[959] On the organic level it might be possible to regard biological morphogenesis in the light of the synchronistic factor. Professor A. M. Dalcq (of Brussels) understands form, despite its tie with matter, as a “continuity that is supraordinate to the living organism.”⁴ Sir James Jeans reckons radioactive decay among the causeless events which, as we have seen, include synchronicity. He says: “Radioactive break-up appeared to be an effect without a cause, and suggested that the ultimate laws of nature were not even causal.”⁵ This highly paradoxical formula, coming from the pen of a physicist, is typical of the intellectual dilemma with which radioactive decay confronts us. It, or rather the phenomenon of “half-life,” appears as an instance of acausal orderedness—a conception which also includes synchronicity and to which I shall revert below.

[960] Synchronicity is not a philosophical view but an empirical concept which postulates an intellectually necessary principle. This cannot be called either materialism or metaphysics. No serious investigator would assert that the nature of what is observed to exist, and of that which observes, namely the psyche, are known and recognized quantities. If the latest conclusions of science are coming nearer and nearer to a unitary idea of being, characterized by space and time on the one hand and by causality and synchronicity on the other, that has nothing to do with materialism. Rather it seems to show that there is some possibility of getting rid of the incommensurability between the observed and the observer. The result, in that case, would be a unity of being which would have to be expressed in terms of a new conceptual language—a “neutral language,” as W. Pauli once called it.

[961] Space, time, and causality, the triad of classical physics, would then be supplemented by the synchronicity factor and become a tetrad, a *quaternio* which makes possible a whole judgment:

[962] Here synchronicity is to the three other principles as the one-dimensionality of time⁶ is to the three-dimensionality of space, or as the recalcitrant “Fourth” in the *Timaeus*, which, Plato says, can only be added “by force” to the other three.⁷ Just as the introduction of time as the fourth dimension in modern physics postulates an irrepresentable space-time continuum, so the idea of synchronicity with its inherent quality of meaning produces a picture of the world so irrepresentable as to be completely baffling.⁸ The advantage, however, of adding this concept is that it makes possible a view which includes the psychoid factor in our description and knowledge of nature—that is, an *a priori* meaning or “equivalence.” The problem that runs like a red thread through the speculations of alchemists for fifteen hundred years thus repeats and solves itself, the so-called axiom of Maria the Jewess (or Copt): “Out of the Third comes the One as the Fourth.”⁹ This cryptic observation confirms what I said above, that in principle new points of view are not as a rule discovered in territory that is already known, but in out-of-the-way places that may even be avoided because of their bad name. The old dream of the alchemists, the transmutation of chemical elements, this much-derided idea, has become a reality in our own day, and its symbolism, which was no less an object of ridicule, has turned out to be a veritable gold-mine for the psychology of the unconscious. Their dilemma of three and four, which began with the story that serves as a setting for the *Timaeus* and extends all the way to the Cabiri scene in *Faust, Part II*, is recognized by a sixteenth-century alchemist, Gerhard Dorn, as the decision between the Christian Trinity and the *serpens quadricornutus*, the four-horned serpent who is the Devil. As though in anticipation of things to come he anathematizes the pagan quaternity which was ordinarily so beloved of the alchemists, on the ground that it arose from the binarius (the number 2) and is thus something material, feminine, and devilish.¹⁰ Dr. von Franz has demonstrated this emergence of trinitarian thinking in the *Parable* of Bernard of Treviso, in Khunrath’s *Amphitheatrum*, in Michael Maier, and in the anonymous author of the *Aquarium sapientum*.¹¹ W. Pauli calls attention to the polemical writings of Kepler and of Robert Fludd, in which Fludd’s correspondence theory was the loser and had to make room for Kepler’s theory of three principles.¹² The decision in favour of the triad, which in certain respects ran counter to the alchemical tradition, was followed by a scientific epoch that knew nothing of correspondence and clung with passionate insistence to a triadic view of the world—

a continuation of the trinitarian type of thinking—which described and explained everything in terms of space, time, and causality.

[963] The revolution brought about by the discovery of radioactivity has considerably modified the classical views of physics. So great is the change of standpoint that we have to revise the classical schema I made use of above. As I was able, thanks to the friendly interest which Professor Pauli evinced in my work, to discuss these questions of principle with a professional physicist who could at the same time appreciate my psychological arguments, I am in a position to put forward a suggestion that takes modern physics into account. Pauli suggested replacing the opposition of space and time in the classical schema by (conservation of) energy and the space-time continuum. This suggestion led me to a closer definition of the other pair of opposites—causality and synchronicity—with a view to establishing some kind of connection between these two heterogeneous concepts. We finally agreed on the following *quaternio*:

[964] This schema satisfies on the one hand the postulates of modern physics, and on the other hand those of psychology. The psychological point of view needs clarifying. A causalistic explanation of synchronicity seems out of the question for the reasons given above. It consists essentially of "chance" equivalences. Their *tertium comparationis* rests on the psychoid factors I call archetypes. These are *indefinite*, that is to say they can be known and determined only approximately. Although associated with causal processes, or "carried" by them, they continually go beyond their frame of reference, an infringement to which I would give the name "transgressivity," because the archetypes are not found exclusively in the psychic sphere, but can occur just as much in circumstances that are not psychic (equivalence of an outward physical process with a psychic one). Archetypal equivalences are *contingent* to causal determination, that is to say there exist between them and the causal processes no relations that conform to law. They seem, therefore, to represent a special instance of randomness or chance, or of that "random state" which "runs through time in a way that fully conforms to law," as Andreas Speiser says.¹³ It is an initial state which is "not governed by mechanistic law" but is the precondition of law, the chance substrate on which law is based. If we consider synchronicity or the archetypes as the contingent, then the latter takes on the specific aspect of a modality that has the functional significance of a world-constituting factor. The archetype

represents *psychic probability*, portraying ordinary instinctual events in the form of *types*. It is a special psychic instance of probability in general, which “is made up of the laws of chance and lays down rules for nature just as the laws of mechanics do.”¹⁴ We must agree with Speiser that although in the realm of pure intellect the contingent is “a formless substance,” it reveals itself to psychic introspection—so far as inward perception can grasp it at all—as an image, or rather a type which underlies not only the psychic equivalences but, remarkably enough, the psychophysical equivalences too.

[965] It is difficult to divest conceptual language of its causalistic colouring. Thus the word “underlying,” despite its causalistic connotation, does not refer to anything causal, but simply to an existing quality, an irreducible contingency which is “Just-So.” The meaningful coincidence or equivalence of a psychic and a physical state that have no causal relationship to one another means, in general terms, that it is a modality without a cause, an “acausal orderedness.” The question now arises whether our definition of synchronicity with reference to the equivalence of psychic and physical processes is capable of expansion, or rather, requires expansion. This requirement seems to force itself on us when we consider the above, wider conception of synchronicity as an “acausal orderedness.” Into this category come all “acts of creation,” *a priori* factors such as the properties of natural numbers, the discontinuities of modern physics, etc. Consequently we would have to include constant and experimentally reproducible phenomena within the scope of our expanded concept, though this does not seem to accord with the nature of the phenomena included in synchronicity narrowly understood. The latter are mostly individual cases which cannot be repeated experimentally. This is not of course altogether true, as Rhine’s experiments show and numerous other experiences with clairvoyant individuals. These facts prove that even in individual cases which have no common denominator and rank as “curiosities” there are certain regularities and therefore constant factors, from which we must conclude that our narrower conception of synchronicity is probably too narrow and really needs expanding. I incline in fact to the view that synchronicity in the narrow sense is only a particular instance of general acausal orderedness—that, namely, of the equivalence of psychic and physical processes where the observer is in the fortunate position of being able to recognize the *tertium comparationis*. But as soon as he perceives the archetypal background he is tempted to trace the mutual assimilation of independent psychic and physical processes back to a (causal) effect of the archetype, and thus to overlook the fact that they are merely contingent. This danger is avoided if one regards synchronicity as a special instance of general acausal orderedness. In this way we also avoid multiplying our principles of explanation illegitimately, for the archetype is the introspectively recognizable form of *a priori* psychic orderedness. If an

external synchronistic process now associates itself with it, it falls into the same basic pattern—in other words, it too is “ordered.” This form of orderedness differs from that of the properties of natural numbers or the discontinuities of physics in that the latter have existed from eternity and occur regularly, whereas the forms of psychic orderedness are *acts of creation in time*. That, incidentally, is precisely why I have stressed the element of time as being characteristic of these phenomena and called them *synchronistic*.

[966] The modern discovery of discontinuity (e.g., the orderedness of energy quanta, of radium decay, etc.) has put an end to the sovereign rule of causality and thus to the triad of principles. The territory lost by the latter belonged earlier to the sphere of correspondence and sympathy, concepts which reached their greatest development in Leibniz’s idea of pre-established harmony. Schopenhauer knew far too little about the empirical foundations of correspondence to realize how hopeless his causalistic attempt at explanation was. Today, thanks to the ESP experiments, we have a great deal of empirical material at our disposal. We can form some conception of its reliability when we learn from G. E. Hutchinson¹⁵ that the ESP experiments conducted by S. G. Soal and K. M. Goldney have a probability of 1 : 10³⁵, this being equivalent to the number of molecules in 250,000 tons of water. There are relatively few experiments in the field of the natural sciences whose results come anywhere near so high a degree of certainty. The exaggerated scepticism in regard to ESP is really without a shred of justification. The main reason for it is simply the ignorance which nowadays, unfortunately, seems to be the inevitable accompaniment of specialism and screens off the necessarily limited horizon of specialist studies from all higher and wider points of view in the most undesirable way. How often have we not found that the so-called “superstitions” contain a core of truth that is well worth knowing! It may well be that the originally magical significance of the word “wish,” which is still preserved in “wishing-rod” (divining rod, or magic wand) and expresses not just wishing in the sense of desire but a magical action,¹⁶ and the traditional belief in the efficacy of prayer, are both based on the experience of concomitant synchronistic phenomena.

[967] Synchronicity is no more baffling or mysterious than the discontinuities of physics. It is only the ingrained belief in the sovereign power of causality that creates intellectual difficulties and makes it appear unthinkable that causeless events exist or could ever occur. But if they do, then we must regard them as *creative acts*, as the continuous creation¹⁷ of a pattern that exists from all eternity, repeats itself sporadically, and is not derivable from any known antecedents. We must of course guard against thinking of every event whose cause is unknown as “causeless.” This, as I have already stressed, is admissible only when a cause is not even thinkable. But thinkability is itself an idea that needs the most rigorous criticism. Had the atom¹⁸

corresponded to the original philosophical conception of it, its fissionability would be unthinkable. But once it proves to be a measurable quantity, its non-fissionability becomes unthinkable. Meaningful coincidences are thinkable as pure chance. But the more they multiply and the greater and more exact the correspondence is, the more their probability sinks and their unthinkability increases, until they can no longer be regarded as pure chance but, for lack of a causal explanation, have to be thought of as meaningful arrangements. As I have already said, however, their “inexplicability” is not due to the fact that the cause is unknown, but to the fact that a cause is not even thinkable in intellectual terms. This is necessarily the case when space and time lose their meaning or have become relative, for under those circumstances a causality which presupposes space and time for its continuance can no longer be said to exist and becomes altogether unthinkable.

[968] For these reasons it seems to me necessary to introduce, alongside space, time, and causality, a category which not only enables us to understand synchronistic phenomena as a special class of natural events, but also takes the contingent partly as a universal factor existing from all eternity, and partly as the sum of countless individual acts of creation occurring in time.

APPENDIX

ON SYNCHRONICITY¹

[969] It might seem appropriate to begin my exposition by defining the concept with which it deals. But I would rather approach the subject the other way and first give you a brief description of the facts which the concept of synchronicity is intended to cover. As its etymology shows, this term has something to do with time or, to be more accurate, with a kind of simultaneity. Instead of simultaneity we could also use the concept of a *meaningful coincidence* of two or more events, where something other than the probability of chance is involved. A statistical—that is, a probable—concurrence of events, such as the “duplication of cases” found in hospitals, falls within the category of chance. Groupings of this kind can consist of any number of terms and still remain within the framework of the probable and rationally possible. Thus, for instance, someone chances to notice the number on his street-car ticket. On arriving home he receives a telephone call during which the same number is mentioned. In the evening he buys a theatre ticket that again has the same number. The three events form a chance grouping that, although not likely to occur often, nevertheless lies well within the framework of probability owing to the frequency of each of its terms. I would like to recount from my own experience the following chance grouping, made up of no fewer than six terms:

[970] On April 1, 1949, I made a note in the morning of an inscription containing a figure that was half man and half fish. There was fish for lunch. Somebody mentioned the custom of making an “April fish” of someone. In the afternoon, a former patient of mine, whom I had not seen for months, showed me some impressive pictures of fish. In the evening, I was shown a piece of embroidery with sea monsters and fishes in it. The next morning, I saw a former patient, who was visiting me for the first time in ten years. She had dreamed of a large fish the night before. A few months later, when I was using this series for a larger work and had just finished writing it down, I walked over to a spot by the lake in front of the house, where I had already been several times that morning. This time a fish a foot long lay on the sea-wall. Since no one else was present, I have no idea how the fish could have got there.

[971] When coincidences pile up in this way one cannot help being impressed by them—for the greater the number of terms in such a series, or the more unusual its

character, the more improbable it becomes. For reasons that I have mentioned elsewhere and will not discuss now, I assume that this was a chance grouping. It must be admitted, though, that it is more improbable than a mere duplication.

[972] In the abovementioned case of the street-car ticket, I said that the observer “chanced” to notice the number and retain it in his memory, which ordinarily he would never have done. This formed the basis for the series of chance events, but I do not know what caused him to notice the number. It seems to me that in judging such a series a factor of uncertainty enters in at this point and requires attention. I have observed something similar in other cases, without, however, being able to draw any reliable conclusions. But it is sometimes difficult to avoid the impression that there is a sort of foreknowledge of the coming series of events. This feeling becomes irresistible when, as so frequently happens, one thinks one is about to meet an old friend in the street, only to find to one’s disappointment that it is a stranger. On turning the next corner one then runs into him in person. Cases of this kind occur in every conceivable form and by no means infrequently, but after the first momentary astonishment they are as a rule quickly forgotten.

[973] Now, the more the foreseen details of an event pile up, the more definite is the impression of an existing foreknowledge, and the more improbable does chance become. I remember the story of a student friend whose father had promised him a trip to Spain if he passed his final examinations satisfactorily. My friend thereupon dreamed that he was walking through a Spanish city. The street led to a square, where there was a Gothic cathedral. He then turned right, around a corner, into another street. There he was met by an elegant carriage drawn by two cream-coloured horses. Then he woke up. He told us about the dream as we were sitting round a table drinking beer. Shortly afterward, having successfully passed his examinations, he went to Spain, and there, in one of the streets, he recognized the city of his dream. He found the square and the cathedral, which exactly corresponded to the dream-image. He wanted to go straight to the cathedral, but then remembered that in the dream he had turned right, at the corner, into another street. He was curious to find out whether his dream would be corroborated further. Hardly had he turned the corner when he saw in reality the carriage with the two cream-coloured horses.

[974] The *sentiment du déjà-vu* is based, as I have found in a number of cases, on a foreknowledge in dreams, but we saw that this foreknowledge can also occur in the waking state. In such cases mere chance becomes highly improbable because the coincidence is known in advance. It thus loses its chance character not only psychologically and subjectively, but objectively too, since the accumulation of details that coincide immeasurably increases the improbability of chance as a determining factor. (For correct precognitions of death, Dariex and Flammarion have

computed probabilities ranging from 1 in 4,000,000 to 1 in 8,000,000.)² So in these cases it would be incongruous to speak of “chance” happenings. It is rather a question of meaningful coincidences. Usually they are explained by precognition—in other words, foreknowledge. People also talk of clairvoyance, telepathy, etc., without, however, being able to explain what these faculties consist of or what means of transmission they use in order to render events distant in space and time accessible to our perception. All these ideas are mere names; they are not scientific concepts which could be taken as statements of principle, for no one has yet succeeded in constructing a causal bridge between the elements making up a meaningful coincidence.

[975] Great credit is due to J. B. Rhine for having established a reliable basis for work in the vast field of these phenomena by his experiments in extrasensory perception, or ESP. He used a pack of 25 cards divided into 5 groups of 5, each with its special sign (star, square, circle, cross, two wavy lines). The experiment was carried out as follows. In each series of experiments the pack is laid out 800 times, in such a way that the subject cannot see the cards. He is then asked to guess the cards as they are turned up. The probability of a correct answer is 1 in 5. The result, computed from very high figures, showed an average of 6.5 hits. The probability of a chance deviation of 1.5 amounts to only 1 in 250,000. Some individuals scored more than twice the probable number of hits. On one occasion all 25 cards were guessed correctly, which gives a probability of 1 in 298,023,223,876,953,125. The spatial distance between experimenter and subject was increased from a few yards to about 4,000 miles, with no effect on the result.

[976] A second type of experiment consisted in asking the subject to guess a series of cards that was still to be laid out in the near or more distant future. The time factor was increased from a few minutes to two weeks. The result of these experiments showed a probability of 1 in 400,000.

[977] In a third type of experiment, the subject had to try to influence the fall of mechanically thrown dice by wishing for a certain number. The results of this so-called psychokinetic (PK) experiment were the more positive the more dice were used at a time.

[978] The result of the spatial experiment proves with tolerable certainty that the psyche can, to some extent, eliminate the space factor. The time experiment proves that the time factor (at any rate, in the dimension of the future) can become psychically relative. The experiment with dice proves that moving bodies, too, can be influenced psychically—a result that could have been predicted from the psychic relativity of space and time.

[979] The energy postulate shows itself to be inapplicable to the Rhine experiments, and thus rules out all ideas about the transmission of force. Equally, the law of causality does not hold—a fact that I pointed out thirty years ago. For we cannot conceive how a future event could bring about an event in the present. Since for the time being there is no possibility whatever of a causal explanation, we must assume provisionally that improbable accidents of an acausal nature—that is, meaningful coincidences—have entered the picture.

[980] In considering these remarkable results we must take into account a fact discovered by Rhine, namely that in each series of experiments the first attempts yielded a better result than the later ones. The falling off in the number of hits scored was connected with the mood of the subject. An initial mood of faith and optimism makes for good results. Scepticism and resistance have the opposite effect, that is, they create an unfavourable disposition. As the energetic, and hence also the causal, approach to these experiments has shown itself to be inapplicable, it follows that the affective factor has the significance simply of a *condition* which makes it possible for the phenomenon to occur, though it need not. According to Rhine's results, we may nevertheless expect 6.5 hits instead of only 5. But it cannot be predicted in advance when the hit will come. Could we do so, we would be dealing with a law, and this would contradict the entire nature of the phenomenon. It has, as said, the improbable character of a "lucky hit" or accident that occurs with a more than merely probable frequency and is as a rule dependent on a certain state of affectivity.

[981] This observation has been thoroughly confirmed, and it suggests that the psychic factor which modifies or even eliminates the principles underlying the physicist's picture of the world is connected with the affective state of the subject. Although the phenomenology of the ESP and PK experiments could be considerably enriched by further experiments of the kind described above, deeper investigation of its bases will have to concern itself with the nature of the affectivity involved. I have therefore directed my attention to certain observations and experiences which, I can fairly say, have forced themselves upon me during the course of my long medical practice. They have to do with spontaneous, meaningful coincidences of so high a degree of improbability as to appear flatly unbelievable. I shall therefore describe to you only one case of this kind, simply to give an example characteristic of a whole category of phenomena. It makes no difference whether you refuse to believe this particular case or whether you dispose of it with an *ad hoc* explanation. I could tell you a great many such stories, which are in principle no more surprising or incredible than the irrefutable results arrived at by Rhine, and you would soon see that almost every case calls for its own explanation. But the causal explanation, the only possible one from the standpoint of natural science, breaks down owing to the psychic relativization of

space and time, which together form the indispensable premises for the cause-and-effect relationship.

[982] My example concerns a young woman patient who, in spite of efforts made on both sides, proved to be psychologically inaccessible. The difficulty lay in the fact that she always knew better about everything. Her excellent education had provided her with a weapon ideally suited to this purpose, namely a highly polished Cartesian rationalism with an impeccably “geometrical”³ idea of reality. After several fruitless attempts to sweeten her rationalism with a somewhat more human understanding, I had to confine myself to the hope that something unexpected and irrational would turn up, something that would burst the intellectual retort into which she had sealed herself. Well, I was sitting opposite her one day, with my back to the window, listening to her flow of rhetoric. She had had an impressive dream the night before, in which someone had given her a golden scarab—a costly piece of jewellery. While she was still telling me this dream, I heard something behind me gently tapping on the window. I turned round and saw that it was a fairly large flying insect that was knocking against the window-pane from outside in the obvious effort to get into the dark room. This seemed to me very strange. I opened the window immediately and caught the insect in the air as it flew in. It was a scarabaeid beetle, or common rose-chaffer (*Cetonia aurata*), whose gold-green colour most nearly resembles that of a golden scarab. I handed the beetle to my patient with the words, “Here is your scarab.” This experience punctured the desired hole in her rationalism and broke the ice of her intellectual resistance. The treatment could now be continued with satisfactory results.

[983] This story is meant only as a paradigm of the innumerable cases of meaningful coincidence that have been observed not only by me but by many others, and recorded in large collections. They include everything that goes by the name of clairvoyance, telepathy, etc., from Swedenborg’s well-attested vision of the great fire in Stockholm to the recent report by Air Marshal Sir Victor Goddard about the dream of an unknown officer, which predicted the subsequent accident to Goddard’s plane.⁴

[984] All the phenomena I have mentioned can be grouped under three categories:

1. The coincidence of a psychic state in the observer with a simultaneous, objective, external event that corresponds to the psychic state or content (e.g., the scarab), where there is no evidence of a causal connection between the psychic state and the external event, and where, considering the psychic relativity of space and time, such a connection is not even conceivable.

2. The coincidence of a psychic state with a corresponding (more or less simultaneous) external event taking place outside the observer’s field of perception, i.e., at a distance, and only verifiable afterward (e.g., the Stockholm fire).

3. The coincidence of a psychic state with a corresponding, not yet existent future event that is distant in time and can likewise only be verified afterward.

[985] In groups 2 and 3 the coinciding events are not yet present in the observer's field of perception, but have been anticipated in time in so far as they can only be verified afterward. For this reason I call such events *synchronistic*, which is not to be confused with *synchronous*.

[986] Our survey of this wide field of experience would be incomplete if we failed to take into account the so-called mantic methods. Manticism lays claim, if not actually to producing synchronistic events, then at least to making them serve its ends. An example of this is the oracle method of the *I Ching*, which Dr. Hellmut Wilhelm has described in detail.⁵ The *I Ching* presupposes that there is a synchronistic correspondence between the psychic state of the questioner and the answering hexagram. The hexagram is formed either by the random division of the 49 yarrow stalks or by the equally random throw of three coins. The result of this method is, incontestably, very interesting, but so far as I can see it does not provide any tool for an objective determination of the facts, that is to say a statistical evaluation, since the psychic state in question is much too indefinite and indefinable. The same holds true of the geomantic experiment, which is based on similar principles.

[987] We are in a somewhat more favourable situation when we turn to the astrological method, as it presupposes a meaningful coincidence of planetary aspects and positions with the character or the existing psychic state of the questioner. In the light of the most recent astrophysical research, astrological correspondence is probably not a matter of synchronicity but, very largely, of a causal relationship. As Professor Max Knoll has demonstrated,⁶ the solar proton radiation is influenced to such a degree by planetary conjunctions, oppositions, and quartile aspects that the appearance of magnetic storms can be predicted with a fair amount of probability. Relationships can be established between the curve of the earth's magnetic disturbances and the mortality rate that confirm the unfavourable influence of conjunctions, oppositions, and quartile aspects and the favourable influence of trine and sextile aspects. So it is probably a question here of a causal relationship, i.e., of a natural law that excludes synchronicity or restricts it. At the same time, the zodiacal qualification of the houses, which plays a large part in the horoscope, creates a complication in that the astrological zodiac, although agreeing with the calendar, does not coincide with the actual constellations themselves. These have shifted their positions by almost a whole platonic month as a result of the precession of the equinoxes since the time when the spring-point was in zero Aries, about the beginning of our era. Therefore, anyone born in Aries today (according to the calendar) is actually born in Pisces. It is simply that his birth took place at a time which, for approximately 2,000 years, has been

called "Aries." Astrology presupposes that this time has a determining quality. It is possible that this quality, like the disturbances in the earth's magnetic field, is connected with the seasonal fluctuations to which solar proton radiation is subject. It is therefore not beyond the realm of possibility that the zodiacal positions may also represent a causal factor.

[988] Although the psychological interpretation of horoscopes is still a very uncertain matter, there is nevertheless some prospect today of a causal explanation in conformity with natural law. Consequently, we are no longer justified in describing astrology as a mantic method. Astrology is in the process of becoming a science. But as there are still large areas of uncertainty, I decided some time ago to make a test and find out how far an accepted astrological tradition would stand up to statistical investigation. For this purpose it was necessary to select a definite and indisputable fact. My choice fell on marriage. Since antiquity, the traditional belief in regard to marriage has been that there is a conjunction of sun and moon in the horoscope of the marriage partners, that is, ☉ (sun) with an orbit of 8 degrees in the case of one partner, in ☌ (conjunction) with ☾ (moon) in the case of the other. A second, equally old, tradition takes (☾ ☌ ☾ as another marriage characteristic. Of like importance are the conjunctions of the ascendent (*Asc.*) with the large luminaries.

[989] Together with my co-worker, Mrs. Liliane Frey-Rohn, I first proceeded to collect 180 marriages, that is to say, 360 horoscopes,⁷ and compared the 50 most important aspects that might possibly be characteristic of marriage, namely the conjunctions and oppositions of ☉ ☾ ☌ (Mars) ♀ (Venus) *Asc.* and *Desc.* This resulted in a maximum of 10 per cent for ☉ ☌ ☾. As Professor Markus Fierz, of Basel, who kindly went to the trouble of computing the probability of my result, informed me, my figure has a probability of 1 : 10,000. The opinion of several mathematical physicists whom I consulted about the significance of this figure is divided: some find it considerable, others find it of questionable value. Our figure is inconclusive inasmuch as a total of 360 horoscopes is far too small from a statistical point of view.

[990] While the aspects of these 180 marriages were being worked out statistically, our collection was enlarged, and when we had collected 220 more marriages, this batch was subjected to separate investigation. As on the first occasion, the material was evaluated just as it came in. It was not selected from any special point of view and was drawn from the most varied sources. Evaluation of this second batch yielded a maximum figure of 10.9 per cent for ☾ ☌ ☾. The probability of this figure is also about 1 : 10,000.

[991] Finally, 83 more marriages arrived, and these in turn were investigated separately. The result was a maximum figure of 9.6 per cent for ☉ ☌ *Asc.* The probability of this figure is approximately 1 : 3,000.⁸

[992] One is immediately struck by the fact that the conjunctions are all *moon conjunctions*, which is in accord with astrological expectations. But the strange thing is that what has turned up here are the three basic positions of the horoscope, ☉ ♀ and Asc. The probability of a concurrence of ☉ ♂ ♀ and ♀ ♂ ♀ amounts to 1 : 100,000,000. The concurrence of the three moon conjunctions with ☉ ♀ Asc. has a probability of 1 : 3×10^{11} ; in other words, the improbability of its being due to mere chance is so enormous that we are forced to take into account the existence of some factor responsible for it. The three batches were so small that little or no theoretical significance can be attached to the individual probabilities of 1 : 10,000 and 1 : 3,000. Their concurrence, however, is so improbable that one cannot help assuming the existence of an impelling factor that produced this result.

[993] The possibility of there being a scientifically valid connection between astrological data and proton radiation cannot be held responsible for this, since the individual probabilities of 1 : 10,000 and 1 : 3,000 are too great for us to be able, with any degree of certainty, to view our result as other than mere chance. Besides, the maxima cancel each other out as soon as one divides up the marriages into a larger number of batches. It would require hundreds of thousands of marriage horoscopes to establish the statistical regularity of occurrences like the sun, moon, and ascendent conjunctions, and even then the result would be questionable. That anything so improbable as the turning up of the three classical moon conjunctions should occur at all, however, can only be explained either as the result of an intentional or unintentional fraud, or else as precisely such a meaningful coincidence, that is, as synchronicity.

[994] Although I was obliged to express doubt, earlier, about the mantic character of astrology, I am now forced as a result of my astrological experiment to recognize it again. The chance arrangement of the marriage horoscopes, which were simply piled on top of one another as they came in from the most diverse sources, and the equally fortuitous way they were divided into three unequal batches, suited the sanguine expectations of the research workers and produced an over-all picture that could scarcely have been improved upon from the standpoint of the astrological hypothesis. The success of the experiment is entirely in accord with Rhine's ESP results, which were also favorably affected by expectation, hope, and faith. However, there was no definite expectation of any one result. Our selection of 50 aspects is proof of this. After we got the result of the first batch, a slight expectation did exist that the ☉ ♂ ♀ would be confirmed. But we were disappointed. The second time, we made up a larger batch from the newly added horoscopes in order to increase the element of certainty. But the result was ♀ ♂ ♀. With the third batch, there was only a faint expectation that ♀ ♂ ♀ would be confirmed, but again this was not the case.

[995] What happened in this case was admittedly a curiosity, apparently a unique instance of meaningful coincidence. If one is impressed by such things, one could call it a minor miracle. Today, however, we are obliged to view the miraculous in a somewhat different light. The Rhine experiments have demonstrated that space and time, and hence causality, are factors that can be eliminated, with the result that acausal phenomena, otherwise called miracles, appear possible. All natural phenomena of this kind are unique and exceedingly curious combinations of chance, held together by the common meaning of their parts to form an unmistakable whole. Although meaningful coincidences are infinitely varied in their phenomenology, as acausal events they nevertheless form an element that is part of the scientific picture of the world. Causality is the way we explain the link between two successive events. Synchronicity designates the parallelism of time and meaning between psychic and psychophysical events, which scientific knowledge so far has been unable to reduce to a common principle. The term explains nothing, it simply formulates the occurrence of meaningful coincidences which, in themselves, are chance happenings, but are so improbable that we must assume them to be based on some kind of principle, or on some property of the empirical world. No reciprocal causal connection can be shown to obtain between parallel events, which is just what gives them their chance character. The only recognizable and demonstrable link between them is a common meaning, or equivalence. The old theory of correspondence was based on the experience of such connections—a theory that reached its culminating point and also its provisional end in Leibniz' idea of pre-established harmony, and was then replaced by causality. Synchronicity is a modern differentiation of the obsolete concept of correspondence, sympathy, and harmony. It is based not on philosophical assumptions but on empirical experience and experimentation.

[996] Synchronistic phenomena prove the simultaneous occurrence of meaningful equivalences in heterogeneous, causally unrelated processes; in other words, they prove that a content perceived by an observer can, at the same time, be represented by an outside event, without any causal connection. From this it follows either that the psyche cannot be localized in space, or that space is relative to the psyche. The same applies to the temporal determination of the psyche and the psychic relativity of time. I do not need to emphasize that the verification of these findings must have far-reaching consequences.

[997] In the short space of a lecture I cannot, unfortunately, do more than give a very cursory sketch of the vast problem of synchronicity. For those of you who would care to go into this question more deeply, I would mention that a more extensive work of mine is soon to appear under the title "Synchronicity: An Acausal Connecting Principle." It will be published together with a work by Professor W. Pauli in a book called *The Interpretation of Nature and the Psyche*.⁹

THE COLLECTED WORKS OF

C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses
(1906)

On the Psychological Diagnosis of Facts (1905)

+2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in
Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in
Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal
Psychology (1908); The Psychological Methods of Investigation Used in the
Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of
Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence
(1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)
The Freudian Theory of Hysteria (1908)
The Analysis of Dreams (1909)
A Contribution to the Psychology of Rumour (1910–11)
On the Significance of Number Dreams (1910–11)
Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)
On the Criticism of Psychoanalysis (1910)
Concerning Psychoanalysis (1912)
The Theory of Psychoanalysis (1913)
General Aspects of Psychoanalysis (1913)
Psychoanalysis and Neurosis (1916)
Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)
Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)
The Significance of the Father in the Destiny of the Individual (1909–1949)
Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)
Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction
Two Kinds of Thinking
The Miller Fantasies: Anamnesis
The Hymn of Creation
The Song of the Moth

PART II

Introduction
The Concept of Libido
The Transformation of Libido
The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)
Analytical Psychology and *Weltanschauung* (1928/1931)
The Real and the Surreal (1933)
The Stages of Life (1930–1931)
The Soul and Death (1934)
Synchronicity: An Acausal Connecting Principle (1952)
Appendix: On Synchronicity (1951)

*9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)
The Concept of the Collective Unconscious (1936)
Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)
Psychological Aspects of the Mother Archetype (1938/1954)
Concerning Rebirth (1940/1950)
The Psychology of the Child Archetype (1940)
The Psychological Aspects of the Kore (1941)
The Phenomenology of the Spirit in Fairytales (1945/1948)
On the Psychology of the Trickster-Figure (1954)
Conscious, Unconscious, and Individuation (1939)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18. MISCELLANY

Posthumous and Other Miscellaneous Works

19. BIBLIOGRAPHY AND INDEX

Complete Bibliography of C. G. Jung's Writings

General Index to the Collected Works

¹ [First published as “Über die Energetik der Seele” in a volume of the same title (Zurich, 1928), which version was translated by H. G. and C. F. Baynes as “On Psychological Energy” in *Contributions to Analytical Psychology* (London and New York, 1928). The translators’ foreword to the latter volume states that this paper “was framed soon after the author had finished the *Psychology of the Unconscious* [i.e., *Wandlungen und Symbole der Libido*, pub. 1912]. It was, however, pressed aside by the greater importance of the type problem . . . , and, originally entitled ‘The Theory of the Libido,’ was taken up again only last summer.” The original version was republished, under the same title, in *Über psychische Energetik und das Wesen der Träume* (Zurich, 1948). Both Swiss volumes are no. II of the *Psychologische Abhandlungen*.—EDITORS.]

² Cf. *Symbols of Transformation*, pars. 190ff.

³ Cf. Wundt, *Grundzüge der physiologischen Psychologie*, III, 692ff. For the dynamistic standpoint see von Hartmann, *Weltanschauung der modernen Physik*, pp. 202ff.

⁴ I use the word “final” rather than “teleological” in order to avoid the misunderstanding that attaches to the common conception of teleology, namely that it contains the idea of an anticipated end or goal.

⁵ “Final causes and mechanical causes are mutually exclusive, because a function having one meaning cannot at the same time be one with many meanings” (Wundt, p. 728). It seems to me inadmissible to speak of “final causes,” since this is a hybrid concept born of the mixing of the causal and final points of view. For Wundt the causal sequence has two terms and one meaning, i.e., cause M and effect E, whereas the final sequence has three terms and several meanings, i.e., the positing of a goal A, the means M', and the achievement of the goal E'. This construction I hold also to be a hybrid product, in that the positing of a goal is a causally conceived complement of the real final sequence M'-E', which likewise has two terms and one meaning. In so far as the final standpoint is only the reverse of the causal (Wundt), M'-E' is simply the causal sequence M-E seen in reverse. The principle of finality recognizes no cause posited at the beginning, for the final standpoint is not a causal one and therefore has no concept of a cause, just as the causal standpoint has no concept of a goal or of an end to be achieved.

⁶ The conflict between energism and mechanism is a parallel of the old problem of universals. Certainly it is true that the individual thing is all that is “given” in sense perception, and to that extent a universal is only a *nomen*, a word. But at the same time the similarities, the relations between things, are also given, and to that extent a universal is a reality (Abelard’s “relative realism”).

⁷ Finality and causality are two possible ways of understanding which form an antinomy. They are progressive and regressive “interpretants” (Wundt) and as such are contradictory. Naturally this statement is correct only if it is assumed that the concept of energy is an abstraction that expresses relation. (“Energy is relation”: von Hartmann, p. 196). But the statement is not correct if an hypostatized concept of energy is assumed, as in Ostwald’s *Die Philosophie der Werte*.

⁸ “The difference between the teleological and the causal view of things is not a real one dividing the contents of experience into two disparate realms. The sole difference between the two views is the formal one that a causal connection belongs as a complement to every final relationship, and conversely, every causal connection can be given, if need be, a teleological form.” Wundt, p. 737.

⁹ [Cf. n. 5.—EDITORS.]

¹¹ Busse, *Geist und Körper, Seele und Leib*.

¹² Külpe, *Einleitung in die Philosophie*, p. 150.

¹³ *Ibid.*, p. 323.

¹⁴ Von Grot goes so far as to say (p. 324): “The burden of proof falls on those who deny psychic energy, not on those who acknowledge it.”

¹⁵ This was actually the case with Descartes, who first formulated the principle of the conservation of the quantity of movement, but had not at his disposal the methods of physical measurement which were discovered only in recent times.

¹⁶ The one-sidedness of consciousness is compensated by a counterposition in the unconscious. It is chiefly the facts of psychopathology that show the compensatory attitude of the unconscious most clearly. Evidence for this may be found in the writings of Freud and Adler, also in my “Psychology of Dementia Praecox.” For a theoretical discussion see my “Instinct and the Unconscious,” pars. 263ff., *infra*. On the general significance of psychological compensation see Maeder, “Régulation psychique et guérison.”

¹⁷ [Cf. Vol. 2, *Collected Works*.—EDITORS.]

¹⁸ [Cf. *Psychiatric Studies*, par. 168, n. 2a.—EDITORS.]

¹⁹ That a complex or its essential nucleus can be unconscious is not a self-evident fact. A complex would not be a complex at all if it did not possess a certain, even a considerable, affective intensity. One would expect that this energetic value would automatically force the complex into consciousness, that the power of attraction inherent within it would compel conscious attention. (Fields of power attract one another mutually!) That this, as experience shows, is frequently not the case requires a special explanation. The readiest and simplest explanation is given by Freud’s theory of repression. This theory presupposes a counterposition in the conscious mind: the conscious attitude is, so to speak, hostile to the unconscious complex and does not allow it to reach consciousness. This theory certainly explains very many cases, but in my experience there are some cases that cannot be so explained. Actually, the repression theory takes account only of those cases in which a content, in itself perfectly capable of becoming conscious, is either quite consciously repressed and made unconscious, or has right from the beginning never reached consciousness. It does not take into account those other cases in which a content of high energetic intensity is formed out of unconscious material that is not in itself capable of becoming conscious, and so cannot be made conscious at all, or only with the greatest difficulty. In these cases the conscious attitude, far from being hostile to the unconscious content, would be most favourably disposed towards it, as in the case of creative products, which, as we know, almost always have their first beginnings in the unconscious. Just as a mother awaits her child with longing and yet brings it into the world only with effort and pain, so a new, creative content, despite the willingness of the conscious mind, can remain for a long time in the unconscious without being “repressed.” Though it has a high energetic value it still does not become conscious. Cases of this sort are not too difficult to explain. Because the content is new and therefore strange to consciousness, there are no existing associations and connecting bridges to the conscious contents. All these connections must first be laid down with considerable effort, for without them no consciousness is possible. Two main grounds must therefore be considered in explaining the unconsciousness of a complex: (1) the

repression of a content capable of becoming conscious, and (2) the strangeness of a content not yet capable of reaching consciousness.

²⁰ Or to an hypostatized concept of energy, such as Ostwald holds. But the concept of substance needed for a causal-mechanistic mode of explanation can hardly be circumvented in this fashion, since “energy” is at bottom always a concept concerned with quantity alone.

²¹ [Cf. “The Psychology of Dementia Praecox,” pars. 175ff.—EDITORS.]

²⁸ *Leitfaden der Psychologie*, pp. 62, 66f.

²⁹ Stern, *Über Psychologie der individuellen Differenzen*, pp. 119ff.

³⁰ *Leitfaden der Psychologie*, p. 36 (1903 edn.).

³¹ Maeder is of the opinion that the “creative activity” of the organism, and particularly that of the psyche, “exceeds the energy consumed.” He also holds that in regard to the psyche, together with the principle of conservation and the principle of entropy, one must make use of yet a third principle, that of integration. Cf. *Heilung und Entwicklung im Seelenleben*, pp. 50 and 69f

³² *Geist und Körper, Seele und Leib*.

³³ *Ibid.*

³⁴ Cf. particularly Part II, ch. III.

³⁶ Hartmann, *Weltanschauung der modernen Physik*, p. 6.

³⁷ Physics today equates energy with mass, but this is irrelevant for our purpose.

³⁸ *Symbols of Transformation*, par. 226.

³⁹ The reduction of a complex structure to sexuality is a valid causal explanation only if it is agreed beforehand that we are interested in explaining solely the function of the sexual components in complex structures. But if we accept the reduction to sexuality as valid, this can only be done on the tacit assumption that we are dealing with an exclusively sexual structure. To assume this, however, is to assert *a priori* that a complex psychic structure can only be a sexual structure, a manifest *petitio principii*. It cannot be asserted that sexuality is the only fundamental psychic

instinct, hence every explanation on a sexual basis can be only a partial explanation, never an all-sufficing psychological theory.

⁴⁰ This applies only to the macrophysical realm, where “absolute” laws hold good.

⁴¹ Cf. *Psychological Types*, pars. 505ff.

⁴² *Populäre Schriften*, p. 33.

⁴³ A system is absolutely closed when no energy from outside can be fed into it. Only in such a system can entropy occur.

⁴⁴ Therefore the idea of it is as old as humanity. We meet it in the fundamental ideas of primitives. Cf. Lehmann, *Mana, der Begriff des ‘ausserordentlich Wirkungsvollen’ bei Südseevölkern*, and my remarks in *Two Essays on Analytical Psychology*, par. 108. Hubert and Mauss (*Mélanges d’histoire des religions*, preface, p. xxix) also call *mana* a “category” of the understanding. I quote their words verbatim: “[The categories] constantly manifested in language, though not necessarily explicit in it, exist as a rule rather in the form of habits that govern consciousness, while themselves unconscious. The notion of *mana* is one of these principles. It is a datum of language; it is implied in a whole series of judgements and reasonings concerned with attributes which are those of *mana*. We have called *mana* a category. But it is not only a category peculiar to primitive thought, and today, by reduction, it is still the first form taken on by other categories which are always operative in our minds, those of substance and cause,” etc.

⁴⁵ [For a discussion of the formation of intuitive vs. empirical concepts, see *Psychological Types*, pars. 518ff., and Def. 22: “Function.”]

⁴⁶ [Jung here uses the terms *Trieb* and *Ichtriebe* (lit. “drive,” “ego-drives”) following Freud’s German terminology. Freud’s terms have been trans. into English as “instinct” and “ego-instincts.” Cf., e.g., Freud, *Introductory Lectures*, pp. 350ff.—EDITORS.]

⁴⁷ The Latin word *libido* has by no means an exclusively sexual connotation, but the general meaning of desire, longing, urge. Cf. *Symbols of Transformation*, pars. 185ff.

⁴⁸ *Freud and Psychoanalysis*, par. 282.

⁴⁹ Somewhat after the manner of *Hudibras*, whose opinion is quoted by Kant (*Träume eines Geisterseliens*, III): “When a hypochondriacal wind is roaring in the bowels, everything depends on the direction it takes. If it goes downwards, it turns into a fart, but if it mounts upwards, it is a vision or a divine inspiration.” [For a much bowdlerized version see *Dreams of a Spirit-Scer*, trans. by Emanuel Goerwitz, p. 84. Kant’s version is presumably based on Samuel Butler’s *Hudibras*, Part II, Canto iii, lines 773–76:

“As wind i’ th’ *Hypochondrias* pent
Is but a blast if downward sent;
But if it upwards chance to fly
Becomes new *Light* and *Prophecy*.”—TRANS.]

⁵⁰ Though professional satiety with neurotic unrealities makes the analyst sceptical, a generalized judgment from the pathological angle has the disadvantage of being always biased.

⁵¹ *Das Zeitalter des Sonnengottes*.

⁵² Diastole is an extraversion of libido spreading through the entire universe; systole is its contraction into the individual, the monad. (“Systole, the conscious, powerful contraction that brings forth the individual, and diastole,

the longing to embrace the All.” Chamberlain, *Goethe*, p. 571.) To remain in either of these attitudes means death (p. 571), hence the one type is insufficient and needs complementing by the opposite function. (“If a man holds himself exclusively in the receptive attitude, if diastole persists indefinitely, then there enters into his psychic life, as into his bodily life, crippling and finally death. Only action can animate, and its first condition is limitation, i.e., systole, which creates a firmly bounded measure. The more energetic the act, the more resolute must be the enforcing of the limitation.”—p. 581.)

⁶³ Spencer and Gillen, p. 277.

⁶⁴ “Man, of course, has always been trying to understand and to control his environment, but in the early stages this process was unconscious. The matters which are problems for us existed latent in the primitive brain; there, undefined, lay both problem and answer; through many ages of savagery, first one and then another partial answer emerged into consciousness; at the end of the series, hardly completed today, there will be a new synthesis in which riddle and answer are one.” Crawley, *The Idea of the Soul*, p. 11.

⁶⁵ “Dreams are to the savage man what the Bible is to us—the source of divine revelation.” Gatschet, “The Klamath Indians of South-western Oregon,” cited in Lévy-Bruhl, p. 57.

⁶⁶ Lévy-Bruhl, p. 57.

⁶⁷ [“Ordained by law.”—EDITORS.]

⁶⁸ Söderblom, *Das Werden des Gottesglaubens*, pp. 88ff. and 175ff.

⁶⁹ I have treated this same problem under other aspects and in another way in *Symbols of Transformation*, pars. 253, 680; and *Psychological Types*, par. 326 and section 3 (a).

⁷⁰ This is not the case with primitives, for whom the food question plays a far greater role.

⁷¹ See “Instinct and the Unconscious,” *infra*.

⁷² “The Siouan Indians—A Preliminary Sketch,” p. 182; Lovejoy, “The Fundamental Concept of the Primitive Philosophy,” p. 363.

⁷³ Lovejoy, p. 365.

⁷⁴ “Some Animistic Beliefs among the Yaos of Central Africa.”

⁷⁵ Tylor, *Primitive Culture*, II, pp. 176, 205.

⁷⁶ Spencer and Gillen, pp. 277f., where the following is reported of the *churinga* as a ritual object: “The native has a vague and undefined but still a very strong idea that any sacred object such as a Churinga, which has been handed down from generation to generation, is not only endowed with the magic power put into it when first it was made, but has gained some kind of virtue from every individual to whom it has belonged. A man who owns such a Churinga as this snake one will constantly rub it over with his hand, singing as he does so the Alcheringa history of the snake, and gradually comes to feel that there is some special association between him and the sacred object—that a virtue of some kind passes from it to him and also from him to it.” Fetishes become charged with new power if left standing for some weeks or months near another strong fetish. Cf. Pechuël-Loesche, p. 366.

⁷⁷ Spencer and Gillen, p. 458.

⁷⁸ *Unknown Mexico*.

⁷⁹ “When the Huichols, influenced by the law of participation, affirm the identity of corn, deer, *hikuli* [= mescal], and plumes, a classification has been established between their representatives, the governing principle of which is a common presence in these entities, or rather the circulation among them of a mystic power which is of supreme importance to the tribe.” Lévy-Bruhl, p. 128.

⁸⁰ Codrington, *The Melanesians*, p. 118. Seligmann, in his book *The Melanesians of British New Guinea*, so rich in valuable observations, speaks of *bariaua* (p. 446), which likewise belongs to the *mana* concept.

⁸¹ Warnecke, *Die Religion der Batak*.

⁸² Lovejoy, pp. 380f.

⁸³ “Der Ursprung der Religion und Kunst.”

⁸⁴ “Das Wesen des Mana.”

⁸⁵ cf. my discussion of the way in which Robert Mayer discovered the concept of energy: *Two Essays on Analytical Psychology*, pars. 106ff.

⁸⁶ Seligmann (pp. 640ff.) reports observations which in my view show transitions of *mana* into animistic personifications. Such are the *labuni* of the Gelaria people of New Guinea. *Labuni* means “sending.” It has to do with dynamic (magical) effects which emanate, or can be sent out, from the ovaries (?) of women who have borne children. *Labuni* look like “shadows,” they use bridges to cross streams, change into animals, but otherwise possess no personality or definable form. Similar to this is the conception of the *ayik* which I observed among the Elgonyi, in northern Kenya.

¹ [Written in 1916 under the title “Die Transzendente Funktion,” the ms. lay in Professor Jung’s files until 1953. First published in 1957 by the Students Association, C. G. Jung Institute, Zurich, in an English translation by A. R. Pope. The German original, considerably revised by the author, was published in *Geist und werk ... turn 75. Geburlstag von Dr. Daniel Brody* (Zurich, 1958), together with a prefatory note of more general import specially written for that volume. The author has partially rewritten the note for publication here. The present translation is based on the revised German version, and Mr. Pope’s translation has been consulted.—EDITORS.]

² Cf. *Studies in Word-Association* (1918 edn.), p. 435.

³ [Cf. infra, “The Structure of the Psyche,” pars. 317ff.—EDITORS.]

¹ [Originally delivered (in English) as a lecture at the Harvard (University) Tercentenary Conference of Arts and Sciences. Cambridge. Mass., 1936, and published in a symposium, *Factors Determining Human Behavior* (Cambridge, 1937). With slight alterations it was republished as “Human Behaviour” in another symposium. *Science and Man*, edited by Ruth Nanda Anshen (New York, 1942). The latter version is here published, with further slight alterations based on the original German typescript.—EDITORS.]

¹ A contribution to the symposium of the same name, presented, in an English translation prepared by H. G. Baynes, at a joint meeting of the Aristotelian Society, the Mind Association, and the British Psychological Society, at Bedford College, London University, July, 1919. [First published in the *British Journal of Psychology* (General Section) (London), X (1919) : 1, 15–26; republished in *Contributions to Analytical Psychology* (London and New York, 1928). The original ms. was subsequently published as “Instinkt und Unbewusstes” in *Über die Energetik der Seele* (Psychologische Abhandlungen, II; Zurich, 1928); republished, with a short concluding note, in *Über psychische Energetik und das Wesen der Träume* (Zurich, 1948). The Baynes version has been consulted in the preparation of the present translation.—EDITORS.]

² *Essays on the Active Powers of Man* (1788), p. 103.

³ *Anthropologie*, in *Werke*, ed. by Cassirer, VIII, p. 156.

⁴ *Principles of Psychology*, II, p. 391.

⁵ Kerner von Marilaun, *The Natural History of Plants*, II, p. 156.

⁶ Cf. *Psychological Types*, Def. 35: “Intuition.”

⁷ [This is the first occasion on which Jung uses the term “archetype” (*Archetypus*). Previously, in his publications, he had discussed the same concept under the term “primordial image” (*Urbild*), which he derived from Burckhardt (cf. *Symbols of Transformation*, par. 45, n. 45; *Two Essays*, par. 101). The primordial image, be it observed, is here and elsewhere used as the equivalent of the archetype; this has given rise to some confusion and to the belief that Jung’s theory of hereditary elements involves the inheritance of representations (ideas or images), a view against which Jung repeatedly protests. The primordial image is, however, in the present text, clearly understood as a more graphic term for the archetype, an essentially unconscious entity which, as Jung points out, is an *a priori* form—the inherited component of the representational image perceived in consciousness.—EDITORS.]

⁸ The actual term “archetype,” however, is to be found in Dionysius the Areopagite and in the *Corpus Hermeticum*.

⁹ *De veritate*, trans. by Carré, p. 122.

¹⁰ Cf. *Ethics* (Everyman edn.), p. 37.

¹¹ Like the now obsolete concept of ether, energy and the atom are primitive intuitions. A primitive form of the one is *mana*, and of the other the atom of Democritus and the “soul-sparks” of the Australian aborigines. [Cf. *Two Essays on Analytical Psychology*, pars. 108f.—EDITORS.]

¹² In the course of my life I have often reflected on the theme of this short essay, and the conclusions I have come to are set down in a paper entitled “On the Nature of the Psyche” [cf. *infra*, pars. 343ff.], where the problem of instinct and archetype in its later developments is dealt with in considerable detail. The biological side of the problem is discussed in Alverdes, “Die Wirksamkeit von Arche-typen in den Instinkthandlungen der Tiere.”

¹ [Originally published as part of “Die Erdbedingtheit der Psyche.” in the symposium *Mensch und Erde*, edited by Count Hermann Keyserling (Darmstadt, 1927). (The other part became the essay “Seele und Erde,” which is now published as “Mind and Earth” in Vol. 10 of the *Collected Works*.) The present work, constituting about the first half of the 1927 publication, was published as “Die Struktur der Seele,” *Europäische Revue* (Berlin), IV (1928), 1 and 2. It was later revised and expanded in *Seelenprobleme der Gegenwart* (Psychologische Abhandlungen, III; Zurich, 1931), and this version is translated here.—EDITORS.]

² Trans. from German, *Life in Ancient Egypt*, pp. 265–67, modified.

³ [*Eine Mithrasliturgie*, pp. 6–7. As the author subsequently learned, the 1910 edition was actually the second, there having been a first edition in 1903. The patient had, however, been committed some years before 1903. Cf. *Symbols of Transformation*, pars. 149ff. and 223, and “The Concept of the Collective Unconscious,” par. 105.—EDITORS.]

¹ [Originally published as “Der Geist der Psychologie,” *Eranos-Jahrbuch 1946* (Zurich, 1947), pp. 385–490. This essay, revised and augmented, was republished as “Theoretische Überlegungen zum Wesen des Psychischen” in *Von den Wurzeln des Bewusstseins* (“Psychologische Abhandlungen, IX; Zurich, 1954), pp. 497–608. The former version was translated by R. F. C. Hull as “The Spirit of Psychology” and published in *Spirit and Nature* (Papers from the Eranos Yearbooks, I; New York, 1954; London, 1955), pp. 371–444. That translation is now further revised to bring it into conformity with the 1954 German version.—EDITORS.]

² Hermann Siebeck, *Geschichte der Psychologie*.

³ Actually this is true only of the old psychology. In recent times there has been a considerable change of standpoint.

⁴ *Psychologia empirica* (1732).

⁵ In Anglo-Saxon countries there is the degree of “Doctor Scientiae,” and psychology too enjoys greater independence.

⁶ Recently these conditions have somewhat improved.

⁷ Trans. by C. H. Judd, pp. 227–28, from *Grundriss der Psychologie*. (My italics.)

⁸ Guido Villa, *Einleitung in die Psychologie der Gegenwart*, p. 330.

⁹ Wilhelm Wundt, *Grundzüge der physiologischen Psychologie*, III, p. 327.

¹⁰ Pierre Janet, *Automatisme psychologique*, pp. 243, 238ff.

¹¹ Gustav Theodor Fechner, *Elemente der Psychophysik*, II, p. 438: “... the idea of a psychophysical threshold ... gives a firm foundation to that of the unconscious generally. Psychology cannot abstract representations from unconscious perceptions, nor even from the effects of unconscious perceptions.”

¹² *Ibid.*, p. 439.

¹³ *Grundzüge der physiologischen Psychologie*, III, p. 328.

¹⁴ *Ibid.*, p. 326. Cited from Wolf’s *Vernünfftige Gedanken von Gott, der Welt, und der Seele des Menschen* (1719), §193.

¹⁵ *Ethnische Elementargedanken in der Lehre vom Menschen* and *Der Mensch in der Geschichte*, I, pp. 166ff., 213ff.; II, pp. 24ff.

¹⁶ *Volkerpsychologie*, V, Part II, p. 459.

¹⁷ *Ibid.*, IV, Part I, p. 41.

¹⁸ Cf. Fechner’s remark that “the idea of a psychophysical threshold is of the utmost importance because it gives a firm foundation to that of the unconscious generally.” He goes on: “Perceptions and representations in the state of unconsciousness have, of course, ceased to exist as real ones ... but something continues in us. psychophysical activity.” etc. (II, pp. 438f.). This conclusion is a little incautious, because the psychic process remains more or less the same whether conscious or not. A “representation” exists not only through its “representedness,” but—and this is the main point—it also exists in its own psychic right.

¹⁹ Cf. Lipps, “Der Begriff des Unbewussten,” pp. 146ff.; and *Grundtatsachen des Seelenlebens*, pp. 125, ff.

²⁰ *Leitfaden der Psychologie*, p. 64.

²¹ *Ibid.*, pp. 65f. (My italics.)

²² *Geschichte der neueren deutschen Psychologie*.

²³ I reproduce here what William James says about the importance of the discovery of the unconscious psyche (*Varieties of Religious Experience*, p. 233): “I cannot but think that the most important step forward that has occurred in psychology since I have been a student of that science is the discovery, first made in 1886, that ... there is not only the consciousness of the ordinary field, with its usual center and margin, but an addition thereto in the shape of a set of memories, thoughts, and feelings which are extramarginal and outside of the primary consciousness altogether, but yet must be classed as conscious facts of some sort, able to reveal their presence by unmistakable signs. I call this the most important step forward because, unlike the other advances which psychology has made, this discovery has revealed to us an entirely unsuspected peculiarity in the constitution of human nature. No other step forward which psychology has made can proffer any such claim as this.” The discovery of 1886 to which James refers is the positing of a “subliminal consciousness” by Frederic W. H. Myers. See n. 47, *infra*.

²⁴ A mathematician once remarked that everything in science was man-made except numbers, which had been created by God himself.

²⁵ G. H. Lewes in *The Physical Basis of Mind* takes all this for granted. For instance, on p. 358, he says: “Sentience has various modes and degrees, such as Perception, Ideation, Emotion, Volition, which may be conscious, subconscious, or unconscious.” On p. 363: “Consciousness and Unconsciousness are correlatives, both belonging to the sphere of Sentience. Every one of the unconscious processes is operant, changes the general state of the organism, and is capable of at once issuing in a discriminated sensation when the force which balances it is disturbed.” On p. 367: “There are many involuntary actions of which we are distinctly conscious, and many voluntary actions of which we are at times subconscious and unconscious. ... Just as the thought which at one moment passes unconsciously, at another consciously, is in itself the same thought ... so the action which at one moment is voluntary, and at another involuntary, is itself the same action.” Lewes certainly goes too far when he says (p. 373): “There is no real and essential distinction between voluntary and involuntary actions.” Occasionally there is a world of difference.

²⁶ Fechner, II, pp. 438f

²⁷ I am not counting “Clever Hans” [but cf. D. Katz, *Animals and Men*, 13ff.—EDITORS] and the dog who talked about the “primordial soul.”

²⁸ James, *Varieties of Religious Experience*, p. 232.

²⁹ Hans A. E. Driesch, *The Science and Philosophy of the Organism*, 1929, p. 221.

³⁰ *Ibid.*, p. 281.

³¹ In *Die Psychoide als Prinzip der organischen Entwicklung*, p. 11. A fem, sing, noun derived from *Psyche* (*ψυχοειδής* = ‘soul-like’).

³² *Ibid.*, p. 11.

³³ *Ibid.*, p. 33.

³⁴ I can avail myself of the word “psychoid” all the more legitimately because, although my use of the term derives from a different field of perception, it nevertheless seeks to delineate roughly the same group of phenomena that Bleuler had in mind. A. Busemann, in his book *Die Einheit der Psychologie* (p. 31), calls this non-differentiated psyche the “micropsychic.”

³⁵ Especial exception is taken to this “superconsciousness” by people who have come under the influence on Indian philosophy. They usually fail to appreciate that their objection only applies to the hypothesis of a

“subconscious,” which ambiguous term I avoid using. On the other hand my concept of the *unconscious* leaves the question of “above” or “below” completely open, as it embraces both aspects of the psyche.

³⁶ Cf. in particular Eduard von Hartmann, *Philosophie des Unbewussten* (1869).

³⁷ An appreciation of his work is to be found in Jean Paulus, *Le Problème de l'haltucination et l'évolution de la psychologie d'Esquirol à Pierre Janet*.

³⁸ In this connection we should also mention the important Swiss psychologist Théodore Flournoy and his chef d'oeuvre *Des Indes à la Planète Mars* (1900). Other pioneers were W. B. Carpenter (*Principles of Mental Physiology*, 1874) and G. H. Lewes (*Problems of Life and Mind*, 1873–79). For Frederic W. H. Myers see nn. 23 and 47.

³⁹ This indistinctness and blurring of the instincts may, as E. N. Marais has shown in his experiments with apes (*The Soul of the White Ant*, p. 429), have something to do with the superior learning-capacity prevailing over the instincts, as is obviously the case with man too. On the question of instincts see L. Szondi, *Experimentelle Triebdiagnostik* and *Triebpathologie*.

⁴⁰ “The instincts are physiological and psychic dispositions which ... cause the organism to move in a clearly defined direction” (W. Jerusalem, *Lehrbuch der Psychologie*, p. 188). From another point of view Oswald Külpe describes instinct as “a fusion of feelings and organ sensations” (*Outlines of Psychology*, p. 322, modified).

⁴¹ *Les Neuroses*, pp. 384ff.

⁴² Janet says (p. 384): “It seems that we must distinguish in every function inferior and superior parts. When a function has been in use for a long time it contains parts which are very old, work very easily, and are represented by very distinct and specialized organs ... these are the inferior parts of the function. But it is my opinion that in every function there are also superior parts which consist in the function’s adaptation to more recent and much less usual circumstances, and are represented by organs which are differentiated in a markedly lesser degree.” But the highest part of the function consists “in its adaptation to the particular circumstances of the present moment, the moment at which we have to use it.”

⁴³ W. H. R. Rivers, “Instinct and the Unconscious.”

⁴⁴ This formulation is purely psychological and has nothing to do with the philosophical problem of indeterminism.

⁴⁵ *Die “Seele” als elementarer Naturfaktor*, p. 80. “Individualized stimuli inform ... the ‘primary knower’ of the abnormal state, and now this ‘knower’ not only *wants* a remedy but *knows* what it is” (p. 82).

⁴⁶ Cf. sec. 6 below, “The Unconscious as a Multiple Consciousness.”

⁴⁷ James speaks also of a “transmarginal field” of consciousness and identifies it with the “subliminal consciousness” of F. W. H. Myers, one of the founders of the British Society for Psychical Research (cf. *Proceedings S.P.R.*, VII, 1892, pp. 298ff., and William James, “Frederic Myers’ Service to Psychology,” *ibid.*, XVII, 1901, pp. 13ff.). Concerning the “field of consciousness” James says (*Varieties of Religious Experience*, p. 232): “The important fact which this ‘field’ formula commemorates is the indetermination of the margin. Inattentively realized as is the matter which the margin contains, it is nevertheless there, and helps both to guide our behavior and to determine the next movement of our attention. It lies around us like a ‘magnetic field’ inside of which our center of energy turns like a compass needle as the present phase of consciousness alters into its successor. Our whole past store of memories floats beyond this margin, ready at a touch to come in; and the entire mass of residual powers, impulses, and

knowledges that constitute our empirical self stretches continuously beyond it. So vaguely drawn are the outlines between what is actual and what is only potential at any moment of our conscious life, that it is always hard to say of certain mental elements whether we are conscious of them or not.”

⁴⁸ In schizophrenic dissociation there is no such change in the conscious state, because the complexes are received not into a complete but into a fragmentary consciousness. That is why they so often appear in the original archaic state.

⁴⁹ Red had a *spiritual* significance for Goethe, but that was in accord with his creed of feeling. Here we may conjecture the alchemical and Rosicrucian background, e.g., the red tincture and the carbuncle. Cf. *Psychology and Alchemy*, pars. 335, 454, 552.

⁵⁰ As already pointed out by E. Bleuler: *Naturgeschichte der Seele und ihres Bewusstwerdens*, pp. 300f.

⁵¹ With the explicit exception of the psychoid unconscious, as this includes things which are not capable of consciousness and are only “quasi-psychic.”

⁵² In this connection I would mention that C. A. Meier associates observations of this kind with similar phenomena in physics. He says: “The relationship of complementarity between conscious and unconscious urges upon us yet another physical parallel, namely the need for a strict application of the ‘principle of correspondence.’ This might provide the key to the ‘strict logic’ of the unconscious (the logic of probability) which we so often experience in analytical psychology and which makes us think of an ‘extended state of consciousness.’”—“Moderne Physik—Moderne Psychologie,” p. 360.

⁵³ *Psychology and Alchemy*, pars. 352, 472. [Also *Myst. Coniunctionis*, pars. 42ff.]

⁵⁴ *Artis aurijerae* (1593), I, p. 208. Said to be a quotation from Morienus (cf. *infra*, par. 394), repeated by Mylius, *Philosophia reformata* (1622), p. 146. On p. 149 he adds “scintillas aureas.”

⁵⁵ “Variae eius radii atque scintillae, per totius ingentem materiei primae massae molem hinc inde dispersae ac dissipatae: inque mundi partibus disiunctis etiam et loco et corporis mole, necnon circumscriptione, postea separatis ... unius Animae universalis scintillae nunc etiam inhabitantes” (Its divers rays and sparks are dispersed and dissipated throughout the immense bulk of the whole mass of the *prima materia*: the sparks of the one universal soul now inhabiting those disunited parts of the world which were later separated from the place and mass of the body, and even from its circumference). Khunrath, *Amphitheatrum sapientiae aeternae solius verae* (1604), pp. 195f., 198.

⁵⁶ *Ibid.*, p. 197. Cf. the Gnostic doctrine of the Seeds of Light harvested by the Virgin of Light, and the Manichaean doctrine of the light-particles which have to be taken into one’s body as ritual food, at a sort of Eucharist when melons were eaten. The earliest mention of this idea seems to be the Καρπιστ ῆς (Irenaeus, *Contra haecreses*, I, 2, 4). Concerning the melons see M.-L. von Franz, “Der Traum des Descartes.”

⁵⁷ “Mens humani animi scintilla altior et lucidior” (The mind of the human soul is a higher and more luminous spark). *Amphitheatrum*, p. 63.

⁵⁸ Khunrath, *Von hylealischen ... Chaos* (1597), p. 63.

⁵⁹ As synonyms, Khunrath mentions (p. 216) “forma aquina, pontica, limus terrae Adamae, Azoth, Mercurius” (a form watery and sea-like, the slime of the earth of Adama, etc.). [*Adama* is Hebrew for ‘earth.’—EDITORS.]

⁶⁰ *Ibid.*, p. 216.

- ⁶¹ The “*formae scintillae Animae Mundi*” (forms or sparks of the world soul) are also called by Khunrath (p. 189) “*rationes seminariae Naturae specificae*” (the seed-ideas of Nature, the origin of species), thus reproducing an ancient idea. In the same way he calls the *scintilla* “*Entelechia*” (p. 65).

- ¹⁰³ Eisler, p. 388. “The All-seeing Chronos” and “the all-beholding daemon.”
- ¹⁰⁴ *The Testament of Ignatius Loyola*, trans. by E. M. Rix, p. 72.
- ¹⁰⁵ Ignatius also had the vision of a “res quaedam rotunda tanquain cx auto et magna” that floated before his eyes: a thing round, as if made of gold, and great. He interpreted it as Christ appearing to him like a *sun*. Philipp Funk, *Ignatius von Loyola*, pp. 57, 65, 74, 112.
- ¹⁰⁶ [Trans. derived from various sources. As Coomaraswamy explains in the *Journal of the American Oriental Society*, LVI (1946), 143–61, “the ten-finger space” (lit. “the ten-fingered”) refers “niacrocsmically to the distance

between sky and earth and macrocosmically to the space between the top of the head and the chin” of a man. He continues: “I therefore consider it shown that what RV 10. 90. 1 ... means is that Purusha, making the whole earth his footstool, fills the entire universe, and rules over it by means of the powers of vision, etc., that proceed from his face, and to which man’s own powers of vision, etc., are analogous; this face, whether of God or man, being ... itself an image of the whole threefold universe.”—TRANS.]

¹⁰⁷ *Edenchos*, VIII, 12, 5. [Cf. *Aion*, pars. 340ff.—EDITORS.]

¹⁰⁸ *Ibid.*, VIII, 12, 2.

¹⁰⁹ Cf. the alchemical dictum: “Seminare aurum in terram albam foliatam” (Sow the gold in white foliated earth).

¹¹⁰ Cf. my remarks on the “uniting symbol” in *Psychological Types*, ch. V, sections 3 and 5.

¹¹¹ Freud also arrived at similar paradoxical conclusions. Thus, in his article “The Unconscious” (p. 177): he says: “An instinct can never become an object of consciousness—only the idea that represents the instinct can. *Even in the unconscious, moreover, an instinct cannot be represented otherwise than by an idea.*” (My italics.) As in my above account we were left asking, “Who is the subject of the unconscious will?” so we must ask here, “Exactly *who* has the idea of the instinct in the unconscious state?” For “unconscious” ideation is a *contradictio in adjecto*.

¹¹² For details see C. Lloyd Morgan, *Habit and Instinct*.

¹¹³ Cf. “The Aims of Psychotherapy,” pars. 101ff.; and *Two Essays on Analytical Psychology*, pars. 343ff. [Also “The Transcendent Function,” pars. 166ff]

¹¹⁴ The same applies to the pentadic figures.

¹¹⁵ So far as the development can be ascertained from the objective material.

¹¹⁶ Cf. *Psychology and Alchemy*, par. 329.

¹¹⁷ Cf. *Two Essays on Analytical Psychology*, par. 151.

¹¹⁸ Occasionally it is associated with synchronistic or parapsychic effects. I mean by synchronicity, as I have explained elsewhere, the not uncommonly observed “coincidence” of subjective and objective happenings, which just cannot be explained causally, at least in the present state of our knowledge. On this premise astrology is based and the methods of the *I Ching*. These observations, like the astrological findings, are not generally accepted, though as we know this has never hurt the facts. I mention these special effects solely for the sake of completeness and solely for the benefit of those readers who have had occasion to convince themselves of the reality of parapsychic phenomena. For a detailed discussion, see the final paper in this volume.

¹¹⁹ Cf. *Psychology and Alchemy*, Part II, for evidence of this.

¹²⁰ [*Mulungu* = ‘spirit, soul, daemonism, magic, prestige’: *Two Essays*, par. 108, and the first paper in this volume, pars. 117, 123f.—EDITORS.]

¹²¹ “Nature” here means simply that which is, and always was, given.

¹²² This expectation is based on the experience that blue, the colour of air and sky, is most readily used for depicting spiritual contents, whereas red, the “warm” colour, is used for feelings and emotions.

¹²³ Sir James Jeans (*Physics and Philosophy*, p. 193) points out that the shadows on the wall of Plato’s cave are just as real as the invisible figures that cast them and whose existence can only be inferred mathematically.

¹²⁴ It is very probable that the archetypes, as instincts, possess a specific energy which cannot be taken away from them in the long run. The energy peculiar to the archetype is normally not sufficient to raise it into consciousness. For this it needs a definite quantum of energy flowing into the unconscious from consciousness, whether because consciousness is not using this energy or because the archetype attracts it to itself. The archetype can be deprived of its supplementary charge, but not of its specific energy.

¹²⁵ Although both passages hint that the devil was cast out during the life-time of Jesus, in the Apocalypse the business of rendering him harmless is deferred until Doomsday (Rev. 20 : 2ff.).

¹²⁶ Cf. "The Phenomenology of the Spirit in Fairytales."

¹²⁷ Aptly expressed in the logion cited by Origen (*Homiliae in Jeremiam*, XX, 3): "He who is near unto me is near unto the fire. He who is far from me is far from the kingdom." This "unclaimed saying of the Master" refers to Isaiah 33 : 14.

¹²⁸ Conscious wholeness consists in a successful union of ego and self, so that both preserve their intrinsic qualities. If, instead of this union, the ego is overpowered by the self, then the self too does not attain the form it ought to have, but remains fixed on a primitive level and can express itself only through archaic symbols.

¹²⁹ I owe this formulation to the kind help of Professor W. Pauli.

¹³⁰ It may interest the reader to hear the opinion of a physicist on this point. Professor Pauli, who was good enough to glance through the ms. of this supplement, writes: "As a matter of fact the physicist would expect a psychological correspondence at this point, because the epistemological situation with regard to the concepts 'conscious' and 'unconscious' seems to offer a pretty close analogy to the undermentioned "complementarity" situation in physics. On the one hand the unconscious can only be inferred indirectly from its (organizing) effects on conscious contents. On the other hand every Observation of the unconscious," i.e., every conscious realization of unconscious contents, has an uncontrollable reactive effect on these same contents (which as we know precludes in principle the possibility of 'exhausting' the unconscious by making it conscious). Thus the physicist will conclude *per analogiam* that this uncontrollable reactive effect of the observing subject on the unconscious limits the objective character of the latter's reality and lends it at the same time a certain subjectivity. Although the *position* of the 'cut' between conscious and unconscious is (at least up to a point) left to the free choice of the 'psychological experimenter,' the *existence* of this 'cut' remains an unavoidable necessity. Accordingly, from the standpoint of the psychologist, the 'observed system' would consist not of physical objects only, but would also include the unconscious, while consciousness would be assigned the role of 'observing medium.' It is undeniable that the development of 'microphysics' has brought the way in which nature is described in this science very much closer to that of the newer psychology: but whereas the former, on account of the basic 'complementarity' situation, is faced with the impossibility of eliminating the effects of the observer by determinable correctives, and has therefore to abandon in principle any objective understanding of physical phenomena, the latter can supplement the purely subjective psychology of consciousness by postulating the existence of an unconscious that possesses a large measure of objective reality."

¹³¹ The physicist Pascual Jordan ("Positivistische Bemerkungen über die para-psychischen Erscheinungen," 14ff.) has already used the idea of relative space to explain telepathic phenomena.

¹³² *Die kulturelle Bedeutung der komplexen Psychologie*, p. 362.

¹³³ By this I only mean that psychic phenomena have an energetic aspect by virtue of which they can be described as "phenomena." I do not mean that the energetic aspect embraces or explains the whole of the psyche.

134 Cf. the first paper in this volume.

¹ [First published in English: “The Psychology of Dreams,” in *Collected Papers on Analytical Psychology*, edited by Constance Long (London, 1916; 2nd edn., London, 1917, and New York, 1920). The translation was by Dora Hecht from a ms., which, in much expanded form, was published as “Allgemeine Gesichtspunkte zur Psychologie des Traumes,” in *Über die Energetik der Seele* (Psychologische Abhandlungen, II; Zurich, 1928). It was again expanded in *Über psychische Energetik und das Wesen der Träume* (Zurich, 1948), and this version is translated here.—EDITORS.]

² [Cf. *Introduction to Logic*, p. 55.—EDITORS.]

³ [The original 1916 version ends at this point.—EDITORS.]

⁴ Cf. my “The Psychology of Dementia Praecox.” Flournoy, “Automatisme téléologique antisuicide” (1908).

⁵ “Sur le mouvement psychanalytique”; “Über die Funktion des Traumes”; *The Dream Problem*.

⁷ *From India to the Planet Mars* and “Nouvelles observations sur un cas de somnambulisme avec glossolalie.”

⁸ On the question of telepathy see Rhine, *New Frontiers of the Mind*.

⁹ Cf. Silberer’s works on “symbol-formation”: “Ober die Symbolbildung.”

¹⁰ At this point we meet with agreement from Adler.

¹¹ Maeder, *The Dream Problem*, pp. 31 ff.

¹² *How Natives Think*, p. 129. It is to be regretted that Lévy-Bruhl expunged this exceedingly apt term from later editions of his books. Probably he succumbed to the attacks of those stupid persons who imagine that “mystic” means their own nonsensical conception of it. [Cf. the original edn., *Les Fonctions mentales*, p. 140.—EDITORS.]

¹³ Several examples of interpretation on the subjective level have been furnished by Maeder. The two kinds of interpretation are discussed in detail in *Two Essays on Analytical Psychology*, pars. 128ff.

¹⁴ Pars. 206ff. Concerning projections in the transference, see “Psychology of the Transference,” index, s.v. “transference,” “projection.”

¹⁵ The first World War.

¹⁶ Cf. “The Psychology of the Transference,” pars. 364ff., 383f.

¹⁷ For the sake of completeness I should mention that no imago comes exclusively from outside. Its specific form is due just as much to the *a priori* psychic disposition, namely the archetype.

¹⁸ By this they mean the theory of archetypes. But is the biological concept of the “pattern of behaviour” also “metaphysical”?

¹⁹ A few additions will be found in the next paper, written very much later.

¹ [First published as “Vom Wesen der Träume,” *Ciba-Zeitschrift* (Basel), IX : 99 (July, 1945). Revised and expanded in *Über psychische Energetik und das Wesen der Träume* (Psychologische Abhandlungen, II; Zurich, 1948).—EDITORS.]

² Cf. “The Practical Use of Dream-Analysis,” pars. 343ff.

³ This is not to deny the principle of *complementarity*. “Compensation” is simply a psychological refinement of this concept.

⁴ *The Psychopathology of Everyday Life*.

⁵ [Cf. Meier, *Ancient Incubation and Modern Psychotherapy*.—EDITORS.]

⁶ Cf. *Two Essays on Analytical Psychology*, I, chs. V–VII.

⁷ Cf. my and C. Kerényi’s *Essays on (or Introduction to) a Science of Mythology*. [Also, *Symbols of Transformation*, pars. 572ff., 577ff.]

⁸ The tree is also an alchemical symbol. Cf. *Psychology and Alchemy*, index, s.v. “tree”; and “The Philosophical Tree.”

⁹ The stag is an allegory of Christ because legend attributes to it the capacity for self-renewal. Thus Honorius of Autun writes in his *Speculum de Mysteriis Ecclesiae* (Migne, *P.L.*, vol. 172, col. 847): “They say that the deer, after he has swallowed a serpent, hastens to the water, that by a draught of water he may eject the poison, and then cast his horns and his hair and so take new.” In the *Saint-Graal* (III, pp. 219 and 224), it is related that Christ sometimes appeared to the disciples as a white stag with four lions (= four evangelists). In alchemy, Mercurius is allegorized as the stag (Manget, *Bibl. chem.*, Tab. IX, fig. XIII, and elsewhere) because the stag can renew itself. “Les os du cuer du serf vault moult pour conforter le cuer humain” (Delatte, *Textes latins et vieux français relatifs aux Cyranides*, p. 346).

¹ Originally translated by H. G. Baynes from a German manuscript and published in *Proceedings of the Society for Psychological Research* (London), XXXI (1920), having been read at a general meeting of the Society on July 4, 1919. This translation was republished in *Contributions to Analytical Psychology* (London and New York, 1928). The German original was first published as “Die psychologischen Grundlagen des Geisterglaubens,” in *Über die Energetik der Seele* (Psychologische Abhandlungen, II; Zurich, 1928), and was revised and expanded in *Über psychische Energetik und das Wesen der Träume* (Zurich, 1948). The latter version is here translated, but the Baynes translation has also been consulted.—EDITORS.]

² When I was on an expedition to Mount Elgon (East Africa) in 1925–26, one of our water-bearers, a young woman who lived in a neighbouring kraal, fell ill with what looked like a septic abortion with high fever. We were unable to treat her from our meagre medical supplies, so her relatives immediately sent for a *nganga*, a medicine-man. When he arrived, the medicine-man walked round and round the hut in ever-widening circles, snuffing the air. Suddenly he came to a halt on a track that led down from the mountain, and explained that the sick girl was the only daughter of parents who had died young and were now up there in the bamboo forest. Every night they came down to make their daughter ill so that she should die and keep them company. On the instructions of the medicine-man a “ghost-trap” was then built on the mountain path, in the form of a little hut, and a clay figure of the sick girl was placed inside it together with some food. During the night the ghosts went in there, thinking to be with their daughter. To our boundless astonishment the girl recovered within two days. Was our diagnosis wrong? The puzzle remained unsolved.

³ There are even cases where the voices repeat the patient’s thoughts aloud. But these are rather rare.

⁴ Cf. *supra*, “A Review of the Complex Theory.”

⁵ This should not be misconstrued as a metaphysical statement. The question of whether spirits exist *in themselves* is far from having been settled. Psychology is not concerned with things as they are “in themselves,” but only with what people think about them.

⁶ By this I do not mean the existing form of the motif but its preconscious, invisible “ground plan.” This might be compared to the crystal lattice which is preformed in the crystalline solution. It should not be confused with the variously structured axial system of the individual crystal.

⁷ Cf. my *Symbols of Transformation*; also Spielrein, “Über den psychologischen Inhalt eines Falles von Schizophrenic”; Nelken, “Analytische Beobachtungen über Phantasien eines Schizophrenen”; C. A. Meier, “Spontanmanifestationen des kollektiven Unbewussten.”

⁸ This is not always a pleasant feeling, for the patient was quite content to lose the complex so long as he did not feel the disagreeable consequences of the loss.

⁹ Those who are familiar with this material will object that my description is one-sided, because they know that the archetype, the autonomous collective content, does not have only the negative aspect described here. I have merely restricted myself to the common symptomatology that can be found in every text-book of psychiatry, and to the equally common defensive attitude towards anything extraordinary. Naturally the archetype also has a positive numinosity which I have repeatedly mentioned elsewhere.

¹⁰ Cf. my *Studies in Word Association*.

¹¹ This account of the genesis of a collective psyche was written in the spring of 1919. Events since 1933 have amply confirmed it.

¹² [The rest of this paragraph was added in the 1948 Swiss edition.—EDITORS.]

¹³ I am indebted to Dr. Fritz Kiinkel, of Los Angeles, for drawing my attention to this author.

¹⁴ Cf. “The Transcendent Function,” supra, pars. 166ff., and *Two Essays*, pars. 343ff. [Also *Mysterium Coniunctionis*, pars. 706, 752ff.]

¹⁵ After collecting psychological experiences from many people and many countries for-fifty years, I no longer feel as certain as I did in 1919, when I wrote this sentence. To put it bluntly, I doubt whether an exclusively psychological approach can do justice to the phenomena in question. Not only the findings of parapsychology, but my own theoretical reflections, outlined in “On the Nature of the Psyche,” have led me to certain postulates which touch on the realm of nuclear physics and the conception of the space-time continuum. This opens up the whole question of the transpsychic reality immediately underlying the psyche.

¹ A lecture delivered to the literary society of Augsburg, October 29, 1926, one of a series of lectures on the theme “Nature and Spirit.” [First published as “Geist und Leben,” *Form und Sinn* (Augsburg), II : 2 (Nov. 1926), which was translated by H. G. and C. F. Baynes in *Contributions to Analytical Psychology* (London and New York, 1928). The original version was republished in *Seelen-probleme der Gegenwart* (Psychologische Abhandlungen, II; Zurich, 1931). The present translation is based on the Baynes version.—EDITORS.]

¹ [First published as “Die Entschleierung der Seele,” *Europäische Revue* (Berlin), VII: 2/7 (July 1931), which version was translated by W. S. Dell and Cary F. Baynes as “The Basic Postulates of Analytical Psychology,” *Modern Man in Search of a Soul* (London and New York, 1933). The original version was republished, with slight revisions and the title “Das Grundproblem der gegenwärtigen Psychologie,” in *Wirklichkeit der Seele* (Psychologische Abhandlungen, IV; Zurich, 1934). The present version is a slight revision of the Dell/Baynes trans.—EDITORS.]

Henley in *Spring* (Analytical Psychology Club, New York), 1945, to whom grateful acknowledgment is made.—EDITORS.]

² [Cf. the next paper in this volume.—EDITORS.]

¹ [Other than, or supplementary to, the laws of chance.—EDITORS.]

² [Cf. Jung, *Studies in Word Association*—EDITORS.]

³ Paul Kammerer, *Das Gesetz der Serie*.

⁴ *Ibid.*, p. 130.

⁵ Pp. 36, 93f., 102f.

⁶ “The law of series is an expression of the inertia of the objects involved in its repetitions (i.e., producing the series). The far greater inertia of a complex of objects and forces (as compared to that of a single object or force) explains the persistence of an identical constellation and the emergence, connected therewith, of repetitions over long periods of time” (p. 117).

⁷ P. 130.

⁸ P. 94.

⁹ [The term “probability” therefore refers to the probability on a chance hypothesis (Null Hypothesis). This is the sense in which the term is most often used in this paper.—EDITORS.]

¹⁰ The numinosity of a series of chance happenings grows in proportion to the number of its terms. Unconscious—probably archetypal—contents are thereby constellated, which then give rise to the impression that the series has been “caused” by these contents. Since we cannot conceive how this could be possible without recourse to positively magical categories, we generally let it go at the bare impression.

¹¹ As a pendant to what I have said above, I should like to mention that I wrote these lines sitting by the lake. Just as I had finished this sentence, I walked over to the sea-wall and there lay a dead fish, about a foot long, apparently uninjured. No fish had been there the previous evening. (Presumably it had been pulled out of the water by a bird of prey or a cat.) The fish was the seventh in the series.

¹² We find ourselves in something of a quandary when it comes to making up our minds about the phenomenon which Stekel calls the “compulsion of the name.” What he means by this is the sometimes quite grotesque coincidence between a man’s name and his peculiarities or profession. For instance Herr Gross (Mr. Grand) suffers from delusions of grandeur, Herr Kleiner (Mr. Small) has an inferiority complex. The Altmann sisters marry men twenty years older than themselves. Herr Feist (Mr. Stout) is the Food Minister, Herr Rosstauscher (Mr. Horsetrader) is a lawyer, Herr Kalberer (Mr. Calver) is an obstetrician, Herr Freud (joy) champions the pleasure-principle, Herr Adler (eagle) the will-to-power, Herr Jung (young) the idea of rebirth, and so on. Are these the whimsicalities of chance, or the suggestive effects of the name, as Stekel seems to suggest, or are they “meaningful coincidences”? (“Die Verpflichtung des Namens,” *noff.*)

¹³ *Parerga und Paralipomena*, I, ed. by von Koeber. [Cf. the trans. by David Irvine, to which reference is made for convenience, though not quoted here.]

- ²⁴ *Ibid.*, p. 202.
- ²⁵ Pp. 192f.
- ²⁶ Pp. 194ff. A certain M. Deschamps, when a boy in Orléans, was once given a piece of plum-pudding by a M. de Fortgibu. Ten years later he discovered another plum-pudding in a Paris restaurant, and asked if he could have a piece. It turned out, however, that the plum-pudding was already ordered—by M. de Fortgibu. Many years afterwards M. Deschamps was invited to partake of a plum-pudding as a special rarity. While he was eating it he remarked that the only thing lacking was M. de Fortgibu. At that moment the door opened and an old, old man in the last stages of disorientation walked in: M. de Fortgibu, who had got hold of the wrong address and burst in on the party by mistake.

- ³³ Professor Pauli was kind enough to draw my attention to this paper, which appeared in 1949.
- ³⁴ Kammerer has dealt, not altogether convincingly, with the question of the “countereffect of the succeeding state on the preceding one” (cf. *Das Gesetz der Serie*, pp. 131f.).
- ³⁵ Cf. above, par. 440.
- ³⁶ To be more accurate, the swarming begins a little before and ends a little after this day, when the swarming is at its height. The months vary according to location. The palolo worm, or wawo, of Amboina is said to appear at full moon in March. (A. F. Krämer, *Über den Bau der Korallenriffe*.)
- ³⁷ Fritz Dahns, “Das Schwärmen des Palolo.”
- ³⁸ Even before that time certain doubts had arisen in me as to the unlimited applicability of the causal principle in psychology. In the foreword to the 1st edn. of *Collected Papers on Analytical Psychology*, I had written (p. ix): “Causality is only one principle and psychology essentially cannot be exhausted by causal methods only, because the

mind [= psyche] lives by aims as well.” Psychic finality rests on a “pre-existent” meaning which becomes problematical only when it is an unconscious arrangement. In that case we have to suppose a “knowledge” prior to all consciousness. Hans Driesch comes to the same conclusion (*Die “Seele” als elementarer Naturfaktor*, pp. 80ff.).

^{38a} [The case is discussed more fully below, par. 982.—EDITORS.]

³⁹ In Homer the souls of the dead “twitter.” [*Odyssey*, Book XI.—EDITORS.]

⁴⁰ Naturally these can only be verified when the doctor himself has the necessary knowledge of symbology.

⁴¹ [Statistical analysis is designed to separate out groupings (termed dispersions) due to random activity from significant dispersions in which causes may be looked for. On Professor Jung’s hypothesis, however, dispersions due to chance can be subdivided into meaningful and meaningless. The meaningless dispersions due to chance are made meaningful by the activation of the psychoid archetype.—EDITORS.]

⁴² Cf. par. 841; also “On the Nature of the Psyche,” par. 404f.

⁴³ A literary example is “The Cranes of Ibycus.” [A poem by Schiller (1798), inspired by the story of the Greek poet murdered by robbers who were brought to justice through the appearance of a swarm of cranes. As cranes had also flown over the scene of the crime, the murderers cried out at the sight and so betrayed themselves.—EDITORS.] Similarly, when a flock of chattering magpies settles on a house it is supposed to mean death, and so on. Cf. also the significance of auguries.

⁴⁴ *An Experiment with Time* (2nd edn.), pp. 34ff.

⁴⁵ *De opificio mundi*, 26. (“Διάστημα τῆς τοῦ οὐρανοῦ κινήσαώς ἐστι ὁ χρόνος.”)

⁴⁶ “virtus”

⁴⁷ “quando ipsa fertur in magnum amoris excessum aut odii aut alicuius talium.”

⁴⁸ “fertur in grandem excessum alicuius passionis invenitur experimento manifesto quod ipse ligat res et alterat ad idem quod desiderat”

⁴⁹ “affectio”

⁵⁰ “cum tali affectione exterminata concurrat hora conveniens aut ordo coelestis aut alia virtus, quae quodvis faciet, illud reputavimus tunc animam facere.”

⁵¹ *De mirabilibus mundi* (1485?).

⁵² *Metaphysica vera*, Part III, “Secunda scientia,” in *Opera philosophica*, ed. by Land, II, pp. 187f.

⁵³ *Eckermann’s Conversations with Goethe*, trans. by Moon, pp. 514f. (modified)

⁵⁴ See p. 430. *supra*.

⁵⁵ Recently Pascual Jordan has put up an excellent case for the scientific investigation of spatial clairvoyance (“Positivistische Bemerkungen über die parapsychischen Erscheinungen”). I would also draw attention to his *Verdrängung und Komplementarität*, concerning the relations between microphysics and the psychology of the unconscious.

⁵⁶ Trans. by Cary F. Baynes from the Richard Wilhelm translation.

⁵⁷ If the experiment is made with the traditional yarrow stalks, the division of the forty-nine stalks represents the chance factor.

⁵⁸ See also *infra*, par. 986.

⁵⁹ I first used this term in my memorial address for Richard Wilhelm (delivered May 10, 1930, in Munich). The address later appeared as an appendix to *The Secret of the Golden Flower*, where I said: “The science of the *I Ching* is not based on the causality principle, but on a principle (hitherto unnamed because not met with among us) which I have tentatively called the synchronistic principle” (p. 141). [Cf. “Richard Wilhelm: In Memoriam,” par. 81.]

⁶⁰ *I Ching*, Appendix.

⁶¹ Mentioned by Isidore of Seville in his *Liber etymologiarum*, VIII, ix, 13.

⁶² Grains of corn or dice can also be used.

⁶³ The best account is to be found in Robert Fludd (1574–1637), *De arte geomantica*. Cf. Lynn Thorndike, *A History of Magic and Experimental Science*, II, p. 110.

⁶⁴ Other obvious facts would be murder and suicide. Statistics are to be found in Herbert von Kloeckler (*Astrologie als Erfahrungswissenschaft*, pp. 232ff. and 260ff.), but unfortunately they fail to give comparisons with normal average values and cannot be used for our purpose. On the other hand, Paul Flambart (*Preuves et bases de l’astrologie scientifique*, pp. 79ff.) shows a graph of statistics on the ascendants of 123 outstandingly intelligent people. Definite accumulations occur at the corners of the airy trigon ((♈, ♎, ♊)). This result was confirmed by a further 300 cases.

⁶⁵ This view dates back to Ptolemy: “Apponit [Ptolemaeus] autem tres gradus concordiae: Primus cum Sol in viro, et Sol vel Luna in femina, aut Luna in utrisque, fuerint in locis se respicientibus trigono, vel hexagono aspectu. Secundus cum in viro Luna, in uxore Sol eodem modo disponuntur. Tertius si cum hoc alter alterum recipiat.” (Ptolemy postulates three degrees of harmony. The first is when the sun in the man’s [horoscope], and the sun or moon in the woman’s, or the moon in both, are in their respective places in a trine or sextile aspect. The second degree is when the moon in a man’s [horoscope] and the sun in a woman’s are constellated in the same way. The third degree is when the one is receptive to the other.) On the same page, Cardan quotes Ptolemy (*De iudiciis astrorum*): “Omnino vero constantes et diurni convictus permanent quando in utriusque conjugis genitura luminaria contigerit configurata esse concorditer” (Generally speaking, their life together will be long and constant when in the horoscopes of both partners the luminaries [sun and moon] are harmoniously constellated). Ptolemy regards the conjunction of a masculine moon with a feminine sun as particularly favourable for marriage.—Jerome Cardan, *Commentaria in Ptolemaeum de astrorum iudiciis*, Book IV (in his *Opera omnia*, V, p. 332).

⁶⁶ The practising astrologer can hardly suppress a smile here, because for him these correspondences are absolutely self-evident, a classic example being Goethe’s connection with Christiane Vulpius: ☉ 5° ♏ ☽ ☾ 7° ♏.

I should perhaps add a few explanatory words for those readers who do not feel at home with the ancient art and technique of astrology. Its basis is the horoscope, a circular arrangement of sun, moon, and planets according to their relative positions in the signs of the zodiac at the moment of an individual’s birth. There are three main positions, viz., those of sun (☉), moon (☾), and the so-called ascendent (Asc); the last has the greatest importance for the interpretation of a nativity: the Asc. represents the degree of the zodiacal sign rising over the eastern horizon at the moment of birth. The horoscope consists of 12 so-called “houses,” sectors of 30° each. Astrological tradition ascribes different qualities to them as it does to the various “aspects,” i.e., angular relations of the planets and the *luminaria* (sun ☉ and moon ☾), and to the zodiacal signs.

⁶⁷ Cf. “On the Psychology of Eastern Meditation,” par. 942.

⁶⁸ Cf. “A Study in the Process of Individuation” and “Concerning Mandala Symbolism.”

¹ For a comprehensive account of this, see Max Knoll, “Transformations of Science in Our Age,” in *Man and Time*.

² Cf. the statistical results in K. E. Krafft and others, *Le Premier Traité d’astrobiologie*, pp. 23ff. and passim.

³ Although the quartile, trine and sextile aspects and the relations to the Medium and Imum Coeli ought really to be considered, I have omitted them here so as not to make the exposition unduly complicated. The main point is not *what* marriage aspects are, but whether they can be detected in the horoscope.

⁴ Fig. 1 (p. 461) sets out clearly the 50 different aspects as they actually occurred in the 180 married pairs.

⁵ [In this way a rough control group is obtained. It will, however, be appreciated that it is derived from a much larger number of pairs than the married pairs: 32,220 as compared with 180. This leads to the possibility of showing the chance nature of the 180 pairs. On the hypothesis that all the figures are due to chance, we would expect a far greater accuracy in the greater number and consequently a much smaller range in the figures. This is so, for the range in the 180 married pairs is $18 - 2 = 16$, whereas in the 180 unmarried pairs we get $9.6 - 7.4 = 2.2$.—EDITORS.]

⁶ [Par. 880. $9.6\% = 8$ such aspects in 83 married pairs. See par. 902 and App., (b).—EDITORS.]

⁷ How subtle these things can be is shown by the following incident: Recently it fell to my colleague to make the table arrangement for a number of people who were invited to dinner. She did this with care and discretion. But at the last moment an esteemed guest, a man, unexpectedly turned up who had at all costs to be suitably placed. The table arrangement was all upset, and a new one had to be hastily devised. There was no time for elaborate reflection. As we sat down to table, the following astrological picture manifested itself in the immediate vicinity of the guest:

LADY ☾ in ♀	LADY ☉ in ♋	GUEST ☉ in ♌	LADY ☉ in ♋
LADY ☉ in ♀	LADY ☾ in ♋	GENTLEMAN ☾ in ♌	LADY ☾ in ♋

Four ☉ ☾ marriages had arisen. My colleague, of course, had a thorough knowledge of astrological marriage aspects, and she was also acquainted with the horoscopes of the people in question. But the speed with which the new table arrangement had to be made left her no opportunity for reflection, so that the unconscious had a free hand in secretly arranging the “marriages.”

⁸ Cf. the nuptials of sun and moon in alchemy: *Psychology and Alchemy*, index, s.v. “Sol and Luna.”

^{8a} [See infra, pars. 989–91—EDITORS.]

⁹ Professor Fierz wishes to correct this sentence as follows: “Later on he called my attention to the fact that the sequence of the 3 aspects does not matter. As there are 6 possible sequences, we have to multiply our probability by 6, which gives 1 : 1500.” To this I reply that I never suggested anything of the kind! The sequence, i.e., the way in which the 3 conjunctions follow each other, has no importance at all.

¹⁰ [See App., (b). This passage has been rewritten to include the three sets of probabilities supplied by Professor Fierz.—EDITORS.]

¹¹ Cf. G. Schmiedler, “Personality Correlates of ESP as Shown by Rorschach Studies.” The author points out that those who accept the possibility of ESP get results above expectation, whereas those who reject it get negative results.

¹² As my statistics show, the result becomes blurred with larger figures. So it is very probable that if more material were collected it would no longer produce a similar result. We have therefore to be content with this apparently unique *lusus naturae*, though its uniqueness in no way prejudices the facts.

¹³ By which I mean a subject chosen at random, and not one with specific gifts.

¹⁴ Cf. “On the Nature of the Psyche,” pars. 417f.

¹⁵ This case is well authenticated. See report in Kant’s *Dreams of a Spirit-Seer, Illustrated by Dreams of Metaphysics*.

¹⁶ Cf. the interesting reflections of G. Spencer Brown: “De la recherche psychique considérée comme un test de la théorie des probabilités.”

¹ Cf. *Psychology and Alchemy*, par. 453. and “The Spirit Mercurius,” par. 273. Also the doctrine of *chèn-yên* in Wei Po-yang [“Phil. Tree,” pars. 432ff., and *Mysterium*, pars. 490, 711n] and in Chuang-tzu.

¹² *La Pensée chinoise*; also Lily Abegg, *The Mind of East Asia*. The latter gives an excellent account of the synchronistic mentality of the Chinese.

¹³ Professor W. Pauli kindly calls my attention to the fact that Niels Bohr used “correspondence” as a mediating term between the representation of the dis-continuum (particle) and the continuum (wave). Originally (1913–18) he called it the “principle of correspondence,” but later (1927) it was formulated as the “argument of correspondence.”

¹⁴ “συμπάθεια τῶν ὅλων”

¹⁵ *De alimento*, a tract ascribed to Hippocrates. (Trans. by John Precoppe in *Hippocrates on Diet and Hygiene*, p. 174, modified.) Σύρροια μία, συμπινοία μία, πάντα συμπαθέα κατά μὲν οὐλομελίην πάντα κατά μέρος δέ τό ἐν ἐκάστω μέρει μερέα πρὸς τό ἔργον ... ἀρχή μεγάλη ἐς ἑαχάτον μέρος ἀφικνέεται, ἐξ ἑσχάτον μέρους εἰς ἀρχήν μεγάλην ἀφικνέεται μία Φύσις εἶναι καὶ μὴ εἶναι.”

¹⁶ *De officio mundi*, 82 (trans. by F. H. Colson and G. H. Whitaker, I, p. 67).

¹⁷ “ἀρχή μεγάλη”

¹⁸ Eduard Zeller, *Die Philosophie der Griechen*, II, part ii, p. 654.

¹⁹ *Enneads*, IV, 3, 8 and 4, 32 (in A. C. H. Dews, *Plotin und der Untergang der antiken Weltanschauung*, p. 179).

²⁰ *Heptaplus*, VI, prooem., in *Opera omnia*, pp. 40f. (“Est enim primum ea in rebus unitas, qua unumquodque sibi est unum sibi que constat atque cohaeret. Est ea secundo, per quam altera alteri creatura unitur, et per quam demum omnes mundi partes unus sunt mundus. Tertia atque omnium principalissima est, qua *totum* universum cum suo opifice quasi exercitus cum suo duce est unum.”)

²¹ “unitas ita ternario distincta, ut ab unitatis simplicitate non discedat.”

²² *Opera omnia*, p. 315. (“Nascenti homini omnifaria semina et origenae vitae germina indidit pater.”)

²³ *Heptaplus*, V, vi, in *ibid.*, p. 38. (“Faciamus hominem ad imaginem nostram, qui non tam quartus est mundus, quasi nova aliqua natura, quam triuin (mundus supercoelestis, coelestis, sublunaris) complexus et colligatio.”)

²⁴ “God ... placed man in the centre [of the world] after his image and the similitude of forms” (“Deus ... hominem in medio [mundi] statuit ad imaginem suam et similitudinem formarum”).

²⁵ Pico’s doctrine is a typical example of the medieval correspondence theory. A good account of cosmological and astrological correspondence is to be found in Alfons Rosenberg, *Zeichen am Himmel: Das Weltbild der Astrologie*.

²⁶ Albrecht Dieterich, *Eine Mithrasliturgie*, p. 9.

²⁷ Henricus Cornelius Agrippa von Nettesheim, *De occulta philosophia Libri tres*, I, viii, p. 12. Trans. by “J. F.” as *Three Books of Occult Philosophy* (1651 edn.), p. 20; republished under the editorship of W. F. Whitehead, p. 55. [Quotations from the J. F. translation have been slightly modified.—TRANS.] (“Est Platoniorum omnium unanimes sententia quemadmodum i 1 archetypo mundo omnia sunt in omnibus, ita etiam in hoc corpóreo mundo, omnia in omnibus esse, modis tamen diversis, pro natura videlicet suscipientium: sic et elementa non solum sunt in istis inferioribus, sed in coelis, in stellis, in daemonibus, in angelis, in ipso denique omnium opifice et archetypo.”)

²⁸ “Omnia plena diis esse.”

²⁹ “virtutes divinae in rebus diffusae”

³⁰ “divinae illices”

³¹ “symbolicae illecebrae.” [In J. F. original edn., p. 32; Whitehead edn., p. 69.—TRANS.] Agrippa is basing himself here on the Marsilio Ficino translation (*Auctores Platonici*, II, vo). In Synesius (*Opuscula*, ed. by Nicolaus Terzaghi, p. 148), the text of Περὶ ἐνυπνῶν III B has το θελγόμενον, from τέλγοιν “to excite, charm, enchant.”

³² *De occulta philosophia*, I, iv, p. 69. (J. F. edn., p. 117; Whitehead edn., p. 169.) Similarly in Paracelsus.

³³ “Haud equidem credo, quia sit divinius illis

Ingenium aut rerum fato prudentia maior.”

—*Georgics*, I, 415f

³⁴ *Die “Seele” als elementarer Naturfaktor*, pp. 80, 82.

³⁵ Cf. supra, “On the Nature of the Psyche,” pars. 392f.

³⁶ Agrippa says of this (*op. cit.*, I, xiv, p. 29; J. F. edn., p. 33; Whitehead edn., p. 70): “That which we call the quintessence: because it is not from the four Elements, but a certain fifth thing, having its being above, and besides them.” (“Quoddam quintum super illa [elementa] aut praeter illa subsistens.”)

³⁷ II, lvii, p. 203 (J. F. edn., p. 331): “Est itaque anima mundi, vita quaedam unica omnia replens, omnia perfundens, omnia colligens et connectens, ut unam reddat totius mundi machinam. ...”

³⁸ *Ibid.*: “... potentius perfectiusque agunt, tum etiam promptius generant sibi simile.”

³⁹ The zoologist A. C. Hardy reaches similar conclusions: “Perhaps our ideas on evolution may be altered if something akin to telepathy—unconscious no doubt—were found to be a factor in moulding the patterns of behaviour among members of a species. If there was such a non-conscious group-behaviour plan, distributed between, and linking, the individuals of the race, we might find ourselves coming back to something like those ideas of subconscious racial memory of Samuel Butler, but on a group rather than an individual basis.” “The Scientific Evidence for Extra-Sensory Perception,” in *Discovery*, X, 328, quoted by Soal, q.v.

⁴⁰ Op. cit., II, iv-xiv.

⁴¹ “Dialogus inter naturam et filium philosophiae.” *Theatrum chemicum*, II (1602), p. 123.

⁴² Cited in Agrippa, op. cit., II, iv, p. 104 (J. F. edn., p. 176).

⁴³ Cf. Aniela Jaffé, “Bilder und Symbole aus E. T. A. Hoffmann’s Märchen ‘Der goldene Topf,’” and Marie-Louise von Franz, “Die Passio Perpetuae.”

⁴⁴ Cf. *Alchemical Studies*, index, s.v. “Agrippa.”

⁴⁵ *Das Buch Paragranum*, ed. by Franz Strunz, pp. 35f. Much the same in *Labyrinthus medicorum*, in the *Sämtliche Werke*, ed. Sudhoff, XI, pp. 204ff

⁴⁶ Strunz edn., p. 34.

⁴⁷ Similar ideas in Jakob Böhme, *The Signature of All Things*, trans. by John Ellistone, p. 10: “Man has indeed the forms of all the three worlds in him, for he is a complete image of God, or of the Being of all beings. ...” (*Signatura rerum*, I, 7.)

⁴⁸ *Opera omnia*, ed. by C. Frisen, I, pp. 605ff.

⁴⁹ Ibid., No. 64.

⁵⁰ No. 65.

⁵¹ No. 67.

⁵² [“in die Natalitia” = “into those [positions presiding] at birth,” if “in die” is construed as German. The *Gesammelte Werke*, ed. by M. Caspar and F. Hammer, IV, p. 211, has “in die Natalitio” = “in the day of birth,” the words “in die” being construed as Latin.—TRANS.]

⁵³ No. 68.

⁵⁴ See the dreams mentioned below.

⁵⁵ Kepler, *Opera*, ed. by Frisch, V, p. 254; cf. also II, pp. 270f. and VI, pp. 178f “... formatrix facultas est in visceribus terrae, quae feminae praegnantis more occursantes foris res humanas veluti eas videret, in fissibilibus lapidibus exprimit, ut militum, monachorum, pontificum, regum et quidquid in ore hominum est. ...”

⁵⁶ “... quod scl. principatus causae in terra sedeat, non in planetis ipsis.” Ibid., II, p. 642.

⁵⁷ “... ut omne genus naturalium vel animalium facultatum in corporibus Dei quandam gerat similitudinem.” Ibid. I am indebted to Dr. Liliane Frey-Rohn and Dr. Marie Louise von Franz for this reference to Kepler.

⁵⁸ C. W. Leibniz, “Second Explanation of the System of the Communication between Substances” (*The Philosophical Works of Leibniz*, trans. by G. M. Duncan, pp. 90–91): “From the beginning God has made each of these two substances of such a nature that merely by following its own peculiar laws, received with its being, it

nevertheless accords with the other, just as if there were a mutual influence or as if God always put his hand thereto in addition to his general co-operation.”

As Professor Pauli has kindly pointed out, it is possible that Leibniz took his idea of the synchronized clocks from the Flemish philosopher Arnold Geulincx (1625–99). In his *Metaphysica vera*, Part III, there is a note to “Octava scientia” (p. 195), which says (p. 296): “... horologium voluntatis nostrae quadret cum horologio motus in corpore” (the clock of our will is synchronized with the clock of our physical movement). Another note (p. 297) explains: “Voluntas nostra nullum habet influxum, causalitatem, determinationem aut efficaciam quam-cunque in motum ... cum cogitationes nostras bene excutimus, nullam apud nos invenimus ideam seu notionem determinationis. ... Restat igitur Deus solus primus motor et solus motor, quia et ita motum ordinat atque disponit et ita simul voluntati nostrae licet libere moderatur, ut eodem temporis momento conspiret et voluntas nostra ad projiciendum v.g. pedes inter ambulandum, et simul ipsa ilia pedum projectio seu ambulatio.” (Our will has no influence, no causative or determinative power, and no effect of any kind on our movement. ... If we examine our thoughts carefully, we find in ourselves no idea or concept of determination. ... There remains, therefore, only God as the prime mover and only mover, because he arranges and orders movement and freely co-ordinates it with our will, so that our will wishes simultaneously to throw the feet forward into walking, and simultaneously the forward movement and the walking take place.) A note to “Nona scientia” adds (p. 298): “Mens nostra ... penitus independens est ab illo (scl. corpore) ... omnia quae de corpore scimus jam praevis quasi ante nostram cognitionem esse in corpore. Ut ilia quodam modo nos in corpore legamus, non vero inscribamiis, quod Deo proprium est.” (Our mind ... is totally independent of the body ... everything we know about the body is already in the body, before our thought. So that we can, as it were, read ourselves in our body, but not imprint ourselves on it. Only God can do that.) This idea anticipates Leibniz’ clock comparison.

⁵⁹ *Monadology*, § 7: “Monads have no windows, by which anything could come in or go out. ... Thus neither substance nor accident can enter a monad from without.”

⁶⁰ Rejoinder to the remarks in Bayle’s *Dictionary*, from the *Kleinere philosophische Schrijten*, XI, p. 105.

⁶¹ *Monadology*, § 56 (Morris edn., p. 12): “Now this connection or adaptation of all created things with each, and of each with all the rest, means that each simple substance has relations which express all the others, and that consequently it is a perpetual living mirror of the universe.”

⁶² *Ibid.*, § 78 (p. 17),

⁶³ § 83 (P. 18): cf. *Theodicy*, § 147 (trans. by E. M. Huggard. pp. 215f).

⁶⁴ *Monadology*, § 79 (Morris edn., p. 17).

⁶⁵ *Ibid.*, § 15 (p. 5).

⁶⁶ § 14 (pp. 4f)

⁶⁷ *Principles of Nature and of Grace, Founded on Reason*, § 4 (Morris edn., p. 22).

⁶⁸ *Monadology*, § 14 (p. 5). Cf. also Dr. Marie-Louise von Franz's paper on the dream of Descartes in *Zeitlose Dokumente der Seele*.

⁶⁹ *Monadology*, § 48 (p. 11); *Theodicy* § 149.

⁷⁰ I must again stress the possibility that the relation between body and soul may yet be understood as a synchronistic one. Should this conjecture ever be proved, my present view that synchronicity is a relatively rare phenomenon would have to be corrected. Cf. C. A. Meier's observations in *Zeitgemässe Probleme der Traumforschung*, p. 22.

⁷¹ In view of the possibility that synchronicity is not only a psychophysical phenomenon but might also occur without the participation of the human psyche, I should like to point out that in this case we should have to speak not of *meaning* but of equivalence or conformity.

⁷² “ὁ θεὸς ἀριθμητίζει.” But in a letter of 1830 Gauss says: “We must in all humility admit that if number is *merely* a product of our mind, space has a reality outside our mind.” (Leopold Kronecker, *über den Zahlenbegriff*, in his *Werke*, III, p. 252.) Hermann Weyl likewise takes number as a product of reason. (“Wissenschaft als symbolische Konstruktion des Menschen,” p. 375). Markus Fierz, on the other hand, inclines more to the Platonic idea. (“Zur physikalischen Erkenntnis,” p. 434.)

⁷³ According to the rules of dream interpretation this Mr. A would represent the animus, who, as a personification of the unconscious, takes back the designs because the conscious mind has no use for them and regards them only as *lusus naturae*.

⁷⁴ The recurrence of the dream expresses the persistent attempt of the unconscious to bring the dream content before the conscious mind.

⁷⁵ An Anthroparion or “metallic man.”

⁷⁶ Cf. Kepler's ideas quoted above.

⁷⁷ Those who find the dreams unintelligible will probably suspect them of harbouring quite a different meaning which is more in accord with their preconceived opinions. One can indulge in wishful thinking about dreams just as one can about anything else. For my part I prefer to keep as close to the dream statement as possible, and to try to formulate it in accordance with its manifest meaning. If it proves impossible to relate this meaning to the conscious situation of the dreamer, then I frankly admit that I do not understand the dream, but I take good care not to juggle it into line with some preconceived theory.

¹ Hubert Jantz and Kurt Beringer, “Das Syndrom des Schwebbeerlebnisses unmittelbar nach Kopfverletzungen,” 202.

² Cf. G. N. M. Tyrrell's report in *The Personality of Man*, pp. 197f. There is another case of this kind on pp. 199f.

³ Karl von Frisch, *The Dancing Bees*, trans. by Dora Ilse, pp. 112ff.

⁴ “La Morphogénèse dans la cadre de la biologie générale.” Cf. above, the similar conclusion reached by the zoologist A. C. Hardy.

⁵ *Physics and Philosophy*, p. 127; cf. also p. 151.

⁶ I am not counting P. A. M. Dirac's multi-dimensionality of time.

⁷ Cf. my “Psychological Approach to the Dogma of the Trinity,” pars. 186ff., 280, 290.

⁸ Sir James Jeans (*Physics and Philosophy*, p. 215) thinks it possible “that the springs of events in this substratum include our own mental activities, so that the future course of events may depend in part on these mental activities.”

The causalism of this argument does not seem to me altogether tenable.

⁹ “ἕκ τοῦ τρίτου τὸ ἔν τέταρτον.” Cf. *Psychology and Alchemy*, par. 26.

¹⁰ “De tenebris contra naturam,” in *Theatrum chemicum*, I (1602), pp. 518ff.

¹¹ Marie-Louise von Franz, “Die Parabel von der Fontina des Grafen von Tarvis.”

¹² See Pauli’s contribution in *The Interpretation of Nature and the Psyche*.

¹³ *Über die Freiheit*, 4f

¹⁴ *Ibid.*, p. 6.

¹⁵ S. G. Soal, “Science and Telepathy,” p. 6.

¹⁶ Jacob Grimm, *Teutonic Mythology*, trans. by J. S. Stallybrass, I, p. 137. Wish-objects are magic implements forged by dwarfs, such as Odin’s spear Gungnir, Thor’s hammer Mjollnir, and Freya’s sword (II, p. 870). Wishing is “gotes kraft” (divine power). “Got hât an sie den wunsch geleit und der wünschelruoten hort” (God has bestowed the wish on her and the treasure of [or: found by] the wishing rod). “Beschoenen mit wunsches gewalte” (to make beautiful with the power of the wish) (IV, p. 1329). “Wish” = Sanskrit *manoratha*, literally, “car of the mind” or of the psyche, i.e., wish, desire, fancy. (A. A. Macdonell, *A Practical Sanskrit Dictionary*, s.v.)

¹⁷ Continuous creation is to be thought of not only as a series of successive acts of creation, but also as the eternal presence of the *one* creative act, in the sense that God “was always the Father and always generated the Son” (Origen, *De principles*, I, 2, 3), or that he is the “eternal Creator of minds” (Augustine, *Confessions*, XI, 31, trans. F. J. Sheed, p. 232). God is contained in his own creation, “nor does he stand in need of his own works, as if he had place in them where he might abide; but endures in his own eternity, where he abides and creates whatever pleases him, both in heaven and earth” (Augustine, on Ps. 113 : 14, in *Expositions on the Book of Psalms*). What happens successively in time is simultaneous in the mind of God: “An immutable order binds mutable things into a pattern, and in this order things which are not simultaneous in time exist simultaneously outside time” (Prosper of Aquitaine, *Sententiae ex Augustino delibatae*, XLI [Migne, *PL.*, LI, col. 433]). “Temporal succession is without time in the eternal wisdom of God” (LVII [Migne, col. 455]). Before the Creation there was no time—time only began with created things: “Rather did time arise from the created than the created from time” (CCLXXX [Migne, col. 468]). “There was no time before time, but time was created together with the world” (Anon., *De triplici habitaculo*, VI [Migne, *P.L.*, XL, col. 995]).

¹⁸ [From ἀτμῶς, ‘indivisible, that cannot be cut.’—TRANS.]

¹ [Originally given as a lecture, “Über Synchronizität,” at the 1951 Eranos conference, Ascona, Switzerland, and published in the *Eranos-Jahrbuch 1951* (Zurich, 1952). The present translation was published in *Man and Time* (Papers from the Eranos Yearbooks, 3; New York and London, 1957); it is republished with minor revisions. The essay was, in the main, drawn from the preceding monograph.—EDITORS.]

BY PRINCETON UNIVERSITY PRESS AT PRINCETON, N. J.

EDITORIAL NOTE

The concept of archetypes and its correlate, that of the collective unconscious, are among the better known theories developed by Professor Jung. Their origins may be traced to his earliest publication, “On the Psychology and Pathology of So-called Occult Phenomena” (1902),* in which he described the fantasies of an hysterical medium. Intimations of the concepts can be found in many of his subsequent writings, and gradually tentative statements crystallized and were reformulated until a stable core of theory was established.

Part I of Volume 9 consists of essays—written from 1933 onward—describing and elaborating the two concepts. The volume is introduced by three essays establishing the theoretical basis, followed by others describing specific archetypes. The relation of these to the process of individuation is defined in essays in the last section.

Part II of the volume, entitled *Aion* and published separately, is devoted to a long monograph on the symbolism of the self as revealed in the “Christian aeon.” Together the two parts give the nucleus of Jung’s work on the theory and meaning of archetypes in relation to the psyche as a whole.

*

While the illustrations that accompany the last two papers are the same subjects published with the Swiss versions in *Gestaltungen des Unbewussten*, they have now been rephotographed and improved in presentation. It has been possible to give the entire pictorial series illustrating “A Study in the Process of Individuation” in colour and to add seven additional pictures, which were chosen by the author from those in his possession (par. 616). Several of the illustrations for “Concerning Mandala Symbolism,” also, are now given in colour. Grateful acknowledgment is made to Mrs. Aniela Jaffé and to Mrs. Margaret Schevill-Link for their kind assistance in connection with the pictures. The frontispiece was published in the Swiss magazine *Du* (April 1955), with the brief article by Professor Jung on mandalas which is given in the appendix. This “Mandala of a Modern Man” was painted in 1916.

EDITORIAL NOTE TO THE SECOND EDITION

Bibliographical citations and entries have been revised in the light of subsequent publications in the *Collected Works* and essential corrections have been made. Jung's acknowledgment in his *Memories, Dreams, Reflections* of having painted the mandala illustrated in the frontispiece, and four other mandalas in this volume, is explained on page 355, n.1.

TRANSLATOR'S NOTE

Grateful acknowledgment is made to those whose translations have been consulted: Mr. W. S. Dell, for help derived from his translations of two papers: "Archetypes of the Collective Unconscious" and "The Meaning of Individuation" (here entitled "Conscious, Unconscious, and Individuation"), both published in *The Integration of the Personality*; Mrs. Cary F. Baynes and Miss Ximena de Angulo, for permission to use, virtually unchanged, long portions of their translations of "Psychological Aspects of the Mother Archetype" and "Concerning Rebirth," issued in *Spring* (New York), 1943 and 1944; and to Miss Hildegard Nagel, for reference to her translation of "The Psychology of the Trickster-Figure," in *Spring*, 1955.

VOLUME 9, PART I ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

TABLE OF CONTENTS

EDITORIAL NOTE

TRANSLATOR'S NOTE

LIST OF ILLUSTRATIONS

I

Archetypes of the Collective Unconscious

Translated from "Über die Archetypen des kollektiven Unbewussten," *Von den Wurzeln des Bewusstseins* (Zurich: Rascher, 1954).

The Concept of the Collective Unconscious

Originally published in English in the *Journal of St. Bartholomew's Hospital* (London), XLIV (1936/37).

Concerning the Archetypes, with Special Reference to the Anima Concept

Translated from "Über den Archetypus mit besonderer Berücksichtigung des Animabegriffes," *Von den Wurzeln des Bewusstseins* (Zurich: Rascher, 1954).

II

Psychological Aspects of the Mother Archetype

Translated from "Die psychologischen Aspekte des Mutter-Archetypus," *Von den Wurzeln des Bewusstseins* (Zurich: Rascher, 1954).

1. ON THE CONCEPT OF THE ARCHETYPE

2. THE MOTHER ARCHETYPE

3. THE MOTHER-COMPLEX

I. The Mother-Complex of the Son

II. The Mother-Complex of the Daughter

a. Hypertrophy of the Maternal Element

- b. Overdevelopment of Eros
- c. Identity with the Mother
- d. Resistance to the Mother

4. POSITIVE ASPECTS OF THE MOTHER-COMPLEX

- I. The Mother
- II. The Overdeveloped Eros
- III. The “Nothing-But” Daughter
- IV. The Negative Mother-Complex

5. CONCLUSION

III

Concerning Rebirth

Translated from “Über Wiedergeburt,” *Gestaltungen des Unbewussten* (Zurich: Rascher, 1950).

1. FORMS OF REBIRTH

2. THE PSYCHOLOGY OF REBIRTH

- I. Experience of the Transcendence of Life
 - a. Experiences Induced by Ritual
 - b. Immediate Experiences
- II. Subjective Transformation
 - a. Diminution of Personality
 - b. Enlargement of Personality
 - c. Change of Internal Structure
 - d. Identification with a Group
 - e. Identification with a Cult-Hero
 - f. Magical Procedures
 - g. Technical Transformation
 - h. Natural Transformation (Individuation)

3. A TYPICAL SET OF SYMBOLS ILLUSTRATING THE PROCESS OF TRANSFORMATION

IV

The Psychology of the Child Archetype

Translated from “Zur Psychologie des Kind-Archetypus,” *Einführung in das Wesen der Mythologie* (with K. Kerényi), 4th revised edition (Zurich: Rhein-Verlag, 1951).

- I. Introduction
- II. The Psychology of the Child Archetype
 1. The Archetype as a Link with the Past
 2. The Function of the Archetype
 3. The Futurity of the Archetype
 4. Unity and Plurality of the Child Motif
 5. Child God and Child Hero
- III. The Special Phenomenology of the Child Archetype
 1. The Abandonment of the Child
 2. The Invincibility of the Child
 3. The Hermaphroditism of the Child
 4. The Child as Beginning and End
- IV. Conclusion

The Psychological Aspects of the Kore

Translated from “Zum psychologischen Aspekt der Kore-Figur,” *Einführung in das Wesen der Mythologie* (with K. Kerényi), 4th revised edition (Zurich: Rhein-Verlag, 1951).

V

The Phenomenology of the Spirit in Fairytales

Translated from “Zur Phänomenologie des Geistes im Märchen,” *Symbolik des Geistes* (Zurich: Rascher, 1948).

- I. Concerning the Word “Spirit,”
- II. Self-Representation of the Spirit in Dreams
- III. The Spirit in Fairytales
- IV. Theriomorphic Spirit Symbolism in Fairytales
- V. Supplement
- VI. Conclusion

On the Psychology of the Trickster-Figure

Translated from part 5 of *Der Göttliche Schelm*, by Paul Radin, with commentaries by C. G. Jung and Karl Kerényi (Zurich: Rhein-Verlag, 1954).

Conscious, Unconscious, and Individuation

Originally written in English as “The Meaning of Individuation,” in *The Integration of the Personality* (New York: Farrar and Rinehart, 1939; London: Kegan Paul, 1940); here revised in accordance with the German version, “Bewusstsein, Unbewusstes und Individuation,” *Zentralblatt für Psychotherapie und ihre Grenzgebiete* (Leipzig), XI (1939).

A Study in the Process of Individuation

Translated from “Zur Empirie des Individuationsprozesses,” *Gestaltungen des Unbewussten* (Zurich: Rascher, 1950).

LIST OF ILLUSTRATIONS

Mandala of a Modern Man *frontispiece*

Painting by C. G. Jung, 1916. The microcosmic enclosed within the macrocosmic system of opposites. Macrocosm, top: boy in the winged egg, Erikapaios or Phanes, the spiritual principle with triadic fire-symbol and attributes; bottom, his dark adversary Abraxas, ruler of the physical world, with double pentadic star of natural man and rebirth symbols. Microcosm, left: snake with phallus, the procreative principle; right, dove of Holy Ghost with double beaker of Sophia. Inner sun (jagged circle) encloses repetitions of this system on a diminishing scale, with inner microcosm at the centre. (From *Du*, Zurich, April 1955, where the mandala was reproduced. Cf. *Memories, Dreams, Reflections*, p. 195, U.S.; 187, Brit.)

THE CONCEPT OF THE COLLECTIVE UNCONSCIOUS

**CONCERNING THE ARCHETYPES,
WITH SPECIAL REFERENCE
TO THE ANIMA CONCEPT**

ARCHETYPES OF THE COLLECTIVE UNCONSCIOUS¹

- [1] The hypothesis of a collective unconscious belongs to the class of ideas that people at first find strange but soon come to possess and use as familiar conceptions. This has been the case with the concept of the unconscious in general. After the philosophical idea of the unconscious, in the form presented chiefly by Carus and von Hartmann, had gone down under the overwhelming wave of materialism and empiricism, leaving hardly a ripple behind it, it gradually reappeared in the scientific domain of medical psychology.
- [2] At first the concept of the unconscious was limited to denoting the state of repressed or forgotten contents. Even with Freud, who makes the unconscious—at least metaphorically—take the stage as the acting subject, it is really nothing but the gathering place of forgotten and repressed contents, and has a functional significance thanks only to these. For Freud, accordingly, the unconscious is of an exclusively personal nature,² although he was aware of its archaic and mythological thought-forms.
- [3] A more or less superficial layer of the unconscious is undoubtedly personal. I call it the *personal unconscious*. But this personal unconscious rests upon a deeper layer, which does not derive from personal experience and is not a personal acquisition but is inborn. This deeper layer I call the *collective unconscious*. I have chosen the term “collective” because this part of the unconscious is not individual but universal; in contrast to the personal psyche, it has contents and modes of behaviour that are more or less the same everywhere and in all individuals. It is, in other words, identical in all men and thus constitutes a common psychic substrate of a suprapersonal nature which is present in every one of us.
- [4] Psychic existence can be recognized only by the presence of contents that are *capable of consciousness*. We can therefore speak of an unconscious only in so far as we are able to demonstrate its contents. The contents of the personal unconscious are chiefly the *feeling-toned complexes*, as they are called; they constitute the personal and private side of psychic life. The contents of the collective unconscious, on the other hand, are known as *archetypes*.
- [5] The term “archetype” occurs as early as Philo Judaeus,³ with reference to the *Imago Dei* (God-image) in man. It can also be found in Irenaeus, who says: “The

creator of the world did not fashion these things directly from himself but copied them from archetypes outside himself.”⁴ In the *Corpus Hermeticum*,⁵ God is called τὸ ἀρχέτυπον φῶς (archetypal light). The term occurs several times in Dionysius the Areopagite, as for instance in *De caelesti hierarchia*, II, 4: “immaterial Archetypes,”⁶ and in *De divinis nominibus*, I, 6: “Archetypal stone.”⁷ The term “archetype” is not found in St. Augustine, but the idea of it is. Thus in *De diversis quaestionibus LXXXIII* he speaks of “*ideae principales*, ‘which are themselves not formed ... but are contained in the divine understanding.’”⁸ “Archetype” is an explanatory paraphrase of the Platonic εἶδος. For our purposes this term is apposite and helpful, because it tells us that so far as the collective unconscious contents are concerned we are dealing with archaic or—I would say—primordial types, that is, with universal images that have existed since the remotest times. The term “représentations collectives,” used by Lévy-Bruhl to denote the symbolic figures in the primitive view of the world, could easily be applied to unconscious contents as well, since it means practically the same thing. Primitive tribal lore is concerned with archetypes that have been modified in a special way. They are no longer contents of the unconscious, but have already been changed into conscious formulae taught according to tradition, generally in the form of esoteric teaching. This last is a typical means of expression for the transmission of collective contents originally derived from the unconscious.

[6] Another well-known expression of the archetypes is myth and fairytale. But here too we are dealing with forms that have received a specific stamp and have been handed down through long periods of time. The term “archetype” thus applies only indirectly to the “représentations collectives,” since it designates only those psychic contents which have not yet been submitted to conscious elaboration and are therefore an immediate datum of psychic experience. In this sense there is a considerable difference between the archetype and the historical formula that has evolved. Especially on the higher levels of esoteric teaching the archetypes appear in a form that reveals quite unmistakably the critical and evaluating influence of conscious elaboration. Their immediate manifestation, as we encounter it in dreams and visions, is much more individual, less understandable, and more naïve than in myths, for example. The archetype is essentially an unconscious content that is altered by becoming conscious and by being perceived, and it takes its colour from the individual consciousness in which it happens to appear.⁹

[7] What the word “archetype” means in the nominal sense is clear enough, then, from its relations with myth, esoteric teaching, and fairytale. But if we try to establish what an archetype is *psychologically*, the matter becomes more complicated. So far mythologists have always helped themselves out with solar, lunar, meteorological, vegetal, and other ideas of the kind. The fact that myths are first and foremost psychic phenomena that reveal the nature of the soul is something they have

absolutely refused to see until now. Primitive man is not much interested in objective explanations of the obvious, but he has an imperative need—or rather, his unconscious psyche has an irresistible urge—to assimilate all outer sense experiences to inner, psychic events. It is not enough for the primitive to see the sun rise and set; this external observation must at the same time be a psychic happening: the sun in its course must represent the fate of a god or hero who, in the last analysis, dwells nowhere except in the soul of man. All the mythologized processes of nature, such as summer and winter, the phases of the moon, the rainy seasons, and so forth, are in no sense allegories¹⁰ of these objective occurrences; rather they are symbolic expressions of the inner, unconscious drama of the psyche which becomes accessible to man's consciousness by way of projection—that is, mirrored in the events of nature. The projection is so fundamental that it has taken several thousand years of civilization to detach it in some measure from its outer object. In the case of astrology, for instance, this age-old “scientia intuitiva” came to be branded as rank heresy because man had not yet succeeded in making the psychological description of character independent of the stars. Even today, people who still believe in astrology fall almost without exception for the old superstitious assumption of the influence of the stars. And yet anyone who can calculate a horoscope should know that, since the days of Hipparchus of Alexandria, the spring-point has been fixed at 0° Aries, and that the zodiac on which every horoscope is based is therefore quite arbitrary, the spring-point having gradually advanced, since then, into the first degrees of Pisces, owing to the precession of the equinoxes.

[8] Primitive man impresses us so strongly with his subjectivity that we should really have guessed long ago that myths refer to something psychic. His knowledge of nature is essentially the language and outer dress of an unconscious psychic process. But the very fact that this process is unconscious gives us the reason why man has thought of everything except the psyche in his attempts to explain myths. He simply didn't know that the psyche contains all the images that have ever given rise to myths, and that our unconscious is an acting and suffering subject with an inner drama which primitive man rediscovers, by means of analogy, in the processes of nature both great and small.¹¹

[9] “The stars of thine own fate lie in thy breast,”¹² says Seni to Wallenstein—a dictum that should satisfy all astrologers if we knew even a little about the secrets of the heart. But for this, so far, men have had little understanding. Nor would I dare to assert that things are any better today.

[10] Tribal lore is always sacred and dangerous. All esoteric teachings seek to apprehend the unseen happenings in the psyche, and all claim supreme authority for themselves. What is true of primitive lore is true in even higher degree of the ruling

world religions. They contain a revealed knowledge that was originally hidden, and they set forth the secrets of the soul in glorious images. Their temples and their sacred writings proclaim in image and word the doctrine hallowed from of old, making it accessible to every believing heart, every sensitive vision, every farthest range of thought. Indeed, we are compelled to say that the more beautiful, the more sublime, the more comprehensive the image that has evolved and been handed down by tradition, the further removed it is from individual experience. We can just feel our way into it and sense something of it, but the original experience has been lost.

[11] Why is psychology the youngest of the empirical sciences? Why have we not long since discovered the unconscious and raised up its treasure-house of eternal images? Simply because we had a religious formula for everything psychic—and one that is far more beautiful and comprehensive than immediate experience. Though the Christian view of the world has paled for many people, the symbolic treasure-rooms of the East are still full of marvels that can nourish for a long time to come the passion for show and new clothes. What is more, these images—be they Christian or Buddhist or what you will—are lovely, mysterious, richly intuitive. Naturally, the more familiar we are with them the more does constant usage polish them smooth, so that what remains is only banal superficiality and meaningless paradox. The mystery of the Virgin Birth, or the homoousia of the Son with the Father, or the Trinity which is nevertheless not a triad—these no longer lend wings to any philosophical fancy. They have stiffened into mere objects of belief. So it is not surprising if the religious need, the believing mind, and the philosophical speculations of the educated European are attracted by the symbols of the East—those grandiose conceptions of divinity in India and the abysses of Taoist philosophy in China—just as once before the heart and mind of the men of antiquity were gripped by Christian ideas. There are many Europeans who began by surrendering completely to the influence of the Christian symbol until they landed themselves in a Kierkegaardian neurosis, or whose relation to God, owing to the progressive impoverishment of symbolism, developed into an unbearably sophisticated I-You relationship—only to fall victims in their turn to the magic and novelty of Eastern symbols. This surrender is not necessarily a defeat; rather it proves the receptiveness and vitality of the religious sense. We can observe much the same thing in the educated Oriental, who not infrequently feels drawn to the Christian symbol or to the science that is so unsuited to the Oriental mind, and even develops an enviable understanding of them. That people should succumb to these eternal images is entirely normal, in fact it is what these images are for. They are meant to attract, to convince, to fascinate, and to overpower. They are created out of the primal stuff of revelation and reflect the ever-unique experience of divinity. That is why they always give man a premonition of the divine while at the same time safeguarding him from immediate experience of it.

Thanks to the labours of the human spirit over the centuries, these images have become embedded in a comprehensive system of thought that ascribes an order to the world, and are at the same time represented by a mighty, far-spread, and venerable institution called the Church.

[12] I can best illustrate my meaning by taking as an example the Swiss mystic and hermit, Brother Nicholas of Flüe,¹³ who has recently been canonized. Probably his most important religious experience was the so-called Trinity Vision, which preoccupied him to such an extent that he painted it, or had it painted, on the wall of his cell. The painting is still preserved in the parish church at Sachseln. It is a mandala divided into six parts, and in the centre is the crowned countenance of God. Now we know that Brother Klaus investigated the nature of his vision with the help of an illustrated devotional booklet by a German mystic, and that he struggled to get his original experience into a form he could understand. He occupied himself with it for years. This is what I call the “elaboration” of the symbol. His reflections on the nature of the vision, influenced as they were by the mystic diagrams he used as a guiding thread, inevitably led him to the conclusion that he must have gazed upon the Holy Trinity itself—the *summum bonum*, eternal love. This is borne out by the “expurgated” version now in Sachseln.

[13] The original experience, however, was entirely different. In his ecstasy there was revealed to Brother Klaus a sight so terrible that his own countenance was changed by it—so much so, indeed, that people were terrified and felt afraid of him. What he had seen was a vision of the utmost intensity. Woelflin,¹⁴ our oldest source, writes as follows:

All who came to him were filled with terror at the first glance. As to the cause of this, he himself used to say that he had seen a piercing light resembling a human face. At the sight of it he feared that his heart would burst into little pieces. Therefore, overcome with terror, he instantly turned his face away and fell to the ground. And that was the reason why his face was now terrible to others.

[14] This vision has rightly been compared¹⁵ with the one in Revelation 1 : 13ff., that strange apocalyptic Christ-image, which for sheer gruesomeness and singularity is surpassed only by the monstrous seven-eyed lamb with seven horns (Rev. 5 : 6f.). It is certainly very difficult to see what is the relationship between this figure and the Christ of the gospels. Hence Brother Klaus’s vision was interpreted in a quite definite way by the earliest sources. In 1508, the humanist Karl Bovillus (Charles de Bouelles) wrote to a friend:

I wish to tell you of a vision which appeared to him in the sky, on a night when the stars were shining and he stood in prayer and contemplation. He saw the head of a

human figure with a terrifying face, full of wrath and threats.¹⁶

[15] This interpretation agrees perfectly with the modern amplification furnished by Revelation 1 : 13.¹⁷ Nor should we forget Brother Klaus's other visions, for instance, of Christ in the bearskin, of God the Father and God the Mother, and of himself as the Son. They exhibit features which are very undogmatic indeed.

[16] Traditionally this great vision was brought into connection with the Trinity picture in the church at Sachseln, and so, likewise, was the wheel symbolism in the so-called "Pilgrim's Tract."¹⁸ Brother Klaus, we are told, showed the picture of the wheel to a visiting pilgrim. Evidently this picture had preoccupied him for some time. Blanke is of the opinion that, contrary to tradition, there is no connection between the vision and the Trinity picture.¹⁹ This scepticism seems to me to go too far. There must have been some reason for Brother Klaus's interest in the wheel. Visions like the one he had often cause mental confusion and disintegration (witness the heart bursting "into little pieces"). We know from experience that the protective circle, the mandala, is the traditional antidote for chaotic states of mind. It is therefore only too clear why Brother Klaus was fascinated by the symbol of the wheel. The interpretation of the terrifying vision as an experience of God need not be so wide of the mark either. The connection between the great vision and the Trinity picture, and of both with the wheel-symbol, therefore seems to me very probable on psychological grounds.

[17] This vision, undoubtedly fearful and highly perturbing, which burst like a volcano upon his religious view of the world, without any dogmatic prelude and without exegetical commentary, naturally needed a long labour of assimilation in order to fit it into the total structure of the psyche and thus restore the disturbed psychic balance. Brother Klaus came to terms with his experience on the basis of dogma, then firm as a rock; and the dogma proved its powers of assimilation by turning something horribly alive into the beautiful abstraction of the Trinity idea. But the reconciliation might have taken place on a quite different basis provided by the vision itself and its unearthly actuality—much to the disadvantage of the Christian conception of God and no doubt to the still greater disadvantage of Brother Klaus himself, who would then have become not a saint but a heretic (if not a lunatic) and would probably have ended his life at the stake.

[18] This example demonstrates the use of the dogmatic symbol: it formulates a tremendous and dangerously decisive psychic experience, fittingly called an "experience of the Divine," in a way that is tolerable to our human understanding, without either limiting the scope of the experience or doing damage to its overwhelming significance. The vision of divine wrath, which we also meet in Jakob Böhme, ill accords with the God of the New Testament, the loving Father in heaven,

and for this reason it might easily have become the source of an inner conflict. That would have been quite in keeping with the spirit of the age—the end of the fifteenth century, the time of Nicholas Cusanus, whose formula of the “*complexio oppositorum*” actually anticipated the schism that was imminent. Not long afterwards the Yahwistic conception of God went through a series of rebirths in Protestantism. Yahweh is a God-concept that contains the opposites in a still undivided state.

[19] Brother Klaus put himself outside the beaten track of convention and habit by leaving his home and family, living alone for years, and gazing deep into the dark mirror, so that the wondrous and terrible boon of original experience befell him. In this situation the dogmatic image of divinity that had been developed over the centuries worked like a healing draught. It helped him to assimilate the fatal incursion of an archetypal image and so escape being torn asunder. Angelus Silesius was not so fortunate; the inner conflict tore him to pieces, because in his day the stability of the Church that dogma guarantees was already shattered.

[20] Jakob Böhme, too, knew a God of the “Wrath-fire,” a real *Deus absconditus*. He was able to bridge the profound and agonizing contradiction on the one hand by means of the Christian formula of Father and Son and embody it speculatively in his view of the world—which, though Gnostic, was in all essential points Christian. Otherwise he would have become a dualist. On the other hand it was undoubtedly alchemy, long brewing the union of opposites in secret, that came to his aid. Nevertheless the opposition has left obvious traces in the mandala appended to his *XL Questions concerning the Soule*,²⁰ showing the nature of the divinity. The mandala is divided into a dark and a light half, and the semicircles that are drawn round them, instead of joining up to form a ring, are turned back to back.²¹

[21] Dogma takes the place of the collective unconscious by formulating its contents on a grand scale. The Catholic way of life is completely unaware of psychological problems in this sense. Almost the entire life of the collective unconscious has been channelled into the dogmatic archetypal ideas and flows along like a well-controlled stream in the symbolism of creed and ritual. It manifests itself in the inwardness of the Catholic psyche. The collective unconscious, as we understand it today, was never a matter of “psychology,” for before the Christian Church existed there were the antique mysteries, and these reach back into the grey mists of neolithic prehistory. Mankind has never lacked powerful images to lend magical aid against all the uncanny things that live in the depths of the psyche. Always the figures of the unconscious were expressed in protecting and healing images and in this way were expelled from the psyche into cosmic space.

[22] The iconoclasm of the Reformation, however, quite literally made a breach in the protective wall of sacred images, and since then one image after another has

crumbled away. They became dubious, for they conflicted with awakening reason. Besides, people had long since forgotten what they meant. Or had they really forgotten? Could it be that men had never really known what they meant, and that only in recent times did it occur to the Protestant part of mankind that actually we haven't the remotest conception of what is meant by the Virgin Birth, the divinity of Christ, and the complexities of the Trinity? It almost seems as if these images had just lived, and as if their living existence had simply been accepted without question and without reflection, much as everyone decorates Christmas trees or hides Easter eggs without ever knowing what these customs mean. The fact is that archetypal images are so packed with meaning in themselves that people never think of asking what they really do mean. That the gods die from time to time is due to man's sudden discovery that they do not mean anything, that they are made by human hands, useless idols of wood and stone. In reality, however, he has merely discovered that up till then he has never thought about his images at all. And when he starts thinking about them, he does so with the help of what he calls "reason"—which in point of fact is nothing more than the sum-total of all his prejudices and myopic views.

[23] The history of Protestantism has been one of chronic iconoclasm. One wall after another fell. And the work of destruction was not too difficult once the authority of the Church had been shattered. We all know how, in large things as in small, in general as well as in particular, piece after piece collapsed, and how the alarming poverty of symbols that is now the condition of our life came about. With that the power of the Church has vanished too—a fortress robbed of its bastions and casemates, a house whose walls have been plucked away, exposed to all the winds of the world and to all dangers.

[24] Although this is, properly speaking, a lamentable collapse that offends our sense of history, the disintegration of Protestantism into nearly four hundred denominations is yet a sure sign that the restlessness continues. The Protestant is cast out into a state of defencelessness that might well make the natural man shudder. His enlightened consciousness, of course, refuses to take cognizance of this fact, and is quietly looking elsewhere for what has been lost to Europe. We seek the effective images, the thought-forms that satisfy the restlessness of heart and mind, and we find the treasures of the East.

[25] There is no objection to this, in and for itself. Nobody forced the Romans to import Asiatic cults in bulk. If Christianity had really been—as so often described—"alien" to the Germanic tribes, they could easily have rejected it when the prestige of the Roman legions began to wane. But Christianity had come to stay, because it fits in with the existing archetypal pattern. In the course of the centuries, however, it turned into something its founder might well have wondered at had he lived to see it;

and the Christianity of Negroes and other dark-skinned converts is certainly an occasion for historical reflections. Why, then, should the West not assimilate Eastern forms? The Romans too went to Eleusis, Samothrace, and Egypt in order to get themselves initiated. In Egypt there even seems to have been a regular tourist trade in this commodity.

[26] The gods of Greece and Rome perished from the same disease as did our Christian symbols: people discovered then, as today, that they had no thoughts whatever on the subject. On the other hand, the gods of the strangers still had unexhausted mana. Their names were weird and incomprehensible and their deeds portentously dark—something altogether different from the hackneyed *chronique scandaleuse* of Olympus. At least one couldn't understand the Asiatic symbols, and for this reason they were not banal like the conventional gods. The fact that people accepted the new as unthinkingly as they had rejected the old did not become a problem at that time.

[27] Is it becoming a problem today? Shall we be able to put on, like a new suit of clothes, ready-made symbols grown on foreign soil, saturated with foreign blood, spoken in a foreign tongue, nourished by a foreign culture, interwoven with foreign history, and so resemble a beggar who wraps himself in kingly raiment, a king who disguises himself as a beggar? No doubt this is possible. Or is there something in ourselves that commands us to go in for no mummeries, but perhaps even to sew our garment ourselves?

[28] I am convinced that the growing impoverishment of symbols has a meaning. It is a development that has an inner consistency. Everything that we have not thought about, and that has therefore been deprived of a meaningful connection with our developing consciousness, has got lost. If we now try to cover our nakedness with the gorgeous trappings of the East, as the theosophists do, we would be playing our own history false. A man does not sink down to beggary only to pose afterwards as an Indian potentate. It seems to me that it would be far better stoutly to avow our spiritual poverty, our symbol-lessness, instead of feigning a legacy to which we are not the legitimate heirs at all. We are, surely, the rightful heirs of Christian symbolism, but somehow we have squandered this heritage. We have let the house our fathers built fall into decay, and now we try to break into Oriental palaces that our fathers never knew. Anyone who has lost the historical symbols and cannot be satisfied with substitutes is certainly in a very difficult position today: before him there yawns the void, and he turns away from it in horror. What is worse, the vacuum gets filled with absurd political and social ideas, which one and all are distinguished by their spiritual bleakness. But if he cannot get along with these pedantic dogmatisms, he sees himself forced to be serious for once with his alleged trust in

God, though it usually turns out that his fear of things going wrong if he did so is even more persuasive. This fear is far from unjustified, for where God is closest the danger seems greatest. It is dangerous to avow spiritual poverty, for the poor man has desires, and whoever has desires calls down some fatality on himself. A Swiss proverb puts it drastically: “Behind every rich man stands a devil, and behind every poor man two.”

[29] Just as in Christianity the vow of worldly poverty turned the mind away from the riches of this earth, so spiritual poverty seeks to renounce the false riches of the spirit in order to withdraw not only from the sorry remnants—which today call themselves the Protestant church—of a great past, but also from all the allurements of the odorous East; in order, finally, to dwell with itself alone, where, in the cold light of consciousness, the blank barrenness of the world reaches to the very stars.

[30] We have inherited this poverty from our fathers. I well remember the confirmation lessons I received at the hands of my own father. The catechism bored me unspeakably. One day I was turning over the pages of my little book, in the hope of finding something interesting, when my eye fell on the paragraphs about the Trinity. This interested me at once, and I waited impatiently for the lessons to get to that section. But when the longed-for lesson arrived, my father said: “We’ll skip this bit; I can’t make head or tail of it myself.” With that my last hope was laid in the grave. I admired my father’s honesty, but this did not alter the fact that from then on all talk of religion bored me to death.

[31] Our intellect has achieved the most tremendous things, but in the meantime our spiritual dwelling has fallen into disrepair. We are absolutely convinced that even with the aid of the latest and largest reflecting telescope, now being built in America, men will discover behind the farthest nebulae no fiery empyrean; and we know that our eyes will wander despairingly through the dead emptiness of interstellar space. Nor is it any better when mathematical physics reveals to us the world of the infinitely small. In the end we dig up the wisdom of all ages and peoples, only to find that everything most dear and precious to us has already been said in the most superb language. Like greedy children we stretch out our hands and think that, if only we could grasp it, we would possess it too. But what we possess is no longer valid, and our hands grow weary from the grasping, for riches lie everywhere, as far as the eye can reach. All these possessions turn to water, and more than one sorcerer’s apprentice has been drowned in the waters called up by himself—if he did not first succumb to the saving delusion that *this* wisdom was good and *that* was bad. It is from these adepts that there come those terrifying invalids who think they have a prophetic mission. For the artificial sundering of true and false wisdom creates a

tension in the psyche, and from this there arises a loneliness and a craving like that of the morphine addict, who always hopes to find companions in his vice.

[32] When our natural inheritance has been dissipated, then the spirit too, as Heraclitus says, has descended from its fiery heights. But when spirit becomes heavy it turns to water, and with Luciferian presumption the intellect usurps the seat where once the spirit was enthroned. The spirit may legitimately claim the *patria potestas* over the soul; not so the earth-born intellect, which is man's sword or hammer, and not a creator of spiritual worlds, a father of the soul. Hence Ludwig Klages²² and Max Scheler²³ were moderate enough in their attempts to rehabilitate the spirit, for both were children of an age in which the spirit was no longer up above but down below, no longer fire but water.

[33] Therefore the way of the soul in search of its lost father—like Sophia seeking Bythos—leads to the water, to the dark mirror that reposes at its bottom. Whoever has elected for the state of spiritual poverty, the true heritage of Protestantism carried to its logical conclusion, goes the way of the soul that leads to the water. This water is no figure of speech, but a living symbol of the dark psyche. I can best illustrate this by a concrete example, one out of many:

[34] A Protestant theologian often dreamed the same dream: *He stood on a mountain slope with a deep valley below, and in it a dark lake. He knew in the dream that something had always prevented him from approaching the lake. This time he resolved to go to the water. As he approached the shore, everything grew dark and uncanny, and a gust of wind suddenly rushed over the face of the water. He was seized by a panic fear, and awoke.*

[35] This dream shows us the natural symbolism. The dreamer descends into his own depths, and the way leads him to the mysterious water. And now there occurs the miracle of the pool of Bethesda: an angel comes down and touches the water, endowing it with healing power. In the dream it is the wind, the *pneuma*, which bloweth where it listeth. Man's descent to the water is needed in order to evoke the miracle of its coming to life. But the breath of the spirit rushing over the dark water is uncanny, like everything whose cause we do not know—since it is not ourselves. It hints at an unseen presence, a numen to which neither human expectations nor the machinations of the will have given life. It lives of itself, and a shudder runs through the man who thought that "spirit" was merely what he believes, what he makes himself, what is said in books, or what people talk about. But when it happens spontaneously it is a spookish thing, and primitive fear seizes the naïve mind. The elders of the Elgoni tribe in Kenya gave me exactly the same description of the nocturnal god whom they call the "maker of fear." "He comes to you," they said, "like a cold gust of wind, and you shudder, or he goes whistling round in the tall

grass”—an African Pan who glides among the reeds in the haunted noontide hour, playing on his pipes and frightening the shepherds.

[36] Thus, in the dream, the breath of the pneuma frightened another pastor, a shepherd of the flock, who in the darkness of the night trod the reed-grown shore in the deep valley of the psyche. Yes, that erstwhile fiery spirit has made a descent to the realm of nature, to the trees and rocks and the waters of the psyche, like the old man in Nietzsche’s *Zarathustra*, who, wearied of humankind, withdrew into the forest to growl with the bears in honour of the Creator.

[37] We must surely go the way of the waters, which always tend downward, if we would raise up the treasure, the precious heritage of the father. In the Gnostic hymn to the soul,²⁴ the son is sent forth by his parents to seek the pearl that fell from the King’s crown. It lies at the bottom of a deep well, guarded by a dragon, in the land of the Egyptians—that land of fleshpots and drunkenness with all its material and spiritual riches. The son and heir sets out to fetch the jewel, but forgets himself and his task in the orgies of Egyptian worldliness, until a letter from his father reminds him what his duty is. He then sets out for the water and plunges into the dark depths of the well, where he finds the pearl on the bottom, and in the end offers it to the highest divinity.

[38] This hymn, ascribed to Bardesanes, dates from an age that resembled ours in more than one respect. Mankind looked and waited, and it was a *fish*—“levatus de profundo” (drawn from the deep)²⁵—that became the symbol of the saviour, the bringer of healing.

[39] As I wrote these lines, I received a letter from Vancouver, from a person unknown to me. The writer is puzzled by his dreams, which are always about water: “Almost every time I dream it is about water: *either I am having a bath, or the water-closet is overflowing, or a pipe is bursting, or my home has drifted down to the water’s edge, or I see an acquaintance about to sink into water, or I am trying to get out of water, or I am having a bath and the tub is about to overflow,*” etc.

[40] Water is the commonest symbol for the unconscious. The lake in the valley is the unconscious, which lies, as it were, underneath consciousness, so that it is often referred to as the “subconscious,” usually with the pejorative connotation of an inferior consciousness. Water is the “valley spirit,” the water dragon of Tao, whose nature resembles water—a *yang* embraced in the *yin*. Psychologically, therefore, water means spirit that has become unconscious. So the dream of the theologian is quite right in telling him that down by the water he could experience the working of the living spirit like a miracle of healing in the pool of Bethesda. The descent into the depths always seems to precede the ascent. Thus another theologian²⁶ dreamed that *he saw on a mountain a kind of Castle of the Grail. He went along a road that*

seemed to lead straight to the foot of the mountain and up it. But as he drew nearer he discovered to his great disappointment that a chasm separated him from the mountain, a deep, darksome gorge with underworldly water rushing along the bottom. A steep path led downwards and toilsomely climbed up again on the other side. But the prospect looked uninviting, and the dreamer awoke. Here again the dreamer, thirsting for the shining heights, had first to descend into the dark depths, and this proves to be the indispensable condition for climbing any higher. The prudent man avoids the danger lurking in these depths, but he also throws away the good which a bold but imprudent venture might bring.

[41] The statement made by the dream meets with violent resistance from the conscious mind, which knows “spirit” only as something to be found in the heights. “Spirit” always seems to come from above, while from below comes everything that is sordid and worthless. For people who think in this way, spirit means highest freedom, a soaring over the depths, deliverance from the prison of the chthonic world, and hence a refuge for all those timorous souls who do not want to become anything different. But water is earthy and tangible, it is also the fluid of the instinct-driven body, blood and the flowing of blood, the odour of the beast, carnality heavy with passion. The unconscious is the psyche that reaches down from the daylight of mentally and morally lucid consciousness into the nervous system that for ages has been known as the “sympathetic.” This does not govern perception and muscular activity like the cerebrospinal system, and thus control the environment; but, though functioning without sense-organs, it maintains the balance of life and, through the mysterious paths of sympathetic excitation, not only gives us knowledge of the innermost life of other beings but also has an inner effect upon them. In this sense it is an extremely collective system, the operative basis of all *participation mystique*, whereas the cerebrospinal function reaches its high point in separating off the specific qualities of the ego, and only apprehends surfaces and externals—always through the medium of space. It experiences everything as an outside, whereas the sympathetic system experiences everything as an inside.

[42] The unconscious is commonly regarded as a sort of incapsulated fragment of our most personal and intimate life—something like what the Bible calls the “heart” and considers the source of all evil thoughts. In the chambers of the heart dwell the wicked blood-spirits, swift anger and sensual weakness. This is how the unconscious looks when seen from the conscious side. But consciousness appears to be essentially an affair of the cerebrum, which sees everything separately and in isolation, and therefore sees the unconscious in this way too, regarding it outright as *my* unconscious. Hence it is generally believed that anyone who descends into the unconscious gets into a suffocating atmosphere of egocentric subjectivity, and in this

blind alley is exposed to the attack of all the ferocious beasts which the caverns of the psychic underworld are supposed to harbour.

[43] True, whoever looks into the mirror of the water will see first of all his own face. Whoever goes to himself risks a confrontation with himself. The mirror does not flatter, it faithfully shows whatever looks into it; namely, the face we never show to the world because we cover it with the *persona*, the mask of the actor. But the mirror lies behind the mask and shows the true face.

[44] This confrontation is the first test of courage on the inner way, a test sufficient to frighten off most people, for the meeting with ourselves belongs to the more unpleasant things that can be avoided so long as we can project everything negative into the environment. But if we are able to see our own shadow and can bear knowing about it, then a small part of the problem has already been solved: we have at least brought up the personal unconscious. The shadow is a living part of the personality and therefore wants to live with it in some form. It cannot be argued out of existence or rationalized into harmlessness. This problem is exceedingly difficult, because it not only challenges the whole man, but reminds him at the same time of his helplessness and ineffectuality. Strong natures—or should one rather call them weak?—do not like to be reminded of this, but prefer to think of themselves as heroes who are beyond good and evil, and to cut the Gordian knot instead of untying it. Nevertheless, the account has to be settled sooner or later. In the end one has to admit that there are problems which one simply cannot solve on one's own resources. Such an admission has the advantage of being honest, truthful, and in accord with reality, and this prepares the ground for a compensatory reaction from the collective unconscious: you are now more inclined to give heed to a helpful idea or intuition, or to notice thoughts which had not been allowed to voice themselves before. Perhaps you will pay attention to the dreams that visit you at such moments, or will reflect on certain inner and outer occurrences that take place just at this time. If you have an attitude of this kind, then the helpful powers slumbering in the deeper strata of man's nature can come awake and intervene, for helplessness and weakness are the eternal experience and the eternal problem of mankind. To this problem there is also an eternal answer, otherwise it would have been all up with humanity long ago. When you have done everything that could possibly be done, the only thing that remains is what you could still do if only you knew it. But how much do we know of ourselves? Precious little, to judge by experience. Hence there is still a great deal of room left for the unconscious. Prayer, as we know, calls for a very similar attitude and therefore has much the same effect.

[45] The necessary and needful reaction from the collective unconscious expresses itself in archetypally formed ideas. The meeting with oneself is, at first, the meeting

with one's own shadow. The shadow is a tight passage, a narrow door, whose painful constriction no one is spared who goes down to the deep well. But one must learn to know oneself in order to know who one is. For what comes after the door is, surprisingly enough, a boundless expanse full of unprecedented uncertainty, with apparently no inside and no outside, no above and no below, no here and no there, no mine and no thine, no good and no bad. It is the world of water, where all life floats in suspension; where the realm of the sympathetic system, the soul of everything living, begins; where I am indivisibly this *and* that; where I experience the other in myself and the other-than-myself experiences me.

[46] No, the collective unconscious is anything but an incapsulated personal system; it is sheer objectivity, as wide as the world and open to all the world. There I am the object of every subject, in complete reversal of my ordinary consciousness, where I am always the subject that has an object. There I am utterly one with the world, so much a part of it that I forget all too easily who I really am. "Lost in oneself" is a good way of describing this state. But this self is the world, if only a consciousness could see it. That is why we must know who we are.

[47] The unconscious no sooner touches us than we *are* it—we become unconscious of ourselves. That is the age-old danger, instinctively known and feared by primitive man, who himself stands so very close to this pleroma. His consciousness is still uncertain, wobbling on its feet. It is still childish, having just emerged from the primal waters. A wave of the unconscious may easily roll over it, and then he forgets who he was and does things that are strange to him. Hence primitives are afraid of uncontrolled emotions, because consciousness breaks down under them and gives way to possession. All man's strivings have therefore been directed towards the consolidation of consciousness. This was the purpose of rite and dogma; they were dams and walls to keep back the dangers of the unconscious, the "perils of the soul." Primitive rites consist accordingly in the exorcizing of spirits, the lifting of spells, the averting of the evil omen, propitiation, purification, and the production by sympathetic magic of helpful occurrences.

[48] It is these barriers, erected in primitive times, that later became the foundations of the Church. It is also these barriers that collapse when the symbols become weak with age. Then the waters rise and boundless catastrophes break over mankind. The religious leader of the Taos pueblo, known as the Loco Tenente Gobernador, once said to me: "The Americans should stop meddling with our religion, for when it dies and we can no longer help the sun our Father to cross the sky, the Americans and the whole world will learn something in ten years' time, for then the sun won't rise any more." In other words, night will fall, the light of consciousness is extinguished, and the dark sea of the unconscious breaks in.

[49] Whether primitive or not, mankind always stands on the brink of actions it performs itself but does not control. The whole world wants peace and the whole world prepares for war, to take but one example. Mankind is powerless against mankind, and the gods, as ever, show it the ways of fate. Today we call the gods “factors,” which comes from *facere*, ‘to make.’ The makers stand behind the wings of the world-theatre. It is so in great things as in small. In the realm of consciousness we are our own masters; we seem to be the “factors” themselves. But if we step through the door of the shadow we discover with terror that we are the objects of unseen factors. To know this is decidedly unpleasant, for nothing is more disillusioning than the discovery of our own inadequacy. It can even give rise to primitive panic, because, instead of being believed in, the anxiously guarded supremacy of consciousness—which is in truth one of the secrets of human success—is questioned in the most dangerous way. But since ignorance is no guarantee of security, and in fact only makes our insecurity still worse, it is probably better despite our fear to know where the danger lies. To ask the right question is already half the solution of a problem. At any rate we then know that the greatest danger threatening us comes from the unpredictability of the psyche’s reactions. Discerning persons have realized for some time that external historical conditions, of whatever kind, are only occasions, jumping-off grounds, for the real dangers that threaten our lives. These are the present politico-social delusional systems. We should not regard them causally, as necessary consequences of external conditions, but as decisions precipitated by the collective unconscious.

[50] This is a new problem. All ages before us have believed in gods in some form or other. Only an unparalleled impoverishment of symbolism could enable us to rediscover the gods as psychic factors, that is, as archetypes of the unconscious. No doubt this discovery is hardly credible at present. To be convinced, we need to have the experience pictured in the dream of the theologian, for only then do we experience the self-activity of the spirit moving over the waters. Since the stars have fallen from heaven and our highest symbols have paled, a secret life holds sway in the unconscious. That is why we have a psychology today, and why we speak of the unconscious. All this would be quite superfluous in an age or culture that possessed symbols. Symbols are spirit from above, and under those conditions the spirit is above too. Therefore it would be a foolish and senseless undertaking for such people to wish to experience or investigate an unconscious that contains nothing but the silent, undisturbed sway of nature. Our unconscious, on the other hand, hides living water, spirit that has become nature, and that is why it is disturbed. Heaven has become for us the cosmic space of the physicists, and the divine empyrean a fair memory of things that once were. But “the heart glows,” and a secret unrest gnaws at the roots of our being. In the words of the *Völuspá* we may ask:

What murmurs Wotan over Mimir's head?

Already the spring boils ...

[51] Our concern with the unconscious has become a vital question for us—a question of spiritual being or non-being. All those who have had an experience like that mentioned in the dream know that the treasure lies in the depths of the water and will try to salvage it. As they must never forget who they are, they must on no account imperil their consciousness. They will keep their standpoint firmly anchored to the earth, and will thus—to preserve the metaphor—become fishers who catch with hook and net what swims in the water. There may be consummate fools who do not understand what fishermen do, but the latter will not mistake the timeless meaning of their action, for the symbol of their craft is many centuries older than the still unfaded story of the Grail. But not every man is a fisherman. Sometimes this figure remains arrested at an early, instinctive level, and then it is an otter, as we know from Oskar Schmitz's fairytales.²⁷

[52] Whoever looks into the water sees his own image, but behind it living creatures soon loom up; fishes, presumably, harmless dwellers of the deep—harmless, if only the lake were not haunted. They are water-beings of a peculiar sort. Sometimes a nixie gets into the fisherman's net, a female, half-human fish.²⁸

Nixies are entrancing creatures:

Half drew she him,
Half sank he down
And nevermore was seen.

[53] The nixie is an even more instinctive version of a magical feminine being whom I call the *anima*. She can also be a siren, *melusina* (mermaid),²⁹ wood-nymph, Grace, or Erlking's daughter, or a lamia or succubus, who infatuates young men and sucks the life out of them. Moralizing critics will say that these figures are projections of soulful emotional states and are nothing but worthless fantasies. One must admit that there is a certain amount of truth in this. But is it the whole truth? Is the nixie really nothing but a product of moral laxity? Were there not such beings long ago, in an age when dawning human consciousness was still wholly bound to nature? Surely there were spirits of forest, field, and stream long before the question of moral conscience ever existed. What is more, these beings were as much dreaded as adored, so that their rather peculiar erotic charms were only one of their characteristics. Man's consciousness was then far simpler, and his possession of it absurdly small. An unlimited amount of what we now feel to be an integral part of our psychic being disports itself merrily for the primitive in projections ranging far and wide.

[54] The word “projection” is not really appropriate, for nothing has been cast out of the psyche; rather, the psyche has attained its present complexity by a series of acts of introjection. Its complexity has increased in proportion to the despiritualization of nature. An alluring nixie from the dim bygone is today called an “erotic fantasy,” and she may complicate our psychic life in a most painful way. She comes upon us just as a nixie might; she sits on top of us like a succubus; she changes into all sorts of shapes like a witch, and in general displays an unbearable independence that does not seem at all proper in a psychic content. Occasionally she causes states of fascination that rival the best bewitchment, or unleashes terrors in us not to be outdone by any manifestation of the devil. She is a mischievous being who crosses our path in numerous transformations and disguises, playing all kinds of tricks on us, causing happy and unhappy delusions, depressions and ecstasies, outbursts of affect, etc. Even in a state of reasonable introjection the nixie has not laid aside her roguery. The witch has not ceased to mix her vile potions of love and death; her magic poison has been refined into intrigue and self-deception, unseen though none the less dangerous for that.

[55] But how do we dare to call this elfin being the “anima”? Anima means soul and should designate something very wonderful and immortal. Yet this was not always so. We should not forget that this kind of soul is a dogmatic conception whose purpose it is to pin down and capture something uncannily alive and active. The German word *Seele* is closely related, via the Gothic form *saiwalô*, to the Greek word *αἶολος*, which means ‘quick-moving,’ ‘changeful of hue,’ ‘twinkling,’ something like a butterfly—*ψυχή* in Greek—which reels drunkenly from flower to flower and lives on honey and love. In Gnostic typology the *ἄνθρωπος ψυχικός*, ‘psychic man,’ is inferior to the *πνευματικός*, ‘spiritual man,’ and finally there are wicked souls who must roast in hell for all eternity. Even the quite innocent soul of the unbaptized newborn babe is deprived of the contemplation of God. Among primitives, the soul is the magic breath of life (hence the term “anima”), or a flame. An uncanonical saying of our Lord’s aptly declares: “Whoso is near unto me is near to the fire.” For Heraclitus the soul at the highest level is fiery and dry, because *ψυχή* as such is closely akin to “cool breath”—*ψύχαιεν* means ‘to breathe,’ ‘to blow’; *ψυχρός* and *ψῦχος* mean ‘cold,’ ‘chill,’ ‘damp.’

[56] Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life. Therefore God breathed into Adam a living breath, that he might live. With her cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be lived. She is full of snares and traps, in order that man should fall, should reach the earth, entangle himself there, and stay caught, so that life should be lived; as Eve in the garden of Eden could not rest content until she had convinced Adam of

the goodness of the forbidden apple. Were it not for the leaping and twinkling of the soul, man would rot away in his greatest passion, idleness.³⁰ A certain kind of reasonableness is its advocate, and a certain kind of morality adds its blessing. But to have soul is the whole venture of life, for soul is a life-giving daemon who plays his elfin game above and below human existence, for which reason—in the realm of dogma—he is threatened and propitiated with superhuman punishments and blessings that go far beyond the possible deserts of human beings. Heaven and hell are the fates meted out to the soul and not to civilized man, who in his nakedness and timidity would have no idea of what to do with himself in a heavenly Jerusalem.

[57] The anima is not the soul in the dogmatic sense, not an *anima rationalis*, which is a philosophical conception, but a natural archetype that satisfactorily sums up all the statements of the unconscious, of the primitive mind, of the history of language and religion. It is a “factor” in the proper sense of the word. Man cannot make it; on the contrary, it is always the *a priori* element in his moods, reactions, impulses, and whatever else is spontaneous in psychic life. It is something that lives of itself, that makes us live; it is a life behind consciousness that cannot be completely integrated with it, but from which, on the contrary, consciousness arises. For, in the last analysis, psychic life is for the greater part an unconscious life that surrounds consciousness on all sides—a notion that is sufficiently obvious when one considers how much unconscious preparation is needed, for instance, to register a sense-impression.

[58] Although it seems as if the whole of our unconscious psychic life could be ascribed to the anima, she is yet only one archetype among many. Therefore, she is not characteristic of the unconscious in its entirety. She is only one of its aspects. This is shown by the very fact of her femininity. What is not—I, not masculine, is most probably feminine, and because the not—I is felt as not belonging to me and therefore as outside me, the anima-image is usually projected upon women. Either sex is inhabited by the opposite sex up to a point, for, biologically speaking, it is simply the greater number of masculine genes that tips the scales in favour of masculinity. The smaller number of feminine genes seems to form a feminine character, which usually remains unconscious because of its subordinate position.

[59] With the archetype of the anima we enter the realm of the gods, or rather, the realm that metaphysics has reserved for itself. Everything the anima touches becomes numinous—unconditional, dangerous, taboo, magical. She is the serpent in the paradise of the harmless man with good resolutions and still better intentions. She affords the most convincing reasons for not prying into the unconscious, an occupation that would break down our moral inhibitions and unleash forces that had better been left unconscious and undisturbed. As usual, there is something in what

the anima says; for life in itself is not good only, it is also bad. Because the anima wants life, she wants both good and bad. These categories do not exist in the elfin realm. Bodily life as well as psychic life have the impudence to get along much better without conventional morality, and they often remain the healthier for it.

[60] The anima believes in the *καλόν κάγαθόν*, the ‘beautiful and the good,’ a primitive conception that antedates the discovery of the conflict between aesthetics and morals. It took more than a thousand years of Christian differentiation to make it clear that the good is not always the beautiful and the beautiful not necessarily good. The paradox of this marriage of ideas troubled the ancients as little as it does the primitives. The anima is conservative and clings in the most exasperating fashion to the ways of earlier humanity. She likes to appear in historic dress, with a predilection for Greece and Egypt. In this connection we would mention the classic anima stories of Rider Haggard and Pierre Benoît. The Renaissance dream known as the *Ipnerotomachia* of Poliphilo,³¹ and Goethe’s *Faust*, likewise reach deep into antiquity in order to find “le vrai mot” for the situation. Poliphilo conjured up Queen Venus; Goethe, Helen of Troy. Aniela Jaffé³² has sketched a lively picture of the anima in the age of Biedermeier and the Romantics. If you want to know what happens when the anima appears in modern society, I can warmly recommend John Erskine’s *Private Life of Helen of Troy*. She is not a shallow creation, for the breath of eternity lies over everything that is really alive. The anima lives beyond all categories, and can therefore dispense with blame as well as with praise. Since the beginning of time man, with his wholesome animal instinct, has been engaged in combat with his soul and its daemonism. If the soul were uniformly dark it would be a simple matter. Unfortunately this is not so, for the anima can appear also as an angel of light, a psychopomp who points the way to the highest meaning, as we know from *Faust*.

[61] If the encounter with the shadow is the “apprentice-piece” in the individual’s development, then that with the anima is the “master-piece.” The relation with the anima is again a test of courage, an ordeal by fire for the spiritual and moral forces of man. We should never forget that in dealing with the anima we are dealing with psychic facts which have never been in man’s possession before, since they were always found “outside” his psychic territory, so to speak, in the form of projections. For the son, the anima is hidden in the dominating power of the mother, and sometimes she leaves him with a sentimental attachment that lasts throughout life and seriously impairs the fate of the adult. On the other hand, she may spur him on to the highest flights. To the men of antiquity the anima appeared as a goddess or a witch, while for medieval man the goddess was replaced by the Queen of Heaven and Mother Church. The desymbolized world of the Protestant produced first an unhealthy sentimentality and then a sharpening of the moral conflict, which, because it was so unbearable, led logically to Nietzsche’s “beyond good and evil.” In centres

of civilization this state shows itself in the increasing insecurity of marriage. The American divorce rate has been reached, if not exceeded, in many European countries, which proves that the anima projects herself by preference on the opposite sex, thus giving rise to magically complicated relationships. This fact, largely because of its pathological consequences, has led to the growth of modern psychology, which in its Freudian form cherishes the belief that the essential cause of all disturbances is sexuality—a view that only exacerbates the already existing conflict.³³ There is a confusion here between cause and effect. The sexual disturbance is by no means the cause of neurotic difficulties, but is, like these, one of the pathological effects of a maladaptation of consciousness, as when consciousness is faced with situations and tasks to which it is not equal. Such a person simply does not understand how the world has altered, and what his attitude would have to be in order to adapt to it.

[62] In dealing with the shadow or anima it is not sufficient just to know about these concepts and to reflect on them. Nor can we ever experience their content by feeling our way into them or by appropriating other people's feelings. It is no use at all to learn a list of archetypes by heart. Archetypes are complexes of experience that come upon us like fate, and their effects are felt in our most personal life. The anima no longer crosses our path as a goddess, but, it may be, as an intimately personal misadventure, or perhaps as our best venture. When, for instance, a highly esteemed professor in his seventies abandons his family and runs off with a young red-headed actress, we know that the gods have claimed another victim. This is how daemonic power reveals itself to us. Until not so long ago it would have been an easy matter to do away with the young woman as a witch.

[63] In my experience there are very many people of intelligence and education who have no trouble in grasping the idea of the anima and her relative autonomy, and can also understand the phenomenology of the animus in women. Psychologists have more difficulties to overcome in this respect, probably because they are under no compulsion to grapple with the complex facts peculiar to the psychology of the unconscious. If they are doctors as well, their somato-psychological thinking gets in the way, with its assumption that psychological processes can be expressed in intellectual, biological, or physiological terms. Psychology, however, is neither biology nor physiology nor any other science than just this knowledge of the psyche.

[64] The picture I have drawn of the anima so far is not complete. Although she may be the chaotic urge to life, something strangely meaningful clings to her, a secret knowledge or hidden wisdom, which contrasts most curiously with her irrational elfin nature. Here I would like to refer again to the authors already cited. Rider Haggard calls She "Wisdom's Daughter"; Benoît's Queen of Atlantis has an excellent library

that even contains a lost book of Plato. Helen of Troy, in her reincarnation, is rescued from a Tyrian brothel by the wise Simon Magus and accompanies him on his travels. I purposely refrained from mentioning this thoroughly characteristic aspect of the anima earlier, because the first encounter with her usually leads one to infer anything rather than wisdom.³⁴ This aspect appears only to the person who gets to grips with her seriously. Only then, when this hard task has been faced,³⁵ does he come to realize more and more that behind all her cruel sporting with human fate there lies something like a hidden purpose which seems to reflect a superior knowledge of life's laws. It is just the most unexpected, the most terrifyingly chaotic things which reveal a deeper meaning. And the more this meaning is recognized, the more the anima loses her impetuous and compulsive character. Gradually breakwaters are built against the surging of chaos, and the meaningful divides itself from the meaningless. When sense and nonsense are no longer identical, the force of chaos is weakened by their subtraction; sense is then endued with the force of meaning, and nonsense with the force of meaninglessness. In this way a new cosmos arises. This is not a new discovery in the realm of medical psychology, but the age-old truth that out of the richness of a man's experience there comes a teaching which the father can pass on to the son.³⁶

[65] In elfin nature wisdom and folly appear as one and the same; and they *are* one and the same as long as they are acted out by the anima. Life is crazy and meaningful at once. And when we do not laugh over the one aspect and speculate about the other, life is exceedingly drab, and everything is reduced to the littlest scale. There is then little sense and little nonsense either. When you come to think about it, nothing has any meaning, for when there was nobody to think, there was nobody to interpret what happened. Interpretations are only for those who don't understand; it is only the things we don't understand that have any meaning. Man woke up in a world he did not understand, and that is why he tries to interpret it.

[66] Thus the anima and life itself are meaningless in so far as they offer no interpretation. Yet they have a nature that can be interpreted, for in all chaos there is a cosmos, in all disorder a secret order, in all caprice a fixed law, for everything that works is grounded on its opposite. It takes man's discriminating understanding, which breaks everything down, into antinomial judgments, to recognize this. Once he comes to grips with the anima, her chaotic capriciousness will give him cause to suspect a secret order, to sense a plan, a meaning, a purpose over and above her nature, or even—we might almost be tempted to say—to "postulate" such a thing, though this would not be in accord with the truth. For in actual reality we do not have at our command any power of cool reflection, nor does any science or philosophy help us, and the traditional teachings of religion do so only to a limited degree. We are caught and entangled in aimless experience, and the judging intellect with its

categories proves itself powerless. Human interpretation fails, for a turbulent life-situation has arisen that refuses to fit any of the traditional meanings assigned to it. It is a moment of collapse. We sink into a final depth—Apuleius calls it “a kind of voluntary death.” It is a surrender of our own powers, not artificially willed but forced upon us by nature; not a voluntary submission and humiliation decked in moral garb but an utter and unmistakable defeat crowned with the panic fear of demoralization. Only when all props and crutches are broken, and no cover from the rear offers even the slightest hope of security, does it become possible for us to experience an archetype that up till then had lain hidden behind the meaningful nonsense played out by the anima. This is the *archetype of meaning*, just as the anima is the *archetype of life itself*.

[67] It always seems to us as if meaning—compared with life—were the younger event, because we assume, with some justification, that we assign it of ourselves, and because we believe, equally rightly no doubt, that the great world can get along without being interpreted. But how do we assign meaning? From what source, in the last analysis, do we derive meaning? The forms we use for assigning meaning are historical categories that reach back into the mists of time—a fact we do not take sufficiently into account. Interpretations make use of certain linguistic matrices that are themselves derived from primordial images. From whatever side we approach this question, everywhere we find ourselves confronted with the history of language, with images and motifs that lead straight back to the primitive wonder-world.

[68] Take, for instance, the word “idea.” It goes back to the εἶδος concept of Plato, and the eternal ideas are primordial images stored up ἐν ὑπερορανίῳ τοῦ πῶ (in a supracelestial place) as eternal, transcendent forms. The eye of the seer perceives them as “imagines et lares,” or as images in dreams and revelatory visions. Or let us take the concept of energy, which is an interpretation of physical events. In earlier times it was the secret fire of the alchemists, or phlogiston, or the heat-force inherent in matter, like the “primal warmth” of the Stoics, or the Heraclitean πῦρ αἰεί ζῶον (ever-living fire), which borders on the primitive notion of an all-pervading vital force, a power of growth and magic healing that is generally called *mana*.

[69] I will not go on needlessly giving examples. It is sufficient to know that there is not a single important idea or view that does not possess historical antecedents. Ultimately they are all founded on primordial archetypal forms whose concreteness dates from a time when consciousness did not *think*, but only *perceived*. “Thoughts” were objects of inner perception, not thought at all, but sensed as external phenomena—seen or heard, so to speak. Thought was essentially revelation, not invented but forced upon us or bringing conviction through its immediacy and actuality. Thinking of this kind precedes the primitive ego-consciousness, and the latter is more its object

than its subject. But we ourselves have not yet climbed the last peak of consciousness, so we also have a pre-existent thinking, of which we are not aware so long as we are supported by traditional symbols—or, to put it in the language of dreams, so long as the father or the king is not dead.

[70] I would like to give you an example of how the unconscious “thinks” and paves the way for solutions. It is the case of a young theological student, whom I did not know personally. He was in great straits because of his religious beliefs, and about this time he dreamed the following dream:³⁷

[71] *He was standing in the presence of a handsome old man dressed entirely in black. He knew it was the white magician. This personage had just addressed him at considerable length, but the dreamer could no longer remember what it was about. He had only retained the closing words: “And for this we need the help of the black magician.” At that moment the door opened and in came another old man exactly like the first, except that he was dressed in white. He said to the white magician, “I need your advice,” but threw a sidelong, questioning look at the dreamer, whereupon the white magician answered: “You can speak freely, he is an innocent.” The black magician then began to relate his story. He had come from a distant land where something extraordinary had happened. The country was ruled by an old king who felt his death near. He—the king—had sought out a tomb for himself. For there were in that land a great number of tombs from ancient times, and the king had chosen the finest for himself. According to legend, a virgin had been buried in it. The king caused the tomb to be opened, in order to get it ready for use. But when the bones it contained were exposed to the light of day, they suddenly took on life and changed into a black horse, which at once fled into the desert and there vanished. The black magician had heard of this story and immediately set forth in pursuit of the horse. After a journey of many days, always on the tracks of the horse, he came to the desert and crossed to the other side, where the grasslands began again. There he met the horse grazing, and there also he came upon the find on whose account he now needed the advice of the white magician. For he had found the lost keys of paradise, and he did not know what to do with them. At this exciting moment the dreamer awoke.*

[72] In the light of our earlier remarks the meaning of the dream is not hard to guess: the old king is the ruling symbol that wants to go to its eternal rest, and in the very place where similar “dominants” lie buried. His choice falls, fittingly enough, on the grave of anima, who lies in the death trance of a Sleeping Beauty so long as the king is alive—that is, so long as a valid principle (Prince or *princeps*) regulates and expresses life. But when the king draws to his end,³⁸ she comes to life again and changes into a black horse, which in Plato’s parable stands for the unruliness of the

passions. Anyone who follows this horse comes into the desert, into a wild land remote from men—an image of spiritual and moral isolation. But there lie the keys of paradise.

[73] Now what is paradise? Clearly, the Garden of Eden with its two-faced tree of life and knowledge and its four streams. In the Christian version it is also the heavenly city of the Apocalypse, which, like the Garden of Eden, is conceived as a mandala. But the mandala is a symbol of individuation. So it is the *black* magician who finds the keys to the solution of the problems of belief weighing on the dreamer, the keys that open the way of individuation. The contrast between desert and paradise therefore signifies isolation as contrasted with individuation, or the becoming of the self.

[74] This part of the dream is a remarkable paraphrase of the Oxyrhynchus sayings of Jesus,³⁹ in which the way to the kingdom of heaven is pointed out by animals, and where we find the admonition: “Therefore know yourselves, for you are the city, and the city is the kingdom.” It is also a paraphrase of the serpent of paradise who persuaded our first parents to sin, and who finally leads to the redemption of mankind through the Son of God. As we know, this causal nexus gave rise to the Ophitic identification of the serpent with the Σωτήρ (Saviour). The black horse and the black magician are half-evil elements whose relativity with respect to good is hinted at in the exchange of garments. The two magicians are, indeed, two aspects of the *wise old man*, the superior master and teacher, the archetype of the spirit, who symbolizes the pre-existent meaning hidden in the chaos of life. He is the father of the soul, and yet the soul, in some miraculous manner, is also his virgin mother, for which reason he was called by the alchemists the “first son of the mother.” The black magician and the black horse correspond to the descent into darkness in the dreams mentioned earlier.

[75] What an unbearably hard lesson for a young student of theology! Fortunately he was not in the least aware that the father of all prophets had spoken to him in the dream and placed a great secret almost within his grasp. One marvels at the inappropriateness of such occurrences. Why this prodigality? But I have to admit that we do not know how this dream affected the student in the long run, and I must emphasize that to me, at least, the dream had a very great deal to say. It was not allowed to get lost, even though the dreamer did not understand it.

[76] The old man in this dream is obviously trying to show how good and evil function together, presumably as an answer to the still unresolved moral conflict in the Christian psyche. With this peculiar relativization of opposites we find ourselves approaching nearer to the ideas of the East, to the *nirvandva* of Hindu philosophy, the freedom from opposites, which is shown as a possible way of solving the conflict

through reconciliation. How perilously fraught with meaning this Eastern relativity of good and evil is, can be seen from the Indian aphoristic question: “Who takes longer to reach perfection, the man who loves God, or the man who hates him?” And the answer is: “He who loves God takes seven reincarnations to reach perfection, and he who hates God takes only three, for he who hates God will think of him more than he who loves him,” Freedom from opposites presupposes their functional equivalence, and this offends our Christian feelings. Nonetheless, as our dream example shows, the balanced co-operation of moral opposites is a natural truth which has been recognized just as naturally by the East. The clearest example of this is to be found in Taoist philosophy. But in the Christian tradition, too, there are various sayings that come very close to this standpoint. I need only remind you of the parable of the unjust steward.

[77] Our dream is by no means unique in this respect, for the tendency to relativize opposites is a notable peculiarity of the unconscious. One must immediately add, however, that this is true only in cases of exaggerated moral sensibility; in other cases the unconscious can insist just as inexorably on the irreconcilability of the opposites. As a rule, the standpoint of the unconscious is relative to the conscious attitude. We can probably say, therefore, that our dream presupposes the specific beliefs and doubts of a theological consciousness of Protestant persuasion. This limits the statement of the dream to a definite set of problems. But even with this paring down of its validity the dream clearly demonstrates the superiority of its standpoint. Fittingly enough, it expresses its meaning in the opinion and voice of a wise magician, who goes back in direct line to the figure of the medicine man in primitive society. He is, like the anima, an immortal daemon that pierces the chaotic darknesses of brute life with the light of meaning. He is the enlightener, the master and teacher, a psychopomp whose personification even Nietzsche, that breaker of tablets, could not escape—for he had called up his reincarnation in Zarathustra, the lofty spirit of an almost Homeric age, as the carrier and mouthpiece of his own “Dionysian” enlightenment and ecstasy. For him God was dead, but the driving daemon of wisdom became as it were his bodily double. He himself says:

Then one was changed to two
And Zarathustra passed me by.

[78] Zarathustra is more for Nietzsche than a poetic figure; he is an involuntary confession, a testament. Nietzsche too had lost his way in the darknesses of a life that turned its back upon God and Christianity, and that is why there came to him the revealer and enlightener, the speaking fountainhead of his soul. Here is the source of the hieratic language of *Zarathustra*, for that is the style of this archetype.

[79] Modern man, in experiencing this archetype, comes to know that most ancient form of thinking as an autonomous activity whose object he is. Hermes Trismegistus or the Thoth of Hermetic literature, Orpheus, the Poimandres (shepherd of men) and his near relation the Poimen of Hermes,⁴⁰ are other formulations of the same experience. If the name “Lucifer” were not prejudicial, it would be a very suitable one for this archetype. But I have been content to call it the *archetype of the wise old man*, or *of meaning*. Like all archetypes it has a positive and a negative aspect, though I don’t want to enter into this here. The reader will find a detailed exposition of the two-facedness of the wise old man in “The Phenomenology of the Spirit in Fairytales.”

[80] The three archetypes so far discussed—the shadow, the anima, and the wise old man—are of a kind that can be directly experienced in personified form. In the foregoing I tried to indicate the general psychological conditions in which such an experience arises. But what I conveyed were only abstract generalizations. One could, or rather should, really give a description of the process as it occurs in immediate experience. In the course of this process the archetypes appear as active personalities in dreams and fantasies. But the process itself involves another class of archetypes which one could call the *archetypes of transformation*. They are not personalities, but are typical situations, places, ways and means, that symbolize the kind of transformation in question. Like the personalities, these archetypes are true and genuine symbols that cannot be exhaustively interpreted, either as signs or as allegories. They are genuine symbols precisely because they are ambiguous, full of half-glimpsed meanings, and in the last resort inexhaustible. The ground principles, the *ἀρχαί*, of the unconscious are indescribable because of their wealth of reference, although in themselves recognizable. The discriminating intellect naturally keeps on trying to establish their singleness of meaning and thus misses the essential point; for what we can above all establish as the one thing consistent with their nature is their *manifold meaning*, their almost limitless wealth of reference, which makes any unilateral formulation impossible. Besides this, they are in principle paradoxical, just as for the alchemists the spirit was conceived as “senex et iuvenis simul”—an old man and a youth at once.

[81] If one wants to form a picture of the symbolic process, the series of pictures found in alchemy are good examples, though the symbols they contain are for the most part traditional despite their often obscure origin and significance. An excellent Eastern example is the Tantric *chakra* system,⁴¹ or the mystical nerve system of Chinese yoga.⁴² It also seems as if the set of pictures in the Tarot cards were distantly descended from the archetypes of transformation, a view that has been confirmed for me in a very enlightening lecture by Professor Bernoulli.⁴³

[82] The symbolic process is an experience *in images and of images*. Its development usually shows an enantiodromian structure like the text of the *I Ching*, and so presents a rhythm of negative and positive, loss and gain, dark and light. Its beginning is almost invariably characterized by one's getting stuck in a blind alley or in some impossible situation; and its goal is, broadly speaking, illumination or higher consciousness, by means of which the initial situation is overcome on a higher level. As regards the time factor, the process may be compressed into a single dream or into a short moment of experience, or it may extend over months and years, depending on the nature of the initial situation, the person involved in the process, and the goal to be reached. The wealth of symbols naturally varies enormously from case to case. Although everything is experienced in image form, i.e., symbolically, it is by no means a question of fictitious dangers but of very real risks upon which the fate of a whole life may depend. The chief danger is that of succumbing to the fascinating influence of the archetypes, and this is most likely to happen when the archetypal images are not made conscious. If there is already a predisposition to psychosis, it may even happen that the archetypal figures, which are endowed with a certain autonomy anyway on account of their natural numinosity, will escape from conscious control altogether and become completely independent, thus producing the phenomena of possession. In the case of an anima-possession, for instance, the patient will want to change himself into a woman through self-castration, or he is afraid that something of the sort will be done to him by force. The best-known example of this is Schreber's *Memoirs of My Nervous Illness*. Patients often discover a whole anima mythology with numerous archaic motifs. A case of this kind was published some time ago by Nelken.⁴⁴ Another patient has described his experiences himself and commented on them in a book.⁴⁵ I mention these examples because there are still people who think that the archetypes are subjective chimeras of my own brain.

[83] The things that come to light brutally in insanity remain hidden in the background in neurosis, but they continue to influence consciousness nonetheless. When, therefore, the analysis penetrates the background of conscious phenomena, it discovers the same archetypal figures that activate the deliriums of psychotics. Finally, there is any amount of literary and historical evidence to prove that in the case of these archetypes we are dealing with normal types of fantasy that occur practically everywhere and not with the monstrous products of insanity. The pathological element does not lie in the existence of these ideas, but in the dissociation of consciousness that can no longer control the unconscious. In all cases of dissociation it is therefore necessary to integrate the unconscious into consciousness. This is a synthetic process which I have termed the "individuation process."

[84] As a matter of fact, this process follows the natural course of life—a life in which the individual becomes what he always was. Because man has consciousness, a development of this kind does not run very smoothly; often it is varied and disturbed, because consciousness deviates again and again from its archetypal, instinctual foundation and finds itself in opposition to it. There then arises the need for a synthesis of the two positions. This amounts to psychotherapy even on the primitive level, where it takes the form of restitution ceremonies. As examples I would mention the identification of the Australian aborigines with their ancestors in the *alcheringa* period, identification with the “sons of the sun” among the Pueblos of Taos, the Helios apotheosis in the Isis mysteries, and so on. Accordingly, the therapeutic method of complex psychology consists on the one hand in making as fully conscious as possible the constellated unconscious contents, and on the other hand in synthesizing them with consciousness through the act of recognition. Since, however, civilized man possesses a high degree of dissociability and makes continual use of it in order to avoid every possible risk, it is by no means a foregone conclusion that recognition will be followed by the appropriate action. On the contrary, we have to reckon with the singular ineffectiveness of recognition and must therefore insist on a meaningful application of it. Recognition by itself does not as a rule do this, nor does it imply, as such, any moral strength. In these cases it becomes very clear how much the cure of neurosis is a moral problem.

[85] As the archetypes, like all numinous contents, are relatively autonomous, they cannot be integrated simply by rational means, but require a dialectical procedure, a real coming to terms with them, often conducted by the patient in dialogue form, so that, without knowing it, he puts into effect the alchemical definition of the *meditatio*: “an inner colloquy with one’s good angel.”⁴⁶ Usually the process runs a dramatic course, with many ups and downs. It expresses itself in, or is accompanied by, dream symbols that are related to the “représentations collectives,” which in the form of mythological motifs have portrayed psychic processes of transformation since the earliest times.⁴⁷

[86] In the short space of a lecture I must content myself with giving only a few examples of archetypes. I have chosen the ones that play the chief part in an analysis of the masculine psyche, and have tried to give you some idea of the transformation process in which they appear. Since this lecture was first published, the figures of the shadow, anima, and wise old man, together with the corresponding figures of the feminine unconscious, have been dealt with in greater detail in my contributions to the symbolism of the self,⁴⁸ and the individuation process in its relation to alchemical symbolism has also been subjected to closer investigation.⁴⁹

THE CONCEPT OF THE COLLECTIVE UNCONSCIOUS¹

[87] Probably none of my empirical concepts has met with so much misunderstanding as the idea of the collective unconscious. In what follows I shall try to give (1) a definition of the concept, (2) a description of what it means for psychology, (3) an explanation of the method of proof, and (4) an example.

1. *Definition*

[88] The collective unconscious is a part of the psyche which can be negatively distinguished from a personal unconscious by the fact that it does not, like the latter, owe its existence to personal experience and consequently is not a personal acquisition. While the personal unconscious is made up essentially of contents which have at one time been conscious but which have disappeared from consciousness through having been forgotten or repressed, the contents of the collective unconscious have never been in consciousness, and therefore have never been individually acquired, but owe their existence exclusively to heredity. Whereas the personal unconscious consists for the most part of *complexes*, the content of the collective unconscious is made up essentially of *archetypes*.

[89] The concept of the archetype, which is an indispensable correlate of the idea of the collective unconscious, indicates the existence of definite forms in the psyche which seem to be present always and everywhere. Mythological research calls them “motifs”; in the psychology of primitives they correspond to Lévy-Bruhl’s concept of “représentations collectives,” and in the field of comparative religion they have been defined by Hubert and Mauss as “categories of the imagination.” Adolf Bastian long ago called them “elementary” or “primordial thoughts.” From these references it should be clear enough that my idea of the archetype—literally a pre-existent form—does not stand alone but is something that is recognized and named in other fields of knowledge.

[90] My thesis, then, is as follows: In addition to our immediate consciousness, which is of a thoroughly personal nature and which we believe to be the only empirical psyche (even if we tack on the personal unconscious as an appendix), there exists a second psychic system of a collective, universal, and impersonal nature

which is identical in all individuals. This collective unconscious does not develop individually but is inherited. It consists of pre-existent forms, the archetypes, which can only become conscious secondarily and which give definite form to certain psychic contents.

2. *The Psychological Meaning of the Collective Unconscious*

[91] Medical psychology, growing as it did out of professional practice, insists on the *personal* nature of the psyche. By this I mean the views of Freud and Adler. It is a *psychology of the person*, and its aetiological or causal factors are regarded almost wholly as personal in nature. Nonetheless, even this psychology is based on certain general biological factors, for instance on the sexual instinct or on the urge for self-assertion, which are by no means merely personal peculiarities. It is forced to do this because it lays claim to being an explanatory science. Neither of these views would deny the existence of *a priori* instincts common to man and animals alike, or that they have a significant influence on personal psychology. Yet instincts are impersonal, universally distributed, hereditary factors of a dynamic or motivating character, which very often fail so completely to reach consciousness that modern psychotherapy is faced with the task of helping the patient to become conscious of them. Moreover, the instincts are not vague and indefinite by nature, but are specifically formed motive forces which, long before there is any consciousness, and in spite of any degree of consciousness later on, pursue their inherent goals. Consequently they form very close analogies to the archetypes, so close, in fact, that there is good reason for supposing that the archetypes are the unconscious images of the instincts themselves, in other words, that they are *patterns of instinctual behaviour*.

[92] The hypothesis of the collective unconscious is, therefore, no more daring than to assume there are instincts. One admits readily that human activity is influenced to a high degree by instincts, quite apart from the rational motivations of the conscious mind. So if the assertion is made that our imagination, perception, and thinking are likewise influenced by inborn and universally present formal elements, it seems to me that a normally functioning intelligence can discover in this idea just as much or just as little mysticism as in the theory of instincts. Although this reproach of mysticism has frequently been levelled at my concept, I must emphasize yet again that the concept of the collective unconscious is neither a speculative nor a philosophical but an empirical matter. The question is simply this: are there or are there not unconscious, universal forms of this kind? If they exist, then there is a region of the psyche which one can call the collective unconscious. It is true that the diagnosis of the collective unconscious is not always an easy task. It is not sufficient to point out the often obviously archetypal nature of unconscious products, for these

can just as well be derived from acquisitions through language and education. Cryptomnesia should also be ruled out, which it is almost impossible to do in certain cases. In spite of all these difficulties, there remain enough individual instances showing the autochthonous revival of mythological motifs to put the matter beyond any reasonable doubt. But if such an unconscious exists at all, psychological explanation must take account of it and submit certain alleged personal aetiologies to sharper criticism.

[93] What I mean can perhaps best be made clear by a concrete example. You have probably read Freud's discussion² of a certain picture by Leonardo da Vinci: St. Anne with the Virgin Mary and the Christ-child. Freud interprets this remarkable picture in terms of the fact that Leonardo himself had two mothers. This causality is personal. We shall not linger over the fact that this picture is far from unique, nor over the minor inaccuracy that St. Anne happens to be the grandmother of Christ and not, as required by Freud's interpretation, the mother, but shall simply point out that interwoven with the apparently personal psychology there is an impersonal motif well known to us from other fields. This is the motif of the *dual mother*, an archetype to be found in many variants in the field of mythology and comparative religion and forming the basis of numerous "représentations collectives." I might mention, for instance, the motif of the *dual descent*, that is, descent from human and divine parents, as in the case of Heracles, who received immortality through being unwittingly adopted by Hera. What was a myth in Greece was actually a ritual in Egypt: Pharaoh was both human and divine by nature. In the birth chambers of the Egyptian temples Pharaoh's second, divine conception and birth is depicted on the walls; he is "twice-born." It is an idea that underlies all rebirth mysteries, Christianity included. Christ himself is "twiceborn": through his baptism in the Jordan he was regenerated and reborn from water and spirit. Consequently, in the Roman liturgy the font is designated the "uterus ecclesiae," and, as you can read in the Roman missal, it is called this even today, in the "benediction of the font" on Holy Saturday before Easter. Further, according to an early Christian-Gnostic idea, the spirit which appeared in the form of a dove was interpreted as Sophia-Sapientia—Wisdom and the Mother of Christ. Thanks to this motif of the dual birth, children today, instead of having good and evil fairies who magically "adopt" them at birth with blessings or curses, are given sponsors—a "godfather" and a "godmother."

[94] The idea of a second birth is found at all times and in all places. In the earliest beginnings of medicine it was a magical means of healing; in many religions it is the central mystical experience; it is the key idea in medieval, occult philosophy, and, last but not least, it is an infantile fantasy occurring in numberless children, large and small, who believe that their parents are not their real parents but merely foster-

parents to whom they were handed over. Benvenuto Cellini also had this idea, as he himself relates in his autobiography.

[95] Now it is absolutely out of the question that all the individuals who believe in a dual descent have in reality always had two mothers, or conversely that those few who shared Leonardo's fate have infected the rest of humanity with their complex. Rather, one cannot avoid the assumption that the universal occurrence of the dual-birth motif together with the fantasy of the two mothers answers an omnipresent human need which is reflected in these motifs. If Leonardo da Vinci did in fact portray his two mothers in St. Anne and Mary—which I doubt—he nonetheless was only expressing something which countless millions of people before and after him have believed. The vulture symbol (which Freud also discusses in the work mentioned) makes this view all the more plausible. With some justification he quotes as the source of the symbol the *Hieroglyphica* of Horapollo,³ a book much in use in Leonardo's time. There you read that vultures are female only and symbolize the mother. They conceive through the wind (*pneuma*). This word took on the meaning of "spirit" chiefly under the influence of Christianity. Even in the account of the miracle at Pentecost the *pneuma* still has the double meaning of wind and spirit. This fact, in my opinion, points without doubt to Mary, who, a virgin by nature, conceived through the *pneuma*, like a vulture. Furthermore, according to Horapollo, the vulture also symbolizes Athene, who sprang, unbegotten, directly from the head of Zeus, was a virgin, and knew only spiritual motherhood. All this is really an allusion to Mary and the rebirth motif. There is not a shadow of evidence that Leonardo meant anything else by his picture. Even if it is correct to assume that he identified himself with the Christ-child, he was in all probability representing the mythological dual-mother motif and by no means his own personal prehistory. And what about all the other artists who painted the same theme? Surely not all of them had two mothers?

[96] Let us now transpose Leonardo's case to the field of the neuroses, and assume that a patient with a mother complex is suffering from the delusion that the cause of his neurosis lies in his having really had two mothers. The personal interpretation would have to admit that he is right—and yet it would be quite wrong. For in reality the cause of his neurosis would lie in the reactivation of the dual-mother archetype, quite regardless of whether he had one mother or two mothers, because, as we have seen, this archetype functions individually and historically without any reference to the relatively rare occurrence of dual motherhood.

[97] In such a case, it is of course tempting to presuppose so simple and personal a cause, yet the hypothesis is not only inexact but totally false. It is admittedly difficult to understand how a dual-mother motif—unknown to a physician trained only in medicine—could have so great a determining power as to produce the effect of a

traumatic condition. But if we consider the tremendous powers that lie hidden in the mythological and religious sphere in man, the aetiological significance of the archetype appears less fantastic. In numerous cases of neurosis the cause of the disturbance lies in the very fact that the psychic life of the patient lacks the cooperation of these motive forces. Nevertheless a purely personalistic psychology, by reducing everything to personal causes, tries its level best to deny the existence of archetypal motifs and even seeks to destroy them by personal analysis. I consider this a rather dangerous procedure which cannot be justified medically. Today you can judge better than you could twenty years ago the nature of the forces involved. Can we not see how a whole nation is reviving an archaic symbol, yes, even archaic religious forms, and how this mass emotion is influencing and revolutionizing the life of the individual in a catastrophic manner? The man of the past is alive in us today to a degree undreamt of before the war, and in the last analysis what is the fate of great nations but a summation of the psychic changes in individuals?

[98] So far as a neurosis is really only a private affair, having its roots exclusively in personal causes, archetypes play no role at all. But if it is a question of a general incompatibility or an otherwise injurious condition productive of neuroses in relatively large numbers of individuals, then we must assume the presence of constellated archetypes. Since neuroses are in most cases not just private concerns, but *social* phenomena, we must assume that archetypes are constellated in these cases too. The archetype corresponding to the situation is activated, and as a result those explosive and dangerous forces hidden in the archetype come into action, frequently with unpredictable consequences. There is no lunacy people under the domination of an archetype will not fall a prey to. If thirty years ago anyone had dared to predict that our psychological development was tending towards a revival of the medieval persecutions of the Jews, that Europe would again tremble before the Roman fasces and the tramp of legions, that people would once more give the Roman salute, as two thousand years ago, and that instead of the Christian Cross an archaic swastika would lure onward millions of warriors ready for death—why, that man would have been hooted at as a mystical fool. And today? Surprising as it may seem, all this absurdity is a horrible reality. Private life, private aetiologies, and private neuroses have become almost a fiction in the world of today. The man of the past who lived in a world of archaic “*représentations collectives*” has risen again into very visible and painfully real life, and this not only in a few unbalanced individuals but in many millions of people.

[99] There are as many archetypes as there are typical situations in life. Endless repetition has engraved these experiences into our psychic constitution, not in the form of images filled with content, but at first only as *forms without content*, representing merely the possibility of a certain type of perception and action. When a

situation occurs which corresponds to a given archetype, that archetype becomes activated and a compulsiveness appears, which, like an instinctual drive, gains its way against all reason and will, or else produces a conflict of pathological dimensions, that is to say, a neurosis.

3. *Method of Proof*

[100] We must now turn to the question of how the existence of archetypes can be produce. Since archetypes are supposed to produce certain psychic forms, we must discuss how and where one can get hold of the material demonstrating these forms. The main source, then, is *dreams*, which have the advantage of being involuntary, spontaneous products of the unconscious psyche and are therefore pure products of nature not falsified by any conscious purpose. By questioning the individual one can ascertain which of the motifs appearing in the dream are known to him. From those which are unknown to him we must naturally exclude all motifs which *might* be known to him, as for instance—to revert to the case of Leonardo—the vulture symbol. We are not sure whether Leonardo took this symbol from Horapollo or not, although it would have been perfectly possible for an educated person of that time, because in those days artists were distinguished for their wide knowledge of the humanities. Therefore, although the bird motif is an archetype par excellence, its existence in Leonardo's fantasy would still prove nothing. Consequently, we must look for motifs which could not possibly be known to the dreamer and yet behave functionally in his dream in such a manner as to coincide with the functioning of the archetype known from historical sources.

[101] Another source for the material we need is to be found in “active imagination.” By this I mean a sequence of fantasies produced by deliberate concentration. I have found that the existence of unrealized, unconscious fantasies increases the frequency and intensity of dreams, and that when these fantasies are made conscious the dreams change their character and become weaker and less frequent. From this I have drawn the conclusion that dreams often contain fantasies which “want” to become conscious. The sources of dreams are often repressed instincts which have a natural tendency to influence the conscious mind. In cases of this sort, the patient is simply given the task of contemplating any one fragment of fantasy that seems significant to him—a chance idea, perhaps, or something he has become conscious of in a dream—until its context becomes visible, that is to say, the relevant associative material in which it is embedded. It is not a question of the “free association” recommended by Freud for the purpose of dream-analysis, but of elaborating the fantasy by observing the further fantasy material that adds itself to the fragment in a natural manner.

[102] This is not the place to enter upon a technical discussion of the method. Suffice it to say that the resultant sequence of fantasies relieves the unconscious and produces material rich in archetypal images and associations. Obviously, this is a method that can only be used in certain carefully selected cases. The method is not entirely without danger, because it may carry the patient too far away from reality. A warning against thoughtless application is therefore in place.

[103] Finally, very interesting sources of archetypal material are to be found in the delusions of paranoiacs, the fantasies observed in trance-states, and the dreams of early childhood, from the third to the fifth year. Such material is available in profusion, but it is valueless unless one can adduce convincing mythological parallels. It does not, of course, suffice simply to connect a dream about a snake with the mythological occurrence of snakes, for who is to guarantee that the functional meaning of the snake in the dream is the same as in the mythological setting? In order to draw a valid parallel, it is necessary to know the functional meaning of the individual symbol, and then to find out whether the apparently parallel mythological symbol has a similar context and therefore the same functional meaning. Establishing such facts not only requires lengthy and wearisome researches, but is also an ungrateful subject for demonstration. As the symbols must not be torn out of their context, one has to launch forth into exhaustive descriptions, personal as well as symbological, and this is practically impossible in the framework of a lecture. I have repeatedly tried it at the risk of sending one half of my audience to sleep.

4. *An Example*

[104] I am choosing as an example a case which, though already published, I use again because its brevity makes it peculiarly suitable for illustration. Moreover, I can add certain remarks which were omitted in the previous publication.⁴

[105] About 1906 I came across a very curious delusion in a paranoid schizophrenic who had been interned for many years. The patient had suffered since his youth and was incurable. He had been educated at a State school and been employed as a clerk in an office. He had no special gifts, and I myself knew nothing of mythology or archaeology in those days, so the situation was not in any way suspect. One day I found the patient standing at the window, wagging his head and blinking into the sun. He told me to do the same, for then I would see something very interesting. When I asked him what he saw, he was astonished that I could see nothing, and said: "Surely you see the sun's penis—when I move my head to and fro, it moves too, and that is where the wind comes from." Naturally I did not understand this strange idea in the least, but I made a note of it. Then about four years later, during my mythological studies, I came upon a book by the late Albrecht Dieterich,⁵ the well-known

philologist, which threw light on this fantasy. The work, published in 1910, deals with a Greek papyrus in the Bibliothèque Nationale, Paris. Dieterich believed he had discovered a Mithraic ritual in one part of the text. The text is undoubtedly a religious prescription for carrying out certain incantations in which Mithras is named. It comes from the Alexandrian school of mysticism and shows affinities with certain passages in the Leiden papyri and the *Corpus Hermeticum*. In Dieterich's text we read the following directions:

Draw breath from the rays, draw in three times as strongly as you can and you will feel yourself raised up and walking towards the height, and you will seem to be in the middle of the aerial region.... The path of the visible gods will appear through the disc of the sun, who is God my father. Likewise the so-called tube, the origin of the ministering wind. For you will see hanging down from the disc of the sun something that looks like a tube. And towards the regions westward it is as though there were an infinite east wind. But if the other wind should prevail towards the regions of the east, you will in like manner see the vision veering in that direction.⁶

[106] It is obviously the author's intention to enable the reader to experience the vision which he had, or which at least he believes in. The reader is to be initiated into the inner religious experience either of the author, or—what seems more likely—of one of those mystic communities of which Philo Judaeus gives contemporary accounts. The fire- or sun-god here invoked is a figure which has close historical parallels, for instance with the Christ-figure of the Apocalypse. It is therefore a “représentation collective,” as are also the ritual actions described, such as the imitating of animal noises, etc. The vision is embedded in a religious context of a distinctly ecstatic nature and describes a kind of initiation into mystic experience of the Deity.

[107] Our patient was about ten years older than I. In his megalomania, he thought he was God and Christ in one person. His attitude towards me was patronizing; he liked me probably because I was the only person with any sympathy for his abstruse ideas. His delusions were mainly religious, and when he invited me to blink into the sun like he did and waggle my head he obviously wanted to let me share his vision. He played the role of the mystic sage and I was the neophyte. He felt he was the sun-god himself, creating the wind by wagging his head to and fro. The ritual transformation into the Deity is attested by Apuleius in the Isis mysteries, and moreover in the form of a Helios apotheosis. The meaning of the “ministering wind” is probably the same as the procreative pneuma, which streams from the sun-god into the soul and fructifies it. The association of sun and wind frequently occurs in ancient symbolism.

[108] It must now be shown that this is not a purely chance coincidence of two isolated cases. We must therefore show that the idea of a wind-tube connected with God or the sun exists independently of these two testimonies and that it occurs at other times

and in other places. Now there are, as a matter of fact, medieval paintings that depict the fructification of Mary with a tube or hose-pipe coming down from the throne of God and passing into her body, and we can see the dove or the Christ-child flying down it. The dove represents the fructifying agent, the wind of the Holy Ghost.

[109] Now it is quite out of the question that the patient could have had any knowledge whatever of a Greek papyrus published four years later, and it is in the highest degree unlikely that his vision had anything to do with the rare medieval representations of the Conception, even if through some incredibly improbable chance he had ever seen a copy of such a painting. The patient was certified in his early twenties. He had never travelled. And there is no such picture in the public art gallery in Zurich, his native town.

[110] I mention this case not in order to prove that the vision is an archetype but only to show you my method of procedure in the simplest possible form. If we had only such cases, the task of investigation would be relatively easy, but in reality the proof is much more complicated. First of all, certain symbols have to be isolated clearly enough to be recognizable as typical phenomena, not just matters of chance. This is done by examining a series of dreams, say a few hundred, for typical figures, and by observing their development in the series. The same method can be applied to the products of active imagination. In this way it is possible to establish certain continuities or modulations of one and the same figure. You can select any figure which gives the impression of being an archetype by its behaviour in the series of dreams or visions. If the material at one's disposal has been well observed and is sufficiently ample, one can discover interesting facts about the variations undergone by a single type. Not only the type itself but its variants too can be substantiated by evidence from comparative mythology and ethnology. I have described the method of investigation elsewhere⁷ and have also furnished the necessary case material.

CONCERNING THE ARCHETYPES, WITH SPECIAL REFERENCE TO THE ANIMA CONCEPT¹

[111] Although modern man appears to believe that the non-empirical approach to psychology is a thing of the past, his general attitude remains very much the same as it was before, when psychology was identified with some theory about the psyche. In academic circles, a drastic revolution in methodology, initiated by Fechner² and Wundt,³ was needed in order to make clear to the scientific world that psychology was a field of experience and not a philosophical theory. To the increasing materialism of the late nineteenth century, however, it meant nothing that there had once been an “experimental psychology,”⁴ to which we owe many descriptions that are still valuable today. I have only to mention Dr. Justinus Kernel’s *Seherin von Prevorst*.⁵ All “romantic” descriptions in psychology were anathema to the new developments in scientific method. The exaggerated expectations of this experimental laboratory science were reflected in Fechner’s “psychophysics,” and its results today take the form of “psychological tests” and a general shifting of the scientific standpoint in favour of phenomenology.

[112] Nevertheless, it cannot be maintained that the phenomenological point of view has made much headway. Theory still plays far too great a role, instead of being included in phenomenology as it should. Even Freud, whose empirical attitude is beyond doubt, coupled his theory as a *sine qua non* with his method, as if psychic phenomena had to be viewed in a certain light in order to mean something. All the same, it was Freud who cleared the ground for the investigation of complex phenomena, at least in the field of neurosis. But the ground he cleared extended only so far as certain basic physiological concepts permitted, so that it looked almost as if psychology were an offshoot of the physiology of the instincts. This limitation of psychology was very welcome to the materialistic outlook of that time, nearly fifty years ago, and, despite our altered view of the world, it still is in large measure today. It gives us not only the advantage of a “delimited field of work,” but also an excellent excuse not to bother with what goes on in a wider world.

[113] Thus it was overlooked by the whole of medical psychology that a psychology of the neuroses, such as Freud’s, is left hanging in mid air if it lacks knowledge of a general phenomenology. It was also overlooked that in the field of the neuroses

Pierre Janet, even before Freud, had begun to build up a descriptive methodology⁶ without loading it with too many theoretical and philosophical assumptions. Biographical descriptions of psychic phenomena, going beyond the strictly medical field, were represented chiefly by the work of the philosopher Théodore Flournoy, of Geneva, in his account of the psychology of an unusual personality.⁷ This was followed by the first attempt at synthesis: William James's *Varieties of Religious Experience* (1902). I owe it mainly to these two investigators that I learnt to understand the nature of psychic disturbances within the setting of the human psyche as a whole. I myself did experimental work for several years, but, through my intensive studies of the neuroses and psychoses, I had to admit that, however desirable quantitative definitions may be, it is impossible to do without qualitatively descriptive methods. Medical psychology has recognized that the salient facts are extraordinarily complex and can be grasped only through descriptions based on case material. But this method presupposes freedom from theoretical prejudice. Every science is descriptive at the point where it can no longer proceed experimentally, without on that account ceasing to be scientific. But an experimental science makes itself impossible when it delimits its field of work in accordance with theoretical concepts. The psyche does not come to an end where some physiological assumption or other stops. In other words, in each individual case that we observe scientifically, we have to consider the manifestations of the psyche in their totality.

[114] These reflections are essential when discussing an empirical concept like that of the anima. As against the constantly reiterated prejudice that this is a theoretical invention or—worse still—sheer mythology, I must emphasize that the concept of the anima is a purely empirical concept, whose sole purpose is to give a name to a group of related or analogous psychic phenomena. The concept does no more and means no more than, shall we say, the concept “arthropods,” which includes all animals with articulated body and limbs and so gives a name to this phenomenological group. The prejudice I have mentioned stems, regrettable though this is, from ignorance. My critics are not acquainted with the phenomena in question, for these lie mostly outside the pale of merely medical knowledge, in a realm of universal human experience. But the psyche, which the medical man has to do with, does not worry about the limitations of his knowledge; it manifests a life of its own and reacts to influences coming from every field of human experience. Its nature shows itself not merely in the personal sphere, or in the instinctual or social, but in phenomena of world-wide distribution. So if we want to understand the psyche, we have to include the whole world. For practical reasons we can, indeed must, delimit our fields of work, but this should be done only with the conscious recognition of limitation. The more complex the phenomena which we have to do with in practical treatment, the wider must be our frame of reference and the greater the corresponding knowledge.

[115] Anyone, therefore, who does not know the universal distribution and significance of the *syzygy* motif in the psychology of primitives,⁸ in mythology, in comparative religion, and in the history of literature, can hardly claim to say anything about the concept of the anima. His knowledge of the psychology of the neuroses may give him some idea of it, but it is only a knowledge of its general phenomenology that could open his eyes to the real meaning of what he encounters in individual cases, often in pathologically distorted form.

[116] Although common prejudice still believes that the sole essential basis of our knowledge is given exclusively from outside, and that “*nihil est in intellectu quod non antea fuerit in sensu*,” it nevertheless remains true that the thoroughly respectable atomic theory of Leucippus and Democritus was not based on any observations of atomic fission but on a “mythological” conception of smallest particles, which, as the smallest animated parts, the soul-atoms, are known even to the still palaeolithic inhabitants of central Australia.⁹ How much “soul” is projected into the unknown in the world of external appearances is, of course, familiar to anyone acquainted with the natural science and natural philosophy of the ancients. It is, in fact, so much that we are absolutely incapable of saying how the world is constituted in itself—and always shall be, since we are obliged to convert physical events into psychic processes as soon as we want to say anything about knowledge. But who can guarantee that this conversion produces anything like an adequate “objective” picture of the world? That could only be if the physical event were also a psychic one. But a great distance still seems to separate us from such an assertion. Till then, we must for better or worse content ourselves with the assumption that the psyche supplies those images and forms which alone make knowledge of objects possible.

[117] These forms are generally supposed to be transmitted by tradition, so that we speak of “atoms” today because we have heard, directly or indirectly, of the atomic theory of Democritus. But where did Democritus, or whoever first spoke of minimal constitutive elements, hear of atoms? This notion had its origin in archetypal ideas, that is, in primordial images which were never reflections of physical events but are spontaneous products of the psychic factor. Despite the materialistic tendency to understand the psyche as a mere reflection or imprint of physical and chemical processes, there is not a single proof of this hypothesis. Quite the contrary, innumerable facts prove that the psyche translates physical processes into sequences of images which have hardly any recognizable connection with the objective process. The materialistic hypothesis is much too bold and flies in the face of experience with almost metaphysical presumption. The only thing that can be established with certainty, in the present state of our knowledge, is our ignorance of the nature of the psyche. There is thus no ground at all for regarding the psyche as something secondary or as an epiphenomenon; on the contrary, there is every reason to regard it,

at least hypothetically, as a factor *sui generis*, and to go on doing so until it has been sufficiently proved that psychic processes can be fabricated in a retort. We have laughed at the claims of the alchemists to be able to manufacture a *lapis philosophorum* consisting of body, soul, and spirit, as impossible, hence we should stop dragging along with us the logical consequence of this medieval assumption, namely the materialistic prejudice regarding the psyche, as though it were a proven fact.

[118] It will not be so easy to reduce complex psychic facts to a chemical formula. Hence the psychic factor must, *ex hypothesi*, be regarded for the present as an autonomous reality of enigmatic character, primarily because, judging from all we know, it appears to be *essentially different* from physicochemical processes. Even if we do not ultimately know what its substantiality is, this is equally true of physical objects and of matter in general. So if we regard the psyche as an independent factor, we must logically conclude that there is a psychic life which is not subject to the caprices of our will. If, then, those qualities of elusiveness, superficiality, shadowiness, and indeed of futility attach to anything psychic, this is primarily true of the subjective psychic, i.e., the contents of consciousness, but not of the objective psychic, the unconscious, which is an *a priori* conditioning factor of consciousness and its contents. From the unconscious there emanate determining influences which, independently of tradition, guarantee in every single individual a similarity and even a sameness of experience, and also of the way it is represented imaginatively. One of the main proofs of this is the almost universal parallelism between mythological motifs, which, on account of their quality as primordial images, I have called *archetypes*.

[119] One of these archetypes, which is of paramount practical importance for the psychotherapist, I have named the anima. This Latin expression is meant to connote something that should not be confused with any dogmatic Christian idea of the soul or with any of the previous philosophical conceptions of it. If one wishes to form anything like a concrete conception of what this term covers, one would do better to go back to a classical author like Macrobius,¹⁰ or to classical Chinese philosophy,¹¹ where the anima (*p'o* or *kuei*) is regarded as the feminine and chthonic part of the soul. A parallel of this kind always runs the risk of metaphysical concretism, which I do my best to avoid, though any attempt at graphic description is bound to succumb to it up to a point. For we are dealing here not with an abstract concept but with an empirical one, and the form in which it appears necessarily clings to it, so that it cannot be described at all except in terms of its specific phenomenology.

[120] Unperturbed by the philosophical pros and cons of the age, a scientific psychology must regard those transcendental intuitions that sprang from the human

mind in all ages as *projections*, that is, as psychic contents that were extrapolated in metaphysical space and hypostatized.¹² We encounter the anima historically above all in the divine syzygies, the male-female pairs of deities. These reach down, on the one side, into the obscurities of primitive mythology,¹³ and up, on the other, into the philosophical speculations of Gnosticism¹⁴ and of classical Chinese philosophy, where the cosmogonic pair of concepts are designated *yang* (masculine) and *yin* (feminine).¹⁵ We can safely assert that these syzygies are as universal as the existence of man and woman. From this fact we may reasonably conclude that man's imagination is bound by this motif, so that he was largely compelled to project it again and again, at all times and in all places.¹⁶

[121] Now, as we know from psychotherapeutic experience, projection is an unconscious, automatic process whereby a content that is unconscious to the subject transfers itself to an object, so that it seems to belong to that object. The projection ceases the moment it becomes conscious, that is to say when it is seen as belonging to the subject.¹⁷ Thus the polytheistic heaven of the ancients owes its depotentiation not least to the view first propounded by Euhemeros,¹⁸ who maintained that the gods were nothing but reflections of human character. It is indeed easy to show that the divine pair is simply an idealization of the parents or of some other human couple, which for some reason appeared in heaven. This assumption would be simple enough if projection were not an unconscious process but were a conscious intention. It would generally be supposed that one's own parents are the best known of all individuals, the ones of which the subject is most conscious. But precisely for this reason they could not be projected, because projection always contains something of which the subject is not conscious and which seems not to belong to him. The image of the parents is the very one that could be projected least, because it is too conscious.

[122] In reality, however, it is just the parental imagos that seem to be projected most frequently, a fact so obvious that one could almost draw the conclusion that it is precisely the conscious contents which are projected. This can be seen most plainly in cases of transference, where it is perfectly clear to the patient that the father-*imago* (or even the mother-*imago*) is projected on to the analyst and he even sees through the incest-fantasies bound up with them, without, however, being freed from the reactive effect of his projection, i.e., from the transference. In other words, he behaves exactly as if he had not seen through his projection at all. Experience shows that projection is never conscious: projections are always there first and are recognized afterwards. We must therefore assume that, over and above the incest-fantasy, highly emotional contents are still bound up with the parental imagos and need to be made conscious. They are obviously more difficult to make conscious than the incest-fantasies, which are supposed to have been repressed through violent

resistance and to be unconscious for that reason. Supposing this view is correct, we are driven to the conclusion that besides the incest-fantasy there must be contents which are repressed through a still greater resistance. Since it is difficult to imagine anything more repellent than incest, we find ourselves rather at a loss to answer this question.

[123] If we let practical experience speak, it tells us that, apart from the incest-fantasy, religious ideas are associated with the parental imagos. I do not need to cite historical proofs of this, as they are known to all. But what about the alleged objectionableness of religious associations?

[124] Someone once observed that in ordinary society it is more embarrassing to talk about God at table than to tell a risqué story. Indeed, for many people it is more bearable to admit their sexual fantasies than to be forced to confess that their analyst is a saviour, for the former are biologically legitimate, whereas the latter instance is definitely pathological, and this is something we greatly fear. It seems to me, however, that we make too much of "resistance." The phenomena in question can be explained just as easily by lack of imagination and reflectiveness, which makes the act of conscious realization so difficult for the patient. He may perhaps have no particular resistance to religious ideas, only the thought has never occurred to him that he could seriously regard his analyst as a God or saviour. Mere reason alone is sufficient to protect him from such illusions. But he is less slow to assume that his analyst thinks himself one. When one is dogmatic oneself, it is notoriously easy to take other people for prophets and founders of religions.

[125] Now religious ideas, as history shows, are charged with an extremely suggestive, emotional power. Among them I naturally reckon all *représentations collectives*, everything that we learn from the history of religion, and anything that has an "-ism" attached to it. The latter is only a modern variant of the denominational religions. A man may be convinced in all good faith that he has no religious ideas, but no one can fall so far away from humanity that he no longer has any dominating *représentation collective*. His very materialism, atheism, communism, socialism, liberalism, intellectualism, existentialism, or what not, testifies against his innocence. Somewhere or other, overtly or covertly, he is possessed by a supraordinate idea.

[126] The psychologist knows how much religious ideas have to do with the parental imagos. History has preserved overwhelming evidence of this, quite apart from modern medical findings, which have even led certain people to suppose that the relationship to the parents is the real origin of religious ideas. This hypothesis is based on very poor knowledge of the facts. In the first place, one should not simply translate the family psychology of modern man into a context of primitive conditions, where things are so very different; secondly, one should beware of ill-considered

tribal-father and primal-horde fantasies; thirdly and most importantly, one should have the most accurate knowledge of the phenomenology of religious experience, which is a subject in itself. Psychological investigations in this field have so far not fulfilled any of these three conditions.

[127] The only thing we know positively from psychological experience is that theistic ideas are associated with the parental imagos, and that our patients are mostly unconscious of them. If the corresponding projections cannot be withdrawn through insight, then we have every reason to suspect the presence of emotional contents of a religious nature, regardless of the rationalistic resistance of the patient.

[128] So far as we have any information about man, we know that he has always and everywhere been under the influence of dominating ideas. Any one who alleges that he is not can immediately be suspected of having exchanged a known form of belief for a variant which is less known both to himself and to others. Instead of theism he is a devotee of atheism, instead of Dionysus he favours the more modern Mithras, and instead of heaven he seeks paradise on earth.

[129] A man without a dominating *représentation collective* would be a thoroughly abnormal phenomenon. But such a person exists only in the fantasies of isolated individuals who are deluded about themselves. They are mistaken not only about the existence of religious ideas, but also and more especially about their intensity. The archetype behind a religious idea has, like every instinct, its specific energy, which it does not lose even if the conscious mind ignores it. Just as it can be assumed with the greatest probability that every man possesses all the average human functions and qualities, so we may expect the presence of normal religious factors, the archetypes, and this expectation does not prove fallacious. Any one who succeeds in putting off the mantle of faith can do so only because another lies close to hand. No one can escape the prejudice of being human.

[130] The *représentations collectives* have a dominating power, so it is not surprising that they are repressed with the most intense resistance. When repressed, they do not hide behind any trifling thing but behind ideas and figures that have already become problematical for other reasons, and intensify and complicate their dubious nature. For instance, everything that we would like, in infantile fashion, to attribute to our parents or blame them for is blown up to fantastic proportions from this secret source, and for this reason it remains an open question how much of the ill-reputed incest-fantasy is to be taken seriously. Behind the parental pair, or pair of lovers, lie contents of extreme tension which are not apperceived in consciousness and can therefore become perceptible only through projection. That projections of this kind do actually occur and are not just traditional opinions is attested by historical documents. These show that syzygies were projected which were in complete

contradiction to the traditional beliefs, and that they were often experienced in the form of a vision.¹⁹

[131] One of the most instructive examples in this respect is the vision of the recently canonized Nicholas of Flüe, a Swiss mystic of the fifteenth century, of whose visions we possess reports by his contemporaries.²⁰ In the visions that marked his initiation into the state of adoption by God, God appeared in dual form, once as a majestic *father* and once as a majestic *mother*. This representation could not be more unorthodox, since the Church had eliminated the feminine element from the Trinity a thousand years earlier as heretical. Brother Klaus was a simple unlettered peasant who doubtless had received none but the approved Church teaching, and was certainly not acquainted with the Gnostic interpretation of the Holy Ghost as the feminine and motherly Sophia.²¹ His so-called Trinity Vision is at the same time a perfect example of the intensity of projected contents. Brother Klaus's psychological situation was eminently suited to a projection of this kind, for his conscious idea of God was so little in accord with the unconscious content that the latter had to appear in the form of an alien and shattering experience. We must conclude from this that it was not the traditional idea of God but, on the contrary, an "heretical" image²² that realized itself in visionary form; an archetypal interpretation which came to life again spontaneously, independently of tradition. It was the archetype of the divine pair, the syzygy.

[132] There is a very similar case in the visions of Guillaume de Digulleville,²³ which are described in *Le Pèlerinage de l'âme*. He saw God in the highest heaven as the King on a shining round throne, and beside him sat the Queen of Heaven on a throne of brown crystal. For a monk of the Cistercian Order, which as we know is distinguished for its severity, this vision is exceedingly heretical. So here again the condition for projection is fulfilled.

[133] Another impressive account of the syzygy vision can be found in the work of Edward Maitland, who wrote the biography of Anna Kingsford. There he describes in detail his own experience of God, which, like that of Brother Klaus, consisted in a vision of light. He says: "This was ... God as the Lord, proving by His duality that God is Substance as well as Force, Love as well as Will, feminine as well as masculine, Mother as well as Father."²⁴

[134] These few examples may suffice to characterize the experience of projection and those features of it which are independent of tradition. We can hardly get round the hypothesis that an emotionally charged content is lying ready in the unconscious and springs into projection at a certain moment. This content is the syzygy motif, and it expresses the fact that a masculine element is always paired with a feminine one. The wide distribution and extraordinary emotionality of this motif prove that it is a

fundamental psychic factor of great practical importance, no matter whether the individual psychotherapist or psychologist understands where and in what way it influences his special field of work. Microbes, as we know, played their dangerous role long before they were discovered.

[135] As I have said, it is natural to suspect the parental pair in all syzygies. The feminine part, the mother, corresponds to the anima. But since, for the reasons discussed above, consciousness of the object prevents its projection, there is nothing for it but to assume that parents are also the least known of all human beings, and consequently that an unconscious reflection of the parental pair exists which is as unlike them, as utterly alien and incommensurable, as a man compared with a god. It would be conceivable, and has as we know been asserted, that the unconscious reflection is none other than the image of father and mother that was acquired in early childhood, overvalued, and later repressed on account of the incest-fantasy associated with it. This hypothesis presupposes that the image was once *conscious*, otherwise it could not have been “repressed.” It also presupposes that the act of moral repression has itself become unconscious, for otherwise the act would remain preserved in consciousness together with the memory of the repressive moral reaction, from which the nature of the thing repressed could easily be recognized. I do not want to enlarge on these misgivings, but would merely like to emphasize that there is general agreement on one point: that the parental imago comes into existence not in the pre-puberal period or at a time when consciousness is more or less developed, but in the initial stages between the first and fourth year, when consciousness does not show any real continuity and is characterized by a kind of island-like discontinuity. The ego-relationship that is required for continuity of consciousness is present only in part, so that a large proportion of psychic life at this stage runs on in a state which can only be described as relatively unconscious. At all events it is a state which would give the impression of a somnambulistic, dream, or twilight state if observed in an adult. These states, as we know from the observation of small children, are always characterized by an apperception of reality filled with fantasies. The fantasy-images outweigh the influence of sensory stimuli and mould them into conformity with a *pre-existing psychic image*.

[136] It is in my view a great mistake to suppose that the psyche of a new-born child is a *tabula rasa* in the sense that there is absolutely nothing in it. In so far as the child is born with a differentiated brain that is predetermined by heredity and therefore individualized, it meets sensory stimuli coming from outside not with *any* aptitudes, but with *specific* ones, and this necessarily results in a particular, individual choice and pattern of apperception. These aptitudes can be shown to be inherited instincts and preformed patterns, the latter being the *a priori* and formal conditions of apperception that are based on instinct. Their presence gives the world of the child

and the dreamer its anthropomorphic stamp. They are the archetypes, which direct all fantasy activity into its appointed paths and in this way produce, in the fantasy-images of children's dreams as well as in the delusions of schizophrenia, astonishing mythological parallels such as can also be found, though in lesser degree, in the dreams of normal persons and neurotics. It is not, therefore, a question of inherited *ideas* but of inherited *possibilities* of ideas. Nor are they individual acquisitions but, in the main, common to all, as can be seen from the universal occurrence of the archetypes.²⁵

[137] Just as the archetypes occur on the ethnological level as myths, so also they are found in every individual, and their effect is always strongest, that is, they anthropomorphize reality most, where consciousness is weakest and most restricted, and where fantasy can overrun the facts of the outer world. This condition is undoubtedly present in the child during the first years of its life. It therefore seems to me more probable that the archetypal form of the divine syzygy first covers up and assimilates the image of the real parents until, with increasing consciousness, the real figures of the parents are perceived—often to the child's disappointment. Nobody knows better than the psychotherapist that the mythologizing of the parents is often pursued far into adulthood and is given up only with the greatest resistance.

[138] I remember a case that was presented to me as the victim of a high-grade mother and castration complex, which had still not been overcome in spite of psychoanalysis. Without any hint from me, the man had made some drawings which showed the mother first as a superhuman being, and then as a figure of woe, with bloody mutilations. I was especially struck by the fact that a castration had obviously been performed on the mother, for in front of her gory genitals lay the cut-off male sexual organs. The drawings clearly represented a diminishing climax: first the mother was a divine hermaphrodite, who then, through the son's disappointing experience of reality, was robbed of its androgynous, Platonic perfection and changed into the woeful figure of an ordinary old woman. Thus from the very beginning, from the son's earliest childhood, the mother was assimilated to the archetypal idea of the syzygy, or conjunction of male and female, and for this reason appeared perfect and superhuman.²⁶ The latter quality invariably attaches to the archetype and explains why the archetype appears strange and as if not belonging to consciousness, and also why, if the subject identifies with it, it often causes a devastating change of personality, generally in the form of megalomania or its opposite.

[139] The son's disappointment effected a castration of the hermaphroditic mother: this was the patient's so-called castration complex. He had tumbled down from his childhood Olympus and was no longer the son-hero of a divine mother. His so-called fear of castration was fear of real life, which refused to come up to his erstwhile

childish expectations, and everywhere lacked that mythological meaning which he still dimly remembered from his earliest youth. His life was, in the truest sense of the word, “godless.” And that, for him—though he did not realize it—meant a dire loss of hope and energy. He thought of himself as “castrated,” which is a very plausible neurotic misunderstanding—so plausible that it could even be turned into a theory of neurosis.

[140] Because people have always feared that the connection with the instinctive, archetypal stage of consciousness might get lost in the course of life, the custom has long since been adopted of giving the new-born child, in addition to his bodily parents, two godparents, a “godfather” and a “godmother,” who are supposed to be responsible for the spiritual welfare of their godchild. They represent the pair of gods who appear at its birth, thus illustrating the “dual birth” motif.²⁷

The anima image, which lends the mother such superhuman glamour in the eyes of the son, gradually becomes tarnished by commonplace reality and sinks back into the unconscious, but without in any way losing its original tension and instinctivity. It is ready to spring out and project itself at the first opportunity, the moment a woman makes an impression that is out of the ordinary. We then have Goethe’s experience with Frau von Stein, and its repercussions in the figures of Mignon and Gretchen, all over again. In the case of Gretchen, Goethe also showed us the whole underlying “metaphysic.” The love life of a man reveals the psychology of this archetype in the form either of boundless fascination, overvaluation, and infatuation, or of misogyny in all its gradations and variants, none of which can be explained by the real nature of the “object” in question, but only by a transference of the mother complex. The complex, however, was caused in the first place by the assimilation of the mother (in itself a normal and ubiquitous phenomenon) to the pre-existent, feminine side of an archetypal “male-female” pair of opposites, and secondly by an abnormal delay in detaching from the primordial image of the mother. Actually, nobody can stand the total loss of the archetype. When that happens, it gives rise to that frightful “discontent in our culture,” where nobody feels at home because a “father” and “mother” are missing. Everyone knows the provisions that religion has always made in this respect. Unfortunately there are very many people who thoughtlessly go on asking whether these provisions are “true,” when it is really a question of a psychological need. Nothing is achieved by explaining them away rationalistically.

[142] When projected, the anima always has a feminine form with definite characteristics. This empirical finding does not mean that the archetype is constituted like that *in itself*. The male-female syzygy is only one among the possible pairs of opposites, albeit the most important one in practice and the commonest. It has

numerous connections with other pairs which do not display any sex differences at all and can therefore be put into the sexual category only by main force. These connections, with their manifold shades of meaning, are found more particularly in Kundalini yoga,²⁸ in Gnosticism,²⁹ and above all in alchemical philosophy,³⁰ quite apart from the spontaneous fantasy-products in neurotic and psychotic case material. When one carefully considers this accumulation of data, it begins to seem probable that an archetype in its quiescent, unprojected state has no exactly determinable form but is in itself an indefinite structure which can assume definite forms only in projection.

[143] This seems to contradict the concept of a “type.” If I am not mistaken, it not only seems but actually *is* a contradiction. Empirically speaking, we are dealing all the time with “types,” definite forms that can be named and distinguished. But as soon as you divest these types of the phenomenology presented by the case material, and try to examine them in relation to other archetypal forms, they branch out into such far-reaching ramifications in the history of symbols that one comes to the conclusion that the basic psychic elements are infinitely varied and ever changing, so as utterly to defy our powers of imagination. The empiricist must therefore content himself with a theoretical “as if.” In this respect he is no worse off than the atomic physicist, even though his method is not based on quantitative measurement but is a morphologically descriptive one.

[144] The anima is a factor of the utmost importance in the psychology of a man wherever emotions and affects are at work. She intensifies, exaggerates, falsifies, and mythologizes all emotional relations with his work and with other people of both sexes. The resultant fantasies and entanglements are all her doing. When the anima is strongly constellated, she softens the man’s character and makes him touchy, irritable, moody, jealous, vain, and unadjusted. He is then in a state of “discontent” and spreads discontent all around him. Sometimes the man’s relationship to the woman who has caught his anima accounts for the existence of this syndrome.

[145] The anima, as I have remarked elsewhere,³¹ has not escaped the attentions of the poets. There are excellent descriptions of her, which at the same time tell us about the symbolic context in which the archetype is usually embedded. I give first place to Rider Haggard’s novels *She*, *The Return of She*, and *Wisdom’s Daughter*, and Benoît’s *L’Atlantide*. Benoît was accused of plagiarizing Rider Haggard, because the two accounts are disconcertingly alike. But it seems he was able to acquit himself of this charge. Spitteler’s *Prometheus* contains some very subtle observations, too, and his novel *Imago* gives an admirable description of projection.

[146] The question of *therapy* is a problem that cannot be disposed of in a few words. It was not my intention to deal with it here, but I would like to outline my point of

view. Younger people, who have not yet reached the middle of life (around the age of 35), can bear even the total loss of the anima without injury. The important thing at this stage is for a man to be a man. The growing youth must be able to free himself from the anima fascination of his mother. There are exceptions, notably artists, where the problem often takes a different turn; also homosexuality, which is usually characterized by identity with the anima. In view of the recognized frequency of this phenomenon, its interpretation as a pathological perversion is very dubious. The psychological findings show that it is rather a matter of incomplete detachment from the hermaphroditic archetype, coupled with a distinct resistance to identify with the role of a one-sided sexual being. Such a disposition should not be adjudged negative in all circumstances, in so far as it preserves the archetype of the Original Man, which a one-sided sexual being has, up to a point, lost.

[147] After the middle of life, however, permanent loss of the anima means a diminution of vitality, of flexibility, and of human kindness. The result, as a rule, is premature rigidity, crustiness, stereotypy, fanatical one-sidedness, obstinacy, pedantry, or else resignation, weariness, sloppiness, irresponsibility, and finally a childish *ramollissement* with a tendency to alcohol. After middle life, therefore, the connection with the archetypal sphere of experience should if possible be re-established.³²

II

PSYCHOLOGICAL ASPECTS OF THE MOTHER ARCHETYPE

[First published as a lecture, “Die psychologischen Aspekte des Mutterarchetypus,” in *Eranos-Jahrbuch 1938*. Later revised and published in *Von den Wurzeln des Bewusstseins* (Zurich, 1954). The present translation is of the latter, but it is also based partially on a translation of the 1938 version by Cary F. Baynes and Ximena de Angulo, privately issued in *Spring* (New York), 1943.—EDITORS.]

1. ON THE CONCEPT OF THE ARCHETYPE

[148] The concept of the Great Mother belongs to the field of comparative religion and embraces widely varying types of mother-goddess. The concept itself is of no immediate concern to psychology, because the image of a Great Mother in this form is rarely encountered in practice, and then only under very special conditions. The symbol is obviously a derivative of the *mother archetype*. If we venture to investigate the background of the Great Mother image from the standpoint of psychology, then the mother archetype, as the more inclusive of the two, must form the basis of our discussion. Though lengthy discussion of the *concept* of an archetype is hardly necessary at this stage, some preliminary remarks of a general nature may not be out of place.

[149] In former times, despite some dissenting opinion and the influence of Aristotle, it was not too difficult to understand Plato's conception of the Idea as supraordinate and pre-existent to all phenomena. "Archetype," far from being a modern term, was already in use before the time of St. Augustine, and was synonymous with "Idea" in the Platonic usage. When the *Corpus Hermeticum*, which probably dates from the third century, describes God as τὸ ἀρέετιπον φς, the 'archetypal light,' it expresses the idea that he is the prototype of all light; that is to say, pre-existent and supraordinate to the phenomenon "light." Were I a philosopher, I should continue in this Platonic strain and say: Somewhere, in "a place beyond the skies," there is a prototype or primordial image of the mother that is pre-existent and supraordinate to all phenomena in which the "maternal," in the broadest sense of the term, is manifest. But I am an empiricist, not a philosopher; I cannot let myself presuppose that my peculiar temperament, my own attitude to intellectual problems, is universally valid. Apparently this is an assumption in which only the philosopher may indulge, who always takes it for granted that his own disposition and attitude are universal, and will not recognize the fact, if he can avoid it, that his "personal equation" conditions his philosophy. As an empiricist, I must point out that there is a temperament which regards ideas as real entities and not merely as *nomina*. It so happens—by the merest accident, one might say—that for the past two hundred years we have been living in an age in which it has become unpopular or even unintelligible to suppose that ideas could be anything but *nomina*. Anyone who continues to think as Plato did must pay for his anachronism by seeing the "supracelestial," i.e., metaphysical, essence of the Idea relegated to the unverifiable realm of faith and superstition, or charitably left to the poet. Once again, in the age-old controversy over universals, the nominalistic standpoint has triumphed over the realistic, and the Idea has evaporated into a mere *flatus vocis*. This change was accompanied—and, indeed, to a considerable degree

caused—by the marked rise of empiricism, the advantages of which were only too obvious to the intellect. Since that time the Idea is no longer something *a priori*, but is secondary and derived. Naturally, the new nominalism promptly claimed universal validity for itself in spite of the fact that it, too, is based on a definite and limited thesis coloured by temperament. This thesis runs as follows: we accept as valid anything that comes from outside and can be verified. The ideal instance is verification by experiment. The antithesis is: we accept as valid anything that comes from inside and cannot be verified. The hopelessness of this position is obvious. Greek natural philosophy with its interest in matter, together with Aristotelian reasoning, has achieved a belated but overwhelming victory over Plato.

[150] Yet every victory contains the germ of future defeat. In our own day signs foreshadowing a change of attitude are rapidly increasing. Significantly enough, it is Kant's doctrine of categories, more than anything else, that destroys in embryo every attempt to revive metaphysics in the old sense of the word, but at the same time paves the way for a rebirth of the Platonic spirit. If it be true that there can be no metaphysics transcending human reason, it is no less true that there can be no empirical knowledge that is not already caught and limited by the *a priori* structure of cognition. During the century and a half that have elapsed since the appearance of the *Critique of Pure Reason*, the conviction has gradually gained ground that thinking, understanding, and reasoning cannot be regarded as independent processes subject only to the eternal laws of logic, but that they are *psychic functions* coordinated with the personality and subordinate to it. We no longer ask, "Has this or that been seen, heard, handled, weighed, counted, thought, and found to be logical?" We ask instead, "Who saw, heard, or thought?" Beginning with "the personal equation" in the observation and measurement of minimal processes, this critical attitude has gone on to the creation of an empirical psychology such as no time before ours has known. Today we are convinced that in all fields of knowledge psychological premises exist which exert a decisive influence upon the choice of material, the method of investigation, the nature of the conclusions, and the formulation of hypotheses and theories. We have even come to believe that Kant's personality was a decisive conditioning factor of his *Critique of Pure Reason*. Not only our philosophers, but our own predilections in philosophy, and even what we are fond of calling our "best" truths are affected, if not dangerously undermined, by this recognition of a personal premise. All creative freedom, we cry out, is taken away from us! What? Can it be possible that a man only thinks or says or does what he himself is?

[151] Provided that we do not again exaggerate and so fall a victim to unrestrained "psychologizing," it seems to me that the critical standpoint here defined is inescapable. It constitutes the essence, origin, and method of modern psychology.

There is an *a priori* factor in all human activities, namely the inborn, preconscious and unconscious individual structure of the psyche. The preconscious psyche—for example, that of a new-born infant—is not an empty vessel into which, under favourable conditions, practically anything can be poured. On the contrary, it is a tremendously complicated, sharply defined individual entity which appears indeterminate to us only because we cannot see it directly. But the moment the first visible manifestations of psychic life begin to appear, one *would* have to be blind not to recognize their individual character, that is, the unique personality behind them. It is hardly possible to suppose that all these details come into being only at the moment in which they appear. When it is a case of morbid predispositions already present in the parents, we infer hereditary transmission through the germ-plasm; it would not occur to us to regard epilepsy in the child of an epileptic mother as an unaccountable mutation. Again, we explain by heredity the gifts and talents which can be traced back through whole generations. We explain in the same way the reappearance of complicated instinctive actions in animals that have never set eyes on their parents and therefore could not possibly have been “taught” by them.

[152] Nowadays we have to start with the hypothesis that, so far as predisposition is concerned, there is no essential difference between man and all other creatures. Like every animal, he possesses a preformed psyche which breeds true to his species and which, on closer examination, reveals distinct features traceable to family antecedents. We have not the slightest reason to suppose that there are certain human activities or functions that could be exempted from this rule. We are unable to form any idea of what those dispositions or aptitudes are which make instinctive actions in animals possible. And it is just as impossible for us to know the nature of the preconscious psychic disposition that enables a child to react in a human manner. We can only suppose that his behaviour results from patterns of functioning, which I have described as *images*. The term “image” is intended to express not only the form of the activity taking place, but the typical situation in which the activity is released.¹ These images are “primordial” images in so far as they are peculiar to whole species, and if they ever “originated” their origin must have coincided at least with the beginning of the species. They are the “human quality” of the human being, the specifically human form his activities take. This specific form is hereditary and is already present in the germ-plasm. The idea that it is not inherited but comes into being in every child anew would be just as preposterous as the primitive belief that the sun which rises in the morning is a different sun from that which set the evening before.

[153] Since everything psychic is preformed, this must also be true of the individual functions, especially those which derive directly from the unconscious predisposition. The most important of these is creative fantasy. In the products of

fantasy the primordial images are made visible, and it is here that the concept of the archetype finds its specific application. I do not claim to have been the first to point out this fact. The honour belongs to Plato. The first investigator in the field of ethnology to draw attention to the widespread occurrence of certain “elementary ideas” was Adolf Bastian. Two later investigators, Hubert and Mauss,² followers of Dürkheim, speak of “categories” of the imagination. And it was no less an authority than Hermann Usener³ who first recognized unconscious preformation under the guise of “unconscious thinking.” If I have any share in these discoveries, it consists in my having shown that archetypes are not disseminated only by tradition, language, and migration, but that they can rearise spontaneously, at any time, at any place, and without any outside influence.

[154] The far-reaching implications of this statement must not be overlooked. For it means that there are present in every psyche forms which are unconscious but nonetheless active—living dispositions, ideas in the Platonic sense, that preform and continually influence our thoughts and feelings and actions.

[155] Again and again I encounter the mistaken notion that an archetype is determined in regard to its content, in other words that it is a kind of unconscious idea (if such an expression be admissible). It is necessary to point out once more that archetypes are not determined as regards their content, but only as regards their form and then only to a very limited degree. A primordial image is determined as to its content only when it has become conscious and is therefore filled out with the material of conscious experience. Its form, however, as I have explained elsewhere, might perhaps be compared to the axial system of a crystal, which, as it were, preforms the crystalline structure in the mother liquid, although it has no material existence of its own. This first appears according to the specific way in which the ions and molecules aggregate. The archetype in itself is empty and purely formal, nothing but a *facultas praeformandi*, a possibility of representation which is given *a priori*. The representations themselves are not inherited, only the forms, and in that respect they correspond in every way to the instincts, which are also determined in form only. The existence of the instincts can no more be proved than the existence of the archetypes, so long as they do not manifest themselves concretely. With regard to the definiteness of the form, our comparison with the crystal is illuminating inasmuch as the axial system determines only the stereometric structure but not the concrete form of the individual crystal. This may be either large or small, and it may vary endlessly by reason of the different size of its planes or by the growing together of two crystals. The only thing that remains constant is the axial system, or rather, the invariable geometric proportions underlying it. The same is true of the archetype. In principle, it can be named and has an invariable nucleus of meaning—but always only in principle, never as regards its concrete manifestation. In the same way, the specific

appearance of the mother-image at any given time cannot be deduced from the mother archetype alone, but depends on innumerable other factors.

2. THE MOTHER ARCHETYPE

Like any other archetype, the mother archetype appears under an almost infinite variety of aspects. I mention here only some of the more characteristic. First in importance are the personal mother and grandmother, stepmother and mother-in-law; then any woman with whom a relationship exists—for example, a nurse or governess or perhaps a remote ancestress. Then there are what might be termed mothers in a figurative sense. To this category belongs the goddess, and especially the Mother of God, the Virgin, and Sophia. Mythology offers many variations of the mother archetype, as for instance the mother who reappears as the maiden in the myth of Demeter and Kore; or the mother who is also the beloved, as in the Cybele-Attis myth. Other symbols of the mother in a figurative sense appear in things representing the goal of our longing for redemption, such as Paradise, the Kingdom of God, the Heavenly Jerusalem. Many things arousing devotion or feelings of awe, as for instance the Church, university, city or country, heaven, earth, the woods, the sea or any still waters, matter even, the underworld and the moon, can be mother-symbols. The archetype is often associated with things and places standing for fertility and fruitfulness: the cornucopia, a ploughed field, a garden. It can be attached to a rock, a cave, a tree, a spring, a deep well, or to various vessels such as the baptismal font, or to vessel-shaped flowers like the rose or the lotus. Because of the protection it implies, the magic circle or mandala can be a form of mother archetype. Hollow objects such as ovens and cooking vessels are associated with the mother archetype, and, of course, the uterus, *yoni*, and anything of a like shape. Added to this list there are many animals, such as the cow, hare, and helpful animals in general.

[157] All these symbols can have a positive, favourable meaning or a negative, evil meaning. An ambivalent aspect is seen in the goddesses of fate (Moiras, Graeae, Norns). Evil symbols are the witch, the dragon (or any devouring and entwining animal, such as a large fish or a serpent), the grave, the sarcophagus, deep water, death, nightmares and bogies (Empusa, Lilith, etc.). This list is not, of course, complete; it presents only the most important features of the mother archetype.

[158] The qualities associated with it are maternal solicitude and sympathy; the magic authority of the female; the wisdom and spiritual exaltation that transcend reason; any helpful instinct or impulse; all that is benign, all that cherishes and sustains, that fosters growth and fertility. The place of magic transformation and rebirth, together with the underworld and its inhabitants, are presided over by the mother. On the negative side the mother archetype may connote anything secret, hidden, dark; the

abyss, the world of the dead, anything that devours, seduces, and poisons, that is terrifying and inescapable like fate. All these attributes of the mother archetype have been fully described and documented in my book *Symbols of Transformation*. There I formulated the ambivalence of these attributes as “the loving and the terrible mother.” Perhaps the historical example of the dual nature of the mother most familiar to us is the Virgin Mary, who is not only the Lord’s mother, but also, according to the medieval allegories, his cross. In India, “the loving and terrible mother” is the paradoxical Kali. Sankhya philosophy has elaborated the mother archetype into the concept of *prakrti* (matter) and assigned to it the three *gunas* or fundamental attributes: *sattva*, *rajas*, *tamas*: goodness, passion, and darkness.¹ These are three essential aspects of the mother: her cherishing and nourishing goodness, her orgiastic emotionality, and her Stygian depths. The special feature of the philosophical myth, which shows Prakrti dancing before Purusha in order to remind him of “discriminating knowledge,” does not belong to the mother archetype but to the archetype of the anima, which in a man’s psychology invariably appears, at first, mingled with the mother-image.

[159] Although the figure of the mother as it appears in folklore is more or less universal, this image changes markedly when it appears in the individual psyche. In treating patients one is at first impressed, and indeed arrested, by the apparent significance of the personal mother. This figure of the personal mother looms so large in all personalistic psychologies that, as we know, they never got beyond it, even in theory, to other important aetiological factors. My own view differs from that of other medico-psychological theories principally in that I attribute to the personal mother only a limited aetiological significance. That is to say, all those influences which the literature describes as being exerted on the children do not come from the mother herself, but rather from the archetype projected upon her, which gives her a mythological background and invests her with authority and numinosity.² The aetiological and traumatic effects produced by the mother must be divided into two groups: (1) those corresponding to traits of character or attitudes actually present in the mother, and (2) those referring to traits which the mother only seems to possess, the reality being composed of more or less fantastic (i.e., archetypal) projections on the part of the child. Freud himself had already seen that the real aetiology of neuroses does not lie in traumatic effects, as he at first suspected, but in a peculiar development of infantile fantasy. This is not to deny that such a development can be traced back to disturbing influences emanating from the mother. I myself make it a rule to look first for the cause of infantile neuroses in the mother, as I know from experience that a child is much more likely to develop normally than neurotically, and that in the great majority of cases definite causes of disturbances can be found in the parents, especially in the mother. The contents of the child’s abnormal fantasies

can be referred to the personal mother only in part, since they often contain clear and unmistakable allusions which could not possibly have reference to human beings. This is especially true where definitely mythological products are concerned, as is frequently the case in infantile phobias where the mother may appear as a wild beast, a witch, a spectre, an ogre, a hermaphrodite, and so on. It must be borne in mind, however, that such fantasies are not always of unmistakably mythological origin, and even if they are, they may not always be rooted in the unconscious archetype but may have been occasioned by fairytales or accidental remarks. A thorough investigation is therefore indicated in each case. For practical reasons, such an investigation cannot be made so readily with children as with adults, who almost invariably transfer their fantasies to the physician during treatment—or, to be more precise, the fantasies are projected upon him automatically.

[160] When that happens, nothing is gained by brushing them aside as ridiculous, for archetypes are among the inalienable assets of every psyche. They form the “treasure in the realm of shadowy thoughts” of which Kant spoke, and of which we have ample evidence in the countless treasure motifs of mythology. An archetype is in no sense just an annoying prejudice; it becomes so only when it is in the wrong place. In themselves, archetypal images are among the highest values of the human psyche; they have peopled the heavens of all races from time immemorial. To discard them as valueless would be a distinct loss. Our task is not, therefore, to deny the archetype, but to dissolve the projections, in order to restore their contents to the individual who has involuntarily lost them by projecting them outside himself.

3. THE MOTHER-COMPLEX

[161] The mother archetype forms the foundation of the so-called mother-complex. It is an open question whether a mother-complex can develop without the mother having taken part in its formation as a demonstrable causal factor. My own experience leads me to believe that the mother always plays an active part in the origin of the disturbance, especially in infantile neuroses or in neuroses whose aetiology undoubtedly dates back to early childhood. In any event, the child's instincts are disturbed, and this constellates archetypes which, in their turn, produce fantasies that come between the child and its mother as an alien and often frightening element. Thus, if the children of an overanxious mother regularly dream that she is a terrifying animal or a witch, these experiences point to a split in the child's psyche that predisposes it to a neurosis.

I. THE MOTHER-COMPLEX OF THE SON

[162] The effects of the mother-complex differ according to whether it appears in a son or a daughter. Typical effects on the son are homosexuality and Don Juanism, and sometimes also impotence.¹ In homosexuality, the son's entire heterosexuality is tied to the mother in an unconscious form; in Don Juanism, he unconsciously seeks his mother in every woman he meets. The effects of a mother-complex on the son may be seen in the ideology of the Cybele and Attis type: self-castration, madness, and early death. Because of the difference in sex, a son's mother-complex does not appear in pure form. This is the reason why in every masculine mother-complex, side by side with the mother archetype, a significant role is played by the image of the man's sexual counterpart, the anima. The mother is the first feminine being with whom the man-to-be comes in contact, and she cannot help playing, overtly or covertly, consciously or unconsciously, upon the son's masculinity, just as the son in his turn grows increasingly aware of his mother's femininity, or unconsciously responds to it by instinct. In the case of the son, therefore, the simple relationships of identity or of resistance and differentiation are continually cut across by erotic attraction or repulsion, which complicates matters very considerably. I do not mean to say that for this reason the mother-complex of a son ought to be regarded as more serious than that of a daughter. The investigation of these complex psychic phenomena is still in the pioneer stage. Comparisons will not become feasible until we have some statistics at our disposal, and of these, so far, there is no sign.

[163] Only in the daughter is the mother-complex clear and uncomplicated. Here we have to do either with an overdevelopment of feminine instincts indirectly caused by the mother, or with a weakening of them to the point of complete extinction. In the first case, the preponderance of instinct makes the daughter unconscious of her own personality; in the latter, the instincts are projected upon the mother. For the present we must content ourselves with the statement that in the daughter a mother-complex either unduly stimulates or else inhibits the feminine instinct, and that in the son it injures the masculine instinct through an unnatural sexualization.

[164] Since a “mother-complex” is a concept borrowed from psychopathology, it is always associated with the idea of injury and illness. But if we take the concept out of its narrow psychopathological setting and give it a wider connotation, we can see that it has positive effects as well. Thus a man with a mother-complex may have a finely differentiated Eros² instead of, or in addition to, homosexuality. (Something of this sort is suggested by Plato in his *Symposium*.) This gives him a great capacity for friendship, which often creates ties of astonishing tenderness between men and may even rescue friendship between the sexes from the limbo of the impossible. He may have good taste and an aesthetic sense which are fostered by the presence of a feminine streak. Then he may be supremely gifted as a teacher because of his almost feminine insight and tact. He is likely to have a feeling for history, and to be conservative in the best sense and cherish the values of the past. Often he is endowed with a wealth of religious feelings, which help to bring the *ecclesia spiritualis* into reality; and a spiritual receptivity which makes him responsive to revelation.

[165] In the same way, what in its negative aspect is Don Juanism can appear positively as bold and resolute manliness; ambitious striving after the highest goals; opposition to all stupidity, narrow-mindedness, injustice, and laziness; willingness to make sacrifices for what is regarded as right, sometimes bordering on heroism; perseverance, inflexibility and toughness of will; a curiosity that does not shrink even from the riddles of the universe; and finally, a revolutionary spirit which strives to put a new face upon the world.

[166] All these possibilities are reflected in the mythological motifs enumerated earlier as different aspects of the mother archetype. As I have already dealt with the mother-complex of the son, including the anima complication, elsewhere, and my present theme is the archetype of the mother, in the following discussion I shall relegate masculine psychology to the background.

II. THE MOTHER-COMPLEX OF THE DAUGHTER³

[167] (a) *Hypertrophy of the Maternal Element*.—We have noted that in the daughter the mother-complex leads either to a hypertrophy of the feminine side or to its

atrophy. The exaggeration of the feminine side means an intensification of all female instincts, above all the maternal instinct. The negative aspect is seen in the woman whose only goal is childbirth. To her the husband is obviously of secondary importance; he is first and foremost the instrument of procreation, and she regards him merely as an object to be looked after, along with children, poor relations, cats, dogs, and household furniture. Even her own personality is of secondary importance; she often remains entirely unconscious of it, for her life is lived in and through others, in more or less complete identification with all the objects of her care. First she gives birth to the children, and from then on she clings to them, for without them she has no existence whatsoever. Like Demeter, she compels the gods by her stubborn persistence to grant her the right of possession over her daughter. Her Eros develops exclusively as a maternal relationship while remaining unconscious as a personal one. An unconscious Eros always expresses itself as will to power.⁴ Women of this type, though continually “living for others,” are, as a matter of fact, unable to make any real sacrifice. Driven by ruthless will to power and a fanatical insistence on their own maternal rights, they often succeed in annihilating not only their own personality but also the personal lives of their children. The less conscious such a mother is of her own personality, the greater and the more violent is her unconscious will to power. For many such women Baubo rather than Demeter would be the appropriate symbol. The mind is not cultivated for its own sake but usually remains in its original condition, altogether primitive, unrelated, and ruthless, but also as true, and sometimes as profound, as Nature herself.⁵ She herself does not know this and is therefore unable to appreciate the wittiness of her mind or to marvel philosophically at its profundity; like as not she will immediately forget what she has said.

[168] (b) *Overdevelopment of Eros.*—It by no means follows that the complex induced in a daughter by such a mother must necessarily result in hypertrophy of the maternal instinct. Quite the contrary, this instinct may be wiped out altogether. As a substitute, an overdeveloped Eros results, and this almost invariably leads to an unconscious incestuous relationship with the father.⁶ The intensified Eros places an abnormal emphasis on the personality of others. Jealousy of the mother and the desire to outdo her become the leitmotifs of subsequent undertakings, which are often disastrous. A woman of this type loves romantic and sensational episodes for their own sake, and is interested in married men, less for themselves than for the fact that they are married and so give her an opportunity to wreck a marriage, that being the whole point of her manoeuvre. Once the goal is attained, her interest evaporates for lack of any maternal instinct, and then it will be someone else’s turn.⁷ This type is noted for its remarkable unconsciousness. Such women really seem to be utterly blind to what they are doing,⁸ which is anything but advantageous either for themselves or for their victims. I need

hardly point out that for men with a passive Eros this type offers an excellent hook for anima projections.

[169] (c) *Identity with the Mother*.—It a mother-complex in a woman does not produce an overdeveloped Eros, it leads to identification with the mother and to paralysis of the daughter's feminine initiative. A complete projection of her personality on to the mother then takes place, owing to the fact that she is unconscious both of her maternal instinct and of her Eros. Everything which reminds her of motherhood, responsibility, personal relationships, and erotic demands arouses feelings of inferiority and compels her to run away—to her mother, naturally, who lives to perfection everything that seems unattainable to her daughter. As a sort of superwoman (admired involuntarily by the daughter), the mother lives out for her beforehand all that the girl might have lived for herself. She is content to cling to her mother in selfless devotion, while at the same time unconsciously striving, almost against her will, to tyrannize over her, naturally under the mask of complete loyalty and devotion. The daughter leads a shadow-existence, often visibly sucked dry by her mother, and she prolongs her mother's life by a sort of continuous blood transfusion. These bloodless maidens are by no means immune to marriage. On the contrary, despite their shadowiness and passivity, they command a high price on the marriage market. First, they are so empty that a man is free to impute to them anything he fancies. In addition, they are so unconscious that the unconscious puts out countless invisible feelers, veritable octopus-tentacles, that suck up all masculine projections; and this pleases men enormously. All that feminine indefiniteness is the longed-for counterpart of male decisiveness and single-mindedness, which can be satisfactorily achieved only if a man can get rid of everything doubtful, ambiguous, vague, and muddled by projecting it upon some charming example of feminine innocence.⁹ Because of the woman's characteristic passivity, and the feelings of inferiority which make her continually play the injured innocent, the man finds himself cast in an attractive role: he has the privilege of putting up with the familiar feminine foibles with real superiority, and yet with forbearance, like a true knight. (Fortunately, he remains ignorant of the fact that these deficiencies consist largely of his own projections.) The girl's notorious helplessness is a special attraction. She is so much an appendage of her mother that she can only flutter confusedly when a man approaches. She just doesn't know a thing. She is so inexperienced, so terribly in need of help, that even the gentlest swain becomes a daring abductor who brutally robs a loving mother of her daughter. Such a marvellous opportunity to pass himself off as a gay Lothario does not occur every day and therefore acts as a strong incentive. This was how Pluto abducted Persephone from the inconsolable Demeter. But, by a decree of the gods, he had to surrender his wife every year to his mother-in-

law for the summer season. (The attentive reader will note that such legends do not come about by chance!)

[170] (d) *Resistance to the Mother*.— These three extreme types are linked together by many intermediate stages, of which I shall mention only one important example. In the particular intermediate type I have in mind, the problem is less an overdevelopment or an inhibition of the feminine instincts than an overwhelming resistance to maternal supremacy, often to the exclusion of all else. It is the supreme example of the negative mother-complex. The motto of this type is: Anything, so long as it is not like Mother! On one hand we have a fascination which never reaches the point of identification; on the other, an intensification of Eros which exhausts itself in jealous resistance. This kind of daughter knows what she does *not* want, but is usually completely at sea as to what she would choose as her own fate. All her instincts are concentrated on the mother in the negative form of resistance and are therefore of no use to her in building her own life. Should she get as far as marrying, either the marriage will be used for the sole purpose of escaping from her mother, or else a diabolical fate will present her with a husband who shares all the essential traits of her mother's character. All instinctive processes meet with unexpected difficulties; either sexuality does not function properly, or the children are unwanted, or maternal duties seem unbearable, or the demands of marital life are responded to with impatience and irritation. This is quite natural, since none of it has anything to do with the realities of life when stubborn resistance to the power of the mother in every form has come to be life's dominating aim. In such cases one can often see the attributes of the mother archetype demonstrated in every detail. For example, the mother as representative of the family (or clan) causes either violent resistances or complete indifference to anything that comes under the head of family, community, society, convention, and the like. Resistance to the mother as *uterus* often manifests itself in menstrual disturbances, failure of conception, abhorrence of pregnancy, hemorrhages and excessive vomiting during pregnancy, miscarriages, and so on. The mother as *materia*, 'matter,' may be at the back of these women's impatience with objects, their clumsy handling of tools and crockery and bad taste in clothes.

[171] Again, resistance to the mother can sometimes result in a spontaneous development of intellect for the purpose of creating a sphere of interest in which the mother has no place. This development springs from the daughter's own needs and not at all for the sake of a man whom she would like to impress or dazzle by a semblance of intellectual comradeship. Its real purpose is to break the mother's power by intellectual criticism and superior knowledge, so as to enumerate to her all her stupidities, mistakes in logic, and educational shortcomings. Intellectual development is often accompanied by the emergence of masculine traits in general.

4. POSITIVE ASPECTS OF THE MOTHER-COMPLEX

I. THE MOTHER

[172] The positive aspect of the first type of complex, namely the overdevelopment of the maternal instinct, is identical with that well-known image of the mother which has been glorified in all ages and all tongues. This is the mother-love which is one of the most moving and unforgettable memories of our lives, the mysterious root of all growth and change; the love that means homecoming, shelter, and the long silence from which everything begins and in which everything ends. Intimately known and yet strange like Nature, lovingly tender and yet cruel like fate, joyous and untiring giver of life—*mater dolorosa* and mute implacable portal that closes upon the dead. Mother is mother-love, *my* experience and *my* secret. Why risk saying too much, too much that is false and inadequate and beside the point, about that human being who was our mother, the accidental carrier of that great experience which includes herself and myself and all mankind, and indeed the whole of created nature, the experience of life whose children we are? The attempt to say these things has always been made, and probably always will be; but a sensitive person cannot in all fairness load that enormous burden of meaning, responsibility, duty, heaven and hell, on to the shoulders of one frail and fallible human being—so deserving of love, indulgence, understanding, and forgiveness—who was our mother. He knows that the mother carries for us that inborn image of the *mater natura* and *mater spiritualis*, of the totality of life of which we are a small and helpless part. Nor should we hesitate for one moment to relieve the human mother of this appalling burden, for our own sakes as well as hers. It is just this massive weight of meaning that ties us to the mother and chains her to her child, to the physical and mental detriment of both. A mother-complex is not got rid of by blindly reducing the mother to human proportions. Besides that we run the risk of dissolving the experience “Mother” into atoms, thus destroying something supremely valuable and throwing away the golden key which a good fairy laid in our cradle. That is why mankind has always instinctively added the pre-existent divine pair to the personal parents—the “god”-father and “god”-mother of the newborn child—so that, from sheer unconsciousness or shortsighted rationalism, he should never forget himself so far as to invest his own parents with divinity.

[173] The archetype is really far less a scientific problem than an urgent question of psychic hygiene. Even if all proofs of the existence of archetypes were lacking, and all the clever people in the world succeeded in convincing us that such a thing could

not possibly exist, we would have to invent them forthwith in order to keep our highest and most important values from disappearing into the unconscious. For when these fall into the unconscious the whole elemental force of the original experience is lost. What then appears in its place is fixation on the mother-*imago*; and when this has been sufficiently rationalized and “corrected,” we are tied fast to human reason and condemned from then on to believe exclusively in what is rational. That is a virtue and an advantage on the one hand, but on the other a limitation and impoverishment, for it brings us nearer to the bleakness of doctrinairism and “enlightenment.” This *Déesse Raison* emits a deceptive light which illuminates only what we know already, but spreads a darkness over all those things which it would be most needful for us to know and become conscious of. The more independent “reason” pretends to be, the more it turns into sheer intellectuality which puts doctrine in the place of reality and shows us man not as he is but how it wants him to be.

[174] Whether he understands them or not, man must remain conscious of the world of the archetypes, because in it he is still a part of Nature and is connected with his own roots. A view of the world or a social order that cuts him off from the primordial images of life not only is no culture at all but, in increasing degree, is a prison or a stable. If the primordial images remain conscious in some form or other, the energy that belongs to them can flow freely into man. But when it is no longer possible to maintain contact with them, then the tremendous sum of energy stored up in these images, which is also the source of the fascination underlying the infantile parental complex, falls back into the unconscious. The unconscious then becomes charged with a force that acts as an irresistible *vis a tergo* to whatever view or idea or tendency our intellect may choose to dangle enticingly before our desiring eyes. In this way man is delivered over to his conscious side, and reason becomes the arbiter of right and wrong, of good and evil. I am far from wishing to belittle the divine gift of reason, man’s highest faculty. But in the role of absolute tyrant it has no meaning—no more than light would have in a world where its counterpart, darkness, was absent. Man would do well to heed the wise counsel of the mother and obey the inexorable law of nature which sets limits to every being. He ought never to forget that the world exists only because opposing forces are held in equilibrium. So, too, the rational is counterbalanced by the irrational, and what is planned and purposed by what *is*.

[175] This excursion into the realm of generalities was unavoidable, because the mother is the first world of the child and the last world of the adult. We are all wrapped as her children in the mantle of this great Isis. But let us now return to the different types of feminine mother-complex. It may seem strange that I am devoting so much more time to the mother-complex in woman than to its counterpart in man.

The reason for this has already been mentioned: in a man, the mother-complex is never “pure,” it is always mixed with the anima archetype, and the consequence is that a man’s statements about the mother are always emotionally prejudiced in the sense of showing “animosity.” Only in women is it possible to examine the effects of the mother archetype without admixture of animosity, and even this has prospects of success only when no compensating animus has developed.

II. THE OVERDEVELOPED EROS

[176] I drew a very unfavourable picture of this type as we encounter it in the field of psychopathology. But this type, uninviting as it appears, also has positive aspects which society could ill afford to do without. Indeed, behind what is possibly the worst effect of this attitude, the unscrupulous wrecking of marriages, we can see an extremely significant and purposeful arrangement of nature. This type often develops in reaction to a mother who is wholly a thrall of nature, purely instinctive and therefore all-devouring. Such a mother is an anachronism, a throw-back to a primitive state of matriarchy where the man leads an insipid existence as a mere procreator and serf of the soil. The reactive intensification of the daughter’s Eros is aimed at some man who ought to be rescued from the preponderance of the female-maternal element in his life. A woman of this type instinctively intervenes when provoked by the unconsciousness of the marriage partner. She will disturb that comfortable ease so dangerous to the personality of a man but frequently regarded by him as marital faithfulness. This complacency leads to blank unconsciousness of his own personality and to those supposedly ideal marriages where he is nothing but Dad and she is nothing but Mom, and they even call each other that. This is a slippery path that can easily degrade marriage to the level of a mere breeding-pen.

[177] A woman of this type directs the burning ray of her Eros upon a man whose life is stifled by maternal solicitude, and by doing so she arouses a moral conflict. Yet without this there can be no consciousness of personality. “But why on earth,” you may ask, “should it be necessary for man to achieve, by hook or by crook, a higher level of consciousness?” This is truly the crucial question, and I do not find the answer easy. Instead of a real answer I can only make a confession of faith: I believe that, after thousands and millions of years, someone had to realize that this wonderful world of mountains and oceans, suns and moons, galaxies and nebulae, plants and animals, *exists*. From a low hill in the Athi plains of East Africa I once watched the vast herds of wild animals grazing in soundless stillness, as they had done from time immemorial, touched only by the breath of a primeval world. I felt then as if I were the first man, the first creature, to know that all this *is*. The entire world round me was still in its primeval state; it did not know that it *was*. And then, in that one moment in which I came to know, the world sprang into being; without that moment

it would never have been. All Nature seeks this goal and finds it fulfilled in man, but only in the most highly developed and most fully conscious man. Every advance, even the smallest, along this path of conscious realization adds that much to the world.

[178] There is no consciousness without discrimination of opposites. This is the paternal principle, the Logos, which eternally struggles to extricate itself from the primal warmth and primal darkness of the maternal womb; in a word, from unconsciousness. Divine curiosity yearns to be born and does not shrink from conflict, suffering, or sin. Unconsciousness is the primal sin, evil itself, for the Logos. Therefore its first creative act of liberation is matricide, and the spirit that dared all heights and all depths must, as Synesius says, suffer the divine punishment, enchainment on the rocks of the Caucasus. Nothing can exist without its opposite; the two were one in the beginning and will be one again in the end. Consciousness can only exist through continual recognition of the unconscious, just as everything that lives must pass through many deaths.

[179] The stirring up of conflict is a Luciferian virtue in the true sense of the word. Conflict engenders fire, the fire of affects and emotions, and like every other fire it has two aspects, that of combustion and that of creating light. On the one hand, emotion is the alchemical fire whose warmth brings everything into existence and whose heat burns all superfluities to ashes (*omnes superfluitates comburit*). But on the other hand, emotion is the moment when steel meets flint and a spark is struck forth, for emotion is the chief source of consciousness. There is no change from darkness to light or from inertia to movement without emotion.

[180] The woman whose fate it is to be a disturbing element is not solely destructive, except in pathological cases. Normally the disturber is herself caught in the disturbance; the worker of change is herself changed, and the glare of the fire she ignites both illuminates and enlightens all the victims of the entanglement. What seemed a senseless upheaval becomes a process of purification:

So that all that is vain
Might dwindle and wane.¹

[181] If a woman of this type remains unconscious of the meaning of her function, if she does not know that she is

Part of that power which would
Ever work evil but engenders good,²

she will herself perish by the sword she brings. But consciousness transforms her into a deliverer and redeemer.

III. THE "NOTHING-BUT" DAUGHTER

[182] The woman of the third type, who is so identified with the mother that her own instincts are paralysed through projection, need not on that account remain a hopeless nonentity forever. On the contrary, if she is at all normal, there is a good chance of the empty vessel being filled by a potent anima projection. Indeed, the fate of such a woman depends on this eventuality; she can never find herself at all, not even approximately, without a man's help; she has to be literally abducted or stolen from her mother. Moreover, she must play the role mapped out for her for a long time and with great effort, until she actually comes to loathe it. In this way she may perhaps discover who she really is. Such women may become devoted and self-sacrificing wives of husbands whose whole existence turns on their identification with a profession or a great talent, but who, for the rest, are unconscious and remain so. Since they are nothing but masks themselves, the wife, too, must be able to play the accompanying part with a semblance of naturalness. But these women sometimes have valuable gifts which remained undeveloped only because they were entirely unconscious of their own personality. They may project the gift or talent upon a husband who lacks it himself, and then we have the spectacle of a totally insignificant man who seemed to have no chance whatsoever suddenly soaring as if on a magic carpet to the highest summits of achievement. *Cherchez la femme*, and you have the secret of his success. These women remind me—if I may be forgiven the impolite comparison—of hefty great bitches who turn tail before the smallest cur simply because he is a terrible male and it never occurs to them to bite him.

[183] Finally, it should be remarked that *emptiness* is a great feminine secret. It is something absolutely alien to man; the chasm, the unplumbed depths, the *yin*. The pitifulness of this vacuous nonentity goes to his heart (I speak here as a man), and one is tempted to say that this constitutes the whole "mystery" of woman. Such a female is fate itself. A man may say what he likes about it; be for it or against it, or both at once; in the end he falls, absurdly happy, into this pit, or, if he doesn't, he has missed and bungled his only chance of making a man of himself. In the first case one cannot disprove his foolish good luck to him, and in the second one cannot make his misfortune seem plausible. "The Mothers, the Mothers, how eerily it sounds!"³ With this sigh, which seals the capitulation of the male as he approaches the realm of the Mothers, we will turn to the fourth type.

IV. THE NEGATIVE MOTHER-COMPLEX

[184] As a pathological phenomenon this type is an unpleasant, exacting, and anything but satisfactory partner for her husband, since she rebels in every fibre of her being against everything that springs from natural soil. However, there is no reason why increasing experience of life should not teach her a thing or two, so that for a start she

gives up fighting the mother in the personal and restricted sense. But even at her best she will remain hostile to all that is dark, unclear, and ambiguous, and will cultivate and emphasize everything certain and clear and reasonable. Excelling her more feminine sister in her objectivity and coolness of judgment, she may become the friend, sister, and competent adviser of her husband. Her own masculine aspirations make it possible for her to have a human understanding of the individuality of her husband quite transcending the realm of the erotic. The woman with this type of mother-complex probably has the best chance of all to make her marriage an outstanding success during the second half of life. But this is true only if she succeeds in overcoming the hell of “nothing but femininity,” the chaos of the maternal womb, which is her greatest danger because of her negative complex. As we know, a complex can be really overcome only if it is lived out to the full. In other words, if we are to develop further we have to draw to us and drink down to the very dregs what, because of our complexes, we have held at a distance.

[185] This type started out in the world with averted face, like Lot’s wife looking back on Sodom and Gomorrah. And all the while the world and life pass by her like a dream—an annoying source of illusions, disappointments, and irritations, all of which are due solely to the fact that she cannot bring herself to look straight ahead for once. Because of her merely unconscious, reactive attitude toward reality, her life actually becomes dominated by what she fought hardest against—the exclusively maternal feminine aspect. But if she should later turn her face, she will see the world for the first time, so to speak, in the light of maturity, and see it embellished with all the colours and enchanting wonders of youth, and sometimes even of childhood. It is a vision that brings knowledge and discovery of truth, the indispensable prerequisite for consciousness. A part of life was lost, but the meaning of life has been salvaged for her.

[186] The woman who fights against her father still has the possibility of leading an instinctive, feminine existence, because she rejects only what is alien to her. But when she fights against the mother she may, at the risk of injury to her instincts, attain to greater consciousness, because in repudiating the mother she repudiates all that is obscure, instinctive, ambiguous, and unconscious in her own nature. Thanks to her lucidity, objectivity, and masculinity, a woman of this type is frequently found in important positions in which her tardily discovered maternal quality, guided by a cool intelligence, exerts a most beneficial influence. This rare combination of womanliness and masculine understanding proves valuable in the realm of intimate relationships as well as in practical matters. As the spiritual guide and adviser of a man, such a woman, unknown to the world, may play a highly influential part. Owing to her qualities, the masculine mind finds this type easier to understand than women with other forms of mother-complex, and for this reason men often favour her with

the projection of positive mother-complexes. The excessively feminine woman terrifies men who have a mother-complex characterized by great sensitivity. But this woman is not frightening to a man, because she builds bridges for the masculine mind over which he can safely guide his feelings to the opposite shore. Her clarity of understanding inspires him with confidence, a factor not to be underrated and one that is absent from the relationship between a man and a woman much more often than one might think. The man's Eros does not lead upward only but downward into that uncanny dark world of Hecate and Kali, which is a horror to any intellectual man. The understanding possessed by this type of woman will be a guiding star to him in the darkness and seemingly unending mazes of life.

5. CONCLUSION

[187] From what has been said it should be clear that in the last analysis all the statements of mythology on this subject as well as the observed effects of the mother-complex, when stripped of their confusing detail, point to the unconscious as their place of origin. How else could it have occurred to man to divide the cosmos, on the analogy of day and night, summer and winter, into a bright day-world and a dark night-world peopled with fabulous monsters, unless he had the prototype of such a division in himself, in the polarity between the conscious and the invisible and unknowable unconscious? Primitive man's perception of objects is conditioned only partly by the objective behaviour of the things themselves, whereas a much greater part is often played by intrapsychic facts which are not related to the external objects except by way of projection.¹ This is due to the simple fact that the primitive has not yet experienced that ascetic discipline of mind known to us as the critique of knowledge. To him the world is a more or less fluid phenomenon within the stream of his own fantasy, where subject and object are undifferentiated and in a state of mutual interpenetration. "All that is outside, also is inside," we could say with Goethe. But this "inside," which modern rationalism is so eager to derive from "outside," has an *a priori* structure of its own that antedates all conscious experience. It is quite impossible to conceive how "experience" in the widest sense, or, for that matter, anything psychic, could originate exclusively in the outside world. The psyche is part of the inmost mystery of life, and it has its own peculiar structure and form like every other organism. Whether this psychic structure and its elements, the archetypes, ever "originated" at all is a metaphysical question and therefore unanswerable. The structure is something given, the precondition that is found to be present in every case. And this is the *mother*, the matrix—the form into which all experience is poured. The *father*, on the other hand, represents the *dynamism* of the archetype, for the archetype consists of both—form and energy.

[188] The carrier of the archetype is in the first place the personal mother, because the child lives at first in complete participation with her, in a state of unconscious identity. She is the psychic as well as the physical precondition of the child. With the awakening of ego-consciousness the participation gradually weakens, and consciousness begins to enter into opposition to the unconscious, its own precondition. This leads to differentiation of the ego from the mother, whose personal peculiarities gradually become more distinct. All the fabulous and mysterious qualities attaching to her image begin to fall away and are transferred to the person

closest to her, for instance the grandmother. As the mother of the mother, she is “greater” than the latter; she is in truth the “grand” or “Great Mother.” Not infrequently she assumes the attributes of wisdom as well as those of a witch. For the further the archetype recedes from consciousness and the clearer the latter becomes, the more distinctly does the archetype assume mythological features. The transition from mother to grandmother means that the archetype is elevated to a higher rank. This is clearly demonstrated in a notion held by the Bataks. The funeral sacrifice in honour of a dead father is modest, consisting of ordinary food. But if the son has a son of his own, then the father has become a grandfather and has consequently attained a more dignified status in the Beyond, and very important offerings are made to him.²

[189] As the distance between conscious and unconscious increases, the grandmother’s more exalted rank transforms her into a “Great Mother,” and it frequently happens that the opposites contained in this image split apart. We then get a good fairy and a wicked fairy, or a benevolent goddess and one who is malevolent and dangerous. In Western antiquity and especially in Eastern cultures the opposites often remain united in the same figure, though this paradox does not disturb the primitive mind in the least. The legends about the gods are as full of contradictions as are their moral characters. In the West, the paradoxical behaviour and moral ambivalence of the gods scandalized people even in antiquity and gave rise to criticism that led finally to a devaluation of the Olympians on the one hand and to their philosophical interpretation on the other. The clearest expression of this is the Christian reformation of the Jewish concept of the Deity: the morally ambiguous Yahweh became an exclusively good God, while everything evil was united in the devil. It seems as if the development of the feeling function in Western man forced a choice on him which led to the moral splitting of the divinity into two halves. In the East the predominantly intuitive intellectual attitude left no room for feeling values, and the gods—Kali is a case in point—could retain their original paradoxical morality undisturbed. Thus Kali is representative of the East and the Madonna of the West. The latter has entirely lost the shadow that still distantly followed her in the allegories of the Middle Ages. It was relegated to the hell of popular imagination, where it now leads an insignificant existence as the devil’s grandmother.³ Thanks to the development of feeling-values, the splendour of the “light” god has been enhanced beyond measure, but the darkness supposedly represented by the devil has localized itself in man. This strange development was precipitated chiefly by the fact that Christianity, terrified of Manichaeism, strove to preserve its monotheism by main force. But since the reality of darkness and evil could not be denied, there was no alternative but to make man responsible for it. Even the devil was largely, if not entirely, abolished, with the result that this metaphysical figure, who at one time

was an integral part of the Deity, was introjected into man, who thereupon became the real carrier of the *mysterium iniquitatis*: “omne bonum a Deo, omne malum ab homine.” In recent times this development has suffered a diabolical reverse, and the wolf in sheep’s clothing now goes about whispering in our ear that evil is really nothing but a misunderstanding of good and an effective instrument of progress. We think that the world of darkness has thus been abolished for good and all, and nobody realizes what a poisoning this is of man’s soul. In this way he turns himself into the devil, for the devil is half of the archetype whose irresistible power makes even unbelievers ejaculate “Oh God!” on every suitable and unsuitable occasion. If one can possibly avoid it, one ought never to identify with an archetype, for, as psychopathology and certain contemporary events show, the consequences are terrifying.

[190] Western man has sunk to such a low level spiritually that he even has to deny the apotheosis of untamed and untameable psychic power—the divinity itself—so that, after swallowing evil, he may possess himself of the good as well. If you read Nietzsche’s *Zarathustra* with attention and psychological understanding, you will see that he has described with rare consistency and with the passion of a truly religious person the psychology of the “Superman” for whom God is dead, and who is himself burst asunder because he tried to imprison the divine paradox within the narrow framework of the mortal man. Goethe has wisely said: “What terror then shall seize the Superman!”—and was rewarded with a supercilious smile from the Philistines. His glorification of the Mother who is great enough to include in herself both the Queen of Heaven and Maria Aegyptiaca is supreme wisdom and profoundly significant for anyone willing to reflect upon it. But what can one expect in an age when the official spokesmen of Christianity publicly announce their inability to understand the foundations of religious experience! I extract the following sentence from an article by a Protestant theologian: “We understand ourselves—whether naturalistically or idealistically—to be *homogeneous creatures who are not so peculiarly divided that alien forces can intervene in our inner life*, as the New Testament supposes.”⁴ (Italics mine.) The author is evidently unacquainted with the fact that science demonstrated the lability and dissociability of consciousness more than half a century ago and proved it by experiment. Our conscious intentions are continually disturbed and thwarted, to a greater or lesser degree, by unconscious intrusions whose causes are at first strange to us. The psyche is far from being a homogeneous unit—on the contrary, it is a boiling cauldron of contradictory impulses, inhibitions, and affects, and for many people the conflict between them is so insupportable that they even wish for the deliverance preached by theologians. Deliverance from what? Obviously, from a highly questionable psychic state. The unity of consciousness or of the so-called personality is not a reality at all but a

desideratum. I still have a vivid memory of a certain philosopher who also raved about this unity and used to consult me about his neurosis: he was obsessed by the idea that he was suffering from cancer. I do not know how many specialists he had consulted already, and how many X-ray pictures he had had made. They all assured him that he had no cancer. He himself told me: "I know I have no cancer, but I still could have one." Who is responsible for this "imaginary" idea? He certainly did not make it himself; it was forced on him by an "alien" power. There is little to choose between this state and that of the man possessed in the New Testament. Now whether you believe in a demon of the air or in a factor in the unconscious that plays diabolical tricks on you is all one to me. The fact that man's imagined unity is menaced by alien powers remains the same in either case. Theologians would do better to take account for once of these psychological facts than to go on "demythologizing" them with rationalistic explanations that are a hundred years behind the times.

*

[191] I have tried in the foregoing to give a survey of the psychic phenomena that may be attributed to the predominance of the mother-image. Although I have not always drawn attention to them, my reader will presumably have had no difficulty in recognizing those features which characterize the Great Mother mythologically, even when they appear under the guise of personalistic psychology. When we ask patients who are particularly influenced by the mother-image to express in words or pictures what "Mother" means to them—be it positive or negative—we invariably get symbolical figures which must be regarded as direct analogies of the mythological mother-image. These analogies take us into a field that still requires a great deal more work of elucidation. At any rate, I personally do not feel able to say anything definitive about it. If, nevertheless, I venture to offer a few suggestions, they should be regarded as altogether provisional and tentative.

[192] Above all, I should like to point out that the mother-image in a man's psychology is entirely different in character from a woman's. For a woman, the mother typifies her own conscious life as conditioned by her sex. But for a man the mother typifies something alien, which he has yet to experience and which is filled with the imagery latent in the unconscious. For this reason, if for no other, the mother-image of a man is essentially different from a woman's. The mother has from the outset a decidedly symbolical significance for a man, which probably accounts for his strong tendency to idealize her. Idealization is a hidden apotropaism; one idealizes whenever there is a secret fear to be exorcized. What is feared is the unconscious and its magical influence.⁵

[193] Whereas for a man the mother is *ipso facto* symbolical, for a woman she becomes a symbol only in the course of her psychological development. Experience reveals the striking fact that the Urania type of mother-image predominates in masculine psychology, whereas in a woman the chthonic type, or Earth Mother, is the most frequent. During the manifest phase of the archetype an almost complete identification takes place. A woman can identify directly with the Earth Mother, but a man cannot (except in psychotic cases). As mythology shows, one of the peculiarities of the Great Mother is that she frequently appears paired with her male counterpart. Accordingly the man identifies with the son-lover on whom the grace of Sophia has descended, with a *puer aeternus* or a *filius sapientiae*. But the companion of the chthonic mother is the exact opposite: an ithyphallic Hermes (the Egyptian Bes) or a lingam. In India this symbol is of the highest spiritual significance, and in the West Hermes is one of the most contradictory figures of Hellenistic syncretism, which was the source of extremely important spiritual developments in Western civilization. He is also the god of revelation, and in the unofficial nature philosophy of the early Middle Ages he is nothing less than the world-creating Nous itself. This mystery has perhaps found its finest expression in the words of the *Tabula smaragdina*: “omne superius sicut inferius” (as it is above, so it is below).

[194] It is a psychological fact that as soon as we touch on these identifications we enter the realm of the syzygies, the paired opposites, where the One is never separated from the Other, its antithesis. It is a field of personal experience which leads directly to the experience of individuation, the attainment of the self. A vast number of symbols for this process could be mustered from the medieval literature of the West and even more from the storehouses of Oriental wisdom, but in this matter words and ideas count for little. Indeed, they may become dangerous bypaths and false trails. In this still very obscure field of psychological experience, where we are in direct contact, so to speak, with the archetype, its psychic power is felt in full force. This realm is so entirely one of immediate experience that it cannot be captured by any formula, but can only be hinted at to one who already knows. He will need no explanations to understand what was the tension of opposites expressed by Apuleius in his magnificent prayer to the Queen of Heaven, when he associates “heavenly Venus” with “Proserpina, who striketh terror with midnight ululations”:⁶ it was the terrifying paradox of the primordial mother-image.

*

[195] When, in 1938, I originally wrote this paper, I naturally did not know that twelve years later the Christian version of the mother archetype would be elevated to the rank of a dogmatic truth. The Christian “Queen of Heaven” has, obviously, shed all her Olympian qualities except for her brightness, goodness, and eternity; and even

her human body, the thing most prone to gross material corruption, has put on an ethereal incorruptibility. The richly varied allegories of the Mother of God have nevertheless retained some *connection* with her pagan prefigurations in Isis (Io) and Semele. Not only are Isis and the Horus-child iconological exemplars, but the ascension of Semele, the originally mortal mother of Dionysus, likewise anticipates the Assumption of the Blessed Virgin. Further, this son of Semele is a dying and resurgent god and the youngest of the Olympians. Semele herself seems to have been an earth-goddess, just as the Virgin Mary is the earth from which Christ was born. This being so, the question naturally arises for the psychologist: what has become of the characteristic relation of the mother-image to the earth, darkness, the abysmal side of the bodily man with his animal passions and instinctual nature, and to “matter” in general? The declaration of the dogma comes at a time when the achievements of science and technology, combined with a rationalistic and materialistic view of the world, threaten the spiritual and psychic heritage of man with instant annihilation. Humanity is arming itself, in dread and fascinated horror, for a stupendous crime. Circumstances might easily arise when the hydrogen bomb would have to be used and the unthinkable frightful deed became unavoidable in legitimate self-defence. In striking contrast to this disastrous turn of events, the Mother of God is now enthroned in heaven; indeed, her Assumption has actually been interpreted as a deliberate counterstroke to the materialistic doctrinairism that provoked the chthonic powers into revolt. Just as Christ’s appearance in his own day created a real devil and adversary of God out of what was originally a son of God dwelling in heaven, so now, conversely, a heavenly figure has split off from her original chthonic realm and taken up a counter-position to the titanic forces of the earth and the underworld that have been unleashed. In the same way that the Mother of God was divested of all the essential qualities of materiality, matter became completely de-souled, and this at a time when physics is pushing forward to insights which, if they do not exactly “de-materialize” matter, at least endue it with properties of its own and make its relation to the psyche a problem that can no longer be shelved. For just as the tremendous advancement of science led at first to a premature dethronement of mind and to an equally ill-considered deification of matter, so it is this same urge for scientific knowledge that is now attempting to bridge the huge gulf that has opened out between the two *Weltanschauungen*. The psychologist inclines to see in the dogma of the Assumption a symbol which, in a sense, anticipates this whole development. For him the relationship to the earth and to matter is one of the inalienable qualities of the mother archetype. So that when a figure that is conditioned by this archetype is represented as having been taken up into heaven, the realm of the spirit, this indicates a union of earth and heaven, or of matter and spirit. The approach of natural science will almost certainly be from the other direction: it will see in matter itself the equivalent of spirit, but this “spirit” will appear divested

of all, or at any rate most, of its known qualities, just as earthly matter was stripped of its specific characteristics when it staged its entry into heaven. Nevertheless, the way will gradually be cleared for a union of the two principles.

[196] Understood concretely, the Assumption is the absolute opposite of materialism. Taken in this sense, it is a counterstroke that does nothing to diminish the tension between the opposites, but drives it to extremes.

[197] Understood symbolically, however, the Assumption of the body is a recognition and acknowledgment of matter, which in the last resort was identified with evil only because of an overwhelmingly “pneumatic” tendency in man. In themselves, spirit and matter are neutral, or rather, “*utriusque capax*”—that is, capable of what man calls good or evil. Although as names they are exceedingly relative, underlying them are very real opposites that are part of the energetic structure of the physical and of the psychic world, and without them no existence of any kind could be established. There is no position without its negation. In spite or just because of their extreme opposition, neither can exist without the other. It is exactly as formulated in classical Chinese philosophy: *yang* (the light, warm, dry, masculine principle) contains within it the seed of *yin* (the dark, cold, moist, feminine principle), and vice versa. Matter therefore would contain the seed of spirit and spirit the seed of matter. The long-known “synchronistic” phenomena that have now been statistically confirmed by Rhine’s experiments⁷ point, to all appearances, in this direction. The “psychization” of matter puts the absolute immateriality of spirit in question, since this would then have to be accorded a kind of substantiality. The dogma of the Assumption, proclaimed in an age suffering from the greatest political schism history has ever known, is a compensating symptom that reflects the strivings of science for a uniform world-picture. In a certain sense, both developments were anticipated by alchemy in the *hieros gamos* of opposites, but only in symbolic form. Nevertheless, the symbol has the great advantage of being able to unite heterogeneous or even incommensurable factors in a *single* image. With the decline of alchemy the symbolical unity of spirit and matter fell apart, with the result that modern man finds himself uprooted and alienated in a de-souled world.

[198] The alchemist saw the union of opposites under the symbol of the tree, and it is therefore not surprising that the unconscious of present-day man, who no longer feels at home in his world and can base his existence neither on the past that is no more nor on the future that is yet to be, should hark back to the symbol of the cosmic tree rooted in this world and growing up to heaven—the tree that is also man. In the history of symbols this tree is described as the way of life itself, a growing into that which eternally is and does not change; which springs from the union of opposites and, by its eternal presence, also makes that union possible. It seems as if it were

only through an experience of symbolic reality that man, vainly seeking his own “existence” and making a philosophy out of it, can find his way back to a world in which he is no longer a stranger.

III

CONCERNING REBIRTH

This paper represents the substance of a lecture which I delivered on the spur of the moment at the Eranos meeting in 1939. In putting it into written form I have made use of the stenographic notes which were taken at the meeting. Certain portions had to be omitted, chiefly because the requirements of a printed text are different from those of the spoken word. However, so far as possible, I have carried out my original intention of summing up the content of my lecture on the theme of rebirth, and have also endeavoured to reproduce my analysis of the Eighteenth Sura of the Koran as an example of a rebirth mystery. I have added some references to source material, which the reader may welcome. My summary does not purport to be more than a survey of a field of knowledge which can only be treated very superficially in the framework of a lecture.—C. G. J.

[First published as a lecture, “Die verschiedenen Aspekte der Wiedergeburt,” in *Eranos-Jahrbuch 1939* (Zurich, 1940). Revised and expanded as “Über Wiedergeburt,” *Gestaltungen des Unbewussten* (Zurich, 1950), from which the present translation is made.—EDITORS.]

1. FORMS OF REBIRTH

[199] The concept of rebirth is not always used in the same sense. Since this concept has various aspects, it may be useful to review its different meanings. The five different forms which I am going to enumerate could probably be added to if one were to go into greater detail, but I venture to think that my definitions cover at least the cardinal meanings. In the first part of my exposition, I give a brief summary of the different forms of rebirth, while the second part presents its various psychological aspects. In the third part, I give an example of a rebirth mystery from the Koran.

[200] 1. *Metempsychosis*. The first of the five aspects of rebirth to which I should like to draw attention is that of metempsychosis, or transmigration of souls. According to this view, one's life is prolonged in time by passing through different bodily existences; or, from another point of view, it is a life-sequence interrupted by different reincarnations. Even in Buddhism, where this doctrine is of particular importance—the Buddha himself experienced a very long sequence of such rebirths—it is by no means certain whether continuity of personality is guaranteed or not: there may be only a continuity of *karma*. The Buddha's disciples put this question to him during his lifetime, but he never made any definite statement as to whether there is or is not a continuity of personality.¹

[201] 2. *Reincarnation*. This concept of rebirth necessarily implies the continuity of personality. Here the human personality is regarded as continuous and accessible to memory, so that, when one is incarnated or born, one is able, at least potentially, to remember that one has lived through previous existences and that these existences were one's own, i.e., that they had the same ego-form as the present life. As a rule, reincarnation means rebirth in a human body.

[202] 3. *Resurrection*. This means a re-establishment of human existence after death. A new element enters here: that of the change, transmutation, or transformation of one's being. The change may be either essential, in the sense that the resurrected being is a different one; or nonessential, in the sense that only the general conditions of existence have changed, as when one finds oneself in a different place or in a body which is differently constituted. It may be a carnal body, as in the Christian assumption that this body will be resurrected. On a higher level, the process is no longer understood in a gross material sense; it is assumed that the resurrection of the dead is the raising up of the *corpus glorificationis*, the "subtle body," in the state of incorruptibility.

[203] 4. *Rebirth (renovatio)*. The fourth form concerns rebirth in the strict sense; that is to say, rebirth within the span of individual life. The English word *rebirth* is the exact equivalent of the German *Wiedergeburt*, but the French language seems to lack a term having the peculiar meaning of “rebirth.” This word has a special flavour; its whole atmosphere suggests the idea of *renovatio*, renewal, or even of improvement brought about by magical means. Rebirth may be a renewal without any change of being, inasmuch as the personality which is renewed is not changed in its essential nature, but only its functions, or parts of the personality, are subjected to healing, strengthening, or improvement. Thus even bodily ills may be healed through rebirth ceremonies.

[204] Another aspect of this fourth form is essential transformation, i.e., total rebirth of the individual. Here the renewal implies a change of his essential nature, and may be called a transmutation. As examples we may mention the transformation of a mortal into an immortal being, of a corporeal into a spiritual being, and of a human into a divine being. Well-known prototypes of this change are the transfiguration and ascension of Christ, and the assumption of the Mother of God into heaven after her death, together with her body. Similar conceptions are to be found in [Part II](#) of Goethe’s *Faust*; for instance, the transformation of Faust into the boy and then into Doctor Marianus.

[205] 5. *Participation in the process of transformation*. The fifth and last form is indirect rebirth. Here the transformation is brought about not directly, by passing through death and rebirth oneself, but indirectly, by participating in a process of transformation which is conceived of as taking place outside the individual. In other words, one has to witness, or take part in, some rite of transformation. This rite may be a ceremony such as the Mass, where there is a transformation of substances. Through his presence at the rite the individual participates in divine grace. Similar transformations of the Deity are to be found in the pagan mysteries; there too the initiate sharing the experience is vouchsafed the gift of grace, as we know from the Eleusinian mysteries. A case in point is the confession of the initiate in the Eleusinian mysteries, who praises the grace conferred through the certainty of immortality.²

2. THE PSYCHOLOGY OF REBIRTH

[206] Rebirth is not a process that we can in any way observe. We can neither measure nor weigh nor photograph it. It is entirely beyond sense perception. We have to do here with a purely *psychic* reality, which is transmitted to us only indirectly through personal statements. One speaks of rebirth; one professes rebirth; one is filled with rebirth. This we accept as sufficiently real. We are not concerned here with the question: is rebirth a tangible process of some sort? We have to be content with its psychic reality. I hasten to add that I am not alluding to the vulgar notion that anything “psychic” is either nothing at all or at best even more tenuous than a gas. Quite the contrary; I am of the opinion that the psyche is the most tremendous fact of human life. Indeed, it is the mother of all human facts; of civilization and of its destroyer, war. All this is at first psychic and invisible. So long as it is “merely” psychic it cannot be experienced by the senses, but is nonetheless indisputably real. The mere fact that people talk about rebirth, and that there is such a concept at all, means that a store of psychic experiences designated by that term must actually exist. What these experiences are like we can only infer from the statements that have been made about them. So, if we want to find out what rebirth really is, we must turn to history in order to ascertain what “rebirth” has been understood to mean.

[207] Rebirth is an affirmation that must be counted among the primordial affirmations of mankind. These primordial affirmations are based on what I call archetypes. In view of the fact that all affirmations relating to the sphere of the suprasensual are, in the last analysis, invariably determined by archetypes, it is not surprising that a concurrence of affirmations concerning rebirth can be found among the most widely differing peoples. There must be psychic events underlying these affirmations which it is the business of psychology to discuss—without entering into all the metaphysical and philosophical assumptions regarding their significance. In order to obtain a general view of their phenomenology, it is necessary to sketch the whole field of transformation experiences in sharper outline. Two main groups of experience may be distinguished: that of the transcendence of life, and that of one’s own transformation.

I. EXPERIENCE OF THE TRANSCENDENCE OF LIFE

[208] a. *Experiences induced by ritual.* By the “transcendence of life” I mean those aforementioned experiences of the initiate who takes part in a sacred rite which reveals to him the perpetual continuation of life through transformation and renewal.

In these mystery-dramas the transcendence of life, as distinct from its momentary concrete manifestations, is usually represented by the fateful transformations—death and rebirth—of a god or a godlike hero. The initiate may either be a mere witness of the divine drama or take part in it or be moved by it, or he may see himself identified through the ritual action with the god. In this case, what really matters is that an objective substance or form of life is ritually transformed through some process going on independently, while the initiate is influenced, impressed, “consecrated,” or granted “divine grace” on the mere ground of his presence or participation. The transformation process takes place not within him but outside him, although he may become involved in it. The initiate who ritually enacts the slaying, dismemberment, and scattering of Osiris, and afterwards his resurrection in the green wheat, experiences in this way the permanence and continuity of life, which outlasts all changes of form and, phoenix-like, continually rises anew from its own ashes. This participation in the ritual event gives rise, among other effects, to that hope of immortality which is characteristic of the Eleusinian mysteries.¹

[209] A living example of the mystery drama representing the permanence as well as the transformation of life is the Mass. If we observe the congregation during this sacred rite we note all degrees of participation, from mere indifferent attendance to the profoundest emotion. The groups of men standing about near the exit, who are obviously engaged in every sort of worldly conversation, crossing themselves and genuflecting in a purely mechanical way—even they, despite their inattention, participate in the sacral action by their mere presence in this place where grace abounds. The Mass is an extramundane and extratemporal act in which Christ is sacrificed and then resurrected in the transformed substances; and this rite of his sacrificial death is not a repetition of the historical event but the original, unique, and eternal act. The experience of the Mass is therefore a participation in the transcendence of life, which overcomes all bounds of space and time. It is a moment of eternity in time.²

[210] b. *Immediate Experiences*. All that the mystery drama represents and brings about in the spectator may also occur in the form of a spontaneous, ecstatic, or visionary experience, without any ritual. Nietzsche’s Noontide Vision is a classic example of this kind.³ Nietzsche, as we know, substitutes for the Christian mystery the myth of Dionysus-Zagreus, who was dismembered and came to life again. His experience has the character of a Dionysian nature myth: the Deity appears in the garb of Nature, as classical antiquity saw it,⁴ and the moment of eternity is the noonday hour, sacred to Pan: “Hath time flown away? Do I not fall? Have I not fallen—hark!—into the well of eternity?” Even the “golden ring,” the “ring of return,” appears to him as a promise of resurrection and life.⁵ It is just as if Nietzsche had been present at a performance of the mysteries.

[211] Many mystic experiences have a similar character: they represent an action in which the spectator becomes involved though his nature is not necessarily changed. In the same way, the most beautiful and impressive dreams often have no lasting or transformative effect on the dreamer. He may be impressed by them, but he does not necessarily see any problem in them. The event then naturally remains “outside,” like a ritual action performed by others. These more aesthetic forms of experience must be carefully distinguished from those which indubitably involve a change of one’s nature.

II. SUBJECTIVE TRANSFORMATION

[212] Transformations of personality are by no means rare occurrences. Indeed, they play a considerable role in psychopathology, although they are rather different from the mystical experiences just discussed, which are not easily accessible to psychological investigation. However, the phenomena we are now about to examine belong to a sphere quite familiar to psychology.

[213] a. *Diminution of personality.* An example of the alteration of personality in the sense of diminution is furnished by what is known in primitive psychology as “loss of soul.” The peculiar condition covered by this term is accounted for in the mind of the primitive by the supposition that a soul has gone off, just like a dog that runs away from his master overnight. It is then the task of the medicine-man to fetch the fugitive back. Often the loss occurs suddenly and manifests itself in a general malaise. The phenomenon is closely connected with the nature of primitive consciousness, which lacks the firm coherence of our own. We have control of our will power, but the primitive has not. Complicated exercises are needed if he is to pull himself together for any activity that is conscious and intentional and not just emotional and instinctive. Our consciousness is safer and more dependable in this respect; but occasionally something similar can happen to civilized man, only he does not describe it as “loss of soul” but as an “*abaissement du niveau mental*,” Janet’s apt term for this phenomenon.⁶ It is a slackening of the tensity of consciousness, which might be compared to a low barometric reading, presaging bad weather. The tonus has given way, and this is felt subjectively as listlessness, moroseness, and depression. One no longer has any wish or courage to face the tasks of the day. One feels like lead, because no part of one’s body seems willing to move, and this is due to the fact that one no longer has any disposable energy.⁷ This well-known phenomenon corresponds to the primitive’s loss of soul. The listlessness and paralysis of will can go so far that the whole personality falls apart, so to speak, and consciousness loses its unity; the individual parts of the personality make themselves independent and thus escape from the control of the conscious mind, as in the case of anaesthetic areas or systematic amnesias. The latter are well known as hysterical

“loss of function” phenomena. This medical term is analogous to the primitive loss of soul.

[214] *Abaissement du niveau mental* can be the result of physical and mental fatigue, bodily illness, violent emotions, and shock, of which the last has a particularly deleterious effect on one’s self-assurance. The *abaissement* always has a restrictive influence on the personality as a whole. It reduces one’s self-confidence and the spirit of enterprise, and, as a result of increasing ego-centricity, narrows the mental horizon. In the end it may lead to the development of an essentially negative personality, which means that a falsification of the original personality has supervened.

[215] b. *Enlargement of personality*. The personality is seldom, in the beginning, what it will be later on. For this reason the possibility of enlarging it exists, at least during the first half of life. The enlargement may be effected through an accretion from without, by new vital contents finding their way into the personality from outside and being assimilated. In this way a considerable increase of personality may be experienced. We therefore tend to assume that this increase comes *only* from without, thus justifying the prejudice that one becomes a personality by stuffing into oneself as much as possible from outside. But the more assiduously we follow this recipe, and the more stubbornly we believe that all increase has to come from without, the greater becomes our inner poverty. Therefore, if some great idea takes hold of us from outside, we must understand that it takes hold of us only because something in us responds to it and goes out to meet it. Richness of mind consists in mental receptivity, not in the accumulation of possessions. What comes to us from outside, and, for that matter, everything that rises up from within, can only be made our own if we are capable of an inner amplitude equal to that of the incoming content. Real increase of personality means consciousness of an enlargement that flows from inner sources. Without psychic depth we can never be adequately related to the magnitude of our object. It has therefore been said quite truly that a man grows with the greatness of his task. But he must have within himself the capacity to grow; otherwise even the most difficult task is of no benefit to him. More likely he will be shattered by it.

[216] A classic example of enlargement is Nietzsche’s encounter with Zarathustra, which made of the critic and aphorist a tragic poet and prophet. Another example is St. Paul, who, on his way to Damascus, was suddenly confronted by Christ. True though it may be that this Christ of St. Paul’s would hardly have been possible without the historical Jesus, the apparition of Christ came to St. Paul not from the historical Jesus but from the depths of his own unconscious.

[217] When a summit of life is reached, when the bud unfolds and from the lesser the greater emerges, then, as Nietzsche says, “One becomes Two,” and the greater figure, which one always was but which remained invisible, appears to the lesser personality with the force of a revelation. He who is truly and hopelessly little will always drag the revelation of the greater down to the level of his littleness, and will never understand that the day of judgment for his littleness has dawned. But the man who is inwardly great will know that the long expected friend of his soul, the immortal one, has now really come, “to lead captivity captive”;⁸ that is, to seize hold of him by whom this immortal had always been confined and held prisoner, and to make his life flow into that greater life—a moment of deadliest peril! Nietzsche’s prophetic vision of the Tightrope Walker⁹ reveals the awful danger that lies in having a “tightrope-walking” attitude towards an event to which St. Paul gave the most exalted name he could find.

[218] Christ himself is the perfect symbol of the hidden immortal within the mortal man.¹⁰ Ordinarily this problem is symbolized by a dual motif such as the Dioscuri, one of whom is mortal and the other immortal. An Indian parallel is the parable of the two friends:

Behold, upon the selfsame tree,
Two birds, fast-bound companions, sit.
This one enjoys the ripened fruit,
The other looks, but does not eat.
On such a tree my spirit crouched,
Deluded by its powerlessness,
Till seeing with joy how great its Lord,
It found from sorrow swift release....¹¹

[219] Another notable parallel is the Islamic legend of the meeting of Moses and Khidr,¹² to which I shall return later on. Naturally the transformation of personality in this enlarging sense does not occur only in the form of such highly significant experiences. There is no lack of more trivial instances, a list of which could easily be compiled from the clinical history of neurotic patients. Indeed, any case where the recognition of a greater personality seems to burst an iron ring round the heart must be included in this category.¹³

[220] *c. Change of internal structure.* We now come to changes of personality which imply neither enlargement nor diminution but a structural alteration. One of the most important forms is the phenomenon of possession: some content, an idea or a part of the personality, obtains mastery of the individual for one reason or another. The contents which thus take possession appear as peculiar convictions, idiosyncrasies,

stubborn plans, and so forth. As a rule, they are not open to correction. One has to be an especially good friend of the possessed person and willing to put up with almost anything if one is to attempt to deal with such a condition. I am not prepared to lay down any hard and fast line of demarcation between possession and paranoia. Possession can be formulated as identity of the ego-personality with a complex.¹⁴

[221] A common instance of this is identity with the persona, which is the individual's system of adaptation to, or the manner he assumes in dealing with, the world. Every calling or profession, for example, has its own characteristic persona. It is easy to study these things nowadays, when the photographs of public personalities so frequently appear in the press. A certain kind of behaviour is forced on them by the world, and professional people endeavour to come up to these expectations. Only, the danger is that they become identical with their personas—the professor with his textbook, the tenor with his voice. Then the damage is done; henceforth he lives exclusively against the background of his own biography. For by that time it is written: "... then he went to such and such a place and said this or that," etc. The garment of Deianeira has grown fast to his skin, and a desperate decision like that of Heracles is needed if he is to tear this Nessus shirt from his body and step into the consuming fire of the flame of immortality, in order to transform himself into what he really is. One could say, with a little exaggeration, that the persona is that which in reality one is not, but which oneself as well as others think one is.¹⁵ In any case the temptation to be what one seems to be is great, because the persona is usually rewarded in cash.

[222] There are still other factors which may take possession of the individual, one of the most important being the so-called "inferior function." This is not the place to enter into a detailed discussion of this problem;¹⁶ I should only like to point out that the inferior function is practically identical with the dark side of the human personality. The darkness which clings to every personality is the door into the unconscious and the gateway of dreams, from which those two twilight figures, the shadow and the anima, step into our nightly visions or, remaining invisible, take possession of our ego-consciousness. A man who is possessed by his shadow is always standing in his own light and falling into his own traps. Whenever possible, he prefers to make an unfavourable impression on others. In the long run luck is always against him, because he is living below his own level and at best only attains what does not suit him. And if there is no doorstep for him to stumble over, he manufactures one for himself and then fondly believes he has done something useful.

[223] Possession caused by the anima or animus presents a different picture. Above all, this transformation of personality gives prominence to those traits which are characteristic of the opposite sex; in man the feminine traits, and in woman the

masculine. In the state of possession both figures lose their charm and their values; they retain them only when they are turned away from the world, in the introverted state, when they serve as bridges to the unconscious. Turned towards the world, the anima is fickle, capricious, moody, uncontrolled and emotional, sometimes gifted with daemonic intuitions, ruthless, malicious, untruthful, bitchy, double-faced, and mystical.¹⁷ The animus is obstinate, harping on principles, laying down the law, dogmatic, world-reforming, theoretic, word-mongering, argumentative, and domineering.¹⁸ Both alike have bad taste: the anima surrounds herself with inferior people, and the animus lets himself be taken in by second-rate thinking.

[224] Another form of structural change concerns certain unusual observations about which I speak only with the utmost reserve. I refer to states of possession in which the possession is caused by something that could perhaps most fitly be described as an “ancestral soul,” by which I mean the soul of some definite forebear. For all practical purposes, such cases may be regarded as striking instances of identification with deceased persons. (Naturally, the phenomena of identity only occur after the “ancestor’s” death.) My attention was first drawn to such possibilities by Léon Daudet’s confused but ingenious book *L’Hérédo*. Daudet supposes that, in the structure of the personality, there are ancestral elements which under certain conditions may suddenly come to the fore. The individual is then precipitately thrust into an ancestral role. Now we know that ancestral roles play a very important part in primitive psychology. Not only are ancestral spirits supposed to be reincarnated in children, but an attempt is made to implant them into the child by naming him after an ancestor. So, too, primitives try to change themselves back into their ancestors by means of certain rites. I would mention especially the Australian conception of the *alcheringamijina*,¹⁹ ancestral souls, half man and half animal, whose reactivation through religious rites is of the greatest functional significance for the life of the tribe. Ideas of this sort, dating back to the Stone Age, were widely diffused, as may be seen from numerous other traces that can be found elsewhere. It is therefore not improbable that these primordial forms of experience may recur even today as cases of identification with ancestral souls, and I believe I have seen such cases.

[225] d. *Identification with a group*. We shall now discuss another form of transformation experience which I would call identification with a group. More accurately speaking, it is the identification of an individual with a number of people who, as a group, have a collective experience of transformation. This special psychological situation must not be confused with participation in a transformation rite, which, though performed before an audience, does not in any way depend upon group identity or necessarily give rise to it. To experience transformation in a group and to experience it in oneself are two totally different things. If any considerable group of persons are united and identified with one another by a particular frame of

mind, the resultant transformation experience bears only a very remote resemblance to the experience of individual transformation. A group experience takes place on a lower level of consciousness than the experience of an individual. This is due to the fact that, when many people gather together to share one common emotion, the total psyche emerging from the group is below the level of the individual psyche. If it is a very large group, the collective psyche will be more like the psyche of an animal, which is the reason why the ethical attitude of large organizations is always doubtful. The psychology of a large crowd inevitably sinks to the level of mob psychology.²⁰ If, therefore, I have a so-called collective experience as a member of a group, it takes place on a lower level of consciousness than if I had the experience by myself alone. That is why this group experience is very much more frequent than an individual experience of transformation. It is also much easier to achieve, because the presence of so many people together exerts great suggestive force. The individual in a crowd easily becomes the victim of his own suggestibility. It is only necessary for something to happen, for instance a proposal backed by the whole crowd, and we too are all for it, even if the proposal is immoral. In the crowd one feels no responsibility, but also no fear.

[226] Thus identification with the group is a simple and easy path to follow, but the group experience goes no deeper than the level of one's own mind in that state. It does work a change in you, but the change does not last. On the contrary, you must have continual recourse to mass intoxication in order to consolidate the experience and your belief in it. But as soon as you are removed from the crowd, you are a different person again and unable to reproduce the previous state of mind. The mass is swayed by *participation mystique*, which is nothing other than an unconscious identity. Supposing, for example, you go to the theatre: glance meets glance, everybody observes everybody else, so that all those who are present are caught up in an invisible web of mutual unconscious relationship. If this condition increases, one literally feels borne along by the universal wave of identity with others. It may be a pleasant feeling—one sheep among ten thousand! Again, if I feel that this crowd is a great and wonderful unity, I am a hero, exalted along with the group. When I am myself again, I discover that I am Mr. So-and-So, and that I live in such and such a street, on the third floor. I also find that the whole affair was really most delightful, and I hope it will take place again tomorrow so that I may once more feel myself to be a whole nation, which is much better than being just plain Mr. X. Since this is such an easy and convenient way of raising one's personality to a more exalted rank, mankind has always formed groups which made collective experiences of transformation—often of an ecstatic nature—possible. The regressive identification with lower and more primitive states of consciousness is invariably accompanied by

a heightened sense of life; hence the quickening effect of regressive identifications with half-animal ancestors²¹ in the Stone Age.

[227] The inevitable psychological regression within the group is partially counteracted by ritual, that is to say through a cult ceremony which makes the solemn performance of sacred events the centre of group activity and prevents the crowd from relapsing into unconscious instinctuality. By engaging the individual's interest and attention, the ritual makes it possible for him to have a comparatively individual experience even within the group and so to remain more or less conscious. But if there is no relation to a centre which expresses the unconscious through its symbolism, the mass psyche inevitably becomes the hypnotic focus of fascination, drawing everyone under its spell. That is why masses are always breeding-grounds of psychic epidemics,²² the events in Germany being a classic example of this.

[228] It will be objected to this essentially negative evaluation of mass psychology that there are also positive experiences, for instance a positive enthusiasm which spurs the individual to noble deeds, or an equally positive feeling of human solidarity. Facts of this kind should not be denied. The group can give the individual a courage, a bearing, and a dignity which may easily get lost in isolation. It can awaken within him the memory of being a man among men. But that does not prevent something else from being added which he would not possess as an individual. Such unearned gifts may seem a special favour of the moment, but in the long run there is a danger of the gift becoming a loss, since human nature has a weak habit of taking gifts for granted; in times of necessity we demand them as a right instead of making the effort to obtain them ourselves. One sees this, unfortunately, only too plainly in the tendency to demand everything from the State, without reflecting that the State consists of those very individuals who make the demands. The logical development of this tendency leads to Communism, where each individual enslaves the community and the latter is represented by a dictator, the slave-owner. All primitive tribes characterized by a communistic order of society also have a chieftain over them with unlimited powers. The Communist State is nothing other than an absolute monarchy in which there are no subjects, but only serfs.

[229] e. *Identification with a cult-hero.* Another important identification underlying the transformation experience is that with the god or hero who is transformed in the sacred ritual. Many cult ceremonies are expressly intended to bring this identity about, an obvious example being the *Metamorphosis* of Apuleius. The initiate, an ordinary human being, is elected to be Helios; he is crowned with a crown of palms and clad in the mystic mantle, whereupon the assembled crowd pays homage to him. The suggestion of the crowd brings about his identity with the god. The participation of the community can also take place in the following way: there is no apotheosis of

the initiate, but the sacred action is recited, and then, in the course of long periods of time, psychic changes gradually occur in the individual participants. The Osiris cult offers an excellent example of this. At first only Pharaoh participated in the transformation of the god, since he alone “had an Osiris”; but later the nobles of the Empire acquired an Osiris too, and finally this development culminated in the Christian idea that everyone has an immortal soul and shares directly in the Godhead. In Christianity the development was carried still further when the outer God or Christ gradually became the inner Christ of the individual believer, remaining one and the same though dwelling in many. This truth had already been anticipated by the psychology of totemism: many exemplars of the totem animal are killed and consumed during the totem meals, and yet it is only the One who is being eaten, just as there is only one Christ-child and one Santa Claus.

[230] In the mysteries, the individual undergoes an indirect transformation through his participation in the fate of the god. The transformation experience is also an indirect one in the Christian Church, inasmuch as it is brought about by participation in something acted or recited. Here the first form, the *dromenon*, is characteristic of the richly developed ritual of the Catholic Church; the second form, the recitation, the “Word” or “gospel,” is practised in the “preaching of the Word” in Protestantism.

[231] f. *Magical procedures*. A further form of transformation is achieved through a rite used directly for this purpose. Instead of the transformation experience coming to one through participation in the rite, the rite is used for the express purpose of effecting the transformation. It thus becomes a sort of technique to which one submits oneself. For instance, a man is ill and consequently needs to be “renewed.” The renewal must “happen” to him from outside, and to bring this about, he is pulled through a hole in the wall at the head of his sick-bed, and now he is reborn; or he is given another name and thereby another soul, and then the demons no longer recognize him; or he has to pass through a symbolical death; or, grotesquely enough, he is pulled through a leathern cow, which devours him, so to speak, in front and then expels him behind; or he undergoes an ablution or baptismal bath and miraculously changes into a semi-divine being with a new character and an altered metaphysical destiny.

[232] g. *Technical transformation*. Besides the use of the rite in the magical sense, there are still other special techniques in which, in addition to the grace inherent in the rite, the personal endeavour of the initiate is needed in order to achieve the intended purpose. It is a transformation experience induced by technical means. The exercises known in the East as yoga and in the West as *exercitia spiritualia* come into this category. These exercises represent special techniques prescribed in advance and intended to achieve a definite psychic effect, or at least to promote it. This is true

both of Eastern yoga and of the methods practised in the West.²³ They are, therefore, technical procedures in the fullest sense of the word; elaborations of the originally natural processes of transformation. The natural or spontaneous transformations that occurred earlier, before there were any historical examples to follow, were thus replaced by techniques designed to induce the transformation by imitating this same sequence of events. I will try to give an idea of the way such techniques may have originated by relating a fairy story:

[233] There was once a queer old man who lived in a cave, where he had sought refuge from the noise of the villages. He was reputed to be a sorcerer, and therefore he had disciples who hoped to learn the art of sorcery from him. But he himself was not thinking of any such thing. He was only seeking to know what it was that he did not know, but which, he felt certain, was always happening. After meditating for a very long time on that which is beyond meditation, he saw no other way of escape from his predicament than to take a piece of red chalk and draw all kinds of diagrams on the walls of his cave, in order to find out what that which he did not know might look like. After many attempts he hit on the circle. “That’s right,” he felt, “and now for a quadrangle inside it!”—which made it better still. His disciples were curious; but all they could make out was that the old man was up to something, and they would have given anything to know what he was doing. But when they asked him: “What are you doing there?” he made no reply. Then they discovered the diagrams on the wall and said: “That’s it!”—and they all imitated the diagrams. But in so doing they turned the whole process upside down, without noticing it: they anticipated the result in the hope of making the process repeat itself which had led to that result. This is how it happened then and how it still happens today.

[234] h. *Natural transformation (individuation)*. As I have pointed out, in addition to the technical processes of transformation there are also natural transformations. All ideas of rebirth are founded on this fact. Nature herself demands a death and a rebirth. As the alchemist Democritus says: “Nature rejoices in nature, nature subdues nature, nature rules over nature.” There are natural transformation processes which simply happen to us, whether we like it or not, and whether we know it or not. These processes develop considerable psychic effects, which would be sufficient in themselves to make any thoughtful person ask himself what really happened to him. Like the old man in our fairytale, he, too, will draw mandalas and seek shelter in their protective circle; in the perplexity and anguish of his self-chosen prison, which he had deemed a refuge, he is transformed into a being akin to the gods. Mandalas are birth-places, vessels of birth in the most literal sense, lotus-flowers in which a Buddha comes to life. Sitting in the lotus-seat, the yogi sees himself transfigured into an immortal.

[235] Natural transformation processes announce themselves mainly in dreams. Elsewhere²⁴ I have presented a series of dream-symbols of the process of individuation. They were dreams which without exception exhibited rebirth symbolism. In this particular case there was a long-drawn-out process of inner transformation and rebirth into another being. This “other being” is the other person in ourselves—that larger and greater personality maturing within us, whom we have already met as the inner friend of the soul. That is why we take comfort whenever we find the friend and companion depicted in a ritual, an example being the friendship between Mithras and the sun-god. This relationship is a mystery to the scientific intellect, because the intellect is accustomed to regard these things unsympathetically. But if it made allowance for feeling, we would discover that it is the friend whom the sun-god takes with him on his chariot, as shown in the monuments. It is the representation of a friendship between two men which is simply the outer reflection of an inner fact: it reveals our relationship to that inner friend of the soul into whom Nature herself would like to change us—that other person who we also are and yet can never attain to completely. We are that pair of Dioscuri, one of whom is mortal and the other immortal, and who, though always together, can never be made completely one. The transformation processes strive to approximate them to one another, but our consciousness is aware of resistances, because the other person seems strange and uncanny, and because we cannot get accustomed to the idea that we are not absolute master in our own house. We should prefer to be always “I” and nothing else. But we are confronted with that inner friend or foe, and whether he is our friend or our foe depends on ourselves.

[236] You need not be insane to hear his voice. On the contrary, it is the simplest and most natural thing imaginable. For instance, you can ask yourself a question to which “he” gives answer. The discussion is then carried on as in any other conversation. You can describe it as mere “associating” or “talking to oneself,” or as a “meditation” in the sense used by the old alchemists, who referred to their interlocutor as *aliquem alium internum*, ‘a certain other one, within.’²⁵ This form of colloquy with the friend of the soul was even admitted by Ignatius Loyola into the technique of his *Exercitia spiritualia*,²⁶ but with the limiting condition that only the person meditating is allowed to speak, whereas the inner responses are passed over as being merely human and therefore to be repudiated. This state of things has continued down to the present day. It is no longer a moral or metaphysical prejudice, but—what is much worse—an intellectual one. The “voice” is explained as nothing but “associating,” pursued in a witless way and running on and on without sense or purpose, like the works of a clock that has no dial. Or we say “It is only my own thoughts!” even if, on closer inspection, it should turn out that they are thoughts which we either reject or had never consciously thought at all—as if everything psychic that is glimpsed by the

ego had always formed part of it! Naturally this hybris serves the useful purpose of maintaining the supremacy of ego-consciousness, which must be safeguarded against dissolution into the unconscious. But it breaks down ignominiously if ever the unconscious should choose to let some nonsensical idea become an obsession or to produce other psychogenic symptoms, for which we would not like to accept responsibility on any account.

[237] Our attitude towards this inner voice alternates between two extremes: it is regarded either as undiluted nonsense or as the voice of God. It does not seem to occur to any one that there might be something valuable in between. The “other” may be just as one-sided in one way as the ego is in another. And yet the conflict between them may give rise to truth and meaning—but only if the ego is willing to grant the other its rightful personality. It has, of course, a personality anyway, just as have the voices of insane people; but a real colloquy becomes possible only when the ego acknowledges the existence of a partner to the discussion. This cannot be expected of everyone, because, after all, not everyone is a fit subject for *exercitia spiritualia*. Nor can it be called a colloquy if one speaks only to oneself or only addresses the other, as is the case with George Sand in her conversations with a “spiritual friend”:^{26a} for thirty pages she talks exclusively to herself while one waits in vain for the other to reply. The colloquy of the *exercitia* may be followed by that silent grace in which the modern doubter no longer believes. But what if it were the supplicated Christ himself who gave immediate answer in the words of the sinful human heart? What fearful abysses of doubt would then be opened? What madness should we not then have to fear? From this one can understand that images of the gods are better mute, and that ego-consciousness had better believe in its own supremacy rather than go on “associating.” One can also understand why that inner friend so often seems to be our enemy, and why he is so far off and his voice so low. For he who is near to him “is near to the fire.”

[238] Something of this sort may have been in the mind of the alchemist who wrote: “Choose for your Stone him through whom kings are honoured in their crowns, and through whom physicians heal their sick, for he is near to the fire.”²⁷ The alchemists projected the inner event into an outer figure, so for them the inner friend appeared in the form of the “Stone,” of which the *Tractatus aureus* says: “Understand, ye sons of the wise, what this exceeding precious Stone crieth out to you: Protect me and I will protect thee. Give me what is mine that I may help thee.”²⁸ To this a scholiast adds: “The seeker after truth hears both the Stone and the Philosopher speaking as if out of one mouth.”²⁹ The Philosopher is Hermes, and the Stone is identical with Mercurius, the Latin Hermes.³⁰ From the earliest times, Hermes was the mystagogue and psychopomp of the alchemists, their friend and counsellor, who leads them to the goal of their work. He is “like a teacher mediating between the stone and the

disciple.”³¹ To others the friend appears in the shape of Christ or Khidr or a visible or invisible guru, or some other personal guide or leader figure. In this case the colloquy is distinctly one-sided: there is no inner dialogue, but instead the response appears as the action of the other, i.e., as an outward event. The alchemists saw it in the transformation of the chemical substance. So if one of them sought transformation, he discovered it outside in matter, whose transformation cried out to him, as it were, “I am the transformation!” But some were clever enough to know, “It is my own transformation—not a personal transformation, but the transformation of what is mortal in me into what is immortal. It shakes off the mortal husk that I am and awakens to a life of its own; it mounts the sun-barge and may take me with it.”³²

[239] This is a very ancient idea. In Upper Egypt, near Aswan, I once saw an ancient Egyptian tomb that had just been opened. Just behind the entrance-door was a little basket made of reeds, containing the withered body of a new-born infant, wrapped in rags. Evidently the wife of one of the workmen had hastily laid the body of her dead child in the nobleman’s tomb at the last moment, hoping that, when he entered the sun-barge in order to rise anew, it might share in his salvation, because it had been buried in the holy precinct within reach of divine grace.

3. A TYPICAL SET OF SYMBOLS ILLUSTRATING THE PROCESS OF TRANSFORMATION

[240] I have chosen as an example a figure which plays a great role in Islamic mysticism, namely Khidr, “the Verdant One.” He appears in the Eighteenth Sura of the Koran, entitled “The Cave.”¹ This entire Sura is taken up with a rebirth mystery. The cave is the place of rebirth, that secret cavity in which one is shut up in order to be incubated and renewed. The Koran says of it: “You might have seen the rising sun decline to the right of their cavern, and as it set, go past them on the left, while they [the Seven Sleepers] stayed in the middle.” The “middle” is the centre where the jewel reposes, where the incubation or the sacrificial rite or the transformation takes place. The most beautiful development of this symbolism is to be found on Mithraic altarpieces² and in alchemical pictures of the transformative substance,³ which is always shown between sun and moon. Representations of the crucifixion frequently follow the same type, and a similar symbolical arrangement is also found in the transformation or healing ceremonies of the Navahos.⁴ Just such a place of the centre or of transformation is the cave in which those seven had gone to sleep, little thinking that they would experience there a prolongation of life verging on immortality. When they awoke, they had slept 309 years.

[241] The legend has the following meaning: Anyone who gets into that cave, that is to say into the cave which everyone has in himself, or into the darkness that lies behind consciousness, will find himself involved in an—at first—unconscious process of transformation. By penetrating into the unconscious he makes a connection with his unconscious contents. This may result in a momentous change of personality in the positive or negative sense. The transformation is often interpreted as a prolongation of the natural span of life or as an earnest of immortality. The former is the case with many alchemists, notably Paracelsus (in his treatise *De vita longa*⁵), and the latter is exemplified in the Eleusinian mysteries.

[242] Those seven sleepers indicate by their sacred number⁶ that they are gods,⁷ who are transformed during sleep and thereby enjoy eternal youth. This helps us to understand at the outset that we are dealing with a mystery legend. The fate of the numinous figures recorded in it grips the hearer, because the story gives expression to parallel processes in his own unconscious which in that way are integrated with consciousness again. The repristination of the original state is tantamount to attaining once more the freshness of youth.

[243] The story of the sleepers is followed by some moral observations which appear to have no connection with it. But this apparent irrelevance is deceptive. In reality, these edifying comments are just what are needed by those who cannot be reborn themselves and have to be content with moral conduct, that is to say with adherence to the law. Very often behaviour prescribed by rule is a substitute for spiritual transformation.⁸ These edifying observations are then followed by the story of Moses and his servant Joshua ben Nun:

And Moses said to his servant: "I will not cease from my wanderings until I have reached the place where the two seas meet, even though I journey for eighty years."

But when they had reached the place where the two seas meet, they forgot their fish, and it took its way through a stream to the sea.

And when they had journeyed past this place, Moses said to his servant: "Bring us our breakfast, for we are weary from this journey."

But the other replied: "See what has befallen me! When we were resting there by the rock, I forgot the fish. Only Satan can have put it out of my mind, and in wondrous fashion it took its way to the sea."

Then Moses said: "That is the place we seek." And they went back the way they had come. And they found one of Our servants, whom We had endowed with Our grace and Our wisdom. Moses said to him: "Shall I follow you, that you may teach me for my guidance some of the wisdom you have learnt?"

But he answered: "You will not bear with me, for how should you bear patiently with things you cannot comprehend?"

Moses said: "If Allah wills, you shall find me patient; I shall not in anything disobey you."

He said: "If you are bent on following me, you must ask no question about anything till I myself speak to you concerning it."

The two set forth, but as soon as they embarked, Moses' companion bored a hole in the bottom of the ship.

"A strange thing you have done!" exclaimed Moses. "Is it to drown her passengers that you have bored a hole in her?"

"Did I not tell you," he replied, "that you would not bear with me?"

"Pardon my forgetfulness," said Moses. "Do not be angry with me on this account."

They journeyed on until they fell in with a certain youth. Moses' companion slew him, and Moses said: "You have killed an innocent man who has done no harm. Surely you have committed a wicked crime."

"Did I not tell you," he replied, "that you would not bear with me?"

Moses said: "If ever I question you again, abandon me; for then I should deserve it."

They travelled on until they came to a certain city. They asked the people for some food, but the people declined to receive them as their guests. There they found a wall on the point of falling down. The other raised it up, and Moses said: "Had you wished, you could have demanded payment for your labours."

"Now the time has arrived when we must part," said the other. "But first I will explain to you those acts of mine which you could not bear with in patience.

"Know that the ship belonged to some poor fishermen. I damaged it because in their rear was a king who was taking every ship by force.

"As for the youth, his parents both are true believers, and we feared lest he should plague them with his wickedness and unbelief. It was our wish that their Lord should grant them another in his place, a son more righteous and more filial.

"As for the wall, it belonged to two orphan boys in the city whose father was an honest man. Beneath it their treasure is buried. Your Lord decreed in His mercy that they should dig out their treasure when they grew to manhood. What I did was not done by caprice. That is the meaning of the things you could not bear with in patience."

[244] This story is an amplification and elucidation of the legend of the seven sleepers and the problem of rebirth. Moses is the man who seeks, the man on the "quest." On this pilgrimage he is accompanied by his "shadow," the "servant" or "lower" man (*pneumatikos* and *sarkikos* in two individuals). Joshua is the son of Nun, which is a name for "fish,"⁹ suggesting that Joshua had his origin in the depths of the waters, in the darkness of the shadow-world. The critical place is reached "where the two seas meet," which is interpreted as the isthmus of Suez, where the Western and the Eastern seas come close together. In other words, it is that "place of the middle" which we have already met in the symbolic preamble, but whose significance was not recognized at first by the man and his shadow. They had "forgotten their fish," the humble source of nourishment. The fish refers to Nun, the father of the shadow, of the carnal man, who comes from the dark world of the Creator. For the fish came alive again and leapt out of the basket in order to find its way back to its homeland, the sea. In other words, the animal ancestor and creator of life separates himself from the conscious man, an event which amounts to loss of the instinctive psyche. This process is a symptom of dissociation well known in the psychopathology of the neuroses; it is always connected with one-sidedness of the conscious attitude. In view of the fact, however, that neurotic phenomena are nothing but exaggerations of normal processes, it is not to be wondered at that very similar phenomena can also be found within the scope of the normal. It is a question of that well-known "loss of soul" among primitives, as described above in the section on diminution of the personality; in scientific language, an *abaissement du niveau mental*.

[245] Moses and his servant soon notice what has happened. Moses had sat down, “worn out” and hungry. Evidently he had a feeling of insufficiency, for which a physiological explanation is given. Fatigue is one of the most regular symptoms of loss of energy or libido. The entire process represents something very typical, namely the *failure to recognize a moment of crucial importance*, a motif which we encounter in a great variety of mythical forms. Moses realizes that he has unconsciously found the source of life and then lost it again, which we might well regard as a remarkable intuition. The fish they had intended to eat is a content of the unconscious, by which the connection with the origin is re-established. He is the reborn one, who has awakened to new life. This came to pass, as the commentaries say, through the contact with the water of life: by slipping back into the sea, the fish once more becomes a content of the unconscious, and its offspring are distinguished by having only one eye and half a head.¹⁰

[246] The alchemists, too, speak of a strange fish in the sea, the “round fish lacking bones and skin,”¹¹ which symbolizes the “round element,” the germ of the “animate stone,” of the *filius philosophorum*. The water of life has its parallel in the *aqua permanens* of alchemy. This water is extolled as “vivifying,” besides which it has the property of dissolving all solids and coagulating all liquids. The Koran commentaries state that, on the spot where the fish disappeared, the sea was turned to solid ground, whereon the tracks of the fish could still be seen.¹² On the island thus formed Khidr was sitting, in the place of the middle. A mystical interpretation says that he was sitting “on a throne consisting of light, between the upper and the lower sea,”¹³ again in the middle position. The appearance of Khidr seems to be mysteriously connected with the disappearance of the fish. It looks almost as if he himself had been the fish. This conjecture is supported by the fact that the commentaries relegate the source of life to the “place of darkness.”¹⁴ The depths of the sea are dark (*mare tenebrositatis*). The darkness has its parallel in the alchemical *nigredo*, which occurs after the *coniunctio*, when the female takes the male into herself.¹⁵ From the *nigredo* issues the Stone, the symbol of the immortal self; moreover, its first appearance is likened to “fish eyes.”¹⁶

[247] Khidr may well be a symbol of the self. His qualities signalize him as such: he is said to have been born in a cave, i.e., in darkness. He is the “Long-lived One,” who continually renews himself, like Elijah. Like Osiris, he is dismembered at the end of time, by Antichrist, but is able to restore himself to life. He is analogous to the Second Adam, with whom the reanimated fish is identified;¹⁷ he is a counsellor, a Paraclete, “Brother Khidr.” Anyway Moses accepts him as a higher consciousness and looks up to him for instruction. Then follow those incomprehensible deeds which show how ego-consciousness reacts to the superior guidance of the self through the twists and turns of fate. To the initiate who is capable of transformation it is a

comforting tale; to the obedient believer, an exhortation not to murmur against Allah's incomprehensible omnipotence. Khidr symbolizes not only the higher wisdom but also a way of acting which is in accord with this wisdom and transcends reason.

[248] Anyone hearing such a mystery tale will recognize himself in the questing Moses and the forgetful Joshua, and the tale shows him how the immortality-bringing rebirth comes about. Characteristically, it is neither Moses nor Joshua who is transformed, but the forgotten fish. Where the fish disappears, there is the birthplace of Khidr. The immortal being issues from something humble and forgotten, indeed, from a wholly improbable source. This is the familiar motif of the hero's birth and need not be documented here.¹⁸ Anyone who knows the Bible will think of Isaiah 53:2ff., where the "servant of God" is described, and of the gospel stories of the Nativity. The nourishing character of the transformative substance or deity is borne out by numerous cult-legends: Christ is the bread, Osiris the wheat, Mondamin the maize,¹⁹ etc. These symbols coincide with a psychic fact which obviously, from the point of view of consciousness, has the significance merely of something to be assimilated, but whose real nature is overlooked. The fish symbol shows immediately what this is: it is the "nourishing" influence of unconscious contents, which maintain the vitality of consciousness by a continual influx of energy; for consciousness does not produce its energy by itself. What is capable of transformation is just this root of consciousness, which—inconspicuous and almost invisible (i.e., unconscious) though it is—provides consciousness with all its energy. Since the unconscious gives us the feeling that it is something alien, a non-ego, it is quite natural that it should be symbolized by an alien figure. Thus, on the one hand, it is the most insignificant of things, while on the other, so far as it potentially contains that "round" wholeness which consciousness lacks, it is the most significant of all. This "round" thing is the great treasure that lies hidden in the cave of the unconscious, and its personification is this personal being who represents the higher unity of conscious and unconscious. It is a figure comparable to Hiranyagarbha, Purusha, Atman, and the mystic Buddha. For this reason I have elected to call it the "self," by which I understand a psychic totality and at the same time a centre, neither of which coincides with the ego but includes it, just as a larger circle encloses a smaller one.

[249] The intuition of immortality which makes itself felt during the transformation is connected with the peculiar nature of the unconscious. It is, in a sense, non-spatial and non-temporal. The empirical proof of this is the occurrence of so-called telepathic phenomena, which are still denied by hypersceptical critics, although in reality they are much more common than is generally supposed.²⁰ The feeling of immortality, it seems to me, has its origin in a peculiar feeling of extension in space

and time, and I am inclined to regard the deification rites in the mysteries as a projection of this same psychic phenomenon.

[250] The character of the self as a personality comes out very plainly in the Khidr legend. This feature is most strikingly expressed in the non-Koranic stories about Khidr, of which Vollers gives some telling examples. During my trip through Kenya, the headman of our safari was a Somali who had been brought up in the Sufi faith. To him Khidr was in every way a living person, and he assured me that I might at any time meet Khidr, because I was, as he put it, a *M'tu-ya-kitabu*,²¹ a 'man of the Book,' meaning the Koran. He had gathered from our talks that I knew the Koran better than he did himself (which was, by the way, not saying a great deal). For this reason he regarded me as "islamu." He told me I might meet Khidr in the street in the shape of a man, or he might appear to me during the night as a pure white light, or—he smilingly picked a blade of grass—the Verdant One might even look like that. He said he himself had once been comforted and helped by Khidr, when he could not find a job after the war and was suffering want. One night, while he slept, he dreamt he saw a bright white light near the door and he knew it was Khidr. Quickly leaping to his feet (in the dream), he reverentially saluted him with the words *salem aleikum*, 'peace be with you,' and then he knew that his wish would be fulfilled. He added that a few days later he was offered the post as headman of a safari by a firm of outfitters in Nairobi.

[251] This shows that, even in our own day, Khidr still lives on in the religion of the people, as friend, adviser, comforter, and teacher of revealed wisdom. The position assigned to him by dogma was, according to my Somali, that of *maleika kwanza-yamungu*, 'First Angel of God'—a sort of "Angel of the Face," an *angelos* in the true sense of the word, a messenger.

[252] Khidr's character as a friend explains the subsequent part of the Eighteenth Sura, which reads as follows:

They will ask you about Dhulqarnein. Say: "I will give you an account of him.

"We made him mighty in the land and gave him means to achieve all things. He journeyed on a certain road until he reached the West and saw the sun setting in a pool of black mud. Hard by he found a certain people.

"'Dhulqarnein,' We said, 'you must either punish them or show them kindness.'

"He replied: 'The wicked We shall surely punish. Then they shall return to their Lord and be sternly punished by Him. As for those that have faith and do good works, we shall bestow on them a rich reward and deal indulgently with them.'

"He then journeyed along another road until he reached the East and saw the sun rising upon a people whom We had utterly exposed to its flaming rays. So he did; and

We had full knowledge of all the forces at his command.

“Then he followed yet another route until he came between the Two Mountains and found a people who could barely understand a word. ‘Dhulqarnein,’ they said, ‘Gog and Magog are ravaging this land. Build us a rampart against them and we will pay you tribute.’

“He replied: ‘The power which my Lord has given me is better than any tribute. Lend me a force of labourers, and I will raise a rampart between you and them. Come, bring me blocks of iron.’

“He dammed up the valley between the Two Mountains, and said: ‘Ply your bellows.’ And when the iron blocks were red with heat, he said: ‘Bring me molten brass to pour on them.’

“Gog and Magog could not scale it, nor could they dig their way through it. He said: ‘This is a blessing from my Lord. But when my Lord’s promise is fulfilled, He will level it to dust. The promise of my Lord is true.’”

On that day We will let them come in tumultuous throngs. The Trumpet shall be sounded and We will gather them all together.

On that day Hell shall be laid bare before the unbelievers, who have turned a blind eye to My admonition and a deaf ear to My warning.

[253] We see here another instance of that lack of coherence which is not uncommon in the Koran. How are we to account for this apparently abrupt transition to Dhulqarnein, the Two-horned One, that is to say, Alexander the Great? Apart from the unheard-of anachronism (Mohammed’s chronology in general leaves much to be desired), one does not quite understand why Alexander is brought in here at all. But it has to be borne in mind that Khidr and Dhulqarnein are *the* great pair of friends, altogether comparable to the Dioscuri, as Vollers rightly emphasizes. The psychological connection may therefore be presumed to be as follows: Moses has had a profoundly moving experience of the self, which brought unconscious processes before his eyes with overwhelming clarity. Afterwards, when he comes to his people, the Jews, who are counted among the infidels, and wants to tell them about his experience, he prefers to use the form of a mystery legend. Instead of speaking about himself, he speaks about the Two-horned One. Since Moses himself is also “horned,” the substitution of Dhulqarnein appears plausible. Then he has to relate the history of this friendship and describe how Khidr helped his friend. Dhulqarnein makes his way to the setting of the sun and then to its rising. That is, he describes the way of the renewal of the sun, through death and darkness to a new resurrection. All this again indicates that it is Khidr who not only stands by man in his bodily needs but also helps him to attain rebirth.²² The Koran, it is true, makes no distinction in this narrative between Allah, who is speaking in the first person plural, and Khidr. But it

is clear that this section is simply a continuation of the helpful actions described previously, from which it is evident that Khidr is a symbolization or “incarnation” of Allah. The friendship between Khidr and Alexander plays an especially prominent part in the commentaries, as does also the connection with the prophet Elijah. Vollers does not hesitate to extend the comparison to that other pair of friends, Gilgamesh and Enkidu.²³

[254] To sum up, then: Moses has to recount the deeds of the two friends to his people in the manner of an impersonal mystery legend. Psychologically this means that the transformation has to be described or felt as happening to the “other.” Although it is Moses himself who, in his experience with Khidr, stands in Dhulqarnein’s place, he has to name the latter instead of himself in telling the story. This can hardly be accidental, for the great psychic danger which is always connected with individuation, or the development of the self, lies in the identification of ego-consciousness with the self. This produces an inflation which threatens consciousness with dissolution. All the more primitive or older cultures show a fine sense for the “perils of the soul” and for the dangerousness and general unreliability of the gods. That is, they have not yet lost their psychic instinct for the barely perceptible and yet vital processes going on in the background, which can hardly be said of our modern culture. To be sure, we have before our eyes as a warning just such a pair of friends distorted by inflation—Nietzsche and Zarathustra—but the warning has not been heeded. And what are we to make of Faust and Mephistopheles? The Faustian hybris is already the first step towards madness. The fact that the unimpressive beginning of the transformation in *Faust* is a dog and not an edible fish, and that the transformed figure is the devil and not a wise friend, “endowed with Our grace and Our wisdom,” might, I am inclined to think, offer a key to our understanding of the highly enigmatic Germanic soul.

[255] Without entering into other details of the text, I would like to draw attention to one more point: the building of the rampart against Gog and Magog (also known as Yajuj and Majuj). This motif is a repetition of Khidr’s last deed in the previous episode, the rebuilding of the town wall. But this time the wall is to be a strong defence against Gog and Magog. The passage may possibly refer to Revelation 20:7f. (AV):

And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four quarters of the earth, Gog and Magog, to gather them together for battle: the number of whom is as the sand of the sea. And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city.

[256] Here Dhulqarnein takes over the role of Khidr and builds an unscalable rampart for the people living “between Two Mountains.” This is obviously the same place in the middle which is to be protected against Gog and Magog, the featureless, hostile masses. Psychologically, it is again a question of the self, enthroned in the place of the middle, and referred to in Revelation as the beloved city (Jerusalem, the centre of the earth). The self is the hero, threatened already at birth by envious collective forces; the jewel that is coveted by all and arouses jealous strife; and finally the god who is dismembered by the old, evil power of darkness. In its psychological meaning, individuation is an *opus contra naturam*, which creates a *horror vacui* in the collective layer and is only too likely to collapse under the impact of the collective forces of the psyche. The mystery legend of the two helpful friends promises protection²⁴ to him who has found the jewel on his quest. But there will come a time when, in accordance with Allah’s providence, even the iron rampart will fall to pieces, namely, on the day when the world comes to an end, or psychologically speaking, when individual consciousness is extinguished in the waters of darkness, that is to say when a *subjective* end of the world is experienced. By this is meant the moment when consciousness sinks back into the darkness from which it originally emerged, like Khidr’s island: the moment of death.

[257] The legend then continues along eschatological lines: on that day (the day of the Last Judgment) the light returns to eternal light and the darkness to eternal darkness. The opposites are separated and a timeless state of permanence sets in, which, because of the absolute separation of opposites, is nevertheless one of supreme tension and therefore corresponds to the improbable initial state. This is in contrast to the view which sees the end as a *complexio oppositorum*.

[258] With this prospect of eternity, Paradise, and Hell the Eighteenth Sura comes to an end. In spite of its apparently disconnected and allusive character, it gives an almost perfect picture of a psychic transformation or rebirth which today, with our greater psychological insight, we would recognize as an individuation process. Because of the great age of the legend and the Islamic prophet’s primitive cast of mind, the process takes place entirely outside the sphere of consciousness and is projected in the form of a mystery legend of a friend or a pair of friends and the deeds they perform. That is why it is all so allusive and lacking in logical sequence. Nevertheless, the legend expresses the obscure archetype of transformation so admirably that the passionate religious *eros* of the Arab finds it completely satisfying. It is for this reason that the figure of Khidr plays such an important part in Islamic mysticism.

IV

THE PSYCHOLOGY OF THE CHILD ARCHETYPE

THE PSYCHOLOGICAL ASPECTS OF THE KORE

[These two studies were first published, under the respective titles “Zur Psychologie des Kind-Archetypus” and “Zum psychologischen Aspekt der Kore-Figur,” in two small volumes: *Das göttliche Kind* (Albae Vigiliae VI/VII, Amsterdam and Leipzig, 1940) and *Das göttliche Mädchen* (same series, VIII/IX, 1941). Each volume contained a companion essay by K. Kerényi. The two volumes were united, with additional material by Professor Kerényi, under the title *Einführung in das Wesen der Mythologie* (Amsterdam, Leipzig, and Zurich, 1941). This combined volume was translated by R. F. C. Hull as *Essays on a Science of Mythology* (Bollingen Series XXII; New York, 1949), of which the London (1950) edition was titled *Introduction to a Science of Mythology*; the text of the two studies here presented is a revision of that of 1949/50. The complete German volume was published in a new edition in 1951. In 1963, the English version appeared in Harper Torchbooks (New York; paperback), with the present Jung translation and a revised Kerényi translation.—EDITORS.]

THE PSYCHOLOGY OF THE CHILD ARCHETYPE

I. INTRODUCTION

[259] The author of the companion essay¹ on the mythology of the “child” or the child god has asked me for a psychological commentary on the subject of his investigations. I am glad to accede to his request, although the undertaking seems to me no small venture in view of the great significance of the child motif in mythology. Kerényi himself has enlarged upon the occurrence of this motif in Greece and Rome, with parallels drawn from Indian, Finnish, ‘and other sources, thus indicating that the presentation of the theme would allow of yet further extensions. Though a comprehensive description would contribute nothing decisive in principle, it would nevertheless produce an overwhelming impression of the world-wide incidence and frequency of the motif. The customary treatment of mythological motifs so far in separate departments of science, such as philology, ethnology, the history of civilization, and comparative religion, was not exactly a help to us in recognizing their universality; and the psychological problems raised by this universality could easily be shelved by hypotheses of migration. Consequently Adolf Bastian’s² ideas met with little success in their day. Even then there was sufficient empirical material available to permit far-reaching psychological conclusions, but the necessary premises were lacking. Although the psychological knowledge of that time included myth-formation in its province—witness Wundt’s *Völkerpsychologie*—it was not in a position to demonstrate this same process as a living function actually present in the psyche of civilized man, any more than it could understand mythological motifs as structural elements of the psyche. True to its history, when psychology was metaphysics first of all, then the study of the senses and their functions, and then of the conscious mind and *its* functions, psychology identified its proper subject with the conscious psyche and its contents and thus completely overlooked the existence of a nonconscious psyche. Although various philosophers, among them Leibniz, Kant, and Schelling, had already pointed very clearly to the problem of the dark side of the psyche, it was a physician who felt impelled, from his scientific and medical experience, to point to the *unconscious* as the essential basis of the psyche. This was C. G. Carus,³ the authority whom Eduard von Hartmann followed. In recent times it was, once again, medical psychology that approached the problem of the unconscious without philosophical preconceptions. It became clear from many separate

investigations that the psychopathology of the neuroses and of many psychoses cannot dispense with the hypothesis of a dark side of the psyche, i.e., the unconscious. It is the same with the psychology of dreams, which is really the *terra intermedia* between normal and pathological psychology. In the dream, as in the products of psychoses, there are numberless interconnections to which one can find parallels only in mythological associations of ideas (or perhaps in certain poetic creations which are often characterized by a borrowing, not always conscious, from myths). Had thorough investigation shown that in the majority of such cases it was simply a matter of forgotten knowledge, the physician would not have gone to the trouble of making extensive researches into individual and collective parallels. But, in point of fact, typical mythologems were observed among individuals to whom all knowledge of this kind was absolutely out of the question, and where indirect derivation from religious ideas that might have been known to them, or from popular figures of speech, was impossible.⁴ Such conclusions forced us to assume that we must be dealing with “autochthonous” revivals independent of all tradition, and, consequently, that “myth-forming” structural elements must be present in the unconscious psyche.⁵

[260] These products are never (or at least very seldom) myths with a definite form, but rather mythological components which, because of their typical nature, we can call “motifs,” “primordial images,” types or—as I have named them—*archetypes*. The child archetype is an excellent example. Today we can hazard the formula that the archetypes appear in myths and fairytales just as they do in dreams and in the products of psychotic fantasy. The medium in which they are embedded is, in the former case, an ordered and for the most part immediately understandable context, but in the latter case a generally unintelligible, irrational, not to say delirious sequence of images which nonetheless does not lack a certain hidden coherence. In the individual, the archetypes appear as involuntary manifestations of unconscious processes whose existence and meaning can only be inferred, whereas the myth deals with traditional forms of incalculable age. They hark back to a prehistoric world whose spiritual preconceptions and general conditions we can still observe today among existing primitives. Myths on this level are as a rule tribal history handed down from generation to generation by word of mouth. Primitive mentality differs from the civilized chiefly in that the conscious mind is far less developed in scope and intensity. Functions such as thinking, willing, etc. are not yet differentiated; they are pre-conscious, and in the case of thinking, for instance, this shows itself in the circumstance that the primitive does not think *consciously*, but that thoughts *appear*. The primitive cannot assert that he thinks; it is rather that “something thinks in him.” The spontaneity of the act of thinking does not lie, causally, in his conscious mind, but in his unconscious. Moreover, he is incapable of any conscious effort of will; he

must put himself beforehand into the “mood of willing,” or let himself be put—hence his *rites d’entrée et de sortie*. His consciousness is menaced by an almighty unconscious: hence his fear of magical influences which may cross his path at any moment; and for this reason, too, he is surrounded by unknown forces and must adjust himself to them as best he can. Owing to the chronic twilight state of his consciousness, it is often next to impossible to find out whether he merely dreamed something or whether he really experienced it. The spontaneous manifestation of the unconscious and its archetypes intrudes everywhere into his conscious mind, and the mythical world of his ancestors—for instance, the *alchera* or *bugari* of the Australian aborigines—is a reality equal if not superior to the material world.⁶ It is not the world as we know it that speaks out of his unconscious, but the unknown world of the psyche, of which we know that it mirrors our empirical world only in part, and that, for the other part, it moulds this empirical world in accordance with its own psychic assumptions. The archetype does not proceed from physical facts, but describes how the psyche experiences the physical fact, and in so doing the psyche often behaves so autocratically that it denies tangible reality or makes statements that fly in the face of it.

[261] The primitive mentality does not *invent* myths, it *experiences* them. Myths are original revelations of the preconscious psyche, involuntary statements about unconscious psychic happenings, and anything but allegories of physical processes.⁷ Such allegories would be an idle amusement for an unscientific intellect. Myths, on the contrary, have a vital meaning. Not merely do they represent, they *are* the psychic life of the primitive tribe, which immediately falls to pieces and decays when it loses its mythological heritage, like a man who has lost his soul. A tribe’s mythology is its living religion, whose loss is always and everywhere, even among the civilized, a moral catastrophe. But religion is a vital link with psychic processes independent of and beyond consciousness, in the dark hinterland of the psyche. Many of these unconscious processes may be indirectly occasioned by consciousness, but never by conscious choice. Others appear to arise spontaneously, that is to say, from no discernible or demonstrable conscious cause.

[262] Modern psychology treats the products of unconscious fantasy-activity as self-portraits of what is going on in the unconscious, or as statements of the unconscious psyche about itself. They fall into two categories. First, fantasies (including dreams) of a personal character, which go back unquestionably to personal experiences, things forgotten or repressed, and can thus be completely explained by individual anamnesis. Second, fantasies (including dreams) of an impersonal character, which cannot be reduced to experiences in the individual’s past, and thus cannot be explained as something individually acquired. These fantasy-images undoubtedly have their closest analogues in mythological types. We must therefore assume that

they correspond to certain *collective* (and not personal) structural elements of the human psyche in general, and, like the morphological elements of the human body, are *inherited*. Although tradition and transmission by migration certainly play a part, there are, as we have said, very many cases that cannot be accounted for in this way and drive us to the hypothesis of “autochthonous revival.” These cases are so numerous that we are obliged to assume the existence of a collective psychic substratum. I have called this the *collective unconscious*.

[263] The products of this second category resemble the types of structures to be met with in myth and fairytale so much that we must regard them as related. It is therefore wholly within the realm of possibility that both, the mythological types as well as the individual types, arise under quite similar conditions. As already mentioned, the fantasy-products of the second category (as also those of the first) arise in a state of reduced intensity of consciousness (in dreams, delirium, reveries, visions, etc.). In all these states the check put upon unconscious contents by the concentration of the conscious mind ceases, so that the hitherto unconscious material streams, as though from opened side-slucices, into the field of consciousness. This mode of origination is the general rule.⁸

[264] Reduced intensity of consciousness and absence of concentration and attention, Janet’s *abaissement du niveau mental*, correspond pretty exactly to the primitive state of consciousness in which, we must suppose, myths were originally formed. It is therefore exceedingly probable that the mythological archetypes, too, made their appearance in much the same manner as the manifestations of archetypal structures among individuals today.

[265] The methodological principle in accordance with which psychology treats the products of the unconscious is this: Contents of an archetypal character are manifestations of processes in the collective unconscious. Hence they do not refer to anything that is or has been conscious, but to something essentially unconscious. In the last analysis, therefore, it is impossible to say what they refer to. Every interpretation necessarily remains an “as-if.” The ultimate core of meaning may be circumscribed, but not described. Even so, the bare circumscription denotes an essential step forward in our knowledge of the pre-conscious structure of the psyche, which was already in existence when there was as yet no unity of personality (even today the primitive is not securely possessed of it) and no consciousness at all. We can also observe this pre-conscious state in early childhood, and as a matter of fact it is the dreams of this early period that not infrequently bring extremely remarkable archetypal contents to light.⁹

[266] If, then, we proceed in accordance with the above principle, there is no longer any question whether a myth refers to the sun or the moon, the father or the mother,

sexuality or fire or water; all it does is to circumscribe and give an approximate description of an *unconscious core of meaning*. The ultimate meaning of this nucleus was never conscious and never will be. It was, and still is, only interpreted, and every interpretation that comes anywhere near the hidden sense (or, from the point of view of scientific intellect, nonsense, which comes to the same thing) has always, right from the beginning, laid claim not only to absolute truth and validity but to instant reverence and religious devotion. Archetypes were, and still are, living psychic forces that demand to be taken seriously, and they have a strange way of making sure of their effect. Always they were the bringers of protection and salvation, and their violation has as its consequence the “perils of the soul” known to us from the psychology of primitives. Moreover, they are the unfailing causes of neurotic and even psychotic disorders, behaving exactly like neglected or maltreated physical organs or organic functional systems.

[267] An archetypal content expresses itself, first and foremost, in metaphors. If such a content should speak of the sun and identify with it the lion, the king, the hoard of gold guarded by the dragon, or the power that makes for the life and health of man, it is neither the one thing nor the other, but the unknown third thing that finds more or less adequate expression in all these similes, yet—to the perpetual vexation of the intellect—remains unknown and not to be fitted into a formula. For this reason the scientific intellect is always inclined to put on airs of enlightenment in the hope of banishing the spectre once and for all. Whether its endeavours were called euhemerism, or Christian apologetics, or Enlightenment in the narrow sense, or Positivism, there was always a myth hiding behind it, in new and disconcerting garb, which then, following the ancient and venerable pattern, gave itself out as ultimate truth. In reality we can never legitimately cut loose from our archetypal foundations unless we are prepared to pay the price of a neurosis, any more than we can rid ourselves of our body and its organs without committing suicide. If we cannot deny the archetypes or otherwise neutralize them, we are confronted, at every new stage in the differentiation of consciousness to which civilization attains, with the task of finding a new *interpretation* appropriate to this stage, in order to connect the life of the past that still exists in us with the life of the present, which threatens to slip away from it. If this link-up does not take place, a kind of rootless consciousness comes into being no longer oriented to the past, a consciousness which succumbs helplessly to all manner of suggestions and, in practice, is susceptible to psychic epidemics. With the loss of the past, now become “insignificant,” devalued, and incapable of revaluation, the saviour is lost too, for the saviour is either the insignificant thing itself or else arises out of it. Over and over again in the “metamorphosis of the gods” he rises up as the prophet or first-born of a new generation and appears unexpectedly

in the unlikeliest places (sprung from a stone, tree, furrow, water, etc.) and in ambiguous form (Tom Thumb, dwarf, child, animal, and so on).

[268] This archetype of the “child god” is extremely widespread and intimately bound up with all the other mythological aspects of the child motif. It is hardly necessary to allude to the still living “Christ-child,” who, in the legend of Saint Christopher, also has the typical feature of being “smaller than small and bigger than big.” In folklore the child motif appears in the guise of the *dwarf* or the *elf* as personifications of the hidden forces of nature. To this sphere also belongs the little metal man of late antiquity, the *άνθρωπάριον*,¹⁰ who, till far into the Middle Ages, on the one hand inhabited the mine-shafts,¹¹ and on the other represented the alchemical metals,¹² above all Mercurius reborn in perfect form (as the hermaphrodite, *filius sapientiae*, or *in-fans noster*).¹³ Thanks to the religious interpretation of the “child,” a fair amount of evidence has come down to us from the Middle Ages showing that the “child” was not merely a traditional figure, but a vision spontaneously experienced (as a so-called “irruption of the unconscious”). I would mention Meister Eckhart’s vision of the “naked boy” and the dream of Brother Eustachius.¹⁴ Interesting accounts of these spontaneous experiences are also to be found in English ghost-stories, where we read of the vision of a “Radiant Boy” said to have been seen in a place where there are Roman remains.¹⁵ This apparition was supposed to be of evil omen. It almost looks as though we were dealing with the figure of a *puer aeternus* who had become inauspicious through “metamorphosis,” or in other words had shared the fate of the classical and the Germanic gods, who have all become bugbears. The mystical character of the experience is also confirmed in [Part II](#) of Goethe’s *Faust*, where Faust himself is transformed into a boy and admitted into the “choir of blessed youths,” this being the “larval stage” of Doctor Marianus.¹⁶

[269] In the strange tale called *Das Reich ohne Raum*, by Bruno Goetz, a *puer aeternus* named Fo (= Buddha) appears with whole troops of “unholy” boys of evil significance. (Contemporary parallels are better let alone.) I mention this instance only to demonstrate the enduring vitality of the child archetype.

[270] The child motif not infrequently occurs in the field of psychopathology. The “imaginary” child is common among women with mental disorders and is usually interpreted in a Christian sense. Homunculi also appear, as in the famous Schreber case,¹⁷ where they come in swarms and plague the sufferer. But the clearest and most significant manifestation of the child motif in the therapy of neuroses is in the maturation process of personality induced by the analysis of the unconscious, which I have termed the process of *individuation*.¹⁸ Here we are confronted with preconscious processes which, in the form of more or less well-formed fantasies, gradually pass over into the conscious mind, or become conscious as dreams, or, lastly, are made

conscious through the method of active imagination.¹⁹ This material is rich in archetypal motifs, among them frequently that of the child. Often the child is formed after the Christian model; more often, though, it develops from earlier, altogether non-Christian levels—that is to say, out of chthonic animals such as crocodiles, dragons, serpents, or monkeys. Sometimes the child appears in the cup of a flower, or out of a golden egg, or as the centre of a mandala. In dreams it often appears as the dreamer's son or daughter or as a boy, youth, or young girl; occasionally it seems to be of exotic origin, Indian or Chinese, with a dusky skin, or, appearing more cosmically, surrounded by stars or with a starry coronet; or as the king's son or the witch's child with daemonic attributes. Seen as a special instance of "the treasure hard to attain" motif,²⁰ the child motif is extremely variable and assumes all manner of shapes, such as the jewel, the pearl, the flower, the chalice, the golden egg, the quaternity, the golden ball, and so on. It can be interchanged with these and similar images almost without limit.

II. THE PSYCHOLOGY OF THE CHILD ARCHETYPE

1. *The Archetype as a Link with the Past*

[271] As to the *psychology* of our theme I must point out that every statement going beyond the purely phenomenal aspects of an archetype lays itself open to the criticism we have expressed above. Not for a moment dare we succumb to the illusion that an archetype can be finally explained and disposed of. Even the best attempts at explanation are only more or less successful translations into another metaphorical language. (Indeed, language itself is only an image.) The most we can do is to *dream the myth onwards* and give it a modern dress. And whatever explanation or interpretation does to it, we do to our own souls as well, with corresponding results for our own well-being. The archetype—let us never forget this—is a psychic organ present in all of us. A bad explanation means a correspondingly bad attitude to this organ, which may thus be injured. But the ultimate sufferer is the bad interpreter himself. Hence the "explanation" should always be such that the functional significance of the archetype remains unimpaired, so that an adequate and meaningful connection between the conscious mind and the archetypes is assured. For the archetype is an element of our psychic structure and thus a vital and necessary component in our psychic economy. It represents or personifies certain instinctive data of the dark, primitive psyche, the real but invisible roots of consciousness. Of what elementary importance the connection with these roots is, we see from the preoccupation of the primitive mentality with certain "magic" factors, which are nothing less than what we would call archetypes. This original form of

religio (“linking back”) is the essence, the working basis of all religious life even today, and always will be, whatever future form this life may take.

[272] There is no “rational” substitute for the archetype any more than there is for the cerebellum or the kidneys. We can examine the physical organs anatomically, histologically, and embryologically. This would correspond to an outline of archetypal phenomenology and its presentation in terms of comparative history. But we only arrive at the *meaning* of a physical organ when we begin to ask teleological questions. Hence the query arises: What is the biological purpose of the archetype? Just as physiology answers such a question for the body, so it is the business of psychology to answer it for the archetype.

[273] Statements like “The child motif is a vestigial memory of one’s own childhood” and similar explanations merely beg the question. But if, giving this proposition a slight twist, we were to say, “The child motif is a picture of certain *forgotten* things in our childhood,” we are getting closer to the truth. Since, however, the archetype is always an image belonging to the whole human race and not merely to the individual, we might put it better this way: “The child motif represents the preconscious, childhood aspect of the collective psyche.”²¹

[274] We shall not go wrong if we take this statement for the time being *historically*, on the analogy of certain psychological experiences which show that certain phases in an individual’s life can become autonomous, can personify themselves to the extent that they result in a *vision of oneself*—for instance, one sees oneself as a child. Visionary experiences of this kind, whether they occur in dreams or in the waking state, are, as we know, conditional on a dissociation having previously taken place between past and present. Such dissociations come about because of various incompatibilities; for instance, a man’s present state may have come into conflict with his childhood state, or he may have violently sundered himself from his original character in the interests of some arbitrary persona²² more in keeping with his ambitions. He has thus become unchildlike and artificial, and has lost his roots. All this presents a favourable opportunity for an equally vehement confrontation with the primary truth.

[275] In view of the fact that men have not yet ceased to make statements about the child god, we may perhaps extend the individual analogy to the life of mankind and say in conclusion that humanity, too, probably always comes into conflict with its childhood conditions, that is, with its original, unconscious, and instinctive state, and that the danger of the kind of conflict which induces the vision of the “child” actually exists. Religious observances, i.e., the retelling and ritual repetition of the mythical event, consequently serve the purpose of bringing the image of childhood, and

everything connected with it, again and again before the eyes of the conscious mind so that the link with the original condition may not be broken.

2. *The Function of the Archetype*

[276] The child motif represents not only something that existed in the distant past but also something that exists *now*; that is to say, it is not just a vestige but a system functioning in the present whose purpose is to compensate or correct, in a meaningful manner, the inevitable one-sidednesses and extravagances of the conscious mind. It is in the nature of the conscious mind to concentrate on relatively few contents and to raise them to the highest pitch of clarity. A necessary result and precondition is the exclusion of other potential contents of consciousness. The exclusion is bound to bring about a certain one-sidedness of the conscious contents. Since the differentiated consciousness of civilized man has been granted an effective instrument for the practical realization of its contents through the dynamics of his will, there is all the more danger, the more he trains his will, of his getting lost in one-sidedness and deviating further and further from the laws and roots of his being. This means, on the one hand, the possibility of human freedom, but on the other it is a source of endless transgressions against one's instincts. Accordingly, primitive man, being closer to his instincts, like the animal, is characterized by fear of novelty and adherence to tradition. To our way of thinking he is painfully backward, whereas we exalt progress. But our progressiveness, though it may result in a great many delightful wish-fulfillments, piles up an equally gigantic Promethean debt which has to be paid off from time to time in the form of hideous catastrophes. For ages man has dreamed of flying, and all we have got for it is saturation bombing! We smile today at the Christian hope of a life beyond the grave, and yet we often fall into chimeras a hundred times more ridiculous than the notion of a happy Hereafter. Our differentiated consciousness is in continual danger of being uprooted; hence it needs compensation through the still existing state of childhood.

[277] The symptoms of compensation are described, from the progressive point of view, in scarcely flattering terms. Since, to the superficial eye, it looks like a retarding operation, people speak of inertia, backwardness, scepticism, fault-finding, conservatism, timidity, pettiness, and so on. But inasmuch as man has, in high degree, the capacity for cutting himself off from his own roots, he may also be swept uncritically to catastrophe by his dangerous one-sidedness. The retarding ideal is always more primitive, more natural (in the good sense as in the bad), and more "moral" in that it keeps faith with law and tradition. The progressive ideal is always more abstract, more unnatural, and less "moral" in that it demands disloyalty to tradition. Progress enforced by will is always *convulsive*. Backwardness may be closer to naturalness, but in its turn it is always menaced by painful awakenings. The

older view of things realized that progress is only possible *Deo concedente*, thus proving itself conscious of the opposites and repeating the age-old *rites d'entrée et de sortie* on a higher plane. The more differentiated consciousness becomes, the greater the danger of severance from the root-condition. Complete severance comes when the *Deo concedente* is forgotten. Now it is an axiom of psychology that when a part of the psyche is split off from consciousness it is only *apparently* inactivated; in actual fact it brings about a possession of the personality, with the result that the individual's aims are falsified in the interests of the split-off part. If, then, the childhood state of the collective psyche is repressed to the point of total exclusion, the unconscious content overwhelms the conscious aim and inhibits, falsifies, even destroys its realization. Viable progress only comes from the co-operation of both.

3. *The Futurity of the Archetype*

[278] One of the essential features of the child motif is its futurity. The child is potential future. Hence the occurrence of the child motif in the psychology of the individual signifies as a rule an anticipation of future developments, even though at first sight it may seem like a retrospective configuration. Life is a flux, a flowing into the future, and not a stoppage or a backwash. It is therefore not surprising that so many of the mythological saviours are child gods. This agrees exactly with our experience of the psychology of the individual, which shows that the "child" paves the way for a future change of personality. In the individuation process, it anticipates the figure that comes from the synthesis of conscious and unconscious elements in the personality. It is therefore a symbol which unites the opposites;²³ a mediator, bringer of healing, that is, one who makes whole. Because it has this meaning, the child motif is capable of the numerous transformations mentioned above: it can be expressed by roundness, the circle or sphere, or else by the quaternity as another form of wholeness.²⁴ I have called this wholeness that transcends consciousness the "self."²⁵ The goal of the individuation process is the synthesis of the self. From another point of view the term "entelechy" might be preferable to "synthesis." There is an empirical reason why "entelechy" is, in certain conditions, more fitting: the symbols of wholeness frequently occur at the beginning of the individuation process, indeed they can often be observed in the first dreams of early infancy. This observation says much for the *a priori* existence of potential wholeness,²⁶ and on this account the idea of *entelechy* instantly recommends itself. But in so far as the individuation process occurs, empirically speaking, as a synthesis, it looks, paradoxically enough, as if something already existent were being put together. From this point of view, the term "synthesis" is also applicable.

4. *Unity and Plurality of the Child Motif*

[279] In the manifold phenomenology of the “child” we have to distinguish between the *unity* and *plurality* of its respective manifestations. Where, for instance, numerous homunculi, dwarfs, boys, etc., appear, having no individual characteristics at all, there is the probability of a *dissociation*. Such forms are therefore found especially in schizophrenia, which is essentially a fragmentation of personality. The many children then represent the products of its dissolution. But if the plurality occurs in normal people, then it is the representation of an as yet incomplete synthesis of personality. The personality (viz., the “self”) is still in the *plural stage*, i.e., an ego may be present, but it cannot experience its wholeness within the framework of its own personality, only within the community of the family, tribe, or nation; it is still in the stage of unconscious identification with the plurality of the group. The Church takes due account of this widespread condition in her doctrine of the *corpus mysticum*, of which the individual is by nature a member.

[280] If, however, the child motif appears in the form of a unity, we are dealing with an unconscious and provisionally complete synthesis of the personality, which in practice, like everything unconscious, signifies no more than a possibility.

5. *Child God and Child Hero*

[281] Sometimes the “child” looks more like a *child god*, sometimes more like a young *hero*. Common to both types is the miraculous birth and the adversities of early childhood—abandonment and danger through persecution. The god is by nature wholly supernatural; the hero’s nature is human but raised to the limit of the supernatural—he is “semi-divine.” While the god, especially in his close affinity with the symbolic animal, personifies the collective unconscious which is not yet integrated into a human being, the hero’s supernaturalness includes human nature and thus represents a synthesis of the (“divine,” i.e., not yet humanized) unconscious and human consciousness. Consequently he signifies the potential anticipation of an individuation process which is approaching wholeness.

[282] For this reason the various “child”-fates may be regarded as illustrating the kind of psychic events that occur in the entelechy or genesis of the “self.” The “miraculous birth” tries to depict the way in which this genesis is experienced. Since it is a psychic genesis, everything must happen non-empirically, e.g., by means of a virgin birth, or by miraculous conception, or by birth from unnatural organs. The motifs of “insignificance,” exposure, abandonment, danger, etc. try to show how precarious is the psychic possibility of wholeness, that is, the enormous difficulties to be met with in attaining this “highest good.” They also signify the powerlessness and helplessness of the life-urge which subjects every growing thing to the law of maximum self-fulfilment, while at the same time the environmental influences place

all sorts of insuperable obstacles in the way of individuation. More especially the threat to one's inmost self from dragons and serpents points to the danger of the newly acquired consciousness being swallowed up again by the instinctive psyche, the unconscious. The lower vertebrates have from earliest times been favourite symbols of the collective psychic substratum,²⁷ which is localized anatomically in the subcortical centres, the cerebellum and the spinal cord. These organs constitute the snake.²⁸ Snake-dreams usually occur, therefore, when the conscious mind is deviating from its instinctual basis.

[283] The motif of "smaller than small yet bigger than big" complements the impotence of the child by means of its equally miraculous deeds. This paradox is the essence of the hero and runs through his whole destiny like a red thread. He can cope with the greatest perils, yet, in the end, something quite insignificant is his undoing: Baldur perishes because of the mistletoe, Maui because of the laughter of a little bird, Siegfried because of his one vulnerable spot, Heracles because of his wife's gift, others because of common treachery, and so on.

[284] The hero's main feat is to overcome the monster of darkness: it is the long-hoped-for and expected triumph of consciousness over the unconscious. Day and light are synonyms for consciousness, night and dark for the unconscious. The coming of consciousness was probably the most tremendous experience of primeval times, for with it a world came into being whose existence no one had suspected before. "And God said: 'Let there be light!'" is the projection of that immemorial experience of the separation of the conscious from the unconscious. Even among primitives today the possession of a soul is a precarious thing, and the "loss of soul" a typical psychic malady which drives primitive medicine to all sorts of psychotherapeutic measures. Hence the "child" distinguishes itself by deeds which point to the conquest of the dark.

III. THE SPECIAL PHENOMENOLOGY OF THE CHILD ARCHETYPE

1. *The Abandonment of the Child*

[285] Abandonment, exposure, danger, etc. are all elaborations of the "child's" insignificant beginnings and of its mysterious and miraculous birth. This statement describes a certain psychic experience of a creative nature, whose object is the emergence of a new and as yet unknown content. In the psychology of the individual there is always, at such moments, an agonizing situation of conflict from which there seems to be no way out—at least for the conscious mind, since as far as this is concerned, *tertium non datur*. But out of this collision of opposites the unconscious psyche always creates a third thing of an irrational nature,²⁹ which the conscious mind neither expects nor understands. It presents itself in a form that is neither a

straight “yes” nor a straight “no,” and is consequently rejected by both. For the conscious mind knows nothing beyond the opposites and, as a result, has no knowledge of the thing that unites them. Since, however, the solution of the conflict through the union of opposites is of vital importance, and is moreover the very thing that the conscious mind is longing for, some inkling of the creative act, and of the significance of it, nevertheless gets through. From this comes the numinous character of the “child.” A meaningful but unknown content always has a secret fascination for the conscious mind. The new configuration is a nascent whole; it is on the way to wholeness, at least in so far as it excels in “wholeness” the conscious mind when torn by opposites and surpasses it in completeness. For this reason all uniting symbols have a redemptive significance.

[286] Out of this situation the “child” emerges as a symbolic content, manifestly separated or even isolated from its background (the mother), but sometimes including the mother in its perilous situation, threatened on the one hand by the negative attitude of the conscious mind and on the other by the *horror vacui* of the unconscious, which is quite ready to swallow up all its progeny, since it produces them only in play, and destruction is an inescapable part of its play. Nothing in all the world welcomes this new birth, although it is the most precious fruit of Mother Nature herself, the most pregnant with the future, signifying a higher stage of self-realization. That is why Nature, the world of the instincts, takes the “child” under its wing: it is nourished or protected by animals.

[287] “Child” means something evolving towards independence. This it cannot do without detaching itself from its origins: abandonment is therefore a necessary condition, not just a concomitant symptom. The conflict is not to be overcome by the conscious mind remaining caught between the opposites, and for this very reason it needs a symbol to point out the necessity of detaching itself from its origins. Because the symbol of the “child” fascinates and grips the conscious mind, its redemptive effect passes over into consciousness and brings about that separation from the conflict-situation which the conscious mind by itself was unable to achieve. The symbol anticipates a nascent state of consciousness. So long as this is not actually in being, the “child” remains a mythological projection which requires religious repetition and renewal by ritual. The Christ Child, for instance, is a religious necessity only so long as the majority of men are incapable of giving psychological reality to the saying: “Except ye become as little children....” Since all such developments and transitions are extraordinarily difficult and dangerous, it is no wonder that figures of this kind persist for hundreds or even thousands of years. Everything that man should, and yet cannot, be or do—be it in a positive or negative sense—lives on as a mythological figure and anticipation alongside his consciousness, either as a religious projection or—what is still more dangerous—as

unconscious contents which then project themselves spontaneously into incongruous objects, e.g., hygienic and other “salvationist” doctrines or practices. All these are so many rationalized substitutes for mythology, and their unnaturalness does more harm than good.

[288] The conflict-situation that offers no way out, the sort of situation that produces the “child” as the irrational third, is of course a formula appropriate only to a psychological, that is, modern stage of development. It is not strictly applicable to the psychic life of primitives, if only because primitive man’s childlike range of consciousness still excludes a whole world of possible psychic experiences. Seen on the nature-level of the primitive, our modern *moral* conflict is still an *objective* calamity that threatens life itself. Hence not a few child-figures are culture-heroes and thus identified with things that promote culture, e.g., fire,³⁰ metal, corn, maize, etc. As bringers of light, that is, enlargers of consciousness, they overcome darkness, which is to say that they overcome the earlier unconscious state. Higher consciousness, or knowledge going beyond our present-day consciousness, is equivalent to being *all alone in the world*. This loneliness expresses the conflict between the bearer or symbol of higher consciousness and his surroundings. The conquerors of darkness go far back into primeval times, and, together with many other legends, prove that there once existed a state of *original psychic distress*, namely *unconsciousness*. Hence in all probability the “irrational” fear which primitive man has of the dark even today. I found a form of religion among a tribe living on Mount Elgon that corresponded to pantheistic optimism. Their optimistic mood was, however, always in abeyance between six o’clock in the evening and six o’clock in the morning, during which time it was replaced by fear, for in the night the dark being Ayik has his dominion—the “Maker of Fear.” During the daytime there were no monster snakes anywhere in the vicinity, but at night they were lurking on every path. At night the whole of mythology was let loose.

2. *The Invincibility of the Child*

[289] It is a striking paradox in all child myths that the “child” is on the one hand delivered helpless into the power of terrible enemies and in continual danger of extinction, while on the other he possesses powers far exceeding those of ordinary humanity. This is closely related to the psychological fact that though the child may be “insignificant,” unknown, “a mere child,” he is also divine. From the conscious standpoint we seem to be dealing with an insignificant content that has no releasing, let alone redeeming, character. The conscious mind is caught in its conflict-situation, and the combatant forces seem so overwhelming that the “child” as an isolated content bears no relation to the conscious factors. It is therefore easily overlooked and falls back into the unconscious. At least, this is what we should have to fear if

things turned out according to our conscious expectations. Myth, however, emphasizes that it is not so, but that the “child” is endowed with superior powers and, despite all dangers, will unexpectedly pull through. The “child” is born out of the womb of the unconscious, begotten out of the depths of human nature, or rather out of living Nature herself. It is a personification of vital forces quite outside the limited range of our conscious mind; of ways and possibilities of which our one-sided conscious mind knows nothing; a wholeness which embraces the very depths of Nature. It represents the strongest, the most ineluctable urge in every being, namely the urge to realize itself. It is, as it were, an incarnation of *the inability to do otherwise*, equipped with all the powers of nature and instinct, whereas the conscious mind is always getting caught up in its supposed ability to do otherwise. The urge and compulsion to self-realization is a law of nature and thus of invincible power, even though its effect, at the start, is insignificant and improbable. Its power is revealed in the miraculous deeds of the child hero, and later in the *athla* (‘works’) of the bondsman or thrall (of the Heracles type), where, although the hero has outgrown the impotence of the “child,” he is still in a menial position. The figure of the thrall generally leads up to the real epiphany of the semi-divine hero. Oddly enough, we have a similar modulation of themes in alchemy—in the synonyms for the *lapis*. As the *materia prima*, it is the *lapis exilis et vilis*. As a substance in process of transmutation, it is *servus rubeus* or *fugitivus*; and finally, in its true apotheosis, it attains the dignity of a *filius sapientiae* or *deus terrenus*, a “light above all lights,” a power that contains in itself all the powers of the upper and nether regions. It becomes a *corpus glorificatum* which enjoys everlasting incorruptibility and is therefore a panacea (“bringer of healing”).³¹ The size and invincibility of the “child” are bound up in Hindu speculation with the nature of the atman, which corresponds to the “smaller than small yet bigger than big” motif. As an individual phenomenon, the self is “smaller than small”; as the equivalent of the cosmos, it is “bigger than big.” The self, regarded as the counter-pole of the world, its “absolutely other,” is the *sine qua non* of all empirical knowledge and consciousness of subject and object. Only because of this psychic “otherness” is consciousness possible at all. Identity does not make consciousness possible; it is only separation, detachment, and agonizing confrontation through opposition that produce consciousness and insight. Hindu introspection recognized this psychological fact very early and consequently equated the subject of cognition with the subject of ontology in general. In accordance with the predominantly introverted attitude of Indian thinking, the object lost the attribute of absolute reality and, in some systems, became a mere illusion. The Greek-Occidental type of mind could not free itself from the conviction of the world’s absolute existence—at the cost, however, of the cosmic significance of the self. Even today Western man finds it hard to see the psychological necessity for a transcendental subject of cognition as the counter-pole of the empirical universe,

although the postulate of a world-confronting self, at least as a *point of reflection*, is a logical necessity. Regardless of philosophy's perpetual attitude of dissent or only half-hearted assent, there is always a compensating tendency in our unconscious psyche to produce a symbol of the self in its cosmic significance. These efforts take on the archetypal forms of the hero myth such as can be observed in almost any individuation process.

[290] The phenomenology of the "child's" birth always points back to an original psychological state of non-recognition, i.e., of darkness or twilight, of non-differentiation between subject and object, of unconscious identity of man and the universe. This phase of non-differentiation produces the *golden egg*, which is both man and universe and yet neither, but an irrational third. To the twilight consciousness of primitive man it seems as if the egg came out of the womb of the wide world and were, accordingly, a cosmic, objective, external occurrence. To a differentiated consciousness, on the other hand, it seems evident that this egg is nothing but a symbol thrown up by the psyche or—what is even worse—a fanciful speculation and therefore "nothing but" a primitive phantasm to which no "reality" of any kind attaches. Present-day medical psychology, however, thinks somewhat differently about these "phantasms." It knows only too well what dire disturbances of the bodily functions and what devastating psychic consequences can flow from "mere" fantasies. "Fantasies" are the natural expressions of the life of the unconscious. But since the unconscious is the psyche of all the body's autonomous functional complexes, its "fantasies" have an aetiological significance that is not to be despised. From the psychopathology of the individuation process we know that the formation of symbols is frequently associated with physical disorders of a psychic origin, which in some cases are felt as decidedly "real." In medicine, fantasies are *real things* with which the psychotherapist has to reckon very seriously indeed. He cannot therefore deprive of all justification those primitive phantasms whose content is so real that it is projected upon the external world. In the last analysis the human body, too, is built of the stuff of the world, the very stuff wherein fantasies become visible; indeed, without it they could not be experienced at all. Without this stuff they would be like a sort of abstract crystalline lattice in a solution where the crystallization process had not yet started.

[291] The symbols of the self arise in the depths of the body and they express its materiality every bit as much as the structure of the perceiving consciousness. The symbol is thus a living body, *corpus et anima*; hence the "child" is such an apt formula for the symbol. The uniqueness of the psyche can never enter wholly into reality, it can only be realized approximately, though it still remains the absolute basis of all consciousness. The deeper "layers" of the psyche lose their individual uniqueness as they retreat farther and farther into darkness. "Lower down," that is to

say as they approach the autonomous functional systems, they become increasingly collective until they are universalized and extinguished in the body's materiality, i.e., in chemical substances. The body's carbon is simply carbon. Hence "at bottom" the psyche is simply "world." In this sense I hold Kerényi to be absolutely right when he says that in the symbol the *world itself* is speaking. The more archaic and "deeper," that is the more *physiological*, the symbol is, the more collective and universal, the more "material" it is. The more abstract, differentiated, and specific it is, and the more its nature approximates to conscious uniqueness and individuality, the more it sloughs off its universal character. Having finally attained full consciousness, it runs the risk of becoming a mere allegory which nowhere oversteps the bounds of conscious comprehension, and is then exposed to all sorts of attempts at rationalistic and therefore inadequate explanation.

3. *The Hermaphroditism of the Child*

[292] It is a remarkable fact that perhaps the majority of cosmogonic gods are of a bisexual nature. The hermaphrodite means nothing less than a union of the strongest and most striking opposites. In the first place this union refers back to a primitive state of mind, a twilight where differences and contrasts were either barely separated or completely merged. With increasing clarity of consciousness, however, the opposites draw more and more distinctly and irreconcilably apart. If, therefore, the hermaphrodite were only a product of primitive non-differentiation, we would have to expect that it would soon be eliminated with increasing civilization. This is by no means the case; on the contrary, man's imagination has been preoccupied with this idea over and over again on the high and even the highest levels of culture, as we can see from the late Greek and syncretic philosophy of Gnosticism. The hermaphroditic *rebis* has an important part to play in the natural philosophy of the Middle Ages. And in our own day we hear of Christ's androgyny in Catholic mysticism.³²

[293] We can no longer be dealing, then, with the continued existence of a primitive phantasm, or with an original contamination of opposites. Rather, as we can see from medieval writings,³³ the primordial idea has become a *symbol of the creative union of opposites*, a "uniting symbol" in the literal sense. In its functional significance the symbol no longer points back, but forward to a goal not yet reached. Notwithstanding its monstrosity, the hermaphrodite has gradually turned into a subduer of conflicts and a bringer of healing, and it acquired this meaning in relatively early phases of civilization. This vital meaning explains why the image of the hermaphrodite did not fade out in primeval times but, on the contrary, was able to assert itself with increasing profundity of symbolic content for thousands of years. The fact that an idea so utterly archaic could rise to such exalted heights of meaning not only points to the vitality of archetypal ideas, it also demonstrates the rightness of the principle

that the archetype, because of its power to unite opposites, mediates between the unconscious substratum and the conscious mind. It throws a bridge between present-day consciousness, always in danger of losing its roots, and the natural, unconscious, instinctive wholeness of primeval times. Through this mediation the uniqueness, peculiarity, and one-sidedness of our present individual consciousness are linked up again with its natural, racial roots. Progress and development are ideals not lightly to be rejected, but they lose all meaning if man only arrives at his new state as a fragment of himself, having left his essential hinterland behind him in the shadow of the unconscious, in a state of primitivity or, indeed, barbarism. The conscious mind, split off from its origins, incapable of realizing the meaning of the new state, then relapses all too easily into a situation far worse than the one from which the innovation was intended to free it—*exempla sunt odiosa!* It was Friedrich Schiller who first had an inkling of this problem; but neither his contemporaries nor his successors were capable of drawing any conclusions. Instead, people incline more than ever to educate *children* and nothing more. I therefore suspect that the *furor paedagogicus* is a god-sent method of by-passing the central problem touched on by Schiller, namely the *education of the educator*. Children are educated by what the grownup *is* and not by what he *says*. The popular faith in words is a veritable disease of the mind, for a superstition of this sort always leads farther and farther away from man's foundations and seduces people into a disastrous identification of the personality with whatever slogan may be in vogue. Meanwhile everything that has been overcome and left behind by so-called "progress" sinks deeper and deeper into the unconscious, from which there re-emerges in the end the primitive condition of *identity with the mass*. Instead of the expected progress, this condition now becomes reality.

[294] As civilization develops, the bisexual primordial being turns into a symbol of the unity of personality, a symbol of the self, where the war of opposites finds peace. In this way the primordial being becomes the distant goal of man's self-development, having been from the very beginning a projection of his unconscious wholeness. Wholeness consists in the union of the conscious and the unconscious personality. Just as every individual derives from masculine and feminine genes, and the sex is determined by the predominance of the corresponding genes, so in the psyche it is only the conscious mind, in a man, that has the masculine sign, while the unconscious is by nature feminine. The reverse is true in the case of a woman. All I have done in my anima theory is to rediscover and reformulate this fact.³⁴ It had long been known.

[295] The idea of the *coniunctio* of male and female, which became almost a technical term in Hermetic philosophy, appears in Gnosticism as the *mysterium iniquitatis*, probably not uninfluenced by the Old Testament "divine marriage" as performed, for

instance, by Hosea.³⁵ Such things are hinted at not only by certain traditional customs,³⁶ but by the quotation from the Gospel according to the Egyptians in the second epistle of Clement: “When the two shall be one, the outside as the inside, and the male with the female neither male nor female.”³⁷ Clement of Alexandria introduces this logion with the words: “When ye have trampled on the garment of shame (with thy feet)...,”³⁸ which probably refers to the body; for Clement as well as Cassian (from whom the quotation was taken over), and the pseudo-Clement, too, interpreted the words in a spiritual sense, in contrast to the Gnostics, who would seem to have taken the *coniunctio* all too literally. They took care, however, through the practice of abortion and other restrictions, that the biological meaning of their acts did not swamp the religious significance of the rite. While, in Church mysticism, the primordial image of the *hieros gamos* was sublimated on a lofty plane and only occasionally—as for instance with Mechthild of Magdeburg³⁹—approached the physical sphere in emotional intensity, for the rest of the world it remained very much alive and continued to be the object of especial psychic preoccupation. In this respect the symbolical drawings of Opicinus de Canistris⁴⁰ afford us an interesting glimpse of the way in which this primordial image was instrumental in uniting opposites, even in a pathological state. On the other hand, in the Hermetic philosophy that thrived in the Middle Ages the *coniunctio* was performed wholly in the physical realm in the admittedly abstract theory of the *coniugium solis et lunae*, which despite this drawback gave the creative imagination much occasion for anthropomorphic flights.

[296] Such being the state of affairs, it is readily understandable that the primordial image of the hermaphrodite should reappear in modern psychology in the guise of the male-female antithesis, in other words as *male* consciousness and personified *female* unconscious. But the psychological process of bringing things to consciousness has complicated the picture considerably. Whereas the old science was almost exclusively a field in which only the man’s unconscious could project itself, the new psychology had to acknowledge the existence of an autonomous female psyche as well. Here the case is reversed, and a feminine consciousness confronts a masculine personification of the unconscious, which can no longer be called *anima* but *animus*. This discovery also complicates the problem of the *coniunctio*.

[297] Originally this archetype played its part entirely in the field of fertility magic and thus remained for a very long time a purely biological phenomenon with no other purpose than that of fecundation. But even in early antiquity the symbolical meaning of the act seems to have increased. Thus, for example, the physical performance of the *hieros gamos* as a sacred rite not only became a mystery—it faded to a mere conjecture.⁴¹ As we have seen, Gnosticism, too, endeavoured in all seriousness to subordinate the physiological to the metaphysical. Finally, the Church severed the

coniunctio from the physical realm altogether, and natural philosophy turned it into an abstract *theoria*. These developments meant the gradual transformation of the archetype into a psychological process which, in theory, we can call a combination of conscious and unconscious processes. In practice, however, it is not so simple, because as a rule the feminine unconscious of a man is projected upon a feminine partner, and the masculine unconscious of a woman is projected upon a man. The elucidation of these problems is a special branch of psychology and has no part in a discussion of the mythological hermaphrodite.

4. *The Child as Beginning and End*

[298] Faust, after his death, is received as a boy into the “choir of blessed youths.” I do not know whether Goethe was referring, with this peculiar idea, to the *cupids* on antique grave-stones. It is not unthinkable. The figure of the *cucullatus* points to the hooded, that is, the *invisible* one, the genius of the departed, who reappears in the child-like frolics of a new life, surrounded by the sea-forms of dolphins and tritons. The sea is the favourite symbol for the unconscious, the mother of all that lives. Just as the “child” is, in certain circumstances (e.g., in the case of Hermes and the Dactyls), closely related to the phallus, symbol of the begetter, so it comes up again in the sepulchral phallus, symbol of a renewed begetting.

[299] The “child” is therefore *renatus in novam infantiam*. It is thus both beginning and end, an initial and a terminal creature. The initial creature existed before man was, and the terminal creature will be when man is not. Psychologically speaking, this means that the “child” symbolizes the pre-conscious and the post-conscious essence of man. His pre-conscious essence is the unconscious state of earliest childhood; his post-conscious essence is an anticipation by analogy of life after death. In this idea the all-embracing nature of psychic wholeness is expressed. Wholeness is never comprised within the compass of the conscious mind—it includes the indefinite and indefinable extent of the unconscious as well. Wholeness, empirically speaking, is therefore of immeasurable extent, older and younger than consciousness and enfolding it in time and space. This is no speculation, but an immediate psychic experience. Not only is the conscious process continually accompanied, it is often guided, helped, or interrupted, by unconscious happenings. The child had a psychic life before it had consciousness. Even the adult still says and does things whose significance he realizes only later, if ever. And yet he said them and did them as if he knew what they meant. Our dreams are continually saying things beyond our conscious comprehension (which is why they are so useful in the therapy of neuroses). We have intimations and intuitions from unknown sources. Fears, moods, plans, and hopes come to us with no visible causation. These concrete experiences

are at the bottom of our feeling that we know ourselves very little; at the bottom, too, of the painful conjecture that we might have surprises in store for ourselves.

[300] Primitive man is no puzzle to himself. The question “What is man?” is the question that man has always kept until last. Primitive man has so much psyche outside his conscious mind that the experience of something psychic outside him is far more familiar to him than to us. Consciousness hedged about by psychic powers, sustained or threatened or deluded by them, is the age-old experience of mankind. This experience has projected itself into the archetype of the child, which expresses man’s wholeness. The “child” is all that is abandoned and exposed and at the same time divinely powerful; the insignificant, dubious beginning, and the triumphal end. The “eternal child” in man is an indescribable experience, an incongruity, a handicap, and a divine prerogative; an imponderable that determines the ultimate worth or worthlessness of a personality.

IV. CONCLUSION

[301] I am aware that a psychological commentary on the child archetype without detailed documentation must remain a mere sketch. But since this is virgin territory for the psychologist, my main endeavour has been to stake out the possible extent of the problems raised by our archetype and to describe, at least cursorily, its different aspects. Clear-cut distinctions and strict formulations are quite impossible in this field, seeing that a kind of fluid interpenetration belongs to the very nature of all archetypes. They can only be roughly circumscribed at best. Their living meaning comes out more from their presentation as a whole than from a single formulation. Every attempt to focus them more sharply is immediately punished by the intangible core of meaning losing its luminosity. No archetype can be reduced to a simple formula. It is a vessel which we can never empty, and never fill. It has a potential existence only, and when it takes shape in matter it is no longer what it was. It persists throughout the ages and requires interpreting ever anew. The archetypes are the imperishable elements of the unconscious, but they change their shape continually.

[302] It is a well-nigh hopeless undertaking to tear a single archetype out of the living tissue of the psyche; but despite their interwovenness they do form units of meaning that can be apprehended intuitively. Psychology, as one of the many expressions of psychic life, operates with ideas which in their turn are derived from archetypal structures and thus generate a somewhat more abstract kind of myth. Psychology therefore translates the archaic speech of myth into a modern mythologem—not yet, of course, recognized as such—which constitutes one element of the myth “science.” This seemingly hopeless undertaking is a *living and lived myth*, satisfying to persons

of a corresponding temperament, indeed beneficial in so far as they have been cut off from their psychic origins by neurotic dissociation.

[303] As a matter of experience, we meet the child archetype in spontaneous and in therapeutically induced individuation processes. The first manifestation of the “child” is as a rule a totally unconscious phenomenon. Here the patient identifies himself with his personal infantilism. Then, under the influence of therapy, we get a more or less gradual separation from and objectification of the “child,” that is, the identity breaks down and is accompanied by an intensification (sometimes technically induced) of fantasy, with the result that archaic or mythological features become increasingly apparent. Further transformations run true to the hero myth. The theme of “mighty feats” is generally absent, but on the other hand the mythical dangers play all the greater part. At this stage there is usually another identification, this time with the hero, whose role is attractive for a variety of reasons. The identification is often extremely stubborn and dangerous to the psychic equilibrium. If it can be broken down and if consciousness can be reduced to human proportions, the figure of the hero can gradually be differentiated into a symbol of the self.

[304] In practical reality, however, it is of course not enough for the patient merely to *know about* such developments; what counts is his experience of the various transformations. The initial stage of personal infantilism presents the picture of an “abandoned” or “misunderstood” and unjustly treated child with overweening pretensions. The epiphany of the hero (the second identification) shows itself in a corresponding inflation: the colossal pretension grows into a conviction that one is something extraordinary, or else the impossibility of the pretension ever being fulfilled only proves one’s own inferiority, which is favourable to the role of the heroic sufferer (a negative inflation). In spite of their contradictoriness, both forms are identical, because conscious megalomania is balanced by unconscious compensatory inferiority and conscious inferiority by unconscious megalomania (you never get one without the other). Once the reef of the second identification has been successfully circumnavigated, conscious processes can be cleanly separated from the unconscious, and the latter observed objectively. This leads to the possibility of an accommodation with the unconscious, and thus to a possible synthesis of the conscious and unconscious elements of knowledge and action. This in turn leads to a shifting of the centre of personality from the ego to the self.⁴²

[305] In this psychological framework the motifs of abandonment, invincibility, hermaphroditism, and beginning and end take their place as distinct categories of experience and understanding.

THE PSYCHOLOGICAL ASPECTS OF THE KORE

[306] Not only is the figure of Demeter and the Kore in its threefold aspect as maiden, mother, and Hecate not unknown to the psychology of the unconscious, it is even something of a practical problem. The “Kore” has her psychological counterpart in those archetypes which I have called the *self* or *supraordinate personality* on the one hand, and the *anima* on the other. In order to explain these figures, with which I cannot assume all readers to be familiar, I must begin with some remarks of a general nature.

[307] The psychologist has to contend with the same difficulties as the mythologist when an exact definition or clear and concise information is demanded of him. The picture is concrete, clear, and subject to no misunderstandings only when it is seen in its habitual context. In this form it tells us everything it contains. But as soon as one tries to abstract the “real essence” of the picture, the whole thing becomes cloudy and indistinct. In order to understand its living function, we must let it remain an organic thing in all its complexity and not try to examine the anatomy of its corpse in the manner of the scientist, or the archaeology of its ruins in the manner of the historian. Naturally this is not to deny the justification of such methods when applied in their proper place.

[308] In view of the enormous complexity of psychic phenomena, a purely phenomenological point of view is, and will be for a long time, the only possible one and the only one with any prospect of success. “Whence” things come and “what” they are, these, particularly in the field of psychology, are questions which are apt to call forth untimely attempts at explanation. Such speculations are moreover based far more on unconscious philosophical premises than on the nature of the phenomena themselves. Psychic phenomena occasioned by unconscious processes are so rich and so multifarious that I prefer to *describe* my findings and observations and, where possible, to classify them—that is, to arrange them under certain definite types. That is the method of natural science, and it is applied wherever we have to do with multifarious and still unorganized material. One may question the utility or the appropriateness of the categories or types used in the arrangement, but not the correctness of the method itself.

[309] Since for years I have been observing and investigating the products of the unconscious in the widest sense of the word, namely dreams, fantasies, visions, and delusions of the insane, I have not been able to avoid recognizing certain regularities, that is, *types*. There are types of *situations* and types of *figures* that repeat themselves frequently and have a corresponding meaning. I therefore employ the term “motif” to designate these repetitions. Thus there are not only typical dreams but typical motifs in the dreams. These may, as we have said, be situations or figures. Among the latter there are human figures that can be arranged under a series of archetypes, the chief of them being, according to my suggestion,¹ the *shadow*, the *wise old man*, the *child* (including the child hero), the *mother* (“Primordial Mother” and “Earth Mother”) as a supraordinate personality (“daemonic” because supraordinate), and her counterpart the *maiden*, and lastly the *anima* in man and the *animus* in woman.

[310] The above types are far from exhausting all the statistical regularities in this respect. The figure of the Kore that interests us here belongs, when observed in a man, to the *anima* type; and when observed in a woman to the type of *supraordinate personality*. It is an essential characteristic of psychic figures that they are duplex or at least capable of duplication; at all events they are bipolar and oscillate between their positive and negative meanings. Thus the “supraordinate” personality can appear in a despicable and distorted form, like for instance Mephistopheles, who is really more positive as a personality than the vapid and unthinking careerist Faust. Another negative figure is the Tom Thumb or Tom Dumb of the folktales. The figure corresponding to the Kore in a woman is generally a double one, i.e., a mother and a maiden, which is to say that she appears now as the one, now as the other. From this I would conclude, for a start, that in the formation of the Demeter-Kore myth the feminine influence so far outweighed the masculine that the latter had practically no significance. The man’s role in the Demeter myth is really only that of seducer or conqueror.

[311] As a matter of practical observation, the Kore often appears in woman as an *unknown young girl*, not infrequently as Gretchen or the unmarried mother.² Another frequent modulation is the *dancer*, who is often formed by borrowings from classical knowledge, in which case the “maiden” appears as the *corybant*, *maenad*, or *nymph*. An occasional variant is the nixie or water-sprite, who betrays her superhuman nature by her fishtail. Sometimes the Kore- and mother-figures slither down altogether to the animal kingdom, the favourite representatives then being the *cat* or the *snake* or the *bear*, or else some black monster of the underworld like the crocodile, or other salamander-like, saurian creatures.³ The maiden’s helplessness exposes her to all sorts of *dangers*, for instance of being devoured by reptiles or ritually slaughtered like a beast of sacrifice. Often there are bloody, cruel, and even obscene *orgies* to which the innocent child falls victim. Sometimes it is a true *nekylia*, a descent into

Hades and a quest for the “treasure hard to attain,” occasionally connected with orgiastic sexual rites or offerings of menstrual blood to the moon. Oddly enough, the various tortures and obscenities are carried out by an “Earth Mother.” There are *drinkings of blood* and *bathings in blood*,⁴ also crucifixions. The maiden who crops up in case histories differs not inconsiderably from the vaguely flower-like Kore in that the modern figure is more sharply delineated and not nearly so “unconscious,” as the following examples will show.

[312] The figures corresponding to Demeter and Hecate are supra-ordinate, not to say over-life-size “Mothers” ranging from the Pietà type to the Baubo type. The unconscious, which acts as a counterbalance to woman’s conventional innocuousness, proves to be highly inventive in this latter respect. I can recall only very few cases where Demeter’s own noble figure in its pure form breaks through as an image rising spontaneously from the unconscious. I remember a case, in fact, where a maiden-goddess appears clad all in purest white, but carrying a black monkey in her arms. The Earth Mother is always chthonic and is occasionally related to the moon, either through the blood-sacrifice already mentioned, or through a child-sacrifice, or else because she is adorned with a sickle moon.⁵ In pictorial or plastic representations the Mother is dark deepening to *black*, or *red* (these being her principal colours), and with a primitive or animal expression of face; in form she not infrequently resembles the *neolithic ideal* of the “Venus” of Brassempouy or that of Willendorf, or again the sleeper of Hal Saflieni.⁶ Now and then I have come across *multiple breasts*, arranged like those of a sow. The Earth Mother plays an important part in the woman’s unconscious, for all her manifestations are described as “powerful.” This shows that in such cases the Earth Mother element in the conscious mind is abnormally weak and requires strengthening.

[313] In view of all this it is, I admit, hardly understandable why such figures should be reckoned as belonging to the type of “supraordinate personality.” In a scientific investigation, however, one has to disregard moral or aesthetic prejudices and let the facts speak for themselves. The *maiden* is often described as not altogether human in the usual sense; she is either of unknown or peculiar origin, or she looks strange or undergoes strange experiences, from which one is forced to infer the maiden’s extraordinary, myth-like nature. Equally and still more strikingly, the Earth Mother is a divine being—in the classical sense. Moreover, she does not by any means always appear in the guise of Baubo, but, for instance, more like Queen Venus in the *Hypnerotomachia Poliphili*, though she is invariably heavy with destiny. The often unaesthetic forms of the Earth Mother are in keeping with a prejudice of the modern feminine unconscious; this prejudice was lacking in antiquity. The underworld nature of Hecate, who is closely connected with Demeter, and Persephone’s fate both point

nevertheless to the dark side of the human psyche, though not to the same extent as the modern material.

[314] The “supraordinate personality” is the total man, i.e., man as he really is, not as he appears to himself. To this wholeness the unconscious psyche also belongs, which has its requirements and needs just as consciousness has. I do not want to interpret the unconscious personalistically and assert, for instance, that fantasy-images like those described above are the “wish-fulfilments” due to repression. These images were as such never conscious and consequently could never have been repressed. I understand the unconscious rather as an *impersonal* psyche common to all men, even though it expresses itself through a personal consciousness. When anyone breathes, his breathing is not a phenomenon to be interpreted personally. The mythological images belong to the structure of the unconscious and are an impersonal possession; in fact, the great majority of men are far more *possessed by* them than possessing them. Images like those described above give rise under certain conditions to corresponding disturbances and symptoms, and it is then the task of medical therapy to find out whether and how and to what extent these impulses can be integrated with the conscious personality, or whether they are a secondary phenomenon which some defective orientation of consciousness has brought out of its normal potential state into actuality. Both possibilities exist in practice.

[315] I usually describe the supraordinate personality as the “self,” thus making a sharp distinction between the ego, which, as is well known, extends only as far as the conscious mind, and the *whole* of the personality, which includes the unconscious as well as the conscious component. The ego is thus related to the self as part to whole. To that extent the self is supraordinate. Moreover, the self is felt empirically not as subject but as object, and this by reason of its unconscious component, which can only come to consciousness indirectly, by way of projection. Because of its unconscious component the self is so far removed from the conscious mind that it can only be partially expressed by human figures; the other part of it has to be expressed by objective, abstract symbols. The human figures are father and son, mother and daughter, king and queen, god and goddess. Theriomorphic symbols are the dragon, snake, elephant, lion, bear, and other powerful animals, or again the spider, crab, butterfly, beetle, worm, etc. Plant symbols are generally flowers (lotus and rose). These lead on to geometrical figures like the circle, the sphere, the square, the quaternity, the clock, the firmament, and so on.⁷ The indefinite extent of the unconscious component makes a comprehensive description of the human personality impossible. Accordingly, the unconscious supplements the picture with living figures ranging from the animal to the divine, as the two extremes outside man, and rounds out the animal extreme, through the addition of vegetable and inorganic

abstractions, into a microcosm. These addenda have a high frequency in anthropomorphic divinities, where they appear as “attributes.”

[316] Demeter and Kore, mother and daughter, extend the feminine consciousness both upwards and downwards. They add an “older and younger,” “stronger and weaker” dimension to it and widen out the narrowly limited conscious mind bound in space and time, giving it intimations of a greater and more comprehensive personality which has a share in the eternal course of things. We can hardly suppose that myth and mystery were invented for any conscious purpose; it seems much more likely that they were the involuntary revelation of a psychic, but unconscious, pre-condition. The psyche pre-existent to consciousness (e.g., in the child) participates in the maternal psyche on the one hand, while on the other it reaches across to the daughter psyche. We could therefore say that every mother contains her daughter in herself and every daughter her mother, and that every woman extends backwards into her mother and forwards into her daughter. This participation and intermingling give rise to that peculiar uncertainty as regards *time*: a woman lives earlier as a mother, later as a daughter. The conscious experience of these ties produces the feeling that her life is spread out over generations—the first step towards the immediate experience and conviction of being outside time, which brings with it a feeling of *immortality*. The individual’s life is elevated into a type, indeed it becomes the archetype of woman’s fate in general. This leads to a restoration or *apocatastasis* of the lives of her ancestors, who now, through the bridge of the momentary individual, pass down into the generations of the future. An experience of this kind gives the individual a place and a meaning in the life of the generations, so that all unnecessary obstacles are cleared out of the way of the life-stream that is to flow through her. At the same time the individual is rescued from her isolation and restored to wholeness. All ritual preoccupation with archetypes ultimately has this aim and this result.

[317] It is immediately clear to the psychologist what cathartic and at the same rejuvenating effects must flow from the Demeter cult into the feminine psyche, and what a lack of psychic hygiene characterizes our culture, which no longer knows the kind of wholesome experience afforded by Eleusinian emotions.

[318] I take full account of the fact that not only the psychologically minded layman but the professional psychologist and psychiatrist as well, and even the psychotherapist, do not possess an adequate knowledge of their patients’ archetypal material, in so far as they have not specially investigated this aspect of the phenomenology of the unconscious. For it is precisely in the field of psychiatric and psychotherapeutic observation that we frequently meet with cases characterized by a rich crop of archetypal symbols.⁸ Since the necessary historical knowledge is lacking to the physician observing them, he is not in a position to perceive the parallelism

between his observations and the findings of anthropology and the humane sciences in general. Conversely, an expert in mythology and comparative religion is as a rule no psychiatrist and consequently does not know that his mythologems are still fresh and living—for instance, in dreams and visions—in the hidden recesses of our most personal life, which we would on no account deliver up to scientific dissection. The archetypal material is therefore the great unknown, and it requires special study and preparation even to collect such material.

[319] It does not seem to me superfluous to give a number of examples from my case histories which bring out the occurrence of archetypal images in dreams or fantasies. Time and again with my public I come across the difficulty that they imagine illustration by “a few examples” to be the simplest thing in the world. In actual fact it is almost impossible, with a few words and one or two images torn out of their context, to demonstrate anything. This only works when dealing with an expert. What Perseus has to do with the Gorgon’s head would never occur to anyone who did not know the myth. So it is with the individual images: they need a context, and the context is not only a myth but an individual anamnesis. Such contexts, however, are of enormous extent. Anything like a complete series of images would require for its proper presentation a book of about two hundred pages. My own investigation of the Miller fantasies gives some idea of this.⁹ It is therefore with the greatest hesitation that I make the attempt to illustrate from case-histories. The material I shall use comes partly from normal, partly from slightly neurotic, persons. It is part dream, part vision, or dream mixed with vision. These “visions” are far from being hallucinations or ecstatic states; they are spontaneous, visual images of fantasy or so-called *active imagination*. The latter is a method (devised by myself) of introspection for observing the stream of interior images. One concentrates one’s attention on some impressive but unintelligible dream-image, or on a spontaneous visual impression, and observes the changes taking place in it. Meanwhile, of course, all criticism must be suspended and the happenings observed and noted with absolute objectivity. Obviously, too, the objection that the whole thing is “arbitrary” or “thought up” must be set aside, since it springs from the anxiety of an ego-consciousness which brooks no master besides itself in its own house. In other words, it is the inhibition exerted by the conscious mind on the unconscious.

[320] Under these conditions, long and often very dramatic series of fantasies ensue. The advantage of this method is that it brings a mass of unconscious material to light. Drawing, painting, and modelling can be used to the same end. Once a visual series has become dramatic, it can easily pass over into the auditive or linguistic sphere and give rise to dialogues and the like. With slightly pathological individuals, and particularly in the not infrequent cases of latent schizophrenia, the method may, in certain circumstances, prove to be rather dangerous and therefore requires medical

control. It is based on a deliberate weakening of the conscious mind and its inhibiting effect, which either limits or suppresses the unconscious. The aim of the method is naturally therapeutic in the first place, while in the second it also furnishes rich empirical material. Some of our examples are taken from this. They differ from dreams only by reason of their better form, which comes from the fact that the contents were perceived not by a dreaming but by a waking consciousness. The examples are from women in middle life.

1. Case X (*spontaneous visual impressions, in chronological order*)

[321] i. *“I saw a white bird with outstretched wings. It alighted on the figure of a woman, clad in blue, who sat there like an antique statue. The bird perched on her hand, and in it she held a grain of wheat. The bird took it in its beak and flew into the sky again.”*

[322] For this X painted a picture: a blue-clad, archaically simple “Mother”-figure on a white marble base. Her maternity is emphasized by the large breasts.

[323] ii. *A bull lifts a child up from the ground and carries it to the antique statue of a woman. A naked young girl with a wreath of flowers in her hair appears, riding on a white bull. She takes the child and throws it into the air like a ball and catches it again. The white bull carries them both to a temple. The girl lays the child on the ground, and so on (initiation follows).*

[324] In this picture the *maiden* appears, rather in the form of Europa. (Here a certain school knowledge is being made use of.) Her nakedness and the wreath of flowers point to Dionysian abandonment. The game of ball with the child is the motif of some secret rite which always has to do with “child-sacrifice.” (Cf. the accusations of ritual murder levelled by the pagans against the Christians and by the Christians against the Jews and Gnostics; also the Phoenician child-sacrifices, rumours about the Black Mass, etc., and “the ball-game in church.”)¹⁰

[325] iii. *“I saw a golden pig on a pedestal. Beast-like beings danced round it in a circle. We made haste to dig a hole in the ground. I reached in and found water. Then a man appeared in a golden carriage. He jumped into the hole and began swaying back and forth, as if dancing... I swayed in rhythm with him. Then he suddenly leaped out of the hole, raped me, and got me with child.”*

[326] X is identical with the young girl, who often appears as a *youth*, too. This youth is an animus-figure, the embodiment of the masculine element in a woman. Youth and young girl together form a syzygy or *coniunctio* which symbolizes the essence of wholeness (as also does the Platonic hermaphrodite, who later became the symbol of perfected wholeness in alchemical philosophy). X evidently dances with the rest,

hence “we made haste.” The parallel with the motifs stressed by Kerényi seems to me remarkable.

[327] iv. *“I saw a beautiful youth with golden cymbals, dancing and leaping in joy and abandonment.... Finally he fell to the ground and buried his face in the flowers. Then he sank into the lap of a very old mother. After a time he got up and jumped into the water, where he sported like a dolphin.... I saw that his hair was golden. Now we were leaping together, hand in hand. So we came to a gorge....” In leaping the gorge the youth falls into the chasm. X is left alone and comes to a river where a white sea-horse is waiting for her with a golden boat.*

[328] In this scene X is the youth; therefore he disappears later, leaving her the sole heroine of the story. She is the child of the “very old mother,” and is also the dolphin, the youth lost in the gorge, and the bride evidently expected by Poseidon. The peculiar overlapping and displacement of motifs in all this individual material is about the same as in the mythological variants. X found the youth in the lap of the mother so impressive that she painted a picture of it. The figure is the same as in item i; only, instead of the grain of wheat in her hand, there is the body of the youth lying completely exhausted in the lap of the gigantic mother.

[329] v. *There now follows a sacrifice of sheep, during which a game of ball is likewise played with the sacrificial animal. The participants smear themselves with the sacrificial blood, and afterwards bathe in the pulsing gore. X is thereupon transformed into a plant.*

[330] vi. *After that X comes to a den of snakes, and the snakes wind all round her.*

[331] vii. *In a den of snakes beneath the sea there is a divine woman, asleep. (She is shown in the picture as much larger than the others.) She is wearing a blood-red garment that covers only the lower half of her body. She has a dark skin, full red lips, and seems to be of great physical strength. She kisses X, who is obviously in the role of the young girl, and hands her as a present to the many men who are standing by, etc.*

[332] This chthonic goddess is the typical Earth Mother as she appears in so many modern fantasies.

[333] viii. *As X emerged from the depths and saw the light again, she experienced a kind of illumination: white flames played about her head as she walked through waving fields of grain.*

[334] With this picture the Mother-episode ended. Although there is not the slightest trace of any known myth being repeated, the motifs and the connections between them are all familiar to us from mythology. These images present themselves spontaneously and are based on no conscious knowledge whatever. I have applied the

method of active imagination to myself over a long time and have observed numerous symbols and symbolic associations which in many cases I was only able to verify years afterwards in texts of whose existence I was totally ignorant. It is the same with dreams. Some years ago I dreamed for example that: *I was climbing slowly and toilsomely up a mountain. When I had reached, as I imagined, the top, I found that I was standing on the edge of a plateau. The crest that represented the real top of the mountain only rose far off in the distance. Night was coming on, and I saw, on the dark slope opposite, a brook flowing down with a metallic shimmer, and two paths leading upwards, one to the left, the other to the right, winding like serpents. On the crest, to the right, there was a hotel. Down below, the brook ran to the left with a bridge leading across.*

[335] Not long afterwards I discovered the following “allegory” in an obscure alchemical treatise. In his *Speculativae philosophiae*¹¹ the Frankfurt physician Gerard Dorn, who lived in the second half of the sixteenth century, describes the “Mundi peregrinatio, quam erroris viam appellamus” (Tour of the world, which we call the way of error) on the one hand and the “Via veritatis” on the other. Of the first way the author says:

The human race, whose nature it is to resist God, does not cease to ask how it may, by its own efforts, escape the pitfalls which it has laid for itself. But it does not ask help from Him on whom alone depends every gift of mercy. Hence it has come about that men have built for themselves a great Workshop on the left-hand side of the road ... presided over by Industry. After this has been attained, they turn aside from Industry and bend their steps towards the *second region of the world*, making their crossing *on the bridge of infirmity*.... But because the good God desires to draw them back. He allows their infirmities to rule over them; then, seeking as before a remedy in themselves [industry!], they flock *to the great Hospital likewise built on the left*, presided over by Medicine. Here there is a great multitude of apothecaries, surgeons, and physicians, [etc.].¹²

[336] Of the “way of truth,” which is the “right” way, our author says: “... you will come to the camp of Wisdom and on being received there, you will be refreshed with food far more powerful than before.” Even the brook is there: “... a stream of living water flowing with such wonderful artifice from the mountain peak. (From the Fountain of Wisdom the waters gush forth.)”¹³

[337] An important difference, compared with my dream, is that here, apart from the situation of the hotel being reversed, the river of Wisdom is on the right and not, as in my dream, in the middle of the picture.

[338] It is evident that in my dream we are not dealing with any known “myth” but with a group of ideas which might easily have been regarded as “individual,” i.e.,

unique. A thorough analysis, however, could show without difficulty that it is an archetypal image such as can be reproduced over and over again in any age and any place. But I must admit that the archetypal nature of the dream-image only became clear to me when I read Dorn. These and similar incidents I have observed repeatedly not only in myself but in my patients. But, as this example shows, it needs special attention if such parallels are not to be missed.

[339] The antique Mother-image is not exhausted with the figure of Demeter. It also expresses itself in Cybele-Artemis. The next case points in this direction.

2. Case Y (dreams)

[340] i. *“I am wandering over a great mountain; the way is lonely, wild, and difficult. A woman comes down from the sky to accompany and help me. She is all bright with light hair and shining eyes. Now and then she vanishes. After going on for some time alone I notice that I have left my stick somewhere, and must turn back to fetch it. To do this I have to pass a terrible monster, an enormous bear. When I came this way the first time I had to pass it, but then the sky-woman protected me. Just as I am passing the beast and he is about to come at me, she stands beside me again, and at her look the bear lies down quietly and lets us pass. Then the sky-woman vanishes.”*

[341] Here we have a maternally protective goddess related to bears, a kind of Diana or the Gallo-Roman Dea Artio. The sky-woman is the positive, the bear the negative aspect of the “supraordinate personality,” which extends the conscious human being upwards into the celestial and downwards into the animal regions.

[342] ii. *“We go through a door into a tower-like room, where we climb a long flight of steps. On one of the topmost steps I read an inscription: ‘Vis ut sis.’ The steps end in a temple situated on the crest of a wooded mountain, and there is no other approach. It is the shrine of Ursanna, the bear-goddess and Mother of God in one. The temple is of red stone. Bloody sacrifices are offered there. Animals are standing about the altar. In order to enter the temple precincts one has to be transformed into an animal—a beast of the forest. The temple has the form of a cross with equal arms and a circular space in the middle, which is not roofed, so that one can look straight up at the sky and the constellation of the Bear. On the altar in the middle of the open space there stands the moon-bowl, from which smoke or vapour continually rises. There is also a huge image of the goddess, but it cannot be seen clearly. The worshippers, who have been changed into animals and to whom I also belong, have to touch the goddess’s foot with their own foot, whereupon the image gives them a sign or an oracular utterance like ‘Vis ut sis.’”*

[343] In this dream the bear-goddess emerges plainly, although her statue “cannot be seen clearly.” The relationship to the self, the supraordinate personality, is indicated

not only by the oracle “Vis ut sis” but by the quaternity and the circular central precinct of the temple. From ancient times any relationship to the stars has always symbolized eternity. The soul comes “from the stars” and returns to the stellar regions. “Ursanna’s” relation to the moon is indicated by the “moon-bowl.”

[344] The moon-goddess also appears in children’s dreams. A girl who grew up in peculiarly difficult psychic circumstances had a recurrent dream between her seventh and tenth years: “*The moon-lady was always waiting for me down by the water at the landing-stage, to take me to her island.*” Unfortunately she could never remember what happened there, but it was so beautiful that she often prayed she might have this dream again. Although, as is evident, the two dreamers are not identical, the *island motif* also occurred in the previous dream as the inaccessible mountain crest.

[345] Thirty years later, the dreamer of the moon-lady had a dramatic fantasy:

[346] “*I am climbing a steep dark mountain, on top of which stands a domed castle. I enter and go up a winding stairway to the left. Arriving inside the dome, I find myself in the presence of a woman wearing a head-dress of cow’s horns. I recognize her immediately as the moon-lady of my childhood dreams. At her behest I look to the right and see a dazzlingly bright sun shining on the other side of a deep chasm. Over the chasm stretches a narrow, transparent bridge, upon which I step, conscious of the fact that in no circumstances must I look down. An uncanny fear seizes me, and I hesitate. Treachery seems to be in the air, but at last I go across and stand before the sun. The sun speaks: ‘If you can approach me nine times without being burned, all will be well.’ But I grow more and more afraid, finally I do look down, and I see a black tentacle like that of an octopus groping towards me from underneath the sun. I step back in fright and plunge into the abyss. But instead of being dashed to pieces I lie in the arms of the Earth Mother. When I try to look into her face, she turns to clay, and I find myself lying on the earth.*”

[347] It is remarkable how the beginning of this fantasy agrees with the dream. The moon-lady above is clearly distinguished from the Earth Mother below. The former urges the dreamer to her somewhat perilous adventure with the sun; the latter catches her protectively in her maternal arms. The dreamer, as the one in danger, would therefore seem to be in the role of the Kore.

[348] Let us now turn back to our dream-series:

[349] iii. *Y sees two pictures in a dream, painted by the Scandinavian painter Hermann Christian Lund.*

I. “*The first picture is of a Scandinavian peasant room. Peasant girls in gay costumes are walking about arm in arm (that is, in a row). The middle one is*

smaller than the rest and, besides this, has a hump and keeps turning her head back. This, together with her peculiar glance, gives her a witchlike look.”

II. *“The second picture shows a dragon with its neck stretched out over the whole picture and especially over a girl, who is in the dragon’s power and cannot move, for as soon as she moves, the dragon, which can make its body big or little at will, moves too; and when the girl wants to get away it simply stretches out its neck over her, and so catches her again. Strangely enough, the girl has no face, at least I couldn’t see it.”*

[350] The painter is an invention of the dream. The animus often appears as a painter or has some kind of projection apparatus, or is a cinema-operator or owner of a picture-gallery. All this refers to the animus as the function mediating between conscious and unconscious: the unconscious contains pictures which are transmitted, that is, made manifest, by the animus, either as fantasies or, unconsciously, in the patient’s own life and actions. The animus-projection gives rise to fantasied relations of love and hatred for “heroes” or “demons.” The favourite victims are tenors, artists, movie-stars, athletic champions, etc. In the first picture the maiden is characterized as demonic, with a hump and an evil look “over her shoulder.” (Hence amulets against the evil eye are often worn by primitives on the nape of the neck, for the vulnerable spot is at the back, where you can’t see.)

[351] In the second picture the “maiden” is portrayed as the innocent victim of the monster. Just as before there was a relationship of identity between the sky-woman and the bear, so here between the young girl and the dragon—which in practical life is often rather more than just a bad joke. Here it signifies a widening of the conscious personality, i.e., through the helplessness of the victim on the one hand and the dangers of the humpback’s evil eye and the dragon’s might on the other.

[352] iv (part dream, part visual imagination). *“A magician is demonstrating his tricks to an Indian prince. He produces a beautiful young girl from under a cloth. She is a dancer, who has the power to change her shape or at least hold her audience spell-bound by faultless illusion. During the dance she dissolves with the music into a swarm of bees. Then she changes into a leopard, then into a jet of water, then into an octopus that has twined itself about a young pearl-fisher. Between times, she takes human form again at the dramatic moment. She appears as a she-ass bearing two baskets of wonderful fruits. Then she becomes a many-coloured peacock. The prince is beside himself with delight and calls her to him. But she dances on, now naked, and even tears the skin from her body, and finally falls down—a naked skeleton. This is buried, but at night a lily grows out of the grave, and from its cup there rises a white lady, who floats slowly up to the sky.”*

[353] This piece describes the successive transformations of the illusionist (artistry in illusion being a specifically feminine talent) until she becomes a transfigured personality. The fantasy was not invented as a sort of allegory; it was part dream, part spontaneous imagery.

[354] v. “*I am in a church made of grey sandstone. The apse is built rather high. Near the tabernacle a girl in a red dress is hanging on the stone cross of the window. (Suicide?)*”

[355] Just as in the preceding cases the sacrifice of a child or a sheep played a part, so here the sacrifice of the maiden hanging on the “cross.” The death of the dancer is also to be understood in this sense, for these maidens are always doomed to die, because their exclusive domination of the feminine psyche hinders the individuation process, that is, the maturation of personality. The “maiden” corresponds to the anima of the man and makes use of it to gain her natural ends, in which illusion plays the greatest role imaginable. But as long as a woman is content to be a *femme à homme*, she has no feminine individuality. She is empty and merely glitters—a welcome vessel for masculine projections. Woman as a personality, however, is a very different thing: here illusion no longer works. So that when the question of personality arises, which is as a rule the painful fact of the second half of life, the childish form of the self disappears too.

[356] All that remains for me now is to describe the Kore as observable in man, the *anima*. Since a man’s wholeness, in so far as he is not constitutionally homosexual, can only be a masculine personality, the feminine figure of the anima cannot be catalogued as a type of supraordinate personality but requires a different evaluation and position. In the products of unconscious activity, the anima appears equally as maiden and mother, which is why a personalistic interpretation always reduces her to the personal mother or some other female person. The real meaning of the figure naturally gets lost in the process, as is inevitably the case with all these reductive interpretations whether in the sphere of the psychology of the unconscious or of mythology. The innumerable attempts that have been made in the sphere of mythology to interpret gods and heroes in a solar, lunar, astral, or meteorological sense contribute nothing of importance to the understanding of them; on the contrary, they all put us on a false track. When, therefore, in dreams and other spontaneous products, we meet with an unknown female figure whose significance oscillates between the extremes of goddess and whore, it is advisable to let her keep her independence and not reduce her arbitrarily to something known. If the unconscious shows her as an “unknown,” this attribute should not be got rid of by main force with a view to arriving at a “rational” interpretation. Like the “supraordinate personality,” the anima is bipolar and can therefore appear positive one moment and negative the

next; now young, now old; now mother, now maiden; now a good fairy, now a witch; now a saint, now a whore. Besides this ambivalence, the anima also has “occult” connections with “mysteries,” with the world of darkness in general, and for that reason she often has a religious tinge. Whenever she emerges with some degree of clarity, she always has a peculiar relationship to *time*: as a rule she is more or less immortal, because outside time. Writers who have tried their hand at this figure have never failed to stress the anima’s peculiarity in this respect. I would refer to the classic descriptions in Rider Haggard’s *She* and *The Return of She*, in Pierre Benoît’s *L’Atlantide*, and above all in the novel of the young American author, William M. Sloane, *To Walk the Night*. In all these accounts, the anima is outside time as we know it and consequently immensely old or a being who belongs to a different order of things.

[357] Since we can no longer or only partially express the archetypes of the unconscious by means of figures in which we religiously believe, they lapse into unconsciousness again and hence are unconsciously projected upon more or less suitable human personalities. To the young boy a clearly discernible anima-form appears in his mother, and this lends her the radiance of power and superiority or else a daemonic aura of even greater fascination. But because of the anima’s ambivalence, the projection can be entirely negative. Much of the fear which the female sex arouses in men is due to the projection of the anima-image. An infantile man generally has a maternal anima; an adult man, the figure of a younger woman. The senile man finds compensation in a very young girl, or even a child.

[3. Case Z]

[358] The anima also has affinities with animals, which symbolize her characteristics. Thus she can appear as a snake or a tiger or a bird. I quote by way of example a dream-series that contains transformations of this kind.¹⁴

[359] i. *A white bird perches on a table. Suddenly it changes into a fair-haired seven-year-old girl and just as suddenly back into a bird, which now speaks with a human voice.*

[360] ii. *In an underground house, which is really the underworld, there lives an old magician and prophet with his “daughter.” She is, however, not really his daughter; she is a dancer, a very loose person, but is blind and seeks healing.*

[361] iii. *A lonely house in a wood, where an old scholar is living. Suddenly his daughter appears, a kind of ghost, complaining that people only look upon her as a figment of fancy.*

- [362] iv. *On the façade of a church there is a Gothic Madonna, who is alive and is the “unknown and yet known woman.” Instead of a child, she holds in her arms a sort of flame or a snake or a dragon.*
- [363] v. *A black-clad “countess” kneels in a dark chapel. Her dress is hung with costly pearls. She has red hair, and there is something uncanny about her. Moreover, she is surrounded by the spirits of the dead.*
- [364] vi. *A female snake comports herself tenderly and insinuatingly, speaking with a human voice. She is only “accidentally” shaped like a snake.*
- [365] vii. *A bird speaks with the same voice, but shows herself helpful by trying to rescue the dreamer from a dangerous situation.*
- [366] viii. *The unknown woman sits, like the dreamer, on the tip of a church-spire and stares at him uncannily across the abyss.*
- [367] ix. *The unknown woman suddenly appears as an old female attendant in an underground public lavatory with a temperature of 40° below zero.*
- [368] x. *The unknown woman leaves the house as a petite bourgeoisie with a female relation, and in her place there is suddenly an over-life-size goddess clad in blue, looking like Athene.*
- [369] xi. *Then she appears in a church, taking the place of the altar, still over-life-size but with veiled face.*
- [370] In all these dreams¹⁵ the central figure is a mysterious feminine being with qualities like those of no woman known to the dreamer. The unknown is described as such in the dreams themselves, and reveals her extraordinary nature firstly by her power to change shape and secondly by her paradoxical ambivalence. Every conceivable shade of meaning glitters in her, from the highest to the lowest.
- [371] *Dream i* shows the anima as elflike, i.e., only partially human. She can just as well be a bird, which means that she may belong wholly to nature and can vanish (i.e., become unconscious) from the human sphere (i.e., consciousness).
- [372] *Dream ii* shows the unknown woman as a mythological figure from the beyond (the unconscious). She is the *soror* or *filia mystica* of a hierophant or “philosopher,” evidently a parallel to those mystic syzygies which are to be met with in the figures of Simon Magus and Helen, Zosimus and Theosebeia, Comarius and Cleopatra, etc. Our dream-figure fits in best with Helen. A really admirable description of anima-psychology in a woman is to be found in Erskine’s *Helen of Troy*.
- [373] *Dream iii* presents the same theme, but on a more “fairytale-like” plane. Here the anima is shown as rather spookish.

- [374] *Dream iv* brings the anima nearer to the Mother of God. The “child” refers to the mystic speculations on the subject of the redemptive serpent and the “fiery” nature of the redeemer.
- [375] In *dream v*, the anima is visualized somewhat romantically as the “distinguished” fascinating woman, who nevertheless has dealings with spirits.
- [376] *Dreams vi and vii* bring theriomorphic variations. The anima’s identity is at once apparent to the dreamer because of the voice and what it says. The anima has “accidentally” taken the form of a snake, just as in *dream i* she changed with the greatest ease into a bird and back again. As a snake, she is playing the negative role, as a bird the positive.
- [377] *Dream viii* shows the dreamer confronted with his anima. This takes place high above the ground (i.e., above human reality). Obviously it is a case of dangerous fascination by the anima.
- [378] *Dream ix* signifies the anima’s deep plunge into an extremely “subordinate” position, where the last trace of fascination has gone and only human sympathy is left.
- [379] *Dream x* shows the paradoxical double nature of the anima: banal mediocrity and Olympian divinity.
- [380] *Dream xi* restores the anima to the Christian church, not as an icon but as the altar itself. The altar is the place of sacrifice and also the receptacle for consecrated relics.
- [381] To throw even a moderate light on all these anima associations would require special and very extensive investigation, which would be out of place here because, as we have already said, the anima has only an indirect bearing on the interpretation of the Kore figure. I have presented this dream-series simply for the purpose of giving the reader some idea of the empirical material on which the idea of the anima is based.¹⁶ From this series and others like it we get an average picture of that strange factor which has such an important part to play in the masculine psyche, and which naïve presumption invariably identifies with certain women, imputing to them all the illusions that swarm in the male Eros.
- [382] It seems clear enough that the man’s anima found occasion for projection in the Demeter cult. The Kore doomed to her subterranean fate, the two-faced mother, and the theriomorphic aspects of both afforded the anima ample opportunity to reflect herself, shimmering and equivocal, in the Eleusinian cult, or rather to experience herself there and fill the celebrants with her unearthly essence, to their lasting gain. For a man, anima experiences are always of immense and abiding significance.

[383] But the Demeter-Kore myth is far too feminine to have been merely the result of an anima-projection. Although the anima can, as we have said, experience herself in Demeter-Kore, she is yet of a wholly different nature. She is in the highest degree *femme à homme*, whereas Demeter-Kore exists on the plane of mother-daughter experience, which is alien to man and shuts him out. In fact, the psychology of the Demeter cult bears all the features of a matriarchal order of society, where the man is an indispensable but on the whole disturbing factor.

V

**THE PHENOMENOLOGY
OF THE SPIRIT IN FAIRYTALES**

ON THE PSYCHOLOGY OF THE TRICKSTER-FIGURE

THE PHENOMENOLOGY OF THE SPIRIT IN FAIRYTALES¹

[384] One of the unbreakable rules in scientific research is to take an object as known only so far as the inquirer is in a position to make scientifically valid statements about it. “Valid” in this sense simply means what can be verified by facts. The object of inquiry is the natural phenomenon. Now in psychology, one of the most important phenomena is the *statement*, and in particular its form and content, the latter aspect being perhaps the more significant with regard to the nature of the psyche. The first task that ordinarily presents itself is the description and arrangement of events, then comes the closer examination into the laws of their living behaviour. To inquire into the *substance* of what has been observed is possible in natural science only where there is an Archimedean point outside. For the psyche, no such outside standpoint exists—only the psyche can observe the psyche. Consequently, knowledge of the psychic substance is impossible for us, at least with the means at present available. This does not rule out the possibility that the atomic physics of the future may supply us with the said Archimedean point. For the time being, however, our subtlest lucubrations can establish no more than is expressed in the statement: this is how the psyche behaves. The honest investigator will piously refrain from meddling with questions of substance. I do not think it superfluous to acquaint my reader with the necessary limitations that psychology voluntarily imposes on itself, for he will then be in a position to appreciate the phenomenological standpoint of modern psychology, which is not always understood. This standpoint does not exclude the existence of faith, conviction, and experienced certainties of whatever description, nor does it contest their possible validity. Great as is their importance for the individual and for collective life, psychology completely lacks the means to prove their validity in the scientific sense. One may lament this incapacity on the part of science, but that does not enable it to jump over its own shadow.

I. CONCERNING THE WORD ‘SPIRIT’

[385] The word “spirit” possesses such a wide range of application that it requires considerable effort to make clear to oneself all the things it can mean. Spirit, we say, is the principle that stands in opposition to matter. By this we understand an immaterial substance or form of existence which on the highest and most universal level is called “God.” We imagine this immaterial substance also as the vehicle of psychic phenomena or even of life itself. In contradiction to this view there stands the

antithesis: spirit and nature. Here the concept of spirit is restricted to the supernatural or anti-natural, and has lost its substantial connection with psyche and life. A similar restriction is implied in Spinoza's view that spirit is an attribute of the One Substance. Hylozoism goes even further, taking spirit to be a quality of matter.

[386] A very widespread view conceives spirit as a higher and psyche as a lower principle of activity, and conversely the alchemists thought of spirit as the *ligamentum animae et corporis*, obviously regarding it as a *spiritus vegetativus* (the later life-spirit or nerve-spirit). Equally common is the view that spirit and psyche are essentially the same and can be separated only arbitrarily. Wundt takes spirit as "the inner being, regardless of any connection with an outer being." Others restrict spirit to certain psychic capacities or functions or qualities, such as the capacity to think and reason in contradistinction to the more "soulful" sentiments. Here spirit means the sum-total of all the phenomena of rational thought, or of the intellect, including the will, memory, imagination, creative power, and aspirations motivated by ideals. Spirit has the further connotation of *sprightliness*, as when we say that a person is "spirited," meaning that he is versatile and full of ideas, with a brilliant, witty, and surprising turn of mind. Again, spirit denotes a certain attitude or the principle underlying it, for instance, one is "educated in the spirit of Pestalozzi," or one says that the "spirit of Weimar is the immortal German heritage." A special instance is the time-spirit, or spirit of the age, which stands for the principle and motive force behind certain views, judgments, and actions of a collective nature. Then there is the "objective spirit,"² by which is meant the whole stock of man's cultural possessions with particular regard to his intellectual and religious achievements.

[387] As linguistic usage shows, spirit in the sense of an attitude has unmistakable leanings towards personification: the spirit of Pestalozzi can also be taken concretistically as his ghost or imago, just as the spirits of Weimar are the personal spectres of Goethe and Schiller; for spirit still has the spookish meaning of the soul of one departed. The "cold breath of the spirits" points on the one hand to the ancient affinity of *ψυχή* with *ψυχός* and *ψῦχος*, which both mean 'cold,' and on the other hand to the original meaning of *πνεῦμα*, which simply denoted 'air in motion'; and in the same way *animus* and *anima* were connected with *άνεμος*, 'wind.' The German word *Geist* probably has more to do with something frothing, effervescing, or fermenting; hence affinities with *Gischt* (foam), *Gäsch* (yeast), *ghost*, and also with the emotional *ghastly* and *aghast*, are not to be rejected. From time immemorial emotion has been regarded as possession, which is why we still say today, of a hot-tempered person, that he is possessed of a devil or that an evil spirit has entered into him.³ Just as, according to the old view, the spirits or souls of the dead are of a subtle disposition like a vapour or a smoke, so to the alchemist *spiritus* was a subtle, volatile, active, and vivifying essence, such as alcohol was understood to be, and all

the arcane substances. On this level, spirit includes spirits of salts, spirits of ammonia, formic spirit, etc.

[388] This score or so of meanings and shades of meaning attributable to the word “spirit” make it difficult for the psychologist to delimit his subject conceptually, but on the other hand they lighten the task of describing it, since the many different aspects go to form a vivid and concrete picture of the phenomenon in question. We are concerned with a functional complex which originally, on the primitive level, was felt as an invisible, breathlike “presence.” William James has given us a lively account of this primordial phenomenon in his *Varieties of Religious Experience*. Another well-known example is the wind of the Pentecostal miracle. The primitive mentality finds it quite natural to personify the invisible presence as a ghost or demon. The souls or spirits of the dead are identical with the psychic activity of the living; they merely continue it. The view that the psyche is a spirit is implicit in this. When therefore something psychic happens in the individual which he feels as belonging to himself, that something is his own spirit. But if anything psychic happens which seems to him strange, then it is somebody else’s spirit, and it may be causing a possession. The spirit in the first case corresponds to the subjective attitude, in the latter case to public opinion, to the time-spirit, or to the original, not yet human, anthropoid disposition which we also call the *unconscious*.

[389] In keeping with its original wind-nature, spirit is always an active, winged, swift-moving being as well as that which vivifies, stimulates, incites, fires, and inspires. To put it in modern language, spirit is the dynamic principle, forming for that very reason the classical antithesis of matter—the antithesis, that is, of its stasis and inertia. Basically it is the contrast between life and death. The subsequent differentiation of this contrast leads to the actually very remarkable opposition of spirit and nature. Even though spirit is regarded as essentially alive and enlivening, one cannot really feel nature as unspiritual and dead. We must therefore be dealing here with the (Christian) postulate of a spirit whose life is so vastly superior to the life of nature that in comparison with it the latter is no better than death.

[390] This special development in man’s idea of spirit rests on the recognition that its invisible presence is a psychic phenomenon, i.e., one’s own spirit, and that this consists not only of uprushes of life but of formal products too. Among the first, the most prominent are the images and shadowy presentations that occupy our inner field of vision; among the second, thinking and reason, which organize the world of images. In this way a transcendent spirit superimposed itself upon the original, natural life-spirit and even swung over to the opposite position, as though the latter were merely naturalistic. The transcendent spirit became the supranatural and transmundane cosmic principle of order and as such was given the name of “God,” or

at least it became an attribute of the One Substance (as in Spinoza) or one Person of the Godhead (as in Christianity).

[391] The corresponding development of spirit in the reverse, hylozoistic direction—a *maiori ad minus*—took place under anti-Christian auspices in materialism. The premise underlying this reaction is the exclusive certainty of the spirit's identity with psychic functions, whose dependence upon brain and metabolism became increasingly clear. One had only to give the One Substance another name and call it "matter" to produce the idea of a spirit which was entirely dependent on nutrition and environment, and whose highest form was the intellect or reason. This meant that the original pneumatic presence had taken up its abode in man's physiology, and a writer like Klages could arraign the spirit as the "adversary of the soul."⁴ For it was into this latter concept that the original spontaneity of the spirit withdrew after it had been degraded to a servile attribute of matter. Somewhere or other the *deus ex machina* quality of spirit had to be preserved—if not in the spirit itself, then in its synonym the soul, that glancing, Aeolian⁵ thing, elusive as a butterfly (anima, ψυχή).

[392] Even though the materialistic conception of the spirit did not prevail everywhere, it still persisted, outside the sphere of religion, in the realm of conscious phenomena. Spirit as "subjective spirit" came to mean a purely endopsychic phenomenon, while "objective spirit" did not mean the universal spirit, or God, but merely the sum total of intellectual and cultural possessions which make up our human institutions and the content of our libraries. Spirit had forfeited its original nature, its autonomy and spontaneity over a very wide area, with the solitary exception of the religious field, where, at least in principle, its pristine character remained unimpaired.

In this résumé we have described an entity which presents itself to us as an immediate psychic phenomenon distinguished from other psychisms whose existence is naïvely believed to be causally dependent upon physical influences. A connection between spirit and physical conditions is not immediately apparent, and for this reason it was credited with immateriality to a much higher degree than was the case with psychic phenomena in the narrower sense. Not only is a certain physical dependence attributed to the latter, but they are themselves thought of as possessing a kind of materiality, as the idea of the subtle body and the Chinese *kuei-soul* clearly show. In view of the intimate connection that exists between certain psychic processes and their physical parallels we cannot very well accept the total immateriality of the psyche. As against this, the *consensus omnium* insists on the immateriality of spirit, though not everyone would agree that it also has a reality of its own. It is, however, not easy to see why our hypothetical "matter," which looks quite different from what it did even thirty years ago, alone should be real, and spirit not. Although the idea of immateriality does not in itself exclude that of reality,

popular opinion invariably associates reality with materiality. Spirit and matter may well be forms of one and the same transcendental being. For instance the Tantrists, with as much right, say that matter is nothing other than the concreteness of God's thoughts. The sole immediate reality is the psychic reality of conscious contents, which are as it were labelled with a spiritual or material origin as the case may be.

[393] The hallmarks of spirit are, firstly, the principle of spontaneous movement and activity; secondly, the spontaneous capacity to produce images independently of sense perception; and thirdly, the autonomous and sovereign manipulation of these images. This spiritual entity approaches primitive man from outside; but with increasing development it gets lodged in man's consciousness and becomes a subordinate function, thus apparently forfeiting its original character of autonomy. That character is now retained only in the most conservative views, namely in the religions. The descent of spirit into the sphere of human consciousness is expressed in the myth of the divine *voūς* caught in the embrace of *φύσις*. This process, continuing over the ages, is probably an unavoidable necessity, and the religions would find themselves in a very forlorn situation if they believed in the attempt to hold up evolution. Their task, if they are well advised, is not to impede the ineluctable march of events, but to guide it in such a way that it can proceed without fatal injury to the soul. The religions should therefore constantly recall to us the origin and original character of the spirit, lest man should forget what he is drawing into himself and with what he is filling his consciousness. He himself did not create the spirit, rather the spirit makes *him* creative, always spurring him on, giving him lucky ideas, staying power, "enthusiasm" and "inspiration." So much, indeed, does it permeate his whole being that he is in gravest danger of thinking that he actually created the spirit and that he "has" it. In reality, however, the primordial phenomenon of the spirit takes possession of *him*, and, while appearing to be the willing object of human intentions, it binds his freedom, just as the physical world does, with a thousand chains and becomes an obsessive *idée-force*. Spirit threatens the naïve-minded man with inflation, of which our own times have given us the most horribly instructive examples. The danger becomes all the greater the more our interest fastens upon external objects and the more we forget that the differentiation of our relation to nature should go hand in hand with a correspondingly differentiated relation to the spirit, so as to establish the necessary balance. If the outer object is not offset by an inner, unbridled materialism results, coupled with maniacal arrogance or else the extinction of the autonomous personality, which is in any case the ideal of the totalitarian mass state.

[394] As can readily be seen, the common modern idea of spirit ill accords with the Christian view, which regards it as the *sum-mum bonum*, as God himself. To be sure, there is also the idea of an evil spirit. But the modern idea cannot be equated with

that either, since for us spirit is not necessarily evil; we would have to call it morally indifferent or neutral. When the Bible says “God is spirit,” it sounds more like the definition of a substance, or like a qualification. But the devil too, it seems, is endowed with the same peculiar spiritual substance, albeit an evil and corrupt one. The original identity of substance is still expressed in the idea of the fallen angel, as well as in the close connection between Jehovah and Satan in the Old Testament. There may be an echo of this primitive connection in the Lord’s Prayer, where we say “Lead us not into temptation”—for is not this really the business of the *tempter*, the devil himself?

[395] This brings us to a point we have not considered at all in the course of our observations so far. We have availed ourselves of cultural and everyday conceptions which are the product of human consciousness and its reflections, in order to form a picture of the psychic modes of manifestation of the factor “spirit.” But we have yet to consider that because of its original autonomy,⁶ about which there can be no doubt in the psychological sense, the spirit is quite capable of staging its own manifestations spontaneously.

II. SELF-REPRESENTATION OF THE SPIRIT IN DREAMS

[396] The psychic manifestations of the spirit indicate at once that they are of an archetypal nature—in other words, the phenomenon we call spirit depends on the existence of an autonomous primordial image which is universally present in the preconscious makeup of the human psyche. As usual, I first came up against this problem when investigating the dreams of my patients. It struck me that a certain kind of father-complex has a “spiritual” character, so to speak, in the sense that the father-image gives rise to statements, actions, tendencies, impulses, opinions, etc., to which one could hardly deny the attribute “spiritual.” In men, a positive father-complex very often produces a certain credulity with regard to authority and a distinct willingness to bow down before all spiritual dogmas and values; while in women, it induces the liveliest spiritual aspirations and interests. In dreams, it is always the father-figure from whom the decisive convictions, prohibitions, and wise counsels emanate. The invisibility of this source is frequently emphasized by the fact that it consists simply of an authoritative voice which passes final judgments.⁷ Mostly, therefore, it is the figure of a “wise old man” who symbolizes the spiritual factor. Sometimes the part is played by a “real” spirit, namely the ghost of one dead, or, more rarely, by grotesque gnomelike figures or talking animals. The dwarf forms are found, at least in my experience, mainly in women; hence it seems to me logical that in Ernst Barlach’s play *Der tote Tag* (1912), the gnomelike figure of Steissbart (“Rumpbeard”) is associated with the mother, just as Bes is associated with the mother-goddess at Karnak. In both sexes the spirit can also take the form of a boy or

a youth. In women he corresponds to the so-called “positive” animus who indicates the possibility of conscious spiritual effort. In men his meaning is not so simple. He can be positive, in which case he signifies the “higher” personality, the self or *filius regius* as conceived by the alchemists.⁸ But he can also be negative, and then he signifies the infantile shadow.⁹ In both cases the boy means some form of spirit.¹⁰ Graybeard and boy belong together. The pair of them play a considerable role in alchemy as symbols of Mercurius.

[397] It can never be established with one-hundred-per-cent certainty whether the spirit-figures in dreams are morally good. Very often they show all the signs of duplicity, if not of outright malice. I must emphasize, however, that the grand plan on which the unconscious life of the psyche is constructed is so inaccessible to our understanding that we can never know what evil may not be necessary in order to produce good by enantiodromia, and what good may very possibly lead to evil. Sometimes the *probate spiritus* recommended by John cannot, with the best will in the world, be anything other than a cautious and patient waiting to see how things will finally turn out.

[398] The figure of the wise old man can appear so plastically, not only in dreams but also in visionary meditation (or what we call active imagination”), that, as is sometimes apparently the case in India, it takes over the role of a guru.¹¹ The wise old man appears in dreams in the guise of a magician, doctor, priest, teacher, professor, grandfather, or any other person possessing authority. The archetype of spirit in the shape of a man, hobgoblin, or animal always appears in a situation where insight, understanding, good advice, determination, planning, etc., are needed but cannot be mustered on one’s own resources. The archetype compensates this state of spiritual deficiency by contents designed to fill the gap. An excellent example of this is the dream about the white and black magicians, which tried to compensate the spiritual difficulties of a young theological student. I did not know the dreamer myself, so the question of my personal influence is ruled out. He dreamed *he was standing in the presence of a sublime hieratic figure called the “white magician,” who was nevertheless clothed in a long black robe. This magician had just ended a lengthy discourse with the words “And for that we require the help of the black magician.” Then the door suddenly opened and another old man came in, the “black magician,” who however was dressed in a white robe. He too looked noble and sublime. The black magician evidently wanted to speak with the white, but hesitated to do so in the presence of the dreamer. At that the white magician, pointing to the dreamer, said, “Speak, he is an innocent.” So the black magician began to relate a strange story of how he had found the lost keys of Paradise and did not know how to use them. He had, he said, come to the white magician for an explanation of the secret of the keys. He told him that the king of the country in which he lived was seeking a suitable tomb*

for himself. His subjects had chanced to dig up an old sarcophagus containing the mortal remains of a virgin. The king opened the sarcophagus, threw away the bones, and had the empty sarcophagus buried again for later use. But no sooner had the bones seen the light of day than the being to whom they once had belonged—the virgin—changed into a black horse that galloped off into the desert. The black magician pursued it across the sandy wastes and beyond, and there after many vicissitudes and difficulties he found the lost keys of Paradise. That was the end of his story, and also, unfortunately, of the dream.

[399] Here the compensation certainly did not fall out as the dreamer would wish, by handing him a solution on a plate; rather it confronted him with a problem to which I have already alluded, and one which life is always bringing us up against: namely, the uncertainty of all moral valuation, the bewildering interplay of good and evil, and the remorseless concatenation of guilt, suffering, and redemption. This path to the primordial religious experience is the right one, but how many can recognize it? It is like a still small voice, and it sounds from afar. It is ambiguous, questionable, dark, presaging danger and hazardous adventure; a razor-edged path, to be trodden for God's sake only, without assurance and without sanction.

III. THE SPIRIT IN FAIRYTALES

[400] I would gladly present the reader with some more modern dream-material, but I fear that the individualism of dreams would make too high a demand upon our exposition and would claim more space than is here at our disposal. We shall therefore turn to folklore, where we need not get involved in the grim confrontations and entanglements of individual case histories and can observe the variations of the spirit motif without having to consider conditions that are more or less unique. In myths and fairytales, as in dreams, the psyche tells its own story, and the interplay of the archetypes is revealed in its natural setting as “formation, transformation / the eternal Mind's eternal recreation.”

[401] The frequency with which the spirit-type appears as an old man is about the same in fairytales as in dreams.¹² The old man always appears when the hero is in a hopeless and desperate situation from which only profound reflection or a lucky idea—in other words, a spiritual function or an endopsychic automatism of some kind—can extricate him. But since, for internal and external reasons, the hero cannot accomplish this himself, the knowledge needed to compensate the deficiency comes in the form of a personified thought, i.e., in the shape of this sagacious and helpful old man. An Estonian fairytale,¹³ for instance, tells how an ill-treated little orphan boy who had let a cow escape was afraid to return home again for fear of more punishment. So he ran away, chancing to luck. He naturally got himself into a hopeless situation, with no visible way out. Exhausted, he fell into a deep sleep.

When he awoke, “it seemed to him that he had something liquid in his mouth, and he saw a little old man with a long grey beard standing before him, who was in the act of replacing the stopper in his little milk-flask. ‘Give me some more to drink,’ begged the boy. ‘You have had enough for today,’ replied the old man. ‘If my path had not chanced to lead me to you, that would assuredly have been your last sleep, for when I found you, you were half dead.’ Then the old man asked the boy who he was and where he wanted to go. The boy recounted everything he could remember happening to him up to the beating he had received the previous evening. ‘My dear child,’ said the old man, ‘you are no better and no worse off than many others whose dear protectors and comforters rest in their coffins under the earth. You can no longer turn back. Now that you have run away, you must seek a new fortune in the world. As I have neither house nor home, nor wife nor child, I cannot take further care of you, but I will give you some good advice for nothing.’”

[402] So far the old man has been expressing no more than what the boy, the hero of the tale, could have thought out for himself. Having given way to the stress of emotion and simply run off like that into the blue, he would at least have had to reflect that he needed food. It would also have been necessary, at such a moment, to consider his position. The whole story of his life up to the recent past would then have passed before his mind, as is usual in such cases. An anamnesis of this kind is a purposeful process whose aim is to gather the assets of the whole personality together at the critical moment, when all one’s spiritual and physical forces are challenged, and with this united strength to fling open the door of the future. No one can help the boy to do this; he has to rely entirely on himself. There is no going back. This realization will give the necessary resolution to his actions. By forcing him to face the issue, the old man saves him the trouble of making up his mind. Indeed the old man is himself this purposeful reflection and concentration of moral and physical forces that comes about spontaneously in the psychic space outside consciousness when conscious thought is not yet—or is no longer—possible. The concentration and tension of psychic forces have something about them that always looks like magic: they develop an unexpected power of endurance which is often superior to the conscious effort of will. One can observe this experimentally in the artificial concentration induced by hypnosis: in my demonstrations I used regularly to put an hysteric, of weak bodily build, into a deep hypnotic sleep and then get her to lie with the back of her head on one chair and her heels resting on another, stiff as a board, and leave her there for about a minute. Her pulse would gradually go up to 90. A husky young athlete among the students tried in vain to imitate this feat with a conscious effort of will. He collapsed in the middle with his pulse racing at 120.

[403] When the clever old man had brought the boy to this point he could begin his good advice, i.e., the situation no longer looked hopeless. He advised him to continue

his wanderings, always to the eastward, where after seven years he would reach the great mountain that betokened his good fortune. The bigness and tallness of the mountain are allusions to his adult personality.¹⁴ Concentration of his powers brings assurance and is therefore the best guarantee of success.¹⁵ From now on he will lack for nothing. “Take my srip and my flask,” says the old man, “and each day you will find in them all the food and drink you need.” At the same time he gave him a burdock leaf that could change into a boat whenever the boy had to cross water.

[404] Often the old man in fairytales asks questions like who? why? whence? and whither?¹⁶ for the purpose of inducing self-reflection and mobilizing the moral forces, and more often still he gives the necessary magical talisman,¹⁷ the unexpected and improbable power to succeed, which is one of the peculiarities of the unified personality in good or bad alike. But the intervention of the old man—the spontaneous objectivation of the archetype—would seem to be equally indispensable, since the conscious will by itself is hardly ever capable of uniting the personality to the point where it acquires this extraordinary power to succeed. For that, not only in fairytales but in life generally, the objective intervention of the archetype is needed, which checks the purely affective reactions with a chain of inner confrontations and realizations. These cause the who? where? how? why? to emerge clearly and in this wise bring knowledge of the immediate situation as well as of the goal. The resultant enlightenment and untying of the fatal tangle often has something positively magical about it—an experience not unknown to the psychotherapist.

[405] The tendency of the old man to set one thinking also takes the form of urging people to “sleep on it.” Thus he says to the girl who is searching for her lost brothers: “Lie down: morning is cleverer than evening.”¹⁸ He also sees through the gloomy situation of the hero who has got himself into trouble, or at least can give him such information as will help him on his journey. To this end he makes ready use of animals, particularly birds. To the prince who has gone in search of the kingdom of heaven the old hermit says: “I have lived here for three hundred years, but never yet has anybody asked me about the kingdom of heaven. I cannot tell you myself; but up there, on another floor of the house, live all kinds of birds, and they can surely tell you.”¹⁹ The old man knows what roads lead to the goal and points them out to the hero.²⁰ He warns of dangers to come and supplies the means of meeting them effectively. For instance, he tells the boy who has gone to fetch the silver water that the well is guarded by a lion who has the deceptive trick of sleeping with his eyes open and watching with his eyes shut,²¹ or he counsels the youth who is riding to a magic fountain in order to fetch the healing draught for the king, only to draw the water at a trot because of the lurking witches who lasso everybody that comes to the fountain.²² He charges the princess whose lover has been changed into a werewolf to make a fire and put a cauldron of tar over it. Then she must plunge her beloved white

lily into the boiling tar, and when the werewolf comes, she must empty the cauldron over its head, which will release her lover from the spell.²³ Occasionally the old man is a very critical old man, as in the Caucasian tale of the youngest prince who wanted to build a flawless church for his father, so as to inherit the kingdom. This he does, and nobody can discover a single flaw, but then an old man comes along and says, "That's a fine church you've built, to be sure! What a pity the main wall is a bit crooked!" The prince has the church pulled down again and builds a new one, but here too the old man discovers a flaw, and so on for the third time.²⁴

[406] The old man thus represents knowledge, reflection, insight, wisdom, cleverness, and intuition on the one hand, and on the other, moral qualities such as goodwill and readiness to help, which make his "spiritual" character sufficiently plain. Since the archetype is an autonomous content of the unconscious, the fairytale, which usually concretizes the archetypes, can cause the old man to appear in a dream in much the same way as happens in modern dreams. In a Balkan tale the old man appears to the hard-pressed hero in a dream and gives him good advice about accomplishing the impossible tasks that have been imposed upon him.²⁵ His relation to the unconscious is clearly expressed in one Russian fairytale, where he is called the "King of the Forest." As the peasant sat down wearily on a tree stump, a little old man crept out: "all wrinkled he was and a green beard hung down to his knees." "Who are you?" asked the peasant. "I am Och, King of the Forest," said the manikin. The peasant hired out his profligate son to him, "and the King of the Forest departed with the young man, and conducted him to that other world under the earth and brought him to a green hut. ... In the hut everything was green: the walls were green and the benches, Och's wife was green and the children were green ... and the little water-women who waited on him were as green as rue." Even the food was green. The King of the Forest is here a vegetation or tree numen who reigns in the woods and, through the nixies, also has connections with water, which clearly shows his relation to the unconscious since the latter is frequently expressed through wood and water symbols.

[407] There is equally a connection with the unconscious when the old man appears as a dwarf. The fairytale about the princess who was searching for her lover says: "Night came and the darkness, and still the princess sat in the same place and wept. As she sat there lost in thought, she heard a voice greeting her: 'Good evening, pretty maid! Why are you sitting here so lonely and sad?' She sprang up hastily and felt very confused, and that was no wonder. But when she looked round there was only a tiny little old man standing before her, who nodded his head at her and looked so kind and simple." In a Swiss fairytale, the peasant's son who wants to bring the king's daughter a basket of apples encounters "es chlis isigs Männli, das frogt-ne, was er do i dem Chratte häig?" (a little iron man who asked what he had there in the

basket). In another passage the “Männkli” has “es isigs Chlaidli a” (iron clothes on). By “isig” presumably “eisern” (iron) is meant, which is more probable than “eisig” (icy). In the latter case it would have to be “es Chlaidli vo Is” (clothes of ice).²⁶ There are indeed little ice men, and little metal men too; in fact, in a modern dream I have even come across a little black iron man who appeared at a critical juncture, like the one in this fairytale of the country bumpkin who wanted to marry the princess.

[408] In a modern series of visions in which the figure of the wise old man occurred several times, he was on one occasion of normal size and appeared at the very bottom of a crater surrounded by high rocky walls; on another occasion he was a tiny figure on the top of a mountain, inside a low, stony enclosure. We find the same motif in Goethe’s tale of the dwarf princess who lived in a casket.²⁷ In this connection we might also mention the Anthroparion, the little leaden man of the Zosimos vision,²⁸ as well as the metallic men who dwell in the mines, the crafty dactyls of antiquity, the homunculi of the alchemists, and the gnomic throng of hobgoblins, brownies, gremlins, etc. How “real” such conceptions are became clear to me on the occasion of a serious mountaineering accident: after the catastrophe two of the climbers had the collective vision, in broad daylight, of a little hooded man who scrambled out of an inaccessible crevasse in the ice face and passed across the glacier, creating a regular panic in the two beholders. I have often encountered motifs which made me think that the unconscious must be the world of the infinitesimally small. Such an idea could be derived rationalistically from the obscure feeling that in all these visions we are dealing with something endopsychic, the inference being that a thing must be exceedingly small in order to fit inside the head. I am no friend of any such “rational” conjectures, though I would not say that they are all beside the mark. It seems to me more probable that this liking for diminutives on the one hand and for superlatives—giants, etc.—on the other is connected with the queer uncertainty of spatial and temporal relations in the unconscious.²⁹ Man’s sense of proportion, his rational conception of big and small, is distinctly anthropomorphic, and it loses its validity not only in the realm of physical phenomena but also in those parts of the collective unconscious beyond the range of the specifically human. The atman is “smaller than small and bigger than big,” he is “the size of a thumb” yet he “encompasses the earth on every side and rules over the ten-finger space.” And of the Cabiri Goethe says: “little in length / mighty in strength.” In the same way, the archetype of the wise old man is quite tiny, almost imperceptible, and yet it possesses a fateful potency, as anyone can see when he gets down to fundamentals. The archetypes have this peculiarity in common with the atomic world, which is demonstrating before our eyes that the more deeply the investigator penetrates into the universe of microphysics the more devastating are the explosive forces he finds enchained there. That the greatest effects come from the smallest causes has become

patently clear not only in physics but in the field of psychological research as well. How often in the critical moments of life everything hangs on what appears to be a mere nothing!

[409] In certain primitive fairytales, the illuminating quality of our archetype is expressed by the fact that the old man is identified with the sun. He brings a firebrand with him which he uses for roasting a pumpkin. After he has eaten, he takes the fire away again, which causes mankind to steal it from him.³⁰ In a North American Indian tale, the old man is a witch-doctor who owns the fire.³¹ Spirit too has a fiery aspect, as we know from the language of the Old Testament and from the story of the Pentecostal miracle.

[410] Apart from his cleverness, wisdom, and insight, the old man, as we have already mentioned, is also notable for his moral qualities; what is more, he even tests the moral qualities of others and makes his gifts dependent on this test. There is a particularly instructive example of this in the Estonian fairytale of the stepdaughter and the real daughter. The former is an orphan distinguished for her obedience and good behaviour. The story begins with her distaff falling into a well. She jumps in after it, but does not drown, and comes to a magic country where, continuing her quest, she meets a cow, a ram, and an apple tree whose wishes she fulfils. She now comes to a wash-house where a dirty old man is sitting who wants her to wash him. The following dialogue develops: “Pretty maid, pretty maid, wash me, do, it is hard for me to be so dirty!” “What shall I heat the stove with?” “Collect wooden pegs and crows’ dung and make a fire with that.” But she fetches sticks, and asks, “Where shall I get the bath-water?” “Under the barn there stands a white mare. Get her to piss into the tub!” But she takes clean water, and asks, “Where shall I get a bath-switch?” “Cut off the white mare’s tail and make a bath-switch of that!” But she makes one out of birch-twigs, and asks, “Where shall I get soap?” “Take a pumice-stone and scrub me with that!” But she fetches soap from the village and with that she washes the old man.

[411] As a reward he gives her a bag full of gold and precious stones. The daughter of the house naturally becomes jealous, throws her distaff into the well, where she finds it again instantly. Nevertheless she goes on and does everything wrong that the stepdaughter had done right, and is rewarded accordingly. The frequency of this motif makes further examples superfluous.

[412] The figure of the superior and helpful old man tempts one to connect him somehow or other with God. In the German tale of the soldier and the black princess³² it is related how the princess, on whom a curse has been laid, creeps out of her iron coffin every night and devours the soldier standing guard over the tomb. One soldier, when his turn came, tried to escape. “That evening he stole away, fled over

the fields and mountains, and came to a beautiful meadow. Suddenly a little man stood before him with a long grey beard, but it was none other than the Lord God himself, who could no longer go on looking at all the mischief the devil wrought every night. ‘Whither away?’ said the little grey man, ‘may I come with you?’ And because the little old man looked so friendly the soldier told him that he had run away and why he had done so.” Good advice follows, as always. In this story the old man is taken for God in the same naïve way that the English alchemist, Sir George Ripley,³³ describes the “old king” as “antiquus dierum”—“the Ancient of Days.”

[413] Just as all archetypes have a positive, favourable, bright side that points upwards, so also they have one that points downwards, partly negative and unfavourable, partly chthonic, but for the rest merely neutral. To this the spirit archetype is no exception. Even his dwarf form implies a kind of limitation and suggests a naturalistic vegetation-numen sprung from the underworld. In one Balkan tale, the old man is handicapped by the loss of an eye. It has been gouged out by the Vili, a species of winged demon, and the hero is charged with the task of getting them to restore it to him. The old man has therefore lost part of his eyesight—that is, his insight and enlightenment—to the daemonic world of darkness; this handicap is reminiscent of the fate of Osiris, who lost an eye at the sight of a black pig (his wicked brother Set), or again of Wotan, who sacrificed his eye at the spring of Mimir. Characteristically enough, the animal ridden by the old man in our fairytale is a goat, a sign that he himself has a dark side. In a Siberian tale, he appears as a one-legged, one-handed, and one-eyed greybeard who wakens a dead man with an iron staff. In the course of the story the latter, after being brought back to life several times, kills the old man by a mistake, and thus throws away his good fortune. The story is entitled “The One-sided Old Man,” and in truth his handicap shows that he consists of one half only. The other half is invisible, but appears in the shape of a murderer who seeks the hero’s life. Eventually the hero succeeds in killing his persistent murderer, but in the struggle he also kills the one-sided old man, so that the identity of the two victims is clearly revealed. It is thus possible that the old man is his own opposite, a life-bringer as well as a death-dealer—“ad utrumque peritus” (skilled in both), as is said of Hermes.³⁴

[414] In these circumstances, whenever the “simple” and “kindly” old man appears, it is advisable for heuristic and other reasons to scrutinize the context with some care. For instance, in the Estonian tale we first mentioned, about the hired boy who lost the cow, there is a suspicion that the helpful old man who happened to be on the spot so opportunely had surreptitiously made away with the cow beforehand in order to give his protégé an excellent reason for taking to flight. This may very well be, for everyday experience shows that it is quite possible for a superior, though subliminal, foreknowledge of fate to contrive some annoying incident for the sole purpose of

bullying our Simple Simon of an ego-consciousness into the way he should go, which for sheer stupidity he would never have found by himself. Had our orphan guessed that it was the old man who had whisked off his cow as if by magic, he would have seemed like a spiteful troll or a devil. And indeed the old man has a wicked aspect too, just as the primitive medicine-man is a healer and helper and also the dreaded concocter of poisons. The very word *φάρμακον* means ‘poison’ as well as ‘antidote,’ and poison can in fact be both.

[415] The old man, then, has an ambiguous elfin character—witness the extremely instructive figure of Merlin—seeming, in certain of his forms, to be good incarnate and in others an aspect of evil. Then again, he is the wicked magician who, from sheer egoism, does evil for evil’s sake. In a Siberian fairytale, he is an evil spirit “on whose head were two lakes with two ducks swimming in them.” He feeds on human flesh. The story relates how the hero and his companions go to a feast in the next village, leaving their dogs at home. These, acting on the principle “when the cat’s away the mice do play,” also arrange a feast, at the climax of which they all hurl themselves on the stores of meat. The men return home and chase out the dogs, who dash off into the wilderness. “Then the Creator spoke to Ememqut [the hero of the tale]: ‘Go and look for the dogs with your wife.’” But he gets caught in a terrible snow-storm and has to seek shelter in the hut of the evil spirit. There now follows the well-known motif of the biter bit. The “Creator” is Ememqut’s father, but the father of the Creator is called the “Self-created” because he created himself. Although we are nowhere told that the old man with the two lakes on his head lured the hero and his wife into the hut in order to satisfy his hunger, it may be conjectured that a very peculiar spirit must have got into the dogs to cause them to celebrate a feast like the men and afterwards—contrary to their nature—to run away, so that Ememqut had to go out and look for them; and that the hero was then caught in a snow-storm in order to drive him into the arms of the wicked old man. The fact that the Creator, son of the Self-created, was a party to the advice raises a knotty problem whose solution we had best leave to the Siberian theologians.

[416] In a Balkan fairytale the old man gives the childless Czarina a magic apple to eat, from which she becomes pregnant and bears a son, it being stipulated that the old man shall be his godfather. The boy, however, grows up into a horrid little tough who bullies all the children and slaughters the cattle. For ten years he is given no name. Then the old man appears, sticks a knife into his leg, and calls him the “Knife Prince.” The boy now wants to set forth on his adventures, which his father, after long hesitation, finally allows him to do. The knife in his leg is of vital importance: if he draws it out himself, he will live; if anybody else does so, he will die. In the end the knife becomes his doom, for an old witch pulls it out when he is asleep. He dies, but is restored to life by the friends he has won.³⁵ Here the old man is a helper, but

also the contriver of a dangerous fate which might just as easily have turned out for the bad. The evil showed itself early and plainly in the boy's villainous character.

[417] In another Balkan tale, there is a variant of our motif that is worth mentioning: A king is looking for his sister who has been abducted by a stranger. His wanderings bring him to the hut of an old woman, who warns him against continuing the search. But a tree laden with fruit, ever receding before him, lures him away from the hut. When at last the tree comes to a halt, an old man climbs down from the branches. He regales the king and takes him to a castle, where the sister is living with the old man as his wife. She tells her brother that the old man is a wicked spirit who will kill him. And sure enough, three days afterwards, the king vanishes without trace. His younger brother now takes up the search and kills the wicked spirit in the form of a dragon. A handsome young man is thereby released from the spell and forthwith marries the sister. The old man, appearing at first as a tree-numen, is obviously connected with the sister. He is a murderer. In an interpolated episode, he is accused of enchanting a whole city by turning it to iron, i.e., making it immovable, rigid, and locked up.³⁶ He also holds the king's sister a captive and will not let her return to her relatives. This amounts to saying that the sister is animus-possessed. The old man is therefore to be regarded as her animus. But the manner in which the king is drawn into this possession, and the way he seeks for his sister, make us think that she has an anima significance for her brother. The fateful archetype of the old man has accordingly first taken possession of the king's anima—in other words, robbed him of the archetype of life which the anima personifies—and forced him to go in search of the lost charm, the “treasure hard to attain,” thus making him the mythical hero, the higher personality who is an expression of the self. Meanwhile, the old man acts the part of the villain and has to be forcibly removed, only to appear at the end as the husband of the sister-anima, or more properly as the bridegroom of the soul, who celebrates the sacred incest that symbolizes the union of opposites and equals. This bold enantiodromia, a very common occurrence, not only signifies the rejuvenation and transformation of the old man, but hints at a secret inner relation of evil to good and vice versa.

[418] So in this story we see the archetype of the old man in the guise of an evil-doer, caught up in all the twists and turns of an individuation process that ends suggestively with the *hieros gamos*. Conversely, in the Russian tale of the Forest King, he starts by being helpful and benevolent, but then refuses to let his hired boy go, so that the main episodes in the story deal with the boy's repeated attempts to escape from the clutches of the magician. Instead of the quest we have flight, which nonetheless appears to win the same reward as adventures valiantly sought, for in the end the hero marries the king's daughter. The magician, however, must rest content with the role of the biter bit.

[419] The description of our archetype would not be complete if we omitted to consider one special form of its manifestation, namely its animal form. This belongs essentially to the theriomorphism of gods and demons and has the same psychological significance. The animal form shows that the contents and functions in question are still in the extrahuman sphere, i.e., on a plane beyond human consciousness, and consequently have a share on the one hand in the daemonically superhuman and on the other in the bestially subhuman. It must be remembered, however, that this division is only true within the sphere of consciousness, where it is a necessary condition of thought. Logic says *tertium non datur*, meaning that we cannot envisage the opposites in their oneness. In other words, while the abolition of an obstinate antinomy can be no more than a postulate for us, this is by no means so for the unconscious, whose contents are without exception paradoxical or antinomial by nature, not excluding the category of being. If anyone unacquainted with the psychology of the unconscious wants to get a working knowledge of these matters, I would recommend a study of Christian mysticism and Indian philosophy, where he will find the clearest elaboration of the antinomies of the unconscious.

[420] Although the old man has, up to now, looked and behaved more or less like a human being, his magical powers and his spiritual superiority suggest that, in good and bad alike, he is outside, or above, or below the human level. Neither for the primitive nor for the unconscious does his animal aspect imply any devaluation, for in certain respects the animal is superior to man. It has not yet blundered into consciousness nor pitted a self-willed ego against the power from which it lives; on the contrary, it fulfils the will that actuates it in a well-nigh perfect manner. Were it conscious, it would be morally better than man. There is deep doctrine in the legend of the fall: it is the expression of a dim presentiment that the emancipation of ego-consciousness was a Luciferian deed. Man's whole history consists from the very beginning in a conflict between his feeling of inferiority and his arrogance. Wisdom seeks the middle path and pays for this audacity by a dubious affinity with daemon and beast, and so is open to moral misinterpretation.

[421] Again and again in fairytales we encounter the motif of helpful animals. These act like humans, speak a human language, and display a sagacity and a knowledge superior to man's. In these circumstances we can say with some justification that the archetype of the spirit is being expressed through an animal form. A German fairytale³⁷ relates how a young man, while searching for his lost princess, meets a wolf, who says, "Do not be afraid! But tell me, where is your way leading you?" The young man recounts his story, whereupon the wolf gives him as a magic gift a few of his hairs, with which the young man can summon his help at any time. This intermezzo proceeds exactly like the meeting with the helpful old man. In the same

story, the archetype also displays its other, wicked side. In order to make this clear I shall give a summary of the story:

[422] While the young man is watching his pigs in the wood, he discovers a large tree, whose branches lose themselves in the clouds. “How would it be,” says he to himself, “if you were to look at the world from the top of that great tree?” So he climbs up, all day long he climbs, without even reaching the branches. Evening comes, and he has to pass the night in a fork of the tree. Next day he goes on climbing and by noon has reached the foliage. Only towards evening does he come to a village nestling in the branches. The peasants who live there give him food and shelter for the night. In the morning he climbs still further. Towards noon, he reaches a castle in which a young girl lives. Here he finds that the tree goes no higher. She is a king’s daughter, held prisoner by a wicked magician. So the young man stays with the princess, and she allows him to go into all the rooms of the castle: one room alone she forbids him to enter. But curiosity is too strong. He unlocks the door, and there in the room he finds a raven fixed to the wall with three nails. One nail goes through his throat, the two others through the wings. The raven complains of thirst and the young man, moved by pity, gives him water to drink. At each sip a nail falls out, and at the third sip the raven is free and flies out at the window. When the princess hears of it she is very frightened and says, “That was the devil who enchanted me! It won’t be long now before he fetches me again.” And one fine morning she has indeed vanished.

[423] The young man now sets out in search of her and, as we have described above, meets the wolf. In the same way he meets a bear and a lion, who also give him some hairs. In addition the lion informs him that the princess is imprisoned nearby in a hunting-lodge. The young man finds the house and the princess, but is told that flight is impossible, because the hunter possesses a three-legged white horse that knows everything and would infallibly warn its master. Despite that, the young man tries to flee away with her, but in vain. The hunter overtakes him but, because he had saved his life as a raven, lets him go and rides off again with the princess. When the hunter has disappeared into the wood, the young man creeps back to the house and persuades the princess to wheedle from the hunter the secret of how he obtained his clever white horse. This she successfully does in the night, and the young man, who has hidden himself under the bed, learns that about an hour’s journey from the hunting-lodge there dwells a witch who breeds magic horses. Whoever was able to guard the foals for three days might choose a horse as a reward. In former times, said the hunter, she used to make a gift of twelve lambs into the bargain, in order to satisfy the hunger of the twelve wolves who lived in the woods near the farmstead, and prevent them from attacking; but to him she gave no lambs. So the wolves followed him as he rode away, and while crossing the borders of her domain they succeeded in tearing off one of his horse’s hoofs. That was why it had only three legs.

[424] Then the young man made haste to seek out the witch and agreed to serve her on condition that she gave him not only a horse of his own choosing but twelve lambs as well. To this she consented. Instantly she commanded the foals to run away, and, to make him sleepy, she gave him brandy. He drinks, falls asleep, and the foals escape. On the first day he catches them with the help of the wolf, on the second day the bear helps him, and on the third the lion. He can now go and choose his reward. The witch's little daughter tells him which horse her mother rides. This is naturally the best horse, and it too is white. Hardly has he got it out of the stall when the witch pierces the four hoofs and sucks the marrow out of the bones. From this she bakes a cake and gives it to the young man for his journey. The horse grows deathly weak, but the young man feeds it on the cake, whereupon the horse recovers its former strength. He gets out of the woods unscathed after quieting the twelve wolves with the twelve lambs. He then fetches the princess and rides away with her. But the three-legged horse calls out to the hunter, who sets off in pursuit and quickly catches up with them, because the four-legged horse refuses to gallop. As the hunter approaches, the four-legged horse cries out to the three-legged, "Sister, throw him off!" The magician is thrown and trampled to pieces by the two horses. The young man sets the princess on the three-legged horse, and the pair of them ride away to her father's kingdom, where they get married. The four-legged horse begs him to cut off both their heads, for otherwise they would bring disaster upon him. This he does, and the horses are transformed into a handsome prince and a wonderfully beautiful princess, who after a while repair "to their own kingdom." They had been changed into horses by the hunter, long ago.

[425] Apart from the theriomorphic spirit symbolism in this tale, it is especially interesting to note that the function of knowing and intuition is represented by a riding-animal. This is as much as to say that the spirit can be somebody's property. The three-legged white horse is thus the property of the demonic hunter, and the four-legged one the property of the witch. Spirit is here partly a function, which like any other object (horse) can change its owner, and partly an autonomous subject (magician as owner of the horse). By obtaining the four-legged horse from the witch, the young man frees a spirit or a thought of some special kind from the grip of the unconscious. Here as elsewhere, the witch stands for a *mater natura* or the original "matriarchal" state of the unconscious, indicating a psychic constitution in which the unconscious is opposed only by a feeble and still-dependent consciousness. The four-legged horse shows itself superior to the three-legged, since it can command the latter. And since the quaternity is a symbol of wholeness and wholeness plays a considerable role in the picture-world of the unconscious,³⁸ the victory of four-leggedness over three-leggedness is not altogether unexpected. But what is the meaning of the opposition between threeness and fourness, or rather, what does

threeness mean as compared with wholeness? In alchemy this problem is known as the axiom of Maria and runs all through alchemical philosophy for more than a thousand years, finally to be taken up again in the Cabiri scene in *Faust*. The earliest literary version of it is to be found in the opening words of Plato's *Timaeus*³⁹ of which Goethe gives us a reminder. Among the alchemists we can see clearly how the divine Trinity has its counterpart in a lower, chthonic triad (similar to Dante's three-headed devil). This represents a principle which, by reason of its symbolism, betrays affinities with evil, though it is by no means certain that it expresses nothing but evil. Everything points rather to the fact that evil, or its familiar symbolism, belongs to the family of figures which describe the dark, nocturnal, lower, chthonic element. In this symbolism the lower stands to the higher as a correspondence⁴⁰ in reverse; that is to say it is conceived, like the upper, as a triad. Three, being a masculine number, is logically correlated with the wicked hunter, who can be thought of alchemically as the lower triad. Four, a feminine number, is assigned to the old woman. The two horses are miraculous animals that talk and know and thus represent the unconscious spirit, which in one case is subordinated to the wicked magician and in the other to the old witch.

[426] Between the three and the four there exists the primary opposition of male and female, but whereas fourness is a symbol of wholeness, threeness is not. The latter, according to alchemy, denotes polarity, since one triad always presupposes another, just as high presupposes low, lightness darkness, good evil. In terms of energy, polarity means a potential, and wherever a potential exists there is the possibility of a current, a flow of events, for the tension of opposites strives for balance. If one imagines the quaternity as a square divided into two halves by a diagonal, one gets two triangles whose apices point in opposite directions. One could therefore say metaphorically that if the wholeness symbolized by the quaternity is divided into equal halves, it produces two opposing triads. This simple reflection shows how three can be derived from four, and in the same way the hunter of the captured princess explains how his horse, from being four-legged, became three-legged, through having one hoof torn off by the twelve wolves. The three-leggedness is due to an accident, therefore, which occurred at the very moment when the horse was leaving the territory of the dark mother. In psychological language we should say that when the unconscious wholeness becomes manifest, i.e., leaves the unconscious and crosses over into the sphere of consciousness, one of the four remains behind, held fast by the *horror vacui* of the unconscious. There thus arises a triad, which as we know—not from the fairytale but from the history of symbolism—constellates a corresponding triad in opposition to it⁴¹—in other words, a conflict ensues. Here too we could ask with Socrates, “One, two, three—but, my dear Timaeus, of those who yesterday were the banqueters and today are the banquet-givers, where is the

fourth?”⁴² He has remained in the realm of the dark mother, caught by the wolfish greed of the unconscious, which is unwilling to let anything escape from its magic circle save at the cost of a sacrifice.

[427] The hunter or old magician and the witch correspond to the negative parental imagos in the magic world of the unconscious. The hunter first appears in the story as a black raven. He has stolen away the princess and holds her a prisoner. She describes him as “the devil.” But it is exceedingly odd that he himself is locked up in the one forbidden room of the castle and fixed to the wall with three nails, as though *crucified*. He is imprisoned, like all jailers, in his own prison, and bound like all who curse. The prison of both is a magic castle at the top of a gigantic tree, presumably the world-tree. The princess belongs to the upper region of light near the sun. Sitting there in captivity on the world-tree, she is a kind of *anima mundi* who has got herself into the power of darkness. But this catch does not seem to have done the latter much good either, seeing that the captor is crucified and moreover with three nails. The crucifixion evidently betokens a state of agonizing bondage and suspension, fit punishment for one foolhardy enough to venture like a Prometheus into the orbit of the opposing principle. This was what the raven, who is identical with the hunter, did when he ravished a precious soul from the upper world of light; and so, as a punishment, he is nailed to the wall in that upper world. That this is an inverted reflection of the primordial Christian image should be obvious enough. The Saviour who freed the soul of humanity from the dominion of the prince of this world was nailed to a cross down below on earth, just as the thieving raven is nailed to the wall in the celestial branches of the world-tree for his presumptuous meddling. In our fairytale, the peculiar instrument of the magic spell is the triad of nails. Who it was that made the raven captive is not told in the tale, but it sounds as if a spell had been laid upon him in the triune name.⁴³

[428] Having climbed up the world-tree and penetrated into the magic castle where he is to rescue the princess, our young hero is permitted to enter all the rooms but one, the very room in which the raven is imprisoned. Just as in paradise there was one tree of which it was forbidden to eat, so here there is one room that is not to be opened, with the natural result that it is entered at once. Nothing excites our interest more than a prohibition. It is the surest way of provoking disobedience. Obviously there is some secret scheme afoot to free not so much the princess as the raven. As soon as the hero catches sight of him, the raven begins to cry piteously and to complain of thirst,⁴⁴ and the young man, moved by the virtue of compassion, slakes it, not with hyssop and gall, but with quickening water, whereupon the three nails fall out and the raven escapes through the open window. Thus the evil spirit regains his freedom, changes into the hunter, steals the princess for the second time, but this time locks her up in his hunting-lodge on earth. The secret scheme is partially unveiled: the princess

must be brought down from the upper world to the world of men, which was evidently not possible without the help of the evil spirit and man's disobedience.

[429] But since in the human world, too, the hunter of souls is the princess's master, the hero has to intervene anew, to which end, as we have seen, he filches the four-legged horse from the witch and breaks the three-legged spell of the magician. It was the triad that first transfixed the raven, and the triad also represents the power of the evil spirit. These are the two triads that point in opposite directions.

[430] Turning now to quite another field, the realm of psychological experience, we know that three of the four functions of consciousness can become differentiated, i.e., conscious, while the other remains connected with the matrix, the unconscious, and is known as the "inferior" function. It is the Achilles heel of even the most heroic consciousness: somewhere the strong man is weak, the clever man foolish, the good man bad, and the reverse is also true. In our fairytale the triad appears as a mutilated quaternity. If only one leg could be added to the other three, it would make a whole. The enigmatic axiom of Maria runs: "... from the third comes the one as the fourth" (ἔκ τοῦ τρίτου τὸ ἕν τέταρτον) —which presumably means, when the third produces the fourth it at once produces unity. The lost component which is in the possession of the wolves belonging to the Great Mother is indeed only a quarter, but, together with the three, it makes a whole which does away with division and conflict.

[431] But how is it that a quarter, on the evidence of symbolism, is at the same time a triad? Here the symbolism of our fairytale leaves us in the lurch, and we are obliged to have recourse to the facts of psychology. I have said previously that three functions can become differentiated, and only one remains under the spell of the unconscious. This statement must be defined more closely. It is an empirical fact that only *one* function becomes more or less successfully differentiated, which on that account is known as the superior or main function, and together with extraversion or introversion constitutes the type of conscious attitude. This function has associated with it one or two partially differentiated auxiliary functions which hardly ever attain the same degree of differentiation as the main function, that is, the same degree of applicability by the will. Accordingly they possess a higher degree of spontaneity than the main function, which displays a large measure of reliability and is amenable to our intentions. The fourth, inferior function proves on the other hand to be inaccessible to our will. It appears now as a teasing and distracting imp, now as a *deus ex machina*. But always it comes and goes of its own volition. From this it is clear that even the differentiated functions have only partially freed themselves from the unconscious; for the rest they are still rooted in it and to that extent they operate under its rule. Hence the three "differentiated" functions at the disposal of the ego have three corresponding unconscious components that have not yet broken loose

from the unconscious.⁴⁵ And just as the three conscious and differentiated parts of these functions are confronted by a fourth, undifferentiated function which acts as a painfully disturbing factor, so also the superior function seems to have its worst enemy in the unconscious. Nor should we omit to mention one final turn of the screw: like the devil who delights in disguising himself as an angel of light, the inferior function secretly and mischievously influences the superior function most of all, just as the latter represses the former most strongly.⁴⁶

[432] These unfortunately somewhat abstract formulations are necessary in order to throw some light on the tricky and allusive associations in our—save the mark! —“childishly simple” fairytale. The two antithetical triads, the one banning and the other representing the power of evil, tally to a hair’s breadth with the functional structure of the conscious and unconscious psyche. Being a spontaneous, naïve, and uncontrived product of the psyche, the fairytale cannot very well express anything except what the psyche actually is. It is not only *our* fairytale that depicts these structural psychic relations, but countless other fairytales do the same.⁴⁷

[433] Our fairytale reveals with unusual clarity the essentially antithetical nature of the spirit archetype, while on the other hand it shows the bewildering play of antinomies all aiming at the great goal of higher consciousness. The young swineherd who climbs from the animal level up to the top of the giant world-tree and there, in the upper world of light, discovers his captive anima, the high-born princess, symbolizes the ascent of consciousness, rising from almost bestial regions to a lofty perch with a broad outlook, which is a singularly appropriate image for the enlargement of the conscious horizon.⁴⁸ Once the masculine consciousness has attained this height, it comes face to face with its feminine counterpart, the anima.⁴⁹ She is a personification of the unconscious. The meeting shows how inept it is to designate the latter as the “subconscious”: it is not merely “below” consciousness but also above it, so far above it indeed that the hero has to climb up to it with considerable effort. This “upper” unconscious, however, is far from being a “supercon-conscious” in the sense that anyone who reaches it, like our hero, would stand as high above the “subconscious” as above the earth’s surface. On the contrary, he makes the disagreeable discovery that his high and mighty anima, the Princess Soul, is bewitched up there and no freer than a bird in a golden cage. He may pat himself on the back for having soared up from the flatlands and from almost bestial stupidity, but his soul is in the power of an evil spirit, a sinister father-imago of subterrene nature in the guise of a raven, the celebrated theriomorphic figure of the devil. What use now is his lofty perch and his wide horizon, when his own dear soul is languishing in prison? Worse, she plays the game of the underworld and ostensibly tries to stop the young man from discovering the secret of her imprisonment, by forbidding him to enter that one room. But secretly she leads him to it by the very

fact of her veto. It is as though the unconscious had two hands of which one always does the opposite of the other. The princess wants and does not want to be rescued. But the evil spirit too has got himself into a fix, by all accounts: he wanted to filch a fine soul from the shining upper world—which he could easily do as a winged being—but had not bargained on being shut up there himself. Black spirit though he is, he longs for the light. That is his secret justification, just as his being spellbound is a punishment for his transgression. But so long as the evil spirit is caught in the upper world, the princess cannot get down to earth either, and the hero remains lost in paradise. So now he commits the sin of disobedience and thereby enables the robber to escape, thus causing the abduction of the princess for the second time—a whole chain of calamities. In the result, however, the princess comes down to earth and the devilish raven assumes the human shape of the hunter. The other-worldly anima and the evil principle both descend to the human sphere, that is, they dwindle to human proportions and thus become approachable. The three-legged, all-knowing horse represents the hunter's own power: it corresponds to the unconscious components of the differentiated functions.⁵⁰ The hunter himself personifies the inferior function, which also manifests itself in the hero as his inquisitiveness and love of adventure. As the story unfolds, he becomes more and more like the hunter: he too obtains his horse from the witch. But, unlike him, the hunter omitted to obtain the twelve lambs in order to feed the wolves, who then injured his horse. He forgot to pay tribute to the chthonic powers because he was nothing but a robber. Through this omission the hero learns that the unconscious lets its creatures go only at the cost of sacrifice.⁵¹ The number 12 is presumably a time symbol, with the subsidiary meaning of the twelve labours (ἄθλα)⁵² that have to be performed for the unconscious before one can get free.⁵³ The hunter looks like a previous unsuccessful attempt of the hero to gain possession of his soul through robbery and violence. But the conquest of the soul is in reality a work of patience, self-sacrifice, and devotion. By gaining possession of the four-legged horse the hero steps right into the shoes of the hunter and carries off the princess as well. The quaternity in our tale proves to be the greater power, for it integrates into its totality that which it still needed in order to become whole.

[434] The archetype of the spirit in this, be it said, by no means primitive fairytale is expressed theriomorphically as a system of three functions which is subordinated to a unity, the evil spirit, in the same way that some unnamed authority has crucified the raven with a triad of three nails. The two supraordinate unities correspond in the first case to the inferior function which is the arch-enemy of the main function, namely to the hunter; and in the second case to the main function, namely to the hero. Hunter and hero are ultimately equated with one another, so that the hunter's function is resolved in the hero. As a matter of fact, the hero lies dormant in the hunter from the very beginning, egging him on, with all the unmoral means at his disposal, to carry

out the rape of the soul, and then causing him to play her into the hero's hands against the hunter's will. On the surface a furious conflict rages between them, but down below the one goes about the other's business. The knot is unravelled directly the hero succeeds in capturing the quaternity—or in psychological language, when he assimilates the inferior function into the ternary system. That puts an end to the conflict at one blow, and the figure of the hunter melts into thin air. After this victory, the hero sets his princess upon the three-legged steed and together they ride away to her father's kingdom. From now on she rules and personifies the realm of spirit that formerly served the wicked hunter. Thus the anima is and remains the representative of that part of the unconscious which can never be assimilated into a humanly attainable whole.

[435] *Postscript.* Only after the completion of my manuscript was my attention drawn by a friend to a Russian variant of our story. It bears the title “Maria Morevna.”⁵⁴ The hero of the story is no swineherd, but Czarevitch Ivan. There is an interesting explanation of the three helpful animals: they correspond to Ivan's three sisters and their husbands, who are really birds. The three sisters represent an unconscious triad of functions related to both the animal and spiritual realms. The bird-men are a species of angel and emphasize the auxiliary nature of the unconscious functions. In the story they intervene at the critical moment when the hero—unlike his German counterpart—gets into the power of the evil spirit and is killed and dismembered (the typical fate of the God-man!).⁵⁵ The evil spirit is an old man who is often shown naked and is called Koschei⁵⁶ the Deathless. The corresponding witch is the well-known Baba Yaga. The three helpful animals of the German variant are doubled here, appearing first as the bird-men and then as the lion, the strange bird, and the bees. The princess is Queen Maria Morevna, a redoubtable martial leader—Mary the queen of heaven is lauded in the Russian Orthodox hymnal as “leader of hosts”!—who has chained up the evil spirit with twelve chains in the forbidden room in her castle. When Ivan slakes the old devil's thirst he makes off with the queen. The magic riding animals do not in the end turn into human beings. This Russian story has a distinctly more primitive character.

V. SUPPLEMENT

[436] The following remarks lay no claim to general interest, being in the main technical. I wanted at first to delete them from this revised version of my essay, but then I changed my mind and appended them in a supplement. The reader who is not specifically interested in psychology can safely skip this section. For, in what follows, I have dealt with the abstruse-looking problem of the three- and four-leggedness of the magic horses, and presented my reflections in such a way as to demonstrate the method I have employed. This piece of psychological reasoning rests

firstly on the irrational data of the material, that is, of the fairytale, myth, or dream, and secondly on the conscious realization of the “latent” rational connections which these data have with one another. That such connections exist at all is something of a hypothesis, like that which asserts that dreams have a meaning. The truth of this assumption is not established *a priori*: its usefulness can only be proved by application. It therefore remains to be seen whether its methodical application to irrational material enables one to interpret the latter in a meaningful way. Its application consists in approaching the material as if it had a coherent inner meaning. For this purpose most of the data require a certain amplification, that is, they need to be clarified, generalized, and approximated to a more or less general concept in accordance with Cardan’s rule of interpretation. For instance, the three-leggedness, in order to be recognized for what it is, has first to be separated from the horse and then approximated to its specific principle—the principle of threeness. Likewise, the four-leggedness in the fairytale, when raised to the level of a general concept, enters into relationship with the threeness, and as a result we have the enigma mentioned in the *Timaeus*, the problem of three and four. Triads and tetrads represent archetypal structures that play a significant part in all symbolism and are equally important for the investigation of myths and dreams. By raising the irrational datum (three-leggedness and four-leggedness) to the level of a general concept we elicit the universal meaning of this motif and encourage the inquiring mind to tackle the problem seriously. This task involves a series of reflections and deductions of a technical nature which I would not wish to withhold from the psychologically interested reader and especially from the professional, the less so as this labour of the intellect represents a typical unravelling of symbols and is indispensable for an adequate understanding of the products of the unconscious. Only in this way can the nexus of unconscious relationships be made to yield their own meaning, in contrast to those deductive interpretations derived from a preconceived theory, e.g., interpretations based on astronomy, meteorology, mythology, and—last but not least—the sexual theory.

[437] The three-legged and four-legged horses are in truth a recondite matter worthy of closer examination. The three and the four remind us not only of the dilemma we have already met in the theory of psychological functions, but also of the axiom of Maria Prophetissa, which plays a considerable role in alchemy. It may therefore be rewarding to examine more closely the meaning of the miraculous horses.

[438] The first thing that seems to me worthy of note is that the three-legged horse which is assigned to the princess as her mount is a mare, and is moreover herself a bewitched princess. Threeness is unmistakably connected here with femininity, whereas from the dominating religious standpoint of consciousness it is an exclusively masculine affair, quite apart from the fact that 3, as an uneven number, is

masculine in the first place. One could therefore translate threeness as “masculinity” outright, this being all the more significant when one remembers the ancient Egyptian triunity of God, Ka-mutef,⁵⁷ and Pharaoh.

[439] Three-leggedness, as the attribute of some animal, denotes the unconscious masculinity immanent in a female creature. In a real woman it would correspond to the animus who, like the magic horse, represents “spirit.” In the case of the anima, however, threeness does not coincide with any Christian idea of the Trinity but with the “lower triangle,” the inferior function triad that constitutes the “shadow.” The inferior half of the personality is for the greater part unconscious. It does not denote the whole of the unconscious, but only the personal segment of it. The anima, on the other hand, so far as she is distinguished from the shadow, personifies the collective unconscious. If threeness is assigned to her as a riding-animal, it means that she “rides” the shadow, is related to it as the *mar*.⁵⁸ In that case she possesses the shadow. But if she herself is the horse, then she has lost her dominating position as a personification of the collective unconscious and is “ridden”—possessed—by Princess A, spouse of the hero. As the fairytale rightly says, she has been changed by witchcraft into the three-legged horse (Princess B).

We can sort out this imbroglio more or less as follows:

[440] 1. Princess A is the anima⁵⁹ of the hero. She rides—that is, possesses—the three-legged horse, who is the shadow, the inferior function-triad of her later spouse. To put it more simply: she has taken possession of the inferior half of the hero’s personality. She has caught him on his weak side, as so often happens in ordinary life, for where one is weak one needs support and completion. In fact, a woman’s place is on the weak side of a man. This is how we would have to formulate the situation if we regarded the hero and Princess A as two ordinary people. But since it is a fairy-story played out mainly in the world of magic, we are probably more correct in interpreting Princess A as the hero’s anima. In that case the hero has been wafted out of the profane world through his encounter with the anima, like Merlin by his fairy: as an ordinary man he is like one caught in a marvellous dream, viewing the world through a veil of mist.

[441] 2. The matter is now considerably complicated by the unexpected fact that the three-legged horse is a mare, an equivalent of Princess A. She (the mare) is Princess B, who in the shape of a horse corresponds to Princess A’s shadow (i.e., her inferior function-triad). Princess B, however, differs from Princess A in that, unlike her, she does not ride the horse but is contained in it: she is bewitched and has thus come under the spell of a masculine triad. Therefore, she is possessed by a shadow.

[442] 3. The question now is, *whose* shadow? It cannot be the shadow of the hero, for this is already taken up by the latter’s anima. The fairytale gives us the answer: it is

the hunter or magician who has bewitched her. As we have seen, the hunter is somehow connected with the hero, since the latter gradually puts himself in his shoes. Hence one could easily arrive at the conjecture that the hunter is at bottom none other than the shadow of the hero. But this supposition is contradicted by the fact that the hunter stands for a formidable power which extends not only to the hero's anima but much further, namely to the royal brother-sister pair of whose existence the hero and his anima have no notion, and who appear very much out of the blue in the story itself. The power that extends beyond the orbit of the individual has a more than individual character and cannot therefore be identified with the shadow, if we conceive and define this as the dark half of the personality. As a supra-individual factor the numen of the hunter is a dominant of the collective unconscious, and its characteristic features—hunter, magician, raven, miraculous horse, crucifixion or suspension high up in the boughs of the world-tree⁶⁰—touch the Germanic psyche very closely. Hence the Christian *Weltanschauung*, when reflected in the ocean of the (Germanic) unconscious, logically takes on the features of Wotan.⁶¹ In the figure of the hunter we meet an *imago dei*, a God-image, for Wotan is also a god of winds and spirits, on which account the Romans fittingly interpreted him as Mercury.

[443] 4. The Prince and his sister, Princess B, have therefore been seized by a pagan god and changed into horses, i.e., thrust down to the animal level, into the realm of the unconscious. The inference is that in their proper human shape the pair of them once belonged to the sphere of collective consciousness. But who are they?

[444] In order to answer this question we must proceed from the fact that these two are an undoubted counterpart of the hero and Princess A. They are connected with the latter also because they serve as their mounts, and in consequence they appear as their lower, animal halves. Because of its almost total unconsciousness, the animal has always symbolized the psychic sphere in man which lies hidden in the darkness of the body's instinctual life. The hero rides the stallion, characterized by the even (feminine) number 4; Princess A rides the mare who has only three legs (3 = a masculine number). These numbers make it clear that the transformation into animals has brought with it a modification of sex character: the stallion has a feminine attribute, the mare a masculine one. Psychology can confirm this development as follows: to the degree that a man is overpowered by the (collective) unconscious there is not only a more unbridled intrusion of the instinctual sphere, but a certain feminine character also makes its appearance, which I have suggested should be called "anima." If, on the other hand, a woman comes under the domination of the unconscious, the darker side of her feminine nature emerges all the more strongly, coupled with markedly masculine traits. These latter are comprised under the term "animus."⁶²

[445] 5. According to the fairytale, however, the animal form of the brother-sister pair is “unreal” and due simply to the magic influence of the pagan hunter-god. If they were nothing but animals, we could rest content with this interpretation. But that would be to pass over in unmerited silence the singular allusion to a modification of sex character. The white horses are no ordinary horses: they are miraculous beasts with supernatural powers. Therefore the human figures out of which the horses were magically conjured must likewise have had something supernatural about them. The fairytale makes no comment here, but if our assumption is correct that the two animal forms correspond to the subhuman components of hero and princess, then it follows that the human forms—Prince and Princess B—must correspond to their superhuman components. The superhuman quality of the original swineherd is shown by the fact that he becomes a hero, practically a half-god, since he does not stay with his swine but climbs the world-tree, where he is very nearly made its prisoner, like Wotan. Similarly, he could not have become like the hunter if he did not have a certain resemblance to him in the first place. In the same way the imprisonment of Princess A on the top of the world-tree proves her electness, and in so far as she shares the hunter’s bed, as stated by the tale, she is actually the bride of God.

[446] It is these extraordinary forces of heroism and election, bordering on the superhuman, which involve two quite ordinary humans in a superhuman fate. Accordingly, in the profane world a swineherd becomes a king, and a princess gets an agreeable husband. But since, for fairytales, there is not only a profane but also a magical world, human fate does not have the final word. The fairytale therefore does not omit to point out what happens in the world of magic. There too a prince and princess have got into the power of the evil spirit, who is himself in a tight corner from which he cannot extricate himself without extraneous help. So the human fate that befalls the swineherd and Princess A is paralleled in the world of magic. But in so far as the hunter is a pagan God-image and thus exalted above the world of heroes and paramours of the gods, the parallelism goes beyond the merely magical into a divine and spiritual sphere, where the evil spirit, the Devil himself—or at least a devil—is bound by the spell of an equally mighty or even mightier counter-principle indicated by the three nails. This supreme tension of opposites, the mainspring of the whole drama, is obviously the conflict between the upper and lower triads, or, to put it in theological terms, between the Christian God and the devil who has assumed the features of Wotan.⁶³

[447] 6. We must, it seems, start from this highest level if we want to understand the story correctly, for the drama takes its rise from the initial transgression of the evil spirit. The immediate consequence of this is his crucifixion. In that distressing situation he needs outside help, and as it is not forthcoming from above, it can only be summoned from below. A young swineherd, possessed with the boyish spirit of

adventure, is reckless and inquisitive enough to climb the world-tree. Had he fallen and broken his neck, no doubt everybody would have said, "What evil spirit could have given him the crazy idea of climbing up an enormous tree like that!" Nor would they have been altogether wrong, for that is precisely what the evil spirit was after. The capture of Princess A was a transgression in the profane world, and the bewitching of the—as we may suppose—semidivine brother-sister pair was just such an enormity in the magical world. We do not know, but it is possible, that this heinous crime was committed before the bewitching of Princess A. At any rate, both episodes point to a transgression of the evil spirit in the magical world as well as in the profane.

[448] It is assuredly not without a deeper meaning that the rescuer or redeemer should be a swineherd, like the Prodigal Son. He is of lowly origin and has this much in common with the curious conception of the redeemer in alchemy. His first liberating act is to deliver the evil spirit from the divine punishment meted out to him. It is from this act, representing the first stage of the lysis, that the whole dramatic tangle develops.

[449] 7. The moral of this story is in truth exceedingly odd. The finale satisfies in so far as the swineherd and Princess A are married and become the royal pair. Prince and Princess B likewise celebrate their wedding, but this—in accordance with the archaic prerogative of kings—takes the form of incest, which, though somewhat repellent, must be regarded as more or less habitual in semidivine circles.⁶⁴ But what, we may ask, happens to the evil spirit, whose rescue from condign punishment sets the whole thing in motion? The wicked hunter is trampled to pieces by the horses, which presumably does no lasting damage to a spirit. Apparently he vanishes without trace, but only apparently, for he does after all leave a trace behind him, namely a hard-won happiness in both the profane and the magical world. Two halves of the quaternity, represented on one side by the swineherd and Princess A and on the other by Prince and Princess B, have each come together and united: two marriage-pairs now confront one another, parallel but otherwise divided, inasmuch as the one pair belongs to the profane and the other to the magical world. But in spite of this indubitable division, secret psychological connections, as we have seen, exist between them which allow us to derive the one pair from the other.

[450] Speaking in the spirit of the fairytale, which unfolds its drama from the highest point, one would have to say that the world of half-gods is anterior to the profane world and produces it out of itself, just as the world of half-gods must be thought of as proceeding from the world of gods. Conceived in this way, the swineherd and Princess A are nothing less than earthly simulacra of Prince and Princess B, who in their turn would be the descendants of divine prototypes. Nor should we forget that

the horse-breeding witch belongs to the hunter as his female counterpart, rather like an ancient Epona (the Celtic goddess of horses). Unfortunately we are not told how the magical conjuration into horses happened. But it is evident that the witch had a hand in the game because both the horses were raised from her stock and are thus, in a sense, her productions. Hunter and witch form a pair—the reflection, in the nocturnalchthonic part of the magical world, of a divine parental pair. The latter is easily recognized in the central Christian idea of *sponsus et sponsa*, Christ and his bride, the Church.

[451] If we wanted to explain the fairytale personalistically, the attempt would founder on the fact that archetypes are not whimsical inventions but autonomous elements of the unconscious psyche which were there before any invention was thought of. They represent the unalterable structure of a psychic world whose “reality” is attested by the determining effects it has upon the conscious mind. Thus, it is a significant psychic reality that the human pair⁶⁵ is matched by another pair in the unconscious, the latter pair being only in appearance a reflection of the first. In reality the royal pair invariably comes first, as an *a priori*, so that the human pair has far more the significance of an individual concretization, in space and time, of an eternal and primordial image—at least in its mental structure, which is imprinted upon the biological continuum.

[452] We could say, then, that the swineherd stands for the “animal” man who has a soul-mate somewhere in the upper world. By her royal birth she betrays her connection with the pre-existent, semidivine pair. Looked at from this angle, the latter stands for everything a man can become if only he climbs high enough up the world-tree.⁶⁶ For to the degree that the young swineherd gains possession of the patrician, feminine half of himself, he approximates to the pair of half-gods and lifts himself into the sphere of royalty, which means universal validity. We come across the same theme in Christian Rosencreutz’s *Chymical Wedding*, where the king’s son must first free his bride from the power of a Moor, to whom she has voluntarily given herself as a concubine. The Moor represents the alchemical *nigredo* in which the arcane substance lies hidden, an idea that forms yet another parallel to our mythologem, or, as we would say in psychological language, another variant of this archetype.

[453] As in alchemy, our fairytale describes the unconscious processes that compensate the conscious, Christian situation. It depicts the workings of a spirit who carries our Christian thinking beyond the boundaries set by ecclesiastical concepts, seeking an answer to questions which neither the Middle Ages nor the present day have been able to solve. It is not difficult to see in the image of the second royal pair a correspondence to the ecclesiastical conception of bridegroom and bride, and in that

of the hunter and witch a distortion of it, veering towards an atavistic, unconscious Wotanism. The fact that it is a *German* fairytale makes the position particularly interesting, since this same Wotanism was the psychological godfather of National Socialism, a phenomenon which carried the distortion to the lowest pitch before the eyes of the world.⁶⁷ On the other hand, the fairytale makes it clear that it is possible for a man to attain totality, to become whole, only with the co-operation of the spirit of darkness, indeed that the latter is actually a *causa instrumentalis* of redemption and individuation. In utter perversion of this goal of spiritual development, to which all nature aspires and which is also prefigured in Christian doctrine, National Socialism destroyed man's moral autonomy and set up the nonsensical totalitarianism of the State. The fairytale tells us how to proceed if we want to overcome the power of darkness: we must turn his own weapons against him, which naturally cannot be done if the magical underworld of the hunter remains unconscious, and if the best men in the nation would rather preach dogmatisms and platitudes than take the human psyche seriously.

VI. CONCLUSION

[454] When we consider the spirit in its archetypal form as it appears to us in fairytales and dreams, it presents a picture that differs strangely from the conscious idea of spirit, which is split up into so many meanings. Spirit was originally a spirit in human or animal form, a *daimonion* that came upon man from without. But our material already shows traces of an expansion of consciousness which has gradually begun to occupy that originally unconscious territory and to transform those *daimonia*, at least partially, into voluntary acts. Man conquers not only nature, but spirit also, without realizing what he is doing. To the man of enlightened intellect it seems like the correction of a fallacy when he recognizes that what he took to be spirits is simply the human spirit and ultimately his own spirit. All the superhuman things, whether good or bad, that former ages predicated of the *daimonia*, are reduced to "reasonable" proportions as though they were pure exaggeration, and everything seems to be in the best possible order. But were the unanimous convictions of the past really and truly only exaggerations? If they were not, then the integration of the spirit means nothing less than its demonization, since the superhuman spiritual agencies that were formerly tied up in nature are introjected into human nature, thus endowing it with a power which extends the bounds of the personality *ad infinitum*, in the most perilous way. I put it to the enlightened rationalist: has his rational reduction led to the beneficial control of matter and spirit? He will point proudly to the advances in physics and medicine, to the freeing of the mind from medieval stupidity and—as a well-meaning Christian—to our deliverance from the fear of demons. But we continue to ask: what have all our other cultural achievements led to? The fearful answer is there before our eyes: man has been delivered from no fear,

a hideous nightmare lies upon the world. So far reason has failed lamentably, and the very thing that everybody wanted to avoid rolls on in ghastly progression. Man has achieved a wealth of useful gadgets, but, to offset that, he has torn open the abyss, and what will become of him now—where can he make a halt? After the last World War we hoped for reason: we go on hoping. But already we are fascinated by the possibilities of atomic fission and promise ourselves a Golden Age—the surest guarantee that the abomination of desolation will grow to limitless dimensions. And who or what is it that causes all this? It is none other than that harmless (!), ingenious, inventive, and sweetly reasonable human spirit who unfortunately is abysmally unconscious of the demonism that still clings to him. Worse, this spirit does everything to avoid looking himself in the face, and we all help him like mad. Only, heaven preserve us from psychology—*that* depravity might lead to self-knowledge I Rather let us have wars, for which somebody else is always to blame, nobody seeing that all the world is driven to do just what all the world flees from in terror.

[455] It seems to me, frankly, that former ages did not exaggerate, that the spirit has not sloughed off its demonisms, and that mankind, because of its scientific and technological development, has in increasing measure delivered itself over to the danger of possession. True, the archetype of the spirit is capable of working for good as well as for evil, but it depends upon man's free—i.e., conscious—decision whether the good also will be perverted into something satanic. Man's worst sin is unconsciousness, but it is indulged in with the greatest piety even by those who should serve mankind as teachers and examples. When shall we stop taking man for granted in this barbarous manner and in all seriousness seek ways and means to exorcize him, to rescue him from possession and unconsciousness, and make this the most vital task of civilization? Can we not understand that all the outward tinkering and improvements do not touch man's inner nature, and that everything ultimately depends upon whether the man who wields the science and the technics is capable of responsibility or not? Christianity has shown us the way, but, as the facts bear witness, it has not penetrated deeply enough below the surface. What depths of despair are still needed to open the eyes of the world's responsible leaders, so that at least they can refrain from leading themselves into temptation?

ON THE PSYCHOLOGY OF THE TRICKSTER-FIGURE¹

[456] It is no light task for me to write about the figure of the trickster in American Indian mythology within the confined space of a commentary. When I first came across Adolf Bandelier's classic on this subject, *The Delight Makers*, many years ago, I was struck by the European analogy of the carnival in the medieval Church, with its reversal of the hierarchic order, which is still continued in the carnivals held by student societies today. Something of this contradictoriness also inheres in the medieval description of the devil as *simia dei* (the ape of God), and in his characterization in folklore as the "simpleton" who is "fooled" or "cheated." A curious combination of typical trickster motifs can be found in the alchemical figure of Mercurius; for instance, his fondness for sly jokes and malicious pranks, his powers as a shape-shifter, his dual nature, half animal, half divine, his exposure to all kinds of tortures, and—last but not least—his approximation to the figure of a saviour. These qualities make Mercurius seem like a daemonic being resurrected from primitive times, older even than the Greek Hermes. His rogueries relate him in some measure to various figures met with in folklore and universally known in fairytales: Tom Thumb, Stupid Hans, or the buffoon-like Hanswurst, who is an altogether negative hero and yet manages to achieve through his stupidity what others fail to accomplish with their best efforts. In Grimm's fairytale, the "Spirit Mercurius" lets himself be outwitted by a peasant lad, and then has to buy his freedom with the precious gift of healing.

[457] Since all mythical figures correspond to inner psychic experiences and originally sprang from them, it is not surprising to find certain phenomena in the field of parapsychology which remind us of the trickster. These are the phenomena connected with poltergeists, and they occur at all times and places in the ambience of pre-adolescent children. The malicious tricks played by the poltergeist are as well known as the low level of his intelligence and the fatuity of his "communications." Ability to change his shape seems also to be one of his characteristics, as there are not a few reports of his appearance in animal form. Since he has on occasion described himself as a soul in hell, the motif of subjective suffering would seem not to be lacking either. His universality is co-extensive, so to speak, with that of shamanism, to which, as we know, the whole phenomenology of spiritualism belongs. There is something of the trickster in the character of the shaman and medicine-man, for he, too, often plays

malicious jokes on people, only to fall victim in his turn to the vengeance of those whom he has injured. For this reason, his profession sometimes puts him in peril of his life. Besides that, the shamanistic techniques in themselves often cause the medicine-man a good deal of discomfort, if not actual pain. At all events the “making of a medicine-man” involves, in many parts of the world, so much agony of body and soul that permanent psychic injuries may result. His “approximation to the saviour” is an obvious consequence of this, in confirmation of the mythological truth that the wounded wounder is the agent of healing, and that the sufferer takes away suffering.

[458] These mythological features extend even to the highest regions of man’s spiritual development. If we consider, for example, the daemonic features exhibited by Yahweh in the Old Testament, we shall find in them not a few reminders of the unpredictable behaviour of the trickster, of his senseless orgies of destruction and his self-imposed sufferings, together with the same gradual development into a saviour and his simultaneous humanization. It is just this transformation of the meaningless into the meaningful that reveals the trickster’s compensatory relation to the “saint.” In the early Middle Ages, this led to some strange ecclesiastical customs based on memories of the ancient saturnalia. Mostly they were celebrated on the days immediately following the birth of Christ—that is, in the New Year—with singing and dancing. The dances were the originally harmless *tripudia* of the priests, lower clergy, children, and subdeacons and took place in church. An *episcopus puerorum* (children’s bishop) was elected on Innocents’ Day and dressed in pontifical robes. Amid uproarious rejoicings he paid an official visit to the palace of the archbishop and bestowed the episcopal blessing from one of the windows. The same thing happened at the *tripudium hypodiaconorum*, and at the dances for other priestly grades. By the end of the twelfth century, the subdeacons’ dance had degenerated into a real *festum stultorum* (fools’ feast). A report from the year 1198 says that at the Feast of the Circumcision in Notre Dame, Paris, “so many abominations and shameful deeds” were committed that the holy place was desecrated “not only by smutty jokes, but even by the shedding of blood.” In vain did Pope Innocent III inveigh against the “jests and madness that make the clergy a mockery,” and the “shameless frenzy of their play-acting.” Two hundred and fifty years later (March 12, 1444), a letter from the Theological Faculty of Paris to all the French bishops was still fulminating against these festivals, at which “even the priests and clerics elected an archbishop or a bishop or pope, and named him the Fools’ Pope” (*fatuorum papam*). “In the very midst of divine service masqueraders with grotesque faces, disguised as women, lions, and mummers, performed their dances, sang indecent songs in the choir, ate their greasy food from a corner of the altar near the priest celebrating mass, got out their games of dice, burned a stinking incense made of old shoe leather, and ran and hopped about all over the church.”²

[459] It is not surprising that this veritable witches' sabbath was uncommonly popular, and that it required considerable time and effort to free the Church from this pagan heritage.³

[460] In certain localities even the priests seem to have adhered to the "libertas decembrica," as the Fools' Holiday was called, in spite (or perhaps because?) of the fact that the older level of consciousness could let itself rip on this happy occasion with all the wildness, wantonness, and irresponsibility of paganism.⁴ These ceremonies, which still reveal the spirit of the trickster in his original form, seem to have died out by the beginning of the sixteenth century. At any rate, the various conciliar decrees issued from 1581 to 1585 forbade only the *festum puerorum* and the election of an *episcopus puerorum*.

[461] Finally, we must also mention in this connection the *festum asinorum*, which, so far as I know, was celebrated mainly in France. Although considered a harmless festival in memory of Mary's flight into Egypt, it was celebrated in a somewhat curious manner which might easily have given rise to misunderstandings. In Beauvais, the ass procession went right into the church.⁵ At the conclusion of each part (Introit, Kyrie, Gloria, etc.) of the high mass that followed, the whole congregation *brayed*, that is, they all went "Y-a" like a donkey ("hac modulatione hinham concludebantur"). A codex dating apparently from the eleventh century says: "At the end of the mass, instead of the words 'Ite missa est,' the priest shall bray three times (*ter hinhamabit*), and instead of the words 'Deo gratias,' the congregation shall answer 'Y-a' (*hinham*) three times."

[462] Du Cange cites a hymn from this festival:

Orientis partibus
Adventavit Asinus
Pulcher et fortissimus
Sarcinis aptissimus.

Each verse was followed by the French refrain:

Hez, Sire Asnes, car chantez
Belle bouche rechignez
Vous aurez du foin assez
Et de l'avoine à plantez.

The hymn had nine verses, the last of which was:

Amen, dicas, Asine (*hie genuflectebatur*)
Jam satur de gramine.

[463] Du Cange says that the more ridiculous this rite seemed, the greater the enthusiasm with which it was celebrated. In other places the ass was decked with a golden canopy whose corners were held “by distinguished canons”; the others present had to “don suitably festive garments, as at Christmas.” Since there were certain tendencies to bring the ass into symbolic relationship with Christ, and since, from ancient times, the god of the Jews was vulgarly conceived to be an ass—a prejudice which extended to Christ himself,⁷ as is shown by the mock crucifixion scratched on the wall of the Imperial Cadet School on the Palatine⁸—the danger of theriomorphism lay uncomfortably close. Even the bishops could do nothing to stamp out this custom, until finally it had to be suppressed by the “auctoritas supremi Senatus.” The suspicion of blasphemy becomes quite open in Nietzsche’s “Ass Festival,” which is a deliberately blasphemous parody of the mass.⁹

[464] These medieval customs demonstrate the role of the trickster to perfection, and, when they vanished from the precincts of the Church, they appeared again on the profane level of Italian theatricals, as those comic types who, often adorned with enormous ithyphallic emblems, entertained the far from prudish public with ribaldries in true Rabelaisian style. Callot’s engravings have preserved these classical figures for posterity—the Pulcinellas, Cucorognas, Chico Sgarras, and the like.¹⁰

[465] In picaresque tales, in carnivals and revels, in magic rites of healing, in man’s religious fears and exaltations, this phantom of the trickster haunts the mythology of all ages, sometimes in quite unmistakable form, sometimes in strangely modulated guise.¹¹ He is obviously a “psychologem,” an archetypal psychic structure of extreme antiquity. In his clearest manifestations he is a faithful reflection of an absolutely undifferentiated human consciousness, corresponding to a psyche that has hardly left the animal level. That this is how the trickster figure originated can hardly be contested if we look at it from the causal and historical angle. In psychology as in biology we cannot afford to overlook or underestimate this question of origins, although the answer usually tells us nothing about the functional meaning. For this reason biology should never forget the question of purpose, for only by answering that can we get at the meaning of a phenomenon. Even in pathology, where we are concerned with lesions which have no meaning in themselves, the exclusively causal approach proves to be inadequate, since there are a number of pathological phenomena which only give up their meaning when we inquire into their purpose. And where we are concerned with the normal phenomena of life, this question of purpose takes undisputed precedence.

[466] When, therefore, a primitive or barbarous consciousness forms a picture of itself on a much earlier level of development and continues to do so for hundreds or even thousands of years, undeterred by the contamination of its archaic qualities with differentiated, highly developed mental products, then the causal explanation is that the older the archaic qualities are, the more conservative and pertinacious is their behaviour. One simply cannot shake off the memory-image of things as they were, and drags it along like a senseless appendage.

[467] This explanation, which is facile enough to satisfy the rationalistic requirements of our age, would certainly not meet with the approval of the Winnebagos, the nearest possessors of the trickster cycle. For them the myth is not in any sense a remnant—it is far too amusing for that, and an object of undivided enjoyment. For them it still “functions,” provided that they have not been spoiled by civilization. For them there is no earthly reason to theorize about the meaning and purpose of myths, just as the Christmas-tree seems no problem at all to the naïve European. For the thoughtful observer, however, both trickster and Christmas-tree afford reason enough for reflection. Naturally it depends very much on the mentality of the observer what he thinks about these things. Considering the crude primitivity of the trickster cycle, it would not be surprising if one saw in this myth simply the reflection of an earlier, rudimentary stage of consciousness, which is what the trickster obviously seems to be.¹²

[468] The only question that would need answering is whether such personified reflections exist at all in empirical psychology. As a matter of fact they do, and these experiences of split or double personality actually form the core of the earliest psychopathological investigations. The peculiar thing about these dissociations is that the split-off personality is not just a random one, but stands in a complementary or compensatory relationship to the ego-personality. It is a personification of traits of character which are sometimes worse and sometimes better than those the ego-personality possesses. A collective personification like the trickster is the product of an aggregate of individuals and is welcomed by each individual as something known to him, which would not be the case if it were just an individual outgrowth.

[469] Now if the myth were nothing but an historical remnant, one would have to ask why it has not long since vanished into the great rubbish-heap of the past, and why it continues to make its influence felt on the highest levels of civilization, even where, on account of his stupidity and grotesque scurrility, the trickster no longer plays the role of a “delight-maker.” In many cultures his figure seems like an old river-bed in which the water still flows. One can see this best of all from the fact that the trickster motif does not crop up only in its mythical form but appears just as naïvely and authentically in the unsuspecting modern man—whenever, in fact, he feels himself at

the mercy of annoying “accidents” which thwart his will and his actions with apparently malicious intent. He then speaks of “hoodoos” and “jinxes” or of the “mischievousness of the object.” Here the trickster is represented by counter-tendencies in the unconscious, and in certain cases by a sort of second personality, of a puerile and inferior character, not unlike the personalities who announce themselves at spiritualistic séances and cause all those ineffably childish phenomena so typical of poltergeists. I have, I think, found a suitable designation for this character-component when I called it the *shadow*.¹³ On the civilized level, it is regarded as a personal “gaffe,” “slip,” “faux pas,” etc., which are then chalked up as defects of the conscious personality. We are no longer aware that in carnival customs and the like there are remnants of a collective shadow figure which prove that the personal shadow is in part descended from a numinous collective figure. This collective figure gradually breaks up under the impact of civilization, leaving traces in folklore which are difficult to recognize. But the main part of him gets personalized and is made an object of personal responsibility.

[470] Radin’s trickster cycle preserves the shadow in its pristine mythological form, and thus points back to a very much earlier stage of consciousness which existed before the birth of the myth, when the Indian was still groping about in a similar mental darkness. Only when his consciousness reached a higher level could he detach the earlier state from himself and objectify it, that is, say anything about it. So long as his consciousness was itself trickster-like, such a confrontation could obviously not take place. It was possible only when the attainment of a newer and higher level of consciousness enabled him to look back on a lower and inferior state. It was only to be expected that a good deal of mockery and contempt should mingle with this retrospect, thus casting an even thicker pall over man’s memories of the past, which were pretty unedifying anyway. This phenomenon must have repeated itself innumerable times in the history of his mental development. The sovereign contempt with which our modern age looks back on the taste and intelligence of earlier centuries is a classic example of this, and there is an unmistakable allusion to the same phenomenon in the New Testament, where we are told in Acts 17:30 that God looked down from above (ὑπεριδῶν, *despiciens*) on the *Χρόνοι τῆς ἀγνοίας*, the times of ignorance (or unconsciousness).

[471] This attitude contrasts strangely with the still commoner and more striking idealization of the past, which is praised not merely as the “good old days” but as the Golden Age—and not just by uneducated and superstitious people, but by all those legions of theosophical enthusiasts who resolutely believe in the former existence and lofty civilization of Atlantis.

[472] Anyone who belongs to a sphere of culture that seeks the perfect state somewhere in the past must feel very queerly indeed when confronted by the figure of the trickster. He is a forerunner of the saviour, and, like him, God, man, and animal at once. He is both subhuman and superhuman, a bestial and divine being, whose chief and most alarming characteristic is his unconsciousness. Because of it he is deserted by his (evidently human) companions, which seems to indicate that he has fallen below their level of consciousness. He is so unconscious of himself that his body is not a unity, and his two hands fight each other. He takes his anus off and entrusts it with a special task. Even his sex is optional despite its phallic qualities: he can turn himself into a woman and bear children. From his penis he makes all kinds of useful plants. This is a reference to his original nature as a Creator, for the world is made from the body of a god.

[473] On the other hand he is in many respects stupider than the animals, and gets into one ridiculous scrape after another. Although he is not really evil, he does the most atrocious things from sheer unconsciousness and unrelatedness. His imprisonment in animal unconsciousness is suggested by the episode where he gets his head caught inside the skull of an elk, and the next episode shows how he overcomes this condition by imprisoning the head of a hawk inside his own rectum. True, he sinks back into the former condition immediately afterwards, by falling under the ice, and is outwitted time after time by the animals, but in the end he succeeds in tricking the cunning coyote, and this brings back to him his saviour nature. The trickster is a primitive "cosmic" being of *divine-animal* nature, on the one hand superior to man because of his superhuman qualities, and on the other hand inferior to him because of his unreason and unconsciousness. He is no match for the animals either, because of his extraordinary clumsiness and lack of instinct. These defects are the marks of his *human* nature, which is not so well adapted to the environment as the animal's but, instead, has prospects of a much higher development of consciousness based on a considerable eagerness to learn, as is duly emphasized in the myth.

[474] What the repeated telling of the myth signifies is the therapeutic anamnesis of contents which, for reasons still to be discussed, should never be forgotten for long. If they were nothing but the remnants of an inferior state it would be understandable if man turned his attention away from them, feeling that their reappearance was a nuisance. This is evidently by no means the case, since the trickster has been a source of amusement right down to civilized times, where he can still be recognized in the carnival figures of Pulcinella and the clown. That is one important reason for his still continuing to function. But it is not the only one, and certainly not the reason why this reflection of an extremely primitive state of consciousness solidified into a mythological personage. Mere vestiges of an early state that is dying out usually lose their energy at an increasing rate, otherwise they would never disappear. The last

thing we would expect is that they would have the strength to solidify into a mythological figure with its own cycle of legends—unless, of course, they received energy from outside, in this case from a higher level of consciousness or from sources in the unconscious which are not yet exhausted. To take a legitimate parallel from the psychology of the individual, namely the appearance of an impressive shadow figure antagonistically confronting a personal consciousness: this figure does not appear merely because it *still* exists in the individual, but because it rests on a dynamism whose existence can only be explained in terms of his actual situation, for instance because the shadow is so disagreeable to his ego-consciousness that it has to be repressed into the unconscious. This explanation does not quite meet the case here, because the trickster obviously represents a vanishing level of consciousness which increasingly lacks the power to take express and assert itself. Furthermore, repression would prevent it from vanishing, because repressed contents are the very ones that have the best chance of survival, as we know from experience that nothing is corrected in the unconscious. Lastly, the story of the trickster is not in the least disagreeable to the Winnebago consciousness or incompatible with it but, on the contrary, pleasurable and therefore not conducive to repression. It looks, therefore, as if the myth were actively sustained and fostered by consciousness. This may well be so, since that is the best and most successful method of keeping the shadow figure conscious and subjecting it to conscious criticism. Although, to begin with, this criticism has more the character of a positive evaluation, we may expect that with the progressive development of consciousness the cruder aspects of the myth will gradually fall away, even if the danger of its rapid disappearance under the stress of white civilization did not exist. We have often seen how certain customs, originally cruel or obscene, became mere vestiges in the course of time.¹⁴

[475] The process of rendering this motif harmless takes an extremely long time, as its history shows; one can still detect traces of it even at a high level of civilization. Its longevity could also be explained by the strength and vitality of the state of consciousness described in the myth, and by the secret attraction and fascination this has for the conscious mind. Although purely causal hypotheses in the biological sphere are not as a rule very satisfactory, due weight must nevertheless be given to the fact that in the case of the trickster a higher level of consciousness has covered up a lower one, and that the latter was already in retreat. His recollection, however, is mainly due to the interest which the conscious mind brings to bear on him, the inevitable concomitant being, as we have seen, the gradual civilizing, i.e., assimilation, of a primitive daemonic figure who was originally autonomous and even capable of causing possession.

[476] To supplement the causal approach by a final one therefore enables us to arrive at more meaningful interpretations not only in medical psychology, where we are

concerned with individual fantasies originating in the unconscious, but also in the case of collective fantasies, that is myths and fairytales.

[477] As Radin points out, the civilizing process begins within the framework of the trickster cycle itself, and this is a clear indication that the original state has been overcome. At any rate the marks of deepest unconsciousness fall away from him; instead of acting in a brutal, savage, stupid, and senseless fashion, the trickster's behaviour towards the end of the cycle becomes quite useful and sensible. The devaluation of his earlier unconsciousness is apparent even in the myth, and one wonders what has happened to his evil qualities. The naïve reader may imagine that when the dark aspects disappear they are no longer there in reality. But that is not the case at all, as experience shows. What actually happens is that the conscious mind is then able to free itself from the fascination of evil and is no longer obliged to live it compulsively. The darkness and the evil have not gone up in smoke, they have merely withdrawn into the unconscious owing to loss of energy, where they remain unconscious so long as all is well with the conscious. But if the conscious should find itself in a critical or doubtful situation, then it soon becomes apparent that the shadow has not dissolved into nothing but is only waiting for a favourable opportunity to reappear as a projection upon one's neighbour. If this trick is successful, there is immediately created between them that world of primordial darkness where everything that is characteristic of the trickster can happen—even on the highest plane of civilization. The best examples of these "monkey tricks," as popular speech aptly and truthfully sums up this state of affairs in which everything goes wrong and nothing intelligent happens except by mistake at the last moment, are naturally to be found in politics.

[478] The so-called civilized man has forgotten the trickster. He remembers him only figuratively and metaphorically, when, irritated by his own ineptitude, he speaks of fate playing tricks on him or of things being bewitched. He never suspects that his own hidden and apparently harmless shadow has qualities whose dangerousness exceeds his wildest dreams. As soon as people get together in masses and submerge the individual, the shadow is mobilized, and, as history shows, may even be personified and incarnated.

[479] The disastrous idea that everything comes to the human psyche from outside and that it is born a *tabula rasa* is responsible for the erroneous belief that under normal circumstances the individual is in perfect order. He then looks to the State for salvation, and makes society pay for his inefficiency. He thinks the meaning of existence would be discovered if food and clothing were delivered to him gratis on his own doorstep, or if everybody possessed an automobile. Such are the puerilities that rise up in place of an unconscious shadow and keep it unconscious. As a result of

these prejudices, the individual feels totally dependent on his environment and loses all capacity for introspection. In this way his code of ethics is replaced by a knowledge of what is permitted or forbidden or ordered. How, under these circumstances, can one expect a soldier to subject an order received from a superior to ethical scrutiny? He has not yet made the discovery that he might be capable of spontaneous ethical impulses, and of performing them—even when no one is looking.

[480] From this point of view we can see why the myth of the trickster was preserved and developed: like many other myths, it was supposed to have a therapeutic effect. It holds the earlier low intellectual and moral level before the eyes of the more highly developed individual, so that he shall not forget how things looked yesterday. We like to imagine that something which we do not understand does not help us in any way. But that is not always so. Seldom does a man understand with his head alone, least of all when he is a primitive. Because of its numinosity the myth has a direct effect on the unconscious, no matter whether it is understood or not. The fact that its repeated telling has not long since become obsolete can, I believe, be explained by its usefulness. The explanation is rather difficult because two contrary tendencies are at work: the desire on the one hand to get out of the earlier condition and on the other hand not to forget it.¹⁵ Apparently Radin has also felt this difficulty, for he says: “Viewed psychologically, it might be contended that the history of civilization is largely the account of the attempts of man to forget his transformation from an animal into a human being.”¹⁶ A few pages further on he says (with reference to the Golden Age): “So stubborn a refusal to forget is not an accident.”¹⁷ And it is also no accident that we are forced to contradict ourselves as soon as we try to formulate man’s paradoxical attitude to myth. Even the most enlightened of us will set up a Christmas-tree for his children without having the least idea what this custom means, and is invariably disposed to nip any attempt at interpretation in the bud. It is really astonishing to see how many so-called superstitions are rampant nowadays in town and country alike, but if one took hold of the individual and asked him, loudly and clearly, “Do you believe in ghosts? in witches? in spells and magic?” he would deny it indignantly. It is a hundred to one he has never heard of such things and thinks it all rubbish. But in secret he is all for it, just like a jungle-dweller. The public knows very little of these things anyway, for everyone is convinced that in our enlightened society that kind of superstition has long since been eradicated, and it is part of the general convention to act as though one had never heard of such things, not to mention believing in them.

[481] But nothing is ever lost, not even the blood pact with the devil. Outwardly it is forgotten, but inwardly not at all. We act like the natives on the southern slopes of Mount Elgon, in East Africa, one of whom accompanied me part of the way into the

bush. At a fork in the path we came upon a brand new “ghost trap,” beautifully got up like a little hut, near the cave where he lived with his family. I asked him if he had made it. He denied it with all the signs of extreme agitation, asserting that only children would make such a “ju-ju.” Whereupon he gave the hut a kick, and the whole thing fell to pieces.

[482] This is exactly the reaction we can observe in Europe today. Outwardly people are more or less civilized, but inwardly they are still primitives. Something in man is profoundly disinclined to give up his beginnings, and something else believes it has long since got beyond all that. This contradiction was once brought home to me in the most drastic manner when I was watching a “Strudel” (a sort of local witch-doctor) taking the spell off a stable. The stable was situated immediately beside the Gotthard railway line, and several international expresses sped past during the ceremony. Their occupants would hardly have suspected that a primitive ritual was being performed a few yards away.

[483] The conflict between the two dimensions of consciousness is simply an expression of the polaristic structure of the psyche, which like any other energetic system is dependent on the tension of opposites. That is also why there are no general psychological propositions which could not just as well be reversed; indeed, their reversibility proves their validity. We should never forget that in any psychological discussion we are not saying anything *about* the psyche, but that the psyche is always speaking about *itself*. It is no use thinking we can ever get beyond the psyche by means of the “mind,” even though the mind asserts that it is not dependent on the psyche. How could it prove that? We can say, if we like, that one statement comes from the psyche, is psychic and nothing but psychic, and that another comes from the mind, is “spiritual” and therefore superior to the psychic one. Both are mere assertions based on the postulates of belief.

[484] The fact is, that this old trichotomous hierarchy of psychic contents (hyleic, psychic, and pneumatic) represents the polaristic structure of the psyche, which is the only immediate object of experience. The unity of our psychic nature lies in the middle, just as the living unity of the waterfall appears in the dynamic connection between above and below. Thus, the living effect of the myth is experienced when a higher consciousness, rejoicing in its freedom and independence, is confronted by the autonomy of a mythological figure and yet cannot flee from its fascination, but must pay tribute to the overwhelming impression. The figure works, because secretly it participates in the observer’s psyche and appears as its reflection, though it is not recognized as such. It is split off from his consciousness and consequently behaves like an autonomous personality. The trickster is a collective shadow figure, a summation of all the inferior traits of character in individuals. And since the

individual shadow is never absent as a component of personality, the collective figure can construct itself out of it continually. Not always, of course, as a mythological figure, but, in consequence of the increasing repression and neglect of the original mythologems, as a corresponding projection on other social groups and nations.

[485] If we take the trickster as a parallel of the individual shadow, then the question arises whether that trend towards meaning, which we saw in the trickster myth, can also be observed in the subjective and personal shadow. Since this shadow frequently appears in the phenomenology of dreams as a well-defined figure, we can answer this question positively: the shadow, although by definition a negative figure, sometimes has certain clearly discernible traits and associations which point to a quite different background. It is as though he were hiding meaningful contents under an unprepossessing exterior. Experience confirms this; and what is more important, the things that are hidden usually consist of increasingly numinous figures. The one standing closest behind the shadow is the anima,¹⁸ who is endowed with considerable powers of fascination and possession. She often appears in rather too youthful form, and hides in her turn the powerful archetype of the wise old man (sage, magician, king, etc.). The series could be extended, but it would be pointless to do so, as psychologically one only understands what one has experienced oneself. The concepts of complex psychology are, in essence, not intellectual formulations but names for certain areas of experience, and though they can be described they remain dead and irrepresentable to anyone who has not experienced them. Thus, I have noticed that people usually have not much difficulty in picturing to themselves what is meant by the shadow, even if they would have preferred instead a bit of Latin or Greek jargon that sounds more “scientific.” But it costs them enormous difficulties to understand what the anima is. They accept her easily enough when she appears in novels or as a film star, but she is not understood at all when it comes to seeing the role she plays in their own lives, because she sums up everything that a man can never get the better of and never finishes coping with. Therefore it remains in a perpetual state of emotionality which must not be touched. The degree of unconsciousness one meets with in this connection is, to put it mildly, astounding. Hence it is practically impossible to get a man who is afraid of his own femininity to understand what is meant by the anima.

[486] Actually, it is not surprising that this should be so, since even the most rudimentary insight into the shadow sometimes causes the greatest difficulties for the modern European. But since the shadow is the figure nearest his consciousness and the least explosive one, it is also the first component of personality to come up in an analysis of the unconscious. A minatory and ridiculous figure, he stands at the very beginning of the way of individuation, posing the deceptively easy riddle of the Sphinx, or grimly demanding answer to a “quaestio crocodilina.”¹⁹

[487] If, at the end of the trickster myth, the saviour is hinted at, this comforting premonition or hope means that some calamity or other has happened and been consciously understood. Only out of disaster can the longing for the saviour arise—in other words, the recognition and unavoidable integration of the shadow create such a harrowing situation that nobody but a saviour can undo the tangled web of fate. In the case of the individual, the problem constellated by the shadow is answered on the plane of the anima, that is, through relatedness. In the history of the collective as in the history of the individual, everything depends on the development of consciousness. This gradually brings liberation from imprisonment in *ἀγνοία*, ‘unconsciousness,’²⁰ and is therefore a bringer of light as well as of healing.

[488] As in its collective, mythological form, so also the individual shadow contains within it the seed of an enantiodromia, of a conversion into its opposite.

VI

CONSCIOUS, UNCONSCIOUS, AND INDIVIDUATION

A STUDY IN THE PROCESS OF INDIVIDUATION

CONCERNING MANDALA SYMBOLISM

CONSCIOUS, UNCONSCIOUS, AND INDIVIDUATION¹

[489] The relation between the conscious and the unconscious on the one hand, and the individuation process on the other, are problems that arise almost regularly during the later stages of analytical treatment. By “analytical” I mean a procedure that takes account of the existence of the unconscious. These problems do not arise in a procedure based on suggestion. A few preliminary words may not be out of place in order to explain what is meant by “individuation.”

[490] I use the term “individuation” to denote the process by which a person becomes a psychological “in-dividual,” that is, a separate, indivisible unity or “whole.”² It is generally assumed that consciousness is the whole of the psychological individual. But knowledge of the phenomena that can only be explained on the hypothesis of unconscious psychic processes makes it doubtful whether the ego and its contents are in fact identical with the “whole.” If unconscious processes exist at all, they must surely belong to the totality of the individual, even though they are not components of the conscious ego. If they were part of the ego they would necessarily be conscious, because everything that is directly related to the ego is conscious. Consciousness can even be equated with the relation between the ego and the psychic contents. But unconscious phenomena are so little related to the ego that most people do not hesitate to deny their existence outright. Nevertheless, they manifest themselves in an individual’s behaviour. An attentive observer can detect them without difficulty, while the observed person remains quite unaware of the fact that he is betraying his most secret thoughts or even things he has never thought consciously. It is, however, a great prejudice to suppose that something we have never thought consciously does not exist in the psyche. There is plenty of evidence to show that consciousness is very far from covering the psyche in its totality. Many things occur semiconsciously, and a great many more remain entirely unconscious. Thorough investigation of the phenomena of dual and multiple personalities, for instance, has brought to light a mass of material with observations to prove this point. (I would refer the reader to the writings of Pierre Janet, Théodore Flournoy, Morton Prince, and others.³)

[491] The importance of such phenomena has made a deep impression on medical psychology, because they give rise to all sorts of psychic and physiological symptoms. In these circumstances, the assumption that the ego expresses the totality

of the psyche has become untenable. It is, on the contrary, evident that the whole must necessarily include not only consciousness but the illimitable field of unconscious occurrences as well, and that the ego can be no more than the centre of the field of consciousness.

[492] You will naturally ask whether the unconscious possesses a centre too. I would hardly venture to assume that there is in the unconscious a ruling principle analogous to the ego. As a matter of fact, everything points to the contrary. If there were such a centre, we could expect almost regular signs of its existence. Cases of dual personality would then be frequent occurrences instead of rare curiosities. As a rule, unconscious phenomena manifest themselves in fairly chaotic and unsystematic form. Dreams, for instance, show no apparent order and no tendency to systematization, as they would have to do if there were a personal consciousness at the back of them. The philosophers Carus and von Hartmann treat the unconscious as a metaphysical principle, a sort of universal mind, without any trace of personality or ego-consciousness, and similarly Schopenhauer's "Will" is without an ego. Modern psychologists, too, regard the unconscious as an egoless function below the threshold of consciousness. Unlike the philosophers, they tend to derive its subliminal functions from the conscious mind. Janet thinks that there is a certain weakness of consciousness which is unable to hold all the psychic processes together. Freud, on the other hand, favours the idea of conscious factors that suppress certain incompatible tendencies. Much can be said for both theories, since there are numerous cases where a weakness of consciousness actually causes certain contents to fall below the threshold, or where disagreeable contents are repressed. It is obvious that such careful observers as Janet and Freud would not have constructed theories deriving the unconscious mainly from conscious sources had they been able to discover traces of an independent personality or of an autonomous will in the manifestations of the unconscious.

[493] If it were true that the unconscious consists of nothing but contents accidentally deprived of consciousness but otherwise indistinguishable from the conscious material, then one could identify the ego more or less with the totality of the psyche. But actually the situation is not quite so simple. Both theories are based mainly on observations in the field of neurosis. Neither Janet nor Freud had any specifically psychiatric experience. If they had, they would surely have been struck by the fact that the unconscious displays contents that are utterly different from conscious ones, so strange, indeed, that nobody can understand them, neither the patient himself nor his doctors. The patient is inundated by a flood of thoughts that are as strange to him as they are to a normal person. That is why we call him "crazy": we cannot understand his ideas. We understand something only if we have the necessary premises for doing so. But here the premises are just as remote from our

consciousness as they were from the mind of the patient before he went mad. Otherwise he would never have become insane.

[494] There is, in fact, no field directly known to us from which we could derive certain pathological ideas. It is not a question of more or less normal contents that became unconscious just by accident. They are, on the contrary, products whose nature is at first completely baffling. They differ in every respect from neurotic material, which cannot be said to be at all bizarre. The material of a neurosis is understandable in human terms, but that of a psychosis is not.⁴

[495] This peculiar psychotic material cannot be derived from the conscious mind, because the latter lacks the premises which would help to explain the strangeness of the ideas. Neurotic contents can be integrated without appreciable injury to the ego, but psychotic ideas cannot. They remain inaccessible, and ego-consciousness is more or less swamped by them. They even show a distinct tendency to draw the ego into their "system."

[496] Such cases indicate that under certain conditions the unconscious is capable of taking over the role of the ego. The consequence of this exchange is insanity and confusion, because the unconscious is not a second personality with organized and centralized functions but in all probability a decentralized congeries of psychic processes. However, nothing produced by the human mind lies absolutely outside the psychic realm. Even the craziest idea must correspond to something in the psyche. We cannot suppose that certain minds contain elements that do not exist at all in other minds. Nor can we assume that the unconscious is capable of becoming autonomous only in certain people, namely in those predisposed to insanity. It is very much more likely that the tendency to autonomy is a more or less general peculiarity of the unconscious. Mental disorder is, in a sense, only one outstanding example of a hidden but none the less general condition. This tendency to autonomy shows itself above all in affective states, including those of normal people. When in a state of violent affect one says or does things which exceed the ordinary. Not much is needed: love and hate, joy and grief, are often enough to make the ego and the unconscious change places. Very strange ideas indeed can take possession of otherwise healthy people on such occasions. Groups, communities, and even whole nations can be seized in this way by psychic epidemics.

[497] The autonomy of the unconscious therefore begins where emotions are generated. Emotions are instinctive, involuntary reactions which upset the rational order of consciousness by their elemental outbursts. Affects are not "made" or wilfully produced; they simply happen. In a state of affect a trait of character sometimes appears which is strange even to the person concerned, or hidden contents may irrupt involuntarily. The more violent an affect the closer it comes to the pathological, to a

condition in which the ego-consciousness is thrust aside by autonomous contents that were unconscious before. So long as the unconscious is in a dormant condition, it seems as if there were absolutely nothing in this hidden region. Hence we are continually surprised when something unknown suddenly appears “from nowhere.” Afterwards, of course, the psychologist comes along and shows that things had to happen as they did for this or that reason. But who could have said so beforehand?

[498] We call the unconscious “nothing,” and yet it is a reality *in potentia*. The thought we shall think, the deed we shall do, even the fate we shall lament tomorrow, all lie unconscious in our today. The unknown in us which the affect uncovers was always there and sooner or later would have presented itself to consciousness. Hence we must always reckon with the presence of things not yet discovered. These, as I have said, may be unknown quirks of character. But possibilities of future development may also come to light in this way, perhaps in just such an outburst of affect which sometimes radically alters the whole situation. The unconscious has a Janus-face: on one side its contents point back to a preconscious, prehistoric world of instinct, while on the other side it potentially anticipates the future—precisely because of the instinctive readiness for action of the factors that determine man’s fate. If we had complete knowledge of the ground plan lying dormant in an individual from the beginning, his fate would be in large measure predictable.

[499] Now, to the extent that unconscious tendencies—be they backward-looking images or forward-looking anticipations—appear in dreams, dreams have been regarded, in all previous ages, less as historical regressions than as anticipations of the future, and rightly so. For everything that will be happens on the basis of what has been, and of what—consciously or unconsciously—still exists as a memory-trace. In so far as no man is born totally new, but continually repeats the stage of development last reached by the species, he contains unconsciously, as an *a priori* datum, the entire psychic structure developed both upwards and downwards by his ancestors in the course of the ages. That is what gives the unconscious its characteristic “historical” aspect, but it is at the same time the *sine qua non* for shaping the future. For this reason it is often very difficult to decide whether an autonomous manifestation of the unconscious should be interpreted as an *effect* (and therefore historical) or as an *aim* (and therefore teleological and anticipatory). The conscious mind thinks as a rule without regard to ancestral preconditions and without taking into account the influence this *a priori* factor has on the shaping of the individual’s fate. Whereas we think in periods of years, the unconscious thinks and lives in terms of millennia. So when something happens that seems to us an unexampled novelty, it is generally a very old story indeed. We still forget, like children, what happened yesterday. We are still living in a wonderful new world where man thinks himself astonishingly new and “modern.” This is unmistakable

proof of the youthfulness of human consciousness, which has not yet grown aware of its historical antecedents.

[500] As a matter of fact, the “normal” person convinces me far more of the autonomy of the unconscious than does the insane person. Psychiatric theory can always take refuge behind real or alleged organic disorders of the brain and thus detract from the importance of the unconscious. But such a view is no longer applicable when it comes to normal humanity. What one sees happening in the world is not just a “shadowy vestige of activities that were once conscious,” but the expression of a living psychic condition that still exists and always will exist. Were that not so, one might well be astonished. But it is precisely those who give least credence to the autonomy of the unconscious who are the most surprised by it. Because of its youthfulness and vulnerability, our consciousness tends to make light of the unconscious. This is understandable enough, for a young man should not let himself be overawed by the authority of his parents if he wants to start something on his own account. Historically as well as individually, our consciousness has developed out of the darkness and somnolence of primordial unconsciousness. There were psychic processes and functions long before any ego-consciousness existed. “Thinking” existed long before man was able to say: “I am conscious of thinking.”

[501] The primitive “perils of the soul” consist mainly of dangers to consciousness. Fascination, bewitchment, “loss of soul,” possession, etc. are obviously phenomena of the dissociation and suppression of consciousness caused by unconscious contents. Even civilized man is not yet entirely free of the darkness of primeval times. The unconscious is the mother of consciousness. Where there is a mother there is also a father, yet he seems to be unknown. Consciousness, in the pride of its youth, may deny its father, but it cannot deny its mother. That would be too unnatural, for one can see in every child how hesitantly and slowly its ego-consciousness evolves out of a fragmentary consciousness lasting for single moments only, and how these islands gradually emerge from the total darkness of mere instinctuality.

[502] Consciousness grows out of an unconscious psyche which is older than it, and which goes on functioning together with it or even in spite of it. Although there are numerous cases of conscious contents becoming unconscious again (through being repressed, for instance), the unconscious as a whole is far from being a mere remnant of consciousness. Or are the psychic functions of animals remnants of consciousness?

[503] As I have said, there is little hope of our finding in the unconscious an order equivalent to that of the ego. It certainly does not look as if we were likely to discover an unconscious ego-personality, something in the nature of a Pythagorean “counter-earth.” Nevertheless, we cannot overlook the fact that, just as consciousness arises from the unconscious, the ego-centre, too, crystallizes out of a dark depth in

which it was somehow contained *in potentia*. Just as a human mother can only produce a human child, whose deepest nature lay hidden during its potential existence within her, so we are practically compelled to believe that the unconscious cannot be an entirely chaotic accumulation of instincts and images. There must be something to hold it together and give expression to the whole. Its centre cannot possibly be the ego, since the ego was born out of it into consciousness and turns its back on the unconscious, seeking to shut it out as much as possible. Or can it be that the unconscious loses its centre with the birth of the ego? In that case we would expect the ego to be far superior to the unconscious in influence and importance. The unconscious would then follow meekly in the footsteps of the conscious, and that would be just what we wish.

[504] Unfortunately, the facts show the exact opposite: consciousness succumbs all too easily to unconscious influences, and these are often truer and wiser than our conscious thinking. Also, it frequently happens that unconscious motives overrule our conscious decisions, especially in matters of vital importance. Indeed, the fate of the individual is largely dependent on unconscious factors. Careful investigation shows how very much our conscious decisions depend on the undisturbed functioning of memory. But memory often suffers from the disturbing interference of unconscious contents. Moreover, it functions as a rule automatically. Ordinarily it uses the bridges of association, but often in such an extraordinary way that another thorough investigation of the whole process of memory-reproduction is needed in order to find out how certain memories managed to reach consciousness at all. And sometimes these bridges cannot be found. In such cases it is impossible to dismiss the hypothesis of the spontaneous activity of the unconscious. Another example is intuition, which is chiefly dependent on unconscious processes of a very complex nature. Because of this peculiarity, I have defined intuition as “perception via the unconscious.”

[505] Normally the unconscious collaborates with the conscious without friction or disturbance, so that one is not even aware of its existence. But when an individual or a social group deviates too far from their instinctual foundations, they then experience the full impact of unconscious forces. The collaboration of the unconscious is intelligent and purposive, and even when it acts in opposition to consciousness its expression is still compensatory in an intelligent way, as if it were trying to restore the lost balance.

[506] There are dreams and visions of such an impressive character that some people refuse to admit that they could have originated in an unconscious psyche. They prefer to assume that such phenomena derive from a sort of “superconsciousness.” Such people make a distinction between a quasi-physiological or instinctive unconscious

and a psychic sphere or layer “above” consciousness, which they style the “superconscious.” As a matter of fact, this psyche, which in Indian philosophy is called the “higher” consciousness, corresponds to what we in the West call the “unconscious.” Certain dreams, visions, and mystical experiences do, however, suggest the existence of a consciousness in the unconscious. But, if we assume a consciousness in the unconscious, we are at once faced with the difficulty that no consciousness can exist without a subject, that is, an ego to which the contents are related. Consciousness needs a centre, an ego to which something is conscious. We know of no other kind of consciousness, nor can we imagine a consciousness without an ego. There can be no consciousness when there is no one to say: “*I am conscious.*”

[507] It is unprofitable to speculate about things we cannot know. I therefore refrain from making assertions that go beyond the bounds of science. It was never possible for me to discover in the unconscious anything like a personality comparable with the ego. But although a “second ego” cannot be discovered (except in the rare cases of dual personality), the manifestations of the unconscious do at least show *traces of personalities*. A simple example is the dream, where a number of real or imaginary people represent the dream-thoughts. In nearly all the important types of dissociation, the manifestations of the unconscious assume a strikingly personal form. Careful examination of the behaviour and mental content of these personifications, however, reveals their fragmentary character. They seem to represent complexes that have split off from a greater whole, and are the very reverse of a personal centre of the unconscious.

[508] I have always been greatly impressed by the character of dissociated fragments as personalities. Hence I have often asked myself whether we are not justified in assuming that, if such fragments have personality, the whole from which they were broken off must have personality to an even higher degree. The inference seemed logical, since it does not depend on whether the fragments are large or small. Why, then, should not the whole have personality too? *Personality need not imply consciousness. It can just as easily be dormant or dreaming.*

[509] The general aspect of unconscious manifestations is in the main chaotic and irrational, despite certain symptoms of intelligence and purposiveness. The unconscious produces dreams, visions, fantasies, emotions, grotesque ideas, and so forth. This is exactly what we would expect a dreaming personality to do. It seems to be a personality that was never awake and was never conscious of the life it had lived and of its own continuity. The only question is whether the hypothesis of a dormant and hidden personality is possible or not. It may be that all of the personality to be found in the unconscious is contained in the fragmentary personifications mentioned

before. Since this is very possible, all my conjectures would be in vain—unless there were evidence of much less fragmentary and more complete personalities, even though they are hidden.

[510] I am convinced that such evidence exists. Unfortunately, the material to prove this belongs to the subtleties of psychological analysis. It is therefore not exactly easy to give the reader a simple and convincing idea of it.

[511] I shall begin with a brief statement: in the unconscious of every man there is hidden a feminine personality, and in that of every woman a masculine personality.

[512] It is a well-known fact that sex is determined by a majority of male or female genes, as the case may be. But the minority of genes belonging to the other sex does not simply disappear. A man therefore has in him a feminine side, an unconscious feminine figure—a fact of which he is generally quite unaware. I may take it as known that I have called this figure the “anima,” and its counterpart in a woman the “animus.” In order not to repeat myself, I must refer the reader to the literature.⁵ This figure frequently appears in dreams, where one can observe all the attributes I have mentioned in earlier publications.

[513] Another, no less important and clearly defined figure is the “shadow.” Like the anima, it appears either in projection on suitable persons, or personified as such in dreams. The shadow coincides with the “personal” unconscious (which corresponds to Freud’s conception of the unconscious). Again like the anima, this figure has often been portrayed by poets and writers. I would mention the Faust-Mephistopheles relationship and E. T. A. Hoffmann’s tale *The Devil’s Elixir* as two especially typical descriptions. The shadow personifies everything that the subject refuses to acknowledge about himself and yet is always thrusting itself upon him directly or indirectly—for instance, inferior traits of character and other incompatible tendencies.⁶

[514] The fact that the unconscious spontaneously personifies certain affectively toned contents in dreams is the reason why I have taken over these personifications in my terminology and formulated them as names.

[515] Besides these figures there are still a few others, less frequent and less striking, which have likewise undergone poetic as well as mythological formulation. I would mention, for instance, the figure of the hero⁷ and of the wise old man,⁸ to name only two of the best known.

[516] All these figures irrupt autonomously into consciousness as soon as it gets into a pathological state. With regard to the anima, I would particularly like to draw attention to the case described by Nelken.⁹ Now the remarkable thing is that these figures show the most striking connections with the poetic, religious, or mythological

formulations, though these connections are in no way factual. That is to say, they are spontaneous products of analogy. One such case even led to the charge of plagiarism: the French writer Benoît gave a description of the anima and her classic myth in his book *L'Atlantide*, which is an exact parallel of Rider Haggard's *She*. The lawsuit proved unsuccessful; Benoît had never heard of *She*. (It might, in the last analysis, have been an instance of cryptomnesic deception, which is often extremely difficult to rule out.) The distinctly "historical" aspect of the anima and her condensation with the figures of the sister, wife, mother, and daughter, plus the associated incest motif, can be found in Goethe ("You were in times gone by my wife or sister"),¹⁰ as well as in the anima figure of the *regina* or *femina alba* in alchemy. The English alchemist Eirenaeus Philalethes ("lover of truth"), writing about 1645, remarks that the "Queen" was the King's "sister, mother, or wife."¹¹ The same idea can be found, ornately elaborated, in Nelken's patient and in a whole series of cases observed by me, where I was able to rule out with certainty any possibility of literary influence. For the rest, the anima complex is one of the oldest features of Latin alchemy.¹²

[517] When one studies the archetypal personalities and their behaviour with the help of the dreams, fantasies, and delusions of patients,¹³ one is profoundly impressed by their manifold and unmistakable connections with mythological ideas completely unknown to the layman. They form a species of singular beings whom one would like to endow with ego-consciousness; indeed, they almost seem capable of it. And yet this idea is not borne out by the facts. There is nothing in their behaviour to suggest that they have an ego-consciousness as we know it. They show, on the contrary, all the marks of fragmentary personalities. They are masklike, wraithlike, without problems, lacking self-reflection, with no conflicts, no doubts, no sufferings; like gods, perhaps, who have no philosophy, such as the Brahma-gods of the *Samyutta-nikāya*, whose erroneous views needed correction by the Buddha. Unlike other contents, they always remain strangers in the world of consciousness, unwelcome intruders saturating the atmosphere with uncanny forebodings or even with the fear of madness.

[518] If we examine their content, i.e., the fantasy material constituting their phenomenology, we find countless archaic and "historical" associations and images of an archetypal nature.¹⁴ This peculiar fact permits us to draw conclusions about the "localization" of anima and animus in the psychic structure. They evidently live and function in the deeper layers of the unconscious, especially in that phylogenetic substratum which I have called the collective unconscious. This localization explains a good deal of their strangeness: they bring into our ephemeral consciousness an unknown psychic life belonging to a remote past. It is the mind of our unknown ancestors, their way of thinking and feeling, their way of experiencing life and the world, gods and men. The existence of these archaic strata is presumably the source

of man's belief in reincarnations and in memories of "previous existences." Just as the human body is a museum, so to speak, of its phylogenetic history, so too is the psyche. We have no reason to suppose that the specific structure of the psyche is the only thing in the world that has no history outside its individual manifestations. Even the conscious mind cannot be denied a history reaching back at least five thousand years. It is only our ego-consciousness that has forever a new beginning and an early end. The unconscious psyche is not only immensely old, it is also capable of growing into an equally remote future. It moulds the human species and is just as much a part of it as the human body, which, though ephemeral in the individual, is collectively of immense age.

[519] The anima and animus live in a world quite different from the world outside—in a world where the pulse of time beats infinitely slowly, where the birth and death of individuals count for little. No wonder their nature is strange, so strange that their irruption into consciousness often amounts to a psychosis. They undoubtedly belong to the material that comes to light in schizophrenia.

[520] What I have said about the collective unconscious may give you a more or less adequate idea of what I mean by this term. If we now turn back to the problem of individuation, we shall see ourselves faced with a rather extraordinary task: the psyche consists of two incongruous halves which together should form a whole. One is inclined to think that ego-consciousness is capable of assimilating the unconscious, at least one hopes that such a solution is possible. But unfortunately the unconscious really is unconscious; in other words, it is unknown. And how can you assimilate something unknown? Even if you can form a fairly complete picture of the anima and animus, this does not mean that you have plumbed the depths of the unconscious. One hopes to control the unconscious, but the past masters in the art of self-control, the yogis, attain perfection in *samadhi*, a state of ecstasy, which so far as we know is equivalent to a state of unconsciousness. It makes no difference whether they call our unconscious a "universal consciousness"; the fact remains that in their case the unconscious has swallowed up ego-consciousness. They do not realize that a "universal consciousness" is a contradiction in terms, since exclusion, selection, and discrimination are the root and essence of everything that lays claim to the name "consciousness." "Universal consciousness" is logically identical with unconsciousness. It is nevertheless true that a correct application of the methods described in the Pāli Canon or in the *Yoga-sūtra* induces a remarkable extension of consciousness. But, with increasing extension, the contents of consciousness lose in clarity of detail. In the end, consciousness becomes all-embracing, but nebulous; an infinite number of things merge into an indefinite whole, a state in which subject and object are almost completely identical. This is all very beautiful, but scarcely to be recommended anywhere north of the Tropic of Cancer.

[521] For this reason we must look for a different solution. We believe in ego-consciousness and in what we call reality. The realities of a northern climate are somehow so convincing that we feel very much better off when we do not forget them. For us it makes sense to concern ourselves with reality. Our European ego-consciousness is therefore inclined to swallow up the unconscious, and if this should not prove feasible we try to suppress it. But if we understand anything of the unconscious, we know that it cannot be swallowed. We also know that it is dangerous to suppress it, because the unconscious is life and this life turns against us if suppressed, as happens in neurosis.

[522] Conscious and unconscious do not make a whole when one of them is suppressed and injured by the other. If they must contend, let it at least be a fair fight with equal rights on both sides. Both are aspects of life. Consciousness should defend its reason and protect itself, and the chaotic life of the unconscious should be given the chance of having its way too—as much of it as we can stand. This means open conflict and open collaboration at once. That, evidently, is the way human life should be. It is the old game of hammer and anvil: between them the patient iron is forged into an indestructible whole, an “individual.”

[523] This, roughly, is what I mean by the individuation process. As the name shows, it is a process or course of development arising out of the conflict between the two fundamental psychic facts. I have described the problems of this conflict, at least in their essentials, in my essay “The Relations between the Ego and the Unconscious.” A special chapter, however, is the *symbolism* of the process, which is of the utmost importance for understanding the final stages of the encounter between conscious and unconscious, in practice as well as in theory. My investigations during these last years have been devoted mainly to this theme. It turned out, to my own great astonishment, that the symbol formation has the closest affinities with alchemical ideas, and especially with the conceptions of the “uniting symbol,”¹⁵ which yield highly significant parallels. Naturally these are processes which have no meaning in the initial stages of psychological treatment. On the other hand, more difficult cases, such as cases of unresolved transference, develop these symbols. Knowledge of them is of inestimable importance in treating cases of this kind, especially when dealing with cultured patients.

[524] How the harmonizing of conscious and unconscious data is to be undertaken cannot be indicated in the form of a recipe. It is an irrational life-process which expresses itself in definite symbols. It may be the task of the analyst to stand by this process with all the help he can give. In this case, knowledge of the symbols is indispensable, for it is in them that the union of conscious and unconscious contents is consummated. Out of this union emerge new situations and new conscious

attitudes. I have therefore called the union of opposites the “transcendent function.”¹⁶
This rounding out of the personality into a whole may well be the goal of any psychotherapy that claims to be more than a mere cure of symptoms.

A STUDY IN THE PROCESS OF INDIVIDUATION¹

Tao's working of things is vague and obscure.
Obscure! Oh vague!
In it are images.
Vague! Oh obscure!
In it are things.
Profound! Oh dark indeed!
In it is seed.
Its seed is very truth.
In it is trustworthiness.
From the earliest Beginning until today
Its name is not lacking
By which to fathom the Beginning of all things.
How do I know it is the Beginning of all things?
Through *it!*

LAO-TZU, *Tao Teh Ching*, ch. 21.

Introductory

[525] During the 1920's, I made the acquaintance in America of a lady with an academic education—we will call her Miss X—who had studied psychology for nine years. She had read all the more recent literature in this field. In 1928, at the age of fifty-five, she came to Europe in order to continue her studies under my guidance. As the daughter of an exceptional father she had varied interests, was extremely cultured, and possessed a lively turn of mind. She was unmarried, but lived with the unconscious equivalent of a human partner, namely the animus (the personification of everything masculine in a woman), in that characteristic liaison so often met with in women with an academic education. As frequently happens, this development of hers was based on a positive father complex: she was “fille à papa” and consequently did not have a good relation to her mother. Her animus was not of the kind to give her cranky ideas. She was protected from this by her natural intelligence and by a remarkable readiness to tolerate the opinions of other people. This good quality, by

no means to be expected in the presence of an animus, had, in conjunction with some difficult experiences that could not be avoided, enabled her to realize that she had reached a limit and “got stuck,” and this made it urgently necessary for her to look round for ways that might lead her out of the impasse. That was one of the reasons for her trip to Europe. Associated with this there was another—not accidental—motive. On her mother’s side she was of Scandinavian descent. Since her relation to her mother left very much to be desired, as she herself clearly realized, the feeling had gradually grown up in her that this side of her nature might have developed differently if only the relation to her mother had given it a chance. In deciding to go to Europe she was conscious that she was turning back to her own origins and was setting out to reactivate a portion of her childhood that was bound up with the mother. Before coming to Zurich she had gone back to Denmark, her mother’s country. There the thing that affected her most was the landscape, and unexpectedly there came over her the desire to paint—above all, landscape motifs. Till then she had noticed no such aesthetic inclinations in herself, also she lacked the ability to paint or draw. She tried her hand at water-colours, and her modest landscapes filled her with a strange feeling of contentment. Painting them, she told me, seemed to fill her with new life. Arriving in Zurich, she continued her painting efforts, and on the day before she came to me for the first time she began another landscape—this time from memory. While she was working on it, a fantasy-image suddenly thrust itself between her and the picture: she saw herself with the lower half of her body in the earth, stuck fast in a block of rock. The region round about was a beach strewn with boulders. In the background was the sea. She felt caught and helpless. Then she suddenly saw me in the guise of a medieval sorcerer. She shouted for help, I came along and touched the rock with a magic wand. The stone instantly burst open, and she stepped out uninjured. She then painted this fantasy-image instead of the landscape and brought it to me on the following day.

Picture 1

[526] As usually happens with beginners and people with no skill of hand, the drawing of the picture cost her considerable difficulties. In such cases it is very easy for the unconscious to slip its subliminal images into the painting. Thus it came about that the big boulders would not appear on the paper in their real form but took on unexpected shapes. They looked, some of them, like hardboiled eggs cut in two, with the yolk in the middle. Others were like pointed pyramids. It was in one of these that Miss X was stuck. Her hair, blown out behind her, and the movement of the sea suggested a strong wind.

[527] The picture shows first of all her imprisoned state, but not yet the act of liberation. So it was there that she was attached to the earth, in the land of her mother.

Psychologically this state means being caught in the unconscious. Her inadequate relation to her mother had left behind something dark and in need of development. Since she succumbed to the magic of her motherland and tried to express this by painting, it is obvious that she is still stuck with half her body in Mother Earth: that is, she is still partly identical with the mother and, what is more, through that part of the body which contains just that secret of the mother which she had never inquired into.

[528] Since Miss X had discovered all by herself the method of active imagination I have long been accustomed to use, I was able to approach the problem at just the point indicated by the picture: she is caught in the unconscious and expects magical help from me, as from a sorcerer. And since her psychological knowledge had made her completely *au fait* with certain possible interpretations, there was no need of even an understanding wink to bring to light the apparent *sous-entendu* of the liberating magician's wand. The sexual symbolism, which for many naïve minds is of such capital importance, was no discovery for her. She was far enough advanced to know that explanations of this kind, however true they might be in other respects, had no significance in her case. She did not want to know how liberation might be possible in a *general* way, but how and in what way it could come about for *her*. And about this I knew as little as she. I know that such solutions can only come about in an individual way that cannot be foreseen. One cannot think up ways and means artificially, let alone know them in advance, for such knowledge is merely collective, based on average experience, and can therefore be completely inadequate, indeed absolutely wrong, in individual cases. And when, on top of that, we consider the patient's age, we would do well to abandon from the start any attempt to apply ready-made solutions and warmed-up generalities of which the patient knows just as much as the doctor. Long experience has taught me not to know anything in advance and not to know better, but to let the unconscious take precedence. Our instincts have ridden so infinitely many times, unharmed, over the problems that arise at this stage of life that we may be sure the transformation processes which make the transition possible have long been prepared in the unconscious and are only waiting to be released.

[529] I had already seen from her previous history how the unconscious made use of the patient's inability to draw in order to insinuate its own suggestions. I had not overlooked the fact that the boulders had surreptitiously transformed themselves into *eggs*. The egg is a germ of life with a lofty symbolical significance. It is not just a cosmogonic symbol—it is also a “philosophical” one. As the former it is the Orphic egg, the world's beginning; as the latter, the philosophical egg of the medieval natural philosophers, the vessel from which, at the end of the *opus alchymicum*, the homunculus emerges, that is, the Anthropos, the spiritual, inner and complete man, who in Chinese alchemy is called the *chen-yen* (literally, “perfect man”).²

[530] From this hint, therefore, I could already see what solution the unconscious had in mind, namely individuation, for this is the transformation process that loosens the attachment to the unconscious. It is a definitive solution, for which all other ways serve as auxiliaries and temporary makeshifts. This knowledge, which for the time being I kept to myself, bade me act with caution. I therefore advised Miss X not to let it go at a mere fantasy-image of the act of liberation, but to try to make a picture of it. How this would turn out I could not guess, and that was a good thing, because otherwise I might have put Miss X on the wrong track from sheer helpfulness. She found this task terribly difficult owing to her artistic inhibitions. So I counselled her to content herself with what was possible and to use her fantasy for the purpose of circumventing technical difficulties. The object of this advice was to introduce as much fantasy as possible into the picture, for in that way the unconscious has the best chance of revealing its contents. I also advised her not to be afraid of bright colours, for I knew from experience that vivid colours seem to attract the unconscious. Thereupon, a new picture arose.

Picture 2

[531] Again there are boulders, the round and pointed forms; but the round ones are no longer eggs, they are complete circles, and the pointed ones are tipped with golden light. One of the round forms has been blasted out of its place by a golden flash of lightning. The magician and magic wand are no longer there. The personal relationship to me seems to have ceased: the picture shows an impersonal natural process.

[532] While Miss X was painting this picture she made all sorts of discoveries. Above all, she had no notion of what picture she was going to paint. She tried to reimagine the initial situation; the rocky shore and the sea are proof of this. But the eggs turned into abstract spheres or circles, and the magician's touch became a flash of lightning cutting through her unconscious state. With this transformation she had rediscovered the historical synonym of the philosophical egg, namely the *rotundum*, the round,

original form of the Anthropos (or *στοιχάειον στρογγυλόν*, ‘round element,’ as Zosimos calls it). This is an idea that has been associated with the Anthropos since ancient times.³ The soul, too, according to tradition, has a round form. As the Monk of Heisterbach says, it is not only “like to the sphere of the moon, but is furnished on all sides with eyes” (*ex omni parte oculata*). We shall come back to this motif of polyophthalmia later on. His remark refers in all probability to certain parapsychological phenomena, the “globes of light” or globular luminosities which, with remarkable consistency, are regarded as “souls” in the remotest parts of the world.⁴

[533] The liberating flash of lightning is a symbol also used by Paracelsus⁵ and the alchemists for the same thing. Moses’ rock-splitting staff, which struck forth the living water and afterwards changed into a serpent, may have been an unconscious echo in the background.⁶ Lightning signifies a sudden, unexpected, and overpowering change of psychic condition.⁷

[534] “In this Spirit of the Fire-flash consists the Great Almighty Life,” says Jakob Böhme.⁸ “For when you strike upon the *sharp* part of the stone, the bitter sting of Nature sharpens itself, and is stirred in the highest degree. For Nature is dissipated or *broken asunder* in the sharpness, so that the *Liberty shines forth as a Flash.*”⁹ The flash is the “*Birth of the light.*”¹⁰ It has transformative power: “For if I could in my Flesh comprehend the Flash, which I very well see and know how it is, I could clarify or trans figure my Body therewith, so that it would shine with a bright light and glory. And then it would no more resemble and be conformed to the bestial Body, but to the angels of God.”¹¹ Elsewhere Böhme says: “As when the Flash of Life rises up in the centre of the Divine Power, wherein all the spirits of God attain their life, and highly rejoice.”¹² Of the “Source-spirit” *Mercurius*, he says that it “arises in the Fire-flash.” *Mercurius* is the “animal spirit” which, from *Lucifer’s* body, “struck into the Salniter¹³ of God like a *fiery serpent* from its hole, as if there went a fiery Thunderbolt into God’s Nature, or a fierce Serpent, which tyrannizes, raves, and rages, as if it would tear and rend Nature all to pieces.”¹⁴ Of the “innermost *birth of the soul*” the bestial body “attains only a glimpse, just as if it lightened.”¹⁵ “The triumphing *divine Birth* lasteth in us men only so long as the flash lasteth; therefore our knowledge is but in part, whereas in God the flash stands unchangeably, always eternally thus.”¹⁶ (Cf. Fig. 1.)

[535] In this connection I would like to mention that Böhme associates lightning with something else too. That is the *quaternity*, which plays a great role in the following pictures. When caught and assuaged in the four “Qualities” or four “Spirits,”¹⁷ “the Flash, or the Light, subsists in the *Midst or Centre as a Heart.*”¹⁸ Now when that Light, which stands in the *Midst or Centre*, shines into the four Spirits, then the

Power of the four Spirits rises up in the Light, and they become Living, and love the Light; that is, they take it into them, and are *impregnated* with it.”¹⁷ “The Flash, or *Stock*,²⁰ or Pith, or the Heart, which is generated in the Powers, remains standing in the Midst or Centre, and that is the *Son*. ... And this is the true *Holy Ghost*, whom we Christians honour and adore for the third Person in the Deity.”²¹ Elsewhere Böhme says: “When the Fire-flash reaches the dark substance,²² it is a great terror, from which the Cold Fire draws back in affright as if it would perish, and becomes impotent, and sinks into itself, ... But now the Flash ... makes in its Rising a Cross²³ with the Comprehension of all Properties; for here arises the Spirit in the Essence, and it stands thus: . If thou hast here understanding, thou needest ask no more; it is Eternity and Time, God in Love and Anger, also Heaven and Hell. The lower part, which is thus marked , is the first Principle, and is the Eternal Nature in the Anger, viz. the Kingdom of Darkness dwelling in itself; and the upper Part, with this figure , is the Salniter;²⁴ the Upper Cross above the Circle is the Kingdom of Glory, which in the Flagrat of Joy in the Will of the free Lubet²⁵ proceeds from the Fire in the Lustre of the Light into the power of the Liberty; and this spiritual Water²⁶ ... is the Corporality of the free Lubet ... wherein the Lustre from the Fire and Light makes a Tincture, viz. a budding and growing and a Manifestation of Colours from the Fire and Light.”²⁷

Fig. 1. Mandala from Jakob Böhme's *XL Questions concerning the Soule* (1620)

The picture is taken from the English edition of 1647. The quaternity consists of *Father*, *H. Ghost*, *Sonne*, and *Earth* or *Earthly Man*. It is characteristic that the two semicircles are turned back to back instead of closing.

[536] I have purposely dwelt at some length on Böhme's disquisition on the lightning, because it throws a good deal of light on the psychology of our pictures. However, it anticipates some things that will only become clear when we examine the pictures themselves. I must therefore ask the reader to bear Böhme's views in mind in the following commentary. I have put the most important points in italics. It is clear from the quotations what the lightning meant to Böhme and what sort of a role it plays in the present case. The last quotation in particular deserves special attention, as it anticipates various key motifs in the subsequent pictures done by my patient, namely the cross, the quaternity, the divided mandala, the lower half of which is virtually equivalent to hell and the upper half to the lighter realm of the "Salniter." For Böhme

the lower half signifies the “everlasting darkness” that “extends into the fire,”²⁸ while the upper, “salnitrous” half corresponds to the third Principle, the “visible, elemental world, which is an emanation of the first and other Principle.”²⁹ The cross, in turn, corresponds to the second Principle, the “Kingdom of Glory,” which is revealed through “magic fire,” the lightning, which he calls a “Revelation of Divine Motion.”³⁰ The “lustre of the fire” comes from the “unity of God” and reveals his will. The mandala therefore represents the “Kingdom of Nature,” which “in itself is the great everlasting Darkness.” The “Kingdom of God,” on the other hand, or the “Glory” (i.e., the Cross), is the Light of which John 1 : 5 speaks: “And the light shineth in the darkness, and the darkness comprehendeth it not.” The Life that “breaks itself off from the eternal Light and enters into the Object, as into the selfhood of Properties,” is “only fantastic and foolish, even such as the Devils were, and the souls of the damned are; as can be seen ... from the fourth number.”³¹ For the “fire of Nature” is called by Böhme the *fourth form*, and he understands it as a “spiritual Life-Fire, that exists from a continual conjunction ... of Hardness [i.e., the solidified, dry Salniter] and Motion [the Divine Will].”³² Quite in keeping with John 1 : 5 the quaternity of the lightning, the Cross, pertains to the Kingdom of Glory, whereas Nature, the visible world and the dark abyss remain untouched by the fourfold light and abide in darkness.

[537] For the sake of completeness I should mention that ☉ is the sign for *cinnabar*, the most important quicksilver ore (HgS).³³ The coincidence of the two symbols can hardly be accidental in view of the significance which Böhme attributes to Mercurius. Ruland finds it rather hard to define exactly what was meant by *cinnabar*.³⁴ The only certain thing is that there was a *κιννάβαρις τῶν φιλοσόφων* (*cinnabar of the philosophers*) in Greek alchemy, and that it stood for the *rubedo* stage of the transforming substance. Thus Zosimos says: “(After the preceding process) you will find the gold coloured fiery red like blood. That is the *cinnabar of the philosophers* and the *copper man* (*χαλκάνθρωπος*, turned to gold.”³⁵ *Cinnabar* was also supposed to be identical with the *uroboros* dragon.³⁶ Even in Pliny, *cinnabar* is called *sanguis draconis*, ‘dragon’s blood,’ a term that lasted all through the Middle Ages.³⁷ On account of its redness it was often identified with the philosophical sulphur. A special difficulty is the fact that the wine-red *cinnabar* crystals were classed with the *άνθρακες*, *carbons*, to which belong all reddish and red-tinted stones like *rubies*, *garnets*, *amethysts*, etc. They all shine like glowing coals.³⁸ The *λιθάνθρακες* (*anthracites*), on the other hand, were regarded as “quenched” coals. These associations explain the similarity of the alchemical signs for gold, antimony, and garnet. Gold ☉, after mercury the most important “philosophical” substance, shares its sign with what is known as “*regulus*” or “*button*” antimony,³⁹ and during the two decades prior to the writing of *Signatura return* (1622), from which our

quotation comes, this had enjoyed particular fame as the new transformative substance⁴⁰ and panacea.⁴¹ Basilius Valentinus' *Triumphal Car of Antimony* was published about the first decade of the seventeenth century (the first edition possibly in 1611) and soon found the widest acclaim.⁴² The sign for garnet is , and  means salt. A cross with a little circle in it  means copper (from the "Cyprian," Venus ). Medicinal tartaric acid is denoted by , and hydrogen potassium tartrate (tartar) has the signs  .⁴³ Tartar settles on the bottom of the vessel, which in the language of the alchemists means: in the underworld, Tartarus.⁴⁴

[538] I will not attempt here any interpretation of Böhme's symbols, but will only point out that in our picture the lightning, striking into the darkness and "hardness," has blasted a *rotundum* out of the dark *massa confusa* and kindled a light in it. There can be no doubt that the dark stone means the blackness, i.e., the unconscious, just as the sea and sky and the upper half of the woman's figure indicate the sphere of consciousness. We may safely assume that Böhme's symbol refers to a similar situation. The lightning has released the spherical form from the rock and so caused a kind of liberation. But, just as the magician has been replaced by the lightning, so the patient has been replaced by the sphere. The unconscious has thus presented her with ideas which show that she had gone on thinking without the aid of consciousness and that this radically altered the initial situation. It was again her inability to draw that led to this result. Before finding this solution, she had made two attempts to portray the act of liberation with human figures, but with no success. She had overlooked the fact that the initial situation, her imprisonment in the rock, was already irrational and symbolic and therefore could not be solved in a rational way. It had to be done by an equally irrational process. That was why I advised her, should she fail in her attempt to draw human figures, to use some kind of hieroglyph. It then suddenly struck her that the sphere was a suitable symbol for the individual human being. That it was a chance idea (*Einfall*) is proved by the fact that it was not her conscious mind that thought up this typification, but the unconscious, for an *Einfall* "falls in" quite of its own accord. It should be noted that she represents only herself as a sphere, not me. I am represented only by the lightning, purely functionally, so that for her I am simply the "precipitating" cause. As a magician I appeared to her in the apt role of Hermes Kyllenios, of whom the *Odyssey* says: "Meanwhile Cyllenian Hermes was gathering in the souls of the suitors, armed with the splendid golden wand that he can use at will to cast a spell on our eyes or wake us from the soundest sleep."⁴⁵ Hermes is the *ψυχῶν αἰτίος*, 'originator of souls.' He is also the *ἡγήτωρ ονειρώων*, 'guide of dreams.'⁴⁶ For the following pictures it is of special importance that Hermes has the number 4 attributed to him. Martianus Capella says: "The number four is assigned to the Cyllenian, for he alone is held to be a fourfold god."⁴⁷

[539] The form the picture had taken was not unreservedly welcome to the patient's conscious mind. Luckily, however, while painting it Miss X had discovered that two factors were involved. These, in her own words, were *reason* and the *eyes*. Reason always wanted to make the picture as *it* thought it ought to be; but the eyes held fast to their vision and finally forced the picture to come out as it actually did and not in accordance with rationalistic expectations. Her reason, she said, had really intended a daylight scene, with the sunshine melting the sphere free, but the eyes favoured a nocturne with "shattering, dangerous lightning." This realization helped her to acknowledge the actual result of her artistic efforts and to admit that it was in fact an objective and impersonal process and not a personal relationship.

[540] For anyone with a personalistic view of psychic events, such as a Freudian, it will not be easy to see in this anything more than an elaborate repression. But if there was any repression here we certainly cannot make, the conscious mind responsible for it, because the conscious mind would undoubtedly have preferred a personal imbroglio as being far more interesting. The repression must have been manoeuvred by the unconscious from the start. One should consider what this means: instinct, the most original force of the unconscious, is suppressed or turned back on itself by an arrangement stemming from this same unconscious! It would be idle indeed to talk of "repression" here, since we know that the unconscious goes straight for its goal and that this does not consist solely in pairing two animals but in allowing an individual to become whole. For this purpose wholeness—represented by the sphere—is emphasized as the essence of personality, while I am reduced to the fraction of a second, the duration of a lightning flash.

[541] The patient's association to lightning was that it might stand for *intuition*, a conjecture that is not far off the mark, since intuitions often come "like a flash." Moreover, there are good grounds for thinking that Miss X was a *sensation* type. She herself thought she was one. The "inferior" function would then be intuition. As such, it would have the significance of a releasing or "redeeming" function. We know from experience that the inferior function always compensates, complements, and balances the "superior" function.⁴⁸ My psychic peculiarity would make me a suitable projection carrier in this respect. The inferior function is the one of which least conscious use is made. This is the reason for its undifferentiated quality, but also for its freshness and vitality. It is not at the disposal of the conscious mind, and even after long use it never loses its autonomy and spontaneity, or only to a very limited degree. Its role is therefore mostly that of a *deus ex machina*. It depends not on the ego but on the *self*. Hence it hits consciousness unexpectedly, like lightning, and occasionally with devastating consequences. It thrusts the ego aside and makes room for a supraordinate factor, the totality of a person, which consists of conscious and unconscious and consequently extends far beyond the ego. This self was always

present,⁴⁹ but sleeping, like Nietzsche's "image in the stone."⁵⁰ It is, in fact, the secret of the stone, of the *lapis philosophorum*, in so far as this is the *prima materia*. In the stone sleeps the spirit *Mercurius*, the "circle of the moon," the "round and square,"⁵¹ the homunculus, Tom Thumb and Anthropos at once,⁵² whom the alchemists also symbolized as their famed *lapis philosophorum*.⁵³

[542] All these ideas and inferences were naturally unknown to my patient, and they were known to me at the time only in so far as I was able to recognize the circle as a *mardala*,⁵⁴ the psychological expression of the totality of the self. Under these circumstances there could be no question of my having unintentionally infected her with alchemical ideas. The pictures are, in all essentials, genuine creations of the unconscious; their inessential aspects (landscape motifs) are derived from conscious contents.

[543] Although the sphere with its glowing red centre and the golden flash of lightning play the chief part, it should not be overlooked that there are several other eggs or spheres as well. If the sphere signifies the self of the patient, we must apply this interpretation to the other spheres, too. They must therefore represent other people who, in all probability, were her intimates. In both the pictures two other spheres are clearly indicated. So I must mention that Miss X had two women friends who shared her intellectual interests and were joined to her in a lifelong friendship. All three of them, as if bound together by fate, are rooted in the same "earth," i.e., in the collective unconscious, which is one and the same for all. It is probably for this reason that the second picture has the decidedly *nocturnal* character intended by the unconscious and asserted against the wishes of the conscious mind. It should also be mentioned that the pointed pyramids of the first picture reappear in the second, where their points are actually gilded by the lightning and strongly emphasized. I would interpret them as unconscious contents "pushing up" into the light of consciousness, as seems to be the case with many contents of the collective unconscious.⁵⁵ In contrast to the first picture, the second is painted in more vivid colours, red and gold. Gold expresses sunlight, value, divinity even. It is therefore a favourite synonym for the *lapis*, being the *aurum philosophicum* or *aurum potable* or *aurum vitreum*.⁵⁶

[544] As already pointed out, I was not at that time in a position to reveal anything of these ideas to Miss X, for the simple reason that I myself knew nothing of them. I feel compelled to mention this circumstance yet again, because the third picture, which now follows, brings a motif that points unmistakably to alchemy and actually gave me the definitive incentive to make a thorough study of the works of the old adepts.

[545] The third picture, done as spontaneously as the first two, is distinguished most of all by its light colours. Free-floating in space, among clouds, is a dark blue sphere with a wine-red border. Round the middle runs a wavy silver band, which keeps the sphere balanced by “equal and opposite forces,” as the patient explained. To the right, above the sphere, floats a snake with golden rings, its head pointing at the sphere—an obvious development of the golden lightning in Picture 2. But she drew the snake in afterwards, on account of certain “reflections.” The whole is “a planet in the making.” In the middle of the silver band is the number 12. The band was thought of as being in rapid vibratory motion; hence the wave motif. It is like a vibrating belt that keeps the sphere afloat. Miss X compared it to the ring of Saturn. But unlike this, which is composed of disintegrated satellites, her ring was the origin of future moons such as Jupiter possesses. The black lines in the silver band she called “lines of force”; they were meant to indicate that it was in motion. As if asking a question, I made the remark: “Then it is the vibrations of the band that keep the sphere floating?” “Naturally,” she said, “they are the wings of Mercury, the messenger of the gods. The silver is *quicksilver!*” She went on at once: “Mercury, that is Hermes, is the *Nous*, the mind or reason, and that is the animus, who is here outside instead of inside. He is like a veil that hides the true personality.”⁵⁷ We shall leave this latter remark alone for the moment and turn first to the wider context, which, unlike that of the two previous pictures, is especially rich.

[546] While Miss X was painting this picture, she felt that two earlier dreams were mingling with her vision. They were the two “big” dreams of her life. She knew of the attribute “big” from my stories of the dream life of African primitives I had visited. It has become a kind of “colloquial term” for characterizing archetypal dreams, which as we know have a peculiar numinosity. It was used in this sense by the dreamer. Several years previously, she had undergone a major operation. Under narcosis she had the following dream-vision: *She saw a grey globe of the world. A silver band rotated about the equator and, according to the frequency of its vibrations, formed alternate zones of condensation and evaporation. In the zones of condensation appeared the numbers 1 to 3, but they had the tendency to increase up to 12. These numbers signified “nodal points” or “great personalities” who played a part in man’s historical development. “The number 12 meant the most important nodal point or great man (still to come), because it denotes the climax or turning point of the process of development.”* (These are her own words.)

[547] The other dream that intervened had occurred a year before the first one: *She saw a golden snake in the sky. It demanded the sacrifice, from among a great crowd of people, of a young man, who obeyed this demand with an expression of sorrow. The dream was repeated a little later, but this time the snake picked on the dreamer*

herself. The assembled people regarded her compassionately, but she took her fate “proudly” on herself.

[548] She was, as she told me, born immediately after midnight, so soon afterwards, indeed, that there was some doubt as to whether she came into the world on the 28th or on the 29th. Her father used to tease her by saying that she was obviously born before her time, since she came into the world just at the beginning of a new day, but “only just,” so that one could almost believe she was born “at the twelfth hour.” The number 12, as she said, meant for her the culminating point of her life, which she had only now reached. That is, she felt the “liberation” as the climax of her life. It is indeed an hour of birth—not of the dreamer but of the self. This distinction must be borne in mind.

[549] The context to Picture 3 here established needs a little commentary. First, it must be emphasized that the patient felt the moment of painting this picture as the “climax” of her life and also described it as such. Second, two “big” dreams have amalgamated in the picture, which heightens its significance still more. The sphere blasted from the rock in Picture 2 has now, in the brighter atmosphere, floated up to heaven. The nocturnal darkness of the earth has vanished. The increase of light indicates conscious realization: the liberation has become a fact that is integrated into consciousness. The patient has understood that the floating sphere symbolizes the “true personality.” At present, however, it is not quite clear how she understands the relation of the ego to the “true personality.” The term chosen by her coincides in a remarkable way with the Chinese *chen-yen*, the “true” or “complete” man, who has the closest affinity with the *homo quadratus*⁵⁸ of alchemy.⁵⁹ As we pointed out in the analysis of Picture 2, the *rotundum* of alchemy is identical with Mercurius, the “round and square.”⁶⁰ In Picture 3 the connection is shown concretely through the mediating idea of the wings of Mercury, who, it is evident, has entered the picture in his own right and not because of any non-existent knowledge of Böhme’s writings.⁶¹

[550] For the alchemists the process of individuation represented by the *opus* was an analogy of the creation of the world, and the *opus* itself an analogy of God’s work of creation. Man was seen as a microcosm, a complete equivalent of the world in miniature. In our picture, we see what it is in man that corresponds to the cosmos, and what kind of evolutionary process is compared with the creation of the world and the heavenly bodies: it is the *birth of the self*, the latter appearing as a microcosm.⁶² It is not the empirical man that forms the “correspondentia” to the world, as the medievalists thought, but rather the indescribable totality of the psychic or spiritual man, who cannot be described because he is compounded of consciousness as well as of the indeterminable extent of the unconscious.⁶³ The term microcosm proves the existence of a common intuition (also present in my patient) that the “total” man is as

big as the world, like an Anthropos. The cosmic analogy had already appeared in the much earlier dream under narcosis, which likewise contained the problem of personality: the nodes of the vibrations were great personalities of historical importance. As early as 1916, I had observed a similar individuation process, illustrated by pictures, in another woman patient. In her case too there was a world creation, depicted as follows (see [Fig. 2](#)):

[551] To the left, from an unknown source, three drops fall, dissolving into four lines,⁶⁴ or two pairs of lines. These lines move and form four separate paths, which then unite periodically in a nodal point and thus build a system of vibrations. The nodes are “great personalities and founders of religions,” as my erstwhile patient told me. It is obviously the same conception as in our case, and we can call it archetypal in so far as there exist universal ideas of world periods, critical transitions, gods and half gods who personify the aeons. The unconscious naturally does not produce its images from conscious reflections, but from the worldwide propensity of the human system to form such conceptions as the world periods of the Parsees, the yugas and avatars of Hinduism, and the Platonic months of astrology with their bull and ram deities and the “great” Fish of the Christian aeon.⁶⁵

Fig. 2. Sketch of a picture from the year 1916

At the top, the sun, surrounded by a rainbow-coloured halo divided into twelve parts, like the zodiac. To the left, the descending, to the right, the ascending, transformation process.

[552] That the nodes in our patient's picture signify or contain numbers is a bit of unconscious number mysticism that is not always easy to unravel. So far as I can see, there are two stages in this arithmetical phenomenology: the first, earlier stage goes up to 3, the second, later stage up to 12. Two numbers, 3 and 12, are expressly mentioned. Twelve is four times three. I think we have here stumbled again on the axiom of Maria, that peculiar dilemma of three and four,⁶⁶ which I have discussed many times before because it plays such a great role in alchemy.⁶⁷ I would hazard that we have to do here with a *tetrameria* (as in Greek alchemy), a transformation process divided into four stages⁶⁸ of three parts each, analogous to the twelve transformations of the zodiac and its division into four. As not infrequently happens, the number 12

would then have a not merely individual significance (as the patient's birth number, for instance), but a time-conditioned one too, since the present aeon of the Fishes is drawing to its end and is at the same time the twelfth house of the zodiac. One is reminded of similar Gnostic ideas, such as those in the gnosis of Justin: The "Father" (Elohim) begets with Edem, who was half woman and half snake, twelve "fatherly" angels, and Edem gives birth besides these to twelve "motherly" angels, who—in psychological parlance—represent the shadows of the twelve "fatherly" ones. The "motherly" angels divide themselves into four categories (*μέρη*) of three each, corresponding to the four rivers of Paradise. These angels dance round in a circle (*ἐν χόρῳ κυκλικῷ*).⁶⁹ It is legitimate to bring these seemingly remote associations into hypothetical relationship, because they all spring from a common root, i.e., the collective unconscious.

[553] In our picture Mercurius forms a world-encircling band, usually represented by a snake.⁷⁰ Mercurius is a serpent or dragon in alchemy ("serpens mercurialis"). Oddly enough, this serpent is some distance away from the sphere and is aiming down at it, as if to strike. The sphere, we are told, is kept afloat by equal and opposite forces, represented by the quicksilver or somehow connected with it. According to the old view, Mercurius is duplex, i.e., he is himself an antithesis.⁷¹ Mercurius or Hermes is a magician and god of magicians. As Hermes Trismegistus he is the patriarch of alchemy. His magician's wand, the caduceus, is entwined by two snakes. The same attribute distinguishes Asklepios, the god of physicians.⁷² The archetype of these ideas was projected on to me by the patient before ever the analysis had begun.

[554] The primordial image underlying the sphere girdled with quicksilver is probably that of the world egg encoiled by a snake.⁷³ But in our case the snake symbol of Mercurius is replaced by a sort of pseudo-physicistic notion of a field of vibrating molecules of quicksilver. This looks like an intellectual disguising of the true situation, that the self, or its symbol, is entwined by the mercurial serpent. As the patient remarked more or less correctly, the "true personality" is veiled by it. This, presumably, would then be something like an Eve in the coils of the paradisaical serpent. In order to avoid giving this appearance, Mercurius has obligingly split into his two forms, according to the old-established pattern: the *mercurius crudus* or *vulgi* (crude or ordinary quicksilver), and the *Mercurius Philosophorum* (the *spiritus mercurialis* or the spirit Mercurius, Hermes-Nous), who hovers in the sky as the golden lightning-serpent or Nous Serpent, at present inactive. In the vibrations of the quicksilver band we may discern a certain tremulous excitement, just as the suspension expresses tense expectation: "Hover and haver suspended in pain!" For the alchemists quicksilver meant the concrete, material manifestation of the spirit Mercurius, as the above-mentioned mandala in the scholia to the *Tractatus aureus* shows: the central point is Mercurius, and the square is Mercurius divided into the

four elements. He is the *anima mundi*, the innermost point and at the same time the encompasser of the world, like the atman in the Upanishads. And just as quicksilver is a materialization of Mercurius, so the gold is a materialization of the sun in the earth.⁷⁴

[555] A circumstance that never ceases to astonish one is this: that at all times and in all places alchemy brought its conception of the *lapis* or its *minera* (raw material) together with the idea of the *homo altus* or *maximus*, that is, with the Anthropos.⁷⁵ Equally, one must stand amazed at the fact that here too the conception of the dark round stone blasted out of the rock should represent such an abstract idea as the psychic totality of man. The earth and in particular the heavy cold stone is the epitome of materiality, and so is the metallic quicksilver which, the patient thought, meant the animus (mind, *nous*). We would expect pneumatic symbols for the idea of the self and the animus, images of air, breath, wind. The ancient formula *λίθος οὐ λίθος* (the stone that is no stone) expresses this dilemma: we are dealing with a *complexio oppositorum*, with something like the nature of light, which under some conditions behaves like particles and under others like waves, and is obviously in its essence both at once. Something of this kind must be conjectured with regard to these paradoxical and hardly explicable statements of the unconscious. They are not inventions of any conscious mind, but are spontaneous manifestations of a psyche not controlled by consciousness and obviously possessing all the freedom it wants to express views that take no account of our conscious intentions. The duplicity of Mercurius, his simultaneously metallic and pneumatic nature, is a parallel to the symbolization of an extremely spiritual idea like the Anthropos by a corporeal, indeed metallic, substance (gold). One can only conclude that the unconscious tends to regard spirit and matter not merely as equivalent but as actually identical, and this in flagrant contrast to the intellectual one-sidedness of consciousness, which would sometimes like to spiritualize matter and at other times to materialize spirit. That the *lapis*, or in our case the floating sphere, has a double meaning is clear from the circumstance that it is characterized by two symbolical colours: red means blood and affectivity, the physiological reaction that joins spirit to body, and blue means the spiritual process (mind or *nous*). This duality reminds one of the alchemical duality *corpus* and *spiritus*, joined together by a third, the *anima* as the *ligamentum corporis et spiritus*. For Böhme a “high deep blue” mixed with green signifies “Liberty,” that is, the inner “Kingdom of Glory” of the reborn soul. Red leads to the region of fire and the “abyss of darkness,” which forms the periphery of Böhme’s mandala (see Fig. 1).

[556] Picture 4, which now follows, shows a significant change: the sphere has divided into an outer membrane and an inner nucleus. The outer membrane is flesh coloured, and the originally rather nebulous red nucleus in Picture 2 now has a differentiated internal structure of a decidedly ternary character. The “lines of force” that originally belonged to the band of quicksilver now run through the whole nuclear body, indicating that the excitation is no longer external only but has seized the innermost core. “An enormous inner activity now began,” the patient told me. The nucleus with its ternary structure is presumably the female organ, stylized to look like a plant, in the act of fecundation: the spermatozoon is penetrating the nuclear membrane. Its role is played by the mercurial serpent: the snake is black, dark, chthonic, a subterranean and ithyphallic Hermes; but it has the golden wings of Mercury and consequently possesses his pneumatic nature. The alchemists accordingly represented their *Mercurius duplex* as the winged and wingless dragon, calling the former feminine and the latter masculine.

[557] The serpent in our picture represents not so much the spermatozoon but, more accurately, the phallus. Leone Ebreo,⁷⁶ in his *Dialoghi d’amore*, calls the planet Mercury the *membrum virile* of heaven, that is, of the macrocosm conceived as the *homo maximus*.⁷⁷ The spermatozoon seems, rather, to correspond to the golden substance which the snake is injecting into the invaginated ectoderm of the nucleus.⁷⁸ The two silver petals (?) probably represent the receptive vessel, the moon-bowl in which the sun’s seed (gold) is destined to rest.⁷⁹ Underneath the flower is a small violet circle inside the ovary, indicating by its colour that it is a “united double nature,” spirit and body (blue and red).⁸⁰ The snake has a pale yellow halo, which is meant to express its numinosity.

[558] Since the snake evolved out of the flash of lightning or is a modulated form of it, I would like to instance a parallel where the lightning has the same illuminating, vivifying, fertilizing, transforming and healing function that in our case falls to the snake (cf. Fig. 3). Two phases are represented: first, a black sphere, signifying a state of profound depression; and second, the lightning that strikes into this sphere. Ordinary speech makes use of the same imagery: something “strikes home” in a “flash of revelation.” The only difference is that generally the image comes first, and only afterwards the realization which enables the patient to say: “This has struck home.”

Fig. 3. Sketch of a drawing by a young woman patient with psychogenic depression from the beginning of the treatment

I. State of black hopelessness / II. Beginning of the therapeutic effect

In an earlier picture the sphere lay on the bottom of the sea. As a series of pictures shows, it arose in the first place because a black snake had swallowed the sun. There then followed an eight-rayed, completely black mandala with a wreath of eight silver stars. In the centre was a black homunculus. Next the black sphere developed a red centre, from which red rays, or streams of blood, ran out into tentacle-like extremities. The whole thing looked rather like a crab or an octopus. As the later pictures showed, the patient herself was shut up in the sphere.

[559] As to the context of Picture 4, Miss X emphasized that what disturbed her most was the band of quicksilver in Picture 3. She felt the silvery substance ought to be “inside,” the black lines of force remaining outside to form a black snake. This would now encircle the sphere.⁸¹ She felt the snake at first as a “terrible danger,” as something threatening the “integrity of the sphere.” At the point where the snake

penetrates the nuclear membrane, fire breaks out (emotion). Her conscious mind interpreted this conflagration as a defensive reaction on the part of the sphere, and accordingly she tried to depict the attack as having been repulsed. But this attempt failed to satisfy the “eyes,” though she showed me a pencil sketch of it. She was obviously in a dilemma: she could not accept the snake, because its sexual significance was only too clear to her without any assistance from me. I merely remarked to her: “This is a well-known process⁸² which you can safely accept,” and showed her from my collection a similar picture, done by a man, of a floating sphere being penetrated *from below* by a black phallus-like object. Later she said: “I suddenly understood the whole process in a more impersonal way.” It was the realization of a law of life to which sex is subordinated. “The ego was not the centre, but, following a universal law, I circled round a sun.” Thereupon she was able to accept the snake “as a necessary part of the process of growth” and finish the picture quickly and satisfactorily. Only one thing continued to give difficulty: she had to put the snake, she said, “One hundred per cent at the top, in the middle, in order to satisfy the eyes.” Evidently the unconscious would only be satisfied with the most important position at the top and in the middle—in direct contrast to the picture I had previously shown her. This, as I said, was done by a man and showed the menacing black symbol entering the mandala from below. For a woman, the typical danger emanating from the unconscious comes *from above*, from the “spiritual” sphere personified by the animus, whereas for a man it comes from the chthonic realm of the “world and woman,” i.e., the anima projected on to the world.

[560] Once again we must recall similar ideas found in Justin’s gnosis: the third of the fatherly angels is Baruch. He is also the tree of life in paradise. His counterpart on the motherly side is Naas, the serpent, who is the tree of knowledge of good and evil.⁸³ When Elohim left Edem, because, as the second member, he had retreated to the first member of the divine triad (which consisted of the “Good,” the “Father,” and Edem), Edem pursued the pneuma of the Father, which he had left behind in man, and caused it to be tormented by Naas (*ἵνα πάσαις κολάσει κολάζη τό ὄν πνευμα του Ἐλωειμ τὸ ἐν τοῖς ἀνθρώποις*), Naas defiled Eve and also used Adam as a catamite. Edem, however, is the soul; Elohim is spirit. “The soul is against the spirit, and the spirit against the soul” (*κατὰ τῆς ψυχῆς τετάκται*).⁸⁴ This idea sheds light on the polarity of red and blue in our mandala, and also on the attack by the snake, who represents knowledge. That is why we fear knowledge of the truth, in this case, of the shadow. Therefore Baruch sent to mankind Jesus, that they might be led back to the “Good.” But the “Good One is Priapus.”⁸⁵ Elohim is the swan, Edem is Leda; he the gold, she Danae. Nor should we forget that the god of revelation has from of old the form of a snake—e.g., the *agathodaimon*. Edem too, as a snake-maiden, has a dual nature,

“two-minded, two-bodied” (*δίγυνωμος, δίσωμος*), and in medieval alchemy her figure became the symbol of the androgynous Mercurius.⁸⁶

[561] Let us remember that in Picture 3 *Mercurius vulgi*, ordinary quicksilver, encircles the sphere. This means that the mysterious sphere is enveloped or veiled by a “vulgar” or crude understanding. The patient herself opined that “the animus veils the true personality.” We shall hardly be wrong in assuming that a banal, everyday view of the world, allegedly biological, has here got hold of the sexual symbol and concretized it after the approved pattern. A pardonable error! Another, more correct view is so much more subtle that one naturally prefers to fall back on something well-known and ready to hand, thus gratifying one’s own “rational” expectations and earning the applause of one’s contemporaries—only to discover that one has got hopelessly stuck and has arrived back at the point from which one set forth on the great adventure. It is clear what is meant by the ithyphallic serpent: from above comes all that is aerial, intellectual, spiritual, and from below all that is passionate, corporeal, and dark. The snake, contrary to expectation, turns out to be a pneumatic symbol,⁸⁷ a *Mercurius spiritualis*—a realization which the patient herself formulated by saying that the ego, despite its capricious manipulation of sexuality, is subject to a universal law. Sex in this case is therefore no problem at all, as it has been subjected to a higher transformation process and is contained in it; not repressed, only without an object.

[562] Miss X subsequently told me that she felt Picture 4 was the most difficult, as if it denoted the turning point of the whole process. In my view she may not have been wrong in this, because the clearly felt, ruthless setting aside of the so beloved and so important ego is no light matter. Not for nothing is this “letting go” the *sine qua non* of all forms of higher spiritual development, whether we call it meditation, contemplation, yoga, or spiritual exercises. But, as this case shows, relinquishing the ego is not an act of the will and not a result arbitrarily produced; it is an event, an occurrence, whose inner, compelling logic can be disguised only by wilful self-deception.

[563] In this case and at this moment the ability to “let go” is of decisive importance. But since everything passes, the moment may come when the relinquished ego must be reinstated in its functions. Letting go gives the unconscious the opportunity it has been waiting for. But since it consists of opposites—day and night, bright and dark, positive and negative—and is good and evil and therefore ambivalent, the moment will infallibly come when the individual, like the exemplary Job, must hold fast so as not to be thrown catastrophically off balance—when the wave rebounds. The holding fast can be achieved only by a conscious will, i.e., by the ego. That is the great and irreplaceable significance of the ego, but one which, as we see here, is nonetheless relative. Relative, too, is the gain won by integrating the unconscious. We add to

ourselves a bright and a dark, and more light means more night.⁸⁸ The urge of consciousness towards wider horizons, however, cannot be stopped; they must needs extend the scope of the personality, if they are not to shatter it.

Picture 5

[564] Picture 5, Miss X said, followed naturally from Picture 4, with no difficulty. The sphere and the snake have drawn apart. The snake is sinking downwards and seems to have lost its threateningness. But the sphere has been fecundated with a vengeance: it has not only got bigger, but blossoms in the most vivid colours.⁸⁹ The nucleus has divided into four; something like a segmentation has occurred. This is not due to any conscious reflection, such as might come naturally to a biologically educated person; the division of the process or of the central symbol into four has always existed, beginning with the four sons of Horus, or the four seraphim of Ezekiel, or the birth of the four Aeons from the Metra (uterus) impregnated by the pneuma in Barbelo-Gnosis, or the cross formed by the lightning (snake) in Böhme's system,⁹⁰ and ending with the tetrameria of the *opus alchymicum* and its components (the four elements, qualities, stages, etc.).⁹¹ In each case the quaternity forms a unity; here it is the green circle at the centre of the four. The four are undifferentiated, and each of them forms a vortex, apparently turning to the left. I think I am not mistaken in regarding it as probable that, in general, a leftward movement indicates movement towards the unconscious, while a rightward (clockwise) movement goes towards consciousness.⁹² The one is "sinister," the other "right," "rightful," "correct." In Tibet, the leftward-moving swastika is a sign of the Bön religion, of black magic. Stupas and chörtens must therefore be circumambulated clockwise. The leftward-spinning eddies spin into the unconscious; the rightward-spinning ones spin out of the unconscious chaos. The rightward-moving swastika in Tibet is therefore a Buddhist emblem.⁹³ (Cf. also [Fig. 4.](#))

[565] For our patient the process appeared to mean, first and foremost, a differentiation of consciousness. From the treasures of her psychological knowledge she interpreted the four as the four orienting functions of consciousness: thinking, feeling, sensation, intuition. She noticed, however, that the four were all alike, whereas the four functions are all unlike. This raised no question for her, but it did for me. What are these four if they are *not* the four functional aspects of consciousness? I doubted whether this could be a sufficient interpretation of them. They seemed to be much more than that, and that is probably the reason why they are not different but identical. They do not form four functions, different by definition, but they might well represent the *a priori* possibility for the formation of the four functions. In this picture we have the quaternity, the archetypal 4, which is capable of numerous interpretations, as history shows and as I have demonstrated elsewhere. It illustrates

the coming to consciousness of an unconscious content; hence it frequently occurs in cosmogonic myths. What is the precise significance of the fact that the four eddies are apparently turning to the left, when the division of the mandala into four denotes a process of becoming conscious, is a point about which I would rather not speculate. I lack the necessary material. Blue means air or pneuma, and the leftward movement an intensification of the unconscious influence. Possibly this should be taken as a pneumatic compensation for the strongly emphasized red colour, which signifies affectivity.

Fig. 4. Neolithic relief from Tarxien, Malta

The spirals represent vine tendrils.

[566] The mandala itself is bright red, but the four eddies have in the main a cool, greenish-blue colour, which the patient associated with “water.” This might hang together with the leftward movement, since water is a favourite symbol for the unconscious.⁹⁴ The green of the circle in the middle signifies life in the chthonic sense. It is the “*benedicta viriditas*” of the alchemists.

[567] The problematical thing about this picture is the fact that the black snake is outside the totality of the symbolic circle. In order to make the totality actual, it ought really to be inside. But if we remember the unfavourable significance of the snake, we shall understand why its assimilation into the symbol of psychic wholeness presents certain difficulties. If our conjecture about the leftward movement of the four eddies is correct, this would denote a trend towards the deep and dark side of the spirit,⁹⁵ by means of which the black snake could be assimilated. The snake, like the

devil in Christian theology, represents the shadow, and one which goes far beyond anything personal and could therefore best be compared with a principle, such as the principle of evil.⁹⁶ It is the colossal shadow thrown by man, of which our age had to have such a devastating experience. It is no easy matter to fit this shadow into our cosmos. The view that we can simply turn our back on evil and in this way eschew it belongs to the long list of antiquated naïveties. This is sheer ostrich policy and does not affect the reality of evil in the slightest. Evil is the necessary opposite of good, without which there would be no good either. It is impossible even to think evil out of existence. Hence the fact that the black snake remains outside expresses the critical position of evil in our traditional view of the world.⁹⁷

[568] The background of the picture is pale, the colour of parchment. I mention this fact in particular, as the pictures that follow show a characteristic change in this respect.

Picture 6

[569] The background of Picture 6 is a cloudy grey. The mandala itself is done in the vividest colours, bright red, green, and blue. Only where the red outer membrane enters the blue-green nucleus does the red deepen to blood colour and the pale blue to a dark ultramarine. The wings of Mercury, missing in the previous picture, reappear here at the neck of the blood-red pistons (as previously on the neck of the black snake in Picture 4). But the most striking thing is the appearance of a swastika, undoubtedly wheeling to the right. (I should add that these pictures were painted in 1928 and had no direct connection with contemporary fantasies, which at that time were still unknown to the world at large.) Because of its green colour, the swastika suggests something plantlike, but at the same time it has the wavelike character of the four eddies in the previous picture.

[570] In this mandala an attempt is made to unite the opposites red and blue, outside and inside. Simultaneously, the rightward movement aims at bringing about an ascent into the light of consciousness, presumably because the background has become noticeably darker. The black snake has disappeared, but has begun to impart its darkness to the entire background. To compensate this, there is in the mandala an upwards movement towards the light, apparently an attempt to rescue consciousness from the darkening of the environment. The picture was associated with a dream that occurred a few days before. Miss X dreamt that *she returned to the city after a holiday in the country. To her astonishment she found a tree growing in the middle of the room where she worked. She thought: "Well, with its thick bark this tree can withstand the heat of an apartment."* Associations to the tree led to its maternal significance. The tree would explain the plant motif in the mandala, and its sudden growth represents the higher level or freeing of consciousness induced by the

movement to the right. For the same reason the “philosophical” tree is a symbol of the alchemical *opus*, which as we know is an individuation process.

[571] We find similar ideas in Justin’s gnosis. The angel Baruch stands for the pneuma of Elohim, and the “motherly” angel Naas for the craftiness of Edem. But both angels, as I have said, were also trees: Baruch the tree of life, Naas the tree of knowledge. Their division and polarity are in keeping with the spirit of the times (second-third centuries A.D.). But in those days, too, they knew of an individuation process, as we can see from Hippolytus.⁹⁸ Elohim, we are told, set the “prophet” Heracles the task of delivering the “Father” (the pneuma) from the power of the twelve wicked angels. This resulted in his twelve labours. Now the Heracles myth has in fact all the characteristic features of an individuation process: the journeys to the four directions,⁹⁹ four sons, submission to the feminine principle (Omphale) that symbolizes the unconscious, and the self-sacrifice and rebirth caused by Deianeira’s robe.

[572] The “thick bark” of the tree suggests the motif of protection, which appears in the mandala as the “formation of skins” (see par. 576). This is expressed in the motif of the protective black bird’s wings, which shield the contents of the mandala from outside influences. The piston-shaped prolongations of the peripheral red substance are phallic symbols, indicating the entry of affectivity into the pneumatic interior. They are obviously meant to activate and enrich the spirit dwelling within. This “spirit” has of course nothing to do with intellect, rather with something that we would have to call spiritual substance (pneuma) or—in modern terms—“spiritual life.” The underlying symbolical thought is no doubt the same as the view developed in the Clementine Homilies, that *πνεῦμα* (spirit) and *σῶμα* (body) are one in God.¹⁰⁰ The mandala, though only a symbol of the self as the psychic totality, is at the same time a God-image, for the central point, circle, and quaternity are well-known symbols for the deity. The impossibility of distinguishing empirically between “self” and “God” leads, in Indian theosophy, to the identity of the personal and supra-personal Purusha-Atman. In ecclesiastical as in alchemical literature the saying is often quoted: “God is an infinite circle (or sphere) whose centre is everywhere and the circumference nowhere.”¹⁰¹ This idea can be found in full development as early as Parmenides. I will cite the passage, because it alludes to the same motifs that underlie our mandala: “For the narrower rings¹⁰² were filled with unmixed Fire, and those next to them with Night, but between these rushes the portion of Flame. And in the centre of these is the goddess¹⁰³ who guides everything; for throughout she rules over cruel Birth and Mating, sending the female to mate with the male, and conversely again the male with the female.”¹⁰⁴

[573] The learned Jesuit, Nicholas Caussin, apropos the report in Clement of Alexandria that, on certain occasions, wheels were rolled round in the Egyptian temples,¹⁰⁵ comments that Democritus of Abdera called God *νοῦν ἐν πυρὶ σφαιροειδεῖ*¹⁰⁶ (*mentem in igne orbiculari*, ‘mind in the spherical fire’). He goes on: “This was the view also of Parmenides, who defined God as *σφάραν*, ‘crown,’ a circle consisting of glowing light.¹⁰⁷ And it has been very clearly established by Iamblichus, in his book on the mysteries, that the Egyptians customarily represent God, the Lord of the world, as sitting in the lotus, a water-plant, the fruits as well as the leaves of which are round,¹⁰⁸ thereby indicating the circular motion of the mind, which everywhere returns into itself.” This is also the origin, he says, of the ritual transformations or circuits (“circuitiones”) that imitate the motion of the heavens. But the Stoics named the heavens a “round and revolving God” (*rotundum et volubilem Deum*). Caussin says it is to this that the “mystical” (*mystice* = symbolical) explanation of Psalm 12 : 8 refers: “In circuitu impii ambulant” (the ungodly wander in a circle);¹⁰⁹ they only walk round the periphery without ever reaching the centre, which is God. Here I would mention the wheel motif in mandala symbolism only in passing, as I have dealt with it in detail elsewhere.¹¹⁰

Picture 7

[574] In Picture 7 it has indeed turned to night: the entire sheet which the mandala is painted on is black. All the light is concentrated in the sphere. The colours have lost their brightness but have gained in intensity. It is especially striking that the black has penetrated as far as the centre, so that something of what we feared has already occurred: the blackness of the snake and of the sombre surroundings has been assimilated by the nucleus and, at the same time, as the picture shows, is compensated by a golden light radiating out from the centre. The rays form an equal-armed cross, to replace the swastika of the previous picture, which is here represented only by four hooks suggesting a rightwards rotation. With the attainment of absolute blackness, and particularly its presence in the centre, the upward movement and rightward rotation seem to have come to an end. On the other hand, the wings of Mercury have undergone a noticeable differentiation, which presumably means that the sphere has sufficient power to keep itself afloat and not sink down into total darkness. The golden rays forming the cross bind the four together.¹¹¹ This produces an inner bond and consolidation as a defence against destructive influences¹¹² emanating from the black substance that has penetrated to the centre. For us the cross symbol always has the connotation of *suffering*, so we are probably not wrong in assuming that the mood of this picture is one of more or less painful *suspension*—remember the wings!—over the dark abyss of inner loneliness.

[575] Earlier, I mentioned Böhme's lightning that "makes a cross," and I brought this cross into connection with the four elements. As a matter of fact, John Dee symbolizes the elements by an equal-armed cross.¹¹³ As we said, the cross with a little circle in it is the alchemical sign for copper (*cuprum*, from Kypris, Aphrodite), and the sign for Venus is ♀. Remarkably enough, ♀ is the old apothecary's sign for *spiritus Tartari* (tartaric acid), which, literally translated, means 'spirit of the underworld.' ⚗ is also the sign for red hematite (bloodstone). Hence there seems to be not only a cross that comes from above, as in Böhme's case and in our mandala, but also one that comes from below. In other words, the lightning—to keep to Böhme's image—can come from below out of the blood, from Venus or from Tartarus. Böhme's neutral "Salniter" is identical with salt in general, and one of the signs for this is ⚗. One can hardly imagine a better sign for the arcane substance, which salt was considered to be by the sixteenth- and seventeenth-century alchemists. Salt, in ecclesiastical as well as alchemical usage, is the symbol for Sapientia and also for the distinguished or elect *personality*, as in Matthew 5 : 13: "Ye are the salt of the earth."

[576] The numerous wavy lines or layers in the mandala could be interpreted as representing the formation of *layers of skin*, giving protection against outside influences. They serve the same purpose as the inner consolidation. These cortices probably have something to do with the dream of the tree in the workroom, which had a "thick bark." The formation of skins is also found in other mandalas, and it denotes a hardening or sealing off against the outside, the production of a regular rind or "hide." It is possible that this phenomenon would account for the cortices or *putamina* ('shards') mentioned in the cabala.¹¹⁴ "For such is the name for that which abides outside holiness," such as the seven fallen kings and the four Achurayim.¹¹⁵ From them come the "kliploth" or cortices. As in alchemy, these are the scoriae or slag, to which adheres the quality of plurality and of death. In our mandala the cortices are boundary lines marking off the inner unity and protecting it against the outer blackness with its disintegrating influences, personified by the snake.¹¹⁶ The same motif is expressed by the petals of the lotus and by the skins of the onion: the outer layers are withered and desiccated, but they protect the softer, inner layers. The lotus seat of the Horus-child, of the Indian divinities, and of the Buddha must be understood in this sense. Hölderlin makes use of the same image:

Fateless, like the sleeping

Infant, breathe the heavenly ones,

Chastely guarded

In modest bud; their spirits

- [577] In Christian metaphor, Mary is the flower in which God lies hidden; or again, the rose window in which the *rex gloriae* and judge of the world is enthroned.
- [578] The idea of circular layers is to be found, by implication, in Böhme, for the outermost ring of his three-dimensional mandala¹¹⁸ is labelled “will of ye Devill Lucifer,” “Abyesse (of) Eternity,” “Abyss of ye Darkness,” “Hell of Devills,” etc. (See Fig. 1.) Böhme says of this in his *Aurora* (ch. XVII, sec. 6): “Behold, when Lucifer with his hosts aroused the Wrath-fire in God’s nature, so that God waxed wroth in Nature in the place of Lucifer, the outermost Birth in Nature acquired another Quality, wholly wrathful, dry, cold, vehement, bitter, and sour. The raging Spirit, that before had a subtle, gentle Quality in Nature, became in his outermost Birth wholly presumptuous and terrible, and now in his outermost Birth is called the Wind, or the element Air.” In this way the four elements arose—the earth, in particular, by a process of contraction and desiccation.
- [579] Cabalistic influences may be conjectured here, though Böhme knew not much more about the Cabala than did Paracelsus. He regarded it as a species of magic. The four elements correspond to the four Achurayim.¹¹⁹ They constitute a sort of second quaternity, proceeding from the inner, pneumatic quaternity but of a physical nature. The alchemists, too, allude to the Achurayim. Mennens,¹²⁰ for instance, says: “And although the holy name of God reveals the Tetragrammaton or the Four Letters, yet if you should look at it aright, only three Letters are found in it. The letter *he* [n] is found twice, since they are the same, namely Air and Water, which signifies the Son; Earth the Father, and Fire the Holy Ghost. Thus the Four Letters of God’s name manifestly signify the Most Holy Trinity and Matter, which likewise is threefold (*triplex*)¹²¹ ... and which is also called the shadow of the same [i.e., of God], and is named by Moyses¹²² the back of God [*Dei posteriora*], which seems to be created out of it [matter].”¹²³ This statement bears out Böhme’s view.
- [580] To return to our mandala. The original four eddies have coalesced into the wavy squares in the middle of the picture. Their place is taken by golden points at the outer rim (developed from the previous picture), emitting rainbow colours. These are the colours of the *peacock’s eye*, which play a great role as the *cauda pavonis* in alchemy.¹²⁴ The appearance of these colours in the *opus* represents an intermediate stage preceding the definitive end result. Böhme speaks of a “love-desire or a Beauty of Colours; and here all Colours arise.”¹²⁵ In our mandala, too, the rainbow colours spring from the red layer that means affectivity. Of the “life of Nature and Spirit” that is united in the “spherical wheel”¹²⁶ Böhme says: “Thus is made known to us an eternal Essence of Nature, like to Water and Fire, which stand as it were mixed into one another. For there comes a *bright-blue* colour, like the *Lightning* of the Fire; and

then it has a form like a *Ruby*¹²⁷ mingled with Crystals into one Essence, or like *yellow, white, red, and blue* mingled in *dark Water*: for it is like blue in green, since each still has its brightness and shines, and the Water only resists their Fire, so that there is no wasting anywhere, but one eternal Essence in two Mysteries mingled together, notwithstanding the difference of two Principles, viz. two kinds of life.” The phenomenon of the colours owes its existence to the “Imagination of the great Mystery, where a wondrous essential Life is born.”¹²⁸

[581] It is abundantly clear from this that Böhme was preoccupied with the same psychic phenomenon that fascinated Miss X—and many other patients too. Although Böhme took the idea of the *cauda pavonis* and the tetrameria from alchemy,¹²⁹ he, like the alchemists, was working on an empirical basis which has since been rediscovered by modern psychology. There are products of active imagination, and also dreams, which reproduce the same patterns and arrangements with a spontaneity that cannot be influenced. A good example is the following dream: A patient dreamt that *she was in a drawing-room. There was a table with three chairs beside it. An unknown man standing beside her invited her to sit down. For this purpose she fetched a fourth chair that stood further off. She then sat at the table and began turning over the pages of a book, containing pictures of blue and red cubes, as for a building game. Suddenly it occurred to her that she had something else to attend to. She left the room and went to a yellow house. It was raining in torrents, and she sought shelter under a green laurel tree.*

[582] The table, the three chairs, the invitation to sit down, the other chair that had to be fetched to make four chairs, the cubes, and the building game all suggest a process of *composition*. This takes place in stages: a combination first of blue and red, then of yellow and green. These four colours symbolize four qualities, as we have seen, which can be interpreted in various ways. Psychologically this quaternity points to the orienting functions of consciousness, of which at least one is unconscious and therefore not available for conscious use. Here it would be the green, the sensation function,¹³⁰ because the patient’s relation to the real world was uncommonly complicated and clumsy. The “inferior” function, however, just because of its unconsciousness, has the great advantage of being contaminated with the collective unconscious and can be used as a bridge to span the gulf between conscious and unconscious and thus restore the vital connection with the latter. This is the deeper reason why the dream represents the inferior function as a laurel. The laurel in this dream has the same connection with the processes of inner growth as the tree that Miss X dreamt grew in her room. It is essentially the same tree as the *arbor philosophica* of the alchemists, about which I have written in *Psychology and Alchemy*.¹³¹ We should also remember that, according to tradition, the laurel is not injured either by lightning or by cold—“*intacta triumphat.*” Hence it symbolized the

Virgin Mary,¹³² the model for all women, just as Christ is the model for men. In view of its historical interpretation the laurel, like the alchemical tree, should be taken in this context as a symbol of the self.¹³³ The ingenuousness of patients who produce such dreams is always very impressive.

[583] To turn back again to our mandala. The golden lines that end in pistons recapitulate the spermatozoon motif and therefore have a spermatic significance, suggesting that the quaternity will be reproduced in a new and more distinct form. In so far as the quaternity has to do with conscious realization, we can infer from these symptoms an intensification of the latter, as is also suggested by the golden light radiating from the centre. Probably a kind of inner illumination is meant.

[584] Two days before painting this picture, Miss X dreamt that *she was in her father's room in their country house. "But my mother had moved my bed away from the wall into the middle of the room and had slept in it. I was furious, and moved the bed back to its former place. In the dream the bed-cover was red—exactly the red reproduced in the picture."*

[585] The mother significance of the tree in her previous dream has here been taken up by the unconscious: this time the mother has slept in the middle of the room. This seems to be for Miss X an annoying intrusion into her sphere, symbolized by the room of her father, who has an animus significance for her. Her sphere is therefore a spiritual one, and she has usurped it just as she usurped her father's room. She has thus identified with the "spirit." Into this sphere her mother has intruded and installed herself in the centre, at first under the symbol of the tree. She therefore stands for physis opposed to spirit, i.e., for the natural feminine being which the dreamer also is, but which she would not accept because it appeared to her as a black snake. Although she remedied the intrusion at once, the dark chthonic principle, the black substance, has nevertheless penetrated to the centre of her mandala, as Picture 7 shows. But just because of this the golden light can appear: "e tenebris lux!" We have to relate the mother to Böhme's idea of the matrix. For him the matrix is the *sine qua non* of all differentiation or realization, without which the spirit remains suspended and never comes down to earth. The collision between the paternal and the maternal principle (spirit and nature) works like a shock.

[586] After this picture, she felt the renewed penetration of the red colour, which she associated with feeling, as something disturbing, and she now discovered that her "rapport" with me, her analyst (= father), was unnatural and unsatisfactory. She was giving herself airs, she said, and was posing as an intelligent, understanding pupil (usurpation of spirituality!). But she had to admit that she felt very silly and was very silly, regardless of what I thought about it. This admission brought her a feeling of great relief and helped her to see at last that sex was "not, on the one hand, merely a

mechanism for producing children and not, on the other, only an expression of supreme passion, but was also banally physiological and autoerotic.” This belated realization led her straight into a fantasy state where she became conscious of a series of obscene images. At the end she saw the image of a large bird, which she called the “earth bird,” and which alighted on the earth. Birds, as aerial beings, are well-known spirit symbols. It represented the transformation of the “spiritual” image of herself into a more earthy version that is more characteristic of women. This “tailpiece” confirms our suspicion that the intensive upward and rightward movement has come to a halt: the bird is coming down to earth. This symbolization denotes a further and necessary differentiation of what Böhme describes in general as “Love-desire.” Through this differentiation consciousness is not only widened but also brought face to face with the reality of things, so that the inner experience is tied, so to speak, to a definite spot.

[587] On the days following, the patient was overcome by feelings of self-pity. It became clear to her how much she regretted never having had any children. She felt like a neglected animal or a lost child. This mood grew into a regular *Weltschmerz*, and she felt like the “all-compassionate Tathagata” (Buddha). Only when she had completely given way to these feelings could she bring herself to paint another picture. Real liberation comes not from glossing over or repressing painful states of feeling, but only from experiencing them to the full.

Picture 8

[588] The thing that strikes us at once in Picture 8 is that almost the whole interior is filled with the black substance. The blue-green of the water has condensed to a dark blue quaternity, and the golden light in the centre turns in the reverse direction, anti-clockwise: the bird is coming down to earth. That is, the mandala is moving towards the dark, chthonic depths. It is still floating—the wings of Mercury show this—but it has come much closer to the blackness. The inner, undifferentiated quaternity is balanced by an outer, differentiated one, which Miss X equated with the four functions of consciousness. To these she assigned the following colours: yellow = intuition, light blue = thinking, flesh pink = feeling, brown = sensation.¹³⁴ Each of these quarters is divided into three, thus producing the number 12 again. The separation and characterization of the two quaternities is worth noting. The outer quaternity of wings appears as a differentiated realization¹³⁵ of the undifferentiated inner one, which really represents the archetype. In the cabala this relationship corresponds to the quaternity of Merkabah¹³⁶ on the one hand and of the Achurayim on the other, and in Böhme they are the four Spirits of God¹³⁷ and the four elements.

[589] The plantlike form of the cross in the middle of the mandala, also noted by the patient, refers back to the tree (“tree of the cross”) and the mother.¹³⁸ She thus makes it clear that this previously taboo element has been accepted and now holds the central place. She was fully conscious of this—which of course was a great advance on her previous attitude.

[590] In contrast to the previous picture there are no inner cortices. This is a logical development, because the thing they were meant to exclude is now in the centre, and defence has become superfluous. Instead, the cortices spread out into the darkness as golden rings, expanding concentrically like waves. This would mean a far-reaching influence on the environment emanating from the sealed-off self.

[591] Four days before she painted this mandala she had the following dream: *“I drew a young man to the window and, with a brush dipped in white oil, removed a black fleck from the cornea of his eye. A little golden lamp then became visible in the centre of the pupil. The young man felt greatly relieved, and I told him he should come again for treatment. I woke up saying the words: ‘If therefore thine eye be single, thy whole body shall be full of light.’”*S (Matthew 6 : 22.)

[592] This dream describes the change: the patient is no longer identical with her animus. The animus has, so to speak, become *her* patient, since he has eye trouble. As a matter of fact the animus usually sees things “cock-eyed” and often very unclearly. Here a black fleck on the cornea obscures the golden light shining from inside the eye. He has “seen things too blackly.” The eye is the prototype of the mandala, as is evident from Böhme, who calls his mandala “The Philosophique Globe, or Eye of ye Wonders of Eternity, or Looking-Glass of Wisdom.” He says: “The substance and Image of the Soul may be resembled to the Earth, having a fair Flower growing out of it, and also to the Fire and Light; as we see that Earth is a Centre, but no life; yet it is essential, and a fair flower grows out of it, which is not like Earth ... and yet the Earth is the Mother of the Flower.” The soul is a “fiery Eye, and similitude of the First Principle,” a “Centre of Nature.”¹³⁹

[593] Our mandala is indeed an “eye,” the structure of which symbolizes the centre of order in the unconscious. The eye is a hollow sphere, black inside, and filled with a semi-liquid substance, the vitreous humour. Looking at it from outside, one sees a round, coloured surface, the iris, with a dark centre, from which a golden light shines. Böhme calls it a “fiery eye,” in accordance with the old idea that seeing emanates from the eye. The eye may well stand for consciousness (which is in fact an organ of perception), looking into its own background. It sees its own light there, and when this is clear and pure the whole body is filled with light. Under certain conditions consciousness has a purifying effect. This is probably what is meant by Matthew 6 : 22ff., an idea expressed even more clearly in Luke 11: 33ff.

[594] The eye is also a well-known symbol for God. Hence Böhme calls his “Philosophique Globe” the “Eye of Eternity,” the “Essence of all Essences,” the “Eye of God.”¹⁴⁰

[595] By accepting the darkness, the patient has not, to be sure, changed it into light, but she has kindled a light that illuminates the darkness within. By day no light is needed, and if you don’t know it is night you won’t light one, nor will any light be lit for you unless you have suffered the horror of darkness. This is not an edifying text but a mere statement of the psychological facts. The transition from Picture 7 to Picture 8 gives one a working idea of what I mean by “accepting the dark principle.” It has sometimes been objected that nobody can form a clear conception of what this means, which is regrettable, because it is an ethical problem of the first order. Here, then, is a practical example of this “acceptance,” and I must leave it to the philosophers to puzzle out the ethical aspects of the process.¹⁴¹

Picture 9

[596] In Picture 9 we see for the first time the blue “soul-flower,” on a red background, also described as such by Miss X (naturally without knowledge of Böhme).¹⁴² In the centre is the golden light in the form of a lamp, as she herself stated. The cortices are very pronounced, but they consist of light (at least in the upper half of the mandala) and radiate outwards.¹⁴³ The light is composed of the rainbow hues of the rising sun; it is a real *cauda pavonis*. There are six sets of sunbeams. This recalls the Buddha’s Discourse on the Robe, from the Collection of the Pali Canon:

His heart overflowing with lovingkindness ... with compassion ... with joyfulness ... with equanimity, he abides, raying forth lovingkindness, compassion, joyfulness, equanimity, towards one quarter of space, then towards the second, then towards the third, then towards the fourth, and above and below, thus, all around. Everywhere, into all places the wide world over, his heart overflowing with compassion streams forth, wide, deep, illimitable, free from enmity, free from all ill-will....¹⁴⁴

[597] But a parallel with the Buddhist East cannot be carried through here, because the mandala is divided into an upper and a lower half.¹⁴⁵ Above, the rings shine many-hued as a rainbow; below, they consist of brown earth. Above, there hover three white birds (*pneumata* signifying the Trinity); below, a goat is rising up, accompanied by two ravens (Wotan’s birds)¹⁴⁶ and twining snakes. This is not the sort of picture a Buddhist holy man would make, but that of a Western person with a Christian background, whose light throws a dark shadow. What is more, the three birds float in a jet black sky, and the goat, rising out of dark clay, is shown against a field of bright orange. This, oddly enough, is the colour of the Buddhist monk’s robe, which was certainly not a conscious intention of the patient. The underlying thought

is clear: no white without black, and no holiness without the devil. Opposites are brothers, and the Oriental seeks to liberate himself from them by his *nirvanda* (“free from the two”) and his *neti neti* (“not this, not that”), or else he puts up with them in some mysterious fashion, as in Taoism. The connection with the East is deliberately stressed by the patient, through her painting into the mandala four hexagrams from the *I Ching*.¹⁴⁷

[598] The sign in the left top half is “Yü, ENTHUSIASM” (NO. 16). It means “Thunder comes resounding out of the earth,” i.e., a movement coming from the unconscious, and expressed by music and dancing. Confucius comments as follows:

Firm as a rock, what need of a whole day?

The judgment can be known.

The superior man knows what is hidden and what is evident.

He knows weakness, he knows strength as well.

Hence the myriads look up to him.

Enthusiasm can be the source of beauty, but it can also delude.

[599] The second hexagram at the top is “Sun, DECREASE” (NO. 41). The upper trigram means Mountain, the lower trigram means Lake. The mountain towers above the lake and “restrains” it. That is the “image” whose interpretation points to self-restraint and reserve, i.e., a seeming decrease of oneself. This is significant in the light of “ENTHUSIASM.” In the top line of the hexagram, “But [one] no longer has a separate home,” the homelessness of the Buddhist monk is meant. On the psychological level this does not, of course, refer to so drastic a demonstration of renunciation and independence, but to the patient’s irreversible insight into the conditioned quality of all relationships, into the relativity of all values, and the transience of all things.

[600] The sign in the bottom half to the right is “Sheng, PUSHING UPWARD” (No. 46). “Within the earth, wood grows: The image of Pushing Upward.” It also says: “One pushes upward into an empty city,” and “The king offers him Mount Ch’i.” So this hexagram means growth and development of the personality, like a plant pushing out of the earth—a theme already anticipated by the plant motif in an earlier mandala. This is an allusion to the important lesson which Miss X has learnt from her experience: that there is no development unless the shadow is accepted.

[601] The hexagram to the left is “Ting, THE CAULDRON” (No. 50). This is a bronze sacrificial vessel equipped with handles and legs, which held the cooked viands used for festive occasions. The lower trigram means Wind and Wood, the upper one Fire. The “Cauldron” is thus made up of “fire over wood,” just as the alchemical vessel consists of fire or water.¹⁴⁸ There is “delicious food” in it (the “fat of the pheasant”),

but it is not eaten because “the handle of the *ting* is altered” and its “legs are broken,” making it unusable. But, as a result of “constant self-abnegation,” the personality becomes differentiated (“the *ting* has golden carrying rings” and even “rings of jade”) and purified, until it acquires the “hardness and soft lustre” of precious jade.¹⁴⁹

[602] Though the four hexagrams were put into the mandala on purpose, they are authentic results of preoccupation with the *I Ching*. The phases and aspects of my patient’s inner process of development can therefore express themselves easily in the language of the *I Ching*, because it too is based on the psychology of the individuation process that forms one of the main interests of Taoism and of Zen Buddhism.¹⁵⁰ Miss X’s interest in Eastern philosophy was due to the deep impression which a better knowledge of her life and of herself had made upon her—an impression of the tremendous contradictions in human nature. The insoluble conflict she was faced with makes her preoccupation with Eastern therapeutic systems, which seem to get along without conflict, doubly interesting. It may be partly due to this acquaintance with the East that the opposites, irreconcilable in Christianity, were not blurred or glossed over, but were seen in all their sharpness, and in spite (or perhaps just because) of this, were brought together into the unity of the mandala. Böhme was never able to achieve this union; on the contrary, in his mandala the bright and dark semi-circles are turned back to back. The bright half is labelled “H. Ghost,” the dark half “Father,” i.e., *auctor rerum*¹⁵¹ or “First Principle,” whereas the Holy Ghost is the “Second Principle.” This polarity is crossed by the paired opposites “Sonne” and “Earthly Man.” The “Devils” are all on the side of the dark “Father” and constitute his “Wrath-fire,” just as on the periphery of the mandala.

[603] Böhme’s starting-point was philosophical alchemy, and to my knowledge he was the first to try to organize the Christian cosmos, as a total reality, into a mandala.¹⁵² The attempt failed, inasmuch as he was unable to unite the two halves in a circle. Miss X’s mandala, on the other hand, comprises and contains the opposites, as a result, we may suppose, of the support afforded by the Chinese doctrine of Yang and Yin, the two metaphysical principles whose co-operation makes the world go round. The hexagrams, with their firm (yang) and yielding (yin) lines, illustrate certain phases of this process. It is therefore right that they should occupy a mediating position between above and below. Lao-tzu says: “High stands on low.” This indisputable truth is secretly suggested in the mandala: the three white birds hover in a black field, but the grey-black goat has a bright orange-coloured background. Thus the Oriental truth insinuates itself and makes possible—at least by symbolic anticipation—a union of opposites within the irrational life process formulated by the *I Ching*. That we are really concerned here with opposite phases of one and the same process is shown by the picture that now follows.

[604] In Picture 10, begun in Zurich but only completed when Miss X again visited her motherland, we find the same division as before into above and below. The “soul-flower”¹⁵³ in the centre is the same, but it is surrounded on all sides by a dark blue night sky, in which we see the four phases of the moon, the new moon coinciding with the world of darkness below. The three birds have become two. Their plumage has darkened, but on the other hand the goat has turned into two semi-human creatures with horns and light faces, and only two of the four snakes remain. A notable innovation is the appearance of two *crabs* in the lower, chthonic hemisphere that also represents the body. The crab has essentially the same meaning as the astrological sign Cancer.¹⁵⁴ Unfortunately Miss X gave no context here. In such cases it is usually worth investigating what use has been made in the past of the object in question. In earlier, prescientific ages hardly any distinction was drawn between longtailed crabs (*Macrura*, crayfish) and short-tailed crabs (*Brachyura*). As a zodiacal sign Cancer signifies *resurrection*, because the crab sheds its shell.¹⁵⁵ The ancients had in mind chiefly *Pagurus bernhardus*, the hermit crab. It hides in its shell and cannot be attacked. Therefore it signifies *caution* and *foresight, knowledge of coming events*¹⁵⁶. It “depends on the moon, and waxes with it.”¹⁵⁷ It is worth noting that the crab appears just in the mandala in which we see the phases of the moon for the first time. Astrologically, Cancer is the house of the moon. Because of its backwards and sideways movement, it plays the role of an unlucky animal in superstition and colloquial speech (“crabbed,” “catch a crab,” etc.). Since ancient times cancer (*καρκίνοῦ*) has been the name for a malignant tumour of the glands. Cancer is the zodiacal sign in which the sun begins to retreat, when the days grow shorter. Pseudo-Kallisthenes relates that crabs dragged Alexander’s ships down into the sea.¹⁵⁸ “Karkinos” was the name of the crab that bit Heracles in the foot in his fight with the Lernaean monster. In gratitude, Hera set her accomplice among the stars.¹⁵⁹

[605] In astrology, Cancer is a feminine and watery sign,¹⁶⁰ and the summer solstice takes place in it. In the *melothesia*¹⁶¹ it is correlated with the *breast*. It rules over the *Western sea*. In Propertius it makes a sinister appearance: “Octipedis Cancrī terga sinistra time” (Fear thou the ill-omened back of the eight-footed crab).¹⁶² De Gubernatis says: “The crab ... causes now the death of the solar hero and now that of the monster.”¹⁶³ The *Panchatantra* (V, 2) relates how a crab, which the mother gave to her son as apotropaic magic, saved his life by killing a black snake.¹⁶⁴ As De Gubernatis thinks, the crab stands now for the sun and now for the moon,¹⁶⁵ according to whether it goes forwards or backwards.

[606] Miss X was born in the first degrees of Cancer (actually about 3°). She knew her horoscope and was well aware of the significance of the moment of birth; that is, she realized that the degree of the rising sign (the ascendent) conditions the individuality of the horoscope. Since she obviously guessed the horoscope's affinity with the mandala, she introduced her individual sign into the painting that was meant to express her psychic self.¹⁶⁶

[607] The essential conclusion to be drawn from Picture 10 is that the dualities which run through it are always inwardly balanced, so that they lose their sharpness and incompatibility. As Multatuli says: "Nothing is quite true, and even that is not quite true." But this loss of strength is counterbalanced by the unity of the centre, where the lamp shines, sending out coloured rays to the eight points of the compass.¹⁶⁷

[608] Although the attainment of inner balance through symmetrical pairs of opposites was probably the main intention of this mandala, we should not overlook the fact that the *duplication motif* also occurs when unconscious contents are about to become conscious and differentiated. They then split, as often happens in dreams, into two identical or slightly different halves corresponding to the conscious and still unconscious aspects of the nascent content. I have the impression, from this picture, that it really does represent a kind of solstice or climax, where decision and division take place. The dualities are, at bottom, Yes and No, the irreconcilable opposites, but they *have* to be held together if the balance of life is to be maintained. This can only be done by holding unswervingly to the centre, where action and suffering balance each other. It is a path "sharp as the edge of a razor." A climax like this, where universal opposites clash, is at the same time a moment when a wide perspective often opens out into the past and future. This is the psychological moment when, as the *consensus gentium* has established since ancient times, synchronistic phenomena occur—that is, when the far appears near: sixteen years later, Miss X became fatally ill with cancer of the breast.¹⁶⁸

Picture 11

[609] Here I will only mention that the coloured rays emanating from the centre have become so rarified that, in the next few pictures, they disappear altogether. Sun and moon are now outside, no longer included in the microcosm of the mandala. The sun is not golden, but has a dull, ochrous hue and in addition is clearly turning to the left: it is moving towards its own obscuration, as had to happen after the cancer picture (solstice). The moon is in the first quarter. The roundish masses near the sun are probably meant to be cumulus clouds, but with their grey-red hues they look suspiciously like bulbous swellings. The interior of the mandala now contains a quincunx of stars, the central star being silver and gold. The division of the mandala

into an aerial and an earthy hemisphere has transferred itself to the outside world and can no longer be seen in the interior. The silvery rim of the aerial hemisphere in the preceding picture now runs round the entire mandala and recalls the band of quicksilver that, as *Mercurius vulgaris*, “veils the true personality.” At all events, it is probable that the influence and importance of the outside world are becoming so strong in this picture as to bring about an impairment and devaluation of the mandala. It does not break down or burst (as can easily happen under similar circumstances), but is removed from the telluric influence through the symbolical constellation of stars and heavenly bodies.

Picture 12-24

[610] In Picture 12 the sun is in fact sinking below the horizon and the moon is coming out of the first quarter. The radiation of the mandala has ceased altogether, but the equivalents of sun and moon, and also of the earth, have been assimilated into it. A remarkable feature is its sudden inner animation by two human figures and various animals. The constellation character of the centre has vanished and given way to a kind of flower motif. What this animation means cannot be established, unfortunately, as we have no commentary.

[611] In Picture 13 the source of radiation is no longer in the mandala but outside, in the shape of the full moon, from which rings of rainbow-coloured light radiate in concentric circles. The mandala is laced together by four black and golden snakes, the heads of three of them pointing to the centre, while the fourth rears upwards. In between the snakes and the centre there are indications of the spermatozoon motif. This may mean an intensive penetration on the part of the outside world, but it could also mean magical protection. The breaking down of the quaternity into 3 plus 1 is in accord with the archetype.¹⁶⁹

[612] In Picture 14 the mandala is suspended over the lit-up ravine of Fifth Avenue, New York, whither Miss X in the meantime returned. On the blue flower in the centre the *coniunctio* of the “royal” pair is represented by the sacrificial fire burning between them. The King and Queen are assisted by two kneeling figures of a man and a woman. It is a typical marriage quaternio, and for an understanding of its psychology I must refer the reader to my account in the “Psychology of the Transference.”¹⁷⁰ This inner bond should be thought of as a compensatory “consolidation” against disintegrating influences from without.

[613] In Picture 15 the mandala floats between Manhattan and the sea. It is daylight again, and the sun is just rising. Out of the blue centre blue snakes penetrate into the red flesh of the mandala: the enantiodynamia is setting in, after the introversion of

feeling caused by the shock of New York had passed its climax. The blue colour of the snakes indicates that they have acquired a pneumatic nature.

[614] From Picture 16 onwards, the drawing and painting technique shows a decided improvement. The mandalas gain in aesthetic value. In Picture 17 a kind of *eye motif* appears, which I have also observed in the mandalas of other persons. It seems to me to link up with the motif of *polyophtalmia* and to point to the peculiar nature of the unconscious, which can be regarded as a “multiple consciousness.” I have discussed this question in detail elsewhere.¹⁷¹ (See also [Fig. 5.](#))

Fig. 5. Mandala by a woman patient

Aged 58, artistic and technically accomplished. In the centre is the egg encircled by the snake; outside, apotropaic wings and eyes. The mandala is exceptional in that it has a pentadic structure. (The patient also produced triadic mandalas. She was fond of playing with forms irrespective of their meaning—a consequence of her artistic gift.)

[615] The enantiodromia only reached its climax the following year, in Picture 19.¹⁷² In that picture the red substance is arranged round the golden, four-rayed star in the centre, and the blue substance is pushing everywhere to the periphery. Here the rainbow-coloured radiation of the mandala begins again for the first time, and from then on was maintained for over ten years (in mandalas not reproduced here).

[616] I will not comment on the subsequent pictures, nor reproduce them all—as I say, they extend over more than ten years—because I feel I do not understand them properly. In addition, they came into my hands only recently, after the death of the

patient, and unfortunately without text or commentary. Under these circumstances the work of interpretation becomes very uncertain, and is better left unattempted. Also, this case was meant only as an example of how such pictures come to be produced, what they mean, and what reflections and observations their interpretation requires. It is not intended to demonstrate how an entire lifetime expresses itself in symbolic form. The individuation process has many stages and is subject to many vicissitudes, as the fictive course of the *opus alchymicum* amply shows.

Conclusion

[617] Our series of pictures illustrates the initial stages of the way of individuation. It would be desirable to know what happens afterwards. But, just as neither the philosophical gold nor the philosophers' stone was ever made in reality, so nobody has ever been able to tell the story of the whole way, at least not to mortal ears, for it is not the story-teller but death who speaks the final "consummatum est." Certainly there are many things worth knowing in the later stages of the process, but, from the point of view of teaching as well as of therapy, it is important not to skip too quickly over the initial stages. As these pictures are intuitive anticipations of future developments, it is worth while lingering over them for a long time, in order, with their help, to integrate so many contents of the unconscious into consciousness that the latter really does reach the stage it sees ahead. These psychic evolutions do not as a rule keep pace with the tempo of intellectual developments. Indeed, their very first goal is to bring a consciousness that has hurried too far ahead into contact again with the unconscious background with which it should be connected. This was the problem in our case too. Miss X had to turn back to her "motherland" in order to find her earth again—*vestigia retro!* It is a task that today faces not only individuals but whole civilizations. What else is the meaning of the frightful regressions of our time? The tempo of the development of consciousness through science and technology was too rapid and left the unconscious, which could no longer keep up with it, far behind, thereby forcing it into a defensive position which expresses itself in a universal will to destruction. The political and social isms of our day preach every conceivable ideal, but, under this mask, they pursue the goal of lowering the level of our culture by restricting or altogether inhibiting the possibilities of individual development. They do this partly by creating a chaos controlled by terrorism, a primitive state of affairs that affords only the barest necessities of life and surpasses in horror the worst times of the so-called "Dark" Ages. It remains to be seen whether this experience of degradation and slavery will once more raise a cry for greater spiritual freedom.

[618] This problem cannot be solved collectively, because the masses are not changed unless the individual changes. At the same time, even the best-looking solution cannot be forced upon him, since it is a good solution only when it is combined with

a natural process of development. It is therefore a hopeless undertaking to stake everything on collective recipes and procedures. The bettering of a general ill begins with the individual, and then only when he makes himself and not others responsible. This is naturally only possible in freedom, but not under a rule of force, whether this be exercised by a self-elected tyrant or by one thrown up by the mob.

[619] The initial pictures in our series illustrate the characteristic psychic processes which set in the moment one gives a mind to that part of the personality which has remained behind, forgotten. Scarcely has the connection been established when symbols of the self appear, trying to convey a picture of the total personality. As a result of this development, the unsuspecting modern gets into paths trodden from time immemorial—the *via sancta*, whose milestones and signposts are the religions.¹⁷³ He will think and feel things that seem strange to him, not to say unpleasant. Apuleius relates that in the Isis mysteries he “approached the very gates of death and set one foot on Proserpina’s threshold, yet was permitted to return, rapt through all the elements. At midnight I saw the sun shining as if it were noon; I entered the presence of the gods of the underworld and the gods of the upper world, stood near and worshipped them.”¹⁷⁴ Such experiences are also expressed in our mandalas; that is why we find in religious literature the best parallels to the symbols and moods of the situations they formulate. These situations are intense inner experiences which can lead to lasting psychic growth and a ripening and deepening of the personality, if the individual affected by them has the moral capacity for πίστις, loyal trust and confidence. They are the age-old psychic experiences that underlie “faith” and ought to be its unshakable foundation—and not of faith alone, but also of knowledge.

[620] Our case shows with singular clarity the spontaneity of the psychic process and the transformation of a personal situation into the problem of individuation, that is, of becoming whole, which is the answer to the great question of our day: How can consciousness, our most recent acquisition, which has bounded ahead, be linked up again with the oldest, the unconscious, which has lagged behind? The oldest of all is the instinctual foundation. Anyone who overlooks the instincts will be ambuscaded by them, and anyone who does not humble himself will be humbled, losing at the same time his freedom, his most precious possession.

[621] Always when science tries to describe a “simple” life-process, the matter becomes complicated and difficult. So it is no wonder that the details of a transformation process rendered visible through active imagination make no small demands on our understanding. In this respect they may be compared with all other biological processes. These, too, require specialized knowledge to become comprehensible. Our example also shows, however, that this process can begin and

run its course without any special knowledge having to stand sponsor to it. But if one wants to understand anything of it and assimilate it into consciousness, then a certain amount of knowledge is needed. If the process is not understood at all, it has to build up an unusual intensity so as not to sink back again into the unconscious without result. But if its affects rise to an unusual pitch, they will enforce some kind of understanding. It depends on the correctness of this understanding whether the consequences turn out more pathologically or less. Psychic experiences, according to whether they are rightly or wrongly understood, have very different effects on a person's development. It is one of the duties of the psychotherapist to acquire such knowledge of these things as will enable him to help his patient to an adequate understanding. Experiences of this kind are not without their dangers, for they are also, among other things, the matrix of the psychoses. Stiffnecked and violent interpretations should under all circumstances be avoided, likewise a patient should never be forced into a development that does not come naturally and spontaneously. But once it has set in, he should not be talked out of it again, unless the possibility of a psychosis has been definitely established. Thorough psychiatric experience is needed to decide this question, and it must constantly be borne in mind that the constellation of archetypal images and fantasies is not in itself pathological. The pathological element only reveals itself in the way the individual reacts to them and how he interprets them. The characteristic feature of a pathological reaction is, above all, *identification with the archetype*. This produces a sort of inflation and possession by the emergent contents, so that they pour out in a torrent which no therapy can stop. Identification can, in favourable cases, sometimes pass off as a more or less harmless inflation. But in all cases identification with the unconscious brings a weakening of consciousness, and herein lies the danger. You do not "make" an identification, you do not "identify yourself," but you experience your identity with the archetype in an unconscious way and so are possessed by it. Hence in more difficult cases it is far more necessary to strengthen and consolidate the ego than to understand and assimilate the products of the unconscious. The decision must be left to the diagnostic and therapeutic tact of the analyst.

*

[622] This paper is a groping attempt to make the inner processes of the mandala more intelligible. They are, as it were, self-delineations of dimly sensed changes going on in the background, which are perceived by the "reversed eye" and rendered visible with pencil and brush, just as they are, uncomprehended and unknown. The pictures represent a kind of ideogram of unconscious contents. I have naturally used this method on myself too and can affirm that one can paint very complicated pictures without having the least idea of their real meaning. While painting them, the picture

seems to develop out of itself and often in opposition to one's conscious intentions. It is interesting to observe how the execution of the picture frequently thwarts one's expectations in the most surprising way. The same thing can be observed, sometimes even more clearly, when writing down the products of active imagination.¹⁷⁵

[623] The present work may also serve to fill a gap I myself have felt in my exposition of therapeutic methods. I have written very little on active imagination, but have talked about it a great deal. I have used this method since 1916, and I sketched it out for the first time in "The Relations between the Ego and the Unconscious." I first mentioned the mandala in 1929, in *The Secret of the Golden Flower*.¹⁷⁶ For at least thirteen years I kept quiet about the results of these methods in order to avoid any suggestion. I wanted to assure myself that these things—mandalas especially—really are produced spontaneously and were not suggested to the patient by my own fantasy. I was then able to convince myself, through my own studies, that mandalas were drawn, painted, carved in stone, and built, at all times and in all parts of the world, long before my patients discovered them. I have also seen to my satisfaction that mandalas are dreamt and drawn by patients who were being treated by psychotherapists whom I had not trained. In view of the importance and significance of the mandala symbol, special precautions seemed to be necessary, seeing that this motif is one of the best examples of the universal operation of an archetype. In a seminar on children's dreams, which I held in 1939–40,¹⁷⁷ I mentioned the dream of a ten-year-old girl who had absolutely no possibility of ever hearing about the quaternity of God. The dream was written down by the child herself and was sent to me by an acquaintance: "*Once in a dream I saw an animal that had lots of horns. It spiked up other little animals with them. It wriggled like a snake and that was how it lived. Then a blue fog came out of all the four corners, and it stopped eating. Then God came, but there were really four Gods in the four corners. Then the animal died, and all the animals it had eaten came out alive again.*"

[624] This dream describes an unconscious individuation process: all the animals are eaten by the one animal. Then comes the enantiodromia: the dragon changes into pneuma, which stands for a divine quaternity. Thereupon follows the apocatastasis, a resurrection of the dead. This exceedingly "unchildish" fantasy can hardly be termed anything but archetypal. Miss X, in Picture 12, also put a whole collection of animals into her mandala—two snakes, two tortoises, two fishes, two lions, two pigs, a goat and a ram.¹⁷⁸ Integration gathers many into one. To the child who had this dream, and to Miss X likewise, it was certainly not known that Origen had already said (speaking of the sacrificial animals): "Seek these sacrifices within thyself, and thou wilt find them within thine own soul. Understand that thou hast within thyself flocks of cattle ... flocks of sheep and flocks of goats. ... Understand that the birds of the sky are also within thee. Marvel not if we say that these are within thee, but understand that

thou thyself art even another little world, and hast within thee the sun and the moon, and also the stars.”¹⁷⁹

[625] The same idea occurs again in another passage, but this time it takes the form of a psychological statement: “For look upon the countenance of a man who is at one moment angry, at the next sad, a short while afterward joyful, then troubled again, and then contented. ... See how he who thinks himself one is not one, but seems to have as many personalities as he has moods, as also the Scripture says: A fool is changed as the moon. ...¹⁸⁰ God, therefore, is unchangeable, and is called one for the reason that he changes not. Thus also the true imitator of God, who is made after God’s image, is called one and the selfsame [*unus et ipse*] when he comes to perfection, for he also, when he is fixed on the summit of virtue, is not changed, but remains alway one. For every man, whiles he is in wickedness [*malitia*], is divided among many things and torn in many directions; and while he is in many kinds of evil he cannot be called one.”¹⁸¹

[626] Here the many animals are affective states to which man is prone. The individuation process, clearly alluded to in this passage, subordinates the many to the One. But the One is God, and that which corresponds to him in us is the *imago Dei*, the God-image. But the God-image, as we saw from Jakob Böhme, expresses itself in the mandala.

CONCERNING MANDALA SYMBOLISM¹

[627] In what follows I shall try to describe a special category of symbols, the *mandala*, with the help of a wide selection of pictures. I have dealt with this theme on several occasions before, and in *Psychology and Alchemy* I gave a detailed account, with running commentary, of the mandala symbols that came up in the course of an individual analysis. I repeated the attempt in the preceding paper of the present volume, but there the mandalas did not derive from dreams but from active imagination. In this paper I shall present mandalas of the most varied provenance, on the one hand to give the reader an impression of the astonishing wealth of forms produced by individual fantasy, and on the other hand to enable him to form some idea of the regular occurrence of the basic elements.

[628] As regards the interpretation, I must refer the reader to the literature. In this paper I shall content myself with hints, because a more detailed explanation would lead much too far, as the mandalas described in “Psychology and Religion” and in the preceding paper of this volume show.

[629] The Sanskrit word *mandala* means ‘circle.’ It is the Indian term for the circles drawn in religious rituals. In the great temple of Madura, in southern India, I saw how a picture of this kind was made. It was drawn by a woman on the floor of the *mandapam* (porch), in coloured chinks, and measured about ten feet across. A pandit who accompanied me said in reply to my questions that he could give me no information about it. Only the women who drew such pictures knew what they meant. The woman herself was non-committal; she evidently did not want to be disturbed in her work. Elaborate mandalas, executed in red chalk, can also be found on the whitewashed walls of many huts. The best and most significant mandalas are found in the sphere of Tibetan Buddhism.² I shall use as an example a Tibetan mandala, to which my attention was drawn by Richard Wilhelm.

Figure 1

[630] A mandala of this sort is known in ritual usage as a *yantra*, an instrument of contemplation. It is meant to aid concentration by narrowing down the psychic field of vision and restricting it to the centre. Usually the mandala contains three circles, painted in black or dark blue. They are meant to shut out the outside and hold the

inside together. Almost regularly the outer rim consists of fire, the fire of *concupiscentia*, 'desire,' from which proceed the torments of hell. The horrors of the burial ground are generally depicted on the outer rim. Inside this is a garland of lotus leaves, characterizing the whole mandala as a *padma*, 'lotus-flower.' Then comes a kind of monastery courtyard with four gates. It signifies sacred seclusion and concentration. Inside this courtyard there are as a rule the four basic colours, red, green, white, and yellow, which represent the four directions and also the psychic functions, as the Tibetan Book of the Dead³ shows. Then, usually marked off by another magic circle, comes the centre as the essential object or goal of contemplation.

[631] This centre is treated in very different ways, depending on the requirements of the ritual, the grade of initiation of the contemplator, and the sect he belongs to. As a rule it shows Shiva in his world-creating emanations. Shiva, according to Tantric doctrine, is the One Existent, the Timeless in its perfect state. Creation begins when this unextended point—known as *Shiva-bindu*—appears in the eternal embrace of its feminine side, the Shakti. It then emerges from the state of being-in-itself and attains the state of being-for-itself, if I may use the Hegelian terminology.

Figure 50

Figure 51

Figure 52

Figure 53

Figure 54

[632] In *kundalini* yoga symbolism, Shakti is represented as a snake wound three and a half times round the *lingam*, which is Shiva in the form of a phallus. This image shows the *possibility* of manifestation in space. From Shakti comes Maya, the building material of all individual things; she is, in consequence, the creatrix of the real world. This is thought of as illusion, as being and not-being. It *is*, and yet remains dissolved in Shiva. Creation therefore begins with an act of division of the opposites that are united in the deity. From their splitting arises, in a gigantic explosion of energy, the multiplicity of the world.

[633] The goal of contemplating the processes depicted in the mandala is that the yogi shall become inwardly aware of the deity. Through contemplation, he recognizes himself as God again, and thus returns from the illusion of individual existence into the universal totality of the divine state.

[634] As I have said, mandala means ‘circle.’ There are innumerable variants of the motif shown here, but they are all based on the squaring of a circle. Their basic motif is the premonition of a centre of personality, a kind of central point within the psyche, to which everything is related, by which everything is arranged, and which is itself a source of energy. The energy of the central point is manifested in the almost irresistible compulsion and urge to *become what one is*, just as every organism is driven to assume the form that is characteristic of its nature, no matter what the circumstances. This centre is not felt or thought of as the ego but, if one may so express it, as the *self*. Although the centre is represented by an innermost point, it is surrounded by a periphery containing everything that belongs to the self—the paired opposites that make up the total personality. This totality comprises consciousness first of all, then the personal unconscious, and finally an indefinitely large segment of the collective unconscious whose archetypes are common to all mankind. A certain number of these, however, are permanently or temporarily included within the scope of the personality and, through this contact, acquire an individual stamp as the shadow, anima, and animus, to mention only the best-known figures. The self, though on the one hand simple, is on the other hand an extremely composite thing, a “conglomerate soul,” to use the Indian expression.

[635] Lamaic literature gives very detailed instructions as to how such a circle must be painted and how it should be used. Form and colour are laid down by tradition, so the variants move within fairly narrow limits. The ritual use of the mandala is actually non-Buddhist; at any rate it is alien to the original Hínayāna Buddhism and appears first in Mahāyāna Buddhism.

[636] The mandala shown here depicts the state of one who has emerged from contemplation into the absolute state. That is why representation of hell and the horrors of the burial ground are missing. The diamond thunderbolt, the *dorje* in the

centre, symbolizes the perfect state where masculine and feminine are united. The world of illusions has finally vanished. All energy has gathered together in the initial state.

[637] The four *dorjes* in the gates of the inner courtyard are meant to indicate that life's energy is streaming inwards; it has detached itself from objects and now returns to the centre. When the perfect union of all energies in the four aspects of wholeness is attained, there arises a static state subject to no more change. In Chinese alchemy this state is called the "Diamond Body," corresponding to the *corpus incorruptibile* of medieval alchemy, which is identical with the *corpus glorificationis* of Christian tradition, the incorruptible body of resurrection. This mandala shows, then, the union of all opposites, and is embedded between *yang* and *yin*, heaven and earth; the state of everlasting balance and immutable duration.

[638] For our more modest psychological purposes we must abandon the colourful metaphysical language of the East. What yoga aims at in this exercise is undoubtedly a psychic change in the adept. The ego is the expression of individual existence. The yogin exchanges his ego for Shiva or the Buddha; in this way he induces a shifting of the psychological centre of personality from the personal ego to the impersonal non-ego, which is now experienced as the real "Ground" of the personality.

[639] In this connection I would like to mention a similar Chinese conception, namely the system on which the *I Ching* is based.

Figure 2

[640] In the centre is *ch'ien*, 'heaven,' from which the four emanations go forth, like the heavenly forces extending through space. Thus we have:

ch'ien: self-generated creative energy, corresponding to Shiva.

heng: all-pervading power.

yuen: generative power.

li: beneficent power.

ching: unchangeable, determinative power.

[641] Round this masculine power-centre lies the earth with its formed elements. It is the same conception as the Shiva-Shakti union in *kundalini* yoga, but here represented as the earth receiving into itself the creative power of heaven. The union of heaven with *kun*, the feminine and receptive, produces the *tetraktys*, which, as in Pythagoras, underlies all existence.

[642] The "River Map" is one of the legendary foundations of the *I Ching*, which in its present form derives partly from the twelfth century B.C. According to the legend, a

dragon dredged the magical signs of the “River Map” from a river. On it the sages discovered the drawing, and in the drawing the laws of the world-order. This drawing, in accordance with its extreme age, shows the knotted cords that signify numbers. These numbers have the usual primitive character of qualities, chiefly masculine and feminine. All uneven numbers are masculine, even numbers feminine.

[643] Unfortunately I do not know whether this primitive conception influenced the formation of the much younger Tantric mandala. But the parallels are so striking that the European investigator has to ask himself: Which view influenced the other? Did the Chinese develop from the Indian, or the Indian from the Chinese? An Indian whom I asked answered: “Naturally the Chinese developed from the Indian.” But he did not know how old the Chinese conceptions are. The bases of the *I Ching* go back to the third millennium B.C. My late friend Richard Wilhelm, the eminent expert on classical Chinese philosophy, was of the opinion that no direct connections could be assumed. Nor, despite the fundamental similarity of the symbolic ideas, does there need to be any direct influence, since the ideas, as experience shows and as I think I have demonstrated, arise autochthonously again and again, independently of one another, out of a psychic matrix that seems to be ubiquitous.

Figure 3

[644] As a counterpart to the Lamaic mandala, I now reproduce the Tibetan “World Wheel,” which should be sharply distinguished from the former, since it represents the world. In the centre are the three principles: cock, snake, and pig, symbolizing lust, envy, and unconsciousness. The wheel has, near the centre, six spokes, and twelve spokes round the edge. It is based on a triadic system. The wheel is held by the god of death, Yama. (Later we shall meet other “shield-holders”: Figs. 34 and 47.) It is understandable that the sorrowful world of old age, sickness, and death should be held in the claws of the death-demon. The incomplete state of existence is, remarkably enough, expressed by a triadic system, and the complete (spiritual) state by a tetradic system. The relation between the incomplete and the complete state therefore corresponds to the “sesquitertian proportion” of 3 : 4. This relation is known in Western alchemical tradition as the axiom of Maria. It also plays a not inconsiderable role in dream symbolism.⁴

*

[645] We shall now pass on to individual mandalas spontaneously produced by patients in the course of an analysis of the unconscious. Unlike the mandalas so far discussed, these are not based on any tradition or model, seeming to be free creations of fantasy, but determined by certain archetypal ideas unknown to their creators. For this reason

the fundamental motifs are repeated so often that marked similarities occur in drawings done by the most diverse patients. The pictures come as a rule from educated persons who were unacquainted with the ethnic parallels. The pictures differ widely, according to the stage of the therapeutic process; but certain important stages correspond to definite motifs. Without going into therapeutic details, I would only like to say that a rearranging of the personality is involved, a kind of new centring. That is why mandalas mostly appear in connection with chaotic psychic states of disorientation or panic. They then have the purpose of reducing the confusion to order, though this is never the conscious intention of the patient. At all events they express order, balance, and wholeness. Patients themselves often emphasize the beneficial or soothing effect of such pictures. Usually the mandalas express religious, i.e., numinous, thoughts and ideas, or, in their stead, philosophical ones. Most mandalas have an intuitive, irrational character and, through their symbolical content, exert a retroactive influence on the unconscious. They therefore possess a “magical” significance, like icons, whose possible efficacy was never consciously felt by the patient. In fact, it is from the effect of their own pictures that patients discover what icons can mean. Their pictures work not because they spring from the patients’ own fantasy but because they are impressed by the fact that their subjective imagination produces motifs and symbols of the most unexpected kind that conform to law and express an idea or situation which their conscious mind can grasp only with difficulty. Confronted with these pictures, many patients suddenly realize for the first time the reality of the collective unconscious as an autonomous entity. I will not labour the point here; the strength of the impression and its effect on the patient are obvious enough from some of the pictures.

[646] I must preface the pictures that now follow with a few remarks on the formal elements of mandala symbolism. These are primarily:

1. *Circular, spherical, or egg-shaped formation.*

2. The circle is elaborated into a *flower* (rose, lotus) or a *wheel*.
3. A centre expressed by a *sun, star, or cross*, usually with four, eight, or twelve rays.
4. The circles, spheres, and cruciform figures are often represented in *rotation* (swastika).
5. The circle is represented by a *snake* coiled about a centre, either ring-shaped (uroboros) or spiral (Orphic egg).
6. *Squaring of the circle*, taking the form of a circle in a square or vice versa.
7. *Castle, city, and courtyard (temenos)* motifs, quadratic or circular.
8. *Eye* (pupil and iris).
9. Besides the tetradic figures (and multiples of four), there are also triadic and pentadic ones, though these are much rarer.

They should be regarded as “disturbed” totality pictures, as we shall see below.

Figure 4

[647] This mandala was done by a woman patient in her middle years, who first saw it in a dream. Here we see at once the difference from the Eastern mandala. It is poor in form, poor in ideas, but nevertheless expresses the individual attitude of the patient far more clearly than the Eastern pictures, which have been subjected to a collective and traditional configuration. Her dream ran: “*I was trying to decipher an embroidery pattern. My sister knew how. I asked her if she had made an elaborate hemstitched handkerchief. She said, “No, but I know how it was done.” Then I saw it with the threads drawn, but the work not yet done. One must go around and around the square until near the centre, then go in circles.*”

[648] The spiral is painted in the typical colours red, green, yellow, and blue. According to the patient, the square in the centre represents a *stone*, its four facets showing the four basic colours. The inner spiral represents the snake that, like Kundalini, winds three and a half times⁵ round the centre.

[649] The dreamer herself had no notion of what was going on in her, namely the beginning of a new orientation, nor would she have understood it consciously. Also, the parallels from Eastern symbolism were completely unknown to her, so that any influence is out of the question. The symbolic picture came to her spontaneously, when she had reached a certain point in her development.

[650] It is, unfortunately, not possible for me to say exactly under what circumstances each of these pictures arose. That would lead us too far. The sole aim of this paper is to give a survey of the formal parallels to the individual and collective mandala. I regret also that for the same reason no single picture can be interpreted circumstantially and in detail, as that would inevitably require a comprehensive account of the analytical situation of the patient. Wherever it is possible to shed light on the origins of the picture by a passing hint, as in the present case, I shall do so.

[651] As to the interpretation of the picture, it must be emphasized that the snake, arranged in angles and then in circles round the square, signifies the circumambulation of, and way to, the centre. The snake, as a chthonic and at the same time spiritual being, symbolizes the unconscious. The stone in the centre, presumably a cube, is the quaternary form of the *lapis philosophorum*. The four colours also point in this direction.⁶ It is evident that the stone in this case signifies the new centre of personality, the self, which is also symbolized by a vessel.

Figure 5

[652] The painter was a middle-aged woman of schizoid disposition. She had several times drawn mandalas spontaneously, because they always had an ordering effect on her chaotic psychic states. The picture shows a rose, the Western equivalent of the lotus. In India the lotus-flower (*padma*) is interpreted by the Tantrists as the womb. We know this symbol from the numerous pictures of the Buddha (and other Indian deities) in the lotus-flower.⁷ It corresponds to the “Golden Flower” of Chinese alchemy, the rose of the Rosicrucians, and the mystic rose in Dante’s *Paradiso*. Rose and lotus are usually arranged in groups of four petals, indicating the squaring of the circle or the united opposites. The significance of the rose as the maternal womb was nothing strange to our Western mystics, for we read in a prayer inspired by the Litany of Loreto:

O Rose-wreath, thy blossoming makes men weep for joy.

O rosy sun, thy burning makes men to love.

O son of the sun,

Rose-child,

Sun-beam.

Flower of the Cross, pure Womb that blossoms

Over all blooming and burning,

Sacred Rose,

Mary.

[653] At the same time, the vessel motif is an expression of the content, just as Shakti represents the actualization of Shiva. As alchemy shows, the self is androgynous and consists of a masculine and a feminine principle. Conrad of Würzburg speaks of Mary, the flower of the sea in which Christ lies hidden. And in an old hymn we read:

O'er all the heavens a rose appears

And a bright dress of blossom wears.

Its light glows in the Three-in-One

For God himself has put it on.

Figure 6

[654] The rose in the centre is depicted as a ruby, its outer ring being conceived as a wheel or a wall with gates (so that nothing can come out from inside or go in from outside). The mandala was a spontaneous product from the analysis of a male patient. It was based on a dream: *The dreamer found himself with three younger travelling companions in Liverpool.*⁸ *It was night, and raining. The air was full of smoke and soot. They climbed up from the harbour to the “upper city.”* The dreamer said: “It

was terribly dark and disagreeable, and we could not understand how anyone could stick it here. We talked about this, and one of my companions said that, remarkably enough, a friend of his had settled here, which astonished everybody. During this conversation we reached a sort of public garden in the middle of the city. The park was square, and in the centre was a lake or large pool. A few street lamps just lit up the pitch darkness, and I could see a little island in the pool. On it there was a single tree, a red-flowering magnolia, which miraculously stood in everlasting sunshine. I noticed that my companions had not seen this miracle, whereas I was beginning to understand why the man had settled here.”

[655] The dreamer went on: “I tried to paint this dream. But as so often happens, it came out rather different. The magnolia turned into a sort of rose made of ruby-coloured glass. It shone like a four-rayed star. The square represents the wall of the park and at the same time a street leading round the park in a square. From it there radiate eight main streets, and from each of these eight side-streets, which meet in a shining red central point, rather like the Étoile in Paris. The acquaintance mentioned in the dream lived in a house at the corner of one of these stars.” The mandala thus combines the classic motifs of flower, star, circle, precinct (*temenos*), and plan of city divided into quarters with citadel. “The whole thing seemed like a window opening on to eternity,” wrote the dreamer.

Figure 7

[656] Flower motif with cross in the centre. The square, too, is arranged like a flower. The four faces at the corners correspond to the four cardinal points, which are often depicted as four deities. Here they have a demonic character. This may be connected with the fact that the patient was born in the Dutch East Indies, where she sucked up the peculiar local demonology with the mother’s milk of her native ayah. Her numerous drawings all had a distinctly Eastern character, and thereby helped her to assimilate influences that at first could not be reconciled with her Western mentality.⁹

[657] In the picture that followed, the demon faces were ornamentally elaborated in eight directions. For the superficial observer the flowerlike character of the whole may disguise the demonic element the mandala is meant to ward off. The patient felt that the “demonic” effect came from the European influence with its moralism and rationalism. Brought up in the East Indies until her sixth year, she came later into a conventional European milieu, and this had a devastating effect on the flowerlike quality of her Eastern spirit and caused a prolonged psychic trauma. Under treatment her native world, long submerged, came up again in these drawings, bringing with it psychic recovery.

Figure 8

[658] The flowerlike development has got stronger and is beginning to overgrow the “demonishness” of the faces.

Figure 9

[659] A later stage is shown here. Minute care in the draughtsmanship vies with richness of colour and form. From this we can discern not only the extraordinary concentration of the patient but the triumph of Eastern “flowerlikeness” over the demon of Western intellectualism, rationalism, and moralism. At the same time the new centring of the personality becomes visible.

Figure 10

[660] In this painting, done by another young woman patient, we see at the cardinal points four creatures: a bird, a sheep, a snake, and a lion with a human face. Together with the four colours in which the four regions are painted, they embody four principles. The interior of the mandala is empty. Or rather, it contains a “Nothing” that is expressed by a quaternity. This is in accord with the overwhelming majority of individual mandalas: as a rule the centre contains the motif of the *rotundum*, known to us from alchemy, or the four-fold emanation or the squaring of the circle, or—more rarely—the figure of the patient in a universal human sense, representing the *Anthropos*.¹⁰ We find this motif, too, in alchemy. The four animals remind us of the cherubim in Ezekiel’s vision, and also of the four symbols of the evangelists and the four sons of Horus, which are sometimes depicted in the same way, three with animal heads and one with a human head. Animals generally signify the instinctive forces of the unconscious, which are brought into unity within the mandala. This integration of the instincts is a prerequisite for individuation.

Figure 11

[661] Painting by an older patient. Here the flower is seen not in the basic pattern of the mandala, but in elevation. The circular form has been preserved inside the square, so that despite its different execution this picture can still be regarded as a mandala. The plant stands for growth and development, like the green shoot in the diaphragm *chakra* of the *kundalini* yoga system. The shoot symbolizes Shiva and represents the centre and the male, whereas the calyx represents the female, the place of germination and birth.¹¹ Thus the Buddha sitting in the lotus is shown as the germinating god. It is the god in his rising, the same symbol as Ra the falcon, or the phoenix rising from the nest, or Mithras in the tree-top, or the Horus-child in the lotus. They are all symbolizations of the *status nascendi* in the seeding-place of the matrix. In medieval hymns Mary too is praised as the cup of the flower in which

Christ, coming down as a bird, makes his nest. Psychologically Christ means unity, which clothes itself in the *corpus mysticum* of the Church or in the body of the Mother of God (“mystic rose”), surrounded as with flower-petals, and thus reveals itself in reality. Christ as an image is a symbol of the self.¹² Just as the plant stands for growth, so the flower depicts the unfolding from a centre.

Figure 12

[662] Here the four rays emanating from the centre spread across the whole picture. This gives the centre a dynamic character. The structure of the flower is a multiple of four. The picture is typical of the marked personality of the patient, who had some artistic talent. (She also painted Fig. 5.) Besides that she had a strong feeling for Christian mysticism, which played a great role in her life. It was important for her to experience the archetypal background of Christian symbolism.

Figure 13

[663] Photograph of a rug woven by a middle-aged woman, Penelope-like, at a time of great inner and outer distress. She was a doctor and she wove this magic circle round herself, working at it every day for months, as a counterbalance to the difficulties of her life. She was not my patient and could not have been influenced by me. The rug contains an eight-petalled flower. A special feature of the rug is that it has a real “above and below.” Above is light; below, relative darkness. In it, there is a creature like a beetle, representing an unconscious content, and comparable with the sun in the form of Khepera. Occasionally the “above and below” are outside the protective circle, instead of inside. In that case the mandala affords protection against extreme opposites; that is, the sharpness of the conflict is not yet realized or else is felt as intolerable. The protective circle then guards against possible disruption due to the tension of opposites.

Figure 14

[664] An Indian picture of *Shiva-bindu*, the unextended point. It shows the divine power before the creation: the opposites are still united. The god rests in the point. Hence the snake signifies extension, the mother of Becoming, the creation of the world of forms. In India this point is also called *Hiranyagarbha*, ‘golden germ’ or ‘golden egg.’ We read in the *Sanatsugatiya*: “That pure great light which is radiant, that great glory which the gods worship, which makes the sun shine forth, that divine, eternal Being is perceived by the faithful.”¹³

Figure 15

[665] This picture, also by a middle-aged woman patient, shows the squaring of the circle. The plants again denote germination and growth. In the centre is a sun. As the snake-and-tree motif shows, we have here a conception of Paradise. A parallel is the Gnostic conception of Edem with the four rivers of Paradise in the Naassene gnosis. For the functional significance of the snake in relation to the mandala, see the preceding paper (comments on pictures 3, 4, and 5).

Figure 16

[666] This picture was painted by a neurotic young woman. The snake is somewhat unusual in that it lies in the centre itself, its head coinciding with this. Usually it is outside the inner circle, or at least coiled round the central point. One suspects (rightly, as it turned out) that the inner darkness does not conceal the longed-for unity, the self, but rather the chthonic, feminine nature of the patient. In a later picture the mandala bursts and the snake comes out.

Figure 17

[667] The picture was done by a young woman. This mandala is “legitimate” in so far as the snake is coiled round the four-rayed middle point. It is trying to get out: it is the awakening of Kundalini, meaning that the patient’s chthonic nature is becoming active. This is also indicated by the arrows pointing outwards. In practice it means becoming conscious of one’s instinctual nature. The snake in ancient times personified the spinal ganglia and the spinal cord. Arrows pointing outwards may in other cases mean the opposite: protection of the inside from danger.

Figure 18

[668] Drawn by an older patient. Unlike the previous picture, this one is “introverted.” The snake is coiled round the four-rayed centre and has laid its head on the white, central point (*Shiva-bindu*), so that it looks as if it were wearing a halo. There seems to be a kind of incubation of the middle point—the motif of the snake guarding the treasure. The centre is often characterized as the “treasure hard to attain.”¹⁴

Figure 19

[669] Done by a middle-aged woman. The concentric circles express concentration. This is further emphasized by the fishes circumnavigating the centre. The number 4 has the meaning of total concentration. The movement to the left presumably indicates movement towards the unconscious, i.e., immersion in it.

Figure 20

[670] This is a parallel to [Figure 19](#): sketch of a fish-motif which I saw on the ceiling of the Maharajah's pavilion in Benares.

Figure 21

[671] A fish instead of a snake. Fish and snake are simultaneously attributes of both Christ and the devil. The fish is making a whirlpool in the sea of the unconscious, and in its midst the precious pearl is being formed. A Rig-Veda hymn says:

Darkness there was, concealed in darkness,
A Lightless ocean lost in night.
Then the One, that was hidden in the shell,
Was born through the power of fiery torment.
From it arose in the beginning love,
Which is the germ and the seed of knowledge.¹⁵

[672] As a rule the snake personifies the unconscious, whereas the fish usually represents one of its contents. These subtle distinctions must be borne in mind when interpreting a mandala, because the two symbols very probably correspond to two different stages of development, the snake representing a more primitive and more instinctual state than the fish, which in history as well was endowed with higher authority than the snake (cf. the Ichthys-symbol).

Figure 22

[673] In this picture by a young woman the fish has produced a differentiated centre by circumnavigation, and in it a mother and child stand before a stylized Tree of Life or of Knowledge. Here the fish has a dragonlike nature; it is a monster, a sort of Leviathan, which, as the texts from Ras Shamra show, was originally a snake.¹⁶ Once more the movement is to the left.

Figure 23

[674] The golden ball corresponds to the golden germ (Hiranyagarbha). It is rotating, and the Kundalini winding round it has doubled. This indicates conscious realization, since a content rising out of the unconscious splits at a certain moment into two halves, a conscious and an unconscious one. The doubling is not made by the conscious mind, but appears spontaneously in the products of the unconscious. The rightwards rotation, expressed by the wings (swastika-motif), likewise indicates conscious realization. The stars show that the centre has a cosmic structure. It has four rays, and thus behaves like a heavenly body. The Shatapatha-Brahmana says:

Then he looks up to the sun, for that is the final goal, that the safe resort. To that final goal, to that resort he goes; for this reason he looks up to the sun.

He looks up, saying, “Self-existent art thou, the best ray of light!” The sun is indeed the best ray of light, and therefore he says, “Self-existent art thou, the best ray of light!” “Light-bestowing art thou: give me light (*varkas*)!” “So say I,” said Yajñavalkya, “and for this indeed the Brahmin should strive, if he would be *brahmavarkasin*, illumined by brahma.”

He then turns from left to right, saying, “I move along the course of the sun.” Having reached that final goal, that safe resort, he now moves along the course of yonder sun.¹⁷

[675] This sun has seven rays. A commentator remarks that four of them point to the four quarters; one points upwards, another downwards, but the seventh and “best” points inwards. It is at the same time the sun’s disc, named Hiranyagarbha. This, according to Ramanuja’s commentary on the Vedanta Sutas,¹⁸ is the highest self, the “collective aggregate of all individual souls.” It is the body of the highest Brahma and represents the collective psyche. For the idea of the self as compounded of many, compare Origen’s “Each of us is not one, but many” and “All are righteous, but one receiveth the crown.”¹⁹

[676] The patient was a woman of sixty, artistically gifted. The individuation process, long blocked but released by the treatment, stimulated her creative activity (Fig. 21 derives from the same source) and gave rise to a series of happily coloured pictures which eloquently express the intensity of her experience.

Figure 24

[677] Done by the same patient. She herself is shown practising contemplation or concentration on the centre: she has taken the place of the fish and the snakes. An ideal image of herself is laid round the precious egg. The legs are flexible, like a nixie’s. The psychology of such a picture reappears in ecclesiastical tradition. The Shiva-Shakti of the East is known in the West as the “man encompassed by a woman,” Christ and his bride the Church. Compare the Maitrayana-Brahmana Upanishad:

He [the Self] is also he who warms, the Sun, hidden by the thousand-eyed golden egg, as one fire by another. He is to be thought after, he is to be sought after. Having said farewell to all living things, having gone to the forest, and having renounced all sensuous objects, let a man perceive the Self from his own body.²⁰

[678] Here too the radiation from the centre spreads out beyond the protective circle into the distance. This expresses the idea of the far-reaching effect of the introverted

state of consciousness. It could also be described as an *unconscious* connection with the world.

Figure 25

[679] This picture was done by another middle-aged patient. It shows various phases of the individuation process. Down below she is caught in a chthonic tangle of roots (the *mūlādhāra* of *kundalini* yoga). In the middle she studies a book, cultivating her mind and augmenting her knowledge and consciousness. At the top, reborn, she receives illumination in the form of a heavenly sphere that widens and frees the personality, its round shape again representing the mandala in its “Kingdom of God” aspect, whereas the lower, wheel-shaped mandala is chthonic. There is a confrontation of the natural and spiritual totalities. The mandala is unusual on account of its six rays, six mountain peaks, six birds, three human figures. In addition, it is located between a distinct Above and Below, also repeated in the mandala itself. The upper, bright sphere is in the act of descending into the hexad or triad and has already passed the rim of the wheel. According to old tradition the number 6 means creation and evolution, since it is a *coniunctio* of 2 and 3 (even and odd = female and male). Philo Judaeus therefore calls the *senarius* (6) the “number most suited to generation.”²¹ The number 3, he says, denotes the surface or flatness, whereas 4 means height or depth. The *quaternarius* “shows the nature of solids,” whereas the three first numbers characterize or produce incorporeal intelligences. The number 4 appears as a three-sided pyramid.²² The hexad shows that the mandala consists of two triads, and the upper one is making itself into a quaternity, the state of “equability and justice,” as Philo says. Down below lurk unintegrated dark clouds. This picture demonstrates the not uncommon fact that the personality needs to be extended both upwards and downwards.

Figure 26 and 27

[680] These mandalas are in part atypical. Both were done by the same young woman. In the centre, as in the previous mandala, is a female figure, as if enclosed in a glass sphere or transparent bubble. It looks almost as if an homunculus were in the making. In addition to the usual four or eight rays, both mandalas show a pentadic element. There is thus a dilemma between four and five. Five is the number assigned to the “natural” man, in so far as he consists of a trunk with five appendages. Four, on the other hand, signifies a *conscious* totality. It describes the ideal, “spiritual” man and formulates him as a totality in contrast to the pentad, which describes the corporeal man. It is significant that the swastika symbolizes the “ideal” man,²³ whereas the five-pointed star symbolizes the material and bodily man.²⁴ The dilemma of four and five corresponds to the conflict between “culture” and “nature.” That was the

problem of the patient. In [Figure 26](#) the dilemma is indicated by the four groups of stars: two of them contain four stars and two of them five stars. On the rims of both mandalas we see the “fire of desire.” In [Figure 27](#) the rim is made of something that looks like lighted tissue. In characteristic contrast to the “shining” mandala, both these (especially the second one) are “burning.” It is flaming desire, comparable to the longing of the homunculus in the retort (*Faust*, [Part II](#)), which was finally shattered against the throne of Galatea. The fire represents an erotic demand but at the same time an *amor fati* that burns in the innermost self, trying to shape the patient’s fate and thus help the self into reality. Like the homunculus in *Faust*, the figure shut up in the vessel wants to “become.”

[681] The patient was herself aware of the conflict, for she told me she had no peace after painting the second picture. She had reached the afternoon of her life, and was in her thirty-fifth year. She was in doubt as to whether she ought to have another child. She decided for a child, but fate did not let her, because the development of her personality was evidently pursuing a different goal, not a biological but a cultural one. The conflict was resolved in the interests of the latter.

Figure 28

[682] Picture by a middle-aged man. In the centre is a star. The blue sky contains golden clouds. At the four cardinal points we see human figures: at the top, an old man in the attitude of contemplation; at the bottom, Loki or Hephaestus with red, flaming hair, holding in his hands a temple. To the right and left are a light and a dark female figure. Together they indicate four aspects of the personality, or four archetypal figures belonging, as it were, to the periphery of the self. The two female figures can be recognized without difficulty as the two aspects of the anima. The old man corresponds to the archetype of meaning, or of the spirit, and the dark chthonic figure to the opposite of the Wise Old Man, namely the magical (and sometimes destructive) Luciferian element. In alchemy it is Hermes Trismegistus versus Mercurius, the evasive “trickster.”²⁵ The circle enclosing the sky contains structures or organisms that look like protozoa. The sixteen globes painted in four colours just outside this circle derived originally from an eye motif and therefore stand for the observing and discriminating consciousness. Similarly, the ornaments in the next circle, all opening inwards, are rather like vessels pouring out their content towards the centre.²⁶ On the other hand the ornaments along the rim open outwards, as if to receive something from outside. That is, in the individuation process what were originally projections stream back “inside” and are integrated into the personality again. Here, in contrast to [Figure 25](#), “Above” and “Below,” male and female, are integrated, as in the alchemical hermaphrodite.

Figure 29

[683] Once again the centre is symbolized by a star. This very common image is consistent with the previous pictures, where the sun represents the centre. The sun, too, is a star, a radiant cell in the ocean of the sky. The picture shows the self appearing as a star out of chaos. The four-rayed structure is emphasized by the use of four colours. This picture is significant in that it sets the structure of the self as a principle of order against chaos.²⁷ It was painted by the same man who did [Figure 28](#).

Figure 30

[684] This mandala, by an older woman patient, is again split into Above and Below: heaven above, the sea below, as indicated by the golden waves on a green ground. Four wings revolve leftwards about the centre, which is marked only by an orange-red spot. Here too the opposites are integrated and are presumably the cause of the centre's rotation.

Figure 31

[685] An atypical mandala, based on a dyad. A golden moon and a silver moon form the upper and lower edges. The inside is blue sky above and something like a black crenellated wall below. On it there sits a peacock, fanning out its tail, and to the left there is an egg, presumably the peacock's. In view of the important role which the peacock and the peacock's egg together play in alchemy and also in Gnosticism, we may expect the miracle of the *cauda pavonis*, the appearance of "all Colours" (Böhme), the unfolding and realization of wholeness, once the dark dividing wall has broken down. (See [Fig. 32](#).) The patient thought the egg might split and produce something new, maybe a snake. In alchemy the peacock is synonymous with the Phoenix. A variant of the Phoenix legend relates that the Semenda Bird consumes itself, a worm forms from the ashes, and from the worm the bird rises anew.

Figure 32

[686] This picture is reproduced from the Codex Alchemicus Rhenoviensis, Central Library, Zurich. Here the peacock represents the Phoenix rising newborn from the fire. There is a similar picture in a manuscript in the British Museum, only there the peacock is enclosed in a flask, the *vas hermeticum*, like the homunculus.²⁸ The peacock is an old emblem of rebirth and resurrection, quite frequently found on Christian sarcophagi. In the vessel standing beside the peacock the colours of the *cauda pavonis* appear, as a sign that the transformation process is nearing its goal. In

the alchemical process the *serpens mercurialis*, the dragon, is changed into the eagle, the peacock, the goose of Hermes, or the Phoenix.²⁹

Figure 33

[687] This picture was done by a seven-year-old boy, offspring of a problem marriage. He had done a whole series of these drawings of circles and hung them up round his bed. He called them his “loves” and would not go to sleep without them. This shows that the “magical” pictures still functioned for him in their original sense, as a protective magic circle.

Figure 34

[688] An eleven-year-old girl, whose parents were divorced, had, at a time of great difficulties and upsets, drawn a number of pictures which clearly reveal a mandala structure. Here too they were magic circles intended to stop the difficulties and adversities of the outside world from entering into the inner psychic space. They represent a kind of self-protection.

[689] As on the *kilkhor*, the Tibetan World Wheel (Fig. 3), you can see at either side of this picture something that looks like horns, which as we know belong to the devil or to one of his theriomorphic symbols. The slanting eye-slits underneath them, and the two strokes for nose and mouth, are also the devil's. This amounts to saying: Behind the mandala lurks the devil. Either the “demons” are covered up by the magically powerful picture, and thereby eliminated—which would be the purpose of the mandala—or, as in the case of the Tibetan World Wheel, the world is caught in the claws of the demon of death. In this picture the devils merely peek out over the edge. I have seen what this means from another case: An artistically gifted patient produced a typical tetradic mandala and stuck it on a sheet of thick paper. On the back there was a circle to match, filled with drawings of sexual perversions. This shadow aspect of the mandala represented the disorderly, disruptive tendencies, the “chaos” that hides behind the self and bursts out in a dangerous way as soon as the individuation process comes to a standstill, or when the self is not realized and so remains unconscious. This piece of psychology was expressed by the alchemists in their Mercurius duplex, who on the one hand is Hermes the mystagogue and psychopomp, and on the other hand is the poisonous dragon, the evil spirit and “trickster.”

Figure 35

[690] Drawing by the same girl. Round the sun is a circle with eyes, and round this an uroboros. The motif of polyophtalmia frequently occurs in individual mandalas.

(See Picture 17 and Fig. 5 in the preceding paper.) In the Maitrayana-Brahmana Upanishad VI, 8 the egg (Hiranyagarbha) is described as “thousand-eyed.” The eyes in the mandala no doubt signify the observing consciousness, but it must also be borne in mind that the texts as well as the pictures both attribute the eyes to a mythic figure, e.g., an Anthropos, who does the seeing. This seems to me to point to the fascination which, through a kind of magical stare, attracts the attention of the conscious mind. (Cf. Figs. 38 and 39.)

Figure 36

[691] Painting of a medieval city with walls and moats, streets and churches, arranged quadratically. The inner city is again surrounded by walls and moats, like the Imperial City in Peking. The buildings all open inwards, towards the centre, represented by a castle with a golden roof. It too is surrounded by a moat. The ground round the castle is laid with black and white tiles, representing the united opposites. This mandala was done by a middle-aged man (cf. Figs. 6, 28, 29). A picture like this is not unknown in Christian symbolism. The Heavenly Jerusalem of Revelation is known to everybody. Coming to the Indian world of ideas, we find the city of Brahma on the world mountain, Meru. We read in the *Golden Flower*: “The *Book of the Yellow Castle* says: ‘In the square inch field of the square foot house, life can be regulated.’ The square foot house is the face. The square inch field in the face: what could that be other than the heavenly heart? In the middle of the square inch dwells the splendour. In the purple hall of the city of jade dwells the God of Utmost Emptiness and Life.”³⁰

Figure 37

[692] Painted by the same patient who did Figures 11 and 30. Here the “seeding-place” is depicted as a child enclosed in a revolving sphere. The four “wings” are painted in the four basic colours. The child corresponds to Hiranyagarbha and to the homunculus of the alchemists. The mythologem of the “Divine Child” is based on ideas of this sort.³¹

Figure 38

[693] Mandala in rotation, by the same patient, who did Figures 21 and 23. A notable feature is the quaternary structure of the golden wings in combination with the triad of three dogs running round the centre. They have their backs to it, indicating that for them the centre is in the unconscious. The mandala contains—another unusual feature—a triadic motif turning to the left, while the wings turn to the right. This is not accidental. The dogs represent consciousness “scenting” or “intuiting” the

unconscious; the wings show the movement of the unconscious towards consciousness, as corresponded to the patient's situation at the time. It is as if the dogs were fascinated by the centre although they cannot see it. They seem to represent the fascination felt by the conscious mind. The picture embodies the above-mentioned sesquitertian proportion (3 : 4).

Figure 39

[694] The same motif as before, but represented by hares. From a Gothic window in the cathedral at Paderborn. There is no recognizable centre though the rotation presupposes one.

Figure 40

[695] Picture by a young woman patient. It too exhibits the sesquitertian proportion and hence the dilemma with which Plato's *Timaeus* begins, and which as I said plays a considerable role in alchemy, as the axiom of Maria.³²

Figure 41

[696] This picture was done by a young woman patient with a schizoid disposition. The pathological element is revealed in the "breaking lines" that split up the centre. The sharp, pointed forms of these breaking lines indicate evil, hurtful, and destructive impulses which might hinder the desired synthesis of personality. But it seems as if the regular structure of the surrounding mandala might be able to restrain the dangerous tendencies to dissociation. And this proved to be the case in the further course of the treatment and subsequent development of the patient.

Figure 42

[697] A neurotically disturbed mandala. It was drawn by a young, unmarried woman patient at a time that was full of conflict: she was in a dilemma between two men. The outer rim shows four different colours. The centre is doubled in a curious way: fire breaks out from behind the blue star in the black field, while to the right a sun appears, with blood vessels running through it. The five-pointed star suggests a pentagram symbolizing man, the arms, legs, and head all having the same value. As I have said, it signifies the purely instinctual, chthonic, unconscious man. (Cf. Figs. 26 and 27.) The colour of the star is blue—of a cool nature, therefore. But the nascent sun is yellow and red—a warm colour. The sun itself (looking rather like the yolk of an incubated egg) usually denotes consciousness, illumination, understanding. Hence we could say of this mandala: a light is gradually dawning on the patient, she is

waking out of her formerly unconscious state, which corresponded to a purely biological and rational existence. (Rationalism is no guarantee of higher consciousness, but merely of a one-sided one!) The new state is characterized by red (feeling) and yellow or gold (intuition). There is thus a shifting of the centre of personality into the warmer region of heart and feeling, while the inclusion of intuition suggests a groping, irrational apprehension of wholeness.

Figure 43

[698] This picture was done by a middle-aged woman who, without being neurotic, was struggling for spiritual development and used for this purpose the method of active imagination. These efforts induced her to make a drawing of the birth of a new insight or conscious awareness (eye) from the depths of the unconscious (sea). Here the eye signifies the self.

Figure 44

[699] Drawing of motif from a Roman mosaic on the floor of a house in Moknine, Tunis, which I photographed. It represents an apotropaism against the evil eye.

Figure 45

[700] Mandala from the Navaho Indians, who with great toil prepare such mandalas from coloured sand for curative purposes. It is part of the Mountain Chant Rite performed for the sick. Around the centre there runs, in a wide arc, the body of the Rainbow Goddess. A square head denotes a female deity, a round one a male deity. The arrangement of the four pairs of deities on the arms of the cross suggests a swastika wheeling to the right. The four male deities who surround the swastika are making the same movement.

Figure 46

[701] Another sand-painting by the Navahos, from the Male Shooting Chant. The four horned heads are painted in the four colours that correspond to the four directions.³³

Figure 47

[702] Here, for comparison, is a painting of the Egyptian Sky Mother, bending, like the Rainbow Goddess, over the “Land” with its round horizon. Behind the mandala stands—presumably—the Air God, like the demon in [Figures 3](#) and [34](#). Underneath, the arms of the *ka*, raised in adoration and decked with the eye motif, hold the mandala, which probably signifies the wholeness of the “Two Lands.”³⁴

Figure 48

[703] This picture, from a manuscript of Hildegard of Bingen, shows the earth surrounded by the ocean, realm of air, and starry heaven. The actual globe of the earth in the centre is divided into four.³⁵

[704] Böhme has a mandala in his book *XL Questions concerning the Soule* (see Fig. 1 of preceding paper). The periphery contains a bright and a dark hemisphere turning their backs to one another. They represent un-united opposites, which presumably should be bound together by the heart standing between them. This drawing is most unusual, but aptly expresses the insoluble moral conflict underlying the Christian view of the world. “The Soul,” Böhme says, “is an Eye in the Eternal Abyss, a similitude of Eternity, a perfect Figure and Image of the first Principle, and resembles God the Father in his Person, as to the eternal Nature. The Essence and Substance of it, merely as to what it is purely in itself, is first the wheel of Nature, with the first four Forms.” In the same treatise Böhme says: “The substance and Image of the soul may be resembled to the Earth, having a fair flower growing out of it...” “The Soul is a fiery Eye ... from the eternal Centre of Nature ... a similitude of the First Principle.”³⁶ As an eye, the soul “receives the Light, as the Moon does the glance of the Sun ... for the life of the soul has its original in the Fire.”³⁷

Figure 49 and 50

[705] Figure 49 is especially interesting because it shows us very clearly in what relationship the picture stands to the painter. The patient (the same as did Fig. 42) has a shadow problem. The female figure in the picture represents her dark, chthonic side. She is standing in front of a wheel with four spokes, the two together forming an eight-rayed mandala. From her head spring four snakes,³⁸ expressing the tetradic nature of consciousness, but—in accordance with the demonic character of the picture—they do this in an evil and nefarious way, since they represent evil and destructive thoughts. The entire figure is wrapped in flames, emitting a dazzling light. She is like a fiery demon, a salamander, the medieval conception of a fire sprite. Fire expresses an intense transformation process. Hence the *prima materia* in alchemy was symbolized by the salamander in the fire, as the next picture shows.³⁹ The spear- or arrow-head expresses “direction”: it is pointing upwards from the middle of the head. Everything that the fire consumes rises up to the seat of the gods. The dragon glowing in the fire becomes volatilized; illumination comes through the fiery torment. Figure 49 tells us something about the background of the transformation process. It depicts a state of suffering, reminiscent on the one hand of crucifixion and on the other of Ixion bound to the wheel. From this it is evident that individuation, or becoming whole, is neither a *summum bonum* nor a *summum*

desideratum, but the painful experience of the union of opposites. That is the real meaning of the cross in the circle, and that is why the cross has an apotropaic effect, because, pointed at evil, it shows evil that it is already included and has therefore lost its destructive power.

Figure 51

[706] This picture was done by a sixty-year-old woman patient with a similar problem: A fiery demon mounts through the night towards a star. There he passes over from a chaotic into an ordered and fixed state. The star stands for the transcendent totality, the demon for the animus, who, like the anima, is the connecting link between conscious and unconscious. The picture recalls the antique symbolism found, for instance, in Plutarch:⁴⁰ The soul is only partly in the body, the other part is outside it and soars above man like a star symbolizing his “genius.” The same conception can be found among the alchemists.

Figure 52

[707] Picture by the same patient as before, showing flames with a soul rising up from them, as if swimming. The motif is repeated in [Figure 53](#). Exactly the same thing—and with the same meaning—can be found in the Codex Rhenoviensis (fifteenth century), Zurich (Fig. 54). The souls of the calcined *prima materia* escape as vapours, in the form of human figures looking like children (homunculi). In the fire is the dragon, the chthonic form of the *anima mundi*, which is being transmuted.

Figure 53 and 54

[708] Here I must remark that not only did the patient have no knowledge of alchemy but that I myself knew nothing at that time of the alchemical picture material. The resemblance between these two pictures, striking as it is, is nothing extraordinary, since the great problem and concern of philosophical alchemy was the same as underlies the psychology of the unconscious, namely individuation, the integration of the self. Similar causes (other things being equal) have similar effects, and similar psychological situations make use of the same symbols, which on their side rest on archetypal foundations, as I have shown in the case of alchemy.

Conclusion

[709] I hope I have succeeded in giving the reader some idea of mandala symbolism with the help of these pictures. Naturally my exposition aims at nothing more than a superficial survey of the empirical material on which comparative research is based. I

have indicated a few parallels that may point the way to further historical and ethnic comparisons, but have refrained from a more complete and more thorough exposition because it would have taken me too far.

[710] I need say only a few words about the functional significance of the mandala, as I have discussed this theme several times before. Moreover, if we have a little feeling in our fingertips we can guess from these pictures, painted with the greatest devotion but with unskilful hands, what is the deeper meaning that the patients tried to put into them and express through them. They are *yantras* in the Indian sense, instruments of meditation, concentration, and self-immersion, for the purpose of realizing inner experience, as I have explained in the commentary to the *Golden Flower*. At the same time they serve to produce an inner order—which is why, when they appear in a series, they often follow chaotic, disordered states marked by conflict and anxiety. They express the idea of a safe refuge, of inner reconciliation and wholeness.

[711] I could produce many more pictures from all parts of the world, and one would be astonished to see how these symbols are governed by the same fundamental laws that can be observed in individual mandalas. In view of the fact that all the mandalas shown here were new and uninfluenced products, we are driven to the conclusion that there must be a transconscious disposition in every individual which is able to produce the same or very similar symbols at all times and in all places. Since this disposition is usually not a conscious possession of the individual I have called it the *collective unconscious*, and, as the bases of its symbolical products, I postulate the existence of primordial images, the *archetypes*. I need hardly add that the identity of unconscious individual contents with their ethnic parallels is expressed not merely in their form but in their meaning.

[712] Knowledge of the common origin of these unconsciously preformed symbols has been totally lost to us. In order to recover it, we have to read old texts and investigate old cultures, so as to gain an understanding of the things our patients bring us today in explanation of their psychic development. And when we penetrate a little more deeply below the surface of the psyche, we come upon historical layers which are not just dead dust, but alive and continuously active in everyone—maybe to a degree that we cannot imagine in the present state of our knowledge.

APPENDIX

MANDALAS¹

[713] The Sanskrit word *mandala* means “circle” in the ordinary sense of the word. In the sphere of religious practices and in psychology it denotes circular images, which are drawn, painted, modelled, or danced. Plastic structures of this kind are to be found, for instance, in Tibetan Buddhism, and as dance figures these circular patterns occur also in Dervish monasteries. As psychological phenomena they appear spontaneously in dreams, in certain states of conflict, and in cases of schizophrenia. Very frequently they contain a quaternity or a multiple of four, in the form of a cross, a star, a square, an octagon, etc. In alchemy we encounter this motif in the form of *quadratura circuli*.

[714] In Tibetan Buddhism the figure has the significance of a ritual instrument (*yantra*), whose purpose is to assist meditation and concentration. Its meaning in alchemy is somewhat similar, inasmuch as it represents the synthesis of the four elements which are forever tending to fall apart. Its spontaneous occurrence in modern individuals enables psychological research to make a closer investigation into its functional meaning. As a rule a mandala occurs in conditions of psychic dissociation or disorientation, for instance in the case of children between the ages of eight and eleven whose parents are about to be divorced, or in adults who, as the result of a neurosis and its treatment, are confronted with the problem of opposites in human nature and are consequently disoriented; or again in schizophrenics whose view of the world has become confused, owing to the invasion of incomprehensible contents from the unconscious. In such cases it is easy to see how the severe pattern imposed by a circular image of this kind compensates the disorder and confusion of the psychic state—namely, through the construction of a central point to which everything is related, or by a concentric arrangement of the disordered multiplicity and of contradictory and irreconcilable elements. This is evidently an *attempt at self-healing* on the part of Nature, which does not spring from conscious reflection but from an instinctive impulse. Here, as comparative research has shown, a fundamental schema is made use of, an archetype which, so to speak, occurs everywhere and by no means owes its individual existence to tradition, any more than the instincts would need to be transmitted in that way. Instincts are given in the case of every newborn individual and belong to the inalienable stock of those qualities which characterize a species. What psychology designates as archetype is really a particular, frequently occurring, formal aspect of instinct, and is just as much an *a priori* factor as the latter.

Therefore, despite external differences, we find a fundamental conformity in mandalas regardless of their origin in time and space.

[715] The “squaring of the circle” is one of the many archetypal motifs which form the basic patterns of our dreams and fantasies. But it is distinguished by the fact that it is one of the most important of them from the functional point of view. Indeed, it could even be called the *archetype of wholeness*. Because of this significance, the “quaternity of the One” is the schema for all images of God, as depicted in the visions of Ezekiel, Daniel, and Enoch, and as the representation of Horus with his four sons also shows. The latter suggests an interesting differentiation, inasmuch as there are occasionally representations in which three of the sons have animals’ heads and only one a human head, in keeping with the Old Testament visions as well as with the emblems of the seraphim which were transferred to the evangelists, and—last but not least—with the nature of the Gospels themselves: three of which are synoptic and one “Gnostic.” Here I must add that, ever since the opening of Plato’s *Timaeus* (“One, two, three ... but where, my dear Socrates, is the fourth?”) and right up to the Cabiri scene in *Faust*, the motif of four as three and one was the ever-recurring preoccupation of alchemy.

[716] The profound significance of the quaternity with its singular process of differentiation extending over the centuries, and now manifest in the latest development of the Christian symbol,² may explain why *Du* chose just the archetype of wholeness as an example of symbol formation. For, just as this symbol claims a central position in the historical documents, individually too it has an outstanding significance. As is to be expected, individual mandalas display an enormous variety. The overwhelming majority are characterized by the circle and the quaternity. In a few, however, the three or the five predominates, for which there are usually special reasons.

[717] Whereas ritual mandalas always display a definite style and a limited number of typical motifs as their content, individual mandalas make use of a well-nigh unlimited wealth of motifs and symbolic allusions, from which it can easily be seen that they are endeavouring to express either the totality of the individual in his inner or outer experience of the world, or its essential point of reference. Their object is the *self* in contradistinction to the *ego*, which is only the point of reference for consciousness, whereas the self comprises the totality of the psyche altogether, i.e., conscious *and* unconscious. It is therefore not unusual for individual mandalas to display a division into a light and a dark half, together with their typical symbols. An historical example of this kind is Jakob Böhme’s mandala, in his treatise *XL Questions concerning the Soule*. It is at the same time an image of God and is designated as such. This is not a matter of chance, for Indian philosophy, which

developed the idea of the self, Atman or Purusha, to the highest degree, makes no distinction in principle between the human essence and the divine. Correspondingly, in the Western mandala, the *scintilla* or soul-spark, the innermost divine essence of man, is characterized by symbols which can just as well express a God-image, namely the image of Deity unfolding in the world, in nature, and in man.

[718] The fact that images of this kind have under certain circumstances a considerable therapeutic effect on their authors is empirically proved and also readily understandable, in that they often represent very bold attempts to see and put together apparently irreconcilable opposites and bridge over apparently hopeless splits. Even the mere attempt in this direction usually has a healing effect, but only when it is done spontaneously. Nothing can be expected from an artificial repetition or a deliberate imitation of such images.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum... Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]

ARTIS AURIFERAE quam chemiam vocant... Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i. Allegoriae super librum Turbae [pp. 139–45]
- ii. Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
- iii. [Zosimus:] Rosinus ad Sarratantam episcopum [pp. 277–319]
- iv. [Kallid:] Calidis Liber secretorum [pp. 325–51]
- v. Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]
- vi. Rachaidibus: De materia philosophici lapidis [pp. 397–404]
- vii. Liber de arte chymica [pp. 575–631]

VOLUME II

- viii Rosarium philosophorum [pp. 204–384]; contains a version of the “Visio Arislei,” pp. 246ff. Another edition of the *Artis auriferae*, occasionally quoted in this volume, appeared in 1572 at Basel; contains the “Tractatus aureus,” pp. 641ff.

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus ...* Coloniae Allobrogum [Geneva], 1702, 2 vols.

Contents quoted in this volume:

VOLUME I

- i Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–45]

ii Morienus: Liber de compositione alchemiae [pp. 509–19]

VOLUME II

iii Sendivogius: Epistola XIII [p. 496]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus ... continens. Ursellis [Ursel] and Argentorati [Strasbourg], 1602–61. 6 vols. (Vols. I–III, Ursel, 1602; Vols. IV–VI, Strasbourg, 1613, 1622, 1661 respectively.)

Contents quoted in this volume:

VOLUME I

i Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]

ii Dorn: De tenebris contra Naturam et vita brevi [pp. 518–35]

iii Dorn: De transmutatione metallorum [pp. 563–646]

VOLUME II

iv Dee: Monas hieroglyphica [pp. 218–43]

VOLUME IV

v Hermetis Trismegisti Tractatus vere aureus de lapide philosophici secreto [pp. 672–797; usually referred to as “Tractatus aureus”]

vi David Lagneus: Harmonia seu Consensus philosophorum chemicorum (frequently called Harmonia chemica) [pp. 813–903]

VOLUME V

vii Mennens: De aureo vellere ... libri tres [pp. 267–470]

VOLUME VI

viii. Vigenerus (Blaise de Vigenère): Tractatus de igne et sale [pp.1–139]

B. GENERAL BIBLIOGRAPHY

ABRAHAM, KARL. *Dreams and Myths*. Translated by William A. White. (Nervous and Mental Disease Monograph Series, 15.) New York, 1913. (Original: *Traum und Mythos*. Schriften zur angewandten Seelenkunde, 4. Vienna, 1909.)

ADLER, GERHARD. *Studies in Analytical Psychology*. London, 1948; 2nd edn., London, 1966, New York, 1967.

AELIAN. *De natura animalium*, etc. Edited by Rudolf Hercher. Paris, 1858.

AETIUS. *De placitis philosophorum reliquiae*. In: HERMANN DIELS (ed.). *Doxographi Graeci*. Berlin, 1879.

AFANAS'EV, E. N. *Russian Fairy Tales*. Translated by Norbert Guterman. New York, [1946].

AGRICOLA, GEORG. *De animantibus subterraneis*. Basel, 1549.

ALDROVANDUS, ULYSSES [Ulisse Aldrovandi]. *Dendrologiae libri duo*. Bologna, 1668; another edn., 1671.

THE COLLECTED WORKS OF *C. G. JUNG*

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena
(1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3 THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

+4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero
Symbols of the Mother and of Rebirth
The Battle for Deliverance from the Mother
The Dual Mother
The Sacrifice
Epilogue
Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction
The Problem of Types in the History of Classical and Medieval
Thought
Schiller's Ideas on the Type Problem
The Apollinian and the Dionysian
The Type Problem in Human Character
The Type Problem in Poetry
The Type Problem in Psychopathology
The Type Problem in Aesthetics
The Type Problem in Modern Philosophy
The Type Problem in Biography
General Description of the Types
Definitions
Epilogue
Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)
The Relations between the Ego and the Unconscious (1928)
Appendix: New Paths in Psychology (1912); The Structure of the Unconscious
(1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)
The Transcendent Function ([1916]/1957)
A Review of the Complex Theory (1934)
The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)

Analytical Psychology and *Weltanschauung* (1928/1931)

The Real and the Surreal (1933)

The Stages of Life (1930–1931)

The Soul and Death (1934)

Synchronicity: An Acausal Connecting Principle (1952)

Appendix: On Synchronicity (1951)

* 9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)

The Concept of the Collective Unconscious (1936)

Concerning the Archetypes, with Special Reference to the Anima
Concept (1936/1954)

Psychological Aspects of the Mother Archetype (1938/1954)

Concerning Rebirth (1940/1950)

The Psychology of the Child Archetype (1940)

The Psychological Aspects of the Kore (1941)

The Phenomenology of the Spirit in Fairytales (1945/1948)

On the Psychology of the Trickster-Figure (1954)

Conscious, Unconscious, and Individuation (1939)

A Study in the Process of Individuation (1934/1950)

Concerning Mandala Symbolism (1950)

Appendix: Mandalas (1955)

* 9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

◦ 10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff’s “Studies in Jungian Psychology” (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling's "America Set Free" (1930) and "La Révolution Mondiale" (1934)

The Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

11 PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White's "God and the Unconscious" and Werblowsky's "Lucifer and Prometheus" (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on "The Tibetan Book of the Great Liberation" (1939/1954) and "The Tibetan Book of the Dead" (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of the Opposites

Rex and Regina

Adam and Eve

The Conjunction

15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses”: A Monologue (1932)

Picasso (1932)

16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes's "Analyses der Kinderseele" (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18. THE SYMBOLIC LIFE

Miscellaneous Writings

19. GENERAL BIBLIOGRAPHY OF C. G. JUNG'S WRITINGS

20. GENERAL INDEX TO THE COLLECTED WORKS

C. G. JUNG. LETTERS

Selected and edited by Gerhard Adler, in collaboration with Aniela Jaffé. Translations from the German by R.F.C. Hull.

VOL. 1: 1906–1950

VOL. 2: 1951–1961

THE FREUD/JUNG LETTERS

Edited by William McGuire, translated by
Ralph Manheim and R.F.C. Hull

C. G. JUNG SPEAKING: Interviews and Encounters

Edited by William McGuire and R.F.C. Hull

C. G. JUNG: Word and Image

Edited by Aniela Jaffé

*In *Psychiatric Studies*, vol. 1 of the *Coll. Works*.

¹ [First published in the *Eranos-Jahrbuch 1934*, and later revised and published in *Von den Wurzeln des Bewusstseins* (Zurich, 1954), from which version the present translation is made. The translation of the original version, by Stanley Dell, in *The Integration of the Personality* (New York, 1939; London, 1940), has been freely consulted.—EDITORS.]

² In his later works Freud differentiated the basic view mentioned here. He called the instinctual psyche the “id,” and his “super-ego” denotes the collective consciousness, of which the individual is partly conscious and partly unconscious (because it is repressed).

³ *De opificio mundi*, I, 69. Cf. Colson/Whitaker trans., I, p. 55.

⁴ *Adversus haereses* II, 7, 5: “Mundi fabricator non a semetipso fecit haec, sed de alienis archetypis transtulit.” (Cf. Roberts/Rambaut trans., I, p. 139.)

⁵ Scott, *Hermetica*, I, p. 140.

⁶ In Migne, *P.G.*, vol. 3, col. 144.

⁷ *Ibid.*, col. 595. Cf. *The Divine Names* (trans. by Rolt), pp. 62, 72.

⁸ Migne, *P.L.*, vol. 40, col. 30. “Archetype” is used in the same way by the alchemists, as in the “Tractatus aureus” of Hermes Trismegistus (*Theatrum chemicum*, IV, 1613, p. 718): “As God [contains] all the treasure of his godhead ... hidden in himself as in an archetype [*in se tanquam archetypo absconditum*] ... in like manner Saturn carries the similitudes of metallic bodies hiddenly in himself.” In the “Tractatus de igne et sale” of Vigenerus (*Theatr. chem.*, VI, 1661, p. 3), the world is “ad archetypi sui similitudinem factus” (made after the likeness of its archetype) and is therefore called the “magnus homo” (the “homo maximus” of Swedenborg).

⁹ One must, for the sake of accuracy, distinguish between “archetype” and “archetypal ideas.” The archetype as such is a hypothetical and irrepresentable model, something like the “pattern of behaviour” in biology. Cf. “On the Nature of the Psyche,” sec. 7.

¹⁰ An allegory is a paraphrase of a conscious content, whereas a symbol is the best possible expression for an unconscious content whose nature can only be guessed, because it is still unknown.

¹¹ Cf. my papers on the divine child and the Kore in the present volume, and Kerényi’s complementary essays in *Essays on [or Introduction to] a Science of Mythology*.

¹² [Schiller, *Piccolomini*, II, 6.—EDITORS.]

¹³ Cf. my “Brother Klaus.”

¹⁴ Heinrich Woelflin, also called by the Latin form *Lupulus*, born 1470, humanist and director of Latin studies at Bern. Cited in Fritz Blanke, *Bruder Klaus von Flüe*, pp. 92f.

¹⁵ *Ibid.*, p. 94.

¹⁶ *Ein gesichte Bruder Clausen ynn Schweytz und seine deutunge* (Wittemberg, 1528), p. 5. Cited in Alban Stoeckli, O. M. Cap., *Die Visionen des seligen Bruder Klaus*, p. 34.

¹⁷ M. B. Lavaud, O.P. (*Vie Profonde de Nicolas de Flue*) gives just as apt a parallel with a text from the *Horologium sapientiae* of Henry Suso, where the apocalyptic Christ appears as an infuriated and wrathful avenger, very much in contrast to the Jesus who preached the Sermon on the Mount. [Cf. Suso, *Little Book of Eternal Wisdom*, Clark trans., pp. 77–78.—EDITORS.]

- ¹⁸ *Ein nützlicher und loblicher Tractat von Bruder Claus und einem Bilger* (1488).
- ¹⁹ Blanke, pp. 95ff.
- ²⁰ London, 1647.
- ²¹ Cf. my “Study in the Process of Individuation,” *infra*.
- ²² [Cf. *Der Geist als Widersacher der Seele*.]
- ²³ [Cf., e.g., *Die Stellung des Menschen im Kosmos*.—EDITORS.]
- ²⁴ James, *Apocryphal New Testament*, pp. 411–15.
- ²⁵ Augustine, *Confessions*, Lib. XIII, cap. XXI.
- ²⁶ The fact that it was another theologian who dreamed this dream is not so surprising, since priests and clergymen have a professional interest in the motif of “ascent.” They have to speak of it so often that the question naturally arises as to what they are doing about their own spiritual ascent.
- ²⁷ [The “Fischottermärchen” in *Märchen aus dem Unbewussten*, pp. 14ff., 43ff.—EDITORS.]
- ²⁸ Cf. Paracelsus, *De vita longa* (1562), and my commentary in “Paracelsus as a Spiritual Phenomenon” [concerning Melusina, pars. 179f., 215ff.].
- ²⁹ Cf. the picture of the adept in *Liber mutus* (1677) (fig. 13 in *The Practice of Psychotherapy*, p. 320). He is fishing, and has caught a nixie. His *soror mystica*, however, catches birds in her net, symbolizing the animus. The idea of the anima often turns up in the literature of the 16th and 17th cent., for instance in Richardus Vitus, Aldrovandus, and the commentator of the *Tractatus aureus*. Cf. “The Enigma of Bologna” in my *Mysterium Coniunctionis*, pars. 51ff.
- ³⁰ La Rochefoucauld, *Pensées DLX*. Quoted in *Symbols of Transformation*, p. 174.
- ³¹ Cf. *The Dream of Poliphilo*, ed. by Linda Fierz-David. [For Haggard and Benoît, see the bibliography.—EDITORS.]
- ³² “Bilder und Symbole aus E. T. A. Hoffmanns Märchen ‘Der Goldne Topf.’”
- ³³ I have expounded my views at some length in “Psychology of the Transference.”
- ³⁴ I am referring here to literary examples that are generally accessible and not to clinical material. These are quite sufficient for our purpose.
- ³⁵ I.e., coming to terms with the contents of the collective unconscious in general. This is *the* great task of the integration process.
- ³⁶ A good example is the little book by Gustav Schmalz, *Östliche Weisheit und Westliche Psychotherapie*.
- ³⁷ I have already used this dream in “The Phenomenology of the Spirit in Fairytales,” par. 398, *infra*, and in “Psychology and Education,” pp. 117ff., as an example of a “big” dream, without commenting on it more closely.
- ³⁸ Cf. the motif of the “old king” in alchemy. *Psychology and Alchemy*, pars. 434ff.
- ³⁹ Cf. James, *The Apocryphal New Testament*, pp. 27f.
- ⁴⁰ Reitzenstein interprets the “Shepherd” of Hermas as a Christian rejoinder to the Poimandres writings.
- ⁴¹ Arthur Avalon, *The Serpent Power*.
- ⁴² Erwin Rousselle, “Spiritual Guidance in Contemporary Taoism.”
- ⁴³ R. Bernoulli, “Zur Symbolik geometrischer Figuren und Zahlen,” pp. 397ff.
- ⁴⁴ “Analytische Beobachtungen über Phantasien eines Schizophrenen,” pp. 504ff.

⁴⁵ John Cusance, *Wisdom, Madness, and Folly*.

⁴⁶ Ruland, *Lexicon alchemiae* (1612).

⁴⁷ Cf. *Symbols of Transformation*.

⁴⁸ *Aion*, Part II of this volume.

⁴⁹ *Psychology and Alchemy*.

1 [Originally given as a lecture to the Abernethian Society at St. Bartholomew's Hospital, London, on Oct. 19, 1936, and published in the Hospital's *Journal*, XLIV (1936/37), 46–49, 64–66. The present version has been slightly revised by the author and edited in terminology.—EDITORS.]

2 *Leonardo da Vinci and a Memory of His Childhood*, sec. IV.

3 [Cf. the trans. by George Boas, pp. 63ff., and Freud, *Leonardo*, sec. II.—EDITORS.]

4 *Wandlungen und Symbole der Libido* (orig. 1912). [Trans. as *Psychology of the Unconscious*, 1916. Cf. the revised edition, *Symbols of Transformation*, pars. 149ff., 223.—EDITORS.]

5 *Eine Mithrasliturgie*. [As the author subsequently learned, the 1910 edition was actually the second, there having been a first edition in 1903. The patient had, however, been committed some years before 1903.—EDITORS.]

6 *Ibid.*, pp. 6ff.

7 *Psychology and Alchemy*, Part II.

- 1 [Originally published as “Über den Archetypus mit besonderer Berücksichtigung des Animabegriffes” in the *Zentralblatt für Psychotherapie und ihre Grenzgebiete* (Leipzig), IX (1936) : 5, 259–75. Revised and republished in *Von den Wurzeln des Bewusstseins* (Zurich, 1954), from which version the present translation is made.—EDITORS.]
- 2 *Elemente der Psychophysik* (1860).
- 3 *Principles of Physiological Psychology* (orig. 1874).
- 4 Cf. G. H. von Schubert’s compilation, *Altes und Neues aus dem Gebiet der innern Seelenkunde* (1825–44).
- 5 First published 1829. Trans. as *The Seeress of Prevorst* (1859).
- 6 *L’Automatisme psychologique* (1889); *The Mental State of Hystericals* (orig., 1893); *Névroses et idées fixes* (1898).
- 7 *From India to the Planet Mars* (orig., 1900), and “Nouvelles Observations sur un cas de somnambulisme avec glossolalie.”
- 8 I am thinking especially of shamanism with its idea of the “celestial wife” (Eliade, *Shamanism*, pp. 76–81).
- 9 Spencer and Gillen, *The Northern Tribes of Central Australia*, pp. 331 and elsewhere. Also Crawley, *The Idea of the Soul*, pp. 87f.
- 10 *Commentary on the Dream of Scipio*.
- 11 Cf. my “Commentary on *The Secret of the Golden Flower*,” pars. 57ff., and Chantepie de la Saussaye, *Lehrbuch der Religionsgeschichte*, I, p. 71.
- 12 This standpoint derives from Kant’s theory of knowledge and has nothing to do with materialism.
- 13 Winthuis, *Das Zweigeschlechterwesen bei den Zentralaustralern und anderen Völkern*.
- 14 Especially in the system of the Valentinians. Cf. Irenaeus, *Adversus haereses*.
- 15 Cf. *The I Ching or Book of Changes*. [Also Needham, *Science and Civilization in China*, II, pp. 273f.—EDITORS.]
- 16 Hermetic alchemical philosophy from the 14th to the 17th cents. provides a wealth of instructive examples. For our purposes, a glimpse into Michael Maier’s *Symbola aureae mensae* (1617) would suffice.
- 17 There are of course cases where, in spite of the patient’s seemingly sufficient insight, the reactive effect of the projection does not cease, and the expected liberation does not take place. I have often observed that in such cases meaningful but unconscious contents are still bound up with the projection carrier. It is these contents that keep up the effect of the projection, although it has apparently been seen through.
- 18 Fl. c. 300 B.C. Cf. Block, *Euhémère: son livre et sa doctrine*.
- 19 This is not to overlook the fact that there is probably a far greater number of visions which agree with the dogma. Nevertheless, they are not spontaneous and autonomous projections in the strict sense but are *visualizations of conscious contents*, evoked through prayer, autosuggestion, and heterosuggestion. Most spiritual exercises have this effect, and so do the prescribed meditation practices of the East. In any thorough investigation of such visions it would have to be ascertained, among other things, what the actual vision was and how far dogmatic elaboration contributed to its form.
- 20 Cf. Stoeckli, *Die Visionen des seligen Bruder Klaus*, and Blanke, *Bruder Klaus von Flüe*.
- 21 The peculiar love-story of this youngest Aeon can be found in Irenaeus, *Adv. haer.*, I, 2, 2ff. (Roberts/Rambaut trans., I, pp. 7ff.)
- 22 Cf. my “Brother Klaus.”

²³ Guillaume wrote three *Pèlerinages* in the manner of the Divine Comedy, but independently of Dante, between 1330 and 1350. He was Prior of the Cistercian monastery at Châlis, in Normandy. Cf. Delacotte, *Guillaume de Digulleville: Trois Romans-poèmes du XIV siècle*. [Also cf. *Psychology and Alchemy*, pars. 315ff.—EDITORS.]

²⁴ *Anna Kingsford: Her Life, Letters, Diary, and Work*, I, pp. 130. Maitland's vision is similar in form and meaning to the one in the Poimandres (Scott, *Hermetica*, I, Libellus I, pp. 114ff.), where the spiritual light is described as "male-female." I do not know whether Maitland was acquainted with the Poimandres; probably not.

²⁵ Hubert and Mauss (*Mélanges d'histoire des religions*, preface, p. xxix) call these *a priori* thought-forms "categories," presumably with reference to Kant: "They exist ordinarily as habits which govern consciousness, but are themselves unconscious." The authors conjecture that the primordial images are conditioned by language. This conjecture may be correct in certain cases, but in general it is contradicted by the fact that a great many archetypal images and associations are brought to light by dream psychology and psychopathology which would be absolutely incommunicable through language.

²⁶ Conforming to the bisexual Original Man in Plato, *Symposium*, XIV, and to the hermaphroditic Primal Beings in general.

²⁷ The "dual birth" refers to the motif, well known from hero mythology, which makes the hero descend from divine as well as from human parents. In most mysteries and religions it plays an important role as a baptism or rebirth motif. It was this motif that misled Freud in his study of Leonardo da Vinci. Without taking account of the fact that Leonardo was by no means the only artist to paint the motif of St. Anne, Mary, and the Christ-child, Freud tried to reduce Anne and Mary, the grandmother and mother, to the mother and stepmother of Leonardo; in other words, to assimilate the painting to his theory. But did the other painters all have stepmothers? What prompted Freud to this violent interpretation was obviously the fantasy of dual descent suggested by Leonardo's biography. This fantasy covered up the inconvenient reality that St. Anne was the grandmother, and prevented Freud from inquiring into the biographies of other artists who also painted St. Anne. The "religious inhibition of thought" mentioned on p. 79 (1957 edn.) proved true of the author himself. Similarly, the incest theory on which he lays so much stress is based on another archetype, the well-known incest motif frequently met with in hero myths. It is logically derived from the original hermaphrodite type, which seems to go far back into prehistory. Whenever a psychological theory is forcibly applied, we have reason to suspect that an archetypal fantasy-image is trying to distort reality, thus bearing out Freud's own idea of the "religious inhibition of thought." But to explain the genesis of archetypes by means of the incest theory is about as useful as ladling water from one kettle into another kettle standing beside it, which is connected with the first by a pipe. You cannot explain one archetype by another; that is, it is impossible to say where the archetype comes from, because there is no Archimedean point outside the *a priori* conditions it represents.

¹ This is the etymological meaning of the three *gunas*. See Weckerling, *Ananda-rama-makhi: Das Glück des Lebens*, pp. 21ff., and Garbe, *Die Samkhya Philosophie*, pp. 272ff. [Cf. also Zimmer, *Philosophies of India*, index, s.v.—EDITORS.]

² American psychology can supply us with any amount of examples. A blistering but instructive lampoon on this subject is Philip Wylie's *Generation of Vipers*.

1 But the father-complex also plays a considerable part here.

2 [Cf. *Two Essays on Analytical Psychology*, pars. 16ff.—EDITORS.]

3 In the present section I propose to present a series of different “types” of mother-complex; in formulating them, I am drawing on my own therapeutic experiences. “Types” are not individual cases, neither are they freely invented schemata into which all individual cases have to be fitted. “Types” are ideal instances, or pictures of the average run of experience, with which no single individual can be identified. People whose experience is confined to books or psychological laboratories can form no proper idea of the cumulative experience of a practising psychologist.

4 This statement is based on the repeated experience that, where love is lacking, power fills the vacuum.

5 In my English seminars [privately distributed] I have called this the “natural mind.”

6 Here the initiative comes from the daughter. In other cases the father’s psychology is responsible; his projection of the anima arouses an incestuous fixation in the daughter.

7 Herein lies the difference between this type of complex and the feminine father-complex related to it, where the “father” is mothered and coddled.

8 This does not mean that they are unconscious of the *facts*. It is only their *meaning* that escapes them.

9 This type of woman has an oddly disarming effect on her husband, but only until he discovers that the person he has married and who shares his nuptial bed is his mother-in-law.

^{26a} [“Daily Conversations with Dr. Pifffoel,” in her *Intimate Journal*.—EDITORS.]

²⁷ A Pseudo-Aristotle quotation in *Rosarium philosophorum* (1550), fol. Q.

²⁸ “Largiri vis mihi meum” is the usual reading, as in the first edition (1556) of *Ars chemica*, under the title “Septem tractatus seu capitula Hermetis Trismegisti aurei,” and also in *Theatrum chemicum*, IV (1613), and Manget, *Bibliotheca chemica*, I (1702), pp. 400ff. In the *Rosarium philosophorum* (1550), fol. E, there is a different reading: “Largire mihi ius meum ut te adiuvem” (Give me my due that I may help thee). This is one of the interpretative readings for which the anonymous author of the *Rosarium* is responsible. Despite their arbitrariness they have an important bearing on the interpretation of alchemy. [Cf. *Psychology and Alchemy*, par. 139, n.17.]

²⁹ *Biblio. chem.*, I, p. 430b.

³⁰ Detailed documentation in *Psychology and Alchemy*, par. 84, and “The Spirit Mercurius,” pars. 278ff., 287ff.

³¹ “Tanquam praeceptor intermedius inter lapidem et discipulum.” (*Biblio. chem.*, I, p. 430b.) Cf. the beautiful prayer of Astrampsychos, beginning “Come to me, Lord Hermes,” and ending “I am thou and thou art I.” (Reitzenstein, *Poimandres*, p. 21.)

³² The stone and its transformation are represented:

(1) as the resurrection of the *homo philosophicus*, the Second Adam (“Aurea hora,” *Art is auriferae*, 1593, I, p. 195);

(2) as the human soul (“Book of Krates,” Berthelot, *La Chimie au moyen âge*, III, p. 50);

(3) as a being below and above man: “This stone is under thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals” (“Rosinus ad Sarratantam,” *Art. aurif.*, I, p. 310);

(4) as life: “blood is soul and soul is life and life is our Stone” (“Tractatulus Aristotelis,” *ibid.*, p. 364),

(5) as the resurrection of the dead (“Calidis liber secretorum,” *ibid.*, p. 347; also “Rachaidibi fragmentum,” *ibid.*, p. 398);

(6) as the Virgin Mary (“De arte chymica,” *ibid.*, p. 582); and

(7) as man himself: “thou art its ore ... and it is extracted from thee ... and it remains inseparably with thee” (“Rosinus ad Sarratantam,” *ibid.*, p. 311).

1 [The Dawood trans. of the Koran is quoted, sometimes with modifications. The 18th Sura is at pp. 89–98.—EDITORS.]

2 Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, II.

3 Cf. especially the crowning vision in the dream of Zosimos: “And another [came] behind him, bringing one adorned round with signs, clad in white and comely to see, who was named the Meridian of the Sun.” Cf. “The Visions of Zosimos,” par. 87 (III, v bis).

4 Matthews, *The Mountain Chant*, and Stevenson, *Ceremonial of Hasjelti Dailjis*.

5 An account of the secret doctrine hinted at in this treatise may be found in my “Paracelsus as a Spiritual Phenomenon,” pars. 169ff.

6 The different versions of the legend speak sometimes of seven and sometimes of eight disciples. According to the account given in the Koran, the eighth is a dog. The 18th Sura mentions still other versions: “Some will say: ‘The sleepers were three: their dog was the fourth.’ Others, guessing at the unknown, will say: ‘They were five; their dog was the sixth.’ And yet others: ‘Seven; their dog was the eighth.’” It is evident, therefore, that the dog is to be taken into account. This would seem to be an instance of that characteristic wavering between seven and eight (or three and four, as the case may be), which I have pointed out in *Psychology and Alchemy*, pars. 200ff. There the wavering between seven and eight is connected with the appearance of Mephistopheles, who, as we know, materialized out of the black poodle. In the case of three and four, the fourth is the devil or the female principle, and on a higher level the Mater Dei. (Cf. “Psychology and Religion,” pars. 124ff.) We may be dealing with the same kind of ambiguity as in the numbering of the Egyptian nonad (*paut* = ‘company of gods’; cf. Budge, *The Gods of the Egyptians*, I, p. 88). The Khidr legend relates to the persecution of the Christians under Decius (c. A.D. 250). The scene is Ephesus, where St. John lay “sleeping,” but not dead. The seven sleepers woke up again during the reign of Theodosius II (408–450); thus they had slept not quite 200 years.

7 The seven are the planetary gods of the ancients. Cf. Bousset, *Hauptprobleme der Gnosis*, pp. 23ff.

8 Obedience under the law on the one hand, and the freedom of the “children of God,” the reborn, on the other, is discussed at length in the Epistles of St. Paul. He distinguishes not only between two different classes of men, who are separated by a greater or lesser development of consciousness, but also between the higher and lower man in one and the same individual. The *sarkikos* (carnal man) remains eternally under the law; the *pneumatikos* (spiritual man) alone is capable of being reborn into freedom. This is quite in keeping with what seems such an insoluble paradox: the Church demanding absolute obedience and at the same time proclaiming freedom from the law. So, too, in the Koran text, the legend appeals to the *pneumatikos* and promises rebirth to him that has ears to hear. But he who, like the *sarkikos*, has no inner ear will find satisfaction and safe guidance in blind submission to Allah’s will.

9 Vollers, “Chidher,” *Archiv für Religionswissenschaft*, XII, p. 241. All quotations from the commentaries are extracted from this article.

¹⁰ *Ibid.*, p. 253.

¹¹ Cf. *Aion*, pars. 195ff.

¹² Vollers, p. 244.

¹³ *Ibid.*, p. 260.

¹⁴ *Ibid.*, p. 258.

¹⁵ Cf. the myth in the “Visio Arislei,” especially the version in the *Rosarium philosophorum* (*Art. aurif.*, II, p. 246), likewise the drowning of the sun in the Mercurial Fountain and the green lion who devours the sun (*Art. aurif.*, II, pp. 315, 366). Cf. “The Psychology of the Transference,” pars. 467ff.

¹⁶ The white stone appears on the edge of the vessel, “like Oriental gems, like fish’s eyes.” Cf. Joannes Isaacus Hollandus, *Opera mineralia* (1600), p. 370. Also Lagneus, “Harmonica chemica.” *Theatrum chemicum*, IV (1613), p. 870. The eyes appear at the end of the *nigredo* and with the beginning of the *albedo*. Another simile of the same sort is the *scintillae* that appear in the dark substance. This idea is traced back to Zacharias 4 : 10 (DV): “And they shall rejoice and see the tin plummet in the hand of Zorobabel. These are the seven eyes of the Lord that run to and fro through the whole earth.” (Cf. Eirenaeus Orandus, in the introduction to Nicholas Flamel’s *Exposition of the Hieroglyphicall Figures*, 1624, fol. A 5.) They are the seven eyes of God on the corner-stone of the new temple (Zach. 3 : 9). The number seven suggests the seven stars, the planetary gods, who were depicted by the alchemists in a cave under the earth (Mylius, *Philosophia reformata*, 1622, p. 167). They are the “sleepers enchained in Hades” (Berthelot, *Collection des anciens alchimistes grecs*, IV, xx, 8). This is an allusion to the legend of the seven sleepers.

¹⁷ Vollers, p. 254. This may possibly be due to Christian influence: one thinks of the fish meals of the early Christians and of fish symbolism in general. Vollers himself stresses the analogy between Christ and Khidr. Concerning the fish symbolism, see *Aion*.

¹⁸ Further examples in *Symbols of Transformation*, Part II. I could give many more from alchemy, but shall content myself with the old verse:

“This is the stone, poor and of little price.
Spurned by the fool, but honoured by the wise.”

(*Ros. phil.*, in *Art. aurif.*, II, p. 210.) The “lapis exilis” may be a connecting-link with the “lapsit exillis,” the grail of Wolfram von Eschenbach.

¹⁹ [The Ojibway legend of Mondamin was recorded by H. R. Schoolcraft and became a source for Longfellow’s *Song of Hiawatha*. Cf. M. L. Williams, *School-craft’s Indian Legends*, pp. 58ff.—EDITORS.]

4 A working example in “The Concept of the Collective Unconscious,” pars. 105ff., above.

5 Freud, in his *Interpretation of Dreams* (p. 261), paralleled certain aspects of infantile psychology with the Oedipus legend and observed that its “universal validity” was to be explained in terms of the same infantile premise. The real working out of mythological material was then taken up by my pupils (A. Maeder, “Essai d’interprétation de quelques rêves,” 1907, and “Die Symbolik in den Legenden, Märchen, Gebräuchen, und Träumen,” 1908; F. Riklin, “Über Gefängnispsychosen,” 1907, and *Wishfulfilment and Symbolism in Fairy Tales*, orig. 1908); and by K. Abraham, *Dreams and Myths*, orig. 1909. They were succeeded by Otto Rank of the Viennese school (*The Myth of the Birth of the Hero*, orig. 1922). In the *Psychology of the Unconscious* (orig. 1911; revised and expanded as *Symbols of Transformation*), I presented a somewhat more comprehensive examination of psychic and mythological parallels. Cf. also my essay in this volume, “Concerning the Archetypes, with Special Reference to the Anima Concept.”

6 This fact is well known, and the relevant ethnological literature is too extensive to be mentioned here.

7 Cf. “The Structure of the Psyche,” pars. 330ff.

8 Except for certain cases of spontaneous vision, *automatismes téléologiques* (Flournoy), and the processes in the method of “active imagination” which I have described [e.g., in “The Transcendent Function” and *Mysterium Coniunctionis*, pars. 706, 753f.—EDITORS].

16 An old alchemical authority variously named Morienes, Morienus, Marianus (“De compositione alchemiae,” Manget, *Bibliotheca chemica curiosa*, I, pp. 509ff.). In view of the explicitly alchemical character of *Faust*, Part II, such a connection would not be surprising.

17 Schreber, *Memoirs of My Nervous Illness*.

18 For a general presentation see *infra*, “Conscious, Unconscious, and Individuation.” Special phenomena in the following text, also in *Psychology and Alchemy*, Part II.

19 “The Relations between the Ego and the Unconscious,” Part II, ch. 3 [also “The Transcendent Function.”—EDITORS].

20 *Symbols of Transformation*, index, s.v.

²¹ It may not be superfluous to point out that lay prejudice is always inclined to identify the child motif with the concrete experience “child,” as though the real child were the cause and pre-condition of the existence of the child motif. In psychological reality, however, the empirical idea “child” is only the means (and not the only one) by which to express a psychic fact that cannot be formulated more exactly. Hence by the same token the mythological idea of the child is emphatically not a copy of the empirical child but a *symbol* clearly recognizable as such: it is a wonder-child, a divine child, begotten, born, and brought up in quite extraordinary circumstances, and not—this is the point—a human child. Its deeds are as miraculous or monstrous as its nature and physical constitution. Only on account of these highly unempirical properties is it necessary to speak of a “child motif” at all. Moreover, the mythological “child” has various forms: now a god, giant, Tom Thumb, animal, etc., and this points to a causality that is anything but rational or concretely human. The same is true of the “father” and “mother” archetypes which, mythologically speaking, are equally irrational symbols.

³⁹ *The Flowing Light of the Godhead*.

⁴⁰ Salomon, *Opicinus de Canistris*.

⁴¹ Cf. the diatribe by Bishop Asterius (Foucart, *Mystères of d’Eleusis*, pp. 477ff.). According to Hippolytus’ account the hierophant actually made himself impotent by a draught of hemlock. The self-castration of priests in the worship

of the Mother Goddess is of similar import.

⁴² A more detailed account of these developments is to be found in “The Relations between the Ego and the Unconscious.”

1 To the best of my knowledge, no other suggestions have been made so far. Critics have contented themselves with asserting that no such archetypes exist. Certainly they do not exist, any more than a botanical system exists in nature! But will anyone deny the existence of natural plant-families on that account? Or will anyone deny the occurrence and continual repetition of certain morphological and functional similarities? It is much the same thing in principle with the typical figures of the unconscious. They are forms existing *a priori*, or biological norms of psychic activity.

2 The “personalistic” approach interprets such dreams as “wish-fulfilments.” To many, this kind of interpretation seems the only possible one. These dreams, however, occur in the most varied circumstances, even in circumstances when the wish-fulfilment theory becomes entirely forced or arbitrary. The investigation of motifs in the field of dreams therefore seems to me the more cautious and the more appropriate procedure.

3 The double vision of a salamander, of which Benvenuto Cellini tells in his autobiography, would be an anima-projection caused by the music his father was playing.

4 One of my patients, whose principal difficulty was a negative mother-complex, developed a series of fantasies on a primitive mother-figure, an Indian woman, who instructed her on the nature of woman in general. In these pronouncements a special paragraph is devoted to blood, running as follows: “A woman’s life is close to the *blood*. Every month she is reminded of this, and birth is indeed a bloody business, destructive and creative. A woman is only *permitted* to give birth, but the new life is not *her* creation. In her heart of hearts she knows this and rejoices in the grace that has fallen to her. She is a little mother, not the *Great Mother*. But her little pattern is like the great pattern. If she understands this she is blessed by nature, because she has submitted in the right way and can thus partake of the nourishment of the Great Mother....”

5 Often the moon is simply “there,” as for instance in a fantasy of the chthonic mother in the shape of the “Woman of the Bees” (Josephine D. Bacon, *In the Border Country*, pp. 14ff.): “The path led to a tiny hut of the same colour as the *four great trees* that stood about it. Its door hung wide open, and in the middle of it, on a low stool, there sat an old woman wrapped in a long cloak, looking kindly at her....” The hut was filled with the steady *humming of bees*. In the corner of the hut there was a deep cold *spring*, in which “a white moon and little stars” were reflected. The old woman exhorted the heroine to remember the duties of a woman’s life. In Tantric yoga an “indistinct hum of swarms of love-mad bees” proceeds from the slumbering Shakti (*Shat-Chakra Nirupana*, in Avalon, *The Serpent Power*, p. 29). Cf. *infra*, the dancer who dissolves into a *swarm of bees*. Bees are also, as an allegory, connected with Mary, as the text for the consecration of the Easter candle shows. See Duchesne, *Christian Worship: Its Origin and Evolution*, p. 253.

8 I would refer to the thesis of my pupil Jan Nelken, “Analytische Beobachtungen über Phantasien eines Schizophrenen,” as also to my own analysis of a series of fantasies in *Symbols of Transformation*.

9 Cf. *Symbols of Transformation*. H. G. Baynes’ book, *The Mythology of the Soul*, runs to 939 pages and endeavours to do justice to the material provided by only two cases.

10 [Cf. *infra*, “On the Psychology of the Trickster-Figure.”—EDITORS.]

11 *Theatrum chemicum*, I (1602), pp. 286ff.

¹² “Humanum genus, cui Deo resistere iam innatum est, non desistit media quaerere, quibus proprio conatu laqueos evadat, quos sibimet posuit, ab eo non petens auxilium, a quo solo dependet omnis misericordiae munus. Hinc factum est, ut in sinistram viae partem officinam sibi maximam extruxerint ... huic domui praeest industria, etc. Quod postquam adepti fuerint, ab industria recedentes *in secundam mundi regionem* tendunt: *per infirmitatis pontem* facientes transitum.... At quia bonus Deus retrahere vellet, infirmitates in ipsis dominari permittit, turn rursus ut prius remedium [industrial] a se quaerentes, *ad xenodochium etiam a sinistris constructum* et permaximum confluunt, cui medicina praeest. Ibi pharmacopolarum, chirurgorum et physicorum ingens est copia.” (p. 288.)

¹³ “... pervenietis ad Sophiae castra, quibus excepti, longe vehementiori quam antea cibo reficiemini.... viventis aquae fluviuſ tam admirando fluens artificio de montis apice. (De Sophiae fonte scaturiunt aquael)” [Slightly modified by Professor Jung. Cf. Dorn, pp. 279–80.—EDITORS.]

¹⁴ Only extracts from the dreams are given, so far as they bear on the anima.

¹⁵ The following statements are not meant as “interpretations” of the dreams. They are intended only to sum up the various forms in which the anima appears.

¹⁶ Cf. the third paper in this volume.

1 [First published as a lecture, “Zur Psychologie des Geistes,” in the *Eranos-Jahr-buch* 1945. Revised and published as “Zur Phänomenologie des Geistes im Märchen,” in *Symbolik des Geistes* (Zurich, 1948), from which the present translation was made. This translation was published in a slightly different form in *Spirit and Nature* (Papers from the Eranos Yearbooks, 1; New York, 1953; London, 1954).—EDITORS.]

2 [An Hegelian term, roughly equivalent to our “spirit of man.”—TRANS.]

3 See my “Spirit and Life.”

4 Ludwig Klages, *Der Geist als Widersacher der Seele*.

5 *Soul*, from Old German *saiwaló*, may be cognate with *αιόλος*, ‘quick-moving, changeful of hue, shifting.’ It also has the meaning of ‘wily’ or ‘shifty’; hence an air of probability attaches to the alchemical definition of *anima* as Mercurius.

6 Even if one accepts the view that a self-revelation of spirit—an apparition for instance—is nothing but an hallucination, the fact remains that this is a spontaneous psychic event not subject to our control. At any rate it is an autonomous complex, and that is quite sufficient for our purpose.

7 Cf. *Psychology and Alchemy*, par. 115.

8 Cf. the vision of the “naked boy” in Meister Eckhart (trans. by Evans, I, p. 438).

9 I would remind the reader of the “boys” in Bruno Goetz’s novel *Das Reich ohne Raum*.

10 Cf. the paper on the “Child Archetype” in this volume, pars. 268f.

11 Hence the many miraculous stories about rishis and mahatmas. A cultured Indian with whom I once conversed on the subject of gurus told me. when I asked him who his guru had been, that it was Shankaracharya (who lived in the 8th and 9th cents.) “But that’s the celebrated commentator,” I remarked in amazement. Whereupon he replied, “Yes, so he was; but naturally it was his spirit,” not in the least perturbed by my Western bewilderment.

12 I am indebted to Mrs. H. von Roques and Dr. Marie-Louise von Franz for the fairytale material used here.

13 *Finnische und estnische Volksmärchen*, No. 68, p. 208 [“How an Orphan Boy Unexpectedly Found His Luck”]. [All German collections of tales here cited are listed under “Folktales” in the bibliography, q.v. English titles of tales are given in brackets, though no attempt has been made to locate published translations.—EDITORS.]

14 The mountain stands for the goal of the pilgrimage and ascent, hence it often has the psychological meaning of the self. The *I Ching* describes the goal thus: “The king introduces him / To the Western Mountain” (Wilhelm/Baynes trans., 1967, p. 74 —Hexagram 17, *Sui*, “Following”). Cf. Honorius of Autun (*Expositio in Cantica canticorum*, col. 389): “The mountains are prophets.” Richard of St. Victor says: “Vis videre Christum transfiguratum? Ascende in montem istum, disce cognoscere te ipsum” (Do you wish to see the transfigured Christ? Ascend that mountain and learn to know yourself). (*Benjamin minor*, cols. 53–56.)

15 In this respect we would call attention to the phenomenology of yoga.

16 There are numerous examples of this: *Spanische und Portugiesische Volksmärchen*, pp. 158, 199 [“The White Parrot” and “Queen Rose, or Little Tom”]; *Russische Volksmärchen*, p. 149 [“The Girl with No Hands”]; *Balkanmärchen*, p. 64 [“The Shepherd and the Three Samovilas (Nymphs)”]; *Märchen aus Iran*, pp. 150ff. [“The Secret of the Bath of Windburg”]; *Nordische Volksmärchen*, I, p. 231 [“The Werewolf”].

¹⁷ To the girl looking for her brothers he gives a ball of thread that rolls towards them (*Finnische und Estnische Volksmärchen*, p. 260 [“The Contending Brothers”]). The prince who is searching for the kingdom of heaven is given a boat that goes by itself (*Deutsche Märchen seit Grimm*, pp. 381 f. [“The Iron Boots”]). Other gifts are a flute that sets everybody dancing (*Balkanmärchen*, p. 173 [“The Twelve Crumbs”]), or the path-finding ball, the staff of invisibility (*Nordische Volksmärchen*, I, p. 97 [“The Princess with Twelve Pairs of Golden Shoes”]), miraculous dogs (*ibid.*, p. 287 [“The Three Dogs”]), or a book of secret wisdom (*Chinesische Volksmärchen*, p. 258 [“Jang Liang”]).

¹⁸ *Finnische und estnische Volksmärchen*, loc. cit.

¹⁹ *Deutsche Märchen seit Grimm*, p. 382 [op. cit.]. In one Balkan tale (*Balkan-Märchen*, p. 65 [“The Shepherd and the Three Samovilas”]) the old man is called the “Czar of all the birds.” Here the magpie knows all the answers. Cf. the mysterious “master of the dovecot” in Gustav Meyrink’s novel *Der weisse Dominikaner*.

²⁰ *Märchen aus Iran*, p. 152 [op. cit.].

²¹ *Spanische und Portugiesische Märchen*, p. 158 [“The White Parrot”].

²² *Ibid.*, p. 199 [“Queen Rose, or Little Tom”].

²³ *Nordische Volksmärchen*, Vol. I, p. 231f. [“The Werewolf”].

²⁴ *Kauhasische Märchen*, pp. 35f [“The False and the True Nightingale”].

²⁵ *Balkanmärchen*, p. 217 [“The Lubi (She-Devil) and the Fair of the Earth”].

²⁶ This occurs in the tale of the griffin, No. 84 in the volume of children’s fairytales collected by the brothers Grimm (1912), II, pp. 84ff. The text swarms with phonetic mistakes. [The English text (trans. by Margaret Hunt, rev. by James Stern, no. 165) has “hoary.”—TRANS.]

²⁷ Goethe, “Die neue Melusine.”

²⁸ Cf. “The Visions of Zosimos,” Par. 87 (III, i, 2–3).

²⁹ In one Siberian fairytale (*Märchen aus Sibirien*, no. 13 [“The Man Turned to Stone”]) the old man is a white shape towering up to heaven.

³⁰ *Indianermärchen aus Sudamerika*, p. 285 [“The End of the World and the Theft of Fire”—Bolivian].

³¹ *Indianermärchen aus Nordamerika*, p. 74 [Tales of Manabos: “The Theft of Fire”].

³² *Deutsche Märchen seit Grimm*, pp. 189ff.

³³ In his “Cantilena” (15 cent.). [Cf. *Mysterium Coniunctionis*, par. 374.].

³⁴ Prudentius, *Contra Symmachum*, I, 94 (trans. by Thomson, I, p. 356). See Hugo Rahner, “Die seelenheilende Blume.”

³⁵ *Balkanmärchen*, pp. 34ff. [“The Deeds of the Czar’s Son and His Two Companions”].

³⁶ *Ibid.*, pp. 177ff. [“The Son-in-Law from Abroad”].

³⁷ *Deutsche Märchen seit Grimm*, pp. 1ff. [“The Princess in the Tree”].

³⁸ With reference to the quaternity I would call attention to my earlier writings, and in particular to *Psychology and Alchemy* and “Psychology and Religion.”

³⁹ The oldest representation I know of this problem is that of the four sons of Horus, three of whom are occasionally depicted with the heads of animals, and the other with the head of a man. Chronologically this links up with Ezekiel’s

vision of the four creatures, which then reappear in the attributes of the four evangelists. Three have animal heads and one a human head (the angel). [Cf. frontispiece to *Psychology and Religion: West and East*.—EDITORS.]

⁴⁰ According to the dictum in the “*Tabula smaragdina*,” “*Quod est inferius, est sicut quod est superius*” (That which is below is like that which is above).

⁴¹ Cf. *Psychology and Alchemy*, fig. 54 and par. 539; and, for a more detailed account, “*The Spirit Mercurius*,” par. 271.

⁴² This unexplained passage has been put down to Plato’s “drollery.”

⁴³ In *Deutsche Märchen seit Grimm* (I, p. 256 [“*The Mary-Child*”]) it is said that the “*Three-in-One*” is in the forbidden room, which seems to me worth noting.

⁴⁴ Aelian (*De natura animalium*, I, 47) relates that Apollo condemned the ravens to perpetual thirst because a raven sent to fetch water dallied too long. In German folklore it is said that the raven has to suffer from thirst in June or August, the reason given being that he alone did not mourn at the death of Christ, and that he failed to return when Noah sent him forth from the ark. (Köhler, *Kleinere Schriften zur Märchenforschung*, p. 3.) For the raven as an allegory of evil, see the exhaustive account by Hugo Rahner, “*Earth Spirit and Divine Spirit in Patristic Theology*.” On the other hand the raven is closely connected with Apollo as his sacred animal, and in the Bible too he has a positive significance. See Psalm 147 : 9: “*He giveth to the beast his food, and to the young ravens which cry*”; Job 38: 41: “*Who provideth for the raven his food? when his young ones cry unto God, they wander for lack of meat*.” Cf. also Luke 12 : 24. Ravens appear as true “*ministering spirits*” in I Kings 17 : 6, where they bring Elijah the Tishbite his daily fare.

⁴⁵ Pictured as three princesses, buried neck deep, in *Nordische Volksmärchen*, II, pp. 126ff. [“*The Three Princesses in the White Land*”].

⁴⁶ For the function theory, see *Psychological Types*.

⁴⁷ I would like to add, for the layman’s benefit, that the theory of the psyche’s structure was not derived from fairytales and myths, but is grounded on empirical observations made in the field of medico-psychological research and was corroborated only secondarily through the study of comparative symbology, in spheres very far removed from ordinary medical practice.

⁴⁸ A typical enantiodromia is played out here: as one cannot go any higher along this road, one must now realize the other side of one’s being, and climb down again.

⁴⁹ The young man asks himself, on catching sight of the tree, “*How would it be if you were to look at the world from the top of that great tree?*”

⁵⁰ The “*omniscience*” of the unconscious components is naturally an exaggeration. Nevertheless they do have at their disposal—or are influenced by—subliminal perceptions and memories of the unconscious, as well as by its instinctive archetypal contents. It is these that give unconscious activities their unexpectedly accurate information.

⁵¹ The hunter has reckoned without his host, as generally happens. Seldom or never do we think of the price exacted by the spirit’s activity.

⁵² Cf. the Heracles cycle.

⁵³ The alchemists stress the long duration of the work and speak of the “*longissima via*,” “*diuturnitas immensae meditationis*,” etc. The number 12 may be connected with the ecclesiastical year, in which the redemptive work of

Christ is fulfilled. The lamb-sacrifice probably comes from this source too.

⁵⁴ “Daughter of the sea.”—Afanas’ev, *Russian Fairy Tales*, pp. 553ff.

⁵⁵ The old man puts the dismembered body into a barrel which he throws into the sea. This is reminiscent of the fate of Osiris (head and phallus).

⁵⁶ From *kost*, ‘bone,’ and *pakost*, *kapost*, ‘disgusting, dirty.’

⁵⁷ Ka-mutef means “bull of his mother.” See Jacobsohn, “Die dogmatische Stellung des Königs in der Theologie der alten Aegypter,” pp. 17, 35, 41ff.

⁵⁸ Cf. *Symbols of Transformation*, pars. 370ff., 421.

⁵⁹ The fact that she is no ordinary girl, but is of royal descent and moreover the *electa* of the evil spirit, proves her nonhuman, mythological nature. I must assume that the reader is acquainted with the idea of the anima.

⁶⁰ “I ween that I hung / on the windy tree.

Hung there for nights full nine;
With the spear I was wounded, / and offered I was
To Othin, myself to myself,
On the tree that none / may ever know
What root beneath it runs.”

—*Hovamol*, 139 (trans. by H. A. Bellows, p. 60).

⁶¹ Cf. the experience of God as described by Nietzsche in “Ariadne’s Lament”:

“I am but thy quarry,
Cruellest of hunters!
Thy proudest captive,
Thou brigand back of the clouds!”

—*Gedichte und Sprüche*, pp. 155ff.

⁶² Cf. Emma Jung, “On the Nature of the Animus.”

⁶³ As regards the triadic nature of Wotan cf. Ninck, *Wodan una germanischer Schicksalsglaube*, p. 142. His horse is also described as, among other things, three-legged.

⁶⁴ The assumption that they are a brother-sister pair is supported by the fact that the stallion addresses the mare as “sister.” This may be just a figure of speech; on the other hand sister means sister, whether we take it figuratively or non-figuratively. Moreover, incest plays a significant part in mythology as well as in alchemy.

⁶⁵ Human in so far as the anima is replaced by a human person.

⁶⁶ The great tree corresponds to the *arbor philosophica* of the alchemists. The meeting between an earthly human being and the anima, swimming down in the shape of a mermaid, is to be found in the so-called “Ripley Scrowle.” Cf. *Psychology and Alchemy*, fig. 257.

⁶⁷ Cf. my “Wotan.”

¹[Originally published as part 5 of *Der göttliche Schelm*, by Paul Radin, with commentaries by C. G. Jung and Karl Kerényi (Zurich, 1954). The present translation then appeared in the English version of the volume: *The Trickster: A Study in American Indian Mythology* (London and New York, 1956); it is republished here with only minor revisions. —EDITORS.]

²Du Cange, *Glossarium*, s.v. Kalendae, p. 1666. Here there is a note to the effect that the French title “sou-diacres” means literally ‘saturi diaconi’ or ‘diacres saouls’ (drunken deacons).

³These customs seem to be directly modelled on the pagan feast known as “Cervula” or “Cervulus.” It took place on the kalends of January and was a kind of New Year’s festival, at which people exchanged *strenae* (étrennes, ‘gifts’), dressed up as animals or old women, and danced through the streets singing, to the applause of the populace. According to Du Cange (s.v. cervulus), sacrilegious songs were sung. This happened even in the immediate vicinity of St. Peter’s in Rome.

⁴Part of the *festum fatuorum* in many places was the still unexplained ball-game played by the priests and captained by the bishop or archbishop, “ut etiam sese ad lusum pilae demittent” (that they also may indulge in the game of pelota). *Pila* or *pelota* is the ball which the players throw to one another. See Du Cange, s.v. Kalendae and pelota.

⁵“Puella, quae cum asino a parte Evangelii prope altare collocabatur” (the girl who stationed herself with the ass at the side of the altar where the gospel is read). Du Cange, s.v. festum asinorum.

⁶*Caetera* instead of *vetera*? [Trans. by A. S. B. Glover:

From the furthest Eastern clime

Came the Ass in olden time,

Comely, sturdy for the road,

Fit to bear a heavy load.

Sing then loudly, master Ass,

Let the tempting titbit pass:

You shall have no lack of hay

And of oats find good supply.

Say Amen, Amen, good ass, (here a *genuflection* is made)

Now you’ve had your fill of grass;

Ancient paths are left behind:

Sing Amen with gladsome mind.]

⁷Cf. also Tertullian, *Apologeticus adversus gentes*, XVI.

⁸[Reproduced in *Symbols of Transformation*, pl. XLIII.—EDITORS.]

⁹Thus *Spake Zarathustra*, Part. IV, ch. LXXVIII.

¹⁰I am thinking here of the series called “Balli di Sfessania.” The name is probably a reference to the Etrurian town of Fescennia, which was famous for its lewd songs. Hence “Fescennina licentia” in Horace, Fescenninus being the equivalent of *σαλλικός*.

¹¹Cf. the article “Daily Paper Pantheon,” by A. McGlashan, in *The Lancet* (1953), p. 238, pointing out that the figures in comic-strips have remarkable archetypal analogies.

¹²Earlier stages of consciousness seem to leave perceptible traces behind them. For instance, the chakras of the Tantric system correspond by and large to the regions where consciousness was earlier localized, *anahata* corresponding to the breast region, *manipura* to the abdominal region, *svadhistana* to the bladder region, and *visuddha* to the larynx and the speech-consciousness of modern man. Cf. Avalon, *The Serpent Power*.

¹³The same idea can be found in the Church Father Irenaeus, who calls it the “umbra.” *Adversus haereses*, I, ii, 1.

¹⁴For instance, the ducking of the “Ueli” (from Udalricus = Ulrich, yokel, oaf, fool) in Basel during the second half of January was, if I remember correctly, forbidden by the police in the 1860’s, after one of the victims died of pneumonia.

¹⁵Not to forget something means keeping it in consciousness. If the enemy disappears from my field of vision, then he may possibly be behind me—and even more dangerous.

¹⁶Radin, *The World of Primitive Man*, p. 3.

¹⁷*Ibid.*, p. 5.

¹⁸By the metaphor “standing behind the shadow” I am attempting to illustrate the fact that, to the degree in which the shadow is recognized and integrated, the problem of the anima, i.e., of relationship, is constellated. It is understandable that the encounter with the shadow should have an enduring effect on the relations of the ego to the inside and outside world, since the integration of the shadow brings about an alteration of personality. Cf. *Aion*, Part II of this vol., pars. 13ff.

¹⁹A crocodile stole a child from its mother. On being asked to give it back to her, the crocodile replied that he would grant her wish if she could give a true answer to his question: “Shall I give the child back?” If she answers “Yes,” it is not true, and she won’t get the child back. If she answers “No,” it is again not true, so in either case the mother loses the child.

²⁰Neumann, *The Origins and History of Consciousness*, passim.

1 [Originally written in English as “The Meaning of Individuation,” the introductory chapter of *The Integration of the Personality* (New York, 1939; London, 1940), a collection of papers otherwise translated by Stanley Dell. Professor Jung afterward rewrote the paper, with considerable revision, in German and published it as “Bewusstsein, Unbewusstes und Individuation,” *Zentralblatt für Psychotherapie und ihre Grenzgebiete* (Leipzig), XI (1939) : 5, 257–70. The original English version was slightly longer, owing to material which Mr. Dell edited into it from other writings of Jung’s, for the special requirements of the *Integration* volume. It is the basis of the present version, together with the 1939 German version.—EDITORS.]

2 Modern physicists (Louis de Broglie, for instance) use instead of this the concept of something “discontinuous.”

3 [See also Jung’s *Psychiatric Studies*, index, s. vv.—EDITORS.]

4 By this I mean only certain cases of schizophrenia, such as the famous Schreber case (*Memoirs of My Nervous Illness*) or the case published by Nelken (“Analytische Beobachtungen über Phantasien eines Schizophrenen,” 1912).

5 *Psychological Types*, Def. 48; “The Relations between the Ego and the Unconscious,” pars. 296ff.; *Psychology and Alchemy*, Part II. Cf. also the third paper in this volume.

6 Toni Wolff, “Einführung in die Grundlagen der Komplexen Psychologie,” p. 107. [Also *Aion*, ch. 2.—EDITORS.]

7 *Symbols of Transformation*, Part II.

8 Cf. supra, “The Phenomenology of the Spirit in Fairytales.”

9 See n. 4, above.

10 [Untitled poem (“Warum gabst du uns die tiefen Blicke”) in *Werke*, II, p. 43.—EDITORS.]

11 *Ripley Reviv’d; or, An Exposition upon Sir George Ripley’s Hermetico-Poetical Works* (1678), trans. into German in 1741 and possibly known to Goethe.

12 Cf. the celebrated “Visio Arislei” (*Artis auriferae*, 1593, II, pp. 246ff.), also available in German: Ruska, *Die Vision des Arisleus*, p. 22.

13 For an example of the method, see *Psychology and Alchemy*, Part II.

14 In my *Symbols of Transformation*, I have described the case of a young woman with a “hero-story,” i.e., an animus fantasy that yielded a rich harvest of mythological material. Rider Haggard, Benoît, and Goethe (in *Faust*) have all stressed the historical character of the anima.

15 [*Psychological Types*, Def. 51 and ch. V, 3c. In the *Collected Works*, the term “uniting symbol” supersedes the earlier translation “reconciling symbol.”—EDITORS.]

16 [Cf. “The Transcendent Function.”—EDITORS.]

1 [Translated from “Zur Empirie des Individuationsprozesses,” *Gestaltungen des Unbewussten* (Zurich, 1950), where it carries the author’s note that it is a “thoroughly revised and enlarged version of the lecture of the same title first published in the *Eranos-Jahrbuch 1933*,” i.e., in 1934. The original version was translated by Stanley Dell and published in *The Integration of the Personality* (New York, 1939; London, 1940). The motto by Lao-tzu is from a translation by Carol Baumann in her article “Time and Tao,” *Spring*, 1951, p. 30.—EDITORS.]

2 Cf. *Psychology and Alchemy*, pars. 138f., 306, and Wei Po-yang, “An Ancient Chinese Treatise on Alchemy.”

3 *Psychology and Alchemy*, par. 109, n. 38.

4 Caesarius of Heisterbach, *The Dialogue on Miracles*, trans. by Scott and Bland, Dist. IV, c. xxxiv (p. 231) and Dist. I, c. xxxii (p. 42): “His soul was like a glassy spherical vessel, that had eyes before and behind.” A collection of similar reports in Bozzano, *Popoli primitivi e Manifestation supernormali*.

5 Cf. my “Paracelsus as a Spiritual Phenomenon,” par. 190. It is Hermes Kyllenios, who calls up the souls. The caduceus corresponds to the phallus. Cf. Hippolytus, *Elenchos*, V, 7, 30.

6 The same association in *Elenchos*, V, 16, 8: serpent = δούναμις of Moses.

7 Ruland (*Lexicon*, 1612) speaks of “the gliding of the mind or spirit into another world.” In the *Chymical Wedding* of Rosencreutz the lightning causes the royal pair to come alive. The Messiah appears as lightning in the Syrian Apocalypse of Baruch (Charles, *Apocrypha*, II, p. 510). Hippolytus (*Elenchos*, VIII, 10, 3) says that, in the view of the Docetists, the Monogenes drew together “like the greatest lightning-flash into the smallest body” (because the Aeons could not stand the effulgence of the Pleroma), or like “light under the eyelids.” In this form he came into the world through Mary (VIII, 10, 5). Lactantius (*Works*, trans. by Fletcher, I, p. 470) says: “... the light of the descending God may be manifest in all the world as lightning.” This refers to Luke 17 : 24: “... as the lightning that lighteneth ... so shall the Son of man be in his day.” Similarly Zach. 9: 14: “And the Lord God ... his dart shall go forth as lightning” (DV).

8 *Forty Questions concerning the Soul* (*Works*, ed. Ward and Langcake, II, p. 17).

9 *The High and Deep Searching of the Threefold Life of Man* (*Works*, II), p. 11.

10 *Aurora* (*Works*, I), X.17, p. 84.

11 *Ibid.*, X. 38, p. 86.

12 *Ibid.*, X. 53, p. 87.

13 Salniter = *sal nitri* = Saltpetre; like salt, *the prima materia*. *Three Principles of the Divine Essence* (*Works*, I), I. 9, p. 10.

14 *Aurora*, XV. 84, p. 154. Here the lightning is not a revelation of God’s will but a Satanic change of state. Lightning is also a manifestation of the devil (Luke 10: 18).

15 *Ibid.*, XIX. 19, p. 185.

16 *Ibid.*, XI. 10, p. 93.

17 For Böhme the four “qualities” coincide partly with the four elements but also with dry, wet, warm, cold, the four qualities of taste (e.g., sharp, bitter, sweet, sour), and the four colours.

18 A heart forms the centre of the mandala in the *Forty Questions*. See Fig. 1.

19 *Aurora*, XI, 27–28, p. 94.

²⁰ “Stock” in this context can mean tree or cross (*σταυρός*, ‘stake, pole, post’), but it could also refer to a staff or stick. It would then be the magical wand that, in the subsequent development of these pictures, begins to sprout like a tree. Cf. *infra*, par. 570.

²¹ *Aurora*, XI. 37, p. 95.

²² The lower darkness corresponds to the elemental world, which has a quaternary character. Cf. the four Achorayim mentioned in the commentary to Picture 7.

²³ The reason for this is that the lightning is caught by the quaternity of elements and qualities and so divided into four.

²⁴ Saltpetre is the arcane substance, synonymous with *Sal Saturni* and *Sal Tartan mundi maioris* (Khunrath, *Von hylealischen Chaos*, 1597, p. 263). Tartarus has a double meaning in alchemy: on the one hand it means tartar (hydrogen potassium tartrate); on the other, the lower half of the cooking vessel and also the arcane substance (Eleazar, *Uraltes Chymisches Werk*, 1760, II, p. 91, no. 32). The metals grow in the “cavitates terrae” (Tartarus). Salt, according to Khunrath, is the “centrum terrae physicum.” Eleazar says that the “Heaven and Tartarus of the wise” change all metals back into mercury. Saturn is a dark “malefic” star. There is the same symbolism in the Offertory from the Mass for the Dead: “Deliver the souls of all the faithful departed from the pains of hell and from the deep pit; deliver them from the mouth of the lion [attribute of Ialdabaoth, Saturn], lest Tartarus lay hold on them, and they fall into darkness.” Saturn “maketh darkness” (Böhme, *Threefold Life*, IX. 85, p. 96) and is one aspect of the Salniter (*Signatura rerum*, XIV. 46–48, p. 118). Salniter is the “dried” or “fixed” form and embodiment of the seven “Source Spirits” of God, who are all contained in the seventh, Mercury, the “Word of God” (*Aurora*, XI. 86f., p. 99 and XV. 49, p. 151; *Sig. rer.*, IV. 35, p. 28). Salniter, like mercury, is the mother and cause of all metals and salts (*Sig. rer.*, XIV. 46 and III. 16, pp. 118 and 19). It is a subtle body, the paradisaal earth and the spotless state of the body before the Fall, and hence the epitome of the *prima materia*.

²⁵ [“Flagrat” and “lubet” are used by Böhme to signify respectively “flash, flame, burning” And “Desire, Affect.”—EDITORS.]

²⁶ Reference to the “waters which were above the firmament” (Gen. 1 : 7).

²⁷ *Sig. rer.*, XIV. 32–33, p. 116.

²⁸ *Tabula principiorum*, 3 (Amsterdam edn., 1682, p. 271).

²⁹ *Ibid.*, 5, p. 271.

³⁰ *Ibid.*, 42, p. 279.

³¹ *Four Tables of Divine Revelation*, p. 14.

³² *Ibid.*, p. 13.

³³ Its official name is *hydrargyrum sulfuratum rubrum*. Another version of its sign is : cf. Lüdy, *Alchemistische und Chemische Zeichen*, and Gessmann, *Die Geheimsymbole der Alchymie, Arzneikunde und Astrologie des Mittelalters*.

³⁴ “There is very great doubt among doctors as to what is actually signified by Cinnabar, for the term is applied by different authorities to very diverse substances.” Ruland, *Lexicon*, p. 102.

³⁵ Berthelot, *Alch. grecs*, III, xxix, 24.

- ³⁶ Ibid., I, V, 1. It may be remarked that the dragon has three ears and four legs (The axiom of Maria! Cf. *Psychology and Alchemy*, pars. 209f.)
- ³⁷ *Hist. nat.*, Lib. XXXIII, cap. vii.
- ³⁸ The medical term *anthrax* means ‘carbuncle, abscess.’
- ³⁹ Antimony is also denoted by ⚛. Regulus = “The impure mass of metal formed beneath the slag in melting and reducing ores” (Merriam-Webster).
- ⁴⁰ Michael Maier (*Symbola aureae mensae*, 1617, p. 380) says: “The true antimony of the Philosophers lies hidden in the deep sea, like the son of the King.”
- ⁴¹ Praised as Hercules Morbicida, “slayer of diseases” (ibid., p. 378).
- ⁴² The book was (first?) mentioned by Maier, ibid., pp. 379ff.
- ⁴³ Also , a pure quaternary.
- ⁴⁴ Τάρταρος, like βόρβορος, βάρβαρος, etc. is probably onomatopoeic, expressing terror. Τάργανου means ‘vinegar, spoilt wine.’ Derived from τάρσσω, ‘to stir up, disturb, frighten’ (τάρραγμα, ‘trouble, confusion’) and τάρβος, ‘terror, awe.’
- ⁴⁵ Rieu trans., p. 351.
- ⁴⁶ Hippolytus, *Elenchos*, V, 7, 30; Kerényi, “Hermes der Seelenführer,” p. 29.
- ⁴⁷ Ibid., p. 30.
- ⁴⁸ The Pairs of functions are thinking/feeling, sensation/intuition. see *Psychological Types*, definitions.
- ⁴⁹ Cf. *Psychology and Alchemy*, par. 329, for the *a priori* presence of the mandala symbol.
- ⁵⁰ Details in ibid., par. 406.
- ⁵¹ Preisendanz, *Papyri Graecae Magicae*, II, p. 139.
- ⁵² “The Spirit Mercurius,” pars. 267ff.
- ⁵³ *Psychology and Alchemy*, Part III, ch. 5.
- ⁵⁴ Cf. Wilhelm and Jung, *The Secret of the Golden Flower*.
- ⁵⁵ Though we talk a great deal and with some justice about the resistance which the unconscious puts up against becoming conscious, it must also be emphasized that it has a kind of gradient towards consciousness, and this acts as an urge to become conscious.
- ⁵⁶ The last-named refers to Rev. 21 : 21.
- ⁵⁷ Miss X was referring to my remarks in “The Relations between the Ego and the Unconscious,” which she knew in its earlier version in *Collected Papers on Analytical Psychology* (2nd. edn., 1920).
- ⁵⁸ The expressions “square,” “four-square,” are used in English in this sense.
- ⁵⁹ The “squared figure” in the centre of the alchemical mandala, symbolizing the *lapis*, and whose midpoint is Mercurius, is called the “mediator making peace between the enemies or elements.” [Cf. *Aion* (Part II of this vol.), pars. 377f.—EDITORS.]
- ⁶⁰ So called in an invocation to Hermes. Cf. Preisendanz, II, p. 139. Further particulars in *Psychology and Alchemy*, par. 172; fig. 214 is a repetition of the *quadrangulum secretum sapientum* from the *Tractatus aureus* (1610), p. 43. Cf. also my “The Spirit Mercurius,” par. 272.

- ⁶¹ Despite my efforts I could find no other source for the “mercury.” Naturally cryptomnesia cannot be ruled out. considering the definiteness of the idea and the astonishing coincidence of its appearance (as in Böhme), I incline to the hypothesis of spontaneous emergence, which does not eliminate the archetype but, on the contrary, presupposes it.
- ⁶² Cf. the “innermost Birth of the soul” in Böhme.
- ⁶³ This *homo interior* or *altus* was Mercurius, or was at least derived from him. Cf. “The Spirit Mercurius,” pars. 284ff.
- ⁶⁴ The lines are painted in the classical four colours.
- ⁶⁵ The “giant” fish of the Abercius inscription (c. A.D. 200). [Cf. *Aion*, par. 127, n. 4.—EDITORS.]
- ⁶⁶ cf. Frobenius, *Schicksalskunde*, pp. 119f. The author’s interpretations seem to me questionable in some respects.
- ⁶⁷ *Psychology and Alchemy*, par. 204; “The Phenomenology of the Spirit in Fairytales,” pars. 425 and 430; and *Psychology and Religion*, par. 184.
- ⁶⁸ *Psychology and Alchemy*, index, s.v. “quartering.”
- ⁶⁹ Hippolytus, *Elenchos*, V, 26, 1ff.
- ⁷⁰ Cf. the “account ... of a many-coloured and many-shaped sphere” from the Cod. Vat. 190 (cited by Cumont in *Textes et monuments figurés relatifs aux mystères de Mithra*), which says: “The all-wise God fashioned an immensely great dragon of gigantic length, breadth and thickness, having its dark-coloured head ... towards sunrise, and its tail ... towards sunset.” Of the dragon the text says: “Then the all-wise Demiurge, by his highest command, set in motion the great dragon with the spangled crown, I mean the twelve signs of the zodiac which it carried on its back.” Eisler (*Weltenmantel und Himmelszelt*, p. 389) connects this zodiacal serpent with Leviathan. For the dragon as symbol of the year, see the Mythographus Vaticanus III, in *Classicorum Auctorum e Vaticanis Codicibus Editorum*, VI(1831), p. 162. There is a similar association in Horapollo, *Hieroglyphica*, trans. by Boas, p. 57.
- ⁷¹ “The Spirit Mercurius,” ch. 6.
- ⁷² Meier, *Antike Inkubation und moderne Psychotherapie*.
- ⁷³ Vishnu is described as *dāmodara*, ‘bound about the body with a rope.’ I am not sure whether this symbol should be considered here; I mention it only for the sake of completeness.
- ⁷⁴ Michael Maier, *De circulo physico quadrato* (1616), ch. I.
- ⁷⁵ Christ in medieval alchemy. Cf. *Psychology and Alchemy*, Part III, ch. 5.
- ⁷⁶ The writings of the physician and philosopher Leone Ebreo (c. 1460–1520) enjoyed widespread popularity in the sixteenth century and exercised a far-reaching influence on his contemporaries and their successors. His work is a continuation of the Neoplatonist thought developed by the physician and alchemist Marsilio Ficino(1433–99) in his commentary on Plato’s *Symposium*. Ebreo’s real name was Don Judah Abrabanel, of Lisbon. (Sometimes the texts have Abrabanel, sometimes Abarbanel.)
- ⁷⁷ Cf. the English version, *The Philosophy of Love*, trans. by Friedeberg-Seeley and Barnes, pp. 92 and 94. The source of this view can be found in the cabalistic interpretation of Yesod (Knorr von Rosenroth, *Kabbala Denudata*, 1677–84).
- ⁷⁸ This pseudo-biological terminology fits in with the patient’s scientific education.

- ⁷⁹ Another alchemical idea: the *synodos Lunae cum Sole*, or hierogamy of sun and moon. Cf. “The Psychology of the Transference,” par. 421, n. 17.
- ⁸⁰ More on this in “On the Nature of the Psyche,” par. 498.
- ⁸¹ Here one must think of the world-encircling Ocean and the world-snake hidden in it: Leviathan, the “dragon in the sea,” which, in accordance with the Egyptian tradition of Typhon (Set) and the sea he rules over, is the devil. “The devil ... surrounds the seas and the ocean on all sides” (St. Jerome, *Epistolae*, Part I, p. 12). Further particulars in Rahner, “Antenna Crucis II: Das Meer der Welt,” pp. 89ff.
- ⁸² We find the same motif in the two mandalas published by Esther Harding in *Psychic Energy: Its Source and Its Transformation* [Pls. XVI, XVII].
- ⁸³ Naas is the same as the snakelike nous and mercurial serpent of alchemy.
- ⁸⁴ Hippolytus, *Elenchos*, V, 26, 21ff. This tale of Adam and Eve and the serpent was preserved until well into the Middle Ages.
- ⁸⁵ Apparently a play on the words **Πρίαπος** and **ἐπριοποίησε τὰ πάντα** (‘created all’). *Elenchos*, V, 26, 33.
- ⁸⁶ See the illustration from Reusner’s *Pandora* (1588) in my “Paracelsus as a Spiritual Phenomenon,” Fig.B4.
- ⁸⁷ In accordance with the classical view that the snake is *πνευματικώτατον ζωον*, ‘the most spiritual animal.’ For this reason it was a symbol for the Nous and the Redeemer.
- ⁸⁸ Cf. what St. John of the Cross says about the “dark night of the soul.” His interpretation is as helpful as it is psychological.
- ⁸⁹ Hence the alchemical mandala was likened to a *rosarium* (rose-garden).
- ⁹⁰ In Buddhism the “four great kings” (*lokapata*), the world-guardians, form the quaternity. Cf. the *Samyutta-Nikaya*, in *Dialogues of the Buddha*, Part II, p. 242.
- ⁹¹ “God separated and divided this primordial water by a kind of mystical distillation into four parts and regions” (Sendivogius, *Epist. XIII*, in Manget, *Bibliotheca chemica*, 1702, II, p. 496). In Christianos (Berthelot, *Alch. grecs*, VI, ix, 1 and x, 1) the egg, and matter itself, consist of four components. (Cited from Xenocrates, *ibid.*, VI, xv, 8.)
- ⁹² In Taoist philosophy, movement to the right means a “falling” life-process, as the spirit is then under the influence of the feminine *p’o-soul*, which embodies the *yin* principle and is by nature passionate. Its designation as the anima (cf. my “Commentary on *The Secret of the Golden Flower*,” pars. 57ff.) is psychologically correct, although this touches only one aspect of it. The *p’o-soul* entangles *hun*, the spirit, in the world-process and in reproduction. A leftward or backward movement, on the other hand, means the “rising” movement of life. A “deliverance from outward things” occurs and the spirit obtains control over the anima. This idea agrees with my findings, but it does not take account of the fact that a person can easily have the spirit outside and the anima inside.
- ⁹³ This was told to me by the Rimpoche of Bhutia Busty, Sikkim.
- ⁹⁴ Water also symbolizes the “materiality” of the spirit when it has become a “fixed” doctrine. One is reminded, too, of the blue-green colour in böhme, signifying “liberty.”
- ⁹⁵ For the double nature of the spirit (*Mercurius duplex* of the alchemists) see “The Phenomenology of the spirit in Fairytales,” supra.
- ⁹⁶ Cf. the fiery serpent of Lucifer in Böhme.

⁹⁷ Cf. “A Psychological Approach to the Dogma of the Trinity,” pars. 243ff.

⁹⁸ *Elenchos*, V, 26, 27ff.

⁹⁹ *Psychology and Alchemy*, par. 457.

¹⁰⁰ Hauck, *Realencyclopädie für protestantische Theologie*, IV, p. 173, li. 59.

¹⁰¹ Baumgartner (*Die Philosophie des Alarms de Insults*, II, [Part 4](#), p. 118) traces this saying to a *liber Hermetis* or *liber Trismegisti*, Cod. Par. 6319 and Cod. Vat. 3060.

¹⁰² **Στεφάναι** — *coronae*.

¹⁰³ *Δαίμων ἢ πάντα κυβέρναι*, a feminine *daemonium*.

¹⁰⁴ Freeman, *Ancilla to the Pre-Socratic Philosophers*, p. 45.

¹⁰⁵ *Writings of Clement of Alexandria*, trans. by Wilson, II, p. 248: “Also Dionysius Thrax, the grammarian, in his book *Respecting the Exposition of the Symbolical Signification of Circles*, says expressly, ‘Some signified actions not by words only, but also by symbols: ... as the wheel that is turned in the temples of the gods [by] the Egyptians, and the branches that are given to the worshippers. For the Thracian Orpheus says:

For the works of mortals on earth are like branches,
Nothing has but one fate in the mind, but all things
Revolve in a circle, nor is it lawful to abide in one place,
But each keeps its own course wherewith it began.”

[Verses translated from the Overbeck version in German quoted by the author.—
TRANS.]

¹⁰⁶ Diels, *Fragmente der Vorsokratiker*, II, p. 102. Aetius, *De plac. phil*, 1, 7, 16.

¹⁰⁷ A Reference to Cicero, *De natura deorum* (trans. by Rackham, p. 31): “Parmenides ... invents a purely fanciful something resembling a crown—*stephane* is his name for it—an unbroken ring of glowing lights encircling the sky, which he entitles god; but no one can imagine this to possess divine form, or sensation.” This ironic remark of Cicero’s shows that he was the child of another age, already very far from the primordial images.

¹⁰⁸ There are innumerable representations of the sun-child sitting in the lotus. Cf. Erman, *Die Religion der Aegypter*, p. 62 and *Handbook of Egyptian Religion*, p. 26. It is also found on Gnostic gems [*Psychology and Alchemy*, fig. 52]. The lotus is the customary seat of the gods in India.

¹⁰⁹ [Or, as in the DV, “The wicked walk round about.”—EDITORS.]

¹¹⁰ *Psychology and Alchemy*, pars. 214f

¹¹¹ This interpretation was confirmed for me by my Tibetan mentor, Lingdam Gomchen, abbot of Bhutia Busty: the swastika, he said, is that which “cannot be broken, divided, or spoilt.” Accordingly, it would amount to an inner consolidation of the mandala.

¹¹² Cf. the similar motif in the mandala of the *Amitāyur-dhyāna Sūtra*, in “The Psychology of Eastern Meditation,” pars. 917, 930.

¹¹³ “Monas hieroglyphica,” *Theatr. chem.* (1602), II, p. 220. Dee also associates the cross with fire.

¹¹⁴ [Cf. “Answer to Job,” *Psychology and Religion*, par. 595, n. 8.—EDITORS.]

¹¹⁵ The seven kings refer to previous aeons, “perished” worlds, and the four Achurayim are the so-called “back of God”: “All belong to Malkhuth; which is so called because it is last in the system of Aziluth ... they exist in the depths of the Shckinah” (*Kabbala Denudata*, I, p. 72). They form a masculine-feminine quaternio “of the Father and Mother of the highest, and of the Senex Israel and Tebhunah” (I, p. 675). The Senex is Ain-Soph or Kether (I, p. 635), Tebhunah is Binah, intelligence (I, p. 726). The shards also mean unclean spirits.

¹¹⁶ *Kabbala Denudata*, 1, pp. 675L The shards also stand for evil. (*Zohar*, I, 137aff., II, 34b.). According to a Christian interpretation from the 17th century, Adam Belial is the body of the Messiah, the “entire body or the host of shards.” (Cf. II Cor. 6 : 15.) In consequence of the Fall, the host of shards irrupted into Adam’s body, its outer layers being more infected than the inner ones. The “Anima Christi” fought and finally destroyed the shards, which signify matter. In connection with Adam Belial the text refers to Proverbs 6 : 12: “A naughty person, a wicked man, walketh with a froward mouth” (AV). (*Kabbala Denudata*, II, Appendix, cap. IX, sec.2, p. 56.)

¹¹⁷ “Hyperion’s Song Of Fate,” in *Gedichte*, p. 315. (Trans. as in Jung, *Symbols of Transformation*, p. 399.)

¹¹⁸ Concerning the total vision of the “Life of Spirit and Nature,” Böhme says: “We may then liken it to a round spherical Wheel, which goes on all sides, as the Wheel in Ezekiel shows” (*Mysterium pansophicum*, Sämmtliche Werke, ed. Schiebler, VI, p. 416).

¹¹⁹ *Quaestiones Theosophicae* (Amsterdam edn., 1682), p. 23. *Aurora*, XVII.9, p. 168, mentions the “seven Spirits, which kindled themselves in their outermost Birth or Geniture.” They are the Spirits of God, “Source-Spirits” of eternal and timeless Nature, corresponding to the seven planets and forming the “Wheel of the Centre” (*Sig. rer.*, IX, 8ff., p. 60). These seven Spirits are the seven above-mentioned “Qualities” which all come from one mother. She is the “twofold Source, evil and good in all things” (*Aurora*, p. 27). Cf. the “goddess” in Parmenides and the two-bodied Edem in Justin's gnosis.

¹²⁰ Gulielmus Mennens(1525–1608), a learned Flemish alchemist, wrote a book entitled *Aurei velleris, sive sacrae philosophiae, naturae et artis admirabilium libri tres* (Antwerp, 1604). Printed in *Theatr. chem.*, V(1622), pp. 267ft.

¹²¹ “As therefore God is three and one, so also the matter from which he created all things is triplex and one.” This is the alchemical equivalent of the conscious and uncon-cious triads of functions in psychology. Cf. supra, “The Phenomenology of the Spirit in Fairytales,” pars. 425 and 436ff.

¹²² Mennens seems to refer not to the Cabala direct, but to a text ascribed to Moses, which I have not been able to trace. It is certainly not a reference to the Greek text called by Berthelot “Chimie de Moise” (*Alch. grecs*, IV, xxii). Moses is mentioned now and then in the old literature, and Lenglet du Frcsnoy (*Histoire de la philosophie hermétique*, 1742, III, p. 22) cites under No. 26 a MS from the Vienna Bibliothek entitled: “Moysis Prophetae et Legislatoris Hebraeorum secretum Chemicum” (Ouvrage supposé).

¹²³ “Aurei velleris,” I, Cap. X, in *Theatr. chem.*, V, pp. 334t.

¹²⁴ The *cauda pavonis* is identified by Khunrath with Iris, the “nuncia Dei.” Dorn (“De transmutatione metallorum,” *Theatr. chem.*, I, p. 599) explains it as follows: “This is the bird which flies by night without wings, which the early dew of heaven, continually acting by upward and downward ascent and descent, turns into the head of a crow (*caput corvi*), then into the tail of a peacock, and afterwards it acquires the bright wings of a swan, and lastly an extreme redness, an index of its fiery nature.” In Basilides (Hippolytus, *Elenchos*, X, 14, 1) the peacock’s egg is synonymous with the *sperma mundi*, the *κόκκος σινάπεως*. It contains the “fullness of colours,” 365 of them. The golden colour should be produced from the peacock’s eggs, we are told in the Cyranides (Delatte, *Textes latins et vieux*

français relatifs aux Cyranides, p. 171). The light of Mohammed has the form of a peacock, and the angels were made out of the peacock's sweat (Aptowitz, "Arabisch-Judische Schopfungstheorien," pp. 209, 233).

¹²⁵ *Sig. rer.*, XIV, 10ff., pp. 112f.

¹²⁶ See n. 118.

¹²⁷ The carbuncle is a synonym for the *lapis*. "The king bright as a carbuncle" (Lilius, an old source in the "Rosarium philosophorum," *Art. aurif.*, 1593, II, p. 329). "A ray ... in the earth, shining in the darkness after the manner of a carbuncle gathered into itself" (from Michael Maier's exposition of the theory of Thomas Aquinas, in *Symbola aureae tensesae*, p. 377). "I found a certain stone, red, shining, transparent, and brilliant, and in it I saw all the forms of the elements and also their contraries" (quotation from Thomas in Mylius, *Philosophia reformata*, p. 42). For heaven, gold, and carbuncle as synonyms for the *rubedo*, see *ibid.*, p. 104. The *lapis* is "shimmering carbuncle light" (Khunrath, *Von hyleal. Chaos*, p. 237). Ruby or carbuncle is the name for the *corpus glorificatum* (Glauber, *Tractatus de natura salium*, Part I, p. 42). In Rosencreutz's *Chemical Wedding* (1616) the bed-chamber of Venus is lit by carbuncles (p. 97). Cf. what was said above about *anthrax* (ruby and cinnabar).

¹²⁸ *Mysterium pansophicum*, pp. 416f

¹²⁹ The chemical causes of the *cauda pavonis* are probably the iridescent skin on molten metals and the vivid colours of certain compounds of mercury and lead. These two metals were often used as the primary material.

¹³⁰ Statistically, at least, green is correlated with the sensation function.

¹³¹ [See the index, s.v.; also Jung, "The Philosophical Tree."—EDITORS.]

¹³² "Lovely laurel, evergreen in all its parts, standing midmost among many trees smitten by lightning, bears the inscription: 'untouched it triumphs.' this similitude refers to mary the virgin, alone among all creatures undefiled by any lightning-flash of sin." picinelli, *Mondo simbolico* (1669), Lib. IX, cap. XVI.

¹³³ cf. "The Spirit Mercurius," par. 241.

¹³⁴ The colour correlated with sensation in the mandalas of other persons is usually green.

¹³⁵ Cf. the Achurayim quaternity.

¹³⁶ Chochmah (= face of the man), Binah (= eagle), Gedulah (= lion), Gebhurah (= bull), the four symbolical angels in Ezekiel's vision.

¹³⁷ He gives them the names of planets and describes them as the "four Bailiffs, who hold government in the Mother, the Birth-giver," They are Jupiter, Saturn, Mars, and Sun. "In these four Forms the Spirit's Birth consists, viz. the true Spirit both in the inward and outward Being" (*Sig. rer.*, IX, 9ff., p. 61).

¹³⁸ The connection between tree and mother, especially in Christian tradition, is discussed at length in *Symbols of Transformation*, Part II.

¹³⁹ *A Summary Appendix of the Soul*, p. 117.

¹⁴⁰ *Forty Questions*, pp. 24ff.

¹⁴¹ I do not feel qualified to go into the ethics of what "venerable Mother Nature" has to do in order to unfold her precious flower. Some people can, and those whose temperament makes them feel an ethical compulsion must do this in order to satisfy a need that is also felt by others. Erich Neumann has discussed these problems in a very interesting way in his *Tiefenpsychologie und Neue Ethik*. It will be objected that my respect for Nature is a very unethical attitude, and I shall be accused of shirking "decisions." People who think like this evidently know all about good and

evil, and why and for what one has to decide. Unfortunately I do not know all this so precisely, but I hope for my patients and for myself that everything, light and darkness, decision and agonizing doubt, may turn to “good”—and by “good” I mean a development such as is here described, an unfolding which does no damage to either of them but conserves the possibilities of life.

¹⁴² *The Secret of the Golden Flower* had not been published then. Picture 9 was reproduced in it.

¹⁴³ Cf. *Kabbala Denudata*, Appendix, ch. IV, sec.2, p. 26: “The beings created by the infinite Deity through the First Adam were all spiritual beings, viz. they were simple, shining acts, being one in themselves, partaking of a being that may be thought of as the midpoint of a sphere, and partaking of a life that may be imagined as a sphere emitting rays.”

¹⁴⁴ “Parable of the Cloth,” in *The First Fifty Discourses from the Collection of the Middle-Length Discourses (Majjhima Nikaya) of Gotama the Buddha*, I, pp. 39f., modified. This reference to the Buddha is not accidental, since the figure of the Tathagata in the lotus seat occurs many times in the patient’s mandalas.

¹⁴⁵ Tibetan mandalas are not so divided, but very often they are embedded between heaven and hell, i.e., between the benevolent and the wrathful deities.

¹⁴⁶ This is the lower triad that corresponds to the Trinity, just as the devil is occasionally depicted with three heads. Cf. supra, “Phenomenology of the spirit in fairytales,” pars. 425 and 436ff.

¹⁴⁷ Trans. by Wilhelm and Baynes (1967), pp. 67ff.

¹⁴⁸ *Psychology ana Alchemy*, par. 338.

¹⁴⁹ The same idea as the transformation into the *lapis*. Cf. *ibid.*, par. 378.

¹⁵⁰ Good examples are *The secret of the Golden Flower* and Suzuki, *Introduction to Zen Buddhism*.

¹⁵¹ Cf. the above quotation from the “Aureum vellus” of Mennens, where earth signifies the Father and his “shadow” signifies matter. Böhme’s view is thoroughly consistent with the character of Yahweh, who, despite his role as the guardian of justice and morality, is amoral and unjust. cf. stade, *biblische théologie des alten testaments*, I, pp. 88f.

¹⁵² I am purposely disregarding the numerous arrangements in a circle such as the *rex gloriae* with the four evangelists, Paradise with its four rivers, the heavenly hierarchies of Dionysius the Areopagite, etc. These all ignore the reality of evil, because they regard it as a mere *privatio boni* and thereby dismiss it with a euphemism.

¹⁵³ Cf. Rahner, “Die seelenheilende Blume.”

¹⁵⁴ Cf. Bouché-Leclercq, *L’Astrologie grecque*, p. 136: Cancer = “crabe ou écrevisse.” The constellation was usually represented as a tailless crab.

¹⁵⁵ “The crab is wont to change with the changing seasons; casting off its old shell, it puts on a new and fresh one.” This, says Picinelli, is an “emblema” of the resurrection of the dead, and cites Ephesians 4: 23: “... be renewed in the spirit of your minds” (RSV). (*Mondo simbolico*, Lib. VI, No. 45.)

¹⁵⁶ Foreseeing the flooding of the Nile, the crabs (like the tortoises and crocodiles) bring their eggs in safety to a higher place. “They foresee the future in their mind long before it comes,” Caussin, *Polyhistor symbolicus* (1618), p. 442.

¹⁵⁷ Masenius, *Speculum imaginum veritatis occultae* (1714), cap. LXVII, 30, p. 768.

¹⁵⁸ De Gubernatis, *Zoological Mythology*, II, p. 355.

- ¹⁵⁹ Roscher, *Lexikon*, II, col.959, s.v. “Karkinos.” The same motif occurs in a dream described in *Two Essays on Analytical Psychology*, pars. 80ff.
- ¹⁶⁰ In Egypt, the heliacal rising of Cancer indicates the beginning of the annual flooding of the Nile and hence the beginning of the year. Bouché-Leclercq, p. 137.
- ¹⁶¹ [Cf. “Psychology and Religion,” p. 67, n. 5.—EDITORS.]
- ¹⁶² Propertius, trans. by Butler, p. 875.
- ¹⁶³ De Gubernatis, II, p. 356.
- ¹⁶⁴ *The Panchatantra Reconstructed*, ed. by Edgerton, II, pp. 403f Cf. also Hoffmann-Krayer et al., *Handwörterbuch des Deutschen Aberglaubens*, V, col. 448, s.v. “Krebs.”
- ¹⁶⁵ De Gubernatis, II, p. 356.
- ¹⁶⁶ Her horoscope shows four earth signs but no air sign. The danger coming from the animus is reflected in ☾ □ ☿.
- ¹⁶⁷ Cf. the Buddhist conception of the “eight points of the compass” in the *Amitāyur-dhyāna Sūtra*; cf. “The Psychology of Eastern Meditation,” pp. 560ff.
- ¹⁶⁸ I do not hesitate to take the synchronistic phenomena that underlie astrology seriously. Just as there is an eminently psychological reason for the existence of alchemy, so too in the case of astrology. Nowadays it is no longer interesting to know how far these two fields are aberrations; we should rather investigate the psychological foundations on which they rest. [Cf. Jung, “Synchronicity: An Acausal Connecting Principle,” *passim*.—EDITORS.]
- ¹⁶⁹ An instance of the axiom of Maria. Other well-known examples are Horus and his 4 (or 3 + 1) sons, the 4 symbolical figures in Ezekiel, the 4 evangelists and—last but not least—the 3 synoptic gospels and the 1 gospel of St. John.
- ¹⁷⁰ [Ch. 2, pp. 211ff.—EDITORS.]
- ¹⁷¹ “On the Nature of the Psyche,” sec. 6.
- ¹⁷² [Pictures 18–24, which were not reproduced with the earlier versions of this essay, were chosen by Professor Jung from among those painted by the patient after the termination of analytical work. The dates of the entire series of pictures were as follows: 1–6, Oct. 1928; 7–9, Nov. 1928; 10, Jan.; 11, Feb.; 12, June.; 13, Aug.; 14, Sept.; 15, Oct.; 16, 17, Nov, all 1920; 18, Feb. 1930; 19, Aug. 1930; 20, March 1931; 21, July 1933; 22, Aug 1933 23, 1935; 24, “Night-blooming cereus, done May 1938, on last trip to Jung” (patient’s notation).—EDITORS.]
- ¹⁷³ Isaiah 45 : 8: “And a highway shall be there, and it shall be called the Holy Way” (RSV).
- ¹⁷⁴ *The Golden Ass*, trans. by Graves, p. 286.
- ¹⁷⁵ Case material in Meier, “Spontanmanifestationen des kollektiven Unbewussten,” 284ff.; Bänziger, “Persönliches und Archetypisches im Individuationsprozess,” p. 272; Gerhard Adler, *Studies in Analytical Psychology*, pp. 90ff.
- ¹⁷⁶ Active imagination is also mentioned in “The Aims of Psychotherapy,” pars. 101 ff. Cf. also “The Transcendent Function.” For other pictures of mandalas see the next paper in the present vol.
- ¹⁷⁷ [*Psychologische Interpretation von Kinderträumen*, winter semester, 1939–40, Federal Polytechnic Institute, Zurich (mimeographed stenographic record). The same dream is discussed by Dr. Jacobi in *Complex/Archetype/Symbol*, pp. 1398:.—EDITORS.]
- ¹⁷⁸ One thinks here of a Noah’s Ark that crosses over the waters of death and leads to a rebirth of all life.

¹⁷⁹ *In Leviticum Homiliae*, V, 2 (Migne, P.G., vol.12, col. 449).

¹⁸⁰ Ecclesiasticus 27 : 11.

¹⁸¹ *In libros Regnorum homiliae*, I, 4 (Migne, P.G., vol. 12, cols. 998–99).

1 [First published, as “Über Mandalasymbolik,” in *Gestaltungen des Unbewussten* (Psychologische Abhandlungen, VII; Zurich, 1950). The illustrations had originally been collected for a seminar which Professor Jung gave at Berlin in 1930. Nine of them (Figs. 1, 6, 9, 25, 26, 28, 36, 37, 38) were published with brief comments as “Examples of European Mandalas” in *Das Geheimnis der goldenen Blüte*, by Jung and Richard Wilhelm (Munich, 1929; 2nd edn., Zurich, 1938), translated by C. F. Baynes as *The Secret of the Golden Flower* (London and New York, 1931; rev. edn., 1962); subsequently published in *Coll. Works*, vol. 13. In his *Memories, Dreams, Reflections* Jung acknowledged having painted the mandalas in Figs. 6 and 36 (thus also those in Figs. 28 and 29) and the frontispiece; see U.S. edn., pp. 197, 195; Brit. edn., pp. 188ff., 187.—EDITORS.]

2 Cf. *Psychology and Alchemy*, pars. 122ff.

3 [Cf. Jung, Psychological Commentary on the *Tibetan Book of the Dead*, par. 850.—EDITORS.]

4 Cf. the preceding paper, par. 552.

5 The motif of 3½ (the Apocalyptic number of days of affliction; cf. Rev. 11 : 9 and 11) refers to the alchemical dilemma “3 or 4?” or to the sesquitertian proportion (3 : 4). The *sesquiertius* is $3 + \frac{1}{3}$.

6 There is a very interesting American Indian parallel to this mandala: a white snake coiled round a centre shaped like a cross in four colours. Cf. Newcomb and Reichard, *Sandpaintings of the Navajo Shooting Chant*, Pl. XIII, pp. 13 and 78. The book contains a large number of interesting mandalas in colour.

7 The Egyptian Horus-child is likewise shown sitting in the lotus.

8 Note the allusion in the name “Liver-pool.” The liver is that which causes to live, the seat of life. [Cf. *Memories, Dreams, Reflections*, pp. 197f./195f.]

9 [Cf. *The Practice of Psychotherapy*, 2nd edn., appendix, esp. par. 557.—EDITORS.]

Fifth hardcover printing, with additional corrections, 1978

First Princeton / Bollingen Paperback printing, 1979

This book is a paperback reprint of Volume 9, part ii, of the Collected Works of C. G. Jung. All the volumes comprising the Collected Works constitute number XX in Bollingen Series, under the editorship of Herbert Read (d. 1968), Michael Fordham, and Gerhard Adler; executive editor, William McGuire.

Translated from the first part of *Aion: Untersuchungen zur Symbolgeschichte* (Psychologische Abhandlungen, VIII), published by Rascher Verlag, Zurich, 1951.

ISBN 0-691-01826-X (paperback edition)

ISBN 0-691-09775-5 (hardcover edition)

LIBRARY OF CONGRESS CATALOG CARD NUMBER 75-156

EDITORIAL NOTE

Volume 9 of the Collected Works is devoted to studies of the specific archetypes of the collective unconscious. Part I, entitled *The Archetypes and the Collective Unconscious*, is composed of shorter essays; Part II, *Aion*, is a long monograph on the archetype of the self. The author has agreed to a modification of the sub-title of *Aion*, which in the Swiss edition appeared in two forms, “Researches into the History of Symbols” and “Contributions to the Symbolism of the Self.” The first five chapters were previously published, with small differences, in *Psyche and Symbol: A Selection from the Writings of C. G. Jung*, edited by Violet S. de Laszlo (Anchor Books, Garden City, New York, 1958).

EDITORIAL NOTE TO THE SECOND EDITION

For this edition corrections have been made in the text and footnotes and the bibliographical references have been brought up to date in relation to the *Collected Works*. The translation has been corrected in light of further experience of translating Jung's works.

TRANSLATOR'S NOTE

Grateful acknowledgment is made to the following persons, whose translations have been consulted during the preparation of the present work: Mr. William H. Kennedy, for extensive use of his translation of portions of [chapters 2](#) and [3](#), issued as “Shadow, Animus, and Anima” by the Analytical Psychology Club of New York, 1950; Dr. Hildegarde Nagel, for reference to her translation of the original *Eranos-Jahrbuch* version (1949) of “Concerning the Self,” in *Spring*, 1951, which original version the author later expanded into *Aion*, [chapters 4](#) and [5](#); and Miss Barbara Hannah and Dr. Marie-Louise von Franz, for helpful advice with the remaining chapters. Especial thanks are due to Mr. A. S. B. Glover, who (unless otherwise noted) translated the Latin and Greek texts throughout. References to published sources are given for the sake of completeness.

FOREWORD

The theme of this work¹ is the idea of the Aeon (Greek, *Aion*). My investigation seeks, with the help of Christian, Gnostic, and alchemical symbols of the self, to throw light on the change of psychic situation within the “Christian aeon.” Christian tradition from the outset is not only saturated with Persian and Jewish ideas about the beginning and end of time, but is filled with intimations of a kind of enantiodromian reversal of dominants. I mean by this the dilemma of Christ and Antichrist. Probably most of the historical speculations about time and the division of time were influenced, as the Apocalypse shows, by astrological ideas. It is therefore only natural that my reflections should gravitate mainly round the symbol of the *Fishes*, for the Pisces aeon is the synchronistic concomitant of two thousand years of Christian development. In this time-period not only was the figure of the Anthropos (the “Son of Man”) progressively amplified symbolically, and thus assimilated psychologically, but it brought with it changes in man’s attitude that had already been anticipated by the expectation of the Antichrist in the ancient texts. Because these texts relegate the appearance of Antichrist to the end of time, we are justified in speaking of a “Christian aeon,” which, it was presupposed, would find its end with the Second Coming. It seems as if this expectation coincides with the astrological conception of the “Platonic month” of the *Fishes*.

The immediate occasion for my proposing to discuss these historical questions is the fact that the archetypal image of wholeness, which appears so frequently in the products of the unconscious, has its forerunners in history. These were identified very early with the figure of Christ, as I have shown in my book *Psychology and Alchemy*.² I have been requested so often by my readers to discuss the relations between the traditional Christ-figure and the natural symbols of wholeness, or the self, that I finally decided to take this task in hand. Considering the unusual difficulties of such an undertaking, my decision did not come easily to me, for, in order to surmount all the obstacles and possibilities of error, a knowledge and caution would be needed which, unfortunately, are vouchsafed me only in limited degree. I am moderately certain of my observations on the empirical material, but I am fully aware of the risk I am taking in drawing the testimonies of history into the scope of my reflections. I think I also know the responsibility I am taking upon myself when, as though continuing the historical process of assimilation, I add to the many symbolical amplifications of the Christ-figure yet another, the psychological one, or even, so it might seem, reduce the Christ-symbol to a psychological image of wholeness. My reader should never forget, however, that I am not making a confession of faith or writing a tendentious tract, but am simply considering how certain things could be understood from the standpoint of our modern

consciousness—things which I deem it valuable to understand, and which are obviously in danger of being swallowed up in the abyss of incomprehension and oblivion; things, finally, whose understanding would do much to remedy our philosophic disorientation by shedding light on the psychic background and the secret chambers of the soul. The essence of this book was built up gradually, in the course of many years, in countless conversations with people of all ages and all walks of life; with people who in the confusion and uprootedness of our society were likely to lose all contact with the meaning of European culture and to fall into that state of suggestibility which is the occasion and cause of the Utopian mass-psychoses of our time.

I write as a physician, with a physician's sense of responsibility, and not as a proselyte. Nor do I write as a scholar, otherwise I would wisely barricade myself behind the safe walls of my specialism and not, on account of my inadequate knowledge of history, expose myself to critical attack and damage my scientific reputation. So far as my capacities allow, restricted as they are by old age and illness, I have made every effort to document my material as reliably as possible and to assist the verification of my conclusions by citing the sources.

AION

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

These things came to pass, they say, that Jesus might be made the first sacrifice in the discrimination of composite natures.

HIPPOLYTUS, *Elenchos*, VII, 27, 8

THE EGO

- [1] Investigation of the psychology of the unconscious confronted me with facts which required the formulation of new concepts. One of these concepts is the *self*. The entity so denoted is not meant to take the place of the one that has always been known as the *ego*, but includes it in a supraordinate concept. We understand the ego as the complex factor to which all conscious contents are related. It forms, as it were, the centre of the field of consciousness; and, in so far as this comprises the empirical personality, the ego is the subject of all personal acts of consciousness. The relation of a psychic content to the ego forms the criterion of its consciousness, for no content can be conscious unless it is represented to a subject.
- [2] With this definition we have described and delimited the *scope* of the subject. Theoretically, no limits can be set to the field of consciousness, since it is capable of indefinite extension. Empirically, however, it always finds its limit when it comes up against the *unknown*. This consists of everything we do not know, which, therefore, is not related to the ego as the centre of the field of consciousness. The unknown falls into two groups of objects: those which are outside and can be experienced by the senses, and those which are inside and are experienced immediately. The first group comprises the unknown in the outer world; the second the unknown in the inner world. We call this latter territory the *unconscious*.
- [3] The ego, as a specific content of consciousness, is not a simple or elementary factor but a complex one which, as such, cannot be described exhaustively. Experience shows that it rests on two seemingly different bases: the *somatic* and the *psychic*. The somatic basis is inferred from the totality of endosomatic perceptions, which for their part are already of a psychic nature and are associated with the ego, and are therefore conscious. They are produced by endosomatic stimuli, only some of which cross the threshold of consciousness. A considerable proportion of these stimuli occur unconsciously, that is, subliminally. The fact that they are subliminal does not necessarily mean that their status is merely physiological, any more than this would be true of a psychic content. Sometimes they are capable of crossing the threshold, that is, of becoming perceptions. But there is no doubt that a large proportion of these endosomatic stimuli are simply incapable of consciousness and are so elementary that there is no reason to assign them a psychic nature—unless of course one favours the philosophical view that all life-processes are psychic anyway.

The chief objection to this hardly demonstrable hypothesis is that it enlarges the concept of the psyche beyond all bounds and interprets the life-process in a way not absolutely warranted by the facts. Concepts that are too broad usually prove to be unsuitable instruments because they are too vague and nebulous. I have therefore suggested that the term “psychic” be used only where there is evidence of a will capable of modifying reflex or instinctual processes. Here I must refer the reader to my paper “On the Nature of the Psyche,”¹ where I have discussed this definition of the “psychic” at somewhat greater length.

[4] The somatic basis of the ego consists, then, of conscious and unconscious factors. The same is true of the psychic basis: on the one hand the ego rests on the *total field of consciousness*, and on the other, on the *sum total of unconscious contents*. These fall into three groups: first, temporarily subliminal contents that can be reproduced voluntarily (memory); second, unconscious contents that cannot be reproduced voluntarily; third, contents that are not capable of becoming conscious at all. Group two can be inferred from the spontaneous irruption of subliminal contents into consciousness. Group three is hypothetical; it is a logical inference from the facts underlying group two. It contains contents which have *not yet* irrupted into consciousness, or which never will.

[5] When I said that the ego “rests” on the total field of consciousness I do not mean that it *consists* of this. Were that so, it would be indistinguishable from the field of consciousness as a whole. The ego is only the latter’s point of reference, grounded on and limited by the somatic factor described above.

[6] Although its bases are in themselves relatively unknown and unconscious, the ego is a conscious factor par excellence. It is even acquired, empirically speaking, during the individual’s lifetime. It seems to arise in the first place from the collision between the somatic factor and the environment, and, once established as a subject, it goes on developing from further collisions with the outer world and the inner.

[7] Despite the unlimited extent of its bases, the ego is never more and never less than consciousness as a whole. As a conscious factor the ego could, theoretically at least, be described completely. But this would never amount to more than a picture of the *conscious personality*; all those features which are unknown or unconscious to the subject would be missing. A total picture would have to include these. But a total description of the personality is, even in theory, absolutely impossible, because the unconscious portion of it cannot be grasped cognitively. This unconscious portion, as experience has abundantly shown, is by no means unimportant. On the contrary, the most decisive qualities in a person are often unconscious and can be perceived only by others, or have to be laboriously discovered with outside help.

- [8] Clearly, then, the *personality as a total phenomenon* does not coincide with the ego, that is, with the conscious personality, but forms an entity that has to be distinguished from the ego. Naturally the need to do this is incumbent only on a psychology that reckons with the fact of the unconscious, but for such a psychology the distinction is of paramount importance. Even for jurisprudence it should be of some importance whether certain psychic facts are conscious or not—for instance, in adjudging the question of responsibility.
- [9] I have suggested calling the total personality which, though present, cannot be fully known, the *self*. The ego is, by definition, subordinate to the self and is related to it like a part to the whole. Inside the field of consciousness it has, as we say, free will. By this I do not mean anything philosophical, only the well-known psychological fact of “free choice,” or rather the subjective feeling of freedom. But, just as our free will clashes with necessity in the outside world, so also it finds its limits outside the field of consciousness in the subjective inner world, where it comes into conflict with the facts of the self. And just as circumstances or outside events “happen” to us and limit our freedom, so the self acts upon the ego like an *objective occurrence* which free will can do very little to alter. It is, indeed, well known that the ego not only can do nothing against the self, but is sometimes actually assimilated by unconscious components of the personality that are in the process of development and is greatly altered by them.
- [10] It is, in the nature of the case, impossible to give any general description of the ego except a formal one. Any other mode of observation would have to take account of the *individuality* which attaches to the ego as one of its main characteristics. Although the numerous elements composing this complex factor are, in themselves, everywhere the same, they are infinitely varied as regards clarity, emotional colouring, and scope. The result of their combination—the ego—is therefore, so far as one can judge, individual and unique, and retains its identity up to a certain point. Its stability is relative, because far-reaching changes of personality can sometimes occur. Alterations of this kind need not always be pathological; they can also be developmental and hence fall within the scope of the normal.
- [11] Since it is the point of reference for the field of consciousness, the ego is the subject of all successful attempts at adaptation so far as these are achieved by the will. The ego therefore has a significant part to play in the psychic economy. Its position there is so important that there are good grounds for the prejudice that the ego is the centre of the personality, and that the field of consciousness is the psyche *per se*. If we discount certain suggestive ideas in Leibniz, Kant, Schelling, and Schopenhauer, and the philosophical excursions of Carus and von Hartmann, it is only since the end of the nineteenth century that modern psychology, with its

inductive methods, has discovered the foundations of consciousness and proved empirically the existence of a psyche outside consciousness. With this discovery the position of the ego, till then absolute, became relativized; that is to say, though it retains its quality as the centre of the field of consciousness, it is questionable whether it is the centre, of the personality. It is part of the personality but not the whole of it. As I have said, it is simply impossible to estimate how large or how small its share is; how free or how dependent it is on the qualities of this “extra-conscious” psyche. We can only say that its freedom is limited and its dependence proved in ways that are often decisive. In my experience one would do well not to underestimate its dependence on the unconscious. Naturally there is no need to say this to persons who already overestimate the latter’s importance. Some criterion for the right measure is afforded by the psychic consequences of a wrong estimate, a point to which we shall return later on.

[12] We have seen that, from the standpoint of the psychology of consciousness, the unconscious can be divided into three groups of contents. But from the standpoint of the psychology of the personality a twofold division ensues: an “extra-conscious” psyche whose contents are *personal*, and an “extra-conscious” psyche whose contents are *impersonal* and *collective*. The first group comprises contents which are integral components of the individual personality and could therefore just as well be conscious; the second group forms, as it were, an omnipresent, unchanging, and everywhere identical *quality or substrate of the psyche per se*. This is, of course, no more than a hypothesis. But we are driven to it by the peculiar nature of the empirical material, not to mention the high probability that the general similarity of psychic processes in all individuals must be based on an equally general and impersonal principle that conforms to law, just as the instinct manifesting itself in the individual is only the partial manifestation of an instinctual substrate common to all men.

II

THE SHADOW

[13] Whereas the contents of the personal unconscious are acquired during the individual's lifetime, the contents of the collective unconscious are invariably archetypes that were present from the beginning. Their relation to the instincts has been discussed elsewhere.¹ The archetypes most clearly characterized from the empirical point of view are those which have the most frequent and the most disturbing influence on the ego. These are the *shadow*, the *anima*, and the *animus*.² The most accessible of these, and the easiest to experience, is the shadow, for its nature can in large measure be inferred from the contents of the personal unconscious. The only exceptions to this rule are those rather rare cases where the positive qualities of the personality are repressed, and the ego in consequence plays an essentially negative or unfavourable role.

[14] The shadow is a moral problem that challenges the whole ego-personality, for no one can become conscious of the shadow without considerable moral effort. To become conscious of it involves recognizing the dark aspects of the personality as present and real. This act is the essential condition for any kind of self-knowledge, and it therefore, as a rule, meets with considerable resistance. Indeed, self-knowledge as a psychotherapeutic measure frequently requires much painstaking work extending over a long period.

[15] Closer examination of the dark characteristics—that is, the inferiorities constituting the shadow—reveals that they have an *emotional* nature, a kind of autonomy, and accordingly an obsessive or, better, possessive quality. Emotion, incidentally, is not an activity of the individual but something that happens to him. Affects occur usually where adaptation is weakest, and at the same time they reveal the reason for its weakness, namely a certain degree of inferiority and the existence of a lower level of personality. On this lower level with its uncontrolled or scarcely controlled emotions one behaves more or less like a primitive, who is not only the passive victim of his affects but also singularly incapable of moral judgment.

[16] Although, with insight and good will, the shadow can to some extent be assimilated into the conscious personality, experience shows that there are certain features which offer the most obstinate resistance to moral control and prove almost impossible to influence. These resistances are usually bound up with *projections*,

which are not recognized as such, and their recognition is a moral achievement beyond the ordinary. While some traits peculiar to the shadow can be recognized without too much difficulty as one's own personal qualities, in this case both insight and good will are unavailing because the cause of the emotion appears to lie, beyond all possibility of doubt, in the *other person*. No matter how obvious it may be to the neutral observer that it is a matter of projections, there is little hope that the subject will perceive this himself. He must be convinced that he throws a very long shadow before he is willing to withdraw his emotionally-toned projections from their object.

[17] Let us suppose that a certain individual shows no inclination whatever to recognize his projections. The projection-making factor then has a free hand and can realize its object—if it has one—or bring about some other situation characteristic of its power. As we know, it is not the conscious subject but the unconscious which does the projecting. Hence one meets with projections, one does not make them. The effect of projection is to isolate the subject from his environment, since instead of a real relation to it there is now only an illusory one. Projections change the world into the replica of one's own unknown face. In the last analysis, therefore, they lead to an autoerotic or autistic condition in which one dreams a world whose reality remains forever unattainable. The resultant *sentiment d'incomplétude* and the still worse feeling of sterility are in their turn explained by projection as the malevolence of the environment, and by means of this vicious circle the isolation is intensified. The more projections are thrust in between the subject and the environment, the harder it is for the ego to see through its illusions. A forty-five-year-old patient who had suffered from a compulsion neurosis since he was twenty and had become completely cut off from the world once said to me: "But I can never admit to myself that I've wasted the best twenty-five years of my life!"

[18] It is often tragic to see how blatantly a man bungles his own life and the lives of others yet remains totally incapable of seeing how much the whole tragedy originates in himself, and how he continually feeds it and keeps it going. Not *consciously*, of course—for consciously he is engaged in bewailing and cursing a faithless world that recedes further and further into the distance. Rather, it is an unconscious factor which spins the illusions that veil his world. And what is being spun is a cocoon, which in the end will completely envelop him.

[19] One might assume that projections like these, which are so very difficult if not impossible to dissolve, would belong to the realm of the shadow—that is, to the negative side of the personality. This assumption becomes untenable after a certain point, because the symbols that then appear no longer refer to the same but to the opposite sex, in a man's case to a woman and vice versa. The source of projections is no longer the shadow—which is always of the same sex as the subject—but a

contrasexual figure. Here we meet the animus of a woman and the anima of a man, two corresponding archetypes whose autonomy and unconsciousness explain the stubbornness of their projections. Though the shadow is a motif as well known to mythology as anima and animus, it represents first and foremost the personal unconscious, and its content can therefore be made conscious without too much difficulty. In this it differs from anima and animus, for whereas the shadow can be seen through and recognized fairly easily, the anima and animus are much further away from consciousness and in normal circumstances are seldom if ever realized. With a little self-criticism one can see through the shadow—so far as its nature is personal. But when it appears as an archetype, one encounters the same difficulties as with anima and animus. In other words, it is quite within the bounds of possibility for a man to recognize the relative evil of his nature, but it is a rare and shattering experience for him to gaze into the face of absolute evil.

III

THE SYZYGY: ANIMA AND ANIMUS

[20] What, then, is this projection-making factor? The East calls it the “Spinning Woman”¹—Maya, who creates illusion by her dancing. Had we not long since known it from the symbolism of dreams, this hint from the Orient would put us on the right track: the enveloping, embracing, and devouring element points unmistakably to the mother,² that is, to the son’s relation to the real mother, to her imago, and to the woman who is to become a mother for him. His Eros is passive like a child’s; he hopes to be caught, sucked in, enveloped, and devoured. He seeks, as it were, the protecting, nourishing, charmed circle of the mother, the condition of the infant released from every care, in which the outside world bends over him and even forces happiness upon him. No wonder the real world vanishes from sight!

[21] If this situation is dramatized, as the unconscious usually dramatizes it, then there appears before you on the psychological stage a man living regressively, seeking his childhood and his mother, fleeing from a cold cruel world which denies him understanding. Often a mother appears beside him who apparently shows not the slightest concern that her little son should become a man, but who, with tireless and self-immolating effort, neglects nothing that might hinder him from growing up and marrying. You behold the secret conspiracy between mother and son, and how each helps the other to betray life.

[22] Where does the guilt lie? With the mother, or with the son? Probably with both. The unsatisfied longing of the son for life and the world ought to be taken seriously. There is in him a desire to touch reality, to embrace the earth and fructify the field of the world. But he makes no more than a series of fitful starts, for his initiative as well as his staying power are crippled by the secret memory that the world and happiness may be had as a gift—from the mother. The fragment of world which he, like every man, must encounter again and again is never quite the right one, since it does not fall into his lap, does not meet him half way, but remains resistant, has to be conquered, and submits only to force. It makes demands on the masculinity of a man, on his ardour, above all on his courage and resolution when it comes to throwing his whole being into the scales. For this he would need a faithless Eros, one capable of forgetting his mother and undergoing the pain of relinquishing the first love of his life. The mother, foreseeing this danger, has carefully inculcated into him the virtues of faithfulness, devotion, loyalty, so as to protect him from the moral disruption

which is the risk of every life adventure. He has learnt these lessons only too well, and remains true to his mother. This naturally causes her the deepest anxiety (when, to her greater glory, he turns out to be a homosexual, for example) and at the same time affords her an unconscious satisfaction that is positively mythological. For, in the relationship now reigning between them, there is consummated the immemorial and most sacred archetype of the marriage of mother and son. What, after all, has commonplace reality to offer, with its registry offices, pay envelopes, and monthly rent, that could outweigh the mystic awe of the *hieros gamos*? Or the star-crowned woman whom the dragon pursues, or the pious obscurities veiling the marriage of the Lamb?

[23] This myth, better than any other, illustrates the nature of the collective unconscious. At this level the mother is both old and young, Demeter and Persephone, and the son is spouse and sleeping suckling rolled into one. The imperfections of real life, with its laborious adaptations and manifold disappointments, naturally cannot compete with such a state of indescribable fulfilment.

[24] In the case of the son, the projection-making factor is identical with the mother-*imago*, and this is consequently taken to be the real mother. The projection can only be dissolved when the son sees that in the realm of his psyche there is an *imago* not only of the mother but of the daughter, the sister, the beloved, the heavenly goddess, and the chthonic Baubo. Every mother and every beloved is forced to become the carrier and embodiment of this omnipresent and ageless image, which corresponds to the deepest reality in a man. It belongs to him, this perilous image of Woman; she stands for the loyalty which in the interests of life he must sometimes forgo; she is the much needed compensation for the risks, struggles, sacrifices that all end in disappointment; she is the solace for all the bitterness of life. And, at the same time, she is the great illusionist, the seductress, who draws him into life with her *Maya*—and not only into life's reasonable and useful aspects, but into its frightful paradoxes and ambivalences where good and evil, success and ruin, hope and despair, counterbalance one another. Because she is his greatest danger she demands from a man his greatest, and if he has it in him she will receive it.

[25] This image is "My Lady Soul," as Spitteler called her. I have suggested instead the term "anima," as indicating something specific, for which the expression "soul" is too general and too vague. The empirical reality summed up under the concept of the *anima* forms an extremely dramatic content of the unconscious. It is possible to describe this content in rational, scientific language, but in this way one entirely fails to express its living character. Therefore, in describing the living processes of the psyche, I deliberately and consciously give preference to a dramatic, mythological

way of thinking and speaking, because this is not only more expressive but also more exact than an abstract scientific terminology, which is wont to toy with the notion that its theoretic formulations may one fine day be resolved into algebraic equations.

[26] The projection-making factor is the anima, or rather the unconscious as represented by the anima. Whenever she appears, in dreams, visions, and fantasies, she takes on personified form, thus demonstrating that the factor she embodies possesses all the outstanding characteristics of a feminine being.³ She is not an invention of the conscious, but a spontaneous product of the unconscious. Nor is she a substitute figure for the mother. On the contrary, there is every likelihood that the numinous qualities which make the mother-imago so dangerously powerful derive from the collective archetype of the anima, which is incarnated anew in every male child.

[27] Since the anima is an archetype that is found in men, it is reasonable to suppose that an equivalent archetype must be present in women; for just as the man is compensated by a feminine element, so woman is compensated by a masculine one. I do not, however, wish this argument to give the impression that these compensatory relationships were arrived at by deduction. On the contrary, long and varied experience was needed in order to grasp the nature of anima and animus empirically. Whatever we have to say about these archetypes, therefore, is either directly verifiable or at least rendered probable by the facts. At the same time, I am fully aware that we are discussing pioneer work which by its very nature can only be provisional.

[28] Just as the mother seems to be the first carrier of the projection-making factor for the son, so is the father for the daughter. Practical experience of these relationships is made up of many individual cases presenting all kinds of variations on the same basic theme. A concise description of them can, therefore, be no more than schematic.

[29] Woman is compensated by a masculine element and therefore her unconscious has, so to speak, a masculine imprint. This results in a considerable psychological difference between men and women, and accordingly I have called the projection-making factor in women the animus, which means mind or spirit. The animus corresponds to the paternal Logos just as the anima corresponds to the maternal Eros. But I do not wish or intend to give these two intuitive concepts too specific a definition. I use Eros and Logos merely as conceptual aids to describe the fact that woman's consciousness is characterized more by the connective quality of Eros than by the discrimination and cognition associated with Logos. In men, Eros, the function of relationship, is usually less developed than Logos. In women, on the other hand, Eros is an expression of their true nature, while their Logos is often only a regrettable accident. It gives rise to misunderstandings and annoying interpretations in the family

circle and among friends. This is because it consists of *opinions* instead of reflections, and by opinions I mean *a priori* assumptions that lay claim to absolute truth. Such assumptions, as everyone knows, can be extremely irritating. As the animus is partial to argument, he can best be seen at work in disputes where both parties know they are right. Men can argue in a very womanish way, too, when they are anima-possessed and have thus been transformed into the animus of their own anima. With them the question becomes one of personal vanity and touchiness (as if they were females); with women it is a question of *power*, whether of truth or justice or some other “ism”—for the dressmaker and hairdresser have already taken care of their vanity. The “Father” (i.e., the sum of conventional opinions) always plays a great role in female argumentation. No matter how friendly and obliging a woman’s Eros may be, no logic on earth can shake her if she is ridden by the animus. Often the man has the feeling—and he is not altogether wrong—that only seduction or a beating or rape would have the necessary power of persuasion. He is unaware that this highly dramatic situation would instantly come to a banal and unexciting end if he were to quit the field and let a second woman carry on the battle (his wife, for instance, if she herself is not the fiery war horse). This sound idea seldom or never occurs to him, because no man can converse with an animus for five minutes without becoming the victim of his own anima. Anyone who still had enough sense of humour to listen objectively to the ensuing dialogue would be staggered by the vast number of commonplaces, misapplied truisms, clichés from newspapers and novels, shop-soiled platitudes of every description interspersed with vulgar abuse and brain-splitting lack of logic. It is a dialogue which, irrespective of its participants, is repeated millions and millions of times in all the languages of the world and always remains essentially the same.

[30] This singular fact is due to the following circumstance: when animus and anima meet, the animus draws his sword of power and the anima ejects her poison of illusion and seduction. The outcome need not always be negative, since the two are equally likely to fall in love (a special instance of love at first sight). The language of love is of astonishing uniformity, using the well-worn formulas with the utmost devotion and fidelity, so that once again the two partners find themselves in a banal collective situation. Yet they live in the illusion that they are related to one another in a most individual way.

[31] In both its positive and its negative aspects the anima/animus relationship is always full of “animosity,” i.e., it is emotional, and hence collective. Affects lower the level of the relationship and bring it closer to the common instinctual basis, which no longer has anything individual about it. Very often the relationship runs its course heedless of its human performers, who afterwards do not know what happened to them.

- [32] Whereas the cloud of “animosity” surrounding the man is composed chiefly of sentimentality and resentment, in woman it expresses itself in the form of opinionated views, interpretations, insinuations, and misconstructions, which all have the purpose (sometimes attained) of severing the relation between two human beings. The woman, like the man, becomes wrapped in a veil of illusions by her demon-familiar, and, as the daughter who alone understands her father (that is, is eternally right in everything), she is translated to the land of sheep, where she is put to graze by the shepherd of her soul, the animus.
- [33] Like the anima, the animus too has a positive aspect. Through the figure of the father he expresses not only conventional opinion but—equally—what we call “spirit,” philosophical or religious ideas in particular, or rather the attitude resulting from them. Thus the animus is a psychopomp, a mediator between the conscious and the unconscious and a personification of the latter. Just as the anima becomes, through integration, the Eros of consciousness, so the animus becomes a Logos; and in the same way that the anima gives relationship and relatedness to a man’s consciousness, the animus gives to woman’s consciousness a capacity for reflection, deliberation, and self-knowledge.
- [34] The effect of anima and animus on the ego is in principle the same. This effect is extremely difficult to eliminate because, in the first place, it is uncommonly strong and immediately fills the ego-personality with an unshakable feeling of rightness and righteousness. In the second place, the cause of the effect is projected and appears to lie in objects and objective situations. Both these characteristics can, I believe, be traced back to the peculiarities of the archetype. For the archetype, of course, exists *a priori*. This may possibly explain the often totally irrational yet undisputed and indisputable existence of certain moods and opinions. Perhaps these are so notoriously difficult to influence because of the powerfully suggestive effect emanating from the archetype. Consciousness is fascinated by it, held captive, as if hypnotized. Very often the ego experiences a vague feeling of moral defeat and then behaves all the more defensively, defiantly, and self-righteously, thus setting up a vicious circle which only increases its feeling of inferiority. The bottom is then knocked out of the human relationship, for, like megalomania, a feeling of inferiority makes mutual recognition impossible, and without this there is no relationship.
- [35] As I said, it is easier to gain insight into the shadow than into the anima or animus. With the shadow, we have the advantage of being prepared in some sort by our education, which has always endeavoured to convince people that they are not one-hundred-per-cent pure gold. So everyone immediately understands what is meant by “shadow,” “inferior personality,” etc. And if he has forgotten, his memory can easily be refreshed by a Sunday sermon, his wife, or the tax collector. With the anima

and animus, however, things are by no means so simple. Firstly, there is no moral education in this respect, and secondly, most people are content to be self-righteous and prefer mutual vilification (if nothing worse!) to the recognition of their projections. Indeed, it seems a very natural state of affairs for men to have irrational moods and women irrational opinions. Presumably this situation is grounded on instinct and must remain as it is to ensure that the Empedoclean game of the hate and love of the elements shall continue for all eternity. Nature is conservative and does not easily allow her courses to be altered; she defends in the most stubborn way the inviolability of the preserves where anima and animus roam, Hence it is much more difficult to become conscious of one's anima/animus projections than to acknowledge one's shadow side. One has, of course, to overcome certain moral obstacles, such as vanity, ambition, conceit, resentment, etc., but in the case of projections all sorts of purely intellectual difficulties are added, quite apart from the contents of the projection which one simply doesn't know how to cope with. And on top of all this there arises a profound doubt as to whether one is not meddling too much with nature's business by prodding into consciousness things which it would have been better to leave asleep.

[36] Although there are, in my experience, a fair number of people who can understand without special intellectual or moral difficulties what is meant by anima and animus, one finds very many more who have the greatest trouble in visualizing these empirical concepts as anything concrete. This shows that they fall a little outside the usual range of experience. They are unpopular precisely because they seem unfamiliar. The consequence is that they mobilize prejudice and become taboo like everything else that is unexpected.

[37] So if we set it up as a kind of requirement that projections should be dissolved, because it is wholesomer that way and in every respect more advantageous, we are entering upon new ground. Up till now everybody has been convinced that the idea "my father," "my mother," etc., is nothing but a faithful reflection of the real parent, corresponding in every detail to the original, so that when someone says "my father" he means no more and no less than what his father is in reality. This is actually what he supposes he does mean, but a supposition of identity by no means brings that identity about. This is where the fallacy of the *enkekalymmenos* ('the veiled one') comes in.⁴ If one includes in the psychological equation X's picture of his father, which he takes for the real father, the equation will not work out, because the unknown quantity he has introduced does not tally with reality. X has overlooked the fact that his idea of a person consists, in the first place, of the possibly very incomplete picture he has received of the real person and, in the second place, of the subjective modifications he has imposed upon this picture. X's idea of his father is a complex quantity for which the real father is only in part responsible, an indefinitely

larger share falling to the son. So true is this that every time he criticizes or praises his father he is unconsciously hitting back at himself, thereby bringing about those psychic consequences that overtake people who habitually disparage or overpraise themselves. If, however, X carefully compares his reactions with reality, he stands a chance of noticing that he has miscalculated somewhere by not realizing long ago from his father's behaviour that the picture he has of him is a false one. But as a rule X is convinced that he is right, and if anybody is wrong it must be the other fellow. Should X have a poorly developed Eros, he will be either indifferent to the inadequate relationship he has with his father or else annoyed by the inconsistency and general incomprehensibility of a father whose behaviour never really corresponds to the picture X has of him. Therefore X thinks he has every right to feel hurt, misunderstood, and even betrayed.

[38] One can imagine how desirable it would be in such cases to dissolve the projection. And there are always optimists who believe that the golden age can be ushered in simply by telling people the right way to go. But just let them try to explain to these people that they are acting like a dog chasing its own tail. To make a person see the shortcomings of his attitude considerably more than mere "telling" is needed, for more is involved than ordinary common sense can allow. What one is up against here is the kind of fateful misunderstanding which, under ordinary conditions, remains forever inaccessible to insight. It is rather like expecting the average respectable citizen to recognize himself as a criminal.

[39] I mention all this just to illustrate the order of magnitude to which the anima/animus projections belong, and the moral and intellectual exertions that are needed to dissolve them. Not all the contents of the anima and animus are projected, however. Many of them appear spontaneously in dreams and so on, and many more can be made conscious through active imagination. In this way we find that thoughts, feelings, and affects are alive in us which we would never have believed possible. Naturally, possibilities of this sort seem utterly fantastic to anyone who has not experienced them himself, for a normal person "knows what he thinks." Such a childish attitude on the part of the "normal person" is simply the rule, so that no one without experience in this field can be expected to understand the real nature of anima and animus. With these reflections one gets into an entirely new world of psychological experience, provided of course that one succeeds in realizing it in practice. Those who do succeed can hardly fail to be impressed by all that the ego does not know and never has known. This increase in self-knowledge is still very rare nowadays and is usually paid for in advance with a neurosis, if not with something worse.

[40] The autonomy of the collective unconscious expresses itself in the figures of anima and animus. They personify those of its contents which, when withdrawn from projection, can be integrated into consciousness. To this extent, both figures represent *functions* which filter the contents of the collective unconscious through to the conscious mind. They appear or behave as such, however, only so long as the tendencies of the conscious and unconscious do not diverge too greatly. Should any tension arise, these functions, harmless till then, confront the conscious mind in personified form and behave rather like systems split off from the personality, or like part souls. This comparison is inadequate in so far as nothing previously belonging to the ego-personality has split off from it; on the contrary, the two figures represent a disturbing accretion. The reason for their behaving in this way is that though the *contents* of anima and animus can be integrated they themselves cannot, since they are archetypes. As such they are the foundation stones of the psychic structure, which in its totality exceeds the limits of consciousness and therefore can never become the object of direct cognition. Though the effects of anima and animus can be made conscious, they themselves are factors transcending consciousness and beyond the reach of perception and volition. Hence they remain autonomous despite the integration of their contents, and for this reason they should be borne constantly in mind. This is extremely important from the therapeutic standpoint, because constant observation pays the unconscious a tribute that more or less guarantees its cooperation. The unconscious as we know can never be "done with" once and for all. It is, in fact, one of the most important tasks of psychic hygiene to pay continual attention to the symptomatology of unconscious contents and processes, for the good reason that the conscious mind is always in danger of becoming one-sided, of keeping to well-worn paths and getting stuck in blind alleys. The complementary and compensating function of the unconscious ensures that these dangers, which are especially great in neurosis, can in some measure be avoided. It is only under ideal conditions, when life is still simple and unconscious enough to follow the serpentine path of instinct without hesitation or misgiving, that the compensation works with entire success. The more civilized, the more conscious and complicated a man is, the less he is able to follow his instincts. His complicated living conditions and the influence of his environment are so strong that they drown the quiet voice of nature. Opinions, beliefs, theories, and collective tendencies appear in its stead and back up all the aberrations of the conscious mind. Deliberate attention should then be given to the unconscious so that the compensation can set to work. Hence it is especially important to picture the archetypes of the unconscious not as a rushing phantasmagoria of fugitive images but as constant, autonomous factors, which indeed they are.

[41] Both these archetypes, as practical experience shows, possess a fatality that can on occasion produce tragic results. They are quite literally the father and mother of all the disastrous entanglements of fate and have long been recognized as such by the whole world. Together they form a divine pair,⁵ one of whom, in accordance with his Logos nature, is characterized by *pneuma* and *nous*, rather like Hermes with his ever-shifting hues, while the other, in accordance with her Eros nature, wears the features of Aphrodite, Helen (Selene), Persephone, and Hecate. Both of them are unconscious powers, “gods” in fact, as the ancient world quite rightly conceived them to be. To call them by this name is to give them that central position in the scale of psychological values which has always been theirs whether consciously acknowledged or not; for their power grows in proportion to the degree that they remain unconscious. Those who do not see them are in their hands, just as a typhus epidemic flourishes best when its source is undiscovered. Even in Christianity the divine syzygy has not become obsolete, but occupies the highest place as Christ and his bride the Church.⁶ Parallels like these prove extremely helpful in our attempts to find the right criterion for gauging the significance of these two archetypes. What we can discover about them from the conscious side is so slight as to be almost imperceptible. It is only when we throw light into the dark depths of the psyche and explore the strange and tortuous paths of human fate that it gradually becomes clear to us how immense is the influence wielded by these two factors that complement our conscious life.

[42] Recapitulating, I should like to emphasize that the integration of the shadow, or the realization of the personal unconscious, marks the first stage in the analytic process, and that without it a recognition of anima and animus is impossible. The shadow can be realized only through a relation to a partner, and anima and animus only through a relation to a partner of the opposite sex, because only in such a relation do their projections become operative. The recognition of the anima gives rise, in a man, to a triad, one third of which is transcendent: the masculine subject, the opposing feminine subject, and the transcendent anima. With a woman the situation is reversed. The missing fourth element that would make the triad a quaternity is, in a man, the archetype of the Wise Old Man, which I have not discussed here, and in a woman the Chthonic Mother. These four constitute a half immanent and half transcendent quaternity, an archetype which I have called the *marriage quaternio*.⁷ The marriage quaternio provides a schema not only for the self but also for the structure of primitive society with its cross-cousin marriage, marriage classes, and division of settlements into quarters. The self, on the other hand, is a God-image, or at least cannot be distinguished from one. Of this the early Christian spirit was not ignorant, otherwise Clement of Alexandria could never have said that he who knows himself knows God.⁸

IV

THE SELF¹

[43] We shall now turn to the question of whether the increase in self-knowledge resulting from the withdrawal of impersonal projections—in other words, the integration of the contents of the collective unconscious—exerts a specific influence on the ego-personality. To the extent that the integrated contents are *parts of the self*, we can expect this influence to be considerable. Their assimilation augments not only the area of the field of consciousness but also the importance of the ego, especially when, as usually happens, the ego lacks any critical approach to the unconscious. In that case it is easily overpowered and becomes identical with the contents that have been assimilated. In this way, for instance, a masculine consciousness comes under the influence of the anima and can even be possessed by her.

[44] I have discussed the wider effects of the integration of unconscious contents elsewhere² and can therefore omit going into details here. I should only like to mention that the more numerous and the more significant the unconscious contents which are assimilated to the ego, the closer the approximation of the ego to the self, even though this approximation must be a never-ending process. This inevitably produces an inflation of the ego,³ unless a critical line of demarcation is drawn between it and the unconscious figures. But this act of discrimination yields practical results only if it succeeds in fixing reasonable boundaries to the ego and in granting the figures of the unconscious—the self, anima, animus, and shadow—relative autonomy and reality (of a psychic nature). To psychologize this reality out of existence either is ineffectual, or else merely increases the inflation of the ego. One cannot dispose of facts by declaring them unreal. The projection-making factor, for instance, has undeniable reality. Anyone who insists on denying it becomes identical with it, which is not only dubious in itself but a positive danger to the well-being of the individual. Everyone who has dealings with such cases knows how perilous an inflation can be. No more than a flight of steps or a smooth floor is needed to precipitate a fatal fall. Besides the “pride goeth before a fall” motif there are other factors of a no less disagreeable psychosomatic and psychic nature which serve to reduce “puffed-up-ness.” This condition should not be interpreted as one of conscious self-aggrandizement. Such is far from being the rule. In general we are not directly conscious of this condition at all, but can at best infer its existence indirectly from the symptoms. These include the reactions of our immediate environment.

Inflation magnifies the blind spot in the eye, and the more we are assimilated by the projection-making factor, the greater becomes the tendency to identify with it. A clear symptom of this is our growing disinclination to take note of the reactions of the environment and pay heed to them.

[45] It must be reckoned a psychic catastrophe when the *ego is assimilated by the self*. The image of wholeness then remains in the unconscious, so that on the one hand it shares the archaic nature of the unconscious and on the other finds itself in the psychically relative space-time continuum that is characteristic of the unconscious as such.⁴ Both these qualities are numinous and hence have an unlimited determining effect on ego-consciousness, which is differentiated, i.e., separated, from the unconscious and moreover exists in an absolute space and an absolute time. It is a vital necessity that this should be so. If, therefore, the ego falls for any length of time under the control of an unconscious factor, its adaptation is disturbed and the way opened for all sorts of possible accidents.

[46] Hence it is of the greatest importance that the ego should be anchored in the world of consciousness and that consciousness should be reinforced by a very precise adaptation. For this, certain virtues like attention, conscientiousness, patience, etc., are of great value on the moral side, just as accurate observation of the symptomatology of the unconscious and objective selfcriticism are valuable on the intellectual side.

[47] However, accentuation of the ego personality and the world of consciousness may easily assume such proportions that the figures of the unconscious are psychologized and the *self consequently becomes assimilated to the ego*. Although this is the exact opposite of the process we have just described it is followed by the same result: inflation. The world of consciousness must now be levelled down in favour of the reality of the unconscious. In the first case, reality had to be protected against an archaic, “eternal” and “ubiquitous” dream-state: in the second, room must be made for the dream at the expense of the world of consciousness. In the first case, mobilization of all the virtues is indicated; in the second, the presumption of the ego can only be damped down by moral defeat. This is necessary, because otherwise one will never attain that median degree of modesty which is essential for the maintenance of a balanced state. It is not a question, as one might think, of relaxing morality itself but of making a moral effort in a different direction. For instance, a man who is not conscientious enough has to make a moral effort in order to come up to the mark; while for one who is sufficiently rooted in the world through his own efforts it is no small moral achievement to inflict defeat on his virtues by loosening his ties with the world and reducing his adaptive performance. (One thinks in this

connection of Brother Klaus, now canonized, who for the salvation of his soul left his wife to her own devices, along with numerous progeny.)

[48] Since real moral problems all begin where the penal code leaves off, their solution can seldom or never depend on precedent, much less on precepts and commandments. The real moral problems spring from *conflicts of duty*. Anyone who is sufficiently humble, or easy-going, can always reach a decision with the help of some outside authority. But one who trusts others as little as himself can never reach a decision at all, unless it is brought about in the manner which Common Law calls an “Act of God.” The Oxford Dictionary defines this concept as the “action of uncontrollable natural forces.” In all such cases there is an unconscious authority which puts an end to doubt by creating a *fait accompli*. (In the last analysis this is true also of those who get their decision from a higher authority, only in more veiled form.) One can describe this authority either as the “will of God” or as an “action of uncontrollable natural forces,” though psychologically it makes a good deal of difference how one thinks of it. The rationalistic interpretation of this inner authority as “natural forces” or the instincts satisfies the modern intellect but has the great disadvantage that the apparent victory of instinct offends our moral self-esteem; hence we like to persuade ourselves that the matter has been decided solely by the rational motions of the will. Civilized man has such a fear of the “*crimen laesae maiestatis humanae*” that whenever possible he indulges in a retrospective coloration of the facts in order to cover up the feeling of having suffered a moral defeat. He prides himself on what he believes to be his self-control and the omnipotence of his will, and despises the man who lets himself be outwitted by mere nature.

[49] If, on the other hand, the inner authority is conceived as the “will of God” (which implies that “natural forces” are divine forces), our self-esteem is benefited because the decision then appears to be an act of obedience and the result a divine intention. This way of looking at it can, with some show of justice, be accused not only of being very convenient but of cloaking moral laxity in the mantle of virtue. The accusation, however, is justified only when one is in fact knowingly hiding one’s own egoistic opinion behind a hypocritical façade of words. But this is by no means the rule, for in most cases instinctive tendencies assert themselves for or against one’s subjective interests no matter whether an outside authority approves or not. The inner authority does not need to be consulted first, as it is present at the outset in the intensity of the tendencies struggling for decision. In this struggle the individual is never a spectator only; he takes part in it more or less “voluntarily” and tries to throw the weight of his feeling of moral freedom into the scales of decision. Nevertheless, it remains a matter of doubt how much his seemingly free decision has a causal, and possibly unconscious, motivation. This may be quite as much an “act of God” as any natural cataclysm. The problem seems to me unanswerable, because we do not know

where the roots of the feeling of moral freedom lie; and yet they exist no less surely than the instincts, which are felt as compelling forces.

[50] All in all, it is not only more beneficial but more “correct” psychologically to explain as the “will of God” the natural forces that appear in us as instincts. In this way we find ourselves living in harmony with the *habitus* of our ancestral psychic life; that is, we function as man has functioned at all times and in all places. The existence of this *habitus* is proof of its viability, for, if it were not viable, all those who obeyed it would long since have perished of maladaptation. On the other hand, by conforming to it one has a reasonable life expectancy. When an habitual way of thinking guarantees as much as this there is not only no ground for declaring it incorrect but, on the contrary, every reason to take it as “true” or “correct” in the psychological sense. Psychological truths are not metaphysical insights; they are habitual modes of thinking, feeling, and behaving which experience has proved appropriate and useful.

[51] So when I say that the impulses which we find in ourselves should be understood as the “will of God,” I wish to emphasize that they ought not to be regarded as an arbitrary wishing and willing, but as absolutes which one must learn how to handle correctly. The will can control them only in part. It may be able to suppress them, but it cannot alter their nature, and what is suppressed comes up again in another place in altered form, but this time loaded with a resentment that makes the otherwise harmless natural impulse our enemy. I should also like the term “God” in the phrase “the will of God” to be understood not so much in the Christian sense as in the sense intended by Diotima, when she said: “Eros, dear Socrates, is a mighty daemon.” The Greek words *daimon* and *daimonion* express a determining power which comes upon man from outside, like providence or fate, though the ethical decision is left to man. He must know, however, what he is deciding about and what he is doing. Then, if he obeys he is following not just his own opinion, and if he rejects he is destroying not just his own invention.

[52] The purely biological or scientific standpoint falls short in psychology because it is, in the main, intellectual only. That this should be so is not a disadvantage, since the methods of natural science have proved of great heuristic value in psychological research. But the psychic phenomenon cannot be grasped in its totality by the intellect, for it consists not only of *meaning* but also of *value*, and this depends on the intensity of the accompanying feeling-tones. Hence at least the two “rational” functions⁵ are needed in order to map out anything like a complete diagram of a given psychic content.

[53] If, therefore, in dealing with psychic contents one makes allowance not only for intellectual judgments but for value judgments as well, not only is the result a more

complete picture of the content in question, but one also gets a better idea of the particular position it holds in the hierarchy of psychic contents in general. The feeling-value is a very important criterion which psychology cannot do without, because it determines in large measure the role which the content will play in the psychic economy. That is to say, the affective value gives the measure of the intensity of an idea, and the intensity in its turn expresses that idea's energetic tension, its effective potential. The shadow, for instance, usually has a decidedly negative feeling-value, while the anima, like the animus, has more of a positive one. Whereas the shadow is accompanied by more or less definite and describable feeling-tones, the anima and animus exhibit feeling qualities that are harder to define. Mostly they are felt to be fascinating or numinous. Often they are surrounded by an atmosphere of sensitivity, touchy reserve, secretiveness, painful intimacy, and even absoluteness. The relative autonomy of the anima- and animus-figures expresses itself in these qualities. In order of affective rank they stand to the shadow very much as the shadow stands in relation to ego-consciousness. The main affective emphasis seems to lie on the latter; at any rate it is able, by means of a considerable expenditure of energy, to repress the shadow, at least temporarily. But if for any reason the unconscious gains the upper hand, then the valency of the shadow and of the other figures increases proportionately, so that the scale of values is reversed. What lay furthest away from waking consciousness and seemed unconscious assumes, as it were, a threatening shape, and the affective value increases the higher up the scale you go: ego-consciousness, shadow, anima, self. This reversal of the conscious waking state occurs regularly during the transition from waking to sleeping, and what then emerge most vividly are the very things that were unconscious by day. Every *abaissement du niveau mental* brings about a relative reversal of values.

[54] I am speaking here of the *subjective* feeling-value, which is subject to the more or less periodic changes described above. But there are also *objective* values which are founded on a *consensus omnium*—moral, aesthetic, and religious values, for instance, and these are universally recognized ideals or feeling-toned collective ideas (Lévy-Bruhl's "representations collectives").⁶ The subjective feeling-tones or "value quanta" are easily recognized by the kind and number of constellations, or symptoms of disturbance,⁷ they produce. Collective ideals often have no subjective feeling-tone, but nevertheless retain their feeling-value. This value, therefore, cannot be demonstrated by subjective symptoms, though it may be by the attributes attaching to these collective ideas and by their characteristic symbolism, quite apart from their suggestive effect.

[55] The problem has a practical aspect, since it may easily happen that a collective idea, though significant in itself, is—because of its lack of subjective feeling-tone—represented in a dream only by a subsidiary attribute, as when a god is represented by

his theriomorphic attribute, etc. Conversely, the idea may appear in consciousness lacking the affective emphasis that properly belongs to it, and must then be transposed back into its archetypal context—a task that is usually discharged by poets and prophets. Thus Hölderlin, in his “Hymn to Liberty,” lets this concept, worn stale by frequent use and misuse, rise up again in its pristine splendour:

Since her arm out of the dust has raised me,
Beats my heart so boldly and serene;
And my cheek still tingles with her kisses,
Flushed and glowing where her lips have been.
Every word she utters, by her magic
Rises new-created, without flaw;
Hearken to the tidings of my goddess,
Hearken to the Sovereign, and adore!⁸

[56] It is not difficult to see here that the idea of liberty has been changed back to its original dramatic state—into the shining figure of the anima, freed from the weight of the earth and the tyranny of the senses, the psychopomp who leads the way to the Elysian fields.

[57] The first case we mentioned, where the collective idea is represented in a dream by a lowly aspect of itself, is certainly the more frequent: the “goddess” appears as a black cat, and the Deity as the *lapis exilis* (stone of no worth). Interpretation then demands a knowledge of certain things which have less to do with zoology and mineralogy than with the existence of an historical *consensus omnium* in regard to the object in question. These “mythological” aspects are always present, even though in a given case they may be unconscious. If for instance one doesn’t happen to recall, when considering whether to paint the garden gate green or white, that green is the colour of life and hope, the symbolic aspect of “green” is nevertheless present as an unconscious *sous-entendu*. So we find something which has the highest significance for the life of the unconscious standing lowest on the scale of conscious values, and vice versa. The figure of the shadow already belongs to the realm of bodiless phantoms—not to speak of anima and animus, which do not seem to appear at all except as projections upon our fellow human beings. As for the self, it is completely outside the personal sphere, and appears, if at all, only as a religious mythologem, and its symbols range from the highest to the lowest. Anyone who identifies with the daylight half of his psychic life will therefore declare the dreams of the night to be null and void, notwithstanding that the night is as long as the day and that all consciousness is manifestly founded on unconsciousness, is rooted in it and every night is extinguished in it. What is more, psychopathology knows with tolerable certainty what the unconscious can do to the conscious, and for this reason devotes to

the unconscious an attention that often seems incomprehensible to the layman. We know, for instance, that what is small by day is big at night, and the other way round; thus we also know that besides the small by day there always looms the big by night, even when it is invisible.

[58] This knowledge is an essential prerequisite for any integration—that is to say a content can only be integrated when its double aspect has become conscious and when it is grasped not merely intellectually but understood according to its feeling-value. Intellect and feeling, however, are difficult to put into one harness—they conflict with one another by definition. Whoever identifies with an intellectual standpoint will occasionally find his feeling confronting him like an enemy in the guise of the anima; conversely, an intellectual animus will make violent attacks on the feeling standpoint. Therefore, anyone who wants to achieve the difficult feat of realizing something not only intellectually, but also according to its feeling-value, must for better or worse come to grips with the anima/animus problem in order to open the way for a higher union, a *coniunctio oppositorum*. This is an indispensable prerequisite for wholeness.

[59] Although “wholeness” seems at first sight to be nothing but an abstract idea (like anima and animus), it is nevertheless empirical in so far as it is anticipated by the psyche in the form of spontaneous or autonomous symbols. These are the quaternity or mandala symbols, which occur not only in the dreams of modern people who have never heard of them, but are widely disseminated in the historical records of many peoples and many epochs. Their significance as *symbols of unity and totality* is amply confirmed by history as well as by empirical psychology. What at first looks like an abstract idea stands in reality for something that exists and can be experienced, that demonstrates its *a priori* presence spontaneously. Wholeness is thus an objective factor that confronts the subject independently of him, like anima or animus; and just as the latter have a higher position in the hierarchy than the shadow, so wholeness lays claim to a position and a value superior to those of the syzygy. The syzygy seems to represent at least a substantial portion of it, if not actually two halves of the totality formed by the royal brother-sister pair, and hence the tension of opposites from which the divine child⁹ is born as the symbol of unity.

[60] Unity and totality stand at the highest point on the scale of objective values because their symbols can no longer be distinguished from the *imago Dei*. Hence all statements about the God-image apply also to the empirical symbols of totality. Experience shows that individual mandalas are symbols of *order*, and that they occur in patients principally during times of psychic disorientation or re-orientation. As magic circles they bind and subdue the lawless powers belonging to the world of darkness, and depict or create an order that transforms the chaos into a cosmos.¹⁰ The

mandala at first comes into the conscious mind as an unimpressive point or dot,¹¹ and a great deal of hard and painstaking work as well as the integration of many projections are generally required before the full range of the symbol can be anything like completely understood. If this insight were purely intellectual it could be achieved without much difficulty, for the world-wide pronouncements about the God within us and above us, about Christ and the *corpus mysticum*, the personal and suprapersonal atman, etc., are all formulations that can easily be mastered by the philosophic intellect. This is the common source of the illusion that one is then in possession of the thing itself. But actually one has acquired nothing more than its name, despite the age-old prejudice that the name magically represents the thing, and that it is sufficient to pronounce the name in order to posit the thing's existence. In the course of the millennia the reasoning mind has been given every opportunity to see through the futility of this conceit, though that has done nothing to prevent the intellectual mastery of a thing from being accepted at its face value. It is precisely our experiences in psychology which demonstrate as plainly as could be wished that the intellectual "grasp" of a psychological fact produces no more than a concept of it, and that a concept is no more than a name, a *flatus vocis*. These intellectual counters can be bandied about easily enough. They pass lightly from hand to hand, for they have no weight or substance. They sound full but are hollow; and though purporting to designate a heavy task and obligation, they commit us to nothing. The intellect is undeniably useful in its own field, but is a great cheat and illusionist outside of it whenever it tries to manipulate values.

[61] It would seem that one can pursue any science with the intellect alone except psychology, whose subject—the psyche—has more than the two aspects mediated by sense-perception and thinking. The function of value—feeling—is an integral part of our conscious orientation and ought not to be missing in a psychological judgment of any scope, otherwise the model we are trying to build of the real process will be incomplete. Every psychic process has a value quality attached to it, namely its feeling-tone. This indicates the degree to which the subject is *affected* by the process or how much it means to him (in so far as the process reaches consciousness at all). It is through the "affect" that the subject becomes involved and so comes to feel the whole weight of reality. The difference amounts roughly to that between a severe illness which one reads about in a textbook and the real illness which one has. In psychology one possesses nothing unless one has experienced it in reality. Hence a purely intellectual insight is not enough, because one knows only the words and not the substance of the thing from inside.

[62] There are far more people who are afraid of the unconscious than one would expect. They are even afraid of their own shadow. And when it comes to the anima and animus, this fear turns to panic. For the syzygy does indeed represent the psychic

contents that irrupt into consciousness in a psychosis (most clearly of all in the paranoid forms of schizophrenia).¹² The overcoming of this fear is often a moral achievement of unusual magnitude, and yet it is not the only condition that must be fulfilled on the way to a real experience of the self.

[63] The shadow, the syzygy, and the self are psychic factors of which an adequate picture can be formed only on the basis of a fairly thorough experience of them. Just as these concepts arose out of an experience of reality, so they can be elucidated only by further experience. Philosophical criticism will find everything to object to in them unless it begins by recognizing that they are concerned with *facts*, and that the “concept” is simply an abbreviated description or definition of these facts. Such criticism has as little effect on the object as zoological criticism on a duck-billed platypus. It is not the concept that matters; the concept is only a word, a counter, and it has meaning and use only because it stands for a certain sum of experience. Unfortunately I cannot pass on this experience to my public. I have tried in a number of publications, with the help of case material, to present the nature of these experiences and also the method of obtaining them. Wherever my methods were really applied the facts I give have been confirmed. One could see the moons of Jupiter even in Galileo’s day if one took the trouble to use his telescope.

[64] Outside the narrower field of professional psychology these figures meet with understanding from all who have any knowledge of comparative mythology. They have no difficulty in recognizing the shadow as the adverse representative of the dark chthonic world, a figure whose characteristics are universal. The syzygy is immediately comprehensible as the psychic prototype of all divine couples. Finally the self, on account of its empirical peculiarities, proves to be the *eidos* behind the supreme ideas of unity and totality that are inherent in all monotheistic and monistic systems.

[65] I regard these parallels as important because it is possible, through them, to relate so-called *metaphysical* concepts, which have lost their root connection with natural experience, to living, universal psychic processes, so that they can recover their true and original meaning. In this way the connection is reestablished between the ego and projected contents now formulated as “metaphysical” ideas. Unfortunately, as already said, the fact that metaphysical ideas exist and are believed in does nothing to prove the actual existence of their content or of the object they refer to, although the coincidence of idea and reality in the form of a special psychic state, a state of grace, should not be deemed impossible, even if the subject cannot bring it about by an act of will. Once metaphysical ideas have lost their capacity to recall and evoke the original experience they have not only become useless but prove to be actual impediments on the road to wider development. One clings to possessions that have

once meant wealth; and the more ineffective, incomprehensible, and lifeless they become the more obstinately people cling to them. (Naturally it is only sterile ideas that they cling to; living ideas have content and riches enough, so there is no need to cling to them.) Thus in the course of time the meaningful turns into the meaningless. This is unfortunately the fate of metaphysical ideas.

[66] Today it is a real problem what on earth such ideas can mean. The world—so far as it has not completely turned its back on tradition—has long ago stopped wanting to hear a “message”; it would rather be told what the message means. The words that resound from the pulpit are incomprehensible and cry for an explanation. How has the death of Christ brought us redemption when no one feels redeemed? In what way is Jesus a God-man and what is such a being? What is the Trinity about, and the parthenogenesis, the eating of the body and the drinking of the blood, and all the rest of it? What connection can there be between the world of such concepts and the everyday world, whose material reality is the concern of natural science on the widest possible scale? At least sixteen hours out of twenty-four we live exclusively in this everyday world, and the remaining eight we spend preferably in an unconscious condition. Where and when does anything take place to remind us even remotely of phenomena like angels, miraculous feedings, beatitudes, the resurrection of the dead, etc.? It was therefore something of a discovery to find that during the unconscious state of sleep intervals occur, called “dreams,” which occasionally contain scenes having a not inconsiderable resemblance to the motifs of mythology. For myths are miracle tales and treat of all those things which, very often, are also objects of belief.

[67] In the everyday world of consciousness such things hardly exist; that is to say, until 1933 only lunatics would have been found in possession of living fragments of mythology. After this date the world of heroes and monsters spread like a devastating fire over whole nations, proving that the strange world of myth had suffered no loss of vitality during the centuries of reason and enlightenment. If metaphysical ideas no longer have such a fascinating effect as before, this is certainly not due to any lack of primitivity in the European psyche, but simply and solely to the fact that the erstwhile symbols no longer express what is now welling up from the unconscious as the end-result of the development of Christian consciousness through the centuries. This end-result is a true *antimimon pneuma*, a false spirit of arrogance, hysteria, woolly-mindedness, criminal amorality, and doctrinaire fanaticism, a purveyor of shoddy spiritual goods, spurious art, philosophical stutterings, and Utopian humbug, fit only to be fed wholesale to the mass man of today. That is what the post-Christian spirit looks like.

V

CHRIST, A SYMBOL OF THE SELF

[68] The dechristianization of our world, the Luciferian development of science and technology, and the frightful material and moral destruction left behind by the second World War have been compared more than once with the *eschatological* events foretold in the New Testament. These, as we know, are concerned with the coming of the Antichrist: “This is Antichrist, who denieth the Father and the Son.”¹ “Every spirit that dissolveth Jesus ... is Antichrist ... of whom you have heard that he cometh.”² The Apocalypse is full of expectations of terrible things that will take place at the end of time, before the marriage of the Lamb. This shows plainly that the *anima christiana* has a sure knowledge not only of the existence of an adversary but also of his future usurpation of power.

[69] Why—my reader will ask—do I discourse here upon Christ and his adversary, the Antichrist? Our discourse necessarily brings us to Christ, because he is the still living myth of our culture. He is our culture hero, who, regardless of his historical existence, embodies the myth of the divine Primordial Man, the mystic Adam. It is he who occupies the centre of the Christian mandala, who is the Lord of the Tetramorph, i.e., the four symbols of the evangelists, which are like the four columns of his throne. He is in us and we in him. His kingdom is the pearl of great price, the treasure buried in the field, the grain of mustard seed which will become a great tree, and the heavenly city.³ As Christ is in us, so also is his heavenly kingdom.⁴

[70] These few, familiar references should be sufficient to make the psychological position of the Christ symbol quite clear. *Christ exemplifies the archetype of the self.*⁵ He represents a totality of a divine or heavenly kind, a glorified man, a son of God *sine macula peccati*, unspotted by sin. As *Adam secundus* he corresponds to the first Adam before the Fall, when the latter was still a pure image of God, of which Tertullian (d. 222) says: “And this therefore is to be considered as the image of God in man, that the human spirit has the same motions and senses as God has, though not in the same way as God has them.”⁶ Origen (185–254) is very much more explicit: The *imago Dei* imprinted on the soul, not on the body,⁷ is an image of an image, “for my soul is not directly the image of God, but is made after the likeness of the former image.”⁸ Christ, on the other hand, is the true image of God,⁹ after whose likeness our inner man is made, invisible, incorporeal, incorrupt, and immortal.¹⁰ The God-image in us reveals itself through “*prudentia, iustitia, moderatio, virtus, sapientia et disciplina.*”¹¹

[71] St. Augustine (354–430) distinguishes between the God-image which is Christ and the image which is implanted in man as a means or possibility of becoming like God.¹² The God-image is not in the corporeal man, but in the *anima rationalis*, the possession of which

distinguishes man from animals. “The God-image is within, not in the body. ... Where the understanding is, where the mind is, where the power of investigating truth is, there God has his image.”¹³ Therefore we should remind ourselves, says Augustine, that we are fashioned after the image of God nowhere save in the understanding: “... but where man knows himself to be made after the image of God, there he knows there is something more in him than is given to the beasts.”¹⁴ From this it is clear that the God-image is, so to speak, identical with the *anima rationalis*. The latter is the higher spiritual man, the *homo coelestis* of St Paul.¹⁵ Like Adam before the Fall, Christ is an embodiment of the God-image,¹⁶ whose totality is specially emphasized by St. Augustine. “The Word,” he says, “took on complete manhood, as it were in its fulness: the soul and body of a man. And if you would have me put it more exactly—since even a beast of the field has a ‘soul’ and a body—when I say a human soul and human flesh, I mean he took upon him a complete human soul.”¹⁷

[72] The God-image in man was not destroyed by the Fall but was only damaged and corrupted (“deformed”), and can be restored through God’s grace. The scope of the integration is suggested by the *descensus ad inferos*, the descent of Christ’s soul to hell, its work of redemption embracing even the dead. The psychological equivalent of this is the integration of the collective unconscious which forms an essential part of the individuation process. St. Augustine says: “Therefore our end must be our perfection, but our perfection is Christ,”¹⁸ since he is the perfect God-image. For this reason he is also called “King.” His bride (*sponsa*) is the human soul, which “in an inwardly hidden spiritual mystery is joined to the Word, that two may be in one flesh,” to correspond with the mystic marriage of Christ and the Church.¹⁹ Concurrently with the continuance of this *hieros gamos* in the dogma and rites of the Church, the symbolism developed in the course of the Middle Ages into the alchemical conjunction of opposites, or “chymical wedding,” thus giving rise on the one hand to the concept of the *lapis philosophorum*, signifying totality, and on the other hand to the concept of chemical combination.

[73] The God-image in man that was damaged by the first sin can be “reformed”²⁰ with the help of God, in accordance with Romans 12:2: “And be not conformed to this world, but be transformed by the renewal of your mind, that you may prove what is ... the will of God” (RSV). The totality images which the unconscious produces in the course of an individuation process are similar “reformations” of an *a priori* archetype (the mandala).²¹ As I have already emphasized, the spontaneous symbols of the self, or of wholeness, cannot in practice be distinguished from a God-image. Despite the word *μεταμορφουῖσθε* (‘be transformed’) in the Greek text of the above quotation, the “renewal” (*ἀνακαίνωσις*, *reformatio*) of the mind is not meant as an actual alteration of consciousness, but rather as the restoration of an original condition, an apocatastasis. This is in exact agreement with the empirical findings of psychology, that there is an ever-present archetype of wholeness²² which may easily disappear from the purview of consciousness or may never be perceived at all until a consciousness illuminated by conversion recognizes it in the figure of Christ. As a result of this “anamnesis” the original state of oneness with the God-image is restored. It brings about an integration, a bridging of the split in the personality caused by the instincts striving apart in different and mutually contradictory directions. The only time the

split does not occur is when a person is still as legitimately unconscious of his instinctual life as an animal. But it proves harmful and impossible to endure when an artificial unconsciousness—a repression—no longer reflects the life of the instincts.

[74] There can be no doubt that the original Christian conception of the *imago Dei* embodied in Christ meant an all-embracing totality that even includes the animal side of man. Nevertheless the Christ-symbol lacks wholeness in the modern psychological sense, since it does not include the dark side of things but specifically excludes it in the form of a Luciferian opponent. Although the exclusion of the power of evil was something the Christian consciousness was well aware of, all it lost in effect was an insubstantial shadow, for, through the doctrine of the *privatio boni* first propounded by Origen, evil was characterized as a mere diminution of good and thus deprived of substance. According to the teachings of the Church, evil is simply “the accidental lack of perfection.” This assumption resulted in the proposition “omne bonum a Deo, omne malum ab homine.” Another logical consequence was the subsequent elimination of the devil in certain Protestant sects.

[75] Thanks to the doctrine of the *privatio boni*, wholeness seemed guaranteed in the figure of Christ. One must, however, take evil rather more substantially when one meets it on the plane of empirical psychology. There it is simply the opposite of good. In the ancient world the Gnostics, whose arguments were very much influenced by psychic experience, tackled the problem of evil on a broader basis than the Church Fathers. For instance, one of the things they taught was that Christ “cast off his shadow from himself.”²³ If we give this view the weight it deserves, we can easily recognize the cut-off counterpart in the figure of Antichrist. The Antichrist develops in legend as a perverse imitator of Christ’s life. He is a true ἀντιμιμῶν πνεῦμα, an imitating spirit of evil who follows in Christ’s footsteps like a shadow following the body. This complementing of the bright but one-sided figure of the Redeemer—we even find traces of it in the New Testament—must be of especial significance. And indeed, considerable attention was paid to it quite early.

[76] If we see the traditional figure of Christ as a parallel to the psychic manifestation of the self, then the Antichrist would correspond to the shadow of the self, namely the dark half of the human totality, which ought not to be judged too optimistically. So far as we can judge from experience, light and shadow are so evenly distributed in man’s nature that his psychic totality appears, to say the least of it, in a somewhat murky light. The psychological concept of the self, in part derived from our knowledge of the whole man, but for the rest depicting itself spontaneously in the products of the unconscious as an archetypal quaternity bound together by inner antinomies, cannot omit the shadow that belongs to the light figure, for without it this figure lacks body and humanity. In the empirical self, light and shadow form a paradoxical unity. In the Christian concept, on the other hand, the archetype is hopelessly split into two irreconcilable halves, leading ultimately to a metaphysical dualism—the final separation of the kingdom of heaven from the fiery world of the damned.

[77] For anyone who has a positive attitude towards Christianity the problem of the Antichrist is a hard nut to crack. It is nothing less than the counterstroke of the devil,

provoked by God's Incarnation; for the devil attains his true stature as the adversary of Christ, and hence of God, only after the rise of Christianity, while as late as the Book of Job he was still one of God's sons and on familiar terms with Yahweh.²⁴ Psychologically the case is clear, since the dogmatic figure of Christ is so sublime and spotless that everything else turns dark beside it. It is, in fact, so one-sidedly perfect that it demands a psychic complement to restore the balance. This inevitable opposition led very early to the doctrine of the two sons of God, of whom the elder was called Satanaël.²⁵ The coming of the Antichrist is not just a prophetic prediction—it is an inexorable psychological law whose existence, though unknown to the author of the Johannine Epistles, brought him a sure knowledge of the impending enantiodromia. Consequently he wrote as if he were conscious of the inner necessity for this transformation, though we may be sure that the idea seemed to him like a divine revelation. In reality every intensified differentiation of the Christ-image brings about a corresponding accentuation of its unconscious complement, thereby increasing the tension between above and below.

[78] In making these statements we are keeping entirely within the sphere of Christian psychology and symbolism. A factor that no one has reckoned with, however, is the fatality inherent in the Christian disposition itself, which leads inevitably to a reversal of its spirit—not through the obscure workings of chance but in accordance with psychological law. The ideal of spirituality striving for the heights was doomed to clash with the materialistic earth-bound passion to conquer matter and master the world. This change became visible at the time of the "Renaissance." The word means "rebirth," and it referred to the renewal of the antique spirit. We know today that this spirit was chiefly a mask; it was not the spirit of antiquity that was reborn, but the spirit of medieval Christianity that underwent strange pagan transformations, exchanging the heavenly goal for an earthly one, and the vertical of the Gothic style for a horizontal perspective (voyages of discovery, exploration of the world and of nature). The subsequent developments that led to the Enlightenment and the French Revolution have produced a worldwide situation today which can only be called "antichristian" in a sense that confirms the early Christian anticipation of the "end of time." It is as if, with the coming of Christ, opposites that were latent till then had become manifest, or as if a pendulum had swung violently to one side and were now carrying out the complementary movement in the opposite direction. No tree, it is said, can grow to heaven unless its roots reach down to hell. The double meaning of this movement lies in the nature of the pendulum. Christ is without spot, but right at the beginning of his career there occurs the encounter with Satan, the Adversary, who represents the counterpole of that tremendous tension in the world psyche which Christ's advent signified. He is the "mysterium iniquitatis" that accompanies the "sol iustitiae" as inseparably as the shadow belongs to the light, in exactly the same way, so the Ebionites²⁶ and Euchites²⁷ thought, that one brother cleaves to the other. Both strive for a kingdom: one for the kingdom of heaven, the other for the "principatus huius mundi." We hear of a reign of a "thousand years" and of a "coming of the Antichrist," just as if a partition of worlds and epochs had taken place between two royal brothers. The meeting with Satan was therefore more than mere chance; it was a link in the chain.

[79] Just as we have to remember the gods of antiquity in order to appreciate the psychological value of the anima/animus archetype, so Christ is our nearest analogy of the self and its meaning. It is naturally not a question of a collective value artificially manufactured or arbitrarily awarded, but of one that is effective and present *per se*, and that makes its effectiveness felt whether the subject is conscious of it or not. Yet, although the attributes of Christ (consubstantiality with the Father, coeternity, filiation, parthenogenesis, crucifixion, Lamb sacrificed between opposites, One divided into Many, etc.) undoubtedly mark him out as an embodiment of the self, looked at from the psychological angle he corresponds to only one half of the archetype. The other half appears in the Antichrist. The latter is just as much a manifestation of the self, except that he consists of its dark aspect. Both are Christian symbols, and they have the same meaning as the image of the Saviour crucified between two thieves. This great symbol tells us that the progressive development and differentiation of consciousness leads to an ever more menacing awareness of the conflict and involves nothing less than a crucifixion of the ego, its agonizing suspension between irreconcilable opposites.²⁸ Naturally there can be no question of a total extinction of the ego, for then the focus of consciousness would be destroyed, and the result would be complete unconsciousness. The relative abolition of the ego affects only those supreme and ultimate decisions which confront us in situations where there are insoluble conflicts of duty. This means, in other words, that in such cases the ego is a suffering bystander who decides nothing but must submit to a decision and surrender unconditionally. The “genius” of man, the higher and more spacious part of him whose extent no one knows, has the final word. It is therefore well to examine carefully the psychological aspects of the individuation process in the light of Christian tradition, which can describe it for us with an exactness and impressiveness far surpassing our feeble attempts, even though the Christian image of the self—Christ—lacks the shadow that properly belongs to it.

[80] The reason for this, as already indicated, is the doctrine of the Summum Bonum. Irenaeus says very rightly, in refuting the Gnostics, that exception must be taken to the “light of their Father,” because it “could not illuminate and fill even those things which were within it,”²⁹ namely the shadow and the void. It seemed to him scandalous and reprehensible to suppose that within the pleroma of light there could be a “dark and formless void.” For the Christian neither God nor Christ could be a paradox; they had to have a single meaning, and this holds true to the present day. No one knew, and apparently (with a few commendable exceptions) no one knows even now, that the hybris of the speculative intellect had already emboldened the ancients to propound a philosophical definition of God that more or less obliged him to be the Summum Bonum. A Protestant theologian has even had the temerity to assert that “God *can* only be good.” Yahweh could certainly have taught him a thing or two in this respect, if he himself is unable to see his intellectual trespass against God’s freedom and omnipotence. This forcible usurpation of the Summum Bonum naturally has its reasons, the origins of which lie far back in the past (though I cannot enter into this here). Nevertheless, it is the effective source of the concept of the *privatio boni*, which nullifies the reality of evil and can be found as early as Basil the

Great (330–79) and Dionysius the Areopagite (2nd half of the 4th century), and is fully developed in Augustine.

[81] The earliest authority of all for the later axiom “Omne bonum a Deo, omne malum ab homine” is Tatian (2nd century), who says: “Nothing evil was created by God; we ourselves have produced all wickedness.”³⁰ This view is also adopted by Theophilus of Antioch (2nd century) in his treatise *Ad Autolyicum*.³¹

[82] Basil says:

You must not look upon God as the author of the existence of evil, nor consider that evil has any subsistence in itself [ιδίαν ὑπόστασιν τοῦ κακοῦ εἶναι]. For evil does not subsist as a living being does, nor can we set before our eyes any substantial essence [οὐσίαν ἐνυπόστατον] thereof. For evil is the privation [στέρησις] of good. ... And thus evil does not inhere in its own substance [ἐν ἰδίᾳ ὑπάρξει], but arises from the mutilation [πηρώμασιν] of the soul.³² Neither is it uncreated, as the wicked say who set up evil for the equal of good ... nor is it created. For if all things are of God, how can evil arise from good?³³

[83] Another passage sheds light on the logic of this statement. In the second homily of the *Hexaemeron*, Basil says:

It is equally impious to say that evil has its origin from God, because the contrary cannot proceed from the contrary. Life does not engender death, darkness is not the origin of light, sickness is not the maker of health. ... Now if evil is neither uncreated nor created by God, whence comes its nature? That evil exists no one living in the world will deny. What shall we say, then? That evil is not a living and animated entity, but a condition [δι᾿ ἄθεσις] of the soul opposed to virtue, proceeding from light-minded [ῥαθύμοις] persons on account of their falling away from good. ... Each of us should acknowledge that he is the first author of the wickedness in him.³⁴

[84] The perfectly natural fact that when you say “high” you immediately postulate “low” is here twisted into a causal relationship and reduced to absurdity, since it is sufficiently obvious that darkness produces no light and light produces no darkness. The idea of good and evil, however, is the premise for any moral judgment. They are a logically equivalent pair of opposites and, as such, the *sine qua non* of all acts of cognition. From the empirical standpoint we cannot say more than this. And from this standpoint we would have to assert that good and evil, being coexistent halves of a moral judgment, do not derive from one another but are always there together. Evil, like good, belongs to the category of human values, and we are the authors of moral value judgments, but only to a limited degree are we authors of the facts submitted to our moral judgment. These facts are called by one person good and by another evil. Only in capital cases is there anything like a *consensus generalis*. If we hold with Basil that man is the author of evil, we are saying in the same breath that he is also the author of good. But man is first and foremost the author merely of judgments; in relation to the facts judged, his responsibility is not so easy to determine. In order to do this,

we would have to give a clear definition of the extent of his free will. The psychiatrist knows what a desperately difficult task this is.

[85] For these reasons the psychologist shrinks from metaphysical assertions but must criticize the admittedly human foundations of the *privatio boni*. When therefore Basil asserts on the one hand that evil has no substance of its own but arises from a “mutilation of the soul,” and if on the other hand he is convinced that evil really exists, then the relative reality of evil is grounded on a real “mutilation” of the soul which must have an equally real cause. If the soul was originally created good, then it has really been corrupted and by something that is real, even if this is nothing more than carelessness, indifference, and frivolity, which are the meaning of the word ῥαθυμία. When something—I must stress this with all possible emphasis—is traced back to a psychic condition or fact, it is very definitely not reduced to nothing and thereby nullified, but is shifted on to the plane of *psychic reality*, which is very much easier to establish empirically than, say, the reality of the devil in dogma, who according to the authentic sources was not invented by man at all but existed long before he did. If the devil fell away from God of his own free will, this proves firstly that evil was in the world before man, and therefore that man cannot be the sole author of it, and secondly that the devil already had a “mutilated” soul for which we must hold a real cause responsible. The basic flaw in Basil’s argument is the *petitio principii* that lands him in insoluble contradictions: it is laid down from the start that the independent existence of evil must be denied even in face of the eternity of the devil as asserted by dogma. The historical reason for this was the threat presented by Manichaeism. This is especially clear in the treatise of Titus of Bostra (d. c. 370), entitled *Adversus Manichaeos*³⁵ where he states in refutation of the Manichaeans that, so far as substance is concerned, there is no such thing as evil.

[86] John Chrysostom (c. 344–407) uses, instead of στέρησις (*privatio*), the expression ἐκτροπή τοῦ καλοῦ (deviation, or turning away, from good). He says: “Evil is nothing other than a turning away from good, and therefore evil is secondary in relation to good.”³⁶

[87] Dionysius the Areopagite gives a detailed explanation of evil in the fourth chapter of *De divinis nominibus*. Evil, he says, cannot come from good, because if it came from good it would not be evil. But since everything that exists comes from good, everything is in some way good, but “evil does not exist at all” (τὸ δὲ κακὸν οὔτε ὄν ἐστίν).

[88] Evil in its nature is neither a thing nor does it bring anything forth.

Evil does not exist at all and is neither good nor productive of good [οὐκ ἔστι καθόλου τὸ κακὸν οὔτε ἀγαθὸν οὔτε ἀγαθοποιόν].

All things which are, by the very fact that they are, are good and come from good; but in so far as they are deprived of good, they are neither good nor do they exist.

That which has no existence is not altogether evil, for the absolutely non-existent will be nothing, unless it be thought of as subsisting in the good superessentially [κατὰ τὸ ὑπερούσιον]. Good, then, as absolutely existing and as absolutely non-existing, will stand in the foremost and highest place [πολλῶ πρότερον ὑπεριδρίμενον], while evil is

neither in that which exists nor in that which does not exist [τὸ δὲ κακὸν οὔτε ἐν τοῖς οὐσίῳ, οὔτε ἐν τοῖς μὴ οὐσίῳ].³⁷

[89] These quotations show with what emphasis the reality of evil was denied by the Church Fathers. As already mentioned, this hangs together with the Church's attitude to Manichaeism, as can plainly be seen in St. Augustine. In his polemic against the Manichaeans and Marcionites he makes the following declaration:

For this reason all things are good, since some things are better than others and the goodness of the less good adds to the glory of the better. ... Those things we call evil, then, are defects in good things, and quite incapable of existing in their own right outside good things. ... But those very defects testify to the natural goodness of things. For what is evil by reason of a defect must obviously be good of its own nature. For a defect is something contrary to nature, something which damages the nature of a thing—and it can do so only by diminishing that thing's goodness. *Evil therefore is nothing but the privation of good.* And thus it can have no existence anywhere except in some good thing. ... So there can be things which are good without any evil in them, such as God himself, and the higher celestial beings; but there can be no evil things without good. For if evils cause no damage to anything, they are not evils; if they do damage something, they diminish its goodness; and if they damage it still more, it is because it still has some goodness which they diminish; and if they swallow it up altogether, nothing of its nature is left to be damaged. And so there will be no evil by which it can be damaged, since there is then no nature left whose goodness any damage can diminish.³⁸

[90] The *Liber Sententiarum ex Augustino* says (CLXXVI): “Evil is not a substance,³⁹ for as it has not God for its author, it does not exist; and so the defect of corruption is nothing else than the desire or act of a misdirected will.”⁴⁰ Augustine agrees with this when he says: “The steel is not evil; but the man who uses the steel for a criminal purpose, he is evil.”⁴¹

[91] These quotations clearly exemplify the standpoint of Dionysius and Augustine: evil has no substance or existence in itself, since it is merely a diminution of good, which alone has substance. Evil is a *vitium*, a bad use of things as a result of erroneous decisions of the will (blindness due to evil desire, etc.). Thomas Aquinas, the great theoretician of the Church, says with reference to the above quotation from Dionysius:

One opposite is known through the other, as darkness is known through light. Hence also what evil is must be known from the nature of good. Now we have said above that good is everything appetible; and thus, since every nature desires its own being and its own perfection, it must necessarily be said that the being and perfection of every created thing is essentially good. Hence it cannot be that evil signifies a being, or any form or nature. Therefore it must be that by the name of evil is signified the absence of good.⁴²

Evil is not a being, whereas good is a being.⁴³

That every agent works for an end clearly follows from the fact that every agent tends to something definite. Now that to which an agent tends definitely must needs be befiting to that agent, since the latter would not tend to it save on account of some fittingness thereto.

But that which is befitting to a thing is good for it. Therefore every agent works for a good.⁴⁴

[92] St. Thomas himself recalls the saying of Aristotle that “the thing is the whiter, the less it is mixed with black,”⁴⁵ without mentioning, however, that the reverse proposition: “the thing is the blacker, the less it is mixed with white,” not only has the same validity as the first but is also its logical equivalent. He might also have mentioned that not only darkness is known through light, but that, conversely, light is known through darkness.

[93] As only that which works is real, so, according to St. Thomas, only good is real in the sense of “existing.” His argument, however, introduces a good that is tantamount to “convenient, sufficient, appropriate, suitable.” One ought therefore to translate “omne agens agit propter bonum” as: “Every agent works for the sake of what suits it.” That’s what the devil does too, as we all know. He too has an “appetite” and strives after perfection—not in good but in evil. Even so, one could hardly conclude from this that his striving is “essentially good.”

[94] Obviously evil can be represented as a diminution of good, but with this kind of logic one could just as well say: The temperature of the Arctic winter, which freezes our noses and ears, is relatively speaking only a little below the heat prevailing at the equator. For the Arctic temperature seldom falls much lower than 230° C. above absolute zero. All things on earth are “warm” in the sense that nowhere is absolute zero even approximately reached. Similarly, all things are more or less “good,” and just as cold is nothing but a diminution of warmth, so evil is nothing but a diminution of good. The *privatio boni* argument remains a euphemistic *petitio principii* no matter whether evil is regarded as a lesser good or as an effect of the finiteness and limitedness of created things. The false conclusion necessarily follows from the premise “Deus = Summum Bonum,” since it is unthinkable that the perfect good could ever have created evil. It merely created the good and the less good (which last is simply called “worse” by laymen).⁴⁶ Just as we freeze miserably despite a temperature of 230° above absolute zero, so there are people and things that, although created by God, are good only to the minimal and bad to the maximal degree.

[95] It is probably from this tendency to deny any reality to evil that we get the axiom “Omne bonum a Deo, omne malum ab homine.” This is a contradiction of the truth that he who created the heat is also responsible for the cold (“the goodness of the less good”). We can certainly hand it to Augustine that all natures are good, yet just not good enough to prevent their badness from being equally obvious.

*

[96] One could hardly call the things that have happened, and still happen, in the concentration camps of the dictator states an “accidental lack of perfection”—it would sound like mockery.

[97] Psychology does not know what good and evil are in themselves; it knows them only as judgments about relationships. “Good” is what seems suitable, acceptable, or valuable from

a certain point of view; evil is its opposite. If the things we call good are “really” good, then there must be evil things that are “real” too. It is evident that psychology is concerned with a more or less subjective judgment, i.e., with a psychic antithesis that cannot be avoided in naming value relationships: “good” denotes something that is not bad, and “bad” something that is not good. There are things which from a certain point of view are extremely evil, that is to say dangerous. There are also things in human nature which are very dangerous and which therefore seem proportionately evil to anyone standing in their line of fire. It is pointless to gloss over these evil things, because that only lulls one into a sense of false security. Human nature is capable of an infinite amount of evil, and the evil deeds are as real as the good ones so far as human experience goes and so far as the psyche judges and differentiates between them. Only unconsciousness makes no difference between good and evil. Inside the psychological realm one honestly does not know which of them predominates in the world. We hope, merely, that good does—i.e., what seems suitable to us. No one could possibly say what the general good might be. No amount of insight into the relativity and fallibility of our moral judgment can deliver us from these defects, and those who deem themselves beyond good and evil are usually the worst tormentors of mankind, because they are twisted with the pain and fear of their own sickness.

[98] Today as never before it is important that human beings should not overlook the danger of the evil lurking within them. It is unfortunately only too real, which is why psychology must insist on the reality of evil and must reject any definition that regards it as insignificant or actually non-existent. Psychology is an empirical science and deals with realities. As a psychologist, therefore, I have neither the inclination nor the competence to mix myself up with metaphysics. Only, I have to get polemical when metaphysics encroaches on experience and interprets it in a way that is not justified empirically. My criticism of the *privatio boni* holds only so far as psychological experience goes. From the scientific point of view the *privatio boni*, as must be apparent to everyone, is founded on a *petitio principii*, where what invariably comes out at the end is what you put in at the beginning. Arguments of this kind have no power of conviction. But the fact that such arguments are not only used but are undoubtedly believed is something that cannot be disposed of so easily. It proves that there is a tendency, existing right from the start, to give priority to “good,” and to do so with all the means in our power, whether suitable or unsuitable. So if Christian metaphysics clings to the *privatio boni*, it is giving expression to the tendency always to increase the good and diminish the bad. The *privatio boni* may therefore be a metaphysical truth. I presume to no judgment on this matter. I must only insist that in our field of experience white and black, light and dark, good and bad, are equivalent opposites which always predicate one another.

[99] This elementary fact was correctly appreciated in the so-called Clementine Homilies,⁴⁷ a collection of Gnostic-Christian writings dating from about A.D. 150. The unknown author understands good and evil as the right and left hand of God, and views the whole of creation in terms of syzygies, or pairs of opposites. In much the same way the follower of Bardesanes, Marinus, sees good as “light” and pertaining to the right hand (δεξιόν), and evil as “dark” and pertaining to the left hand (ἀριστερόν).⁴⁸ The left also corresponds to the

feminine. Thus in Irenaeus (*Adv. haer.*, I, 30, 3), Sophia Prounikos is called Sinistra. Clement finds this altogether compatible with the idea of God's unity. Provided that one has an anthropomorphic God-image—and every God-image is anthropomorphic in a more or less subtle way—the logic and naturalness of Clement's view can hardly be contested. At all events this view, which may be some two hundred years older than the quotations given above, proves that the reality of evil does not necessarily lead to Manichaean dualism and so does not endanger the unity of the God-image. As a matter of fact, it guarantees that unity on a plane beyond the crucial difference between the Yahwistic and the Christian points of view. Yahweh is notoriously unjust, and injustice is not good. The God of Christianity, on the other hand, is *only* good. There is no denying that Clement's theology helps us to get over this contradiction in a way that fits the psychological facts.

[100] It is therefore worth following up Clement's line of thought a little more closely. "God," he says, "appointed two kingdoms [βασιλείας] and two ages [αἰῶνας], determining that the present world should be given over to evil [πονηρῶ], because it is small and passes quickly away. But he promised to preserve the future world for good, because it is great and eternal." Clement goes on to say that this division into two corresponds to the structure of man: the body comes from the female, who is characterized by emotionality; the spirit comes from the male, who stands for rationality. He calls body and spirit the "two triads."⁴⁹

Man is a compound of two mixtures [ἄνθρωπος, lit. 'paste'], the female and the male. Wherefore also two ways have been laid before him—those of obedience and of disobedience to law; and two kingdoms have been established—the one called the kingdom of heaven, and the other the kingdom of those who are now rulers upon earth. ... Of these two, the one does violence to the other. Moreover these two rulers are the swift hands of God.

That is a reference to Deuteronomy 32 : 39: "I will kill and I will make to live" (DV). He kills with the left hand and saves with the right.

These two principles have not their substance outside of God, for there is no other primal source [ἀρχὴ]. Nor have they been sent forth from God as animals, for they were of the same mind [ὁμόδοξοι] with him. ... But from God were sent forth the four first elements—hot and cold, moist and dry. In consequence of this, he is the Father of every substance [οὐσίας], but not of the knowledge which arises from the mixing of the elements.⁵⁰ For when these were combined from without, choice [προαίρεσις] was begotten in them as a child.⁵¹

That is to say, through the mixing of the four elements inequalities arose which caused uncertainty and so necessitated decisions or acts of choice. The four elements form the fourfold substance of the body (τετραγενῆς τοῦ σώματος οὐσία) and also of evil (τοῦ πονηροῦ). This substance was "carefully discriminated and sent forth from God, but when it was combined from without, according to the will of him who sent it forth, there arose, as a result of the combination, the preference which rejoices in evils [ἡ κακοῖς χαίρουσα προαίρεσις]."⁵²

[101] The last sentence is to be understood as follows: The fourfold substance is eternal (οὔσα αἰεί) and God's child. But the tendency to evil was added from outside to the mixture willed by God (κατὰ τὴν τοῦ θεοῦ βούλησιν ἔξω τῆ κράσει συμβέβηκεν). Thus evil is not created by God or by any one else, nor was it projected out of him, nor did it arise of itself. Peter, who is engaged in these reflections, is evidently not quite sure how the matter stands.

[102] It seems as if, without God's intending it (and possibly without his knowing it) the mixture of the four elements took a wrong turning, though this is rather hard to square with Clement's idea of the opposite hands of God "doing violence to one another." Obviously Peter, the leader of the dialogue, finds it rather difficult to attribute the cause of evil to the Creator in so many words.

[103] The author of the Homilies espouses a Petrine Christianity distinctly "High Church" or ritualistic in flavour. This, taken together with his doctrine of the dual aspect of God, brings him into close relationship with the early Jewish-Christian Church, where, according to the testimony of Epiphanius, we find the Ebionite notion that God had two sons, an elder one, Satan, and a younger one, Christ.⁵³ Michaias, one of the speakers in the dialogue, suggests as much when he remarks that if good and evil were begotten in the same way they must be brothers.⁵⁴

[104] In the (Jewish-Christian?) apocalypse, the "Ascension of Isaiah," we find, in the middle section, Isaiah's vision of the seven heavens through which he was rapt.⁵⁵ First he saw Sammaël and his hosts, against whom a "great battle" was raging in the firmament. The angel then wafted him beyond this into the first heaven and led him before a throne. On the right of the throne stood angels who were more beautiful than the angels on the left. Those on the right "all sang praises with *one* voice," but the ones on the left sang *after* them, and their singing was not like the singing of the first. In the second heaven all the angels were more beautiful than in the first heaven, and there was no difference between them, either here or in any of the higher heavens. Evidently Sammaël still has a noticeable influence on the first heaven, since the angels on the left are not so beautiful there. Also, the lower heavens are not so splendid as the upper ones, though each surpasses the other in splendour. The devil, like the Gnostic archons, dwells in the firmament, and he and his angels presumably correspond to astrological gods and influences. The gradation of splendour, going all the way up to the topmost heaven, shows that his sphere interpenetrates with the divine sphere of the Trinity, whose light in turn filters down as far as the lowest heaven. This paints a picture of complementary opposites balancing one another like right and left hands. Significantly enough, this vision, like the Clementine Homilies, belongs to the pre-Manichaeic period (second century), when there was as yet no need for Christianity to fight against its Manichaeic competitors. It might easily be a description of a genuine yang-yin relationship, a picture that comes closer to the actual truth than the *privatio boni*. Moreover, it does not damage monotheism in any way, since it unites the opposites just as yang and yin are united in Tao (which the Jesuits quite logically translated as "God"). It is as if Manichaeic dualism first made the Fathers conscious of the fact that until then, without clearly realizing it, they had always believed firmly in the substantiality of evil. This sudden

realization might well have led them to the dangerously anthropomorphic assumption that what man cannot unite, God cannot unite either. The early Christians, thanks to their greater unconsciousness, were able to avoid this mistake.

[105] Perhaps we may risk the conjecture that the problem of the Yahwistic God-image, which had been constellated in men's minds ever since the Book of Job, continued to be discussed in Gnostic circles and in syncretistic Judaism generally, all the more eagerly as the Christian answer to this question—namely the unanimous decision in favour of God's goodness⁵⁶—did not satisfy the conservative Jews. In this respect, therefore, it is significant that the doctrine of the two antithetical sons of God originated with the Jewish Christians living in Palestine. Inside Christianity itself the doctrine spread to the Bogomils and Cathars; in Judaism it influenced religious speculation and found lasting expression in the two sides of the cabalistic Tree of the Sephiroth, which were named *hesed* (love) and *din* (justice). A rabbinical scholar, Zwi Werblowsky, has been kind enough to put together for me a number of passages from Hebrew literature which have bearing on this problem.

[106] R. Joseph taught: "What is the meaning of the verse, 'And none of you shall go out at the door of his house until the morning?' (Exodus 12 : 22.)⁵⁷ Once permission has been granted to the destroyer, he does not distinguish between the righteous and the wicked. Indeed, he even begins with the righteous."⁵⁸ Commenting on Exodus 33 : 5 ("If for a single moment I should go up among you, I would consume you"), the midrash says: "Yahweh means he could wax wroth with you for a moment—for that is the length of his wrath, as is said in Isaiah 26 : 20, 'Hide yourselves for a little moment until the wrath is past'—and destroy you." Yahweh gives warning here of his unbridled irascibility. If in this moment of divine wrath a curse is uttered, it will indubitably be effective. That is why Balaam, "who knows the thoughts of the Most High,"⁵⁹ when called upon by Balak to curse Israel, was so dangerous an enemy, because he knew the moment of Yahweh's wrath.⁶⁰

[107] God's love and mercy are named his right hand, but his justice and his administration of it are named his left hand. Thus we read in I Kings 22 : 19: "I saw the Lord sitting on his throne, and all the host of heaven standing beside him on his right hand and on his left." The midrash comments: "Is there right and left on high? This means that the intercessors stand on the right and the accusers on the left."⁶¹ The comment on Exodus 15 : 6 ("Thy right hand, O Lord, glorious in power, thy right hand, O Lord, shatters the enemy") runs: "When the children of Israel perform God's will, they make the left hand his right hand. When they do not do his will, they make even the right hand his left hand."⁶² "God's left hand dashes to pieces; his right hand is glorious to save."⁶³

[108] The dangerous aspect of Yahweh's justice comes out in the following passage: "Even so said the Holy One, blessed be He: If I create the world on the basis of mercy alone, its sins will be great; but on the basis of justice alone the world cannot exist. Hence I will create it on the basis of justice and mercy, and may it then stand!"⁶⁴ The midrash on Genesis 18 : 23 (Abraham's plea for Sodom) says (Abraham speaking): "If thou desirest the world to endure, there can be no absolute justice, while if thou desirest absolute justice, the world

cannot endure. Yet thou wouldst hold the cord by both ends, desiring both the world and absolute justice. Unless thou forgoest a little, the world cannot endure.”⁶⁵

[109] Yahweh prefers the repentant sinners even to the righteous, and protects them from his justice by covering them with his hand or by hiding them under his throne.⁶⁶

[110] With reference to Habakkuk 2 : 3 (“For still the vision awaits its time. ... If it seem slow, wait for it”), R. Jonathan says: “Should you say, *We* wait [for his coming] but *He* does not, it stands written (Isaiah 30 : 18), ‘Therefore will the Lord wait, that he may be gracious unto you.’ ... But since we wait and he waits too. what delays his coming? Divine justice delays it.”⁶⁷ It is in this sense that we have to understand the prayer of R. Jochanan: “May it be thy will, O Lord our God, to look upon our shame and behold our evil plight. Clothe thyself in thy mercies, cover thyself in thy strength, wrap thyself in thy loving-kindness, and gird thyself with thy graciousness, and may thy goodness and gentleness come before thee.”⁶⁸ God is properly exhorted to remember his good qualities. There is even a tradition that God prays to himself: “May it be My will that My mercy may suppress My anger, and that My compassion may prevail over My other attributes.”⁶⁹ This tradition is borne out by the following story:

R. Ishmael the son of Elisha said: I once entered the innermost sanctuary to offer incense, and there I saw Akathriel⁷⁰ Jah Jahweh Zebaoth⁷¹ seated upon a high and exalted throne. He said to me, Ishmael, my son, bless me! And I answered him: May it be Thy will that Thy mercy may suppress Thy anger, and that Thy compassion may prevail over Thy other attributes, so that Thou mayest deal with Thy children according to the attribute of mercy and stop short of the limit of strict justice! And He nodded to me with His head.⁷²

[111] It is not difficult to see from these quotations what was the effect of Job’s contradictory God-image. It became a subject for religious speculation inside Judaism and, through the medium of the Cabala, it evidently had an influence on Jakob Böhme. In his writings we find a similar ambivalence, namely the love and the “wrath-fire” of God, in which Lucifer burns for ever.⁷³

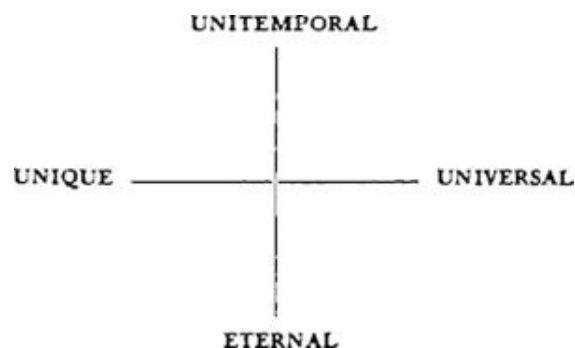

[112] Since psychology is not metaphysics, no metaphysical dualism can be derived from, or imputed to, its statements concerning the equivalence of opposites.⁷⁴ It knows that equivalent opposites are necessary conditions inherent in the act of cognition, and that without them no discrimination would be possible. It is not exactly probable that anything so intrinsically bound up with the act of cognition should be at the same time a property of the object. It is far easier to suppose that it is primarily our consciousness which names and evaluates the differences between things, and perhaps even creates distinctions where no differences are discernible.

[113] I have gone into the doctrine of the *privatio boni* at such length because it is in a sense responsible for a too optimistic conception of the evil in human nature and for a too pessimistic view of the human soul. To offset this, early Christianity, with unerring logic, balanced Christ against an Antichrist. For how can you speak of “high” if there is no “low,” or “right” if there is no “left,” of “good” if there is no “bad,” and the one is as real as the

other? Only with Christ did a devil enter the world as the real counterpart of God, and in early Jewish-Christian circles Satan, as already mentioned, was regarded as Christ's elder brother.

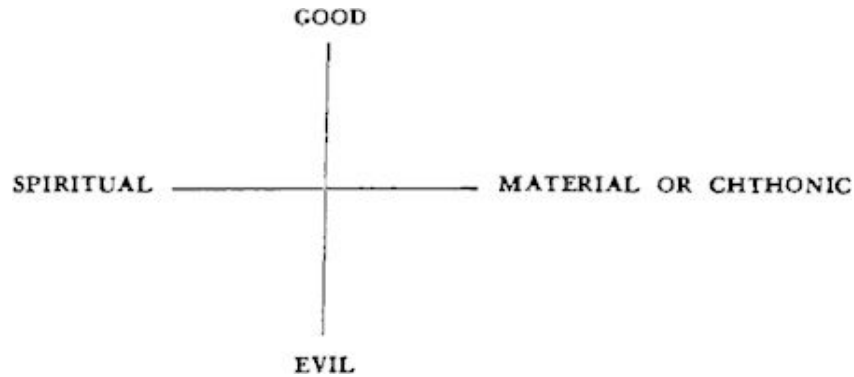

[114] But there is still another reason why I must lay such critical stress on the *privatio boni*. As early as Basil we meet with the tendency to attribute evil to the disposition (*διάθεσις*) of the soul, and at the same time to give it a “non-existent” character. Since, according to this author, evil originates in human frivolity and therefore owes its existence to mere negligence, it exists, so to speak, only as a by-product of psychological oversight, and this is such a *quantité négligeable* that evil vanishes altogether in smoke. Frivolity as a cause of evil is certainly a factor to be taken seriously, but it is a factor that can be got rid of by a change of attitude. We *can* act differently, if we want to. Psychological causation is something so elusive and seemingly unreal that everything which is reduced to it inevitably takes on the character of futility or of a purely accidental mistake and is thereby minimized to the utmost. It is an open question how much of our modern undervaluation of the psyche stems from this prejudice. This prejudice is all the more serious in that it causes the psyche to be suspected of being the birthplace of all evil. The Church Fathers can hardly have considered what a fatal power they were ascribing to the soul. One must be positively blind not to see the colossal role that evil plays in the world. Indeed, it took the intervention of God himself to deliver humanity from the curse of evil, for without his intervention man would have been lost. If this paramount power of evil is imputed to the soul, the result can only be a negative inflation—i.e., a daemonic claim to power on the part of the unconscious which makes it all the more formidable. This unavoidable consequence is anticipated in the figure of the Antichrist and is reflected in the course of contemporary events, whose nature is in accord with the Christian aeon of the Fishes, now running to its end.

[115] In the world of Christian ideas Christ undoubtedly represents the self.⁷⁵ As the apotheosis of individuality, the self has the attributes of uniqueness and of occurring once only in time. But since the psychological self is a transcendent concept, expressing the totality of conscious and unconscious contents, it can only be described in antinomial terms;⁷⁶ that is, the above attributes must be supplemented by their opposites if the transcendental situation is to be characterized correctly. We can do this most simply in the form of a quaternion of opposites:

[116] This formula expresses not only the psychological self but also the dogmatic figure of Christ. As an historical personage Christ is unitemporal and unique; as God, universal and eternal. Likewise the self: as the essence of individuality it is unitemporal and unique; as an

archetypal symbol it is a God-image and therefore universal and eternal.⁷⁷ Now if theology describes Christ as simply “good” and “spiritual,” something “evil” and “material”—or “chthonic”—is bound to arise on the other side, to represent the Antichrist. The resultant quaternion of opposites is united on the psychological plane by the fact that the self is not deemed exclusively “good” and “spiritual”; consequently its shadow turns out to be much less black. A further result is that the opposites of “good” and “spiritual” need no longer be separated from the whole:

[117] This *quaternio* characterizes the psychological self. Being a totality, it must by definition include the light and dark aspects, in the same way that the self embraces both masculine and feminine and is therefore symbolized by the marriage *quaternio*.⁷⁸ This last is by no means a new discovery, since according to Hippolytus it was known to the Naassenes.⁷⁹ Hence individuation is a “mysterium coniunctionis,” the self being experienced as a nuptial union of opposite halves⁸⁰ and depicted as a composite whole in mandalas that are drawn spontaneously by patients.

[118] It was known, and stated, very early that the man Jesus, the son of Mary, was the *principium individuationis*. Thus Basilides⁸¹ is reported by Hippolytus as saying: “Now Jesus became the first sacrifice in the discrimination of the natures [φυλοκρίνησις], and the Passion came to pass for no other reason than the discrimination of composite things. For in this manner, he says, the sonship that had been left behind in a formless state [ἀμορφία] ... needed separating into its components [φυλοκρινηθῆναι], in the same way that Jesus was separated.”⁸² According to the rather complicated teachings of Basilides, the “non-existent” God begot a threefold sonship (*υἱοτήs*). The first “son,” whose nature was the finest and most subtle, remained up above with the Father. The second son, having a grosser (*παχυμερέστερα*) nature, descended a bit lower, but received “some such wing as that with which Plato ... equips the soul in his *Phaedrus*.”⁸³ The third son, as his nature needed purifying (*ἀποκαθάρσις*), fell deepest into “formlessness.” This third “sonship” is obviously the grossest and heaviest because of its impurity. In these three emanations or manifestations of the non-existent God it is not hard to see the trichotomy of spirit, soul, and body (*πνευματικόν, Ψυχικόν, σαρκικόν*). Spirit is the finest and highest; soul, as the *ligamentum spiritus et corporis*, is grosser than spirit, but has “the wings of an eagle,”⁸⁴ so that it may lift its heaviness up to the higher regions. Both are of a “subtle” nature and dwell, like the ether and the eagle, in or near the region of light, whereas the body, being heavy, dark, and impure, is deprived of the light but nevertheless contains the divine seed of the third sonship, though still *unconscious and formless*. This seed is as it were awakened

by Jesus, purified and made capable of ascension (ἀναδρομή),⁸⁵ by virtue of the fact that the opposites were separated in Jesus through the Passion (i.e., through his division into four).⁸⁶ Jesus is thus the prototype for the awakening of the third sonship slumbering in the darkness of humanity. He is the “spiritual inner man.”⁸⁷ He is also a complete trichotomy in himself, for Jesus the son of Mary represents the incarnate man, but his immediate predecessor is the second Christ, the son of the highest archon of the hebdomad, and his first prefiguration is Christ the son of the highest archon of the ogdoad, the demiurge Yahweh.⁸⁸ This trichotomy of Anthropos figures corresponds exactly to the three sonships of the non-existing God and to the division of human nature into three parts. We have therefore three trichotomies:

I	II	III
<i>First sonship</i>	<i>Christ of the Ogdoad</i>	<i>Spirit</i>
<i>Second sonship</i>	<i>Christ of the Hebdomad</i>	<i>Soul</i>
<i>Third sonship</i>	<i>Jesus the Son of Mary</i>	<i>Body</i>

[119] It is in the sphere of the dark, heavy body that we must look for the ἀμορφία, the “formlessness” wherein the third sonship lies hidden. As suggested above, this formlessness seems to be practically the equivalent of “unconsciousness.” G. Quispel has drawn attention to the concepts of ἀγνώσια in Epiphanius⁸⁹ and ἀνόητον in Hippolytus,⁹⁰ which are best translated by “unconscious.” Ἀμορφία, ἀγνώσια, and ἀνόητον all refer to the initial state of things, to the potentiality of unconscious contents, aptly formulated by Basilides as οὐκ ὄν σπέρρα τοῦ κόσμου πολύμορφον ὁμοῦ καὶ πολυούσιον (the non-existent, many-formed, and all-empowering seed of the world).⁹¹

[120] This picture of the third sonship has certain analogies with the medieval *filius philosophorum* and the *filius macrocosmi*, who also symbolize the world-soul slumbering in matter.⁹² Even with Basilides the body acquires a special and unexpected significance, since in it and its materiality is lodged a third of the revealed Godhead. This means nothing less than that matter is predicated as having considerable numinosity in itself, and I see this as an anticipation of the “mystic” significance which matter subsequently assumed in alchemy and—later on—in natural science. From a psychological point of view it is particularly important that Jesus corresponds to the third sonship and is the prototype of the “awakener” because the opposites were separated in him through the Passion and so became conscious, whereas in the third sonship itself they remain unconscious so long as the latter is formless and undifferentiated. This amounts to saying that in unconscious humanity there is a latent seed that corresponds to the prototype Jesus. Just as the man Jesus became conscious only through the light that emanated from the higher Christ and separated the natures in him, so the seed in unconscious humanity is awakened by the light emanating from Jesus, and is thereby impelled to a similar discrimination of opposites. This view is entirely in accord with the psychological fact that the archetypal image of the self has been shown to occur in dreams even when no such conceptions exist in the conscious mind of the dreamer.⁹³

[121] I would not like to end this chapter without a few final remarks that are forced on me by the importance of the material we have been discussing. The standpoint of a psychology whose subject is the phenomenology of the psyche is evidently something that is not easy to grasp and is very often misunderstood. If, therefore, at the risk of repeating myself, I come back to fundamentals, I do so only in order to forestall certain wrong impressions which might be occasioned by what I have said, and to spare my reader unnecessary difficulties.

[122] The parallel I have drawn here between Christ and the self is not to be taken as anything more than a psychological one, just as the parallel with the fish is mythological. There is no question of any intrusion into the sphere of metaphysics, i.e., of faith. The images of God and Christ which man's religious fantasy projects cannot avoid being anthropomorphic and are admitted to be so; hence they are capable of psychological elucidation like any other symbols. Just as the ancients believed that they had said something important about Christ with their fish symbol, so it seemed to the alchemists that their parallel with the stone served to illuminate and deepen the meaning of the Christ-image. In the course of time, the fish symbolism disappeared completely, and so likewise did the *lapis philosophorum*. Concerning this latter symbol, however, there are plenty of statements to be found which show it in a special light—views and ideas which attach such importance to the stone that one begins to wonder whether, in the end, it was Christ who was taken as a symbol of the stone rather than the other way round. This marks a development which—with the help of certain ideas in the epistles of John and Paul—includes Christ in the realm of immediate inner experience and makes him appear as the figure of the total man. It also links up directly with the psychological evidence for the existence of an archetypal content possessing all those qualities which are characteristic of the Christ-image in its archaic and medieval forms. Modern psychology is therefore confronted with a question very like the one that faced the alchemists: Is the self a symbol of Christ, or is Christ a symbol of the self?

[123] In the present study I have affirmed the latter alternative. I have tried to show how the traditional Christ-image concentrates upon itself the characteristics of an archetype—the archetype of the self. My aim and method do not purport to be anything more in principle than, shall we say, the efforts of an art historian to trace the various influences which have contributed towards the formation of a particular Christ-image. Thus we find the concept of the archetype in the history of art as well as in philology and textual criticism. The psychological archetype differs from its parallels in other fields only in one respect: it refers to a living and ubiquitous psychic fact, and this naturally shows the whole situation in a rather different light. One is then tempted to attach greater importance to the immediate and living presence of the archetype than to the idea of the historical Christ. As I have said, there is among certain of the alchemists, too, a tendency to give the *lapis* priority over Christ. Since I am far from cherishing any missionary intentions, I must expressly emphasize that I am not concerned here with confessions of faith but with proven scientific facts. If one inclines to regard the archetype of the self as the real agent and hence takes

Christ as a symbol of the self, one must bear in mind that there is a considerable difference between *perfection* and *completeness*. The Christ-image is as good as perfect (at least it is meant to be so), while the archetype (so far as known) denotes completeness but is far from being perfect. It is a paradox, a statement about something indescribable and transcendental. Accordingly the realization of the self, which would logically follow from a recognition of its supremacy, leads to a fundamental conflict, to a real suspension between opposites (reminiscent of the crucified Christ hanging between two thieves), and to an approximate state of wholeness that lacks perfection. To strive after teleiosis in the sense of perfection is not only legitimate but is inborn in man as a peculiarity which provides civilization with one of its strongest roots. This striving is so powerful, even, that it can turn into a passion that draws everything into its service. Natural as it is to seek perfection in one way or another, the archetype fulfils itself in completeness, and this is a *τελείωσις* of quite another kind. Where the archetype predominates, completeness is *forced* upon us against all our conscious strivings, in accordance with the archaic nature of the archetype. The individual may strive after perfection (“Be you therefore perfect—τέλειοι—also your heavenly Father is perfect.”⁹⁴) but must suffer from the opposite of his intentions for the sake of his completeness. “I find then a law, that, when I would do good, evil is present with me.”⁹⁵

[124] The Christ-image fully corresponds to this situation: Christ is the perfect man who is crucified. One could hardly think of a truer picture of the goal of ethical endeavour. At any rate the transcendental idea of the self that serves psychology as a working hypothesis can never match that image because, although it is a symbol, it lacks the character of a revelatory historical event. Like the related ideas of *atman* and *tao* in the East, the idea of the self is at least in part a product of cognition, grounded neither on faith nor on metaphysical speculation but on the experience that under certain conditions the unconscious spontaneously brings forth an archetypal symbol of wholeness. From this we must conclude that some such archetype occurs universally and is endowed with a certain numinosity. And there is in fact any amount of historical evidence as well as modern case material to prove this.⁹⁶ These naive and completely uninfluenced pictorial representations of the symbol show that it is given central and supreme importance precisely because it stands for the conjunction of opposites. Naturally the conjunction can only be understood as a paradox, since a union of opposites can be thought of only as their annihilation. Paradox is a characteristic of all transcendental situations because it alone gives adequate expression to their indescribable nature.

[125] Whenever the archetype of the self predominates, the inevitable psychological consequence is a state of conflict vividly exemplified by the Christian symbol of crucifixion—that acute state of unredeemedness which comes to an end only with the words “consummatum est.” Recognition of the archetype, therefore, does not in any way circumvent the Christian mystery; rather, it forcibly creates the psychological preconditions without which “redemption” would appear meaningless. “Redemption” does not mean that a burden is taken from one’s shoulders which one was never meant to bear. Only the “complete” person knows how unbearable man is to himself. So far as I can see, no relevant objection could be raised from the Christian point of view against anyone accepting the task

of individuation imposed on us by nature, and the recognition of our wholeness or completeness, as a binding personal commitment. If he does this consciously and intentionally, he avoids all the unhappy consequences of repressed individuation. In other words, if he voluntarily takes the burden of completeness on himself, he need not find it “happening” to him against his will in a negative form. This is as much as to say that anyone who is destined to descend into a deep pit had better set about it with all the necessary precautions rather than risk falling into the hole backwards.

[126] The irreconcilable nature of the opposites in Christian psychology is due to their moral accentuation. This accentuation seems natural to us, although, looked at historically, it is a legacy from the Old Testament with its emphasis on righteousness in the eyes of the law. Such an influence is notably lacking in the East, in the philosophical religions of India and China. Without stopping to discuss the question of whether this exacerbation of the opposites, much as it increases suffering, may not after all correspond to a higher degree of truth, I should like merely to express the hope that the present world situation may be looked upon in the light of the psychological rule alluded to above. Today humanity, as never before, is split into two apparently irreconcilable halves. The psychological rule says that when an inner situation is not made conscious, it happens outside, as fate. That is to say, when the individual remains undivided and does not become conscious of his inner opposite, the world must perforce act out the conflict and be torn into opposing halves.

VI

THE SIGN OF THE FISHES

[127] The figure of Christ is not as simple and unequivocal as one could wish. I am not referring here to the enormous difficulties arising out of a comparison of the Synoptic Christ with the Johannine Christ, but to the remarkable fact that in the hermeneutic writings of the Church Fathers, which go right back to the days of primitive Christianity, Christ has a number of symbols or “allegories” in common with the devil. Of these I would mention the lion, snake (*coluber*, ‘viper’), bird (devil = *nocturna avis*), raven (Christ = *nycticorax*, ‘night-heron’), eagle, and fish. It is also worth noting that Lucifer, the Morning Star, means Christ as well as the devil.¹ Apart from the snake, the fish is one of the oldest allegories. Nowadays we would prefer to call them symbols, because these synonyms always contain more than mere allegories, as is particularly obvious in the case of the fish symbol. It is unlikely that ’Ιχθῦς is simply an anagrammatic abbreviation of ’Ι[ησοῦς] Χ[ριστός] Θ[εοῦ] Υ[ιὸς] Σ[ωτήρ],² but rather the symbolical designation for something far more complex. (As I have frequently pointed out in my other writings, I do not regard the symbol as an allegory or a sign, but take it in its proper sense as the best possible way of describing and formulating an object that is not completely knowable. It is in this sense that the creed is called a “symbolum.”) The order of the words gives one more the impression that they were put together for the purpose of explaining an already extant and widely disseminated “Ichthys.”³ For the fish symbol, in the Near and Middle East especially, has a long and colourful prehistory, from the Babylonian fish-god Oannes and his priests who clothed themselves in fish-skins, to the sacred fish-meals in the cult of the Phoenician goddess Derceto-Atargatis and the obscurities of the Abercius inscription.⁴ The symbol ranges from the redeemer-fish of Manu in farthest India to the Eucharistic fish-feast celebrated by the “Thracian riders” in the Roman Empire.⁵ For our purpose it is hardly necessary to go into this voluminous material more closely. As Doelger and others have shown, there are plenty of occasions for fish symbolism within the original, purely Christian world of ideas. I need only mention the regeneration in the font, in which the baptized swim like fishes.⁶

[128] In view of this wide distribution of the fish symbol, its appearance at a particular place or at a particular moment in the history of the world is no cause for wonder. But the sudden activation of the symbol, and its identification with Christ even in the early days of the Church, lead one to conjecture a second source. This

source is astrology, and it seems that Friedrich Muenther⁷ was the first to draw attention to it. Jeremias⁸ adopts the same view and mentions that a Jewish commentary on Daniel, written in the fourteenth century, expected the coming of the Messiah in the sign of the Fishes. This commentary is mentioned by Muenther in a later publication⁹ as stemming from Don Isaac Abarbanel, who was born in Lisbon in 1437 and died in Venice in 1508.¹⁰ It is explained here that the House of the Fishes (♋) is the house of justice and of brilliant splendour (♃ in ♋). Further, that in *anno mundi* 2365,¹¹ a great conjunction of Saturn (♄) and Jupiter (♃) took place in Pisces.¹² These two great planets, he says, are also the most important for the destiny of the world, and especially for the destiny of the Jews. The conjunction took place three years before the birth of Moses. (This is of course legendary.) Abarbanel expects the coming of the Messiah when there is a conjunction of Jupiter and Saturn in Pisces. He was not the first to express such expectations. Four hundred years earlier we find similar pronouncements; for instance, Rabbi Abraham ben Hiyya, who died about 1136, is said to have decreed that the Messiah was to be expected in 1464, at the time of the great conjunction in Pisces; and the same is reported of Solomon ben Gabirol (1020–70).¹³ These astrological ideas are quite understandable when one considers that Saturn is the star of Israel, and that Jupiter means the “king” (of justice). Among the territories ruled by the Fishes, the house of Jupiter, are Mesopotamia, Bactria, the Red Sea, and Palestine.¹⁴ Chiun (Saturn) is mentioned in Amos 5 : 26 as “the star of your god.”¹⁵ James of Sarug (d. 521) says the Israelites worshipped Saturn. The Sabaeans called him the “god of the Jews.”¹⁶ The Sabbath is Saturday, Saturn’s Day. Albumasar¹⁷ testifies that Saturn is the star of Israel.¹⁸ In medieval astrology Saturn was believed to be the abode of the devil.¹⁹ Both Saturn and Ialdabaoth, the demiurge and highest archon, have lion’s faces. Origen elicits from the diagram of Celsus that Michael, the first angel of the Creator, has “the shape of a lion.”²⁰ He obviously stands in the place of Ialdabaoth, who is identical with Saturn, as Origen points out.²¹ The demiurge of the Naassenes is a “fiery god, the fourth by number.”²² According to the teachings of Apelles, who had connections with Marcion, there was a “third god who spoke to Moses, a fiery one, and there was also a fourth, the author of evil.”²³ Between the god of the Naassenes and the god of Apelles there is evidently a close relationship, and also, it appears, with Yahweh, the demiurge of the Old Testament.

[129] Saturn is a “black” star,²⁴ anciently reputed a “maleficus.” “Dragons, serpents, scorpions, vipères, renards, chats et souris, oiseaux nocturnes et autres engeances surnoisies sont le lot de Saturne,” says Bouché-Leclercq.²⁵ Remarkably enough, Saturn’s animals also include the ass,²⁶ which on that account was rated a theriomorphic form of the Jewish god. A pictorial representation of it is the well-known mock crucifixion on the Palatine.²⁷ Similar traditions can be found in Plutarch,²⁸ Diodorus, Josephus,²⁹ and Tacitus.³⁰ Sabaoth, the seventh archon, has the

form of an ass.³¹ Tertullian is referring to these rumours when he says: “You are under the delusion that our God is an ass’s head,” and that “we do homage only to an ass.”³² As we have indicated, the ass is sacred to the Egyptian Set.³³ In the early texts, however, the ass is the attribute of the sun-god and only later became an emblem of the underworldly Apep and of evil (Set).³⁴

[130] According to medieval tradition, the religion of the Jews originated in a conjunction of Jupiter with Saturn, Islam in ♃ ♄ ♀, Christianity in ♃ ♄ ♀, and the Antichrist in ♃ ♄ ☿.³⁵ Unlike Saturn, Jupiter is a beneficent star. In the Iranian view Jupiter signifies life, Saturn death.³⁶ The conjunction of the two therefore signifies the *union of extreme opposites*. In the year 7 B.C. this famed conjunction took place no less than three times in the sign of the Fishes. The greatest approximation occurred on May 29 of that year, the planets being only 0.21 degrees apart, less than half the width of the full moon.³⁷ The conjunction took place in the middle of the commissure, “near the bend in the line of the Fishes.” From the astrological point of view this conjunction must appear especially significant, because the approximation of the two planets was exceptionally large and of an impressive brilliance. In addition, seen heliocentrically, it took place near the equinoctial point, which at that time was located between ♋ and ♌, that is, between fire and water.³⁸ The conjunction was characterized by the important fact that Mars was in opposition (♂ ♄ ♃ ♅), which means, astrologically, that the planet correlated with the instincts stood in a hostile relationship to it, which is peculiarly characteristic of Christianity. If we accept Gerhardt’s calculation that the conjunction took place on May 29, in the year 7 B.C., then the position of the sun—especially important in a man’s nativity—at Christ’s birth would be in the double sign of the *Twins*.³⁹ One thinks involuntarily of the ancient Egyptian pair of hostile brothers, Horus and Set, the sacrificer and the sacrificed (cf. n. 27, on Set’s “martyrdom”), who in a sense prefigure the drama of the Christian myth. In the Egyptian myth it is the evil one who is sacrificed on the “slave’s post.”⁴⁰ But the pair of brothers Heru-ur (the “older Horus”) and Set are sometimes pictured as having one body with two heads. The planet Mercury is correlated with Set, and this is interesting in view of the tradition that Christianity originated in a conjunction of Jupiter with Mercury. In the New Kingdom (XIXth dynasty) Set appears as Sutech in the Nile delta. In the new capital built by Rameses II, one district was dedicated to Amon, the other to Sutech.⁴¹ It was here that the Jews were supposed to have done slave-labour.

[131] In considering the double aspect of Christ, mention might be made of the legend of Pistis Sophia (3rd cent.), which also originated in Egypt. Mary says to Jesus:

When thou wert a child, before the spirit had descended upon thee, when thou wert in the vineyard with Joseph, the spirit came down from the height, and came unto me in

the house, like unto thee, and I knew him not, but thought that he was thou. And he said unto me, “Where is Jesus, my brother, that I may go to meet him?” And when he had said this unto me, I was in doubt, and thought it was a phantom tempting me. I seized him and bound him to the foot of the bed which was in my house, until I had gone to find you in the field, thee and Joseph; and I found you in the vineyard, where Joseph was putting up the vine-poles. And it came to pass, when thou didst hear me saying this thing unto Joseph, that thou didst understand, and thou wert joyful, and didst say, “Where is he, that I may see him?” And it came to pass, when Joseph heard thee say these words, that he was disturbed. We went up together, entered into the house and found the spirit bound to the bed, and we gazed upon thee and him, and found that thou wert like unto him. And he that was bound to the bed was unloosed, he embraced thee and kissed thee, and thou also didst kiss him, and you became one.⁴²

[132] It appears from the context of this fragment that Jesus is the “truth sprouting from the earth,” whereas the spirit that resembled him is “justice [δικαιοσύνη] looking down from heaven.” The text says: “Truth is the power which issued from thee when thou wast in the lower regions of chaos. For this cause thy power hath said through David, ‘Truth hath sprouted out of the earth,’ because thou wert in the lower regions of chaos.”⁴³ Jesus, accordingly, is conceived as a double personality, part of which rises up from the chaos or *hyle*, while the other part descends as *pneuma* from heaven.

[133] One could hardly find the *φυλοκρίνησις*, or ‘discrimination of the natures’ that characterizes the Gnostic Redeemer, exemplified more graphically than in the astrological determination of time. The astrological statements that were quite possible in antiquity all point to the prominent double aspect⁴⁴ of the birth that occurred at this particular moment of time, and one can understand how plausible was the astrological interpretation of the Christ-Antichrist myth when it entered into manifestation at the time of the Gnostics. A fairly old authority, earlier anyway than the sixth century, which bears striking witness to the antithetical nature of the Fishes is the Talmud. This says:

Four thousand two hundred and ninety-one years after the Creation [A.D. 530], the world will be orphaned. There will follow the war of the *tanninim* [sea-monsters], the war of Gog and Magog,⁴⁵ and then the Messianic era; only after seven thousand years will the Holy One, blessed be He, set up his world anew. R. Abba, the son of Raba, said, It was taught: after five thousand years.⁴⁶

The Talmud commentator Solomon ben Isaac, alias Rashi (1039–1105), remarks that the *tanninim* are fishes, presumably basing himself on an older source, since he does

not give this as his own opinion, as he usually does. This remark is important, firstly because it takes the battle of the fishes as an eschatological event (like the fight between Behemoth and Leviathan), and secondly because it is probably the oldest testimony to the antithetical nature of the fishes. From about this period, too—the eleventh century—comes the apocryphal text of a Johannine Genesis in which the two fishes are mentioned, this time in unmistakably astrological form.^{46a} Both documents fall within the critical epoch that opened with the second millennium of the Christian era, about which I shall have more to say in due course.

[134] The year 531 is characterized astronomically by a conjunction of ♊ and ♋ in Gemini. This sign stands for a pair of brothers, and they too have a somewhat antithetical nature. The Greeks interpreted them as the Dioscuri ('boys of Zeus'), the sons of Leda who were begotten by the swan and hatched out of an egg. Pollux was immortal, but Castor shared the human lot. Another interpretation takes them as representing Apollo and Heracles or Apollo and Dionysus. Both interpretations suggest a certain polarity. Astronomically, at any rate, the air sign Gemini stands in a quartile and therefore unfavourable aspect to the conjunction that took place in the year 7 B.C. The inner polarity of ♊ may perhaps shed light on the prophecy about the war of the *tanninim*, which Rashi interprets as fishes. From the dating of Christ's birth it would appear, as said, that the sun was in Gemini. The motif of the brothers is found very early in connection with Christ, for instance among the Jewish Christians and Ebionites.⁴⁷

[135] From all this we may risk the conjecture that the Talmudic prophecy was based on astrological premises.

[136] The precession of the equinoxes was a fact well known to the astrologers of antiquity. Origen, helped out by the observations and calculations of Hipparchus,⁴⁸ uses it as a cogent argument against an astrology based on the so-called "morphomata" (the actual constellations).⁴⁹ Naturally this does not apply to the distinction already drawn in ancient astrology between the morphomata and the ζωδιὰ νοητά (the fictive signs of the zodiac).⁵⁰ If we take the 7,000 years mentioned in the prophecy as *anno mundi* 7000, the year denoted would be A.D. 3239. By then the spring-point will have moved from its present position 18 degrees into Aquarius, the next aeon, that of the Water Carrier. As an astrologer of the second or third century would be acquainted with the precession, we may surmise that these dates were based on astrological considerations. At all events the Middle Ages were much concerned with the calculation of *coniunctiones maximae* and *magnae*, as we know from Pierre d'Ailly and Cardan.⁵¹ Pierre d'Ailly reckoned that the first *coniunctio maxima* (♊ δ ♋ in ♉) after the creation of the world took place in 5027 B.C., while Cardan relegated the tenth conjunction to A.D. 3613.⁵² Both of them assumed

the lapse of too large an interval between conjunctions in the same sign. The correct astronomical interval is about 795 years. Cardan's conjunction would accordingly take place in the year A.D. 3234. For astrological speculation this date is naturally of the greatest importance.

[137] As to the 5,000 years, the date we get is A.D. 1239. This was an epoch noted for its spiritual instability, revolutionary heresies and chiliastic expectations, and at the same time it saw the founding of the mendicant orders, which injected new life into monasticism. One of the most powerful and influential voices to announce the coming of a "new age of the spirit" was Joachim of Flora (d. 1202), whose teachings were condemned by the Fourth Lateran Council in 1215. He expected the opening of the seventh seal in the fairly near future, the advent of the "everlasting gospel" and the reign of the "intellectus spiritualis," the age of the Holy Ghost. This third aeon, he says, had already begun with St. Benedict, the founder of the Benedictine Order (the first monastery was supposed to have been built a few years after 529). One of Joachim's followers, the Franciscan friar Gerard of Borgo San Donnino, proclaimed in his *Introductorius in evangelium aeternum*, which appeared in 1254 in Paris, that Joachim's three main treatises were in fact the everlasting gospel, and that in the year 1260 this would replace the gospel of Jesus Christ.⁵³ As we know, Joachim saw monasticism as the true vehicle of the Holy Ghost and for this reason he dated the secret inception of the new era from the lifetime of St. Benedict, whose founding of the Benedictine Order revived monasticism in the West.

[138] To Pierre d'Ailly the time of Pope Innocent III (1198–1216) had already seemed significant. About the year 1189, he says, the revolutions of Saturn were once again completed ("completae anno Christi 1189 vel circiter"). He complains that the Pope had condemned a treatise of Abbot Joachim,⁵⁴ and also the heretical doctrine of Almaricus.⁵⁵ This last is the theological philosopher Amalric of Bene (d. 1204), who took part in the widespread Holy Ghost movement of that age. It was then, too, he says, that the Dominican and Franciscan mendicant orders came into existence, "which was a great and wonderful thing for the Christian church." Pierre d'Ailly thus lays stress on the same phenomena that struck us as being characteristic of the time, and further regards this epoch as having been foretold in astrology.

[139] The date for the founding of the monastery of Monte Cassino brings us very close to the year 530, which the Talmud prophesied would be a critical one. In Joachim's view not only does a new era begin then, but a new "status" of the world—the age of monasticism and the reign of the Holy Ghost. Its beginning still comes within the domain of the Son, but Joachim surmises in a psychologically correct manner that a new status—or, as we would say, a new attitude—would appear first as a more or less latent preliminary stage, which would then be followed by the

fructificatio, the flower and the fruit. In Joachim's day the fruition was still in abeyance, but one could observe far and wide an uncommon agitation and commotion of men's spirits. Everyone felt the rushing wind of the pneuma; it was an age of new and unprecedented ideas which were blazoned abroad by the Cathari, Patarenes, Concorricci, Waldenses, Poor Men of Lyons, Beghards, Brethren of the Free Spirit, "Bread through God,"⁵⁶ and whatever else these movements were called. Their visible beginnings all lay in the early years of the eleventh century. The contemporary documents amassed by Hahn throw a revealing light on the ideas current in these circles:

Item, they believe themselves to be God by nature without distinction ... and that they are eternal

Item, that they have no need of God or the Godhead.

Item, that they constitute the kingdom of heaven.

Item, that they are immutable in the new rock, that they rejoice in naught and are troubled by naught.

Item, that a man is bound to follow his inner instinct rather than the truth of the Gospel which is preached every day. ... They say that they believe the Gospel to contain poetical matters which are not true.⁵⁷

[140] These few examples may suffice to show what kind of spirit animated these movements. They were made up of people who identified themselves (or were identified) with God, who deemed themselves supermen, had a critical approach to the gospels, followed the promptings of the inner man, and understood the kingdom of heaven to be within. In a sense, therefore, they were modern in their outlook, but they had a religious inflation instead of the rationalistic and political psychosis that is the affliction of our day. We ought not to impute these extremist ideas to Joachim, even though he took part in that great movement of the spirit and was one of its outstanding figures. One must ask oneself what psychological impulse could have moved him and his adherents to cherish such bold expectations as the substitution of the "everlasting gospel" for the Christian message or the supersession of the second Person in the Godhead by the third, who would reign over the new era. This thought is so heretical and subversive that it could never have occurred to him had he not felt himself supported and swept along by the revolutionary currents of the age. He felt it as a revelation of the Holy Ghost, whose life and procreative power no church could bring to a stop. The numinosity of this feeling was heightened by the temporal coincidence—"synchronicity"—of the epoch he lived in with the beginning of the sphere of the "antichristian" fish in Pisces. In consequence, one might feel tempted to regard the Holy Ghost movement and Joachim's central ideas as a direct expression of the antichristian psychology that was then dawning. At any rate the Church's condemnation is thoroughly understandable, for in many ways his attitude to the Church of Jesus Christ comes very close to open insurrection, if not downright apostasy. But if we allow some credence to the conviction of these innovators that

they were moved by the Holy Ghost, then another interpretation becomes not only possible but even probable.

[141] That is to say, just as Joachim supposed that the status of the Holy Ghost had secretly begun with St. Benedict, so we might hazard the conjecture that a new status was secretly anticipated in Joachim himself. Consciously, of course, he thought he was bringing the status of the Holy Ghost into reality, just as it is certain that St. Benedict had nothing else in mind than to put the Church on a firm footing and deepen the meaning of the Christian life through monasticism. But, unconsciously—and this is psychologically what probably happened—Joachim could have been seized by the archetype of the spirit. There is no doubt that his activities were founded on a numinous experience, which is, indeed, characteristic of all those who are gripped by an archetype. He understood the spirit in the dogmatic sense as the third Person of the Godhead, for no other way was possible, but not in the sense of the empirical archetype. This archetype is not of uniform meaning, but was originally an ambivalent dualistic figure⁵⁸ that broke through again in the alchemical concept of spirit after engendering the most contradictory manifestations within the Holy Ghost movement itself. The Gnostics in their day had already had clear intimations of this dualistic figure. It was therefore very natural, in an age which coincided with the beginning of the second Fish and which was, so to speak, forced into ambiguity, that an espousal of the Holy Ghost in its Christian form should at the same time help the archetype of the spirit to break through in all its characteristic ambivalence. It would be unjust to class so worthy a personage as Joachim with the bigoted advocates of that revolutionary and anarchic turbulence, which is what the Holy Ghost movement turned into in so many places. We must suppose, rather, that he himself unwittingly ushered in a new “status,” a religious attitude that was destined to bridge and compensate the frightful gulf that had opened out between Christ and Antichrist in the eleventh century. The antichristian era is to blame that the spirit became non-spiritual and that the vitalizing archetype gradually degenerated into rationalism, intellectualism, and doctrinairism, all of which leads straight to the tragedy of modern times now hanging over our heads like a sword of Damocles. In the old formula for the Trinity, as Joachim knew it, the dogmatic figure of the devil is lacking, for then as now he led a questionable existence somewhere on the fringes of theological metaphysics, in the shape of the *mysterium iniquitatis*. Fortunately for us, the threat of his coming had already been foretold in the New Testament—for the less he is recognized the more dangerous he is. Who would suspect him under those high-sounding names of his, such as public welfare, lifelong security, peace among the nations, etc.? He hides under idealisms, under -isms in general, and of these the most pernicious is doctrinairism, that most unspiritual of all the spirit’s manifestations. The present age must come to terms drastically with the facts as they are, with the

absolute opposition that is not only tearing the world asunder politically but has planted a schism in the human heart. We need to find our way back to the original, living spirit which, because of its ambivalence, is also a mediator and uniter of opposites,⁵⁹ an idea that preoccupied the alchemists for many centuries.

[142] If, as seems probable, the aeon of the fishes is ruled by the archetypal motif of the hostile brothers, then the approach of the next Platonic month, namely Aquarius, will constellate the problem of the union of opposites. It will then no longer be possible to write off evil as the mere privation of good; its real existence will have to be recognized. This problem can be solved neither by philosophy, nor by economics, nor by politics, but only by the individual human being, via his experience of the living spirit, whose fire descended upon Joachim, one of many, and, despite all contemporary misunderstandings, was handed onward into the future. The solemn proclamation of the *Assumptio Mariae* which we have experienced in our own day is an example of the way symbols develop through the ages. The impelling motive behind it did not come from the ecclesiastical authorities, who had given clear proof of their hesitation by postponing the declaration for nearly a hundred years,⁶⁰ but from the Catholic masses, who have insisted more and more vehemently on this development. Their insistence is, at bottom, the urge of the archetype to realize itself.⁶¹

[143] The repercussions of the Holy Ghost movement spread, in the years that followed, to four minds of immense significance for the future. These were Albertus Magnus (1193–1280); his pupil Thomas Aquinas, the philosopher of the Church and an adept in alchemy (as also was Albertus); Roger Bacon (c. 1214–c. 1294), the English forerunner of inductive science; and finally Meister Eckhart (c. 1260–1327), the independent religious thinker, now enjoying a real revival after six hundred years of obscurity. Some people have rightly seen the Holy Ghost movement as the forerunner of the Reformation. At about the time of the twelfth and thirteenth centuries we find also the beginnings of Latin alchemy, whose philosophical and spiritual content I have tried to elucidate in my book *Psychology and Alchemy*. The image mentioned above (par. 139) of “immutability in the new rock” bears a striking resemblance to the central idea of philosophical alchemy, the *lapis philosophorum*, which is used as a parallel to Christ, the “rock,” the “stone,” the “cornerstone.” Priscillian (4th cent.) says: “We have Christ for a rock, Jesus for a cornerstone.”⁶² An alchemical text speaks of the “rock which is smitten thrice with Moses’ rod, so that the waters flow forth freely.”⁶³ The *lapis* is called a “sacred rock” and is described as having four parts.⁶⁴ St. Ambrose says the water from the rock is a prefiguration of the blood that flowed from Christ’s side.⁶⁵ Another alchemical text mentions the “water from the rock” as the equivalent of the universal solvent, the *aqua permanens*.⁶⁶ Khunrath, in his somewhat florid language, even speaks of the “Petroleum

sapientum.”⁶⁷ By the Naassenes, Adam was called the “rock” and the “cornerstone.”⁶⁸ Both these allegories of Christ are mentioned by Epiphanius in his *Ancoratus*, and also by Firmicus Maternus.⁶⁹ This image, common to ecclesiastical and alchemical language alike, goes back to I Corinthians 10 : 4 and I Peter 2 : 4.

[144] The new rock, then, takes the place of Christ, just as the everlasting gospel was meant to take the place of Christ’s message. Through the descent and indwelling of the Holy Ghost the *υιοτης*, sonship, is infused into every individual, so that everybody who possesses the Holy Ghost will be a new rock, in accordance with I Peter 2 : 5: “Be you also as living stones built up.”⁷⁰ This is a logical development of the teaching about the Paraclete and the filiation, as stated in Luke 6 : 35: “You shall be sons of the Highest,” and John 10 : 34: “Is it not written in your law: I said, you are gods?” The Naassenes, as we know, had already made use of these allusions and thus anticipated a whole tract of historical development—a development that led via monasticism to the Holy Ghost movement, via the *Theologia Germanica* direct to Luther, and via alchemy to modern science.

[145] Let us now turn back to the theme of Christ as the fish. According to Doelger, the Christian fish symbol first appeared in Alexandria around A.D. 200;⁷¹ similarly, the baptismal bath was described as a *piscina* (fish-pond) quite early. This presupposes that the believers were fishes, as is in fact suggested by the gospels (for instance Matt. 4 : 19). There Christ wants to make Peter and Andrew “fishers of men,” and the miraculous draught of fishes (Luke 5 : 10) is used by Christ himself as a paradigm for Peter’s missionary activity.

[146] A direct astrological aspect of Christ’s birth is given us in Matthew 2 : 1ff. The Magi from the East were star-gazers who, beholding an extraordinary constellation, inferred an equally extraordinary birth. This anecdote proves that Christ, possibly even at the time of the apostles, was viewed from the astrological standpoint or was at least brought into connection with astrological myths. The latter alternative is fully confirmed when we consider the apocalyptic utterances of St. John. Since this exceedingly complex question has been discussed by those who are more qualified than I, we can support our argument on the well-attested fact that glimpses of astrological mythology may be caught behind the stories of the worldly and otherworldly life of the Redeemer.⁷²

[147] Above all it is the connections with the age of the Fishes which are attested by the fish symbolism, either contemporaneously with the gospels themselves (“fishers of men,” fishermen as the first disciples, miracle of loaves and fishes), or immediately afterwards in the post-apostolic era. The symbolism shows Christ and those who believe in him as fishes, fish as the food eaten at the Agape,⁷³ baptism as immersion in a fish-pond, etc. At first sight, all this points to no more than the fact

that the fish symbols and mythologems which have always existed had assimilated the figure of the Redeemer; in other words, it was a symptom of Christ's assimilation into the world of ideas prevailing at that time. But, to the extent that Christ was regarded as the new aeon, it would be clear to anyone acquainted with astrology that he was born as the first fish of the Pisces era, and was doomed to die as the last ram⁷⁴ (ἀρνίον, lamb) of the declining Aries era.⁷⁵ Matthew 27 : 15ff. hands down this mythologem in the form of the old sacrifice of the seasonal god. Significantly enough, Jesus's partner in the ceremony is called Barabbas, "son of the father." There would be some justification for drawing a parallel between the tension of opposites in early Christian psychology and the fact the zodiacal sign for Pisces (♊) frequently shows two fishes moving in opposite directions, but only if it could be proved that their contrary movement dates from pre-Christian times or is at least contemporary with Christ. Unfortunately, I know of no pictorial representation from this period that would give us any information about the position of the fishes. In the fine bas-relief of the zodia from the Little Metropolis in Athens, Pisces and Aquarius are missing. There is one representation of the fishes, near the beginning of our era, that is certainly free from Christian influence. This is the globe of the heavens from the Farnese Atlas in Naples. The first fish, depicted north of the equator, is vertical, with its head pointing to the celestial Pole; the second fish, south of the equator, is horizontal, with its head pointing West. The picture follows the astronomical configuration and is therefore naturalistic.⁷⁶ The zodiac from the temple of Hathor at Denderah (1st cent. B.C.) shows the fishes, but they both face the same way. The planisphere of Timochares,⁷⁷ mentioned by Hipparchus, has only *one* fish where Pisces should be. On coins and gems from the time of the emperors, and also on Mithraic monuments,⁷⁸ the fishes are shown either facing the same way or moving in opposite directions.⁷⁹ The polarity which the fishes later acquired may perhaps be due to the fact that the astronomical constellation shows the first (northerly) fish as vertical, and the second (southerly) fish as horizontal. They move almost at right angles to one another and hence form a cross. This countermovement, which was unknown to the majority of the oldest sources, was much emphasized in Christian times, and this leads one to suspect a certain tendentiousness.⁸⁰

[148] Although no connection of any kind can be proved between the figure of Christ and the inception of the astrological age of the fishes, the simultaneity of the fish symbolism of the Redeemer with the astrological symbol of the new aeon seems to me important enough to warrant the emphasis we place upon it. If we try to follow up the complicated mythological ramifications of this parallel, we do so with intent to throw light on the multifarious aspects of an archetype that manifests itself on the one hand in a *personality*, and on the other hand synchronistically, in a moment of time determined in advance, before Christ's birth. Indeed, long before that, the archetype

had been written in the heavens by projection, so as then, “when the time was fulfilled,” to coincide with the symbols produced by the new era. The fish, appropriately enough, belongs to the winter rainy season, like Aquarius and Capricorn (*αἰγόκερως*, the goatfish).⁸¹ As a zodiacal sign, therefore, it is not in the least remarkable. It becomes a matter for astonishment only when, through the precession of the equinoxes, the spring-point moves into this sign and thus inaugurates an age in which the “fish” was used as a name for the God who became a man, who was born as a fish and was sacrificed as a ram, who had fishermen for disciples and wanted to make them fishers of men, who fed the multitude with miraculously multiplying fishes, who was himself eaten as a fish, the “holier food,” and whose followers are little fishes, the “pisciculi.” Assume, if you like, that a fairly widespread knowledge of astrology would account for at least some of this symbolism in certain Gnostic-Christian circles.⁸² But this assumption does not apply when it comes to eyewitness accounts in the synoptic gospels. There is no evidence of any such thing. We have no reason whatever to suppose that those stories are disguised astrological myths. On the contrary, one gets the impression that the fish episodes are entirely natural happenings and that there is nothing further to be looked for behind them. They are “Just So” stories, quite simple and natural, and one wonders whether the whole Christian fish symbolism may not have come about equally fortuitously and without premeditation. Hence one could speak just as well of the seemingly fortuitous coincidence of this symbolism with the name of the new aeon, the more so as the age of the fishes seems to have left no very clear traces in the cultures of the East. I could not maintain with any certainty that this is correct, because I know far too little about Indian and Chinese astrology. As against this, the fact that the traditional fish symbolism makes possible a verifiable prediction that had already been made in the New Testament is a somewhat uncomfortable proposition to swallow.

[149] The northerly, or easterly, fish, which the spring-point entered at about the beginning of our era,⁸³ is joined to the southerly, or westerly, fish by the so-called commissure. This consists of a band of faint stars forming the middle sector of the constellation, and the spring-point gradually moved along its southern edge. The point where the ecliptic intersects with the meridian at the tail of the second fish coincides roughly with the sixteenth century, the time of the Reformation, which as we know is so extraordinarily important for the history of Western symbols. Since then the spring-point has moved along the southern edge of the second fish, and will enter Aquarius in the course of the third millennium.⁸⁴ Astrologically interpreted, the designation of Christ as one of the fishes identifies him with the first fish, the vertical one. Christ is followed by the Antichrist, at the end of time. The beginning of the enantiodromia would fall, logically, midway between the two fishes. We have seen

that this is so. The time of the Renaissance begins in the immediate vicinity of the second fish, and with it comes that spirit which culminates in the modern age.⁸⁵

VII

THE PROPHECIES OF NOSTRADAMUS

[150] The course of our religious history as well as an essential part of our psychic development could have been predicted more or less accurately, both as regards time and content, from the precession of the equinoxes through the constellation of Pisces. The prediction, as we saw, was actually made and coincides with the fact that the Church suffered a schism in the sixteenth century. After that an enantiodromian process set in which, in contrast to the “Gothic” striving *upwards* to the heights, could be described as a horizontal movement *outwards*, namely the voyages of discovery and the conquest of Nature. The vertical was cut across by the horizontal, and man’s spiritual and moral development moved in a direction that grew more and more obviously antichristian, so that today we are confronted with a crisis of Western civilization whose outcome appears to be exceedingly dubious.

[151] With this background in mind, I would like to mention the astrological prophecies of Nostradamus, written in a letter¹ to Henry II of France, on June 27, 1558. After detailing a year characterized, among other things, by ♄ ☊ ♀ with ♂ ☐ ♀,² he says:

Then the beginning of that year shall see a greater persecution against the Christian Church than ever was in Africa,³ and it shall be in the year 1792, at which time everyone will think it a renovation of the age. ... And at that time and in those countries the infernal power shall rise against the Church of Jesus Christ. This shall be the second Antichrist, which shall persecute the said Church and its true vicar by means of the power of temporal kings, who through their ignorance shall be seduced by tongues more sharp than any sword in the hands of a madman. ... The persecution of the clergy shall have its beginning in the power of the Northern Kings joined by the Eastern ones. And that persecution shall last eleven years, or a little less, at which time the chief Northern king shall fail.⁴

[152] However, Nostradamus thinks that “a united Southern king” will outlast the Northern one by three years. He sees a return of paganism (“the sanctuary destroyed by paganism”), the Bible will be burned, and an immense blood-bath will take place: “So great tribulations as ever did happen since the first foundation of the Christian Church.” All Latin countries will be affected by it.

[153] There are historical determinants that may have moved Nostradamus to give the year 1792 as the beginning of the new aeon. For instance, Cardinal Pierre d’Ailly, basing himself on Albumasar, writes in his *Concordantia*⁵ on the eighth *coniunctio maxima* (ϛ ϔ ♃ in ♀), which had been calculated for 1693:

And after that shall be the fulfilment of ten revolutions of Saturn in the year 1789, and this will happen after the said conjunction, in the course of ninety-seven years or thereabouts. ... This being so, we say that if the world shall endure until then, which God alone knows, then there will be many and great and marvellous changes and transformations of the world, especially as concerns law-giving and religious sects, for the said conjunction and the revolutions of Saturn will coincide with the revolution or reversal of the upper orb, i.e., the eighth sphere, and from these and other premises the change of sects will be known. ... Whence it may be concluded with some probability that this is the time when the Antichrist shall come with his law and his damnable sects, which are utterly contrary and inimical to the law of Christ; for, being human, we can have no certainty with regard to the time and the moment of his coming. ... Yet, despite the indeterminate statement that he will come at approximately that time, it is possible to have a probable conjecture and a credible hypothesis in accordance with the astronomical indications. If, therefore, the astronomers say that a change of sects will occur about that time, then, according to them, a Mighty One will come after Mahomet, who will set up an evil and magical law. Thus we may surmise with credible probability that after the sect of Mahomet none other will come save the law of the Antichrist.⁶

[154] In connection with the calculation of the year 1693, Pierre d’Ailly quotes Albumasar as saying that the first *coniunctio maxima* of Saturn and Jupiter took place *anno mundi* 3200. To this Albumasar added 960 years, which brings us to A.D. 1693 as the year of the eighth *coniunctio maxima*.⁷ In Part III of his book, [chapter 17](#), Pierre d’Ailly criticizes this view and calls it a “false deduction.” In his treatise against “superstitiosos astronomos,” 1410, he maintains that the Christian religion should not be brought under astrological laws. He was alluding in particular to Roger Bacon, who had revived the theory that Christianity was under the influence of the planet Mercury. Pierre d’Ailly held that only superstitions and heretical opinions were astrologically influenced, and especially the coming of the Antichrist.⁸

[155] We are probably right in assuming that these calculations were known to Nostradamus, who proposed 1792 as an improvement on 1789. Both dates are suggestive, and a knowledge of subsequent events confirms that the things that happened around that time were significant forerunners of developments in our own day. The enthronement of the “Déesse Raison” was, in fact, an anticipation of the antichristian trend that was pursued from then onwards.

[156] The “renovation of the age” might mean a new aeon, and it coincides in a remarkable way with the new system of dating, the revolutionary calendar, which began with September 22, 1792, and had a distinctly antichristian character.⁹ What had been brewing up long beforehand then became a manifest event; in the French Revolution men witnessed the enantiodromia that had set in with the Renaissance and ran parallel with the astrological fish symbol. The time seemed a significant one astrologically, for a variety of reasons. In the first place this was the moment when the precession of the equinoxes reached the tail of the second fish.¹⁰ Then, in the year 1791, Saturn was in ♄, a fiery sign. Besides that, tradition made use of the theory of maximal conjunctions¹¹ and regarded the year of the eighth *coniunctio maxima*—1693—as a starting-point for future calculations.¹² This critical year was combined with another tradition basing itself on periods of ten revolutions of Saturn, each period taking three hundred years. Pierre d’Ailly cites Albumasar, who says in his *Magnae coniunctiones*: “They said that the change shall come when ten revolutions of Saturn have been completed, and that the permutation of Saturn is particularly appropriate to the movable signs” (♄, ♁, ♃, ♅).¹³ According to Pierre d’Ailly, a Saturn period came to an end in 11 B.C., and he connects this with the appearance of Christ. Another period ended in A.D. 289: this he connects with Manichaeism. The year 589 foretells Islam, and 1189 the significant reign of Pope Innocent III; 1489 announces a schism of the Church, and 1789 signalizes—by inference—the coming of the Antichrist. Fantasy could do the rest, for the archetype had long been ready and was only waiting for the time to be fulfilled. That a usurper from the North would seize power¹⁴ is easily understood when we consider that the Antichrist is something infernal, the devil or the devil’s son, and is therefore Typhon or Set, who has his fiery abode in the North. Typhon’s power is triadic, possessing two confederates, one in the East and one in the South. This power corresponds to the “lower triad.”¹⁵

[157] Nostradamus, the learned physician and astrologer, would certainly have been familiar with the idea of the North as the region of the devil, unbelievers, and all things evil. The idea, as St. Eucherius of Lyons (d. 450) remarks,¹⁶ goes back to Jeremiah 1 : 14: “From the north shall an evil wind break forth upon all the inhabitants of the land,”¹⁷ and other passages such as Isaiah 14 : 12f.:

How art thou fallen from heaven, O Lucifer, son of the morning! how art thou cut down to the ground, which didst weaken the nations! For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God, I will sit on the mount of assembly in the far north.¹⁸

The Benedictine monk Rhabanus Maurus (d. 856) says that “the north wind is the harshness of persecution” and “a figure of the old enemy.”¹⁹ The north wind, he adds,

signifies the devil, as is evident from Job 26 : 7: “He stretcheth out the north over the empty space, and hangeth the earth upon nothing.”²⁰ Rhabanus interprets this as meaning that “God allows the devil to rule the minds of those who are empty of his grace.”²¹ St. Augustine says: “Who is that north wind, save him who said: I will set up my seat in the north, I will be like the most High? The devil held rule over the wicked, and possessed the nations,” etc.²²

[158] The Victorine monk Garnerius says that the “malign spirit” was called Aquilo, the north wind. Its coldness meant the “frigidity of sinners.”²³ Adam Scotus imagined there was a frightful dragon’s head in the north from which all evil comes. From its mouth and snout it emitted smoke of a triple nature,²⁴ the “threefold ignorance, namely of good and evil, of true and false, of fitting and unfitting.”²⁵ “That is the smoke,” says Adam Scotus, “which the prophet Ezekiel, in his vision of God, saw coming from the north,”²⁶ the “smoke” of which Isaiah speaks.²⁷ The pious author never stops to think how remarkable it is that the prophet’s vision of God should be blown along on the wings of the north wind, wrapped in this devilish smoke of threefold ignorance. Where there is smoke, there is fire. Hence the “great cloud” had “brightness round about it, and fire flashing forth continually, and in the midst of the fire, as it were gleaming bronze.”²⁸ The north wind comes from the region of fire and, despite its coldness, is a “ventus urens” (burning wind), as Gregory the Great calls it, referring to Job 27 : 21.²⁹ This wind is the malign spirit, “who rouses up the flames of lust in the heart” and kindles every living thing to sin. “Through the breath of evil incitement to earthly pleasures he makes the hearts of the wicked to burn.” As Jeremiah 1:13 says, “I see a boiling pot, facing away from the north.” In these quotations from Gregory we hear a faint echo of the ancient idea of the fire in the north, which is still very much alive in Ezekiel, whose cloud of fire appears from the north, whence “an evil shall break forth upon all the inhabitants of the land.”³⁰

[159] In these circumstances it is hardly surprising that Nostradamus warns against the usurper from the north when foretelling the coming of the Antichrist. Even before the Reformation the Antichrist was a popular figure in folklore, as the numerous editions of the “Entkrist”³¹ in the second half of the fifteenth century show.³² This is quite understandable in view of the spiritual events then impending: the Reformation was about to begin. Luther was promptly greeted as the Antichrist, and it is possible that Nostradamus calls the Antichrist who was to appear after 1792 the “second Antichrist” because the first had already appeared in the guise of the German reformer, or much earlier with Nero or Mohammed.³³ We should not omit to mention in this connection how much capital the Nazis made out of the idea that Hitler was continuing and completing the work of reformation which Luther had left only half finished.

[160] From the existing astrological data, therefore, and from the possibilities of interpreting them it was not difficult for Nostradamus to predict the imminent enantiodromia of the Christian aeon; indeed, by making this prediction, he placed himself firmly in the antichristian phase and served as its mouthpiece.

[161] After this excursion, let us turn back to our fish symbolism.

VIII

THE HISTORICAL SIGNIFICANCE OF THE FISH

[162] In addition to the “pisciculi Christianorum,” the shepherd and the lamb play, as we know only too well, an almost greater role in Christian allegory, and Hermes Kriophoros (the “rambearer”) became the prototype of the “good shepherd,” the tutelary god of flocks. Another prototype, in his capacity as shepherd, was Orpheus.¹ This aspect of the Poimen gave rise to a figure of similar name in the mystery cults, who was popularized in the “Shepherd” of Hermas (2nd century). Like the “giant fish” mentioned in the Abercius inscription,² the shepherd probably has connections with Attis, both temporally and regionally. Reitzenstein even conjectures that the “Shepherd” of Hermas derives from the Poimandres writings, which are of purely pagan origin.³ Shepherd, ram, and lamb symbolism coincides with the expiring aeon of Aries. In the first century of our era the two aeons overlap, and the two most important mystery gods of this period, Attis and Christ, are both characterized as shepherds, rams, and fishes. The Poimen symbolism has undergone such thorough elaboration at the hands of Reitzenstein that I am in no position to add anything illuminating in this respect. The case is somewhat different with the fish symbol. Not only are the sources more copious, but the very nature of the symbol, and in particular its dual aspects, give rise to definite psychological questions which I should like to go into more closely.

[163] Like every hero, Christ had a childhood that was threatened (massacre of the innocents, flight into Egypt). The astrological “interpretation” of this can be found in Revelation 12 : 1: “A woman clothed with the sun, with the moon under her feet, and on her head a crown of twelve stars.” She is in the pangs of birth and is pursued by a dragon. She will give birth to a man-child who shall “rule the nations with a rod of iron.” This story carries echoes of numerous kindred motifs in East and West, for instance that of Leto and Python, of Aphrodite and her son, who, when pursued, leapt into the Euphrates and were changed into fishes,⁴ and of Isis and Horus in Egypt. The Syrian Greeks identified Derceto-Atargatis and her son Ichthys with the constellation of the Fishes.⁵

[164] The mother-goddess—and the star-crowned woman of the Apocalypse counts as one—is usually thought of as a virgin (*παρθένος*, *virgo*). The Christmas message, ‘*Ἡ παρθένος τέτοκεν, αὐξεῖ φῶς* (the virgin has brought forth, the light increases), is

pagan. Speaking of the so-called Korion in Alexandria, Epiphanius⁶ says that on the night of the Epiphany (January 5/6) the pagans held a great festival:

They stay up the whole night singing songs and playing the flute, offering these to the images of the gods; and, when the revelries of the night are over, after cock-crow, they go down with torches into a subterranean sanctuary and bring up a carved wooden image, which is laid naked on a litter. On its forehead it has the sign of the cross, in gold, and on both its hands two other signs of the same shape, and two more on its knees; and the five signs are all fashioned in gold. They carry this carved image seven times round the middle of the temple precincts, to the sound of flutes and tambourines and hymns, and after the procession they carry it down again into the crypt. But if you ask them what this mysterious performance means, they answer: Today, at this hour, the Kore, that is to say the virgin, has given birth to the Aeon.

[165] Epiphanius expressly states that he is not telling this of a Christian sect, but of the worshippers of idols, and he does so in order to illustrate the idea that even the pagans bear involuntary witness to the truth of Christianity.

[166] Virgo, the zodiacal sign, carries either a wheat-sheaf or a child. Some authorities connect her with the “woman” of the Apocalypse.⁷ At any rate, this woman has something to do with the prophecy of the birth of a Messiah at the end of time. Since the author of the Apocalypse was supposed to be a Christian, the question arises: To whom does the woman refer who is interpreted as the mother of the Messiah, or of Christ? And to whom does the son of the woman refer who (translating the Greek literally) shall “pasture (*ποιμαίνειν*) the pagans with an iron staff”?

[167] As this passage contains an allusion on the one hand to the Messianic prophecy in Isaiah 66 : 7,⁸ and on the other to Yahweh’s wrath (Psalm 2 : 9⁹), it would seem to refer in some way to the future rebirth of the Messiah. But such an idea is quite impossible in the Christian sphere. Boll¹⁰ says of the description of the “lamb” in Revelation 5 : 6ff.: “This remarkably bizarre figure with seven horns and seven eyes cannot possibly be explained in Christian terms.” Also, the “lamb” develops some very unexpected peculiarities: he is a *bellicose* lamb, a conqueror (Rev. 17 : 14). The mighty ones of the earth will have to hide from his *wrath* (Rev. 6 : 15ff.). He is likened to the “*lion* of the tribe of Judah” (Rev. 5 : 5). This lamb, who is reminiscent of Psalm 2 : 9 (“Thou shalt break them with a rod of iron, thou shalt dash them in pieces like a potter’s vessel”), rather gives one the sinister impression of a daemonic ram,¹¹ and not at all of a lamb who is led meekly to the slaughter. The lamb of the Apocalypse belongs, without doubt, to the category of horned monsters mentioned in these prophecies. One must therefore consider the question whether the author of the Apocalypse was influenced by an idea that was in some sense antithetical to Christ,

perhaps by a psychological shadow-figure, an “umbra Jesu” which was united at the end of time with the triumphant Christ, through an act of rebirth. This hypothesis would explain the repetition of the birth myth and also the curious fact that so important an eschatological expectation as the coming of the Antichrist receives but scant mention in the Apocalypse. The seven-horned ram is just about everything that Jesus appears not to be.¹² He is a real shadow-figure, but he could not be described as the Antichrist, who is a creature of Satan. For although the monstrous, warlike lamb is a shadow-figure in the sense that he is the counterpart of the lamb who was sacrificed, he is not nearly so irreconcilable with Christ as the Antichrist would have to be. The duplication of the Christ-figure cannot, therefore, be traced back to this split between Christ and Antichrist, but is due rather to the anti-Roman resentment felt by the Jewish Christians, who fell back on their god of vengeance and his warlike Messiah. The author of the Apocalypse may have been acquainted with Jewish speculations known to us through later tradition. We are told in the *Bereshith Rabbati* of Moses ha-Darshan that Elias found in Bethlehem a young woman sitting before her door with a newborn child lying on the ground beside her, flecked with blood. She explained that her son had been born at an evil hour, just when the temple was destroyed. Elias admonished her to look after the child. When he came back again five weeks later, he asked about her son. “He neither walks, nor sees, nor speaks, nor hears, but lies there like a stone,” said the woman. Suddenly a wind blew from the four corners of the earth, bore the child away, and plunged him into the sea. Elias lamented that it was now all up with the salvation of Israel, but a *bath kol* (voice) said to him:

It is not so. He will remain in the great sea for four hundred years, and eighty years in the rising smoke of the children of Korah,¹³ eighty years under the gates of Rome, and the rest of the time he will wander round in the great cities until the end of the days comes.¹⁴

[168] This story describes a Messiah who, though born in Bethlehem, is wafted by divine intervention into the Beyond (sea = unconscious). From the very beginning his childhood is so threatened that he is scarcely able to live. The legend is symptomatic of an extraordinary weakness of the Messianic element in Judaism and the dangers attending it, which would explain the delay in the Messiah’s appearance. For 560 years he remains latent, and only then does his missionary work begin. This interlude is not so far off the 530 years mentioned in the Talmudic prophecy (cf. par. 133), near enough anyway for us to compare them, if we take this legend as referring to Christ. In the limitless sea of Jewish speculation mutual contacts of this sort are more likely to have occurred than not. Thus the deadly threat to the Messiah and his death by violence is a motif that repeats itself in other stories, too. The later, mainly Cabalistic

tradition speaks of two Messiahs, the Messiah ben Joseph (or ben Ephraim) and the Messiah ben David. They were compared to Moses and Aaron, also to two roes, and this on the authority of the Song of Solomon 4 : 5: “Thy two breasts are like two young roes that are twins.”¹⁵ Messiah ben Joseph is, according to Deuteronomy 33 : 17, the “firstling of his bullock,” and Messiah ben David rides on an ass.¹⁶ Messiah ben Joseph is the first, Messiah ben David the second.¹⁷ Messiah ben Joseph must die in order to “atone with his blood for the children of Yahweh.”¹⁸ He will fall in the fight against Gog and Magog, and Armilus will kill him. Armilus is the Anti-Messiah, whom Satan begot on a block of marble.¹⁹ He will be killed by Messiah ben David in his turn. Afterwards, ben David will fetch the new Jerusalem down from heaven and bring ben Joseph back to life.²⁰ This ben Joseph plays a strange role in later tradition. Tabari, the commentator on the Koran, mentions that the Antichrist will be a king of the Jews,²¹ and in Abarbanel’s *Mashmi‘ a Yeshu‘ ah* the Messiah ben Joseph actually is the Antichrist. So he is not only characterized as the suffering Messiah in contrast to the victorious one, but is ultimately thought of as his antagonist.²²

[169] As these traditions show, the above-mentioned weakness of the Messianic element consists in a split which in the end becomes a complete polarity. This development is foreshadowed in Persian religious literature, in the pre-Christian idea of an enantiodromia of the great time-periods, and the deterioration of goodness. The Bahman Yast calls the fourth Iron Age “the evil sovereignty of the demons with dishevelled hair of the race of Wrath.”²³ On the other hand, the splitting of the Messiah into two is an expression of an inner disquiet with regard to the character of Yahweh, whose injustice and unreliability must have shocked every thoughtful believer ever since the time of Job.²⁴ Job puts the problem in unequivocal terms, and Christianity gave an equally unequivocal answer. Jewish mysticism, on the other hand, went its own way, and its speculations hover over depths which Christian thinkers have done their utmost to cover up. I do not want to elaborate this theme here, but will mention as an example a story told by Ibn Ezra. In Spain, he says, there was a great sage who was reputed to be unable to read the Eighty-ninth Psalm because it saddened him too much. The verses in question are:

I will not remove from him my steadfast love,
or be false to my faithfulness.

I will not violate my covenant,
or alter the word that went forth from my lips.

Once for all I have sworn my holiness:

I will not lie to David.

His line shall endure for ever,

his throne as long as the sun before me.
Like the moon it shall be established for ever;
the witness in the skies is sure. Selah!
But now thou hast cast off and rejected,
thou art full of wrath against thy anointed.
Thou hast renounced the covenant with thy servant;
thou hast trodden his crown in the dust.
Thou hast breached all his walls;
thou hast laid his strongholds in ruins.²⁵

[170] It is the same problem as in Job. As the highest value and supreme dominant in the psychic hierarchy, the God-image is immediately related to, or identical with, the self, and everything that happens to the God-image has an effect on the latter. Any uncertainty about the God-image causes a profound uneasiness in the self, for which reason the question is generally ignored because of its painfulness. But that does not mean that it remains unasked in the unconscious. What is more, it is answered by views and beliefs like materialism, atheism, and similar substitutes, which spread like epidemics. They crop up wherever and whenever one waits in vain for the legitimate answer. The *ersatz* product represses the real question into the unconscious and destroys the continuity of historical tradition which is the hallmark of civilization. The result is bewilderment and confusion. Christianity has insisted on God's goodness as a loving Father and has done its best to rob evil of substance. The early Christian prophecy concerning the Antichrist, and certain ideas in late Jewish theology, could have suggested to us that the Christian answer to the problem of Job omits to mention the corollary, the sinister reality of which is now being demonstrated before our eyes by the splitting of our world: *the destruction of the God-image is followed by the annulment of the human personality*. Materialistic atheism with its utopian chimeras forms the religion of all those rationalistic movements which delegate the freedom of personality to the masses and thereby extinguish it. The advocates of Christianity squander their energies in the mere preservation of what has come down to them, with no thought of building on to their house and making it roomier. Stagnation in these matters is threatened in the long run with a lethal end.

[171] As Bousset has plausibly suggested, the duality of the apocalyptic Christ is the outcome of Jewish-Gnostic speculations whose echoes we hear in the traditions mentioned above. The intensive preoccupation of the Gnostics with the problem of evil stands out in startling contrast to the peremptory nullification of it by the Church fathers, and shows that this question had already become topical at the beginning of the third century. In this connection we may recall the view expressed by

Valentinus,²⁶ that Christ was born “not without a kind of shadow” and that he afterwards “cast off the shadow from himself.”²⁷ Valentinus lived sometime in the first half of the second century, and the Apocalypse was probably written about A.D. 90, under Domitian. Like other Gnostics, Valentinus carried the gospels a stage further in his thinking, and for this reason it does not seem to me impossible that he understood the “shadow” as the Yahwistic law under which Christ was born. The Apocalypse and other things in the New Testament could easily have prompted him to such a view, quite apart from the more or less contemporaneous ideas about the demiurge and the prime Ogdoad that consists of light and shadow.²⁸ It is not certain whether Origen’s doubt concerning the ultimate fate of the devil was original;²⁹ at all events, it proves that the possibility of the devil’s reunion with God was an object of discussion in very early times, and indeed had to be if Christian philosophy was not to end in dualism. One should not forget that the theory of the *privatio boni* does not dispose of the eternity of hell and damnation. God’s humanity is also an expression of dualism, as the controversy of the Monophysites and Dyopnysites in the early Church shows. Apart from the religious significance of the decision in favour of a complete union of both natures, I would mention in passing that the Monophysite dogma has a noteworthy psychological aspect: it tells us (in psychological parlance) that since Christ, as a man, corresponds to the ego, and, as God, to the self, he is at once both ego and self, part and whole. Empirically speaking, consciousness can never comprehend the whole, but it is probable that the whole is unconsciously present in the ego. This would be equivalent to the highest possible state of *τελείωσις* (completeness or perfection).

[172] I have dwelt at some length on the dualistic aspects of the Christ-figure because, through the fish symbolism, Christ was assimilated into a world of ideas that seems far removed from the gospels—a world of pagan origin, saturated with astrological beliefs to an extent that we can scarcely imagine today. Christ was born at the beginning of the aeon of the Fishes. It is by no means ruled out that there were educated Christians who knew of the *coniunctio maxima* of Jupiter and Saturn in Pisces in the year 7 B.C., just as, according to the gospel reports, there were Chaldaeans who actually found Christ’s birthplace. The Fishes, however, are a double sign.

[173] At midnight on Christmas Eve, when (according to the old time-reckoning) the sun enters Capricorn, Virgo is standing on the eastern horizon, and is soon followed by the Serpent held by Ophiuchus, the “Serpent-bearer.” This astrological coincidence seems to me worth mentioning, as also the view that the two fishes are mother and son. The latter idea has a quite special significance because this relationship suggests that the two fishes were originally one. In fact, Babylonian and Indian astrology know of only one fish.³⁰ Later, this mother evidently gave birth to a

son, who was a fish like her. The same thing happened to the Phoenician Derceto-Atargatis, who, half fish herself, had a son called Ichthys. It is just possible that “the sign of the prophet Jonah”³¹ goes back to an older tradition about an heroic night sea journey and conquest of death, where the hero is swallowed by a fish (“whale-dragon”) and is then reborn.³² The redemptory name Joshua³³ (Yehoshua, Yeshua, Gr. *Iesus*) is connected with the fish: Joshua is the son of Nun, and Nun means ‘fish.’ The Joshua ben Nun of the Khidr legend had dealings with a fish that was meant to be eaten but was revived by a drop of water from the fountain of life.³⁴

[174] The mythological Great Mothers are usually a danger to their sons. Jeremias mentions a fish representation on an early Christian lamp, showing one fish devouring the other.³⁵ The name of the largest star in the constellation known as the Southern Fish—Fomalhaut, ‘the fish’s mouth’—might be interpreted in this sense, just as in fish symbolism every conceivable form of devouring *concupiscentia* is attributed to fishes, which are said to be “ambitious, libidinous, voracious, avaricious, lascivious”—in short, an emblem of the vanity of the world and of earthly pleasures (“voluptas terrena”).³⁶ They owe these bad qualities most of all to their relationship with the mother- and love-goddess Ishtar, Astarte, Atargatis, or Aphrodite. As the planet Venus, she has her “exaltatio” in the zodiacal sign of the fishes. Thus, in astrological tradition as well as in the history of symbols, the fishes have always had these opprobrious qualities attached to them,³⁷ while on the other hand laying claim to a special and higher significance. This claim is based—at least in astrology—on the fact that anyone born under Pisces may expect to become a fisherman or a sailor, and in that capacity to catch fishes or hold dominion over the sea—an echo of the primitive totemistic identity between the hunter and his prey. The Babylonian culture-hero Oannes was himself a fish, and the Christian Ichthys is a fisher of men par excellence. Symbologically, he is actually the hook or bait on God’s fishing-rod with which the Leviathan—death or the devil—is caught.³⁸ In Jewish tradition the Leviathan is a sort of eucharistic food stored up for the faithful in Paradise. After death, they clothe themselves in fishrobes.³⁹ Christ is not only a fisher but the fish that is “eucharistically” eaten.⁴⁰ Augustine says in his *Confessions*: “But [the earth] eats the fish that was drawn from the deep, at the table which you have prepared for them that believe; for the fish was drawn from the deep in order to nourish the needy ones of the earth.”⁴¹ St. Augustine is referring to the meal of fishes eaten by the disciples at Emmaus (Luke 24 : 43). We come across the “healing fish” in the story of Tobit: the angel Raphael helps Tobit to catch the fish that is about to eat him, and shows him how to make a magic “smoke” against evil spirits from the heart and liver of the fish, and how he can heal his father’s blindness with its gall (Tobit 6 : 1ff.).

[175] St. Peter Damian (d. 1072) describes monks as fishes, because all pious men are little fishes leaping in the net of the Great Fisher.⁴² In the Pectorios inscription

(beginning of the fourth century), believers are called the “divine descendants of the heavenly fish.”⁴³

[176] The fish of Manu is a saviour,⁴⁴ identified in legend with Vishnu, who had assumed the form of a small goldfish. He begs Manu to take him home, because he was afraid of being devoured by the water monsters.⁴⁵ He then grows mightily, fairytale fashion, and in the end rescues Manu from the great flood.⁴⁶ On the twelfth day of the first month of the Indian year a golden fish is placed in a bowl of water and invoked as follows: “As thou, O God, in the form of a fish, hast saved the Vedas that were in the underworld, so save me also, O Keshava!”⁴⁷ De Gubernatis and other investigators after him tried to derive the Christian fish from India.⁴⁸ Indian influence is not impossible, since relations with India existed even before Christ and various spiritual currents from the East made themselves felt in early Christianity, as we know from the reports of Hippolytus and Epiphanius. Nevertheless, there is no serious reason to derive the fish from India, for Western fish symbolism is so rich and at the same time so archaic that we may safely regard it as autochthonous.

[177] Since the Fishes stand for mother and son, the mythological tragedy of the son’s early death and resurrection is already implicit in them. Being the twelfth sign of the Zodiac, Pisces denotes the end of the astrological year and also a new beginning. This characteristic coincides with the claim of Christianity to be the beginning and end of all things, and with its eschatological expectation of the end of the world and the coming of God’s kingdom.⁴⁹ *Thus the astrological characteristics of the fish contain essential components of the Christian myth; first, the cross; second, the moral conflict and its splitting into the figures of Christ and Antichrist; third, the motif of the son of a virgin; fourth, the classical mother-son tragedy; fifth, the danger at birth; and sixth, the saviour and bringer of healing.* It is therefore not beside the point to relate the designation of Christ as a fish to the new aeon then dawning. If this relationship existed even in antiquity, it must obviously have been a tacit assumption or one that was purposely kept secret; for, to my knowledge, there is no evidence in the old literature that the Christian fish symbolism was derived from the zodiac. Moreover, the astrological evidence up to the second century A.D. is by no means of such a kind that the Christ/Antichrist antithesis could be derived *causally* from the polarity of the Fishes, since this, as the material we have cited shows, was not stressed as in any way significant. Finally, as Doelger rightly emphasizes, the Ichthys was always thought of as only *one* fish, though here we must point out that in the astrological interpretation Christ is in fact only one of the fishes, the role of the other fish being allotted to the Antichrist. There are, in short, no grounds whatever for supposing that the zodiac of the Fishes could have served as the Ichthys prototype.

[178] Pagan fish symbolism plays in comparison a far greater role.⁵⁰ The most important is the Jewish material collected by Scheftelowitz. The Jewish “chalice of benediction”⁵¹ was sometimes decorated with pictures of fishes, for fishes were the food of the blessed in Paradise. The chalice was placed in the dead man’s grave as a funerary gift.⁵² Fishes have a wide distribution as sepulchral symbols. The Christian fish occurs mainly in this connection. Devout Israelites who live “in the water of the doctrine” are likened to fishes. This analogy was self-evident around A.D. 100.⁵³ The fish also has a Messianic significance.⁵⁴ According to the Syrian Apocalypse of Baruch, Leviathan shall rise from the sea with the advent of the Messiah.⁵⁵ This is probably the “very great fish” of the Abercius inscription, corresponding to the “fish from the fountain” mentioned in a religious debate at the court of the Sassanids (5th century). The fountain refers to the Babylonian Hera, but in Christian language it means Mary, who in orthodox as well as in Gnostic circles (Acts of Thomas) was invoked as *πηγή*, ‘fountain.’ Thus we read in a hymn of Synesius (c. 350): *Παγά παγῶν, ἀρχῶν ἀρχά, ῥίζα, μονάς Εἶ μονάδων, κτλ.* (Fountain of fountains, source of sources, root of roots, monad of monads art thou.)⁵⁶ The fountain of Hera was also said to contain the one fish (*μόνον ἰχθύον*) that is caught by the “hook of divinity” and “feeds the whole world with its flesh.”⁵⁷ In a Boeotian vase-painting the “lady of the beasts”⁵⁸ is shown with a fish between her legs, or in her body,⁵⁹ presumably indicating that the fish is her son. Although, in the Sassanid debate, the legend of Mary was transferred to Hera, the “one fish” that is hooked does not correspond to the Christian symbol, for in Christian symbology the crucifix is the hook or bait with which God catches Leviathan,⁶⁰ who is either death or the devil (“that ancient serpent”) but not the Messiah. In Jewish tradition, on the other hand, the *pharmakon athanasias* is the flesh of Leviathan, the “Messianic fish,” as Scheftelowitz says. The Talmud Sanhedrin says that the Messiah “will not come until a fish is sought for an invalid and cannot be procured.”⁶¹ According to the Apocalypse of Baruch, Behemoth as well as Leviathan⁶² is a eucharistic food. This is assiduously overlooked. As I have explained elsewhere,⁶³ Yahweh’s two prehistoric monsters seem to represent a pair of opposites, the one being unquestionably a land animal, and the other aquatic.

[179] Since olden times, not only among the Jews but all over the Near East, the birth of an outstanding human being has been identified with the rising of a star. Thus Balaam prophecies (Num. 24 : 17):

I shall see him, but not now,

I shall behold him, but not nigh;

a star shall come forth out of Jacob

[180] Always the hope of a Messiah is connected with the appearance of a star. According to the Zohar, the fish that swallowed Jonah died, but revived after three days and then spewed him out again. “Through the fish we shall find a medicament for the whole world.”⁶⁴ This text is medieval but comes from a trustworthy source. The “very great⁶⁵ and pure fish from the fountain” mentioned in the Abercius inscription is, in the opinion of Scheftelowitz,⁶⁶ none other than Leviathan, which is not only the biggest fish but is held to be pure, as Scheftelowitz shows by citing the relevant passages from Talmudic literature. In this connection we might also mention the “one and only fish” (*εἰς μόνος ἰχθῦς*) recorded in the “Happenings in Persia.”⁶⁷

IX

THE AMBIVALENCE OF THE FISH SYMBOL

[181] According to the Syrian Apocalypse of Baruch (29 : 1ff.), the time preceding the coming of the Messiah falls into twelve parts, and the Messiah will appear in the twelfth. As a time-division, the number twelve points to the zodia, of which the twelfth is the Fishes. Leviathan will then rise out of the sea. “The two great sea monsters which I created on the fifth day of creation and which I have preserved until that time shall then be food for all who are left.”¹ Since Behemoth is unquestionably not a sea-animal, but one which, as a midrash says, “pastures on a thousand mountains,”² the two “sea monsters” must be a duplication of Leviathan. And as a matter of fact, he does appear to be divided as to sex, for there is a male and a female of the species.³ A similar duplication is suggested in Isaiah 27 : 1: “In that day, the Lord with his sore and great strong sword shall punish Leviathan the piercing serpent, even Leviathan that crooked serpent, and he shall slay the dragon [Vulgate: whale] that is in the sea.” This duplication gave rise in medieval alchemy to the idea of two serpents fighting each other, one winged, the other wingless.⁴ In the Book of Job, where Leviathan appears only in the singular, the underlying polarity comes to light in his opposite number, Behemoth. A poem by Meir ben Isaac describes the battle between Leviathan and Behemoth at the end of time, in which the two monsters wound each other to death. Yahweh then cuts them up and serves them as food to the devout.⁵ This idea is probably connected with the old Jewish Passover, which was celebrated in the month of Adar, the fish. In spite of the distinct duplication of Leviathan in the later texts, it is very likely that originally there was only one Leviathan, authenticated at a very early date in the Ugarit texts from Ras Shamra (c. 2000 B.C.). Virolleaud gives the following translation:

Quand tu frapperas Ltn, le serpent brh

Tu achèveras le serpent ‘qltn,

Le puissant aux sept têtes.

[182] He comments: “It is remarkable that the two adjectives *brh* and ‘*qltn* are the ones which qualify, in Isaiah 27 : 1, a particularly dangerous species of serpent which we call Leviathan, in Hebrew Liviatan.”⁶ From this period, too, there are pictures of a fight between Baal and the serpent Ltn,⁷ remarkable in that the conflict is between a god and a monster and not between two monsters, as it was later.

[183] We can see from the example of Leviathan how the great “fish” gradually split into its opposite, after having itself been the opposite of the highest God and hence his shadow, the embodiment of his evil side.⁸

[184] With this splitting of the monster into a new opposite, its original opposition to God takes a back seat, and the monster is now in conflict either with itself or with an equivalent monster (e.g., Leviathan and Behemoth). This relieves God of his own inner conflict, which now appears outside him in the form of a hostile pair of brother monsters. In later Jewish tradition the Leviathan that Yahweh fought with in Isaiah develops a tendency, on the evidence cited by Scheftelowitz, to become “pure” and be eaten as “eucharistic” food, with the result that, if one wanted to derive the Ichthys symbol from this source, Christ as a fish would appear in place of Leviathan, the monstrous animals of tradition having meanwhile faded into mere attributes of death and the devil.

[185] This split corresponds to the doubling of the shadow often met with in dreams, where the two halves appear as different or even as antagonistic figures. This happens when the conscious ego-personality does not contain all the contents and components that it could contain. Part of the personality then remains split off and mixes with the normally unconscious shadow, the two together forming a double—and often antagonistic—personality. If we apply this experience from the domain of practical psychology to the mythological material under discussion, we find that God’s monstrous antagonist produces a double because the God-image is incomplete and does not contain everything it logically ought to contain. Whereas Leviathan is a fishlike creature, primitive and cold-blooded, dwelling in the depths of the ocean, Behemoth is a warm-blooded quadruped, presumably something like a bull, who roams the mountains (at least in later tradition). Hence he is related to Leviathan as a higher, superior creature to a lower, inferior one, rather like the winged and the wingless dragon in alchemy. All winged beings are “volatile,” i.e., vapours and gases, in other words *pneuma*. Just as in Augustine Christ the fish is “drawn from the deep,”⁹ so in II Esdras 13 : 2ff. the “man” came out of the sea like a wind. His appearance was heralded by an eagle and a lion, theriomorphic symbols which greatly affrighted the prophet in the same way that Behemoth inspired chiefly terror in Job. The fish drawn from the deep has a secret connection with Leviathan: he is the bait with which Leviathan is lured and caught. This fish is probably a duplication of the great fish and stands for its pneumatic aspect. It is evident that Leviathan has such an aspect, because he, like the Ichthys, is eucharistic food.¹⁰ That this doubling represents an act of conscious realization is clear from Job 26 : 12, where we are told that Yahweh smote Rahab “by his understanding” (*tebūnā*). Rahab, the sea monster, is cousin german to Tiamat, whom Marduk split asunder by filling her up with Imhullu, the north wind.¹¹ The word *tebūnā* comes from *bīn*, ‘to separate, split, part

asunder’—in other words, to discriminate, which is the essence of conscious realization.¹² In this sense Leviathan and Behemoth represent stages in the development of consciousness whereby they become assimilated and humanized. The fish changes, via the warm-blooded quadruped, into a human being, and in so far as the Messiah became, in Christianity, the second Person of the Trinity, the human figure split off from the fish hints at God’s incarnation.¹³ What was previously missing in the God-image, therefore, was the human element.

[186] The role of the fish in Jewish tradition probably has some connections with the Syrophoenician fish cult of Atargatis. Her temples had pools with sacred fishes in them which no one was allowed to touch.¹⁴ Similarly, meals of fish were ritually eaten in the temples. “This cult and these customs, which originated in Syria, may well have engendered the Ichthys symbolism in Christian times,” says Cumont.¹⁵ In Lycia they worshipped the divine fish Orphos or Diorphos, the son of Mithras and the “sacred stone,” Cybele.¹⁶ This god is a variant of the Semitic fish-deities we have already mentioned, such as Oannes, the Babylonian Nun, Dagon, and Adonis, whom the Greeks called Ichthys. Fish offerings were made to Tanit in Carthage and to Ea and Nina in Babylon. Traces of a fish cult can be found in Egypt too. The Egyptian priests were forbidden to eat fish, for fishes were held to be as unclean as Typhon’s sea. “All abstain from sea-fish,” observes Plutarch. According to Clement of Alexandria, the inhabitants of Syene, Elephantine, and Oxyrhynchus worshipped a fish. Plutarch¹⁷ says it was the custom to eat a broiled fish before the door of one’s house on the ninth day of the first month. Doelger inclines to the view that this custom paved the way for the eucharistic fish in Christianity.¹⁸

[187] The ambivalent attitude towards the fish is an indication of its double nature. It is unclean and an emblem of hatred on the one hand, but on the other it is an object of veneration. It even seems to have been regarded as a symbol for the soul, if we are to judge by a painting on a late Hellenistic sarcophagus. The mummy lies on a lion-shaped bier, and under the bier are the four Canopic jars, the lids representing the four sons of Horus, three of them with animal heads and one with a human head. Over the mummy there floats a fish,¹⁹ instead of the usual soul-bird. It is clear from the painting that the fish is an oxyrhynchus, or barbel, one of the three most abominated fishes, which was said to have devoured the phallus of Osiris after he had been dismembered by Typhon (Set).²⁰ Barbels were sacred to Typhon, who is “that part of the soul which is passionate, impulsive, irrational, and truculent.”²¹ Because of their voraciousness, fishes were regarded in the Middle Ages as an allegory of the damned.²² The fish as an Egyptian soul-symbol is therefore all the more remarkable. The same ambivalence can be seen in the figure of Typhon/Set. In later times he was a god of death, destruction, and the desert, the treacherous opponent of his brother Osiris. But earlier he was closely connected with Horus and was a friend and helper

of the dead. In one of the Pyramid Texts he and Heru-ur (the “older Horus”) help Osiris to climb up to heaven. The floor of heaven consists of an iron plate, which in places is so close to the tops of the mountains that one can climb up to heaven with the help of a ladder. The four corners of the iron plate rest on four pillars, corresponding to the four cardinal points. In the Pyramid Texts of Pepi I, a song of praise is addressed to the “ladder of the twin gods,” and the Unas text says: “Unas cometh forth upon the Ladder which his father Ra hath made for him, and Horus and Set take the hand of Unas, and they lead him into the Tuat.”²³ Other texts show that there was enmity between Heru-ur and Set because one was a god of the day and the other a god of the night. The hieroglyph for Set has as a determinative the sign for a stone, or else the unidentified Set-animal with long ears. There are paintings showing the heads of Heru-ur and Set growing out of the same body, from which we may infer the identity of the opposites they represent. Budge says: “The attributes of Heru-ur changed somewhat in early dynastic times, but they were always the opposite of those of Set, whether we regard the two gods as personifications of two powers of nature, i.e., Light and Darkness, Day and Night, or as Kosmos and Chaos, or as Life and Death, or as Good and Evil.”²⁴

[188] This pair of gods represent the latent opposites contained in Osiris, the higher divinity, just as Behemoth and Leviathan do in relation to Yahweh. It is significant that the opposites have to work together for a common purpose when it comes to helping the *one* god, Osiris, to reach the heavenly quaternity. This quaternity is also personified by the four sons of Horus: Mestha, Hapi, Tuamutef, and Qebhsennuf, who are said to dwell “behind the thigh of the northern heaven,” that is, behind the thigh of Set, whose seat is in the constellation of the Great Bear. The four sons of Horus are Set’s enemies, but on the other hand they are closely connected with him. They are an analogy of the four pillars of heaven which support the four-cornered iron plate. Since three of the sons are often shown with animal heads, and one with a human head, we may point to a similar state of affairs in the visions of Ezekiel, from whose cherubim-figures the well-known symbols of the evangelists (three animals, one angel) are derived.²⁵ Ezekiel says, furthermore (1 : 22): “Over the heads of the living creatures [the cherubim] there was the likeness of a solid plate, shining like terrible crystal, spread out above their heads,” and (1 : 26, RSV): “And above the solid plate that was over their heads there was the likeness of a throne, in appearance like sapphire; and seated above the likeness of a throne was a likeness as it were of a human form.”

[189] In view of the close ties between Israel and Egypt an intermingling of symbols is not unlikely. What is remarkable, however, is that in Arab tradition the region round the heavenly Pole is seen in the form of a *fish*. Qazvini says: “The Pole can be seen. Round it are the smaller *Benat na’sh*²⁶ and dark stars, which together form the

picture of a fish, and in its midst is the Pole.”²⁷ This means that the Pole, which in ancient Egypt denoted the region of Set and was at the same time the abode of the four sons of Horus, was contained, so to speak, in the body of a fish. According to Babylonian tradition Anu has his seat in the northern heaven; likewise Marduk, as the highest god, world-creator and ruler of its courses, is the Pole. The *Enuma Elish* says of him: “He who fixes the course of the stars of heaven, like sheep shall pasture the gods all together.”²⁸

[190] At the northern point of the ecliptic is the region of fire (purgatory and the entrance to the Anu-heaven). Hence the northern corner of the temple built around the tower at Nippur was called the *kibla* (point of orientation). In like manner the Sabaeans and Mandaeans, when praying, turn towards the north.²⁹ We might also mention the Mithraic liturgy in this connection: in the final vision Mithras appears, “holding the golden shoulder of a young bull. This is the constellation of the Bear, which moves and turns the heavens round.” The text piles endless fire-attributes on this god, who obviously hails from the north.³⁰

[191] These Babylonian ideas about the significance of the north make it easier for us to understand why Ezekiel’s vision of God came from that quarter, despite the fact that it is the birthplace of all evil. The coincidence of opposites is the normal thing in a primitive conception of God, since God, not being an object of reflection, is simply taken for granted. At the level of conscious reflection, however, the coincidence of opposites becomes a major problem, which we do everything possible to circumvent. That is why the position of the devil in Christian dogma is so very unsatisfactory. When there are such gaps in our collective ideas, in the dominants of our conscious orientation, we can count with absolute certainty on the existence of complementary or—to be more precise—compensatory developments in the unconscious. These compensating ideas can be found in the speculations of alchemy. We can hardly suppose that ideas of this sort remained totally unconscious so far as the adepts were concerned. What they were aiming at was a more or less conscious restoration of the primitive God-image. Hence they were able to propound paradoxes as shocking as that of God’s love glowing in the midst of hell-fire,³¹ which is represented as being no more than the Christian conception of God in a new but necessary relation to everything hell stands for. Above all it was Jakob Böhme who, influenced by alchemy and the Cabala equally, envisaged a paradoxical God-image in which the good and the bad aspects appertain to the same divine being in a way that bears comparison with the views of Clement of Rome.

[192] Ancient history gives us a divided picture of the region to the north: it is the seat of the highest gods and also of the adversary; thither men direct their prayers, and from thence blows an evil pneuma, the Aquilo, “by the name whereof is to be

understood the evil spirit”;³² and finally, it is the navel of the world and at the same time hell. Bernard of Clairvaux apostrophizes Lucifer thus: “And dost thou strive perversely towards the north? The more thou dost hasten toward the heights, the more speedily shalt thou go down to thy setting.”³³ The “king of the North” in Nostradamus has to be understood in the light of this passage. At the same time, it is clear from St. Bernard’s words that the heights of power to which Lucifer strives are still associated with the north.³⁴

X

THE FISH IN ALCHEMY

1. *The Medusa*

[193] Michel Nostradamus, physician and astrologer, must surely have been acquainted with alchemy, since this art was practised mainly by physicians. Whether he knew that the fish was a symbol for the arcane substance and the *lapis* is perhaps questionable, but it is more than likely that he had read the classics of alchemy. Of these one of the greatest authorities is the *Turba philosophorum*, which had been translated very early (11th–12th cent.) from the Arabic into Latin. At about the same time, or a little later, its appendices were also translated, namely the “*Allegoriae super librum Turbae*,” the “*Allegoriae sapientum supra librum Turbae XXIX distinctiones*,”¹ together with the “*Aenigmata ex Visione Arislei*” and “*In Turbam philosophorum exercitationes*.” The *Turba* belongs to the same sphere of thought as the *Tabula smaragdina*, and hence is one of those late Hellenistic products that were transmitted to us by the Arabs, mainly, perhaps, through the Neoplatonic school of Harran (Thabit ibn Qurrah and others), which flourished at the beginning of the eleventh century.² The ideas preserved in these treatises are “Alexandrian,” and the recipes, particularly those set forth in the “*Allegoriae super librum Turbae*,” adhere closely to the spirit and letter of the *Papyri Graecae Magicae*.³

[194] Now these “*Allegoriae*”⁴ are our earliest source for the alchemical fish symbolism. For this reason we may assign a fairly early date to the alchemical fish—before the eleventh century, in any case.⁵ There is nothing to suggest that it is of Christian origin. That, however, did not prevent it from becoming—through the transformation of the arcane substance which it had at first represented—a symbol of the *lapis*, the latter term denoting the *prima materia* as well as the end product of the process, variously called *lapis philosophorum*, *elixir vitae*, *aurum nostrum*, *infans*, *puer*, *filius philosophorum*, *Hermaphroditus*, and so on. This *filius*, as I have shown elsewhere, was regarded as a parallel of Christ. Thus, by an indirect route, the alchemical fish attains the dignity of a symbol for the *Salvator mundi*. Its father is God, but its mother is the *Sapientia Dei*, or Mercurius as Virgo. The *filius philosophorum* (or *macrocosmi*), otherwise the *lapis*, means nothing other than the self, as I have explained in a detailed examination of its various attributes and peculiarities.

[195] The text containing the earliest reference to the fish runs: “There is in the sea a round fish, lacking bones and cortex, and having in itself a fatness, a wondrous virtue, which, if it is cooked on a slow fire until its fatness and moisture entirely disappear ... is saturated with sea-water until it begins to shine.”⁶ This recipe is repeated in another, possibly later, treatise of the same kind, the “Aenigmata philosophorum.”⁷ Here the “piscis” has become a “pisciculus,” and “lucescat” has become “candescat.” Common to both treatises is the ironic conclusion of the recipe: When the *citrinitas* (*xanthosis*, ‘yellowing’) appears, “there is formed the *collyrium* [eyewash] of the philosophers.” If they wash their eyes with it, they will easily understand the secrets of the philosophy.

[196] This round fish is certainly not a fish in the modern sense, but an invertebrate. This is borne out by the absence of bones and “cortex,” which in medieval Latin simply means a musselshell or mollusc.⁸ At all events, it is some kind of round organism that lives in the sea, presumably a scyphomedusa or jellyfish, which abounded in the seas of the ancient world. Its free-swimming form, the acropedote medusa, has a round, bell-or disc-shaped body of radial construction, which as a rule is divided into eight sections by means of four perradials and four interradians (whose angles may again be halved by adradials). Like all Cnidaria⁹ or Nematophora¹⁰ (to which class the Scyphomedusae belong), they are equipped with tentacles; these contain the thread-cells or nematocysts with which they poison their prey.

[197] Our text remarks that when the “round fish” is warmed or cooked on a slow fire it “begins to shine.” In other words, the heat already present in it becomes visible as light. This suggests that the author of the recipe was influenced either by Pliny himself or by some one in the same tradition. Pliny describes a fish—the *stella marina*, ‘star of the sea’—which, he says, has puzzled several great philosophers.¹¹ This fish was said to be hot and burning, and to consume as with fire everything it touched in the sea.¹² Pliny mentions the *stella marina*¹³ in the same breath¹⁴ as the *pulmo marinus*, which swims freely on the surface,¹⁵ and attributes to the latter so fiery a nature that when you rub it with a stick, you can straightway use the stick as a torch.¹⁶ From this we might conclude that our author did not take zoological distinctions too seriously, and may have confused the *stella marina* with the *pulmones*. However that may be, the Middle Ages with its passion for symbols eagerly seized on the legend of the “starfish.” Nicholas Caussin regarded the “fish” as a starfish and describes it as such. This animal, he says, generates so much heat that it not only sets fire to everything it touches but also cooks its own food. Hence it signifies the “*veri amoris vis inextinguibilis*” (the inextinguishable power of true love).¹⁷

[198] Such an interpretation sounds very strange to modern ears. But for the Middle Ages “alles Vergängliche ist nur ein Gleichnis” was literally true: all ephemeral things were but a symbol of the divine drama, which to modern man has become almost meaningless. Picinellus interprets the fish in the same way, the only difference being that his amplification is much more elaborate. “This fish,” he says, “glows forever in the midst of the waters, and whatsoever it touches grows hot and bursts into flames.” This glow is a fire—the fire of the Holy Ghost. He cites as his authority Ecclesiasticus 48 : 1,¹⁸ and refers also to the fiery tongues of the Pentecostal miracle. The miraculous fact that the fire of the *stella marina* does not go out in the water reminds him of the “divinae gratiae efficacitas” (action of divine grace), which sets on fire the hearts that are drowned in a “sea of sins.” For the same reason the fish means charity and divine love, as the Song of Solomon 8 : 7 testifies: “Many waters cannot quench love, neither can the floods drown it.” The fish, so our author supposes, spreads a radiance about itself from the first moment of its life and thus is an emblem of religion, by whose light the faithful live.

[199] As the quotation from the Song of Solomon shows, the interpretation of the burning starfish brings out its connection with profane love. Picinellus even says that the starfish is the “hieroglyph of a lover’s heart,” whose passion not even the entire sea can extinguish, no matter whether his love be divine or profane. This fish, says our author inconsequently, burns but gives no light. He quotes St. Basil: “Then conceive in your mind a deep pit, impenetrable darkness, fire that has no brightness, having all fire’s power of burning, but without any light. ... Such a conception describes the fire of hell.”¹⁹ This fire is “concupiscentia,” the “scintilla voluptatis” (spark of lechery).

[200] It is curious how often the medieval symbolists give diametrically opposed interpretations of the same symbol, apparently without becoming aware of the far-reaching and dangerous possibility that the unity of the symbol implies the identity of the opposites. Thus we can find certain views in alchemy which maintain that God himself “glows” in this subterranean or submarine²⁰ fire. The “Gloria mundi,” for instance, says:²¹

Take fire or unslaked lime, which the Philosophers say grows on trees. In this fire God himself glows in divine love. ... Likewise the Natural Master says regarding the art of fire, that Mercurius is to be decomposed ... and fixed in the unquenchable or living fire, wherein God himself glows, together with the sun, in divine love, for the solace of all men; and without this fire can the art never be brought to perfection. It is also the fire of the Philosophers, which they keep hidden away and concealed. ... It is also the noblest fire which God created upon earth, for it has a thousand virtues. To these things the teacher replies that God has bestowed upon it such virtue and

efficacy ... that with this fire is mingled the Godhead itself. And this fire purifies, as purgatory does in the lower regions.²²

The fire is “inextinguishable.” “The Philosophers call this fire the fire of the Holy Ghost.”²³ It unites Mercurius with the sun “so that all three make but one thing, which no man shall part asunder.”²⁴ “Just as in these three God the Father, God the Son, and God the Holy Ghost are united, [i.e., as] the Holy Trinity in three Persons, and there yet remains the one single true God, so also the fire unites these three things: body, spirit, and soul, that is, Sun, Mercurius, and Soul.”²⁵ “In this invisible fire the mystery of the Art is enclosed, as God the Father, Son, and Spirit in three Persons is verily included in one essence.”²⁶ This fire is “fire and water at once.” The Philosophers name it the “living fire” in honour of God, “who mingles himself with himself in the living water.”²⁷

[201] Another treatise says of the water that it is the “hiding-place and dwelling-place of the whole treasure.”²⁸ For in its midst is the “fire of Gehenna” which “contains this engine of the world in its own being.”²⁹ The fire is caused by the “primum mobile” and is kindled by the influence of the stars. It never ceases its universal motion and is continually lit through the “influence of celestial forces.”³⁰

[202] It is an “unnatural” fire, “contrary to nature.” It puts bodies to the torture, it is itself the dragon that “burns furiously like hell-fire.”³¹ The life-spirit dwelling in nature, Phyton, has a double aspect: there is an infernal form of it, namely hell-fire, from which a hellish bath can be prepared. The treatise of Abraham Eleazar speaks of Phyton as a “god.”³²

[203] According to Blaise de Vigenère, the fire has not two but four aspects: the intelligible, which is all light; the heavenly, partaking of heat and light; the elemental, pertaining to the lower world and compounded of light, heat, and glow (*ardor*); and finally the infernal, opposed to the intelligible, glowing and burning without any light.³³ Here again we encounter the quaternity which the ancients associated with fire, as we saw from the Egyptian conception of Set and the four sons of Horus,³⁴ and from Ezekiel’s vision of the fiery region to the north. It is not at all likely that Vigenère was thinking of Ezekiel in this connection.³⁵

[204] In the “Introitus apertus” of Philalethes the arcane substance is named “chalybs” (steel). This, he says, is the “auri minera” (the *prima materia* of the gold), “the true key of our Work, without which no skill can kindle the fire of the lamp.” Chalybs is a “spirit pre-eminently pure,” a “secret, infernal, and yet most volatile fire,”³⁶ the “wonder of the world, the system of the higher powers in the lower. For this reason the Almighty has assigned to it a most glorious and rare heavenly conjunction, even that notable sign whose nativity is declared throughout the Philosophical East to the

furthest horizon of its hemisphere. The wise Magi saw it at the [beginning of the] era, and were astonished, and straightway they knew that the most serene King was born in the world. Do you, when you see his star, follow it to the cradle, and there you shall behold the fair infant. Cast aside your defilements, honour the royal child, open your treasure, offer a gift of gold; and after death he will give you flesh and blood, the supreme Medicine in the three monarchies of the earth.”³⁷

[205] This passage is particularly interesting because it allows us to look deep into the world of obscure archetypal ideas that fill the mind of the alchemist. The author goes on to say that the steel, which is at the same time the “infernal fire,” the “key of our Work,” is attracted by the magnet, for which reason “our magnet” is the true “minera” (raw material) of the steel. The magnet has a hidden centre which “with an archetic appetite³⁸ turns towards the Pole, where the virtue of the steel is exalted.” The centre “abounds in salt”—evidently the *sal sapientiae*, for immediately afterwards the text says: “The wise man will rejoice, but the fool will pay small heed to these things, and will not learn wisdom, even though he see the outward-turned central Pole marked with the notable sign³⁹ of the Almighty.”

[206] In the Pole is found the heart of Mercurius, “which is the true fire wherein its Lord has his rest. He who journeys through this great and wide sea may touch at both Indies, may guide his course by the sight of the North Star, which our Magnet will cause to appear unto you.” This is an allusion to the mystic journey, the “peregrinatio.” As I have explained elsewhere, it leads to the four quarters, here indicated by the two Indies—East, West—and by the turning of the compass to the north.⁴⁰ Together they form a cross, i.e., a quaternity, which characterizes the nature of the Pole. For from the Pole the four directions radiate out, and also the division of the hemispheres (east and west of the Greenwich meridian). Thus the northern hemisphere resembles the round body of the hydromedusa, whose spherical surface is divided by four (or multiples of four) radials, and therefore looks like a globe seen from the Pole.

[207] In this connection I would like to mention the dream of a twenty-year-old student, who got into a state of confusion when he found that the philosophical faculty for which he had opted did not suit him. He could discover no reason for this. His disorientation reached the point where he simply did not know what profession he wanted to take up. Then a dream came to his help and showed him his goal in the fullest sense:

[208] *He dreamt that he was walking in a wood. Gradually this grew more and more lonely and wild, and finally he realized that he was in a primeval forest. The trees were so high and the foliage so thick that it was almost dark on the ground. All trace of a path had long since disappeared, but, driven on by a vague sense of expectation*

and curiosity, he pressed forward and soon came to a circular pool, measuring ten to twelve feet across. It was a spring, and the crystal-clear water looked almost black in the dark shadows of the trees. In the middle of the pool there floated a pearly organism, about eighteen inches in diameter, that emitted a faint light. It was a jelly-fish.^{40a} Here the dreamer awoke with a violent emotion: he decided there and then to study science, and he kept to this decision. I must emphasize that the dreamer was not under any psychological influence that might have suggested such an interpretation. The conclusion he drew from the dream was undoubtedly the right one, but it does not by any means exhaust the meaning of the symbol. The dream is archetypal—a “big” dream. The wood that grows dusky and turns into a primeval forest means entry into the unconscious. The round pool with the jelly-fish in it represents a three-dimensional mandala, the self: wholeness as the goal to which the “archetic appetite” points, the magnetic north which gives the traveller his bearings on the “sea of the world.”

[209] Turning back to our text, I would emphasize, by way of recapitulation, that the infernal fire is nothing other than the *Deus absconditus* (hidden God) who dwells at the North Pole and reveals himself through magnetism. His other synonym is Mercurius, whose heart is to be found at the Pole, and who guides men on their perilous voyage over the sea of the world. The idea that the whole machinery of the world is driven by the infernal fire at the North Pole, that this is hell, and that hell is a system of upper powers reflected in the lower—this is a shattering thought. But the same note is struck by Meister Eckhart when he says that, on returning to his true self, he enters an abyss “deeper than hell itself.” Scurrilous as it is, the alchemical idea cannot be denied a certain grandeur. What is particularly interesting, psychologically, is the nature of the image: it is the projection of an archetypal pattern of order,⁴¹ the mandala, which represents the idea of totality. The centering of the image on hell, which at the same time is God, is grounded on the experience that highest and lowest both come from the depths of the soul, and either bring the frail vessel of consciousness to shipwreck or carry it safely to port, with little or no assistance from us. The experience of this “centre” is therefore a numinous one in its own right.

[210] Picinellus feels that his *stella maris*, “this fish which burns in the midst of the water but gives no light,” besides meaning the Holy Ghost, love, grace, and religion, also symbolizes something in man, namely his *tongue*, speech, and powers of expression, for it is in these faculties that all psychic life is manifest. He is evidently thinking of an instinctive, unreflecting psychic activity, because at this point he cites James 3 : 6: “And the tongue is a fire, a world of iniquity among our members, defiling the whole body, setting on fire the wheel of birth, and set on fire by hell.”⁴²

[211] Hence the evil “fish” coincides with our untamed and apparently untameable propensities, which, like a “small fire that sets a great forest ablaze,”⁴³ defiles the whole body and even sets on fire the “wheel of birth.” The τροχός τῆς Γενέσεως (*rota nativitatis*) is a distinctly curious expression to use in this connection. The wheel, it is explained, symbolizes the circle or course or cycle of life. This interpretation presupposes ideas akin to Buddhism, if we are not to conceive the wheel merely as the banal statistical cycle of births and deaths. How the wheel could ever be set on fire is a difficult question that cannot be answered without further reflection. We must consider, rather, that it is meant as a parallel to the defilement of the whole body—in other words, a destruction of the *soul*.

[212] Ever since the *Timaeus* it has been repeatedly stated that the soul is a sphere.⁴⁴ As the *anima mundi*, the soul revolves with the world wheel, whose hub is the Pole. That is why the “heart of Mercurius” is found there, for Mercurius is the *anima mundi*.⁴⁵ The *anima mundi* is really the motor of the heavens. The wheel of the starry universe is reflected in the horoscope, called the “thema” of birth. This is a division of the heavens into twelve houses, calculated at the moment of birth, the first house coinciding with the ascendent. Divided up in this way the firmament looks like a wheel turning, and the astronomer Nigidius⁴⁶ is said to have received the name Figulus (“potter”) because the wheel of heaven turns like a potter’s wheel.⁴⁷ The “thema” (that which is “set” or “ordained”) is indeed a τροχός, ‘wheel’. The basic meaning of the horoscope is that, by mapping out the positions of the planets and their relations to one another (aspects), together with the distribution of the signs of the zodiac at the cardinal points, it gives a picture first of the psychic and then of the physical constitution of the individual. It represents, in essence, a system of original and fundamental qualities in a person’s character, and can therefore be regarded as an equivalent of the individual psyche. Priscillian (d. 385) evidently took the wheel in this sense. He says of Christ: “He alone has the power to join together the Pleiades and to loose the bands of Orion. Knowing the changes of the firmament and destroying the wheel of generation, he has overcome the day of our birth by the renewal of baptism.”⁴⁸ From this it is plain that in the fourth century the wheel of birth was in fact regarded as the horoscope. “Setting fire to the wheel” is therefore a figurative expression for a catastrophic revolt of all the original components of the psyche, a conflagration resembling panic or some other uncontrollable, and hence fatal outburst of emotion.⁴⁹ The total nature of the catastrophe is explained by the central position of the so-called “tongue,” the diabolical element whose destructiveness is an essential part of every psyche. Seen in this light, the *stella maris* stands for the fiery centre in us from which creative or destructive influences come.

2. The Fish

[213] In our discussion of medieval fish symbolism we have so far been concerned with a fish only in name, the jelly-fish, without taking due account of the fact that this is not a fish at all in the zoological sense, and—more important still—is not shaped like one. It was simply the description of the “round fish” that brought it to our attention. That, however, was not the case in the Middle Ages, for we have the testimony of a sixteenth-century adept, Theobald de Hoghelande, which shows that he at least understood the fish to be a real fish. Listing the numerous synonyms for the tincture, he remarks: “Likewise they compared it to fishes. Hence Mundus says in the *Turba*: Take one part fish-gall and one part calf’s urine, etc. And in the ‘Aenigmata sapientum’ it says: There is in our sea a small round fish, without bones or legs [*cruribus*].”⁵⁰ Since the gall mentioned in the quotation can only come from a real fish, Hoghelande obviously took the “small round fish” to be a real one, and since one can imagine a fish without bones, but hardly without skin or some kind of integument, the incomprehensible “corticibus” of the original version⁵¹ had to be changed into “cruribus” (legs). Of course, fishes don’t have legs either. But this passage from a sixteenth-century text proves that the “small round fish” of the “Aenigmata” was understood, in alchemical tradition, as a real fish and not as a jelly-fish. A round and transparent fish of a peculiar sort, without “cortices,” is described in the *Cyranides*: the “cinedian fish” lives in the sea on the shores of Syria, Palestine, and Libya, is six fingers long, and is a “pisciculus rotundus.” It has two stones in its head and another one in the third vertebra of the tail (*spondilo*), or notochord. This stone is especially potent and is used as a love-potion.⁵² The cinedian stone is practically unknown, because it is very rare. It is also called “opsianus,”⁵³ which is interpreted as “serotinus” (of late growth or origin) and “tardus” (slow, hesitant). It pertains to Saturn. “This stone is twin or twofold: the one is opaque and black, but the other though black is brilliant and shining like a mirror.”⁵⁴ This is the stone which many seek, without finding it: for it is the dragon’s stone (*dracontius lapis*).⁵⁵

[214] The only thing that can be elicited with certainty from this involved description is that the animal in question must be a vertebrate, and is therefore presumably a genuine fish. What exactly is the justification for calling it “round” is far from clear. It is obvious that the fish is mainly a mythologem, since it is said to contain the dragon’s stone. This stone was known to Pliny⁵⁶ and also to the medieval alchemists, who named it *draconites*, *dracontias*, or *drachates*.⁵⁷ It was reputed to be a precious stone, which could be obtained by cutting off the head of a sleeping dragon. But it becomes a gem only when a bit of the dragon’s soul remains inside,⁵⁸ and this is the “hate of the monster as it feels itself dying.” The gem is of a *white* colour, and a powerful alexipharmic. Even though there are no dragons nowadays, the text says, these draconites are occasionally found in the heads of water-snakes. Ruland asserts that he has seen such stones, blue or black in colour.

[215] The cinedian stone has a double nature, though, as the text shows, it is not at all clear.⁵⁹ One might almost conjecture that its double nature consisted originally in a white and a black variety, and that a copyist, puzzled by the contradiction, inserted “niger quidem” (‘though black’). But Ruland distinctly emphasizes that “the colour of the Draconite is white.”⁶⁰ Its affinity with Saturn may shed light on this dilemma. Saturn, in astrology the “star of the sun,” is alchemically interpreted as black; it is even called “sol niger” and has a double nature as the arcane substance,⁶¹ being black outside like lead, but white inside. Johannes Grasseus cites the opinion of the Augustinian monk Degenhardus concerning the lead: the lead of the Philosophers, named lead of the air (*Pb aeris*), contains the “shining white dove” which is called the “salt of the metals.”⁶² Vigenère assures us that lead, “than which nothing is more opaque,” can be turned into “hyacinth” and back again to lead.⁶³ Quicksilver, says Mylius,⁶⁴ comes from the “heart of Saturn,” in fact *is* Saturn, the bright silveriness of mercury contrasting with the “blackness” of lead. The “bright” water⁶⁵ that flows from the plant Saturnia is, according to Sir George Ripley, “the most perfect water and the bloom of the world.”⁶⁶ How old this idea is can be seen from the remark of Hippolytus,⁶⁷ that Chronos (Saturn) is a “power of the colour of water, and all-destructive.”

[216] In view of all this, the double nature of the cinedian stone might signify the polarity and union of opposites, which is just what gives the *lapis philosophorum* its peculiar significance as a uniting symbol,⁶⁸ and hence its magical and divine properties. Our draconite, too, is endowed with extraordinary powers (“*potentissimus valde*”), which make it eminently suitable as the “ligature of Aphrodite,” i.e., love-magic. Magic exercises a *compulsion* that prevails over the conscious mind and will of the victim: an alien will rises up in the bewitched and proves stronger than his ego. The only comparable effect capable of psychological verification is that exerted by unconscious contents, which by their compelling power demonstrate their affinity with or dependence on man’s totality, that is, the self and its “karmic” functions.⁶⁹ We have already seen that the alchemical fish symbol points ultimately to an archetype of the order of magnitude of the self. So it should not surprise us to see that the principle of “outward uncomeliness,” which applies to the lead and the *lapis*, is also applied to Christ. The same that is said of the *lapis* is said of Christ by Ephrem the Syrian (d. 373): “He is clothed in figures, he is the bearer of types. ... His treasure is hidden and of small account, but when it is laid open, it is wonderful to look upon.”⁷⁰

[217] In a treatise of the seventeenth century, by an anonymous French author,⁷¹ our strange hybrid, the “round fish,” finally becomes a verifiable vertebrate known to zoology: *Echeneis remora*, the common remora or sucking-fish. It belongs to the mackerel family, and is distinguished by a large, flat, oval-shaped sucker on the top

of the head in place of the dorsal fin. By means of this it attaches itself either to a larger fish or to a ship's bottom and in this wise is transported about the world.

[218] The text says of this fish:

For that which we take, in order to prepare from it the Philosophical Work, is naught else but that little fish the *Echeneis*, which has no blood or spiny bones, and is shut up in that deep mid region of the great universal sea. This little fish is extremely small, alone, and unique in its shape, but the sea is great and vast, and hence it is impossible for those to catch it who do not know in what part of the world it dwells. Believe me verily, that he who, as Theophrastus says, does not well understand the art by which he can draw down the moon from the sky and bring it from heaven to earth, and change it into water and then into earth, will never find the material of the stone of the wise, for it is not more difficult to perform the one than to find the other. Yet none the less, when we speak somewhat in confidence in the ear of a trusted friend, we teach him that hidden secret of the wise, how he can naturally, speedily, and easily catch the little fish called Remora, which is able to hold back the proud vessels of the great Ocean sea (that is the spirit of the world). Those who are not sons of the art are altogether ignorant and know not those precious treasures which are concealed by nature in the precious and heavenly Aqua Vitae of our sea. But, that I may declare to you the clear light of our unique material, or our virgin soil, and teach you in what wise you may acquire the supreme art of the sons of wisdom, it is needful that I instruct you concerning the magnet of the wise, which has the power of attracting the little fish called Echeneis or Remora from out the centre and depth of the sea. If it is caught in accordance with nature, it changes in a natural way first into water and then into earth. And this, when properly prepared by the cunning secret of the wise, has the power of dissolving all solid bodies and making them volatile, and of purifying all bodies that are poisoned.⁷²

[219] We learn from this text that the fish is found, if it can be found at all, in the centre of the ocean. But the ocean is the "spirit of the world." Our text, as the above sample shows, derives from a time when alchemy had almost given up its laboratory work and was becoming more and more of a philosophy. For an alchemist living in the early part of the seventeenth century, the "spirit of the world" is a somewhat unusual term, because the expression more commonly used was the "anima mundi." The world-soul or, in this case, the world-spirit is a projection of the unconscious, there being no method or apparatus which could provide an objective experience of this kind and thus furnish objective proof of the world's animation. This idea is nothing more than an analogy of the animating principle in man which inspires his thoughts and acts of cognition. "Soul" and "spirit," or psyche as such, is in itself totally unconscious. If it is assumed to be somewhere "outside," it cannot be anything

except a projection of the unconscious. This may mean a lot or a little, according to the way you look at it. At any rate, we know that in alchemy “our sea” is a symbol for the unconscious in general, just as it is in dreams. The extremely small fish that dwells in the centre of the universal sea nevertheless has the power to stop the largest ships. From the description of the Echeneis it is evident that the author was acquainted with the “pisciculus rotundus ossibus et corticibus carens” of the “Aenigmata.” Our interpretation of the round fish as the self can, accordingly, be extended to the Echeneis. The symbol of the self appears here as an “extremely small” fish in the vast ocean of the unconscious, like a man alone on the sea of the world. Its symbolization as a fish characterizes the self, in this state, as an unconscious content. There would be no hope whatever of catching this insignificant creature if a “magnet of the wise” did not exist in the conscious subject. This “magnet” is obviously something a master can teach to his pupil; it is the “theoria,” the one solid possession from which the adept can proceed. For the *prima materia* always remains to be found, and the only thing that helps him is the “cunning secret of the wise,” a theory that can be communicated.

[220] This is affirmed by Bernardus Trevisanus (1406–1490) in his treatise “De secretissimo philosophorum opere chemico”: it was the sermons of Parmenides in the *Turba* that first freed him from error and guided him into the right way.⁷³ But Parmenides says the same thing as Arisleus⁷⁴ in the *Turba*: “Nature is not improved save through its own nature,”⁷⁵ and Bernardus adds by way of confirmation: “Thus our material cannot be improved save through itself.” It was the *theory* of Parmenides that helped Bernardus on to the right track after much fruitless laboratory work, and there is a legend that he even succeeded in making the philosophers’ stone. As to the theory, he is obviously of the opinion that its basic thought is expressed in the saying quoted above, that “nature”⁷⁶ can improve or free itself from error only in and through itself. The same idea is expressed in the repeated warning of other treatises not to mix anything from outside with the content of the Hermetic vessel, because the *lapis* “has everything it needs.”⁷⁷

[221] It is not exactly probable that the alchemists always knew what they were writing, otherwise they would have dropped dead at their own enormities, and of this there is no sign in the literature. *Who* has everything he needs? Even the loneliest meteor circles round some distant sun, or hesitantly draws near to a cluster of brother meteors. Everything hangs together with everything else. By definition, only absolute totality contains everything in itself, and neither need nor compulsion attaches it to anything outside. This is undoubtedly the same as the idea of an absolute God who encompasses everything that exists. But which of us can pull himself out of the bog by his own pigtail? Which of us can improve himself in total isolation? Even the holy anchorite who lives three days’ journey off in the desert not only needs to eat and

drink but finds himself utterly and terribly dependent on the ceaseless presence of God.⁷⁸ Only absolute totality can renew itself out of itself and generate itself anew.

[222] What is it, then, that one adept whispers into the ear of another, fearfully looking round lest any betray them, or even guess their secret? Nothing less than this: that through this teaching the One and All, the Greatest in the guise of the Smallest, God himself in his everlasting fires, may be caught like a fish in the deep sea. Further, that he may be “drawn from the deep” by a eucharistic act of integration (called *teoqualo*, ‘God-eating,’ by the Aztecs⁷⁹), and incorporated in the human body.

[223] This teaching is the secret and “cunning” magnet by virtue of which the remora (“little in length / mighty in strength”) stops the proud frigates in the sea, an adventure which befell the quinquereme of the emperor Caligula “in our own day,” as Pliny says in his interesting and edifying tale. The little fish, that was only half a foot long, had sucked fast to the rudder on the return journey from Stura to Entium, and had brought the ship to a standstill. On returning to Rome after this journey, Caligula was murdered by his soldiers. So the Echeneis turned out to be an omen, as Pliny points out. The fish played another such trick on Mark Antony before the naval engagement with Augustus, during which Antony was killed. Pliny cannot marvel enough at the mysterious powers of the Echeneis. His amazement obviously impressed the alchemists so much that they identified the “round fish in our sea” with the remora, and in this way the remora came to symbolize that extremely small thing in the vastness of the unconscious which is charged with such fateful significance: it is the self, the *atman*, “smaller than small, greater than great.”

[224] The alchemical fish symbol, the Echeneis, clearly derives from Pliny. But fishes also crop up in the writings of Sir George Ripley.⁸⁰ What is more, they appear in their “messianic” role: together with the birds, they bring the stone, just as in the Oxyrhynchus sayings of Jesus⁸¹ it is the “fowls of the air and the fishes of the sea and whatsoever is upon or beneath the earth” that point the way to the kingdom of heaven (motif of the “helpful animals”). In Lambspringk’s symbols⁸² the zodiacal fishes that move in opposite directions symbolize the arcane substance. All this theriomorphism is simply a visualization of the unconscious self manifesting itself through “animal” impulses. Some of these can be attributed to known instincts, but for the most part they consist of feelings of certainty, beliefs, compulsions, idiosyncrasies, and phobias that may run directly counter to the so-called biological instincts without necessarily being pathological on that account. Wholeness is perforce paradoxical in its manifestations, and the two fishes going in opposite directions, or the co-operation of birds and fishes, are an instructive illustration of this.⁸³ The arcane substance, as its attributes show, refers to the self, and so, in the Oxyrhynchus sayings, does the “kingdom of heaven” or the conjectural “city.”

3. The Fish Symbol of the Cathars

[225] The use of fishes as symbols for the psychopompos and for the antithetical nature of the self points to another tradition that seems to run parallel with the Echeneis. And there is, in fact, a very remarkable clue to be found, not in the literature of alchemy, but in heresiology. The document in question comes from the archives of the Inquisition at Carcassonne, published by Benoist in his *Histoire des Albigeois et des Vaudois*, in 1691.⁸⁴ It concerns an alleged revelation which Christ's favourite disciple John was vouchsafed as he "rested in the Lord's bosom." John wished to know what Satan's state was before his fall, and the Lord answered: "He was in such splendour that he ruled the powers of heaven." He wanted to be like God, and to this end he descended through the elements of air and water, and found that the earth was covered with water. Penetrating beneath the surface of the earth, "he found two fishes lying upon the waters, and they were like oxen yoked for ploughing the whole earth from sunset to sunrise [or, from West to East] at the command of the invisible Father. And when he went down, he found hanging clouds which covered the broad sea. ... And when he went down, he found set apart therefrom his 'Osob,' which is a kind of fire." On account of the flames he could not descend any further, so he went back to heaven and announced to the angels that he was going to set up his throne on the clouds and be like the All-highest. He then treated the angels as the unjust steward treated his master's debtors, whereupon he and the angels were cast out of heaven by God.⁸⁵ But God took pity on him and allowed him and his angels to do what they liked for a week. During this time Satan, using Genesis 1 as a model, created the world and mankind.

[226] A prominent Cathar, John de Lugio, confesses to a similar belief.⁸⁶ This belief seems to have been known in Catharist circles during the eleventh and twelfth centuries, for the conviction that the world was created by the devil is found in many of the sects. The alchemist Johannes de Rupescissa was in all probability a member of the Poor Men of Lyons,⁸⁷ who were influenced by the Cathars. In any case, he could be considered as a connecting link with this tradition.

[227] What strikes us most of all in this text is the fact that it contains the Old Bulgarian word *Osob*. Karl Meyer, in his Old Church Slavonic dictionary,⁸⁸ gives *особѣ* as *κατ' ἰδίαν: особа (osóba)* means in Russian, Polish, and Czech 'individual, personality.' "His osob" could therefore be translated as "that which is peculiar to him."⁸⁹ This, in the case of the devil, would naturally be fire.⁹⁰

[228] The idea of the two fishes lying on the waters, yoked like oxen for ploughing, is very strange and needs some elucidation. To this end I must recall to the reader St. Augustine's interpretation of the two fishes in the miraculous feeding of the five thousand: for him they represent the *kingly* and the *priestly* person or power,⁹¹

because, like fishes surviving the tempests of the sea, they outlast the turbulence of the multitude. These two powers are united in Christ: he is the king and priest.⁹²

[229] Although the two fishes in the Cathar text certainly do not refer to the miraculous fishes, Augustine's interpretation tells us something of importance about the way people thought in those days: the fishes were regarded as *ruling powers*. Since the text is indubitably heretical and a Bogomil document at that, there can be no question of a uniform interpretation of the two fishes as Christ. It may be that they symbolize, as might easily be conjectured, two different persons or powers, from before the creation of the world: Satanaël the elder son of God, and Christ the younger. In the thirtieth heresy of his *Panarium*, Epiphanius reports that the Ebionites believed in a double sonship: "Two, they maintain, were begotten by God, one of them Christ, the other the devil."⁹³ This doctrine must obviously have spread throughout the Near and Middle East, for it was there that the Bogomil doctrine of Satanaël as the demiurge arose among the Paulicians and Euchites.⁹⁴ Our document is nothing but a Latin version of the report in the *Panoplia* of Euthymios Zigabenos, which in its turn goes back to the confession of faith made before the emperor Alexius Comnenus by the Bogomil bishop Basilius in the year 1111.⁹⁵

[230] Note that Satan finds the two fishes *before* the creation, i.e., "in the beginning," when the spirit of God still brooded upon the dark face of the waters (Gen. 1 : 2). Had it been *one* fish only, we could interpret it as a prefiguration of the Redeemer, as the pre-existent Christ of St. John's gospel, the Logos that "was in the beginning with God." (Christ himself says in this document, with reference to John 1 : 2: "But I shall sit with my Father.") There are, however, two fishes, joined by a commissure (= the yoke), which can refer only to the zodiacal fishes. The zodia are important determinants in horoscopes, modifying the influence of the planets that have moved into them, or, even if there are no planets, giving the individual houses a special character. In the present instance the fishes would characterize the ascendent, the moment of the world's birth.⁹⁶ Now we know that cosmogonic myths are, at bottom, symbols for the coming of consciousness (though I cannot go into this here).⁹⁷ The dawn-state corresponds to the unconscious; in alchemical terms, it is the chaos, the *massa confusa* or *nigredo*; and by means of the *opus*, which the adept likens to the creation of the world, the *albedo* or *dealbatio* is produced, the whitening, which is compared sometimes to the full moon, sometimes to sunrise.⁹⁸ It also means illumination, the broadening of consciousness that goes hand in hand with the "work." Expressed psychologically, therefore, the two fishes which the devil found on the primeval waters would signify the newly arisen world of consciousness.

[231] The comparison of the fishes with a yoke of oxen ploughing merits special attention. Oxen stand for the motive power of the plough. In the same way, the fishes

represent the driving forces of the coming world of consciousness. Since olden times the plough has stood for man's mastery over the earth: wherever man ploughs, he has wrested a patch of soil from the primal state and put it to his own use. That is to say: the fishes will rule this world and subdue it by working astrologically through man and moulding his consciousness. Oddly enough, the ploughing does not begin, like all other things, in the east, but in the west. This motif turns up again in alchemy. "Know," says Ripley, "that your beginning should be made towards sunset, and from there you should turn towards midnight, when the lights cease altogether to shine, and you should remain ninety nights in the dark fire of purgatory without light. Then turn your course towards the east, and you will pass through many different colours," etc.⁹⁹ The alchemical work starts with the descent into darkness (*nigredo*), i.e., the unconscious. The ploughing or mastery of the earth is undertaken "at the command of the Father." Thus God not only foresaw the enantiodromia that began in the year 1000, but also intended it. The Platonic month of the Fishes is to be ruled by two principles. The fishes in our text are parallel, like the oxen, and point to the same goal, although one is Christ and the other the Antichrist.

[232] This, roughly, would be the early medieval line of reasoning (if we can speak of "reasoning" here). I do not know whether the argument we have outlined was ever discussed consciously. Yet it would be possible; the Talmudic prophecy concerning the year 530 (pars. 133ff.) leads one to conjecture astronomical calculations on the one hand and on the other an astrological allusion to the sign of Fishes favoured by the Jewish masters. As against this, it is possible that the fishes in our text are not a conscious reference to astrological ideas but rather a product of the unconscious. That the unconscious is quite capable of "reflections" of this kind we know well enough from dreams and the analysis of myths and fairytales.¹⁰⁰ The image of the fishes as such belonged to the common stock of conscious ideas and may—unconsciously—have expressed the meaning in symbolic form. For it was about this time (11th cent.) that the Jewish astrologers began calculating the birth of the Messiah in Pisces, and the universal feeling that a new age had commenced was given clear expression by Joachim of Flora.

[233] The text of our Johannine revelation can hardly be earlier, or much later, than the eleventh century. With the beginning of this century, which is astrologically the middle of the Pisces aeon, heresies sprang up everywhere like mushrooms, and at the same time Christ's adversary, the second fish, alias the devil, appears as the demiurge. Historically speaking, this idea represents a kind of Gnostic Renaissance, since the Gnostic demiurge was regarded as an inferior being from whom all evil comes.¹⁰¹ The significant thing about this phenomenon is its synchronicity, that is, its occurrence at a time that had been fixed astrologically.

[234] That Catharist ideas found their way into alchemy is not altogether surprising. I have not, however, come across any texts which would prove that the Catharist fish symbol was assimilated into the alchemical tradition and so could be held responsible for Lambspringk's fish symbol, signifying the arcane substance and its inner antinomy. Lambspringk's symbol appeared not much earlier than the end of the sixteenth century and represented a revitalization of the archetype. It shows two reversed fishes swimming in the *sea—nostro mari*—by which was meant the *aqua permanens* or arcane substance. They are designated "spiritus et anima," and like the stag and unicorn, the two lions, the dog and wolf, and the two fighting birds, they indicate the double nature of Mercurius.¹⁰²

[235] If my reflections, which are based on some knowledge of the symbolic thinking of the Middle Ages, are justified, then we have here a remarkable confirmation of the views I expressed in an earlier chapter. With the year 1000 a new world begins, proclaiming its advent in a strange medley of religious movements such as the Bogomils, Cathari, Albigenses, Waldenses, Poor Men of Lyons, Brethren of the Free Spirit, Beguins, Beghards, etc., and in the Holy Ghost Movement of Joachim of Flora. These movements are also associated with the rise of alchemy, Protestantism, the Enlightenment, and natural science, leading ultimately to the increasingly devilish developments we have lived to experience in our own day, and to the evaporation of Christianity under the assaults of rationalism, intellectualism, materialism, and "realism."

[236] In conclusion, I would like to give a concrete example of the way the symbol of the fish springs out of the unconscious autochthonously. The case in question is that of a young woman who had uncommonly lively and plastic dreams. She was very much under the influence of her father, who had a materialistic outlook and was not happily married. She shut herself off from these unfavourable surroundings by developing, at a very early age, an intense inner life of her own. As a small child, she replaced her parents by two trees in the garden. In her sixth or seventh year, she dreamt that God had promised her a golden fish. From this time forth she frequently dreamt of fishes. Later, a little while before starting psychological treatment on account of her manifold problems, she dreamt that she was "*standing on the bank of the Limmat and looking down into the water. A man threw a gold coin into the river, the water became transparent and I could see the bottom.*"¹⁰³ *There was a coral reef and a lot of fishes. One of them had a shining silver belly and a golden back.*" During treatment she had the following dream: "*I came to the bank of a broad, flowing river. I couldn't see much at first, only water, earth, and rock. I threw the pages with my notes on them into the water, with the feeling that I was giving something back to the river. Immediately afterwards I had a fishing-rod in my hand. I sat down on a rock and started fishing. Still I saw nothing but water, earth, and rock. Suddenly a big fish*

bit. He had a silver belly and a golden back. As I drew him to land, the whole landscape became alive: the rock emerged like the primeval foundation of the earth, grass and flowers sprang up, and the bushes expanded into a great forest. A gust of wind blew and set everything in motion. Then, suddenly, I heard behind me the voice of Mr. X [an older man whom she knew only from photographs and from hearsay, but who seems to have been some kind of authority for her]. He said, quietly but distinctly: ‘The patient ones in the innermost realm are given the fish, the food of the deep.’ At this moment a circle ran round me, part of it touching the water. Then I heard the voice again: ‘The brave ones in the second realm may be given victory, for there the battle is fought.’ Immediately another circle ran round me, this time touching the other bank. At the same time I saw into the distance and a colourful landscape was revealed. The sun rose over the horizon. I heard the voice, speaking as if out of the distance: ‘The third and the fourth realms come, similarly enlarged, out of the other two. But the fourth realm’—and here the voice paused for a moment, as if deliberating—‘the fourth realm joins on to the first.’¹⁰⁴ It is the highest and the lowest at once, for the highest and the lowest come together. They are at bottom one.’” Here the dreamer awoke with a roaring in her ears.

[237] This dream has all the marks of a “big” dream, and it also has the quality of something “thought,” which is characteristic of the intuitive type. Even though the dreamer had acquired some knowledge of psychology by this time, she had no knowledge whatever of the historical fish symbol. The details of the dream may be commented on as follows: The bank of the river represents the threshold, so to speak, to the unconscious. Fishing is an intuitive attempt to “catch” unconscious contents (fishes). Silver and gold, in alchemical language, signify feminine and masculine, the hermaphrodite aspect of the fish, indicating that it is a *complexio oppositorum*.¹⁰⁵ It also brings about a magical animation.¹⁰⁶ The older man is a personification of the archetype of the “wise old man.” We know already that the fish is a “miraculous food,” the eucharistic food of the *τέλειοι*. The first circle that touches the water illustrates the partial integration of the unconscious. The battle is the conflict of opposites, maybe between consciousness and the shadow. The second circle touches the “other bank,” where the union of opposites takes place. In the Indian “quicksilver system” the arcane substance is called *para-da*, ‘leading to the other shore’; in the West it is Mercurius.¹⁰⁷ The fourth realm, stressed by a weighty pause, is the One that adds itself to the three and makes all four into a unity.¹⁰⁸ The circles naturally produce a mandala, the outermost circle paradoxically coinciding with the centre, and recalling the old image for God. “God is a circle whose centre is everywhere and the circumference nowhere.”¹⁰⁹ The motif of the first coinciding with the fourth was expressed long ago in the axiom of Maria: “One becomes two, two becomes three, and out of the third comes the One as the fourth.”

[238]

The dream sums up in condensed form the whole symbolism of the individuation process in a person who was totally unacquainted with the literature of the subject. Cases of this kind are by no means rare and ought to make us think. They demonstrate the existence of an unconscious “knowledge” of the individuation process and its historical symbolism.

XI

THE ALCHEMICAL INTERPRETATION OF THE FISH

[239] We shall now turn to the problem raised by the anonymous French author of the “*Instructio de arbore solari*,” the problem of how the fish is caught. The Echeneis exercises an attraction on ships that could best be compared with the influence of a magnet on iron. The attraction, so the historical tradition says, emanates from the fish and brings the vessel, whether powered by sail or oarsmen, to a standstill.¹ I mention this seemingly unimportant feature because, as we shall see, in the alchemical view the attraction no longer proceeds from the fish but from a magnet which man possesses and which exerts the attraction that was once the mysterious property of the fish. If we bear in mind the significance of the fish, it is easy to understand why a powerful attraction should emanate from this arcane centre, which might aptly be compared with the magnetism of the North Pole.² As we shall see in a later chapter, the Gnostics said the same thing about the magnetic effect of their central figure (point, monad, son, etc.). It is therefore a remarkable innovation when the alchemists set out to manipulate an instrument that would exert the same powers as the Echeneis, but on the Echeneis itself. This reversal of direction is important for the psychology of alchemy because it offers a parallel to the adept’s claim to be able to produce the *filius macrocosmi*, the equivalent of Christ—*Deo concedente*—through his art. In this way the artifex or his instrument comes to replace the Echeneis and everything it stood for as the arcane substance. He has, so to speak, inveigled the secret out of the fish and seeks to draw the arcane substance to the surface in order to prepare from it the *filius philosophorum*, the *lapis*.

[240] The “magnet of the wise” which is to draw the wonder-working fish to the surface can, our text says, be *taught*. The content of this secret teaching is the real arcanum of alchemy: the discovery or production of the *prima materia*. The “doctrine” or “theory” is personified—or rather, concretized—as “*Mercurius non vulgi*,” the philosophical mercury. This conception is as ambiguous as the antique Hermes; sometimes Mercurius is a substance like quicksilver, sometimes it is a philosophy. Dom Pernety formulates it somewhat drastically: “[La matière du mercure philosophique] a une vertu aimantive qui attire des rayons du Soleil et de la Lune le mercure des Sages.”³ Concerning the *prima materia* the adepts talk a great deal but say very little—so little that in most cases one can form no conception of it whatever.⁴ This attitude is proof of serious intellectual difficulties—understandably

so, because in the first place no such material existed from which the *lapis* could be prepared, nor did anyone ever succeed in making a *lapis* that would have come up to expectations. Secondly, the names given to the *prima materia* show that it was not a definite substance at all, but rather an intuitive concept for an *initial psychic situation*, symbolized by such terms as water of life, cloud, heaven, shadow, sea, mother, moon, dragon, Venus, chaos, *massa confusa*, Microcosmos, etc.

[241] In the long lists of names one that frequently figures is “magnesia,” though this should certainly not be understood as the magnesium oxide of the pharmacopoeia.⁵ Magnesia is rather the “complete or conjoined mixture from which this moisture is extracted,⁶ i.e., the root-matter of our stone.”⁷ The complicated procedure for producing the magnesia is described in the treatise “Aristoteles de perfecto Magisterio.”⁸ It is the whitened arcane substance.⁹ Pandolfus says in the *Turba*: “I command you to take the hidden and venerable secret thing, which is the white magnesia.”¹⁰ In Khunrath, magnesia is synonymous with “chaos” and “Aes Hermetis.” He calls it “A Catholic or Universal, that is, a Cosmic Ens or Entity, Three-in-One, naturally compounded of Body, Spirit, and Soul, the one and only true Subiectum Catholicon and true Universal Materia lapidis Philosophorum.”¹¹ The magnesia is feminine,¹² just as the magnet is masculine by nature.¹³ Hence it carries “in its belly the sal Armoniacum et vegetabile,” meaning the arcane substance of the stone.¹⁴ Even in Greek alchemy magnesia or “magnes” denoted the hermaphroditic transformative substance.¹⁵ For the alchemists, magnesia is associated with “magnes” (magnet) not only phonetically, but also in meaning, as a recipe of Rosinus shows: “Take therefore this animate stone, the stone which has a soul in it, the mercurial,¹⁶ which is sensible and sensitive to the presence and influence of the magnesia and the magnet, and [which is] the calaminary and the living Stone, yielding and repelling by local motion.”¹⁷

[242] This text shows clearly enough that the real alchemical procedure was not concerned at all with chemical processes, for if it were, the substance to be transformed would not need to be animate or endowed with sensitivity. But a psychic function was absolutely necessary to it when, as in the case of the magnesia, the adept was preoccupied with one of the innumerable expressions used for the unconscious, that is, for the hidden part of the psyche that had slipped into the unknown chemical compound by projection, and that bedevilled and befooled him in the guise of a hundred “arcane substances.” Naturally only the most stupid and unobservant of the alchemists were hoodwinked in this way, for there were plenty of hints in the classical texts that could have put them on the right track. Unfortunately, we today are not so far removed from the Middle Ages: we still have to overcome considerable difficulties before we can begin to understand the real purpose of alchemy.

[243] The “*lapis animalis*” of Rosinus, then, is a live thing, credited with the ability to *feel* or *perceive* the influence of the *magnesia* and the magnet. But the magnet, too, is a live thing. Thus, the juriconsult and alchemist Chrysippus Fanianus, of Basel, says: “But if Thales of Miletus chose to call that stone of Hercules, the magnet, an animate thing, because we see it attract and move iron, why shall we not likewise call salt, which in wondrous wise penetrates, purges, contracts, expands, hinders, and reduces, a living thing?”¹⁸ Dorn writes: “The magnetic stone teaches us, for in it the power of magnetizing and attracting iron is not seen [with the eyes]; it is a spirit hidden within, not perceptible to the sense.”¹⁹ The numinous effect which the incomprehensible power of magnetism had upon our forefathers is graphically described by St. Augustine: “We know that the lodestone draws iron strangely; the which, when I saw it for the first time, did send a cold shiver through me [*vehementer inhorru*].”²⁰ Even the humanist Andrea Alciati (d. 1550) exclaims: “Wherefore he who first perceives and beholds the power of the magnet to attract iron cannot but be rapt in admiration. ... And it is not enough for some to obtrude upon us that there is a certain secret power in these things, which is generally known. For how will they define that hidden force, of which they can tell us nothing but the name?”²¹ The famous anatomist and astrologer Gabriel Fallopius (1490–1563) is said to have considered the magnet, together with quicksilver and purgatives, to be inexplicable marvels, “whose effect is to be wondered at with amazement,” as Libavius relates in his “*Ars prolatoria*.”²² These utterances bear witness to the naïve reaction of intelligent and thoughtful people who took what they saw to be an inexplicable miracle. So it is quite understandable if they felt that such an astonishing object was *alive* (like the “*lapis animatus*,” “*calx viva*,” etc.). The magnet, too, had a soul, like the mysterious stone that could feel. In the “*Duodecim tractatus*”²³ the magnet appears as the symbol of the *aqua roris nostri* (water of our dew), “whose mother is the midpoint of the heavenly and earthly Sun and Moon.” This water, the famed *aqua permanens*, is apostrophized by the anonymous author as follows: “O holy and wonderful nature, which permittest not the sons of the doctrine to err, as thou showest in man’s daily life. Further in these ... treatises I have put forward so many natural reasons, that ... the reader may understand all those things which, by God’s blessing, I have seen with my own eyes.”²⁴

[244] The underlying thought here is the idea of the doctrine, the “*aqua doctrinae*.” As we have seen, the “magnet” or “heavenly dew” can be *taught*. Like the water, it symbolizes the doctrine itself. This is contrasted with the “animate stone” that “perceives” the influence of the magnetic pair, *magnes* and *magnesia*. The animate stone, like the magnet, is an arcane substance, and only such substances can enter into a combination finally leading to the goal of the *lapis philosophorum*. Dorn says: “The pagan Gentiles say that nature seeks after a nature like to itself, and rejoices in

its own nature; if it is joined to another, the work of nature is destroyed.”²⁵ This is an allusion to the axiom usually attributed to the alchemist Democritus: “Nature rejoices in nature; nature subdues nature; nature rules over nature.”²⁶

[245] Just as magnes and magnesia form a pair, so the *lapis animatus sive vegetabilis*²⁷ is a Rebis or hermaphrodite that is born of the royal marriage. We have, then, two contrasting pairs, forming by mutual attraction a *quaternio*, the fourfold basis of wholeness.²⁸ As the symbolism shows, the pairs both signify the same thing: a *complexio oppositorum* or uniting symbol.²⁹ If our texts do not represent them as the same thing and as coinciding with the arcane substance, then there must be a reason for this, though it cannot be ascertained from the symbols used for the two substances to be combined. Sometimes the arcane substance is magnesia, sometimes the water, sometimes the magnet, sometimes the fish; and yet they all mean the *prima materia* from which the miraculous birth ensues. The distinction that the alchemists had in mind is made clear by a passage from a seventeenth-century treatise written by John Colleson, prior of the Benedictine Order:³⁰ “But as to that substance whereby common gold and silver are naturally and Philosophically dissolved, let no man imagine that it is any other than the general soul of the world, which by magnets and Philosophical means is attracted and drawn down from the higher bodies, and especially from the rays of the Sun and Moon. And hence it is clear that they have no knowledge whatever of Mercurius or of the Philosophical fluid who think to dissolve perfect metals by natural and physical means.”³¹

[246] Obviously a distinction must be made between two categories of symbols: first, those which refer to the extrapsychic chemical substance or its metaphysical equivalent, e.g., *serpens mercurialis*, *spiritus*, *anima mundi*, *veritas*, *sapientia*, etc.; second, those denoting the chemical preparations produced by the adept, such as solvents (*aqua*, *acetum*, *lac virginis*) or their “philosophical” equivalent, the *theoria* or *scientia*, which, when it is “right,” has miraculous effects on matter, as Dorn explains in his philosophical treatises.³²

[247] These two categories continually overlap: sometimes the arcane substance is apparently nothing but a chemical body, sometimes an idea, which today we would call a psychic content. Pernety describes this confusion very clearly in his explanation of the magnet: “But it must not be supposed that this magnet is the common magnet. They [the alchemists] have given it this name only because of its natural sympathy with what they call their steel [*adamas*]. This is the ore [*prima materia*] of their gold, and the magnet is the ore of their steel. The centre of this magnet contains a hidden salt, a menstruum for calcining the philosophical gold. This prepared salt forms their Mercury, with which they perform the magistry of the Sages in white and in red. It becomes an ore of heavenly fire, which acts as a ferment

for their stone.”³³ In his view, therefore, the secret of the magnet’s effect lies in a salt prepared by the adept. Whenever an alchemist speaks of “salt,” he does not mean sodium chloride or any other salt, or only in a very limited sense. He could not get away from its symbolic significance, and therefore included the *sal sapientiae* in the chemical substance. That is the salt hidden in the magnet and prepared by the adept—on the one hand, a product of his art; on the other, already present in nature. This contradiction can be resolved very easily by taking it simply as the projection of a psychic content.

[248] A similar state of affairs can be found in Dorn’s writings. In his case it is not a question of the *sal sapientiae* but of the “veritas,” which for him is hidden in natural things and at the same time is obviously a “moral” concept. This truth is the “medicine, improving and transforming that which *is no longer* into that which it *was before* its corruption, and that which *is not* into that which it *ought to be*.”³⁴ It is a “metaphysical substance,” hidden not only in things, but in the human body: “In the human body is concealed a certain metaphysical substance known to very few, which needeth no medicament, being itself an incorrupt medicament.”³⁵ Therefore “it is the study of the Chemists to liberate that unsensual truth from its fetters in things of sense.”³⁶ He that would acquire the chemical art must study the “true Philosophy” and not the “Aristotelian,” adds Dorn, because the true doctrine, in Colleson’s words, is the magnet whereby the “centre of truth” is liberated from bodies and whereby the bodies are transformed. “The Philosophers, through a kind of divine inspiration, knew that this virtue and heavenly vigour can be freed from its fetters; not by its contrary ... but by its like. Since therefore some such a thing is found, whether within man or outside him, which is conformable to this substance, the wise concluded that like things are to be fortified by like, by peace rather than by war.”³⁷

[249] Thus the doctrine, which may be consciously acquired “through a kind of divine inspiration,” is at the same time the instrument whereby the object of the doctrine or theory can be freed from its imprisonment in the body, because the symbol for the doctrine—the “magnet”—is at the same time the mysterious “truth” of which the doctrine speaks. The doctrine enters the consciousness of the adept as a gift of the Holy Ghost. It is a thesaurus of knowledge about the secret of the art, of the treasure hidden in the *prima materia*, which was thought to be outside man. The treasure of the doctrine and the precious secret concealed in the darkness of matter are one and the same thing. For us this is not a discovery, as we have known for some time that such secrets owe their existence to unconscious projections. Dorn was the first thinker to recognize with the utmost clarity the extraordinary dilemma of alchemy: *the arcane substance is one and the same, whether it is found within man or outside him*. The “alchymical” procedure takes place within and without. He who does not understand how to free the “truth” in his own soul from its fetters will never make a

success of the physical opus, and he who knows how to make the stone can only do so on the basis of right doctrine, through which he himself is transformed, or which he creates through his own transformation.

[250] Helped by these reflections, Dorn comes to realize the fundamental importance of self-knowledge: “See, therefore, that thou goest forth such as thou desirest the work to be which thou seekest.”³⁸ In other words, the expectations you put into the work must be applied to your own ego. The production of the arcane substance, the “*generatio Mercurii*,” is possible only for one who has full knowledge of the doctrine; but “we cannot be resolved of any doubt except by experiment, and there is no better way to make it than on ourselves.”³⁹ The doctrine formulates our inner experience or is substantially dependent upon it: “Let him know that man’s greatest treasure is to be found within man, and not outside him. From him it goes forth inwardly ... whereby that is outwardly brought to pass which he sees with his own eyes. Therefore unless his mind be blinded, he will see, that is, understand, who and of what sort he is inwardly, and by the light of nature he will know himself through outward things.”⁴⁰ The secret is first and foremost *in man*; it is his *true self*,⁴¹ which he does not know but learns to know by experience of outward things. Therefore Dorn exhorts the alchemist: “Learn from within thyself to know all that is in heaven and on earth, that thou mayest be wise in all things. Knowest thou not that heaven and the elements were formerly one, and were separated by a divine act of creation from one another, that they might bring forth thee and all things?”⁴²

[251] Since knowledge of the world dwells in his own bosom, the adept should draw such knowledge out of his knowledge of himself, for the self he must seek to know is a part of that nature which was bodied forth by God’s original oneness with the world. It is manifestly *not* a knowledge of the nature of the ego, though this is far more convenient and is fondly confused with self-knowledge. For this reason anyone who seriously tries to know himself as an object is accused of selfishness and eccentricity. But such knowledge has nothing to do with the ego’s subjective knowledge of itself. *That* is a dog chasing its own tail. The other, on the contrary, is a difficult and morally exacting study of which so-called psychology knows nothing and the educated public very little. The alchemist, however, had at the very least an indirect inkling of it: he knew definitely that as part of the whole he had an image of the whole in himself, the “firmament” or “Olympus,” as Paracelsus calls it.⁴³ This interior microcosm was the unwitting object of alchemical research. Today we would call it the collective unconscious, and we would describe it as “objective” because it is identical in all individuals and is therefore *one*. Out of this universal One there is produced in every individual a *subjective* consciousness, i.e., the ego. This is, roughly, how we today would understand Dorn’s “formerly one” and “separated by a divine act of creation.”

[252] This objective knowledge of the self is what the author means when he says: “No one can know himself unless he knows *what*, and not *who*, he is, on what he depends, or whose he is [or: to whom or what he belongs] and for what end he was made.”⁴⁴ The distinction between “quis” and “quid” is crucial: whereas “quis” has an unmistakably personal aspect and refers to the ego, “quid” is neuter, predicating nothing except an object which is not endowed even with personality. Not the subjective ego-consciousness of the psyche is meant, but the psyche itself as the unknown, unprejudiced object that still has to be investigated. The difference between knowledge of the ego and knowledge of the self could hardly be formulated more trenchantly than in this distinction between “quis” and “quid.” An alchemist of the sixteenth century has here put his finger on something that certain psychologists (or those of them who allow themselves an opinion in psychological matters) still stumble over today. “What” refers to the neutral self, the objective fact of totality, since the ego is on the one hand causally “dependent on” or “belongs to” it, and on the other hand is directed towards it as to a goal. This recalls the impressive opening sentence of Ignatius Loyola’s “Foundation”: “Man was created to praise, do reverence to, and serve God our Lord, and thereby to save his soul.”⁴⁵

[253] Man knows only a small part of his psyche, just as he has only a very limited knowledge of the physiology of his body. The causal factors determining his psychic existence reside largely in unconscious processes outside consciousness, and in the same way there are final factors at work in him which likewise originate in the unconscious. Freud’s psychology gives elementary proof of the causal factors, Adler’s of the final ones. Causes and ends thus transcend consciousness to a degree that ought not to be underestimated, and this implies that their nature and action are unalterable and irreversible so long as they have not become objects of consciousness. They can only be corrected through conscious insight and moral determination, which is why self-knowledge, being so necessary, is feared so much. Accordingly, if we divest the opening sentence of the “Foundation” of its theological terminology, it would run as follows: “Man’s consciousness was created to the end that it may (1) recognize (*laudet*) its descent from a higher unity (*Deum*); (2) pay due and careful regard to this source (*reverentiam exhibeat*); (3) execute its commands intelligently and responsibly (*serviat*); and (4) thereby afford the psyche as a whole the optimum degree of life and development (*salvet animam suam*).”

[254] This paraphrase not only sounds rationalistic but is meant to be so, for despite every effort the modern mind no longer understands our two-thousand-year-old theological language unless it “accords with reason.” As a result, the danger that lack of understanding will be replaced by lip-service, affectation, and forced belief or else by resignation and indifference has long since come to pass.

[255] The final factors at work in us are nothing other than those talents which “a certain nobleman” entrusted to his “servants,” that they might trade with them (Luke 19 : 12ff.). It does not require much imagination to see what this involvement in the ways of the world means in the moral sense. Only an infantile person can pretend that evil is not at work everywhere, and the more unconscious he is, the more the devil drives him. It is just because of this inner connection with the black side of things that it is so incredibly easy for the mass man to commit the most appalling crimes without thinking. Only ruthless self-knowledge on the widest scale, which sees good and evil in correct perspective and can weigh up the motives of human action, offers some guarantee that the end-result will not turn out too badly.

[256] We find the crucial importance of self-knowledge for the alchemical process of transformation expressed most clearly in Dorn, who lived in the second half of the sixteenth century. The idea itself is much older and goes back to Morienus Romanus (7th-8th cent.), in the saying which he wrote on the rim of the Hermetic vessel: “All those who have all things with them have no need of outside aid.”⁴⁶ He is not referring to the possession of all the necessary chemical substances; it is far more a moral matter, as the text makes clear.⁴⁷ God, says Morienus, made the world out of four unequal elements and set man as the “greater ornament” between them: “This thing is extracted from thee, for thou art its ore; in thee they find it, and, to speak more plainly, from thee they take it; and when thou hast experienced this, the love and desire for it will be increased in thee.”⁴⁸ This “thing” is the *lapis*, and Morienus says that it contains the four elements and is likened to the cosmos and its structure. The procedure for making the stone “cannot be performed with hands,”⁴⁹ for it is a “human attitude” (*dispositio hominum*). This alone accomplishes the “changing of the natures.” The transformation is brought about by the *coniunctio*, which forms the essence of the work.⁵⁰

[257] The “Rosinus ad Sarratantam Episcopum”—which, if not altogether Arabic in origin, is one of the oldest texts in Arabic style—cites Magus Philosophus:⁵¹ “This stone is below thee, as to obedience; above thee, as to dominion; therefore from thee, as to knowledge; about thee, as to equals.”⁵² The passage is somewhat obscure. Nevertheless, it can be elicited that the stone stands in an undoubted psychic relationship to man: the adept can expect obedience from it, but on the other hand the stone exercises dominion over him. Since the stone is a matter of “knowledge” or science, it springs from man. But it is outside him, in his surroundings, among his “equals,” i.e., those of like mind. This description fits the paradoxical situation of the self, as its symbolism shows. It is the smallest of the small, easily overlooked and pushed aside. Indeed, it is in need of help and must be perceived, protected, and as it were built up by the conscious mind, just as if it did not exist at all and were called into being only through man’s care and devotion. As against this, we know from

experience that it had long been there and is older than the ego, and that it is actually the secret *spiritus rector* of our fate. The self does not become conscious by itself, but has always been taught, if at all, through a tradition of knowing (the *purusha/atman* teaching, for instance). Since it stands for the essence of individuation, and individuation is impossible without a relationship to one's environment, it is found among those of like mind with whom individual relations can be established. The self, moreover, is an archetype that invariably expresses a situation within which the ego is contained. Therefore, like every archetype, the self cannot be localized in an individual ego-consciousness, but acts like a circumambient atmosphere to which no definite limits can be set, either in space or in time. (Hence the synchronistic phenomena so often associated with activated archetypes.)

[258] The treatise of Rosinus contains a parallel to Morienus:⁵³ “This stone is something which is fixed more in thee [than elsewhere], created of God, and thou art its ore, and it is extracted from thee, and wheresoever thou art it remains inseparably with thee. ... And as man is made up of four elements, so also is the stone, and so it is [dug] out of man, and thou art its ore, namely by working; and from thee it is extracted, that is by division; and in thee it remains inseparably, namely by knowledge. [To express it] otherwise, fixed in thee: namely in the Mercurius of the wise; thou art its ore: that is, it is enclosed in thee and thou holdest it⁵⁴ secretly; and from thee it is extracted when it is reduced [to its essence] by thee and dissolved; for without thee it cannot be fulfilled, and without it canst thou not live, and so the end looks to the beginning, and contrariwise.”⁵⁵

[259] This looks like a commentary on Morienus. We learn from it that the stone is implanted in man by God, that the laborant is its *prima materia*, that the extraction corresponds to the so-called *divisio* or *separatio* of the alchemical procedure, and that through his knowledge of the stone man remains inseparably bound to the self. The procedure here described could easily be understood as the realization of an unconscious content. Fixation in the Mercurius of the wise would then correspond to the traditional Hermetic knowledge, since Mercurius symbolizes the Nous;⁵⁶ through this knowledge the self, as a content of the unconscious, is made conscious and “fixed” in the mind. For without the existence of conscious concepts apperception is, as we know, impossible. This explains numerous neurotic disturbances which arise from the fact that certain contents are constellated in the unconscious but cannot be assimilated owing to the lack of apperceptive concepts that would “grasp” them. That is why it is so extremely important to tell children fairytales and legends, and to inculcate religious ideas (dogmas) into grown-ups, because these things are instrumental symbols with whose help unconscious contents can be canalized into consciousness, interpreted, and integrated. Failing this, their energy flows off into conscious contents which, normally, are not much emphasized, and intensifies them

to pathological proportions. We then get apparently groundless phobias and obsessions—crazes, idiosyncrasies, hypochondriac ideas, and intellectual perversions suitably camouflaged in social, religious, or political garb.

[260] The old master saw the alchemical *opus* as a kind of apocatastasis, the restoring of an initial state in an “eschatological” one (“the end looks to the beginning, and contrariwise”). This is exactly what happens in the individuation process, whether it take the form of a Christian transformation (“Except ye become as little children”), or a *satori* experience in Zen (“show me your original face”), or a psychological process of development in which the original propensity to wholeness becomes a conscious happening.

[261] For the alchemist it was clear that the “centre,” or what we would call the self, does not lie in the ego but is outside it, “in us” yet not “in our mind,” being located rather in that which we unconsciously are, the “quid” which we still have to recognize. Today we would call it the unconscious, and we distinguish between a personal unconscious which enables us to recognize the shadow and an impersonal unconscious which enables us to recognize the archetypal symbol of the self. Such a point of view was inaccessible to the alchemist, and having no idea of the theory of knowledge, he had to exteriorize his archetype in the traditional way and lodge it in matter, even though he felt, as Dorn and others undoubtedly did, that the centre was paradoxically in man and yet at the same time outside him.

[262] The “incorrupt medicament,” the *lapis*, says Dorn, can be found nowhere save in heaven, for heaven “pervades all the elements with invisible rays meeting together from all parts at the centre of the earth, and generates and hatches forth all creatures.” “No man can generate in himself, but [only] in that which is like him, which is from the same [heaven].”⁵⁷

[263] We see here how Dorn gets round his paradox: no one can produce anything without an object that is like him. But it is like him because it comes from the same source. If he wants to produce the incorrupt medicament, he can only do so in something that is akin to his own centre, and this is the centre in the earth and in all creatures. It comes, like his own, from the same fountainhead, which is God. Separation into apparently dissimilar things, such as heaven, the elements, man, etc., was necessary only for the work of generation. Everything separated must be united again in the production of the stone, so that the original state of unity shall be restored. But, says Dorn, “thou wilt never make from others the One which thou seekest, except first there be made one thing of thyself. ... For so is the will of God, that the pious shall pursue the pious work which they seek, and the perfect shall perfect the other on which they were intent. ... See therefore that thou goest forth such as thou desirest the work to be which thou seekest.”⁵⁸

[264] The union of opposites in the stone is possible only when the adept has become One himself. The unity of the stone is the equivalent of individuation, by which man is made one; we would say that the stone is a projection of the unified self. This formulation is psychologically correct. It does not, however, take sufficient account of the fact that the stone is a *transcendent* unity. We must therefore emphasize that though the self can become a symbolic content of consciousness, it is, as a supraordinate totality, necessarily transcendental as well. Dorn recognized the identity of the stone with the transformed man when he exclaimed: “Transmute yourselves from dead stones into living philosophical stones!”⁵⁹ But he lacked the concept of an unconscious existence which would have enabled him to express the identity of the subjective psychic centre and the objective alchemical centre in a satisfactory formula. Nevertheless, he succeeded in explaining the magnetic attraction between the imagined symbol—the “theoria”—and the “centre” hidden in matter, or in the interior of the earth or in the North Pole, as the identity of two extremes. That is why the theoria and the arcanum in matter are both called *veritas*. This truth “shines” in us, but it is not of us: it “is to be sought not in us, but in the image of God which is in us.”⁶⁰

[265] Dorn thus equates the transcendent centre in man with the God-image. This identification makes it clear why the alchemical symbols for wholeness apply as much to the arcanum in man as to the Deity, and why substances like mercury and sulphur, or the elements fire and water, could refer to God, Christ, and the Holy Ghost. Indeed, Dorn goes even further and allows the predicate of *being* to this truth, and to this truth alone: “Further, that we may give a satisfactory definition of the truth, we say *it is*, but nothing can be added to it; for what, pray, can be added to the One, what is lacking to it, or on what can it be supported? For in truth nothing exists beside that One.”⁶¹ The only thing that truly exists for him is the transcendental self, which is identical with God.

[266] Dorn was probably the first alchemist to sum up the results of all the symbolical terms and to state clearly what had been the impelling motive of alchemy from the very beginning. It is remarkable that this thinker, who is far more lucid in his formulations than his successor Jakob Böhme, has remained completely unknown to historians of philosophy until today. He thus shares the fate of Hermetic philosophy in general, which, for those unacquainted with modern psychology, remains a closed book sealed with seven seals. But this book has to be opened sometime if we wish to understand the mentality of the present day; for alchemy is the mother of the essential substance as well as the concreteness of modern scientific thinking, and not scholasticism, which was responsible in the main only for the discipline and training of the intellect.

XII

BACKGROUND TO THE PSYCHOLOGY OF CHRISTIAN ALCHEMICAL SYMBOLISM

[267] “Mater Alchimia” could serve as the name of a whole epoch. Beginning, roughly, with Christianity, it gave birth in the sixteenth and seventeenth centuries to the age of science, only to perish, unrecognized and misunderstood, and sink from sight in the stream of the centuries as an age that had been outlived. But, just as every mother was once a daughter, so too was alchemy. It owes its real beginnings to the Gnostic systems, which Hippolytus rightly regarded as philosophic, and which, with the help of Greek philosophy and the mythologies of the Near and Middle East, together with Christian dogmatics and Jewish cabalism, made extremely interesting attempts, from the modern point of view, to synthesize a unitary vision of the world in which the physical and the mystical aspects played equal parts. Had this attempt succeeded, we would not be witnessing today the curious spectacle of two parallel world-views neither of which knows, or wishes to know, anything about the other. Hippolytus was in the enviable position of being able to see Christian doctrine side by side with its pagan sisters, and similar comparisons had also been attempted by Justin Martyr. To the honour of Christian thinking it must be said that up till the time of Kepler there was no lack of praiseworthy attempts to interpret and understand Nature, in the broadest sense, on the basis of Christian dogma.

[268] These attempts, however, inevitably came to grief for lack of any adequate knowledge of natural processes. Thus, in the course of the eighteenth century, there arose that notorious rift between faith and knowledge. Faith lacked experience and science missed out the soul. Instead, science believed fervently in absolute objectivity and assiduously overlooked the fundamental difficulty that the real vehicle and begetter of all knowledge is the *psyche*, the very thing that scientists knew the least about for the longest time. It was regarded as a symptom of chemical reactions, an epiphenomenon of biological processes in the brain-cells—indeed, for some time it did not exist at all. Yet all the while scientists remained totally unaware of the fact that they were using for their observations a photographic apparatus of whose nature and structure they knew practically nothing, and whose very existence many of them were unwilling to admit. It is only quite recently that they have been obliged to take into their calculations the objective reality of this psychic factor. Significantly enough, it is microphysics that has come up against the *psyche* in the

most tangible and unexpected way. Obviously, we must disregard the psychology of the unconscious in this connection, since its working hypothesis consists precisely in the reality of the psyche. What is significant here is the exact opposite, namely the psyche's collision with physics.¹

[269] Now for the Gnostics—and this is their real secret—the psyche existed as a source of knowledge just as much as it did for the alchemists. Aside from the psychology of the unconscious, contemporary science and philosophy know only of what is outside, while faith knows only of the inside, and then only in the Christian form imparted to it by the passage of the centuries, beginning with St. Paul and the gospel of St. John. Faith, quite as much as science with its traditional objectivity, is *absolute*, which is why faith and knowledge can no more agree than Christians can with one another.

[270] Our Christian doctrine is a highly differentiated symbol that expresses the transcendent psychic—the God-image and its properties, to speak with Dorn. The Creed is a “symbolum.” This comprises practically everything of importance that can be ascertained about the manifestations of the psyche in the field of inner experience, but it does not include Nature, at least not in any recognizable form. Consequently, at every period of Christianity there have been subsidiary currents or undercurrents that have sought to investigate the empirical aspect of Nature not only from the outside but also from the inside.

[271] Although dogma, like mythology in general, expresses the quintessence of inner experience and thus formulates the operative principles of the objective psyche, i.e., the collective unconscious, it does so by making use of a language and outlook that have become alien to our present way of thinking. The word “dogma” has even acquired a somewhat unpleasant sound and frequently serves merely to emphasize the rigidity of a prejudice. For most people living in the West, it has lost its meaning as a symbol for a virtually unknowable and yet “actual”—i.e., operative—fact. Even in theological circles any real discussion of dogma had as good as ceased until the recent papal declarations, a sign that the symbol has begun to fade, if it is not already withered. This is a dangerous development for our psychic health, as we know of no other symbol that better expresses the world of the unconscious. More and more people then begin looking round for exotic ideas in the hope of finding a substitute, for example in India. This hope is delusory, for though the Indian symbols formulate the unconscious just as well as the Christian ones do, they each exemplify their own spiritual past. The Indian teachings constitute the essence of several thousand years of experience of Indian life. Though we can learn a lot from Indian thought, it can never express the past that is stored up within us. The premise we start from is and remains Christianity, which covers anything from eleven to nineteen centuries of

Western life. Before that, there was for most Western peoples a considerably longer period of polytheism and polydemonism. In certain parts of Europe Christianity goes back not much more than five hundred years—a mere sixteen generations. The last witch was burnt in Europe the year my grandfather was born, and barbarism with its degradation of human nature has broken out again in the twentieth century.

[272] I mention these facts in order to illustrate how thin is the wall that separates us from pagan times. Besides that, the Germanic peoples never developed organically out of primitive polydemonism to polytheism and its philosophical subtleties, but in many places accepted Christian monotheism and its doctrine of redemption only at the sword's point of the Roman legions, as in Africa the machine-gun is the latent argument behind the Christian invasion.² Doubtless the spread of Christianity among barbarian peoples not only favoured, but actually necessitated, a certain inflexibility of dogma. Much the same thing can be observed in the spread of Islam, which was likewise obliged to resort to fanaticism and rigidity. In India the symbol developed far more organically and pursued a less disturbed course. Even the great Hindu Reformation, Buddhism, is grounded, in true Indian fashion, on yoga, and, in India at least, it was almost completely reassimilated by Hinduism in less than a millennium, so that today the Buddha himself is enthroned in the Hindu pantheon as the avatar of Vishnu, along with Christ, Matsya (the fish), Kurma (the tortoise), Vamana (the dwarf), and a host of others.

[273] The historical development of our Western mentality cannot be compared in any way with the Indian. Anyone who believes that he can simply take over Eastern forms of thought is uprooting himself, for they do not express our Western past, but remain bloodless intellectual concepts that strike no chord in our inmost being. We are rooted in Christian soil. This foundation does not go very deep, certainly, and, as we have seen, it has proved alarmingly thin in places, so that the original paganism, in altered guise, was able to regain possession of a large part of Europe and impose on it its characteristic economic pattern of slavery.

[274] This modern development is in line with the pagan currents that were clearly present in alchemy and had remained alive beneath the Christian surface ever since the days of antiquity. Alchemy reached its greatest efflorescence in the sixteenth and seventeenth centuries, then to all appearances it began to die out. In reality it found its continuation in natural science, which led in the nineteenth century to materialism and in the twentieth century to so-called "realism," whose end is not yet in sight. Despite well-meaning assurances to the contrary, Christianity is a helpless bystander. The Church still has a little power left, but she pastures her sheep on the ruins of Europe. Her message works, *if* one knows how to combine her language, ideas, and customs with an understanding of the present. But for many she no longer speaks, as

Paul did in the market-place of Athens, the language of the present, but wraps her message in sacrosanct words hallowed by age. What success would Paul have had with his preaching if he had had to use the language and myths of the Minoan age in order to announce the gospel to the Athenians? We overlook the unfortunate fact that far greater demands are made on present-day man than were ever made on people living in the apostolic era: for them there was no difficulty at all in believing in the virgin birth of the hero and demigod, and Justin Martyr was still able to use this argument in his apology. Nor was the idea of a redeeming God-man anything unheard of, since practically all Asiatic potentates together with the Roman Emperor were of divine nature. But we have no further use even for the divine right of kings! The miraculous tales in the gospels, which easily convinced people in those days, would be a *petra scandali* in any modern biography and would evoke the very reverse of belief. The weird and wonderful nature of the gods was a self-evident fact in a hundred living myths and assumed a special significance in the no less credible philosophic refinements of those myths. "Hermes ter unus" (Hermes-Thrice-One) was not an intellectual absurdity but a philosophical truth. On these foundations the dogma of the Trinity could be built up convincingly. For modern man this dogma is either an impenetrable mystery or an historical curiosity, preferably the latter. For the man of antiquity the virtue of the consecrated water or the transmutation of substances was in no sense an enormity, because there were dozens of sacred springs whose workings were incomprehensible, and any amount of chemical changes whose nature appeared miraculous. Nowadays every schoolboy knows more, in principle, about the ways of Nature than all the volumes of Pliny's Natural History put together.

[275] If Paul were alive today, and should undertake to reach the ear of intelligent Londoners in Hyde Park, he could no longer content himself with quotations from Greek literature and a smattering of Jewish history, but would have to accommodate his language to the intellectual faculties of the modern English public. If he failed to do this, he would have announced his message badly, for no one, except perhaps a classical philologist, would understand half of what he was saying. That, however, is the situation in which Christian kerygmatics³ finds itself today. Not that it uses a dead foreign language in the literal sense, but it speaks in images that on the one hand are hoary with age and look deceptively familiar, while on the other hand they are miles away from a modern man's conscious understanding, addressing themselves, at most, to his unconscious, and then only if the speaker's whole soul is in his work. The best that can happen, therefore, is that the effect remains stuck in the sphere of feeling, though in most cases it does not get even that far.

[276] The bridge from dogma to the inner experience of the individual has broken down. Instead, dogma is "believed";⁴ it is hypostatized, as the Protestants hypostatize the Bible, illegitimately making it the supreme authority, regardless of its

contradictions and controversial interpretations. (As we know, anything can be authorized out of the Bible.) Dogma no longer formulates anything, no longer expresses anything; it has become a tenet to be accepted in and for itself, with no basis in any experience that would demonstrate its truth.⁵ Indeed, faith has itself become that experience. The faith of a man like Paul, who had never seen our Lord in the flesh, could still appeal to the overwhelming apparition on the road to Damascus and to the revelation of the gospel in a kind of ecstasy. Similarly, the faith of the man of antiquity and of the medieval Christian never ran counter to the *consensus omnium* but was on the contrary supported by it. All this has completely changed in the last three hundred years. But what comparable change has kept pace with this in theological circles?

[277] The danger exists—and of this there can be no doubt—that the new wine will burst the old bottles, and that what we no longer understand will be thrown into the lumber-room, as happened once before at the time of the Reformation. Protestantism then discarded (except for a few pallid remnants) the ritual that every religion needs, and now relies solely on the *sola fides* standpoint. The content of faith, of the symbolum, is continually crumbling away. What is still left of it? The person of Jesus Christ? Even the most benighted layman knows that the personality of Jesus is, for the biographer, the obscurest item of all in the reports of the New Testament, and that, from a human and psychological point of view, his personality must remain an unfathomable enigma. As a Catholic writer pithily remarked, the gospels record the history of a man and a god at the same time. Or is only God left? In that case, what about the Incarnation, the most vital part of the symbolum? In my view one would be well advised to apply the papal dictum: “Let it be as it is, or not be at all,”⁶ to the Creed and leave it at that, because nobody really understands what it is all about. How else can one explain the notorious drift away from dogma?

[278] It may strike my reader as strange that a physician and psychologist should be so insistent about dogma. But I *must* emphasize it, and for the same reasons that once moved the alchemist to attach special importance to his “theoria.” His doctrine was the quintessence of the symbolism of unconscious processes, just as the dogmas are a condensation or distillation of “sacred history,” of the myth of the divine being and his deeds. If we wish to understand what alchemical doctrine means, we must go back to the historical as well as the individual phenomenology of the symbols, and if we wish to gain a closer understanding of dogma, we must perforce consider first the myths of the Near and Middle East that underlie Christianity, and then the whole of mythology as the expression of a universal disposition in man. This disposition I have called the collective unconscious, the existence of which can be inferred only from individual phenomenology. In both cases the investigator comes back to the individual, for what he is all the time concerned with are certain complex thought-

forms, the archetypes, which must be conjectured as the unconscious organizers of our ideas. The motive force that produces these configurations cannot be distinguished from the transconscious factor known as instinct. There is, therefore, no justification for visualizing the archetype as anything other than the image of instinct in man.⁷

[279] From this one should not jump to the conclusion that the world of religious ideas can be reduced to “nothing but” a biological basis, and it would be equally erroneous to suppose that, when approached in this way, the religious phenomenon is “psychologized” and dissolved in smoke. No reasonable person would conclude that the reduction of man’s morphology to a four-legged saurian amounts to a nullification of the human form, or, alternatively, that the latter somehow explains itself. For behind all this looms the vast and unsolved riddle of life itself and of evolution in general, and the question of overriding importance in the end is not the origin of evolution but its goal. Nevertheless, when a living organism is cut off from its roots, it loses the connections with the foundations of its existence and must necessarily perish. When that happens, anamnesis of the origins is a matter of life and death.

[280] Myths and fairytales give expression to unconscious processes, and their retelling causes these processes to come alive again and be recollected, thereby re-establishing the connection between conscious and unconscious. What the separation of the two psychic halves means, the psychiatrist knows only too well. He knows it as dissociation of the personality, the root of all neuroses: the conscious goes to the right and the unconscious to the left. As opposites never unite at their own level (*tertium non datur!*), a supraordinate “third” is always required, in which the two parts can come together. And since the symbol derives as much from the conscious as from the unconscious, it is able to unite them both, reconciling their conceptual polarity through its form and their emotional polarity through its numinosity.

[281] For this reason the ancients often compared the symbol to water, a case in point being *tao*, where *yang* and *yin* are united. *Tao* is the “valley spirit,” the winding course of a river. The symbolum of the Church is the *aqua doctrinae*, corresponding to the wonder-working “divine” water of alchemy, whose double aspect is represented by Mercurius. The healing and renewing properties of this symbolical water—whether it be *tao*, the baptismal water, or the elixir—point to the therapeutic character of the mythological background from which this idea comes. Physicians who were versed in alchemy had long recognized that their arcanum healed, or was supposed to heal, not only the diseases of the body but also those of the mind. Similarly, modern psychotherapy knows that, though there are many interim solutions, there is, at the bottom of every neurosis, a moral problem of opposites that

cannot be solved rationally, and can be answered only by a supraordinate third, by a symbol which expresses both sides. This was the “veritas” (Dorn) or “theoria” (Paracelsus) for which the old physicians and alchemists strove, and they could do so only by incorporating the Christian revelation into their world of ideas. They continued the work of the Gnostics (who were, most of them, not so much heretics as theologians) and the Church Fathers in a new era, instinctively recognizing that new wine should not be put into old bottles, and that, like a snake changing its skin, the old myth needs to be clothed anew in every renewed age if it is not to lose its therapeutic effect.

[282] The problems which the integration of the unconscious sets modern doctors and psychologists can only be solved along the lines traced out by history, and the upshot will be a new assimilation of the traditional myth. This, however, presupposes the continuity of historical development. Naturally the present tendency to destroy all tradition or render it unconscious could interrupt the normal process of development for several hundred years and substitute an interlude of barbarism. Wherever the Marxist utopia prevails, this has already happened. But a predominantly scientific and technological education, such as is the usual thing nowadays, can also bring about a spiritual regression and a considerable increase of psychic dissociation. With hygiene and prosperity alone a man is still far from health, otherwise the most enlightened and most comfortably off among us would be the healthiest. But in regard to neuroses that is not the case at all, quite the contrary. Loss of roots and lack of tradition neuroticize the masses and prepare them for collective hysteria. Collective hysteria calls for collective therapy, which consists in abolition of liberty and terrorization. Where rationalistic materialism holds sway, states tend to develop less into prisons than into lunatic asylums.

*

[283] I have tried, in the foregoing, to indicate the kind of psychic matrix into which the Christ-figure was assimilated in the course of the centuries. Had there not been an affinity—magnet!—between the figure of the Redeemer and certain contents of the unconscious, the human mind would never have been able to perceive the light shining in Christ and seize upon it so passionately. The connecting link here is the archetype of the Godman, which on the one hand became historical reality in Christ, and on the other, being eternally present, reigns over the soul in the form of a supraordinate totality, the self. The God-man, like the priest in the vision of Zosimos, is a *Κύριος τῶν πνευμάτων*, not only “Lord of the spirits,” but “Lord over the (evil) spirits,” which is one of the essential meanings of the Christian Kyrios.⁸

[284] The noncanonical fish symbol led us into this psychic matrix and thus into a realm of experience where the unknowable archetypes become living things, changing their name and guise in never-ending succession and, as it were, disclosing their hidden nucleus by perpetually circumambulating round it. The *lapis* that signifies God become man or man become God “has a thousand names.” It is not Christ; it is his parallel in the subjective realm, which dogma calls Christ. Alchemy gives us, in the *lapis*, a concrete idea of what Christ means in the realm of subjective experience, and under what delusive or illuminative disguises his actual presence may be experienced in its transcendent ineffability. One could demonstrate the same thing in the psychology of a modern individual, as I attempted to do in Part II of *Psychology and Alchemy*.⁹ Only, this would be a much more exacting task, running into great detail and requiring a mass of personal biographical data with which one could fill volumes. Such an undertaking would exceed my powers. I must therefore rest content with having laid some of the historical and conceptual foundations for this work of the future.

[285] In conclusion, I would like to emphasize once again that the fish symbol is a spontaneous assimilation of the Christ-figure of the gospels, and is thus a symptom which shows us in what manner and with what meaning the symbol was assimilated by the unconscious. In this respect the patristic allegory of the capture of Leviathan (with the Cross as the hook, and the Crucified as the bait) is highly characteristic: a content (fish) of the unconscious (sea) has been caught and has attached itself to the Christ-figure. Hence the expression used by St. Augustine: “de profundo levatus” (drawn from the deep). This is true enough of the fish; but of Christ? The image of the fish came out of the depths of the unconscious as an equivalent of the historical Christ figure, and if Christ was invoked as “Ichthys,” this name referred to what had come up out of the depths. The fish symbol is thus the bridge between the historical Christ and the psychic nature of man, where the archetype of the Redeemer dwells. In this way Christ became an inner experience, the “Christ within.”

[286] As I have shown, the alchemical fish symbolism leads direct to the *lapis*, the *salvator*, *servator*, and *deus terrenus*; that is, psychologically, to the self. We now have a new symbol in place of the fish: a psychological concept of human wholeness. In as much or in as little as the fish is Christ does the self mean God. It is something that corresponds, an inner experience, an assimilation of Christ into the psychic matrix, a new realization of the divine Son, no longer in theriomorphic form, but expressed in a conceptual or “philosophic” symbol. This, compared with the mute and unconscious fish, marks a distinct increase in conscious development.¹⁰

XIII

GNOSTIC SYMBOLS OF THE SELF

1

[287] Since all cognition is akin to recognition, it should not come as a surprise to find that what I have described as a gradual process of development had already been anticipated, and more or less prefigured, at the beginning of our era. We meet these images and ideas in Gnosticism, to which we must now give our attention; for Gnosticism was, in the main, a product of cultural assimilation and is therefore of the greatest interest in elucidating and defining the contents constellated by prophecies about the Redeemer, or by his appearance in history, or by the synchronicity of the archetype.¹

[288] In the *Elenchos* of Hippolytus the attraction between the magnet and iron is mentioned, if I am not mistaken, three times. It first appears in the doctrine of the NAASSENES, who taught that the four rivers of Paradise correspond to the eye, the ear, the sense of smell, and the mouth. The mouth, through which prayers go out and food goes in, corresponds to the fourth river, the Euphrates. The well-known significance of the “fourth” helps to explain its connection with the “whole” man, for the fourth always makes a triad into a totality. The text says: “This is the water above the firmament,² of which, they say, the Saviour spoke: ‘If you knew who it is that asks, you would have asked him, and he would have given you a spring of living water to drink.’³ To this water comes every nature to choose its own substances, and from this water goes forth to every nature that which is proper to it, more [certainly] than iron to the Heracleian stone,”⁴ etc.

[289] As the reference to John 4 : 10 shows, the wonderful water of the Euphrates has the property of the *aqua doctrinae*, which perfects every nature in its individuality and thus makes man whole too. It does this by giving him a kind of magnetic power by which he can attract and integrate that which belongs to him. The Naassene doctrine is, plainly, a perfect parallel to the alchemical view already discussed: the doctrine is the magnet that makes possible the integration of man as well as the *lapis*.

[290] In the PERATIC doctrine, so many ideas of this kind reappear that Hippolytus even uses the same metaphors, though the meaning is more subtle. No one, he says, can be saved without the Son:

But this is the serpent. For it is he who brought the signs of the Father down from above, and it is he who carries them back again after they have been awakened from sleep, transferring them thither from hence as substances proceeding from the Substanceless. This, they say, is [what is meant by] the saying, “I am the Door.”⁵ But they say he transfers them to those whose eyelids are closed,⁶ as naphtha draws everywhere the fire to itself,⁷ more than the Heracleian stone draws iron ...⁸ Thus, they say, the perfect race of men, made in the image [of the Father] and of the same substance [*homoousion*], is drawn from the world by the Serpent, even as it was sent down by him; but naught else [is so drawn].⁹

[291] Here the magnetic attraction does not come from the doctrine or the water but from the “Son,” who is symbolized by the serpent, as in John 3 : 14.¹⁰ Christ is the magnet that draws to itself those parts or substances in man that are of divine origin, the *πατρικοί χαρακτήρες* (signs of the Father), and carries them back to their heavenly birthplace. The serpent is an equivalent of the fish. The consensus of opinion interpreted the Redeemer equally as a fish and a serpent; he is a fish because he rose from the unknown depths, and a serpent because he came mysteriously out of the darkness. Fishes and snakes are favourite symbols for describing psychic happenings or experiences that suddenly dart out of the unconscious and have a frightening or redeeming effect. That is why they are so often expressed by the motif of helpful animals. The comparison of Christ with the serpent is more authentic than that with the fish, but, for all that, it was not so popular in primitive Christianity. The Gnostics favoured it because it was an old-established symbol for the “good” *genius loci*, the Agathodaimon, and also for their beloved Nous. Both symbols are of inestimable value when it comes to the natural, instinctive interpretation of the Christ-figure. Theriomorphic symbols are very common in dreams and other manifestations of the unconscious. They express the psychic level of the content in question; that is to say, such contents are at a stage of unconsciousness that is as far from human consciousness as the psyche of an animal. Warm-blooded or cold-blooded vertebrates of all kinds, or even invertebrates, thus indicate the degree of unconsciousness. It is important for psychopathologists to know this, because these contents can produce, at all levels, symptoms that correspond to the physiological functions and are localized accordingly. For instance, the symptoms may be distinctly correlated with the cerebrospinal and the sympathetic nervous system. The Sethians may have guessed something of this sort, for Hippolytus mentions, in connection with the serpent, that they compared the “Father” with the cerebrum (*ἐγκέφαλον*) and the “Son” with the cerebellum and spinal cord (*παρεγκεφαλίζ δροκοντοειδής*). The snake does in fact symbolize “cold-blooded,” inhuman contents and tendencies of an abstractly intellectual as well as a concretely animal nature: in a word, the extra-human quality in man.

[292] The third reference to the magnet is to be found in Hippolytus' account of the SETHIAN doctrine. This has remarkable analogies with the alchemical doctrines of the Middle Ages, though no direct transmission can be proved. It expounds, in Hippolytus' words, a theory of "composition and mixture": the ray of light from above mingles with the dark waters below in the form of a minute spark. At the death of the individual, and also at his figurative death as a mystical experience, the two substances unmix themselves. This mystical experience is the *divisio* and *separatio* of the composite (τὸ διχάσαι καὶ χωρίσαι τὰ συγκεκραμένα). I purposely give the Latin terms used in medieval alchemy, because they denote essentially the same thing as do the Gnostic concepts. The separation or unmixing enables the alchemist to extract the *anima* or *spiritus* from the *prima materia*. During this operation the helpful Mercurius appears with the dividing sword (used also by the adept!), which the Sethians refer to Matthew 10 : 34: "I came not to send peace, but a sword." The result of the unmixing is that what was previously mixed up with the "other" is now drawn to "its own place" and to that which is "proper" or "akin" to it, "like iron to the magnet" (ὡς σίδηρος [πρὸς] Ἡράκλειον λίθον).¹¹ In the same way, the spark or ray of light, "having received from the teaching and learning its proper place, hastens to the Logos, which comes from above in the form of a slave ... more [quickly] than iron [flies] to the magnet."¹²

[293] Here the magnetic attraction comes from the Logos. This denotes a thought or idea that has been formulated and articulated, hence a content and a product of consciousness. Consequently the Logos is very like the *aqua doctrinae*, but whereas the Logos has the advantage of being an autonomous personality, the latter is merely a passive object of human action. The Logos is nearer to the historical Christ-figure, just as the "water" is nearer to the magical water used in ritual (ablution, aspersion, baptism). Our three examples of magnetic action suggest three different forms of magnetic agent:

1. The agent is an inanimate and in itself passive substance, *water*. It is drawn from the depths of the well, handled by human hands, and used according to man's needs. It signifies the visible doctrine, the *aqua doctrinae* or the Logos, communicated to others by word of mouth and by ritual.

2. The agent is an animate, autonomous being, the *serpent*. It appears spontaneously or comes as a surprise; it fascinates; its glance is staring, fixed, unrelated; its blood cold, and it is a stranger to man: it crawls over the sleeper, he finds it in a shoe or in his pocket. It expresses his fear of everything inhuman and his awe of the sublime, of what is beyond human ken. It is the lowest (devil) and the highest (son of God, Logos, Nous, Agathodaimon). The snake's presence is frightening, one finds it in unexpected places at unexpected moments. Like the fish, it

represents and personifies the dark and unfathomable, the watery deep, the forest, the night, the cave. When a primitive says “snake,” he means an experience of something extrahuman. The snake is not an allegory or metaphor, for its own peculiar form is symbolic in itself, and it is essential to note that the “Son” has the form of a snake and not the other way round: the snake does not signify the “Son.”

3. The agent is the *Logos*, a philosophical idea and abstraction of the bodily and personal son of God on the one hand, and on the other the dynamic power of thoughts and words.

[294] It is clear that these three symbols seek to describe the unknowable essence of the incarnate God. But it is equally clear that they are hypostatized to a high degree: it is real water, and not figurative water, that is used in ritual. The Logos was in the beginning, and God was the Logos, long before the Incarnation. The emphasis falls so much on the “serpent” that the Ophites celebrated their eucharistic feast with a live snake, no less realistic than the Aesculapian snake at Epidaurus. Similarly, the “fish” is not just the secret language of the mystery, but, as the monuments show, it meant something in itself. Moreover, it acquired its meaning in primitive Christianity without any real support from the written tradition, whereas the serpent can at least be referred back to an authentic logion.

[295] All three symbols are phenomena of assimilation that are in themselves of a numinous nature and therefore have a certain degree of autonomy. Indeed, had they never made their appearance, it would have meant that the annunciation of the Christ-figure was ineffective. These phenomena not only prove the effectiveness of the annunciation, but provide the necessary conditions in which the annunciation can take effect. In other words, the symbols represent the prototypes of the Christ-figure that were slumbering in man’s unconscious and were then called awake by his actual appearance in history and, so to speak, magnetically attracted. That is why Meister Eckhart uses the same symbolism to describe Adam’s relation to the Creator on the one hand and to the lower creatures on the other.¹³

[296] This magnetic process revolutionizes the ego-oriented psyche by setting up, in contradistinction to the ego, another goal or centre which is characterized by all manner of names and symbols: fish, serpent, centre of the sea-hawk,¹⁴ point, monad, cross, paradise, and so on. The myth of the ignorant demiurge who imagined he was the highest divinity illustrates the perplexity of the ego when it can no longer hide from itself the knowledge that it has been dethroned by a supraordinate authority. The “thousand names” of the *lapis philosophorum* correspond to the innumerable Gnostic designations for the Anthropos, which make it quite obvious what is meant: the greater, more comprehensive Man, that indescribable whole consisting of the sum of conscious and unconscious processes. This objective whole, the antithesis of the

subjective ego-psyche, is what I have called the self, and this corresponds exactly to the idea of the Anthropos.

2

[297] When, in treating a case of neurosis, we try to supplement the inadequate attitude (or adaptedness) of the conscious mind by adding to it contents of the unconscious, our aim is to create a wider personality whose centre of gravity does not necessarily coincide with the ego, but which, on the contrary, as the patient's insights increase, may even thwart his ego-tendencies. Like a magnet, the new centre attracts to itself that which is proper to it, the "signs of the Father," i.e., everything that pertains to the original and unalterable character of the individual ground-plan. All this is older than the ego and acts towards it as the "blessed, nonexistent God" of the Basilidians acted towards the archon of the Ogdoad, the demiurge, and—paradoxically enough—as the son of the demiurge acted towards his father. The son proves superior in that he has knowledge of the message from above and can therefore tell his father that he is not the highest God. This apparent contradiction resolves itself when we consider the underlying psychological experience. On the one hand, in the products of the unconscious the self appears as it were *a priori*, that is, in well-known circle and quaternity symbols which may already have occurred in the earliest dreams of childhood, long before there was any possibility of consciousness or understanding. On the other hand, only patient and painstaking work on the contents of the unconscious, and the resultant synthesis of conscious and unconscious data, can lead to a "totality," which once more uses circle and quaternity symbols for purposes of self-description.¹⁵ In this phase, too, the original dreams of childhood are remembered and understood. The alchemists, who in their own way knew more about the nature of the individuation process than we moderns do, expressed this paradox through the symbol of the uroboros, the snake that bites its own tail.

[298] The same knowledge, formulated differently to suit the age they lived in, was possessed by the Gnostics. The idea of an unconscious was not unknown to them. For instance, Epiphanius quotes an excerpt from one of the Valentinian letters, which says: "In the beginning the Autopator contained in himself everything that is, in a state of unconsciousness [lit., 'not-knowing': ἀγνωσίᾳ]."¹⁶ It was Professor G. Quispel who kindly drew my attention to this passage. He also points out the passage in Hippolytus: ὁ Πατήρ ... ὁ ἀνευνόητος καὶ ἀνούσιος, ὁ μήτε ἄρρεν μήτε θῆλυ, which he translates: "le Père ... qui est dépourvu de conscience et de substance, celui qui est ni masculin, ni féminin."¹⁷ So the "Father" is not only unconscious and without the quality of being, but also *nirdvandva*, without opposites, lacking all qualities and therefore unknowable. This describes the state of the unconscious. The Valentinian text gives the Autopator more positive qualities: "Some called him the ageless Aeon,

eternally young, male and female, who contains everything in himself and is [himself] contained by nothing.” In him was *ἔννοια*, consciousness, which “conveys the treasures of the greatness to those who come from the greatness.” But the presence of *ἔννοια* does not prove that the Autopator himself is conscious, for the differentiation of consciousness results only from the syzygies and tetrads that follow afterwards, all of them symbolizing processes of conjunction and composition. *ἔννοια* must be thought of here as the latent possibility of consciousness. Oehler translates it as *mens*, Cornarius as *intelligentia* and *notio*.

[299] St. Paul’s concept of *ἄγνοια* (*ignorantia*) may not be too far removed from *ἄγνωσία*, since both mean the initial, unconscious condition of man. When God “looked down” on the times of ignorance, the Greek word used here, *ὑπεριδών* (Vulgate: *despiciens*) has the connotation ‘to disdain, despise.’¹⁸ At all events, Gnostic tradition says that when the highest God saw what miserable, unconscious creatures these human beings were whom the demiurge had created, who were not even able to walk upright, he immediately got the work of redemption under way.¹⁹ And in the same passage in the Acts, Paul reminds the Athenians that they were “God’s offspring,”²⁰ and that God, looking back disapprovingly on “the times of ignorance,” had sent the message to mankind, commanding “all men every-where to repent.” Because that earlier condition seemed to be altogether too wretched, the *μετάνοια* (transformation of mind) took on the moral character of repentance of sins, with the result that the Vulgate could translate it as “poenitentiam agere.”²¹ The sin to be repented, of course, is *ἄγνοια* or *ἄγνωσία*, unconsciousness.²² As we have seen, it is not only man who is in this condition, but also, according to the Gnostics, the *ἄνευνόητος*, the God without consciousness. This idea is more or less in line with the traditional Christian view that God was transformed during the passage from the Old Testament to the New, and, from being the God of wrath, changed into the God of Love—a thought that is expressed very clearly by Nicolaus Caussin in the seventeenth century.²³

[300] In this connection I must mention the results of Riwkah Schärf’s examination of the figure of Satan in the Old Testament.²⁴ With the historical transformation of the concept of Satan the image of Yahweh changes too, so that one can well say that there was a differentiation of the God-image even in the Old Testament, not to speak of the New. The idea that the world-creating Deity is not conscious, but may be dreaming, is found also in Hindu literature:

Who knows how it was, and who shall declare

Whence it was born and whence it came?

The gods are later than this creation;

Who knows, then, whence it has sprung?

Whence this created world came,
And whether he made it or not,
He alone who sees all in the highest heaven
Knows—or does not know.²⁵

[301] Meister Eckhart's theology knows a "Godhead" of which no qualities, except unity and being,²⁶ can be predicated;²⁷ it "is becoming," it is not yet Lord of itself, and it represents an absolute coincidence of opposites: "But its simple nature is of forms formless; of becoming becomingless; of beings beingless; of things thingless," etc.²⁸ Union of opposites is equivalent to unconsciousness, so far as human logic goes, for consciousness presupposes a differentiation into subject and object and a relation between them. Where there is no "other," or it does not yet exist, all possibility of consciousness ceases. Only the Father, the God "welling" out of the Godhead, "notices himself," becomes "beknown to himself," and "confronts himself as a Person." So, from the Father, comes the Son, as the Father's thought of his own being. In his original unity "he knows nothing" except the "suprareal" One which he *is*. As the Godhead is essentially unconscious,²⁹ so too is the man who lives in God. In his sermon on "The Poor in Spirit" (Matt. 5 : 3), the Meister says: "The man who has this poverty has everything he was when he lived not in any wise, neither in himself, nor in truth, nor in God. He is so quit and empty of all knowing that no knowledge of God is alive in him; for while he stood in the eternal nature of God, there lived in him not another: what lived there was himself. And so we say this man is as empty of his own knowledge as he was when he was not anything; he lets God work what he will, and he stands empty as when he came from God."³⁰ Therefore he should love God in the following way: "Love him as he is: a not-God, a not-spirit, a not-person, a not-image; as a sheer, pure, clear One, which he is, sundered from all secondness; and in this One let us sink eternally, from nothing to nothing. So help us God. Amen."³¹

[302] The world-embracing spirit of Meister Eckhart knew, without discursive knowledge, the primordial mystical experience of India as well as of the Gnostics, and was itself the finest flower on the tree of the "Free Spirit" that flourished at the beginning of the eleventh century. Well might the writings of this Master lie buried for six hundred years, for "his time was not yet come." Only in the nineteenth century did he find a public at all capable of appreciating the grandeur of his mind.

[303] These utterances on the nature of the Deity express transformations of the God-image which run parallel with changes in human consciousness, though one would be at a loss to say which is the cause of the other. The God-image is not something *invented*, it is an *experience* that comes upon man spontaneously—as anyone can see for himself unless he is blinded to the truth by theories and prejudices. The

unconscious God-image can therefore alter the state of consciousness, just as the latter can modify the God-image once it has become conscious. This, obviously, has nothing to do with the “prime truth,” the unknown God—at least, nothing that could be verified. Psychologically, however, the idea of God’s *ἄγνωσία*, or of the *ἀνεκνόητος θεός*, is of the utmost importance, because it identifies the Deity with the numinosity of the unconscious. The *atman / purusha* philosophy of the East and, as we have seen, Meister Eckhart in the West both bear witness to this.

[304] Now if psychology is to lay hold of this phenomenon, it can only do so if it expressly refrains from passing metaphysical judgments, and if it does not presume to profess convictions to which it is ostensibly entitled on the ground of scientific experience. But of this there can be no question whatever. The one and only thing that psychology can establish is the presence of pictorial symbols, whose interpretation is in no sense fixed beforehand. It can make out, with some certainty, that these symbols have the character of “wholeness” and therefore presumably *mean* wholeness. As a rule they are “uniting” symbols, representing the conjunction of a single or double pair of opposites, the result being either a dyad or a quaternity. They arise from the collision between the conscious and the unconscious and from the confusion which this causes (known in alchemy as “chaos” or “nigredo”). Empirically, this confusion takes the form of restlessness and disorientation. The circle and quaternity symbolism appears at this point as a compensating principle of order, which depicts the union of warring opposites as already accomplished, and thus eases the way to a healthier and quieter state (“salvation”). For the present, it is not possible for psychology to establish more than that the symbols of wholeness mean the wholeness of the individual.³² On the other hand, it has to admit, most emphatically, that this symbolism uses images or schemata which have always, in all the religions, expressed the universal “Ground,” the Deity itself. Thus the circle is a well-known symbol for God; and so (in a certain sense) is the cross, the quaternity in all its forms, e.g., Ezekiel’s vision, the *Rex gloriae* with the four evangelists, the Gnostic Barbelo (“God in four”) and Kolorbas (“all four”); the duality (*tao*, hermaphrodite, father-mother); and finally, the human form (child, son, anthropos) and the individual personality (Christ and Buddha), to name only the most important of the motifs here used.

[305] All these images are found, empirically, to be expressions for the unified wholeness of man. The fact that this goal goes by the name of “God” proves that it has a numinous character; and indeed, experiences, dreams, and visions of this kind do have a fascinating and impressive quality which can be spontaneously felt even by people who are not prejudiced in their favour by prior psychological knowledge. So it is no wonder that naïve minds make no distinction between God and the image they have experienced. Wherever, therefore, we find symbols indicative of psychic

wholeness, we encounter the naive idea that they stand for God. In the case of those quite common Romanesque pictures of the Son of Man accompanied by three angels with animal heads and one with a human head, for example, it would be simpler to assume that the Son of Man meant the ordinary man and that the problem of one against three referred to the well-known psychological schema of one differentiated and three undifferentiated functions. But this interpretation would, according to the traditional view, devalue the symbol, for it means the second Person of the Godhead in its universal, fourfold aspect. Psychology cannot of course adopt this view as its own; it can only establish the existence of such statements and point out, by way of comparison, that essentially the same symbols, in particular the dilemma of one and three, often appear in the spontaneous products of the unconscious, where they demonstrably refer to the psychic totality of the individual. They indicate the presence of an archetype of like nature, one of whose derivatives would seem to be the quaternity of functions that orient consciousness. But, since this totality exceeds the individual's consciousness to an indefinite and indeterminable extent, it invariably includes the unconscious in its orbit and hence the totality of all archetypes. But the archetypes are complementary equivalents of the "outside world" and therefore possess a "cosmic" character. This explains their numinosity and "godlikeness."

3

[306] To make my exposition more complete, I would like to mention some of the Gnostic symbols for the universal "Ground" or arcanum, and especially those synonyms which signify the "Ground." Psychology takes this idea as an image of the unconscious background and begetter of consciousness. The most important of these images is the figure of the demiurge. The Gnostics have a vast number of symbols for the source or origin, the centre of being, the Creator, and the divine substance hidden in the creature. Lest the reader be confused by this wealth of images, he should always remember that each new image is simply another aspect of the divine mystery immanent in all creatures. My list of Gnostic symbols is no more than an amplification of a single transcendental idea, which is so comprehensive and so difficult to visualize in itself that a great many different expressions are required in order to bring out its various aspects.

[307] According to Irenaeus, the Gnostics held that Sophia represents the world of the Ogdoad,³³ which is a double quaternity. In the form of a dove, she descended into the water and begot Saturn, who is identical with Yahweh. Saturn, as we have already mentioned, is the "other sun," the *sol niger* of alchemy. Here he is the "primus Anthropus." He created the first man, who could only crawl like a worm.³⁴ Among the Naassenes, the demiurge Esaldaios, "a fiery god, the fourth by number," is set up against the Trinity of Father, Mother, and Son. The highest is the Father, the

Archanthropos, who is without qualities and is called the higher Adam. In various systems Sophia takes the place of the Protanthropos.³⁵ Epiphanius mentions the Ebionite teaching that Adam, the original man, is identical with Christ.³⁶ In Theodor Bar-Kuni the original man is the five elements (i.e., 4 + 1).³⁷ In the Acts of Thomas, the dragon says of itself: “I am the son ... of him that hurt and smote the four brethren which stood upright.”³⁸

[308] The primordial image of the quaternity coalesces, for the Gnostics, with the figure of the demiurge or Anthropos. He is, as it were, the victim of his own creative act, for, when he descended into Physis, he was caught in her embrace.³⁹ The image of the *anima mundi* or Original Man latent in the dark of matter expresses the presence of a transconscious centre which, because of its quaternary character and its roundness, must be regarded as a symbol of wholeness. We may assume, with due caution, that some kind of psychic wholeness is meant (for instance, conscious + unconscious), though the history of the symbol shows that it was always used as a God-image. Psychology, as I have said, is not in a position to make metaphysical statements. It can only establish that the symbolism of psychic wholeness coincides with the God-image, but it can never prove that the God-image is God himself, or that the self takes the place of God.

[309] This coincidence comes out very clearly in the ancient Egyptian Heb-Sed festival, of which Colin Campbell gives the following description: “The king comes out of an apartment called the sanctuary, then he ascends into a pavilion open at the four sides, with four staircases leading up to it. Carrying the emblems of Osiris, he takes his seat on a throne, and turns to the four cardinal points in succession. ... It is a kind of second enthronement ... and sometimes the king acts as a priest, making offerings to himself. This last act may be regarded as the climax of the deification of the king.”⁴⁰

[310] All kingship is rooted in this psychology, and therefore, for the anonymous individual of the populace, every king carries the symbol of the self. All his insignia—crown, mantle, orb, sceptre, starry orders, etc.—show him as the cosmic Anthropos, who not only begets, but himself is, the world. He is the *homo maximus*, whom we meet again in Swedenborg’s speculations. The Gnostics, too, constantly endeavoured to give visible form and a suitable conceptual dress to this being, suspecting that he was the matrix and organizing principle of consciousness. As the “Phrygians” (Naassenes) say in Hippolytus,⁴¹ he is the “undivided point,” the “grain of mustard seed” that grows into the kingdom of God. This point is “present in the body.” But this is known only to the *πνευματικοί* the “spiritual” men as opposed to the *ψυχικοί* and the *ὕλικοί* (“material” men). He is *τὸ ῥῆμα τοῦ* the utterance of God (*sermo Dei*), and the “matrix of the Aeons, Powers, Intelligences, Gods, Angels, and

Emissary Spirits, of Being and Non-Being, of Begotten and Unbegotten, of the Non-Intelligible Intelligible, of the Years, Moons, Days, Hours" This point, "being nothing and consisting of nothing," becomes a "certain magnitude incomprehensible by thought." Hippolytus accuses the Naassenes of bundling everything into their thought like the syncretists, for he obviously cannot quite understand how the point, the "utterance of God," can have a human form. The Naassenes, he complains, also call him the "polymorphous Attis," the young dying son of the Great Mother, or, as the hymn cited by Hippolytus says, τὸ κατέφες ἄκοναμα 'Ρ'έας, the 'dark rumour of Rhea.' In the hymn he has the synonyms Adonis, Osiris, Adam, Korybas, Pan, Bacchus, and ποιμὴν λευκῶν ἀστρῶν, 'shepherd of white stars.'

[311] The Naassenes themselves considered Naas, the serpent, to be their central deity, and they explained it as the "moist substance," in agreement with Thales of Miletus, who said water was the prime substance on which all life depended. Similarly, all living things depend on the Naas; "it contains within itself, like the horn of the one-horned bull, the beauty of all things." It "pervades everything, like the water that flows out of Eden and divides into four sources" (ἄρχας). "This Eden, they say, is the brain." Three of the rivers of Paradise are sensory functions (Pison = sight, Gihon = hearing, Tigris = smell), but the fourth, the Euphrates, is the mouth, "the seat of prayer and the entrance of food." As the fourth function it has a double significance,⁴² denoting on the one hand the purely material activity of bodily nourishment, while on the other hand it "gladdens,⁴³ feeds, and forms [χαρακτηρίζει] the spiritual, perfect [τέλειον] man."⁴⁴ The "fourth" is something special, ambivalent—a daimonion. A good example of this is in Daniel 3 : 24f., where the three men in the burning fiery furnace are joined by a fourth, whose form was "like a son of God."

[312] The water of the Euphrates is the "water above the firmament," the "living water of which the Saviour spoke,"⁴⁵ and possessing, as we have seen, magnetic properties. It is that miraculous water from which the olive draws its oil and the grape the wine. "That man," continues Hippolytus, as though still speaking of the water of the Euphrates, "is without honour in the world."⁴⁶ This is an allusion to the τέλειος ἄνθρωπος. Indeed, this water is the "perfect man," the ῥῆμα θεοῦ, the Word sent by God. "From the living water we spiritual men choose that which is ours,"⁴⁷ for every nature, when dipped in this water, "chooses its own substances ... and from this water goes forth to every nature that which is proper to it."⁴⁸ The water or, as we could say, this Christ is a sort of panspermia, a matrix of all possibilities, from which the πνευματικός chooses "his Osob," his idiosyncrasy,⁴⁹ that "flies to him more [quickly] than iron to the magnet." But the "spiritual men" attain their proper nature by entering in through the "true door," Jesus Makarios (the blessed), and thus obtaining knowledge of their own wholeness, i.e., of the complete man. This man, unhonoured in the world, is obviously the inner, spiritual man, who becomes

conscious for those who enter in through Christ, the door to life, and are illuminated by him. Two images are blended here: the image of the “strait gate,” 50 and that of John 14 : 6: “I am the way, and the truth, and the life. No one comes to the Father but through me.”⁵¹ They represent an integration process that is characteristic of psychological individuation. As formulated, the water symbol continually coalesces with Christ and Christ with the inner man. This, it seems to me, is not a confusion of thought but a psychologically correct formulation of the facts, since Christ as the “Word” is indeed the “living water” and at the same time the symbol of the inner “complete” man, the self.

[313] For the Naassenes, the universal “Ground” is the Original Man, Adam, and knowledge of him is regarded as the beginning of perfection and the bridge to knowledge of God.⁵² He is male/female; from him come “father and mother”;⁵³ he consists of three parts: the rational (νοερόν), the psychic, and the earthly (χοικόν). These three “came down together into one man, Jesus,” and “these three men spoke together, each of them from his own substance to his own,” i.e., from the rational to the rational, etc. Through this doctrine Jesus is related to the Original Man (Christ as second Adam). His soul is “of three parts and (yet) one”—a Trinity.⁵⁴ As examples of the Original Man the text mentions the Cabiros⁵⁵ and Oannes. The latter had a soul capable of suffering, so that the “figure (πλάσμα) of the great, most beautiful and perfect man, humbled to a slave,” might suffer punishment. He is the “blessed nature, at once hidden and revealed, of everything that has come to be and will be,” “the kingdom of heaven which is to be sought within man” (ἐντός ἀνθρώπου), even “in children of seven years.”⁵⁶ For the Naassenes, says Hippolytus, place the “procreative nature of the Whole in the procreative seed.”⁵⁷ On the face of it, this looks like the beginnings of a “sexual theory” concerning the underlying psychic substance, reminiscent of certain modern attempts in the same vein. But one should not overlook the fact that in reality man’s procreative power is only a special instance of the “procreative nature of the Whole.” “This, for them, is the hidden and mystical Logos,” which, in the text that follows, is likened to the phallus of Osiris—“and they say Osiris is water.” Although the substance of this seed is the cause of all things, it does not partake of their nature. They say therefore: “I become what I will, and I am what I am.” For he who moves everything is himself unmoved. “He, they say, is alone good.”⁵⁸ A further synonym is the ithyphallic Hermes Kyllenios. “For they say Hermes is the Logos, the interpreter and fashioner of what has been, is, and will be.” That is why he is worshipped as the phallus, because he, like the male organ, “has an urge [ὄρμη]ν] from below upwards.”⁵⁹

[314] The fact that not only the Gnostic Logos but Christ himself was drawn into the orbit of sexual symbolism is corroborated by the fragment from the *Interrogationes maiores Mariae*, quoted by Epiphanius.⁶⁰ It is related there that Christ took this Mary with him on to a mountain, where he produced a woman from his side and began to have intercourse with her: “... seminis sui defluxum assumpsisset, indicasse illi, quod oporteat sic facere, ut vivamus.”⁶¹ It is understandable that this crude symbolism should offend our modern feelings. But it also appeared shocking to Christians of the third and fourth centuries; and when, in addition, the symbolism became associated with a concretistic misunderstanding, as appeared to be the case in certain sects, it could only be rejected. That the author of the *Interrogationes* was by no means ignorant of some such reaction is evident from the text itself. It says that Mary received such a shock that she fell to the ground. Christ then said to her: “Wherefore do you doubt me, O you of little faith?” This was meant as a reference to John 3: 12: “If I have told you earthly things and you do not believe, how can you believe if I tell you heavenly things?” and also to John 6 : 53: “Unless you eat the flesh of the Son of man and drink his blood, you have no life in you” (RSV).

[315] This symbolism may well have been based, originally, on some visionary experience, such as happens not uncommonly today during psychological treatment. For the medical psychologist there is nothing very lurid about it. The context itself points the way to the right interpretation. The image expresses a psychologem that can hardly be formulated in rational terms and has, therefore, to make use of a concrete symbol, just as a dream must when a more or less “abstract” thought comes up during the *abaissement du niveau mental* that occurs in sleep. These “shocking” surprises, of which there is certainly no lack in dreams, should always be taken “as-if,” even though they clothe themselves in sensual imagery that stops at no scurrility and no obscenity. They are unconcerned with offensiveness, because they do not really mean it. It is as if they were stammering in their efforts to express the elusive meaning that grips the dreamer’s attention.⁶²

[316] The context of the vision (John 3 : 12) makes it clear that the image should be taken not concretistically but symbolically; for Christ speaks not of earthly things but of a heavenly or spiritual mystery—a “mystery” not because he is hiding something or making a secret of it (indeed, nothing could be more blatant than the naked obscenity of the vision!) but because its meaning is still hidden from consciousness. The modern method of dream-analysis and interpretation follows this heuristic rule.⁶³ If we apply it to the vision, we arrive at the following result:

[317] 1. The MOUNTAIN means ascent, particularly the mystical, spiritual ascent to the heights, to the place of revelation where the spirit is present. This motif is so well known that there is no need to document it.⁶⁴

[318] 2. The central significance of the CHRIST-FIGURE for that epoch has been abundantly proved. In Christian Gnosticism it was a visualization of God as the Archanthropos (Original Man = Adam), and therefore the epitome of man as such: "Man and the Son of Man." Christ is the inner man who is reached by the path of self-knowledge, "the kingdom of heaven within you." As the Anthropos he corresponds to what is empirically the most important archetype and, as judge of the living and the dead and king of glory, to the real organizing principle of the unconscious, the quaternity, or squared circle of the self.⁶⁵ In saying this I have not done violence to anything; my views are based on the experience that mandala structures have the meaning and function of a centre of the unconscious personality.⁶⁶ The quaternity of Christ, which must be borne in mind in this vision, is exemplified by the cross symbol, the *rex gloriae*, and Christ as the year.

[319] 3. The production of the WOMAN from his side suggests that he is interpreted as the second Adam. Bringing forth a woman means that he is playing the role of the Creator-god in Genesis.⁶⁷ Just as Adam, before the creation of Eve, was supposed by various traditions to be male/female,⁶⁸ so Christ here demonstrates his androgyny in a drastic way.⁶⁹ The Original Man is usually hermaphroditic; in Vedic tradition too he produces his own feminine half and unites with her. In Christian allegory the woman sprung from Christ's side signifies the Church as the Bride of the Lamb.

[320] The splitting of the Original Man into husband and wife expresses an act of nascent consciousness; it gives birth to a pair of opposites, thereby making consciousness possible. For the beholder of the miracle, Mary, the vision was the spontaneous visualization or projection of an unconscious process in herself. Experience shows that unconscious processes are compensatory to a definite conscious situation. The splitting in the vision would therefore suggest that it is compensating a conscious condition of unity. This unity probably refers in the first place to the figure of the Anthropos, the incarnate God, who was then in the forefront of religious interest. He was, in Origen's words, the "Vir Unus,"⁷⁰ the One Man. It was with this figure that Mary was confronted in her vision. If we assume that the recipient of the vision was in reality a woman—an assumption that is not altogether without grounds—then what she had been missing in the pure, deified masculinity of Christ was the counterbalancing femininity. Therefore it was revealed to her: "I am both, man and woman." This psychologem is still incorporated today in the Catholic conception of Christ's androgyny as the "Virgo de Virgine," though this is more a *sententia communis* than a *conclusio*. Medieval iconography sometimes shows Christ with breasts, in accordance with Song of Solomon 1 : 1 : "For thy breasts are better than wine" (DV). In Mechthild of Magdeburg, the soul remarks that when the Lord kissed her,⁷¹ he had, contrary to expectation, no beard. The tokens of masculinity were lacking. Mechthild had a vision similar to Mary's, dealing with the same

problem from a different angle: she saw herself transported to a “rocky mountain” where the Blessed Virgin sat, awaiting the birth of the divine child. When it was born, she embraced it and kissed it three times. As the text points out, the mountain is an allegory of the “*spiritualis habitus*,” or spiritual attitude. “Through divine inspiration she knew how the Son is the innermost core [*medulla*] of the Father’s heart.” This *medulla* is “strengthening, healing, and most sweet”; God’s “strength and greatest sweetness” are given to us through the Son, the “Saviour and strongest, sweetest Comforter,” but “the innermost [core] of the soul is that sweetest thing.”⁷² From this it is clear that Mechthild equates the “medulla” with the Father’s heart, the Son, and the inner man. Psychologically speaking, “that sweetest thing” corresponds to the self, which is indistinguishable from the God-image.

[321] There is a significant difference between the two visions. The antique revelation depicts the birth of Eve from Adam on the spiritual level of the second Adam (Christ), from whose side the feminine pneuma, or second Eve, i.e., the soul, appears as Christ’s daughter. As already mentioned, in the Christian view the soul is interpreted as the Church: she is the woman who “embraces the man”⁷³ and anoints the Lord’s feet. Mechthild’s vision is a continuation of the sacred myth: the daughter-bride has become a mother and bears the Father in the shape of the Son. That the Son is closely akin to the self is evident from the emphasis laid on the quaternary nature of Christ: he has a “fourfold voice” (*quadruplex vox*),⁷⁴ his heart has four kinds of pulse,⁷⁵ and from his countenance go forth four rays of light.⁷⁶ In this image a new millennium is speaking. Meister Eckhart, using a different formulation, says that “God is born from the soul,” and when we come to the *Cherubinic Wanderer*⁷⁷ of Angelus Silesius, God and the self coincide absolutely. The times have undergone a profound change: the procreative power no longer proceeds from God, rather is God born from the soul. The mythologem of the young dying god has taken on psychological form—a sign of further assimilation and conscious realization.

[322] 4. But to turn back to the first vision: the bringing forth of the woman is followed by COPULATION. The *hieros gamos* on the mountain is a well-known motif,⁷⁸ just as, in the old alchemical pictures, the hermaphrodite has a fondness for elevated places. The alchemists likewise speak of an Adam who always carries his Eve around with him. Their *coniunctio* is an incestuous act, performed not by father and daughter but, in accordance with the changed times, by brother and sister or mother and son. The latter variant corresponds to the ancient Egyptian mythologem of Amen as Kamutef, which means ‘husband of his mother,’ or of Mut, who is the “mother of her father and daughter of her son.”⁷⁹ The idea of self-copulation is a recurrent theme in descriptions of the world creator: for instance, God splits into his masculine and feminine halves,⁸⁰ or he fertilizes himself in a manner that could easily have served as a model for the *Interrogationes* vision, if literary antecedents must be conjectured.

Thus the relevant passage in the Heliopolitan story of the Creation runs: “I, even I, had union with my clenched hand, I joined myself in an embrace with my shadow, I poured seed into my mouth, my own, I sent forth issue in the form of Shu, I sent forth moisture in the form of Tefnut.”⁸¹

[323] Although the idea of self-fertilization is not touched on in our vision, there can be no doubt that there is a close connection between this and the idea of the cosmogonic self-creator. Here, however, world creation gives place to spiritual renewal. That is why no visible creature arises from the taking in of seed; it means a nourishing of life, “that we may live.” And because, as the text itself shows, the vision should be understood on the “heavenly” or spiritual plane, the pouring out (ἀπόρροια) refers to a λόγος σπερματικός, which in the language of the gospels means a living water “springing up into eternal life.” The whole vision reminds one very much of the related alchemical symbolisms. Its drastic naturalism, unpleasantly obtrusive in comparison with the reticence of ecclesiastical language, points back on the one hand to archaic forms of religion whose ideas and modes of expression had long since been superseded, but forwards, on the other, to a still crude observation of Nature that was just beginning to assimilate the archetype of man. This attempt continued right up to the seventeenth century, when Johannes Kepler recognized the Trinity as underlying the structure of the universe—in other words, when he assimilated this archetype into the astronomer’s picture of the world.⁸²

5

[324] After this digression on the phallic synonyms for the Original Man, we will turn back to Hippolytus’ account of the central symbols of the Naassenes and continue with a list of statements about Hermes.

[325] Hermes is a conjurer of spirits (Ψυχαγωγός), a guide of souls (Ψυχοπομπός), and a begetter of souls (ψυχῶν αἴτιος). But the souls were “brought down from the blessed Man on high, the archman Adamas, ... into the form of clay, that they might serve the demiurge of this creation, Esaldaios, a fiery god, the fourth by number.”⁸³ Esaldaios corresponds to Ialdabaoth, the highest archon, and also to Saturn.⁸⁴ The “fourth” refers to the fourth Person—the devil—who is opposed to the Trinity. Ialdabaoth means “child of chaos”; hence when Goethe, borrowing from alchemical terminology, calls the devil the “strange son of chaos,” the name is a very apt one.

[326] Hermes is equipped with the golden wand.⁸⁵ With it he “drops sleep on the eyes of the dead and wakes up the sleepers.” The Naassenes referred this to Ephesians 5 : 14: “Awake, O sleeper, and arise from the dead, and Christ shall give you light.” Just as the alchemists took the well-known allegory of Christ, the *lapis angularis* or cornerstone, for their *lapis philosophorum*, so the Naassenes took it as symbolizing their Protanthropos Adam, or more precisely, the “inner man,” who is a rock or stone,

since he came from the *πέτρη τοῦ Ἀδάμαντος*, “fallen from Adamas the archman on high.”⁸⁶ The alchemists said their stone was “cut from the mountain without hands,”⁸⁷ and the Naassenes say the same thing of the inner man, who was brought down “into the form of oblivion.”⁸⁸ In Epiphanius the mountain is the Archanthropos Christ, from whom the stone or inner man was cut. As Epiphanius interprets it, this means that the inner man is begotten “without human seed,” “a small stone that becomes a great mountain.”⁸⁹

[327] The Archanthropos is the Logos, whom the souls follow “twittering,” as the bats follow Hermes in the *nekyia*. He leads them to Oceanus and—in the immortal words of Homer—to “the doors of Helios and the land of dreams.” “He [Hermes] is Oceanus, the begetter of gods and men, ever ebbing and flowing, now forth, now back.” Men are born from the ebb, and gods from the flow. “It is this, they say, that stands written: ‘I have said, you are gods, and all of you the sons of the most High.’”⁹⁰ Here the affinity or identity of God and man is explicit, in the Holy Scriptures no less than in the Naassene teachings.

6

[328] The Naassenes, as Hippolytus says,⁹¹ derived all things from a triad, which consists firstly of the “blessed nature of the blessed Man on high, Adamas,” secondly of the mortal nature of the lower man, and thirdly of the “kingless race begotten from above,” to which belong “Mariam the sought-for one, and Jothor⁹² the great wise one, and Sephora⁹³ the seer, and Moses whose generation was not in Egypt.”⁹⁴ Together these four form a marriage *quaternio*⁹⁵ of the classic type:

Their synonyms are:

MOTHER	—	FATHER
QUEEN	—	KING
THE UNKNOWN WOMAN	—	THE DISTANT LOVER
ANIMA	—	ANIMUS

[329] Moses corresponds to the husband, Sephora to the wife; Mariam (Miriam) is the sister of Moses; Jothor (Jethro) is the archetype of the wise old man and corresponds to the father-animus, if the *quaternio* is that of a woman. But the fact that Jothor is called “the great wise one” suggests that the *quaternio* is a man’s. In the case of a woman the accent that falls here on the wise man would fall on Mariam, who would then have the significance of the Great Mother. At all events our *quaternio* lacks the

incestuous brother-sister relationship, otherwise very common. Instead, Miriam has something of a mother significance for Moses (cf. Exodus 2 : 4ff.). As a prophetess (Exodus 15 : 20f.) she is a “magical” personality. When Moses took a Moor to wife—the “Ethiopian woman”—this incensed Miriam so much that she was smitten with leprosy and became “as white as snow” (Numbers 12 : 10). Miriam is therefore not altogether unsuited to play the role of the anima. The best-known anima-figure in the Old Testament, the Shulamite, says: “I am black, but comely” (Song of Songs 1 : 5). In the *Chymical Wedding* of Christian Rosenkreutz, the royal bride is the concubine of the Moorish king. Negroes, and especially Ethiopians, play a considerable role in alchemy as synonyms of the *caput corvi* and the *nigredo*.⁹⁶ They appear in the Passion of St. Perpetua⁹⁷ as representatives of the sinful pagan world.

[330] The triad is characterized by various names that may be onomatopoeic: Kaulakau, Saulasau, Zeesar.⁹⁸ Kaulakau means the higher Adam, Saulasau the lower, mortal man, and Zeesar is named the “upwards-flowing Jordan.” The Jordan was caused by Jesus to flow up-stream; it is the rising flood and this, as already mentioned, is the begetter of gods. “This, they say, is the human hermaphrodite in all creatures, whom the ignorant call ‘Geryon of the threefold body’ [that is, *ὡς ἐκ γῆς ῥέοντα*, ‘flowing from the earth’]; but the Greeks name it the celestial horn of the moon.” The text defines the above-mentioned *quaternio*, which is identical with Zeesar, the upwards-flowing Jordan, the hermaphrodite, Geryon of the threefold body, and the horn of the moon, as the cosmogonic Logos (John 1 : 1ff.), and the “life that was in him” (John 1 : 4) as a “generation of perfect men” (τέλειοι ἄνθρωποι).⁹⁹

[331] This Logos or quaternity is “the cup from which the king, drinking, draws his omens,”¹⁰⁰ or the beaker of Anacreon. The cup leads Hippolytus on to the wine miracle at Cana, which, he says, “showed forth the kingdom of heaven”; for the kingdom of heaven lies within us, like the wine in the cup. Further parallels of the cup are the ithyphallic gods of Samothrace and the Kyllenic Hermes, who signify the Original Man as well as the spiritual man who is reborn. This last is “in every respect consubstantial” with the Original Man symbolized by Hermes. For this reason, says Hippolytus, Christ said that one must eat of his flesh and drink of his blood, for he was conscious of the *individual nature* of each of his disciples, and also of the need of each “to come to his own special nature.”¹⁰¹

[332] Another synonym is Korybas, who was descended from the crown of the head and from the unformed (ἄχαρακτηρίστων) brain, like the Euphrates from Eden, and permeates all things. His image exists—unrecognized—“in earthly form.” He is the god who *dwells in the flood*. I need not describe this symbol here, as I have already discussed it at some length in one of my Paracelsus studies.¹⁰² So far as Korybas is concerned, the parallel between him and the Protanthropos is explained by the

ancient view that the corybants were the original men.¹⁰³ The name “Korybas” does not denote a particular personality, but rather the anonymous member of a collectivity, such as the Curetes, Cabiri, Dactyls, etc. Etymologically, it has been brought into connection with κορυφή (crown of the head), though this is not certain.¹⁰⁴ Korybas seems in our text to be the name of a single personality—the Kyllenian Hermes, who appears here as synonymous with the Cabiri of Samothrace. With reference to this Hermes the text says: “Him the Thracians ... call Korybas.”¹⁰⁵ I have suggested in an earlier publication¹⁰⁶ that this unusual single personality may perhaps be a product of contamination with Korybas, known to us from the Dionysus legend, because he too seems to have been a phallic being, as we learn from a scholium to Lucian’s *De dea Syria*.¹⁰⁷

[333] From the centre of the “perfect man” flows the ocean (where, as we have said, the god dwells). The “perfect” man is, as Jesus says, the “true door,” through which the “perfect” man must go in order to be reborn. Here the problem of how to translate “teleios” becomes crucial; for—we must ask—why should anyone who is “perfect” need renewal through rebirth?¹⁰⁸ One can only conclude that the perfect man was not so perfected that no further improvement was possible. We encounter a similar difficulty in Philippians 3 : 12, where Paul says: “Not that I ... am already perfect” (τετελειώμαι). But three verses further on he writes: “Let us then, as many as are perfect (τέλειοι) be of this mind.” The Gnostic use of τέλειος obviously agrees with Paul’s. The word has only an approximate meaning and amounts to much the same thing as πνευματικός, ‘spiritual,’¹⁰⁹ which is not connected with any conception of a definite degree of perfection or spirituality. The word “perfect” gives the sense of the Greek τέλειος correctly only when it refers to God. But when it applies to a man, who in addition is in need of rebirth, it can at most mean “whole” or “complete,” especially if, as our text says, the complete man cannot even be saved unless he passes through this door.¹¹⁰

[334] The father of the “perfectus” is the higher man or Protanthropos, who is “not clearly formed” and “without qualities.” Hippolytus goes on to say that he is called Papa (Attis) by the Phrygians. He is a bringer of peace and quells “the war of the elements” in the human body,¹¹¹ a statement we meet again word for word in medieval alchemy, where the *filius philosophorum* “makes peace between enemies or the elements.”¹¹² This “Papa” is also called νέκυσ (cadaver), because he is buried in the body like a mummy in a tomb. A similar idea is found in Paracelsus; his treatise *De vita longa* opens with the words: “Life, verily, is naught but a kind of embalmed mummy, which preserves the mortal body from the mortal worms.”¹¹³ The body lives only from the “Mumia,” through which the “peregrinus microcosmus,” the wandering microcosm (corresponding to the macrocosm), rules the physical body.¹¹⁴ His synonyms are the Adech, Archeus, Protothoma, Ides, Idechtrum, etc. He is the

“Protoplast” (the first-created), and, as Ides, “the door whence all created things have come.”¹¹⁵ (Cf. the “true door” above!) The Mumia is born together with the body and sustains it,¹¹⁶ though not to the degree that the “supercelestial Mumia” does.¹¹⁷ The latter would correspond to the higher Adam of the Naassenes. Of the Ideus or Ides Paracelsus says that in it “there is but One Man ... and he is the Protoplast.”¹¹⁸

[335] The Paracelsian Mumia therefore corresponds in every way to the Original Man, who forms the microcosm in the mortal man and, as such, shares all the powers of the macrocosm. Since it is often a question of cabalistic influences in Paracelsus, it may not be superfluous in this connection to recall the figure of the cabalistic *Metatron*. In the *Zohar* the Messiah is described as the “central column” (i.e., of the Sephiroth system), and of this column it is said: “The column of the centre is Metatron, whose name is like that of the Lord. It is created and constituted to be his image and likeness, and it includes all gradations from Above to Below and from Below to Above, and binds [them] together in the centre.”¹¹⁹

[336] The dead man, Hippolytus continues, will rise again by passing through the “door of heaven.” Jacob saw the gate of heaven on his way to Mesopotamia, “but they say Mesopotamia is the stream of the great ocean that flows from the midst of the perfect man.” This is the gate of heaven of which Jacob said: “How terrible is this place! This is no other but the house of God, and the gate of heaven.”¹²⁰ The stream that flows out of the Original Man (the gate of heaven) is interpreted here as the flood-tide of Oceanus, which, as we have seen, generates the gods. The passage quoted by Hippolytus probably refers to John 7 : 38 or to an apocryphal source common to both. The passage in John—“He who believes in me, as the scripture has said, Out of his belly shall flow rivers of living water”—refers to a nonbiblical source, which, however, seemed scriptural to the author. Whoever drinks of this water, in him it shall be a fountain of water springing up into eternal life, says Origen.¹²¹ This water is the “higher” water, the *aqua doctrinae*, the rivers from the belly of Christ, and the divine life as contrasted with the “lower” water, the *aqua abyssi*, where the darkneses are, and where dwell the Prince of this world and the deceiving dragon and his angels.¹²² The river of water is the “Saviour” himself.¹²³ Christ is the river that pours into the world through the four gospels,¹²⁴ like the rivers of Paradise. I have purposely cited the ecclesiastical allegories in greater detail here, so that the reader can see how saturated Gnostic symbolism is in the language of the Church, and how, on the other hand, particularly in Origen, the liveliness of his amplifications and interpretations has much in common with Gnostic views. Thus, to him as to many of his contemporaries and successors, the idea of the cosmic correspondence of the “spiritual inner man” was something quite familiar: in his first Homily on Genesis he says that God first created heaven, the whole spiritual

substance, and that the counterpart of this is “our mind, which is itself a spirit, that is, it is our spiritual inner man which sees and knows God.”¹²⁵

[337] These examples of Christian parallels to the partly pagan views of the Gnostics may suffice to give the reader a picture of the mentality of the first two centuries of our era, and to show how closely the religious teachings of that age were connected with psychic facts.

[338] Now let us come back to the symbols listed by Hippolytus. The Original Man in his *latent state*—so we could interpret the term ἀχαρακτηριστός—is named *Aipolos*, “not because he feeds he-goats and she-goats,” but because he is ἀειπόλος, the Pole that turns the cosmos round.¹²⁶ This recalls the parallel ideas of the alchemists, previously mentioned, about Mercurius, who is found at the North Pole. Similarly the Naassenes named *Aipolos*—in the language of the *Odyssey*—*Proteus*. Hippolytus quotes Homer as follows: “This place is frequented by the Old Man of the Sea, immortal Proteus the Egyptian ... who always tells the truth ... ”¹²⁷ Homer then continues: “ ... who owes allegiance to Poseidon and knows the sea in all its depths.”¹²⁸ Proteus is evidently a personification of the unconscious:¹²⁹ it is difficult to “catch this mysterious old being ... he might see me first, or know I am there and keep away.” One must seize him quickly and hold him fast, in order to force him to speak. Though he lives in the sea, he comes to the lonely shore at the sacred noon-tide hour, like an amphibian, and lies down to sleep among his seals. These, it must be remembered, are warm-blooded—that is to say, they can be thought of as contents of the unconscious that are capable of becoming conscious, and at certain times they appear spontaneously in the light and airy world of consciousness. From Proteus the wandering hero learns how he may make his way homewards “over the fish-giving sea,” and thus the Old Man proves to be a psychopomp.¹³⁰ Οὐ πιπρασκέται, Hippolytus says of him, which can best be translated by the French colloquialism “il ne se laisse pas rouler.” “But,” the text goes on, “he spins round himself and changes his shape.” He behaves, therefore, like a revolving image that cannot be grasped. What he says is νημερτής, ‘in sooth,’ infallible; he is a “soothsayer.” So it is not for nothing that the Naassenes say that “knowledge of the complete man is deep indeed and hard to comprehend.”

[339] Subsequently, Proteus is likened to the green ear of corn in the Eleusinian mysteries. To him is addressed the cry of the celebrants: “The Mistress has borne the divine boy, Brimo has borne Brimos!” A “lower” correspondence to the high Eleusinian initiations, says Hippolytus, is the dark path of Persephone, who was abducted by the god of the underworld; it leads “to the grove of adored Aphrodite, who rouses the sickness of love.” Men should keep to this lower path in order to be initiated “into the great and heavenly” mysteries.¹³¹ For this mystery is “the gate of

heaven” and the “house of God,” where alone the good God dwells, who is destined only for the spiritual men. They should put off their garments and all become νυμφίοι, ‘bridegrooms,’ “robbed of their virility by the virgin spirit.”¹³² This is an allusion to Revelation 14 : 4: “ ... for they are virgins. These ... follow the Lamb whithersoever he goeth.”¹³³

[340] Among the objective symbols of the self I have already mentioned the Naassene conception of the ἄμεριστος στιγμή, the indivisible point. This conception fully accords with that of the “Monad” and “Son of Man” in Monoïmos. Hippolytus says:

Monoïmos ... thinks that there is some such Man as Oceanus, of whom the poet speaks somewhat as follows: Oceanus, the origin of gods and of men.¹³⁴ Putting this into other words, he says that the Man is All, the source of the universe, unbegotten, incorruptible, everlasting; and that there is a Son of the aforesaid Man, who is begotten and capable of suffering, and whose birth is outside time, neither willed nor predetermined ... This Man is a single Monad, uncompounded [and] indivisible, [yet] compounded [and] divisible; loving and at peace with all things [yet] warring with all things and at war with itself in all things; unlike and like [itself], as it were a musical harmony containing all things ... showing forth all things and giving birth to all things. It is its own mother, its own father, the two immortal names. The emblem of the perfect Man, says Monoïmos, is the jot or tittle.¹³⁵ This one tittle is the uncompounded, simple, unmixed Monad, having its composition from nothing whatsoever, yet composed of many forms, of many parts. That single, indivisible jot is the many-faced, thousand-eyed and thousand-named, the jot of the iota. This is the emblem of that perfect and indivisible Man. ... The Son of the Man is the one iota, the one jot flowing from on high, full and filling all things, containing in himself everything that is in the Man, the Father of the Son of Man.¹³⁶

[341] This paradoxical idea of the Monad in Monoïmos describes the psychological nature of the self as conceived by a thinker of the second century under the influence of the Christian message.

[342] A parallel conception is to be found in Plotinus, who lived a little later (c. 205–70). He says in the *Enneads*: “Self-knowledge reveals the fact that the soul’s natural movement is not in a straight line, unless indeed it have undergone some deviation. On the contrary, it circles around something interior, around a centre. Now the centre is that from which proceeds the circle, that is, the soul. The soul will therefore move around the centre, that is, around the principle from which she proceeds; and, trending towards it, she will attach herself to it, as indeed all souls should do. The souls of the divinities ever direct themselves towards it, and that is the secret of their divinity; for divinity consists in being attached to the centre. ... Anyone who withdraws from it is a man who has remained un-unified, or who is a brute.”¹³⁷

- [343] Here the point is the centre of a circle that is created, so to speak, by the circumambulation of the soul. But this point is the “centre of all things,” a God-image. This is an idea that still underlies the mandala-symbols in modern dreams.¹³⁸
- [344] Of equal significance is the idea, also common among the Gnostics, of the σπινθήρ or spark.¹³⁹ It corresponds to the *scintilla vitae*, the “little spark of the soul” in Meister Eckhart,¹⁴⁰ which we meet with rather early in the teachings of Saturninus.¹⁴¹ Similarly Heraclitus, “the physicist,” is said to have conceived the soul as a “spark of stellar essence.”¹⁴² Hippolytus says that in the doctrine of the Sethians the darkness held “the brightness and the spark of light in thrall,”¹⁴³ and that this “very small spark” was finely mingled in the dark waters¹⁴⁴ below.¹⁴⁵ Simon Magus¹⁴⁶ likewise teaches that in semen and milk there is a very small spark which “increases and becomes a power boundless and immutable.”¹⁴⁷
- [345] The symbol of the point is found also in alchemy, where it stands for the arcane substance; in Michael Maier¹⁴⁸ it signifies “the purity or homogeneity of the essence.” It is the “punctum solis”¹⁴⁹ in the egg-yolk, which grows into a chick. In Khunrath it represents Sapientia in the form of the “salt-point”,¹⁵⁰ in Maier it symbolizes gold.¹⁵¹ To the scholiast of the “Tractatus aureus” it is the midpoint, the “circulus exiguus” and “mediator” which reconciles the hostile elements and “by persistent rotation changes the angular form of the square into a circular one like itself.”¹⁵² For Dorn the “punctum vix intelligibile” is the starting point of creation.¹⁵³ Similarly John Dee says that all things originated from the point and the monad.¹⁵⁴ Indeed, God himself is simultaneously both the centre and the circumference. In Mylius the point is called the bird of Hermes.¹⁵⁵ In the “Novum lumen” it is spirit and fire, the life of the arcane substance, similar to the spark.¹⁵⁶ This conception of the point is more or less the same as that of the Gnostics.
- [346] From these citations we can see how Christ was assimilated to symbols that also meant the kingdom of God, for instance the grain of mustard-seed, the hidden treasure, and the pearl of great price. He and his kingdom have the same meaning. Objections have always been made to this dissolution of Christ’s personality, but what has not been realized is that it represents at the same time an assimilation and integration of Christ into the human psyche.¹⁵⁷ The result is seen in the growth of the human personality and in the development of consciousness. These specific attainments are now gravely threatened in our antichristian age, not only by the sociopolitical delusional systems, but above all by the rationalistic hybris which is tearing our consciousness from its transcendent roots and holding before it immanent goals.

XIV

THE STRUCTURE AND DYNAMICS OF THE SELF

[347] The examples given in the previous chapter should be sufficient to describe the progressive assimilation and amplification of the archetype that underlies ego-consciousness. Rather than add to their number unnecessarily, I will try to summarize them so that an over-all picture results. From various hints dropped by Hippolytus, it is clear beyond a doubt that many of the Gnostics were nothing other than psychologists. Thus he reports them as saying that “the soul is very hard to find and to comprehend,”¹ and that knowledge of the whole man is just as difficult. “For knowledge of man is the beginning of wholeness (*τελείωσις*), but knowledge of God is perfect wholeness (*ἀπηρτισμένη τελείωσις*).” Clement of Alexandria says in the *Paedagogus* (III, 1): “Therefore, as it seems, it is the greatest of all disciplines to know oneself; for when a man knows himself, he knows God.” And Monoïmos, in his letter to Theophrastus, writes: “Seek him from out thyself, and learn who it is that taketh possession of everything in thee, saying: *my god, my spirit, my understanding, my soul, my body*; and learn whence is sorrow and joy, and love and hate, and waking though one would not, and sleeping though one would not, and getting angry though one would not, and falling in love though one would not. And if thou shouldst closely investigate these things, thou wilt find Him in thyself, the One and the Many, like to that little point [*κεραία*], for it is in thee that he hath his origin and his deliverance.”²

[348] One cannot help being reminded, in reading this text, of the Indian idea of the Self as brahman and atman, for instance in the Kena Upanishad: “By whom willed and directed does the mind fly forth? By whom commanded does the first breath move? Who sends forth the speech we utter here? What god is it that stirs the eye and ear? The hearing of the ear, the thinking of the mind, the speaking of the speech ... That which speech cannot express, by which speech is expressed ... which the mind cannot think, by which the mind thinks, know that as Brahman.”³

[349] Yajñyavalkya defines it in indirect form in the Brihadāranyaka Upanishad: “He who dwells in all beings, yet is apart from all beings, whom no beings know, whose body is all beings, who controls all beings from within, he is your Self, the inner controller, the immortal. ... There is no other seer but he, no other hearer but he, no other perceiver but he, no other knower but he. He is your Self, the inner controller, the immortal. All else is of sorrow.”⁴

[350] In Monoïmos, who was called “the Arab,” Indian influences are not impossible. His statement is significant because it shows that even in the second century⁵ the ego was considered the exponent of an all-embracing totality, the self—a thought that by no means all psychologists are familiar with even today. These insights, in the Near East as in India, are the product of intense introspective observation that can only be psychological. *Gnosis is undoubtedly a psychological knowledge whose contents derive from the unconscious.* It reached its insights by concentrating on the “subjective factor,”⁶ which consists empirically in the demonstrable influence that the collective unconscious exerts on the conscious mind. This would explain the astonishing parallelism between Gnostic symbolism and the findings of the psychology of the unconscious.

[351] I would like to illustrate this parallelism by summarizing the symbols previously discussed. For this purpose we must first of all review the facts that led psychologists to conjecture an archetype of wholeness, i.e., the self. These are in the first place dreams and visions; in the second place, products of active imagination in which symbols of wholeness appear. The most important of these are geometrical structures containing elements of the circle and quaternity;⁷ namely, circular and spherical forms on the one hand, which can be represented either purely geometrically or as objects; and, on the other hand, quadratic figures divided into four or in the form of a cross. They can also be four objects or persons related to one another in meaning or by the way they are arranged. Eight, as a multiple of four, has the same significance. A special variant of the quaternity motif is the dilemma of 3 + 1. Twelve (3×4) seems to belong here as a solution of the dilemma and as a symbol of wholeness (zodiac, year). Three can be regarded as a relative totality, since it usually represents either a spiritual totality that is a product of thought, like the Trinity,⁸ or else an instinctual, chthonic one, like the triadic nature of the gods of the underworld—the “lower triad.” Psychologically, however, three—if the context indicates that it refers to the self—should be understood as a defective quaternity or as a stepping-stone towards it.⁹ Empirically, a triad has a trinity opposed to it as its complement. The complement of the quaternity is unity.¹⁰

[352] From the circle and quaternity motif is derived the symbol of the geometrically formed crystal and the wonder-working stone. From here analogy formation leads on to the city,¹¹ castle, church,¹² house,¹³ and vessel.¹⁴ Another variant is the wheel (*rota*). The former motif emphasizes the ego’s containment in the greater dimension of the self; the latter emphasizes the rotation which also appears as a ritual circumambulation. Psychologically, it denotes concentration on and preoccupation with a centre, conceived as the centre of a circle and thus formulated as a point. This leads easily enough to a relationship to the heavenly Pole and the starry bowl of heaven rotating round it. A parallel is the horoscope as the “wheel of birth.”

[353] The image of the city, house, and vessel brings us to their content—the inhabitant of the city or house, and the water contained in the vessel. The inhabitant, in his turn, has a relationship to the quaternity, and to the fifth as the unity of the four. The water appears in modern dreams and visions as a blue expanse reflecting the sky, as a lake, as four rivers (e.g., Switzerland as the heart of Europe with the Rhine, Ticino, Rhone, and Inn, or the Garden of Eden with the Gihon, Pison, Hiddekel, and Euphrates), as healing water and consecrated water, etc. Sometimes the water is associated with fire, or even combined with it as fire-water (wine, alcohol).

[354] The inhabitant of the quadratic space leads to the human figure. Apart from the geometrical and arithmetical symbols, this is the commonest symbol of the self. It is either a god or a godlike human being, a prince, a priest, a great man, an historical personality, a dearly loved father, an admired example, the successful elder brother—in short, a figure that transcends the ego personality of the dreamer. There are corresponding feminine figures in a woman's psychology.

[355] Just as the circle is contrasted with the square, so the quaternity is contrasted with the 3 + 1 motif, and the positive, beautiful, good, admirable, and lovable human figure with a daemonic, misbegotten creature who is negative, ugly, evil, despicable and an object of fear. Like all archetypes, the self has a paradoxical, antinomial character. It is male and female, old man and child, powerful and helpless, large and small. The self is a true "complexio oppositorum,"¹⁵ though this does not mean that it is anything like as contradictory in itself. It is quite possible that the seeming paradox is nothing but a reflection of the enantiodromian changes of the conscious attitude which can have a favourable or an unfavourable effect on the whole. The same is true of the unconscious in general, for its frightening figures may be called forth by the fear which the conscious mind has of the unconscious. The importance of consciousness should not be underrated; hence it is advisable to relate the contradictory manifestations of the unconscious causally to the conscious attitude, at least in some degree. But consciousness should not be overrated either, for experience provides too many incontrovertible proofs of the autonomy of unconscious compensatory processes for us to seek the origin of these antinomies only in the conscious mind. Between the conscious and the unconscious there is a kind of "uncertainty relationship," because the observer is inseparable from the observed and always disturbs it by the act of observation. In other words, exact observation of the unconscious prejudices observation of the conscious and vice versa.

[356] Thus the self can appear in all shapes from the highest to the lowest, inasmuch as these transcend the scope of the ego personality in the manner of a daimonion. It goes without saying that the self also has its theriomorphic symbolism. The

commonest of these images in modern dreams are, in my experience, the elephant, horse, bull, bear, white and black birds, fishes, and snakes. Occasionally one comes across tortoises, snails, spiders, and beetles. The principal plant symbols are the flower and the tree. Of the inorganic products, the commonest are the mountain and lake.

[357] Where there is an undervaluation of sexuality the self is symbolized as a phallus. Undervaluation can consist in an ordinary repression or in overt devaluation. In certain differentiated persons a purely biological interpretation and evaluation of sexuality can also have this effect. Any such conception overlooks the spiritual and “mystical” implications of the sexual instinct.¹⁶ These have existed from time immemorial as psychic facts, but are devalued and repressed on rationalistic and philosophical grounds. In all such cases one can expect an unconscious phallicism by way of compensation. A good example of this is the mainly sexualistic approach to the psyche that is to be found in Freud.

2

[358] Coming now to the Gnostic symbols of the self, we find that the Naassenes of Hippolytus lay most emphasis on the human images; of the geometrical and arithmetical symbols the most important are the quaternity, the ogdoad, the trinity, and unity. Here we shall give our attention mainly to the totality symbol of the quaternity, and above all to the symbol mentioned in section 6 of the last chapter, which I would like to call, for short, the Moses Quaternio. We shall then consider the second Naassene Quaternio, the one with the four rivers of Paradise, which I shall call the Paradise Quaternio. Though differently constituted, the two quaternios express roughly the same idea, and in what follows I shall try not only to relate them to one another psychologically, but also to bring out their connection with later (alchemical) quaternary structures. In the course of these investigations, we shall see how far the two quaternios are characteristic of the Gnostic age, and how far they can be correlated with the archetypal history of the mind in the Christian aeon.

[359] The quaternity in the Moses Quaternio¹⁷ is evidently constructed according to the following schema:

The Moses Quaternio

[360] The “lower Adam” corresponds to the ordinary mortal man, Moses to the culture-hero and lawgiver, and thus, on a personalistic level, to the “father”; Zipporah, as the daughter of a king and priest, to the “higher mother.” For the ordinary man, these two represent the “royal pair,”¹⁸ which for Moses corresponds on the one hand to his “higher man,” and on the other hand to his anima, Miriam. The “higher” man is synonymous with the “spiritual, inner” man, who is represented in the quaternio by Jethro. Such is the meaning of the quaternio when seen from the standpoint of Moses. But since Moses is related to Jethro as the lower Adam, or ordinary man, is to Moses, the quaternio cannot be understood merely as the structure of Moses’ personality, but must be looked at from the standpoint of the lower Adam as well. We then get the following quaternio:

[361] From this we can see that the Naassene quaternio is in a sense unsymmetrical, since it leads to a senarius (hexad) with an exclusively upward tendency: Jethro and Miriam have to be added to the above four as a kind of third storey, as the higher counterparts of Moses and Zipporah. We thus get a gradual progression, or series of steps leading from the lower to the higher Adam. This psychology evidently underlies the elaborate lists of Valentinian syzygies. The lower Adam or somatic man consequently appears as the lowest stage of all, from which there can be only an

ascent. But, as we have seen, the four persons in the Naassene quaternio are chosen so skilfully that it leaves room not only for the incest motif [Jethro-Miriam], which is never lacking in the marriage quaternio, but also for the extension of the ordinary man's psychic structure downwards, towards the sub-human, the dark and evil side represented by the shadow. That is to say, Moses marries the "Ethiopian woman," and Miriam, the prophetess and mother-sister, becomes "leprous," which is clear proof that her relation to Moses has taken a negative turn. This is further confirmed by the fact that Miriam "spoke against" Moses and even stirred up his brother Aaron against him. Accordingly, we get the following senarius:

THE LOWER ADAM _____ EVE
 MOSES _____ ETHIOPIAN WOMAN JETHRO, *the heathen priest*
 _____ MIRIAM, *the "white" leper*

[362] Though nothing is said against Jethro, "the great wise one," in the Bible story, yet as a Midianite priest he did not serve Yahweh and did not belong to the chosen people, but departs from them to his own country.¹⁹ He seems also to have borne the name Reguel ("friend of God") and to have helped Moses with his superior wisdom. He is, accordingly, a numinous personality, the embodiment of an archetype, obviously that of the "wise old man" who personifies the spirit in myth and folklore. The spirit, as I have shown elsewhere,²⁰ has a dichotomous nature. Just as Moses in this case represents his own shadow by taking to wife the black daughter of the earth, so Jethro, in his capacity as heathen priest and stranger, has to be included in the quaternio as the "lower" aspect of himself, with a magical and nefarious significance (though this is not vouched for in the text).²¹

[363] As I have already explained, the Moses Quaternio is an individual variant of the common marriage quaternio found in folklore.²² It could therefore be designated just as well with other mythical names. The basic schema of the cross-cousin marriage:

has numerous variants; for instance the sister can be replaced by the mother or the wife's brother by a fatherlike figure. But the incest motif remains a characteristic feature. Since the schema is a primary one characterizing the psychology of love relationships and also of the transference, it will, like all characterological schemata, obviously manifest itself in a "favourable" and an "unfavourable" form, for the relationships in question also exhibit the same ambivalence: everything a man does has a positive and a negative aspect.

[364] The reader, therefore, should not let himself be put off by the somewhat scurrilous Gnostic nomenclature. The names are accidental, whereas the schema

itself is universally valid. The same is true of the “Shadow Quaternio,” for which I have kept the same names because the biography of Moses offers certain features that are well suited to illustrate the shadow.

[365] The lower senarius reaches its nadir not in the “lower Adam” but in his dark, theriomorphic prefiguration—the *serpent* who was created before man, or the Gnostic *Naas*. Accordingly we have the structures shown on the facing page.

[366] This schema is no idle parlour game, because the texts make it abundantly clear that the Gnostics were quite familiar with the dark aspect of their metaphysical figures, so much so that they caused the greatest offence on that account. (One has only to think of the identification of the good God with Priapus,²³ or of the Anthropos with the ithyphallic Hermes.) It was, moreover, the Gnostics—e.g., Basilides—who exhaustively discussed the problem of evil (*πόθεν τὸ κακόν*;—‘whence comes evil?’). The serpentine form of the Nous and the Agathodaimon does not mean that the serpent has only a good aspect. Just as the Apophis-serpent was the traditional enemy of the Egyptian sun-god, so the devil, “that ancient serpent,”²⁴ is the enemy of Christ, the “novus Sol.” The good, perfect, spiritual God was opposed by an imperfect, vain, ignorant, and incompetent demiurge. There were archontic Powers that gave to mankind a corrupt “chirographum” (handwriting) from which Christ had to redeem them.²⁵

[367] With the dawn of the second millennium the accent shifted more and more towards the dark side. The demiurge became the devil who had created the world, and, a little later, alchemy began to develop its conception of Mercurius as the partly material, partly immaterial spirit that penetrates and sustains all things, from stones and metals to the highest living organisms. In the form of a snake he dwells inside the earth, has a body, soul, and spirit, was believed to have a human shape as the homunculus or *homo altus*, and was regarded as the chthonic God.²⁶ From this we can see clearly that the serpent was either a forerunner of man or a distant copy of the Anthropos, and how justified is the equation $Naas = Nous = Logos = Christ = Higher Adam$. The medieval extension of this equation towards the dark side had, as I have said, already been prepared by Gnostic phallicism. This appears as early as the fifteenth century in the alchemical Codex Ashburnham 1166,²⁷ and in the sixteenth century Mercurius was identified with Hermes Kyllenios.²⁸

A. The Anthropos Quaternio

B. The Shadow Quaternio

[368] It is significant that Gnostic philosophy found its continuation in alchemy.²⁹ “Mater Alchimia” is one of the mothers of modern science, and modern science has given us an unparalleled knowledge of the “dark” side of matter. It has also penetrated into the secrets of physiology and evolution, and made the very roots of life itself an object of investigation. In this way the human mind has sunk deep into the sublunary world of matter, thus repeating the Gnostic myth of the Nous, who,

beholding his reflection in the depths below, plunged down and was swallowed in the embrace of Physis. The climax of this development was marked in the eighteenth century by the French Revolution, in the nineteenth century by scientific materialism, and in the twentieth century by political and social “realism,” which has turned the wheel of history back a full two thousand years and seen the recrudescence of the despotism, the lack of individual rights, the cruelty, indignity, and slavery of the pre-Christian world, whose “labour problem” was solved by the “ergastulum” (convict-camp). The “transvaluation of all values” is being enacted before our eyes.

[369] The development briefly outlined here seems to have been anticipated in medieval and Gnostic symbolism, just as the Antichrist was in the New Testament. How this occurred I will endeavour to describe in what follows. We have seen that, as the higher Adam corresponds to the lower, so the lower Adam corresponds to the serpent. For the mentality of the Middle Ages and of late antiquity, the first of the two double pyramids, the *Anthropos Quaternio*, represents the world of the spirit, or metaphysics, while the second, the *Shadow Quaternio*, represents sublunary nature and in particular man’s instinctual disposition, the “flesh”—to use a Gnostic-Christian term—which has its roots in the animal kingdom or, to be more precise, in the realm of warm-blooded animals. The nadir of this system is the cold-blooded vertebrate, the snake,³⁰ for with the snake the psychic rapport that can be established with practically all warm-blooded animals comes to an end. That the snake, contrary to expectation, should be a counterpart of the Anthropos is corroborated by the fact—of especial significance for the Middle Ages—that it is on the one hand a well-known allegory of Christ, and on the other hand appears to be equipped with the gift of wisdom and of supreme spirituality.³¹ As Hippolytus says, the Gnostics identified the serpent with the spinal cord and the medulla. These are synonymous with the reflex functions.

[370] The second of these quaternios is the negative of the first; it is its shadow. By “shadow” I mean the inferior personality, the lowest levels of which are indistinguishable from the instinctuality of an animal. This is a view that can be found at a very early date, in the idea of the *προσφύης ψυχή*, the ‘excremental soul’³² of Isidorus.³³ We also meet it in Origen, who speaks of the animals contained in man.³⁴ Since the shadow, in itself, is unconscious for most people, the snake would correspond to what is totally unconscious and incapable of becoming conscious, but which, as the collective unconscious and as instinct, seems to possess a peculiar wisdom of its own and a knowledge that is often felt to be supernatural. This is the treasure which the snake (or dragon) guards, and also the reason why the snake signifies evil and darkness on the one hand and wisdom on the other. Its unrelatedness, coldness, and dangerousness express the instinctuality that with ruthless cruelty rides roughshod over all moral and any other human wishes and

considerations and is therefore just as terrifying and fascinating in its effects as the sudden glance of a poisonous snake.

[371] In alchemy the snake is the symbol of *Mercurius non vulgi*, who was bracketed with the god of revelation, Hermes. Both have a pneumatic nature. The *serpens Mercurii* is a chthonic spirit who dwells in matter, more especially in the bit of original chaos hidden in creation, the *massa confusa* or *globosa*. The snake-symbol in alchemy points back to historically earlier images. Since the *opus* was understood by the alchemists as a recapitulation or imitation of the creation of the world, the serpent of Mercurius, that crafty and deceitful god, reminded them of the serpent in the Garden of Eden, and therefore of the devil, the tempter, who on their own admission played all sorts of tricks on them during their work. Mephistopheles, whose “aunt is the snake,” is Goethe’s version of the alchemical familiar, Mercurius. Like the dragon, Mercurius is the slippery, evasive, poisonous, dangerous forerunner of the hermaphrodite, and for that reason he has to be overcome.

[372] For the Naassenes Paradise was a quaternity parallel with the Moses quaternio and of similar meaning. Its fourfold nature consisted in the four rivers, Pison, Gihon, Hiddekel, and Phrat.³⁵ The serpent in Genesis is an illustration of the personified treenumen; hence it is traditionally represented in or coiled round the tree. It is the tree’s voice, which persuades Eve—in Luther’s version—that “it would be good to eat of the tree, and pleasant to behold that it is a lusty tree.” In the fairytale of “The Spirit in the Bottle,” Mercurius can likewise be interpreted as a treenumen.³⁶ In the Ripley “Scrowle” Mercurius appears as a snake in the shape of a Melusina descending from the top of the Philosophical Tree (“tree of knowledge”).³⁷ The tree stands for the development and phases of the transformation process,³⁸ and its fruits or flowers signify the consummation of the work.³⁹ In the fairytale Mercurius is hidden in the roots of a great oak-tree, i.e., in the earth. For it is in the interior of the earth that the Mercurial serpent dwells.

[373] For the alchemists Paradise was a favourite symbol of the *albedo*⁴⁰ the regained state of innocence, and the source of its rivers is a symbol of the *aqua permanens*.⁴¹ For the Church Fathers Christ is this source,⁴² and Paradise means the ground of the soul from which the fourfold river of the Logos bubbles forth.⁴³ We find the same symbol in the alchemist and mystic John Pordage: divine Wisdom is a “New Earth, the heavenly Land. ... For from this Earth grew all the Trees of Life. ... Thus did Paradise ... rise up from the Heart and Centre of this New Earth, and thus did the lost Garden of Eden flourish in greenness.”⁴⁴

[374] The snake symbol brings us to the images of Paradise, tree, and earth. This amounts to an evolutionary regression from the animal kingdom back to plants and

inorganic nature, epitomized in alchemy by the secret of matter, the *lapis*. Here the *lapis* is not to be understood as the end product of the *opus* but rather as its initial material. This arcane substance was also called *lapis* by the alchemists. The symbolism here described can be represented diagrammatically as another quaternio or double pyramid:

C. The Paradise Quaternio

[375] The *lapis* was thought of as a unity and therefore often stands for the *prima materia* in general. But just as the latter is a bit of the original chaos which was believed to be hidden somewhere in metals, particularly in mercury, or in other substances, and is not in itself a simple thing (as the name “*massa confusa*” shows), so too the *lapis* consists of the four elements or has to be put together from them.⁴⁵ In the chaos the elements are not united, they are merely coexistent and have to be combined through the alchemical procedure. They are even hostile to one another and will not unite of their own accord. They represent, therefore, an original state of conflict and mutual repulsion. This image serves to illustrate the splitting up or unfolding of the original unity into the multiplicity of the visible world. Out of the split-up quaternity the *opus* puts together the unity of the *lapis* in the realm of the inorganic. As the *filius macrocosmi* and a living being, the *lapis* is not just an allegory but is a direct parallel of Christ⁴⁶ and the higher Adam, of the heavenly Original Man, of the second Adam (Christ), and of the serpent. The nadir of this third quaternio is therefore a further counterpart of the Anthropos.

[376] As already mentioned, the constitution of the *lapis* rests on the union of the four elements,⁴⁷ which in their turn represent an unfolding of the unknowable inchoate state, or chaos. This is the *prima materia*, the arcanum, the primary substance, which in Paracelsus and his followers is called the *increated* and is regarded as coeternal with God—a correct interpretation of the Tehom in Genesis 1 : 2: “And the [uncreated] earth was without form and void, and darkness was upon the face of the deep; and the Spirit of God [brooded] over the face of the waters.” This primary substance is round (*massa globosa, rotundum, στοιχείον στρογγύλον*), like the world and the world-soul; it is in fact the world-soul and the world-substance in one. It is the “stone that has a spirit,”⁴⁸ in modern parlance the most elementary building-stone in the architecture of matter, the atom, which is an intellectual model. The alchemists describe the “round element” now as primal water, now as primal fire, or as pneuma, primal earth, or “*corpusculum nostrae sapientiae*,” the little body of our wisdom.⁴⁹ As water or fire it is the universal solvent; as stone and metal it is something that has to be dissolved and changed into air (pneuma, spirit).

[377] This *lapis* symbolism can once more be visualized diagrammatically as a double pyramid:

D. The Lapis Quaternio

Zosimos calls the *rotundum* the omega element (Ω), which probably signifies the head.⁵⁰ The skull is mentioned as the vessel of transformation in the Sabaeen treatise “Platonis liber quattorum,”⁵¹ and the “Philosophers” styled themselves “children of the golden head,”⁵² which is probably synonymous with “filii sapientiae.” The *vas* is often synonymous with the *lapis*, so that there is no difference between the vessel and its content; in other words, it is the same arcanum.⁵³ According to the old view the soul is round⁵⁴ and the vessel must be round too, like the heavens or the world.⁵⁵ The form of the Original Man is round. Accordingly Dorn says that the vessel “should be made from a kind of squaring of the circle, so that the spirit and the soul of our material, separated from its body, may raise the body with them to the height of their own heaven.”⁵⁶ The anonymous author of the scholia to the “Tractatus aureus” also writes about the squaring of the circle and shows a square whose corners are formed by the four elements. In the centre there is a small circle. The author says: “Reduce your stone to the four elements, rectify and combine them into one, and you will have the whole magistry. This One, to which the elements must be reduced, is that little circle in the centre of this squared figure. It is the mediator, making peace between the enemies or elements.”⁵⁷ In a later chapter he depicts the vessel, “the true philosophical Pelican,”⁵⁸ as shown on the next page.⁵⁹

[378] He comments: “A is the inside, as it were the origin and source from which the other letters flow, and likewise the final goal to which all the others flow back, as rivers flow into the ocean or into the great sea.” This explanation is enough to show that the vessel is nothing else but a mandala, symbolizing the self or the higher Adam with his four emanations (like Horus with his four sons). The author calls it the “Septenarius magicus occultus” (the hidden magic number, seven).⁶⁰ Likewise Maria the Prophetess says: “The Philosophers teach everything except the Hermetic vessel, because that is divine and is hidden from the Gentiles by the Lord’s wisdom; and they who know it not, know not the true method, because of their ignorance of the vessel of Hermes.” Theobald de Hoghelande adds: “Senior says that the vision thereof is more to be sought after than [knowledge of] the Scriptures.” Maria the Prophetess says: “This is the vessel of Hermes, which the Stoics hid, and it is no nigromantic vessel, but is the measure of thy fire [*mensura ignis tui*].”⁶¹

[379] It is clear from these quotations that the vessel had a great and unusual significance.⁶² Philalethes, summing up the innumerable synonyms for Mercurius, says that Mercurius is not only the key to the alchemical art, and “that two-edged sword in the hand of the cherub who guards the way to the tree of life,” but also “our true, hidden vessel, the Philosophic garden, wherein our Sun rises and sets.”⁶³ This helps us to understand, more or less, the strange advice given by Johannes de Rupescissa: “Have a vessel made after the manner of a cherub, which is the figure of God, and have six wings, after the fashion of six arms, turning back on themselves; and above, a round head ... and put within this vessel the said burning water,” etc.⁶⁴ The definition of the cherub as “the figure of God” suggests that Rupescissa is referring here to the vision of Ezekiel, which was arranged in such a way that a horizontal section through it would produce a mandala divided into four parts. This, as I have already mentioned, is equivalent to the squaring of the circle, from which, according to one alchemical recipe, the vessel should be constructed. The mandala signifies the human or divine self, the totality or vision of God, as in this case is quite clear. Naturally a recipe of this sort can only be understood “philosophically,” that is psychologically. It then reads: make the Hermetic vessel out of your psychic wholeness and pour into it the *aqua permanens*, or *aqua doctrinae*, one of whose synonyms is the *vinum ardens* (cf. Rupescissa’s “burning water”). This would be a hint that the adept should “inwardly digest” and transform himself through the alchemical doctrine.

[380] In this connection we can also understand what the *Aurora consurgens* (Part II) means when it speaks of the *vas naturale* as the *matrix*: it is the “One in which there are three things, namely water, air, and fire. They are three glass alembics, in which the son of the Philosophers is begotten. Therefore they have named it tincture, blood,

and egg.”⁶⁵ The three alembics are an allusion to the Trinity. That this is in fact so can be seen from the illustration on [page 249](#) of the 1588 edition of *Pandora*, where, beside the three alembics immersed in a great cooking-pot, there stands the figure of Christ, with blood pouring from the lance wound in his breast (“flumina de ventre Christi”!).⁶⁶ The round Hermetic vessel in which the mysterious transformation is accomplished is God himself, the (Platonic) world-soul and man’s own wholeness. It is, therefore, another counterpart of the Anthropos, and at the same time the universe in its smallest and most material form. So it is easy to see why the first attempts to construct a model of the atom took the planetary system as a prototype.

5

[381] The quaternity is an organizing schema par excellence, something like the crossed threads in a telescope. It is a system of co-ordinates that is used almost instinctively for dividing up and arranging a chaotic multiplicity, as when we divide up the visible surface of the earth, the course of the year, or a collection of individuals into groups,⁶⁷ the phases of the moon, the temperaments, elements, alchemical colours, and so on. Thus, when we come upon a quaternio among the Gnostics, we find in it an attempt, more or less conscious, to organize the chaotic medley of numinous images that poured in upon them. As we have seen, the arrangement took a form that derives from the primitive cross-cousin marriage, namely the marriage quaternio.⁶⁸ This differs from the primitive form in that the sister-exchange marriage has sloughed off its biological character, the sister’s husband no longer being the wife’s brother but another close relative (such as the wife’s father in the Moses Quaternio), or even a stranger. The loss of the cousin- and brother-attribute is compensated as a rule by magical qualities, such as more exalted rank, magical powers, and the like, both in the case of the husband’s sister and the wife’s brother. That is to say, an anima-animus projection takes place. This modification brings with it a great cultural advance, for the very fact of projection points to a constellation of the unconscious in the husband-wife relationship, which means that the marriage has become *psychologically* complicated. It is no longer a state of mere biological and social coexistence, but is beginning to turn into a conscious relationship. This happens when the original cross-cousin marriage becomes obsolete as a result of the further differentiation of marriage classes into a six-, eight-, or twelve-class system. The cause of the activation of the unconscious that goes hand in hand with this development is the regression of the endogamous tendency—the “kinship libido”—which can no longer find adequate satisfaction owing to the increasing strangeness of the marriage partner.⁶⁹

[382] Besides the marriage quaternio, the Gnostics also used the quaternity of the rivers of Paradise as a means of organizing their numerous symbols. There are thus

two (compensatory) attempts, in the symbols we have listed, to organize the apparently disconnected images. This accords with our experience of the series of pictures produced during active imagination and in chaotic psychic states. In both cases quaternity symbols appear from time to time.⁷⁰ They signify stabilization through order as opposed to the instability caused by chaos, and have a compensatory meaning.

[383] The four quaternios depicted above are first and foremost an attempt to arrange systematically the almost limitless wealth of symbols in Gnosticism and its continuation, alchemy. But such an arrangement of principles also proves useful for understanding the individual symbolism of modern dreams. The images we encounter in this field are even more varied, and so confusing in their complexity that some kind of organizing schema is absolutely essential. As it is advisable to proceed historically, I have taken the Moses Quaternio as a starting point, because it derives directly from the primitive schema of the cross-cousin marriage. Naturally this quaternio has only a paradigmatic significance. One could base the system just as easily on any other marriage quaternio, but not on any other quaternity, such as, for instance, Horus and his four sons. This quaternity is not aboriginal enough, for it misses out the antagonistic, feminine element.⁷¹ It is most important that just the extreme opposites, masculine-feminine and so on, should appear linked together. That is why the alchemical pairs of opposites are linked together in quaternities, e.g., warm-cold, dry-moist. Applied to the Moses Quaternio, the following schema of relationships would result:

[384] Whereas the first double pyramid, the Anthropos Quaternio, corresponds to the Gnostic model, the second one is a construction derived psychologically from the first, but based on the data contained in the Biblical text used by the Gnostics. The psychological reasons for constructing a second quaternio have already been discussed. That the second must be the “shadow” of the first is due to the fact that the lower Adam, the mortal man, possesses a chthonic psyche and is therefore not adequately expressed by a quaternity supraordinate to him. If he were, he would be an unsymmetrical figure, just as the higher Adam is unsymmetrical and has to be

complemented by a subordinate quaternity related to him like his shadow or his darker reflection.

[385] Now just as the Anthropos Quaternio finds its symmetrical complement in the lower Adam, so the lower Adam is balanced by the subordinate Shadow Quaternio, constructed after the pattern of the upper one. The symmetrical complement of the lower Adam is the *serpent*. The choice of this symbol is justified firstly by the well-known association of Adam with the snake: it is his chthonic daemon, his familiar spirit. Secondly, the snake is the commonest symbol for the dark, chthonic world of instinct. It may—as frequently happens—be replaced by an equivalent cold-blooded animal, such as a dragon, crocodile, or fish. But the snake is not just a nefarious, chthonic being; it is also, as we have already mentioned, a symbol of wisdom, and hence of light, goodness, and healing.⁷² Even in the New Testament it is simultaneously an allegory of Christ and of the devil, just as we have seen that the fish was. Similarly the dragon, which for us has only a negative meaning, has a positive significance in China, and sometimes in Western alchemy too. The inner polarity of the snake-symbol far exceeds that of man. It is overt, whereas man's is partly latent or potential. The serpent surpasses Adam in cleverness and knowledge and can outwit him. She is older than he, and is evidently equipped by God with a superhuman intelligence, like that son of God who took over the role of Satan.⁷³

[386] Just as man culminates above in the idea of a “light” and good God, so he rests below on a dark and evil principle, traditionally described as the devil or as the serpent that personifies Adam's disobedience. And just as we symmetrized man by the serpent, so the serpent has its complement in the second Naassene quaternio, or Paradise Quaternio. Paradise takes us into the world of plants and animals. It is, in fact, a plantation or garden enlivened by animals, the epitome of all the growing things that sprout out of the earth. As *serpens mercurialis*, the snake is not only related to the god of revelation, Hermes, but, as a vegetation numen, calls forth the “blessed greenness,” all the budding and blossoming of plant life.⁷⁴ Indeed, this serpent actually dwells in the interior of the earth and is the pneuma that lies hidden in the *stone*.⁷⁵

[387] The symmetrical complement of the serpent, then, is the *stone* as representative of the earth. Here we enter a later developmental stage of the symbolism, the alchemical stage, whose central idea is the *lapis*. Just as the serpent forms the lower opposite of man, so the *lapis* complements the serpent. It corresponds, on the other hand, to man, for it is not only represented in human form but even has “body, soul, and spirit,” is an homunculus and, as the texts show, a symbol of the self. It is, however, not a human ego but a collective entity, a collective soul, like the Indian *hiranyagarbha*, ‘golden seed.’ The stone is the “father-mother” of the metals, an

hermaphrodite. Though it is an ultimate unity, it is not an elementary but a composite unity that has evolved. For the stone we could substitute all those “thousand names” which the alchemists devised for their central symbol, but nothing different or more fitting would have been said.

[388] This choice of symbol, too, is not arbitrary, but is documented by alchemical literature from the first to the eighteenth century. The *lapis* is produced, as we have already seen, from the splitting and putting together of the four elements, from the *rotundum*. The *rotundum* is a highly abstract, transcendent idea, which by reason of its roundness⁷⁶ and wholeness refers to the Original Man, the Anthropos.

[389] Accordingly our four double pyramids would arrange themselves in a *circle* and form the well-known *uroboros*. As the fifth stage, the *rotundum* would then be identical with the first; that is to say, the heavy darkness of the earth, *metal*, has a secret relationship to the Anthropos. That is obvious in alchemy, but occurs also in the history of religion, where the metals grow from Gayomart’s blood.⁷⁷ This curious relationship is explained by the identity of the lowest, most material thing with the highest and most spiritual, which we have already met in the interpretation of the serpent as a chthonic and at the same time the “most spiritual” animal. In Plato the *rotundum* is the world-soul and a “blessed God.”⁷⁸

[390] We shall now try to condense the argument of the previous chapter and represent it graphically. Vertically arranged, our schema looks like this:

In the diagram I have emphasized the point of greatest tension between the opposites, namely the double significance of the serpent, which occupies the centre of the system. Being an allegory of Christ as well as of the devil, it contains and symbolizes the strongest polarity into which the *Anthropos* falls when he descends into *Physis*. The ordinary man has not reached this point of tension: he has it merely in the unconscious, i.e., in the serpent.⁷⁹ In the *lapis*, the counterpart of man, the opposites are so to speak united, but with a visible seam or suture as in the symbol of the hermaphrodite. This mars the idea of the *lapis* just as much as the all-too-human element mars *Homo sapiens*. In the higher *Adam* and in the *rotundum* the opposition is invisible. But presumably the one stands in absolute opposition to the other, and if both are identical as indistinguishable transcendental entities, this is one of those paradoxes that are the rule: a statement about something metaphysical can only be antinomial.

[391] The arrangement in the uroboros gives the following picture:

This arrangement shows the stronger tension between *anthropos-rotundum* and *serpens* on the one hand, and the lesser tension between *homo* and *lapis* on the other, expressed by the distance of the points in question from one another. The arrows indicate the descent into *Physis* and the ascent towards the spiritual. The lowest point is the serpent. The *lapis*, however, though of decidedly material nature, is also a spiritual symbol, while the *rotundum* connotes a transcendent entity symbolized by

the secret of matter and thus comparable to the concept of the atom. The antinomial development of the concepts is in keeping with the paradoxical nature of alchemy.

[392] The *lapis* quaternity, which is a product of alchemical gnosis, brings us to the interesting physical speculations of alchemy. In the *Scrutinium chymicum* (1687) of Michael Maier (1568-1622), there is a picture⁸⁰ of the four elements as four different stages of fire (Plate I).

[393] As the picture shows, the four spheres are filled with fire. The author comments with the following verses:

Naturae qui imitaris opus, tibi quattuor orbes
Quaerendi, interius quos levis ignis agat.
Imus Vulcanum referat, bene monstret at alter
Mercurium, Lunam tertius orbis habet:
Quartus, Apollo, tuus, naturae auditur et ignis,
Ducat in arte manus illa catena tuas.

From this we learn that the lowest sphere corresponds to Vulcan, the earthly (?) fire; the second to Mercurius, the vegetative life-spirit; the third to the moon, the female, psychic principle; and the fourth to the sun, the male, spiritual principle. It is evident from Maier's commentary that he is concerned on the one hand with the four *elements* and on the other with the four kinds of *fire* which are responsible for producing different states of aggregation. His *ignis elementalis re et nomine* would, according to its place in the sequence, correspond to Vulcan; the fire of Mercurius to air; the third fire to water and the moon; and the fourth, which would correspond to the sun, he calls "terreus" (earthly). According to Ripley, whom Maier quotes, the *ignis elementalis* is the fire "which lights wood"; it must therefore be the ordinary fire. The sun-fire, on the other hand, seems to be the fire in the earth, which today we would call "volcanic," and corresponds to the solid state of aggregation ("terreus"). We thus get the following series:

VIGENÈRE SERIES ⁸¹	RIPLEY SERIES	
<i>ignis mundi intelligibilis</i>	= <i>ignis naturalise</i> ⁸²	=
<i>ignis caelestis</i>	= <i>ignis innaturalis</i> ⁸³	=
<i>ignis elementaris</i>	= <i>ignis contra naturam</i> ⁸⁴	=
<i>ignis infernalis</i> ⁸¹	= <i>ignis elementalis</i>	=

<i>ignis terreus</i>	= <i>Sulfura et Mercurii</i>	= <i>Sun (Apollo)</i>	= <i>earth</i>
<i>ignis aqueus</i>	= <i>aquae</i>	= <i>Moon (Luna)</i>	= <i>water</i>
<i>ignis aereus</i>	= <i>dracones</i>	= <i>Mercurius</i>	= <i>air</i>
<i>ignis elementalis</i>	= <i>ignis elementalis re et nomine</i>	= <i>Ordinary fire (Vulca)</i>	= <i>fire</i>

STATES OF AGGREGATION

= *solid*= *liquid*= *gas*= *flame*

[394] The remarkable thing about this paralleling of states of aggregation with different kinds of fire is that it amounts to a kind of *phlogiston theory*—not, of course, explicit, but clearly hinted at: fire is peculiar to all the states of aggregation and is therefore responsible for their constitution. This idea is old⁸⁵ and can be found as early as the *Turba*, where Dardaris says: “The sulphurs are four souls [*animae*] which were hidden in the four elements.”⁸⁶ Here the active principle (*anima*) is not fire, but sulphur. The idea, however, is the same, namely that the elements or states of aggregation can be reduced to a common denominator. Today we know that the factor common to antagonistic elements is *molecular movement*, and that the states of aggregation correspond to different degrees of this movement. Molecular movement in its turn corresponds to a certain quantum of energy, so that the common denominator of the elements is energy. One of the stepping-stones to the modern concept of energy is Stahl’s phlogiston theory,⁸⁷ which is based on the alchemical premises discussed above. We can see in them, therefore, the earliest beginnings of a theory of energy.⁸⁸

I. The Four Elements From Michael Maier, *Scrutinium chymicum* (1687)

[395] The phlogiston theory adumbrated by the alchemists did not get as far as that, but it points unmistakably in that direction. Moreover, all the mathematical and physical elements from which a theory of energy could have been constructed were known in the seventeenth century. Energy is an abstract concept which is indispensable for exact description of the behaviour of bodies in motion. In the same way bodies in motion can only be apprehended with the help of the system of space-time co-ordinates. Wherever movement is established, it is done by means of the space-time quaternio, which can be expressed either by the axiom of Maria, $3 + 1$, or by the sesquitertian proportion, $3 : 4$. This quaternio could therefore replace that of the four elements, where the unit that corresponds to the time-coordinate, or the fourth in the alchemical series of elements, is characterized by the fact that *one* element has an exceptional position, like fire or earth.⁸⁹

[396] The exceptional position of one of the factors in a quaternity can also be expressed by its *duplex nature*. For instance, the fourth of the rivers of Paradise, the Euphrates, signifies the mouth through which food goes in and prayers go out, as well as the Logos. In the Moses Quaternio, the wife of Moses plays the double role of Zipporah and of the Ethiopian woman. If we construct a quaternity from the divine equivalents of Maier's four elements—Apollo, Luna, Mercurius, Vulcan—we get a marriage quaternio with a brother-sister relationship:

In alchemy Mercurius is male-female and frequently appears as a virgin too. This characteristic (3 + 1, or 3 : 4) is also apparent in the space-time quaternio:

[397] If we look at this quaternio from the standpoint of the three-dimensionality of space, then time can be conceived as a fourth dimension. But if we look at it in terms of the three qualities of time—past, present, future—then static space, in which changes of state occur, must be added as a fourth term. In both cases, the fourth represents an incommensurable Other that is needed for their mutual determination. Thus we measure space by time and time by space. The Other, the fourth, corresponds in the Gnostic quaternities to the fiery god, “the fourth by number,” to the dual wife of Moses (Zipporah and the Ethiopian woman), to the dual Euphrates (river and Logos), to the fire⁹⁰ in the alchemical quaternio of elements, to Mercurius duplex in Maier’s quaternio of gods, and in the “Christian Quaternity”—if such an expression be permitted⁹¹—to Mary or the devil. These two incompatible figures are united in the Mercurius duplex of alchemy.⁹²

[398] The space-time quaternio is the archetypal *sine qua non* for any apprehension of the physical world—indeed, the very possibility of apprehending it. It is the organizing schema par excellence among the psychic quaternities. In its structure it corresponds to the psychological schema of the functions.⁹³ The 3 : 1 proportion frequently occurs in dreams and in spontaneous mandala-drawings.

[399] A modern parallel to the diagram of quaternities arranged on top of one another (cf. par. 390), coupled with the idea of ascent and descent, can be found among the illustrations to my paper on mandala pictures.⁹⁴ The same idea also appears in the

pictures relating to a case described there at some length, and dealing with vibrations that formed “nodes.”⁹⁵ Each of these nodes signified an outstanding personality, as was true also of the picture in the first case. A similar motif may well underlie the representation of the Trinity here appended (Plate II), from the manuscript of a treatise by Joachim of Flora.⁹⁶

[400] I would like, in conclusion, to mention the peculiar theory of world creation in the Clementine Homilies. In God, pneuma and soma are one. When they separate, pneuma appears as the Son and “archon of the future Aeon,” but soma, actual substance (*οὐοία*) or matter *ὑλη*, divides into four, corresponding to the four elements (which were always solemnly invoked at initiations). From the mixing of the four parts there arose the devil, the “archon of this Aeon,” and the *psyche* of this world. Soma had become psychized (*ἐμψύχον*): “God rules this world as much through the devil as through the Son, for both are in his hands.”⁹⁷ God unfolds himself in the world in the form of syzygies (paired opposites), such as heaven/earth, day/night, male/female, etc. The last term of the first series is the Adam/Eve syzygy. At the end of this fragmentation process there follows the return to the beginning, the consummation of the universe (*τελευτὴ τῶν πάντων*) through purification and annihilation.⁹⁸

[401] Anyone who knows alchemy can hardly avoid being struck by the likeness which pseudo-Clement’s theory bears to the basic conceptions of the alchemists, if we disregard its moral aspects. Thus we have the “hostile brothers,” Christ and the devil, who were regarded as brothers in the Jewish-Christian tradition; the tetrameria into four parts or elements; the paired opposites and their ultimate unity; the parallel of the *lapis* and Mercurius with Christ and, because of the snake or dragon symbolism, also with the devil; and finally, the figure of Mercurius duplex and of the *lapis*, which unites the opposites indivisibly in itself.

*

[402] If we look back over the course our argument has taken, we see at the beginning of it two Gnostic quaternities, one of which is supraordinate, and the other subordinate, to man, namely the “Positive Moses” or Anthropos Quaternio, and the Paradise Quaternio.⁹⁹ It is probably no accident that Hippolytus mentions precisely these two quaternities, or that the Naassenes knew only these, for the position of man is, in their system, closely connected with the higher Adam but is separated from the chthonic world of plants and animals, namely Paradise. Only through his shadow has he a relationship to the serpent with its dual meaning. This situation is altogether characteristic of the age of Gnosticism and early Christianity. Man in those days was close to the “kingless [i.e., independent] race,” that is, to the upper quaternity, the

kingdom of heaven, and looked upward. But what begins above does not rise higher, but ends below. Thus we felt impelled to symmetrize the lower Adam of the Naassenes by a Shadow Quaternio, for just as he cannot ascend direct to the higher Adam—since the Moses Quaternio lies in between—so we have to assume a lower, shadowy quaternity corresponding to the upper one, lying between him and the lower principle, the serpent. This operation was obviously unknown in the Gnostic age, because the unsymmetrical upward trend seemed to disturb nobody, but rather to be the very thing desired and “on the programme.” If, therefore, we insert between Man and Serpent a quaternity not mentioned in the texts, we do so because we can no longer conceive of a psyche that is oriented exclusively upwards and that is not balanced by an equally strong consciousness of the lower man. This is a specifically modern state of affairs and, in the context of Gnostic thinking, an obnoxious anachronism that puts man in the centre of the field of consciousness where he had never consciously stood before. Only through Christ could he actually see this consciousness mediating between God and the world, and by making the person of Christ the object of his devotions he gradually came to acquire Christ’s position as mediator. Through the Christ crucified between the two thieves man gradually attained knowledge of his shadow and its duality. This duality had already been anticipated by the double meaning of the serpent. Just as the serpent stands for the power that heals as well as corrupts, so one of the thieves is destined upwards, the other downwards, and so likewise the shadow is on one side regrettable and reprehensible weakness, on the other side healthy instinctivity and the prerequisite for higher consciousness.

II. The Trinity From a manuscript by Joachim of Flora

[403] Thus the Shadow Quaternio that counterbalances man's position as mediator only falls into place when that position has become sufficiently real for him to feel his consciousness of himself or his own existence more strongly than his dependence on and governance by God. Therefore, if we complement the upward-tending pneumatic attitude that characterizes the early Christian and Gnostic mentality by adding its opposite counterpart, this is in line with the historical development. Man's original dependence on a pneumatic sphere, to which he clung like a child to its mother, was threatened by the kingdom of Satan. From him the pneumatic man was delivered by the Redeemer, who broke the gates of hell and deceived the archons; but he was bound to the kingdom of heaven in exactly the same degree. He was separated from evil by an abyss. This attitude was powerfully reinforced by the immediate expectation of the Second Coming. But when Christ did not reappear, a regression was only to be expected. When such a great hope is dashed and such great expectations are not fulfilled, then the libido perforce flows back into man and heightens his consciousness of himself by accentuating his personal psychic processes; in other words, he gradually moves into the centre of his field of consciousness. This leads to separation from the pneumatic sphere and an approach

to the realm of the shadow. Accordingly, man's moral consciousness is sharpened, and, as a parallel to this, his feeling of redemption becomes relativized. The Church has to exalt the significance and power of her ritual in order to put limits to the inrush of reality. In this way she inevitably becomes a "kingdom of this world." The transition from the Anthropos to the Shadow Quaternio illustrates an historical development which led, in the eleventh century, to a widespread recognition of the evil principle as the world creator.

[404] The serpent and its chthonic wisdom form the turning-point of the great drama. The Paradise Quaternio with the *lapis*, that comes next, brings us to the beginnings of natural science (Roger Bacon, 1214–94; Albertus Magnus, 1193–1280; and the alchemists), whose main trend differs from the pneumatic not by 180° but only by 90°—that is to say, it cuts across the spiritual attitude of the Church and is more an embarrassment for faith than a contradiction of it.

[405] From the *lapis*, i.e., from alchemy, the line leads direct to the quaternio of alchemical states of aggregation, which, as we have seen, is ultimately based on the space-time quaternio. The latter comes into the category of archetypal quaternities and proves, like these, to be an indispensable principle for organizing the sense-impressions which the psyche receives from bodies in motion. Space and time form a psychological *a priori*, an aspect of the archetypal quaternity which is altogether indispensable for acquiring knowledge of physical processes.

[406] The development from the Shadow to the Lapis Quaternio illustrates the change in man's picture of the world during the course of the second millennium. The series ends with the concept of the *rotundum*, or of rotation as contrasted with the static quality of the quaternity, which, as we have said, proves to be of prime importance for apprehending reality. The rise of scientific materialism connected with this development appears on the one hand as a logical consequence, on the other hand as a deification of matter. This latter aspect is based, psychologically, on the fact that the *rotundum* coincides with the archetype of the Anthropos.

[407] With this insight the ring of the uroboros closes, that symbol of the *opus circulare* of Nature as well as of the "Art."

7

[408] Our quaternio series could also be expressed in the form of an equation, where *A* stands for the initial state (in this case the Anthropos) and for the end state, and *B C D* for intermediate states. The formations that split off from them are denoted in each case by the small letters *a b c d*. With regard to the construction of the formula, we must bear in mind that we are concerned with the continual process of transformation of one and the same substance. This substance, and its respective state of

transformation, will always bring forth its like; thus A will produce a and B b ; equally, b produces B and c C . It is also assumed that a is followed by b and that the formula runs from left to right. These assumptions are legitimate in a psychological formula.

[409] Naturally the formula cannot be arranged in linear fashion but only in a circle, which for that reason moves to the right. A produces its like, a . From a the process advances by contingency to b , which in turn produces B . The transformation turns rightwards with the sun; that is, it is a process of becoming conscious, as is already indicated by the splitting (discrimination) of A B C D each time into four qualitatively discrete units.¹⁰⁰ Our scientific understanding today is not based on a quaternity but on a trinity of principles (space, time, causality).¹⁰¹ Here, however, we are moving not in the sphere of modern scientific thinking, but in that of the classical and medieval view of the world, which up to the time of Leibniz recognized the principle of *correspondence* and applied it naïvely and unreflectingly. In order to give our judgment on A —expressed by abc —the character of wholeness, we must supplement our time-conditioned thinking by the principle of correspondence or, as I have called it, *synchronicity*.¹⁰² The reason for this is that our description of Nature is in certain respects incomplete and accordingly excludes observable facts from our understanding or else formulates them in an unjustifiably negative way, as for instance in the paradox of “an effect without a cause.”¹⁰³ Our Gnostic quaternity is a naïve product of the unconscious and therefore represents a psychic fact which can be brought into relationship with the four orienting functions of consciousness; for the rightward movement of the process is, as I have said, the expression of conscious discrimination¹⁰⁴ and hence an application of the four functions that constitute the essence of a conscious process.

[410] The whole cycle necessarily returns to its beginning, and does so at the moment when D , in point of contingency the state furthest removed from A , changes into a_3 by a kind of enantiodromia. We thus have:

The formula reproduces exactly the essential features of the symbolic process of transformation. It shows the rotation of the mandala,¹⁰⁵ the antithetical play of complementary (or compensatory) processes, then the apocatastasis, i.e., the restoration of an original state of wholeness, which the alchemists expressed through the symbol of the uroboros, and finally the formula repeats the ancient alchemical

tetrameria,¹⁰⁶ which is implicit in the fourfold structure of unity: $A = a \begin{array}{c} d \\ \diagdown \quad \diagup \\ c \\ \diagup \quad \diagdown \\ b \end{array}$. What

the formula can only hint at, however, is the higher plane that is reached through the process of transformation and integration. The “sublimation” or progress or qualitative change consists in an unfolding of totality into four parts four times, which means nothing less than its becoming conscious. When psychic contents are split up into four aspects, it means that they have been subjected to discrimination by the four orienting functions of consciousness. Only the production of these four aspects makes a total description possible. The process depicted by our formula changes the originally unconscious totality into a conscious one. The Anthropos *A* descends from above through his Shadow *B* into Physis *C* (= serpent), and, through a kind of crystallization process *D* (= lapis) that reduces chaos to order, rises again to the original state, which in the meantime has been transformed from an unconscious into a conscious one. Consciousness and understanding arise from discrimination, that is, through analysis (dissolution) followed by synthesis, as stated in symbolical terms by the alchemical dictum: “Solve et coagula” (dissolve and coagulate). The correspondence is represented by the identity of the letters *a*, *a*₁, *a*₂, *a*₃, and so on. That is to say, we are dealing all the time with the same factor, which in the formula merely changes its place, whereas psychologically its name and quality change too. At the same time it becomes clear that the change of place is always an enantiodromian change of situation, corresponding to the complementary or compensatory changes in the psyche as a whole. It was in this way that the changing of the hexagrams in the *I Ching* was understood by the classical Chinese commentators. Every archetypal arrangement has its own numinosity, as is apparent from the very names given to it. Thus *a* to *d* is the “kingless race,” *a*₁ to *d*₂ is the Shadow Quaternio, which is annoying, because it stands for the all-too-human human being (Nietzsche’s “Ugliest Man”),¹⁰⁷ *a*₂ to *d*₂ is “Paradise,” which speaks for itself, and finally *a*₃ to *d*₃ is the world of matter, whose numinosity in the shape of materialism threatens to suffocate our world. What changes these correspond to in the history of the human mind over the last two thousand years I need hardly specify in detail.

[411] The formula presents a symbol of the self, for the self is not just a static quantity or constant form, but is also a dynamic process. In the same way, the ancients saw the

imago Dei in man not as a mere imprint, as a sort of lifeless, stereotyped impression, but as an active force. The four transformations represent a process of restoration or rejuvenation taking place, as it were, inside the self, and comparable to the carbon-nitrogen cycle in the sun, when a carbon nucleus captures four protons (two of which immediately become neutrons) and releases them at the end of the cycle in the form of an alpha particle. The carbon nucleus itself comes out of the reaction unchanged, “like the Phoenix from the ashes.”¹⁰⁸ The secret of existence, i.e., the existence of the atom and its components, may well consist in a continually repeated process of rejuvenation, and one comes to similar conclusions in trying to account for the numinosity of the archetypes.

[412] I am fully aware of the extremely hypothetical nature of this comparison, but I deem it appropriate to entertain such reflections even at the risk of being deceived by appearances. Sooner or later nuclear physics and the psychology of the unconscious will draw closer together as both of them, independently of one another and from opposite directions, push forward into transcendental territory, the one with the concept of the atom, the other with that of the archetype.

[413] The analogy with physics is not a digression since the symbolical schema itself represents the descent into matter and requires the identity of the outside with the inside. Psyche cannot be totally different from matter, for how otherwise could it move matter? And matter cannot be alien to psyche, for how else could matter produce psyche? Psyche and matter exist in one and the same world, and each partakes of the other, otherwise any reciprocal action would be impossible. If research could only advance far enough, therefore, we should arrive at an ultimate agreement between physical and psychological concepts. Our present attempts may be bold, but I believe they are on the right lines. Mathematics, for instance, has more than once proved that its purely logical constructions which transcend all experience subsequently coincided with the behaviour of things. This, like the events I call synchronistic, points to a profound harmony between all forms of existence.

[414] Since analogy formation is a law which to a large extent governs the life of the psyche, we may fairly conjecture that our—to all appearances—purely speculative construction is not a new invention, but is prefigured on earlier levels of thought. Generally speaking, these prefigurations can be found in the multifarious stages of the mystic transformation process, as well as in the different degrees of initiation into the mysteries. We also find them in the classical as well as Christian trichotomy consisting of the pneumatic, the psychic, and the hylic. One of the most comprehensive attempts of this kind is the sixteenfold schema in the Book of Platonic Tetralogies.¹⁰⁹ I have dealt with this in detail in *Psychology and Alchemy* and can therefore limit myself here to the basic points. The schematization and analogy-

formation start from four first principles: 1. the work of nature, 2. water, 3. composite natures, 4. the senses. Each of these four starting-points has three stages of transformation, which together with the first stage make sixteen parts in all. But besides this fourfold horizontal division of each of the principles, each stage has its correspondence in the vertical series:

I	II	II	IV
1. <i>Opus naturalium</i>	<i>Aqua</i>	<i>Naturae compositae</i>	<i>Sensus</i>
2. <i>Divisio naturae</i>	<i>Terra</i>	<i>Naturae discretae</i>	<i>Discretio intellectualis</i>
3. <i>Anima</i>	<i>Aer</i>	<i>Simplicia</i>	<i>Ratio</i>
4. <i>Intellectus</i>	<i>Ignis</i>	<i>Aetheris simplicioris</i>	<i>Arcanum</i>

[415] This table of correspondences shows the various aspects of the *opus alchemicum*, which was also bound up with astrology and the so-called necromantic arts. This is evident from the use of significant numbers and the invocation or conjuring up of the familiar spirit. Similarly, the age-old art of geomancy¹¹⁰ is based on a sixteen-part schema: four central figures (consisting of Sub- or Superiudex, Iudex, and two Testes), four *nepotes* (grandsons), four sons, four mothers. (The series is written from right to left.) These figures are arranged in a schema of astrological houses, but the centre that is empty in the horoscope is replaced by a square containing the four central figures.

[416] Athanasius Kircher¹¹¹ produced a quaternity system that is worth mentioning in this connection:

I. *Unum = Monas monadikē = Deus = Radix omnium = Mens simplicissima = Divina essentia = Exemplar divinum.*

(The One = First Monad = God = Root of all things = Simplest understanding = Divine Essence = Divine Exemplar.)

II. *10 (1 + 2 + 3 + 4 = 10) = Secunda Monas = dekadikē = Dyas = Mundus intellectualis = Angelica intelligentia = Compositio ab uno et altero = i.e., ex oppositis.*

(... Second Monad = tenth = duality = spiritual world = intelligence of the angels = composition of the One and the Other = i.e., from opposites.)

III. *10² = 100 = Tertia Monas = hekatontadikē = Anima = Intelligentia.*

(... Third Monad = hundredth = soul = intelligence.)

IV. $10^3 = 1000 = \textit{Quarta Monas} = \textit{chiliadikē} = \textit{Omnia sensibilia} = \textit{Corpus} = \textit{ultima et sensibilis Unionum explicatio}$.

(... Fourth Monad = thousandth = all concrete things = body = final and concrete unfolding of unities.)

[417] Kircher comments that whereas the senses affect only the body, the first three unities are objects of understanding. So if one wants to understand what is perceived by the senses (*sensibilia*), this can only be done through the mind. “Everything perceived by the senses must therefore be elevated to reason or to the intelligence or to absolute unity. When in this way we shall have brought the absolute unity back to the infinitely simple from all perceptible, rational or intellectual multiplicity, then nothing more remains to be said, and then the Stone too is not so much *a* Stone as *no* Stone, but everything is the simplest unity. And even as the absolute unity of that concrete and rational Stone has God for an exemplar, so likewise its intellectual unity is the intelligence. You can see from these unities how the perceiving senses go back to reason, and reason to intelligence, and intelligence to God, where in a perfect cycle is found the beginning and the consummation.”¹¹² That Kircher should choose the *lapis* as an example of concrete things and of God’s unity is obvious enough in terms of alchemy, because the *lapis* is the arcanum that contains God or that part of God which is hidden in matter.

[418] Kircher’s system shows certain affinities with our series of quaternios. Thus the Second Monad is a duality consisting of opposites, corresponding to the angelic world that was split by Lucifer’s fall. Another significant analogy is that Kircher conceives his schema as a cycle set in motion by God as the prime cause, and unfolding out of itself, but brought back to God again through the activity of human understanding, so that the end returns once more to the beginning. This, too, is an analogy of our formula. The alchemists were fond of picturing their *opus* as a circulatory process, as a circular distillation or as the uroboros, the snake biting its own tail, and they made innumerable pictures of this process. Just as the central idea of the *lapis Philosophorum* plainly signifies the self, so the *opus* with its countless symbols illustrates the process of individuation, the step-by-step development of the self from an unconscious state to a conscious one. That is why the *lapis*, as *prima materia*, stands at the beginning of the process as well as at the end.¹¹³ According to Michael Maier, the gold, another synonym for the self, comes from the *opus circulatorium* of the sun. This circle is “the line that runs back upon itself (like the serpent that with its head bites its own tail), wherein that eternal painter and potter, God, may be discerned.”¹¹⁴ In this circle, Nature “has related the four qualities to one another and drawn, as it were, an equilateral square, since contraries are bound together by contraries, and enemies by enemies, with the same everlasting bonds.” Maier compares this squaring of the circle to the “homo quadratus,” the four-square man, who “remains himself” come weal come woe.¹¹⁵ He calls it the “golden house,

the twicebisected circle, the four-cornered phalanx, the rampart, the city wall, the four-sided line of battle.”¹¹⁶ This circle is a magic circle consisting of the union of opposites, “immune to all injury.”

[419] Independently of Western tradition, the same idea of the circular *opus* can be found in Chinese alchemy: “When the light is made to move in a circle, all the energies of heaven and earth, of the light and the dark, are crystallized,” says the text of the *Golden Flower*.¹¹⁷

[420] The *ὄργανον κυκλικόν*, the circular apparatus that assists the circular process, is mentioned as early as Olympiodorus.¹¹⁸ Dorn is of the opinion that the “circular movement of the Physiochemists” comes from the earth, the lowest element. For the fire originates in the earth and transforms the finer minerals and water into air, which, rising up to the heavens, condenses there and falls down again. But during their ascent the volatilized elements take “from the higher stars male seeds, which they bring down into the four matrices, the elements, in order to fertilize them spagyrically.” This is the “circular distillation”¹¹⁹ which Rupescissa says must be repeated a thousand times.¹²⁰

[421] The basic idea of ascent and descent can be found in the *Tabula smaragdina*, and the stages of transformation have been depicted over and over again, above all in the Ripley “Scrowle” and its variants. These should be understood as indirect attempts to apprehend the unconscious processes of individuation in the form of pictures.

XV CONCLUSION

[422] I have tried, in this book, to elucidate and amplify the various aspects of the archetype which it is most important for modern man to understand—namely, the archetype of the self. By way of introduction, I described those concepts and archetypes which manifest themselves in the course of any psychological treatment that penetrates at all deeply. The first of these is the SHADOW, that hidden, repressed, for the most part inferior and guilt-laden personality whose ultimate ramifications reach back into the realm of our animal ancestors and so comprise the whole historical aspect of the unconscious. Through analysis of the shadow and of the processes contained in it we uncover the ANIMA/ANIMUS syzygy. Looked at superficially, the shadow is cast by the conscious mind and is as much a privation of light as the physical shadow that follows the body. For this superficial view, therefore, the psychological shadow with its moral inferiority might also be regarded as a privation of good. On closer inspection, however, it proves to be a darkness that hides influential and autonomous factors which can be distinguished in their own right, namely anima and animus. When we observe them in full operation—as the devastating, blindly obstinate demon of opinionatedness in a woman, and the glamorous, possessive, moody, and sentimental seductress in a man—we begin to doubt whether the unconscious can be merely the insubstantial comet's tail of consciousness and nothing but a privation of light and good.

[423] If it has been believed hitherto that the human shadow was the source of all evil, it can now be ascertained on closer investigation that the unconscious man, that is, his shadow, does not consist only of morally reprehensible tendencies, but also displays a number of good qualities, such as normal instincts, appropriate reactions, realistic insights, creative impulses, etc. On this level of understanding, evil appears more as a distortion, a deformation, a misinterpretation and misapplication of facts that in themselves are natural. These falsifications and caricatures now appear as the specific effects of anima and animus, and the latter as the real authors of evil. But we cannot stop even at this realization, for it turns out that all archetypes spontaneously develop favourable and unfavourable, light and dark, good and bad effects. In the end we have to acknowledge that the self is a *complexio oppositorum* precisely because there can be no reality without polarity. We must not overlook the fact that opposites acquire their moral accentuation only within the sphere of human endeavour and action, and that we are unable to give a definition of good and evil that could be

considered universally valid. In other words, we do not know what good and evil are in themselves. It must therefore be supposed that they spring from a need of human consciousness and that for this reason they lose their validity outside the human sphere. That is to say a hypostasis of good and evil as metaphysical entities is inadmissible because it would deprive these terms of meaning. If we call everything that God does or allows “good,” then evil is good too, and “good” becomes meaningless. But suffering, whether it be Christ’s passion or the suffering of the world, remains the same as before. Stupidity, sin, sickness, old age, and death continue to form the dark foll that sets off the joyful splendour of life.

[424] The recognition of anima and animus is a specific experience that seems to be reserved mostly, or at any rate primarily, for psychotherapists. Nevertheless, anyone who has a little knowledge of *belles-lettres* will have no difficulty in forming a picture of the anima; she is a favourite subject for novelists, particularly west of the Rhine.¹ Nor is a careful study of dreams always necessary. It is not quite so easy to recognize the woman’s animus, for his name is legion. But anyone who can stand the animosity of his fellows without being infected by it, and is capable at the same time of examining it critically, cannot help discovering that they are possessed. It is, however, more advantageous and more to the point to subject to the most rigorous scrutiny one’s own *moods* and their changing influence on one’s personality. To know where the other person makes a mistake is of little value. It only becomes interesting when you know where *you* make the mistake, for then you can do something about it. What we can improve in others is of doubtful utility as a rule, if, indeed, it has any effect at all.

[425] Although, to begin with, we meet the anima and animus mostly in their negative and unwelcome form, they are very far from being only a species of bad spirit. They have, as we have said, an equally positive aspect. Because of their numinous, suggestive power they have formed since olden times the archetypal basis of all masculine and feminine divinities and therefore merit special attention, above all from the psychologist, but also from thoughtful laymen. As numina, anima and animus work now for good, now for evil. Their opposition is that of the sexes. They therefore represent a supreme pair of opposites, not hopelessly divided by logical contradiction but, because of the mutual attraction between them, giving promise of union and actually making it possible. The *coniunctio oppositorum* engaged the speculations of the alchemists in the form of the “Chymical Wedding,” and those of the cabalists in the form of Tifereth and Malchuth or God and the Shekhinah,² not to speak of the marriage of the Lamb.

[426] The dual being born of the alchemical union of opposites, the Rebis or Lapis Philosophorum, is so distinctively marked in the literature that we have no difficulty

in recognizing it as a symbol of the self. Psychologically the self is a union of conscious (masculine) and unconscious (feminine). It stands for the psychic totality. So formulated, it is a psychological concept. Empirically, however, the self appears spontaneously in the shape of specific symbols, and its totality is discernible above all in the mandala and its countless variants. Historically, these symbols are authenticated as God-images.

[427] The anima/animus stage is correlated with polytheism, the self with monotheism.³ The natural archetypal symbolism, describing a totality that includes light and dark, contradicts in some sort the Christian but not the Jewish or Yahwistic viewpoint, or only to a relative degree. The latter seems to be closer to Nature and therefore to be a better reflection of immediate experience. Nevertheless, the Christian heresiarchs tried to sail round the rocks of Manichaeism, which was such a danger to the early Church, in a way that took cognizance of the natural symbol, and among the symbols for Christ there are some very important ones which he has in common with the devil, though this had no influence on dogma.

[428] By far the most fruitful attempts, however, to find suitable symbolic expressions for the self were made by the Gnostics. Most of them—Valentinus and Basilides, for instance—were in reality theologians who, unlike the more orthodox ones, allowed themselves to be influenced in large measure by natural inner experience. They are therefore, like the alchemists, a veritable mine of information concerning all those natural symbols arising out of the repercussions of the Christian message. At the same time, their ideas compensate the asymmetry of God postulated by the doctrine of the *privatio boni*, exactly like those well-known modern tendencies of the unconscious to produce symbols of totality for bridging the gap between the conscious and the unconscious, which has widened dangerously to the point of universal disorientation.

[429] I am well aware that this work, far from being complete, is a mere sketch showing how certain Christian ideas look when observed from the standpoint of psychological experience. Since my main concern was to point out the parallelism or the difference between the empirical findings and our traditional views, a consideration of the disparities due to time and language proved unavoidable. This was particularly so in the case of the fish symbol. Inevitably, we move here on uncertain ground and must now and then have recourse to a speculative hypothesis or tentatively reconstruct a context. Naturally every investigator must document his findings as fully as possible, but he should also venture an occasional hypothesis even at the risk of making a mistake. Mistakes are, after all, the foundations of truth, and if a man does not know what a thing *is*, it is at least an increase in knowledge if he knows what it is *not*.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum. ... Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Tabula smaragdina [pp. 32–33]

ARTIS AURIFERAE quam chemiam vocant. ... Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [two versions: pp. 1–65, 66–139]
- i-a Allegoriae super librum Turbae [pp. 139–45]
- ii Aenigmata ex Visione Arislei philosophi et allegoriis sapientum [pp. 146–54; usually referred to as “Vi Arislei”]
- iii In Turbam philosophorum exercitationes [pp. 154–82]
- iv Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]
- v [Zosimus]: Rosinus ad Sarratantam episcopum [pp. 277–319]
- vi Maria Prophetissa: Practica ... in artem alchemicam [pp. 319–24]
- vii Tractatulus Aristotelis de practica lapidis philosophici [pp. 361–73]
- viii Interpretatio cuiusdam epistolae Alexandri Macedonum regis [pp. 382–88]
- ix Tractatulus Avicennae [pp. 405–37]

VOLUME II

- x Morienus Romanus: Sermo de transmutatione metallica [pp. 7–54]

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus* ... Coloniae Allobrogum [Geneva], 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Allegoriae sapientum supra librum Turbae philosophorum XXIX distinctiones [pp. 467–79]
- ii Turba philosophorum [pp. 445–65; another version, pp. 480–94]
- iii Allegoriae supra librum Turbae [pp. 494–95]

MUSAEUM HERMETICUM reformatum et amplificatum ... continens tractatus chemicos XXI praestantissimos ... Francofurti [Frankfurt a. M.], 1678. For translation, see (B) WAITE, *The Hermetic Museum*.

Contents quoted in this volume:

- i [Barcius (F. von Sternberg)]: Gloria mundi, alias Paradysi tabula [pp. 203–304]
- ii Lamspringk: De lapide philosophico figurae et emblemata [pp. 337–72]
- iii Sendivogius: Novum lumen chemicum e naturae fonte et manuali experientia depromptum [pp. 545–600]
- iv [Sendivogius:] Novi luminis chemici Tractatus alter de sulphure [pp. 601–46]
- v Philalethes: Introitus apertus ad oclusum regis palatium [pp. 647–700]
- vi Philalethes: Metallorum metamorphosis [pp. 741–74]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus ... continens. Ursellis [Ursel] and Argentorati [Strasbourg], 1602–61. 6 vols. (Vols. I–III, Ursel, 1602; Vols. IV–VI, Strasbourg, 1613, 1622, 1661 respectively.)

Contents quoted in this volume:

VOLUME I

- i Fanianus: De arte metallica metamorphoseos ad Philoponum [pp. 28–48]
- ii Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]
- iii Dorn: Ars chemistica [pp. 217–54]
- iv Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]
- v Dorn: Physica genesis [pp. 367–404]
- v-a Dorn: Physica Trismegisti [pp. 405–37]
- vi Dorn: Philosophia meditativa [pp. 450–72]
- vii Dorn: Philosophia chemica ad meditativam comparata [pp. 472–517]
- viii Dorn: Congeries Paracelsicae chemicae de transmutationibus metallorum [pp. 557–646]
- ix Bernardus Trevisanus: Liber de alchemia [pp. 773–803]

VOLUME II

- x Ripley: Duodecim portarum axiomata philosophica [pp. 123–39]
- xi Hollandus: Fragmentum de lapide [pp. 142–46]
- xii Dee: Monas hieroglyphica [pp. 218–43]

VOLUME III

- xiii Aristoteles de perfecto Magisterio [pp. 56–118]

VOLUME IV

- xiv Artefius: Clavis maioris sapientiae [pp. 221–40]
- xv Duodecim tractatus de lapide philosophorum [pp. 478–502]
- xvi Beatus: Aurelia occulta philosophorum [pp. 525–81]
- xvii Hermetis Trismegisti Tractatus vere aureus de lapide philosophici secreto [pp. 672–797; usually referred as “Tractatus aureus”]

VOLUME V

- xvii-a Turba philosophorum [pp. 1–57]
- xviii Allegoriae sapientum et distinctiones XXIX supra librum Turbae [pp. 64–100]
- xix Platonis liber quattorum [pp. 114–208]
- xx Tractatus Aristotelis alchymistae ad Alexandrum Magnum de lapide philosophico [pp. 880–92]

VOLUME VI

- xxi Blaise de Vigenère: Tractatus de igne et sale [pp. 1–139]
- xxii Colleson: Idea perfecta philosophiae hermeticae [pp. 143–61]
- xxiii Fidelissima et jucunda instructio de arbore solari [pp. 163–194]
- xxiv Grasseus: Arca arcani artificiosissimi de summis naturae mysteriis [pp. 294–381]
- xxv [Barchius:] Summa libri quae vocatur Gloria mundi, seu Tabula comprehensa [pp. 513–17]
- xxvi Chartier: Scientia plumbi sacri sapientum [pp. 569–99]

THE COLLECTED WORKS OF C. G. JUNG

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

*3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

*6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

Ralph Manheim and R.F.C. Hull

C. G. JUNG SPEAKING: Interviews and Encounters

Edited by William McGuire and R.F.C. Hull

1 [In the Swiss edition, this foreword begins as follows: “In this volume (VIII of the *Psychologische Abhandlungen*) I am bringing out two works which, despite their inner and outer differences, belong together in so far as they both treat of the great theme of this book, namely the idea of the Aeon (Greek, *Aion*). While the contribution of my co-worker, Dr. Marie-Louise von Franz, describes the psychological transition from antiquity to Christianity by analysing the Passion of St. Perpetua, my own investigation seeks, with the help of” etc., as above. Dr. von Franz’s “*Die Passio Perpetuae*” is omitted from the present volume.—EDITORS.]

2 [Ch. 5, “The Lapis-Christ Parallel.”]

1 “Instinct and the Unconscious” and “On the Nature of the Psyche,” pars. 397ff.

2 The contents of this and the following chapter are taken from a lecture delivered to the Swiss Society for Practical Psychology, in Zurich, 1948. The material was first published in the *Wiener Zeitschrift für Nervenheilkunde und deren Grenzgebiete*, I (1948) : 4.

1 Erwin Rousselle, “Seelische Führung im lebenden Taoismus,” Pl. I, pp. 150, 170. Rousselle calls the spinning woman the “animal soul.” There is a saying that runs, “The spinner sets in motion.” I have defined the anima as a personification of the unconscious.

2 Here and in what follows, the word “mother” is not meant in the literal sense but as a symbol of everything that functions as a mother.

3 Naturally, she is a typical figure in *belles-lettres*. Recent publications on the subject of the anima include Linda Fierz-David, *The Dream of Poliphilo*, and my “Psychology of the Transference.” The anima as a psychological idea first appears in the 16th-cent. humanist Richardus Vitus. Cf. my *Mysterium Coniunctionis*, pars. 91ff.

4 The fallacy, which stems from Eubulides the Megarian, runs: “Can you recognize your father?” Yes. “Can you recognize this veiled one?” No. “This veiled one is your father. Hence you can recognize your father and not recognize him.”

5 Naturally this is not meant as a psychological definition, let alone a metaphysical one. As I pointed out in “The Relations between the Ego and the Unconscious” (pars. 296ff.), the syzygy consists of three elements: the femininity pertaining to the man and the masculinity pertaining to the woman; the experience which man has of woman and vice versa; and, finally, the masculine and feminine archetypal image. The first element can be integrated into the personality by the process of conscious realization, but the last one cannot.

6 “For the Scripture says, God made man male and female; the male is Christ, the female is the Church.”—Second Epistle of Clement to the Corinthians, xiv, a (trans. by Lake, I, p. 151). In pictorial representations, Mary often takes the place of the Church.

7 “The Psychology of the Transference,” pars. 425ff. Cf. *infra*, pars. 358ff., the Naassene *quaternio*.

8 Cf. *infra*, par. 347.

- 1 The material for this chapter is drawn from a paper, “Über das Selbst,” published in the *Eranos-Jahrbuch 1948*.
- 2 “The Relations between the Ego and the Unconscious.”
- 3 In the sense of the words used in I Cor. 5 : 2: “Inflati estis [πεφυσωμένοι] et non magis luctum habuistis” (And you are puffed up, and have not rather mourned)—with reference to a case of tolerated incest with the mother (“that a man should have his father’s wife”).
- 4 Cf. “On the Nature of the Psyche,” pars. 414ff., 439ff.
- 5 Cf. *Psychological Types*, Defs., “Rational” and “Irrational.”
- 6 *Les Fonctions mentales dans les sociétés inférieures*.
- 7 “On Psychic Energy,” pars. 14ff., 20ff.
- 8 *Sämtliche Werke*, I, p. 126.
- 9 Cf. my “Psychology of the Child Archetype”; also *Psychology and Alchemy*, index, s.v. “filius Philosophorum,” “child,” “hermaphrodite.”
- 10 Cf. *Psychology and Alchemy*, Part II, ch. 3.
- 11 [Cf. infra, par. 340.]
- 12 A classic case is the one published by Nelken: “Analytische Beobachtungen über Phantasien eines Schizophrenen.” Another is Schreber’s *Memoirs of My Nervous Illness*.

1 I John 2 : 22 (DV).

2 I John 4 : 3 (DV). The traditional view of the Church is based on II Thessalonians 2 : 3ff., which speaks of the apostasy, of the *ἄνθρωπος τῆς ἀνομίας* (man of lawlessness) and the *υἱὸς τῆς ἀπωλείας* (son of perdition) who herald the coming of the Lord. This “lawless one” will set himself up in the place of God, but will finally be slain by the Lord Jesus “with the breath of his mouth.” He will work wonders *κατ’ ἐνέργειαν τοῦ σατανᾶ* (according to the working of Satan). Above all, he will reveal himself by his *lying and deceitfulness*. Daniel 11 : 36ff. is regarded as a prototype.

3 For “city” cf. *Psychology and Alchemy*, pp. 104ff.

4 Ἡ βασιλεία τοῦ θεοῦ ἐντὸς ὑμῶν ἔστιν (The kingdom of God is within you [or “among you”]). “The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there!” for it is within and everywhere. (Luke 17 : 20f.) “It is not of this [external] world.” (John 18 : 36.) The likeness of the kingdom of God to man is explicitly stated in the parable of the sower (Matthew 13 : 24. Cf. also Matthew 13 : 45, 18 : 23, 22 : 2). The papyrus fragments from Oxyrhynchus say: ... ἡ βασ[ιλεία τῶν οὐρανῶν] ἐντὸς ὑμῶν [ἐ]στι [καὶ ὅστις ἂν ἑαυτὸν] γινῶ ταύτην εὐρή[σκει] ἑαυταὺς γινώσκει κτλ. (The kingdom of heaven is within you, and whosoever knoweth himself shall find it. Know yourselves.) Cf. James, *The Apocryphal New Testament*, p. 26, and Grenfell and Hunt, *New Sayings of Jesus*, p. 15.

5 Cf. my observations on Christ as archetype in “A Psychological Approach to the Dogma of the Trinity,” pars. 226ff.

6 “Et haec ergo imago censenda est Dei in homine, quod eosdem motus et sensus habeat humanus animus, quos et Deus, licet non tales quales Deus” (*Adv. Marcion., II*, xvi; in Migne, *P.L.*, vol. 2, col. 304).

7 *Contra Celsum*, VIII, 49 (Migne, *P.G.*, vol. 11, col. 1590): “In anima, non in corpore impressus sit imaginis conditoris character” (The character of the image of the Creator is imprinted on the soul, not on the body). (Cf. trans. by H. Chadwick, p. 488.)

8 *In Lucam homilia*, VIII (Migne, *P.G.*, vol. 13, col. 1820): “Si considerem Dominum Salvatorem imaginem esse invisibilis Dei, et videam animam meam factam ad imaginem conditoris, ut imago esset imaginis: neque enim anima mea specialiter imago est Dei, sed ad similitudinem imaginis prioris effecta est” (If I consider that the Lord and Saviour is the image of the invisible God, I see that my soul is made after the image of the Creator, so as to be an image of an image; for my soul is not directly the image of God, but is made after the likeness of the former image).

9 *De principiis*, I, ii, 8 (Migne, *P.G.*, vol. 11, col. 156): “Salvator figura est substantiae vel subsistentiae Dei” (The Saviour is the figure of the substance or subsistence of God). *In Genesim homilia*, I, 13 (Migne, *P.G.*, vol. 12, col. 156): “Quae est ergo alia imago Dei ad cuius imaginis similitudinem factus est homo, nisi Salvator noster, qui est primogenitus omnis creaturae?” (What else therefore is the image of God after the likeness of which image man was made, but our Saviour, who is the first born of every creature?) *Selecta in Genesim*, IX, 6 (Migne, *P.G.*, vol. 12, col. 107): “Imago autem Dei invisibilis salvator” (But the image of the invisible God is the saviour).

10 *In Gen. hom.*, I, 13 (Migne, *P.G.*, vol. 12, col. 155): “Is autem qui ad imaginem Dei factus est et ad similitudinem, interior homo noster est, invisibilis et incorporealis, et incorruptus atque immortalis” (But that which is made after the image and similitude of God is our inner man, invisible, incorporeal, incorrupt, and immortal).

11 *De princip.*, IV, 37 (Migne, *P.G.*, vol. 11, col. 412).

12 *Retractationes*, I, xxvi (Migne, *P.L.*, vol. 32, col. 626): “(Unigenitus) ... tantummodo imago est, non ad imaginem” (The Only-Begotten ... alone is the image, not after the image).

13 *Enarrationes in Psalmos*, XLVIII. Sermo II (Migne, *P.L.*, vol. 36, col. 564): “Imago Dei intus est, non est in corpore ... ubi est intellectus, ubi est mens, ubi ratio investigandae veritatis etc. ibi habet Deus imaginem suam.” Also *ibid.*, Psalm XLII, 6 (Migne, *P.L.*, vol. 36, col. 480): “Ergo intelligimus habere nos aliquid ubi imago Dei est, mentem scilicet atque rationem” (Therefore we understand that we have something in which the image of God is, namely mind and reason). Sermo XC, 10 (Migne, *P.L.*, vol. 38, col. 566): “Veritas quaeritur in Dei imagine” (Truth is sought in the image of God), but against this the *Liber de vera religione* says: “in interiore homine habitat veritas” (truth dwells in the inner man). From this it is clear that the *imago Dei* coincides with the *interior homo*.

14 *Enarr. in Ps.*, LIV, 3 (Migne, *P.L.*, vol. 36, col. 629): “ ... ubi autem homo ad imaginem Dei factum se novit, ibi aliquid in se agnoscit amplius esse quam datum est pecoribus.”

15 I Cor. 15 : 47.

16 In *Joannis Evangelium*, Tract. LXXVIII, 3 (Migne, *P.L.*, vol. 35, col. 1836): “Christus est Deus, anima rationalis et caro” (Christ is God, a rational soul and a body).

17 Sermo CCXXXVII, 4 (Migne, *P.L.*, vol. 38, col. 1124): “(Verbum) suscepit totum quasi plenum hominem, animam et corpus hominis. Et si aliquid scrupulosius vis audire; quia animam et carnem habet et pecus, cum dico animam humanam et carnem humanam, totam animam humanam accepit.”

18 *Enarr. in Ps.*, LIV, 1 (Migne, *P.L.*, vol. 36, col. 628).

19 *Contra Faustum*, XXII, 38 (Migne, *P.L.*, vol. 42, col. 424): “Est enim et sancta Ecclesia Domino Jesu Christo in occulto uxor. Occulte quippe atque intus in abscondito secreto spirituali anima humana inhaeret Verbo Dei, ut sint duo in carne una.” Cf. St. Augustine’s *Reply to Faustus the Manichaean* (trans. by Richard Stothert, p. 433): “The holy Church, too, is in secret the spouse of the Lord Jesus Christ, For it is secretly, and in the hidden depths of the spirit, that the soul of man is joined to the word of God, so that they are two in one flesh.” St. Augustine is referring here to Eph. 5 : 31f.: “For this cause shall a man leave his father and mother, and shall be joined unto his wife, and they two shall be one flesh. This is a great mystery: but I speak concerning Christ and the Church.”

20 Augustine, *De Trinitate*, XIV, 22 (Migne, *P.L.*, vol. 42, col. 1053): “Reformamini in novitate mentis vestrae, ut incipiat illa imago ab illo reformari, a quo formata est” (Be reformed in the newness of your mind; the beginning of the image’s reforming must come from him who first formed it) (trans. by John Burnaby, p. 120).

21 Cf. “Concerning Mandala Symbolism,” in Part I of vol. 9.

22 *Psychology and Alchemy*, pars. 323ff.

23 Irenaeus (*Adversus haereses*, II, 5, 1) records the Gnostic teaching that when Christ, as the demiurgic Logos, created his mother’s being, he “cast her out of the Pleroma—that is, he cut her off from knowledge.” For creation took place outside the pleroma, in the shadow and the void. According to Valentinus (*Adv. haer.*, I, 11, 1), Christ did not spring from the Aeons of the pleroma, but from the mother who was outside it. She bore him, he says, “not without a kind of shadow.” But he, “being masculine,’ cast off the shadow from himself and returned to the Pleroma (καὶ τοῦτον [Χριστὸν] μὲν ἄτε ἄρρενα ὑπάρχοντα ἀποκόψαντα ἀφ’ ἑαυτοῦ τὴν σκιάν, ἀναδραμεῖν εἰς τὸ Πλήρωμα κτλ.), while his mother, “being left behind in the shadow, and deprived of spiritual substance,’ there gave birth to the real “Demiurge and Pantokrator of the lower world.’ But the shadow

which lies over the world is, as we know from the Gospels, the *princeps huius mundi*, the devil. Cf. *The Writings of Irenaeus*, I, pp. 45f.

24 Cf. R. Schärf, “Die Gestalt des Satans im Alten Testament.”

25 “The Spirit Mercurius,” par. 271.

26 Jewish Christians who formed a Gnostic-syncretistic party.

27 A Gnostic sect mentioned in Epiphanius, *Panarium adversus octoginta haereses*, LXXX, 1–3, and in Michael Psellus, *De daemonibus* (in Marsilius Ficinus, *Auctores Platonici [Iamblichus de mysteriis Aegyptiorum]*, Venice, 1497).

28 “Oportuit autem ut alter illorum extremorum isque optimus appellaretur Dei filius propter suam excellentiam; alter vero ipsi *ex diametro oppositus*, mali daemonis, Satanae diabolique filius diceretur” (But it is fitting that one of these two extremes, and that the best, should be called the Son of God because of his excellence, and the other, *diametrically opposed* to him, the son of the evil demon, of Satan and the devil) (Origen, *Contra Celsum*, VI, 45; in Migne, *P.G.*, vol. 11, col. 1367; cf. trans. by Chadwick, p. 362). The opposites even condition one another: “Ubi quid malum est ... ibi necessario bonum esse malo contrarium. ... Alterum ex altero sequitur: proinde aut utrumque tollendum est negandumque bona et mala esse; aut admissio altero maximeque malo, bonum quoque admissum oportet.” (Where there is evil ... there must needs be good contrary to the evil. ... The one follows from the other; hence we must either do away with both, and deny that good and evil exist, or if we admit the one, and particularly evil, we must also admit the good.) (*Contra Celsum*, II, 51; in Migne, *P.G.*, vol. 11, col. 878; cf. trans. by Chadwick, p. 106.) In contrast to this clear, logical statement Origen cannot help asserting elsewhere that the “Powers, Thrones, and Principalities” down to the evil spirits and impure demons “do not have it—the contrary virtue—substantially” (“non substantialiter id habeant scl. virtus adversaria”), and that they were not created evil but chose the condition of wickedness (“malitiae gradus”) of their own free will. (*De principiis*, I, viii, 4; in Migne, *P.G.*, vol. 11, col. 179.) Origen is already committed, at least by implication, to the definition of God as the Summum Bonum, and hence betrays the inclination to deprive evil of substance. He comes very close to the Augustinian conception of the *privatio boni* when he says: “Certum namque est malum esse bono carere” (For it is certain that to be evil means to be deprived of good). But this sentence is immediately preceded by the following: “Recedere autem a bono, non aliud est quam effici in malo” (To turn aside from good is nothing other than to be perfected in evil) (*De principiis*, II, ix, 2; in Migne, *P.G.*, vol. 11, cols. 226–27). This shows clearly that an increase in the one means a diminution of the other, so that good and evil represent equivalent halves of an opposition.

29 *Adv. haer.*, II, 4, 3.

30 *Oratio ad Graecos* (Migne, *P.G.*, vol. 6, col. 829).

31 Migne, *P.G.*, vol. 6, col. 1080.

32 Basil thought that the darkness of the world came from the shadow cast by the body of heaven. *Hexaemeron*, II, 5 (Migne, *P.G.*, vol. 29, col. 40).

33 *Homilia: Quod Deus non est auctor malorum* (Migne, *P.G.*, vol. 31, col. 341).

34 *De spiritu sancto* (Migne, *P.G.*, vol. 29, col. 37). Cf. *Nine Homilies of the Hexaemeron*, trans. by Blomfield Jackson, pp. 61f.

35 Migne, *P.G.*, vol. 18, cols. 1132f.

36 *Responsiones ad orthodoxas* (Migne, P.G., vol. 6, cols. 1313–14).

37 Migne, P.G., vol. 3, cols. 716–18. Cf. the *Works of Dionysius the Areopagite*, trans. by John Parker, I, pp. 53ff.

38 “Nunc vero ideo sunt omnia bona, quia sunt aliis alia meliora, et bonitas inferiorum addit laudibus meliorum. ... Ea vero quae dicuntur mala, aut vitia sunt rerum bonarum, quae omnino extra res bonas per se ipsa alicubi esse non possunt. ... Sed ipsa quoque vitia testimonium perhibent bonitati naturarum. Quod enim malum est per vitium, profecto bonum est per naturam. Vitium quippe contra naturam est, quia naturae nocet; nec noceret, nisi bonum eius minueret. *Non est ergo malum nisi privatio boni*. Ac per hoc nusquam est nisi in re aliqua bona. ... Ac per hoc bona sine malis esse possunt, sicut ipse Deus, et quaeque superiora coelestia; mala vero sine bonis esse non possunt. Si enim nihil nocent, mala non sunt; si autem nocent, bonum minuunt; et si amplius nocent, habent adhuc bonum quod minuant; et si totum consumunt, nihil naturae remanebit qui noceatur; ac per hoc nec malum erit a quo noceatur, quando natura defuerit, cuius bonum nocendo minuitur.” (*Contra adversarium legis et prophetarum*, I, 4f.; in Migne, P.L., vol. 42, cols. 606–7.) Although the *Dialogus Quaestionum LXV* is not an authentic writing of Augustine’s, it reflects his standpoint very clearly. Quaest. XVI: “Cum Deus omnia bona creaverit, nihilque sit quod non ab illo conditum sit, unde malum? Resp. Malum natura non est; sed *privatio boni* hoc nomen accepit. Denique bonum potest esse sine malo, sed malum non potest esse sine bono, nec potest esse malum ubi non fuerit bonum. ... Ideoque quando dicimus bonum, naturam laudamus; quando dicimus malum, non naturam sed vitium, quod est bonae naturae contrarium reprehendimus.” (Question XVI: Since God created all things good and there is nothing which was not created by him, whence arises evil? Answer: Evil is not a natural thing, it is rather the name given to the privation of good. Thus there can be good without evil, but there cannot be evil without good, nor can there be evil where there is no good. ... Therefore, when we call a thing good, we praise its inherent nature; when we call a thing evil, we blame not its nature, but some defect in it contrary to its nature, which is good.)

39 “Iniquity has no substance” (CCXXVIII). “There is a nature in which there is no evil—in which, indeed, there can be no evil. But it is impossible for a nature to exist in which there is no good” (CLX).

40 *Augustini Opera omnia*, Maurist edn., X, Part 2, cols. 2561–2618.

41 *Sermones supposititii*, Sermo I, 3, Maurist edn., V, col. 2287.

42 *Summa theologica*, I, q. 48, ad I (trans. by the Fathers of the English Dominican Province, II, p. 264).

43 *Ibid.*, I, q. 48, ad 3 (trans., p. 268).

44 “ ... Quod autem conveniens est alicui est illi bonum. Ergo omne agens agit propter bonum” (*Summa contra Gentiles*, 111, ch. 3, trans. by the English Dominican Fathers, vol. III, p. 7).

45 *Summa theologica*, I, q. 48, ad 2 (trans., II, p. 266, citing Aristotle’s *Topics*, iii, 4).

46 In the Decrees of the 4th Lateran Council we read: “For the devil and the other demons as created by God were naturally good, but became evil of their own motion.” Denzinger and Bannwart, *Enchiridion symbolorum*, p. 189.

47 Harnack (*Lehrbuch der Dogmengeschichte*, p. 332) ascribes the Clementine Homilies to the beginning of the 4th cent. and is of the opinion that they contain “no source that could be attributed with any certainty to the 2nd century.” He thinks that Islam is far superior to this theology. Yahweh and Allah are unreflected God-images, whereas in the Clementine Homilies there is a psychological and reflective spirit at work. It is not immediately evident why this should bring about a disintegration of the God-concept, as Harnack thinks. Fear of psychology should not be carried too far.

- 48 *Der Dialog des Adamantius*, III, 4 (ed. by van de Sande Bakhuyzen, p, 119).
- 49 The female or somatic triad consist of ἐπιθυμία (desire), ὀργή (anger), and λύπη (grief); the male, of λογισμός (reflection), λογισμός (knowledge), and φόβος (fear). Cf. the triad of functions in “The Phenomenology of the Spirit in Fairytales,” Part I of vol. 9, pars. 425ff.
- 50 P. de Lagarde (*Clementina*, p. 190) has here ... πάσης ούσας ... ούσης. The reading γνώμης.. seems to me to make more sense.

- 74 My learned friend Victor White, O.P., in his *Dominican Studies* (II, p. 399), thinks he can detect a Manichaean streak in me. I don't go in for metaphysics, but ecclesiastical philosophy undoubtedly does, and for this reason I must

ask what are we to make of hell, damnation, and the devil, if these things are eternal? Theoretically they consist of nothing, and how does that square with the dogma of eternal damnation? But if they consist of something, that something can hardly be good. So where is the danger of dualism? In addition to this my critic should know how very much I stress the unity of the self, this central archetype which is a *complexio oppositorum* par excellence, and that my leanings are therefore towards the very reverse of dualism.

75 It has been objected that Christ cannot have been a valid symbol of the self, or was only an illusory substitute for it. I can agree with this view only if it refers strictly to the present time, when psychological criticism has become possible, but not if it pretends to judge the pre-psychological age. Christ did not merely *symbolize* wholeness, but, as a psychic phenomenon, he *was* wholeness. This is proved by the symbolism as well as by the phenomenology of the past, for which—be it noted—evil was a *privatio boni*. The idea of totality is, at any given time, as total as one is oneself. Who can guarantee that our conception of totality is not equally in need of completion? The mere concept of totality does not by any means posit it.

76 Just as the transcendent nature of light can only be expressed through the image of waves *and* particles.

77 Cf. *Psychology and Alchemy*, pars. 323ff., and “The Relations between the Ego and the Unconscious,” pars. 398ff.

81 Basilides lived in the 2nd cent.

82 *Elenchos*, VII, 27, 12 (cf. Legge trans., II, p. 79).

83 *Ibid.*, VII, 22, 10 (cf. II, pp. 69–70).

84 *Ibid.*, VII, 22, 15 (II, p. 70). The eagle has the same significance in alchemy.

85 This word also occurs in the well-known passage about the *krater* in Zosimos. (Berthelot, *Alch. grecs*, III, li, 8: **ἀναδραρε ἐπὶ τὸ γένος τὸ σόν.**

86 I must say a word here about the *horos* doctrine of the Valentinians in Irenaeus (*Adv. haer.*, I, 2, 2ff.) *Horos* (boundary) is a “power” or numen identical with Christ, or at least proceeding from him. It has the following synonyms: ὁροθέτης (boundary-fixer), **μεταγωγεὺς** (he who leads across), *καρπιστής* (emancipator), *λυτρώτης* (redeemer), *σταυρός* (cross). In this capacity he is the regulator and mainstay of the universe, like Jesus. When Sophia was “formless and shapeless as an embryo, Christ took pity on her, stretched her out through his Cross and gave her form through his power,” so that at least she acquired substance (*Adv. haer.*, I, 4). He also left behind for her an “intimation of immortality.” The identity of the Cross with Horos, or with Christ, is clear from the text, an image that we find also in Paulinus of Nola:

“... regnare deum super omnia Christum,
qui cruce dispensa per quattuor extima ligni
quattuor adtingit dimensum partibus orbem,
ut trahat ad uitam populos ex omnibus oris.”

(Christ reigns over all things as God, who, on the outstretched cross, reaches out through the four extremities of the wood to the four parts of the wide world, that he may draw unto life the peoples from all lands.) (*Carmina*, ed. by Wilhelm Hartel, *Carm.*

91 *Ibid.*, 20, 5 (cf. II, p. 66). Quispel, "Note sur 'Basilide'."

92 With reference to the psychological nature of Gnostic sayings, see Quispel's "Philo und die altchristliche Háresie," p. 432, where he quotes Irenaeus (*Adv. haer.*, II, 4, 2): "Id quod extra et quod intus dicere eos secundum agnitionem et ignorantiam, sed non secundum localem sententiam" (In speaking of what is outward and what is inward, they refer, not to place, but to what is known and what is not known). (Cf. Legge, I, p. 127.) The sentence that follows immediately after this—"But in the Pleroma, or in that which is contained by the Father, everything that the demiurge or the angels have created is contained by the unspeakable greatness, as the centre in a circle"—is therefore to be taken as a description of unconscious contents. Quispel's view of projection calls for the critical remark that projection does not do away with the *reality* of a psychic content. Nor can a fact be called "unreal" merely because it cannot be described as other than "psychic." Psyche is reality par excellence.

93 Cf. *Psychology and Alchemy*, pars. 528ff., 122ff., and "A Study in the Process of Individuation," pars. 542, 550, 581f.

94 Matt. 5 : 48 (DV).

95 Rom. 7 : 21 (AV).

96 Cf. the last two papers in Part I of vol. 9.

1 Early collections of such allegories in the *Ancoratus* of Epiphanius, and in Augustine, *Contra Faustum*. For *nycticorax* and *aquila* see Eucherius, *Liber formularum spiritalis intelligentiae*, cap. 5 (Migne, *P.L.*, vol. 50, col. 740).

2 Augustine (*City of God*, trans. by J. Healey, II, p. 196) relates how the former proconsul Flaccianus, with whom he had a conversation about Jesus, produced a book containing the songs of the Erythraean Sibyl, and showed him the passage where the above words, forming the acrostic *Ἰχθῦς*, are themselves the acrostic for a whole poem, an apocalyptic prophecy of the Sibyls:

“Iudicii signum tellus sudore madescet,
E coelo Rex adveniet per saecula futurus:
Scilicet in carne praesens ut iudicet orbem.
Unde Deum cernent incredulus atque fidelis
Celsum cum Sanctis, aevi iam termino in ipso.
Sic animae cum carne aderunt quas iudicat ipse ... ”
(In sign of doomsday the whole earth shall sweat.
Ever to reign a king in heavenly seat
Shall come to judge all flesh. The faithful and
Unfaithful too before this God shall stand,
Seeing him high with saints in time’s last end.
Corporeal shall he sit, and thence extend
His doom on souls ...) (Ibid., p. 437.)

The Greek original is in *Oracula Sibyllina*, ed. John Geffcken, p. 142. [For Augustine’s explanation of the discrepancy in the acrostic, see Healey trans., II, p. 196.—EDITORS.]

3 Cf. Jeremias, *The Old Testament in the Light of the Ancient East*, I, p. 76, n. 2.

4 From this inscription I will cite only the middle portion, which says: “Everywhere I had a travelling companion, since I had Paul sitting in the chariot. But everywhere Faith drew me onward, and everywhere he set before me for food a fish from the source, exceeding great and pure, which a holy virgin had caught. And he offered this fish to the friends to eat, having good wine, a mixed drink with bread.” See Ramsay, “The Cities and Bishoprics of Phrygia,” p. 424.

- 11 Corresponding to 1396 B.C.
- 12 Actually the conjunction took place in Sagittarius (♐). The *coniunctiones magnae* of the water trigon (♊, ♋, ♌) fall in the years 1800 to 1600 and 1000 to 800 B.C.
- 13 Anger, “Der Stern der Weisen und das Geburtsjahr Christi,” p. 396, and Gerhardt, *Der Stern des Messias*, pp. 54f.
- 14 Gerhardt, p. 57. Ptolemy and, following him, the Middle Ages associate Palestine with Aries.
- 15 “Ye have borne Siccuth your king and Chiun your images, the star of your god, which ye made to yourselves” (RV). Stephen refers to this in his defence (Acts 7: 43): “And you took unto you the tabernacle of Moloch and the star of your god Rempham.” “Rempham” (Ῥομφά), is a corruption of Kewan (Chiun).
- 16 Dozy and de Goeje, “Nouveaux documents pour l’étude de la religion des Harraniens,” p. 350.
- 17 Abu Ma’shar, d. 885.
- 18 Gerhardt, p. 57. Also Pierre d’Ailly, *Concordantia astronomie cum theologia*, etc., fol. g4 (Venice, 1490): “But Saturn, as Messahali says, has a meaning which concerns the Jewish people or their faith.”
- 19 Reitzenstein, *Poimandres*, p. 76.
- 20 *Contra Celsum*, VI, 30 (trans. by H. Chadwick, p. 345).
- 21 *Ibid.*, VI, 31: “But they say that this angel like unto a lion has a necessary connection with the star Saturn.” Cf. *Pistis Sophia*, trans. by Mead, p. 47, and Bousset, *Hauptprobleme der Gnosis*, pp. 352ff.
- 22 Hippolytus, *Elenchos*, V, 7, 30 (Legge trans., I, p. 128).
- 23 *Ibid.*, VII, 38, 1 (cf. Legge trans., II, p. 96).
- 24 Hence the image of Saturn worshipped by the Sabaeans was said to be made of lead or black stone. (Chwolsohn, *Die Ssabier und der Ssabismus*, II, p. 383.)
- 25 *L’Astrologie grecque*, p. 317.
- 26 Bouché-Leclercq (p. 318) conjectures one of the known classical “etymologies,” namely an *onos* (ass) contained in *Kronos* (Saturn), based on a joke aimed at the Megarian philosopher Diodoros. But the reason for the Saturn-ass analogy probably lies deeper, that is, in the nature of the ass itself, which was regarded as a “cold, intractable, slow-witted, long-lived animal.” (From the Greek bestiary cited by Bouché-Leclercq.) In Polcmon’s bestiary I find the following description of the wild ass: “Given to flight, timid, stupid, untamed, lustful, jealous, killing its females” (*Scriptores physiognomici graeci et latini*, I, p. 182).
- 27 A possible model might be the Egyptian tradition of the martyrdom of Set, depicted at Denderah. He is shown tied to the “slave’s post,” has an ass’s head, and Horus stands before him with a knife in his hand. (Mariette, *Dendérah*, plates vol. IV, pl. 56.)
- 28 *Quaestiones convivales*, IV, 5.
- 29 *Contra Apionem*, II, 7–8 (80ff.). (Cf. trans. by H. St. J. Thackeray and R. Marcus, I, pp. 325ff.)
- 30 *The Histories*, trans. by W. H. Fyfe, II, pp. 204ff.
- 31 Epiphanius, *Panarium*, ed. Oehler, I, p. 184.
- 32 *Apologeticus adversus gentes*, XVI (Migne, *P.L.*, vol. 1, cols. 364–65; cf. trans. by S. Thelwall, I, pp. 84f.).
- 33 Plutarch, *De Iside et Osiride*, in *Moralia*, pp. 77, 123. In ch. 31 Plutarch states that the legend of Set’s flight on an ass and of the fathering of his two sons Hierosolymus and Judaeus is not Egyptian, but pertained to the Ἰουδαϊκά.

34 In the Papyrus of Ani (ed. E. A. W. Budge, p. 248) a hymn to Ra says: “May I advance upon the earth; may I smite the Ass; may I crush the evil one (Sebau); may I destroy Apep in his hour.”

35 Albumasar, Lib. II, *De magnis coniunctionibus*, tract. I, diff. 4, p. a8^f (1489): “If (Jupiter) is in conjunction with Saturn, it signifies that the faith of the citizens thereof is Judaism. ... And if the moon is in conjunction with Saturn it signifies doubt and revolution and change, and this by reason of the speed of the corruption of the moon and the rapidity of its motion and the shortness of its delay in the sign.” Cf. also Pierre d’Ailly, *Concordantia*, etc., fol. d8^f. J. H. Heidegger (*Quaestiones ad textum Lucae VII, 12–17*, 1655) says in ch. IX that Abu Mansor (= Albumasar), in his sixth tractate, in the *Introductio maior*, connects the life of Christ, like that of Mahomet, with the stars. Cardan ascribes ♃ ♄ ♀ to Christianity, ♃ ♄ ♁ to Judaism, ♃ ♄ ♂ to Islam, and according to him ♃ ♄ ♀ signifies idolatry (“Commentarium in Ptolemaeum De astrorum Iudiciis,” p. 188).

36 Christensen, *Le Premier Homme et le premier roi dans l’histoire légendaire des Iraniens*, part 1, p. 24.

37 Gerhardt, *Stern des Messias*, p. 74.

38 Calculated on the basis of Peters and Knobel, *Ptolemy’s Catalogue of Stars*.

39 Medieval astrologers cast a number of ideal horoscopes for Christ. Albumasar and Albertus Magnus took Virgo as the ascendent; Pierre d’Ailly (1356–1420), on the other hand, took Libra, and so did Cardan. Pierre d’Ailly says: “For Libra is the human sign, that is, of the Liberator of men, [the sign] of a prudent and just and spiritual man” (*Concordantia*, etc., cap. 2). Kepler, in his *Discurs von der grossen Conjunction* (1623; p. 701), says that God himself marked “such great conjunctions as these with extraordinary and marvellous stars visible in high heaven, also with notable works of his divine Providence.” He continues: “Accordingly he appointed the birth of his Son Christ our Saviour exactly at the time of the great conjunction in the signs of the Fishes and the Ram, near the equinoctial point.” Seen heliocentrically, the conjunction took place just in front of the equinoctial point, and this gives it a special significance astrologically. Pierre d’Ailly (*Concordantia*, etc., fol. b^f) says: “But a great conjunction is that of Saturn and Jupiter in the beginning of the Ram.” These conjunctions occur every 20 years and take place every 200 years in the same trigon. But the same position can only recur every 800 years. The most significant positions are those between two trigons. Albumasar (*De magnis coniunc.*, tract. 3, diff. 1, fol. D 8^f) says they manifest themselves “in changes of parties and offices and in changes of the laws and ... in the coming of prophets and of prophesying and of miracles in parties and offices of state.”

40 Crucifixion was a well-known punishment for slaves. The Cross with a snake on it, instead of the Crucified, is often found in medieval times [*Psychology and Alchemy*, fig. 217], and also in the dreams and fantasy-images of modern people who know nothing of this tradition. A characteristic dream of this sort is the following: *The dreamer was watching a Passion play in the theatre. On the way to Golgotha, the actor taking the part of the Saviour suddenly changed into a snake or crocodile.*

41 Erman, *Die Religion der Ägypter*, p. 137.

42 *Pistis Sophia*, Mead trans., pp. 118f., slightly modified.

43 Cf. the fish that Augustine says was “drawn from the deep.”

44 In this connection mention should be made of the “Saviour of the twins” (σωτηρες) in *Pistis Sophia* (Mead trans., pp. 2, 17, and elsewhere).

45 Also mentioned in the *Chronique* of Tabari (I, ch. 23, p. 67). There Antichrist is the king of the Jews, who appears with Gog and Magog. This may be an allusion to Rev. 20: 7f.: “And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four corners of the earth, Gog and Magog, to gather them together to battle” (AV).

Graf von Wackerbarth (*Merkwürdige Geschichte der weltberühmten Gog und Magog*, p. 19) relates from an English “History of the World,” which came out in German in 1760, that the Arab writers say the “Yajui” were “of more than ordinary size,” whereas the “Majui” were “not more than three spans high.” This story, despite the obscurity of its origins, points to the antithetical nature of Gog and Magog, who thus form a parallel to the Fishes. Augustine interprets “the nations which are in the four corners of the earth, Gog and Magog” as, respectively (Gog), *tectum*, ‘roof’ or ‘house,’ and (Magog) *de tecto*, ‘he that comes out of the house’: “Ut illae sint tectum, ipse de tecto.” That is to say the nations are the house, but the devil dwells in the house and comes out of it. (*City of God*, Healey trans., II, p. 286.) On Augustine is based the *Compendium theologiae veritatis* (Venice, 1492), which was attributed in turn to Albertus Magnus, Hugh of Strasbourg, and John of Paris. It is our main source for the Antichrist legend. With reference to Augustine it says (Libell. 7, cap. 11) that Gog means “occultatio” (concealment), Magog “detectio” (revelation). This corroborates the antithetical nature of Gog and Magog at least for the Middle Ages. It is another instance of the motif of the hostile brothers, or of duplication. Albumasar (tract. 4, diff. 12, f. 8^r) calls the sixth “clima” (inclination towards the Pole) that of Gog and Magog, and correlates it with Gemini and Virgo.

46 *Nezikin VI*, Sanhedrin II (*BT*, p. 658). R. Hanan ben Tahlifa, into whose mouth this prophecy is put, is mentioned in the list of Amoraim (teachers of the Talmud) and lived in the 2nd cent. A.D.

46a Cf. *infra*, pars. 225ff.

47 Epiphanius, *Panarium*, XXX (Oehler edn., I, pp. 240ff.).

48 Hipparchus is supposed to have discovered the precession. Cf. Boll, *Sphaera*, p. 199, n. 1.

49 Origen, *Commentaria in Genesim*, tom. III, i, 14, 11 (Migne, *P.G.*, vol. 12, col. 79): “There is indeed a theory that the zodiacal circle, just like the planets, is carried back from setting to rising [or: from west to east], within a century by one degree; ... since the twelfth part [1 zodiac] is one thing when conceived in the mind, another when perceived by the senses; ye, from that which is conceived only in the mind, and can scarcely, or not even scarcely, be held for certain, the truth of the matter appears.” The Platonic year was then reckoned as 36,000 years. Tycho Brahe reckoned it at 24,120 years. The constant for the precession is 50.3708 seconds and the total cycle (360°) takes 25,725.6 years.

50 Bouché-Leclercq, p. 591, n. 2; Knapp, *Antiskia*; Boll, *Sphaera*.

51 The theory of the conjunctions was set down in writing by the Arabs about the middle of the 9th cent., more particularly by Messahala. Cf. Strauss, *Die Astrologie des Johannes Kepler*.

52 With his estimate of 960 years between two *coniunctiones maximae*, Pierre d’Ailly would also arrive at A.D. 3613.

53 This period around the year 1240 would, from the astrological standpoint, be characterized by the great conjunction of Jupiter and Saturn in Libra, in 1246. Libra is another double sign with a pneumatic nature (air trigon), like Gemini, and for this reason it was taken by Pierre d’Ailly as Christ’s ascendent.

54 At the Lateran Council, 1215. Cf. Denzinger and Bannwart, *Enchiridion symbolorum*, pp. 190ff.

55 “His teaching is to be held not so much heretical as insane,” says the decree.

56 Hahn, *Geschichte der Ketzer im Mittelalter*, II, p. 779: “ ... some who under the name of a false and pretended religious order, whom the common folk call Beghards and Schwestrones or ‘Brod durch Gott’; but they call themselves Little Brethren and Sisters of the fellowship of the Free Spirit and of Voluntary Poverty.”

57 “Item credunt se esse Deum per naturam sine distinctione ... se esse aeternos ...

“Item quod nullo indigent nec Deo nec Deitate.

“Item quod sunt ipsum regnum coelorum.

“Item quod sunt etiam immutabiles in nova rupe, quod de nullo gaudent, et de nullo turbantur.

“Item quod homo magis tenetur sequi instinctum interiorem quam veritatem Evangelii quod cottidie praedicatur ... dicunt, se credere ibi (in Evangelio) esse poetica quae non sunt vera.” (Hahn, II, pp. 779f.)

58 Cf. “The Phenomenology of the Spirit in Fairytales,” pars. 396ff.

59 “The Spirit Mercurius,” pars. 284ff., and “A Psychological Approach to the Dogma of the Trinity,” pars. 257ff.

60 [Although Mary’s Immaculate Conception was declared *de fide* by Pope Pius IX in 1854, by the bull *Ineffabilis Deus*, her Assumption was not defined as part of divine revelation until 1950.—EDITORS.]

61 [Cf. “Psychology and Religion,” par. 122, and “Answer to Job,” pars. 748ff.]

62 *Opera*, ed. G. Schepps, p. 24.

63 Cf. *Aurora Consurgens* (ed. von Franz), p. 127: “this great and wide sea smote the rock and the metallic waters flowed forth.”

64 *Musaeum hermeticum* (1678), p. 212: “Our stone is called the sacred rock, and is understood or signified in four ways.” Cf. Ephesians 3 : 18. The Pyramid Text of Pepi I mentions a god of resurrection with four faces: “Homage to thee, O thou who hast four faces. ... Thou art endowed with a soul, and thou dost rise (like the sun) in thy boat ... carry thou this Pepi with thee in the cabin of thy boat, for this Pepi is the son of the Scarab.” (Budge, *Gods of the Egyptians*, I, p. 85.)

65 *Explanationes in Psalmos*, XXXVIII: “In the shadow there was water from the rock, as it were the blood of Christ.”

66 Mylius, *Philosophia reformata* (1622), p. 112: “Whence the philosopher brought forth water from the rock and oil out of the flinty stone.”

67 *Von hylealischen Chaos* (1597), p. 272.

68 Hippolytus, *Elenchos*, V, 7, 34f. (Legge trans., I, p. 129). Reference is also made here to the “stone cut from the mountain without hands” (Daniel 2 : 45), a metaphor used by the alchemists.

69 *De errore profanarum religionum*, 20, 1.

70 Cf. the building of the seamless tower (church) with “living stones” in the “Shepherd” of Hermas.

71 Doelger, **ΙΧΘΥΣ**: *Das Fischsymbol*, I, p. 18. Though the Abercius inscription, which dates from the beginning of the 3rd cent., (after A.D. 216), is of importance in this connection, it is of doubtful Christian origin. Dieterich (*Die Grabschrift des Aberkios*), in the course of a brilliant argument, demonstrates that the “holy shepherd” mentioned in the inscription is Attis, the Lord of the sacred Ram and the thousand-eyed shepherd of glittering stars. One of his special forms was Elogabal of Emera, the god of the emperor Heliogabalus, who caused the *hieros gamos* of his god to be celebrated with Urania of Carthage, also called *Virgo coelestis*. Heliogabalus was a *gallus* (priest) of the Great

Mother, whose fish only the priests might eat. The fish had to be caught by a virgin. It is conjectured that Abercius had this inscription written in commemoration of his journey to Rome to the great *hieros gamos*, sometime after A.D. 216. For the same reasons there are doubts about the Christianity of the Pectorios inscription at Autun, in which the fish figures too: Ἔσθιε πν ..., ἰχθὺν ἔχων παλάμαις Ἰχθῦϊ χόρταξ ἄρα λιλαίω δέσποτα σῶτερ: “Eat ... (reading uncertain), holding the fish in the hands. Nourish now with the fish, I yearn, Lord Saviour.” Probable reading: πινάων instead of πεινάων. Cf. Cabrol and Leclercq, *Dictionnaire d’archéologie chrétienne*, XIII, cols. 2884ff., “Pectorios.” The first three distichs of the inscription make the acrostic Ichthys. Dating is uncertain (3rd–5th cent.). Cf. Doelger, I, pp. 12ff.

72 I refer particularly to Boll, *Aus der Offenbarung Johannis*. The writings of Arthur Drews have treated the astrological parallels with—one can well say—monomaniacal thoroughness, not altogether to the advantage of this idea. See *Der Sternenhimmel in der Dichtung und Religion der alten Völker und des Christentums*.

73 Religious meal. According to Tertullian (*Adversus Marcionem*, I, cap. XIV; Migne, *P.L.*, vol. 2, col. 262) the fish signifies “the holier food.” Cf. also Goodenough, *Jewish Symbols*, V, pp. 41ff.

74 Origen, *In Genesim hom.* VIII, 9 (Migne, *P.G.*, vol. 12, col. 208): “We said ... that Isaac bore the form of Christ, but that the *ram* also seems no less to bear the form of Christ.” Augustine (*City of God*, XVI, 32, 1) asks: “Who was that ram by the offering whereof was made a complete sacrifice in typical blood ... who was prefigured thereby but Jesus ... ?” For the Lamb as Aries in the Apocalypse see Boll, *Aus der Offenbarung Johannis*.

75 Eisler, *Orpheus—The Fisher*, pp. 51ff. There is also a wealth of material in Eisler’s paper “Der Fisch als Sexuelsymbol,” though it contains little that would help to interpret the fish-symbol, since the question puts the cart before the horse. It has long been known that *all the instinctual forces of the psyche* are involved in the formation of symbolic images, hence sexuality as well. Sex is not “symbolized” in these images, but leaps to the eye, as Eisler’s material clearly shows. In whatsoever a man is involved, there his sexuality will appear too. The indubitably correct statement that St. Peter’s is made of stone, wood, and metal hardly helps us to interpret its meaning, and the same is true of the fish symbol if one continues to be astonished that this image, like all others, has its manifest sexual components. With regard to the terminology, it should be noted that something known is never “symbolized,” but can only be expressed *allegorically* or *semiotically*.

79 Cumont, *Textes et monuments*, II.

80 See the two fishes in Lambspringk’s symbols (*Mus. herm.*, p. 343), representing at the same time the opposites to be united. Aratus (*Phaenomena*, Mair trans., p. 401) mentions only the higher position of the northern fish as compared with the southern one, without emphasizing their duality or opposition. Their double character is, however, stressed in modern astrological speculation. (E. M. Smith, *The Zodia*, p. 279.) Senard (*Le Zodiaque*, p. 446) says: “The fish ... swimming from above downwards symbolizes the movement of involution of Spirit in Matter; that ... which swims from below upwards, the movement of evolution of the Spirit-Matter composite returning to its Unique Principle.”

81 Capricorn ♄ or ♆.

82 A clear reference to astrology can be found in *Pistis Sophia*, where Jesus converses with the “ordainers of the nativity”: “But Jesus answered and said to Mary: If the ordainers of the nativity find Heimarmene and the Sphere turned to the left in accordance with their first circulation, then their words will be true, and they will say what must come to pass. But if they find Heimarmene or the Sphere turned to the right, then they will not say anything true, because I have changed their influences and their squares and their triangles and their octants.” (Cf. Mead trans., p. 29.)

83 The meridian of the star “O” in the commissure passed through the spring-point in A.D. 11, and that of the star “a 113” in 146 B.C. Calculated on the basis of Peters and Knobel, *Ptolemy’s Catalogue of Stars*.

84 Since the delimitation of the constellations is known to be somewhat arbitrary, this date is very indefinite. It refers to the actual constellation of fixed stars, not to the *zodion noeton*, i.e., the zodiac divided into sectors of 30° each. Astrologically the beginning of the next aeon, according to the starting-point you select, falls between A.D. 2000 and 2200. Starting from star “O” and assuming a Platonic month of 2,143 years, one would arrive at A.D. 2154 for the beginning of the Aquarian Age, and at A.D. 1997 if you start from star “a 113.” The latter date agrees with the longitude of the stars in Ptolemy’s *Almagest*.

85 Modern astrological speculation likewise associates the Fishes with Christ: “The fishes ... the inhabitants of the waters, are fitly an emblem of those whose life being hid with Christ in God, come out of the waters of judgment without being destroyed [an allusion to the fishes which were *not* drowned in the Deluge!—C.G.J.] and shall find their true sphere where life abounds and death is not: where, for ever surrounded with the living water and drinking from its fountain, they ‘shall not perish, but have everlasting life.’ ... Those who shall dwell for ever in the living water are one with Jesus Christ the Son of God, the Living One.” (Smith, *The Zodia*, pp. 280f.)

1 Printed in the Amsterdam edition of the *Vrayes Centuries et Prophéties de Maistre Michel Nostredame* (1667), pp. 96ff.

2 According to the old tradition the conjunction of Jupiter and Mercury, as mentioned above, is characteristic of Christianity. The quartile aspect between Mercury and Mars “injures” Mercury by “martial” violence. According to Cardan, ♃ ♀ ♁ signifies “the law of Mahomet” (*Comment. in Ptol.*, p. 188). This aspect could therefore indicate an attack by Islam. Albumasar regards ♃ ♀ ♁ in the same way: “And if Mars shall be in conjunction with him (Jupiter), it signifies the fiery civilization and the pagan faith” (*De magn. coniunct.*, tract. I, diff. 4, p. a8^f). On the analogy of history the evil events to come are ascribed to the crescent moon, but one never reflects that the opponent of Christianity dwells in the European unconscious. History repeats itself.

3 Where Roman Christendom succumbed to Islam.

5 D 7^v to 8^r, div. 2, cap. 60 and 61. Cf. also Thorndike, *A History of Magic and Experimental Science*, IV, p. 102.

6 “Et post illam erit complementum 10 revolutionum saturnalium anno Christi 1789 et hoc erit post dictam coniunctionem per annos 97 vel prope. ... His itaque praesuppositis dicimus quod si mundus usque ad illa tempora duraverit, quod solus deus novit, multae tunc et magnae et mirabiles alterationes mundi et mutationes futurae sunt, et maxime circa leges et sectas, nam cum praedicta coniunctione et illis revolutionibus Saturni ad hoc concurret revolutio seu reversio superioris orbis, id est, octavae sphaerae per quam et per alia praemissa cognoscitur sectarum mutatio ... Unde ex his probabiliter concluditur quod forte circa illa tempora veniet *Antichristus* cum lege sua vel secta damnabili, quae maxime adversa erit et contraria legi Christi; nam licet de adventu sui determinato tempore vel momento haberi non possit humanitus certitudo. ... Tamen indeterminate loquendo quod circa illa tempora venturus sit potest haberi probabilis coniectura et verisimilis suspicio per astronomica iudicia. Cum enim dictum sit secundum astronomos circa illa tempora fieri mutationem sectarum et secundum eos post *machometum* erit aliquis potens, qui legem foedam et magicam constituet. Ideo verisimili probabilitate credi potest, quod post sectam machometi nulla secta veniet, nisi lex antichristi.”

7 *Concordantia*, etc., fol. b 5.

8 Cf. Thorndike, IV, p. 103.
