men.²³⁹ The Song of Songs (2 : 14) says: “O my dove, that art in the clefts of the rock, in the secret places of the stairs, let me see thy countenance, let me hear thy voice . . .” In our text her head will be of gold, like the sun, and her hair like the moon. She thus declares herself to be a conjunction of the sun and moon. Indeed, a golden head and “bushy” hair are attributes of the Beloved.²⁴⁰ She is, in fact, mingled with the Beloved, from which it is evident that the perfect state melts *sponsus* and *sponsa* into *one* figure, the sun-and-moon child.²⁴¹ The black Shulamite, well matched by her “bushy locks, black as a raven,” becomes the moon, which in this way acquires its “curly-gleaming” hair.²⁴²

7. ROTUNDUM, HEAD, AND BRAIN

[626] Although the above passage from the Song of Songs is chiefly responsible for the “golden head,” it should be emphasized that this motif also occurs in alchemy without direct reference to the Song of Songs. “His head was of fine gold,” says the “Splendor solis” of the dismembered man whose body was “white like salt.”²⁴³ In Greek alchemy the adepts were called “children of the golden head.”²⁴⁴ The “simple” (i.e., arcane) substance was called the “Golden Head, after the god-sent Daniel, God’s mouthpiece.”²⁴⁵ According to legend, Pope Sylvester II (d. 1003), famed as the transmitter of Arabian science, possessed a golden head that imparted oracles.²⁴⁶ This legend may perhaps date back to the Harranite ceremony of the oracular head.²⁴⁷ The head has also the subsidiary meaning of the *corpus rotundum*, signifying the arcane substance.²⁴⁸ This is particularly relevant to our text, as the “inwards” of the head turned to gold and/or white earth. The latter is the *terra alba foliata* (foliated white earth), which in this case would be the brain. This conjecture is corroborated by the fact that the “inwards of the head” is, as it were, a literal translation of *ἐγκέφαλος μυελός* (marrow in the head). Besides this the brain is a synonym for the arcane substance, as is clear from a Hermes quotation in the *Rosarium*: “Take his brain, powder it with very strong vinegar . . . until it turns dark.”²⁴⁹ The brain was of interest to the alchemists because it was the seat of the “spirit of the supracelestial waters,”²⁵⁰ the waters that are above the firmament (Genesis 1 : 7). In the “Visio Arislei” the brain of the King of the Sea is the birthplace of the brother-sister pair.²⁵¹ The “Liber quartorum” calls the brain the “abode of the divine part.”²⁵² For the brain has a “proximity to the rational soul,” which in turn possesses “simplicitas,” a feature it

shares with God.²⁵³ Because the brain seemed secretly to participate in the alchemical process,²⁵⁴ Wei Po-yang states that “when the brain is properly tended for the required length of time, one will certainly attain the miracle.”²⁵⁵ References to the brain are also found in Greek alchemy, an especially large role being played by the *λίθος ἐγκέφαλος* (brain-stone), which was equated with the *λίθος οὐ λίθος* (stone that is no stone).²⁵⁶ The latter is one of the terms Zosimos uses for the brain; he also calls it “not given and given by God,” and the “Mithraic secret.”²⁵⁷ The treatise on the “Stone of Philosophy” says that “alabaster is whitest brain stone.”²⁵⁸ In the Table of Symbols in Penotus the brain is correlated with the *moon*, the mystery of baptism, and the “infernal gods.”²⁵⁹ The new moon signifies the *albedo* and the white stone;²⁶⁰ baptism has its parallel in the children of the King of the Sea, who were imprisoned in the glass-house at the bottom of the sea and transformed;²⁶¹ the infernal gods can be correlated with the brain as the seat of consciousness and intelligence, for consciousness leads an “ungodly” existence, having fallen away from the divine totality.²⁶²

[627] Zosimos is the connecting link between alchemy and Gnosticism, where we find similar ideas. There the brain (or cerebellum) “is in shape like the head of a dragon.”²⁶³ The wicked Korybas, having affinities on the one hand with Adam and on the other with the Kyllenic Hermes,²⁶⁴ comes “from the head on high and from the uncharacterized brain,”²⁶⁵ and penetrates all things; “we know not how and in what fashion he comes.” Here Hippolytus paraphrases John 5 : 37: “We have heard his voice, but we have not seen his shape,” an allusion to a partially unconscious factor. To emphasize this aspect, Hippolytus goes on to say that Korybas dwells in the “image of clay” (*ἐν τῷ πλάσματι τῷ χοϊκῷ*), i.e., in man.²⁶⁶ “This,” he continues, “is the God who dwells in the flood, of whom the Psalter says that he calls aloud and cries out from many waters.”²⁶⁷ We can take this as the longing of the unconscious for consciousness. When one considers that this passage dates from an age (*ca.* 2nd cent.) that had not the remotest conception of psychology in the modern sense, one must admit that Hippolytus, with the scanty means at his disposal, has managed to give a fairly decent account of the psychological facts. The Adam of whom the Naassenes speak is a “rock.”

This, they say, is Adamas, the chief corner-stone [*λίθος ὁ ἀκρογωνιαίος*], who has become the head [*κεφαλήν*] of the corner. For in the head is the characterized [*χαρακτηριστικόν*] brain, the substance from which the whole family is named [*χαρακτηρίζεται*], the “Adam whom I place in the foundations of Zion.”²⁶⁸ Allegorically, they mean the image [*πλάσμα*] of Man. But he who is so placed is Adam [the inner man, the foundation of Zion] . . . who has fallen from Adam the archman [*ἀρχανθρώπου*] on high.²⁶⁹

[628] These extracts are sufficient to show how original are the bases of alchemical ideas. If no continuity of tradition can be proven, we would be forced to assume that the same ideas can arise spontaneously, again and again, from an archetypal foundation.

8. ADAM AS TOTALITY

[629] Now that we have seen the significance of the brain and the moon-earth as the arcane substance, we can take up our commentary on Eleazar's text.

[630] An alchemical recipe says: "Sow the gold in foliated white earth."²⁷⁰ Thus the gold (sun) and the white earth, or moon²⁷¹ are united. In Christianity, as in alchemy, earth and moon are closely related, conjoined by the figure of the divine mother. The sun-moon conjunction takes place in the head, an indication of the psychic nature of this event.²⁷² As I said, the concept of the "psychic," as we understand it today, did not exist in the Middle Ages, and even the educated modern man finds it difficult to understand what is meant by "reality of the psyche." So it is not surprising that it was incomparably more difficult for medieval man to imagine something between "esse in re" and "esse in intellectu solo."²⁷³ The way out lay in "metaphysics."²⁷⁴ The alchemist was therefore compelled to formulate his quasichemical facts metaphysically too.²⁷⁵ Thus the white earth corresponds to the earth that signified "mankind, is exalted above all the circles of the World, and placed in the intellectual heaven of the most holy Trinity."²⁷⁶ (Where, we may add, it is obviously added to the Trinity as the "Fourth," thereby making it a totality.)²⁷⁷ This cheerful piece of heterodoxy remained unconscious and its consequences never appeared on the surface.

[631] The conclusion which Eleazar draws requires elucidation. It is in itself remarkable that he should paraphrase, in connection with the perfect state, i.e., the *coniunctio Solis et Lunae*, just that passage in Job (supra, par. 624) and say: "Out of my earth shall come forth blood." This is feasible only if the *coniunctio* symbolizes the production of the hermaphroditic second Adam, namely Christ and the *corpus mysticum* of the Church. In the ecclesiastical rite the equivalent of the *coniunctio* is the mixing of substances, or the Communion in both kinds. The passage from Job must therefore be interpreted as though Christ were speaking: "From my earth, my body, will come forth blood." In the Greek Orthodox rite the loaf of bread stands for Christ's body. The priest pierces it with a small silver lance, to represent by analogy the wound in his side from which blood and grace flow, and perhaps also the slaying of the victim (*mactatio Christi*).

[632] The alchemical earth, as we saw, is the arcane substance, here equated with the body of Christ and with *adamah*, the red earth of paradise. From *adamah* is traditionally derived the name Adam, so that here again the paradisaical earth is connected with the corpus mysticum. (This specifically Christian idea comports ill with the alleged Jewish authorship.) Nevertheless, it is strange that, as Eleazar says, this earth is “mingled with fire.” This recalls the alchemical idea of the “*ignis gehennalis*,” the “central fire”²⁷⁸ by whose warmth all nature germinates and grows, because in it dwells the Mercurial serpent, the salamander whom the fire does not consume, and the dragon that feeds on the fire.²⁷⁹ Though this fire is a portion of the fire of God’s spirit (Boehme’s “divine wrath-fire”), it is also Lucifer, the most beautiful of God’s angels, who after his fall became the fire of hell itself. Eleazar says: “This-old Father-Begetter²⁸⁰ will one day be drawn from the primordial Chaos,²⁸¹ and he is the fire-spewing dragon.” The dragon floating in the air is the universal “Phyton,²⁸² the beginning of all things.”²⁸³

[633] Another source for the fire mingled with earth might be the image of the Son of Man in Revelation 1 : 14f.:

His head and his hairs were white like wool, as white as snow, and his eyes were as a flame of fire, and his feet like unto fine brass,²⁸⁴ as if they burned in a furnace, and his voice as the sound of many waters. And he had in his right hand seven stars, and out of his mouth went a sharp two-edged sword, and his countenance was as the sun shineth in his strength.

Here again the head is compared to the sun, combined with the whiteness of the full moon. But the feet stand in the fire and glow like molten metal. We find the lower fire in Job 28 : 5: “*Terra igne subversa est*” (DV: “the earth hath been overturned with fire”). But “out of it cometh bread”—an image of the union of supreme opposites! In the Apocalyptic image we would hardly recognize the Son of Man, who is the true incarnation of God’s love. But actually this image comes nearer to the paradoxes of the alchemists than does the Christ of the gospels, whose inner polarity was reduced to vanishing-point after the “Get thee behind me, Satan” incident. In the Apocalypse it becomes visible again, and even more so in the symbolism of alchemy.²⁸⁵

[634] Our conjecture that Eleazar had in mind the Apocalyptic figure of the Son of Man is confirmed to the extent that there is an illustration of the “*fils de l’homme* ☿” (= Mercurius) in a French manuscript (18th cent.),²⁸⁶ bearing the name “Jezoth le Juste,” who is assigned the significant number 4×4 in the form of sixteen points (Pl. 3).²⁸⁷ This refers to the four cherubim in the vision of Ezekiel, each of which had four faces (Ezek. 1: 10, 10: 14). In unorthodox fashion he is dressed like a woman, as is often the case with the hermaphroditic Mercurius in alchemical illustrations of the seventeenth and eighteenth centuries. Models for this figure are the visions of St.

John the Divine (Rev. 1 and 4) and of Daniel (7 : 9ff.). “Jezoth” (= Yesod) is the ninth and middle Sefira in the lowest triad of the Cabalistic tree, and was interpreted as the creative and procreative power in the universe. Alchemically he corresponds to the *spiritus vegetativus*, Mercurius.²⁸⁸ Just as Mercurius has a phallic aspect in alchemy, being related to Hermes Kyllenios,²⁸⁹ so in the *Zohar* has Yesod; indeed the “Zaddik” or “Just One,” as Yesod is also called, is the organ of generation.²⁹⁰ He is the “spout of the waters” (*effusorium aquarum*),²⁹¹ or the “tube” (*fistula*) and “waterpipe” (*canalis*),²⁹² and the “spring of bubbling water” (*scaturigo*).²⁹³ Such comparisons mislead the modern mind into one-sided interpretations, for instance that Yesod is simply the penis, or, conversely, that the obviously sexual language has no basis in real sexuality. But in mysticism one must remember that no “symbolic” object has only one meaning; it is always several things at once. Sexuality does not exclude spirituality nor spirituality sexuality, for in God all opposites are abolished. One has only to think of the *unio mystica* of Simeon ben Yochai in *Zohar* III, which Scholem (see n. 290) barely mentions.

[635] Yesod has many meanings, which in the manuscript are related to Mercurius. In alchemy Mercurius is the “ligament” of the soul, uniting spirit and body. His dual nature enables him to play the role of mediator; he is bodily and spiritual and is himself the union of these two principles. Correspondingly, in Yesod is accomplished the mystery of the “unitio”²⁹⁴ of the upper, Tifereth, and the lower, Malchuth. He is also called the “covenant of peace.”²⁹⁵ Similar designations are “bread,” “chief of the Faces”²⁹⁶ (i.e., of the upper and lower), the “apex” which touches earth and heaven,²⁹⁷ “propinquus” (the Near One), since he is nearer to the Glory (Shekinah), i.e., Malchuth, than to Tifereth,²⁹⁸ and the “Strong One of Israel.”²⁹⁹ Yesod unites the emanation of the right, masculine side (Nezach, life-force) with the left, feminine side (Hod, beauty).³⁰⁰ He is called “firm, reliable, constant”³⁰¹ because he leads the emanation of Tifereth down into Malchuth.³⁰²

[636] Mercurius is often symbolized as a tree, and Yesod as *frutex* (tree-trunk) and *virgultum* (thicket).³⁰³ Mercurius is the *spiritus vegetativus*, spirit of life and growth, and Yesod is described as “vivus,” living,³⁰⁴ or “living for aeons.”³⁰⁵ Just as Mercurius is the prima materia and the basis of the whole process, so Yesod means “foundation.”³⁰⁶ “In natural things Yesod contains in himself quicksilver, for this is the basis of the whole art of transmutation”;³⁰⁷ not, of course, ordinary quicksilver, but “that which not without mystery is called a star.” From this star flow “the waters of the good God El, or quicksilver. . . . This quicksilver . . . is called the Spherical Water,” or “the water of baptism.”³⁰⁸

This water is called the daughter of Matred, that is . . . of a man who labours unweariedly at making gold. For this water flows not out of the earth, nor is it dug

out of mines, but is brought forth and perfected with great labour and much diligence. His wife is called the Water of gold, or such kind of water as gives rise to gold. And if this workman is espoused with her, he will engender a daughter, who will be the Water of the king's bath.³⁰⁹

On the basis of isopsephic³¹⁰ speculation the water of gold was identified with Yesod. The tablet with sixteen signs for gold or sun ☉ at the feet of the *filis de l'homme* seems to point to this (Pl. 3). The *Kabbala denudata* reproduces a "Kamea"³¹¹ containing not 2×8 but $8 \times 8 = 64$ numbers,³¹² "which represent the sum of the name of the golden water."³¹³

[637] As the prima materia is also called lead and Saturn, we should mention that the Sabbath is co-ordinated with Yesod, as is the letter Teth,³¹⁴ which stands under the influence of Shabtai (Saturn). In the same way that Mercurius, as a volatile substance, is named the bird, goose, chick of Hermes, swan, eagle, vulture, and phoenix, Yesod (as well as Tifereth) is called "pullus avis"³¹⁵ also "penna, ala" (feather, wing).³¹⁶ Feathers and wings play a role in alchemy too: the eagle that devours its own feathers or wings,³¹⁷ and the feathers of the phoenix in Michael Maier.³¹⁸ The idea of the bird eating its own feathers is a variant of the uroboros, which in turn is connected with Leviathan. Leviathan and the "great dragon" are names for both Yesod and Tifereth.³¹⁹

[638] Yesod is as a part to the whole, and the whole is Tifereth, who is named the sun.³²⁰ The feet of the Apocalyptic Son of Man, glowing as if in the fire, may have a connection with Malchuth, since the feet are the organ that touches the earth. The earth, Malchuth, is Yesod's "footstool."³²¹ Malchuth is also the "furnace", "the place destined for the cooking and decoction of the influence sent down to her by her husband for the nourishment of the hosts."³²²

[639] After this digression, let us turn back once more to Eleazar's text. The golden head with the silver moon-hair and the body made of red earth mingled with fire are the "inside" of a black, poisonous, ugly figure, which is how the Shulamite now appears. Obviously these negative qualities are to be understood in a moral sense, although chemically they signify the black lead of the initial state. But "inside" is the second Adam, a mystic Christ, as is made clear by the allegory of the lion which Samson slew, and which then became the habitation of a swarm of honey-bees: "Out of the eater came forth meat, and out of the strong came forth sweetness."³²³ These words were interpreted as referring to the *corpus Christi*, the Host,³²⁴ which Eleazar calls the "food of heroes." This strange expression and the still stranger conception of the "Christ" present in the Host are an allusion to the alchemical secret. That is why the author can say with Job 28 : 7 that the way is unknown, "neither hath the eye of

the vulture beheld it.” It is shrouded in mystery, for “the stone belongeth only to the proven and elect of God.”

[640] The lapis also figures in the Cabala: “Sometimes Adonai, the name of the last Sefira, and Malchuth herself, the Kingdom, are so called; for the latter is the foundation of the whole fabric of the world.”³²⁵ The stone is, indeed, of supreme importance, because it fulfils the function of Adam Kadmon as the “capital-stone, from which all the upper and lower hosts in the work of creation are brought into being.”³²⁶ It is called the “sapphirestone, because it takes on divers colours from the highest powers, and works in created things now in one wise, now in the contrary, administering at times good, at others evil, now life, now death, now sickness, now healing, now poverty, now riches.”³²⁷ The stone appears here as the power of fate; indeed, as the reference to Deuteronomy 32 : 39 shows, it is God himself.³²⁸ Knorr von Rosenroth was himself an alchemist, and his words here are written with deliberate intent.³²⁹ He emphasizes that the stone is the one “which the builders rejected and is become the head of the corner.”³³⁰ It occupies a middle position in the Sefiroth system since it unites in itself the powers of the upper world and distributes them to the lower.³³¹ According to its position, therefore, it would correspond to Tifereth.³³²

[641] I have found no evidence in the alchemical literature that the sapphire was an arcanum before the time of Paracelsus. It seems as though this author introduced it into alchemy from the Cabala as a synonym for the arcane substance:

For the virtue which lies in the sapphire is given from heaven by way of solution, coagulation, and fixation. Now, since heaven is created so as to work through these three things until it has achieved this [viz., the production of the sapphire and its virtues], so must the breaking up of the sapphire correspond to the same three procedures. This breaking up is such that the bodies vanish, and the arcanum remains. For before the sapphire existed, there was no arcanum. But subsequently, just as life was given to man, the arcanum was given to this material by heaven.³³³

We can recognize here relationships with Cabalistic ideas. Paracelsus’s pupil, Adam von Bodenstein, says in his *Onomasticon*: “The sapphire material: that liquid in which there is no harmful matter.”³³⁴ Dorn³³⁵ relates the “sapphirine flower” to the “Arcanum Cheyri” of Paracelsus.³³⁶ The “Epistola ad Hermannum” cites a certain G. Ph. Rodochaeus de Geleinen Husio:³³⁷ “Then arises the sapphirine flower of the hermaphrodite, the wondrous mystery of the Macrocosm, of which one part, if it be poured into a thousand parts of the melted Ophirizum, converts it all into its own nature.”³³⁸ This passage is influenced by Paracelsus.

[642] The Lapis Sapphirus or Sapphirinus is derived from Ezekiel 1 : 22 and 26, where the firmament above the “living creature” was like a “terrible crystal” and a

“sapphire stone” (also 10 : 1), and from Exodus 24 : 10: “And they saw the God of Israel: and under his feet as it were a work of sapphire stone, and as the heaven, when clear” (DV). In alchemy “our gold” is “crystalline”;³³⁹ the treasure of the Philosophers is “a certain glassy heaven, like crystal, and ductile like gold”;³⁴⁰ the tincture of gold is “transparent as crystal, fragile as glass.”³⁴¹ The “Book of the Cave of Treasures” says that Adam’s body “shone like the light of a crystal.”³⁴² The crystal, “which appears equally pure within and without,” refers in ecclesiastical language to the “unimpaired purity” of the Virgin.³⁴³ The throne in Ezekiel’s vision, says Gregory the Great, is rightly likened to the sapphire, “for this stone has the colour of air.”³⁴⁴ He compares Christ to the crystal in a way that served as a model for the language and ideas of the alchemists.³⁴⁵

[643] The combination of water and crystal is found also in the Cabalistic “Sifra de Zeniutha.” § 178 of Luria’s commentary says: “The second form is called crystalline dew, and this is formed of the Severity of the Kingdom³⁴⁶ of the first Adam, which entered into the Wisdom of Macroprosopus:³⁴⁷ hence in the crystal there appears a distinct red colour. And this [form] is the Wisdom whereof they said, that Judgments are rooted in it.”³⁴⁸ Although alchemy was undoubtedly influenced by such comparisons, the stone cannot be traced back to Christ, despite all the analogies.³⁴⁹ It was the mystical property of alchemy, this “stone that is no stone,” or the “stone that hath a spirit” and is found in the “streamings of the Nile.”³⁵⁰ It is a symbol that cannot be explained away as yet another supererogatory attempt to obscure the Christian mystery. On the contrary, it appears as a new and singular product which in early times gradually crystallized out through the assimilation of Christian ideas into Gnostic material; later, clear attempts were made in turn to assimilate the alchemical ideas to the Christian, though, as Eleazar’s text shows, there was an unbridgeable difference between them. The reason for this is that the symbol of the stone, despite the analogy with Christ, contains an element that cannot be reconciled with the purely spiritual assumptions of Christianity. The very concept of the “stone” indicates the peculiar nature of this symbol. “Stone” is the essence of everything solid and earthly. It represents feminine *matter*, and this concept intrudes into the sphere of “spirit” and its symbolism. The Church’s hermeneutic allegories of the cornerstone and the “stone cut out of a mountain without hands,”³⁵¹ which were interpreted as Christ, were not the source of the lapis symbol, but were used by the alchemists in order to justify it, for the *λίθος οὐ λίθος* was not of Christian origin. The stone was more than an “incarnation” of God, it was a concretization, a “materialization” that reached down into the darkness of the inorganic realm or even arose from it, from that part of the Deity which put itself in opposition to the Creator because, as the Basilidians say, it remained latent in the *panspermia* (universal seed-bed) as the formative principle of crystals, metals, and living organisms. The inorganic realm included regions, like

that of hell-fire, which were the dominion of the devil. The three-headed Mercurial serpent was, indeed, a triunity in matter³⁵²—the “lower triad”³⁵³—complementing the divine Trinity.

[644] We may therefore suppose that in alchemy an attempt was made at a symbolical *integration of evil* by localizing the divine drama of redemption in man himself. This process appears now as an extension of redemption beyond man to matter, now as an ascent of the *ἀντίμιμον πνεῦμα*, ‘spirit of imitation,’ or Lucifer, and as a reconciliation of this with the spirit descending from above, both the Above and Below undergoing a process of mutual transformation. It seems to me that Eleazar’s text conveys some idea of this, as the transformation of the black Shulamite takes place in three stages, which were mentioned by Dionysius the Areopagite as characterizing the mystical ascent: *emundatio καθαρισμός*, ‘purification’), *illuminatio (φωτισμός)*, *perfectio (τελεσμός)*.³⁵⁴ Dionysius refers the purification to Psalm 51 : 7 (AV): “Wash me, and I shall be whiter than snow”; and the illumination to Psalm 13 : 3 (AV): “Lighten mine eyes.” (The two heavenly luminaries, sun and moon, correspond on the old view to the two eyes.) The perfection he refers to Matthew 5 : 48: “Be ye therefore perfect, even as your Father which is in heaven is perfect.” Here we have one aspect of the approximation to divinity; the other aspect is exemplified by the image of the Apocalyptic Son of Man, described earlier.

[645] The transformation of the Shulamite as described in the text can thus be conceived as the preliminary stage of an individuation process, rising unexpectedly out of the unconscious in symbolical form, and comparable to a dream that seeks to outline this process and for that purpose makes use now of religious and now of “scientific” images. So regarded and looked at from a psychological angle, the following facts emerge.

[646] The *nigredo* corresponds to the darkness of the unconscious, which contains in the first place the inferior personality, the shadow. This changes into the feminine figure that stands immediately behind it, as it were, and controls it: the anima, whose typical representative the Shulamite is. “I am black, but comely”—not “hateful,” as Eleazar would have us believe, after having reconsidered the matter. For since nature was deformed by the sin of Adam, her blackness must in his view be regarded as ugliness, as the blackness of sin, as the Saturnine initial state, heavy and black as lead. But the Shulamite, the priestess of Ishtar, signifies earth, nature, fertility, everything that flourishes under the damp light of the moon, and also the natural life-urge. The anima is indeed the archetype of life itself, which is beyond all meaning and all moral categories. What at first struck us as incomprehensible, namely that the old Adam should come forth from her again, thus reversing the sequence of Creation, can now be understood, for if anyone knows how to live the natural life it is the old

Adam. Here he is not so much the old Adam as an Adam reborn from a daughter of Eve, an Adam restored to his pristine naturalness. The fact that she gives rebirth to Adam and that a black Shulamite produces the original man in his savage, unredeemed state rules out the suspicion that the “old” Adam is a slip of the pen or a misprint. There is a method in it, which allows us to guess what it was that induced the author to adopt a Jewish pseudonym. For the Jew was the handiest example, living under everyone’s eyes, of a non-Christian, and therefore a vessel for all those things a Christian could not or did not like to remember. So it was really very natural to put those dark, half-conscious thoughts which began with the Movement of the Free Spirit, the late Christian religion of the Holy Ghost, and which formed the life-blood of the Renaissance, into the mouth of an allegedly Jewish author. Just as the era of the Old Testament prophets began with Hosea, who was commanded by God to marry another Shulamite, so the *cours d’amour* of René d’Anjou, the minnesingers and saints with their passionate love of God, were contemporaneous with the Brethren of the Free Spirit. Eleazar’s text is nothing but a late echo of these centuries-old events which changed the face of Christianity. But in any such echo there is also a premonition of future developments: in the very same century the author of *Faust*, that momentous opus, was born.

[647] The Shulamite remains unchanged, as did the old Adam. And yet Adam Kadmon is born, a non-Christian second Adam, just at the moment when the transformation is expected. This extraordinary contradiction seems insoluble at first sight. But it becomes understandable when we consider that the illumination or *solificatio* of the Shulamite is not the first transformation but the second, and takes place within. The subject of transformation is not the empirical man, however much he may identify with the “old Adam,” but Adam the Primordial Man, the archetype within us. The black Shulamite herself represents the first transformation: it is the coming to consciousness of the black anima, the Primordial Man’s feminine aspect. The second, or *solificatio*, is the conscious differentiation of the masculine aspect—a far more difficult task. Every man feels identical with this, though in reality he is not. There is too much blackness in the archetype for him to put it all down to his own account, and so many good and positive things that he cannot resist the temptation to identify with them. It is therefore much easier to see the blackness in projected form: “The woman whom thou gavest to be with me, she gave me of the tree, and I did eat” holds true even of the most enlightened psychology. But the masculine aspect is as unfathomable as the feminine aspect. It would certainly not be fitting for the empirical man, no matter how swollen his ego-feelings, to appropriate the whole range of Adam’s heights and depths. Human being though he is, he has no cause to attribute to himself all the nobility and beauty a man can attain to, just as he would assuredly refuse to accept the guilt for the abjectness and baseness that make man

lower than an animal—unless, of course, he were driven by insanity to act out the role of the archetype.

[648] But although, when the masculine aspect of the Primordial Man “comes forth again,” it is the old Adam, who is black like the Shulamite, it is nevertheless the second Adam, i.e., the still older Adam before the Fall, Adam Kadmon. The ambiguity of this passage is too perfect for the author, who proves himself elsewhere to be a not particularly skilful forger, to have been conscious of it. The coming to consciousness of Adam Kadmon would indeed be a great illumination, for it would be a realization of the inner man or Anthropos, an archetypal totality transcending the sexes. In so far as this Man is divine, we could speak of a theophany. The Shulamite’s hope of becoming a “white dove” points to a future, perfect state. The white dove is a hint that the Shulamite will become Sophia,³⁵⁵ the Holy Ghost, while Adam Kadmon is an obvious parallel of Christ.

[649] If the alchemical process of thought corresponded only to the three stages of purification, illumination, perfection, it would be difficult to see the justification for paraphrasing the analogous Christian ideas, which are so patently betrayed, for instance, in the fixing to the “black cross.” But the need for a symbolism other than the Christian one is evident from the fact that the transformation process does not culminate in the second Adam and the white dove but in the lapis, which, with God’s help, is made by the empirical man. It is a half physical, half metaphysical product, a psychological symbol expressing something created by man and yet supra-ordinate to him. This paradox can only be something like the symbol of the *self*, which likewise can be brought forth, i.e., made conscious, by human effort but is at the same time by definition a pre-existent totality that includes the conscious and the unconscious.

[650] This is a thought that goes beyond the Christian world of ideas and involves a mystery consummated in and through man. It is as though the drama of Christ’s life were, from now on, located in man as its living carrier. As a result of this shift, the events formulated in dogma are brought within range of psychological experience and become recognizable in the process of individuation.

[651] It is naturally not the task of an empirical science to evaluate such spiritual developments from the standpoint of transcendental truth. It must content itself with establishing the existence of these processes and comparing them with parallel observations in modern man. It also has the right to attempt to map out the logical structure of such psychologems. The fact that it must push forward into regions where belief and doubt argue the question of truth does not prove that it has any intention of intervening or presuming to decide what the truth is. Its “truth” consists solely in establishing the facts and in explaining them without prejudice within the framework of empirical psychology. Under no circumstances is it entitled to say

whether the facts are valid or not, or to try to ascertain their moral or religious value. I must emphasize this so emphatically because my method is constantly suspected of being theology or metaphysics in disguise. The difficulty for my critics seems to be that they are unable to accept the concept of psychic reality. A psychic process is something that really exists, and a psychic content is as real as a plant or an animal. In spite of the fact that the duckbilled platypus, for example, cannot be logically derived from the general premises of zoology, it nevertheless indubitably exists, improbable as this may appear to prejudiced minds. It is not a fantasy and not just somebody's opinion but an immovable fact. It is perfectly true that one can play metaphysics with psychic facts, and particularly with ideas that have always been counted as metaphysical. But the ideas themselves are not metaphysical; they are empirically verifiable phenomena that are the proper subject of the scientific method.

[652] With the statements of the Cabala, which as we have seen found their way into alchemy, our interpretation of Adam attains a scope and a depth that can hardly be surpassed. This interpretation includes Eve as the feminine principle itself. She appears chiefly as the "lower," as Malchuth (kingdom), Shekinah (the Indwelling of God), or as Atarah (Crown), the equivalent below of Kether, the upper crown. She is also present in the "hermaphroditic" Sefiroth system, the right half of which is masculine and the left half feminine. Hence Adam Kadmon, as a personification of the whole "inverted tree," is androgynous, but the system itself is a highly differentiated coniunctio symbol, and, as such, divided into three parts (three columns of three Sefiroth each). According to Hippolytus, the Naassenes divided the hermaphroditic Adam into three parts, just as they did Geryon.³⁵⁶ Geryon was triple-bodied³⁵⁷ and the possessor of the splendid cattle on the island of Erythia. Heracles slew him with an arrow, on which occasion Hera was wounded in the breast. On the same journey Heracles had threatened to shoot the sun because his rays were too hot. So the slaying of Geryon was the last in a series of three sacrileges.

For they say of this Geryon [continues Hippolytus] that one part is spiritual, one psychic, and one earthly; and they hold that the knowledge of him is the beginning of the capacity to know God, for they say: "The beginning of wholeness is the knowledge of man, but the knowledge of God is perfect wholeness." All this, they say, the spiritual, the psychic, and the earthly, set itself in motion and came down together into one man, Jesus who was born of Mary; and there spoke through it [the spiritual, the psychic, and the earthly] these three men [i.e., the triple-bodied Geryon], each from his own substance to his own. For of all things there are three kinds, the angelic, the psychic, and the earthly; and three Churches, angelic, psychic, and earthly; and their names are the Chosen, the Called, and the Captive.³⁵⁸

[653] This conception bears a striking resemblance to the Sefiroth system.³⁵⁹ In particular, Geryon corresponds to the cosmogonic Adam Kadmon. He is the “masculo-feminine Man in all things, [whom] the Greeks call the heavenly horn of the moon.³⁶⁰ For they say all things were made by him, and without him was not any thing made.³⁶¹ That which was made in him is Life. This, they say, is Life—the unutterable generation [*γενεά*] of perfect men, which to earlier generations was unknown.”³⁶²

VI

THE CONJUNCTION

1. THE ALCHEMICAL VIEW OF THE UNION OF OPPOSITES

[654] Herbert Silberer rightly called the coniunctio the “central idea” of the alchemical procedure.¹ This author correctly recognized that alchemy was, in the main, symbolical, whereas the historian of alchemy, Eduard von Lippmann, a chemist, did not mention the term “coniunctio” even in his index.² Anyone who has but a slight acquaintance with the literature knows that the adepts were ultimately concerned with a union of the substances—by whatever names these may have been called. By means of this union they hoped to attain the goal of the work: the production of the gold or a symbolical equivalent of it. Although the coniunctio is unquestionably the primordial image of what we today would call chemical combination, it is hardly possible to prove beyond a doubt that the adept thought as concretely as the modern chemist. Even when he spoke of a union of the “natures,” or of an “amalgam” of iron and copper, or of a compound of sulphur and mercury, he meant it at the same time as a symbol: iron was Mars and copper was Venus, and their fusion was at the same time a love-affair. The union of the “natures” which “embrace one another” was not physical and concrete, for they were “celestial natures” which multiplied “by the command of God.”³ When “red lead” was roasted with gold it produced a “spirit,” that is, the compound became “spiritual,”⁴ and from the “red spirit” proceeded the “principle of the world.”⁵ The combination of sulphur and mercury was followed by the “bath” and “death.”⁶ By the combination of copper and the *aqua permanens*, which was usually quicksilver, we think only of an amalgam. But for the alchemists it meant a secret, “philosophical” sea, since for them the *aqua permanens* was primarily a symbol or a philosophical postulate which they hoped to discover—or believed they had discovered—in the various “fluids.” The substances they sought to combine in reality always had—on account of their unknown nature—a numinous quality which tended towards phantasmal personification. They were substances which, like living organisms, “fertilized one another and thereby produced the living being [ζῶον] sought by the Philosophers.”⁷ The substances seemed to them hermaphroditic, and the conjunction they strove for was a philosophical operation, namely the union of form and matter.⁸ This inherent duality explains the duplications that so often occur, e.g., two sulphurs, two quicksivers,⁹ *Venus alba et rubea*,¹⁰ *aurum nostrum* and *aurum vulgi*.

[655] It is therefore not surprising that the adepts, as we have seen in the previous chapters, piled up vast numbers of synonyms to express the mysterious nature of the substances—an occupation which, though it must seem utterly futile to the chemist, affords the psychologist a welcome explanation concerning the nature of the projected contents. Like all numinous contents, they have a tendency to self-amplification, that is to say they form the nuclei for an aggregation of synonyms. These synonyms represent the elements to be united as a pair of opposites;¹¹ for instance as man and woman, god and goddess, son and mother,¹² red and white,¹³ active and passive, body and spirit,¹⁴ and so on. The opposites are usually derived from the quaternio of elements,¹⁵ as we can see very clearly from the anonymous treatise “De sulphure,” which says:

Thus the fire began to work upon the air and brought forth Sulphur. Then the air began to work upon the water and brought forth Mercurius. The water began to work upon the earth and brought forth Salt. But the earth, having nothing to work upon, brought forth nothing, so the product remained within it. Therefore only three principles were produced, and the earth became the nurse and matrix of the others.

From these three principles were produced male and female, the male obviously from Sulphur and Mercurius, and the female from Mercurius and Salt.¹⁶ Together they bring forth the “incorruptible One,” the *quinta essentia*, “and thus quadrangle will answer to quadrangle.¹⁷”

[656] The synthesis of the incorruptible One or quintessence follows the Axiom of Maria, the earth representing the “fourth.” The separation of the hostile elements corresponds to the initial state of chaos and darkness. From the successive unions arise an active principle (sulphur) and a passive (salt), as well as a mediating, ambivalent principle, Mercurius. This classical alchemical trinity then produces the relationship of male to female as the supreme and essential opposition. Fire comes at the beginning and is acted on by nothing, and earth at the end acts on nothing. Between fire and earth there is no interaction; hence the four elements do not constitute a circle, i.e., a totality. This is produced only by the synthesis of male and female. Thus the square at the beginning corresponds to the quaternio of elements united in the *quinta essentia* at the end—“quadrangle will answer to quadrangle.”

[657] The alchemical description of the beginning corresponds psychologically to a primitive consciousness which is constantly liable to break up into individual affective processes—to fall apart, as it were, in four directions. As the four elements represent the whole physical world, their falling apart means dissolution into the constituents of the world, that is, into a purely inorganic and hence unconscious state. Conversely, the combination of the elements and the final synthesis of male and female is an achievement of the art and a product of conscious endeavour. The result

of the synthesis was consequently conceived by the adept as self-knowledge,¹⁸ which, like the knowledge of God, is needed for the preparation of the Philosophers' Stone.¹⁹ Piety is needed for the work, and this is nothing but knowledge of oneself.²⁰ This thought occurs not only in late alchemy but also in Greek tradition, as in the Alexandrian treatise of Krates (transmitted by the Arabs), where it is said that a perfect knowledge of the soul enables the adept to understand the many different names which the Philosophers have given to the arcane substance.²¹ The "Liber quartorum" emphasizes that there must be self-observation in the work as well as of events in due time.²² It is evident from this that the chemical process of the coniunctio was at the same time a psychic synthesis. Sometimes it seems as if self-knowledge brought about the union, sometimes as if the chemical process were the efficient cause. The latter alternative is decidedly the more frequent: the coniunctio takes place in the retort²³ or, more indefinitely, in the "natural vessel" or matrix.²⁴ The vessel is also called the grave, and the union a "shared death."²⁵ This state is named the "eclipse of the sun."²⁶

[658] The coniunctio does not always take the form of a direct union, since it needs—or occurs in—a medium: "Only through a medium can the transition take place,"²⁷ and, "Mercurius is the medium of conjunction."²⁸ Mercurius is the soul (anima), which is the "mediator between body and spirit."²⁹ The same is true of the synonyms for Mercurius, the green lion³⁰ and the *aqua permanens* or spiritual water,³¹ which are likewise media of conjunction. The "Consilium coniugii" mentions as a connective agent the sweet smell or "smoky vapour,"³² recalling Basilides' idea of the sweet smell of the Holy Ghost.³³ Obviously this refers to the "spiritual" nature of Mercurius, just as the spiritual water, also called *aqua aëris* (aerial water or air-water), is a life principle and the "marriage maker" between man and woman.³⁴ A common synonym for the water is the "sea," as the place where the chymical marriage is celebrated. The "Tractatus Micreris" mentions as further synonyms the "Nile of Egypt," the "Sea of the Indians," and the "Meridian Sea." The "marvels" of this sea are that it mitigates and unites the opposites.³⁵ An essential feature of the royal marriage is therefore the sea-journey, as described by Christian Rosencreutz.³⁶ This alchemical motif was taken up by Goethe in *Faust II*, where it underlies the meaning of the Aegean Festival. The archetypal content of this festival has been elaborated by Kerényi in a brilliant amplificatory interpretation. The bands of nereids on Roman sarcophagi reveal the "epithalamic and the sepulchral element," for "basic to the antique mysteries . . . is the identity of marriage and death on the one hand, and of birth and the eternal resurgence of life from death on the other."³⁷

[659] Mercurius, however, is not just the medium of conjunction but also that which is to be united, since he is the essence or "seminal matter" of both man and woman. *Mercurius masculinus* and *Mercurius foemineus* are united in and through *Mercurius*

menstrualis, which is the “aqua.”³⁸ Dorn gives the “philosophical” explanation of this in his “Physica Trismegisti”: In the beginning God created *one* world (*unus mundus*).³⁹ This he divided into two—heaven and earth. “Beneath this spiritual and corporeal binarius lieth hid a third thing, which is the bond of holy matrimony. This same is the medium enduring until now in all things, partaking of both their extremes, without which it cannot be at all, nor they without this medium be what they are, one thing out of three.”⁴⁰ The division into two was necessary in order to bring the “one” world out of the state of potentiality into reality. Reality consists of a multiplicity of things. But one is not a number; the first number is two, and with it multiplicity and reality begin.

[660] It is apparent from this explanation that the desperately evasive and universal Mercurius—that Proteus twinkling in a myriad shapes and colours—is none other than the “*unus mundus*,” the original, non-differentiated unity of the world or of Being; the *ἀγνοσία* of the Gnostics, the primordial unconsciousness.⁴¹ The Mercurius of the alchemists is a personification and concretization of what we today would call the collective unconscious. While the concept of the *unus mundus* is a metaphysical speculation, the unconscious can be indirectly experienced via its manifestations. Though in itself an hypothesis, it has at least as great a probability as the hypothesis of the atom. It is clear from the empirical material at our disposal today that the contents of the unconscious, unlike conscious contents, are mutually contaminated to such a degree that they cannot be distinguished from one another and can therefore easily take one another’s place, as can be seen most clearly in dreams. The indistinguishableness of its contents gives one the impression that everything is connected with everything else and therefore, despite their multifarious modes of manifestation, that they are at bottom a unity. The only comparatively clear contents consist of motifs or types round which the individual associations congregate. As the history of the human mind shows, these archetypes are of great stability and so distinct that they allow themselves to be personified and named, even though their boundaries are blurred or cut across those of other archetypes, so that certain of their qualities can be interchanged. In particular, mandala symbolism shows a marked tendency to concentrate all the archetypes on a common centre, comparable to the relationship of all conscious contents to the ego. The analogy is so striking that a layman unfamiliar with this symbolism is easily misled into thinking that the mandala is an artificial product of the conscious mind. Naturally mandalas can be imitated, but this does not prove that all mandalas are imitations. They are produced spontaneously, without external influence, even by children and adults who have never come into contact with any such ideas.⁴² One might perhaps regard the mandala as a reflection of the egocentric nature of consciousness, though this view would be justified only if it could be proved that the unconscious is a secondary phenomenon.

But the unconscious is undoubtedly older and more original than consciousness, and for this reason one could just as well call the egocentrism of consciousness a reflection or imitation of the “self”-centrism of the unconscious.

[661] The mandala symbolizes, by its central point, the ultimate unity of all archetypes as well as of the multiplicity of the phenomenal world, and is therefore the empirical equivalent of the metaphysical concept of a *unus mundus*. The alchemical equivalent is the lapis and its synonyms, in particular the Microcosm.⁴³

[662] Dorn’s explanation is illuminating in that it affords us a deep insight into the alchemical *mysterium coniunctionis*. If this is nothing less than a restoration of the original state of the cosmos and the divine unconsciousness of the world, we can understand the extraordinary fascination emanating from this mystery. It is the Western equivalent of the fundamental principle of classical Chinese philosophy, namely the union of *yang* and *yin* in *tao*, and at the same time a premonition of that “tertium quid” which, on the basis of psychological experience on the one hand and of Rhine’s experiments on the other, I have called “synchronicity.”⁴⁴ If mandala symbolism is the psychological equivalent of the *unus mundus*, then synchronicity is its para-psychological equivalent. Though synchronistic phenomena occur in time and space they manifest a remarkable independence of both these indispensable determinants of physical existence and hence do not conform to the law of causality. The causalism that underlies our scientific view of the world breaks everything down into individual processes which it punctiliously tries to isolate from all other parallel processes. This tendency is absolutely necessary if we are to gain reliable knowledge of the world, but philosophically it has the disadvantage of breaking up, or obscuring, the universal interrelationship of events so that a recognition of the greater relationship, i.e., of the unity of the world, becomes more and more difficult. Everything that happens, however, happens in the same “one world” and is a part of it. For this reason events must possess an *a priori* aspect of unity, though it is difficult to establish this by the statistical method. So far as we can see at present, Rhine seems to have successfully demonstrated this unity by his extrasensory-perception experiments (ESP).⁴⁵ Independence of time and space brings about a concurrence or meaningful coincidence of events not causally connected with one another—phenomena which till now were summed under the purely descriptive concepts of telepathy, clairvoyance, and precognition. These concepts naturally have no explanatory value as each of them represents an X which cannot be distinguished from the X of the other. The characteristic feature of all these phenomena, including Rhine’s psychokinetic effect and other synchronistic occurrences, is *meaningful coincidence*, and as such I have defined the synchronistic principle. This principle suggests that there is an inter-connection or unity of causally unrelated events, and

thus postulates a unitary aspect of being which can very well be described as the *unus mundus*.

[663] Mercurius usually stands for the arcane substance, whose synonyms are the panacea and the “spagyric medicine.” Dorn identifies the latter with the “balsam”⁴⁶ of Paracelsus, which is a close analogy of the *μύρον* of the Basilidians. In the *De vita longa* of Paracelsus, balsam as an *elixir vitae* is associated with the term “gamonymus,” which might be rendered “having the name of matrimony.”⁴⁷ Dorn thinks that the balsam, which “stands higher than nature,” is to be found in the human body and is a kind of aetheric substance.⁴⁸ He says it is the best medicament not only for the body but also for the mind (*mens*). Though it is a corporeal substance, as a combination of the spirit and soul of the spagyric medicine it is essentially spiritual.⁴⁹

We conclude that meditative philosophy consists in the overcoming of the body by mental union [*unio mentalis*]. This first union does not as yet make the wise man, but only the mental disciple of wisdom. The second union of the mind with the body shows forth the wise man, hoping for and expecting that blessed third union with the first unity [i.e., the *unus mundus*, the latent unity of the world]. May Almighty God grant that all men be made such, and may He be one in All.⁵⁰

* * *

[664] It is significant for the whole of alchemy that in Dorn’s view a mental union was not the culminating point but merely the first stage of the procedure. The second stage is reached when the mental union, that is, the unity of spirit and soul, is conjoined with the body. But a consummation of the *mysterium coniunctionis* can be expected only when the unity of spirit, soul, and body is made one with the original *unus mundus*. This third stage of the *coniunctio* was depicted⁵¹ after the manner of an Assumption and Coronation of Mary, in which the Mother of God represents the body. The Assumption is really a wedding feast, the Christian version of the hierosgamos, whose originally incestuous nature played a great role in alchemy. The traditional incest always indicated that the supreme union of opposites expressed a combination of things which are related but of unlike nature.⁵² This may begin with a purely intra-psychic *unio mentalis* of intellect or reason with Eros, representing feeling. Such an interior operation means a great deal, since it brings a considerable increase of self-knowledge as well as of personal maturity, but its reality is merely potential and is validated only by a union with the physical world of the body. The alchemists therefore pictured the *unio mentalis* as Father and Son and their union as the dove (the “spiration” common to both), but the world of the body they represented by the feminine or passive principle, namely Mary. Thus, for more than a thousand years, they prepared the ground for the dogma of the Assumption. It is true that the far-reaching implications of a marriage of the fatherly spiritual principle with

the principle of matter, or maternal corporeality, are not to be seen from the dogma at first glance. Nevertheless, it does bridge over a gulf that seems unfathomable: the apparently irremediable separation of spirit from nature and the body. Alchemy throws a bright light on the background of the dogma, for the new article of faith expresses in symbolical form exactly what the adepts recognized as being the secret of their coniunctio. The correspondence is indeed so great that the old Masters could legitimately have declared that the new dogma has written the Hermetic secret in the skies. As against this it will be said that the alchemists smuggled the mystic or theological marriage into their obscure procedures. This is contradicted by the fact that the alchymical marriage is not only older than the corresponding formulation in the liturgy and of the Church Fathers but is based on classical and pre-Christian tradition.⁵³ The alchemical tradition cannot be brought into relationship with the Apocalyptic marriage of the Lamb. The highly differentiated symbolism of the latter (lamb and city) is itself an offshoot of the archetypal hierosgamos, just as this is the source for the alchemical idea of the coniunctio.

[665] The adepts strove to realize their speculative ideas in the form of a chemical substance which they thought was endowed with all kinds of magical powers. This is the literal meaning of their uniting the *unio mentalis* with the body. For us it is certainly not easy to include moral and philosophical reflections in this amalgamation, as the alchemists obviously did. For one thing we know too much about the real nature of chemical combination, and for another we have a much too abstract conception of the mind to be able to understand how a “truth” can be hidden in matter or what an effective “balsam” must be like. Owing to medieval ignorance both of chemistry and of psychology, and the lack of any epistemological criticism, the two concepts could easily mix, so that things that for us have no recognizable connection with one another could enter into mutual relationship.

[666] The dogma of the Assumption and the alchemical *mysterium coniunctionis* express the same fundamental thought even though in very different symbolism. Just as the Church insists on the literal taking up of the physical body into heaven, so the alchemists believed in the possibility, or even in the actual existence, of their stone or of the philosophical gold. In both cases belief was a substitute for the missing empirical reality. Even though alchemy was essentially more materialistic in its procedures than the dogma, both of them remain at the second, anticipatory stage of the coniunctio, the union of the *unio mentalis* with the body. Even Dorn did not venture to assert that he or any other adept had perfected the third stage in his lifetime. Naturally there were as many swindlers and dupes as ever who claimed to possess the lapis or golden tincture, or to be able to make it. But the more honest alchemists readily admitted that they had not yet plumbed the final secret.

[667] One should not be put off by the physical impossibilities of dogma or of the coniunctio, for they are symbols in regard to which the allurements of rationalism are entirely out of place and miss the mark. If symbols mean anything at all, they are tendencies which pursue a definite but not yet recognizable goal and consequently can express themselves only in analogies. In this uncertain situation one must be content to leave things as they are, and give up trying to know anything beyond the symbol. In the case of dogma such a renunciation is reinforced by the fear of possibly violating the sanctity of a religious idea, and in the case of alchemy it was until very recently considered not worth while to rack one's brains over medieval absurdities. Today, armed with psychological understanding, we are in a position to penetrate into the meaning of even the most abstruse alchemical symbols, and there is no justifiable reason why we should not apply the same method to dogma. Nobody, after all, can deny that it consists of ideas which are born of man's imagining and thinking. The question of how far this thinking may be inspired by the Holy Ghost is not affected at all, let alone decided, by psychological investigation, nor is the possibility of a metaphysical background denied. Psychology cannot advance any argument either for or against the objective validity of any metaphysical view. I have repeated this statement in various places in order to give the lie to the obstinate and grotesque notion that a psychological explanation must necessarily be either psychologism or its opposite, namely a metaphysical assertion. The psychic is a phenomenal world in itself, which can be reduced neither to the brain nor to metaphysics.

[668] I have just said that symbols are tendencies whose goal is as yet unknown.⁵⁴ We may assume that the same fundamental rules obtain in the history of the human mind as in the psychology of the individual. In psychotherapy it often happens that, long before they reach consciousness, certain unconscious tendencies betray their presence by symbols, occurring mostly in dreams but also in waking fantasies and symbolic actions. Often we have the impression that the unconscious is trying to enter consciousness by means of all sorts of allusions and analogies, or that it is making more or less playful attempts to attract attention to itself. One can observe these phenomena very easily in a dream-series. The series I discussed in *Psychology and Alchemy* offers a good example.⁵⁵ Ideas develop from seeds, and we do not know what ideas will develop from what seeds in the course of history. The Assumption of the Virgin, for instance, is vouched for neither in Scripture nor in the tradition of the first five centuries of the Christian Church. For a long time it was officially denied even, but, with the connivance of the whole medieval and modern Church, it gradually developed as a "pious opinion" and gained so much power and influence that it finally succeeded in thrusting aside the necessity for scriptural proof and for a tradition going back to primitive times, and in attaining definition in spite of the fact that the content of the dogma is not even definable.⁵⁶ The papal declaration made a

reality of what had long been condoned. This irrevocable step beyond the confines of historical Christianity is the strongest proof of the autonomy of archetypal images.

2. STAGES OF THE CONJUNCTION

[669] The coniunctio affords another example of the gradual development of an idea in the course of the millennia. Its history flows in two main streams which are largely independent of one another: theology and alchemy. While alchemy has, except for a few traces, been extinct for some two hundred years, theology has put forth a new blossom in the dogma of the Assumption, from which it is evident that the stream of development has by no means come to a standstill. But the differentiation of the two streams has not yet passed beyond the framework of the archetypal hierosgamos, for the coniunctio is still represented as a union of mother and son or of a brother-sister pair. Already in the sixteenth century, however, Gerard Dorn had recognized the psychological aspect of the chymical marriage and clearly understood it as what we today would call the individuation process. This is a step beyond the bounds which were set to the coniunctio, both in ecclesiastical doctrine and in alchemy, by its archetypal symbolism. It seems to me that Dorn's view represents a logical understanding of it in two respects: first because the discrepancy between the chemical operation and the psychic events associated with it could not remain permanently hidden from an attentive and critical observer, and secondly because the marriage symbolism obviously never quite satisfied the alchemical thinkers themselves, since they constantly felt obliged to make use of other "uniting symbols," besides the numerous variants of the hierosgamos, to express the all but incomprehensible nature of the mystery. Thus the coniunctio is represented by the dragon embracing the woman in the grave,⁵⁷ or by two animals fighting,⁵⁸ or by the king dissolving in water,⁵⁹ and so on. Similarly, in Chinese philosophy the meaning of *yang* is far from exhausted with its masculine connotation. It also means dry, bright, and the south side of the mountain, just as the feminine *yin* means damp, dark, and the north side of the mountain.

[670] Although the esoteric symbolism of the coniunctio occupies a prominent position, it does not cover all aspects of the mysterium. In addition we have to consider the symbolism of death and the grave, and the motif of conflict. Obviously, very different if not contradictory symbolisms were needed to give an adequate description of the paradoxical nature of the conjunction. In such a situation one can conclude with certainty that none of the symbols employed suffices to express the whole. One therefore feels compelled to seek a formula in which the various aspects can be brought together without contradiction. Dorn attempted to do this with the means that were then at his disposal. He could do so the more easily as the current idea of

correspondentia came to his aid. For a man of those times there was no intellectual difficulty in postulating a “truth” which was the same in God, in man, and in matter. With the help of this idea he could see at once that the reconciliation of hostile elements and the union of alchemical opposites formed a “correspondence” to the *unio mentalis* which took place simultaneously in the mind of man, and not only in man but in God (“that He may be one in All”). Dorn correctly recognized that the entity in which the union took place is the psychological authority which I have called the self. The *unio mentalis*, the interior oneness which today we call individuation, he conceived as a psychic equilibration of opposites “in the overcoming of the body,” a state of equanimity transcending the body’s affectivity and instinctuality.⁶⁰ The spirit (*animus*), which is to unite with the soul, he called a “spiracle [*spiraculum*] of eternal life,” a sort of “window into eternity” (Leibniz), whereas the soul is an organ of the spirit and the body an instrument of the soul. The soul stands between good and evil and has the “option” of both. It animates the body by a “natural union,” just as, by a “supernatural union,” it is endowed with life by the spirit.⁶¹

[671] But, in order to bring about their subsequent reunion, the mind (*mens*) must be separated from the body—which is equivalent to “voluntary death”⁶²—for only separated things can unite. By this separation (*distractio*) Dorn obviously meant a discrimination and dissolution of the “composite,” the composite state being one in which the affectivity of the body has a disturbing-influence on the rationality of the mind. The aim of this separation was to free the mind from the influence of the “bodily appetites and the heart’s affections,” and to establish a spiritual position which is supraordinate to the turbulent sphere of the body. This leads at first to a dissociation of the personality and a violation of the merely natural man.

[672] This preliminary step, in itself a clear blend of Stoic philosophy and Christian psychology, is indispensable for the differentiation of consciousness.⁶³ Modern psychotherapy makes use of the same procedure when it objectifies the affects and instincts and confronts consciousness with them. But the separation of the spiritual and the vital spheres, and the subordination of the latter to the rational standpoint, is not satisfactory inasmuch as reason alone cannot do complete or even adequate justice to the irrational facts of the unconscious. In the long run it does not pay to cripple life by insisting on the primacy of the spirit, for which reason the pious man cannot prevent himself from sinning again and again and the rationalist must constantly trip up over his own irrationalities. Only the man who hides the other side in artificial unconsciousness can escape this intolerable conflict. Accordingly, the chronic duel between body and spirit seems a better though by no means ideal solution. The advantage, however, is that both sides remain conscious. Anything conscious can be corrected, but anything that slips away into the unconscious is

beyond the reach of correction and, its rank growth undisturbed, is subject to increasing degeneration. Happily, nature sees to it that the unconscious contents will irrupt into consciousness sooner or later and create the necessary confusion. A permanent and uncomplicated state of spiritualization is therefore such a rarity that its possessors are canonized by the Church.

[673] Since the soul animates the body, just as the soul is animated by the spirit, she tends to favour the body and everything bodily, sensuous, and emotional. She lies caught in “the chains” of Physis, and she desires “beyond physical necessity.” She must be called back by the “counsel of the spirit” from her lostness in matter and the world. This is a relief to the body too, for it not only enjoys the advantage of being animated by the soul but suffers under the disadvantage of having to serve as the instrument of the soul’s appetites and desires. Her wish-fantasies impel it to deeds to which it would not rouse itself without this incentive, for the inertia of matter is inborn in it and probably forms its only interest except for the satisfaction of physiological instincts. Hence the separation means withdrawing the soul and her projections from the bodily sphere and from all environmental conditions relating to the body. In modern terms it would be a turning away from sensuous reality, a withdrawal of the fantasy-projections that give “the ten thousand things” their attractive and deceptive glamour. In other words, it means introversion, introspection, meditation, and the careful investigation of desires and their motives. Since, as Dorn says, the soul “stands between good and evil,” the disciple will have every opportunity to discover the dark side of his personality, his inferior wishes and motives, childish fantasies and resentments, etc.; in short, all those traits he habitually hides from himself. He will be confronted with his shadow, but more rarely with the good qualities, of which he is accustomed to make a show anyway. He will learn to know his soul, that is, his anima and Shakti who conjures up a delusory world for him. He attains this knowledge, Dorn supposes, with the help of the spirit, by which are meant all the higher mental faculties such as reason, insight, and moral discrimination. But, in so far as the spirit is also a “window into eternity” and, as the *anima rationalis* immortal, it conveys to the soul a certain “divine influx” and the knowledge of higher things, wherein consists precisely its supposed animation of the soul. This higher world has an impersonal character and consists on the one hand of all those traditional, intellectual, and moral values which educate and cultivate the individual, and, on the other, of the products of the unconscious, which present themselves to consciousness as archetypal ideas. Usually the former predominate. But when, weakened by age or by criticism, they lose their power of conviction, the archetypal ideas rush in to fill the gap. Freud, correctly recognizing this situation, called the traditional values the “super-ego,” but the archetypal ideas remained unknown to him, as the belief in reason and the positivism of the nineteenth century

never relaxed their hold. A materialistic view of the world ill accords with the reality and autonomy of the psyche.

[674] The arcanum of alchemy is one of these archetypal ideas that fills a gap in the Christian view of the world, namely, the un-bridged gulf between the opposites, in particular between good and evil. Only logic knows a *tertium non datur*; nature consists entirely of such “thirds,” since she is represented by effects which resolve an opposition—just as a waterfall mediates between “above” and “below.” The alchemists sought for that effect which would heal not only the disharmonies of the physical world but the inner psychic conflict as well, the “affliction of the soul”; and they called this effect the lapis Philosophorum. In order to obtain it, they had to loosen the age-old attachment of the soul to the body and thus make conscious the conflict between the purely natural and the spiritual man. In so doing they rediscovered the old truth that every operation of this kind is a figurative death⁶⁴—which explains the violent aversion everybody feels when he has to see through his projections and recognize the nature of his anima. It requires indeed an unusual degree of self-abnegation to question the fictitious picture of one’s own personality. This, nevertheless, is the requirement of any psychotherapy that goes at all deep, and one realizes how oversimplified its procedures are only when the analyst has to try out his own medicine on himself. One can, as experience has often shown, relieve oneself of the difficult act of self-knowledge by shutting out the moral criterion with so-called scientific objectivity or unvarnished cynicism. But this simply means buying a certain amount of insight at the cost of artificially repressing an ethical value. The result of this deception is that the insight is robbed of its efficacy, since the moral reaction is missing. Thus the foundations for a neurotic dissociation are laid, and this in no way corresponds to the psychotherapist’s intention. The goal of the procedure is the *unio mentalis*, the attainment of full knowledge of the heights and depths of one’s own character.
