[417] Paradox is a characteristic of the Gnostic writings. It does more justice to the *unknowable* than clarity can do, for uniformity of meaning robs the mystery of its darkness and sets it up as something that is *known*. That is a usurpation, and it leads the human intellect into hybris by pretending that it, the intellect, has got hold of the transcendent mystery by a cognitive act and has "grasped" it. The paradox therefore reflects a higher level of intellect and, by not forcibly representing the unknowable as known, gives a more faithful picture of the real state of affairs.

[418] These antithetical predications show the amount of *reflection* that has gone into the hymn: it formulates the figure of our Lord in a series of paradoxes, as God and man, sacrificer and sacrificed. The latter formulation is important because the hymn was sung just before Jesus was arrested, that is, at about the moment when the synoptic gospels speak of the Last Supper and John—among other things—of the parable of the vine. John, significantly enough, does not mention the Last Supper, and in the Acts of John its place is taken by the "round dance." But the round table, like the round dance, stands for synthesis and union. In the Last Supper this takes the form of participation in the body and blood of Christ, i.e., there is an ingestion and assimilation of the Lord, and in the round dance there is a circular circumambulation

round the Lord as the central point. Despite the outward difference of the symbols, they have a common meaning: Christ is taken into the midst of the disciples. But, although the two rites have this common basic meaning, the outward difference between them should not be overlooked. The classical Eucharistic feast follows the synoptic gospels, whereas the one in the Acts of John follows the Johannine pattern. One could almost say that it expresses, in a form borrowed from some pagan mystery feast, a more immediate relationship of the congregation to Christ, after the manner of the Johannine parable: "I am the vine, ye are the branches. He that abideth in me, and I in him, the same bringeth forth much fruit" (John 15:5). This close relationship is represented by the circle and central point: the two parts are indispensable to each other and equivalent. Since olden times the circle with a centre has been a symbol for the Deity, illustrating the wholeness of God incarnate: the single point in the centre and the series of points constituting the circumference. Ritual circumambulation often bases itself quite consciously on the cosmic picture of the starry heavens revolving, on the "dance of the stars," an idea that is still preserved in the comparison of the twelve disciples with the zodiacal constellations, as also in the depictions of the zodiac that are sometimes found in churches, in front of the altar or on the roof of the nave. Some such picture may well have been at the back of the medieval ball-game of pelota that was played in church by the bishop and his clergy.

[419] At all events, the aim and effect of the solemn round dance is to impress upon the mind the image of the circle and the centre and the relation of each point along the periphery to that centre.³⁷ Psychologically this arrangement is equivalent to a mandala and is thus a symbol of the self,³⁸ the point of reference not only of the individual ego but of all those who are of like mind or who are bound together by fate. The self is not an ego but a supraordinate totality embracing the conscious and the unconscious. But since the latter has no assignable limits and in its deeper layers is of a collective nature, it cannot be distinguished from that of another individual. As a result, it continually creates that ubiquitous *participation mystique* which is the unity of many, the *one* man in all men. This psychological fact forms the basis for the archetype of the *άνθρωπος*, the Son of Man, the *homo maximus*, the *vir unus*, purusha, etc.³⁹ Because the unconscious, in fact and by definition, cannot be discriminated as such, the most we can hope to do is to infer its nature from the empirical material. Certain unconscious contents are undoubtedly personal and individual and cannot be attributed to any other individual. But, besides these, there are numerous others that can be observed in almost identical form in many different individuals in no way connected with one another. These experiences suggest that the unconscious has a collective aspect. It is therefore difficult to understand how people today can still doubt the existence of a collective unconscious. After all, nobody would dream of regarding the instincts or human morphology as personal

acquisitions or personal caprices. The unconscious is the universal mediator among men. It is in a sense the all-embracing One, or the one psychic substratum common to all. The alchemists knew it as their Mercurius and they called him the mediator in analogy to Christ.⁴⁰ Ecclesiastical doctrine says the same thing about Christ, and so, particularly, does our hymn. Its antithetical statements could, however, be interpreted as referring just as well to Mercurius, if not better.

[420] For instance, in the first verse, “I will be saved,” it is not clear how far the Lord is able to say such a thing of himself, since he is the saviour (σωτήρ) par excellence. Mercurius, on the other hand, the helpful arcane substance of the alchemists, is the world-soul imprisoned in matter and, like the Original Man who fell into the embrace of Physis, is in need of salvation through the labours of the artifex. Mercurius is set free (“loosed”) and redeemed; as *aqua permanens* he is also the classical solvent. “I will be wounded, and I will wound” is clearer: it refers to the wound in Christ’s side and to the divisive sword. But Mercurius too, as the arcane substance, is divided or pierced through with the sword (*separatio* and *penetratio*), and wounds himself with the sword or *telum passionis*, the dart of love. The reference to Christ is less clear in the words “I will be begotten, and I will beget.” The first statement refers essentially to him in so far as the Son was begotten by the Holy Ghost and not created, but the “begetting” is generally held to be the property of the Holy Ghost and not of Christ as such. It certainly remains a moot point whether Mercurius as the world-soul was begotten or created, but he is unquestionably “vivifying,” and in his ithyphallic form as Hermes Kyllenios he is actually the symbol of generation. “Eating” as compared with “being eaten” is not exactly characteristic of Christ, but rather of the devouring dragon, the corrosive Mercurius, who, as the uroboros, also eats himself, like Zosimos’s homunculus.

[421] “I will be thought,” if evangelical at all, is an exclusively Johannine, post-apostolic speculation concerning the nature of the Logos. Hermes was very early considered to be Nous and Logos, and Hermes Trismegistus was actually the Nous of revelation. Mercurius, until well into the seventeenth century, was thought of as the *veritas* hidden in the human body, i.e., in matter, and this truth had to be known by meditation, or by *cogitatio*, reflection. Meditation is an idea that does not occur at all in the New Testament.⁴¹ The *cogitatio* which might possibly correspond to it usually has a negative character and appears as the wicked *cogitatio cordis* of Genesis 6:5 (and 8:21): “Cuncta cogitatio cordis intenta ad malum” (DV: “... all the thought of their heart was bent upon evil at all times”; AV: “... every imagination of the thoughts of his heart ...”). In I Peter 4:1 Ἐννοια is given as “cogitatio” (DV: “... arm yourselves with the same intent”; AV: “same mind”; RSV: “same thought”). “Cogitare” has a more positive meaning in II Corinthians 10:7, where it really means

to “bethink oneself,” “remember by reflection”: “hoc cogitet iterum apud se” (τοῦτο λογιζέσθω πάλιν ἐφ’ ἑαυτοῦ); DV: “let him reflect within himself”;

AV: “let him of himself think this again”; RSV: “let him remind himself”). But this positive thinking in us is of God (II Cor. 3:5: “non quod sufficientes simus cogitare aliquid a nobis, quasi ex nobis”; οὐχ ὅτι ἀφ’ ἑαυτῶν ἱκανοί ἐσμεν λογίσασθαι τι ὡς ἐξ ἑαυτῶν, ἀλλ’ ἡ ἱκανότης ἡμῶν ἐκ τοῦ θεοῦ); DV: “Not that we are sufficient of ourselves to think anything, as from ourselves, but our sufficiency is from God”). The only place where *cogitatio* has the character of a meditation culminating in enlightenment is Acts 10:19: “Petro autem cogitante de visione, dixit Spiritus ei” (“Τοῦ δὲ Πέτρου διενθυμουμένου περὶ τοῦ ὁράματος εἶπεν τὸ πνεῦμα αὐτῷ”; DV: “But while Peter was pondering over the vision, the spirit said to him ...”).

[422] Thinking, in the first centuries of our era, was more the concern of the Gnostics than of the Church, for which reason the great Gnostics, such as Basilides and Valentinus, seem almost like Christian theologians with a bent for philosophy. With John’s doctrine of the Logos, Christ came to be regarded simultaneously as the Nous and the object of human thought; the Greek text says literally: “Νοηθῆναι θέλω νοῦς ὦν ὅλος”⁴² (I will be thought, being wholly spirit). Similarly, the Acts of Peter say of Christ: “Thou art perceived of the spirit only.”⁴³

[423] The “washing” refers to the *purificatio*, or to baptism, and equally to the washing of the dead body. The latter idea lingered on into the eighteenth century, as the alchemical washing of the “black corpse,” an *opus mulierum*. The object to be washed was the black *prima materia*: it, the washing material (*sapo sapientum!*), and the washer were—all three of them—the selfsame Mercurius in different guises. But whereas in alchemy the *nigredo* and sin were identical concepts (since both needed washing), in Christian Gnosticism there are only a few hints of Christ’s possible identity with the darkness. The *λούσασθαι* (“I will be washed”) in our text is one of them.

[424] The “ogdoad,” being a double quaternity, belongs to the symbolism of the mandala. It obviously represents the archetype of the round dance in the “supra-celestial place,” since it sings in harmony. The same applies to the number Twelve, the zodiacal archetype of the twelve disciples, a cosmic idea that still echoes in Dante’s *Paradiso*, where the saints form shining constellations.

[425] Anyone who does not join in the dance, who does not make the circumambulation of the centre (Christ and Anthropos), is smitten with blindness and sees nothing. What is described here as an outward event is really a symbol for the inward turning towards the centre in each of the disciples, towards the archetype of man, towards the self—for the dance can hardly be understood as an historical event. It should be understood, rather, as a sort of paraphrase of the Eucharist, an amplifying

symbol that renders the mystery more assimilable to consciousness, and it must therefore be interpreted as a psychic phenomenon. It is an act of conscious realization on a higher level, establishing a connection between the consciousness of the individual and the supraordinate symbol of totality.

[426] The “Acts of Peter” says of Christ:

Thou art unto me father, thou my mother, thou my brother, thou my friend, thou my bondsman, thou my steward. Thou art All and All is in thee; thou Art, and there is naught else that is save thee only.

Unto him therefore do ye also, brethren, flee, and if ye learn that in him alone ye exist, ye shall obtain those things whereof he saith unto you: “Which neither eye hath seen nor ear heard, neither have they entered into the heart of man.”⁴⁴

[427] The words “I will be united” must be understood in this sense, as meaning that subjective consciousness is united with an objective centre, thus producing the unity of God and man represented by Christ. The self is brought into actuality through the concentration of the many upon the centre, and the self wants this concentration. It is the subject and the object of the process. Therefore it is a “lamp” to those who “perceive” it. Its light is invisible if it is not perceived; it might just as well not exist. It is as dependent on being perceived as the act of perception is on light. This brings out once again the paradoxical subject-object nature of the unknowable. Christ, or the self, is a “mirror”: on the one hand it reflects the subjective consciousness of the disciple, making it visible to him, and on the other hand it “knows” Christ, that is to say it does not merely reflect the empirical man, it also shows him as a (transcendental) whole. And, just as a “door” opens to one who “knocks” on it, or a “way” opens out to the wayfarer who seeks it, so, when you relate to your own (transcendental) centre, you initiate a process of conscious development which leads to oneness and wholeness. You no longer see yourself as an isolated point on the periphery, but as the One in the centre. Only subjective consciousness is isolated; when it relates to its centre it is integrated into wholeness. Whoever joins in the dance sees himself in the reflecting centre, and his suffering is the suffering which the One who stands in the centre “wills to suffer.” The paradoxical identity and difference of ego and self could hardly be formulated more trenchantly.

[428] As the text says, you would not be able to understand what you suffer unless there were that Archimedean point outside, the objective standpoint of the self, from which the ego can be seen as a phenomenon. Without the objectivation of the self the ego would remain caught in hopeless subjectivity and would only gyrate round itself. But if you can see and understand your suffering without being subjectively involved, then, because of your altered standpoint, you also understand “how not to suffer,” for you have reached a place beyond all involvements (“you have me as a bed, rest upon me”). This is an unexpectedly psychological formulation of the Christian idea of

overcoming the world, though with a Docetist twist to it: “Who I am, you shall know when I depart. What now I am seen to be, I am not.”⁴⁵ These statements are clarified by a vision in which John sees the Lord “standing in the midst of the cave and illuminating it.” He says to John:

[429] John, for the multitude below in Jerusalem I am being crucified and pierced with lances and staves, and vinegar and gall are given me to drink. But to you I speak, and what I say, hear: I put it into your mind to go up on this mountain, that you might hear those things which a disciple must learn from his master and a man from his God. And with these words he showed me a cross of light, and about the cross a great multitude that had no form [*μίαν μορφήν μη ἔοντα*], and in the cross there was one form and one appearance. And above [*ἐπάνω*] the cross I saw the Lord himself, and he had no outward shape [*σχῆμα*], but only a voice, and a voice not such as we knew, but one sweet and kind and truly [that] of [a] God, which spoke to me: John, one man must hear this from me, for I require one that shall hear. For your sakes this cross of light was named by me now Logos, now Nous, now Jesus, now Christ, now Door, now Way, now Bread, now Seed [*σπόρος*], now Resurrection, now Son, now Father, now Pneuma, now Life, now Truth, now Faith [*πίστις*], now Grace. So is it called for men; but in itself and in its essence, as spoken of to you, it is the Boundary of all things, and the composing of things unstable,⁴⁶ and the harmony of wisdom, and the wisdom that is in harmony. For there are [places] of the right and of the left, Powers, Authorities, Archons, Daemons, Workings, Threatenings, Wraths, Devils, Satan, and the Nether Root whence proceeded the nature of whatever comes to be. And so it is this cross which joined all things together through the Word, and which separated the things that are from those that are below, and which caused all things to flow forth from the One.

But this is not the cross of wood which you will see when you go down from here; neither am I he that is on the cross, whom now you do not see, but only hear his voice. I passed for that which I am not, for I am not what I was to many others. But what they will say of me is vile and not worthy of me. Since, then, the place of rest is neither seen nor named, how much less will they see and name me, their Lord!

Now the formless multitude about the cross is of the lower nature. And if those whom you see in the cross have not one form, then not all the parts of him who descended have yet been recollected. But when the nature of man has been taken up and a generation of men that obey my voice draws near to me, he that now hears me shall be united with them and shall no longer be what he now is, but shall stand above them, as I do now. For so long as you call not yourself mine, I am not what I was. But if you understand me, you shall be in your understanding as I am, and I shall be what I was when I have you with me. For this you are through me....

Behold, what you are, I have shown you. But what I am, I alone know, and no man else. Therefore let me have what is mine, but behold what is thine through me. And behold me truly, not as I have said I am, but as you, being akin to me, know me.⁴⁷

[430] Our text throws some doubt on the traditional view of Docetism. Though it is perfectly clear from the texts that Christ only seemed to have a body, which only seemed to suffer, this is Docetism at its grossest. The Acts of John are more subtle, and the argument used is almost epistemological: the historical facts are real enough, but they reveal no more than is intelligible to the senses of the ordinary man. Yet even for the knower of divine secrets the act of crucifixion is a mystery, a symbol that expresses a parallel psychic event in the beholder. In the language of Plato it is an event which occurs in a “supra-celestial place,” i.e., on a “mountain” and in a “cave” where a cross of light is set up, its many synonyms signifying that it has many aspects and many meanings. It expresses the unknowable nature of the “Lord,” the supraordinate personality and *τέλειος ἄνθρωπος*, and since it is a quaternity, a whole divided into four parts, it is the classic symbol of the self.

[431] Understood in this sense, the Docetism of the Acts of John appears more as a completion of the historical event than a devaluation of it. It is not surprising that the common people should have failed to appreciate its subtlety, though it is plain enough from a psychological point of view. On the other hand, the educated public of those days were by no means unfamiliar with the parallelism of earthly and metaphysical happenings, only it was not clear to them that their visionary symbols were not necessarily metaphysical realities but were perceptions of intrapsychic or subliminal processes that I have called “phenomena of assimilation.” The contemplation of Christ’s sacrificial death in its traditional form and cosmic significance constellated analogous psychic processes which in their turn gave rise to a wealth of symbols, as I have shown elsewhere.⁴⁸ This is, quite obviously, what has happened here, and it took the form of a visible split between the historical event down below on earth, as perceived by the senses, and its ideal, visionary reflection on high, the cross appearing on the one hand as a wooden instrument of torture and on the other as a glorious symbol. Evidently the centre of gravity has shifted to the ideal event, with the result that the psychic process is involuntarily given the greater importance. Although the emphasis on the pneuma detracts from the meaning of the concrete event in a rather one-sided and debatable way, it cannot be dismissed as superfluous, since a concrete event by itself can never create meaning, but is largely dependent for this on the manner in which it is understood. Interpretation is necessary before the meaning of a thing can be grasped. The naked facts by themselves “mean” nothing. So one cannot assert that the Gnostic attempts at interpretation were entirely lacking in merit, even though it went far beyond the framework of early Christian tradition. One could even venture to assert that it was already implicit in that tradition, since the cross and the crucified are practically synonymous in the language of the New Testament.⁴⁹

[432] The text shows the cross as the antithesis of the formless multitude: it is, or it has, “form” and its meaning is that of a central point defined by the crossing of two straight lines. It is identical with the Kyrios (Lord) and the Logos, with Jesus and with Christ. How John could “see” the Lord above the cross, when the Lord is described as having no “outward shape,” must remain a mystery. He only hears an explanatory voice, and this may indicate that the cross of light is only a visualization of the unknowable, whose voice can be heard apart from the cross. This seems to be confirmed by the remark that the cross was named Logos and so on “for your sakes.”

[433] The cross signifies order as opposed to the disorderly chaos of the formless multitude. It is, in fact, one of the prime symbols of order, as I have shown elsewhere. In the domain of psychological processes it functions as an organizing centre, and in states of psychic disorder⁵⁰ caused by an invasion of unconscious contents it appears as a mandala divided into four. No doubt this was a frequent phenomenon in early Christian times, and not only in Gnostic circles.⁵¹ Gnostic introspection could hardly fail, therefore, to perceive the numinosity of this archetype and be duly impressed by it. For the Gnostics the cross had exactly the same function that the atman or Self has always had for the East. This realization is one of the central experiences of Gnosticism.

[434] The definition of the cross or centre as *διορισμός*, the “boundary” of all things, is exceedingly original, for it suggests that the limits of the universe are not to be found in a nonexistent periphery but in its centre. There alone lies the possibility of transcending this world. All instability culminates in that which is unchanging and quiescent, and in the self all disharmonies are resolved in the “harmony of wisdom.”

[435] As the centre symbolizes the idea of totality and finality, it is quite appropriate that the text should suddenly start speaking of the dichotomy of the universe, polarized into right and left, brightness and darkness, heaven and the “nether root,” the *omnium genetrix*. This is a clear reminder that everything is contained in the centre and that, as a result, the Lord (i.e., the cross) unites and composes all things and is therefore “nirdvanda,” free from the opposites, in conformity with Eastern ideas and also with the psychology of this archetypal symbol. The Gnostic Christ-figure and the cross are counterparts of the typical mandalas spontaneously produced by the unconscious. They are *natural symbols* and they differ fundamentally from the dogmatic figure of Christ, in whom all trace of darkness is expressly lacking.

[436] In this connection mention should be made of Peter’s valedictory words, which he spoke during his martyrdom (he was crucified upside down, at his own request):

O name of the cross, hidden mystery! O grace ineffable that is pronounced in the name of the cross! O nature of man, that cannot be separated from God! O love unspeakable and indivisible, that cannot be shown forth by unclean lips! I grasp thee now, I that am at the end of my earthly course. I will declare thee as thou art, I will not

keep silent the mystery of the cross which was once shut and hidden from my soul. You that hope in Christ, let not the cross be for you that which appears; for it is another thing, and different from that which appears, this suffering which is in accordance with Christ's. And now above all, because you that can hear are able to hear it of me, who am at the last and farewell hour of my life, hearken: separate your souls from everything that is of the senses, from everything that appears to be but in truth is not. Lock your eyes, close your ears, shun those happenings which are seen! Then you shall perceive that which was done to Christ, and the whole mystery of your salvation....

Learn the mystery of all nature and the beginning of all things, as it was. For the first man, of whose race I bear the likeness, fell head downwards and showed forth a manner of birth such as had not existed till then, for it was dead, having no motion. And being pulled downwards, and having also cast his origin upon the earth, he established the whole disposition of things; for, being hanged up in the manner appointed, he showed forth the things of the right as those of the left, and the things of the left as those of the right, and changed about all the marks of their nature, so that things that were not fair were perceived to be fair, and those that were in truth evil were perceived to be good. Wherefore the Lord says in a mystery: "Except ye make the things of the right as those of the left, and those of the left as those of the right, and those that are above as those below, and those that are behind as those that are before, ye shall not have knowledge of the kingdom."

This understanding have I brought you, and the figure in which you now see me hanging is the representation of the first man who came to birth.

[437] In this passage, too, the symbolical interpretation of the cross is coupled with the problem of opposites, first in the unusual idea that the creation of the first man caused everything to be turned upside down, and then in the attempt to unite the opposites by identifying them with one another. A further point of significance is that Peter, crucified head downwards, is identical not only with the first created man, but with the cross:

For what else is Christ but the word, the sound of God? So the word is this upright beam on which I am crucified; and the sound is the beam which crosses it, the nature of man; but the nail which holds the centre of the crossbeam to the upright is man's conversion and repentance (μετάνοια).⁵²

[438] In the light of these passages it can hardly be said that the author of the Acts of John—presumably a Gnostic—has drawn the necessary conclusions from his premises or that their full implications have become clear to him. On the contrary, one gets the impression that the light has swallowed up everything dark. Just as the enlightening vision appears high above the actual scene of crucifixion, so, for John, the enlightened one stands high above the formless multitude. The text says: "Therefore care not for the many, and despise those that are outside the mystery!"⁵³ This overweening attitude arises from an inflation caused by the fact that the enlightened John has identified with his own light and confused his ego with the self. Therefore he feels superior to the darkness in him. He forgets that light only has a meaning when it illuminates something dark and that his enlightenment is no good to him unless it helps him to recognize his own darkness. If the powers of the left are as

real as those of the right, then their union can only produce a third thing that shares the nature of both. Opposites unite in a new energy potential: the “third” that arises out of their union is a figure “free from the opposites,” beyond all moral categories. This conclusion would have been too advanced for the Gnostics. Recognizing the danger of Gnostic irrealism, the Church, more practical in these matters, has always insisted on the concretism of the historical events despite the fact that the original New Testament texts predict the ultimate deification of man in a manner strangely reminiscent of the words of the serpent in the Garden of Eden: “Ye shall be as gods.”⁵⁴ Nevertheless, there was some justification for postponing the elevation of man’s status until after death, as this avoided the danger of Gnostic inflation.⁵⁵

[439] Had the Gnostic not identified with the self, he would have been bound to see how much darkness was in him—a realization that comes more naturally to modern man but causes him no less difficulties. Indeed, he is far more likely to assume that he himself is wholly of the devil than to believe that God could ever indulge in paradoxical statements. For all the ill consequences of his fatal inflation, the Gnostic did, however, gain an insight into religion, or into the psychology of religion, from which we can still learn a thing or two today. He looked deep into the background of Christianity and hence into its future developments. This he could do because his intimate connection with pagan Gnosis made him an “assimilator” that helped to integrate the Christian message into the spirit of the times.

[440] The extraordinary number of synonyms piled on top of one another in an attempt to define the cross have their analogy in the Naassene and Peratic symbols of Hippolytus, all pointing to this one centre. It is the *Ἐν τῷ πᾶν* of alchemy, which is on the one hand the heart and governing principle of the macrocosm, and on the other hand its reflection in a point, in a microcosm such as man has always been thought to be. He is of the same essence as the universe, and his own mid-point is its centre. This inner experience, shared by Gnostics, alchemists, and mystics alike, has to do with the nature of the unconscious—one could even say that it *is* the experience of the unconscious; for the unconscious, though its objective existence and its influence on consciousness cannot be doubted, is in itself undifferentiable and therefore unknowable. Hypothetical germs of differentiation may be conjectured to exist in it, but their existence cannot be proved, because everything appears to be in a state of mutual contamination. The unconscious gives the impression of multiplicity and unity at once. However overwhelmed we may be by the vast quantity of things differentiated in space and time, we know from the world of the senses that the validity of its laws extends to immense distances. We therefore believe that it is one and the same universe throughout, in its smallest part as in its greatest. On the other hand the intellect always tries to discern differences, because it cannot discriminate without them. Consequently the unity of the cosmos remains, for it, a somewhat

nebulous postulate which it doesn't rightly know what to do with. But as soon as introspection starts penetrating into the psychic background it comes up against the unconscious, which, unlike consciousness, shows only the barest traces of any definite contents, surprising the investigator at every turn with a confusing medley of relationships, parallels, contaminations, and identifications. Although he is forced, for epistemological reasons, to postulate an indefinite number of distinct and separate archetypes, yet he is constantly overcome by doubt as to how far they are really distinguishable from one another. They overlap to such a degree and have such a capacity for combination that all attempts to isolate them conceptually must appear hopeless. In addition the unconscious, in sharpest contrast to consciousness and its contents, has a tendency to personify itself in a uniform way, just as if it possessed only one shape or one voice. Because of this peculiarity, the unconscious conveys an experience of unity, to which are due all those qualities enumerated by the Gnostics and alchemists, and a lot more besides.

[441] As can plainly be seen from Gnosticism and other spiritual movements of the kind, people are naïvely inclined to take all the manifestations of the unconscious at their face value and to believe that in them the essence of the world itself, the ultimate truth, has been unveiled. This assumption does not seem to me quite as unwarranted as it may look at first sight, because the spontaneous utterances of the unconscious do after all reveal a psyche which is not identical with consciousness and which is, at times, greatly at variance with it. These utterances occur as a natural psychic activity that can neither be learnt nor controlled by the will. The manifestation of the unconscious is therefore a revelation of the unknown in man. We have only to disregard the dependence of dream language on environment and substitute "eagle" for "aeroplane," "dragon" for "automobile" or "train," "snake-bite" for "injection," and so forth, in order to arrive at the more universal and more fundamental language of mythology. This gives us access to the primordial images that underlie all thinking and have a considerable influence even on our scientific ideas.⁵⁶

[442] In these archetypal forms, something, presumably, is expressing itself that must in some way be connected with the mysterious operation of a natural psyche—in other words, with a cosmic factor of the first order. To save the honour of the objective psyche, which the contemporary hypertrophy of consciousness has done so much to depreciate, I must again emphasize that without the psyche we could not establish the existence of any world at all, let alone know it. But, judging by all we do know, it is certain that the original psyche possesses no consciousness of itself. This only comes in the course of development, a development that falls mostly within the historical epoch.⁵⁷ Even today we know of primitive tribes whose level of consciousness is not so far removed from the darkness of the primordial psyche, and

numerous vestiges of this state can still be found among civilized people. It is even probable, in view of its potentialities for further differentiation, that our modern consciousness is still on a relatively low level. Nevertheless, its development so far has made it emancipated enough to forget its dependence on the unconscious psyche. It is not a little proud of this emancipation, but it overlooks the fact that although it has apparently got rid of the unconscious it has become the victim of its own verbal concepts. The devil is cast out with Beelzebub. Our dependence on words is so strong that a philosophical brand of “existentialism” had to restore the balance by pointing to a reality that exists in spite of words—at considerable risk, however, of concepts such as “existence,” “existential,” etc. turning into more words which delude us into thinking that we have caught a reality. One can be—and is—just as dependent on words as on the unconscious. Man’s advance towards the Logos was a great achievement, but he must pay for it with loss of instinct and loss of reality to the degree that he remains in primitive dependence on mere words. Because words are substitutes for things, which of course they cannot be in reality, they take on intensified forms, become eccentric, outlandish, stupendous, swell up into what schizophrenic patients call “power words.” A primitive word-magic develops, and one is inordinately impressed by it because anything out of the ordinary is felt to be especially profound and significant. Gnosticism in particular affords some very instructive examples of this. Neologisms tend not only to hypostatize themselves to an amazing degree, but actually to replace the reality they were originally intended to express.

[443] This rupture of the link with the unconscious and our submission to the tyranny of words have one great disadvantage: the conscious mind becomes more and more the victim of its own discriminating activity, the picture we have of the world gets broken down into countless particulars, and the original feeling of unity, which was integrally connected with the unity of the unconscious psyche, is lost. This feeling of unity, in the form of the correspondence theory and the sympathy of all things, dominated philosophy until well into the seventeenth century and is now, after a long period of oblivion, looming up again on the scientific horizon, thanks to the discoveries made by the psychology of the unconscious and by parapsychology. The manner in which the unconscious forcibly obtrudes upon the conscious by means of neurotic disturbances is not only reminiscent of contemporary political and social conditions but even appears as an accompanying phenomenon. In both cases there is an analogous dissociation: in the one case a splitting of the world’s consciousness by an “iron curtain,” and in the other a splitting of the individual personality. This dissociation extends throughout the entire world, so that a psychological split runs through vast numbers of individuals who, in their totality, call forth the corresponding mass phenomena. In the West it was chiefly the mass factor, and in the

East technology, that undermined the old hierarchies. The cause of this development lay principally in the economic and psychological uprootedness of the industrial masses, which in turn was caused by the rapid technological advance. But technology, it is obvious, is based on a specifically rationalistic differentiation of consciousness which tends to repress all irrational psychic factors. Hence there arises, in the individual and nation alike, an unconscious counterposition which in time grows strong enough to burst out into open conflict.

[444] The same situation in reverse was played out on a smaller scale and on a spiritual plane during the first centuries of our era, when the spiritual disorientation of the Roman world was compensated by the irruption of Christianity. Naturally, in order to survive, Christianity had to defend itself not only against its enemies but also against the excessive pretensions of some of its adherents, including those of the Gnostics. Increasingly it had to rationalize its doctrines in order to stem the flood of irrationality. This led, over the centuries, to that strange marriage of the originally irrational Christian message with human reason, which is so characteristic of the Western mentality. But to the degree that reason gradually gained the upper hand, the intellect asserted itself and demanded autonomy. And just as the intellect subjugated the psyche, so also it subjugated Nature and begat on her an age of scientific technology that left less and less room for the natural and irrational man. Thus the foundations were laid for an inner opposition which today threatens the world with chaos. To make the reversal complete, all the powers of the underworld now hide behind reason and intellect, and under the mask of rationalistic ideology a stubborn faith seeks to impose itself by fire and sword, vying with the darkest aspects of a church militant. By a strange enantiodromia,⁵⁸ the Christian spirit of the West has become the defender of the irrational, since, in spite of having fathered rationalism and intellectualism, it has not succumbed to them so far as to give up its belief in the rights of man, and especially the freedom of the individual. But this freedom guarantees a recognition of the irrational principle, despite the lurking danger of chaotic individualism. By appealing to the eternal rights of man, faith binds itself inalienably to a higher order, not only on account of the historical fact that Christ has proved to be an ordering factor for many hundreds of years, but also because the self effectively compensates chaotic conditions no matter by what name it is known: for the self is the *Anthropos* above and beyond this world, and in him is contained the freedom and dignity of the individual man. From this point of view, disparagement and vilification of Gnosticism are an anachronism. Its obviously psychological symbolism could serve many people today as a bridge to a more living appreciation of Christian tradition.

[445] These historical changes have to be borne in mind if we wish to understand the Gnostic figure of Christ, because the sayings in the Acts of John concerning the

nature of the Lord only become intelligible when we interpret them as expressing an experience of the original unity as contrasted with the formless multiplicity of conscious contents. This Gnostic Christ, of whom we hear hints even in the Gospel according to St. John, symbolizes man's original unity and exalts it as the saving goal of his development. By "composing the unstable," by bringing order into chaos, by resolving disharmonies and centring upon the mid-point, thus setting a "boundary" to the multitude and focusing attention upon the cross, consciousness is reunited with the unconscious, the unconscious man is made one with his centre, which is also the centre of the universe, and in this wise the goal of man's salvation and exaltation is reached.

[446] Right as this intuition may be, it is also exceedingly dangerous, for it presupposes a coherent egoconsciousness capable of resisting the temptation to identify with the self. Such an ego-consciousness seems to be comparatively rare, as history shows; usually the ego identifies with the inner Christ, and the danger is increased by an *imitatio Christi* falsely understood. The result is inflation, of which our text affords eloquent proof. In order to exorcise this danger, the Church has not made too much of the "Christ within," but has made all it possibly could of the Christ whom we "have seen, heard, and touched with hands," in other words, with the historical event "below in Jerusalem." This is a wise attitude, which takes realistic account of the primitiveness of man's consciousness, then as now. For the less mindful it is of the unconscious, the greater becomes the danger of its identification with the latter, and the greater, therefore, the danger of inflation, which, as we have experienced to our cost, can seize upon whole nations like a psychic epidemic. If Christ is to be "real" for this relatively primitive consciousness, then he can be so only as an historical figure and a metaphysical entity, but not as a psychic centre in all too perilous proximity to a human ego. The Gnostic development, supported by scriptural authority, pushed so far ahead that Christ was clearly recognized as an inner, psychic fact. This also entailed the relativity of the Christ-figure, as expressively formulated in our text: "For so long as you call not yourself mine, I am not what I was.... I shall be what I was when I have you with me." From this it follows unmistakably that although Christ was whole once upon a time, that is, before time and consciousness began, he either lost this wholeness or gave it away to mankind⁵⁹ and can only get it back again through man's integration. His wholeness depends on man: "You shall be in your understanding as I am"—this ineluctable conclusion shows the danger very clearly. The ego is dissolved in the self; unbeknown to itself, and with all its inadequacy and darkness, it has become a god and deems itself superior to its unenlightened fellows. It has identified with its own conception of the "higher man," quite regardless of the fact that this figure consists of "Places of the right and left, Authorities, Archons, Daemons" etc., and the devil

himself. A figure like this is simply not to be comprehended, an awesome mystery with which one had better not identify if one has any sense. It is sufficient to know that such a mystery exists and that somewhere man can feel its presence, but he should take care not to confuse his ego with it. On the contrary, the confrontation with his own darkness should not only warn him against identification but should inspire him with salutary terror on beholding just what he is capable of becoming. He cannot conquer the tremendous polarity of his nature on his own resources; he can only do so through the terrifying experience of a psychic process that is independent of him, that works *him* rather than he *it*.

[447] If such a process exists at all, then it is something that can be experienced. My own personal experience, going back over several decades and garnered from many individuals, and the experience of many other doctors and psychologists, not to mention the statements—terminologically different, but essentially the same—of all the great religions,⁶⁰ all confirm the existence of a compensatory ordering factor which is independent of the ego and whose nature transcends consciousness. The existence of such a factor is no more miraculous, in itself, than the orderliness of radium decay, or the attunement of a virus to the anatomy and physiology of human beings,⁶¹ or the symbiosis of plants and animals. What is miraculous in the extreme is that man can have conscious, reflective knowledge of these hidden processes, while animals, plants, and inorganic bodies seemingly lack it. Presumably it would also be an ecstatic experience for a radium atom to know that the time of its decay is exactly determined, or for the butterfly to recognize that the flower has made all the necessary provisions for its propagation.

[448] The numinous experience of the individuation process is, on the archaic level, the prerogative of shamans and medicine men; later, of the physician, prophet, and priest; and finally, at the civilized stage, of philosophy and religion. The shaman's experience of sickness, torture, death, and regeneration implies, at a higher level, the idea of being made whole through sacrifice, of being changed by transubstantiation and exalted to the pneumatic man—in a word, of apotheosis. The Mass is the summation and quintessence of a development which began many thousands of years ago and, with the progressive broadening and deepening of consciousness, gradually made the isolated experience of specifically gifted individuals the common property of a larger group. The underlying psychic process remained, of course, hidden from view and was dramatized in the form of suitable "mysteries" and "sacraments," these being reinforced by religious teachings, exercises, meditations, and acts of sacrifice which plunge the celebrant so deeply into the sphere of the mystery that he is able to become conscious of his intimate connection with the mythic happenings. Thus, in ancient Egypt, we see how the experience of "Osirification,"⁶² originally the prerogative of the Pharaohs, gradually passed to the aristocracy and finally, towards

the end of the Old Kingdom, to the single individual as well. Similarly, the mystery religions of the Greeks, originally esoteric and not talked about, broadened out into collective experience, and at the time of the Caesars it was considered a regular sport for Roman tourists to get themselves initiated into foreign mysteries. Christianity, after some hesitation, went a step further and made celebration of the mysteries a public institution, for, as we know, it was especially concerned to introduce as many people as possible to the experience of the mystery. So, sooner or later, the individual could not fail to become conscious of his own transformation and of the necessary psychological conditions for this, such as confession and repentance of sin. The ground was prepared for the realization that, in the mystery of transubstantiation, it was not so much a question of magical influence as of psychological processes—a realization for which the alchemists had already paved the way by putting their *opus operatum* at least on a level with the ecclesiastical mystery, and even attributing to it a cosmic significance since, by its means, the divine world-soul could be liberated from imprisonment in matter. As I think I have shown, the “philosophical” side of alchemy is nothing less than a symbolic anticipation of certain psychological insights, and these—to judge by the example of Gerhard Dorn—were pretty far advanced by the end of the sixteenth century.⁶³ Only our intellectualized age could have been so deluded as to see in alchemy nothing but an abortive attempt at chemistry, and in the interpretative methods of modern psychology a mere “psychologizing,” i.e., annihilation, of the mystery. Just as the alchemists knew that the production of their stone was a miracle that could only happen “Deo concedente,” so the modern psychologist is aware that he can produce no more than a description, couched in scientific symbols, of a psychic process whose real nature transcends consciousness just as much as does the mystery of life or of matter. At no point has he explained the mystery itself, thereby causing it to fade. He has merely, in accordance with the spirit of Christian tradition, brought it a little nearer to individual consciousness, using the empirical material to set forth the individuation process and show it as an actual and experienceable fact. To treat a metaphysical statement as a psychic process is not to say that it is “merely psychic,” as my critics assert—in the fond belief that the word “psychic” postulates something known. It does not seem to have occurred to people that when we say “psyche” we are alluding to the densest darkness it is possible to imagine. The ethics of the researcher require him to admit where his knowledge comes to an end. This end is the beginning of true wisdom.

IV

FOREWORD TO WHITE'S "GOD AND THE UNCONSCIOUS"

FOREWORD TO WERBLOWSKY'S "LUCIFER AND PROMETHEUS"

BROTHER KLAUS

FOREWORD TO WHITE'S "GOD AND THE UNCONSCIOUS"¹

[449] It is now many years since I expressed a desire for co-operation with a theologian, but I little knew—or even dreamt—how or to what extent my wish was to be fulfilled. This book, to which I have the honour of contributing an introductory foreword, is the third major publication² from the theological side which has been written in a spirit of collaboration and mutual effort. In the fifty years of pioneer work that now lie behind me I have experienced criticism, just and unjust, in such abundance that I know how to value any attempt at positive co-operation. Criticism from this quarter is constructive and therefore welcome.

[450] Psychopathology and medical psychotherapy are, when viewed superficially, far removed from the theologian's particular field of interest, and it is therefore to be expected that no small amount of preliminary effort will be required to establish a terminology comprehensible to both parties. To make this possible, certain fundamental realizations are required on either side. The most important of these is an appreciation of the fact that the object of mutual concern is the psychically sick and suffering human being, who is in need of consideration as much from the somatic or biological standpoint as from the spiritual or religious. The problem of neurosis ranges from disturbances in the sphere of instinct to the ultimate questions and decisions affecting our philosophy of life. Neurosis is not an isolated, sharply defined phenomenon; it is a reaction of the *whole* human being. Here a pure therapy of the symptoms is obviously even more definitely proscribed than in the case of purely somatic illnesses; these too, however, always have a psychic component or accompanying symptom even though they are not psychogenic. Modern medicine has just begun to take account of this fact, which the psychotherapists have been emphasizing for a long time. In the same way, long years of experience have shown me over and over again that a therapy along purely biological lines does not suffice, but requires a spiritual complement. This becomes especially clear to the medical psychologist where the question of *dreams* is concerned; for dreams, being statements of the unconscious, play no small part in the therapy. Anyone who sets to work in an honest and critical frame of mind will have to admit that the correct understanding of dreams is no easy matter, but one that calls for careful reflection, leading far beyond purely biological points of view. The indubitable occurrence of archetypal motifs in dreams makes a thorough knowledge of the spiritual history of man indispensable for anyone seriously attempting to understand the real meaning of

dreams. The likeness between certain dream-motifs and mythologems is so striking that they may be regarded not merely as similar but even as identical. This recognition not only raises the dream to a higher level and places it in the wider context of the mythologem, but, at the same time, the problems posed by mythology are brought into connection with the psychic life of the individual. From the mythologem to the religious statement it is only a step. But whereas the mythological figures appear as pale phantoms and relics of a long past life that has become strange to us, the religious statement represents an immediate “numinous” experience. It is a *living mythologem*.

[451] Here the empiricist’s way of thinking and expressing himself gets him into difficulties with the theologian. The latter—when he is either making a dogma of the Gospel or “demythologizing” it—won’t hear anything of “myth” because it seems to him a devaluation of the religious statement, in whose supreme truth he believes. The empiricist, on the other hand, whose orientation is that of natural science, does not connect any notion of value with the concept “myth.” “Myth,” for him, means “a statement about processes in the unconscious,” and this applies equally to the religious statement. He has no means of deciding whether the latter is “truer” than the mythologem, for between the two he sees only one difference: the difference in living intensity. The so-called religious statement is still numinous, a quality which the myth has already lost to a great extent. The empiricist knows that rites and figures once “sacred” have become obsolete and that new figures have become “numinous.”

[452] The theologian can reproach the empiricist and say that he *does* possess the means of deciding the truth, he merely does not wish to make use of it—referring to the truth of revelation. In all humility the empiricist will then ask: *Which* revealed truth, and where is the proof that one view is truer than another? Christians themselves do not appear to be at one on this point. While they are busy wrangling, the doctor has an urgent case on his hands. He cannot wait for age-long schisms to be settled, but will seize upon anything that is “alive” for the patient and therefore effective. Naturally he cannot prescribe *any* religious system which is commonly supposed to be alive. Rather, by dint of careful and persevering investigation, he must endeavour to discover just where the sick person feels a healing, living quality which can make him whole. For the present he cannot be concerned whether this so-called truth bears the official stamp of validity or not. If, however, the patient is able to rediscover himself in this way and so get on his feet again, then the question of reconciling his individual realization—or whatever one may choose to call the new insight or life-giving experience—with the collectively valid opinions and beliefs becomes a matter of vital importance. That which is *only* individual has an isolating effect, and the sick person will never be healed by becoming a mere individualist. He would still be neurotically unrelated and estranged from his social group. Even

Freud's exclusively personalistic psychology of drives was obliged to come to terms, at least negatively, with the generally valid truths, the age-old *représentations collectives* of human society. Scientific materialism is by no means a private religious or philosophical matter, but a very public matter indeed, as we might well have realized from contemporary events. In view of the extraordinary importance of these so-called universal truths, a rapprochement between individual realizations and social convictions becomes an urgent necessity. And just as the sick person in his individual distinctiveness must find a *modus vivendi* with society, so it will be a no less urgent task for him to compare the insights he has won through exploring the unconscious with the universal truths, and to bring them into mutual relationship.

[453] A great part of my life's work has been devoted to this endeavour. But it was clear to me from the outset that I could never accomplish such a task by myself. Although I can testify to the psychological facts, it is quite beyond my power to promote the necessary processes of assimilation which coming to terms with the *représentations collectives* requires. This calls for the cooperation of many, and above all of those who are the expounders of the universal truths, namely the theologians. Apart from doctors, they are the only people who have to worry professionally about the human soul, with the exception perhaps of teachers. But the latter confine themselves to children, who as a rule only suffer from the problems of the age indirectly, via their parents and educators. Surely, then, it would be valuable for the theologian to know what happens in the psyche of an adult. It must gradually be dawning on any responsible doctor what a tremendously important role the spiritual element plays in the psychic economy.

[454] I must acknowledge with gratitude that the co-operation I had so long wished and hoped for has now become a reality. The present book bears witness to this, for it meets the preoccupations of medical psychology not only with intellectual understanding, but with good will. Only the most uncritical optimism could expect such an encounter to be love at first sight. The *points de départ* are too far apart and too different, and the road to their meeting-place too long and too hard, for agreement to come as a matter of course. I do not presume to know what the theologian misunderstands or fails to understand in the empiricist's point of view, for it is as much as I can do to learn to estimate his theological premises correctly. If I am not mistaken, however, one of the main difficulties lies in the fact that both appear to speak the same language, but this language calls up in their minds two totally different fields of association. Both can apparently use the same concept and must then acknowledge, to their amazement, that they are speaking of two different things. Take, for instance, the word "God." The theologian will naturally assume that the metaphysical *Ens Absolutum* is meant. The empiricist, on the contrary, does not dream of making such a far-reaching assumption, which strikes him as downright

impossible anyway. He just as naturally means the word “God” as a mere statement, or at most as an archetypal motif which prefigures such statements. For him “God” can just as well mean Yahweh, Allah, Zeus, Shiva, or Huitzilopochtli. The divine attributes of omnipotence, omniscience, eternity, and so on are to him statements which, symptomatically or as syndromes, more or less regularly accompany the archetype. He grants the divine image numinosity—that is, a deeply stirring emotional effect—which he accepts in the first place as a fact and sometimes tries to explain rationally, in a more or less unsatisfactory way. As a psychiatrist, he is sufficiently hardboiled to be profoundly convinced of the relativity of all such statements. As a scientist, his primary interest is the verification of psychic facts and their regular occurrence, to which he attaches incomparably greater importance than to abstract possibilities. His *religio* consists in establishing facts which can be observed and proved. He describes and circumscribes these in the same way as the mineralogist his mineral samples and the botanist his plants. He is aware that beyond provable facts he can know nothing and at best can only dream, and he considers it immoral to confuse a dream with knowledge. He does not deny what he has not experienced and cannot experience, but he will on no account assert anything which he does not think he can prove with facts. It is true that I have often been accused of having dreamt up the archetypes. I must remind these too hasty critics that a comparative study of motifs existed long before I ever mentioned archetypes. The fact that archetypal motifs occur in the psyche of people who have never heard of mythology is common knowledge to anyone who has investigated the structure of schizophrenic delusions, if his eyes have not already been opened in this respect by the universal occurrence of certain mythologems. Ignorance and narrow-mindedness, even when the latter is political, have never been conclusive scientific arguments.³

[455] I must be content to describe the standpoint, the faith, the struggle, the hope and devotion of the empiricist, which all culminate in the discovery and verification of provable facts and their hypothetical interpretation. For the theological standpoint I refer the reader to the competent *exposé* by the author of this book.

[456] When standpoints differ so widely, it is understandable that numerous clashes should occur in practice, some important, some unimportant. They are important, above all, where one realm threatens to encroach upon the territory of the other. My criticism of the doctrine of the *privatio boni* is such a case. Here the theologian has a certain right to fear an intrusion on the part of the empiricist. This discussion has left its mark on the book, as the reader will see for himself. Hence I feel at liberty to avail myself of the right of free criticism, so generously offered me by the author, and to lay my argument before the reader.

[457] I should never have dreamt that I would come up against such an apparently out-of-the-way problem as that of the *privatio boni* in my practical work. Fate would have it, however, that I was called upon to treat a patient, a scholarly man with an academic training, who had got involved in all manner of dubious and morally reprehensible practices. He turned out to be a fervent adherent of the *privatio boni*, because it fitted in admirably with his scheme: evil in itself is nothing, a mere shadow, a trifling and fleeting diminution of good, like a cloud passing over the sun. This man professed to be a believing Protestant and would therefore have had no reason to appeal to a *sententia communis* of the Catholic Church had it not proved a welcome sedative to his uneasy conscience. It was this case that originally induced me to come to grips with the *privatio boni* in its psychological aspect. It is self-evident to the empiricist that the metaphysical aspect of such a doctrine must be left out of account, for he knows that he is dealing only with moral judgments and not with substances. We name a thing, *from a certain point of view*, good or bad, high or low, right or left, light or dark, and so forth. Here the antithesis is just as factual and real as the thesis.⁴ It would never occur to anyone—except under very special conditions and for a definite purpose—to define cold as a diminution of heat, depth as a diminution of height, right as a diminution of left. With this kind of logic one could just as well call good a diminution of evil. The psychologist would, it is true, find this way of putting it a little too pessimistic, but he would have nothing against it logically. Instead of ninety-nine you can also say a hundred minus one, if you don't find it too complicated. But should he, as a moral man, catch himself glossing over an immoral act by optimistically regarding it as a slight diminution of good, which alone is real, or as an “accidental lack of perfection,” then he would immediately have to call himself to order. His better judgment would tell him: If your evil is in fact only an unreal shadow of your good, then your so-called good is nothing but an unreal shadow of your real evil. If he does not reflect in this way he is deceiving himself, and self-deceptions of this kind have dissociating effects which breed neurosis, among them feelings of inferiority, with all their well-known attendant phenomena.

[458] For these reasons I have felt compelled to contest the validity of the *privatio boni* so far as the empirical realm is concerned. For the same reasons I also criticize the dictum derived from the *privatio boni*, namely: “Omne bonum a Deo, omne malum ab homine”;⁵ for then on the one hand man is deprived of the possibility of doing anything good, and on the other he is given the seductive power of doing evil. The only dignity which is left him is that of the fallen angel. The reader will see that I take this dictum literally.

[459] Criticism can be applied only to psychic phenomena, i.e., to ideas and concepts, and not to metaphysical entities. These can only be confronted with other

metaphysical entities. Hence my criticism is valid *only within the empirical realm*. In the metaphysical realm, on the other hand, good may be a substance and evil a *μη`όν*. I know of no factual experience which approximates to such an assertion, so at this point the empiricist must remain silent. Nevertheless, it is possible that here, as in the case of other metaphysical statements, especially dogmas, there are archetypal factors in the background, which have existed for an indefinitely long time as preformative psychic forces and would therefore be accessible to empirical research. In other words, there might be a preconscious psychic tendency which, independent of time and place, continually causes similar statements to be made, as is the case with mythologems, folklore motifs, and the individual formation of symbols. It seems to me, however, that the existing empirical material, at least so far as I am acquainted with it, permits of no definite conclusion as to the archetypal background of the *privatio boni*. Subject to correction, I would say that clear-cut *moral* distinctions are the most recent acquisition of civilized man. That is why such distinctions are often so hazy and uncertain, unlike other antithetical constructions which undoubtedly have an archetypal nature and are the prerequisites for any act of cognition, such as the Platonic *ταὐτὸν-θᾶτερον* (the Same and the Different).

[460] Psychology, like every empirical science, cannot get along without auxiliary concepts, hypotheses, and models. But the theologian as well as the philosopher is apt to make the mistake of taking them for metaphysical postulates. The atom of which the physicist speaks is not an *hypostasis*, it is a *model*. Similarly, my concept of the archetype or of psychic energy is only an auxiliary idea which can be exchanged at any time for a better formula. From a philosophical standpoint my empirical concepts would be logical monsters, and as a philosopher I should cut a very sorry figure. Looked at theologically, my concept of the anima, for instance, is pure Gnosticism; hence I am often classed among the Gnostics. On top of that, the individuation process develops a symbolism whose nearest affinities are to be found in folklore, in Gnostic, alchemical, and suchlike “mystical” conceptions, not to mention shamanism. When material of this kind is adduced for comparison, the exposition fairly swarms with “exotic” and “far-fetched” proofs, and anyone who merely skims through a book instead of reading it can easily succumb to the illusion that he is confronted with a Gnostic system. In reality, however, individuation is an expression of that biological process—simple or complicated as the case may be—by which every living thing becomes what it was destined to become from the beginning. This process naturally expresses itself in man as much psychically as somatically. On the psychic side it produces those well-known quaternity symbols, for instance, whose parallels are found in mental asylums as well as in Gnosticism and other exoticisms, and—last but not least—in Christian allegory. Hence it is by no means a case of mystical speculations, but of clinical observations and their

interpretation through comparison with analogous phenomena in other fields. It is not the daring fantasy of the anatomist that can be held responsible when he discovers the nearest analogies to the human skeleton in certain African anthropoids of which the layman has never heard.

[461] It is certainly remarkable that my critics, with few exceptions, ignore the fact that, as a doctor and scientist, I proceed from facts which everyone is at liberty to verify. Instead, they criticize me as if I were a philosopher, or a Gnostic with pretensions to supernatural knowledge. As a philosopher and speculating heretic I am, of course, easy prey. That is probably the reason why people prefer to ignore the facts I have discovered, or to deny them without scruple. But it is the facts that are of prime importance to me and not a provisional terminology or attempts at theoretical reflections. The fact that archetypes exist is not spirited away by saying that there are no inborn ideas. I have never maintained that the archetype *an sich* is an idea, but have expressly pointed out that I regard it as a form without definite content.

[462] In view of these manifold misunderstandings, I set a particularly high value on the real understanding shown by the author, whose *point de départ* is diametrically opposed to that of natural science. He has successfully undertaken to feel his way into the empiricist's manner of thinking as far as possible, and if he has not always entirely succeeded in his attempt, I am the last person to blame him, for I am convinced that I am unwittingly guilty of many an offence against the theological way of thinking. Discrepancies of this kind can only be settled by lengthy discussions, but they have their good side: not only do two apparently incompatible mental spheres come into contact, they also animate and fertilize one another. This calls for a great deal of good will on either side, and here I can give the author unstinted praise. He has taken the part of the opposite standpoint very fairly, and—what is especially valuable to me—has at the same time illustrated the theological standpoint in a highly instructive way. The medical psychotherapist cannot in the long run afford to overlook the religious systems of healing—if one may so describe certain aspects of religion—any more than the theologian, if he has the cure of souls at heart, can afford to ignore the experience of medical psychology.

[463] In the practical field of individual treatment it seems to me that no serious difficulties should arise. These may be expected only when the discussion begins between individual experience and the collective truths. In most cases this necessity does not present itself until fairly late in the treatment, if at all. In practice it quite often happens that the whole treatment takes place on the personal plane, without the patient having any inner experiences that are definite enough to necessitate his coming to terms with the collective beliefs. If the patient remains within the framework of his traditional faith, he will, even if stirred or perhaps shattered by an

archetypal dream, translate this experience into the language of his faith. This operation may strike the empiricist (if he happens to be a fanatic of the truth) as questionable, but it can pass off harmlessly and may even lead to a satisfactory issue, in so far as it is *legitimate* for this type of man. I try to impress it upon my pupils not to treat their patients as if they were all cut to the same measure: the population consists of different historical layers. There are people who, psychologically, might be living in the year 5000 B.C., i.e., who can still successfully solve their conflicts as people did seven thousand years ago. There are countless troglodytes and barbarians living in Europe and in all civilized countries, as well as a large number of medieval Christians. On the other hand, there are relatively few who have reached the level of consciousness which is possible in our time. We must also reckon with the fact that a few of our generation belong to the third or fourth millennium A.D. and are consequently anachronistic. So it is psychologically quite “legitimate” when a medieval man solves his conflict today on a thirteenth-century level and treats his shadow as the devil incarnate. For such a man any other procedure would be unnatural and wrong, for his belief is that of a thirteenth-century Christian. But, for the man who belongs by temperament, i.e., psychologically, to the twentieth century, there are certain important considerations which would never enter the head of our medieval specimen. How much the Middle Ages are still with us can be seen, among other things, from the fact that such a simple truth as the psychic quality of metaphysical figures will not penetrate into people’s heads. This is not a matter of intelligence or education, or of *Weltanschauung*, for the materialist also is unable to perceive to what extent, for instance, God is a psychic quantity which nothing can deprive of its reality, which does not insist on a definite name and which allows itself to be called reason, energy, matter, or even ego.

[464] This historical stratification must be taken into account most carefully by the psychotherapist, likewise the possibility of a latent capacity for development, which he would do well, however, not to take for granted.

[465] Whereas the “reasonable,” i.e., rationalistic, point of view is satisfying to the man of the eighteenth century, the psychological standpoint appeals much more to the man of the twentieth century. The most threadbare rationalism means more to the former than the best psychological explanation, for he is incapable of thinking psychologically and can operate only with rational concepts, which must on no account savour of metaphysics, for the latter are taboo. He will at once suspect the psychologist of mysticism, for in his eyes a rational concept can be neither metaphysical nor psychological. Resistances against the psychological standpoint, which regards psychic processes as facts, are, I fear, all equally anachronistic, including the prejudice of “psychologism,” which does not understand the empirical nature of the psyche either. To the man of the twentieth century this is a matter of the

highest importance and the very foundation of his reality, because he has recognized once and for all that without an observer there is no world and consequently no truth, for there would be nobody to register it. The one and only immediate guarantor of reality is the observer. Significantly enough, the most unpsychological of all sciences, physics, comes up against the observer at the decisive point. This knowledge sets its stamp on our century.

[466] It would be an anachronism, i.e., a regression, for the man of the twentieth century to solve his conflicts either rationalistically or metaphysically. Therefore, for better or worse, he has built himself a psychology, because it is impossible to get along without it. Both the theologian and the somatic doctor would do well to give earnest consideration to this fact, if they do not want to risk losing touch with their time. It is not easy for the somatically oriented doctor to see his long familiar clinical pictures and their aetiology in the unaccustomed light of psychology, and in the same way it will cost the theologian considerable effort to adjust his thinking to the new fact of the psyche and, in particular, of the unconscious, so that he too can reach the man of the twentieth century. No art, science, or institution in any way concerned with human beings can escape the effects of the development which the psychologists and physicists have let loose, even if they oppose it with the most stubborn prejudices.

[467] Father White's book has the merit of being the first theological work from the Catholic side to concern itself with the far-reaching effects of the new empirical knowledge in the realm of archetypal ideas, and to make a serious attempt to integrate it. Although the book is addressed primarily to the theologian, the psychologist and particularly the medical psychotherapist will be able to glean from it a rich harvest of knowledge.

FOREWORD TO WERBLOWSKY'S "LUCIFER AND PROMETHEUS"¹

[468] The author has submitted his manuscript to me with the request that I should write a few words by way of introduction. As the subject of the book is essentially literary, I do not feel altogether competent to express an opinion on the matter. The author has, however, rightly discerned that, although the problem of Milton's *Paradise Lost* is primarily a subject for literary criticism, it is, as a piece of confessional writing, fundamentally bound up with certain psychological assumptions. Though he has only touched on these—at least in so many words—he has made it sufficiently plain why he has appealed to me as a psychologist. However little disposed I am to regard Dante's *Divine Comedy* or Klopstock's *Messiah* or Milton's opus as fit subjects for psychological commentary, I cannot but acknowledge the acumen of the author, who has seen that the problem of Milton might well be elucidated from that angle of research which is my special field of study.

[469] For over two thousand years the figure of Satan, both as a theme of poetico-religious thinking and artistic creation and as a mythologem, has been a constant expression of the psyche, having its source in the unconscious evolution of "metaphysical" images. We should go very wrong in our judgment if we assumed that ideas such as this derive from rationalistic thinking. All the old ideas of God, indeed thought itself, and particularly numinous thought, have their origin in *experience*. Primitive man does not think his thoughts, they simply *appear* in his mind. Purposive and directed thinking is a relatively late human achievement. The numinous image is far more an expression of essentially unconscious processes than a product of rational inference. Consequently it falls into the category of psychological objects, and this raises the question of the underlying psychological assumptions. We have to imagine a millennial process of symbol-formation which presses towards consciousness, beginning in the darkness of prehistory with primordial or archetypal images, and gradually developing and differentiating these images into conscious creations. The history of religion in the West can be taken as an illustration of this: I mean the historical development of dogma, which also includes the figure of Satan. One of the best-known archetypes, lost in the grey mists of antiquity, is the triad of gods. In the early centuries of Christianity it reappears in the Christian formula for the Trinity, whose pagan version is *Hermes ter unus*. Nor is it difficult to see that the great goddess of the Ephesians has been resurrected in the

θεοτόκος. This latter problem, after lying dormant for centuries, came into circulation again with the dogma of the Immaculate Conception and, more recently, of the Assumption of the Virgin. The figure of the mediatrix rounds itself out in almost classical perfection, and it is especially noteworthy that behind the solemn promulgation of the dogma there stands no arbitrary tenet of papal authority but an anonymous movement of the Catholic world. The numerous miracles of the Virgin which preceded it are equally autochthonous; they are genuine and legitimate experiences springing directly from the unconscious psychic life of the people.

[470] I do not wish to multiply examples needlessly, but only to make it clear that the figure of Satan, too, has undergone a curious development, from the time of his first undistinguished appearance in the Old Testament texts to his heyday in Christianity. He achieved notoriety as the personification of the adversary or principle of evil, though by no means for the first time, as we meet him centuries earlier in the ancient Egyptian Set and the Persian Ahriman. Persian influences have been conjectured as mainly responsible for the Christian devil. But the real reason for the differentiation of this figure lies in the conception of God as the *summum bonum*, which stands in sharp contrast to the Old Testament view and which, for reasons of psychic balance, inevitably requires the existence of an *infimum malum*. No logical reasons are needed for this, only the natural and unconscious striving for balance and symmetry. Hence very early, in Clement of Rome, we meet with the conception of Christ as the right hand and the devil as the left hand of God, not to speak of the Judaeo-Christian view which recognized two sons of God, Satan the elder and Christ the younger. The figure of the devil then rose to such exalted metaphysical heights that he had to be forcibly depotentiated, under the threatening influence of Manichaeism. The depotentiation was effected—this time—by rationalistic reflection, by a regular *tour de force* of sophistry which defined evil as a *privatio boni*. But that did nothing to stop the belief from arising in many parts of Europe during the eleventh century, mainly under the influence of the Cathars, that it was not God but the devil who had created the world. In this way the archetype of the imperfect demiurge, who had enjoyed official recognition in Gnosticism, reappeared in altered guise. (The corresponding archetype is probably to be found in the cosmogonic jester² of primitive peoples.) With the extermination of the heretics that dragged on into the fourteenth and fifteenth centuries, an uneasy calm ensued, but the Reformation thrust the figure of Satan once more into the foreground. I would only mention Jakob Böhme, who sketched a picture of evil which leaves the *privatio boni* pale by comparison. The same can be said of Milton. He inhabits the same mental climate. As for Böhme, although he was not a direct descendant of alchemical philosophy, whose importance is still grossly underrated today, he certainly took over a number of its leading ideas, among them the specific recognition of Satan, who was exalted

to a cosmic figure of first rank in Milton, even emancipating himself from his subordinate role as the left hand of God (the role assigned to him by Clement). Milton goes even further than Böhme and apostrophizes the devil as the true *principium individuationis*, a concept which had been anticipated by the alchemists some time before. To mention only one example: “Ascendit a terra in coelum, iterumque descendit in terram et recipit vim superiorum et inferiorum. Sic habebis gloriam totius mundi.” (He rises from earth to heaven and descends again to earth, and receives into himself the power of above and below. Thus thou wilt have the glory of the whole world.) The quotation comes from the famous alchemical classic, the *Tabula Smaragdina*, attributed to Hermes Trismegistus, whose authority remained unchallenged for more than thirteen centuries of alchemical thought. His words refer not to Satan, but to the *filius philosophorum*, whose symbolism, as I believe I have shown, coincides with that of the psychological “self.” The *filius* of the alchemists is one of the numerous manifestations of Mercurius, who is called “duplex” and “ambiguus” and is also known outside alchemy as “utriusque capax”—capable of anything. His “dark” half has an obvious affinity with Lucifer.

[471] In Milton’s time these ideas were very much in the air, forming part of the general stock of culture, and there were not a few Masters who realized that their philosophical stone was none other than the “total man.” The Satan-Prometheus parallel shows clearly enough that Milton’s devil stands for the essence of human individuation and thus comes within the scope of psychology. This close proximity, as we know, proved a danger not only to the metaphysical status of Satan, but to that of other numinous figures as well. With the coming of the Enlightenment, metaphysics as a whole began to decline, and the rift which then opened out between knowledge and faith could no longer be repaired. The more resplendent figures in the metaphysical pantheon had their autonomy restored to them practically untarnished, which assuredly cannot be said of the devil. In Goethe’s *Faust* he has dwindled to a very personal *familiaris*, the mere “shadow” of the struggling hero. After rational-liberal Protestantism had, as it were, deposed him by order of the day, he retired to the shadier side of the Christian Olympus as the “odd man out,” and thus, in a manner not unwelcome to the Church, the old principle reasserted itself: *Omne bonum a Deo, omne malum ab homine*. The devil remains as an appendix to psychology.

[472] It is a psychological rule that when an archetype has lost its metaphysical hypostasis, it becomes identified with the conscious mind of the individual, which it influences and refashions in its own form. And since an archetype always possesses a certain numinosity, the integration of the numen generally produces an inflation of the subject. It is therefore entirely in accord with psychological expectations that Goethe should dub his Faust a Superman. In recent times this type has extended

beyond Nietzsche into the field of political psychology, and its incarnation in man has had all the consequences that might have been expected to follow from such a misappropriation of power.

[473] As human beings do not live in airtight compartments, this infectious inflation has spread everywhere and given rise to an extraordinary uncertainty in morals and philosophy. The medical psychologist is bound to take an interest in such matters, if only for professional reasons, and so we witness the memorable spectacle of a psychiatrist introducing a critical study of Milton's *Paradise Lost*. Meditating upon this highly incongruous conjunction, I decided that I should best fulfil my obligations if I explained to the well-intentioned reader how and why the devil got into the consulting-room of the psychiatrist.

BROTHER KLAUS¹

[474] Before me lies a little book by Father Alban Stoeckli on the Visions of the Blessed Brother Klaus.² Let the reader not be alarmed. Though a psychiatrist takes up his pen, it does not necessarily mean that he is going to set about this venerable figure with the profane instrument of psychopathology. Psychiatrists have committed enough sins already and have put their science to the most unsuitable uses. Nothing of the kind is to happen here: no diagnosis or analysis will be undertaken, no significant hints of pathological possibilities will be dropped, and no attempt will be made to bring the Blessed Nicholas of Flüe anywhere near a psychiatric clinic. Hence it must seem all the stranger to the reader that the reviewer of the book is a physician. I admit this fact is difficult to explain to anyone who does not know my unfashionable view on visions and the like. In this respect I am a good deal less sophisticated and more conservative than the so-called educated public, who in their philosophical embarrassment heave a sigh of relief when visions are equated with hallucinations, delusional ideas, mania, and schizophrenia, or whatever else these morbid things may be called, and are reduced to the right denominator by some competent authority. Medically, I can find nothing wrong with Brother Klaus. I see him as a somewhat unusual but in no wise pathological person, a man after my own heart: my brother Klaus. Rather remote, to be sure, at this distance of more than four hundred years, separated by culture and creed, by those fashionable trifles which we always think constitute a world. Yet they amount to no more than linguistic difficulties, and these do not impede understanding of the essentials. So little, in fact, that I was able to converse, in the primitive language of inward vision, with a man who in every way was even further removed from me than Brother Klaus—a Pueblo Indian, my friend Ochwiabiano (“Mountain Lake”).^{2a} For what interests us here is not the historical personage, not the well-known figure at the Diet of Stans,³ but the “friend of God,” who appeared but a few times on the world stage, yet lived a long life in the realms of the soul. Of what he there experienced he left behind only scant traces, so few and inarticulate that it is hard for posterity to form any picture of his inner life.

[475] It has always intrigued me to know what a hermit does with himself all day long. Can we still imagine a real spiritual anchorite nowadays, one who has not simply crept away to vegetate in misanthropic simplicity? A solitary fellow, like an

old elephant who resentfully defies the herd instinct? Can we imagine a normal person living a sensible, vital existence by himself, with no visible partner?

[476] Brother Klaus had a house, wife, and children, and we do not know of any external factors which could have induced him to become a hermit. The sole reason for this was his singular inner life; experiences for which no merely natural grounds can be adduced, decisive experiences which accompanied him from youth up. These things seemed to him of more value than ordinary human existence. They were probably the object of his daily interest and the source of his spiritual vitality. It sounds rather like an anecdote from the life of a scholar who is completely immersed in his studies when the so-called “Pilgrim’s Tract”⁴ relates: “And he [Brother Klaus] began to speak again and said to me, ‘If it does not trouble you, I would like to show you my book, in which I am learning and seeking the art of this doctrine.’ And he brought me a figure, drawn like a wheel with six spokes.” So evidently Brother Klaus studied some mysterious “doctrine” or other; he sought to understand and interpret the things that happened to him. That the hermit’s activity was a sort of study must also have occurred to Gundolfingen,⁵ one of the oldest writers on our subject. He says: “Did he not likewise learn in that High School of the Holy Ghost the representation of the wheel, which he caused to be painted in his chapel, and through which, as in a clear mirror, was reflected the entire essence of the Godhead?” From the same “High School” he derived “his kindness, his doctrine, and his science.”^{5a}

[477] Here we are concerned with the so-called Trinity Vision, which was of the greatest significance for the hermit’s inner life. According to the oldest reports, it was an apparition of light, of surpassing intensity, in the form of a human face. The firsthand reports make no mention of a “wheel.” This seems to have been a subsequent addition for the purpose of clarifying the vision. Just as a stone, falling into calm water, produces wave after wave of circles, so a sudden and violent vision of this kind has long-lasting after-effects, like any shock. And the stranger and more impressive the initial vision was, the longer it will take to be assimilated, and the greater and more persevering will be the efforts of the mind to master it and render it intelligible to human understanding. Such a vision is a tremendous “irruption” in the most literal sense of the word, and it has therefore always been customary to draw rings round it like those made by the falling stone when it breaks the smooth surface of the water.

[478] Now what has “irrupted” here, and wherein lies its mighty “impression”? The oldest source, Wölflin’s biography,⁶ narrates the following on this score:

All who came to him were filled with terror at the first glance. As to the cause of this, he himself used to say that he had seen a piercing light resembling a human face. At the sight of it he feared that his heart would burst into

little pieces. Overcome with terror, he instantly turned his face away and fell to the ground. And that was the reason why his face was now terrible to others.

This is borne out by the account which the humanist Karl Bovillus (Charles de Bouelles) gave to a friend in 1508 (some twenty years after the death of Brother Klaus):

I wish to tell you of a vision which appeared to him in the sky, on a night when the stars were shining and he stood in prayer and contemplation. He saw the head of a human figure with a terrifying face, full of wrath and threats.⁷

So we shall not go wrong in surmising that the vision was terrifying in the extreme. When we consider that the mental attitude of that age, and in particular that of Brother Klaus, allowed no other interpretation than that this vision represented God himself, and that God signified the *summum bonum*, Absolute Perfection, then it is clear that such a vision must, by its violent contrast, have had a profound and shattering effect, whose assimilation into consciousness required years of the most strenuous spiritual effort. Through subsequent elaboration this vision then became the so-called Trinity Vision. As Father Stoeckli rightly conjectures, the “wheel” or circles were formed on the basis of, and as parallels to, the illustrated devotional books that were read at the time. As mentioned above, Brother Klaus even seems to have possessed such a book himself. Later, as a result of further mental elaboration, there were added the spokes of the wheel and the six secondary circles, as shown in the old picture of the vision in the parish church at Sachseln.

[479] The vision of light was not the only one which Brother Klaus had. He even thought that, while still in his mother’s womb, he had seen a star that outshone all others in brightness, and later, in his solitude, he saw a very similar star repeatedly. The vision of light had, therefore, occurred several times before in his life. Light means illumination; it is an illuminating idea that “irrupts.” Using a very cautious formulation, we could say that the underlying factor here is a considerable tension of psychic energy, evidently corresponding to some very important unconscious content. This content has an overpowering effect and holds the conscious mind spellbound. The tremendous power of the “objective psychic” has been named “demon” or “God” in all epochs with the sole exception of the recent present. We have become so bashful in matters of religion that we correctly say “unconscious,” because God has in fact become unconscious to us. This is what always happens when things are interpreted, explained, and dogmatized until they become so encrusted with man-made images and words that they can no longer be seen. Something similar seems to have happened to Brother Klaus, which is why the immediate experience burst upon him with appalling terror. Had his vision been as charming and edifying as the present picture at Sachseln, no such terror would ever have emanated from it.

[480] “God” is a primordial experience of man, and from the remotest times humanity has taken inconceivable pains either to portray this baffling experience, to assimilate it by means of interpretation, speculation, and dogma, or else to deny it. And again and again it has happened, and still happens, that one hears too much about the “good” God and knows him too well, so that one confuses him with one’s own ideas

and regards them as sacred because they can be traced back a couple of thousand years. This is a superstition and an idolatry every bit as bad as the Bolshevik delusion that “God” can be educated out of existence. Even a modern theologian like Gogarten⁸ is quite sure that God *can only be good*. A good man does not terrify me—what then would Gogarten have made of the Blessed Brother Klaus? Presumably he would have had to explain to him that he had seen the devil in person.

[481] And here we are in the midst of that ancient dilemma of how such visions are to be evaluated. I would suggest taking every genuine case at its face value. If it was an overwhelming experience for so worthy and shrewd a man as Brother Klaus, then I do not hesitate to call it a true and veritable experience of God, even if it turns out not quite right dogmatically. Great saints were, as we know, sometimes great heretics, so it is probable that anyone who has immediate experience of God is a little bit outside the organization one calls the Church. The Church itself would have been in a pretty pass if the Son of God had remained a law-abiding Pharisee, a point one tends to forget.

[482] There are many indubitable lunatics who have experiences of God, and here too I do not contest the genuineness of the experience, for I know that it takes a complete and a brave man to stand up to it. Therefore I feel sorry for those who go under, and I shall not add insult to injury by saying that they tripped up on a mere psychologism. Besides, one can never know in what form a man will experience God, for there are very peculiar things just as there are very peculiar people—like those, for instance, who think that one can make anything but a conceptual distinction between the individual experience of God and God himself. It would certainly be desirable to make this distinction, but to do so one would have to know what God is in and for himself, which does not seem to me possible.

[483] Brother Klaus’s vision was a genuine primordial experience, and it therefore seemed to him particularly necessary to submit it to a thorough dogmatic revision. Loyally and with great efforts he applied himself to this task, the more so as he was smitten with terror in every limb so that even strangers took fright. The unconscious taint of heresy that probably clings to all genuine and unexpurgated visions is only hinted at in the Trinity Vision, but in the touched-up version it has been successfully eliminated. All the affectivity, the very thing that made the strongest impression, has vanished without a trace, thus affording at least a negative proof of our interpretation.

[484] Brother Klaus’s elucidation of his vision with the help of the three circles (the so-called “wheel”) is in keeping with age-old human practice, which goes back to the Bronze Age sun-wheels (often found in Switzerland) and to the mandalas depicted in the Rhodesian rock-drawings. These sun-wheels may possibly be paleolithic;⁹ we find them in Mexico, India, Tibet, and China. The Christian mandalas probably date

back to St. Augustine and his definition of God as a circle. Presumably Henry Suso's notions of the circle, which were accessible to the "Friends of God," were derived from the same source. But even if this whole tradition had been cut off and no little treatise with mandalas in the margin had ever come to light, and if Brother Klaus had never seen the rose-window of a church, he would still have succeeded in working his great experience into the shape of a circle, because this is what has always happened in every part of the world and still goes on happening today.¹⁰

[485] We spoke above of heresy. In Father Stoeckli's newly found fragment describing the vision, there is another vision which contains an interesting parallelism. I put the two passages side by side for the sake of comparison:

There came a handsome majestic man through the palace, with a shining colour in his face, and in a white garment. And he laid both arms on his shoulders and pressed him close and thanked him with all the fervent love of his heart, because he had stood by his son and helped him in his need.

There came a beautiful majestic woman through the palace, also in a white garment.... And she laid both arms on his shoulders and pressed him close to her heart with an overflowing love, because he had stood so faithfully by her son in his need.¹¹

[486] It is clear that this is a vision of God the Father and Son, and of the Mother of God. The palace is heaven, where "God the Father" dwells, and also "God the Mother." In pagan form they are unmistakably God and Goddess, as their absolute parallelism shows. The androgyny of the divine Ground is characteristic of mystic experience. In Indian Tantrism the masculine Shiva and the feminine Shakti both proceed from Brahman, which is devoid of qualities. Man as the son of the Heavenly Father and Heavenly Mother is an age-old conception which goes back to primitive times, and in this vision the Blessed Brother Klaus is set on a par with the Son of God. The Trinity in this vision—Father, Mother, and Son—is very undogmatic indeed. Its nearest parallel is the exceedingly unorthodox Gnostic Trinity: God, Sophia, Christ. The Church, however, has expunged the feminine nature of the Holy Ghost, though it is still suggested by the symbolic dove.

[487] It is nice to think that the only outstanding Swiss mystic received, by God's grace, unorthodox visions and was permitted to look with unerring eye into the depths of the divine soul, where all the creeds of humanity which dogma has divided are united in *one* symbolic archetype. As I hope Father Stoeckli's little book will find many attentive readers, I shall not discuss the Vision of the Well, nor the Vision of the Man with the Bearskin,¹² although from the standpoint of comparative symbolism they offer some very interesting aspects—for I do not want to deprive the reader of the pleasure of finding out their meaning by himself.

V

PSYCHOTHERAPISTS OR THE CLERGY

— — —

PSYCHOANALYSIS AND THE CURE OF SOULS

PSYCHOTHERAPISTS OR THE CLERGY¹

[488] It is far more the urgent psychic problems of patients, rather than the curiosity of research workers, that have given effective impetus to the recent developments in medical psychology and psychotherapy. Medical science—almost in defiance of the patients' needs—has held aloof from all contact with strictly psychic problems, on the partly justifiable assumption that psychic problems belong to other fields of study. But it has been compelled to widen its scope so as to include experimental psychology, just as it has been driven time and time again—out of regard for the biological unity of the human being—to borrow from such outlying branches of science as chemistry, physics, and biology.

[489] It was natural that the branches of science adopted by medicine should be given a new direction. We can characterize the change by saying that instead of being regarded as ends in themselves they were valued for their practical application to human beings. Psychiatry, for example, helped itself out of the treasure-chest of experimental psychology and its methods, and funded its borrowings in the inclusive body of knowledge that we call psychopathology—a name for the study of complex psychic phenomena. Psychopathology is built for one part on the findings of psychiatry in the strict sense of the term, and for the other part on the findings of neurology—a field of study which originally embraced the so-called psychogenic neuroses, and still does so in academic parlance. In practice, however, a gulf has opened out in the last few decades between the trained neurologist and the psychotherapist, especially after the first researches in hypnotism. This rift was unavoidable, because neurology, strictly speaking, is the science of organic nervous diseases, whereas the psychogenic neuroses are not organic diseases in the usual sense of the term. Nor do they fall within the realm of psychiatry, whose particular field of study is the psychoses, or mental diseases—for the psychogenic neuroses are not mental diseases as this term is commonly understood. Rather do they constitute a special field by themselves with no hard and fast boundaries, and they show many transitional forms which point in two directions: towards mental disease on the one hand, and diseases of the nerves on the other.

[490] The unmistakable feature of the neuroses is the fact that their causes are psychic, and that their cure depends entirely upon psychic methods of treatment. The attempts to delimit and explore this special field—both from the side of psychiatry and from that of neurology—led to a discovery which was very unwelcome to the science of

medicine: namely, the *discovery of the psyche* as an aetiological or causal factor in disease. In the course of the nineteenth century medicine had become, in its methods and theory, one of the disciplines of natural science, and it cherished the same basically philosophical assumption of *material causation*. For medicine, the psyche as a mental “substance” did not exist, and experimental psychology also did its best to constitute itself a psychology without a psyche.

[491] Investigation, however, has established beyond a doubt that the crux of the psychoneuroses is the psychic factor, that this is the essential cause of the pathological state, and must therefore be recognized in its own right along with other admitted pathogenic factors such as inheritance, disposition, bacterial infection, and so forth. All attempts to explain the psychic factor in terms of more elementary physical factors were doomed to failure. There was more promise in the attempt to reduce it to the concept of the drive or instinct—a concept taken over from biology. It is well known that instincts are observable physiological urges based on the functioning of the glands, and that, as experience shows, they condition or influence psychic processes. What could be more plausible, therefore, than to seek the specific cause of the psychoneuroses not in the mystical notion of the “soul,” but in a disturbance of the instincts which might possibly be curable in the last resort by medicinal treatment of the glands?

[492] Freud’s theory of the neuroses is based on this standpoint: it explains them in terms of disturbances of the sexual instinct. Adler likewise resorts to the concept of the drive, and explains the neuroses in terms of disturbances of the urge to power, a concept which, we must admit, is a good deal more psychic than that of the physiological sexual instinct.

[493] The term “instinct” is anything but well defined in the scientific sense. It applies to a biological phenomenon of immense complexity, and is not much more than a border-line concept of quite indefinite content standing for an unknown quantity. I do not wish to enter here upon a critical discussion of instinct. Instead I will consider the possibility that the psychic factor is just a combination of instincts which for their part may again be reduced to the functioning of the glands. We may even consider the possibility that everything “psychic” is comprised in the sum total of instincts, and that the psyche itself is therefore only an instinct or a conglomerate of instincts, being in the last analysis nothing but a function of the glands. A psychoneurosis would then be a glandular disease.

[494] There is, however, no proof of this statement, and no glandular extract that will cure a neurosis has yet been found. On the other hand, we have been taught by all too many mistakes that organic therapy fails completely in the treatment of neuroses, while psychic methods cure them. These psychic methods are just as effective as we might suppose the glandular extracts would be. So far, then, as our present

knowledge goes, neuroses are to be influenced or cured by approaching them not from the proximal end, i.e., from the functioning of the glands, but from the distal end, i.e., from the psyche, just as if the psyche were itself a substance. For instance, a suitable explanation or a comforting word to the patient can have something like a healing effect which may even influence the glandular secretions. The doctor's words, to be sure, are "only" vibrations in the air, yet their special quality is due to a particular psychic state in the doctor. His words are effective only in so far as they convey a meaning or have significance. It is this that makes them work. But "meaning" is something mental or spiritual. Call it a fiction if you like. Nevertheless this fiction enables us to influence the course of the disease far more effectively than we could with chemical preparations. Indeed, we can even influence the biochemical processes of the body. Whether the fiction forms itself in me spontaneously or reaches me from outside via human speech, it can make me ill or cure me. Fictions, illusions, opinions are perhaps the most intangible and unreal things we can think of; yet they are the most effective of all in the psychic and even the psychophysical realm.

[495] It was by recognizing these facts that medicine discovered the psyche, and it can no longer honestly deny the psyche's reality. It has been shown that the instincts are a condition of psychic activity, while at the same time psychic processes seem to condition the instincts.

[496] The reproach levelled at the Freudian and Adlerian theories is not that they are based on instincts, but that they are one-sided. It is psychology without the psyche, and this suits people who think they have no spiritual needs or aspirations. But here both doctor and patient deceive themselves. Even though the theories of Freud and Adler come much nearer to getting at the bottom of the neuroses than any earlier approach from the medical side, their exclusive concern with the instincts fails to satisfy the deeper spiritual needs of the patient. They are too much bound by the premises of nineteenth-century science, too matter of fact, and they give too little value to fictional and imaginative processes. In a word, they do not give enough meaning to life. And it is only meaning that liberates.

[497] Ordinary reasonableness, sound human judgment, science as a compendium of common sense, these certainly help us over a good part of the road, but they never take us beyond the frontiers of life's most commonplace realities, beyond the merely average and normal. They afford no answer to the question of psychic suffering and its profound significance. A psychoneurosis must be understood, ultimately, as the suffering of a soul which has not discovered its meaning. But all creativeness in the realm of the spirit as well as every psychic advance of man arises from the suffering of the soul, and the cause of the suffering is spiritual stagnation, or psychic sterility.

[498] With this realization the doctor sets foot on territory which he enters with the greatest caution. He is now confronted with the necessity of conveying to his patient the healing fiction, the meaning that quickens—for it is this that the sick person longs for, over and above everything that reason and science can give him. He is looking for something that will take possession of him and give meaning and form to the confusion of his neurotic soul.

[499] Is the doctor equal to this task? To begin with, he will probably hand his patient over to the clergyman or philosopher, or abandon him to that vast perplexity which is the special note of our day. As a doctor he is not required to have a finished outlook on life, and his professional conscience does not demand it of him. But what will he do when he sees only too clearly why his patient is ill; when he sees that he has no love, but only sexuality; no faith, because he is afraid to grope in the dark; no hope, because he is disillusioned by the world and by life; and no understanding, because he has failed to read the meaning of his own existence?

[500] There are many well-educated patients who flatly refuse to consult a clergyman. Still less will they listen to a philosopher, for the history of philosophy leaves them cold, and intellectual problems seem to them more barren than the desert. And where are the great and wise men who do not merely talk about the meaning of life and of the world, but really possess it? One cannot just think up a system or truth which would give the patient what he needs in order to live, namely faith, hope, love, and understanding.

[501] These four highest achievements of human endeavour are so many gifts of grace, which are neither to be taught nor learned, neither given nor taken, neither withheld nor earned, since they come through experience, which is an irrational datum not subject to human will and caprice. Experiences cannot be *made*. They happen—yet fortunately their independence of man's activity is not absolute but relative. We can draw closer to them—that much lies within our human reach. There are ways which bring us nearer to living experience, yet we should beware of calling these ways “methods.” The very word has a deadening effect. The way to experience, moreover, is anything but a clever trick; it is rather a venture which requires us to commit ourselves with our whole being.

[502] Thus, in trying to meet the therapeutic demands made upon him, the doctor is confronted with a question which seems to contain an insuperable difficulty. How can he help the sufferer to attain the liberating experience which will bestow upon him the four great gifts of grace and heal his sickness? We can, of course, advise the patient with the best intentions that he should have true love, or true faith, or true hope; and we can admonish him with the phrase: “Know thyself.” But how is the patient to obtain beforehand that which only experience can give him?

[503] Saul owed his conversion neither to true love, nor to true faith, nor to any other truth. It was solely his hatred of the Christians that set him on the road to Damascus, and to that decisive experience which was to alter the whole course of his life. He was brought to this experience by following out, with conviction, his own worst mistake.

[504] This opens up a problem which we can hardly take too seriously. And it confronts the psychotherapist with a question which brings him shoulder to shoulder with the clergyman: the question of good and evil.

[505] It is in reality the priest or the clergyman, rather than the doctor, who should be most concerned with the problem of spiritual suffering. But in most cases the sufferer consults the doctor in the first place, because he supposes himself to be physically ill, and because certain neurotic symptoms can be at least alleviated by drugs. But if, on the other hand, the clergyman is consulted, he cannot persuade the sick man that the trouble is psychic. As a rule he lacks the special knowledge which would enable him to discern the psychic factors of the disease, and his judgment is without the weight of authority.

[506] There are, however, persons who, while well aware of the psychic nature of their complaint, nevertheless refuse to turn to the clergyman. They do not believe that he can really help them. Such persons distrust the doctor for the same reason, and rightly so, for the truth is that both doctor and clergyman stand before them with empty hands, if not—what is even worse—with empty words. We can hardly expect the doctor to have anything to say about the ultimate questions of the soul. It is from the clergyman, not from the doctor, that the sufferer should expect such help. But the Protestant clergyman often finds himself face to face with an almost impossible task, for he has to cope with practical difficulties that the Catholic priest is spared. Above all, the priest has the authority of his Church behind him, and his economic position is secure and independent. This is far less true of the Protestant clergyman, who may be married and burdened with the responsibility of a family, and cannot expect, if all else fails, to be supported by the parish or taken into a monastery. Moreover the priest, if he is also a Jesuit, is *au fait* with the most up-to-date developments in psychology. I know, for instance, that my own writings were seriously studied in Rome long before any Protestant theologian thought them worthy of a glance.

[507] We have come to a serious pass. The exodus from the German Protestant Church is only one of many symptoms which should make it plain to the clergy that mere admonitions to believe, or to perform acts of charity, do not give modern man what he is looking for. The fact that many clergymen seek support or practical help from Freud's theory of sexuality or Adler's theory of power is astonishing, inasmuch as both these theories are, at bottom, hostile to spiritual values, being, as I have said, psychology without the psyche. They are rationalistic methods of treatment which

actually hinder the realization of meaningful experience. By far the larger number of psychotherapists are disciples of Freud or of Adler. This means that the great majority of patients are necessarily alienated from a spiritual standpoint—a fact which cannot be a matter of indifference to one who has the fate of the psyche at heart. The wave of interest in psychology which at present is sweeping over the Protestant countries of Europe is far from receding. It is coincident with the mass exodus from the Church. Quoting a Protestant minister, I may say: “Nowadays people go to the psychotherapist rather than to the clergyman.”

[508] I am convinced that this statement is true only of relatively educated persons, not of mankind in the mass. However, we must not forget that it takes about twenty years for the ordinary run of people to begin thinking the thoughts of the educated person of today. For instance, Büchner’s work *Force and Matter*² became one of the most widely read books in German public libraries some twenty years after educated persons had forgotten all about it. I am convinced that the psychological needs of the educated today will be the interests of the people tomorrow.

[509] I should like to call attention to the following facts. During the past thirty years, people from all the civilized countries of the earth have consulted me. Many hundreds of patients have passed through my hands, the greater number being Protestants, a lesser number Jews, and not more than five or six believing Catholics. Among all my patients in the second half of life—that is to say, over thirty-five—there has not been one whose problem in the last resort was not that of finding a religious outlook on life. It is safe to say that every one of them fell ill because he had lost what the living religions of every age have given to their followers, and none of them has been really healed who did not regain his religious outlook. This of course has nothing whatever to do with a particular creed or membership of a church.

[510] Here, then, the clergyman stands before a vast horizon. But it would seem as if no one had noticed it. It also looks as though the Protestant clergyman of today were insufficiently equipped to cope with the urgent psychic needs of our age. It is indeed high time for the clergyman and the psychotherapist to join forces to meet this great spiritual task.

[511] Here is a concrete example which goes to show how closely this problem touches us all. A little more than a year ago the leaders of the Christian Students’ Conference at Aarau [Switzerland] laid before me the question whether people in spiritual distress prefer nowadays to consult the doctor rather than the clergyman, and what are the causes of their choice. This was a very direct and very practical question. At the time I knew nothing more than the fact that my own patients obviously had consulted the doctor rather than the clergyman. It seemed to me to be open to doubt whether this was generally the case or not. At any rate, I was unable to give a definite reply. I therefore set on foot an inquiry, through acquaintances of mine, among

people whom I did not know personally; I sent out a questionnaire which was answered by Swiss, German, and French Protestants, as well as by a few Catholics. The results are very interesting, as the following general summary shows. Those who decided for the doctor represented 57 per cent of the Protestants and only 25 per cent of the Catholics, while those who decided for the clergyman formed only 8 per cent of the Protestants as against 58 per cent of the Catholics. These were the unequivocal decisions. The remaining 35 per cent of the Protestants could not make up their minds, while only 17 per cent of the Catholics were undecided.

[512] The main reasons given for not consulting the clergyman were, firstly, his lack of psychological knowledge and insight, and this covered 52 per cent of the answers. Some 28 per cent were to the effect that he was prejudiced in his views and showed a dogmatic and traditional bias. Curiously enough, there was even one clergyman who decided for the doctor, while another made the irritated retort: "Theology has nothing to do with the treatment of human beings." All the relatives of clergymen who answered my questionnaire pronounced themselves against the clergy.

[513] So far as this inquiry was restricted to educated persons, it is only a straw in the wind. I am convinced that the uneducated classes would have reacted differently. But I am inclined to accept these sample results as a more or less valid indication of the views of educated people, the more so as it is a well-known fact that their indifference in matters of the Church and religion is steadily growing. Nor should we forget the above-mentioned truth of social psychology: that it takes about twenty years for the general outlook and problems of the educated to percolate down to the uneducated masses. Who, for instance, would have dared to prophesy twenty years ago, or even ten, that Spain, the most Catholic of European countries, would undergo the tremendous mental revolution we are witnessing today?³ And yet it has broken out with the violence of a cataclysm.

[514] It seems to me that, side by side with the decline of religious life, the neuroses grow noticeably more frequent. There are as yet no statistics with actual figures to prove this increase. But of one thing I am sure, that everywhere the mental state of European man shows an alarming lack of balance. We are living undeniably in a period of the greatest restlessness, nervous tension, confusion, and disorientation of outlook. Among my patients from many countries, all of them educated persons, there is a considerable number who came to see me not because they were suffering from a neurosis but because they could find no meaning in their lives or were torturing themselves with questions which neither our philosophy nor our religion could answer. Some of them perhaps thought I knew of a magic formula, but I soon had to tell them that I didn't know the answer either. And this brings us to practical considerations.

[515] Let us take for example that most ordinary and frequent of questions: What is the meaning of my life, or of life in general? Today people believe that they know only too well what the clergyman will—or rather must—say to this. They smile at the very thought of the philosopher's answer, and in general do not expect much of the physician. But from the psychotherapist who analyses the unconscious—from him one might at last learn something. Perhaps he has dug up from the abstruse depths of his mind, among other things, some meaning which could even be bought for a fee! It must be a relief to every serious-minded person to hear that the psychotherapist also does not know what to say. Such a confession is often the beginning of the patient's confidence in him.

[516] I have found that modern man has an ineradicable aversion for traditional opinions and inherited truths. He is a Bolshevik for whom all the spiritual standards and forms of the past have somehow lost their validity, and who therefore wants to experiment with his mind as the Bolshevik experiments with economics. Confronted with this attitude, every ecclesiastical system finds itself in an awkward situation, be it Catholic, Protestant, Buddhist, or Confucianist. Among these moderns there are of course some of those negative, destructive, and perverse natures—degenerates and unbalanced eccentrics—who are never satisfied anywhere, and who therefore flock to every new banner, much to the hurt of these movements and undertakings, in the hope of finding something *for once* which will compensate at low cost for their own ineptitude. It goes without saying that, in my professional work, I have come to know a great many modern men and women, including of course their pathological hangers-on. But these I prefer to leave aside. Those I am thinking of are by no means sickly eccentrics, but are very often exceptionally able, courageous, and upright persons who have repudiated traditional truths for honest and decent reasons, and not from wickedness of heart. Every one of them has the feeling that our religious truths have somehow become hollow. Either they cannot reconcile the scientific and the religious outlook, or the Christian tenets have lost their authority and their psychological justification. People no longer feel redeemed by the death of Christ; they cannot believe—for although it is a lucky man who *can* believe, it is not possible to compel belief. Sin has become something quite relative: what is evil for one man is good for another. After all, why should not the Buddha be right too?

[517] There is no one who is not familiar with these questions and doubts. Yet Freudian analysis would brush them all aside as irrelevant, for in its view, it is basically a question of repressed sexuality, which the philosophical or religious doubts only serve to mask. If we closely examine an individual case of this sort, we do discover peculiar disturbances in the sexual sphere as well as in the sphere of unconscious impulses in general. Freud sees in the presence of these disturbances an explanation of the psychic disturbance as a whole; he is interested only in the causal

interpretation of the sexual symptoms. He completely overlooks the fact that, in certain cases, the supposed causes of the neurosis were always present, but had no pathological effect until a disturbance of the conscious attitude set in and led to a neurotic upset. It is as though, when a ship was sinking because of a leak, the crew interested itself in the chemical constitution of the water that was pouring in, instead of stopping the leak. The disturbance of the instinctual sphere is not a primary but a secondary phenomenon. When conscious life has lost its meaning and promise, it is as though a panic had broken loose: "Let us eat and drink, for tomorrow we die!" It is this mood, born of the meaninglessness of life, that causes the disturbance in the unconscious and provokes the painfully curbed instincts to break out anew. The causes of a neurosis lie in the present as much as in the past, and only a cause actually existing in the present can keep a neurosis active. A man is not tubercular because he was infected twenty years ago with bacilli, but because active foci of infection are present *now*. The questions when and how the infection occurred are totally irrelevant. Even the most accurate knowledge of the previous history cannot cure the tuberculosis. And the same holds true of the neuroses.

[518] That is why I regard the religious problems which the patient puts before me as authentic and as possible causes of the neurosis. But if I take them seriously, I must be able to confess to the patient: "Yes, I agree, the Buddha may be just as right as Jesus. Sin is only relative, and it is difficult to see how we can feel ourselves in any way redeemed by the death of Christ." As a doctor I can easily admit these doubts, while it is hard for the clergyman to do so. The patient feels my attitude to be one of understanding, while the parson's hesitation strikes him as a traditional prejudice, and this estranges them from one another. He asks himself: "What would the parson say if I began to tell him of the painful details of my sexual disturbances?" He rightly suspects that the parson's moral prejudice is even stronger than his dogmatic bias. In this connection there is a good story about the American president, "silent Cal" Coolidge. When he returned after an absence one Sunday morning his wife asked him where he had been. "To church," he replied. "What did the minister say?" "He talked about sin." "And what did he say about sin?" "He was against it."

519 It is easy for the doctor to show understanding in this respect, you will say. But people forget that even doctors have moral scruples, and that certain patients' confessions are hard even for a doctor to swallow. Yet the patient does not feel himself accepted unless the very worst in him is accepted too. No one can bring this about by mere words; it comes only through reflection and through the doctor's attitude towards himself and his own dark side. If the doctor wants to guide another, or even accompany him a step of the way, he must *feel* with that person's psyche. He never feels it when he passes judgment. Whether he puts his judgments into words, or keeps them to himself, makes not the slightest difference. To take the opposite

position, and to agree with the patient offhand, is also of no use, but estranges him as much as condemnation. Feeling comes only through unprejudiced objectivity. This sounds almost like a scientific precept, and it could be confused with a purely intellectual, abstract attitude of mind. But what I mean is something quite different. It is a human quality—a kind of deep respect for the facts, for the man who suffers from them, and for the riddle of such a man's life. The truly religious person has this attitude. He knows that God has brought all sorts of strange and inconceivable things to pass and seeks in the most curious ways to enter a man's heart. He therefore senses in everything the unseen presence of the divine will. This is what I mean by "unprejudiced objectivity." It is a moral achievement on the part of the doctor, who ought not to let himself be repelled by sickness and corruption. We cannot change anything unless we accept it. Condemnation does not liberate, it oppresses. I am the oppressor of the person I condemn, not his friend and fellow-sufferer. I do not in the least mean to say that we must never pass judgment when we desire to help and improve. But if the doctor wishes to help a human being he must be able to accept him as he is. And he can do this in reality only when he has already seen and accepted himself as he is.

[520] Perhaps this sounds very simple, but simple things are always the most difficult. In actual life it requires the greatest art to be simple, and so acceptance of oneself is the essence of the moral problem and the acid test of one's whole outlook on life. That I feed the beggar, that I forgive an insult, that I love my enemy in the name of Christ—all these are undoubtedly great virtues. What I do unto the least of my brethren, that I do unto Christ. But what if I should discover that the least amongst them all, the poorest of all beggars, the most impudent of all offenders, yea the very fiend himself—that these are within me, and that I myself stand in need of the alms of my own kindness, that I myself am the enemy who must be loved—what then? Then, as a rule, the whole truth of Christianity is reversed: there is then no more talk of love and long-suffering; we say to the brother within us "Raca," and condemn and rage against ourselves. We hide him from the world, we deny ever having met this least among the lowly in ourselves, and had it been God himself who drew near to us in this despicable form, we should have denied him a thousand times before a single cock had crowed.

[521] Anyone who uses modern psychology to look behind the scene not only of his patients' lives but more especially of his own life—and the modern psychotherapist must do this if he is not to be merely an unconscious fraud—will admit that to accept himself in all his wretchedness is the hardest of tasks, and one which it is almost impossible to fulfil. The very thought can make us sweat with fear. We are therefore only too delighted to choose, without a moment's hesitation, the complicated course of remaining in ignorance about ourselves while busying ourselves with other people

and their troubles and sins. This activity lends us a perceptible air of virtue, by means of which we benevolently deceive ourselves and others. God be praised, we have escaped from ourselves at last! There are countless people who can do this with impunity, but not everyone can, and these few break down on the road to their Damascus and succumb to a neurosis. How can I help these people if I myself am a fugitive, and perhaps also suffer from the *morbis sacer* of a neurosis? Only he who has fully accepted himself has “unprejudiced objectivity.” But no one is justified in boasting that he has fully accepted himself. We can point to Christ, who sacrificed his historical bias to the god within him, and lived his individual life to the bitter end without regard for conventions or for the moral standards of the Pharisees.

[522] We Protestants must sooner or later face this question: Are we to understand the “imitation of Christ” in the sense that we should copy his life and, if I may use the expression, ape his stigmata; or in the deeper sense that we are to live our own proper lives as truly as he lived his in its individual uniqueness? It is no easy matter to live a life that is modelled on Christ’s, but it is unspeakably harder to live one’s own life as truly as Christ lived his. Anyone who did this would run counter to the conditions of his own history, and though he might thus be fulfilling them, he would none the less be misjudged, derided, tortured, and crucified. He would be a kind of crazy Bolshevist who deserved the cross. We therefore prefer the historically sanctioned and sanctified imitation of Christ. I would never disturb a monk in the practice of this identification, for he deserves our respect. But neither I nor my patients are monks, and it is my duty as a physician to show my patients how they can live their lives without becoming neurotic. Neurosis is an inner cleavage—the state of being at war with oneself. Everything that accentuates this cleavage makes the patient worse, and everything that mitigates it tends to heal him. What drives people to war with themselves is the suspicion or the knowledge that they consist of two persons in opposition to one another. The conflict may be between the sensual and the spiritual man, or between the ego and the shadow. It is what Faust means when he says: “Two souls, alas, are housed within my breast.” A neurosis is a splitting of personality.

[523] Healing may be called a religious problem. In the sphere of social or national relations, the state of suffering may be civil war, and this state is to be cured by the Christian virtue of forgiveness and love of one’s enemies. That which we recommend, with the conviction of good Christians, as applicable to external situations, we must also apply inwardly in the treatment of neurosis. This is why modern man has heard enough about guilt and sin. He is sorely enough beset by his own bad conscience, and wants rather to know how he is to reconcile himself with his own nature—how he is to love the enemy in his own heart and call the wolf his brother.

[524] The modern man does not want to know in what way he can imitate Christ, but in what way he can live his own individual life, however meagre and uninteresting it may be. It is because every form of imitation seems to him deadening and sterile that he rebels against the force of tradition that would hold him to well-trodden ways. All such roads, for him, lead in the wrong direction. He may not know it, but he behaves as if his own individual life were God's special will which must be fulfilled at all costs. This is the source of his egoism, which is one of the most tangible evils of the neurotic state. But the person who tells him he is too egoistic has already lost his confidence, and rightly so, for that person has driven him still further into his neurosis.

[525] If I wish to effect a cure for my patients I am forced to acknowledge the deep significance of their egoism. I should be blind, indeed, if I did not recognize it as a true will of God. I must even help the patient to prevail in his egoism; if he succeeds in this, he estranges himself from other people. He drives them away, and they come to themselves—as they should, for they were seeking to rob him of his “sacred” egoism. This must be left to him, for it is his strongest and healthiest power; it is, as I have said, a true will of God, which sometimes drives him into complete isolation. However wretched this state may be, it also stands him in good stead, for in this way alone can he get to know himself and learn what an invaluable treasure is the love of his fellow beings. It is, moreover, only in the state of complete abandonment and loneliness that we experience the helpful powers of our own natures.

[526] “When one has several times seen this development at work one can no longer deny that what was evil has turned to good, and that what seemed good has kept alive the forces of evil. The archdemon of egoism leads us along the royal road to that ingathering which religious experience demands. What we observe here is a fundamental law of life—*enantiodromia* or conversion into the opposite; and it is this that makes possible the reunion of the warring halves of the personality and thereby brings the civil war to an end.

[527] I have taken the neurotic's egoism as an example because it is one of his most common symptoms. I might equally well have taken any other characteristic symptom to show what attitude the physician must adopt towards the shortcomings of his patients, in other words, how he must deal with the problem of evil.

[528] No doubt this also sounds very simple. In reality, however, the acceptance of the shadow-side of human nature verges on the impossible. Consider for a moment what it means to grant the right of existence to what is unreasonable, senseless, and evil! Yet it is just this that the modern man insists upon. He wants to live with every side of himself—to know what he is. That is why he casts history aside. He wants to break with tradition so that he can experiment with his life and determine what value and meaning things have in themselves, apart from traditional presuppositions. Modern

youth gives us astonishing examples of this attitude. To show how far this tendency may go, I will instance a question addressed to me by a German society. I was asked if incest is to be reprobated, and what facts can be adduced against it!

529 Granted such tendencies, the conflicts into which people may fall are not hard to imagine. I can well understand that one would like to do everything possible to protect one's fellow beings from such adventures. But curiously enough we find ourselves without means to do this. All the old arguments against unreasonableness, self-deception, and immorality, once so potent, have lost their attraction. We are now reaping the fruit of nineteenth-century education. Throughout that period the Church preached to young people the merit of blind faith, while the universities inculcated an intellectual rationalism, with the result that today we plead in vain whether for faith or reason. Tired of this warfare of opinions, the modern man wishes to find out for himself how things are. And though this desire opens the door to the most dangerous possibilities, we cannot help seeing it as a courageous enterprise and giving it some measure of sympathy. It is no reckless adventure, but an effort inspired by deep spiritual distress to bring meaning once more into life on the basis of fresh and unprejudiced experience. Caution has its place, no doubt, but we cannot refuse our support to a serious venture which challenges the whole of the personality. If we oppose it, we are trying to suppress what is best in man—his daring and his aspirations. And should we succeed, we should only have stood in the way of that invaluable experience which might have given a meaning to life. What would have happened if Paul had allowed himself to be talked out of his journey to Damascus?

[530] The psychotherapist who takes his work seriously must come to grips with this question. He must decide in every single case whether or not he is willing to stand by a human being with counsel and help upon what may be a daring misadventure. He must have no fixed ideas as to what is right, nor must he pretend to know what is right and what not—otherwise he takes something from the richness of the experience. He must keep in view what actually happens—for only that which acts is actual.⁴ If something which seems to me an error shows itself to be more effective than a truth, then I must first follow up the error, for in it lie power and life which I lose if I hold to what seems to me true. Light has need of darkness—otherwise how could it appear as light?

[531] It is well known that Freudian psychoanalysis limits itself to the task of making conscious the shadow-side and the evil within us. It simply brings into action the civil war that was latent, and lets it go at that. The patient must deal with it as best he can. Freud has unfortunately overlooked the fact that man has never yet been able single-handed to hold his own against the powers of darkness—that is, of the unconscious. Man has always stood in need of the spiritual help which his particular religion held out to him. The opening up of the unconscious always means the

outbreak of intense spiritual suffering; it is as when a flourishing civilization is abandoned to invading hordes of barbarians, or when fertile fields are exposed by the bursting of a dam to a raging torrent. The World War was such an invasion which showed, as nothing else could, how thin are the walls which separate a well-ordered world from lurking chaos. But it is the same with the individual and his rationally ordered world. Seeking revenge for the violence his reason has done to her, outraged Nature only awaits the moment when the partition falls so as to overwhelm the conscious life with destruction. Man has been aware of this danger to the psyche since the earliest times, even in the most primitive stages of culture. It was to arm himself against this threat and to heal the damage done that he developed religious and magical practices. This is why the medicine-man is also the priest; he is the saviour of the soul as well as of the body, and religions are systems of healing for psychic illness. This is especially true of the two greatest religions of humanity, Christianity and Buddhism. Man is never helped in his suffering by what he thinks of for himself; only suprahuman, revealed truth lifts him out of his distress.

[532] Today the tide of destruction has already reached us and the psyche has suffered damage. That is why patients force the psychotherapist into the role of the priest and expect and demand of him that he shall free them from their suffering. That is why we psychotherapists must occupy ourselves with problems which, strictly speaking, belong to the theologian. But we cannot leave these questions for theology to answer; challenged by the urgent psychic needs of our patients, we are directly confronted with them every day. Since, as a rule, every concept and every point of view handed down from the past proves futile, we must first tread with the patient the path of his illness—the path of his mistake that sharpens his conflicts and increases his loneliness till it becomes unbearable—hoping that from the psychic depths which cast up the powers of destruction the rescuing forces will also come.

[533] When I first took this path I did not know where it would lead. I did not know what lay hidden in the depths of the psyche—that region which I have since called the “collective unconscious” and whose contents I designate as “archetypes.” Since time immemorial, invasions of the unconscious have occurred, and ever and again they repeat themselves. For consciousness did not exist from the beginning; in every child it has to be built up anew in the first years of life. Consciousness is very weak in this formative period, and the same is true of the psychic history of mankind—the unconscious easily seizes power. These struggles have left their mark. To put it in scientific terms: instinctive defence-mechanisms have been built up which automatically intervene when the danger is greatest, and their coming into action during an emergency is represented in fantasy by helpful images which are ineradicably imprinted on the human psyche. Science can only establish the existence of these psychic factors and attempt a rationalistic explanation by offering an

hypothesis as to their source. This, however, only thrusts the problem a stage further back without solving the riddle. We thus come to those ultimate questions: Where does consciousness come from? What is the psyche? At this point all science ends.

[534] It is as though, at the climax of the illness, the destructive powers were converted into healing forces. This is brought about by the archetypes awaking to independent life and taking over the guidance of the psychic personality, thus supplanting the ego with its futile willing and striving. As a religious-minded person would say: guidance has come from God. With most of my patients I have to avoid this formulation, apt though it is, for it reminds them too much of what they had to reject in the first place. I must express myself in more modest terms and say that the psyche has awakened to spontaneous activity. And indeed this formulation is better suited to the observable facts, as the transformation takes place at that moment when, in dreams or fantasies, motifs appear whose source in consciousness cannot be demonstrated. To the patient it is nothing less than a revelation when something altogether strange rises up to confront him from the hidden depths of the psyche—something that is not his ego and is therefore beyond the reach of his personal will. He has regained access to the sources of psychic life, and this marks the beginning of the cure.

[535] In order to illustrate this process, I ought really to discuss it with the help of examples. But it is almost impossible to give a convincing example offhand, for as a rule it is an extremely subtle and complicated matter. Often it is simply the deep impression made on the patient by the independent way the dreams deal with his problem. Or it may be that his fantasy points to something for which his conscious mind was quite unprepared. But in most cases it is contents of an archetypal nature, or the connections between them, that exert a strong influence of their own whether or not they are understood by the conscious mind. This spontaneous activity of the psyche often becomes so intense that visionary pictures are seen or inner voices heard—a true, primordial experience of the spirit.

[536] Such experiences reward the sufferer for the pains of the labyrinthine way. From now on a light shines through the confusion; more, he can accept the conflict within him and so come to resolve the morbid split in his nature on a higher level.

*

[537] The fundamental problems of modern psychotherapy are so important and far-reaching that their discussion in an essay precludes any presentation of details, however desirable this might be for clarity's sake. I hope nevertheless that I have succeeded in my main purpose, which was to set forth the attitude of the psychotherapist to his work. This may be found more rewarding than precepts and pointers to methods of treatment, which in any case never work properly unless they are applied with right understanding. The attitude of the psychotherapist is infinitely

more important than the theories and methods of psychotherapy, and that is why I was particularly concerned to make this attitude known. I believe I have given an honest account and have, at the same time, imparted information which will allow you to decide how far and in what way the clergyman can join with the psychotherapist in his aspirations and endeavours. I believe, also, that the picture I have drawn of the spiritual outlook of modern man corresponds to the true state of affairs, though I make no claim to infallibility. In any case, what I have had to say about the cure of neurosis, and the problems involved, is the unvarnished truth. We doctors would naturally welcome the sympathetic understanding of the clergy in our endeavours to heal psychic suffering, but we are also fully aware of the fundamental difficulties which stand in the way of co-operation. My own position is on the extreme left wing in the parliament of Protestant opinion, yet I would be the first to warn people against uncritical generalizations of their own point of view. As a Swiss I am an inveterate democrat, yet I recognize that Nature is aristocratic and, what is even more, esoteric. “Quod licet Jovi, non licet bovi” is an unpleasant but eternal truth. Who are forgiven their many sins? Those who have loved much. But as to those who love little, their few sins are held against them. I am firmly convinced that a vast number of people belong to the fold of the Catholic Church and nowhere else, because they are most suitably housed there. I am as much persuaded of this as of the fact, which I have myself observed, that a primitive religion is better suited to primitive people than Christianity, which is so incomprehensible to them and so foreign to their blood that they can only ape it in the most disgusting way. I believe, too, that there must be protestants against the Catholic Church, and also protestants against Protestantism—for the manifestations of the spirit are truly wondrous, and as varied as Creation itself.

[538] The living spirit grows and even outgrows its earlier forms of expression; it freely chooses the men who proclaim it and in whom it lives. This living spirit is eternally renewed and pursues its goal in manifold and inconceivable ways throughout the history of mankind. Measured against it, the names and forms which men have given it mean very little; they are only the changing leaves and blossoms on the stem of the eternal tree.

PSYCHOANALYSIS AND THE CURE OF SOULS¹

[539] The question of the relations between psychoanalysis and the pastoral cure of souls is not easy to answer, because the two are concerned with essentially different things. The cure of souls as practised by the clergyman or priest is a religious influence based on a Christian confession of faith. Psychoanalysis, on the other hand, is a medical intervention, a psychological technique whose purpose it is to lay bare the contents of the unconscious and integrate them into the conscious mind. This definition of psychoanalysis applies, however, only to the methods employed by Freud's school and mine. The Adlerian method is not an analysis in this sense, nor does it pursue the aim stated above. It is chiefly pedagogical in intent, and works directly upon the conscious mind without, as it were, considering the unconscious. It is a further development of the French "rééducation de la volonté" and of Dubois' "psychic orthopedics." The normalization of the individual at which Adlerian pedagogics aim, and his adaptation to the collective psyche, represent a different goal from that pursued by the pastoral cure of souls, which has for its aim the salvation of the soul and its deliverance from the snares of this world. Normalization and adaptation may, under certain circumstances, even be aims which are diametrically opposed to the Christian ideal of detachment from the world, submission to the will of God, and the salvation of the individual. The Adlerian method and the pastoral cure of souls, whether Protestant or Catholic, have only one thing in common, and that is the fact that they both apply themselves to the conscious mind, and in so doing appeal to a person's insight and will.

[540] Freudian psychoanalysis, on the other hand, appeals in the first place neither to insight nor to the will, but seeks to lead the contents of the unconscious over into the conscious mind, thereby destroying the roots of the disturbances or symptoms. Freud seeks, therefore, to remove the disturbance of adaptation by an undermining of the symptoms, and not through treatment of the conscious mind. That is the aim of his psychoanalytic technique.

[541] My difference with Freud begins with the interpretation of unconscious material. It stands to reason that you cannot integrate anything into consciousness without some measure of comprehension, i.e., insight. In order to make the unconscious material assimilable or understandable, Freud employs his famous sexual theory, which conceives the material brought to light through analysis mainly

as sexual tendencies (or other immoral wishes) that are incompatible with the conscious attitude. Freud's standpoint here is based on the rationalistic materialism of the scientific views current in the late nineteenth century (of which his book *The Future of an Illusion* affords the plainest possible demonstration). With these views a fairly far-reaching recognition of the animal nature of man can be effected without too much difficulty, for the moral conflict is then apparently limited to easily avoidable collisions with public opinion or the penal code. At the same time Freud speaks of "sublimation," which he understands as an application of libido in desexualized form. I cannot enter here into a criticism of this very delicate subject, but would merely point out that not everything that comes out of the unconscious can be "sublimated."

[542] For anyone who, whether by temperament, or for philosophical or religious reasons, cannot adopt the standpoint of scientific materialism, the realization of unconscious contents is in every respect a serious problem. Fortunately an instinctive resistance protects us from realizations that would take us too far; hence one can often content oneself with a moderate increase of consciousness. This is particularly so in the case of simple, uncomplicated neuroses, or rather, with people who are simple and uncomplicated (a neurosis is never more complicated than the person who has it). Those, on the other hand, with more refined natures suffer mostly from a passion for consciousness far exceeding their instinctive resistance. They want to see, know, and understand. For these people the answer given by the Freudian art of interpretation is unsatisfying. Here the Church's means of grace, especially as entrusted to the Catholic priest, are likely to come to the aid of understanding, for their form and meaning are suited at the outset to the nature of unconscious contents. That is why the priest not only hears the confession, but also asks questions—indeed, it is incumbent on him to ask them. What is more, he can ask about things which would otherwise only come to the ears of the doctor. In view of the means of grace at his disposal, the priest's intervention cannot be regarded as exceeding his competence, seeing that he is also empowered to lay the storm which he has provoked.

[543] For the Protestant minister the problem is not so simple. Apart from common prayer and Holy Communion, he has no ritual ceremonies at his disposal, no spiritual exercises, rosaries, pilgrimages, etc., with their expressive symbolism. He is therefore compelled to take his stand on moral ground, which puts the instinctual forces coming up from the unconscious in danger of a new repression. Any sacral action, in whatever form, works like a vessel for receiving the contents of the unconscious. Puritan simplification has deprived Protestantism of just this means of acting on the unconscious; at any rate it has dispossessed the clergyman of his quality as a priestly mediator, which is so very necessary to the soul. Instead, it has given the individual

responsibility for himself and left him alone with his God. Herein lies the advantage and also the danger of Protestantism. From this, too, comes its inner unrest, which in the course of a few centuries has begotten more than four hundred Protestant denominations—an indubitable symptom of individualism run riot.

[544] There can be no doubt that the psychoanalytical unveiling of the unconscious has a great effect. Equally, there can be no doubt of the tremendous effect of Catholic confession, especially when it is not just a passive hearing, but an active intervention. In view of this, it is truly astonishing that the Protestant Churches have not long since made an effort to revive the institution of confession as the epitome of the pastoral bond between the shepherd and his flock. For the Protestant, however, there is—and rightly so—no going back to this primitive Catholic form; it is too sharply opposed to the nature of Protestantism. The Protestant minister, rightly seeing in the cure of souls the real purpose of his existence, naturally looks round for a new way that will lead to the souls, and not merely to the ears, of his parishioners. Analytical psychology seems to him to provide the key, for the meaning and purpose of his ministry are not fulfilled with the Sunday sermon, which, though it reaches the ears, seldom penetrates to the heart, much less to the soul, the most hidden of all things hidden in man. The cure of souls can only be practised in the stillness of a colloquy, carried on in the healthful atmosphere of unreserved confidence. Soul must work on soul, and many doors be unlocked that bar the way to the innermost sanctuary. Psychoanalysis possesses the means of opening doors otherwise tightly closed.

[545] The opening of these doors, however, is often very like a surgical operation, where the doctor, with knife poised, must be prepared for anything the moment the cut is made. The psychoanalyst, likewise, can discover unforeseen things that are very unpleasant indeed, such as latent psychoses and the like. Although these things, given time, often come to the surface entirely of their own accord, the blame nevertheless falls on the analyst, who, by his intervention, releases the disturbance prematurely. Only a thorough knowledge of psychiatry and its specialized techniques can protect the doctor from such blunders. A lay analyst should therefore always work in collaboration with a doctor.

[546] Fortunately, the unlucky accidents I have just mentioned occur relatively seldom. But what psychoanalysis brings to light is, in itself, difficult enough to cope with. It brings the patient face to face with his life problem, and hence with some of the ultimate, serious questions which he has hitherto evaded. As human nature is very far from innocent, the facts that come up are usually quite sufficient to explain why the patient avoided them: he felt instinctively that he did not know a satisfactory answer to these questions. Accordingly he expects it from the analyst. The analyst can now safely leave certain critical questions open—and to the patient's own

advantage; for no sensible patient will expect from him anything more than *medical* help. More is expected from the clergyman, namely the solution of *religious* questions.

[547] As already said, the Catholic Church has at her disposal ways and means which have served since olden times to gather the lower, instinctual forces of the psyche into symbols and in this way integrate them into the hierarchy of the spirit. The Protestant minister lacks these means, and consequently often stands perplexed before certain facts of human nature which no amount of admonition, or insight, or goodwill, or heroic self-castigation can subdue. In Protestantism good and evil are flatly and irreconcilably opposed to one another. There is no visible forgiveness; the human being is left alone with his sin. And God, as we know, only forgives the sins we have conquered ourselves. For the Protestant clergy it is a momentous psychological difficulty that they possess no forms which would serve to catch the lower instincts of psychic life. It is precisely the problem of the unconscious conflict brought to light by psychoanalysis that requires solving. The doctor can—on the basis of scientific materialism—treat the problem with medical discretion, that is to say he can regard the ethical problems of his patient as lying outside his competence as a doctor. He can safely retire behind a regretful “There you must make out as best you can.” But the Protestant clergyman cannot, in my opinion, wash his hands in innocence; he must accompany the soul of the person who confides in him on its dark journey. The reductive standpoint of psychoanalysis is of little use to him here, for any development is a building up and not a breaking down. Good advice and moral exhortation are little if any help in serious cases because, if followed, they dispel that intense darkness which precedes the coming of the light. As a wise saying of the East puts it: It is better to do good than to eschew evil. He who is wise, therefore, will play the part of beggar, king, or criminal, and be mindful of the gods.

[548] It is easier for the Catholic clergy to employ the elements of psychological analysis than it is for the Protestant. The latter are faced with the harder task. Not only do the Catholics possess a ready-made pastoral technique in the historically sanctioned form of confession, penance, and absolution, but they also have at their command a rich and palpably ritualistic symbolism which fully satisfies the demands as well as the obscure passions of simpler minds. The Protestants need a psychological technique to an even greater degree since they lack all essential forms of ritual. I therefore hold that psychological interest on the part of the Protestant clergy is entirely legitimate and even necessary. Their possible encroachment upon medical territory is more than balanced by medical incursions into religion and philosophy, to which doctors naïvely believe themselves entitled (witness the explanation of religious processes in terms of sexual symptoms or infantile wish-

fantasies). The doctor and the clergyman undoubtedly clash head-on in analytical psychology. This collision should lead to co-operation and not to enmity.

[549] Owing to the absence of ritual forms, the Protestant (as opposed to the Catholic) cure of souls develops into a personal discussion in the sense of an “I-Thou” relationship. It cannot translate the fundamental problem of the transference into something impersonal, as the Catholic can, but must handle it with confidence as a personal experience. Any contact with the unconscious that goes at all deep leads to transference phenomena. Whenever, therefore, the clergyman penetrates any distance into the psychic background, he will provoke a transference (with men as well as with women). This involves him personally, and on top of that he has no form which he could substitute for his own person, as the Catholic priest can, or rather must do. In this way he finds himself drawn into the most personal participation for the sake of his parishioner’s spiritual welfare, more so even than the analyst, for whom the specific salvation of the patient’s soul is not necessarily a matter of burning importance. At all events he can resort to plausible excuses which the clergyman, somewhat nervously, must repudiate for higher reasons. Hence he stands, and must stand, in constant danger of involving himself in serious psychic conflicts which, to put it mildly, are not conducive to the parochial peace of mind. This danger is no trifling one, but it has the great advantage of drawing the responsible pastor back into real life and, at the same time, of exposing him to the tribulations of the early Church (cf. the gossip against which Paul had to defend himself).

[550] The pastor must make up his mind how far his public position, his stipend, and considerations for his family keep him from setting forth on the perilous mission of curing souls. I would not think ill of him if he decided not to follow the advice that Tertullian gave his catechumens, namely, that they should deliberately visit the arena. Real pastoral work that is based on modern psychology can easily expose the clergyman to the martyrdom of public misinterpretation. Public position and regard for the family, though worldly considerations, counsel a wise reserve (for the children of this world are, as we know, wiser than the children of light). Nevertheless, the eyes of the soul turn longingly to those who, regardless of their worldly welfare, can throw everything into the scales for the sake of something better. Nothing, certainly, is ever won by childish enthusiasm; yet only with daring—a daring which never leaves the firm ground of the real and the possible, and which shrinks from no suffering—can anything of greater worth be achieved.

[551] Thus it is the Protestant minister’s lack of ritual equipment which holds him back from closer contact with the world, and at the same time drives him towards a greater adventure—because it moves him right into the firing line. I hope that the Protestant will not be found wanting in courage for this task.

[552] All intelligent psychotherapists would be glad if their endeavours were supported and supplemented by the work of the clergy. Certainly the problems of the human soul, approached from opposite ends by cleric and doctor, will cause considerable difficulties for both, not least on account of the difference in standpoint. But it is just from this encounter that we may expect the most fruitful stimulation for both sides.

VI

ANSWER TO JOB

[First published as a book, *Antwort auf Hiob* (Zurich, 1952). The present translation was first published, in book form, in London, 1954; for it, Professor Jung made some half-dozen small alterations to the original text and added or authorized an occasional footnote. In 1956, it was reprinted and published by Pastoral Psychology Book Club, Great Neck, New York. Only minor stylistic alterations have been made in the version here published.—EDITORS.]

PREFATORY NOTE¹

The suggestion that I should tell you how *Answer to Job* came to be written sets me a difficult task, because the history of this book can hardly be told in a few words. I have been occupied with its central problem for years. Many different sources nourished the stream of its thoughts, until one day—and after long reflection—the time was ripe to put them into words.

The most immediate cause of my writing the book is perhaps to be found in certain problems discussed in my book *Aion*, especially the problems of Christ as a symbolic figure and of the antagonism Christ-Antichrist, represented in the traditional zodiacal symbolism of the two fishes.

In connection with the discussion of these problems and of the doctrine of Redemption, I criticized the idea of the *privatio boni* as not agreeing with the psychological findings. Psychological experience shows that whatever we call “good” is balanced by an equally substantial “bad” or “evil.” If “evil” is non-existent, then whatever there is must needs be “good.” Dogmatically, neither “good” nor “evil” can be derived from Man, since the “Evil One” existed before Man as one of the “Sons of God.” The idea of the *privatio boni* began to play a role in the Church only after Mani. Before this heresy, Clement of Rome taught that God rules the world with a right and a left hand, the right being Christ, the left Satan. Clement’s view is clearly *monotheistic*, as it unites the opposites in one God.

Later Christianity, however, is dualistic, inasmuch as it splits off one half of the opposites, personified in Satan, and he is *eternal* in his state of damnation. This crucial question of *πόθεν τό κακόν* (whence evil?) forms the point of departure for the Christian theory of Redemption. It is therefore of prime importance. If Christianity claims to be a monotheism, it becomes unavoidable to assume the opposites as being contained in God. But then we are confronted with a major religious problem: the problem of Job. It is the aim of my book to point out its historical evolution since the time of Job down through the centuries to the most recent symbolic phenomena, such as the *Assumptio Mariae*, etc.

Moreover, the study of medieval natural philosophy—of the greatest importance to psychology—made me try to find an answer to the question: what image of God did these old philosophers have? Or rather: how should the symbols which supplement their image of God be understood? All this pointed to a *complexio oppositorum* and thus recalled again the story of Job to my mind: Job who expected help from God against God. This most peculiar fact presupposes a similar conception of the opposites in God.

On the other hand, numerous questions, not only from my patients, but from all over the world, brought up the problem of giving a more complete and explicit answer than I had given in *Aion*. For many years I hesitated to do this because I was quite conscious of the probable consequences, and knew what a storm would be raised. But I was gripped by the urgency and difficulty of the problem and was unable to throw it off. Therefore I found myself obliged to deal with the whole problem, and I did so in the form of describing a personal experience, carried by subjective emotions. I deliberately chose this form because I wanted to avoid the impression that I had any idea of

announcing an “eternal truth.” The book does not pretend to be anything but the voice or question of a single individual who hopes or expects to meet with thoughtfulness in the public.

LECTORI BENEVOLO

I am distressed for thee, my brother ...

II Samuel 1:26 (AV)

[553] On account of its somewhat unusual content, my little book requires a short preface. I beg of you, dear reader, not to overlook it. For, in what follows, I shall speak of the venerable objects of religious belief. Whoever talks of such matters inevitably runs the risk of being torn to pieces by the two parties who are in mortal conflict about those very things. This conflict is due to the strange supposition that a thing is true only if it presents itself as a *physical* fact. Thus some people believe it to be physically true that Christ was born as the son of a virgin, while others deny this as a physical impossibility. Everyone can see that there is no logical solution to this conflict and that one would do better not to get involved in such sterile disputes. Both are right and both are wrong. Yet they could easily reach agreement if only they dropped the word “physical.” “Physical” is not the only criterion of truth: there are also *psychic* truths which can neither be explained nor proved nor contested in any physical way. If, for instance, a general belief existed that the river Rhine had at one time flowed backwards from its mouth to its source, then this belief would in itself be a fact even though such an assertion, physically understood, would be deemed utterly incredible. Beliefs of this kind are psychic facts which cannot be contested and need no proof.

[554] Religious statements are of this type. They refer without exception to things that cannot be established as physical facts. If they did not do this, they would inevitably fall into the category of the natural sciences. Taken as referring to anything physical, they make no sense whatever, and science would dismiss them as non-experienceable. They would be mere miracles, which are sufficiently exposed to doubt as it is, and yet they could not demonstrate the reality of the spirit or *meaning* that underlies them, because meaning is something that always demonstrates itself and is experienced on its own merits. The spirit and meaning of Christ are present and perceptible to us even without the aid of miracles. Miracles appeal only to the understanding of those who cannot perceive the meaning. They are mere substitutes for the not understood reality of the spirit. This is not to say that the living presence of the spirit is not occasionally accompanied by marvellous physical happenings. I only wish to emphasize that these happenings can neither replace nor bring about an understanding of the spirit, which is the one essential thing.

[555] The fact that religious statements frequently conflict with the observed physical phenomena proves that in contrast to physical perception the spirit is autonomous, and that psychic experience is to a certain extent independent of physical data. The psyche is an autonomous factor, and religious statements are psychic confessions which in the last resort are based on unconscious, i.e., on transcendental, processes. These processes are not accessible to physical perception but demonstrate their existence through the confessions of the psyche. The resultant statements are filtered through the medium of human consciousness: that is to say, they are given visible forms which in their turn are subject to manifold influences from within and without. That is why whenever we speak of religious contents we move in a world of images that point to something ineffable. We do not know how clear or unclear these images, metaphors, and concepts are in respect of their transcendental object. If, for instance, we say "God," we give expression to an image or verbal concept which has undergone many changes in the course of time. We are, however, unable to say with any degree of certainty—unless it be by faith—whether these changes affect only the images and concepts, or the Unspeakable itself. After all, we can imagine God as an eternally flowing current of vital energy that endlessly changes shape just as easily as we can imagine him as an eternally unmoved, unchangeable essence. Our reason is sure only of one thing: that it manipulates images and ideas which are dependent on human imagination and its temporal and local conditions, and which have therefore changed innumerable times in the course of their long history. There is no doubt that there is something behind these images that transcends consciousness and operates in such a way that the statements do not vary limitlessly and chaotically, but clearly all relate to a few basic principles or archetypes. These, like the psyche itself, or like matter, are unknowable as such. All we can do is to construct models of them which we know to be inadequate, a fact which is confirmed again and again by religious statements.

[556] If, therefore, in what follows I concern myself with these "metaphysical" objects, I am quite conscious that I am moving in a world of images and that none of my reflections touches the essence of the Unknowable. I am also too well aware of how limited are our powers of conception—to say nothing of the feebleness and poverty of language—to imagine that my remarks mean anything more in principle than what a primitive man means when he conceives of his god as a hare or a snake. But, although our whole world of religious ideas consists of anthropomorphic images that could never stand up to rational criticism, we should never forget that they are based on numinous archetypes, i.e., on an emotional foundation which is unassailable by reason. We are dealing with psychic facts which logic can overlook but not eliminate. In this connection Tertullian has already appealed, quite rightly, to the testimony of the soul. In his *De testimonio animae*, he says:

These testimonies of the soul are as simple as they are true, as obvious as they are simple, as common as they are obvious, as natural as they are common, as divine as they are natural. I think that they cannot appear to any one to be trifling and ridiculous if he considers the majesty of Nature, whence the authority of the soul is derived. What you allow to the mistress you will assign to the disciple. Nature is the mistress, the soul is the disciple; what the one has taught, or the other has learned, has been delivered to them by God, who is, in truth, the Master even of the mistress herself. What notion the soul is able to conceive of her first teacher is in your power to judge, from that soul which is in you. Feel that which causes you to feel; think upon that which is in forebodings your prophet; in omens, your augur; in the events which befall you, your foreseer. Strange if, being given by God, she knows how to act the diviner for men! Equally strange if she knows Him by whom she has been given!¹

[557] I would go a step further and say that the statements made in the Holy Scriptures are also utterances of the soul—even at the risk of being suspected of psychologism. The statements of the conscious mind may easily be snares and delusions, lies, or arbitrary opinions, but this is certainly not true of the statements of the soul: to begin with they always go over our heads because they point to realities that transcend consciousness. These *entia* are the archetypes of the collective unconscious, and they precipitate complexes of ideas in the form of mythological motifs. Ideas of this kind are never invented, but enter the field of inner perception as finished products, for instance in dreams. They are spontaneous phenomena which are not subject to our will, and we are therefore justified in ascribing to them a certain autonomy. They are to be regarded not only as objects but as subjects with laws of their own. From the point of view of consciousness, we can, of course, describe them as objects, and even explain them up to a point, in the same measure as we can describe and explain a living human being. But then we have to disregard their autonomy. If that is considered, we are compelled to treat them as subjects; in other words, we have to admit that they possess spontaneity and purposiveness, or a kind of consciousness and free will. We observe their behaviour and consider their statements. This dual standpoint, which we are forced to adopt towards every relatively independent organism, naturally has a dual result. On the one hand it tells me what I do to the object, and on the other hand what it does (possibly to me). It is obvious that this unavoidable dualism will create a certain amount of confusion in the minds of my readers, particularly as in what follows we shall have to do with the archetype of Deity.

[558] Should any of my readers feel tempted to add an apologetic “only” to the God-images as we perceive them, he would immediately fall foul of experience, which demonstrates beyond any shadow of doubt the extraordinary numinosity of these

images. The tremendous effectiveness (mana) of these images is such that they not only give one the feeling of pointing to the *Ens realissimum*, but make one convinced that they actually express it and establish it as a fact. This makes discussion uncommonly difficult, if not impossible. It is, in fact, impossible to demonstrate God's reality to oneself except by using images which have arisen spontaneously or are sanctified by tradition, and whose psychic nature and effects the naïve-minded person has never separated from their unknowable metaphysical background. He instantly equates the effective image with the transcendental X to which it points. The seeming justification for this procedure appears self-evident and is not considered a problem so long as the statements of religion are not seriously questioned. But if there is occasion for criticism, then it must be remembered that the image and the statement are psychic processes which are different from their transcendental object; they do not posit it, they merely point to it. In the realm of psychic processes criticism and discussion are not only permissible but are unavoidable.

[559] In what follows I shall attempt just such a discussion, such a "coming to terms" with certain religious traditions and ideas. Since I shall be dealing with numinous factors, my feeling is challenged quite as much as my intellect. I cannot, therefore, write in a coolly objective manner, but must allow my emotional subjectivity to speak if I want to describe what I feel when I read certain books of the Bible, or when I remember the impressions I have received from the doctrines of our faith. I do not write as a biblical scholar (which I am not), but as a layman and physician who has been privileged to see deeply into the psychic life of many people. What I am expressing is first of all my own personal view, but I know that I also speak in the name of many who have had similar experiences.

ANSWER TO JOB

[560] The Book of Job is a landmark in the long historical development of a divine drama. At the time the book was written, there were already many testimonies which had given a contradictory picture of Yahweh—the picture of a God who knew no moderation in his emotions and suffered precisely from this lack of moderation. He himself admitted that he was eaten up with rage and jealousy and that this knowledge was painful to him. Insight existed along with obtuseness, loving-kindness along with cruelty, creative power along with destructiveness. Everything was there, and none of these qualities was an obstacle to the other. Such a condition is only conceivable either when no reflecting consciousness is present at all, or when the capacity for reflection is very feeble and a more or less adventitious phenomenon. A condition of this sort can only be described as *amoral*.

[561] How the people of the Old Testament felt about their God we know from the testimony of the Bible. That is not what I am concerned with here, but rather with the way in which a modern man with a Christian education and background comes to terms with the divine darkness which is unveiled in the Book of Job, and what effect it has on him. I shall not give a cool and carefully considered exegesis that tries to be fair to every detail, but a purely subjective reaction. In this way I hope to act as a voice for many who feel the same way as I do, and to give expression to the shattering emotion which the unvarnished spectacle of divine savagery and ruthlessness produces in us. Even if we know by hearsay about the suffering and discord in the Deity, they are so unconscious, and hence so ineffectual morally, that they arouse no human sympathy or understanding. Instead, they give rise to an equally ill-considered outburst of affect, and a smouldering resentment that may be compared to a slowly healing wound. And just as there is a secret tie between the wound and the weapon, so the affect corresponds to the violence of the deed that caused it.

[562] The Book of Job serves as a paradigm for a certain experience of God which has a special significance for us today. These experiences come upon man from inside as well as from outside, and it is useless to interpret them rationalistically and thus weaken them by apotropaic means. It is far better to admit the affect and submit to its violence than to try to escape it by all sorts of intellectual tricks or by emotional value-judgments. Although, by giving way to the affect, one imitates all the bad qualities of the outrageous act that provoked it and thus makes oneself guilty of the

same fault, that is precisely the point of the whole proceeding: the violence is meant to penetrate to a man's vitals, and he to succumb to its action. He must be affected by it, otherwise its full effect will not reach him. But he should know, or learn to know, what has affected him, for in this way he transforms the blindness of the violence on the one hand and of the affect on the other into knowledge.

[563] For this reason I shall express my affect fearlessly and ruthlessly in what follows, and I shall answer injustice with injustice, that I may learn to know why and to what purpose Job was wounded, and what consequences have grown out of this for Yahweh as well as for man.

I

[564] Job answers Yahweh thus:

Behold, I am of small account; what shall I answer thee?

I lay my hand on my mouth.

I have spoken once, and I will not answer;

twice, but I will proceed no further.¹

[565] And indeed, in the immediate presence of the infinite power of creation, this is the only possible answer for a witness who is still trembling in every limb with the terror of almost total annihilation. What else could a half-crushed human worm, grovelling in the dust, reasonably answer in the circumstances? In spite of his pitiable littleness and feebleness, this man knows that he is confronted with a superhuman being who is personally most easily provoked. He also knows that it is far better to withhold all moral reflections, to say nothing of certain moral requirements which might be expected to apply to a god.

[566] Yahweh's "justice" is praised, so presumably Job could bring his complaint and the protestation of his innocence before him as the just judge. But he doubts this possibility. "How can a man be just before God?"² "If I summoned him and he answered me, I would not believe that he was listening to my voice."³ "If it is a matter of justice, who can summon him?"⁴ He "multiplies my wounds without cause."⁵ "He destroys both the blameless and the wicked."⁶ "If the scourge slay suddenly, he will laugh at the trial of the innocent."⁷ "I know," Job says to Yahweh, "thou wilt not hold me innocent. I shall be condemned."⁸ "If I wash myself ... never so clean, yet shalt thou plunge me in the ditch."⁹ "For he is not a man, as I am, that I should answer him, and we should come together in judgment."¹⁰ Job wants to explain his point of view to Yahweh, to state his complaint, and tells him: "Thou knowest that I am not guilty, and there is none to deliver out of thy hand."¹¹ "I desire to argue my case with God."¹² "I will defend my ways to his face,"¹³ "I know that I shall be vindicated."¹⁴ Yahweh should summon him and render him an account or at

least allow him to plead his cause. Properly estimating the disproportion between man and God, he asks: “Wilt thou break a leaf driven to and fro? and wilt thou pursue the dry stubble?”¹⁵ God has put him in the wrong, but there is no justice.¹⁶ He has “taken away my right.”¹⁷ “Till I die I will not put away my integrity from me. I hold fast to my righteousness, and will not let it go.”¹⁸ His friend Elihu the Buzite does not believe the injustice of Yahweh: “Of a truth, God will not do wickedly, and the Almighty will not pervert justice.”¹⁹ Illogically enough, he bases his opinion on God’s *power*: “Is it fit to say to a king, Thou art wicked? and to princes, Ye are ungodly?”²⁰ One must “respect the persons of princes and esteem the high more than the low.”²¹ But Job is not shaken in his faith, and had already uttered an important truth when he said: “Behold, my witness is in heaven, and he that vouches for me is on high ... my eye pours out tears to God, that he would maintain the right of a man with God, like that of a man with his neighbour.”²² And later: “For I know that my Vindicator lives, and at last he will stand upon the earth.”²³

[567] These words clearly show that Job, in spite of his doubt as to whether man can be just before God, still finds it difficult to relinquish the idea of meeting God on the basis of justice and therefore of morality. Because, in spite of everything, he cannot give up his faith in divine justice, it is not easy for him to accept the knowledge that divine arbitrariness breaks the law. On the other hand, he has to admit that no one except Yahweh himself is doing him injustice and violence. He cannot deny that he is up against a God who does not care a rap for any moral opinion and does not recognize any form of ethics as binding. This is perhaps the greatest thing about Job, that, faced with this difficulty, he does not doubt the unity of God. He clearly sees that God is at odds with himself—so totally at odds that he, Job, is quite certain of finding in God a helper and an “advocate” against God. As certain as he is of the evil in Yahweh, he is equally certain of the good. In a human being who renders us evil we cannot expect at the same time to find a helper. But Yahweh is not a human being: he is both a persecutor and a helper in one, and the one aspect is as real as the other. Yahweh is not split but is an *antinomy*—a totality of inner opposites—and this is the indispensable condition for his tremendous dynamism, his omniscience and omnipotence. Because of this knowledge Job holds on to his intention of “defending his ways to his face,” i.e., of making his point of view clear to him, since notwithstanding his wrath, Yahweh is also man’s advocate *against himself* when man puts forth his complaint.

[568] One would be even more astonished at Job’s knowledge of God if this were the first time one were hearing of Yahweh’s amorality. His incalculable moods and devastating attacks of wrath had, however, been known from time immemorial. He had proved himself to be a jealous defender of morality and was specially sensitive in regard to justice. Hence he had always to be praised as “just,” which, it seemed, was

very important to him. Thanks to this circumstance or peculiarity of his, he had a *distinct personality*, which differed from that of a more or less archaic king only in scope. His jealous and irritable nature, prying mistrustfully into the faithless hearts of men and exploring their secret thoughts, compelled a personal relationship between himself and man, who could not help but feel personally called by him. That was the essential difference between Yahweh and the all-ruling Father Zeus, who in a benevolent and somewhat detached manner allowed the economy of the universe to roll along on its accustomed courses and punished only those who were disorderly. He did not moralize but ruled purely instinctively. He did not demand anything more *from* human beings than the sacrifices due to him; he did not want to do anything *with* human beings because he had no plans for them. Father Zeus is certainly a figure but not a personality. Yahweh, on the other hand, was interested in man. Human beings were a matter of first-rate importance to him. He needed them as they needed him, urgently and personally. Zeus too could throw thunderbolts about, but only at hopelessly disorderly individuals. Against mankind as a whole he had no objections—but then they did not interest him all that much. Yahweh, however, could get inordinately excited about man as a species and men as individuals if they did not behave as he desired or expected, without ever considering that in his omnipotence he could easily have created something better than these “bad earthenware pots.”

[569] In view of this intense personal relatedness to his chosen people, it was only to be expected that a regular covenant would develop which also extended to certain individuals, for instance to David. As we learn from the Eighty-ninth Psalm, Yahweh told him:

My steadfast love I will keep for him for ever,
and my covenant will stand firm for him.

.

I will not violate my covenant,
or alter the word that went forth from my lips.

Once for all I have sworn by my holiness;
I will not lie to David.²⁴

[570] And yet it happened that he, who watched so jealously over the fulfilment of laws and contracts, broke his own oath. Modern man, with his sensitive conscience, would have felt the black abyss opening and the ground giving way under his feet, for the least he expects of his God is that he should be superior to mortal man in the sense of being better, higher, nobler—but not his superior in the kind of moral flexibility and unreliability that do not jib even at perjury.

[571] Of course one must not tax an archaic god with the requirements of modern ethics. For the people of early antiquity things were rather different. In their gods there was absolutely everything: they teemed with virtues and vices. Hence they could be punished, put in chains, deceived, stirred up against one another without losing face, or at least not for long. The man of that epoch was so inured to divine inconsistencies that he was not unduly perturbed when they happened. With Yahweh the case was different because, from quite early on, the personal and moral tie began to play an important part in the religious relationship. In these circumstances a breach of contract was bound to have the effect not only of a personal but of a moral injury. One can see this from the way David answers Yahweh:

How long, Lord? wilt thou hide thyself for ever?
shall thy wrath burn like fire?
Remember how short my time is:
wherefore hast thou made all men in vain?
.
Lord, where are thy former lovingkindnesses,
which by thy faithfulness thou didst swear to David?²⁵

[572] Had this been addressed to a human being it would have run something like this: “For heaven’s sake, man, pull yourself together and stop being such a senseless savage! It is really too grotesque to get into such a rage when it’s partly your own fault that the plants won’t flourish. You used to be quite reasonable and took good care of the garden you planted, instead of trampling it to pieces.”

[573] Certainly our interlocutor would never dare to remonstrate with his almighty partner about this breach of contract. He knows only too well what a row he would get into if *he* were the wretched breaker of the law. Because anything else would put him in peril of his life, he must retire to the more exalted plane of reason. In this way, without knowing it or wanting it, he shows himself superior to his divine partner both intellectually and morally. Yahweh fails to notice that he is being humoured, just as little as he understands why he has continually to be praised as just. He makes pressing demands on his people to be praised²⁶ and propitiated in every possible way, for the obvious purpose of keeping him in a good temper at any price.

[574] The character thus revealed fits a personality who can only convince himself that he exists through his relation to an object. Such dependence on the object is absolute when the subject is totally lacking in self-reflection and therefore has no insight into himself. It is as if he existed only by reason of the fact that he has an object which assures him that he is really there. If Yahweh, as we would expect of a sensible human being, were really conscious of himself, he would, in view of the true facts of the case, at least have put an end to the panegyrics on his justice. But he is too

unconscious to be moral. Morality presupposes consciousness. By this I do not mean to say that Yahweh is imperfect or evil, like a gnostic demiurge. He is everything in its totality; therefore, among other things, he is total justice, and also its total opposite. At least this is the way he must be conceived if one is to form a unified picture of his character. We must only remember that what we have sketched is no more than an anthropomorphic picture which is not even particularly easy to visualize. From the way the divine nature expresses itself we can see that the individual qualities are not adequately related to one another, with the result that they fall apart into mutually contradictory acts. For instance, Yahweh regrets having created human beings, although in his omniscience he must have known all along what would happen to them.

II

[575] Since the Omniscient looks into all hearts, and Yahweh's eyes "run to and fro through the whole earth,"¹ it were better for the interlocutor of the Eighty-ninth Psalm not to wax too conscious of his slight moral superiority over the more unconscious God. Better to keep it dark, for Yahweh is no friend of critical thoughts which in any way diminish the tribute of recognition he demands. Loudly as his power resounds through the universe, the basis of its existence is correspondingly slender, for it needs conscious reflection in order to exist in reality. Existence is only real when it is conscious to somebody. That is why the Creator needs conscious man even though, from sheer unconsciousness, he would like to prevent him from becoming conscious. And that is also why Yahweh needs the acclamation of a small group of people. One can imagine what would happen if this assembly suddenly decided to stop the applause: there would be a state of high excitation, with outbursts of blind destructive rage, then a withdrawal into hellish loneliness and the torture of non-existence, followed by a gradual reawakening of an unutterable longing for something which would make him conscious of himself. It is probably for this reason that all pristine things, even man before he becomes the canaille, have a touching, magical beauty, for in its nascent state "each thing after its kind" is the most precious, the most desirable, the tenderest thing in the world, being a reflection of the infinite love and goodness of the Creator.

[576] In view of the undoubted frightfulness of divine wrath, and in an age when men still knew what they were talking about when they said "Fear God," it was only to be expected that man's slight superiority should have remained unconscious. The powerful personality of Yahweh, who, in addition to everything else, lacked all biographical antecedents (his original relationship to the Elohim had long since been sunk in oblivion), had raised him above all the numina of the Gentiles and had immunized him against the influence that for several centuries had been undermining

the authority of the pagan gods. It was precisely the details of their mythological biography that had become their nemesis, for with his growing capacity for judgment man had found these stories more and more incomprehensible and indecent. Yahweh, however, had no origin and no past, except his creation of the world, with which all history began, and his relation to that part of mankind whose forefather Adam he had fashioned in his own image as the *Anthropos*, the original man, by what appears to have been a special act of creation. One can only suppose that the other human beings who must also have existed at that time had been formed previously on the divine potter's wheel along with the various kinds of beasts and cattle—those human beings, namely, from whom Cain and Seth chose their wives. If one does not approve of this conjecture, then the only other possibility that remains is the far more scandalous one that they incestuously married their sisters (for whom there is no evidence in the text), as was still surmised by the philosopher Karl Lamprecht at the end of the nineteenth century.

[577] The special providence which singled out the Jews from among the divinely stamped portion of humanity and made them the “chosen people” had burdened them from the start with a heavy obligation. As usually happens with such mortgages, they quite understandably tried to circumvent it as much as possible. Since the chosen people used every opportunity to break away from him, and Yahweh felt it of vital importance to tie this indispensable object (which he had made “godlike” for this very purpose) definitely to himself, he proposed to the patriarch Noah a contract between himself on the one hand, and Noah, his children, and all their animals, both tame and wild, on the other—a contract that promised advantages to both parties. In order to strengthen this contract and keep it fresh in the memory, he instituted the rainbow as a token of the covenant. If, in future, he summoned the thunder-clouds which hide within them floods of water and lightning, then the rainbow would appear, reminding him and his people of the contract. The temptation to use such an accumulation of clouds for an experimental deluge was no small one, and it was therefore a good idea to associate it with a sign that would give timely warning of possible catastrophe.

[578] In spite of these precautions the contract had gone to pieces with David, an event which left behind it a literary deposit in the Scriptures and which grieved some few of the devout, who upon reading it became reflective. As the Psalms were zealously read, it was inevitable that certain thoughtful people were unable to stomach the Eighty-ninth Psalm. However that may be, the fatal impression made by the breach of contract survived.² It is historically possible that these considerations influenced the author of the Book of Job.

[579] The Book of Job places this pious and faithful man, so heavily afflicted by the Lord, on a brightly lit stage where he presents his case to the eyes and ears of the

world. It is amazing to see how easily Yahweh, quite without reason, had let himself be influenced by one of his sons, by a *doubting thought*,³ and made unsure of Job's faithfulness. With his touchiness and suspiciousness the mere possibility of doubt was enough to infuriate him and induce that peculiar double-faced behaviour of which he had already given proof in the Garden of Eden, when he pointed out the tree to the First Parents and at the same time forbade them to eat of it. In this way he precipitated the Fall, which he apparently never intended. Similarly, his faithful servant Job is now to be exposed to a rigorous moral test, quite gratuitously and to no purpose, although Yahweh is convinced of Job's faithfulness and constancy, and could moreover have assured himself beyond all doubt on this point had he taken counsel with his own omniscience. Why, then, is the experiment made at all, and a bet with the unscrupulous slanderer settled, without a stake, on the back of a powerless creature? It is indeed no edifying spectacle to see how quickly Yahweh abandons his faithful servant to the evil spirit and lets him fall without compunction or pity into the abyss of physical and moral suffering. From the human point of view Yahweh's behaviour is so revolting that one has to ask oneself whether there is not a deeper motive hidden behind it. Has Yahweh some secret resistance against Job? That would explain his yielding to Satan. But what does man possess that God does not have? Because of his littleness, puniness, and defencelessness against the Almighty, he possesses, as we have already suggested, a somewhat keener consciousness based on self-reflection: he must, in order to survive, always be mindful of his impotence. God has no need of this circumspection, for nowhere does he come up against an insuperable obstacle that would force him to hesitate and hence make him reflect on himself. Could a suspicion have grown up in God that man possesses an infinitely small yet more concentrated light than he, Yahweh, possesses? A jealousy of that kind might perhaps explain his behaviour. It would be quite explicable if some such dim, barely understood deviation from the definition of a mere "creature" had aroused his divine suspicions. Too often already these human beings had not behaved in the prescribed manner. Even his trusty servant Job might have something up his sleeve.... Hence Yahweh's surprising readiness to listen to Satan's insinuations against his better judgment.

[580] Without further ado Job is robbed of his herds, his servants are slaughtered, his sons and daughters are killed by a whirlwind, and he himself is smitten with sickness and brought to the brink of the grave. To rob him of peace altogether, his wife and his old friends are let loose against him, all of whom say the wrong things. His justified complaint finds no hearing with the judge who is so much praised for his justice. Job's right is refused in order that Satan be not disturbed in his play.

[581] One must bear in mind here the dark deeds that follow one another in quick succession: robbery, murder, bodily injury with premeditation, and denial of a fair

trial. This is further exacerbated by the fact that Yahweh displays no compunction, remorse, or compassion, but only ruthlessness and brutality. The plea of unconsciousness is invalid, seeing that he flagrantly violates at least three of the commandments he himself gave out on Mount Sinai.

[582] Job's friends do everything in their power to contribute to his moral torments, and instead of giving him, whom God has perfidiously abandoned, their warm-hearted support, they moralize in an all too human manner, that is, in the stupidest fashion imaginable, and "fill him with wrinkles." They thus deny him even the last comfort of sympathetic participation and human understanding, so that one cannot altogether suppress the suspicion of connivance in high places.

[583] Why Job's torments and the divine wager should suddenly come to an end is not quite clear. So long as Job does not actually die, the pointless suffering could be continued indefinitely. We must, however, keep an eye on the background of all these events: it is just possible that something in this background will gradually begin to take shape as a compensation for Job's undeserved suffering—something to which Yahweh, even if he had only a faint inkling of it, could hardly remain indifferent. Without Yahweh's knowledge and contrary to his intentions, the tormented though guiltless Job had secretly been lifted up to a superior knowledge of God which God himself did not possess. Had Yahweh consulted his omniscience, Job would not have had the advantage of him. But then, so many other things would not have happened either.

[584] Job realizes God's inner antinomy, and in the light of this realization his knowledge attains a divine numinosity. The possibility of this development lies, one must suppose, in man's "godlikeness," which one should certainly not look for in human morphology. Yahweh himself had guarded against this error by expressly forbidding the making of images. Job, by his insistence on bringing his case before God, even without hope of a hearing, had stood his ground and thus created the very obstacle that forced God to reveal his true nature. With this dramatic climax Yahweh abruptly breaks off his cruel game of cat and mouse. But if anyone should expect that his wrath will now be turned against the slanderer, he will be severely disappointed. Yahweh does not think of bringing this mischief-making son of his to account, nor does it ever occur to him to give Job at least the moral satisfaction of explaining his behaviour. Instead, he comes riding along on the tempest of his almightiness and thunders reproaches at the half-crushed human worm:

Who is this that darkens counsel
by words without insight?⁴

[585] In view of the subsequent words of Yahweh, one must really ask oneself: *Who* is darkening *what* counsel? The only dark thing here is how Yahweh ever came to make

a bet with Satan. It is certainly not Job who has darkened anything and least of all a counsel, for there was never any talk of this nor will there be in what follows. The bet does not contain any “counsel” so far as one can see—unless, of course, it was Yahweh himself who egged Satan on for the ultimate purpose of exalting Job. Naturally this development was foreseen in omniscience, and it may be that the word “counsel” refers to this eternal and absolute knowledge. If so, Yahweh’s attitude seems the more illogical and incomprehensible, as he could then have enlightened Job on this point—which, in view of the wrong done to him, would have been only fair and equitable. I must therefore regard this possibility as improbable.

[586] *Whose words are without insight?* Presumably Yahweh is not referring to the words of Job’s friends, but is rebuking Job. But what is Job’s guilt? The only thing he can be blamed for is his incurable optimism in believing that he can appeal to divine justice. In this he is mistaken, as Yahweh’s subsequent words prove. God does not want to be just; he merely flaunts might over right. Job could not get that into his head, because he looked upon God as a moral being. He had never doubted God’s might, but had hoped for right as well. He had, however, already taken back this error when he recognized God’s contradictory nature, and by so doing he assigned a place to God’s justice and goodness. So one can hardly speak of lack of insight.

[587] The answer to Yahweh’s conundrum is therefore: it is Yahweh himself who darkens his own counsel and who has no insight. He turns the tables on Job and blames him for what he himself does: man is not permitted to have an opinion about him, and, in particular, is to have no insight which he himself does not possess. For seventy-one verses he proclaims his world-creating power to his miserable victim, who sits in ashes and scratches his sores with potsherds, and who by now has had more than enough of superhuman violence. Job has absolutely no need of being impressed by further exhibitions of this power. Yahweh, in his omniscience, could have known just how incongruous his attempts at intimidation were in such a situation. He could easily have seen that Job believes in his omnipotence as much as ever and has never doubted it or wavered in his loyalty. Altogether, he pays so little attention to Job’s real situation that one suspects him of having an ulterior motive which is more important to him: Job is no more than the outward occasion for an inward process of dialectic in God. His thunderings at Job so completely miss the point that one cannot help but see how much he is occupied with himself. The tremendous emphasis he lays on his omnipotence and greatness makes no sense in relation to Job, who certainly needs no more convincing, but only becomes intelligible when aimed at a listener *who doubts it*. This “doubting thought” is Satan, who after completing his evil handiwork has returned to the paternal bosom in order to continue his subversive activity there. Yahweh must have seen that Job’s loyalty was unshakable and that Satan had lost his bet. He must also have realized that, in

accepting this bet, he had done everything possible to drive his faithful servant to disloyalty, even to the extent of perpetrating a whole series of crimes. Yet it is not remorse and certainly not moral horror that rises to his consciousness, but an obscure intimation of something that questions his omnipotence. He is particularly sensitive on this point, because “might” is the great argument. But omniscience knows that might excuses nothing. The said intimation refers, of course, to the extremely uncomfortable fact that Yahweh had let himself be bamboozled by Satan. This weakness of his does not reach full consciousness, since Satan is treated with remarkable tolerance and consideration. Evidently Satan’s intrigue is deliberately overlooked at Job’s expense.

[588] Luckily enough, Job had noticed during this harangue that everything else had been mentioned except his right. He has understood that it is at present impossible to argue the question of right, as it is only too obvious that Yahweh has no interest whatever in Job’s cause but is far more preoccupied with his own affairs. Satan, that is to say, has somehow to disappear, and this can best be done by casting suspicion on Job as a man of subversive opinions. The problem is thus switched on to another track, and the episode with Satan remains unmentioned and unconscious. To the spectator it is not quite clear why Job is treated to this almighty exhibition of thunder and lightning, but the performance as such is sufficiently magnificent and impressive to convince not only a larger audience but above all Yahweh himself of his unassailable power. Whether Job realizes what violence Yahweh is doing to his own omniscience by behaving like this we do not know, but his silence and submission leave a number of possibilities open. Job has no alternative but formally to revoke his demand for justice, and he therefore answers in the words quoted at the beginning: “I lay my hand on my mouth.”

[589] He betrays not the slightest trace of mental reservation—in fact, his answer leaves us in no doubt that he has succumbed completely and without question to the tremendous force of the divine demonstration. The most exacting tyrant should have been satisfied with this, and could be quite sure that his servant—from terror alone, to say nothing of his undoubted loyalty—would not dare to nourish a single improper thought for a very long time to come.

[590] Strangely enough, Yahweh does not notice anything of the kind. He does not see Job and his situation at all. It is rather as if he had another powerful opponent in the place of Job, one who was better worth challenging. This is clear from his twicerepeated taunt:

Gird up your loins like a man;

I will question you, and you shall declare to me.⁵

[591] One would have to choose positively grotesque examples to illustrate the disproportion between the two antagonists. Yahweh sees something in Job which we would not ascribe to him but to God, that is, an equal power which causes him to bring out his whole power apparatus and parade it before his opponent. Yahweh projects on to Job a sceptic's face which is hateful to him because it is his own, and which gazes at him with an uncanny and critical eye. He is afraid of it, for only in face of something frightening does one let off a cannonade of references to one's power, cleverness, courage, invincibility, etc. What has all that to do with Job? Is it worth the lion's while to terrify a mouse?

[592] Yahweh cannot rest satisfied with the first victorious round. Job has long since been knocked out, but the great antagonist whose phantom is projected on to the pitiable sufferer still stands menacingly upright. Therefore Yahweh raises his arm again:

Will you even put me in the wrong?

Will you condemn me that you may be justified?

Have you an arm like God,

and can you thunder with a voice like his?⁶

[593] Man, abandoned without protection and stripped of his rights, and whose nothingness is thrown in his face at every opportunity, evidently appears to be so dangerous to Yahweh that he must be battered down with the heaviest artillery. What irritates Yahweh can be seen from his challenge to the ostensible Job:

Look on every one that is proud, and bring him low;

and tread down the wicked where they stand.

Hide them in the dust together;

bind their faces in the hidden place.

Then will I also acknowledge to you

that your own right hand can give you victory.⁷

[594] Job is challenged as though he himself were a god. But in the contemporary metaphysics there was no *deuteros theos*, no other god except Satan, who owns Yahweh's ear and is able to influence him. He is the only one who can pull the wool over his eyes, beguile him, and put him up to a massive violation of his own penal code. A formidable opponent indeed, and, because of his close kinship, so compromising that he must be concealed with the utmost discretion—even to the point of God's hiding him from his own consciousness in his own bosom! In his stead God must set up his miserable servant as the bugbear whom he has to fight, in the hope that by banishing the dreaded countenance to "the hidden place" he will be able to maintain himself in a state of unconsciousness.

[595] The stage-managing of this imaginary duel, the speechifying, and the impressive performance given by the prehistoric menagerie would not be sufficiently explained if we tried to reduce them to the purely negative factor of Yahweh's fear of becoming conscious and of the relativization which this entails. The conflict becomes acute for Yahweh as a result of a new factor, which is, however, not hidden from omniscience—though in this case the existing knowledge is not accompanied by any conclusion. The new factor is something that has never occurred before in the history of the world, the unheard-of fact that, without knowing it or wanting it, a mortal man is raised by his moral behaviour above the stars in heaven, from which position of advantage he can behold the back of Yahweh, the abysmal world of “shards.”⁸

[596] Does Job know what he has seen? If he does, he is astute or canny enough not to betray it. But his words speak volumes:

I know that thou canst do all things,
and that no purpose of thine can be thwarted.⁹

[597] Truly, Yahweh can do all things and permits himself all things without batting an eyelid. With brazen countenance he can project his shadow side and remain unconscious at man's expense. He can boast of his superior power and enact laws which mean less than air to him. Murder and manslaughter are mere bagatelles, and if the mood takes him he can play the feudal grand seigneur and generously recompense his bondsman for the havoc wrought in his wheat-fields. “So you have lost your sons and daughters? No harm done, I will give you new and better ones.”

[598] Job continues (no doubt with downcast eyes and in a low voice):

“Who is this that hides counsel without insight?”
Therefore I have uttered what I did not understand,
things too wonderful for me, which I did not know.
“Hear, and I will speak;
I will question you, and you declare to me.”
I had heard of thee by the hearing of the ear,
but now my eye sees thee;
therefore I abhor myself,
and repent in dust and ashes.¹⁰

[599] Shrewdly, Job takes up Yahweh's aggressive words and prostrates himself at his feet as if he were indeed the defeated antagonist. Guileless as Job's speech sounds, it could just as well be equivocal. He has learnt his lesson well and experienced “wonderful things” which are none too easily grasped. Before, he had known Yahweh “by the hearing of the ear,” but now he has got a taste of his reality, more so even than David—an incisive lesson that had better not be forgotten. Formerly he was

naïve, dreaming perhaps of a “good” God, or of a benevolent ruler and just judge. He had imagined that a “covenant” was a legal matter and that anyone who was party to a contract could insist on his rights as agreed; that God would be faithful and true or at least just, and, as one could assume from the Ten Commandments, would have some recognition of ethical values or at least feel committed to his own legal standpoint. But, to his horror, he has discovered that Yahweh is not human but, in certain respects, less than human, that he is just what Yahweh himself says of Leviathan (the crocodile):

He beholds everything that is high:

He is king over all proud beasts.¹¹

[600] Unconsciousness has an animal nature. Like all old gods Yahweh has his animal symbolism with its unmistakable borrowings from the much older theriomorphic gods of Egypt, especially Horus and his four sons. Of the four animals of Yahweh only one has a human face. That is probably Satan, the godfather of man as a spiritual being. Ezekiel’s vision attributes three-fourths animal nature and only one-fourth human nature to the animal deity, while the upper deity, the one above the “sapphire throne,” merely had the “likeness” of a man.¹² This symbolism explains Yahweh’s behaviour, which, from the human point of view, is so intolerable: it is the behaviour of an unconscious being who cannot be judged morally. Yahweh is a *phenomenon* and, as Job says, “not a man.”¹³

[601] One could, without too much difficulty, impute such a meaning to Job’s speech. Be that as it may, Yahweh calmed down at last. The therapeutic measure of unresisting acceptance had proved its value yet again. Nevertheless, Yahweh is still somewhat nervous of Job’s friends—they “have not spoken of me what is right.”¹⁴ The projection of his doubt-complex extends—comically enough, one must say—to these respectable and slightly pedantic old gentlemen, as though God-knows-what depended on what they thought. But the fact that men should think at all, and especially about him, is maddeningly disquieting and ought somehow to be stopped. It is far too much like the sort of thing his vagrant son is always springing on him, thus hitting him in his weakest spot. How often already has he bitterly regretted his unconsidered outbursts!

[602] One can hardly avoid the impression that Omniscience is gradually drawing near to a realization, and is threatened with an insight that seems to be hedged about with fears of self-destruction. Fortunately, Job’s final declaration is so formulated that one can assume with some certainty that, for the protagonists, the incident is closed for good and all.

[603] We, the commenting chorus on this great tragedy, which has never at any time lost its vitality, do not feel quite like that. For our modern sensibilities it is by no

means apparent that with Job's profound obeisance to the majesty of the divine presence, and his prudent silence, a real answer has been given to the question raised by the Satanic prank of a wager with God. Job has not so much answered as reacted in an adjusted way. In so doing he displayed remarkable self-discipline, but an unequivocal answer has still to be given.

[604] To take the most obvious thing, what about the moral wrong Job has suffered? Is man so worthless in God's eyes that not even a *tort moral* can be inflicted on him? That contradicts the fact that man is desired by Yahweh and that it obviously matters to him whether men speak "right" of him or not. He needs Job's loyalty, and it means so much to him that he shrinks at nothing in carrying out his test. This attitude attaches an almost divine importance to man, for what else is there in the whole wide world that could mean anything to one who has everything? Yahweh's divided attitude, which on the one hand tramples on human life and happiness without regard, and on the other hand must have man for a partner, puts the latter in an impossible position. At one moment Yahweh behaves as irrationally as a cataclysm; the next moment he wants to be loved, honoured, worshipped, and praised as just. He reacts irritably to every word that has the faintest suggestion of criticism, while he himself does not care a straw for his own moral code if his actions happen to run counter to its statutes.

[605] One can submit to such a God only with fear and trembling, and can try indirectly to propitiate the despot with unctuous praises and ostentatious obedience. But a relationship of trust seems completely out of the question to our modern way of thinking. Nor can moral satisfaction be expected from an unconscious nature god of this kind. Nevertheless, Job got his satisfaction, without Yahweh's intending it and possibly without himself knowing it, as the poet would have it appear. Yahweh's allocutions have the unthinking yet none the less transparent purpose of showing Job the brutal power of the demiurge: "This is I, the creator of all the ungovernable, ruthless forces of Nature, which are not subject to any ethical laws. I, too, am an amoral force of Nature, a purely phenomenal personality that cannot see its own back."

[606] This is, or at any rate could be, a moral satisfaction of the first order for Job, because through this declaration man, in spite of his impotence, is set up as a judge over God himself. We do not know whether Job realizes this, but we do know from the numerous commentaries on Job that all succeeding ages have overlooked the fact that a kind of Moira or Dike rules over Yahweh, causing him to give himself away so blatantly. Anyone can see how he unwittingly raises Job by humiliating him in the dust. By so doing he pronounces judgment on himself and gives man the moral satisfaction whose absence we found so painful in the Book of Job.

[607] The poet of this drama showed a masterly discretion in ringing down the curtain at the very moment when his hero gave unqualified recognition to the *ἀπόφασις μεγάλη* of the Demiurge by prostrating himself at the feet of His Divine Majesty. No other impression was permitted to remain. An unusual scandal was blowing up in the realm of metaphysics, with supposedly devastating consequences, and nobody was ready with a saving formula which would rescue the monotheistic conception of God from disaster. Even in those days the critical intellect of a Greek could easily have seized on this new addition to Yahweh's biography and used it in his disfavour (as indeed happened, though very much later)¹⁵ so as to mete out to him the fate that had already overtaken the Greek gods. But a relativization of God was utterly unthinkable at that time, and remained so for the next two thousand years.

[608] The unconscious mind of man sees correctly even when conscious reason is blind and impotent. The drama has been consummated for all eternity: Yahweh's dual nature has been revealed, and somebody or something has seen and registered this fact. Such a revelation, whether it reached man's consciousness or not, could not fail to have far-reaching consequences.

III

[609] Before turning to the question of how the germ of unrest developed further, we must turn back to the time when the Book of Job was written. Unfortunately the dating is uncertain. It is generally assumed that it was written between 600 and 300 B.C.—not too far away, therefore, from the time of the Book of Proverbs (4th to 3rd century). Now in Proverbs we encounter a symptom of Greek influence which, if an earlier date is assigned to it, reached the Jewish sphere of culture through Asia Minor and, if a later date, through Alexandria. This is the idea of Sophia, or the *Sapientia Dei*, who is a coeternal and more or less hypostatized pneuma of feminine nature that existed before the Creation:

The Lord possessed me in the beginning of his way,
before his works of old.

I was set up from everlasting, from the beginning,
or ever the earth was.

When there were no depths, I was brought forth;
when there were no fountains abounding with water.

.

When he established the heavens, I was there,

.

when he marked out the foundations of the earth,
then I was by him, as a master workman,

and I was daily his delight,
rejoicing always before him,
rejoicing in his habitable earth;
and my delights were with the sons of men.¹

[610] This Sophia, who already shares certain essential qualities with the Johannine Logos, is on the one hand closely associated with the Hebrew Chochma, but on the other hand goes so far beyond it that one can hardly fail to think of the Indian Shakti. Relations with India certainly existed at that time (the time of the Ptolemys). A further source is the Wisdom of Jesus the Son of Sirach, or Ecclesiasticus, written around 200 B.C. Here Wisdom says of herself:

I came out of the mouth of the most High,
and covered the earth as a cloud.
I dwelt in high places,
and my throne is in a cloudy pillar.
I alone encompassed the circuit of heaven,
and walked in the bottom of the deep.
I had power over the waves of the sea, and over all the earth,
and over every people and nation.

.

He created me from the beginning before the world,
and I shall never fail.
In the holy tabernacle I served before him;
and so was I established in Sion.
Likewise in the beloved city he gave me rest,
and in Jerusalem was my power.

.

I was exalted like a cedar in Libanus,
and as a cypress tree upon the mountains of Hermon.
I was exalted like a palm tree in En-gaddi,
and as a rose plant in Jericho,
as a fair olive tree in a pleasant field,
and grew up as a plane tree by the water.
I gave a sweet smell like cinnamon and aspalathus,
and I yielded a pleasant odour like the best myrrh ...
As the turpentine tree I stretched out my branches,
and my branches are the branches of honour and grace.

As the vine brought I forth pleasant savour,
and my flowers are the fruit of honour and riches.

I am the mother of fair love,
and fear, and knowledge, and holy hope:
I therefore, being eternal, am given to all my children
which are chosen of him.²

[611] It is worth while to examine this text more closely. Wisdom describes herself, in effect, as the Logos, the Word of God (“I came out of the mouth of the most High”). As Ruach, the spirit of God, she brooded over the waters of the beginning. Like God, she has her throne in heaven. As the cosmogonic Pneuma she pervades heaven and earth and all created things. She corresponds in almost every feature to the Logos of St. John. We shall see below how far this connection is also important as regards content.

[612] She is the feminine numen of the “metropolis” par excellence, of Jerusalem the mother-city. She is the mother-beloved, a reflection of Ishtar, the pagan city-goddess. This is confirmed by the detailed comparison of Wisdom with trees, such as the cedar, palm, terebinth (“turpentine-tree”), olive, cypress, etc. All these trees have from ancient times been symbols of the Semitic love- and mother-goddess. A holy tree always stood beside her altar on high places. In the Old Testament oaks and terebinths are oracle trees. God or angels are said to appear in or beside trees. David consulted a mulberry-tree oracle.³ The tree in Babylon represented Tammuz, the son-lover, just as it represented Osiris, Adonis, Attis, and Dionysus, the young dying gods of the Near East. All these symbolic attributes also occur in the Song of Songs, as characteristics of the *sponsus* as well as the *sponsa*. The vine, the grape, the vine flower, and the vineyard play a significant role here. The Beloved is like an appletree; she shall come down from the mountains (the cult places of the mother-goddess), “from the lions’ dens, from the mountains of the leopards”;⁴ her womb is “an orchard of pomegranates, with pleasant fruits, camphire with spikenard, spikenard and saffron, calamus and cinnamon, with all trees of frankincense, myrrh and aloes, with all the chief spices.”⁵ Her hands “dropped with myrrh”⁶ (Adonis, we may remember, was born of the myrrh). Like the Holy Ghost, Wisdom is given as a gift to the elect, an idea that is taken up again in the doctrine of the Paraclete.

[613] The pneumatic nature of Sophia as well as her world-building Maya character come out still more clearly in the apocryphal Wisdom of Solomon. “For wisdom is a loving spirit,”⁷ “kind to man.”⁸ She is “the worker of all things,” “in her is an understanding spirit, holy.”⁹ She is “the breath of the power of God,” “a pure effluence flowing from the glory of the Almighty,”¹⁰ “the brightness of the everlasting light, the unspotted mirror of the power of God,”¹¹ a being “most subtil,” who “passeth and goeth through all things by reason of her pureness.”¹² She is

“conversant with God,” and “the Lord of all things himself loved her.”¹³ “Who of all that are is a more cunning workman than she?”¹⁴ She is sent from heaven and from the throne of glory as a “Holy Spirit.”¹⁵ As a psychopomp she leads the way to God and assures immortality.¹⁶

[614] The Wisdom of Solomon is emphatic about God’s justice and, probably not without pragmatic purpose, ventures to sail very close to the wind: “Righteousness is immortal, but ungodly men with their works and words call death upon themselves.”¹⁷ The unrighteous and the ungodly, however, say:

Let us oppress the poor righteous man,
let us not spare the widow,
nor reverence the ancient gray hairs of the aged.
Let our strength be the law of justice:
for that which is feeble is found to be nothing worth.
Therefore let us lie in wait for the righteous;
because ... he upbraideth us with our offending the law,
and objecteth to our infamy....
He professeth to have the knowledge of God:
and he calleth himself the child of the Lord.
He was made to reprove our thoughts.

.

Let us see if his words be true:
and let us prove what shall happen in the end of him.

.

Let us examine him with despitefulness and torture,
that we may know his meekness, and prove his patience.¹⁸

[615] Where did we read but a short while before: “And the Lord said to Satan, Have you considered my servant Job, that there is none like him on the earth, a blameless and upright man, who fears God and turns away from evil? He still holds fast his integrity, although you moved me against him, to destroy him without cause”? “Wisdom is better than might,” saith the Preacher.¹⁹

[616] Not from mere thoughtfulness and unconsciousness, but from a deeper motive, the Wisdom of Solomon here touches on the sore spot. In order to understand this more fully, we would have to find out in what sort of relation the Book of Job stands to the change that occurred in the status of Yahweh at about the same time, i.e., its relation to the appearance of Sophia. It is not a question of literary history, but of Yahweh’s fate as it affects man. From the ancient records we know that the divine drama was enacted between God and his people, who were betrothed to him, the masculine dynamis, like a woman, and over whose faithfulness he watched jealously.

A particular instance of this is Job, whose faithfulness is subjected to a savage test. As I have said, the really astonishing thing is how easily Yahweh gives in to the insinuations of Satan. If it were true that he trusted Job perfectly, it would be only logical for Yahweh to defend him, unmask the malicious slanderer, and make him pay for his defamation of God's faithful servant. But Yahweh never thinks of it, not even after Job's innocence has been proved. We hear nothing of a rebuke or disapproval of Satan. Therefore, one cannot doubt Yahweh's connivance. His readiness to deliver Job into Satan's murderous hands proves that he doubts Job precisely because he projects his own tendency to unfaithfulness upon a scapegoat. There is reason to suspect that he is about to loosen his matrimonial ties with Israel but hides this intention from himself. This vaguely suspected unfaithfulness causes him with the help of Satan, to seek out the unfaithful one, and he infallibly picks on the most faithful of the lot, who is forthwith subjected to a gruelling test. Yahweh has become unsure of his own faithfulness.

[617] At about the same time, or a little later, it is rumoured what has happened: he has remembered a feminine being who is no less agreeable to him than to man, a friend and playmate from the beginning of the world, the first-born of all God's creatures, a stainless reflection of his glory and a master workman, nearer and dearer to his heart than the late descendants of the protoplast, the original man, who was but a secondary product stamped in his image. There must be some dire necessity responsible for this anamnesis of Sophia: things simply could not go on as before, the "just" God could not go on committing injustices, and the "Omniscient" could not behave any longer like a clueless and thoughtless human being. Self-reflection becomes an imperative necessity, and for this Wisdom is needed. Yahweh has to remember his absolute knowledge; for, if Job gains knowledge of God, then God must also learn to know himself. It just could not be that Yahweh's dual nature should become public property and remain hidden from himself alone. Whoever knows God has an effect on him. The failure of the attempt to corrupt Job has changed Yahweh's nature.

[618] We shall now proceed to reconstruct, from the hints given in the Bible and from history, what happened after this change. For this purpose we must turn back to the time of Genesis, and to the protoplast before the Fall. He, Adam, produced Eve, his feminine counterpart, from his rib with the Creator's help, in the same way as the Creator had produced the hermaphroditic Adam from the *prima materia* and, along with him, the divinely stamped portion of humanity, namely the people of Israel and the other descendants of Adam.²⁰ Mysteriously following the same pattern, it was bound to happen that Adam's first son, like Satan, was an evildoer and murderer before the Lord, so that the prologue in heaven was repeated on earth. It can easily be surmised that this was the deeper reason why Yahweh gave special protection to the

unsuccessful Cain, for he was a faithful reproduction of Satan in miniature. Nothing is said about a prototype of the early-departed Abel, who was dearer to God than Cain, the go-ahead husbandman (who was no doubt instructed in these arts by one of Satan's angels). Perhaps this prototype was another son of God of a more conservative nature than Satan, no rolling stone with a fondness for new and blackhearted thoughts, but one who was bound to the Father in childlike love, who harboured no other thoughts except those that enjoyed paternal approval, and who dwelt in the inner circle of the heavenly economy. That would explain why his earthly counterpart Abel could so soon "hasten away from the evil world," in the words of the Book of Wisdom, and return to the Father, while Cain in his earthly existence had to taste to the full the curse of his progressiveness on the one hand and of his moral inferiority on the other.

[619] If the original father Adam is a copy of the Creator, his son Cain is certainly a copy of God's son Satan, and this gives us good reason for supposing that God's favourite, Abel, must also have his correspondence in a "supracelestial place." The ominous happenings that occur right at the beginning of a seemingly successful and satisfactory Creation—the Fall and the fratricide—catch our attention, and one is forced to admit that the initial situation, when the spirit of God brooded over the tohubohu, hardly permits us to expect an absolutely perfect result. Furthermore the Creator, who found every other day of his work "good," failed to give good marks to what happened on Monday. He simply said nothing—a circumstance that favours an argument from silence! What happened on that day was the final separation of the upper from the lower waters by the interposed "plate" of the firmament. It is clear that this unavoidable dualism refused, then as later, to fit smoothly into the concept of monotheism, because it points to a metaphysical disunity. This split, as we know from history, had to be patched up again and again through the centuries, concealed and denied. It had made itself felt from the very beginning in Paradise, through a strange inconsequence which befell the Creator or was put over on him. Instead of following his original programme of letting man appear on the last day as the most intelligent being and lord of all creatures, he created the serpent who proved to be much more intelligent and more conscious than Adam, and, in addition, had been created before him. We can hardly suppose that Yahweh would have played such a trick on himself; it is far more likely that his son Satan had a hand in it. He is a trickster and spoilsport who loves nothing better than to cause annoying accidents. Although Yahweh had created the reptiles before Adam, they were common or garden snakes, highly unintelligent, from among whom Satan selected a tree-snake to use as his disguise. From then on the rumour spread that the snake was "the most spiritual animal."²¹ Later the snake became the favourite symbol of the Noug, received high honours and was even permitted to symbolize God's second son,

because the latter was interpreted as the world-redeeming Logos, which frequently appears as identical with the Nous. A legend of later origin maintains that the snake in the Garden of Eden was Lilith, Adam's first wife, with whom he begot a horde of demons. This legend likewise supposes a trick that can hardly have been intended by the Creator. Consequently, the Bible knows only of Eve as Adam's legitimate wife. It nevertheless remains a strange fact that the original man who was created in the image of God had, according to tradition, two wives, just like his heavenly prototype. Just as Yahweh is legitimately united with his wife Israel, but has a feminine pneuma as his intimate playmate from all eternity, so Adam first has Lilith (the daughter or emanation of Satan) to wife, as a Satanic correspondence to Sophia. Eve would then correspond to the people of Israel. We naturally do not know why we should hear at such a late date that the Ruach Elohim, the "spirit of God," is not only feminine but a comparatively independent being who exists side by side with God, and that long before the marriage with Israel Yahweh had had relations with Sophia. Nor do we know why, in the older tradition, the knowledge of this first alliance had been lost. Likewise it was only quite late that one heard of the delicate relationship between Adam and Lilith. Whether Eve was as troublesome a wife for Adam as the children of Israel, who were perpetually flirting with unfaithfulness, were for Yahweh, is equally dark to us. At any rate the family life of our first parents was not all beer and skittles: their first two sons are a typical pair of hostile brothers, for at that time it was apparently still the custom to live out mythological motifs in reality. (Nowadays this is felt to be objectionable and is denied whenever it happens.) The parents can share the blame for original sin: Adam has only to remember his demon princess, and Eve should never forget that she was the first to fall for the wiles of the serpent. Like the Fall, the Cain-Abel intermezzo can hardly be listed as one of Creation's shining successes. One must draw this conclusion because Yahweh himself did not appear to be informed in advance of the above-mentioned incidents. Here as later there is reason to suspect that no conclusions were ever drawn from Omniscience: Yahweh did not consult his total knowledge and was accordingly surprised by the result. One can observe the same phenomenon in human beings, wherever in fact people cannot deny themselves the pleasure of their emotions. It must be admitted that a fit of rage or a sulk has its secret attractions. Were that not so, most people would long since have acquired a little wisdom.

[620] From this point of view we may be in a better position to understand what happened to Job. In the pleromatic or (as the Tibetans call it) Bardo state,²² there is a perfect interplay of cosmic forces, but with the Creation—that is, with the division of the world into distinct processes in space and time—events begin to rub and jostle one another. Covered by the hem of the paternal mantle, Satan soon starts putting a right touch here and a wrong touch there, thus giving rise to complications which

were apparently not intended in the Creator's plan and which come as surprises. While unconscious creation—animals, plants, and crystals—functions satisfactorily so far as we know, things are constantly going wrong with man. At first his consciousness is only a very little higher than that of the animals, for which reason his freedom of will is also extremely limited. But Satan takes an interest in him and experiments with him in his own way, leading him into all sorts of wickedness while his angels teach him the arts and sciences, which until now had been reserved for the perfection of the pleroma. (Even in those days Satan would have merited the name of "Lucifer"!) The peculiar, unforeseen antics of men arouse Yahweh's wrath and thereby involve him in his own creation. Divine interventions become a compelling necessity. Irritatingly enough, they only meet with temporary success. Even the Draconian punishment of drowning all life with a few choice exceptions (a fate which, according to old Johann Jacob Scheuchzer on the evidence of the fossils, not even the fishes escaped), had no lasting effect. Creation remained just as tainted as before. The strange thing is that Yahweh invariably seeks the reason for this in man, who apparently refuses to obey, but never in his son, the father of all tricksters. This false orientation cannot fail to exasperate his already touchy nature, so that fear of God is regarded by man in general as the principle and even as the beginning of all wisdom. While mankind tried, under this hard discipline, to broaden their consciousness by acquiring a modicum of wisdom, that is, a little foresight and reflection,²³ it is clear from the historical development that Yahweh had lost sight of his pleromatic coexistence with Sophia since the days of the Creation. Her place was taken by the covenant with the chosen people, who were thus forced into the feminine role. At that time the people consisted of a patriarchal society in which women were only of secondary importance. God's marriage with Israel was therefore an essentially masculine affair, something like the founding of the Greek *polis*, which occurred about the same time. The inferiority of women was a settled fact. Woman was regarded as less perfect than man, as Eve's weakness for the blandishments of the serpent amply proved. *Perfection* is a masculine desideratum, while woman inclines by nature to *completeness*. And it is a fact that, even today, a man can stand a relative state of perfection much better and for a longer period than a woman, while as a rule it does not agree with women and may even be dangerous for them. If a woman strives for perfection she forgets the complementary role of completeness, which, though imperfect by itself, forms the necessary counterpart to perfection. For, just as completeness is always imperfect, so perfection is always incomplete, and therefore represents a final state which is hopelessly sterile. "Ex perfecto nihil fit," say the old masters, whereas the *imperfectum* carries within it the seeds of its own improvement. Perfectionism always ends in a blind alley, while completeness by itself lacks selective values.

[621] At the bottom of Yahweh's marriage with Israel is a perfectionist intention which excludes that kind of relatedness we know as "Eros." The lack of Eros, of relationship to values, is painfully apparent in the Book of Job: the paragon of all creation is not a man but a monster! Yahweh has no Eros, no relationship to man, but only to a purpose man must help him fulfil. But that does not prevent him from being jealous and mistrustful like any other husband, though even here he has his purpose in mind and not man.

[622] The faithfulness of his people becomes the more important to him the more he forgets Wisdom. But again and again they slip back into unfaithfulness despite the many proofs of his favour. This behaviour naturally does nothing to mollify Yahweh's jealousy and suspicions, hence Satan's insinuations fall on fertile ground when he drips his doubt about Job's faithfulness into the paternal ear. Against his own convictions Yahweh agrees without any hesitation to inflict the worst tortures on him. One misses Sophia's "love of mankind" more than ever. Even Job longs for the Wisdom which is nowhere to be found.²⁴

[623] Job marks the climax of this unhappy development. He epitomizes a thought which had been maturing in mankind about that time—a dangerous thought that makes great demands on the wisdom of gods and men. Though conscious of these demands, Job obviously does not know enough about the Sophia who is coeternal with God. Because man feels himself at the mercy of Yahweh's capricious will, he is in need of wisdom; not so Yahweh, who up to now has had nothing to contend with except man's nothingness. With the Job drama, however, the situation undergoes a radical change. Here Yahweh comes up against a man who stands firm, who clings to his rights until he is compelled to give way to brute force. He has seen God's face and the unconscious split in his nature. God was now known, and this knowledge went on working not only in Yahweh but in man too. Thus it was the men of the last few centuries before Christ who, at the gentle touch of the pre-existent Sophia, compensate Yahweh and his attitude, and at the same time complete the anamnesis of Wisdom. Taking a highly personified form that is clear proof of her autonomy, Wisdom reveals herself to men as a friendly helper and advocate against Yahweh, and shows them the bright side, the kind, just, and amiable aspect of their God.

[624] At the time when Satan's practical joke with the snake compromised the paradise that was planned to be perfect, Yahweh banished Adam and Eve, whom he had created as images of his masculine essence and its feminine emanation, to the extraparadise world, the limbo of "shards." It is not clear how much of Eve represents Sophia and how much of her is Lilith. At any rate Adam has priority in every respect. Eve was taken out of his body as an afterthought. I mention these details from Genesis only because the reappearance of Sophia in the heavenly regions points to a coming act of creation. She is indeed the "master workman"; she realizes

God's thoughts by clothing them in material form, which is the prerogative of all feminine beings. Her coexistence with Yahweh signifies the perpetual *hieros gamos* from which worlds are begotten and born. A momentous change is imminent: God desires to regenerate himself in the mystery of the heavenly nuptials—as the chief gods of Egypt had done from time immemorial—and to become man. For this he uses the Egyptian model of the god's incarnation in Pharaoh, which in its turn is but a copy of the eternal *hieros gamos* in the pleroma. It would, however, be wrong to suppose that this archetype is merely repeating itself mechanically. So far as we know, this is never the case, since archetypal situations only return when specifically called for. The real reason for God's becoming man is to be sought in his encounter with Job. Later on we shall deal with this question in more detail.

IV

[625] Just as the decision to become man apparently makes use of the ancient Egyptian model, so we can expect that the process itself will follow certain prefigurations. The approach of Sophia betokens a new creation. But this time it is not the world that is to be changed; rather it is God who intends to change his own nature. Mankind is not, as before, to be destroyed, but saved. In this decision we can discern the "philanthropic" influence of Sophia: no new human beings are to be created, but only one, the God-man. For this purpose a contrary procedure must be employed. The Second Adam shall not, like the first, proceed directly from the hand of the Creator, but shall be born of a human woman. So this time priority falls to the Second Eve, not only in a temporal sense but in a material sense as well. On the basis of the so-called Proto-Evangelium, the Second Eve corresponds to "the woman and her seed" mentioned in Genesis 3:15, which shall bruise the serpent's head. And just as Adam was believed to be originally hermaphroditic, so "the woman and her seed" are thought of as a human pair, as the Queen of Heaven and Mother of God and as the divine son who has no human father. Thus Mary, the virgin, is chosen as the pure vessel for the coming birth of God. Her independence of the male is emphasized by her virginity as the *sine qua non* of the process. She is a "daughter of God" who, as a later dogma will establish, is distinguished at the outset by the privilege of an immaculate conception and is thus free from the taint of original sin. It is therefore evident that she belongs to the state before the Fall. This posits a new beginning. The divine immaculateness of her status makes it immediately clear that she not only bears the image of God in undiminished purity, but, as the bride of God, is also the incarnation of her prototype, namely Sophia. Her love of mankind, widely emphasized in the ancient writings, suggests that in this newest creation of his Yahweh has allowed himself to be extensively influenced by Sophia. For Mary, the blessed among women, is a friend and intercessor for sinners, which all men are. Like Sophia, she is

a mediatrix who leads the way to God and assures man of immortality. Her Assumption is therefore the prototype of man's bodily resurrection. As the bride of God and Queen of Heaven she holds the place of the Old Testament Sophia.

[626] Remarkable indeed are the unusual precautions which surround the making of Mary: immaculate conception, extirpation of the taint of sin, everlasting virginity. The Mother of God is obviously being protected against Satan's tricks. From this we can conclude that Yahweh has consulted his own omniscience, for in his omniscience there is a clear knowledge of the perverse intentions which lurk in the dark son of God. Mary must at all costs be protected from these corrupting influences. The inevitable consequence of all these elaborate protective measures is something that has not been sufficiently taken into account in the dogmatic evaluation of the Incarnation: her freedom from original sin sets Mary apart from mankind in general, whose common characteristic is original sin and therefore the need of redemption. The *status ante lapsum* is tantamount to a paradisal, i.e., pleromatic and divine, existence. By having these special measures applied to her, Mary is elevated to the status of a goddess and consequently loses something of her humanity: she will not conceive her child in sin, like all other mothers, and therefore he also will never be a human being, but a god. To my knowledge at least, no one has ever perceived that this queers the pitch for a genuine Incarnation of God, or rather, that the Incarnation was only partially consummated. Both mother and son are not real human beings at all, but gods.

[627] This arrangement, though it had the effect of exalting Mary's personality in the masculine sense by bringing it closer to the perfection of Christ, was at the same time injurious to the feminine principle of imperfection or completeness, since this was reduced by the perfectionizing tendency to the little bit of imperfection that still distinguishes Mary from Christ. *Phoebo propior lumina perdit!* Thus the more the feminine ideal is bent in the direction of the masculine, the more the woman loses her power to compensate the masculine striving for perfection, and a typically masculine, ideal state arises which, as we shall see, is threatened with an enantiodromia. No path leads beyond perfection into the future—there is only a turning back, a collapse of the ideal, which could easily have been avoided by paying attention to the feminine ideal of completeness. Yahweh's perfectionism is carried over from the Old Testament into the New, and despite all the recognition and glorification of the feminine principle this never prevailed against the patriarchal supremacy. We have not, therefore, by any means heard the last of it.

[628] The older son of the first parents was corrupted by Satan and not much of a success. He was an eidolon of Satan, and only the younger son, Abel, was pleasing to

God. In Cain the God-image was distorted, but in Abel it was considerably less dimmed. If Adam is thought of as a copy of God, then God's successful son, who served as a model for Abel (and about whom, as we have seen, there are no available documents), is the prefiguration of the God-man. Of the latter we know positively that, as the Logos, he is preexistent and coeternal with God, indeed of the same substance (*ὁμοούσιος*) as he. One can therefore regard Abel as the imperfect prototype of God's son who is about to be begotten in Mary. Just as Yahweh originally undertook to create a chthonic equivalent of himself in the first man, Adam, so now he intends something similar, but much better. The extraordinary precautionary measures above-mentioned are designed to serve this purpose. The new son, Christ, shall on the one hand be a chthonic man like Adam, mortal and capable of suffering, but on the other hand he shall not be, like Adam, a mere copy, but God himself, begotten by himself as the Father, and rejuvenating the Father as the Son. As God he has always been God, and as the son of Mary, who is plainly a copy of Sophia, he is the Logos (synonymous with Nous), who, like Sophia, is a master workman, as stated by the Gospel according to St. John.¹ This identity of mother and son is borne out over and over again in the myths.

[629] Although the birth of Christ is an event that occurred but once in history, it has always existed in eternity. For the layman in these matters, the identity of a nontemporal, eternal event with a unique historical occurrence is something that is extremely difficult to conceive. He must, however, accustom himself to the idea that "time" is a relative concept and needs to be complemented by that of the "simultaneous" existence, in the Bardo or pleroma, of all historical processes. What exists in the pleroma as an eternal process appears in time as an aperiodic sequence, that is to say, it is repeated many times in an irregular pattern. To take but one example: Yahweh had one good son and one who was a failure. Cain and Abel, Jacob and Esau, correspond to this prototype, and so, in all ages and in all parts of the world, does the motif of the hostile brothers, which in innumerable modern variants still causes dissension in families and keeps the psychotherapist busy. Just as many examples, no less instructive, could be found for the two women prefigured in eternity. When these things occur as modern variants, therefore, they should not be regarded merely as personal episodes, moods, or chance idiosyncrasies in people, but as fragments of the pleromatic process itself, which, broken up into individual events occurring in time, is an essential component or aspect of the divine drama.

[630] When Yahweh created the world from his *prima materia*, the "Void," he could not help breathing his own mystery into the Creation which is himself in every part, as every reasonable theology has long been convinced. From this comes the belief that it is possible to know God from his Creation. When I say that he could not help doing this, I do not imply any limitation of his omnipotence; on the contrary, it is an

acknowledgment that all possibilities are contained in him, and that there are in consequence no other possibilities than those which express him.

[631] All the world is God's, and God is in all the world from the very beginning. Why, then, the *tour de force* of the Incarnation? one asks oneself, astonished. God is in everything already, and yet there must be something missing if a sort of second entrance into Creation has now to be staged with so much care and circumspection. Since Creation is universal, reaching to the remotest stellar galaxies, and since it has also made organic life infinitely variable and capable of endless differentiation, we can hardly see where the defect lies. The fact that Satan has everywhere intruded his corrupting influence is no doubt regrettable for many reasons, but it makes no difference in principle. It is not easy to give an answer to this question. One would like to say that Christ had to appear in order to deliver mankind from evil. But when one considers that evil was originally slipped into the scheme of things by Satan, and still is, then it would seem much simpler if Yahweh would, for once, call this "practical joker" severely to account, get rid of his pernicious influence, and thus eliminate the root of all evil. He would then not need the elaborate arrangement of a special Incarnation with all the unforeseeable consequences which this entails. One should make clear to oneself what it means when God becomes man. It means nothing less than a world-shaking transformation of God. It means more or less what Creation meant in the beginning, namely an objectivation of God. At the time of the Creation he revealed himself in Nature; now he wants to be more specific and become man. It must be admitted, however, that there was a tendency in this direction right from the start. For, when those other human beings, who had evidently been created before Adam, appeared on the scene along with the higher mammals, Yahweh created on the following day, by a special act of creation, a man who was the image of God. This was the first prefiguration of his becoming man. He took Adam's descendants, especially the people of Israel, into his personal possession, and from time to time he filled this people's prophets with his spirit. All these things were preparatory events and symptoms of a tendency within God to become man. But in omniscience there had existed from all eternity a knowledge of the human nature of God or of the divine nature of man. That is why, long before Genesis was written, we find corresponding testimonies in the ancient Egyptian records. These intimations and prefigurations of the Incarnation must strike one as either completely incomprehensible or superfluous, since all creation *ex nihilo* is God's and consists of nothing but God, with the result that man, like the rest of creation, is simply God become concrete. Prefigurations, however, are not in themselves creative events, but are only stages in the process of becoming conscious. It was only quite late that we realized (or rather, are beginning to realize) that God is Reality itself and therefore—last but not least—man. This realization is a millennial process.

[632] In view of the immense problem which we are about to discuss, this excursus on pleromatic events is not out of place as an introduction.

[633] What, then, is the real reason for the Incarnation as an historical event?

[634] In order to answer this question we have to go rather far back. As we have seen, Yahweh evidently has a disinclination to take his absolute knowledge into account as a counterbalance to the dynamism of omnipotence. The most instructive example of this is his relation to Satan: it always looks as if Yahweh were completely uninformed about his son's intentions. That is because he never consults his omniscience. We can only explain this on the assumption that Yahweh was so fascinated by his successive acts of creation, so taken up with them, that he forgot about his omniscience altogether. It is quite understandable that the magical bodying forth of the most diverse objects, which had never before existed in such pristine splendour, should have caused God infinite delight. Sophia's memory is not at fault when she says:

when he marked out the foundations of the earth,
then I was by him, like a master workman,
and I was daily his delight.¹

[635] The Book of Job still rings with the proud joy of creating when Yahweh points to the huge animals he has successfully turned out:

Behold, Behemoth,
which I made as I made you.
.
.
.
.
.
.
.
.
.
.
He is the first of the works of God,
made to be lord over his companions.²

[636] So even in Job's day Yahweh is still intoxicated with the tremendous power and grandeur of his creation. Compared with this, what are Satan's pinpricks and the lamentations of human beings who were created with the behemoth, even if they do bear God's image? Yahweh seems to have forgotten this fact entirely, otherwise he would never have ridden so roughshod over Job's human dignity.

[637] It is only the careful and farsighted preparations for Christ's birth which show us that omniscience has begun to have a noticeable effect on Yahweh's actions. A certain philanthropic and universalistic tendency makes itself felt. The "children of Israel" take something of a second place in comparison with the "children of men." After Job, we hear nothing further about new covenants. Proverbs and gnostic

utterances seem to be the order of the day, and a real *novum* now appears on the scene, namely apocalyptic communications. This points to metaphysical acts of cognition, that is, to “constellated” unconscious contents which are ready to irrupt into consciousness. In all this, as we have said, we discern the helpful hand of Sophia.

[638] If we consider Yahweh’s behaviour, up to the reappearance of Sophia, as a whole, one indubitable fact strikes us—the fact that his actions are accompanied by an inferior consciousness. Time and again we miss reflection and regard for absolute knowledge. His consciousness seems to be not much more than a primitive “awareness” which knows no reflection and no morality. One merely perceives and acts blindly, without conscious inclusion of the subject, whose individual existence raises no problems. Today we would call such a state psychologically “unconscious,” and in the eyes of the law it would be described as *non compos mentis*. The fact that consciousness does not perform acts of thinking does not, however, prove that they do not exist. They merely occur unconsciously and make themselves felt indirectly in dreams, visions, revelations, and “instinctive” changes of consciousness, whose very nature tells us that they derive from an “unconscious” knowledge and are the result of unconscious acts of judgment or unconscious conclusions.

[639] Some such process can be observed in the curious change which comes over Yahweh’s behaviour after the Job episode. There can be no doubt that he did not immediately become conscious of the moral defeat he had suffered at Job’s hands. In his omniscience, of course, this fact had been known from all eternity, and it is not unthinkable that the knowledge of it unconsciously brought him into the position of dealing so harshly with Job in order that he himself should become conscious of something through this conflict, and thus gain new insight. Satan who, with good reason, later on received the name of “Lucifer,” knew how to make more frequent and better use of omniscience than did his father.³ It seems he was the only one among the sons of God who developed that much initiative. At all events, it was he who placed those unforeseen incidents in Yahweh’s way, which omniscience knew to be necessary and indeed indispensable for the unfolding and completion of the divine drama. Among these the case of Job was decisive, and it could only have happened thanks to Satan’s initiative.

[640] The victory of the vanquished and oppressed is obvious: Job stands morally higher than Yahweh. In this respect the creature has surpassed the creator. As always when an external event touches on some unconscious knowledge, this knowledge can reach consciousness. The event is recognized as a *déjà vu*, and one remembers a pre-existent knowledge about it. Something of the kind must have happened to Yahweh. Job’s superiority cannot be shrugged off. Hence a situation arises in which real reflection is needed. That is why Sophia steps in. She reinforces the much needed

self-reflection and thus makes possible Yahweh's decision to become man. It is a decision fraught with consequences: he raises himself above his earlier primitive level of consciousness by indirectly acknowledging that the man Job is morally superior to him and that therefore he has to catch up and become human himself. Had he not taken this decision he would have found himself in flagrant opposition to his omniscience. Yahweh must become man precisely because he has done man a wrong. He, the guardian of justice, knows that every wrong must be expiated, and Wisdom knows that moral law is above even him. Because his creature has surpassed him he must regenerate himself.

[641] As nothing can happen without a pre-existing pattern, not even creation *ex nihilo*, which must always resort to the treasurehouse of eternal images in the fabulous mind of the "master workman," the choice of a model for the son who is now about to be begotten lies between Adam (to a limited extent) and Abel (to a much greater extent). Adam's limitation lies in the fact that, even if he is the Anthropos, he is chiefly a creature and a father. Abel's advantage is that he is the son well pleasing to God, begotten and not directly created. One disadvantage has to be accepted: he met with an early death by violence, too early to leave behind him a widow and children, which ought really to be part of human fate if lived to the full. Abel is not the authentic archetype of the son well pleasing to God; he is a copy, but the first of the kind to be met with in the Scriptures. The young dying god is also well known in the contemporary pagan religions, and so is the fratricide motif. We shall hardly be wrong in assuming that Abel's fate refers back to a metaphysical event which was played out between Satan and another son of God with a "light" nature and more devotion to his father. Egyptian tradition can give us information on this point (Horus and Set). As we have said, the disadvantage prefigured in the Abel type can hardly be avoided, because it is an integral part of the mythical-son drama, as the numerous pagan variants of this motif show. The short, dramatic course of Abel's fate serves as an excellent paradigm for the life and death of a God become man.

[642] To sum up: the immediate cause of the Incarnation lies in Job's elevation, and its purpose is the differentiation of Yahweh's consciousness. For this a situation of extreme gravity was needed, a *peripeteia* charged with affect, without which no higher level of consciousness can be reached.

VII

[643] In addition to Abel, we have to consider, as a model for the impending birth of the son of God, the general pattern of the hero's life which has been established since time immemorial and handed down by tradition. Since this son is not intended merely as a national Messiah, but as the universal saviour of mankind, we have also to

consider the pagan myths and revelations concerning the life of one who is singled out by the gods.

[644] The birth of Christ is therefore characterized by all the usual phenomena attendant upon the birth of a hero, such as the annunciation, the divine generation from a virgin, the coincidence of the birth with the thrice-repeated *coniunctio maxima* (♈ ♂ ♀) in the sign of Pisces, which at that precise moment inaugurated the new era, the recognition of the birth of a king, the persecution of the newborn, his flight and concealment, his lowly birth, etc. The motif of the growing up of the hero is discernible in the wisdom of the twelve-year-old child in the temple, and there are several examples in the gospels of the breaking away from the mother.

[645] It goes without saying that a quite special interest attaches to the character and fate of the incarnate son of God. Seen from a distance of nearly two thousand years, it is uncommonly difficult to reconstruct a biographical picture of Christ from the traditions that have been preserved. Not a single text is extant which would fulfil even the minimum modern requirements for writing a history. The historically verifiable facts are extremely scanty, and the little biographically valid material that exists is not sufficient for us to create out of it a consistent career or an even remotely probable character. Certain theologians have discovered the main reason for this in the fact that Christ's biography and psychology cannot be separated from eschatology. Eschatology means in effect that Christ is God and man at the same time and that he therefore suffers a divine as well as a human fate. The two natures interpenetrate so thoroughly that any attempt to separate them mutilates both. The divine overshadows the human, and the human being is scarcely graspable as an empirical personality. Even the critical procedures of modern psychology do not suffice to throw light on all the obscurities. Every attempt to single out one particular feature for clarity's sake does violence to another which is just as essential either with respect to his divinity or with respect to his humanity. The commonplace is so interwoven with the miraculous and the mythical that we can never be sure of our facts. Perhaps the most disturbing and confusing thing of all is that the oldest writings, those of St. Paul, do not seem to have the slightest interest in Christ's existence as a concrete human being. The synoptic gospels are equally unsatisfactory as they have more the character of propaganda than of biography.

[646] With regard to the human side of Christ, if we can speak of a "purely human" aspect at all, what stands out particularly clearly is his love of mankind. This feature is already implied in the relationship of Mary to Sophia, and especially in his genesis by the Holy Ghost, whose feminine nature is personified by Sophia, since she is the preliminary historical form of the ἅγιον πνεῦμα, who is symbolized by the dove, the bird belonging to the love-goddess. Furthermore, the love-goddess is in most cases the mother of the young dying god. Christ's love of mankind is, however, limited to a not

inconsiderable degree by a certain predestinarian tendency which sometimes causes him to withhold his salutary message from those who do not belong to the elect. If one takes the doctrine of predestination literally, it is difficult to see how it can be fitted into the framework of the Christian message. But taken psychologically, as a means to achieving a definite effect, it can readily be understood that these allusions to predestination give one a feeling of distinction. If one knows that one has been singled out by divine choice and intention from the beginning of the world, then one feels lifted beyond the transitoriness and meaninglessness of ordinary human existence and transported to a new state of dignity and importance, like one who has a part in the divine world drama. In this way man is brought nearer to God, and this is in entire accord with the meaning of the message in the gospels.

[647] Besides his love of mankind a certain irascibility is noticeable in Christ's character, and, as is often the case with people of emotional temperament, a manifest lack of self-reflection. There is no evidence that Christ ever wondered about himself, or that he ever confronted himself. To this rule there is only one significant exception—the despairing cry from the Cross: “My God, my God, why hast thou forsaken me?” Here his human nature attains divinity; at that moment God experiences what it means to be a mortal man and drinks to the dregs what he made his faithful servant Job suffer. Here is given the answer to Job, and, clearly, this supreme moment is as divine as it is human, as “eschatological” as it is “psychological.” And at this moment, too, where one can feel the human being so absolutely, the divine myth is present in full force. And both mean one and the same thing. How, then, can one possibly “demythologize” the figure of Christ? A rationalistic attempt of that sort would soak all the mystery out of his personality, and what remained would no longer be the birth and tragic fate of a God in time, but, historically speaking, a badly authenticated religious teacher, a Jewish reformer who was hellenistically interpreted and misunderstood—a kind of Pythagoras, maybe, or, if you like, a Buddha or a Mohammed, but certainly not a son of God or a God incarnate. Nor does anybody seem to have realized what would be the consequences of a Christ disinfected of all trace of eschatology. Today we have an empirical psychology, which continues to exist despite the fact that the theologians have done their best to ignore it, and with its help we can put certain of Christ's statements under the microscope. If these statements are detached from their mythical context, they can only be explained personalistically. But what sort of conclusion are we bound to arrive at if a statement like “I am the way, and the truth, and the life; no one comes to the Father, but by me”¹ is reduced to personal psychology? Obviously the same conclusion as that reached by Jesus' relatives when, in their ignorance of eschatology, they said, “He is beside himself.”² What is the use of a religion without a mythos, since religion

means, if anything at all, precisely that function which links us back to the eternal myth?

[648] In view of these portentous impossibilities, it has been assumed, perhaps as the result of a growing impatience with the difficult factual material, that Christ was nothing but a myth, in this case no more than a fiction. But myth is not fiction: it consists of facts that are continually repeated and can be observed over and over again. It is something that happens to man, and men have mythical fates just as much as the Greek heroes do. The fact that the life of Christ is largely myth does absolutely nothing to disprove its factual truth—quite the contrary. I would even go so far as to say that the mythical character of a life is just what expresses its universal human validity. It is perfectly possible, psychologically, for the unconscious or an archetype to take complete possession of a man and to determine his fate down to the smallest detail. At the same time objective, non-psychic parallel phenomena can occur which also represent the archetype. It not only seems so, it simply is so, that the archetype fulfils itself not only psychically in the individual, but objectively outside the individual. My own conjecture is that Christ was such a personality. The life of Christ is just what it had to be if it is the life of a god and a man at the same time. It is a *symbolum*, a bringing together of heterogeneous natures, rather as if Job and Yahweh were combined in a single personality. Yahweh's intention to become man, which resulted from his collision with Job, is fulfilled in Christ's life and suffering.

VIII

[649] When one remembers the earlier acts of creation, one wonders what has happened to Satan and his subversive activities. Everywhere he sows his tares among the wheat. One suspects he had a hand in Herod's massacre of the innocents. What is certain is his attempt to lure Christ into the role of a worldly ruler. Equally obvious is the fact, as is evidenced by the remarks of the man possessed of devils, that he is very well informed about Christ's nature. He also seems to have inspired Judas, without, however, being able to influence or prevent the sacrificial death.

[650] His comparative ineffectiveness can be explained on the one hand by the careful preparations for the divine birth, and on the other hand by a curious metaphysical phenomenon which Christ witnessed: he saw Satan fall like lightning from heaven.¹ In this vision a metaphysical event has become temporal; it indicates the historic and—so far as we know—final separation of Yahweh from his dark son. Satan is banished from heaven and no longer has any opportunity to inveigle his father into dubious undertakings. This event may well explain why he plays such an inferior role wherever he appears in the history of the Incarnation. His role here is in no way comparable to his former confidential relationship to Yahweh. He has obviously forfeited the paternal affection and been exiled. The punishment which we missed in

the story of Job has at last caught up with him, though in a strangely limited form. Although he is banished from the heavenly court he has kept his dominion over the sublunary world. He is not cast directly into hell, but upon earth. Only at the end of time shall he be locked up and made permanently ineffective. Christ's death cannot be laid at his door, because, through its prefiguration in Abel and in the young dying gods, the sacrificial death was a fate chosen by Yahweh as a reparation for the wrong done to Job on the one hand, and on the other hand as a fillip to the spiritual and moral development of man. There can be no doubt that man's importance is enormously enhanced if God himself deigns to become one.

[651] As a result of the partial neutralization of Satan, Yahweh identifies with his light aspect and becomes the good God and loving father. He has not lost his wrath and can still mete out punishment, but he does it with justice. Cases like the Job tragedy are apparently no longer to be expected. He proves himself benevolent and gracious. He shows mercy to the sinful children of men and is defined as Love itself. But although Christ has complete confidence in his father and even feels at one with him, he cannot help inserting the cautious petition—and warning—into the Lord's Prayer: "Lead us not into temptation, but deliver us from evil." God is asked not to entice us outright into doing evil, but rather to deliver us from it. The possibility that Yahweh, in spite of all the precautionary measures and in spite of his express intention to become the Summum Bonum, might yet revert to his former ways is not so remote that one need not keep one eye open for it. At any rate, Christ considers it appropriate to remind his father of his destructive inclinations towards mankind and to beg him to desist from them. Judged by any human standards it is after all unfair, indeed extremely immoral, to entice little children into doing things that might be dangerous for them, simply in order to test their moral stamina! Especially as the difference between a child and a grown-up is immeasurably smaller than that between God and his creatures, whose moral weakness is particularly well known to him. The incongruity of it is so colossal that if this petition were not in the Lord's Prayer one would have to call it sheer blasphemy, because it really will not do to ascribe such contradictory behaviour to the God of Love and Summum Bonum.

[652] The sixth petition indeed allows a deep insight, for in face of this fact Christ's immense certainty with regard to his father's character becomes somewhat questionable. It is, unfortunately, a common experience that particularly positive and categorical assertions are met with wherever there is a slight doubt in the background that has to be stifled. One must admit that it would be contrary to all reasonable expectations to suppose that a God who, for all his lavish generosity, had been subject to intermittent but devastating fits of rage ever since time began could suddenly become the epitome of everything good. Christ's unadmitted but none the less evident doubt in this respect is confirmed in the New Testament, and particularly

in the Apocalypse. There Yahweh again delivers himself up to an unheard-of fury of destruction against the human race, of whom a mere hundred and forty-four thousand specimens appear to survive.²

[653] One is indeed at a loss how to bring such a reaction into line with the behaviour of a loving father, whom we would expect to glorify his creation with patience and love. It looks as if the attempt to secure an absolute and final victory for good is bound to lead to a dangerous accumulation of evil and hence to catastrophe. Compared with the end of the world, the destruction of Sodom and Gomorrah and even the Deluge are mere child's play; for this time the whole of creation goes to pieces. As Satan was locked up for a time, then conquered and cast into a lake of fire,³ the destruction of the world can hardly be the work of the devil, but must be an "act of God" not influenced by Satan.

[654] The end of the world is, however, preceded by the circumstance that even Christ's victory over his brother Satan—Abel's counterstroke against Cain—is not really and truly won, because, before this can come to pass, a final and mighty manifestation of Satan is to be expected. One can hardly suppose that God's incarnation in his son Christ would be calmly accepted by Satan. It must certainly have stirred up his jealousy to the highest pitch and evoked in him a desire to imitate Christ (a role for which he is particularly well suited as the *πνεῦμα ἀντίμιμον*), and to become incarnate in his turn as the *dark* God. (As we know, numerous legends were later woven round this theme.) This plan will be put into operation by the figure of the Antichrist after the preordained thousand years are over, the term allotted by astrology to the reign of Christ. This expectation, which is already to be found in the New Testament, reveals a doubt as to the immediate finality or universal effectiveness of the work of salvation. Unfortunately it must be said that these expectations gave rise to thoughtless revelations which were never even discussed with other aspects of the doctrine of salvation, let alone brought into harmony with them.

IX

[655] I mention these future apocalyptic events only to illustrate the doubt which is indirectly expressed in the sixth petition of the Lord's Prayer, and not in order to give a general interpretation of the Apocalypse. I shall come back to this theme later on. But, before doing so, we must turn to the question of how matters stood with the Incarnation after the death of Christ. We have always been taught that the Incarnation was a unique historical event. No repetition of it was to be expected, any more than one could expect a further revelation of the Logos, for this too was included in the uniqueness of God's appearance on earth, in human form, nearly two thousand years ago. The sole source of revelation, and hence the final authority, is the Bible. God is

an authority only in so far as he authorized the writings in the New Testament, and with the conclusion of the New Testament the authentic communications of God cease. Thus far the Protestant standpoint. The Catholic Church, the direct heir and continuator of historical Christianity, proves to be somewhat more cautious in this regard, believing that with the assistance of the Holy Ghost the dogma can progressively develop and unfold. This view is in entire agreement with Christ's own teachings about the Holy Ghost and hence with the further continuance of the Incarnation. Christ is of the opinion that whoever believes in him—believes, that is to say, that he is the son of God—can “do the works that I do, and greater works than these.”¹ He reminds his disciples that he had told them they were gods.² The believers or chosen ones are children of God and “fellow heirs with Christ.”³ When Christ leaves the earthly stage, he will ask his father to send his flock a Counsellor (the “Paraclete”), who will abide with them and in them for ever.⁴ The Counsellor is the Holy Ghost, who will be sent from the father. This “Spirit of truth” will teach the believers “all things” and guide them “into all truth.”⁵ According to this, Christ envisages a continuing realization of God in his children, and consequently in his (Christ's) brothers and sisters in the spirit, so that his own works need not necessarily be considered the greatest ones.

[656] Since the Holy Ghost is the Third Person of the Trinity and God is present entire in each of the three Persons at any time, the indwelling of the Holy Ghost means nothing less than an approximation of the believer to the status of God's son. One can therefore understand what is meant by the remark “you are gods.” The deifying effect of the Holy Ghost is naturally assisted by the *imago Dei* stamped on the elect. God, in the shape of the Holy Ghost, puts up his tent in man, for he is obviously minded to realize himself continually not only in Adam's descendants, but in an indefinitely large number of believers, and possibly in mankind as a whole. Symptomatic of this is the significant fact that Barnabas and Paul were identified in Lystra with Zeus and Hermes: “The gods have come down to us in the likeness of men.”⁶ This was certainly only the more naïve, pagan view of the Christian transmutation, but precisely for that reason it convinces. Tertullian must have had something of the sort in mind when he described the “*sublimiorem Deum*” as a sort of lender of divinity “who has made gods of men.”⁷

[657] God's Incarnation in Christ requires continuation and completion because Christ, owing to his virgin birth and his sinlessness, was not an empirical human being at all. As stated in the first chapter of St. John, he represented a light which, though it shone in the darkness, was not comprehended by the darkness. He remained outside and above mankind. Job, on the other hand, was an ordinary human being, and therefore the wrong done to him, and through him to mankind, can, according to divine justice, only be repaired by an incarnation of God in an empirical human being. This act of

expiation is performed by the Paraclete; for, just as man must suffer from God, so God must suffer from man. Otherwise there can be no reconciliation between the two.

[658] The continuing, direct operation of the Holy Ghost on those who are called to be God's children implies, in fact, a broadening process of incarnation. Christ, the son begotten by God, is the first-born who is succeeded by an ever-increasing number of younger brothers and sisters. These are, however, neither begotten by the Holy Ghost nor born of a virgin. This may be prejudicial to their metaphysical status, but their merely human birth will in no sense endanger their prospects of a future position of honour at the heavenly court, nor will it diminish their capacity to perform miracles. Their lowly origin (possibly from the mammals) does not prevent them from entering into a close kinship with God as their father and Christ as their brother. In a metaphorical sense, indeed, it is actually a "kinship by blood," since they have received their share of the blood and flesh of Christ, which means more than mere adoption. These profound changes in man's status are the direct result of Christ's work of redemption. Redemption or deliverance has several different aspects, the most important of which is the expiation wrought by Christ's sacrificial death for the misdemeanours of mankind. His blood cleanses us from the evil consequences of sin. He reconciles God with man and delivers him from the divine wrath, which hangs over him like doom, and from eternal damnation. It is obvious that such ideas still picture God the father as the dangerous Yahweh who has to be propitiated. The agonizing death of his son is supposed to give him satisfaction for an affront he has suffered, and for this "moral injury" he would be inclined to take a terrible vengeance. Once more we are appalled by the incongruous attitude of the world creator towards his creatures, who to his chagrin never behave according to his expectations. It is as if someone started a bacterial culture which turned out to be a failure. He might curse his luck, but he would never seek the reason for the failure in the bacilli and want to punish them morally for it. Rather, he would select a more suitable culture medium. Yahweh's behaviour towards his creatures contradicts all the requirements of so-called "divine" reason whose possession is supposed to distinguish men from animals. Moreover, a bacteriologist might make a mistake in his choice of a culture medium, for he is only human. But God in his omniscience would never make mistakes if only he consulted with it. He has equipped his human creatures with a modicum of consciousness and a corresponding degree of free will, but he must also know that by so doing he leads them into the temptation of falling into a dangerous independence. That would not be too great a risk if man had to do with a creator who was only kind and good. But Yahweh is forgetting his son Satan, to whose wiles even he occasionally succumbs. How then could he expect man with his limited consciousness and imperfect knowledge to do any better? He also

overlooks the fact that the more consciousness a man possesses the more he is separated from his instincts (which at least give him an inkling of the hidden wisdom of God) and the more prone he is to error. He is certainly not up to Satan's wiles if even his creator is unable, or unwilling, to restrain this powerful spirit.

X

[659] The fact of God's "unconsciousness" throws a peculiar light on the doctrine of salvation. Man is not so much delivered from his sins, even if he is baptized in the prescribed manner and thus washed clean, as delivered from fear of the consequences of sin, that is, from the wrath of God. Consequently, the work of salvation is intended to save man from the fear of God. This is certainly possible where the belief in a loving father, who has sent his only-begotten son to rescue the human race, has repressed the persistent traces of the old Yahweh and his dangerous affects. Such a belief, however, presupposes a lack of reflection or a *sacrificium intellectus*, and it appears questionable whether either of them can be morally justified. We should never forget that it was Christ himself who taught us to make usurious use of the talents entrusted to us and not hide them in the ground. One ought not to make oneself out to be more stupid and more unconscious than one really is, for in all other aspects we are called upon to be alert, critical, and self-aware, so as not to fall into temptation, and to "examine the spirits" who want to gain influence over us and "see whether they are of God,"¹ so that we may recognize the mistakes we make. It even needs superhuman intelligence to avoid the cunning snares of Satan. These obligations inevitably sharpen our understanding, our love of truth, and the urge to know, which as well as being genuine human virtues are quite possibly effects of that spirit which "searches everything, even the depths of God."² These intellectual and moral capacities are themselves of a divine nature, and therefore cannot and must not be cut off. It is just by following Christian morality that one gets into the worst collisions of duty. Only those who habitually make five an even number can escape them. The fact that Christian ethics leads to collisions of duty speaks in its favour. By engendering insoluble conflicts and consequently an *afflictio animae*, it brings man nearer to a knowledge of God. All opposites are of God, therefore man must bend to this burden; and in so doing he finds that God in his "oppositeness" has taken possession of him, incarnated himself in him. He becomes a vessel filled with divine conflict. We rightly associate the idea of suffering with a state in which the opposites violently collide with one another, and we hesitate to describe such a painful experience as being "redeemed." Yet it cannot be denied that the great symbol of the Christian faith, the Cross, upon which hangs the suffering figure of the Redeemer, has been emphatically held up before the eyes of Christians for nearly two thousand years. This picture is completed by the two thieves, one of whom goes down to hell,

the other into paradise. One could hardly imagine a better representation of the “oppositeness” of the central Christian symbol. Why this inevitable product of Christian psychology should signify redemption is difficult to see, except that the conscious recognition of the opposites, painful though it may be at the moment, does bring with it a definite feeling of deliverance. It is on the one hand a deliverance from the distressing state of dull and helpless unconsciousness, and on the other hand a growing awareness of God’s oppositeness, in which man can participate if he does not shrink from being wounded by the dividing sword which is Christ. Only through the most extreme and most menacing conflict does the Christian experience deliverance into divinity, always provided that he does not break, but accepts the burden of being marked out by God. In this way alone can the *imago Dei* realize itself in him, and God become man. The seventh petition in the Lord’s Prayer, “But deliver us from evil,” is to be understood in the same sense as Christ’s prayer in the Garden of Gethsemane: “My Father, if it be possible, let this cup pass from me.”³ In principle it does not seem to fit God’s purpose to exempt a man from conflict and hence from evil. It is altogether human to express such a desire but it must not be made into a principle, because it is directed against God’s will and rests only on human weakness and fear. Fear is certainly justified up to a point, for, to make the conflict complete, there must be doubt and uncertainty as to whether man’s strength is not being overtaxed.

[660] Because the *imago Dei* pervades the whole human sphere and makes mankind its involuntary exponent, it is just possible that the four-hundred-year-old schism in the Church and the present division of the political world into two hostile camps are both expressions of the unrecognized polarity of the dominant archetype.

[661] The traditional view of Christ’s work of redemption reflects a one-sided way of thinking, no matter whether we regard that one-sidedness as purely human or as willed by God. The other view, which regards the atonement not as the payment of a human debt to God, but as reparation for a wrong done by God to man, has been briefly outlined above. This view seems to me to be better suited to the power situation as it actually exists. The sheep can stir up mud in the wolf’s drinking water, but can do him no other harm. So also the creature can disappoint the creator, but it is scarcely credible that he can do him a painful wrong. This lies only in the power of the creator with respect to the powerless creature. On this view, a wrong is imputed to God, but it is certainly no worse than what has already been imputed to him if one assumes that it was necessary to torture the son to death on the Cross merely in order to appease the father’s wrath. What kind of father is it who would rather his son were slaughtered than forgive his ill-advised creatures who have been corrupted by his precious Satan? What is supposed to be demonstrated by this gruesome and archaic sacrifice of the son? God’s love, perhaps? Or his implacability? We know from

chapter 22 of Genesis⁴ and from Exodus 22:29 that Yahweh has a tendency to employ such means as the killing of the son and the first-born in order to test his people's faith or to assert his will, despite the fact that his omniscience and omnipotence have no need whatever of such savage procedures, which moreover set a bad example to the mighty ones of the earth. It is very understandable, therefore, that a naïve mind is apt to run away from such questions and excuse this manoeuvre as a beautiful *sacrificium intellectus*. If one prefers not to read the Eighty-ninth Psalm, the matter will not end there. He who cheats once will cheat again, particularly when it comes to self-knowledge. But self-knowledge, in the form of an examination of conscience, is demanded by Christian ethics. They were very pious people who maintained that self-knowledge paves the way to knowledge of God.

XI

[662] To believe that God is the Summum Bonum is impossible for a reflecting consciousness. Such a consciousness does not feel in any way delivered from the fear of God, and therefore asks itself, quite rightly, what Christ means to it. That, indeed, is the great question: can Christ still be interpreted in our day and age, or must one be satisfied with the historical interpretation?

[663] One thing, anyway, cannot be doubted: Christ is a highly numinous figure. The interpretation of him as God and the son of God is in full accord with this. The old view, which is based on Christ's own view of the matter, asserts that he came into the world, suffered, and died in order to save mankind from the wrath to come. Furthermore he believed that his own bodily resurrection would assure all God's children of the same future.

[664] We have already pointed out at some length how curiously God's salvationist project works out in practice. All he does is, in the shape of his own son, to rescue mankind from himself. This thought is as scurrilous as the old rabbinical view of Yahweh hiding the righteous from his wrath under his throne, where of course he cannot see them. It is exactly as if God the father were a different God from the son, which is not the meaning at all. Nor is there any psychological need for such an assumption, since the undoubted lack of reflection in God's consciousness is sufficient to explain his peculiar behaviour. It is quite right, therefore, that fear of God should be considered the beginning of all wisdom. On the other hand, the much-vaunted goodness, love, and justice of God should not be regarded as mere propitiation, but should be recognized as a genuine experience, for God is a *coincidentia oppositorum*. Both are justified, the fear of God as well as the love of God.

[665] A more differentiated consciousness must, sooner or later, find it difficult to love, as a kind father, a God whom on account of his unpredictable fits of wrath, his

unreliability, injustice, and cruelty, it has every reason to fear. The decay of the gods of antiquity has proved to our satisfaction that man does not relish any all-too-human inconsistencies and weaknesses in his gods. Likewise, it is probable that Yahweh's moral defeat in his dealings with Job had its hidden effects: man's unintended elevation on the one hand, and on the other hand a disturbance of the unconscious. For a while the first-mentioned effect remains a mere fact, not consciously realized though registered by the unconscious. This contributes to the disturbance in the unconscious, which thereby acquires a higher potential than exists in consciousness. Man then counts for more in the unconscious than he does consciously. In these circumstances the potential starts flowing from the unconscious towards consciousness, and the unconscious breaks through in the form of dreams, visions, and revelations. Unfortunately the Book of Job cannot be dated with any certainty. As mentioned above, it was written somewhere between 600 and 300 B.C. During the first half of the sixth century, Ezekiel,¹ the prophet with the so-called "pathological" features, appears on the scene. Although laymen are inclined to apply this epithet to his visions, I must, as a psychiatrist, emphatically state that visions and their accompanying phenomena cannot be uncritically evaluated as morbid. Visions, like dreams, are unusual but quite natural occurrences which can be designated as "pathological" only when their morbid nature has been proved. From a strictly clinical standpoint Ezekiel's visions are of an archetypal nature and are not morbidly distorted in any way. There is no reason to regard them as pathological.² They are a symptom of the split which already existed at that time between conscious and unconscious. The first great vision is made up of two well-ordered compound quaternities, that is, conceptions of totality, such as we frequently observe today as spontaneous phenomena. Their *quinta essentia* is represented by a figure which has "the likeness of a human form."³ Here Ezekiel has seen the essential content of the unconscious, namely *the idea of the higher man* by whom Yahweh was morally defeated and who he was later to become.

[666] In India, a more or less simultaneous symptom of the same tendency was Gautama the Buddha (b. 562 B.C), who gave the maximum differentiation of consciousness supremacy even over the highest Brahman gods. This development was a logical consequence of the *purusha-atman* doctrine and derived from the inner experience of yoga practice.

[667] Ezekiel grasped, in a symbol, the fact that Yahweh was drawing closer to man. This is something which came to Job as an experience but probably did not reach his consciousness. That is to say, he did not realize that his consciousness was higher than Yahweh's, and that consequently God wants to become man. What is more, in Ezekiel we meet for the first time the title "Son of Man," which Yahweh significantly uses in addressing the prophet, presumably to indicate that he is a son of the "Man"

on the throne, and hence a prefiguration of the much later revelation in Christ. It is with the greatest right, therefore, that the four seraphim on God's throne became the emblems of the evangelists, for they form the quaternity which expresses Christ's totality, just as the four gospels represent the four pillars of his throne.

[668] The disturbance of the unconscious continued for several centuries. Around 165 B.C., Daniel had a vision of four beasts and the "Ancient of Days," to whom "with the clouds of heaven there came one like a son of man."⁴ Here the "son of man" is no longer the prophet but a son of the "Ancient of Days" in his own right, and a son whose task it is to rejuvenate the father.

[669] The Book of Enoch, written around 100 B.C., goes into considerably more detail. It gives a revealing account of the advance of the sons of God into the world of men, another prefiguration which has been described as the "fall of the angels." Whereas, according to Genesis,⁵ Yahweh resolved that his spirit should not "abide in man for ever," and that men should not live to be hundreds of years old as they had before, the sons of God, by way of compensation, fell in love with the beautiful daughters of men. This happened at the time of the giants. Enoch relates that after conspiring with one another, two hundred angels under the leadership of Samiazaz descended to earth, took the daughters of men to wife, and begat with them giants three thousand ells long.⁶ The angels, among whom Azazel particularly excelled, taught mankind the arts and sciences. They proved to be extraordinarily progressive elements who broadened and developed man's consciousness, just as the wicked Cain had stood for progress as contrasted with the stay-at-home Abel. In this way they enlarged the significance of man to "gigantic" proportions, which points to an inflation of the cultural consciousness at that period. An inflation, however, is always threatened with a counter-stroke from the unconscious, and this actually did happen in the form of the Deluge. So corrupt was the earth before the Deluge that the giants "consumed all the acquisitions of men" and then began to devour each other, while men in their turn devoured the beasts, so that "the earth laid accusation against the lawless ones."⁷

[670] The invasion of the human world by the sons of God therefore had serious consequences, which make Yahweh's precautions prior to his appearance on the earthly scene the more understandable. Man was completely helpless in face of this superior divine force. Hence it is of the greatest interest to see how Yahweh behaves in this matter. As the later Draconian punishment proves, it was a not unimportant event in the heavenly economy when no less than two hundred of the sons of God departed from the paternal household to carry out experiments on their own in the human world. One would have expected that information concerning this mass exodus would have trickled through to the court (quite apart from the fact of divine omniscience). But nothing of the sort happened. Only after the giants had long been begotten and had already started to slaughter and devour mankind did four

archangels, apparently by accident, hear the weeping and wailing of men and discover what was going on on earth. One really does not know which is the more astonishing, the bad organization of the angelic hosts or the faulty communications in heaven. Be that as it may, this time the archangels felt impelled to appear before God with the following peroration:

All things are naked and open in Thy sight, and Thou seest all things, and nothing can hide itself from Thee. Thou seest what Azazel hath done, who taught all unrighteousness on earth and revealed the eternal secrets which were preserved in heaven.... [And enchantments hath Samiazaz taught], to whom Thou hast given authority to bear rule over his associates.... And Thou knowest all things before they come to pass, and Thou seest these things and Thou dost suffer them, and Thou dost not say to us what we are to do to them in regard to these.⁸

[671] Either all that the archangels say is a lie, or Yahweh, for some incomprehensible reason, has drawn no conclusions from his omniscience, or—what is more likely—the archangels must remind him that once again he has preferred to know nothing of his omniscience. At any rate it is only on their intervention that retaliatory action is released on a global scale, but it is not really a just punishment, seeing that Yahweh promptly drowns all living creatures with the exception of Noah and his relatives. This intermezzo proves that the sons of God are somehow more vigilant, more progressive, and more conscious than their father. Yahweh's subsequent transformation is therefore to be rated all the higher. The preparations for his Incarnation give one the impression that he has really learnt something from experience and is setting about things more consciously than before. Undoubtedly the recollection of Sophia has contributed to this increase of consciousness. Parallel with this, the revelation of the metaphysical structure becomes more explicit. Whereas in Ezekiel and Daniel we find only vague hints about the quaternity and the Son of Man, Enoch gives us clear and detailed information on these points. The underworld, a sort of Hades, is divided into four hollow places which serve as abodes for the spirits of the dead until the Last Judgment. Three of these hollow places are dark, but one is bright and contains a "fountain of water."⁹ This is the abode of the righteous.

[672] With statements of this type we enter into a definitely psychological realm, namely that of mandala symbolism, to which also belong the ratios 1:3 and 3:4. The quadripartite Hades of Enoch corresponds to a chthonic quaternity, which presumably stands in everlasting contrast to a pneumatic or heavenly one. The former corresponds in alchemy to the *quaternio* of the elements, the latter to a fourfold, or total, aspect of the deity, as for instance Barbelo, Kolorbas, *Mercurius quadratus*, and the four-faced gods all indicate.

[673] In fact, Enoch in his vision sees the four faces of God. Three of them are engaged in praising, praying, and supplicating, but the fourth in "fending off the Satans and

forbidding them to come before the Lord of Spirits to accuse them who dwell on earth.”¹⁰

[674] The vision shows us an essential differentiation of the God-image: God now has four faces, or rather, four angels of his face, who are four hypostases or emanations, of which one is exclusively occupied in keeping his elder son Satan, now changed into many, away from him, and in preventing further experiments after the style of the Job episode.¹¹ The Satans still dwell in the heavenly regions, since the fall of Satan has not yet occurred. The above-mentioned proportions are also suggested here by the fact that three of the angels perform holy or beneficial functions, while the fourth is a militant figure who has to keep Satan at bay.

[675] This quaternity has a distinctly pneumatic nature and is therefore expressed by angels, who are generally pictured with wings, i.e., as aerial beings. This is the more likely as they are presumably the descendants of Ezekiel’s four seraphim.¹² The doubling and separation of the quaternity into an upper and a lower one, like the exclusion of the Satans from the heavenly court, points to a metaphysical split that had already taken place. But the pleromatic split is in its turn a symptom of a much deeper split in the divine will: the father wants to become the son, God wants to become man, the amoral wants to become exclusively good, the unconscious wants to become consciously responsible. So far everything exists only *in statu nascendi*.

[676] Enoch’s unconscious is vastly excited by all this and its contents burst out in a spate of apocalyptic visions. It also causes him to undertake the *peregrinatio*, the journey to the four quarters of heaven and to the centre of the earth, so that he draws a mandala with his own movements, in accordance with the “journeys” of the alchemistic philosophers and the corresponding fantasies of our modern unconscious.

[677] When Yahweh addressed Ezekiel as “Son of Man,” this was no more at first than a dark and enigmatic hint. But now it becomes clear: the man Enoch is not only the recipient of divine revelation but is at the same time a participant in the divine drama, as though he were at least one of the sons of God himself. This can only be taken as meaning that in the same measure as God sets out to become man, man is immersed in the pleromatic process. He becomes, as it were, baptized in it and is made to participate in the divine quaternity (i.e., is crucified with Christ). That is why even today, in the rite of the *benedictio fontis*, the water is divided into a cross by the hand of the priest and then sprinkled to the four quarters.

[678] Enoch is so much under the influence of the divine drama, so gripped by it, that one could almost suppose he had a quite special understanding of the coming Incarnation. The “Son of Man” who is with the “Head [or Ancient] of Days” looks like an angel (i.e., like one of the sons of God). He “hath righteousness”; “with him dwelleth righteousness”; the Lord of Spirits has “chosen him”; “his lot hath the preeminence before the Lord of Spirits in uprightness.”¹³ It is probably no accident

that so much stress is laid on righteousness, for it is the one quality that Yahweh lacks, a fact that could hardly have remained hidden from such a man as the author of the Book of Enoch. Under the reign of the Son of Man "... the prayer of the righteous has been heard, and the blood of the righteous ... [avenged] before the Lord of Spirits."¹⁴ Enoch sees a "fountain of righteousness which was inexhaustible."¹⁵ The Son of Man

... shall be a staff to the righteous....
For this reason hath he been chosen and hidden before
him,
Before the creation of the world and for evermore.
And the wisdom of the Lord of Spirits hath revealed
him ... ,
For he hath preserved the lot of the righteous.¹⁶
For wisdom is poured out like water....
He is mighty in all the secrets of righteousness,
And unrighteousness shall disappear as a shadow....
In him dwells the spirit of wisdom,
And the spirit which gives insight,
And the spirit of understanding and of might.¹⁷

[679] Under the reign of the Son of Man

... shall the earth also give back that which has been
entrusted to it,
And Sheol also shall give back that which it has received,
And hell¹⁸ shall give back that which it owes....

The Elect One shall in those days sit on My throne,
And his mouth shall pour forth all the secrets of
wisdom and counsel.¹⁹

[680] "All shall become angels in heaven." Azazel and his hosts shall be cast into the burning fiery furnace for "becoming subject to Satan and leading astray those who dwell on the earth."²⁰

[681] At the end of the world the Son of Man shall sit in judgment over all creatures. "The darkness shall be destroyed, and the light established for ever."²¹ Even Yahweh's two big exhibits, Leviathan and Behemoth, are forced to succumb: they are carved up and eaten. In this passage²² Enoch is addressed by the revealing angel with the title "Son of Man," a further indication that he, like Ezekiel, has been assimilated by the divine mystery, is included in it, as is already suggested by the bare fact that

he witnesses it. Enoch is wafted away and takes his seat in heaven. In the “heaven of heavens” he beholds the house of God built of crystal, with streams of living fire about it, and guarded by winged beings that never sleep.²³ The “Head of Days” comes forth with the angelic quaternity (Michael, Gabriel, Raphael, Phanuel) and speaks to him, saying: “This is the Son of Man who is born unto righteousness, and righteousness abides over him, and the righteousness of the Head of Days forsakes him not.”²⁴

[682] It is remarkable that the Son of Man and what he means should be associated again and again with righteousness. It seems to be his leitmotif, his chief concern. Only where injustice threatens or has already occurred does such an emphasis on righteousness make any sense. No one, only God, can dispense justice to any noticeable degree, and precisely with regard to him there exists the justifiable fear that he may forget his justice. In this case his righteous son would intercede with him on man’s behalf. Thus “the righteous shall have peace.”²⁵ The justice that shall prevail under the son is stressed to such an extent that one has the impression that formerly, under the reign of the father, injustice was paramount, and that only with the son is the era of law and order inaugurated. It looks as though, with this, Enoch had unconsciously given an answer to Job.

[683] The emphasis laid on God’s agedness is logically connected with the existence of a son, but it also suggests that he himself will step a little into the background and leave the government of the human world more and more to the son, in the hope that a juster order will emerge. From all this we can see the aftereffects of some psychological trauma, the memory of an injustice that cries to heaven and beclouds the intimate relationship with God. God himself wants a son, and man also wants a son to take the place of the father. This son must, as we have conclusively seen, be absolutely just, and this quality is given priority over all other virtues. God and man both want to escape from blind injustice.

[684] Enoch, in his ecstasy, recognizes himself as the Son of Man, or as the son of God, although neither by birth nor by predestination does he seem to have been chosen for such a role.²⁶ He experiences that godlike elevation which, in the case of Job, we merely assumed, or rather inferred as the inevitable outcome. Job himself seems to have suspected something of the sort when he declares: “I know that my Vindicator lives.”²⁷ This highly remarkable statement can, under the circumstances, only refer to the benevolent Yahweh. The traditional Christian interpretation of this passage as an anticipation of Christ is correct in so far as Yahweh’s benevolent aspect incarnates itself, as its own hypostasis, in the Son of Man, and in so far as the Son of Man proves in Enoch to be a representative of justice and, in Christianity, the justifier of mankind. Furthermore, the Son of Man is pre-existent, and therefore Job could very

well appeal to him. Just as Satan plays the role of accuser and slanderer, so Christ, God's other son, plays the role of advocate and defender.

[685] Despite the contradiction, certain scholars have wished to see Enoch's Messianic ideas as Christian interpolations. For psychological reasons this suspicion seems to me unjustified. One has only to consider what Yahweh's injustice, his downright immorality, must have meant to a devout thinker. It was no laughing matter to be burdened with such an idea of God. A much later document tells us of a pious sage who could never read the Eighty-ninth Psalm, "because he could not bear it." When one considers with what intensity and exclusiveness not only Christ's teaching, but the doctrines of the Church in the following centuries down to the present day, have emphasized the goodness of the loving Father in heaven, the deliverance from fear, the *Summum Bonum*, and the *privatio boni*, one can form some conception of the incompatibility which the figure of Yahweh presents, and see how intolerable such a paradox must appear to the religious consciousness. And this has probably been so ever since the days of Job.

[686] The inner instability of Yahweh is the prime cause not only of the creation of the world, but also of the pleromatic drama for which mankind serves as a tragic chorus. The encounter with the creature changes the creator. In the Old Testament writings we find increasing traces of this development from the sixth century B.C. on. The two main climaxes are formed firstly by the Job tragedy, and secondly by Ezekiel's revelation. Job is the innocent sufferer, but Ezekiel witnesses the humanization and differentiation of Yahweh. By being addressed as "Son of Man," it is intimated to him that Yahweh's incarnation and quaternity are, so to speak, the pleromatic model for what is going to happen, through the transformation and humanization of God, not only to God's son as foreseen from all eternity, but to man as such. This is fulfilled as an intuitive anticipation in Enoch. In his ecstasy he becomes the Son of Man in the pleroma, and his wafting away in a chariot (like Elijah) prefigures the resurrection of the dead. To fulfil his role as minister of justice he must get into immediate proximity to God, and as the pre-existing Son of Man he is no longer subject to death. But in so far as he was an ordinary human being and therefore mortal, other mortals as well as he can attain to the vision of God; they too can become conscious of their saviour, and consequently immortal.

[687] All these ideas could easily have become conscious at the time on the basis of the assumptions then current, if only someone had seriously reflected on them. For that no Christian interpolations were needed. The Book of Enoch was an anticipation in the grand manner, but everything still hung in mid air as mere revelation that never came down to earth. In view of these facts one cannot, with the best will in the world, see how Christianity, as we hear over and over again, is supposed to have burst upon world history as an absolute novelty. If ever anything had been historically prepared,

and sustained and supported by the existing *Weltanschauung*, Christianity would be a classic example.

XII

[688] Jesus first appears as a Jewish reformer and prophet of an exclusively good God. In so doing he saves the threatened religious continuity, and in this respect he does in fact prove himself a *σωτήρ*, a saviour. He preserves mankind from loss of communion with God and from getting lost in mere consciousness and rationality. That would have brought something like a dissociation between consciousness and the unconscious, an unnatural and even pathological condition, a “loss of soul” such as has threatened man from the beginning of time. Again and again and in increasing measure he gets into danger of overlooking the necessary irrationalities of his psyche, and of imagining that he can control everything by will and reason alone, and thus paddle his own canoe. This can be seen most clearly in the great socio-political movements, such as Socialism and Communism: under the former the state suffers, and under the latter, man.

[689] Jesus, it is plain, translated the existing tradition into his own personal reality, announcing the glad tidings: “God has good pleasure in mankind. He is a loving father and loves you as I love you, and has sent me as his son to ransom you from the old debt.” He offers himself as an expiatory sacrifice that shall effect the reconciliation with God. The more desirable a real relationship of trust between man and God, the more astonishing becomes Yahweh’s vindictiveness and irreconcilability towards his creatures. From a God who is a loving father, who is actually Love itself, one would expect understanding and forgiveness. So it comes as a nasty shock when this supremely good God only allows the purchase of such an act of grace through a human sacrifice, and, what is worse, through the killing of his own son. Christ apparently overlooked this anticlimax; at any rate all succeeding centuries have accepted it without opposition. One should keep before one’s eyes the strange fact that the God of goodness is so unforgiving that he can only be appeased by a human sacrifice! This is an insufferable incongruity which modern man can no longer swallow, for he must be blind if he does not see the glaring light it throws on the divine character, giving the lie to all talk about love and the Summum Bonum.

[690] Christ proves to be a mediator in two ways: he helps men against God and assuages the fear which man feels towards this being. He holds an important position midway between the two extremes, man and God, which are so difficult to unite. Clearly the focus of the divine drama shifts to the mediating God-man. He is lacking neither in humanity nor in divinity, and for this reason he was long ago characterized by totality symbols, because he was understood to be all-embracing and to unite all opposites. The quaternity of the Son of Man, indicating a more differentiated

consciousness, was also ascribed to him (*vide* Cross and tetramorph). This corresponds by and large to the pattern in Enoch, but with one important deviation: Ezekiel and Enoch, the two bearers of the title “Son of Man,” were ordinary human beings, whereas Christ by his descent,¹ conception, and birth is a hero and half-god in the classical sense. He is virginally begotten by the Holy Ghost and, as he is not a creaturely human being, has no inclination to sin. The infection of evil was in his case precluded by the preparations for the Incarnation. Christ therefore stands more on the divine than on the human level. He incarnates God’s good will to the exclusion of all else and therefore does not stand exactly in the middle, because the essential thing about the creaturely human being, sin, does not touch him. Sin originally came from the heavenly court and entered into creation with the help of Satan, which enraged Yahweh to such an extent that in the end his own son had to be sacrificed in order to placate him. Strangely enough, he took no steps to remove Satan from his entourage. In Enoch a special archangel, Phanuel, was charged with the task of defending Yahweh from Satan’s insinuations, and only at the end of the world shall Satan, in the shape of a star,² be bound hand and foot, cast into the abyss, and destroyed. (This is not the case in the Book of Revelation, where he remains eternally alive in his natural element.)

[691] Although it is generally assumed that Christ’s unique sacrifice broke the curse of original sin and finally placated God, Christ nevertheless seems to have had certain misgivings in this respect. What will happen to man, and especially to his own followers, when the sheep have lost their shepherd, and when they miss the one who interceded for them with the father? He assures his disciples that he will always be with them, nay more, that he himself abides within them. Nevertheless this does not seem to satisfy him completely, for in addition he promises to send them from the father another *παράκλητος* (advocate, “Counsellor”), in his stead, who will assist them by word and deed and remain with them forever.³ One might conjecture from this that the “legal position” has still not been cleared up beyond a doubt, or that there still exists a factor of uncertainty.

[692] The sending of the Paraclete has still another aspect. This Spirit of Truth and Wisdom is the Holy Ghost by whom Christ was begotten. He is the spirit of physical and spiritual procreation who from now on shall make his abode in creaturely man. Since he is the Third Person of the Deity, this is as much as to say that *God will be begotten in creaturely man*. This implies a tremendous change in man’s status, for he is now raised to sonship and almost to the position of a man-god. With this the prefiguration in Ezekiel and Enoch, where, as we saw, the title “Son of Man” was already conferred on the creaturely man, is fulfilled. But that puts man, despite his continuing sinfulness, in the position of the mediator, the unifier of God and creature. Christ probably had this incalculable possibility in mind when he said: “... he who

believes in me, will also do the works that I do; and greater works than these will he do,”⁴ and, referring to the sixth verse of the Eighty-second Psalm, “I say, ‘You are gods, sons of the Most High, all of you,’” he added, “and scripture cannot be broken.”⁵

[693] The future indwelling of the Holy Ghost in man amounts to a continuing incarnation of God. Christ, as the begotten son of God and pre-existing mediator, is a first-born and a divine paradigm which will be followed by further incarnations of the Holy Ghost in the empirical man. But man participates in the darkness of the world, and therefore, with Christ’s death, a critical situation arises which might well be a cause for anxiety. When God became man all darkness and evil were carefully kept outside. Enoch’s transformation into the Son of Man took place entirely in the realm of light, and to an even greater extent this is true of the incarnation in Christ. It is highly unlikely that the bond between God and man was broken with the death of Christ; on the contrary, the continuity of this bond is stressed again and again and is further confirmed by the sending of the Paraclete. But the closer this bond becomes, the closer becomes the danger of a collision with evil. On the basis of a belief that had existed quite early, the expectation grew up that the light manifestation would be followed by an equally dark one, and Christ by an Antichrist. Such an opinion is the last thing one would expect from the metaphysical situation, for the power of evil is supposedly overcome, and one can hardly believe that a loving father, after the whole complicated arrangement of salvation in Christ, the atonement and declaration of love for mankind, would again let loose his evil watch-dog on his children in complete disregard of all that had gone before. Why this wearisome forbearance towards Satan? Why this stubborn projection of evil on man, whom he has made so weak, so faltering, and so stupid that we are quite incapable of resisting his wicked sons? Why not pull up evil by the roots?

[694] God, with his good intentions, begot a good and helpful son and thus created an image of himself as the good father—unfortunately, we must admit, again without considering that there existed in him a knowledge that spoke a very different truth. Had he only given an account of his action to himself, he would have seen what a fearful dissociation he had got into through his incarnation. Where, for instance, did his darkness go—that darkness by means of which Satan always manages to escape his well-earned punishment? Does he think he is completely changed and that his amorality has fallen from him? Even his “light” son, Christ, did not quite trust him in this respect. So now he sends to men the “spirit of truth,” with whose help they will discover soon enough what happens when God incarnates only in his light aspect and believes he is goodness itself, or at least wants to be regarded as such. An enantiodromia in the grand style is to be expected. This may well be the meaning of

the belief in the coming of the Antichrist, which we owe more than anything else to the activity of the “spirit of truth.”

[695] Although the Paraclete is of the greatest significance metaphysically, it was, from the point of view of the organization of the Church, most undesirable, because, as is authoritatively stated in scripture, the Holy Ghost is not subject to any control. In the interests of continuity and the Church the uniqueness of the incarnation and of Christ’s work of redemption has to be strongly emphasized, and for the same reason the continuing indwelling of the Holy Ghost is discouraged and ignored as much as possible. No further individualistic digressions can be tolerated. Anyone who is inclined by the Holy Ghost towards dissident opinions necessarily becomes a heretic, whose persecution and elimination take a turn very much to Satan’s liking. On the other hand one must realize that if everybody had tried to thrust the intuitions of his own private Holy Ghost upon others for the improvement of the universal doctrine, Christianity would rapidly have perished in a Babylonian confusion of tongues—a fate that lay threateningly close for many centuries.

[696] It is the task of the Paraclete, the “spirit of truth,” to dwell and work in individual human beings, so as to remind them of Christ’s teachings and lead them into the light. A good example of this activity is Paul, who knew not the Lord and received his gospel not from the apostles but through revelation. He is one of those people whose unconscious was disturbed and produced revelatory ecstasies. The life of the Holy Ghost reveals itself through its own activity, and through effects which not only confirm the things we all know, but go beyond them. In Christ’s sayings there are already indications of ideas which go beyond the traditionally “Christian” morality—for instance the parable of the unjust steward, the moral of which agrees with the Logion of the Codex Bezae,⁶ and betrays an ethical standard very different from what is expected. Here the moral criterion is *consciousness*, and not law or convention. One might also mention the strange fact that it is precisely Peter, who lacks self-control and is fickle in character, whom Christ wishes to make the rock and foundation of his Church. These seem to me to be ideas which point to the inclusion of evil in what I would call a *differential moral valuation*. For instance, it is good if evil is sensibly covered up, but to act unconsciously is evil. One might almost suppose that such views were intended for a time when consideration is given to evil as well as to good, or rather, when it is not suppressed below the threshold on the dubious assumption that we always know exactly what evil is.

[697] Again, the expectation of the Antichrist is a far-reaching revelation or discovery, like the remarkable statement that despite his fall and exile the devil is still “prince of this world” and has his habitation in the all-surrounding air. In spite of his misdeeds and in spite of God’s work of redemption for mankind, the devil still maintains a position of considerable power and holds all sublunary creatures under his sway. This

situation can only be described as critical; at any rate it does not correspond to what could reasonably have been expected from the “glad tidings.” Evil is by no means fettered, even though its days are numbered. God still hesitates to use force against Satan. Presumably he still does not know how much his own dark side favours the evil angel. Naturally this situation could not remain indefinitely hidden from the “spirit of truth” who has taken up his abode in man. He therefore created a disturbance in man’s unconscious and produced, at the beginning of the Christian era, another great revelation which, because of its obscurity, gave rise to numerous interpretations and misinterpretations in the centuries that followed. This is the Revelation of St. John.

XIII

[698] One could hardly imagine a more suitable personality for the John of the Apocalypse than the author of the Epistles of John. It was he who declared that God is light and that “in him is no darkness at all.”¹ (Who said there was any darkness in God?) Nevertheless, he knows that when we sin we need an “advocate with the Father,” and this is Christ, “the expiation for our sins,”² even though for his sake our sins are already forgiven. (Why then do we need an advocate?) The Father has bestowed his great love upon us (though it had to be bought at the cost of a human sacrifice!), and we are the children of God. He who is begotten by God commits no sin.³ (Who commits *no* sin?) John then preaches the message of love. God himself is love; perfect love casteth out fear. But he must warn against false prophets and teachers of false doctrines, and it is he who announces the coming of the Antichrist.⁴ His conscious attitude is orthodox, but he has evil forebodings. He might easily have dreams that are not listed on his conscious programme. He talks as if he knew not only a sinless state but also a perfect love, unlike Paul, who was not lacking in the necessary self-reflection. John is a bit too sure, and therefore he runs the risk of a dissociation. Under these circumstances a counterposition is bound to grow up in the unconscious, which can then irrupt into consciousness in the form of a revelation. If this happens, the revelation will take the form of a more or less subjective myth, because, among other things, it compensates the one-sidedness of an individual consciousness. This contrasts with the visions of Ezekiel or Enoch, whose conscious situation was mainly characterized by an ignorance (for which they were not to blame) and was therefore compensated by a more or less objective and universally valid configuration of archetypal material.

[699] So far as we can see, the Apocalypse conforms to these conditions. Even in the initial vision a fear-inspiring figure appears: Christ blended with the Ancient of Days, having the likeness of a man and the Son of Man. Out of his mouth goes a “sharp two-edged sword,” which would seem more suitable for fighting and the shedding of

blood than for demonstrating brotherly love. Since this Christ says to him. “Fear not,” we must assume that John was not overcome by love when he fell “as though dead.”⁵ but rather by fear. (What price now the perfect love which casts out fear?)

[700] Christ commands him to write seven epistles to the churches in the province of Asia. The church in Ephesus is admonished to repent: otherwise it is threatened with deprivation of the light (“I will come ... and remove your candlestick from its place”).⁶ We also learn from this letter that Christ “hates” the Nicolaitans. (How does this square with love of your neighbour?)

[701] The church in Smyrna does not come off so badly. Its enemies supposedly are Jews, but they are “a synagogue of Satan” which does not sound too friendly.

[702] Pergamum is censured because a teacher of false doctrines is making himself conspicuous there, and the place swarms with Nicolaitans. Therefore it must repent —“if not, I will come to you soon.” This can only be interpreted as a threat.

[703] Thyatira tolerates the preaching of “that woman Jezebel, who calls herself a prophetess.” He will “throw her on a sickbed” and “strike her children dead.” But “he who ... keeps my works until the end I will give him power over the nations, and he shall rule them with a rod of iron, as when earthen pots are broken in pieces, even as I myself have received power from my Father and I will give him the morning star.”⁷ Christ, as we know, teaches “Love your enemies” but here he threatens a massacre of children all too reminiscent of Bethlehem!

[704] The works of the church in Sardis are not perfect before God. Therefore, “repent.” Otherwise he will come like a thief, “and you will not know at what hour I will come upon you”⁸—a none too friendly warning.

[705] In regard to Philadelphia, there is nothing to be censured. But Laodicea he will spew out of his mouth, because they are lukewarm. They too must repent. His explanation is characteristic: “Those whom I love, I reprove and chasten.”⁹ It would be quite understandable if the Laodiceans did not want too much of this “love.”

[706] Five of the seven churches get bad reports. This apocalyptic “Christ” behaves rather like a bad-tempered, power-conscious “boss” who very much resembles the “shadow” of a love-preaching bishop.

[707] As if in confirmation of what I have said, there now follows a vision in the style of Ezekiel. But he who sat upon the throne did not look like a man, but was to look upon “like jasper and carnelian.”¹⁰ Before him was “a sea of glass, like crystal”; around the throne, four “living creatures” (ζῶα), which were “full of eyes in front and behind ... all round and within.”¹¹ The symbol of Ezekiel appears here strangely modified: stone, glass, crystal—dead and rigid things deriving from the inorganic realm—characterize the Deity. One is inevitably reminded of the preoccupation of the alchemists during the following centuries, when the mysterious “Man,” the *homo*

altus, was named λίθος οὐ λίθος, ‘the stone that is no stone,’ and multiple eyes gleamed in the ocean of the unconscious.¹² At any rate, something of John’s psychology comes in here, which has caught a glimpse of things beyond the Christian cosmos.

[708] Hereupon follows the opening of the Book with Seven Seals by the “Lamb.” The latter has put off the human features of the “Ancient of Days” and now appears in purely theriomorphic but monstrous form, like one of the many other horned animals in the Book of Revelation. It has seven eyes and seven horns, and is therefore more like a ram than a lamb. Altogether it must have looked pretty awful. Although it is described as “standing, as though it had been slain,”¹³ it does not behave at all like an innocent victim, but in a very lively manner indeed. From the first four seals it lets loose the four sinister apocalyptic horsemen. With the opening of the fifth seal, we hear the martyrs crying for vengeance (“O sovereign Lord, holy and true, how long before thou wilt judge and avenge our blood on those who dwell upon the earth?”).¹⁴ The sixth seal brings a cosmic catastrophe, and everything hides from the “wrath of the Lamb,” “for the great day of his wrath is come.”¹⁵ We no longer recognize the meek Lamb who lets himself be led unresistingly to the slaughter; there is only the aggressive and irascible ram whose rage can at last be vented. In all this I see less a metaphysical mystery than the outburst of long pent-up negative feelings such as can frequently be observed in people who strive for perfection. We can take it as certain that the author of the Epistles of John made every effort to practise what he preached to his fellow Christians. For this purpose he had to shut out all negative feelings, and, thanks to a helpful lack of self-reflection, he was able to forget them. But though they disappeared from the conscious level they continued to rankle beneath the surface, and in the course of time spun an elaborate web of resentments and vengeful thoughts which then burst upon consciousness in the form of a revelation. From this there grew up a terrifying picture that blatantly contradicts all ideas of Christian humility, tolerance, love of your neighbour and your enemies, and makes nonsense of a loving father in heaven and rescuer of mankind. A veritable orgy of hatred, wrath, vindictiveness, and blind destructive fury that revels in fantastic images of terror breaks out and with blood and fire overwhelms a world which Christ had just endeavoured to restore to the original state of innocence and loving communion with God.

[709] The opening of the seventh seal naturally brings a new flood of miseries which threaten to exhaust even St. John’s unholy imagination. As if to fortify himself, he must now eat a “little scroll” in order to go on with his “prophesying.”

[710] When the seventh angel had finally ceased blowing his trumpet, there appeared in heaven, after the destruction of Jerusalem, a vision of the *sun-woman*, “with the moon under her feet, and on her head a crown of twelve stars.”¹⁶ She was in the

pangs of birth, and before her stood a great red dragon that wanted to devour her child.

[711] This vision is altogether out of context. Whereas with the previous visions one has the impression that they were afterwards revised, rearranged, and embellished, one feels that this image is original and not intended for any educational purpose. The vision is introduced by the opening of the temple in heaven and the sight of the Ark of the Covenant.¹⁷ This is probably a prelude to the descent of the heavenly bride, Jerusalem, an equivalent of Sophia, for it is all part of the heavenly *hieros gamos*, whose fruit is a divine man-child. He is threatened with the fate of Apollo, the son of Leto, who was likewise pursued by a dragon. But here we must dwell for a moment on the figure of the mother. She is “a woman clothed with the sun.” Note the simple statement “a woman”—an ordinary woman, not a goddess and not an eternal virgin immaculately conceived. No special precautions exempting her from complete womanhood are noticeable, except the cosmic and naturalistic attributes which mark her as an *anima mundi* and peer of the primordial cosmic man, or Anthropos. She is the feminine Anthropos, the counterpart of the masculine principle. The pagan Leto motif is eminently suited to illustrate this, for in Greek mythology matriarchal and patriarchal elements are about equally mixed. The stars above, the moon below, in the middle the sun, the rising Horus and the setting Osiris, and the maternal night all round, οὐρανὸς ἄνω, οὐρανὸς κάτω¹⁸—this symbolism reveals the whole mystery of the “woman”: she contains in her darkness the sun of “masculine” consciousness, which rises as a child out of the nocturnal sea of the unconscious, and as an old man sinks into it again. She adds the dark to the light, symbolizes the hierogamy of opposites, and reconciles nature with spirit.

[712] The son who is born of these heavenly nuptials is perforce a *complexio oppositorum*, a uniting symbol, a totality of life. John’s unconscious, certainly not without reason, borrowed from Greek mythology in order to describe this strange eschatological experience, for it was not on any account to be confused with the birth of the Christ-child which had occurred long before under quite different circumstances. Though obviously the allusion is to the “wrathful Lamb,” i.e., the apocalyptic Christ, the new-born man-child is represented as his duplicate, as one who will “rule the nations with a rod of iron.”¹⁹ He is thus assimilated to the predominant feelings of hatred and vengeance, so that it looks as if he will needlessly continue to wreak his judgment even in the distant future. This interpretation does not seem consistent, because the Lamb is already charged with this task and, in the course of the revelation, carries it to an end without the newborn man-child ever having an opportunity to act on his own. He never reappears afterwards. I am therefore inclined to believe that the depiction of him as a son of vengeance, if it is not an interpretative interpolation, must have been a familiar phrase to John and that

it slipped out as the obvious interpretation. This is the more probable in that the intermezzo could not at the time have been understood in any other way even though this interpretation is quite meaningless. As I have already pointed out, the sun-woman episode is a foreign body in the flow of the visions. Therefore, I believe, it is not too far-fetched to conjecture that the author of the Apocalypse, or perhaps a perplexed transcriber, felt the need to interpret this obvious parallel with Christ and somehow bring it into line with the text as a whole. This could easily be done by using the familiar image of the shepherd with the iron crook. I cannot see any other reason for this association.

[713] The man-child is “caught up” to God, who is manifestly his father, and the mother is hidden in the wilderness. This would seem to indicate that the child-figure will remain latent for an indefinite time and that its activity is reserved for the future. The story of Hagar may be a prefiguration of this. The similarity between this story and the birth of Christ obviously means no more than that the birth of the man-child is an analogous event, like the previously mentioned enthronement of the Lamb in all his metaphysical glory, which must have taken place long before at the time of the ascension. In the same way the dragon, i.e., the devil, is described as being thrown down to earth,²⁰ although Christ had already observed the fall of Satan very much earlier. This strange repetition or duplication of the characteristic events in Christ’s life gave rise to the conjecture that a second Messiah is to be expected at the end of the world. What is meant here cannot be the return of Christ himself, for we are told that he would come “in the clouds of heaven,” but not be *born* a second time, and certainly not from a sun-moon conjunction. The epiphany at the end of the world corresponds more to the content of Revelation 1 and 19:11ff. The fact that John uses the myth of Leto and Apollo in describing the birth may be an indication that the vision, in contrast to the Christian tradition, is a product of the unconscious.²¹ But in the unconscious is everything that has been rejected by consciousness, and the more Christian one’s consciousness is, the more heathenishly does the unconscious behave, if in the rejected heathenism there are values which are important for life—if, that is to say, the baby has been thrown out with the bath water, as so often happens. The unconscious does not isolate or differentiate its objects as consciousness does. It does not think abstractly or apart from the subject: the person of the ecstatic or visionary is always drawn into the process and included in it. In this case it is John himself whose unconscious personality is more or less identified with Christ; that is to say, he is born like Christ, and born to a like destiny. John is so completely captivated by the archetype of the divine son that he sees its activity in the unconscious; in other words, he sees how God is born again in the (partly pagan) unconscious, indistinguishable from the self of John, since the “divine child” is a symbol of the one as much as the other, just as Christ is. Consciously, of course, John was very far

from thinking of Christ as a symbol. For the believing Christian, Christ is everything, but certainly not a symbol, which is an expression for something unknown or not yet knowable. And yet he is a symbol by his very nature. Christ would never have made the impression he did on his followers if he had not expressed something that was alive and at work in their unconscious. Christianity itself would never have spread through the pagan world with such astonishing rapidity had its ideas not found an analogous psychic readiness to receive them. It is this fact which also makes it possible to say that whoever believes in Christ is not only contained in him, but that Christ then dwells in the believer as the perfect man formed in the image of God, the second Adam. Psychologically, it is the same relationship as that in Indian philosophy between man's ego-consciousness and *purusha*, or *atman*. It is the ascendancy of the "complete"—*τέλειος*—or total human being, consisting of the totality of the psyche, of conscious and unconscious, over the ego, which represents only consciousness and its contents and knows nothing of the unconscious, although in many respects it is dependent on the unconscious and is often decisively influenced by it. This relationship of the self to the ego is reflected in the relationship of Christ to man. Hence the unmistakable analogies between certain Indian and Christian ideas, which have given rise to conjectures of Indian influence on Christianity.

[714] This parallelism, which has so far remained latent in John, now bursts into consciousness in the form of a vision. That this invasion is authentic can be seen from the use of pagan mythological material, a most improbable procedure for a Christian of that time, especially as it contains traces of astrological influence. That may explain the thoroughly pagan remark, "And the earth helped the woman."²² Even though the consciousness of that age was exclusively filled with Christian ideas, earlier or contemporaneous pagan contents lay just below the surface, as for example in the case of St. Perpetua.²³ With a Judaeo-Christian—and the author of the Apocalypse was probably such—another possible model to be considered is the cosmic Sophia, to whom John refers on more than one occasion. She could easily be taken as the mother of the divine child,²⁴ since she is obviously a woman in heaven, i.e., a goddess or consort of a god. Sophia comes up to this definition, and so does the transfigured Mary. If the vision were a modern dream one would not hesitate to interpret the birth of the divine child as the coming to consciousness of the self. In John's case the conscious attitude of faith made it possible for the Christ-image to be received into the material of the unconscious; it activated the archetype of the divine virgin mother and of the birth of her son-lover, and brought it face to face with his Christian consciousness. As a result, John became personally involved in the divine drama.

[715] His Christ-image, clouded by negative feelings, has turned into a savage avenger who no longer bears any real resemblance to a saviour. One is not at all sure whether this Christ-figure may not in the end have more of the human John in it, with his compensating shadow, than of the divine saviour who, as the *lumen de lumine*, contains “no darkness.” The grotesque paradox of the “wrathful Lamb” should have been enough to arouse our suspicions in this respect. We can turn and twist it as we like, but, seen in the light of the gospel of love, the avenger and judge remains a most sinister figure. This, one suspects, may have been the reason which moved John to assimilate the newborn man-child to the figure of the avenger, thereby blurring his mythological character as the lovely and lovable divine youth whom we know so well in the figures of Tammuz, Adonis, and Balder. The enchanting springlike beauty of this divine youth is one of those pagan values which we miss so sorely in Christianity, and particularly in the sombre world of the apocalypse—the indescribable morning glory of a day in spring, which after the deathly stillness of winter causes the earth to put forth and blossom, gladdens the heart of man and makes him believe in a kind and loving God.

[716] As a totality, the self is by definition always a *complexio oppositorum*, and the more consciousness insists on its own luminous nature and lays claim to moral authority, the more the self will appear as something dark and menacing. We may assume such a condition in John, since he was a shepherd of his flock and also a fallible human being. Had the apocalypse been a more or less personal affair of John’s, and hence nothing but an outburst of personal resentment, the figure of the wrathful Lamb would have satisfied this need completely. Under those conditions the new-born man-child would have been bound to have a noticeably positive aspect, because, in accordance with his symbolic nature, he would have compensated the intolerable devastation wrought by the outburst of long pent-up passions, being the child of the conjunction of opposites, of the sunfilled day world and the moonlit night world. He would have acted as a mediator between the loving and the vengeful sides of John’s nature, and would thus have become a beneficent saviour who restored the balance. This positive aspect, however, must have escaped John’s notice, otherwise he could never have conceived of the child as standing on the same level as the avenging Christ.

[717] But John’s problem was not a personal one. It was not a question of his personal unconscious or of an outburst of ill humour, but of visions which came up from a far greater and more comprehensive depth, namely from the collective unconscious. His problem expresses itself far too much in collective and archetypal forms for us to reduce it to a merely personal situation. To do so would be altogether too easy as well as being wrong in theory and practice. As a Christian, John was seized by a collective, archetypal process, and he must therefore be explained first and foremost

in that light. He certainly also had his personal psychology, into which we, if we may regard the author of the Epistles and the apocalypticist as one and the same person, have some insight. That the imitation of Christ creates a corresponding shadow in the unconscious hardly needs demonstrating. The fact that John had visions at all is evidence of an unusual tension between conscious and unconscious. If he is identical with the author of the Epistles, he must have been quite old when he wrote the Book of Revelation. *In confinio mortis* and in the evening of a long and eventful life a man will often see immense vistas of time stretching out before him. Such a man no longer lives in the everyday world and in the vicissitudes of personal relationships, but in the sight of many aeons and in the movement of ideas as they pass from century to century. The eye of John penetrates into the distant future of the Christian aeon and into the dark abyss of those forces which his Christianity kept in equilibrium. What burst upon him is the storm of the times, the premonition of a tremendous enantiodromia which he could only understand as the final annihilation of the darkness which had not comprehended the light that appeared in Christ. He failed to see that the power of destruction and vengeance is that very darkness from which God had split himself off when he became man. Therefore he could not understand, either, what that sun-moon-child meant, and he could only interpret it as another figure of vengeance. The passion that breaks through in his revelation bears no trace of the feebleness or serenity of old age, because it is infinitely more than personal resentment: it is the spirit of God itself, which blows through the weak mortal frame and again demands man's *fear* of the unfathomable Godhead.

XIV

[718] The torrent of negative feelings seems to be inexhaustible, and the dire events continue their course. Out of the sea come monsters "with horns" (i.e., endowed with power), the horrid progeny of the deep. Faced with all this darkness and destruction, man's terrified consciousness quite understandably looks round for a mountain of refuge, an island of peace and safety. John therefore weaves in a vision of the Lamb on Mount Zion, where the hundred and forty-four thousand elect and redeemed are gathered round the Lamb.¹ They are the *παρθάνοι*, the male virgins, "which were not defiled with women."² They are the ones who, following in the footsteps of the young dying god, have never become complete human beings, but have voluntarily renounced their share in the human lot and have said no to the continuance of life on earth.³ If everyone were converted to this point of view, man as a species would die out in a few decades. But of such preordained ones there are relatively few. John believed in predestination in accordance with higher authority. This is rank pessimism.

says Mephisto.

[719] This only moderately comforting prospect is immediately interrupted by the warning angels. The first angel proclaims an “everlasting gospel,” the quintessence of which is “Fear God!” There is no more talk of God’s love. What is feared can only be something fearful.⁴

[720] The Son of Man now appears holding a sharp sickle in his hand, together with an auxiliary angel who also has a sickle.⁵ But the grape harvest consists in an unparalleled blood-bath: the angel “gathered the vintage of the earth, and threw it into the great winepress of the wrath of God ... and blood flowed from the winepress”—in which human beings were trodden!—“as high as a horse’s bridle, for one thousand six hundred stadia.”⁶

[721] Seven angels then come out of the heavenly temple with the seven vials of wrath, which they proceed to pour out on the earth.⁷ The *piece de rèsistance* is the destruction of the Great Whore of Babylon, the counterpart of the heavenly Jerusalem. The Whore is the chthonic equivalent of the sun-woman Sophia, with, however, a reversal in moral character. If the elect turn themselves into “virgins” in honour of the Great Mother Sophia, a gruesome fantasy of fornication is spawned in the unconscious by way of compensation. The destruction of Babylon therefore represents not only the end of fornication, but the utter eradication of all life’s joys and pleasures, as can be seen from 18:22–23:

and the sound of harpers and minstrels, of flute players
and trumpeters,
shall be heard in thee no more;

.

and the light of a lamp
shall shine in thee no more;
and the voice of bridegroom and bride
shall be heard in thee no more ...

[722] As we happen to be living at the end of the Christian aeon Pisces, one cannot help but recall the doom that has overtaken our modern art.

[723] Symbols like Jerusalem, Babylon, etc. are always overdetermined, that is, they have several aspects of meaning and can therefore be interpreted in different ways. I am only concerned with the psychological aspect, and do not wish to express an opinion as to their possible connection with historical events.

[724] The destruction of all beauty and of all life's joys, the unspeakable suffering of the whole of creation that once sprang from the hand of a lavish Creator, would be, for a feeling heart, an occasion for deepest melancholy. But John cries: "Rejoice over her, thou heaven, ye holy apostles and prophets, for God hath avenged you on her [Babylon],"⁸ from which we can see how far vindictiveness and lust for destruction can go, and what the "thorn in the flesh" means.

[725] It is Christ who, leading the hosts of angels, treads "the winepress of the fierceness and wrath of Almighty God."⁹ His robe "is dipped in blood."¹⁰ He rides a *white horse*,¹¹ and with the sword which issues out of his mouth he kills the beast and the "false prophet," presumably his—or John's—dark counterpart, i.e., the shadow. Satan is locked up in the bottomless pit for a thousand years, and *Christ shall reign for the same length of time*. "After that he must be loosed a little season."¹² These thousand years correspond astrologically to the first half of the Pisces aeon. The setting free of Satan after this time must therefore correspond—one cannot imagine any other reason for it—to the enantiodromia of the Christian aeon, that is, to the reign of the Antichrist, whose coming could be predicted on astrological grounds. Finally, at the end of an unspecified period, the devil is thrown into the lake of fire and brimstone for ever and ever (but not completely destroyed as in Enoch), and the whole of the first creation disappears.¹³

[726] The *hieros gamos*, the marriage of the Lamb with "his Bride," which had been announced earlier,¹⁴ can now take place. The bride is the "new Jerusalem coming down out of heaven."¹⁵ Her "radiance [was] like a most rare jewel, like a jasper, clear as crystal."¹⁶ The city was built foursquare and was of pure gold, clear as glass, and so were its streets. The Lord God himself and the Lamb are its temple, and the source of never-ending light. There is no night in the city, and nothing unclean can enter in to defile it.¹⁷ (This repeated assurance allays a doubt in John that has never been quite silenced.) From the throne of God and the Lamb flows the river of the water of life, and beside it stands the tree of life, as a reminder of paradise and pleromatic pre-existence.¹⁸

[727] This final vision, which is generally interpreted as referring to the relationship of Christ to his Church, has the meaning of a "uniting symbol" and is therefore a representation of perfection and wholeness: hence the quaternity, which expresses itself in the city as a quadrangle, in paradise as the four rivers, in Christ as the four evangelists, and in God as the four living creatures. While the circle signifies the roundness of heaven and the all-embracing nature of the "pneumatic" deity, the square refers to the earth.¹⁹ Heaven is masculine, but the earth is feminine. Therefore God has his throne in heaven, while Wisdom has hers on the earth, as she says in Ecclesiasticus: "Likewise in the beloved city he gave me rest, and in Jerusalem was my power." She is the "mother of fair love,"²⁰ and when John pictures Jerusalem as

the bride he is probably following Ecclesiasticus. The city is Sophia, who was with God before time began, and at the end of time will be reunited with God through the sacred marriage. As a feminine being she coincides with the earth, from which, so a Church Father tells us, Christ was born,²¹ and hence with the quaternity of the four living creatures in whom God manifests himself in Ezekiel. In the same way that Sophia signifies God's self-reflection, the four seraphim represent God's consciousness with its four functional aspects. The many perceiving eyes²² which are concentrated in the four wheels point in the same direction. They represent a fourfold synthesis of unconscious luminosities, corresponding to the tetrameria of the *lapis philosophorum*, of which the description of the heavenly city reminds us: everything sparkles with precious gems, crystal, and glass, in complete accordance with Ezekiel's vision of God. And just as the *hieros gamos* unites Yahweh with Sophia (Shekinah in the Cabala), thus restoring the original pleromatic state, so the parallel description of God and city points to their common nature: they are originally one, a single hermaphroditic being, an archetype of the greatest universality.

[728] No doubt this is meant as a final solution of the terrible conflict of existence. The solution, however, as here presented, does not consist in the reconciliation of the opposites, but in their final severance, by which means those whose destiny it is to be saved can save themselves by identifying with the bright pneumatic side of God. An indispensable condition for this seems to be the denial of propagation and of sexual life altogether.

XV

[729] The Book of Revelation is on the one hand so personal and on the other so archetypal and collective that one is obliged to consider both aspects. Our modern interest would certainly turn first to the person of John. As I have said before, it is possible that John the author of the Epistles is identical with the apocalypticist. The psychological findings speak in favour of such an assumption. The "revelation" was experienced by an early Christian who, as a leading light of the community, presumably had to live an exemplary life and demonstrate to his flock the Christian virtues of true faith, humility, patience, devotion, selfless love, and denial of all worldly desires. In the long run this can become too much, even for the most righteous. Irritability, bad moods, and outbursts of affect are the classic symptoms of chronic virtuousness.¹ In regard to his Christian attitude, his own words probably give us the best picture:

Beloved, let us love one another; for love is of God, and he who loves is born of God and knows God. He who does not love does not know God; for God is love.... In this is love, not that we loved God but that he loved us and sent his Son to be the expiation for

our sins. Beloved, if God so loved us, we also ought to love one another.... So we know and believe the love God has for us. God is love, and he who abides in love abides in God, and God abides in him.... There is no fear in love, but perfect love casts out fear. For fear has to do with punishment, and he who fears is not perfected in love.... If any one says, "I love God," and hates his brother, he is a liar; for he who does not love his brother whom he has seen, cannot love God whom he has not seen. And this commandment we have from him, that he who loves God should love his brother also.²

[730] But who hates the Nicolaitans? Who thirsts for vengeance and even wants to throw "that woman Jezebel" on a sickbed and strike her children dead? Who cannot have enough of bloodthirsty fantasies? Let us be psychologically correct, however: it is not the conscious mind of John that thinks up these fantasies, they come to him in a violent "revelation." They fall upon him involuntarily with an unexpected vehemence and with an intensity which, as said, far transcends anything we could expect as compensation of a somewhat one-sided attitude of consciousness.

[731] I have seen many compensating dreams of believing Christians who deceived themselves about their real psychic constitution and imagined that they were in a different condition from what they were in reality. But I have seen nothing that even remotely resembles the brutal impact with which the opposites collide in John's visions, except in the case of severe psychosis. However, John gives us no grounds for such a diagnosis. His apocalyptic visions are not confused enough; they are too consistent, not subjective and scurrilous enough. Considering the nature of their subject, the accompanying affects are adequate. Their author need not necessarily be an unbalanced psychopath. It is sufficient that he is a passionately religious person with an otherwise well-ordered psyche. But he must have an intensive relationship to God which lays him open to an invasion far transcending anything personal. The really religious person, in whom the capacity for an unusual extension of consciousness is inborn, must be prepared for such dangers.

[732] The purpose of the apocalyptic visions is not to tell John, as an ordinary human being, how much shadow he hides beneath his luminous nature, but to open the seer's eye to the immensity of God, for he who loves God will know God. We can say that just because John loved God and did his best to love his fellows also, this "gnosis," this knowledge of God, struck him. Like Job, he saw the fierce and terrible side of Yahweh. For this reason he felt his gospel of love to be one-sided, and he supplemented it with the gospel of fear: *God can be loved but must be feared.*

[733] With this, the seer's range of vision extends far beyond the first half of the Christian aeon: he divines that the reign of Antichrist will begin after a thousand years, a clear indication that Christ was not an unqualified victor. John anticipated the alchemists and Jakob Böhme; maybe he even sensed his own personal implication in

the divine drama, since he anticipated the possibility of God's birth in man, which the alchemists, Meister Eckhart, and Angelus Silesius also intuited. He thus outlined the programme for the whole aeon of Pisces, with its dramatic enantiodromia, and its dark end which we have still to experience, and before whose—without exaggeration—truly apocalyptic possibilities mankind shudders. The four sinister horsemen, the threatening tumult of trumpets, and the brimming vials of wrath are still waiting; already the atom bomb hangs over us like the sword of Damocles, and behind that lurk the incomparably more terrible possibilities of chemical warfare, which would eclipse even the horrors described in the Apocalypse. *Luciferi vires accendit Aquarius acres*—"Aquarius sets aflame Lucifer's harsh forces." Could anyone in his right senses deny that John correctly foresaw at least some of the possible dangers which threaten our world in the final phase of the Christian aeon? He knew, also, that the fire in which the devil is tormented burns in the divine pleroma for ever. God has a terrible double aspect: a sea of grace is met by a seething lake of fire, and the light of love glows with a fierce dark heat of which it is said "ardet non lucet"—it burns but gives no light. That is the eternal, as distinct from the temporal, gospel: *one can love God but must fear him.*

XVI

[734] The book of Revelation, rightly placed at the end of the New Testament, reaches beyond it into a future that is all too palpably close with its apocalyptic terrors. The decision of an ill-considered moment, made in some Herostratic head,¹ can suffice to unleash the world cataclysm. The thread by which our fate hangs is wearing thin. Not nature, but the "genius of mankind," has knotted the hangman's noose with which it can execute itself at any moment. This is simply another *façon de parler* for what John called the "wrath of God."

[735] Unfortunately we have no means of envisaging how John—if, as I surmise, he is the same as the author of the Epistles—would have come to terms with the double aspect of God. It is possible, even probable, that he was not aware of any contrast. It is altogether amazing how little most people reflect on numinous objects and attempt to come to terms with them, and how laborious such an undertaking is once we have embarked upon it. The numinosity of the object makes it difficult to handle intellectually, since our affectivity is always involved. One always participates for or against, and "absolute objectivity" is more rarely achieved here than anywhere else. If one has positive religious convictions, i.e., if one believes, then doubt is felt as very disagreeable and also one fears it. For this reason, one prefers not to analyse the object of belief. If one has no religious beliefs, then one does not like to admit the feeling of deficit, but prates loudly about one's liberal-mindedness and pats oneself on the back for the noble frankness of one's agnosticism. From this standpoint, it is

hardly possible to admit the numinosity of the religious object, and yet its very numinosity is just as great a hindrance to critical thinking, because the unpleasant possibility might then arise that one's faith in enlightenment or agnosticism would be shaken. Both types feel, without knowing it, the insufficiency of their argument. Enlightenment operates with an inadequate rationalistic concept of truth and points triumphantly to the fact that beliefs such as the virgin birth, divine filiation, the resurrection of the dead, transubstantiation, etc., are all moonshine. Agnosticism maintains that it does not possess any knowledge of God or of anything metaphysical, overlooking the fact that one never *possesses* a metaphysical belief but is *possessed by it*. Both are possessed by reason, which represents the supreme arbiter who cannot be argued with. But who or what is this "reason" and why should it be supreme? Is not something that *is* and has real existence for us an authority superior to any rational judgment, as has been shown over and over again in the history of the human mind? Unfortunately the defenders of "faith" operate with the same futile arguments, only the other way about. The only thing which is beyond doubt is that there are metaphysical statements which are asserted or denied with considerable affect precisely because of their numinosity. This fact gives us a sure empirical basis from which to proceed. It is objectively real as a psychic phenomenon. The same applies naturally to all statements, even the most contradictory, that ever were or still are numinous. From now on we shall have to consider religious statements in their totality.

XVII

[736] Let us turn back to the question of coming to terms with the paradoxical idea of God which the Apocalypse reveals to us. Evangelical Christianity, in the strict sense, has no need to bother with it, because it has as an essential doctrine an idea of God that, unlike Yahweh, coincides with the epitome of good. It would have been very different if the John of the Epistles had been obliged to discuss these matters with the John of Revelation. Later generations could afford to ignore the dark side of the Apocalypse, because the specifically Christian achievement was something that was not to be frivolously endangered. But for modern man the case is quite otherwise. We have experienced things so unheard of and so staggering that the question of whether such things are in any way reconcilable with the idea of a good God has become burningly topical. It is no longer a problem for experts in theological seminaries, but a universal religious nightmare, to the solution of which even a layman in theology like myself can, or perhaps must, make a contribution.

[737] I have tried to set forth above the inescapable conclusions which must, I believe, be reached if one looks at tradition with critical common sense. If, in this wise, one is confronted with a paradoxical idea of God, and if, as a religious person, one

considers at the same time the full extent of the problem, one finds oneself in the situation of the author of Revelation, who we may suppose was a convinced Christian. His possible identity with the writer of the letters brings out the acuteness of the contradiction: What is the relationship of this man to God? How does he endure the intolerable contradiction in the nature of Deity? Although we know nothing of his conscious decision, we believe we may find some clue in the vision of the sun-woman in travail.

[738] The paradoxical nature of God has a like effect on man: it tears him asunder into opposites and delivers him over to a seemingly insoluble conflict. What happens in such a condition? Here we must let psychology speak, for psychology represents the sum of all the observations and insights it has gained from the empirical study of severe states of conflict. There are, for example, conflicts of duty no one knows how to solve. Consciousness only knows: *tertium non datur!* The doctor therefore advises his patient to wait and see whether the unconscious will not produce a dream which proposes an irrational and therefore unexpected third thing as a solution. As experience shows, symbols of a reconciling and unitive nature do in fact turn up in dreams, the most frequent being the motif of the child-hero and the squaring of the circle, signifying the union of opposites. Those who have no access to these specifically medical experiences can derive practical instruction from fairy tales, and particularly from alchemy. The real subject of Hermetic philosophy is the *coniunctio oppositorum*. Alchemy characterizes its “child” on the one hand as the stone (e.g., the carbuncle), and on the other hand as the homunculus, or the *filius sapientiae* or even the *homo altus*. This is precisely the figure we meet in the Apocalypse as the son of the sun-woman, whose birth story seems like a paraphrase of the birth of Christ—a paraphrase which was repeated in various forms by the alchemists. In fact, they posit their stone as a parallel to Christ (this, with one exception, without reference to the Book of Revelation). This motif appears again in corresponding form and in corresponding situations in the dreams of modern man, with no connection with alchemy, and always it has to do with the bringing together of the light and the dark, as though modern man, like the alchemists, had divined what the problem was that the Apocalypse set the future. It was this problem on which the alchemists laboured for nearly seventeen centuries, and it is the same problem that distresses modern man. Though in one respect he knows more, in another respect he knows less than the alchemists. The problem for him is no longer projected upon matter, as it was for them; but on the other hand it has become psychologically acute, so that the psychotherapist has more to say on these matters than the theologian, who has remained caught in his archaic figures of speech. The doctor, often very much against his will, is forced by the problems of psychoneurosis to look more closely at the religious problem. It is not without good reason that I myself have reached the age of

seventy-six before venturing to catechize myself as to the nature of those “ruling ideas” which decide our ethical behaviour and have such an important influence on our practical life. They are in the last resort the principles which, spoken or unspoken, determine the moral decisions upon which our existence depends, for weal or woe. All these dominants culminate in the positive or negative concept of God.¹

[739] Ever since John the apocalyptist experienced for the first time (perhaps unconsciously) the conflict into which Christianity inevitably leads, mankind has groaned under this burden: *God wanted to become man, and still wants to*. That is probably why John experienced in his vision a second birth of a son from the mother Sophia, a divine birth which was characterized by a *coniunctio oppositorum* and which anticipated the *filius sapientiae*, the essence of the individuation process. This was the effect of Christianity on a Christian of early times, who had lived long and resolutely enough to be able to cast a glance into the distant future. The mediation between the opposites was already indicated in the symbolism of Christ’s fate, in the crucifixion scene where the mediator hangs between two thieves, one of whom goes to paradise, the other down to hell. Inevitably, in the Christian view, the opposition had to lie between God and man, and man was always in danger of being identified with the dark side. This, and the predestinarian hints dropped by our Lord, influenced John strongly: only the few preordained from eternity shall be saved, while the great mass of mankind shall perish in the final catastrophe. The opposition between God and man in the Christian view may well be a Yahwistic legacy from olden times, when the metaphysical problem consisted solely in Yahweh’s relations with his people. The fear of Yahweh was still too great for anybody to dare—despite Job’s gnosis—to lodge the antinomy in Deity itself. But if you keep the opposition between God and man, then you finally arrive, whether you like it or not, at the Christian conclusion “*omne bonum a Deo, omne malum ab homine,*” with the absurd result that the creature is placed in opposition to its creator and a positively cosmic or daemonic grandeur in evil is imputed to man. The terrible destructive will that breaks out in John’s ecstasies gives some idea of what it means when man is placed in opposition to the God of goodness: it burdens him with the dark side of God, which in Job is still in its right place. But either way man is identified with evil, with the result that he sets his face against goodness or else tries to be as perfect as his father in heaven.

[740] Yahweh’s decision to become man is a symbol of the development that had to supervene when man becomes conscious of the sort of God-image he is confronted with.² God acts out of the unconscious of man and forces him to harmonize and unite the opposing influences to which his mind is exposed from the unconscious. The unconscious wants both: to divide and to unite. In his striving for unity, therefore, man may always count on the help of a metaphysical advocate, as Job clearly

recognized. The unconscious wants to flow into consciousness in order to reach the light, but at the same time it continually thwarts itself, because it would rather remain unconscious. That is to say, God wants to become man, but not quite. The conflict in his nature is so great that the incarnation can only be bought by an expiatory self-sacrifice offered up to the wrath of God's dark side.

[741] At first, God incarnated his good side in order, as we may suppose, to create the most durable basis for a later assimilation of the other side. From the promise of the Paraclete we may conclude that God wants to become *wholly* man; in other words, to reproduce himself in his own dark creature (man not redeemed from original sin). The author of Revelation has left us a testimony to the continued operation of the Holy Ghost in the sense of a continuing incarnation. He was a creaturely man who was invaded by the dark God of wrath and vengeance—a *ventus urens*, a 'burning wind.' (This John was possibly the favourite disciple, who in old age was vouchsafed a premonition of future developments.) This disturbing invasion engendered in him the image of the divine child, of a future saviour, born of the divine consort whose reflection (the anima) lives in every man—that child whom Meister Eckhart also saw in a vision. It was he who knew that God alone in his Godhead is not in a state of bliss, but must be born in the human soul ("Gott ist selig in der Seele"). The incarnation in Christ is the prototype which is continually being transferred to the creature by the Holy Ghost.

[742] Since our moral conduct can hardly be compared with that of an early Christian like John, all manner of good as well as evil can still break through in us, particularly in regard to love. A sheer will for destruction, such as was evident in John, is not to be expected in our case. In all my experience I have never observed anything like it, except in cases of severe psychoses and criminal insanity. As a result of the spiritual differentiation fostered by the Reformation, and by the growth of the sciences in particular (which were originally taught by the fallen angels), there is already a considerable admixture of darkness in us, so that, compared with the purity of the early Christian saints (and some of the later ones too), we do not show up in a very favourable light. Our comparative blackness naturally does not help us a bit. Though it mitigates the impact of evil forces, it makes us more vulnerable and less capable of resisting them. We therefore need more light, more goodness and moral strength, and must wash off as much of the obnoxious blackness as possible, otherwise we shall not be able to assimilate the dark God who also wants to become man, and at the same time endure him without perishing. For this all the Christian virtues are needed and something else besides, for the problem is not only moral: we also need the Wisdom that Job was seeking. But at that time she was still hidden in Yahweh, or rather, she was not yet remembered by him. That higher and "complete" (τέλειος) man is begotten by the "unknown" father and born from Wisdom, and it is he who, in

the figure of the *puer aeternus*—“*vultu mutabilis albus et ater*”³—represents our totality, which transcends consciousness. It was this boy into whom Faust had to change, abandoning his inflated onesidedness which saw the devil only outside. Christ’s “Except ye become as little children” prefigures this change, for in them the opposites lie close together; but what is meant is the boy who is born from the maturity of the adult man, and not the unconscious child we would like to remain. Looking ahead, Christ also hinted, as I mentioned before, at a morality of evil.

[743] Strangely, suddenly, as if it did not belong there, the sun-woman with her child appears in the stream of apocalyptic visions. He belongs to another, future world. Hence, like the Jewish Messiah, the child is “caught up” to God, and his mother must stay for a long time hidden in the wilderness, where she is nourished by God. For the immediate and urgent problem in those days was not the union of opposites, which lay in the future, but the incarnation of the light and the good, the subjugation of *concupiscentia*, the lust of this world, and the consolidation of the *civitas Dei* against the advent of the Antichrist, who would come after a thousand years to announce the horrors of the last days, the epiphany of the wrathful and avenging God. The Lamb, transformed into a demonic ram, reveals a new gospel, the *Evangelium Aeternum*, which, going right beyond the love of God, has the fear of God as its main ingredient. Therefore the Apocalypse closes, like the classical individuation process, with the symbol of the *hieros gamos*, the marriage of the son with the mother-bride. But the marriage takes place in heaven, where “nothing unclean” enters, high above the devastated world. Light consorts with light. That is the programme for the Christian aeon which must be fulfilled before God can incarnate in the creaturely man. Only in the last days will the vision of the sun-woman be fulfilled. In recognition of this truth, and evidently inspired by the workings of the Holy Ghost, the Pope has recently announced the dogma of the *Assumptio Mariae*, very much to the astonishment of all rationalists. Mary as the bride is united with the son in the heavenly bridal-chamber, and, as Sophia, with the Godhead.⁴

[744] This dogma is in every respect timely. In the first place it is a symbolical fulfilment of John’s vision.⁵ Secondly, it contains an allusion to the marriage of the Lamb at the end of time, and, thirdly, it repeats the Old Testament anamnesis of Sophia. These three references foretell the Incarnation of God. The second and third foretell the Incarnation in Christ,⁶ but the first foretells the Incarnation in creaturely man.

[745] Everything now depends on man: immense power of destruction is given into his hand, and the question is whether he can resist the will to use it, and can temper his will with the spirit of love and wisdom. He will hardly be capable of doing so on his

own unaided resources. He needs the help of an “advocate” in heaven, that is, of the child who was caught up to God and who brings the “healing” and making whole of the hitherto fragmentary man. Whatever man’s wholeness, or the self, may mean *per se*, empirically it is an image of the goal of life spontaneously produced by the unconscious, irrespective of the wishes and fears of the conscious mind. It stands for the goal of the total man, for the realization of his wholeness and individuality with or without the consent of his will. The dynamic of this process is instinct, which ensures that everything which belongs to an individual’s life shall enter into it, whether he consents or not, or is conscious of what is happening to him or not. Obviously, it makes a great deal of difference subjectively whether he knows what he is living out, whether he understands what he is doing, and whether he accepts responsibility for what he proposes to do or has done. The difference between conscious realization and the lack of it has been roundly formulated in the saying of Christ already quoted: “Man, if indeed thou knowest what thou doest, thou art blessed: but if thou knowest not, thou art cursed, and a transgressor of the law.”¹ Before the bar of nature and fate, unconsciousness is never accepted as an excuse; on the contrary there are very severe penalties for it. Hence all unconscious nature longs for the light of consciousness while frantically struggling against it at the same time.

[746] The conscious realization of what is hidden and kept secret certainly confronts us with an insoluble conflict; at least this is how it appears to the conscious mind. But the symbols that rise up out of the unconscious in dreams show it rather as a confrontation of opposites, and the images of the goal represent their successful reconciliation. Something empirically demonstrable comes to our aid from the depths of our unconscious nature. It is the task of the conscious mind to understand these hints. If this does not happen, the process of individuation will nevertheless continue. The only difference is that we become its victims and are dragged along by fate towards that inescapable goal which we might have reached walking upright, if only we had taken the trouble and been patient enough to understand in time the meaning of the numina that cross our path. The only thing that really matters now is whether man can climb up to a higher moral level, to a higher plane of consciousness, in order to be equal to the superhuman powers which the fallen angels have played into his hands. But he can make no progress with himself unless he becomes very much better acquainted with his own nature. Unfortunately, a terrifying ignorance prevails in this respect, and an equally great aversion to increasing the knowledge of his intrinsic character. However, in the most unexpected quarters nowadays we find people who can no longer blink the fact that something *ought* to be done with man in regard to his psychology. Unfortunately, the little word “ought” tells us that they do not know what to do, and do not know the way that leads to the goal. We can, of course, hope for the undeserved grace of God, who hears our prayers. But God, who

also does *not* hear our prayers, wants to become man, and for that purpose he has chosen, through the Holy Ghost, the creaturely man filled with darkness—the natural man who is tainted with original sin and who learnt the divine arts and sciences from the fallen angels. The guilty man is eminently suitable and is therefore chosen to become the vessel for the continuing incarnation, not the guiltless one who holds aloof from the world and refuses to pay his tribute to life, for in him the dark God would find no room.

[747] Since the Apocalypse we now know again that God is not only to be loved, but also to be feared. He fills us with evil as well as with good, otherwise he would not need to be feared; and because he wants to become man, the uniting of his antinomy must take place in man. This involves man in a new responsibility. He can no longer wriggle out of it on the plea of his littleness and nothingness, for the dark God has slipped the atom bomb and chemical weapons into his hands and given him the power to empty out the apocalyptic vials of wrath on his fellow creatures. Since he has been granted an almost godlike power, he can no longer remain blind and unconscious. He must know something of God's nature and of metaphysical processes if he is to understand himself and thereby achieve gnosis of the Divine.

XIX

[748] The promulgation of the new dogma of the Assumption of the Virgin Mary could, in itself, have been sufficient reason for examining the psychological background. It was interesting to note that, among the many articles published in the Catholic and Protestant press on the declaration of the dogma, there was not one, so far as I could see, which laid anything like the proper emphasis on what was undoubtedly the most powerful motive: namely, the popular movement and the psychological need behind it. Essentially, the writers of the articles were satisfied with learned considerations, dogmatic and historical, which have no bearing on the living religious process. But anyone who has followed with attention the visions of Mary which have been increasing in number over the last few decades, and has taken their psychological significance into account, might have known what was brewing. The fact, especially, that it was largely children who had the visions might have given pause for thought, for in such cases the collective unconscious is always at work. Incidentally, the Pope himself is rumoured to have had several visions of the Mother of God on the occasion of the declaration. One could have known for a long time that there was a deep longing in the masses for an intercessor and mediatrix who would at last take her place alongside the Holy Trinity and be received as the "Queen of Heaven and Bride at the heavenly court." For more than a thousand years it had been taken for granted that the Mother of God dwelt there, and we know from the Old Testament that Sophia was with God before the creation. From the ancient Egyptian theology of

the divine Pharaohs we know that God wants to become man by means of a human mother, and it was recognized even in prehistoric times that the primordial divine being is both male and female. But such a truth eventuates in time only when it is solemnly proclaimed or rediscovered. It is psychologically significant for our day that in the year 1950 the heavenly bride was united with the bridegroom. In order to interpret this event, one has to consider not only the arguments adduced by the Papal Bull, but the prefigurations in the apocalyptic marriage of the Lamb and in the Old Testament anamnesis of Sophia. The nuptial union in the *thalamus* (bridal-chamber) signifies the *hieros gamos*, and this in turn is the first step towards incarnation, towards the birth of the saviour who, since antiquity, was thought of as the *filius solis et lunae*, the *filius sapientiae*, and the equivalent of Christ. When, therefore, a longing for the exaltation of the Mother of God passes through the people, this tendency, if thought to its logical conclusion, means the desire for the birth of a saviour, a peacemaker, a “mediator pacem faciens inter inimicos.”¹ Although he is already born in the pleroma, his birth in time can only be accomplished when it is perceived, recognized, and declared by man.

[749] The motive and content of the popular movement which contributed to the Pope’s decision solemnly to declare the new dogma consist not in the birth of a new god, but in the continuing incarnation of God which began with Christ. Arguments based on historical criticism will never do justice to the new dogma; on the contrary, they are as lamentably wide of the mark as are the unqualified fears to which the English archbishops have given expression. In the first place, the declaration of the dogma has changed nothing in principle in the Catholic ideology as it has existed for more than a thousand years; and in the second place, the failure to understand that God has eternally wanted to become man, and for that purpose continually incarnates through the Holy Ghost in the temporal sphere, is an alarming symptom and can only mean that the Protestant standpoint has lost ground by not understanding the signs of the times and by ignoring the continued operation of the Holy Ghost. It is obviously out of touch with the tremendous archetypal happenings in the psyche of the individual and the masses, and with the symbols which are intended to compensate the truly apocalyptic world situation today.² It seems to have succumbed to a species of rationalistic historicism and to have lost any understanding of the Holy Ghost who works in the hidden places of the soul. It can therefore neither understand nor admit a further revelation of the divine drama.

[750] This circumstance has given me, a layman in things theological, cause to put forward my views on these dark matters. My attempt is based on the psychological experience I have harvested during the course of a long life. I do not underestimate the psyche in any respect whatsoever, nor do I imagine for a moment that psychic happenings vanish into thin air by being explained. Psychologism represents a still

primitive mode of magical thinking, with the help of which one hopes to conjure the reality of the soul out of existence, after the manner of the “Proktophantasmist” in *Faust*:

Are you still here? Nay, it's a thing unheard.

Vanish at once! We've said the enlightening word.

[751] One would be very ill advised to identify me with such a childish standpoint. However, I have been asked so often whether I believe in the existence of God or not that I am somewhat concerned lest I be taken for an adherent of “psychologism” far more commonly than I suspect. What most people overlook or seem unable to understand is the fact that I regard the psyche as *real*. They believe only in physical facts, and must consequently come to the conclusion that either the uranium itself or the laboratory equipment created the atom bomb. That is no less absurd than the assumption that a non-real psyche is responsible for it. God is an obvious psychic and non-physical fact, i.e., a fact that can be established psychically but not physically. Equally, these people have still not got it into their heads that the psychology of religion falls into two categories, which must be sharply distinguished from one another: firstly, the psychology of the religious person, and secondly, the psychology of religion proper, i.e., of religious contents.

[752] It is chiefly my experiences in the latter field which have given me the courage to enter into the discussion of the religious question and especially into the pros and cons of the dogma of the Assumption—which, by the way, I consider to be the most important religious event since the Reformation. It is a *petra scandali* for the unpsychological mind: how can such an unfounded assertion as the bodily reception of the Virgin into heaven be put forward as worthy of belief? But the method which the Pope uses in order to demonstrate the truth of the dogma makes sense to the psychological mind, because it bases itself firstly on the necessary prefigurations, and secondly on a tradition of religious assertions reaching back for more than a thousand years. Clearly, the material evidence for the existence of this psychic phenomenon is more than sufficient. It does not matter at all that a physically impossible fact is asserted, because all religious assertions are physical impossibilities. If they were not so, they would, as I said earlier, necessarily be treated in the text-books of natural science. But religious statements without exception have to do with the reality of the *psyche* and not with the reality of *physis*. What outrages the Protestant standpoint in particular is the boundless approximation of the Deipara to the Godhead and, in consequence, the endangered supremacy of Christ, from which Protestantism will not budge. In sticking to this point it has obviously failed to consider that its hymnology is full of references to the “heavenly bridegroom,” who is now suddenly supposed

not to have a bride with equal rights. Or has, perchance, the “bridegroom,” in true psychologistic manner, been understood as a mere metaphor?

[753] The logical consistency of the papal declaration cannot be surpassed, and it leaves Protestantism with the odium of being nothing but a *man's religion* which allows no metaphysical representation of woman. In this respect it is similar to Mithraism, and Mithraism found this prejudice very much to its detriment. Protestantism has obviously not given sufficient attention to the signs of the times which point to the equality of women. But this equality requires to be metaphysically anchored in the figure of a “divine” woman, the bride of Christ. Just as the person of Christ cannot be replaced by an organization, so the bride cannot be replaced by the Church. The feminine, like the masculine, demands an equally personal representation.

[754] The dogmatizing of the Assumption does not, however, according to the dogmatic view, mean that Mary has attained the status of a goddess, although, as mistress of heaven (as opposed to the prince of the sublunary aerial realm, Satan) and mediatrix, she is functionally on a par with Christ, the king and mediator. At any rate her position satisfies the need of the archetype. The new dogma expresses a renewed hope for the fulfilment of that yearning for peace which stirs deep down in the soul, and for a resolution of the threatening tension between the opposites. Everyone shares this tension and everyone experiences it in his individual form of unrest, the more so the less he sees any possibility of getting rid of it by rational means. It is no wonder, therefore, that the hope, indeed the expectation of divine intervention arises in the collective unconscious and at the same time in the masses. The papal declaration has given comforting expression to this yearning. How could Protestantism so completely miss the point? This lack of understanding can only be explained by the fact that the dogmatic symbols and hermeneutic allegories have lost their meaning for Protestant rationalism. This is also true, in some measure, of the opposition to the new dogma within the Catholic Church itself, or rather to the dogmatization of the old doctrine. Naturally, a certain degree of rationalism is better suited to Protestantism than it is to the Catholic outlook. The latter gives the archetypal symbolisms the necessary freedom and space in which to develop over the centuries while at the same time insisting on their original form, unperturbed by intellectual difficulties and the objections of rationalists. In this way the Catholic Church demonstrates her maternal character, because she allows the tree growing out of her matrix to develop according to its own laws. Protestantism, in contrast, is committed to the paternal spirit. Not only did it develop, at the outset, from an encounter with the worldly spirit of the times, but it continues this dialectic with the spiritual currents of every age; for the pneuma, in keeping with its original wind nature, is flexible, ever in living motion, comparable now to water, now to fire. It can

desert its original haunts, can even go astray and get lost, if it succumbs too much to the spirit of the age. In order to fulfil its task, the Protestant spirit must be full of unrest and occasionally troublesome; it must even be revolutionary, so as to make sure that tradition has an influence on the change of contemporary values. The shocks it sustains during this encounter modify and at the same time enliven the tradition, which in its slow progress through the centuries would, without these disturbances, finally arrive at complete petrification and thus lose its effect. By merely criticizing and opposing certain developments within the Catholic Church, Protestantism would gain only a miserable bit of vitality, unless, mindful of the fact that Christianity consists of two separate camps, or rather, is a disunited brother-sister pair, it remembers that besides defending its own existence it must acknowledge Catholicism's right to exist too. A brother who for theological reasons wanted to cut the thread of his elder sister's life would rightly be called inhuman—to say nothing of Christian charity—and the converse is also true. Nothing is achieved by merely negative criticism. It is justified only to the degree that it is creative. Therefore it would seem profitable to me if, for example, Protestantism admitted that it is shocked by the new dogma not only because it throws a distressing light on the gulf between brother and sister, but because, for fundamental reasons, a situation has developed within Christianity which removes it further than ever from the sphere of worldly understanding. Protestantism knows, or could know, how much it owes its very existence to the Catholic Church. How much or how little does the Protestant still possess if he can no longer criticize or protest? In view of the intellectual *skandalon* which the new dogma represents, he should remind himself of his Christian responsibility—"Am I my brother's (or in this case, my sister's) keeper?"—and examine in all seriousness the reasons, explicit or otherwise, that decided the declaration of the new dogma. In so doing, he should guard against casting cheap aspersions and would do well to assume that there is more in it than papal arbitrariness. It would be desirable for the Protestant to understand that the new dogma has placed upon him a new responsibility toward the worldly spirit of our age, for he cannot simply deny his problematical sister before the eyes of the world. He must, even if he finds her antipathetic, be fair to her if he does not want to lose his self-respect. For instance, this is a favourable opportunity for him to ask himself, for a change, what is the meaning not only of the new dogma but of all more or less dogmatic assertions over and above their literal concretism. Considering the arbitrary and protean state of his own dogmas, and the precarious, schism-riven condition of his Church, he cannot afford to remain rigid and impervious to the spirit of the age. And since, in accordance with his obligations to the *Zeitgeist*, he is more concerned to come to terms with the world and its ideas than with God, it would seem clearly indicated that, on the occasion of the entry of the Mother of God into the heavenly bridal-chamber, he should bend to the great task of reinterpreting all the Christian

traditions. If it is a question of truths which are anchored deep in the soul—and no one with the slightest insight can doubt this fact—then the solution of this task must be possible. For this we need the freedom of the spirit, which, as we know, is assured only in Protestantism. The dogma of the Assumption is a slap in the face for the historical and rationalistic view of the world, and would remain so for all time if one were to insist obstinately on the arguments of reason and history. This is a case, if ever there was one, where psychological understanding is needed, because the mythologem coming to light is so obvious that we must be deliberately blinding ourselves if we cannot see its symbolic nature and interpret it in symbolic terms.

[755] The dogmatization of the *Assumptio Mariae* points to the *hieros gamos* in the pleroma, and this in turn implies, as we have said, the future birth of the divine child, who, in accordance with the divine trend towards incarnation, will choose as his birthplace the empirical man. The metaphysical process is known to the psychology of the unconscious as the individuation process. In so far as this process, as a rule, runs its course un-unconsciously as it has from time immemorial, it means no more than that the acorn becomes an oak, the calf a cow, and the child an adult. But if the individuation process is made conscious, consciousness must confront the unconscious and a balance between the opposites must be found. As this is not possible through logic, one is dependent on *symbols* which make the irrational union of opposites possible. They are produced spontaneously by the unconscious and are amplified by the conscious mind. The central symbols of this process describe the self, which is man's totality, consisting on the one hand of that which is conscious to him, and on the other hand of the contents of the unconscious. The self is the *τάλειος; άνθρωπος*, the whole man, whose symbols are the divine child and its synonyms. This is only a very summary sketch of the process, but it can be observed at any time in modern man, or one can read about it in the documents of Hermetic philosophy from the Middle Ages. The parallelism between the symbols is astonishing to anyone who knows both the psychology of the unconscious and alchemy.

[756] The difference between the “natural” individuation process, which runs its course unconsciously, and the one which is consciously realized, is tremendous. In the first case consciousness nowhere intervenes; the end remains as dark as the beginning. In the second case so much darkness comes to light that the personality is permeated with light, and consciousness necessarily gains in scope and insight. The encounter between conscious and unconscious has to ensure that the light which shines in the darkness is not only comprehended by the darkness, but comprehends it. The *filus solis et lunae* is the symbol of the union of opposites as well as the catalyst of their union. It is the alpha and omega of the process, the mediator and intermedium. “It has a thousand names,” say the alchemists, meaning that the source from which the individuation process rises and the goal towards which it aims is nameless, ineffable.

[757] It is only through the psyche that we can establish that God acts upon us, but we are unable to distinguish whether these actions emanate from God or from the unconscious. We cannot tell whether God and the unconscious are two different entities. Both are border-line concepts for transcendental contents. But empirically it can be established, with a sufficient degree of probability, that there is in the unconscious an archetype of wholeness which manifests itself spontaneously in dreams, etc., and a tendency, independent of the conscious will, to relate other archetypes to this centre. Consequently, it does not seem improbable that the archetype of wholeness occupies as such a central position which approximates it to the God-image. The similarity is further borne out by the peculiar fact that the archetype produces a symbolism which has always characterized and expressed the Deity. These facts make possible a certain qualification of our above thesis concerning the indistinguishableness of God and the unconscious. Strictly speaking, the God-image does not coincide with the unconscious as such, but with a special content of it, namely the archetype of the self. It is this archetype from which we can no longer distinguish the God-image empirically. We can arbitrarily postulate a difference between these two entities, but that does not help us at all. On the contrary, it only helps us to separate man from God, and prevents God from becoming man. Faith is certainly right when it impresses on man's mind and heart how infinitely far away and inaccessible God is; but it also teaches his nearness, his immediate presence, and it is just this nearness which has to be empirically real if it is not to lose all significance. Only that which acts upon me do I recognize as real and actual. But that which has no effect upon me might as well not exist. The religious need longs for wholeness, and therefore lays hold of the images of wholeness offered by the unconscious, which, independently of the conscious mind, rise up from the depths of our psychic nature.

XX

[758] It will probably have become clear to the reader that the account I have given of the development of symbolic entities corresponds to a process of differentiation of human consciousness. But since, as I showed in the introduction, the archetypes in question are not mere objects of the mind, but are also autonomous factors, i.e., living subjects, the differentiation of consciousness can be understood as the effect of the intervention of transcendentially conditioned dynamisms. In this case it would be the archetypes that accomplish the primary transformation. But since, in our experience, there are no psychic conditions which could be observed *through introspection* outside the human being, the behaviour of the archetypes cannot be investigated at all without the interaction of the observing consciousness. Therefore the question as to whether the process is initiated by consciousness or by the

archetype can never be answered; unless, in contradiction to experience, one either robbed the archetype of its autonomy or degraded consciousness to a mere machine. We find ourselves in best agreement with psychological experience if we concede to the archetype a definite measure of independence, and to consciousness a degree of creative freedom proportionate to its scope. There then arises that reciprocal action between two relatively autonomous factors which compels us, when describing and explaining the processes, to present sometimes the one and sometimes the other factor as the acting subject, even when God becomes man. The Christian solution has hitherto avoided this difficulty by recognizing Christ as the one and only God-man. But the indwelling of the Holy Ghost, the third Divine Person, in man, brings about a Christification of many, and the question then arises whether these many are all complete God-men. Such a transformation would lead to insufferable collisions between them, to say nothing of the unavoidable inflation to which the ordinary mortal, who is not freed from original sin, would instantly succumb. In these circumstances it is well to remind ourselves of St. Paul and his split consciousness: on one side he felt he was the apostle directly called and enlightened by God, and, on the other side, a sinful man who could not pluck out the "thorn in the flesh" and rid himself of the Satanic angel who plagued him. That is to say, even the enlightened person remains what he is, and is never more than his own limited ego before the One who dwells within him, whose form has no knowable boundaries, who encompasses him on all sides, fathomless as the abysses of the earth and vast as the sky.

PART TWO

EASTERN RELIGION

VII

PSYCHOLOGICAL COMMENTARIES ON "THE TIBETAN BOOK OF THE GREAT LIBERATION" AND "THE TIBETAN BOOK OF THE DEAD"

PSYCHOLOGICAL COMMENTARY ON “THE TIBETAN BOOK OF THE GREAT LIBERATION”¹

1. THE DIFFERENCE BETWEEN EASTERN AND WESTERN THINKING

[759] Dr. Evans-Wentz has entrusted me with the task of commenting on a text which contains an important exposition of Eastern “psychology.” The very fact that I have to use quotation marks shows the dubious applicability of this term. It is perhaps not superfluous to mention that the East has produced nothing equivalent to what we call psychology, but rather philosophy or metaphysics. Critical philosophy, the mother of modern psychology, is as foreign to the East as to medieval Europe. Thus the word “mind,” as used in the East, has the connotation of something metaphysical. Our Western conception of mind has lost this connotation since the Middle Ages, and the word has now come to signify a “psychic function.” Despite the fact that we neither know nor pretend to know what “psyche” is, we can deal with the phenomenon of “mind.” We do not assume that the mind is a metaphysical entity or that there is any connection between an individual mind and a hypothetical Universal Mind. Our psychology is, therefore, a science of mere phenomena without any metaphysical implications. The development of Western philosophy during the last two centuries has succeeded in isolating the mind in its own sphere and in severing it from its primordial oneness with the universe. Man himself has ceased to be the microcosm and eidolon of the cosmos, and his “anima” is no longer the consubstantial *scintilla*, or spark of the *Anima Mundi*, the World Soul.

[760] Psychology accordingly treats all metaphysical claims and assertions as mental phenomena, and regards them as statements about the mind and its structure that derive ultimately from certain unconscious dispositions. It does not consider them to be absolutely valid or even capable of establishing a metaphysical truth. We have no intellectual means of ascertaining whether this attitude is right or wrong. We only know that there is no evidence for, and no possibility of proving, the validity of a metaphysical postulate such as “Universal Mind.” If the mind asserts the existence of a Universal Mind, we hold that it is merely making an assertion. We do not assume that by such an assertion the existence of a Universal Mind has been established. There is no argument against this reasoning, but no evidence, either, that our conclusion is ultimately right. In other words, it is just as possible that our mind is nothing but a perceptible manifestation of a Universal Mind. Yet we do not know,

and we cannot even see, how it would be possible to recognize whether this is so or not. Psychology therefore holds that the mind cannot establish or assert anything beyond itself.

[761] If, then, we accept the restrictions imposed upon the capacity of our mind, we demonstrate our common sense. I admit it is something of a sacrifice, inasmuch as we bid farewell to that miraculous world in which mind-created things and beings move and live. This is the world of the primitive, where even inanimate objects are endowed with a living, healing, magic power, through which they participate in us and we in them. Sooner or later we had to understand that their potency was really ours, and that their significance was our projection. The theory of knowledge is only the last step out of humanity's childhood, out of a world where mind-created figures populated a metaphysical heaven and hell.

[762] Despite this inevitable epistemological criticism, however, we have held fast to the religious belief that the organ of faith enables man to know God. The West thus developed a new disease: the conflict between science and religion. The critical philosophy of science became as it were negatively metaphysical—in other words, materialistic—on the basis of an error in judgment; matter was assumed to be a tangible and recognizable reality. Yet this is a thoroughly metaphysical concept hypostatized by uncritical minds. Matter is an hypothesis. When you say “matter,” you are really creating a symbol for something unknown, which may just as well be “spirit” or anything else; it may even be God. Religious faith, on the other hand, refuses to give up its pre-critical *Weltanschauung*. In contradiction to the saying of Christ, the faithful try to *remain* children instead of becoming *as* children. They cling to the world of childhood. A famous modern theologian confesses in his autobiography that Jesus has been his good friend “from childhood on.” Jesus is the perfect example of a man who preached something different from the religion of his forefathers. But the *imitatio Christi* does not appear to include the mental and spiritual sacrifice which he had to undergo at the beginning of his career and without which he would never have become a saviour.

[763] The conflict between science and religion is in reality a misunderstanding of both. Scientific materialism has merely introduced a new hypostasis, and that is an intellectual sin. It has given another name to the supreme principle of reality and has assumed that this created a new thing and destroyed an old thing. Whether you call the principle of existence “God,” “matter,” “energy,” or anything else you like, you have created nothing; you have simply changed a symbol. The materialist is a metaphysician *malgré lui*. Faith, on the other hand, tries to retain a primitive mental condition on merely sentimental grounds. It is unwilling to give up the primitive, childlike relationship to mind-created and hypostatized figures; it wants to go on enjoying the security and confidence of a world still presided over by powerful,

responsible, and kindly parents. Faith may include a *sacrificium intellectus* (provided there is an intellect to sacrifice), but certainly not a sacrifice of feeling. In this way the faithful *remain* children instead of becoming *as* children, and they do not gain their life because they have not lost it. Furthermore, faith collides with science and thus gets its deserts, for it refuses to share in the spiritual adventure of our age.

[764] Any honest thinker has to admit the insecurity of all metaphysical positions, and in particular of all creeds. He has also to admit the unwarrantable nature of all metaphysical assertions and face the fact that there is no evidence whatever for the ability of the human mind to pull itself up by its own bootstrings, that is, to establish anything transcendental.

[765] Materialism is a metaphysical reaction against the sudden realization that cognition is a mental faculty and, if carried beyond the human plane, a projection. The reaction was “metaphysical” in so far as the man of average philosophical education failed to see through the implied hypostasis, not realizing that “matter” was just another name for the supreme principle. As against this, the attitude of faith shows how reluctant people were to accept philosophical criticism. It also demonstrates how great is the fear of letting go one’s hold on the securities of childhood and of dropping into a strange, unknown world ruled by forces unconcerned with man. Nothing really changes in either case; man and his surroundings remain the same. He has only to realize that he is shut up inside his mind and cannot step beyond it, even in insanity; and that the appearance of his world or of his gods very much depends upon his own mental condition.

[766] In the first place, the structure of the mind is responsible for anything we may assert about metaphysical matters, as I have already pointed out. We have also begun to understand that the intellect is not an *ens per se*, or an independent mental faculty, but a psychic function dependent upon the conditions of the psyche as a whole. A philosophical statement is the product of a certain personality living at a certain time in a certain place, and not the outcome of a purely logical and impersonal procedure. To that extent it is chiefly subjective; whether it has an objective validity or not depends on whether there are few or many persons who argue in the same way. The isolation of man within his mind as a result of epistemological criticism has naturally led to psychological criticism. This kind of criticism is not popular with the philosophers, since they like to consider the philosophic intellect as the perfect and unconditioned instrument of philosophy. Yet this intellect of theirs is a function dependent upon an individual psyche and determined on all sides by subjective conditions, quite apart from environmental influences. Indeed, we have already become so accustomed to this point of view that “mind” has lost its universal character altogether. It has become a more or less individualized affair, with no trace of its former cosmic aspect as the *anima rationalis*. Mind is understood nowadays as

a subjective, even an arbitrary, thing. Now that the formerly hypostatized “universal ideas” have turned out to be mental principles, it is dawning upon us to what an extent our whole experience of so-called reality is psychic; as a matter of fact, everything thought, felt, or perceived is a psychic image, and the world itself exists only so far as we are able to produce an image of it. We are so deeply impressed with the truth of our imprisonment in, and limitation by, the psyche that we are ready to admit the existence in it even of things we do *not* know: we call them “the unconscious.”

[767] The seemingly universal and metaphysical scope of the mind has thus been narrowed down to the small circle of individual consciousness, profoundly aware of its almost limitless subjectivity and of its infantile-archaic tendency to heedless projection and illusion. Many scientifically-minded persons have even sacrificed their religious and philosophical leanings for fear of uncontrolled subjectivism. By way of compensation for the loss of a world that pulsed with our blood and breathed with our breath, we have developed an enthusiasm for *facts*—mountains of facts, far beyond any single individual’s power to survey. We have the pious hope that this incidental accumulation of facts will form a meaningful whole, but nobody is quite sure, because no human brain can possibly comprehend the gigantic sum total of this mass-produced knowledge. The facts bury us, but whoever dares to speculate must pay for it with a bad conscience—and rightly so, for he will instantly be tripped up by the facts.

[768] Western psychology knows the mind as the mental functioning of a psyche. It is the “mentality” of an individual. An impersonal Universal Mind is still to be met with in the sphere of philosophy, where it seems to be a relic of the original human “soul.” This picture of our Western outlook may seem a little drastic, but I do not think it is far from the truth. At all events, something of the kind presents itself as soon as we are confronted with the Eastern mentality. In the East, mind is a cosmic factor, the very essence of existence; while in the West we have just begun to understand that it is the essential condition of cognition, and hence of the cognitive existence of the world. There is no conflict between religion and science in the East, because no science is there based upon the passion for facts, and no religion upon mere faith; there is religious cognition and cognitive religion.² With us, man is incommensurably small and the grace of God is everything; but in the East, man is God and he redeems himself. The gods of Tibetan Buddhism belong to the sphere of illusory separateness and mind-created projections, and yet they exist; but so far as we are concerned an illusion remains an illusion, and thus is nothing at all. It is a paradox, yet nevertheless true, that with us a thought has no proper reality; we treat it as if it were a nothingness. Even though the thought be true in itself, we hold that it exists only by virtue of certain facts which it is said to formulate. We can produce a

most devastating fact like the atom bomb with the help of this ever-changing phantasmagoria of virtually nonexistent thoughts, but it seems wholly absurd to us that one could ever establish the reality of thought itself.

[769] “Psychic reality” is a controversial concept, like “psyche” or “mind.” By the latter terms some understand consciousness and its contents, others allow the existence of “dark” or “subconscious” representations. Some include instincts in the psychic realm, others exclude them. The vast majority consider the psyche to be a result of biochemical processes in the brain cells. A few conjecture that it is the psyche that makes the cortical cells function. Some identify “life” with psyche. But only an insignificant minority regards the psychic phenomenon as a category of existence *per se* and draws the necessary conclusions. It is indeed paradoxical that *the* category of existence, the indispensable *sine qua non* of all existence, namely the psyche, should be treated as if it were only semi-existent. Psychic existence is the only category of existence of which we have *immediate* knowledge, since nothing can be known unless it first appears as a psychic image. Only psychic existence is immediately verifiable. To the extent that the world does not assume the form of a psychic image, it is virtually non-existent. This is a fact which, with few exceptions—as for instance in Schopenhauer’s philosophy—the West has not yet fully realized. But Schopenhauer was influenced by Buddhism and by the Upanishads.

[770] Even a superficial acquaintance with Eastern thought is sufficient to show that a fundamental difference divides East and West. The East bases itself upon psychic reality, that is, upon the psyche as the main and unique condition of existence. It seems as if this Eastern recognition were a psychological or temperamental fact rather than a result of philosophical reasoning. It is a typically introverted point of view, contrasted with the equally typical extraverted point of view of the West.³ Introversion and extraversion are known to be temperamental or even constitutional attitudes which are never intentionally adopted in normal circumstances. In exceptional cases they may be produced at will, but only under very special conditions. Introversion is, if one may so express it, the “style” of the East, an habitual and collective attitude, just as extraversion is the “style” of the West. Introversion is felt here as something abnormal, morbid, or otherwise objectionable. Freud identifies it with an autoerotic, “narcissistic” attitude of mind. He shares his negative position with the National Socialist philosophy of modern Germany,⁴ which accuses introversion of being an offence against community feeling. In the East, however, our cherished extraversion is depreciated as illusory desirousness, as existence in the *samsāra*, the very essence of the *nidāna-chain* which culminates in the sum of the world’s sufferings.⁵ Anyone with practical knowledge of the mutual depreciation of values between introvert and extravert will understand the emotional conflict between the Eastern and the Western standpoint. For those who know

something of the history of European philosophy the bitter wrangling about “universals” which began with Plato will provide an instructive example. I do not wish to go into all the ramifications of this conflict between introversion and extraversion, but I must mention the religious aspects of the problem. The Christian West considers man to be wholly dependent upon the grace of God, or at least upon the Church as the exclusive and divinely sanctioned earthly instrument of man’s redemption. The East, however, insists that man is the sole cause of his higher development, for it believes in “self-liberation.”

[771] The religious point of view always expresses and formulates the essential psychological attitude and its specific prejudices, even in the case of people who have forgotten, or who have never heard of, their own religion. In spite of everything, the West is thoroughly Christian as far as its psychology is concerned. Tertullian’s *anima naturaliter christiana* holds true throughout the West—not, as he thought, in the religious sense, but in a psychological one. Grace comes from elsewhere; at all events from outside. Every other point of view is sheer heresy. Hence it is quite understandable why the human psyche is suffering from undervaluation. Anyone who dares to establish a connection between the psyche and the idea of God is immediately accused of “psychologism” or suspected of morbid “mysticism.” The East, on the other hand, compassionately tolerates those “lower” spiritual stages where man, in his blind ignorance of karma, still bothers about sin and tortures his imagination with a belief in absolute gods, who, if he only looked deeper, are nothing but the veil of illusion woven by his own unenlightened mind. The psyche is therefore all-important; it is the all-pervading Breath, the Buddha-essence; it is the Buddha-Mind, the One, the *Dharmakāya*. All existence emanates from it, and all separate forms dissolve back into it. This is the basic psychological prejudice that permeates Eastern man in every fibre of his being, seeping into all his thoughts, feelings, and deeds, no matter what creed he professes.

[772] In the same way Western man is Christian, no matter to what denomination his Christianity belongs. For him man is small inside, he is next to nothing; moreover, as Kierkegaard says, “before God man is always wrong.” By fear, repentance, promises, submission, self-abasement, good deeds, and praise he propitiates the great power, which is not himself but *totaliter aliter*, the Wholly Other, altogether perfect and “outside,” the only reality.⁶ If you shift the formula a bit and substitute for God some other power, for instance the world or money, you get a complete picture of Western man—assiduous, fearful, devout, self-abasing, enterprising, greedy, and violent in his pursuit of the goods of this world: possessions, health, knowledge, technical mastery, public welfare, political power, conquest, and so on. What are the great popular movements of our time? Attempts to grab the money or property of others and to protect our own. The mind is chiefly employed in devising suitable “isms” to hide the

real motives or to get more loot. I refrain from describing what would happen to Eastern man should he forget his ideal of Buddhahood, for I do not want to give such an unfair advantage to my Western prejudices. But I cannot help raising the question of whether it is possible, or indeed advisable, for either to imitate the other's standpoint. The difference between them is so vast that one can see no reasonable possibility of this, much less its advisability. You cannot mix fire and water. The Eastern attitude stultifies the Western, and vice versa. You cannot be a good Christian and redeem yourself, nor can you be a Buddha and worship God. It is much better to accept the conflict, for it admits only of an irrational solution, if any.

[773] By an inevitable decree of fate the West is becoming acquainted with the peculiar facts of Eastern spirituality. It is useless either to belittle these facts, or to build false and treacherous bridges over yawning gaps. Instead of learning the spiritual techniques of the East by heart and imitating them in a thoroughly Christian way—*imitatio Christi!*;—with a correspondingly forced attitude, it would be far more to the point to find out whether there exists in the unconscious an introverted tendency similar to that which has become the guiding spiritual principle of the East. We should then be in a position to build on our own ground with our own methods. If we snatch these things directly from the East, we have merely indulged our Western acquisitiveness, confirming yet again that “everything good is outside,” whence it has to be fetched and pumped into our barren souls.⁷ It seems to me that we have really learned something from the East when we understand that the psyche contains riches enough without having to be primed from outside, and when we feel capable of evolving out of ourselves with or without divine grace. But we cannot embark upon this ambitious enterprise until we have learned how to deal with our spiritual pride and blasphemous self-assertiveness. The Eastern attitude violates the specifically Christian values, and it is no good blinking this fact. If our new attitude is to be genuine, i.e., grounded in our own history, it must be acquired with full consciousness of the Christian values and of the conflict between them and the introverted attitude of the East. We must get at the Eastern values from within and not from without, seeking them in ourselves, in the unconscious. We shall then discover how great is our fear of the unconscious and how formidable are our resistances. Because of these resistances we doubt the very thing that seems so obvious to the East, namely, the *self-liberating power of the introverted mind*.

[774] This aspect of the mind is practically unknown to the West, though it forms the most important component of the unconscious. Many people flatly deny the existence of the unconscious, or else they say that it consists merely of instincts, or of repressed or forgotten contents that were once part of the conscious mind. It is safe to assume that what the East calls “mind” has more to do with our “unconscious” than with mind as we understand it, which is more or less identical with consciousness. To us,

consciousness is inconceivable without an ego; it is equated with the relation of contents to an ego. If there is no ego there is nobody to be conscious of anything. The ego is therefore indispensable to the conscious process. The Eastern mind, however, has no difficulty in conceiving of a consciousness without an ego. Consciousness is deemed capable of transcending its ego condition; indeed, in its “higher” forms, the ego disappears altogether. Such an ego-less mental condition can only be unconscious to us, for the simple reason that there would be nobody to witness it. I do not doubt the existence of mental states transcending consciousness. But they lose their consciousness to exactly the same degree that they transcend consciousness. I cannot imagine a conscious mental state that does not relate to a subject, that is, to an ego. The ego may be depotentiated—divested, for instance, of its awareness of the body—but so long as there is awareness of something, there must be somebody who is aware. The unconscious, however, is a mental condition of which no ego is aware. It is only by indirect means that we eventually become conscious of the existence of an unconscious. We can observe the manifestation of unconscious fragments of the personality, detached from the patient’s consciousness, in insanity. But there is no evidence that the unconscious contents are related to an unconscious centre analogous to the ego; in fact there are good reasons why such a centre is not even probable.

[775] The fact that the East can dispose so easily of the ego seems to point to a mind that is not to be identified with our “mind.” Certainly the ego does not play the same role in Eastern thought as it does with us. It seems as if the Eastern mind were less egocentric, as if its contents were more loosely connected with the subject, and as if greater stress were laid on mental states which include a depotentiated ego. It also seems as if *hatha* yoga were chiefly useful as a means for extinguishing the ego by fettering its unruly impulses. There is no doubt that the higher forms of yoga, in so far as they strive to reach *samādhi*, seek a mental condition in which the ego is practically dissolved. Consciousness in our sense of the word is rated a definitely inferior condition, the state of *avidyā* (ignorance), whereas what we call the “dark background of consciousness” is understood to be a “higher” consciousness.⁸ Thus our concept of the “collective unconscious” would be the European equivalent of *buddhi*, the enlightened mind.

[776] In view of all this, the Eastern form of “sublimation” amounts to a withdrawal of the centre of psychic gravity from ego-consciousness, which holds a middle position between the body and the ideational processes of the psyche. The lower, semi-physiological strata of the psyche are subdued by *askesis*, i.e., exercises, and kept under control. They are not exactly denied or suppressed by a supreme effort of the will, as is customary in Western sublimation. Rather, the lower psychic strata are adapted and shaped through the patient practice of *hatha* yoga until they no longer

interfere with the development of “higher” consciousness. This peculiar process seems to be aided by the fact that the ego and its desires are checked by the greater importance which the East habitually attaches to the “subjective factor.”⁹ By this I mean the “dark background” of consciousness, the unconscious. The introverted attitude is characterized in general by an emphasis on the *a priori* data of apperception. As is well known, the act of apperception consists of two phases: first the perception of the object, second the assimilation of the perception to a preexisting pattern or concept by means of which the object is “comprehended.” The psyche is not a nonentity devoid of all quality; it is a definite system made up of definite conditions and it reacts in a specific way. Every new representation, be it a perception or a spontaneous thought, arouses associations which derive from the storehouse of memory. These leap immediately into consciousness, producing the complex picture of an “impression,” though this is already a sort of interpretation. The unconscious disposition upon which the quality of the impression depends is what I call the “subjective factor.” It deserves the qualification “subjective” because objectivity is hardly ever conferred by a first impression. Usually a rather laborious process of verification, comparison, and analysis is needed to modify and adapt the immediate reactions of the subjective factor.

[777] The prominence of the subjective factor does not imply a *personal subjectivism*, despite the readiness of the extraverted attitude to dismiss the subjective factor as “nothing but” subjective. The psyche and its structure are real enough. They even transform material objects into psychic images, as we have said. They do not perceive waves, but sound; not wave-lengths, but colours. Existence is as we see and understand it. There are innumerable things that can be seen, felt, and understood in a great variety of ways. Quite apart from merely personal prejudices, the psyche assimilates external facts in its own way, which is based ultimately upon the laws or patterns of apperception. These laws do not change, although different ages or different parts of the world call them by different names. On a primitive level people are afraid of witches; on the modern level we are apprehensively aware of microbes. There everybody believes in ghosts, here everybody believes in vitamins. Once upon a time men were possessed by devils, now they are not less obsessed by ideas, and so on.

[778] The subjective factor is made up, in the last resort, of the eternal patterns of psychic functioning. Anyone who relies upon the subjective factor is therefore basing himself on the reality of psychic law. So he can hardly be said to be wrong. If by this means he succeeds in extending his consciousness downwards, to touch the basic laws of psychic life, he is in possession of that truth which the psyche will naturally evolve if not fatally interfered with by the non-psychic, i.e., the external, world. At any rate, his truth could be weighed against the sum of all knowledge acquired

through the investigation of externals. We in the West believe that a truth is satisfactory only if it can be verified by external facts. We believe in the most exact observation and exploration of nature; our truth must coincide with the behaviour of the external world, otherwise it is merely “subjective.” In the same way that the East turns its gaze from the dance of *prakriti* (physis) and from the multitudinous illusory forms of *māyā*, the West shuns the unconscious and its futile fantasies. Despite its introverted attitude, however, the East knows very well how to deal with the external world. And despite its extraversions the West, too, has a way of dealing with the psyche and its demands; it has an institution called the Church, which gives expression to the unknown psyche of man through its rites and dogmas. Nor are natural science and modern techniques by any means the invention of the West. Their Eastern equivalents are somewhat old-fashioned, or even primitive. But what we have to show in the way of spiritual insight and psychological technique must seem, when compared with yoga, just as backward as Eastern astrology and medicine when compared with Western science. I do not deny the efficacy of the Christian Church; but, if you compare the *Exercitia* of Ignatius Loyola with yoga, you will take my meaning. There is a difference, and a big one. To jump straight from that level into Eastern yoga is no more advisable than the sudden transformation of Asian peoples into half-baked Europeans. I have serious doubts as to the blessings of Western civilization, and I have similar misgivings as to the adoption of Eastern spirituality by the West. Yet the two contradictory worlds have met. The East is in full transformation; it is thoroughly and fatally disturbed. Even the most efficient methods of European warfare have been successfully imitated. The trouble with us seems to be far more psychological. Our blight is ideologies—they are the long-expected Antichrist! National Socialism comes as near to being a religious movement as any movement since A.D. 622.^{9a} Communism claims to be paradise come to earth again. We are far better protected against failing crops, inundations, epidemics, and invasions from the Turk than we are against our own deplorable spiritual inferiority, which seems to have little resistance to psychic epidemics.

[779] In its religious attitude, too, the West is extraverted. Nowadays it is gratuitously offensive to say that Christianity implies hostility, or even indifference, to the world and the flesh. On the contrary, the good Christian is a jovial citizen, an enterprising business man, an excellent soldier, the very best in every profession there is. Worldly goods are often interpreted as special rewards for Christian behaviour, and in the Lord’s Prayer the adjective *ἀπιοῦσιος*, *supersubstantialis*,¹⁰ referring to the bread, has long since been omitted, for the real bread obviously makes so very much more sense! It is only logical that extraversion, when carried to such lengths, cannot credit man with a psyche which contains anything not imported into it from outside, either by human teaching or divine grace. From this point of view it is downright

blasphemy to assert that man has it in him to accomplish his own redemption. Nothing in our religion encourages the idea of the self-liberating power of the mind. Yet a very modern form of psychology—"analytical" or "complex" psychology—envisages the possibility of there being certain processes in the unconscious which, by virtue of their symbolism, compensate the defects and anfractuositities of the conscious attitude. When these unconscious compensations are made conscious through the analytical technique, they produce such a change in the conscious attitude that we are entitled to speak of a new level of consciousness. The method cannot, however, produce the actual process of unconscious compensation; for that we depend upon the unconscious psyche or the "grace of God"—names make no difference. But the unconscious process itself hardly ever reaches consciousness without technical aid. When brought to the surface, it reveals contents that offer a striking contrast to the general run of conscious thinking and feeling. If that were not so, they would not have a compensatory effect. The first effect, however, is usually a conflict, because the conscious attitude resists the intrusion of apparently incompatible and extraneous tendencies, thoughts, feelings, etc. Schizophrenia yields the most startling examples of such intrusions of utterly foreign and unacceptable contents. In schizophrenia it is, of course, a question of pathological distortions and exaggerations, but anybody with the slightest knowledge of the normal material will easily recognize the sameness of the underlying patterns. It is, as a matter of fact, the same imagery that one finds in mythology and other archaic thought-forms.

[780] Under normal conditions, every conflict stimulates the mind to activity for the purpose of creating a satisfactory solution. Usually—i.e., in the West—the conscious standpoint arbitrarily decides against the unconscious, since anything coming from inside suffers from the prejudice of being regarded as inferior or somehow wrong. But in the cases with which we are here concerned it is tacitly agreed that the apparently incompatible contents shall not be suppressed again, and that the conflict shall be accepted and suffered. At first no solution appears possible, and this fact, too, has to be borne with patience. The suspension thus created "constellates" the unconscious—in other words, the conscious suspense produces a new compensatory reaction in the unconscious. This reaction (usually manifested in dreams) is brought to conscious realization in its turn. The conscious mind is thus confronted with a new aspect of the psyche, which arouses a different problem or modifies an old one in an unexpected way. The procedure is continued until the original conflict is satisfactorily resolved. The whole process is called the "transcendent function." It is a process and a method at the same time. The production of unconscious compensations is a spontaneous *process*; the conscious realization is a *method*. The function is called "transcendent" because it facilitates the transition from one psychic condition to another by means of the mutual confrontation of opposites.

[781] This is a very sketchy description of the transcendent function, and for details I must refer the reader to the relevant literature.¹¹ But I felt it necessary to call attention to these psychological observations and methods because they indicate the way by which we may find access to the sort of “mind” referred to in our text. This is the image-creating mind, the matrix of all those patterns that give apperception its peculiar character. These patterns are inherent in the unconscious “mind”; they are its structural elements, and they alone can explain why certain mythological motifs are more or less ubiquitous, even where migration as a means of transmission is exceedingly improbable. Dreams, fantasies, and psychoses produce images to all appearances identical with mythological motifs of which the individuals concerned had absolutely no knowledge, not even indirect knowledge acquired through popular figures of speech or through the symbolic language of the Bible.¹² The psychopathology of schizophrenia, as well as the psychology of the unconscious, demonstrate the production of archaic material beyond a doubt. Whatever the structure of the unconscious may be, one thing is certain: it contains an indefinite number of motifs or patterns of an archaic character, in principle identical with the root ideas of mythology and similar thought-forms.

[782] Because the unconscious is the matrix mind, the quality of creativeness attaches to it. It is the birthplace of thought-forms such as our text considers the Universal Mind to be. Since we cannot attribute any particular form to the unconscious, the Eastern assertion that the Universal Mind is without form, the *arupaloka*, yet is the source of all forms, seems to be psychologically justified. In so far as the forms or patterns of the unconscious belong to no time in particular, being seemingly eternal, they convey a peculiar feeling of timelessness when consciously realized. We find similar statements in primitive psychology: for instance, the Australian word *aljira*¹³ means ‘dream’ as well as ‘ghostland’ and the ‘time’ in which the ancestors lived and still live. It is, as they say, the ‘time when there was no time.’ This looks like an obvious concretization and projection of the unconscious with all its characteristic qualities—its dream manifestations, its ancestral world of thought-forms, and its timelessness.

[783] An introverted attitude, therefore, which withdraws its emphasis from the external world (the world of consciousness) and localizes it in the subjective factor (the background of consciousness) necessarily calls forth the characteristic manifestations of the unconscious, namely, archaic thought-forms imbued with “ancestral” or “historic” feeling, and, beyond them, the sense of indefiniteness, timelessness, oneness. The extraordinary feeling of oneness is a common experience in all forms of “mysticism” and probably derives from the general contamination of contents, which increases as consciousness dims. The almost limitless contamination of images in dreams, and particularly in the products of insanity, testifies to their

unconscious origin. In contrast to the clear distinction and differentiation of forms in consciousness, unconscious contents are incredibly vague and for this reason capable of any amount of contamination. If we tried to conceive of a state in which nothing is distinct, we should certainly feel the whole as one. Hence it is not unlikely that the peculiar experience of oneness derives from the subliminal awareness of all-contamination in the unconscious.

[784] By means of the transcendent function we not only gain access to the “One Mind” but also come to understand why the East believes in the possibility of self-liberation. If, through introspection and the conscious realization of unconscious compensations, it is possible to transform one’s mental condition and thus arrive at a solution of painful conflicts, one would seem entitled to speak of “self-liberation.” But, as I have already hinted, there is a hitch in this proud claim to self-liberation, for a man cannot produce these unconscious compensations at will. He has to rely upon the possibility that they *may* be produced. Nor can he alter the peculiar character of the compensation: *est ut est aut non est*—‘it is as it is or it isn’t at all.’ It is a curious thing that Eastern philosophy seems to be almost unaware of this highly important fact. And it is precisely this fact that provides the psychological justification for the Western point of view. It seems as if the Western mind had a most penetrating intuition of man’s fateful dependence upon some dark power which must co-operate if all is to be well. Indeed, whenever and wherever the unconscious fails to co-operate, man is instantly at a loss, even in his most ordinary activities. There may be a failure of memory, of co-ordinated action, or of interest and concentration; and such failure may well be the cause of serious annoyance, or of a fatal accident, a professional disaster, or a moral collapse. Formerly, men called the gods unfavourable: now we prefer to call it a neurosis, and we seek the cause in lack of vitamins, in endocrine disturbances, overwork, or sex. The co-operation of the unconscious, which is something we never think of and always take for granted, is, when it suddenly fails, a very serious matter indeed.

[785] In comparison with other races—the Chinese for instance—the white man’s mental equilibrium, or to put it bluntly, his brain, seems to be his tender spot. We naturally try to get as far away from our weaknesses as possible, a fact which may explain the sort of extraversion that is always seeking security by dominating its surroundings. Extraversion goes hand in hand with mistrust of the inner man. If indeed there is any consciousness of him at all. Moreover, we all tend to undervalue the things we are afraid of. There must be some such reason for our absolute conviction that *nihil est in intellectu quod non antea fuerit in sensu*, which is the motto of Western extraversion. But as we have emphasized, this extraversion is psychologically justified by the vital fact that unconscious compensation lies beyond man’s control. I know that yoga prides itself on being able to control even the

unconscious processes, so that nothing can happen in the psyche as a whole that is not ruled by a supreme consciousness. I have not the slightest doubt that such a condition is more or less possible. But it is possible only at the price of becoming identical with the unconscious. Such an identity is the Eastern equivalent of our Western fetish of “complete objectivity,” the machine-like subservience to one goal, to one idea or cause, at the cost of losing every trace of inner life. From the Eastern point of view this complete objectivity is appalling, for it amounts to complete identity with the *samsāra*; to the West, on the other hand, *samādhi* is nothing but a meaningless dream-state. In the East, the inner man has always had such a firm hold on the outer man that the world had no chance of tearing him away from his inner roots; in the West, the outer man gained the ascendancy to such an extent that he was alienated from his innermost being. The One Mind, Oneness, indefiniteness, and eternity remained the prerogative of the One God. Man became small, futile, and essentially in the wrong.

[786] I think it is becoming clear from my argument that the two standpoints, however contradictory, each have their psychological justification. Both are one-sided in that they fail to see and take account of those factors which do not fit in with their typical attitude. The one underrates the world of consciousness, the other the world of the One Mind. The result is that, in their extremism, both lose one half of the universe; their life is shut off from total reality, and is apt to become artificial and inhuman. In the West, there is the mania for “objectivity,” the asceticism of the scientist or of the stockbroker, who throw away the beauty and universality of life for the sake of the ideal, or not so ideal, goal. In the East, there is the wisdom, peace, detachment, and inertia of a psyche that has returned to its dim origins, having left behind all the sorrow and joy of existence as it is and, presumably, ought to be. No wonder that one-sidedness produces very similar forms of monasticism in both cases, guaranteeing to the hermit, the holy man, the monk or the scientist unswerving singleness of purpose. I have nothing against one-sidedness as such. Man, the great experiment of nature, or his own great experiment, is evidently entitled to all such undertakings—if he can endure them. Without one-sidedness the spirit of man could not unfold in all its diversity. But I do not think there is any harm in trying to understand both sides.

[787] The extraverted tendency of the West and the introverted tendency of the East have one important purpose in common: both make desperate efforts to conquer the mere naturalness of life. It is the assertion of mind over matter, the *opus contra naturam*, a symptom of the youthfulness of man, still delighting in the use of the most powerful weapon ever devised by nature: the conscious mind. The afternoon of humanity, in a distant future, may yet evolve a different ideal. In time, even conquest will cease to be the dream.

2. COMMENTS ON THE TEXT

[788] Before embarking upon the commentary proper, I must not omit to call the reader's attention to the very marked difference between the tenor of a psychological dissertation and that of a sacred text. A scientist forgets all too easily that the impartial handling of a subject may violate its emotional values, often to an unpardonable degree. The scientific intellect is inhuman and cannot afford to be anything else; it cannot avoid being ruthless in effect, though it may be well-intentioned in motive. In dealing with a sacred text, therefore, the psychologist ought at least to be aware that his subject represents an inestimable religious and philosophical value which should not be desecrated by profane hands. I confess that I myself venture to deal with such a text only because I know and appreciate its value. In commenting upon it I have no intention whatsoever of anatomizing it with heavy-handed criticism. On the contrary, my endeavour will be to amplify its symbolic language so that it may yield itself more easily to our understanding. To this end, it is necessary to bring down its lofty metaphysical concepts to a level where it is possible to see whether any of the psychological facts known to us have parallels in, or at least border upon, the sphere of Eastern thought. I hope this will not be misunderstood as an attempt to belittle or to banalize; my aim is simply to bring ideas which are alien to our way of thinking within reach of Western psychological experience.

[789] What follows is a series of notes and comments which should be read together with the textual sections indicated by the titles.

The Obeisance

[790] Eastern texts usually begin with a statement which in the West would come at the end, as the *conclusio finalis* to a long argument. We would begin with things generally known and accepted, and would end with the most important item of our investigation. Hence our dissertation would conclude with the sentence: "Therefore the *Trikāya* is the All-Enlightened Mind itself." In this respect, the Eastern mentality is not so very different from the medieval. As late as the eighteenth century our books on history or natural science began, as here, with God's decision to create a world. The idea of a Universal Mind is a commonplace in the East, since it aptly expresses the introverted Eastern temperament. Put into psychological language, the above sentence could be paraphrased thus: The unconscious is the root of all experience of oneness (*dharmakāya*), the matrix of all archetypes or structural patterns (*sambhogakāya*), and the *conditio sine qua non* of the phenomenal world (*nirmānakāya*).

The Foreword

[791] The gods are archetypal thought-forms belonging to the *sambhogakāya*.¹⁴ Their peaceful and wrathful aspects, which play a great role in the meditations of the Tibetan Book of the Dead, symbolize the opposites. In the *nirmānakāya* these opposites are no more than human conflicts, but in the *sambhogakāya* they are the positive and negative principles united in one and the same figure. This corresponds to the psychological experience, also formulated in Lao-tzu's *Tao Teh Ching*, that there is no position without its negation. Where there is faith, there is doubt; where there is doubt, there is credulity; where there is morality, there is temptation. Only saints have diabolical visions, and tyrants are the slaves of their *valets de chambre*. If we carefully scrutinize our own character we shall inevitably find that, as Lao-tzu says, "high stands on low," which means that the opposites condition one another, that they are really one and the same thing. This can easily be seen in persons with an inferiority complex: they foment a little megalomania somewhere. The fact that the opposites appear as gods comes from the simple recognition that they are exceedingly powerful. Chinese philosophy therefore declared them to be cosmic principles, and named them *yang* and *yin*. Their power increases the more one tries to separate them. "When a tree grows up to heaven its roots reach down to hell," says Nietzsche. Yet, above as below, it is the same tree. It is characteristic of our Western mentality that we should separate the two aspects into antagonistic personifications: God and the Devil. And it is equally characteristic of the worldly optimism of Protestantism that it should have hushed up the Devil in a tactful sort of way, at any rate in recent times. *Omne bonum a Deo, omne malum ab homine* is the uncomfortable consequence.

[792] The "seeing of reality" clearly refers to Mind as the supreme reality. In the West, however, the unconscious is considered to be a fantastic irreality. The "seeing of the Mind" implies self-liberation. This means, psychologically, that the more weight we attach to unconscious processes the more we detach ourselves from the world of desires and of separated opposites, and the nearer we draw to the state of unconsciousness with its qualities of oneness, indefiniteness, and timelessness. This is truly a liberation of the self from its bondage to strife and suffering. "By this method, one's mind is understood." Mind in this context is obviously the individual's mind, that is, his psyche. Psychology can agree in so far as the understanding of the unconscious is one of its foremost tasks.

Salutation to the One Mind

[793] This section shows very clearly that the One Mind is the unconscious, since it is characterized as "eternal, unknown, not visible, not recognized." But it also displays positive features which are in keeping with Eastern experience. These are the attributes "ever clear, ever existing, radiant and unobscured." It is an undeniable

psychological fact that the more one concentrates on one's unconscious contents the more they become charged with energy; they become vitalized, as if illuminated from within. In fact they turn into something like a substitute reality. In analytical psychology we make methodical use of this phenomenon. I have called the method "active imagination." Ignatius Loyola also made use of active imagination in his *Exercitia*. There is evidence that something similar was used in the meditations of alchemical philosophy.¹⁵

The Result of Not Knowing the One Mind

[794] "Knowledge of that which is vulgarly called mind is widespread." This clearly refers to the conscious mind of everybody, in contrast to the One Mind which is unknown, i.e., unconscious. These teachings "will also be sought after by ordinary individuals who, not knowing the One Mind, do not know themselves." Self-knowledge is here definitely identified with "knowing the One Mind," which means that knowledge of the unconscious is essential for any understanding of one's own psychology. The desire for such knowledge is a well-established fact in the West, as evidenced by the rise of psychology in our time and a growing interest in these matters. The public desire for more psychological knowledge is largely due to the suffering which results from the disuse of religion and from the lack of spiritual guidance. "They wander hither and thither in the Three Regions ... suffering sorrow." As we know what a neurosis can mean in moral suffering, this statement needs no comment. This section formulates the reasons why we have such a thing as the psychology of the unconscious today.

[795] Even if one wishes "to know the mind as it is, one fails." The text again stresses how hard it is to gain access to the basic mind, because it is unconscious.

The Results of Desires

[796] Those "fettered by desires cannot perceive the Clear Light." The "Clear Light" again refers to the One Mind. Desires crave for external fulfilment. They forge the chain that fetters man to the world of consciousness. In that condition he naturally cannot become aware of his unconscious contents. And indeed there is a healing power in withdrawing from the conscious world—up to a point. Beyond that point, which varies with individuals, withdrawal amounts to neglect and repression.

[797] Even the "Middle Path" finally becomes "obscured by desires." This is a very true statement, which cannot be dinned too insistently into European ears. Patients and normal individuals, on becoming acquainted with their unconscious material, hurl themselves upon it with the same heedless desirousness and greed that before had engulfed them in their extraversion. The problem is not so much a withdrawal from the objects of desire, as a more detached attitude to desire as such, no matter

what its object. We cannot compel unconscious compensation through the impetuosity of uncontrolled desire. We have to wait patiently to see whether it will come of its own accord, and put up with whatever form it takes. Hence we are forced into a sort of contemplative attitude which, in itself, not rarely has a liberating and healing effect.

The Transcendent At-one-ment

[798] “There being really no duality, pluralism is untrue.” This is certainly one of the most fundamental truths of the East. There are no opposites—it is the same tree above and below. The *Tabula smaragdina* says: “Quod est inferius est sicut quod est superius. Et quod est superius est sicut quod est inferius, ad perpetranda miracula rei unius.”¹⁶ Pluralism is even more illusory, since all separate forms originate in the indistinguishable oneness of the psychic matrix, deep down in the unconscious. The statement made by our text refers psychologically to the subjective factor, to the material immediately constellated by a stimulus, i.e., the first impression which, as we have seen, interprets every new perception in terms of previous experience. “Previous experience” goes right back to the instincts, and thus to the inherited and inherent patterns of psychic functioning, the ancestral and “eternal” laws of the human mind. But the statement entirely ignores the possible transcendent reality of the physical world as such, a problem not unknown to Sankhya philosophy, where *prakriti* and *purusha*—so far as they are a polarization of Universal Being—form a cosmic dualism that can hardly be circumvented. One has to close one’s eyes to dualism and pluralism alike, and forget all about the existence of a world, as soon as one tries to identify oneself with the monistic origin of life. The questions naturally arise: “Why should the One appear as the Many, when ultimate reality is All-One? What is the cause of pluralism, or of the illusion of pluralism? If the One is pleased with itself, why should it mirror itself in the Many? Which after all is the more real, the one that mirrors itself, or the mirror it uses?” Probably we should not ask such questions, seeing that there is no answer to them.

[799] It is psychologically correct to say that “At-one-ment” is attained by withdrawal from the world of consciousness. In the stratosphere of the unconscious there are no more thunderstorms, because nothing is differentiated enough to produce tensions and conflicts. These belong to the surface of our reality.

[800] The Mind in which the irreconcilables—*samsāra* and *nirvāna*—are united is ultimately our mind. Does this statement spring from profound modesty or from overweening hybris? Does it mean that the Mind is “nothing but” our mind? Or that our mind is the Mind? Assuredly it means the latter, and from the Eastern point of view there is no hybris in this; on the contrary, it is a perfectly acceptable truth, whereas with us it would amount to saying “I am God.” This is an incontestable

“mystical” experience, though a highly objectionable one to the Westerner; but in the East, where it derives from a mind that has never lost touch with the instinctual matrix, it has a very different value. The collective introverted attitude of the East did not permit the world of the senses to sever the vital link with the unconscious; psychic reality was never seriously disputed, despite the existence of so-called materialistic speculations. The only known analogy to this fact is the mental condition of the primitive, who confuses dream and reality in the most bewildering way. Naturally we hesitate to call the Eastern mind primitive, for we are deeply impressed with its remarkable civilization and differentiation. Yet the primitive mind is its matrix, and this is particularly true of that aspect of it which stresses the validity of psychic phenomena, such as relate to ghosts and spirits. The West has simply cultivated the other aspect of primitivity, namely, the scrupulously accurate observation of nature at the expense of abstraction. Our natural science is the epitome of primitive man’s astonishing powers of observation. We have added only a moderate amount of abstraction, for fear of being contradicted by the facts. The East, on the other hand, cultivates the psychic aspect of primitivity together with an inordinate amount of abstraction. Facts make excellent stories but not much more.

[801] Thus, if the East speaks of the Mind as being inherent in everybody, no more hybris or modesty is involved than in the European’s belief in facts, which are mostly derived from man’s own observation and sometimes from rather less than his observation, to wit, his interpretation. He is, therefore, quite right to be afraid of too much abstraction.

The Great Self-Liberation

[802] I have mentioned more than once that the shifting of the basic personality-feeling to the less conscious mental sphere has a liberating effect. I have also described, somewhat cursorily, the transcendent function which produces the transformation of personality, and I have emphasized the importance of spontaneous unconscious compensation. Further, I have pointed out the neglect of this crucial fact in yoga. This section tends to confirm my observations. The grasping of “the whole essence of these teachings” seems also to be the whole essence of “self-liberation.” The Westerner would take this to mean: “Learn your lesson and repeat it, and then you will be self-liberated.” That, indeed, is precisely what happens with most Western practitioners of yoga. They are very apt to “do” it in an extraverted fashion, oblivious of the inturning of the mind which is the essence of such teachings. In the East, the “truths” are so much a part of the collective consciousness that they are at least intuitively grasped by the pupil. If the European could turn himself inside out and live as an Oriental, with all the social, moral, religious, intellectual, and aesthetic obligations which such a course would involve, he might be able to benefit by these

teachings. But you cannot be a good Christian, either in your faith or in your morality or in your intellectual make-up, and practise genuine yoga at the same time. I have seen too many cases that have made me sceptical in the highest degree. The trouble is that Western man cannot get rid of his history as easily as his short-legged memory can. History, one might say, is written in the blood. I would not advise anyone to touch yoga without a careful analysis of his unconscious reactions. What is the use of imitating yoga if your dark side remains as good a medieval Christian as ever? If you can afford to seat yourself on a gazelle skin under a Bo-tree or in the cell of a *gompa* for the rest of your life without being troubled by politics or the collapse of your securities, I will look favourably upon your case. But yoga in Mayfair or Fifth Avenue, or in any other place which is on the telephone, is a spiritual fake.

[803] Taking the mental equipment of Eastern man into account, we may suppose that the teaching is effective. But unless one is prepared to turn away from the world and to disappear into the unconscious for good, mere teaching has no effect, or at least not the desired one. For this the union of opposites is necessary, and in particular the difficult task of reconciling extraversion and introversion by means of the transcendent function.

The Nature of Mind

[804] This section contains a valuable piece of psychological information. The text says: "The mind is of intuitive ("quick-knowing") Wisdom." Here "mind" is understood to be identical with immediate awareness of the "first impression" which conveys the whole sum of previous experience based upon instinctual patterns. This bears out our remarks about the essentially introverted prejudice of the East. The formula also draws attention to the highly differentiated character of Eastern intuition. The intuitive mind is noted for its disregard of facts in favour of possibilities.¹⁷

[805] The assertion that the Mind "has no existence" obviously refers to the peculiar "potentiality" of the unconscious. A thing seems to exist only to the degree that we are aware of it, which explains why so many people are disinclined to believe in the existence of an unconscious. When I tell a patient that he is chock full of fantasies, he is often astonished beyond all measure, having been completely unaware of the fantasy-life he was leading.

The Names Given to the Mind

[806] The various terms employed to express a "difficult" or "obscure" idea are a valuable source of information about the ways in which that idea can be interpreted, and at the same time an indication of its doubtful or controversial nature even in the country, religion, or philosophy to which it is indigenous. If the idea were perfectly

straightforward and enjoyed general acceptance, there would be no reason to call it by a number of different names. But when something is little known, or ambiguous, it can be envisaged from different angles, and then a multiplicity of names is needed to express its peculiar nature. A classical example of this is the philosophers' stone; many of the old alchemical treatises give long lists of its names.

[807] The statement that “the various names given to it [the Mind] are innumerable” proves that the Mind must be something as vague and indefinite as the philosophers' stone. A substance that can be described in “innumerable” ways must be expected to display as many qualities or facets. If these are really “innumerable,” they cannot be counted, and it follows that the substance is well-nigh indescribable and unknowable. It can never be realized completely. This is certainly true of the unconscious, and a further proof that the Mind is the Eastern equivalent of our concept of the unconscious, more particularly of the collective unconscious.

[808] In keeping with this hypothesis, the text goes on to say that the Mind is also called the “Mental Self.” The “self” is an important concept in analytical psychology, where much has been said that I need not repeat here. I would refer the interested reader to the literature given below.¹⁸ Although the symbols of the “self” are produced by unconscious activity and are mostly manifested in dreams,¹⁹ the facts which the idea covers are not merely mental; they include aspects of physical existence as well. In this and other Eastern texts the “Self” represents a purely spiritual idea, but in Western psychology the “self” stands for a totality which comprises instincts, physiological and semi-physiological phenomena. To us a purely spiritual totality is inconceivable for the reasons mentioned above.²⁰

[809] It is interesting to note that in the East, too, there are “heretics” who identify the Self with the ego.²¹ With us this heresy is pretty widespread and is subscribed to by all those who firmly believe that ego-consciousness is the only form of psychic life.

[810] The Mind as “the means of attaining the Other Shore” points to a connection between the transcendent function and the idea of the Mind or Self. Since the unknowable substance of the Mind, i.e., of the unconscious, always represents itself to consciousness in the form of symbols—the self being one such symbol—the symbol functions as a “means of attaining the Other Shore,” in other words, as a means of transformation. In my essay on psychic energy I said that the symbol acts as a transformer of energy.²²

[811] My interpretation of the Mind or Self as a symbol is not arbitrary; the text itself calls it “The Great Symbol.”

[812] It is also remarkable that our text recognizes the “potentiality” of the unconscious, as formulated above, by calling the Mind the “Sole Seed” and the “Potentiality of Truth.”

[813] The matrix-character of the unconscious comes out in the term “All-Foundation.”

[814] I have already explained this “timelessness” as a quality inherent in the experience of the collective unconscious. The application of the “yoga of self-liberation” is said to reintegrate all forgotten knowledge of the past with consciousness. The motif of *ἀποκατάστασις* (restoration, restitution) occurs in many redemption myths and is also an important aspect of the psychology of the unconscious, which reveals an extraordinary amount of archaic material in the dreams and spontaneous fantasies of normal and insane people. In the systematic analysis of an individual the spontaneous reawakening of ancestral patterns (as a compensation) has the effect of a restoration. It is also a fact that premonitory dreams are relatively frequent, and this substantiates what the text calls “knowledge of the future.”

[815] The Mind’s “own time” is very difficult to interpret. From the psychological point of view we must agree with Dr. Evans-Wentz’s comment here.²³ The unconscious certainly has its “own time” inasmuch as past, present, and future are blended together in it. Dreams of the type experienced by J. W. Dunne,²⁴ where he dreamed the night before what he ought logically to have dreamed the night after, are not infrequent.

Mind in Its True State

[816] This section describes the state of detached consciousness²⁵ which corresponds to a psychic experience very common throughout the East. Similar descriptions are to be found in Chinese literature, as, for instance, in the *Hui Ming Ch’ing*:

A luminosity surrounds the world of spirit.

We forget one another when, still and pure, we draw strength from the Void.

The Void is filled with the light of the Heart of Heaven ... Consciousness dissolves in vision.²⁶

[817] The statement “Nor is one’s own mind separable from other minds” is another way of expressing the fact of “all-contamination.” Since all distinctions vanish in the unconscious condition, it is only logical that the distinction between separate minds should disappear too. “Wherever there is a lowering of the conscious level we come across instances of unconscious identity,²⁷ or what Lévy-Bruhl calls “participation mystique.”²⁸ The realization of the One Mind is, as our text says, the “at-one-ment of the *Trikāya*”; in fact it creates the at-one-ment. But we are unable to imagine how such a realization could ever be complete in any human individual. There must always be somebody or something left over to experience the realization, to say “I know at-one-ment, I know there is no distinction.” The very fact of the realization proves its inevitable incompleteness. One cannot know something that is not distinct from oneself. Even when I say “I know myself,” an infinitesimal ego—the knowing

“I”—is still distinct from “myself.” In this as it were atomic ego, which is completely ignored by the essentially non-dualist standpoint of the East, there nevertheless lies hidden the whole unabolished pluralistic universe and its unconquered reality.

[818] The experience of “at-one-ment” is one example of those “quick-knowing” realizations of the East, an intuition of what it would be like if one could exist and not exist at the same time. If I were a Moslem, I should maintain that the power of the All-Compassionate is infinite, and that He alone can make a man to be and not to be at the same time. But for my part I cannot conceive of such a possibility. I therefore assume that, in this point, Eastern intuition has overreached itself.

Mind Is Non-Created

[819] This section emphasizes that as the Mind is without characteristics, one cannot assert that it is created. But then, it would be illogical to assert that it is non-created, for such a qualification would amount to a “characteristic.” As a matter of fact you can make no assertion whatever about a thing that is indistinct, void of characteristics and, moreover, “unknowable.” For precisely this reason Western psychology does not speak of the One Mind, but of the unconscious, regarding it as a thing-in-itself, a noumenon, “a merely negative borderline concept,” to quote Kant.²⁹ We have often been reproached for using such a negative term, but unfortunately intellectual honesty does not allow a positive one.

The Yoga of Introspection

[820] Should there be any doubt left concerning the identity of the One Mind and the unconscious, this section certainly ought to dispel it. “The One Mind being verily of the Voidness and without any foundation, one’s mind is, likewise, as vacuous as the sky.” The One Mind and the individual mind are equally void and vacuous. Only the collective and the personal unconscious can be meant by this statement, for the conscious mind is in no circumstances “vacuous.”

[821] As I have said earlier, the Eastern mind insists first and foremost upon the subjective factor, and in particular upon the intuitive “first impression,” or the psychic disposition. This is borne out by the statement that “All appearances are verily one’s own concepts, self-conceived in the mind.”

The Dharma Within

[822] *Dharma*, law, truth, guidance, is said to be “nowhere save in the mind.” Thus the unconscious is credited with all those faculties which the West attributes to God. The transcendent function, however, shows how right the East is in assuming that the complex experience of *dharma* comes from “within,” i.e., from the unconscious. It

also shows that the phenomenon of spontaneous compensation, being beyond the control of man, is quite in accord with the formula “grace” or the “will of God.”

[823] This and the preceding section insist again and again that introspection is the only source of spiritual information and guidance. If introspection were something morbid, as certain people in the West opine, we should have to send practically the whole East, or such parts of it as are not yet infected with the blessings of the West, to the lunatic asylum.

The Wondrousness of These Teachings

[824] This section calls the mind “Natural Wisdom,” which is very much the same expression that I used in order to designate the symbols produced by the unconscious. I called them “natural symbols.”³⁰ I chose the term before I had any knowledge of this text. I mention this fact simply because it illustrates the close parallelism between the findings of Eastern and Western psychology.

[825] The text also confirms what we said earlier about the impossibility of a “knowing” ego. “Although it is Total Reality, there is no perceiver of it. “Wondrous is this.” Wondrous indeed, and incomprehensible; for how could such a thing ever be *realized* in the true sense of the word? “It remains undefiled by evil” and “it remains unallied to good.” One is reminded of Nietzsche’s “six thousand feet beyond good and evil.” But the consequences of such a statement are usually ignored by the emulators of Eastern wisdom. While one is safely ensconced in one’s cosy flat, secure in the favour of the Oriental gods, one is free to admire this lofty moral indifference. But does it agree with our temperament, or with our history, which is not thereby conquered but merely forgotten? I think not. Anyone who affects the higher yoga will be called upon to prove his professions of moral indifference, not only as the doer of evil but, even more, as its victim. As psychologists well know, the moral conflict is not to be settled merely by a declaration of superiority bordering on inhumanity. We are witnessing today some terrifying examples of the Superman’s aloofness from moral principles.

[826] I do not doubt that the Eastern liberation from vices, as well as from virtues, is coupled with detachment in every respect, so that the yogi is translated beyond this world, and quite inoffensive. But I suspect every European attempt at detachment of being mere liberation from moral considerations. Anybody who tries his hand at yoga ought therefore to be conscious of its far-reaching consequences, or else his so-called quest will remain a futile pastime.

The Fourfold Great Path

[827] The text says: “This meditation [is] devoid of mental concentration.” The usual assumption about yoga is that it chiefly consists in intense concentration. We think

we know what concentration means, but it is very difficult to arrive at a real understanding of Eastern concentration. Our sort may well be just the opposite of the Eastern, as a study of Zen Buddhism will show.³¹ However, if we take “devoid of mental concentration” literally, it can only mean that the meditation does not centre upon anything. Not being centred, it would be rather like a dissolution of consciousness and hence a direct approach to the unconscious condition. Consciousness always implies a certain degree of concentration, without which there would be no clarity of mental content and no consciousness of anything. Meditation without concentration would be a waking but empty condition, on the verge of falling asleep. Since our text calls this “the most excellent of meditations” we must suppose the existence of less excellent meditations which, we infer, would be characterized by more concentration. The meditation our text has in mind seems to be a sort of Royal Road to the unconscious.

The Great Light

[828] The central mystical experience of enlightenment is aptly symbolized by Light in most of the numerous forms of mysticism. It is a curious paradox that the approach to a region which seems to us the way into utter darkness should yield the light of illumination as its fruit. This is, however, the usual *enantiodromia per tenebras ad lucem*. Many initiation ceremonies³² stage a *κατάβασις εἰς ἄντρον* (descent into the cave), a diving down into the depths of the baptismal water, or a return to the womb of rebirth. Rebirth symbolism simply describes the union of opposites—conscious and unconscious—by means of concretistic analogies. Underlying all rebirth symbolism is the transcendent function. Since this function results in an increase of consciousness (the previous condition augmented by the addition of formerly unconscious contents), the new condition carries more insight, which is symbolized by more light.³³ It is therefore a more enlightened state compared with the relative darkness of the previous state. In many cases the Light even appears in the form of a vision.

The Yoga of the Nirvanic Path

[829] This section gives one of the best formulations of the complete dissolution of consciousness, which appears to be the goal of this yoga: “There being no two such things as action and performer of action, if one seeks the performer of action and no performer of action be found anywhere, thereupon the goal of all fruit-obtaining is reached and also the final consummation itself.”

[830] With this very complete formulation of the method and its aim, I reach the end of my commentary. The text that follows, in Book II, is of great beauty and wisdom, and contains nothing that requires further comment. It can be translated into

psychological language and interpreted with the help of the principles I have here set forth in Part I and illustrated in Part II.

PSYCHOLOGICAL COMMENTARY ON "THE TIBETAN BOOK OF THE DEAD"¹

[831] Before embarking upon the psychological commentary, I should like to say a few words about the text itself. The Tibetan Book of the Dead, or the *Bardo Thödol*, is a book of instructions for the dead and dying. Like the Egyptian Book of the Dead, it is meant to be a guide for the dead man during the period of his *Bardo* existence, symbolically described as an intermediate state of forty-nine days' duration between death and rebirth. The text falls into three parts. The first part, called *Chikhai Bardo*, describes the psychic happenings at the moment of death. The second part, or *Chönyid Bardo*, deals with the dream-state which supervenes immediately after death, and with what are called "karmic illusions." The third part, or *Sidpa Bardo*, concerns the onset of the birth-instinct and of prenatal events. It is characteristic that supreme insight and illumination, and hence the greatest possibility of attaining liberation, are vouchsafed during the actual process of dying. Soon afterward, the "illusions" begin which lead eventually to reincarnation, the illuminative lights growing ever fainter and more multifarious, and the visions more and more terrifying. This descent illustrates the estrangement of consciousness from the liberating truth as it approaches nearer and nearer to physical rebirth. The purpose of the instruction is to fix the attention of the dead man, at each successive stage of delusion and entanglement, on the ever-present possibility of liberation, and to explain to him the nature of his visions. The text of the *Bardo Thödol* is recited by the lama in the presence of the corpse.

[832] I do not think I could better discharge my debt of thanks to the two previous translators of the *Bardo Thödol*, the late Lama Kazi Dawa-Samdup and Dr. Evans-Wentz, than by attempting, with the aid of a psychological commentary, to make the magnificent world of ideas and the problems contained in this treatise a little more intelligible to the Western mind. I am sure that all who read this book with open eyes, and who allow it to impress itself upon them without prejudice, will reap a rich reward.

*

[833] The *Bardo Thödol*, fitly named by its editor, Dr. W. Y. Evans-Wentz, "The Tibetan Book of the Dead," caused a considerable stir in English-speaking countries at the time of its first appearance in 1927. It belongs to that class of writings which are not only of interest to specialists in Mahayana Buddhism, but which also, because of their deep humanity and their still deeper insight into the secrets of the human

psyche, make an especial appeal to the layman who is seeking to broaden his knowledge of life. For years, ever since it was first published, the *Bardo Thödol* has been my constant companion, and to it I owe not only many stimulating ideas and discoveries, but also many fundamental insights. Unlike the Egyptian Book of the Dead, which always prompts one to say too much or too little, the *Bardo Thödol* offers one an intelligible philosophy addressed to human beings rather than to gods or primitive savages. Its philosophy contains the quintessence of Buddhist psychological criticism; and, as such, one can truly say that it is of an unexampled sublimity. Not only the “wrathful” but also the “peaceful” deities are conceived as samsaric projections of the human psyche, an idea that seems all too obvious to the enlightened European, because it reminds him of his own banal simplifications. But though the European can easily explain away these deities as projections, he would be quite incapable of positing them at the same time as real. The *Bardo Thödol* can do that, because, in certain of its most essential metaphysical premises, it has the enlightened as well as the unenlightened European at a disadvantage. The ever-present, unspoken assumption of the *Bardo Thödol* is the antinomian character of all metaphysical assertions, and also the idea of the qualitative difference of the various levels of consciousness and of the metaphysical realities conditioned by them. The background of this unusual book is not the niggardly European “either-or,” but a magnificently affirmative “both-and.” This statement may appear objectionable to the Western philosopher, for the West loves clarity and unambiguity; consequently, one philosopher clings to the position, “God is,” while another clings equally fervently to the negation, “God is not.” What would these hostile brethren make of an assertion like the following [p. 96]:

Recognizing the voidness of thine own intellect to be Buddhahood, and knowing it at the same time to be thine own consciousness, thou shalt abide in the state of the divine mind of the Buddha.

[834] Such an assertion is, I fear, as unwelcome to our Western philosophy as it is to our theology. The *Bardo Thödol* is in the highest degree psychological in its outlook; but, with us, philosophy and theology are still in the medieval, pre-psychological stage where only the assertions are listened to, explained, defended, criticized and disputed, while the authority that makes them has, by general consent, been deposed as outside the scope of discussion.

[835] Metaphysical assertions, however, are *statements of the psyche*, and are therefore psychological. To the Western mind, which compensates its well-known feelings of resentment by a slavish regard for “rational” explanations, this obvious truth seems all too obvious, or else it is seen as an inadmissible negation of metaphysical “truth.” Whenever the Westerner hears the word “psychological,” it always sounds to him like “*only* psychological.” For him the “soul” is something pitifully small, unworthy,

personal, subjective, and a lot more besides. He therefore prefers to use the word “mind” instead, though he likes to pretend at the same time that a statement which may in fact be very subjective indeed is made by the “mind,” naturally by the “Universal Mind,” or even—at a pinch—by the “Absolute” itself. This rather ridiculous presumption is probably a compensation for the regrettable smallness of the soul. It almost seems as if Anatole France had uttered a truth which were valid for the whole Western world when, in his *Penguin Island*, Cathérine d’Alexandrie offers this advice to God: “Donnez-leur une âme, mais une petite!”

[836] It is the psyche which, by the divine creative power inherent in it, makes the metaphysical assertion; it posits the distinctions between metaphysical entities. Not only is it the condition of all metaphysical reality, it is that reality.

[837] With this great psychological truth the *Bardo Thödol* opens. The book is not a ceremonial of burial, but a set of instructions for the dead, a guide through the changing phenomena of the *Bardo* realm, that state of existence which continues for forty-nine days after death until the next incarnation. If we disregard for the moment the supratemporality of the soul—which the East accepts as a self-evident fact—we, as readers of the *Bardo Thödol*, shall be able to put ourselves without difficulty in the position of the dead man, and shall consider attentively the teaching set forth in the opening section, which is outlined in the quotation above. At this point, the following words are spoken, not presumptuously, but in a courteous manner [pp. 95f.]:

O nobly born (so and so), listen. Now thou art experiencing the Radiance of the Clear Light of Pure Reality. Recognize it. O nobly-born, thy present intellect, in real nature void, not formed into anything as regards characteristics or colour, naturally void, is the very Reality, the All-Good.

Thine own intellect, which is now voidness, yet not to be regarded as of the voidness of nothingness, but as being the intellect itself, unobstructed, shining, thrilling, and blissful, is the very consciousness, the All-good Buddha.

[838] This realization is the *Dharmakāya* state of perfect enlightenment; or, as we should express it in our own language, the creative ground of all metaphysical assertion is consciousness, as the invisible, intangible manifestation of the soul. The “Voidness” is the state transcendent over all assertion and all predication. The fulness of its discriminative manifestations still lies latent in the soul.

[839] The text continues:

Thine own consciousness, shining, void, and inseparable from the Great Body of Radiance, hath no birth, nor death, and is the Immutable Light—Buddha Amitābha.

[840] The soul is assuredly not small, but the radiant Godhead itself. The West finds this statement either very dangerous, if not downright blasphemous, or else accepts it unthinkingly and then suffers from a theosophical inflation. Somehow we always have a wrong attitude to these things. But if we can master ourselves far enough to

refrain from our chief error of always wanting to *do* something with things and put them to practical use, we may perhaps succeed in learning an important lesson from these teachings, or at least in appreciating the greatness of the *Bardo Thödol*, which vouchsafes to the dead man the ultimate and highest truth, that even the gods are the radiance and reflection of our own souls. No sun is thereby eclipsed for the Oriental as it would be for the Christian, who would feel robbed of his God; on the contrary, his soul is the light of the Godhead, and the Godhead is the soul. The East can sustain this paradox better than the unfortunate Angelus Silesius, who even today would be psychologically far in advance of his time.

[841] It is highly sensible of the *Bardo Thödol* to make clear to the dead man the primacy of the psyche, for that is the one thing which life does not make clear to us. We are so hemmed in by things which jostle and oppress that we never get a chance, in the midst of all these “given” things, to wonder by whom they are “given.” It is from this world of “given” things that the dead man liberates himself; and the purpose of the instruction is to help him towards this liberation. We, if we put ourselves in his place, shall derive no lesser reward from it, since we learn from the very first paragraphs that the “giver” of all “given” things dwells within us. This is a truth which in the face of all evidence, in the greatest things as in the smallest, is never known, although it is often so very necessary, indeed vital, for us to know it. Such knowledge, to be sure, is suitable only for contemplatives who are minded to understand the purpose of existence, for those who are Gnostics by temperament and therefore believe in a saviour who, like the saviour of the Mandaeans, is called “knowledge of life” (Manda d’Hayye). Perhaps it is not granted to many of us to see the world as something “given.” A great reversal of standpoint, calling for much sacrifice, is needed before we can see the world as “given” by the very nature of the psyche. It is so much more straightforward, more dramatic, impressive, and therefore more convincing, to see all the things that happen to me than to observe how I make them happen. Indeed, the animal nature of man makes him resist seeing himself as the maker of his circumstances. That is why attempts of this kind were always the object of secret initiations, culminating as a rule in a figurative death which symbolized the total character of this reversal. And, in point of fact, the instruction given in the *Bardo Thödol* serves to recall to the dead man the experiences of his initiation and the teachings of his guru, for the instruction is, at bottom, nothing less than an initiation of the dead into the *Bardo* life, just as the initiation of the living was a preparation for the Beyond. Such was the case, at least, with all the mystery cults in ancient civilizations from the time of the Egyptian and Eleusinian mysteries. In the initiation of the living, however, this “Beyond” is not a world beyond death, but a reversal of the mind’s intentions and outlook, a psychological “Beyond” or, in Christian terms, a “redemption” from the trammels of the world and of sin.

Redemption is a separation and deliverance from an earlier condition of darkness and unconsciousness, and leads to a condition of illumination and releasedness, to victory and transcendence over everything “given.”

[842] Thus far the *Bardo Thödol* is, as Dr. Evans-Wentz also feels, an initiation process whose purpose it is to restore to the soul the divinity it lost at birth. Now it is a characteristic of Oriental religious literature that the teaching invariably begins with the most important item, with the ultimate and highest principles which, with us, would come last—as for instance in Apuleius, where Lucius is worshipped as Helios only right at the end. Accordingly, in the *Bardo Thödol*, the initiation is a series of diminishing climaxes ending with rebirth in the womb. The only “initiation process” that is still alive and practised today in the West is the analysis of the unconscious as used by doctors for therapeutic purposes. This penetration into the ground-layers of consciousness is a kind of rational maieutics in the Socratic sense, a bringing forth of psychic contents that are still germinal, subliminal, and as yet unborn. Originally, this therapy took the form of Freudian psychoanalysis and was mainly concerned with sexual fantasies. This is the realm that corresponds to the last and lowest region of the *Bardo*, known as the *Sidpa Bardo*, where the dead man, unable to profit by the teachings of the *Chikhai* and *Chönyid Bardo*, begins to fall a prey to sexual fantasies and is attracted by the vision of mating couples. Eventually he is caught by a womb and born into the earthly world again. Meanwhile, as one might expect, the Oedipus complex starts functioning. If his karma destines him to be reborn as a man, he will fall in love with his mother-to-be and will find his father hateful and disgusting. Conversely, the future daughter will be highly attracted by her father-to-be and repelled by her mother. The European passes through this specifically Freudian domain when his unconscious contents are brought to light under analysis, but he goes in the reverse direction. He journeys back through the world of infantile-sexual fantasy to the womb. It has even been suggested in psychoanalytical circles that the trauma par excellence is the birth-experience itself—nay more, psychoanalysts even claim to have probed back to memories of intra-uterine origin. Here Western reason reaches its limit, unfortunately. I say “unfortunately,” because one rather wishes that Freudian psychoanalysis could have happily pursued these so-called intra-uterine experiences still further back. Had it succeeded in this bold undertaking, it would surely have come out beyond the *Sidpa Bardo* and penetrated from behind into the lower reaches of the *Chönyid Bardo*. It is true that, with the equipment of our existing biological ideas, such a venture would not have been crowned with success; it would have needed a wholly different kind of philosophical preparation from that based on current scientific assumptions. But, had the journey back been consistently pursued, it would undoubtedly have led to the postulate of a pre-uterine existence, a true *Bardo* life, if only it had been possible to find at least some trace of an experiencing

subject. As it was, the psychoanalysts never got beyond purely conjectural traces of intra-uterine experiences, and even the famous “birth trauma” has remained such an obvious truism that it can no longer explain anything, any more than can the hypothesis that life is a disease with a bad prognosis because its outcome is always fatal.

[843] Freudian psychoanalysis, in all essential aspects, never went beyond the experiences of the *Sidpa Bardo*; that is, it was unable to extricate itself from sexual fantasies and similar “incompatible” tendencies which cause anxiety and other affective states. Nevertheless, Freud’s theory is the first attempt made by the West to investigate, as if from below, from the animal sphere of instinct, the psychic territory that corresponds in Tantric Lamaism to the *Sidpa Bardo*. A very justifiable fear of metaphysics prevented Freud from penetrating into the sphere of the “occult.” In addition to this, the *Sidpa* state, if we are to accept the psychology of the *Sidpa Bardo*, is characterized by the fierce wind of karma, which whirls the dead man along until he comes to the “womb-door.” In other words, the *Sidpa* state permits of no going back, because it is sealed off against the *Chönyid* state by an intense striving downwards, towards the animal sphere of instinct and physical rebirth. That is to say, anyone who penetrates into the unconscious with purely biological assumptions will become stuck in the instinctual sphere and be unable to advance beyond it, for he will be pulled back again and again into physical existence. It is therefore not possible for Freudian theory to reach anything except an essentially negative valuation of the unconscious. It is a “nothing but.” At the same time, it must be admitted that this view of the psyche is typically Western, only it is expressed more blatantly, more plainly, and more ruthlessly than others would have dared to express it, though at bottom they think no differently. As to what “mind” means in this connection, we can only cherish the hope that it will carry conviction. But, as even Max Scheler² noted with regret, the power of this “mind” is, to say the least of it, doubtful.

[844] I think, then, we can state it as a fact that with the aid of psychoanalysis the rationalizing mind of the West has pushed forward into what one might call the neuroticism of the *Sidpa* state, and has there been brought to an inevitable standstill by the uncritical assumption that everything psychological is subjective and personal. Even so, this advance has been a great gain, inasmuch as it has enabled us to take one more step behind our conscious lives. This knowledge also gives us a hint of how we ought to read the *Bardo Thödol*—that is, backwards. If, with the help of our Western science, we have to some extent succeeded in understanding the psychological character of the *Sidpa Bardo*, our next task is to see if we can make anything of the preceding *Chönyid Bardo*.

[845] The *Chönyid* state is one of karmic illusion—that is to say, illusions which result from the psychic residua of previous existences. According to the Eastern view,

karma implies a sort of psychic theory of heredity based on the hypothesis of reincarnation, which in the last resort is an hypothesis of the supratemporality of the soul. Neither our scientific knowledge nor our reason can keep in step with this idea. There are too many if's and but's. Above all, we know desperately little about the possibilities of continued existence of the individual soul after death, so little that we cannot even conceive how anyone could prove anything at all in this respect. Moreover, we know only too well, on epistemological grounds, that such a proof would be just as impossible as the proof of God. Hence we may cautiously accept the idea of karma only if we understand it as *psychic heredity* in the very widest sense of the word. Psychic heredity does exist—that is to say, there is inheritance of psychic characteristics such as predisposition to disease, traits of character, special gifts, and so forth. It does no violence to the psychic nature of these complex facts if natural science reduces them to what appear to be physical aspects (nuclear structures in cells, and so on). They are essential phenomena of life which express themselves, in the main, psychically, just as there are other inherited characteristics which express themselves, in the main, physiologically, on the physical level. Among these inherited psychic factors there is a special class which is not confined either to family or to race. These are the universal dispositions of the mind, and they are to be understood as analogous to Plato's forms (*eidola*), in accordance with which the mind organizes its contents. One could also describe these forms as *categories* analogous to the logical categories which are always and everywhere present as the basic postulates of reason. Only, in the case of our "forms," we are not dealing with categories of reason but with categories of the *imagination*. As the products of imagination are always in essence visual, their forms must, from the outset, have the character of images and moreover of *typical* images, which is why, following St. Augustine, I call them "archetypes." Comparative religion and mythology are rich mines of archetypes, and so is the psychology of dreams and psychoses. The astonishing parallelism between these images and the ideas they serve to express has frequently given rise to the wildest migration theories, although it would have been far more natural to think of the remarkable similarity of the human psyche at all times and in all places. Archetypal fantasy-forms are, in fact, reproduced spontaneously anytime and anywhere, without there being any conceivable trace of direct transmission. The original structural components of the psyche are of no less surprising a uniformity than are those of the visible body. The archetypes are, so to speak, organs of the pre-rational psyche. They are eternally inherited forms and ideas which have at first no specific content. Their specific content only appears in the course of the individual's life, when personal experience is taken up in precisely these forms. If the archetypes were not pre-existent in identical form everywhere, how could one explain the fact, postulated at almost every turn by the *Bardo Thödol*, that the dead do not know that they are dead, and that this assertion is to be met with

just as often in the dreary, half-baked literature of European and American Spiritualism? Although we find the same assertion in Swedenborg, knowledge of his writings can hardly be sufficiently widespread for this little bit of information to have been picked up by every small-town medium. And a connection between Swedenborg and the *Bardo Thödol* is completely unthinkable. It is a primordial, universal idea that the dead simply continue their earthly existence and do not know that they are disembodied spirits—an archetypal idea which enters into immediate, visible manifestation whenever anyone sees a ghost. It is significant, too, that ghosts all over the world have certain features in common. I am naturally aware of the unverifiable spiritualistic hypothesis, though I have no wish to make it my own. I must content myself with the hypothesis of an omnipresent, but differentiated, psychic structure which is inherited and which necessarily gives a certain form and direction to all experience. For, just as the organs of the body are not mere lumps of indifferent, passive matter, but are dynamic, functional complexes which assert themselves with imperious urgency, so also the archetypes, as organs of the psyche, are dynamic, instinctual complexes which determine psychic life to an extraordinary degree. That is why I also call them *dominants* of the unconscious. The layer of unconscious psyche which is made up of these universal dynamic forms I have termed the *collective unconscious*.

[846] So far as I know, there is no inheritance of individual prenatal, or pre-uterine, memories, but there are undoubtedly inherited archetypes which are, however, devoid of content, because, to begin with, they contain no personal experiences. They only emerge into consciousness when personal experiences have rendered them visible. As we have seen, *Sidpa* psychology consists in wanting to live and to be born. (The *Sidpa Bardo* is the “*Bardo* of Seeking Rebirth.”) Such a state, therefore, precludes any experience of transsubjective psychic realities, unless the dead man refuses categorically to be born back again into the world of consciousness. According to the teachings of the *Bardo Thödol*, it is still possible for him, in each of the *Bardo* states, to reach the *Dharmakāya* by transcending the four-faced Mount Meru, provided that he does not yield to his desire to follow the “dim lights.” This is as much as to say that the individual must desperately resist the dictates of reason, as we understand it, and give up the supremacy of egohood, regarded by reason as sacrosanct. What this means in practice is complete capitulation to the objective powers of the psyche, with all that this entails; a kind of figurative death, corresponding to the Judgment of the Dead in the *Sidpa Bardo*. It means the end of all conscious, rational, morally responsible conduct of life, and a voluntary surrender to what the *Bardo Thödol* calls “karmic illusion.” Karmic illusion springs from belief in a visionary world of an extremely irrational nature, which neither accords with nor derives from our rational judgments but is the exclusive product of uninhibited imagination. It is sheer dream

or “fantasy,” and every well-meaning person will instantly caution us against it; nor indeed can one see at first sight what is the difference between fantasies of this kind and the phantasmagoria of a lunatic. Very often only a slight *abaissement du niveau mental* is needed to unleash this world of illusion. The terror and darkness of this moment are reflected in the experiences described in the opening sections of the *Sidpa Bardo*. But the contents of the *Chönyid Bardo* reveal the archetypes, the karmic images which appear first in their terrifying form. The *Chönyid* state is equivalent to a deliberately induced psychosis.

[847] One often hears and reads about the dangers of yoga, particularly of the ill-reputed *kundalini* yoga. The deliberately induced psychotic state, which in certain unstable individuals might easily lead to a real psychosis, is a danger that needs to be taken very seriously indeed. These things really are dangerous and ought not to be meddled with in our typically Western way. It is a meddling with fate, which strikes at the very roots of human existence and can let loose a flood of sufferings of which no sane person ever dreamed. These sufferings correspond to the hellish torments of the *Chönyid* state, described in the text as follows:

Then the Lord of Death will place round thy neck a rope and drag thee along; he will cut off thy head, tear out thy heart, pull out thy intestines, lick up thy brain, drink thy blood, eat thy flesh, and gnaw thy bones; but thou wilt be incapable of dying. Even when thy body is hacked to pieces, it will revive again. The repeated hacking will cause intense pain and torture.³

[848] These tortures aptly describe the real nature of the danger: it is a disintegration of the wholeness of the *Bardo* body, which is a kind of “subtle body” constituting the visible envelope of the psychic self in the after-death state. The psychological equivalent of this dismemberment is psychic dissociation. In its deleterious form it would be schizophrenia (split mind). This most common of all mental illnesses consists essentially in a marked *abaissement du niveau mental* which abolishes the normal checks imposed by the conscious mind and thus gives unlimited scope to the play of the unconscious “dominants.”

[849] The transition, then, from the *Sidpa* state to the *Chönyid* state is a dangerous reversal of the aims and intentions of the conscious mind. It is a sacrifice of the ego’s stability and a surrender to the extreme uncertainty of what must seem like a chaotic riot of phantasmal forms. When Freud coined the phrase that the ego was “the true seat of anxiety,” he was giving voice to a very true and profound intuition. Fear of self-sacrifice lurks deep in every ego, and this fear is often only the precariously controlled demand of the unconscious forces to burst out in full strength. No one who strives for selfhood (individuation) is spared this dangerous passage, for that which is feared also belongs to the wholeness of the self—the sub-human, or supra-human, world of psychic “dominants” from which the ego originally emancipated itself with enormous effort, and then only partially, for the sake of a more or less illusory

freedom. This liberation is certainly a very necessary and very heroic undertaking, but it represents nothing final: it is merely the creation of a *subject*, who, in order to find fulfilment, has still to be confronted by an *object*. This, at first sight, would appear to be the world, which is swelled out with projections for that very purpose. Here we seek and find our difficulties, here we seek and find our enemy, here we seek and find what is dear and precious to us; and it is comforting to know that all evil and all good is to be found out there, in the visible object, where it can be conquered, punished, destroyed, or enjoyed. But nature herself does not allow this paradisaic state of innocence to continue for ever. There are, and always have been, those who cannot help but see that the world and its experiences are in the nature of a symbol, and that it really reflects something that lies hidden in the subject himself, in his own transubjective reality. It is from this profound intuition, according to lamaist doctrine, that the *Chönyid* state derives its true meaning, which is why the *Chönyid Bardo* is entitled “The *Bardo* of the Experiencing of Reality.”

[850] The reality experienced in the *Chönyid* state is, as the last section [pp. 143ff.] of this *Bardo* teaches, the reality of thought. The “thought-forms” appear as realities, fantasy takes on real form, and the terrifying dream evoked by karma and played out by the unconscious “dominants” begins. The first to appear (if we read the text backwards) is the all-destroying God of Death, the epitome of all terrors; he is followed by the twenty-eight “power-holding” and sinister goddesses and the fifty-eight “blood-drinking” goddesses. In spite of their demonic aspect, which appears as a confusing chaos of terrifying attributes and monstrosities, a certain order is already discernible. We find that there are companies of gods and goddesses who are arranged according to the four directions and are distinguished by typical mystic colours. It gradually becomes clearer that all these deities are organized into mandalas, or circles, containing a cross of the four colours. The colours are coordinated with the four aspects of wisdom:

- (1) White = the light-path of the mirror-like wisdom;
- (2) Yellow = the light-path of the wisdom of equality;
- (3) Red = the light-path of the discriminative wisdom;
- (4) Green = the light-path of the all-performing wisdom.

[851] On a higher level of insight, the dead man knows that the real thought-forms all emanate from himself, and that the four light-paths of wisdom which appear before him are the radiations of his own psychic faculties. This takes us straight to the psychology of the lamaistic mandala, which I have already discussed in the book I brought out with the late Richard Wilhelm, *The Secret of the Golden Flower*.

[852] Continuing our ascent backwards through the region of the *Chönyid Bardo*, we come finally to the vision of the Four Great Ones: the green Amogha-Siddhi, the red Amitābha, the yellow Ratna-Sambhava, and the white Vajra-Sattva. The ascent ends

with the effulgent blue light of the *Dharmadhātu*, the Buddha-body, which glows in the midst of the mandala from the heart of Vairochana.

[853] With this final vision the karmic illusions cease; consciousness, weaned away from all form and from all attachment to objects, returns to the timeless, inchoate state of the *Dharmakāya*. Thus (reading backwards) the *Chikhai* state, which appeared at the moment of death, is reached.

[854] I think these few hints will suffice to give the attentive reader some idea of the psychology of the *Bardo Thödol*. The book describes a way of initiation in reverse, which, unlike the eschatological expectations of Christianity, prepares the soul for a descent into physical being. The thoroughly intellectualistic and rationalistic worldly-mindedness of the European makes it advisable for us to reverse the sequence of the *Bardo Thödol* and to regard it as an account of Eastern initiation experiences, though one is perfectly free, if one chooses, to substitute Christian symbols for the gods of the *Chönyid Bardo*. At any rate, the sequence of events as I have described it offers a close parallel to the phenomenology of the European unconscious when it is undergoing an “initiation process,” that is to say, when it is being analysed. The transformation of the unconscious that occurs under analysis makes it the natural analogue of the religious initiation ceremonies, which do, however, differ in principle from the natural process in that they anticipate the natural course of development and substitute for the spontaneous production of symbols a deliberately selected set of symbols prescribed by tradition. We can see this in the *Exercitia* of Ignatius Loyola, or in the yoga meditations of the Buddhists and Tantrists.

[855] The reversal of the order of the chapters, which I have suggested here as an aid to understanding, in no way accords with the original intention of the *Bardo Thödol*. Nor is the psychological use we make of it anything but a secondary intention, though one that is possibly sanctioned by lamaist custom. The real purpose of this singular book is the attempt, which must seem very strange to the educated European of the twentieth century, to enlighten the dead on their journey through the regions of the *Bardo*. The Catholic Church is the only place in the world of the white man where any provision is made for the souls of the departed. Inside the Protestant camp, with its world-affirming optimism, we only find a few mediumistic “rescue circles,” whose main concern is to make the dead aware of the fact that they *are* dead.⁴ But, generally speaking, we have nothing in the West that is in any way comparable to the *Bardo Thödol*, except for certain secret writings which are inaccessible to the wider public and to the ordinary scientist. According to tradition, the *Bardo Thödol*, too, seems to have been included among the “hidden” books, as Dr. Evans-Wentz makes clear in his Introduction. As such, it forms a special chapter in the magical “cure of the soul” which extends even beyond death. This cult of the dead is rationally based on the belief in the supra-temporality of the soul, but its irrational basis is to be found

in the psychological need of the living to do something for the departed. This is an elementary need which forces itself upon even the most “enlightened” individuals when faced by the death of relatives and friends. That is why, enlightenment or no enlightenment, we still have all manner of ceremonies for the dead. If Lenin had to submit to being embalmed and put on show in a sumptuous mausoleum like an Egyptian pharaoh, we may be quite sure it was not because his followers believed in the resurrection of the body. Apart, however, from the Masses said for the soul in the Catholic Church, the provisions we make for the dead are rudimentary and on the lowest level, not because we cannot convince ourselves of the soul’s immortality, but because we have rationalized the above-mentioned psychological need out of existence. We behave as if we did not have this need, and because we cannot believe in a life after death we prefer to do nothing about it. Simpler-minded people follow their own feelings, and, as in Italy, build themselves funeral monuments of gruesome beauty. The Catholic Masses for the soul are on a level considerably above this, because they are expressly intended for the psychic welfare of the deceased and are not a mere gratification of lachrymose sentiments. But the highest application of spiritual effort on behalf of the departed is surely to be found in the instructions of the *Bardo Thödol*. They are so detailed and thoroughly adapted to the apparent changes in the dead man’s condition that every serious-minded reader must ask himself whether these wise old lamas might not, after all, have caught a glimpse of the fourth dimension and twitched the veil from the greatest of life’s secrets.

[856] Even if the truth should prove to be a disappointment, one almost feels tempted to concede at least some measure of reality to the vision of life in the *Bardo*. At any rate, it is unexpectedly original, if nothing else, to find the after-death state, of which our religious imagination has formed the most grandiose conceptions, painted in lurid colours as a terrifying dream-state of a progressively degenerative character.⁵ The supreme vision comes not at the end of the *Bardo*, but right at the beginning, at the moment of death; what happens afterward is an ever-deepening descent into illusion and obscuration, down to the ultimate degradation of new physical birth. The spiritual climax is reached at the moment when life ends. Human life, therefore, is the vehicle of the highest perfection it is possible to attain; it alone generates the karma that makes it possible for the dead man to abide in the perpetual light of the Voidness without clinging to any object, and thus to rest on the hub of the wheel of rebirth, freed from all illusion of genesis and decay. Life in the *Bardo* brings no eternal rewards or punishments, but merely a descent into a new life which shall bear the individual nearer to his final goal. But this eschatological goal is what he himself brings to birth as the last and highest fruit of the labours and aspirations of earthly existence. This view is not only lofty, it is manly and heroic.

[857] The degenerative character of *Bardo* life is corroborated by the spiritualistic literature of the West, which again and again gives one a sickening impression of the utter inanity and banality of communications from the “spirit world.” The scientific mind does not hesitate to explain these reports as emanations from the unconscious of the mediums and of those taking part in the séance, and even to extend this explanation to the description of the Hereafter given in the Tibetan Book of the Dead. And it is an undeniable fact that the whole book is created out of the archetypal contents of the unconscious. Behind these there lie—and in this our Western reason is quite right—no physical or metaphysical realities, but “merely” the reality of psychic facts, the data of psychic experience. Now whether a thing is “given” subjectively or objectively, the fact remains that it *is*. The *Bardo Thödol* says no more than this, for its five Dhyāni-Buddhas are themselves no more than psychic data. That is just what the dead man has to recognize, if it has not already become clear to him during life that his own psychic self and the giver of all data are one and the same. The world of gods and spirits is truly “nothing but” the collective unconscious inside me. To turn this sentence round so that it reads “The collective unconscious is the world of gods and spirits outside me,” no intellectual acrobatics are needed, but a whole human lifetime, perhaps even many lifetimes of increasing completeness. Notice that I do not say “of increasing perfection,” because those who are “perfect” make another kind of discovery altogether.

[858] The *Bardo Thödol* began by being a “closed” book, and so it has remained, no matter what kind of commentaries may be written upon it. For it is a book that will only open itself to spiritual understanding, and this is a capacity which no man is born with, but which he can only acquire through special training and special experience. It is good that such to all intents and purposes “useless” books exist. They are meant for those “queer folk” who no longer set much store by the uses, aims, and meaning of present-day “civilization.”

VIII

YOGA AND THE WEST

———

FOREWORD TO SUZUKI'S "INTRODUCTION TO ZEN BUDDHISM"

———

THE PSYCHOLOGY OF EASTERN MEDITATION

———

THE HOLY MEN OF INDIA

YOGA AND THE WEST¹

[859] Less than a century has passed since yoga became known to the West. Although all sorts of miraculous tales had come to Europe two thousand years before from the fabled land of India, with its wise men, its gymnosophists and omphalosceps, yet no real knowledge of Indian philosophy and philosophical practices can be said to have existed until, thanks to the efforts of the Frenchman, Anquetil du Perron, the Upanishads were transmitted to the West. A general and more profound knowledge was first made possible by Max Müller, of Oxford, and the Sacred Books of the East edited by him. To begin with, this knowledge remained the preserve of Sanskrit scholars and philosophers. But it was not so very long before the theosophical movement inaugurated by Mme. Blavatsky possessed itself of the Eastern traditions and promulgated them among the general public. For several decades after that, knowledge of yoga in the West developed along two separate lines. On the one hand it was regarded as a strictly academic science, and on the other it became something very like a religion, though it did not develop into an organized Church—despite the endeavours of Annie Besant and Rudolf Steiner. Although he was the founder of the anthroposophical secession, Steiner was originally a follower of Mme. Blavatsky.

[860] The peculiar product resulting from this Western development can hardly be compared with what yoga means in India. In the West, Eastern teaching encountered a special situation, a condition of mind such as the earlier India, at any rate, had never known. This was the strict line of division between science and philosophy, which had already existed, to a greater or lesser degree, for some three hundred years before yoga teachings began to be known in the West. The beginning of this split—a specifically Western phenomenon—really set in with the Renaissance, in the fifteenth century. At that time, there arose a widespread and passionate interest in antiquity, stimulated by the fall of the Byzantine Empire under the onslaught of Islam. Then, for the first time, knowledge of the Greek language and of Greek literature was carried to every corner of Europe. As a direct result of this invasion of so-called pagan philosophy, there arose the great schism in the Roman Church—Protestantism, which soon covered the whole of northern Europe. But not even this renewal of Christianity was able to hold the liberated minds in thrall.

[861] The period of world discovery in the geographical and scientific sense had begun, and to an ever-increasing degree thought emancipated itself from the shackles

of religious tradition. The Churches, of course, continued to exist because they were maintained by the strictly religious needs of the public, but they lost their leadership in the cultural sphere. While the Church of Rome, thanks to her unsurpassed organization, remained a unity, Protestantism split into nearly four hundred denominations. This is a proof on the one hand of its bankruptcy, and, on the other, of a religious vitality which refuses to be stifled. Gradually, in the course of the nineteenth century, this led to syncretistic outgrowths and to the importation on a mass scale of exotic religious systems, such as the religion of Abdul Baha, the Sufi sects, the Ramakrishna Mission, Buddhism, and so on. Many of these systems, for instance anthroposophy, were syncretized with Christian elements. The resultant picture corresponds roughly to the Hellenistic syncretism of the third and fourth centuries A.D., which likewise showed traces of Indian thought. (Cf. Apollonius of Tyana, the Orphic-Pythagorean secret doctrines, the Gnosis, etc.)

[862] All these systems moved on the religious plane and recruited the great majority of their adherents from Protestantism. They are thus, fundamentally, Protestant sects. By directing its main attack against the authority of the Roman Church, Protestantism largely destroyed belief in the Church as the indispensable agent of divine salvation. Thus the burden of authority fell to the individual, and with it a religious responsibility that had never existed before. The decline of confession and absolution sharpened the moral conflict of the individual and burdened him with problems which previously the Church had settled for him, since her sacraments, particularly that of the Mass, guaranteed his salvation through the priest's enactment of the sacred rite. The only things the individual had to contribute were confession, repentance, and penance. With the collapse of the rite, which did the work for him, he had to do without God's answer to his plans. This dissatisfaction explains the demand for systems that promise an answer—the visible or at least noticeable favour of another (higher, spiritual, or divine) power.

[863] European science paid no attention to these hopes and expectations. It lived its intellectual life unconcerned with religious needs and convictions. This—historically inevitable—split in the Western mind also affected yoga so far as this had gained a footing in the West, and led to its being made an object of scientific study on the one hand, while on the other it was welcomed as a way of salvation. But inside the religious movement there were any number of attempts to combine science with religious belief and practice, as for instance Christian Science, theosophy, and anthroposophy. The last-named, especially, likes to give itself scientific airs and has, therefore, like Christian Science, penetrated into intellectual circles.

[864] Since the way of the Protestant is not laid down for him in advance, he gives welcome, one might say, to practically any system which holds out the promise of

successful development. He must now do for himself the very thing which had always been done by the Church as intermediary, and he does not know *how* to do it. If he is a man who has taken his religious needs seriously, he has also made untold efforts towards faith, because his doctrine sets exclusive store by faith. But faith is a charisma, a gift of grace, and not a method. The Protestant is so entirely without a method that many of them have seriously interested themselves in the rigorously Catholic exercises of Ignatius Loyola. Yet, do what they will, the thing that disturbs them most is naturally the contradiction between religious and scientific truth, the conflict between faith and knowledge, which reaches far beyond Protestantism into Catholicism itself. This conflict is due solely to the historical split in the European mind. Had it not been for the—psychologically speaking—unnatural compulsion to believe, and an equally unnatural belief in science, this conflict would have had no reason to exist. One can easily imagine a state of mind in which one simply *knows* and in addition *believes* a thing which seems probable for such and such reasons. There are no grounds whatsoever for any conflict between these two things. Both are necessary, for knowledge alone, like faith alone, is always insufficient.

[865] When, therefore, a “religious” method recommends itself at the same time as “scientific,” it can be sure of finding a public in the West. Yoga fulfils this expectation. Quite apart from the charm of the new and the fascination of the half-understood, there is good reason for yoga to have many adherents. It offers not only the much-sought way, but also a philosophy of unrivalled profundity. It holds out the possibility of controllable experience, and thus satisfies the scientist’s need for “facts.” Moreover, by reason of its breadth and depth, its venerable age, its teachings and methods which cover every sphere of life, it promises undreamt of possibilities which the missionaries of yoga seldom omit to emphasize.

[866] I will remain silent on the subject of what yoga means for India, because I cannot presume to judge something I do not know from personal experience. I can, however, say something about what it means for the West. Our lack of direction borders on psychic anarchy. Therefore, any religious or philosophical practice amounts to a psychological discipline; in other words, it is a method of psychic hygiene. The numerous purely physical procedures of yoga are a physiological hygiene as well, which is far superior to ordinary gymnastics or breathing exercises in that it is not merely mechanistic and scientific but, at the same time, philosophical. In its training of the parts of the body, it unites them with the whole of the mind and spirit, as is quite clear, for instance, in the *prāṇayāma* exercises, where *prāṇa* is both the breath and the universal dynamics of the cosmos. When the doing of the individual is at the same time a cosmic happening, the elation of the body (innervation) becomes one with the elation of the spirit (the universal idea), and from this there arises a living whole which no technique, however scientific, can hope to

produce. Yoga practice is unthinkable, and would also be ineffectual, without the ideas on which it is based. It works the physical and the spiritual into one another in an extraordinarily complete way.

[867] In the East, where these ideas and practices originated, and where an uninterrupted tradition extending over some four thousand years has created the necessary spiritual conditions, yoga is, as I can readily believe, the perfect and appropriate method of fusing body and mind together so that they form a unity that can hardly be doubted. They thus create a psychological disposition which makes possible intuitions that transcend consciousness. The Indian mentality has no difficulty in operating intelligently with a concept like *prāna*. The West, on the contrary, with its bad habit of wanting to believe on the one hand, and its highly developed scientific and philosophical critique on the other, finds itself in a real dilemma. Either it falls into the trap of faith and swallows concepts like *prāna*, *atman*, *chakra*, *samādhi*, etc., without giving them a thought, or its scientific critique repudiates them one and all as “pure mysticism.” The split in the Western mind therefore makes it impossible at the outset for the intentions of yoga to be realized in any adequate way. It becomes either a strictly religious matter, or else a kind of training like Pelmanism, breath-control, eurhythmics, etc., and not a trace is to be found of the unity and wholeness of nature which is characteristic of yoga. The Indian can forget neither the body nor the mind, while the European is always forgetting either the one or the other. With this capacity to forget he has, for the time being, conquered the world. Not so the Indian. He not only knows his own nature, but he knows also how much he himself is nature. The European, on the other hand, has a science of nature and knows astonishingly little of his own nature, the nature within him. For the Indian, it comes as a blessing to know of a method which helps him to control the supreme power of nature within and without. For the European, it is sheer poison to suppress his nature, which is warped enough as it is, and to make out of it a willing robot.

[868] It is said of the yogi that he can remove mountains, though it would be difficult to furnish any real proof of this. The power of the yogi operates within limits acceptable to his environment. The European, on the other hand, can blow up mountains, and the World War has given us a bitter foretaste of what he is capable of when free rein is given to an intellect that has grown estranged from human nature. As a European, I cannot wish the European more “control” and more power over the nature within and around us. Indeed, I must confess to my shame that I owe my best insights (and there are some quite good ones among them) to the circumstance that I have always done just the opposite of what the rules of yoga prescribe. Through his historical development, the European has become so far removed from his roots that his mind was finally split into faith and knowledge, in the same way that every

psychological exaggeration breaks up into its inherent opposites. He needs to return, not to Nature in the manner of Rousseau, but to his own nature. His task is to find the natural man again. Instead of this, there is nothing he likes better than systems and methods by which he can repress the natural man who is everywhere at cross purposes with him. He will infallibly make a wrong use of yoga because his psychic disposition is quite different from that of the Oriental. I say to whomsoever I can: “Study yoga—you will learn an infinite amount from it—but do not try to apply it, for we Europeans are not so constituted that we apply these methods correctly, just like that. An Indian guru can explain everything and you can imitate everything. But do you know *who* is applying the yoga? In other words, do you know who you are and how you are constituted?”

[869] The power of science and technics in Europe is so enormous and indisputable that there is little point in reckoning up all that can be done and all that has been invented. One shudders at the stupendous possibilities. Quite another question begins to loom up: *Who* is applying this technical skill? in *whose* hands does this power lie? For the present, the state is a provisional means of protection, because, apparently, it safeguards the citizen from the enormous quantities of poison gas and other infernal engines of destruction which can be manufactured by the thousand tons at a moment’s notice. Our technical skill has grown to be so dangerous that the most urgent question today is not what *more* can be done in this line, but how the man who is entrusted with the control of this skill should be constituted, or how to alter the mind of Western man so that he would renounce his terrible skill. It is infinitely more important to strip him of the illusion of his power than to strengthen him still further in the mistaken idea that he can do everything he wills. The slogan one hears so often in Germany, “Where there’s a will there’s a way,” has cost the lives of millions of human beings.

[870] Western man has no need of more superiority over nature, whether outside or inside. He has both in almost devilish perfection. What he lacks is conscious recognition of his inferiority to the nature around and within him. He must learn that he may not do exactly as he wills. If he does not learn this, his own nature will destroy him. He does not know that his own soul is rebelling against him in a suicidal way.

[871] Since Western man can turn everything into a technique, it is true in principle that everything that looks like a method is either dangerous or condemned to futility. In so far as yoga is a form of hygiene, it is as useful to him as any other system. In the deepest sense, however, yoga does not mean this but, if I understand it correctly, a great deal more, namely the final release and detachment of consciousness from all bondage to object and subject. But since one cannot detach oneself from something

of which one is unconscious, the European must first learn to know his subject. This, in the West, is what one calls the unconscious. Yoga technique applies itself exclusively to the conscious mind and will. Such an undertaking promises success only when the unconscious has no potential worth mentioning, that is to say, when it does not contain large portions of the personality. If it does, then all conscious effort remains futile, and what comes out of this cramped condition of mind is a caricature or even the exact opposite of the intended result.

[872] The rich metaphysic and symbolism of the East express the larger and more important part of the unconscious and in this way reduce its potential. When the yogi says “prāna,” he means very much more than mere breath. For him the word *prāna* brings with it the full weight of its metaphysical components, and it is as if he really knew what prāna meant in this respect. He does not know it with his understanding, but with his heart, belly, and blood. The European only imitates and learns ideas by rote, and is therefore incapable of expressing his subjective facts through Indian concepts. I am more than doubtful whether the European, if he were capable of the corresponding experiences, would choose to express them through intuitive ideas like prāna.

[873] Yoga was originally a natural process of introversion, with all manner of individual variations. Introversions of this sort lead to peculiar inner processes which change the personality. In the course of several thousand years these introversions became organized as methods, and along widely differing lines. Indian yoga itself recognizes numerous and extremely diverse forms. The reason for this lies in the original diversity of individual experience. This is not to say that any one of these methods is suited to the peculiar historical structure of the European. It is much more likely that the yoga natural to the European proceeds from historical patterns unknown to the East. As a matter of fact, the two cultural achievements which, in the West, have had to concern themselves most with the psyche in the practical sense, namely medicine and the Catholic cure of souls, have both produced methods comparable to yoga. I have already referred to the exercises of Ignatius Loyola. With respect to medicine, it is the modern psychotherapeutic methods which come closest to yoga. Freud’s psychoanalysis leads the conscious mind of the patient back to the inner world of childhood reminiscences on one side, and on the other to wishes and drives which have been repressed from consciousness. The latter technique is a logical development of confession. It aims at an artificial introversion for the purpose of making conscious the unconscious components of the subject.

[874] A somewhat different method is the so-called “autogenic training” of Professor Schultz,² which consciously links up with yoga. His chief aim is to break down the conscious cramp and the repression of the unconscious this has caused.

[875] My method, like Freud's, is built up on the practice of confession. Like him, I pay close attention to dreams, but when it comes to the unconscious our views part company. For Freud it is essentially an appendage of consciousness, in which all the individual's incompatibilities are heaped up. For me the unconscious is a collective psychic disposition, creative in character. This fundamental difference of viewpoint naturally produces an entirely different evaluation of the symbolism and the method of interpreting it. Freud's procedure is, in the main, analytical and reductive. To this I add a synthesis which emphasizes the purposiveness of unconscious tendencies with respect to personality development. In this line of research important parallels with yoga have come to light, especially with *kundalini* yoga and the symbolism of tantric yoga, lamaism, and Taoistic yoga in China. These forms of yoga with their rich symbolism afford me invaluable comparative material for interpreting the collective unconscious. However, I do not apply yoga methods in principle, because, in the West, nothing ought to be forced on the unconscious. Usually, consciousness is characterized by an intensity and narrowness that have a cramping effect, and this ought not to be emphasized still further. On the contrary, everything must be done to help the unconscious to reach the conscious mind and to free it from its rigidity. For this purpose I employ a method of active imagination, which consists in a special training for switching off consciousness, at least to a relative extent, thus giving the unconscious contents a chance to develop.

[876] If I remain so critically averse to yoga, it does not mean that I do not regard this spiritual achievement of the East as one of the greatest things the human mind has ever created. I hope my exposition makes it sufficiently clear that my criticism is directed solely against the application of yoga to the peoples of the West. The spiritual development of the West has been along entirely different lines from that of the East and has therefore produced conditions which are the most unfavourable soil one can think of for the application of yoga. Western civilization is scarcely a thousand years old and must first of all free itself from its barbarous one-sidedness. This means, above all, deeper insight into the nature of man. But no insight is gained by repressing and controlling the unconscious, and least of all by imitating methods which have grown up under totally different psychological conditions. In the course of the centuries the West will produce its own yoga, and it will be on the basis laid down by Christianity.

[877] Daisetz Teitaro Suzuki's works on Zen Buddhism are among the best contributions to the knowledge of living Buddhism that recent decades have produced, and Zen itself is the most important fruit to have sprung from the tree whose roots are the collections of the Pali Canon.² We cannot be sufficiently grateful to the author, first for having brought Zen closer to Western understanding, and secondly for the manner in which he has performed this task. Oriental religious conceptions are usually so very different from our Western ones that even the bare translation of the words often presents the greatest difficulties, quite apart from the meaning of the terms used, which in certain circumstances are better left untranslated. I need only mention the Chinese "tao," which no European translation has yet got near. The original Buddhist writings contain views and ideas which are more or less unassimilable for ordinary Europeans. I do not know, for instance, just what kind of mental (or perhaps climatic?) background or preparation is necessary before one can form any completely clear idea of what is meant by the Buddhist "kamma." Judging by all we know of the nature of Zen, here too we are up against a central conception of unsurpassed singularity. This strange conception is called "satori," which may be translated as "enlightenment." "Satori is the *raison d'être* of Zen without which Zen is not Zen," says Suzuki.³ It should not be too difficult for the Western mind to grasp what a mystic understands by "enlightenment," or what is known as such in religious parlance. Satori, however, designates a special kind and way of enlightenment which it is practically impossible for the European to appreciate. By way of illustration, I would refer the reader to the enlightenment of Hyakujo (Pai-chang Huai-hai, A.D. 724–814) and of the Confucian poet and statesman Kozankoku (Huang Shan-ku),⁴ as described by Suzuki.

[878] The following may serve as a further example: A monk once went to Gensha, and wanted to learn where the entrance to the path of truth was. Gensha asked him, "Do you hear the murmuring of the brook?" "Yes, I hear it," answered the monk. "There is the entrance," the Master instructed him.

[879] I will content myself with these few examples, which aptly illustrate the opacity of satori experiences. Even if we take example after example, it still remains exceedingly obscure how any enlightenment comes and of what it consists—in other words, by what or about what one is enlightened. Kaiten Nukariya, who was himself a professor at the So-to-shu Buddhist College in Tokyo, says, speaking of enlightenment:

Having set ourselves free from the mistaken conception of self, next we must awaken our innermost wisdom, pure and divine, called the Mind of Buddha, or Bodhi, or Prajna by Zen masters. It is the divine light, the inner heaven, the key to all moral treasures, the centre of thought and consciousness, the source of all influence and power, the seat of kindness, justice, sympathy, impartial love, humanity, and mercy, the measure of all things. When this innermost wisdom is fully awakened, we are able to realize that each and every one of us is identical in spirit, in essence, in nature with the universal life or Buddha, that each ever lives face to face with Buddha, that each is beset by the abundant grace of the Blessed One, that He arouses his moral nature, that He opens his spiritual eyes, that He unfolds his new capacity, that He appoints his mission, and that life is not an ocean of birth, disease, old age, and death, nor the vale of tears, but the holy temple of Buddha, the Pure Land, where he can enjoy the bliss of Nirvana.⁵

[880] That is how an Oriental, himself an adept in Zen, describes the essence of enlightenment. One must admit that this passage would need only a few trifling alterations in order to find its way into a Christian mystical book of devotion. Yet somehow it sends us away empty as regards understanding the satori experience described again and again in the literature. Presumably Nukariya is addressing himself to Western rationalism, of which he himself acquired a good dose, and that is why it all sounds so flatly edifying. The abstruse obscurity of the Zen anecdotes is distinctly preferable to this adaptation *ad usum Delphini*: it conveys a great deal more by saying less.

[881] Zen is anything but a philosophy in the Western sense of the word.⁶ This is also the opinion of Rudolf Otto, who says in his foreword to Ohazama's book on Zen that Nukariya has "imported the magical world of Oriental ideas into our Western philosophical categories" and confused it with these. "If psycho-physical parallelism, that most wooden of all doctrines, is invoked in order to explain this mystical intuition of Non-duality and Oneness and the *coincidentia oppositorum*, then one is completely outside the sphere of the *koan*, the *kwatsu*, and *satori*."⁷ It is far better to allow oneself to become deeply imbued at the outset with the exotic obscurity of the Zen anecdotes, and to bear in mind the whole time that satori is a *mysterium ineffabile*, as indeed the Zen masters wish it to be. Between the anecdote and the mystical enlightenment there is to our way of thinking, a gulf, and the possibility of bridging it can at best be hinted but never in practice achieved.⁸ One has the feeling of touching upon a true secret, and not one that is merely imagined or pretended. It is not a question of mystification and mumbo-jumbo, but rather of an experience which strikes the experient dumb. Satori comes upon one unawares, as something utterly unexpected.

[882] When, in the sphere of Christianity, visions of the Holy Trinity, the Madonna, the Crucified, or of the patron saint are vouchsafed after long spiritual preparation, one has the impression that this is all more or less as it should be. That Jakob Böhme should obtain a glimpse into the *centrum naturae* by means of a sunbeam reflected in a tin platter is also understandable. It is harder to digest Meister Eckhart's vision of the "little naked boy," not to speak of Swedenborg's "man in the purple coat," who wanted to dissuade him from overeating, and whom, in spite—or perhaps because—of this, he recognized as the Lord God.⁹ Such things are difficult to swallow, bordering as they do on the grotesque. Many of the Zen anecdotes, however, not only border on the grotesque but are right there in the middle of it, and sound like the most crashing nonsense.

[883] For anyone who has devoted himself, with love and sympathetic understanding, to studying the flowerlike mind of the Far East, many of these puzzling things, which drive the naïve European from one perplexity to another, simply disappear. Zen is indeed one of the most wonderful blossoms of the Chinese spirit¹⁰—a spirit fertilized by the immense world of Buddhist thought. Anyone who has really tried to understand Buddhist doctrine—even if only to the extent of giving up certain Western prejudices—will begin to suspect treacherous depths beneath the bizarre surface of individual satori experiences, or will sense disquieting difficulties which the religion and philosophy of the West have up to now thought fit to disregard. If he is a philosopher, he is exclusively concerned with the kind of understanding that has nothing to do with life. And if he is a Christian, he has of course no truck with heathens ("God, I thank thee that I am not as other men are"). There is no satori within these Western limits—that is a purely Oriental affair. But is this really so? Have we in fact no satori?

[884] When one reads the Zen texts attentively, one cannot escape the impression that, however bizarre, satori is a *natural occurrence*, something so very simple,¹¹ even, that one fails to see the wood for the trees, and in attempting to explain it invariably says the very thing that throws others into the greatest confusion. Nukariya is therefore right when he says that any attempt to explain or analyse the content of Zen, or of the enlightenment, is futile. Nevertheless he does venture to assert that enlightenment "implies an insight into the nature of self,"¹² and that it is an "emancipation of mind from illusion concerning self."¹³ The illusion concerning the nature of self is the common confusion of the self with the ego. Nukariya understands by "self" the All-Buddha, i.e., total consciousness of life. He quotes Pan Shan, who says: "The moon of mind comprehends all the universe in its light," adding: "It is Cosmic life and Cosmic spirit, and at the same time individual life and individual spirit."¹⁴

[885] However one may define the self, it is always something other than the ego, and inasmuch as a higher insight of the ego leads over to the self, the self is a more comprehensive thing which includes the experience of the ego and therefore transcends it. Just as the ego is a certain experience I have of myself, so is the self an experience of my ego. It is, however, no longer experienced in the form of a broader or higher ego, but in the form of a non-ego.

[886] Such thoughts were familiar to the anonymous author of the *Theologia Germanica*:

In whatsoever creature the Perfect shall be known, therein creature-nature, created state, I-hood, selfhood, and the like must all be given up and done away.¹⁵

Now that I arrogate anything good to myself, as if I were, or had done, or knew, or could perform any good thing, or that it were mine; that is all out of blindness and folly. For if the real truth were in me, I should understand that I am not that good thing, and that it is not mine nor of me.

Then the man says: "Behold! I, poor fool that I was, thought it was I, but behold! it is, and was, of a truth, God!"¹⁶

[887] This tells us a good deal about the "content of enlightenment." The occurrence of satori is interpreted and formulated as a *break-through*, by a consciousness limited to the ego-form, into the non-ego-like self. This view is in accord not only with the essence of Zen, but also with the mysticism of Meister Eckhart:

When I flowed out from God, all things declared, "God is!" Now this cannot make me blessed, for thereby I acknowledge myself a creature. But in the breakthrough¹⁷ I stand empty in the will of God, and empty also of God's will, and of all his works, even of God himself—then I am more than all creatures, then I am neither God nor creature: I am what I was, and that I shall remain, now and ever more! Then I receive a thrust which carries me above all angels. By this thrust I become so rich that God cannot suffice me, despite all that he is as God and all his godly works; for in this breakthrough I receive what God and I have in common. I am what I was,¹⁸ I neither increase nor diminish, for I am the unmoved mover that moves all things. Here God can find no more place in man, for man by his emptiness has won back that which he was eternally and ever shall remain.¹⁹

[888] Here the Master may actually be describing a satori experience, a supersession of the ego by the self, which is endued with the "Buddha nature" or divine universality. Since, out of scientific modesty, I do not presume to make a metaphysical statement, but am referring only to a change of consciousness that can be experienced, I treat satori first of all as a psychological problem. For anyone who does not share or understand this point of view, the "explanation" will consist of nothing but words which have no tangible meaning. He is then incapable of throwing a bridge from these abstractions to the facts reported; that is to say, he cannot understand how the scent of the blossoming laurel or the tweaked nose²⁰ could bring about so formidable a change of consciousness. Naturally the simplest thing would

be to relegate all these anecdotes to the realm of amusing fairytales, or, if one accepts the facts as they are, to write them off as instances of self-deception. (Another favourite explanation is “auto-suggestion,” that pathetic white elephant from the arsenal of intellectual inadequacies!) But no serious and responsible investigation can pass over these facts unheedingly. Of course, we can never decide definitely whether a person is *really* “enlightened” or “released,” or whether he merely imagines it. We have no criteria to go on. Moreover, we know well enough that an imaginary pain is often far more agonizing than a so-called real one, since it is accompanied by a subtle moral suffering caused by a dull feeling of secret self-accusation. In this sense, therefore, it is not a question of “actual fact” but of *psychic reality*, i.e., the psychic process known as satori.

[889] Every psychic process is an image and an “imagining,” otherwise no consciousness could exist and the occurrence would lack phenomenality. Imagination itself is a psychic process, for which reason it is completely irrelevant whether the enlightenment be called “real” or “imaginary.” The person who has the enlightenment, or alleges that he has it, thinks at all events that he is enlightened. “What others think about it decides nothing whatever for him in regard to his experience. Even if he were lying, his lie would still be a psychic fact. Indeed, even if all the reports of religious experiences were nothing but deliberate inventions and falsifications, a very interesting psychological treatise could still be written about the incidence of such lies, and with the same scientific objectivity with which one describes the psychopathology of delusional ideas. The fact that there is a religious movement upon which many brilliant minds have worked over a period of many centuries is sufficient reason for at least venturing a serious attempt to bring such processes within the realm of scientific understanding.

[890] Earlier, I raised the question of whether we have anything like satori in the West. If we discount the sayings of our Western mystics, a superficial glance discloses nothing that could be likened to it in even the faintest degree. The possibility that there are stages in the development of consciousness plays no role in our thinking. The mere thought that there is a tremendous psychological difference between consciousness of the existence of an object and “consciousness of the consciousness” of an object borders on a quibble that hardly needs answering. For the same reason, one could hardly bring oneself to take such a problem seriously enough to consider the psychological conditions in which it arose. It is significant that questions of this kind do not, as a rule, arise from any intellectual need, but, where they exist, are nearly always rooted in an originally religious practice. In India it was yoga and in China Buddhism which supplied the driving force for these attempts to wrench oneself free from bondage to a state of consciousness that was felt to be incomplete. So far as Western mysticism is concerned, its texts are full of instructions as to how

man can and must release himself from the “I-ness” of his consciousness, so that through knowledge of his own nature he may rise above it and attain the inner (godlike) man. John of Ruysbroeck makes use of an image which was also known to Indian philosophy, that of the tree whose roots are above and its branches below:²¹ “And he must climb up into the tree of faith, which grows from above downwards, for its roots are in the Godhead.”²² He also says, like the yogi: “Man must be free and without ideas, released from all attachments and empty of all creatures.”²³ “He must be untouched by joy and sorrow, profit and loss, rising and falling, concern for others, pleasure and fear, and not be attached to any creature.”²⁴ It is in this that the “unity” of his being consists, and this means “being turned inwards.” Being turned inwards means that “a man is turned within, into his own heart, that he may understand and feel the inner working and the inner words’ of God.”²⁵ This new state of consciousness born of religious practice is distinguished by the fact that outward things no longer affect an ego-bound consciousness, thus giving rise to mutual attachment, but that an empty consciousness stands open to another influence. This “other” influence is no longer felt as one’s own activity, but as that of a non-ego which has the conscious mind as its object.²⁶ It is as if the subject-character of the ego had been overrun, or taken over, by another subject which appears in place of the ego.²⁷ This is a well-known religious experience, already formulated by St. Paul.²⁸ Undoubtedly a new state of consciousness is described here, separated from the earlier state by an incisive process of religious transformation.

[891] It could be objected that consciousness in itself has not changed, only the consciousness of something, just as though one had turned over the page of a book and now saw a different picture with the same eyes. I am afraid this is no more than an arbitrary interpretation, for it does not fit the facts. The fact is that in the texts it is not merely a different picture or object that is described, but rather an experience of transformation, often occurring amid the most violent psychic convulsions. The blotting out of one picture and its replacement by another is an everyday occurrence which has none of the attributes of a transformation experience. *It is not that something different is seen, but that one sees differently.* It is as though the spatial act of seeing were changed by a new dimension. When the Master asks: “Do you hear the murmuring of the brook?” he obviously means something quite different from ordinary “hearing.”²⁹ Consciousness is something like perception, and like the latter is subject to conditions and limitations. You can, for instance, be conscious at various levels, within a narrower or wider field, more on the surface or deeper down. These differences in degree are often differences in kind as well, since they depend on the development of the personality as a whole; that is to say, on the nature of the perceiving subject.

[892] The intellect has no interest in the nature of the perceiving subject so far as the latter only thinks logically. The intellect is essentially concerned with elaborating the contents of consciousness and with methods of elaboration. A rare philosophic passion is needed to compel the attempt to get beyond intellect and break through to a “knowledge of the knower.” Such a passion is practically indistinguishable from the driving force of religion; consequently this whole problem belongs to the religious transformation process, which is incommensurable with intellect. Classical philosophy subserves this process on a wide scale, but this can be said less and less of the newer philosophy. Schopenhauer is still—with qualifications—classical, but Nietzsche’s *Zarathustra* is no longer philosophy at all: it is a dramatic process of transformation which has completely swallowed up the intellect. It is no longer concerned with thought, but, in the highest sense, with the thinker of thought—and this on every page of the book. A new man, a completely transformed man, is to appear on the scene, one who has broken the shell of the old and who not only looks upon a new heaven and a new earth, but has created them. Angelus Silesius puts it rather more modestly than Zarathustra:

My body is a shell in which a chick lies closed about;

Brooded by the spirit of eternity, it waits its hatching out.³⁰

[893] Satori corresponds in the Christian sphere to an experience of religious transformation. As there are different degrees and kinds of such an experience, it may not be superfluous to define more accurately the category which corresponds most closely to the Zen experience. This is without doubt the mystic experience, which differs from other types in that its preliminary stages consist in “letting oneself go,” in “emptying oneself of images and ideas,” as opposed to those religious experiences which, like the exercises of Ignatius Loyola, are based on the practice of envisaging sacred images. In this latter class I would include transformation through faith and prayer and through collective experience in Protestantism, since a very definite expectation plays the decisive role here, and not by any means “emptiness” or “freeness.” The characteristically Eckhartian assertion that “God is Nothingness” may well be incompatible in principle with the contemplation of the Passion, with faith and collective expectations.

[894] Thus the correspondence between satori and Western experience is limited to those few Christian mystics whose paradoxical statements skirt the edge of heterodoxy or actually overstep it. As we know, it was this that drew down on Meister Eckhart’s writings the condemnation of the Church. If Buddhism were a “Church” in our sense of the word, she would undoubtedly find Zen an insufferable nuisance. The reason for this is the extreme individualism of its methods, and also the

iconoclastic attitude of many of the Masters.³¹ To the extent that Zen is a movement, collective forms have arisen in the course of the centuries, as can be seen from Suzuki's *Training of the Zen Buddhist Monk* (Kyoto, 1934). But these concern externals only. Apart from the typical mode of life, the spiritual training or development seems to lie in the method of the *koan*. The koan is understood to be a paradoxical question, statement, or action of the Master. Judging by Suzuki's description, it seems to consist chiefly of master-questions handed down in the form of anecdotes. These are submitted by the teacher to the student for meditation. A classic example is the Wu anecdote. A monk once asked the Master: "Has a dog a Buddha nature too?" Whereupon the Master replied: "Wu!" As Suzuki remarks, this "Wu" means quite simply "bow-wow," obviously just what the dog himself would have said in answer to such a question.³²

[895] At first sight it seems as if the posing of such a question as an object of meditation would anticipate or prejudice the end-result, and that it would therefore determine the content of the experience, just as in the Jesuit exercises or in certain yoga meditations the content is determined by the task set by the teacher. The koans, however, are so various, so ambiguous, and above all so boundlessly paradoxical that even an expert must be completely in the dark as to what might be considered a suitable solution. In addition, the descriptions of the final result are so obscure that in no single case can one discover any rational connection between the koan and the experience of enlightenment. Since no logical sequence can be demonstrated, it remains to be supposed that the koan method puts not the smallest restraint upon the freedom of the psychic process and that the end-result therefore springs from nothing but the individual disposition of the pupil. The complete destruction of the rational intellect aimed at in the training creates an almost perfect lack of conscious presuppositions. These are excluded as far as possible, but not unconscious presuppositions—that is, the existing but unrecognized psychological disposition, which is anything but empty or a *tabula rasa*. It is a nature-given factor, and when it answers—this being obviously the satori experience—it is an answer of Nature, who has succeeded in conveying her reaction direct to the conscious mind.³³ What the unconscious nature of the pupil presents to the teacher or to the koan by way of an answer is, manifestly, satori. This seems, at least to me, to be the view which, to judge by the descriptions, formulates the nature of satori more or less correctly. It is also supported by the fact that the "glimpse into one's own nature," the "original man," and the depths of one's being are often a matter of supreme concern to the Zen master.³⁴

[896] Zen differs from all other exercises in meditation, whether philosophical or religious, in its total lack of presuppositions. Often Buddha himself is sternly rejected, indeed, almost blasphemously ignored, although—or perhaps just because

—he could be the strongest spiritual presupposition of the whole exercise. But he too is an image and must therefore be set aside. Nothing must be present except what is actually there: that is, man with all his unconscious presuppositions, of which, precisely because they are unconscious, he can never, never rid himself. The answer which appears to come from the void, the light which flares up from the blackest darkness, these have always been experienced as a wonderful and blessed illumination.

[897] The world of consciousness is inevitably a world full of restrictions, of walls blocking the way. It is of necessity one-sided, because of the nature of consciousness itself. No consciousness can harbour more than a very small number of simultaneous perceptions. All else must lie in shadow, withdrawn from sight. Any increase in the simultaneous contents immediately produces a dimming of consciousness, if not confusion to the point of disorientation. Consciousness not only requires, but is of its very nature strictly limited to, the few and hence the distinct. We owe our general orientation simply and solely to the fact that through attention we are able to register a fairly rapid succession of images. But attention is an effort of which we are not capable all the time. We have to make do, so to speak, with a minimum of simultaneous perceptions and successions of images. Hence in wide areas possible perceptions are continuously excluded, and consciousness is always bound to the narrowest circle. What would happen if an individual consciousness were able to take in at a single glance a simultaneous picture of every possible perception is beyond imagining. If man has already succeeded in building up the structure of the world from the few distinct things that he can perceive at one and the same time, what godlike spectacle would present itself to his eyes if he were able to perceive a great deal more all at once and distinctly? This question applies only to perceptions that are *possible* to us. If we now add to these the unconscious contents—i.e., contents which are not yet, or no longer, capable of consciousness—and then try to imagine a total vision, why, this is beyond the most audacious fantasy. It is of course completely unimaginable in any conscious form, but in the unconscious it is a fact, since everything subliminal holds within it the ever-present possibility of being perceived and represented in consciousness. The unconscious is an irrepresentable totality of all subliminal psychic factors, a “total vision” *in potentia*. It constitutes the total disposition from which consciousness singles out tiny fragments from time to time.

[898] Now if consciousness is emptied as far as possible of its contents, they will fall into a state of unconsciousness, at least for the time being. In Zen, this displacement usually results from the energy being withdrawn from conscious contents and transferred either to the conception of “emptiness” or to the koan. As both of these must be static, the succession of images is abolished and with it the energy which maintains the kinetics of consciousness. The energy thus saved goes over to the

unconscious and reinforces its natural charge to bursting point. This increases the readiness of the unconscious contents to break through into consciousness. But since the emptying and shutting down of consciousness is no easy matter, a special training of indefinite duration³⁵ is needed in order to set up that maximum tension which leads to the final break-through of unconscious contents.

[899] The contents that break through are far from being random ones. As psychiatric experience with insane patients shows, specific relations exist between the conscious contents and the delusional ideas that break through in delirium. They are the same relations as exist between the dreams and the waking consciousness of normal people. The connection is an essentially compensatory relationship:³⁶ the unconscious contents bring to the surface everything that is necessary³⁷ in the broadest sense for the completion and wholeness of conscious orientation. If the fragments offered by, or forced up from, the unconscious are meaningfully built into conscious life, a form of psychic existence results which corresponds better to the whole of the individual's personality, and so abolishes the fruitless conflicts between his conscious and unconscious self. Modern psychotherapy is based on this principle, in so far as it has been able to free itself from the historical prejudice that the unconscious consists only of infantile and morally inferior contents. There is certainly an inferior corner in it, a lumber-room full of dirty secrets, though these are not so much unconscious as hidden and only half forgotten. But all this has about as much to do with the whole of the unconscious as a decayed tooth has with the total personality. The unconscious is the matrix of all metaphysical statements, of all mythology, of all philosophy (so far as this is not merely critical), and of all expressions of life that are based on psychological premises.

[900] Every invasion of the unconscious is an answer to a definite conscious situation, and this answer follows from the totality of possible ideas present, i.e., from the total disposition which, as explained above, is a simultaneous picture *in potentia* of psychic existence. The splitting up into single units, its one-sided and fragmentary character, is of the essence of consciousness. The reaction coming from the disposition always has a total character, as it reflects a nature which has not been divided up by any discriminating consciousness.³⁸ Hence its overpowering effect. It is the unexpected, all-embracing, completely illuminating answer, which works all the more as illumination and revelation since the conscious mind has got itself wedged into a hopeless blind alley.³⁹

[901] When, therefore, after many years of the hardest practice and the most strenuous demolition of rational understanding, the Zen devotee receives an answer—the only true answer—from Nature herself, everything that is said of satori can be understood. As one can see for oneself, it is the *naturalness* of the answer that strikes one most

about the Zen anecdotes. Yes, one can accept with a sort of old-roguish satisfaction the story of the enlightened pupil who gave his Master a slap in the face as a reward.⁴⁰ And how much wisdom there is in the Master's "Wu," the answer to the question about the Buddha-nature of the dog! One must always bear in mind, however, that there are a great many people who cannot distinguish between a metaphysical joke and nonsense, and just as many who are so convinced of their own cleverness that they have never in their lives met any but fools.

[902] Great as is the value of Zen Buddhism for understanding the religious transformation process, its use among Western people is very problematical. The mental education necessary for Zen is lacking in the West. Who among us would place such implicit trust in a superior Master and his incomprehensible ways? This respect for the greater human personality is found only in the East. Could any of us boast that he believes in the possibility of a boundlessly paradoxical transformation experience, to the extent, moreover, of sacrificing many years of his life to the wearisome pursuit of such a goal? And finally, who would dare to take upon himself the responsibility for such an unorthodox transformation experience—except a man who was little to be trusted, one who, maybe for pathological reasons, has too much to say for himself? Just such a person would have no cause to complain of any lack of following among us. But let a "Master" set us a hard task, which requires more than mere parrot-talk, and the European begins to have doubts, for the steep path of self-development is to him as mournful and gloomy as the path to hell.

[903] I have no doubt that the satori experience does occur also in the West, for we too have men who glimpse ultimate goals and spare themselves no pains to draw near to them. But they will keep silent, not only out of shyness, but because they know that any attempt to convey their experience to others is hopeless. There is nothing in our civilization to foster these strivings, not even the Church, the custodian of religious values. Indeed, it is the function of the Church to oppose all original experience, because this can only be unorthodox. The only movement inside our civilization which has, or should have, some understanding of these endeavours is psychotherapy. It is therefore no accident that it is a psychotherapist who is writing this foreword.

[904] Psychotherapy is at bottom a dialectical relationship between doctor and patient. It is an encounter, a discussion between two psychic wholes, in which knowledge is used only as a tool. The goal is transformation—not one that is predetermined, but rather an indeterminable change, the only criterion of which is the disappearance of egohood. No efforts on the part of the doctor can compel this experience. The most he can do is to smooth the path for the patient and help him to attain an attitude which offers the least resistance to the decisive experience. If knowledge plays no small part in our Western procedure, this is equivalent to the importance of the

traditional spiritual atmosphere of Buddhism in Zen. Zen and its technique could only have arisen on the basis of Buddhist culture, which it presupposes at every turn. You cannot annihilate a rationalistic intellect that was never there—no Zen adept was ever the product of ignorance and lack of culture. Hence it frequently happens with us also that a conscious ego and a cultivated understanding must first be produced through analysis before one can even think about abolishing egohood or rationalism. What is more, psychotherapy does not deal with men who, like Zen monks, are ready to make any sacrifice for the sake of truth, but very often with the most stubborn of all Europeans. Thus the tasks of psychotherapy are much more varied, and the individual phases of the long process much more contradictory, than is the case in Zen.

[905] For these and many other reasons a direct transplantation of Zen to our Western conditions is neither commendable nor even possible. All the same, the psychotherapist who is seriously concerned with the question of the aim of his therapy cannot remain unmoved when he sees the end towards which this Eastern method of psychic “healing”—i.e., “making whole”—is striving. As we know, this question has occupied the most adventurous minds of the East for more than two thousand years, and in this respect methods and philosophical doctrines have been developed which simply put all Western attempts along these lines into the shade. Our attempts have, with few exceptions, all stopped short at either magic (mystery cults, amongst which we must include Christianity) or intellectualism (philosophy from Pythagoras to Schopenhauer). It is only the tragedies of Goethe’s *Faust* and Nietzsche’s *Zarathustra* which mark the first glimmerings of a break-through of total experience in our Western hemisphere.⁴¹ And we do not know even today what these most promising of all products of the Western mind may at length signify, so overlaid are they with the materiality and concreteness of our thinking, as moulded by the Greeks.⁴² Despite the fact that our intellect has developed almost to perfection the capacity of the bird of prey to spy the tiniest mouse from the greatest height, yet the pull of the earth drags it down, and the *samskaras* entangle it in a world of confusing images the moment it no longer seeks for booty but turns one eye inwards *to find him who seeks*. Then the individual falls into the throes of a daemonic rebirth, beset with unknown terrors and dangers and menaced by deluding mirages in a labyrinth of error. The worst of all fates threatens the venturer: mute, abysmal loneliness in the age he calls his own. What do we know of the hidden motives for Goethe’s “main business,” as he called his *Faust*, or of the shudders of the “Dionysus experience”? One has to read the *Bardo Thödol*, the Tibetan Book of the Dead, backwards, as I have suggested,⁴³ in order to find an Eastern parallel to the torments and catastrophes of the Western “way of release” to wholeness. This is the issue here—not good intentions, clever imitations, or intellectual acrobatics. And this, in shadowy hints or

in greater or lesser fragments, is what the psychotherapist is faced with when he has freed himself from over-hasty and short-sighted doctrinal opinions. If he is a slave to his quasi-biological credo he will always try to reduce what he has glimpsed to the banal and the known, to a rationalistic denominator which satisfies only those who are content with illusions. But the foremost of all illusions is that anything can ever satisfy anybody. That illusion stands behind all that is unendurable in life and in front of all progress, and it is one of the most difficult things to overcome. If the psychotherapist can take time off from his helpful activities for a little reflection, or if by any chance he is forced into seeing through his own illusions, it may dawn on him how hollow and flat, how inimical to life, are all rationalistic reductions when they come upon something that is alive, that wants to grow. Should he follow this up he will soon get an idea of what it means to “open wide that gate / Past which man’s steps have ever flinching trod.”⁴⁴

[906] I would not under any circumstances like it to be understood that I am making any recommendations or offering any advice. But when one begins to talk about Zen in the West I consider it my duty to show the European where our entrance lies to that “longest road” which leads to satori, and what kind of difficulties bestrew the path which only a few of our great ones have trod—beacons, perhaps, on high mountains, shining out into the dim future. It would be a disastrous mistake to assume that satori or samādhi are to be met with anywhere below these heights. As an experience of totality it cannot be anything cheaper or smaller than the whole. What this means psychologically can be seen from the simple reflection that consciousness is always only a part of the psyche and therefore never capable of psychic wholeness: for that the indefinite extension of the unconscious is needed. But the unconscious can neither be caught with clever formulas nor exorcized by means of scientific dogmas, for something of destiny clings to it—indeed, it is sometimes destiny itself, as *Faust* and *Zarathustra* show all too clearly. The attainment of wholeness requires one to stake one’s whole being. Nothing less will do; there can be no easier conditions, no substitutes, no compromises. Considering that both *Faust* and *Zarathustra*, despite the highest recognition, stand on the border-line of what is comprehensible to the European, one could hardly expect the educated public, which has only just begun to hear about the obscure world of the psyche, to form any adequate conception of the spiritual state of a man caught in the toils of the individuation process—which is my term for “becoming whole.” People then drag out the vocabulary of pathology and console themselves with the terminology of neurosis and psychosis, or else they whisper about the “creative secret.” But what can a man “create” if he doesn’t happen to be a poet? This misunderstanding has caused not a few persons in recent times to call themselves—by their own grace—“artists,” just as if art had nothing to do with ability. But if you have nothing at all to create, then perhaps you create yourself.

[907] Zen shows how much “becoming whole” means to the East. Preoccupation with the riddles of Zen may perhaps stiffen the spine of the faint-hearted European or provide a pair of spectacles for his psychic myopia, so that from his “damned hole in the wall”⁴⁵ he may enjoy at least a glimpse of the world of psychic experience, which till now lay shrouded in fog. No harm can be done, for those who are too frightened will be effectively protected from further corruption, as also from everything of significance, by the helpful idea of “auto-suggestion.”⁴⁶ I should like to warn the attentive and sympathetic reader, however, not to underestimate the spiritual depth of the East, or to assume that there is anything cheap and facile about Zen.⁴⁷ The assiduously cultivated credulity of the West in regard to Eastern thought is in this case a lesser danger, as in Zen there are fortunately none of those marvellously incomprehensible words that we find in Indian cults. Neither does Zen play about with complicated *hatha-yoga* techniques,⁴⁸ which delude the physiologically minded European into the false hope that the spirit can be obtained by just sitting and breathing. On the contrary, Zen demands intelligence and will power, as do all greater things that want to become realities.

[908] The profound relationship between yoga and the hieratic architecture of India has already been pointed out by my friend Heinrich Zimmer, whose unfortunate early death is a great loss to Indology. Anyone who has visited Borobudur or seen the stupas at Bharhut and Sanchi can hardly avoid feeling that an attitude of mind and a vision quite foreign to the European have been at work here—if he has not already been brought to this realization by a thousand other impressions of Indian life. In the overflowing wealth of Indian spirituality there is reflected a vision of the soul which at first appears strange and inaccessible to the Greek-trained European mind. Our minds perceive things, our eyes, as Gottfried Keller says, “drink what the eyelids hold of the golden abundance of the world,” and we draw conclusions about the inner world from our wealth of outward impressions. We even derive its content from outside on the principle that “nothing is in the mind which was not previously in the senses.” This principle seems to have no validity in India. Indian thought and Indian art merely *appear* in the sense-world, but do not derive from it. Although often expressed with startling sensuality, they are, in their truest essence, unsensual, not to say suprasensual. It is not the world of the senses, of the body, of colours and sounds, not human passions that are born anew in transfigured form, or with realistic pathos, through the creativity of the Indian soul, but rather an underworld or an overworld of a metaphysical nature, out of which strange forms emerge into the familiar earthly scene. For instance, if one carefully observes the tremendously impressive impersonations of the gods performed by the Kathakali dancers of southern India, there is not a single *natural* gesture to be seen. Everything is bizarre, subhuman and superhuman at once. The dancers do not walk like human beings—they glide; they do not think with their heads but with their hands. Even their human faces vanish behind blue-enamelled masks. The world we know offers nothing even remotely comparable to this grotesque splendour. Watching these spectacles one is transported to a world of dreams, for that is the only place where we might conceivably meet with anything similar. But the Kathakali dancers, as we see them in the flesh or in the temple sculptures, are no nocturnal phantoms; they are intensely dynamic figures, consistent in every detail, or as if they had grown organically. These are no shadows or ghosts of a bygone reality, they are more like realities which have *not yet been*, potential realities which might at any moment step over the threshold.

[909] Anyone who wholeheartedly surrenders to these impressions will soon notice that these figures do not strike the Indians themselves as dreamlike but as real. And, indeed, they touch upon something in our own depths, too, with an almost terrifying intensity, though we have no words to express it. At the same time, one notices that

the more deeply one is stirred the more our sense-world fades into a dream, and that we seem to wake up in a world of gods, so immediate is their reality.

[910] What the European notices at first in India is the outward corporeality he sees everywhere. But that is not India as the Indian sees it; that is not *his* reality. Reality, as the German word “Wirklichkeit” implies, is that which *works*. For us the essence of that which works is the world of appearance; for the Indian it is the soul. The world for him is a mere show or façade, and his reality comes close to being what we would call a dream.

[911] This strange antithesis between East and West is expressed most clearly in religious practice. We speak of religious uplift and exaltation; for us God is the Lord of the universe, we have a religion of brotherly love, and in our heaven-aspiring churches there is a *high altar*. The Indian, on the other hand, speaks of *dhyāna*, of self-immersion, and of *sinking* into meditation; God is within all things and especially within man, and one turns away from the outer world to the inner. In the old Indian temples the altar is sunk six to eight feet deep in the earth, and what we hide most shamefacedly is the holiest symbol to the Indian. We believe in *doing*, the Indian in impassive *being*. Our religious exercises consist of prayer, worship, and singing hymns. The Indian’s most important exercise is yoga, an immersion in what we would call an unconscious state, but which he praises as the highest consciousness. Yoga is the most eloquent expression of the Indian mind and at the same time the instrument continually used to produce this peculiar attitude of mind.

[912] What, then, is yoga? The word means literally “yoking,” i.e., the disciplining of the instinctual forces of the psyche, which in Sanskrit are called *kleshas*. The yoking aims at controlling these forces that fetter human beings to the world. The *kleshas* would correspond, in the language of St. Augustine, to *superbia* and *concupiscentia*. There are many different forms of yoga, but all of them pursue the same goal. Here I will only mention that besides the purely psychic exercises there is also a form called *hatha* yoga, a sort of gymnastics consisting chiefly of breathing exercises and special body postures. In this lecture I have undertaken to describe a yoga text which allows a deep insight into the psychic processes of yoga. It is a little-known Buddhist text, written in Chinese but translated from the original Sanskrit, and dating from A.D. 424. It is called the *Amitāyur-dhyāna Sūtra*, the Sutra of Meditation on Amitāyus. This sutra, highly valued in Japan, belongs to the sphere of theistic Buddhism, in which is found the teaching that the Ādi-Buddha or Mahābuddha, the Primordial Buddha, brought forth the five Dhyāni-Buddhas or Dhyāni-Bodhisattvas. One of the five is Amitābha, “the Buddha of the *setting sun* of immeasurable light,” the Lord of Sukhāvati, land of supreme bliss. He is the protector of our present world-period, just as Shākyamuni, the historical Buddha, is its teacher. In the cult of Amitābha there is,

oddly enough, a kind of Eucharistic feast with consecrated bread. He is sometimes depicted holding in his hand the vessel of the life-giving food of immortality, or the vessel of holy water.

[913] The text² begins with an introductory story that need not detain us here. A crown prince seeks to take the life of his parents, and in her extremity the Queen calls upon the Buddha for help, praying him to send her his two disciples Maudgalyāyana and Ānanda. The Buddha fulfils her wish, and the two appear at once. At the same time Shākyamuni, the Buddha himself, appears before her eyes. He shows her in a vision all the ten worlds, so that she can choose in which one she wishes to be reborn. She chooses the western realm of Amitābha. He then teaches her the yoga which should enable her to retain rebirth in the Amitābha land, and after giving her various moral instructions he speaks to her as follows:

[914] You and all other beings besides ought to make it their only aim, with concentrated thought, to get a perception of the western quarter. You will ask how that perception is to be formed. I will explain it now. All beings, if not blind from birth, are uniformly possessed of sight, and they all see the setting sun. You should sit down properly, looking in the western direction, and prepare your thought for a close meditation on the sun: cause your mind to be firmly fixed on it so as to have an unwavering perception by the exclusive application of your thought, and gaze upon it more particularly when it is about to set and looks like a suspended drum. After you have thus seen the sun, let that image remain clear and fixed, whether your eyes be shut or open. Such is the perception of the sun, which is the First Meditation.

[915] As we have already seen, the setting sun is an allegory of the immortality-dispensing Amitābha. The text continues:

Next you should form the perception of water; gaze on the water clear and pure, and let this image also remain clear and fixed afterwards; never allow your thought to be scattered and lost.

[916] As already mentioned, Amitābha is also the dispenser of the water of immortality.

[917] When you have thus seen the water you should form the perception of ice. As you see the ice shining and transparent, so you should imagine the appearance of lapis lazuli. After that has been done, you will see the ground consisting of lapis lazuli transparent and shining both within and without. Beneath this ground of lapis lazuli there will be seen a golden banner with the seven jewels, diamonds, and the rest, supporting the ground. It extends to the eight points of the compass, and thus the eight corners of the ground are perfectly filled up. Every side of the eight quarters consists of a hundred jewels, every jewel has a thousand rays, and every ray has eighty-four thousand colours which, when reflected in the ground of lapis lazuli, look

like a thousand millions of suns, and it is difficult to see them all one by one. Over the surface of that ground of lapis lazuli there are stretched golden ropes intertwined crosswise; divisions are made by means of [strings of] seven jewels with every part clear and distinct....

When this perception has been formed, you should meditate on its constituents one by one and make the images as clear as possible, so that they may never be scattered and lost, whether your eyes be shut or open. Except only during the time of your sleep, you should always keep this in mind. One who has reached this stage of perception is said to have dimly seen the Land of Highest Happiness [Sukhāvati]. One who has obtained *samādhi* [the state of supernatural calm] is able to see the land of that Buddha country clearly and distinctly; this state is too much to be explained fully. Such is the perception of the land, and it is the Third Meditation.

[918] Samādhi is ‘withdrawnness,’ i.e., a condition in which all connections with the world are absorbed into the inner world. Samādhi is the eighth phase of the Eightfold Path.

[919] After the above comes a meditation on the Jewel Tree of the Amitābha land, and then follows the meditation on water:

In the Land of Highest Happiness there are waters in eight lakes; the water in every lake consists of seven jewels which are soft and yielding. Its source derives from the king of jewels that fulfils every wish [*cintāmani*, the wishing-pearl].... In the midst of each lake there are sixty millions of lotus-flowers, made of seven jewels; all the flowers are perfectly round and exactly equal in circumference.... The water of jewels flows amidst the flowers and ... the sound of the streaming water is melodious and pleasing. It proclaims all the perfect virtues [*pārāmitās*], “suffering,” “non-existence,” “impermanence” and “non-self”; it proclaims also the praise of the signs of perfection, and minor marks of excellence, of all Buddhas. From the king of jewels that fulfils every wish stream forth the golden-coloured rays excessively beautiful, the radiance of which transforms itself into birds possessing the colours of a hundred jewels, which sing out harmonious notes, sweet and delicious, ever praising the remembrance of the Buddha, the remembrance of the Law, and the remembrance of the Church. Such is the perception of the water of eight good qualities, and it is the Fifth Meditation.

[920] Concerning the meditation on Amitābha himself, the Buddha instructs the Queen in the following manner: “Form the perception of a lotus-flower on a ground of seven jewels.” The flower has 84,000 petals, each petal 84,000 veins, and each vein possesses 84,000 rays, “of which each can clearly be seen.”

[921] When you have perceived this, you should next perceive the Buddha himself. Do you ask how? Every Buddha Tathāgata is one whose spiritual body is the principle of nature [*Dharmadhātu-kāya*], so that he may enter into the mind of all beings. Consequently, when you have perceived the Buddha, it is indeed that mind of yours that possesses those thirty-two signs of perfection and eighty minor marks of excellence which you see in the Buddha. In fine, it is your mind that becomes the Buddha, nay, it is your mind that is indeed the Buddha. The ocean of true and

universal knowledge of all the Buddhas derives its source from one's own mind and thought. Therefore you should apply your thought with undivided attention to a careful meditation on that Buddha Tathāgata, the *Arhat*, the Holy and Fully Enlightened One. In forming the perception of that Buddha, you should first perceive the image of that Buddha; whether your eyes be open or shut, look at him as at an image like to Jambunada³ gold in colour, sitting on the flower.

When you have seen the seated figure your mental vision will become clear, and you will be able to see clearly and distinctly the adornment of that Buddha-country, the jewelled ground, etc. In seeing these things let them be clear and fixed just as you see the palms of your hands....

If you pass through this experience, you will at the same time see all the Buddhas of the ten quarters.... Those who have practised this meditation are said to have contemplated the bodies of all the Buddhas. Since they have meditated on the Buddha's body, they will also see the Buddha's mind. It is great compassion that is called the Buddha's mind. It is by his absolute compassion that he receives all beings. Those who have practised this meditation will, when they die, be born in the presence of the Buddhas in another life, and obtain a spirit of resignation wherewith to face all the consequences which shall hereafter arise. Therefore those who have wisdom should direct their thought to the careful meditation upon that Buddha Amitāyus.

[922] Of those who practise this meditation it is said that they no longer live in an embryonic condition but will "obtain free access to the excellent and admirable countries of Buddhas."

[923] After you have had this perception, you should imagine yourself to be born in the World of Highest Happiness in the western quarter, and to be seated, cross-legged, on a lotus-flower there. Then imagine that the flower has shut you in and has afterwards unfolded: when the flower has thus unfolded, five hundred coloured rays will shine over your body, your eyes will be opened so as to see the Buddhas and Bodhisattvas who fill the whole sky; you will hear the sounds of waters and trees, the notes of birds, and the voices of many Buddhas....

[924] The Buddha then says to Ānanda and Yaidehi (the Queen):

Those who wish, by means of their serene thoughts, to be born in the western land, should first meditate on an image of the Buddha, which is sixteen cubits high, seated on a lotus-flower in the water of the lake. As was stated before, the real body and its measurements are unlimited, incomprehensible to the ordinary mind. But by the efficacy of the ancient prayer of that Tathāgata, those who think of and remember him shall certainly be able to accomplish their aim....

[925] The Buddha's speech continues for many pages, then the text says:

When the Buddha had finished this speech, Vaidehi, together with her five hundred female attendants, guided by the Buddha's words, could see the scene of the far-stretching World of the Highest Happiness, and could also see the body of the Buddha and the bodies of the two Bodhisattvas. With her mind filled with joy she praised them, saying: "Never have I seen such a wonder!" Instantly she became wholly and fully enlightened, and attained a

spirit of resignation, prepared to endure whatever consequences might yet arise. Her five hundred female attendants too cherished the thought of obtaining the highest perfect knowledge, and sought to be born in that Buddha-country. The World-Honoured One predicted that they would all be born in that Buddha-country, and be able to obtain samādhi of the presence of many Buddhas.

[926] In a digression on the fate of the unenlightened, the Buddha sums up the yoga exercise as follows:

But, being harassed by pains, he will have no time to think of the Buddha. Some good friend will then say to him: “Even if you cannot exercise the remembrance of the Buddha, you may, at least, utter the name, ‘Buddha Amitāyus.’” Let him do so serenely with his voice uninterrupted; let him be continually thinking of the Buddha until he has completed ten times the thought, repeating the formula, “Adoration to Buddha Amitāyus.” On the strength of his merit in uttering the Buddha’s name he will, during every repetition, expiate the sins which involve him in births and deaths during eighty millions of *kalpas*. He will, while dying, see a golden lotus-flower like the disc of the sun appearing before his eyes; in a moment he will be born in the World of Highest Happiness.

[927] The above quotations form the essential content of the yoga exercise which interests us here. The text is divided into sixteen meditations, from which I have chosen only certain parts, but they will suffice to portray the intensification of the meditation, culminating in samādhi, the highest ecstasy and enlightenment.

[928] The exercise begins with the concentration on the setting sun. In southern latitudes the intensity of the rays of the setting sun is so strong that a few moments of gazing at it are enough to create an intense after-image. With closed eyes one continues to see the sun for some time. As is well known, one method of hypnosis consists in fixating a shining object, such as a diamond or a crystal. Presumably the fixation of the sun is meant to produce a similar hypnotic effect. On the other hand it should not have a soporific effect, because a “meditation” of the sun must accompany the fixation. This meditation is a reflecting, a “making clear,” in fact a *realization* of the sun, its form, its qualities, and its meanings. Since the round form plays such an important role in the subsequent meditations, we may suppose that the sun’s disk serves as a model for the later fantasies of circular structures, just as, by reason of its intense light, it prepares the way for the resplendent visions that come afterwards. In this manner, so the text says, “the perception is to be formed.”

[929] The next meditation, that of the water, is no longer based on any sense-impression but creates through active imagination the image of a reflecting expanse of water. This, as we know, throws back the full light of the sun. It should now be imagined that the water changes into ice, “shining and transparent.” Through this procedure the immaterial light of the sun-image is transformed into the substance of water and this in turn into the solidity of ice. A concretization of the vision is evidently aimed at, and this results in a materialization of the fantasy-creation, which appears in the place of physical nature, of the world as we know it. A different reality

is created, so to speak, out of soul-stuff. The ice, of a bluish colour by nature, changes into blue lapis lazuli, a solid, stony substance, which then becomes a “ground,” “transparent and shining.” With this “ground” an immutable, absolutely real foundation has been created. The blue translucent floor is like a lake of glass, and through its transparent layers one’s gaze penetrates into the depths below.

[930] The so-called “golden banner” then shines forth out of these depths. It should be noted that the Sanskrit word *dhvaja* also means ‘sign’ or ‘symbol’ in general. So we could speak just as well of the appearance of the “symbol.” It is evident that the symbol “extending to the eight points of the compass” represents the ground plan of an eight-rayed system. As the text says, the “eight corners of the ground are perfectly filled up” by the banner. The system shines “like a thousand millions of suns,” so that the shining after-image of the sun has enormously increased its radiant energy, and its illuminative power has now been intensified to an immeasurable degree. The strange idea of the “golden ropes” spread over the system like a net presumably means that the system is tied together and secured in this way, so that it can no longer fall apart. Unfortunately the text says nothing about a possible failure of the method, or about the phenomena of disintegration which might supervene as the result of a mistake. But disturbances of this kind in an imaginative process are nothing unexpected to an expert—on the contrary, they are a regular occurrence. So it is not surprising that a kind of inner reinforcement of the image is provided in the yoga vision by means of golden ropes.

[931] Although not explicitly stated in the text, the eight-rayed system is already the Amitābha land. In it grow wonderful trees, as is meet and proper, for this is paradise. Especial importance attaches to the water of the Amitābha land. In accordance with the octagonal system it is arranged in the form of eight lakes, and the source of these waters is a central jewel, *cintāmani*, the wishing pearl, a symbol of the “treasure hard to attain,”⁴ the highest value. In Chinese art it appears as a moonlike image, frequently associated with a dragon.⁵ The wondrous sounds of the water consist of two pairs of opposites which proclaim the dogmatic ground truths of Buddhism: “suffering and non-existence, impermanence and non-self,” signifying that all existence is full of suffering, and that everything that clings to the ego is impermanent. Not-being and not-being-ego deliver us from these errors. Thus the singing water is something like the teaching of the Buddha—a redeeming water of wisdom, an *aqua doctrinae*, to use an expression of Origen. The source of this water, the pearl without peer, is the Tathāgata, the Buddha himself. Hence the imaginative reconstruction of the Buddha-image follows immediately afterwards, and while this structure is being built up in the meditation it is realized that the Buddha is really nothing other than the activating psyche of the yogi—the meditator himself. It is not

only that the image of the Buddha is produced out of “one’s own mind and thought,” but the psyche which produces these thought-forms *is the Buddha himself*.

[932] The image of the Buddha sits in the round lotus in the centre of the octagonal Amitābha land. He is distinguished by the great compassion with which he “receives all beings,” including the meditator. This means that the inmost being which is the Buddha is bodied forth in the vision and revealed as the true self of the meditator. He experiences himself as the only thing that exists, as the highest consciousness, even the Buddha. In order to attain this final goal it was necessary to pass through all the laborious exercises of mental reconstruction, to get free of the deluded ego-consciousness which is responsible for the sorrowful illusion of the world, and to reach that other pole of the psyche where the world as illusion is abolished.

*

[933] Although it appears exceedingly obscure to the European, this yoga text is not a mere literary museum piece. It lives in the psyche of every Indian, in this form and in many others, so that his life and thinking are permeated by it down to the smallest details. It was not Buddhism that nurtured and educated this psyche, but yoga. Buddhism itself was born of the spirit of yoga, which is older and more universal than the historical reformation wrought by the Buddha. Anyone who seeks to understand Indian art, philosophy, and ethics from the inside must of necessity befriend this spirit. Our habitual understanding from the outside breaks down here, because it is hopelessly inadequate to the nature of Indian spirituality. And I wish particularly to warn against the oft-attempted imitation of Indian practices and sentiments. As a rule nothing comes of it except an artificial stultification of our Western intelligence. Of course, if anyone should succeed in giving up Europe from every point of view, and could actually *be* nothing but a yogi and sit in the lotus position with all the practical and ethical consequences that this entails, evaporating on a gazelle-skin under a dusty banyan tree and ending his days in nameless non-being, then I should have to admit that such a person understood yoga in the Indian manner. But anyone who cannot do this should not behave as if he did. He cannot and should not give up his Western understanding; on the contrary, he should apply it honestly, without imitation or sentimentality, to understanding as much of yoga as is possible for the Western mind. The secrets of yoga mean as much or even more to the Indian than our own Christian mysteries mean to us, and just as we would not allow any foreigner to make our *mysterium fidei* ludicrous, so we should not belittle these strange Indian ideas and practices or scorn them as absurd errors. By so doing we only block the way to a sensible understanding. Indeed, we in Europe have already gone so far in this direction that the spiritual content of our Christian dogma has disappeared in a rationalistic and “enlightened” fog of alarming density, and this

makes it all too easy for us to undervalue those things which we do not know and do not understand.

[934] If we wish to understand at all, we can do so only in the European way. One can, it is true, understand many things with the heart, but then the head often finds it difficult to follow up with an intellectual formulation that gives suitable expression to what has been understood. There is also an understanding with the head, particularly of the scientific kind, where there is sometimes too little room for the heart. We must therefore leave it to the good will and co-operation of the reader to use first one and then the other. So let us first attempt, with the head, to find or build that hidden bridge which may lead to a European understanding of yoga.

[935] For this purpose we must again take up the series of symbols we have already discussed, but this time we shall consider their sense-content. The *sun*, with which the series begins, is the source of warmth and light, the indubitable central point of our visible world. As the giver of life it is always and everywhere either the divinity itself or an image of the same. Even in the world of Christian ideas, the sun is a favourite allegory of Christ. A second source of life, especially in southern countries, is *water*, which also plays an important role in Christian allegory, for instance as the four rivers of paradise and the waters which issued from the side of the temple (Ezekiel 47). The latter were compared to the blood that flowed from the wound in Christ's side. In this connection I would also mention Christ's talk with the woman of Samaria at the well, and the rivers of living water flowing from the body of Christ (John 7:38). A meditation on sun and water evokes these and similar associations without fail, so that the meditator will gradually be led from the foreground of visible appearances into the background, that is, to the spiritual meaning behind the object of meditation. He is transported to the psychic sphere, where sun and water, divested of their physical objectivity, become symbols of psychic contents, images of the source of life in the individual psyche. For indeed our consciousness does not create itself—it wells up from unknown depths. In childhood it awakens gradually, and all through life it wakes each morning out of the depths of sleep from an unconscious condition. It is like a child that is born daily out of the primordial womb of the unconscious. In fact, closer investigation reveals that it is not only influenced by the unconscious but continually emerges out of it in the form of numberless spontaneous ideas and sudden flashes of thought. Meditation on the meaning of sun and water is therefore something like a descent into the fountainhead of the psyche, into the unconscious itself.

[936] Here, then, is a great difference between the Eastern and the Western mind. It is the same difference as the one we met before: the difference between the high and the low altar. The West is always seeking uplift, but the East seeks a sinking or

deepening. Outer reality, with its bodiliness and weight, appears to make a much stronger and sharper impression on the European than it does on the Indian. Therefore the European seeks to raise himself above this world, while the Indian likes to turn back into the maternal depths of Nature.

[937] Just as the Christian contemplative, for instance in the *Exercitia spiritualia* of Loyola, strives to comprehend the holy image as concretely as possible, with all the senses, so the yogi solidifies the water he contemplates first to ice and then to lapis lazuli, thereby creating a firm “ground,” as he calls it. He makes, so to speak, a solid body for his vision. In this way he endows the figures of his psychic world with a concrete reality which takes the place of the outer world. At first he sees nothing but a reflecting blue surface, like that of a lake or ocean (also a favourite symbol of the unconscious in our Western dreams); but under the shining surface unknown depths lie hidden, dark and mysterious.

[938] As the text says, the blue stone is *transparent*, which informs us that the gaze of the meditator can penetrate into the depths of the psyche’s secrets. There he sees what could not be seen before, i.e., what was unconscious. Just as sun and water are the physical sources of life, so, as symbols, they express the essential secret of the life of the unconscious. In the *banner*, the symbol the yogi sees through the floor of lapis lazuli, he beholds, as it were, an image of the source of consciousness, which before was invisible and apparently without form. Through *dhyāna*, through the sinking and deepening of contemplation, the unconscious has evidently taken on form. It is as if the light of consciousness had ceased to illuminate the objects of the outer world of the senses and now illumines the darkness of the unconscious. If the world of the senses and all thought of it are completely extinguished, then the inner world springs into relief more distinctly.

[939] Here the Eastern text skips over a psychic phenomenon that is a source of endless difficulties for the European. If a European tries to banish all thought of the outer world and to empty his mind of everything outside, he immediately becomes the prey of his own subjective fantasies, which have nothing whatever to do with the images mentioned in our text. Fantasies do not enjoy a good reputation; they are considered cheap and worthless and are therefore rejected as useless and meaningless. They are the *kleshas*, the disorderly and chaotic instinctual forces which yoga proposes to yoke. The *Exercitia spiritualia* pursue the same goal, in fact both methods seek to attain success by providing the meditator with an object to contemplate and showing him the image he has to concentrate on in order to shut out the allegedly worthless fantasies. Both methods, Eastern as well as Western, try to reach the goal by a direct path. I do not wish to question the possibilities of success when the meditation exercise is conducted in some kind of ecclesiastical setting. But,

outside of some such setting, the thing does not as a rule work, or it may even lead to deplorable results. By throwing light on the unconscious one gets first of all into the chaotic sphere of the personal unconscious, which contains all that one would like to forget, and all that one does not wish to admit to oneself or to anybody else, and which one prefers to believe is not true anyhow. One therefore expects to come off best if one looks as little as possible into this dark corner. Naturally anyone who proceeds in that way will never get round this corner and will never obtain even a trace of what yoga promises. Only the man who goes through this darkness can hope to make any further progress. I am therefore in principle against the uncritical appropriation of yoga practices by Europeans, because I know only too well that they hope to avoid their own dark corners. Such a beginning is entirely meaningless and worthless.

[940] This is also the deeper reason why we in the West have never developed anything comparable to yoga, aside from the very limited application of the Jesuit *Exercitia*. We have an abysmal fear of that lurking horror, our personal unconscious. Hence the European much prefers to tell others “how to do it.” That the improvement of the whole begins with the individual, even with myself, never enters our heads. Besides, many people think it morbid to glance into their own interiors—it makes you melancholic, a theologian once assured me.

[941] I have just said that we have developed nothing that could be compared with yoga. This is not entirely correct. True to our European bias, we have evolved a medical psychology dealing specifically with the kleshas. We call it the “psychology of the unconscious.” The movement inaugurated by Freud recognized the importance of the human shadow-side and its influence on consciousness, and then got entangled in this problem. Freudian psychology is concerned with the very thing that our text passes over in silence and assumes is already dealt with. The yogi is perfectly well aware of the world of the kleshas, but his religion is such a natural one that he knows nothing of the *moral conflict* which the kleshas represent for us. An ethical dilemma divides us from our shadow. The spirit of India grows out of nature; with us spirit is opposed to nature.

[942] The floor of lapis lazuli is not transparent for us because the question of the *evil in nature* must first be answered. This question *can* be answered, but surely not with shallow rationalistic arguments and intellectual patter. The ethical responsibility of the individual can give a valid answer, but there are no cheap recipes and no licences—one must pay to the last penny before the floor of lapis lazuli can become transparent. Our sutra presupposes that the shadow world of our personal fantasies—the personal unconscious—has been traversed, and goes on to describe a symbolical figure which at first strikes us as very strange. This is a geometrical structure raying

out from a centre and divided into eight parts—an ogdoad. In the centre there is a lotus with the Buddha sitting in it, and the decisive experience is the final knowledge that the meditator himself is the Buddha, whereby the fateful knots woven in the opening story are apparently resolved. The concentrically constructed symbol evidently expresses the highest concentration, which can be achieved only when the previously described withdrawal and canalization of interest away from the impressions of the sense-world and from object-bound ideas is pushed to the limit and applied to the background of consciousness. The conscious world with its attachment to objects, and even the centre of consciousness, the ego, are extinguished, and in their place the splendour of the Amitābha land appears with ever-increasing intensity.

[943] Psychologically this means that behind or beneath the world of personal fantasies and instincts a still deeper layer of the unconscious becomes visible, which in contrast to the chaotic disorder of the kleshas is pervaded by the highest order and harmony, and, in contrast to their multiplicity, symbolizes the all-embracing unity of the *bodhimandala*, the magic circle of enlightenment.

[944] What has our psychology to say about this Indian assertion of a supra-personal, world-embracing unconscious that appears when the darkness of the personal unconscious grows transparent? Modern psychology knows that the personal unconscious is only the top layer, resting on a foundation of a wholly different nature which we call the collective unconscious. The reason for this designation is the circumstance that, unlike the personal unconscious and its purely personal contents, the images in the deeper unconscious have a distinctly mythological character. That is to say, in form and content they coincide with those widespread primordial ideas which underlie the myths. They are no longer of a personal but of a purely supra-personal nature and are therefore common to all men. For this reason they are to be found in the myths and legends of all peoples and all times, as well as in individuals who have not the slightest knowledge of mythology.

[945] Our Western psychology has, in fact, got as far as yoga in that it is able to establish scientifically a deeper layer of unity in the unconscious. The mythological motifs whose presence has been demonstrated by the exploration of the unconscious form in themselves a multiplicity, but this culminates in a concentric or radial order which constitutes the true centre or essence of the collective unconscious. On account of the remarkable agreement between the insights of yoga and the results of psychological research, I have chosen the Sanskrit term *mandala* for this central symbol.

[946] You will now surely ask: but how in the world does science come to such conclusions? There are two paths to this end. The first is the historical path. If we

study, for instance, the introspective method of medieval natural philosophy, we find that it repeatedly used the circle, and in most cases the circle divided into four parts, to symbolize the central principle, obviously borrowing this idea from the ecclesiastical allegory of the quaternity as found in numerous representations of the *Rex gloriae* with the four evangelists, the four rivers of paradise, the four winds, and so on.

[947] The second is the path of empirical psychology. At a certain stage in the psychological treatment patients sometimes paint or draw such mandalas spontaneously, either because they dream them or because they suddenly feel the need to compensate the confusion in their psyches through representations of an ordered unity. For instance, our Swiss national saint, the Blessed Brother Nicholas of Flüe, went through a process of this kind, and the result can still be seen in the picture of the Trinity in the parish church at Sachseln. With the help of circular drawings in a little book by a German mystic,⁶ he succeeded in assimilating the great and terrifying vision that had shaken him to the depths.

[948] But what has our empirical psychology to say about the Buddha sitting in the lotus? Logically one would expect Christ to be enthroned in the centre of our Western mandalas. This was once true, as we have already said, in the Middle Ages. But our modern mandalas, spontaneously produced by numerous individuals without any preconceived ideas or suggestions from outside, contain no Christ-figure, still less a Buddha in the lotus position. On the other hand, the equal-armed Greek cross, or even an unmistakable imitation of the swastika, is to be found fairly often. I cannot discuss this strange fact here, though in itself it is of the greatest interest.⁷

[949] Between the Christian and the Buddhist mandala there is a subtle but enormous difference. The Christian during contemplation would never say “*I am Christ,*” but will confess with Paul: “Not I, but Christ liveth in me” (Gal. 2:20). Our sutra, however, says: “Thou wilt know that *thou* art the Buddha.” At bottom the two confessions are identical, in that the Buddhist only attains this knowledge when he is *anātman*, ‘without self.’ But there is an immeasurable difference in the formulation. The Christian attains his end *in Christ*, the Buddhist knows *he* is the Buddha. The Christian gets *out of* the transitory and ego-bound world of consciousness, but the Buddhist *still* reposes on the eternal ground of his inner nature, whose oneness with Deity, or with universal Being, is confirmed in other Indian testimonies.

[950] Heinrich Zimmer had been interested for years in the Maharshi of Tiruvannamalai, and the first question he asked me on my return from India concerned this latest holy and wise man from southern India. I do not know whether my friend found it an unforgivable or an incomprehensible sin on my part that I had not sought out Shri Ramana. I had the feeling that *he* would certainly not have neglected to pay him a visit, so warm was his interest in the life and thought of the holy man. This was scarcely surprising, as I know how deeply Zimmer had penetrated into the spirit of India. His most ardent wish to see India in reality was unfortunately never fulfilled, and the one chance he had of doing so fell through in the last hours before the outbreak of the second World War. As if in compensation, his vision of the spiritual India was all the more magnificent. In our work together he gave me invaluable insights into the Oriental psyche, not only through his immense technical knowledge, but above all through his brilliant grasp of the meaning and content of Indian mythology. Unhappily, the early death of those beloved of the gods was fulfilled in him, and it remains for us to mourn the loss of a spirit that overcame the limitations of the specialist and, turning towards humanity, bestowed upon it the joyous gift of “immortal fruit.”

[951] The carrier of mythological and philosophical wisdom in India has been since time immemorial the “holy man”—a Western title which does not quite render the essence and outward appearance of the parallel figure in the East. This figure is the embodiment of the spiritual India, and we meet him again and again in the literature. No wonder, then, that Zimmer was passionately interested in the latest and best incarnation of this type in the phenomenal personage of Shri Ramana. He saw in this yogi the true avatar of the figure of the *rishi*, seer and philosopher, which strides, as legendary as it is historical, down the centuries and the ages.

[952] Perhaps I should have visited Shri Ramana. Yet I fear that if I journeyed to India a second time to make up for my omission, it would fare with me just the same: I simply could not, despite the uniqueness of the occasion, bring myself to visit this undoubtedly distinguished man personally. For the fact is, I doubt his uniqueness; he is of a type which always was and will be. Therefore it was not necessary to seek him out. I saw him all over India, in the pictures of Ramakrishna, in Ramakrishna’s disciples, in Buddhist monks, in innumerable other figures of the daily Indian scene, and the words of his wisdom are the *sous-entendu* of India’s spiritual life. Shri Ramana is, in a sense, a *hominum homo*, a true “son of man” of the Indian earth. He is “genuine,” and on top of that he is a “phenomenon” which, seen through European eyes, has claims to uniqueness. But in India he is merely the whitest spot on a white

surface (whose whiteness is mentioned only because there are so many surfaces that are just as black). Altogether, one sees so much in India that in the end one only wishes one could see less: the enormous variety of countries and human beings creates a longing for complete simplicity. This simplicity is there too; it pervades the spiritual life of India like a pleasant fragrance or a melody. It is everywhere the same, but never monotonous, endlessly varied. To get to know it, it is sufficient to read an Upanishad or any discourse of the Buddha. What is heard there is heard everywhere; it speaks out of a million eyes, it expresses itself in countless gestures, and there is no village or country road where that broad-branched tree cannot be found in whose shade the ego struggles for its own abolition, drowning the world of multiplicity in the All and All-Oneness of Universal Being. This note rang so insistently in my ears that soon I was no longer able to shake off its spell. I was then absolutely certain that no one could ever get beyond this, least of all the Indian holy man himself; and should Shri Ramana say anything that did not chime in with this melody, or claim to know anything that transcended it, his illumination would assuredly be false. The holy man is right when he intones India's ancient chants, but wrong when he pipes any other tune. This effortless drone of argumentation, so suited to the heat of southern India, made me refrain, without regret, from a visit to Tiruvannamalai.

[953] Nevertheless, the unfathomableness of India saw to it that I should encounter the holy man after all, and in a form that was more congenial to me, without my seeking him out: in Trivandrum, the capital of Travancore, I ran across a disciple of the Maharshi. He was an unassuming little man, of a social status which we would describe as that of a primary-school teacher, and he reminded me most vividly of the shoemaker of Alexandria who (in Anatole France's story) was presented to St. Anthony by the angel as an example of an even greater saint than he. Like the shoemaker, my little holy man had innumerable children to feed and was making special sacrifices in order that his eldest son might be educated. (I will not enter here into the closely allied question as to whether holy men are always wise, and conversely, whether all wise men are unconditionally holy. In this respect there is room for doubt.) Be that as it may, in this modest, kindly, devout, and childlike spirit I encountered a man who had absorbed the wisdom of the Maharshi with utter devotion, and at the same time had surpassed his master because, notwithstanding his cleverness and holiness, he had "eaten" the world. I acknowledge with deep gratitude this meeting with him; nothing better could have happened to me. The man who is only wise and only holy interests me about as much as the skeleton of a rare saurian, which would not move me to tears. The insane contradiction, on the other hand, between existence beyond Māyā in the cosmic Self, and that amiable human weakness which fruitfully sinks many roots into the black earth, repeating for all eternity the weaving and rending of the veil as the ageless melody of India—this

contradiction fascinates me; for how else can one perceive the light without the shadow, hear the silence without the noise, attain wisdom without foolishness? The experience of holiness may well be the most painful of all. My man—thank God—was only a little holy man; no radiant peak above the dark abysses, no shattering sport of nature, but an example of how wisdom, holiness, *and* humanity can dwell together in harmony, richly, pleasantly, sweetly, peacefully, and patiently, without limiting one another, without being peculiar, causing no surprise, in no way sensational, necessitating no special post-office, yet embodying an age-old culture amid the gentle murmur of the coconut palms fanning themselves in the light sea wind. He has found a meaning in the rushing phantasmagoria of Being, freedom in bondage, victory in defeat.

[954] Unadulterated wisdom and unadulterated holiness, I fear, are seen to best advantage in literature, where their reputation remains undisputed. Lao-tzu reads exquisitely, unsurpassably well, in the *Tao Teh Ching*; Lao-tzu with his dancing girl on the Western slope of the mountain, celebrating the evening of life, is rather less edifying. But even less can one approve of the neglected body of the “unadulterated” holy man, especially if one believes that beauty is one of the most excellent of God’s creations.

[955] Shri Ramana’s thoughts are beautiful to read. What we find here is purest India, the breath of eternity, scorning and scorned by the world. It is the song of the ages, resounding, like the shrilling of crickets on a summer’s night, from a million beings. This melody is built up on the one great theme, which, veiling its monotony under a thousand colourful reflections, tirelessly and everlastingly rejuvenates itself in the Indian spirit, whose youngest incarnation is Shri Ramana himself. It is the drama of *ahamkāra*, the “I-maker” or ego-consciousness, in opposition and indissoluble bondage to the atman, the self or non-ego. The Maharshi also calls the atman the “ego-ego”—significantly enough, for the self is indeed experienced as the subject of the subject, as the true source and controller of the ego, whose (mistaken) strivings are continually directed towards appropriating the very autonomy which is intimated to it by the self.

[956] This conflict is not unknown to the Westerner: for him it is the relationship of man to God. The modern Indian, as I can testify from my own experience, has largely adopted European habits of language, “self” or “atman” being essentially synonymous with “God.” But, in contradistinction to the Western “man and God,” the Indian posits the opposition (or correspondence) between “ego and self.” “Ego,” as contrasted with “man,” is a distinctly psychological concept, and so is “self”—to *our* way of thinking. We might therefore be inclined to assume that in India the metaphysical problem “man and God” has been shifted on to the psychological plane.

On closer inspection it is clear that this is not so, for the Indian concept of “ego” and “self” is not really psychological but—one could well say—just as metaphysical as our “man and God.” The Indian lacks the epistemological standpoint just as much as our own religious language does. He is still “pre-Kantian.” This complication is unknown in India and it is still largely unknown with us. In India there is no psychology in our sense of the word. India is “pre-psychological”: when it speaks of the “self,” it *posits* such a thing as existing. Psychology does not do this. It does not in any sense deny the existence of the dramatic conflict, but reserves the right to the poverty, or the riches, of *not* knowing about the self. Though very well acquainted with the self’s peculiar and paradoxical phenomenology, we remain conscious of the fact that we are discerning, with the limited means at our disposal, something essentially unknown and expressing it in terms of psychic structures which may not be adequate to the nature of what is to be known.

[957] This epistemological limitation keeps us at a remove from what we term “self” or “God.” The equation self = God is shocking to the European. As Shri Ramana’s statements and many others show, it is a specifically Eastern insight, to which psychology has nothing further to say except that it is not within its competence to differentiate between the two. Psychology can only establish that the empiricism of the “self” exhibits a religious symptomatology, just as does that category of assertions associated with the term “God.” Although the phenomenon of religious exaltation transcends epistemological criticism—a feature it shares with all manifestations of emotion—yet the human urge to knowledge asserts itself again and again with “ungodly” or “Luciferian” obstinacy and wilfulness, indeed with necessity, whether it be to the loss or gain of the thinking man. Sooner or later he will place his reason in opposition to the emotion that grips him and seek to withdraw from its entangling grasp in order to give an account of what has happened. If he proceeds prudently and conscientiously, he will continually discover that at least a part of his experience is a humanly limited *interpretation*, as was the case with Ignatius Loyola and his vision of the snake with multiple eyes, which he at first regarded as of divine, and later as of diabolical, origin. (Compare the exhortation in I John 4:1: “Do not believe every spirit, but test the spirits to see whether they are of God.”) To the Indian it is clear that the self as the originating ground of the psyche is not different from God, and that, so far as a man is *in* the self, he is not only contained in God but actually is God. Shri Ramana is quite explicit on this point. No doubt this equation, too, is an “interpretation.” Equally, it is an interpretation to regard the self as the highest good or as the goal of all desire and fulfilment, although the phenomenology of such an experience leaves no doubt that these characteristics exist *a priori* and are indispensable components of religious exaltation. But that will not prevent the critical intellect from questioning the validity of these characteristics.

It is difficult to see how this question could be answered, as the intellect lacks the necessary criteria. Anything that might serve as a criterion is subject in turn to the critical question of validity. The only thing that can decide here is the preponderance of psychic facts.

[958] The goal of Eastern religious practice is the same as that of Western mysticism: the shifting of the centre of gravity from the ego to the self, from man to God. This means that the ego disappears in the self, and man in God. It is evident that Shri Ramana has either really been more or less absorbed by the self, or has at least struggled earnestly all his life to extinguish his ego in it. The *Exercitia spiritualia* reveal a similar striving: they subordinate “self-possession” (possession of an ego) as much as possible to possession by Christ. Shri Ramana’s elder contemporary, Ramakrishna, had the same attitude concerning the relation to the self, only in his case the dilemma between ego and self seems to emerge more distinctly. Whereas Shri Ramana displays a “sympathetic” tolerance towards the worldly callings of his disciples, while yet exalting the extinction of the ego as the real goal of spiritual exertion, Ramakrishna shows a rather more hesitant attitude in this respect. He says: “So long as ego-seeking exists, neither knowledge (*jñāna*) nor liberation (*mukti*) is possible, and to births and deaths there is no end.”² All the same, he has to admit the fatal tenacity of *ahamkāra* (the “I-maker”): “Very few can get rid of the sense of ‘I’ through *samādhi*.... We may discriminate a thousand times, but the sense of ‘I’ is bound to return again and again. You may cut down the branches of a fig-tree today, but tomorrow you will see that new twigs are sprouting.”³ He goes so far as to suggest the indestructibility of the ego with the words: “If this sense of ‘I’ will not leave, then let it stay on as the servant of God.”⁴ Compared with this concession to the ego, Shri Ramana is definitely the more radical or, in the sense of Indian tradition, the more conservative. Though the elder, Ramakrishna is the more modern of the two, and this is probably to be attributed to the fact that he was affected by the Western attitude of mind far more profoundly than was Shri Ramana.

[959] If we conceive of the self as the essence of psychic wholeness, i.e., as the totality of conscious and unconscious, we do so because it does *in fact* represent something like a goal of psychic development, and this irrespective of all conscious opinions and expectations. The self is the subject-matter of a process that generally runs its course outside consciousness and makes its presence felt only by a kind of long-range effect. A critical attitude towards this natural process allows us to raise questions which are excluded at the outset by the formula self = God. This formula shows the dissolution of the ego in the atman to be the unequivocal goal of religion and ethics, as exemplified in the life and thought of Shri Ramana. The same is obviously true of Christian mysticism, which differs from Oriental philosophy only through having a different terminology. The inevitable consequence is the

depreciation and abolition of the physical and psychic man (i.e., of the living body and *ahamkāra*) in favour of the pneumatic man. Shri Ramana speaks of his body as “this clod.” As against this, and taking into consideration the complex nature of human experience (emotion plus interpretation), the critical standpoint admits the importance of ego-consciousness, well knowing that without *ahamkāra* there would be absolutely no one there to register what was happening. Without the Maharshi’s personal ego, which, as a matter of brute experience, only exists in conjunction with the said “clod” (= body), there would be no Shri Ramana at all. Even if we agreed with him that it is no longer his ego, but the atman speaking, it is still the psychic structure of consciousness in association with the body that makes speech communication possible. Without this admittedly very troublesome physical and psychic man, the self would be entirely without substance, as Angelus Silesius has already said:

I know that without me
God can no moment live;
Were I to die, then he
No longer could survive.

[960] The intrinsically goal-like quality of the self and the urge to realize this goal are, as we have said, not dependent on the participation of consciousness. They cannot be denied any more than one can deny one’s ego-consciousness. It, too, puts forward its claims peremptorily, and very often in overt or covert opposition to the needs of the evolving self. In reality, i.e., with few exceptions, the entelechy of the self consists in a succession of endless compromises, ego and self laboriously keeping the scales balanced if all is to go well. Too great a swing to one side or the other is often no more than an example of how not to set about it. This certainly does not mean that extremes, when they occur in a natural way, are in themselves evil. We make the right use of them when we examine their meaning, and they give us ample opportunity to do this in a manner deserving our gratitude. Exceptional human beings, carefully hedged about and secluded, are invariably a gift of nature, enriching and widening the scope of our consciousness—but only if our capacity for reflection does not suffer shipwreck. Enthusiasm can be a veritable gift of the gods or a monster from hell. With the hybris which attends it, corruption sets in, even if the resultant clouding of consciousness seems to put the attainment of the highest goals almost within one’s grasp. The only true and lasting gain is heightened and broadened reflection.

[961] Banalities apart, there is unfortunately no philosophical or psychological proposition that does not immediately have to be reversed. Thus reflection as an end in itself is nothing but a limitation if it cannot stand firm in the turmoil of chaotic

extremes, just as mere dynamism for its own sake leads to inanity. Everything requires for its existence its own opposite, or else it fades into nothingness. The ego needs the self and vice versa. The changing relations between these two entities constitute a field of experience which Eastern introspection has exploited to a degree almost unattainable to Western man. The philosophy of the East, although so vastly different from ours, could be an inestimable treasure for us too; but, in order to possess it, we must first earn it. Shri Ramana's words, which Heinrich Zimmer has bequeathed to us, in excellent translation, as the last gift of his pen, bring together once again the loftiest insights that the spirit of India has garnered in the course of the ages, and the individual life and work of the Maharshi illustrate once again the passionate striving of the Indian for the liberating "Ground." I say "once again," because India is about to take the fateful step of becoming a State and entering into a community of nations whose guiding principles have anything and everything on the programme except detachment and peace of the soul.

[962] The Eastern peoples are threatened with a rapid collapse of their spiritual values, and what replaces them cannot always be counted among the best that Western civilization has produced. From this point of view, one could regard Ramakrishna and Shri Ramana as modern prophets, who play the same compensatory role in relation to their people as that of the Old Testament prophets in relation to the "unfaithful" children of Israel. Not only do they exhort their compatriots to remember their thousand-year-old spiritual culture, they actually embody it and thus serve as an impressive warning, lest the demands of the soul be forgotten amid the novelties of Western civilization with its materialistic technology and commercial acquisitiveness. The breathless drive for power and aggrandizement in the political, social, and intellectual sphere, gnawing at the soul of the Westerner with apparently insatiable greed, is spreading irresistibly in the East and threatens to have incalculable consequences. Not only in India but in China, too, much has already perished where once the soul lived and thrived. The externalization of culture may do away with a great many evils whose removal seems most desirable and beneficial, yet this step forward, as experience shows, is all too dearly paid for with a loss of spiritual culture. It is undeniably much more comfortable to live in a well-planned and hygienically equipped house, but this still does not answer the question of *who* is the dweller in this house and whether his soul rejoices in the same order and cleanliness as the house which ministers to his outer life. The man whose interests are all outside is never satisfied with what is necessary, but is perpetually hankering after something more and better which, true to his bias, he always seeks outside himself. He forgets completely that, for all his outward successes, he himself remains the same inwardly, and he therefore laments his poverty if he possesses only one automobile when the majority have two. Obviously the outward lives of men could

do with a lot more bettering and beautifying, but these things lose their meaning when the inner man does not keep pace with them. To be satiated with “necessities” is no doubt an inestimable source of happiness, yet the inner man continues to raise his claim, and this can be satisfied by no outward possessions. And the less this voice is heard in the chase after the brilliant things of this world, the more the inner man becomes the source of inexplicable misfortune and uncomprehended unhappiness in the midst of living conditions whose outcome was expected to be entirely different. The externalization of life turns to incurable suffering, because no one can understand why he should suffer from himself. No one wonders at his insatiability, but regards it as his lawful right, never thinking that the one-sidedness of this psychic diet leads in the end to the gravest disturbances of equilibrium. That is the sickness of Western man, and he will not rest until he has infected the whole world with his own greedy restlessness.

[963] The wisdom and mysticism of the East have, therefore, very much to say to us, even when they speak their own inimitable language. They serve to remind us that we in our culture possess something similar, which we have already forgotten, and to direct our attention to the fate of the inner man, which we set aside as trifling. The life and teaching of Shri Ramana are of significance not only for India, but for the West too. They are more than a *document humain*: they are a warning message to a humanity which threatens to lose itself in unconsciousness and anarchy. It is perhaps, in the deeper sense, no accident that Heinrich Zimmer’s last book should leave us, as a testament, the life-work of a modern Indian prophet who exemplifies so impressively the problem of psychic transformation.

IX

FOREWORD TO THE "I CHING"

FOREWORD TO THE "I CHING"¹

[964] Since I am not a Sinologue, a foreword to the Book of Changes from my hand must be a testimonial of my individual experience with this great and singular book. It also affords me a welcome opportunity to pay tribute again to the memory of my late friend, Richard Wilhelm. He himself was profoundly aware of the cultural significance of his translation of the *I Ching*, a version unrivalled in the West.

[965] If the meaning of the Book of Changes were easy to grasp, the work would need no foreword. But this is far from being the case, for there is so much that is obscure about it that Western scholars have tended to dispose of it as a collection of "magic spells," either too abstruse to be intelligible or of no value whatsoever. Legge's translation of the *I Ching*, up to now the only version available in English, has done little to make the work accessible to Western minds.² Wilhelm, however, has made every effort to open the way to an understanding of the symbolism of the text. He was in a position to do this because he himself was taught the philosophy and the use of the *I Ching* by the venerable sage Lao Nai-hsüan; moreover, he had over a period of many years put the peculiar technique of the oracle into practice. His grasp of the living meaning of the text gives his version of the *I Ching* a depth of perspective that an exclusively academic knowledge of Chinese philosophy could never provide.

[966] I am greatly indebted to Wilhelm for the light he has thrown upon the complicated problem of the *I Ching*, and for insight into its practical application. For more than thirty years I have interested myself in this oracle technique, for it seemed to me of uncommon significance as a method of exploring the unconscious. I was already fairly familiar with the *I Ching* when I first met Wilhelm in the early nineteen twenties; he confirmed then what I already knew, and taught me many things more.

[967] I do not know Chinese and have never been in China. I can assure my reader that it is not altogether easy to find the right approach to this monument of Chinese thought, which departs so completely from our ways of thinking. In order to understand what such a book is all about, it is imperative to cast off certain of our Western prejudices. It is a curious fact that such a gifted and intelligent people as the Chinese has never developed what we call science. Our science, however, is based upon the principle of causality, and causality is considered to be an axiomatic truth. But a great change in our standpoint is setting in. What Kant's *Critique of Pure Reason* failed to do is being accomplished by modern physics. The axioms of causality are being shaken to their foundations: we know now that what we term

natural laws are merely statistical truths and thus must necessarily allow for exceptions. We have not sufficiently taken into account as yet that we need the laboratory with its incisive restrictions in order to demonstrate the invariable validity of natural law. If we leave things to nature, we see a very different picture: every process is partially or totally interfered with by chance, so much so that under natural circumstances a course of events absolutely conforming to specific laws is almost an exception.

[968] The Chinese mind, as I see it at work in the *I Ching*, seems to be exclusively preoccupied with the chance aspect of events. What we call coincidence seems to be the chief concern of this peculiar mind, and what we worship as causality passes almost unnoticed. We must admit that there is something to be said for the immense importance of chance. An incalculable amount of human effort is directed to combatting and restricting the nuisance or danger that chance represents. Theoretical considerations of cause and effect often look pale and dusty in comparison with the practical results of chance. It is all very well to say that the crystal of quartz is a hexagonal prism. The statement is quite true in so far as an ideal crystal is envisaged. But in nature one finds no two crystals exactly alike, although all are unmistakably hexagonal. The actual form, however, seems to appeal more to the Chinese sage than the ideal one. The jumble of natural laws constituting empirical reality holds more significance for him than a causal explanation of events that, in addition, must usually be separated from one another in order to be properly dealt with.

[969] The manner in which the *I Ching* tends to look upon reality seems to disfavour our causal procedures. The moment under actual observation appears to the ancient Chinese view more of a chance hit than a clearly defined result of concurrent causal chains. The matter of interest seems to be the configuration formed by chance events at the moment of observation, and not at all the hypothetical reasons that seemingly account for the coincidence. While the Western mind carefully sifts, weighs, selects, classifies, isolates, the Chinese picture of the moment encompasses everything down to the minutest nonsensical detail, because all of the ingredients make up the observed moment.

[970] Thus it happens that when one throws the three coins, or counts through the forty-nine yarrow-stalks, these chance details enter into the picture of the moment of observation and form a part of it—a part that is insignificant to us, yet most meaningful to the Chinese mind. With us it would be a banal and almost meaningless statement (at least on the face of it) to say that whatever happens in a given moment has inevitably the quality peculiar to that moment. This is not an abstract argument but a very practical one. There are certain connoisseurs who can tell you merely from the appearance, taste, and behaviour of a wine the site of its vineyard and the year of its origin. There are antiquarians who with almost uncanny accuracy will name the

time and place of origin and the maker of an *objet d'art* or piece of furniture on merely looking at it. And there are even astrologers who can tell you, without any previous knowledge of your nativity, what the position of sun and moon was and what zodiacal sign rose above the horizon at the moment of your birth. In the face of such facts, it must be admitted that moments can leave long-lasting traces.

[971] In other words, whoever invented the *I Ching* was convinced that the hexagram worked out in a certain moment coincided with the latter in quality no less than in time. To him the hexagram was the exponent of the moment in which it was cast—even more so than the hours of the clock or the divisions of the calendar could be—inasmuch as the hexagram was understood to be an indicator of the essential situation prevailing at the moment of its origin.

[972] This assumption involves a certain curious principle which I have termed synchronicity,³ a concept that formulates a point of view diametrically opposed to that of causality. Since the latter is a merely statistical truth and not absolute, it is a sort of working hypothesis of how events evolve one out of another, whereas synchronicity takes the coincidence of events in space and time as meaning something more than mere chance, namely, a peculiar interdependence of objective events among themselves as well as with the subjective (psychic) states of the observer or observers.

[973] The ancient Chinese mind contemplates the cosmos in a way comparable to that of the modern physicist, who cannot deny that his model of the world is a decidedly psychophysical structure. The microphysical event includes the observer just as much as the reality underlying the *I Ching* comprises subjective, i.e., psychic conditions in the totality of the momentary situation. Just as causality describes the sequence of events, so synchronicity to the Chinese mind deals with the coincidence of events. The causal point of view tells us a dramatic story about how *D* came into existence: it took its origin from *C*, which existed before *D*, and *C* in its turn had a father, *B*, etc. The synchronistic view on the other hand tries to produce an equally meaningful picture of coincidence. How does it happen that *A'*, *B'*, *C'*, *D'*, etc., appear all at the same moment and in the same place? It happens in the first place because the physical events *A'* and *B'* are of the same quality as the psychic events *C'* and *D'*, and further because all are the exponents of one and the same momentary situation. The situation is assumed to represent a legible or understandable picture.

[974] Now the sixty-four hexagrams of the *I Ching* are the instrument by which the meaning of sixty-four different yet typical situations can be determined. These interpretations are equivalent to causal explanations. Causal connection can be determined statistically and can be subjected to experiment. Inasmuch as situations are unique and cannot be repeated, experimenting with synchronicity seems to be impossible under ordinary conditions.⁴ In the *I Ching*, the only criterion of the

validity of synchronicity is the observer's opinion that the text of the hexagram amounts to a true rendering of his psychic condition. It is assumed that the fall of the coins or the result of the division of the bundle of yarrow-stalks is what it necessarily must be in a given "situation," inasmuch as anything happening at that moment belongs to it as an indispensable part of the picture. If a handful of matches is thrown to the floor, they form the pattern characteristic of that moment. But such an obvious truth as this reveals its meaningful nature only if it is possible to read the pattern and to verify its interpretation, partly by the observer's knowledge of the subjective and objective situation, partly by the character of subsequent events. It is obviously not a procedure that appeals to a critical mind used to experimental verification of facts or to factual evidence. But for someone who likes to look at the world at the angle from which ancient China saw it, the *I Ching* may have some attraction.

[975] My argument as outlined above has of course never entered a Chinese mind. On the contrary, according to the old tradition, it is "spiritual agencies," acting in a mysterious way, that make the yarrow-stalks give a meaningful answer.⁵ These powers form, as it were, the living soul of the book. As the latter is thus a sort of animated being, the tradition assumes that one can put questions to the *I Ching* and expect to receive intelligent answers. Thus it occurred to me that it might interest the uninitiated reader to see the *I Ching* at work. For this purpose I made an experiment strictly in accordance with the Chinese conception: I personified the book in a sense, asking its judgment about its present situation, i.e., my intention to introduce it to the English-speaking public.

[976] Although this procedure is well within the premises of Taoist philosophy, it appears exceedingly odd to us. However, not even the strangeness of insane delusions or of primitive superstition has ever shocked me. I have always tried to remain unbiased and curious—*rerum novarum cupidus*. Why not venture a dialogue with an ancient book that purports to be animated? There can be no harm in it, and the reader may watch a psychological procedure that has been carried out time and again throughout the millennia of Chinese civilization, representing to a Confucius or a Lao-tzu both a supreme expression of spiritual authority and a philosophical enigma. I made use of the coin method, and the answer obtained was hexagram 50, Ting, THE CAULDRON.⁶

[977] In accordance with the way my question was phrased, the text of the hexagram must be regarded as though the *I Ching* itself were the speaking person. Thus it describes itself as a cauldron, that is, as a ritual vessel containing cooked food. Here the food is to be understood as spiritual nourishment. Wilhelm says about this:

The *ting*, as a utensil pertaining to a refined civilization, suggests the fostering and nourishing of able men, which redounded to the benefit of the state.... Here we see civilization as it reaches its culmination in religion. The *ting* serves in offering sacrifice to God.... The supreme revelation of God appears in prophets and holy men. To

venerate them is true veneration of God. The will of God, as revealed through them, should be accepted in humility.

[978] Keeping to our hypothesis, we must conclude that the *I Ching* is here testifying concerning itself.

[979] When any of the lines of a given hexagram have the value of six or nine, it means that they are specially emphasized and hence important in the interpretation.⁷ In my hexagram the “spiritual agencies” have given the emphasis of a nine to the lines in the second and in the third place. The text says:

Nine in the second place means:

There is food in the *ting*.

My comrades are envious,

But they cannot harm me.

Good fortune.

[980] Thus the *I Ching* says of itself: “I contain (spiritual) nourishment.” Since a share in something great always arouses envy, the chorus of the envious⁸ is part of the picture. The envious want to rob the *I Ching* of its great possession, that is, they seek to rob it of meaning, or to destroy its meaning. But their enmity is in vain. Its richness of meaning is assured; that is, it is convinced of its positive achievements, which no one can take away. The text continues:

Nine in the third place means:

The handle of the *ting* is altered.

One is impeded in his way of life.

The fat of the pheasant is not eaten.

Once rain falls, remorse is spent.

Good fortune comes in the end.

[981] The handle [German *Griff*] is the part by which the *ting* can be grasped [*gegriffen*]. Thus it signifies the concept⁹ [*Begriff*] one has of the *I Ching* (the *ting*). In the course of time this concept has apparently changed, so that today we can no longer grasp [*begreifen*] the *I Ching*. Thus “one is impeded in his way of life.” We are no longer supported by the wise counsel and deep insight of the oracle; therefore we no longer find our way through the mazes of fate and the obscurities of our own natures. The fat of the pheasant, that is, the best and richest part of a good dish, is no longer eaten. But when the thirsty earth finally receives rain again, that is, when this state of want has been overcome, “remorse,” that is, sorrow over the loss of wisdom, is ended, and then comes the longed-for opportunity. Wilhelm comments: “This describes a man who, in a highly evolved civilization, finds himself in a place where no one notices or recognizes him. This is a severe block to his effectiveness.” The *I*

Ching is complaining, as it were, that its excellent qualities go unrecognized and hence lie fallow. It comforts itself with the hope that it is about to regain recognition.

[982] The answer given in these two salient lines to the question I put to the *I Ching* requires no particular subtlety for its interpretation, no artifices, and no unusual knowledge. Anyone with a little common sense can understand the meaning of the answer; it is the answer of one who has a good opinion of himself, but whose value is neither generally recognized nor even widely known. The answering subject has an interesting notion of itself: it looks upon itself as a vessel in which sacrificial offerings are brought to the gods, ritual food for their nourishment. It conceives of itself as a cult utensil serving to provide spiritual nourishment for the unconscious elements or forces (“spiritual agencies”) that have been projected as gods—in other words, to give these forces the attention they need in order to play their part in the life of the individual. Indeed, this is the original meaning of the word *religio*—a careful observation and taking account of (from *relegere*¹⁰) the numinous.

[983] The method of the *I Ching* does indeed take into account the hidden individual quality in things and men, and in one’s own unconscious self as well. I questioned the *I Ching* as one questions a person whom one is about to introduce to friends: one asks whether or not it will be agreeable to him. In answer the *I Ching* tells me of its religious significance, of the fact that at present it is unknown and misjudged, of its hope of being restored to a place of honour—this last obviously with a sidelong glance at my as yet unwritten foreword,¹¹ and above all at the English translation. This seems a perfectly understandable reaction, such as one could expect also from a person in a similar situation.

[984] But how has this reaction come about? Simply because I threw three small coins into the air and let them fall, roll, and come to rest, heads up or tails up as the case might be. This peculiar fact—that a reaction that makes sense arises out of a technique which at the outset seemingly excludes all sense—is the great achievement of the *I Ching*. The instance I have just given is not unique; meaningful answers are the rule. Western sinologues and distinguished Chinese scholars have been at pains to inform me that the *I Ching* is a collection of obsolete “magic spells.” In the course of these conversations my informant has sometimes admitted having consulted the oracle through a fortune teller, usually a Taoist priest. This could be “only nonsense” of course. But oddly enough, the answer received apparently coincided with the questioner’s psychological blind spot remarkably well.

[985] I agree with Western thinking that any number of answers to my question were possible, and I certainly cannot assert that another answer would not have been equally significant. However, the answer received was the first and only one; we know nothing of other possible answers. It pleased and satisfied me. To ask the same question a second time would have been tactless and so I did not do it: “the master

speaks but once.” The heavy-handed pedagogic approach that attempts to fit irrational phenomena into a preconceived rational pattern is anathema to me. Indeed, such things as this answer should remain as they were when they first emerged to view, for only then do we know what nature does when left to herself undisturbed by the meddlesomeness of man. One ought not to go to dead bodies to study life. Moreover, a repetition of the experiment is impossible, for the simple reason that the original situation cannot be reconstructed. Therefore in each instance there is only a first and single answer.

[986] To return to the hexagram itself. There is nothing strange in the fact that all of Ting, THE CAULDRON, amplifies the themes announced by the two salient lines.¹² The first line of the hexagram says:

A *ting* with legs upturned

Furthers removal of stagnating stuff.

One takes a concubine for the sake of her son.

No blame.

[987] A *ting* that is turned upside down is not in use. Hence the *I Ching* is like an unused cauldron. Turning it over serves to remove stagnating matter, as the line says. Just as a man takes a concubine when his wife has no son, so the *I Ching* is called upon when one sees no other way out. Despite the quasi-legal status of the concubine in China, she is in reality only a somewhat awkward makeshift; so likewise the magic procedure of the oracle is an expedient that may be utilized for a higher purpose. There is no blame, although it is an exceptional recourse.

[988] The second and third lines have already been discussed. The fourth line says:

The legs of the *ting* are broken.

The prince's meal is spilled

And his person is soiled.

Misfortune.

[989] Here the *ting* has been put to use, but evidently in a very clumsy manner, that is, the oracle has been abused or misinterpreted. In this way the divine food is lost, and one puts oneself to shame. Legge translates as follows: “Its subject will be made to blush for shame.” Abuse of a cult utensil such as the *ting* (i.e., the *I Ching*) is a gross profanation. The *I Ching* is evidently insisting here on its dignity as a ritual vessel and protesting against being profanely used.

[990] The fifth line says:

The *ting* has yellow handles, golden carrying rings.

Perseverance furthers.

[991] The *I Ching* has, it seems, met with a new, correct (yellow) understanding, that is, a new concept [*Begriff*] by which it can be grasped. This concept is valuable (golden). There is indeed a new edition in English, making the book more accessible to the Western world than before.

[992] The sixth line says:

The *ting* has rings of jade.

Great good fortune.

Nothing that would not act to further.

[993] Jade is distinguished for its beauty and soft sheen. If the carrying rings are of jade, the whole vessel is enhanced in beauty, honour, and value. The *I Ching* expresses itself here as being not only well satisfied but indeed very optimistic. One can only await further events and in the meantime remain content with the pleasant conclusion that the *I Ching* approves of the new edition.

[994] I have shown in this example as objectively as I can how the oracle proceeds in a given case. Of course the procedure varies somewhat according to the way the question is put. If for instance a person finds himself in a confusing situation, he may himself appear in the oracle as the speaker. Or, if the question concerns a relationship with another person, that person may appear as the speaker. However, the identity of the speaker does not depend entirely on the manner in which the question is phrased, inasmuch as our relations with our fellow beings are not always determined by the latter. Very often our relations depend almost exclusively on our own attitudes, though we may be quite unaware of this fact. Hence, if an individual is unconscious of his role in a relationship, there may be a surprise in store for him; contrary to expectation, he himself may appear as the chief agent, as is sometimes unmistakably indicated by the text. It may also happen that we take a situation too seriously and consider it extremely important, whereas the answer we get on consulting the *I Ching* draws attention to some unsuspected other aspect implicit in the question.

[995] Such instances might at first lead one to think that the oracle is fallacious. Confucius is said to have received only one inappropriate answer, i.e., hexagram 22, GRACE—a thoroughly aesthetic hexagram. This is reminiscent of the advice given to Socrates by his daemon—“You ought to make more music”—whereupon Socrates took to playing the flute. Confucius and Socrates compete for first place as far as rationality and a pedagogic attitude to life are concerned; but it is unlikely that either of them occupied himself with “lending grace to the beard on his chin,” as the second line of this hexagram advises. Unfortunately, reason and pedagogy often lack charm and grace, and so the oracle may not have been wrong after all.

[996] To come back once more to our hexagram. Though the *I Ching* not only seems to be satisfied with its new edition, but even expresses emphatic optimism, this still

does not foretell anything about the effect it will have on the public it is intended to reach. Since we have in our hexagram two *yang* lines stressed by the numerical value nine, we are in a position to find out what sort of prognosis the *I Ching* makes for itself. Lines designated by a six or a nine have, according to the ancient conception, an inner tension so great as to cause them to change into their opposites, that is, *yang* into *yin*, and vice versa. Through this change we obtain in the present instance hexagram 35, Chin, PROGRESS.

[997] The subject of this hexagram is someone who meets with all sorts of vicissitudes of fortune in his climb upward, and the text describes how he should behave. The *I Ching* is in this same situation: it rises like the sun and declares itself, but it is rebuffed and finds no confidence—it is “progressing, but in sorrow.” However, “one obtains great happiness from one’s ancestress.” Psychology can help us to elucidate this obscure passage. In dreams and fairy tales the grandmother, or ancestress, often represents the unconscious, because the latter in a man contains the feminine component of the psyche. If the *I Ching* is not accepted by the conscious, at least the unconscious meets it halfway, for the *I Ching* is more closely connected with the unconscious than with the rational attitude of consciousness. Since the unconscious is often represented in dreams by a feminine figure, this may be the explanation here. The feminine person might be the translator, who has given the book her maternal care, and this might easily appear to the *I Ching* a “great happiness.” It anticipates general understanding, but is afraid of misuse—“Progress like a hamster.” But it is mindful of the admonition, “Take not gain and loss to heart.” It remains free of “partisan motives.” It does not thrust itself on anyone.

[998] The *I Ching* therefore faces its future on the American book market calmly and expresses itself here just about as any reasonable person would in regard to the fate of so controversial a work. This prediction is so very reasonable and full of common sense that it would be hard to think of a more fitting answer.

[999] All this happened before I had written the foregoing paragraphs. When I reached this point, I wished to know the attitude of the *I Ching* to the new situation. The state of things had been altered by what I had written, inasmuch as I myself had now entered upon the scene, and I therefore expected to hear something referring to my own action. I must confess that I had not been feeling too happy in the course of writing this foreword, for, as a person with a sense of responsibility toward science, I am not in the habit of asserting something I cannot prove or at least present as acceptable to reason. It is a dubious task indeed to try to introduce a collection of archaic “magic spells” to a critical modern public with the idea of making them more or less acceptable. I have undertaken it because I myself think that there is more to the ancient Chinese way of thinking than meets the eye. But it is embarrassing to me that I must appeal to the good will and imagination of the reader, instead of giving

him conclusive proofs and scientifically watertight explanations. Unfortunately I am only too well aware of the arguments that can be brought against this age-old oracle technique. We are not even certain that the ship that is to carry us over the unknown seas has not sprung a leak somewhere. May not the old text be corrupt? Is Wilhelm's translation accurate? Are we not self-deluded in our explanations?

[1000] The *I Ching* insists upon self-knowledge throughout. The method by which this is to be achieved is open to every kind of misuse, and is therefore not for the frivolous-minded and immature; nor is it for intellectualists and rationalists. It is appropriate only for thoughtful and reflective people who like to think about what they do and what happens to them—a predilection not to be confused with the morbid brooding of the hypochondriac. As I have indicated above, I have no answer to the multitude of problems that arise when we seek to harmonize the oracle of the *I Ching* with our accepted scientific canons. But needless to say, nothing “occult” is to be inferred. My position in these matters is pragmatic, and the great disciplines that have taught me the practical usefulness of this viewpoint are psychotherapy and medical psychology. Probably in no other field do we have to reckon with so many unknown quantities, and nowhere else do we become more accustomed to adopting methods that work even though for a long time we may not know why they work. Unexpected cures may arise from questionable therapies and unexpected failures from allegedly reliable methods. In the exploration of the unconscious we come upon very strange things, from which a rationalist turns away with horror, claiming afterward that he did not see anything. The irrational fulness of life has taught me never to discard anything, even when it goes against all our theories (so short-lived at best) or otherwise admits of no immediate explanation. It is of course disquieting, and one is not certain whether the compass is pointing true or not; but security, certitude, and peace do not lead to discoveries. It is the same with this Chinese mode of divination. Clearly the method aims at self-knowledge, though at all times it has also been put to superstitious use.

[1001] I of course am thoroughly convinced of the value of self-knowledge, but is there any use in recommending such insight, when the wisest of men throughout the ages have preached the need of it without success? Even to the most biased eye it is obvious that this book represents one long admonition to careful scrutiny of one's own character, attitude, and motives. This attitude appeals to me and has induced me to undertake the foreword. Only once before have I expressed myself in regard to the problem of the *I Ching*: this was in a memorial address in tribute to Richard Wilhelm.¹³ For the rest I have maintained a discreet silence. It is by no means easy to feel one's way into such a remote and mysterious mentality as that underlying the *I Ching*. One cannot easily disregard such great minds as Confucius and Lao-tzu, if one is at all able to appreciate the quality of the thoughts they represent; much less

can one overlook the fact that the *I Ching* was their main source of inspiration. I know that previously I would not have dared to express myself so explicitly about so uncertain a matter. I can take this risk because I am now in my eighth decade, and the changing opinions of men scarcely impress me any more; the thoughts of the old masters are of greater value to me than the philosophical prejudices of the Western mind.

[1002] I do not like to burden my reader with these personal considerations; but, as already indicated, one's own personality is very often implicated in the answer of the oracle. Indeed, in formulating my question I even invited the oracle to comment directly on my action. The answer was hexagram 29, K'an, THE ABYSMAL. Special emphasis is given to the third place by the fact that the line is designated by a six. This line says:

Forward and backward, abyss on abyss.

In danger like this, pause at first and wait,

Otherwise you will fall into a pit in the abyss.

Do not act in this way.

[1003] Formerly I would have accepted unconditionally the advice, "Do not act in this way," and would have refused to give my opinion of the *I Ching*, for the sole reason that I had none. But now the counsel may serve as an example of the way in which the *I Ching* functions. It is a fact that if one begins to think about it, the problems of the *I Ching* do represent "abyss on abyss," and unavoidably one must "pause at first and wait" in the midst of the dangers of limitless and uncritical speculation; otherwise one really will lose one's way in the darkness. Could there be a more uncomfortable position intellectually than that of floating in the thin air of unproven possibilities, not knowing whether what one sees is truth or illusion? This is the dreamlike atmosphere of the *I Ching*, and in it one has nothing to rely upon except one's own so fallible subjective judgment. I cannot but admit that this line represents very appropriately the feelings with which I wrote the foregoing passages. Equally fitting is the comforting beginning of this hexagram—"If you are sincere, you have success in your heart"—for it indicates that the decisive thing here is not the outer danger but the subjective condition, that is, whether one believes oneself to be "sincere" or not.

[1004] The hexagram compares the dynamic action in this situation to the behaviour of flowing water, which is not afraid of any dangerous place but plunges over cliffs and fills up the pits that lie in its course (K'an also stands for water). This is the way in which the "superior man" acts and "carries on the business of teaching."

[1005] K'an is definitely one of the less agreeable hexagrams. It describes a situation in which the subject seems in grave danger of being caught in all sorts of pitfalls. I have

found that K'an often turned up with patients who were too much under the sway of the unconscious (water) and hence threatened with the possible occurrence of psychotic phenomena. If one were superstitious, one would be inclined to assume that some such meaning attaches intrinsically to this hexagram. But just as, in interpreting a dream, one must follow the dream-text with the utmost exactitude, so in consulting the oracle one must keep in mind the form of the question put, for this sets a definite limit to the interpretation of the answer. "When I consulted the oracle the first time, I was thinking above all of the meaning for the *I Ching* of the foreword I had still to write. I thus put the book in the foreground and made it, so to speak, the acting subject. But in my second question, it is I who am the acting subject. So it would be illogical to take the *I Ching* as the subject in this case too, and, in addition, the interpretation would become unintelligible. But if I am the subject, the interpretation is meaningful to me, because it expresses the undeniable feeling of uncertainty and risk present in my mind. If one ventures upon such uncertain ground, it is easy to come dangerously under the influence of the unconscious without knowing it.

[1006] The first line of the hexagram notes the presence of the danger: "In the abyss one falls into a pit." The second line does the same, then adds the counsel: "One should strive to attain small things only." I apparently anticipated this advice by limiting myself in this foreword to a demonstration of how the *I Ching* functions in the Chinese mind, and by renouncing the more ambitious project of writing a psychological commentary on the whole book.

[1007] The simplification of my task is expressed in the fourth line, which says:

A jug of wine, a bowl of rice with it;
Earthen vessels
Simply handed in through the window.
There is certainly no blame in this.

[1008] Wilhelm makes the following comment here:

Although as a rule it is customary for an official to present certain introductory gifts and recommendations before he is appointed, here everything is simplified to the utmost. The gifts are insignificant, there is no one to sponsor him, he introduces himself; yet all this need not be humiliating if only there is the honest intention of mutual help in danger.

[1009] The fifth line continues the theme of limitation. If one studies the nature of water, one sees that it fills a pit only to the rim and then flows on. It does not stay caught there:

The abyss is not filled to overflowing,

It is filled only to the rim.

[1010] But if, tempted by the danger, and just because of the uncertainty, one were to insist on forcing conviction by special efforts, such as elaborate commentaries and the like, one would only be bogged down in the difficulty, which the top line describes very accurately as a tied-up and caged-in condition. Indeed, the last line often shows the consequences that result when one does not take the meaning of the hexagram to heart.

[1011] In our hexagram we have a six in the third place. This *yin* line of mounting tension changes into a *yang* line and thus produces a new hexagram showing a new possibility or tendency. We now have hexagram 48, Ching, THE WELL. The water hole no longer means danger, however, but rather something beneficial, a well:

Thus the superior man encourages the people at their work,
And exhorts them to help one another.

[1012] The image of people helping one another would seem to refer to the reconstruction of the well, for it is broken down and full of mud. Not even animals drink from it. There are fishes living in it, and one can catch these, but the well is not used for drinking, that is, for human needs. This description is reminiscent of the overturned and unused *ting* that is to receive a new handle. Moreover, like the *ting*, “the well is cleaned, but no one drinks from it”:

This is my heart’s sorrow,
For one might draw from it.

[1013] The dangerous water-hole or abyss pointed to the *I Ching*, and so does the well, but the latter has a positive meaning: it contains the waters of life. It should be restored to use. But one has no concept [*Begriff*] of it, no utensil with which to carry the water; the jug is broken and leaks. The *ting* needs new handles and carrying rings by which to grasp it, and so also the well must be newly lined, for it contains “a clear, cold spring from which one can drink.” One may draw water from it, because “it is dependable.”

[1014] It is clear that in this prognosis the speaking subject is once more the *I Ching*, representing itself as a spring of living water. The previous hexagram described in detail the danger confronting the person who accidentally falls into the pit within the abyss. He must work his way out of it, in order to discover that it is an old, ruined well, buried in mud, but capable of being restored to use again.

[1015] I submitted two questions to the method of chance represented by the coin oracle, the second question being put after I had written my analysis of the answer to the first. The first question was directed, as it were, to the *I Ching*: what had it to say

about my intention to write a foreword? The second question concerned my own action, or rather the situation in which I was the acting subject who had discussed the first hexagram. To the first question the *I Ching* replied by comparing itself to a cauldron, a ritual vessel in need of renovation, a vessel that was finding only doubtful favour with the public. To the second question the reply was that I had fallen into a difficulty, for the *I Ching* represented a deep and dangerous water-hole in which one might easily be bogged down. However, the water-hole proved to be an old well that needed only to be renovated in order to be put to useful purposes once more.

[1016] These four hexagrams are in the main consistent as regards theme (vessel, pit, well); and as regards intellectual content, they seem to be meaningful. Had a human being made such replies, I should, as a psychiatrist, have had to pronounce him of sound mind, at least on the basis of the material presented. Indeed, I should not have been able to discover anything delirious, idiotic, or schizophrenic in the four answers. In view of the *I Ching's* extreme age and its Chinese origin, I cannot consider its archaic, symbolic, and flowery language abnormal. On the contrary, I should have had to congratulate this hypothetical person on the extent of his insight into my unexpressed state of doubt. On the other hand, any person of clever and versatile mind can turn the whole thing around and show how I have projected my subjective contents into the symbolism of the hexagrams. Such a critique, though catastrophic from the standpoint of Western rationality, does no harm to the function of the *I Ching*. On the contrary, the Chinese sage would smilingly tell me: "Don't you see how useful the *I Ching* is in making you project your hitherto unrealized thoughts into its abstruse symbolism? You could have written your foreword without ever realizing what an avalanche of misunderstanding might be released by it."

[1017] The Chinese standpoint does not concern itself with the attitude one takes toward the performance of the oracle. It is only we who are puzzled, because we trip time and again over our prejudice, viz., the notion of causality. The ancient wisdom of the East lays stress upon the fact that the intelligent individual realizes his own thoughts, but not in the least upon the way in which he does it. The less one thinks about the theory of the *I Ching*, the more soundly one sleeps.

[1018] It would seem to me that on the basis of this example an unprejudiced reader should now be in a position to form at least a tentative judgment on the operation of the *I Ching*.¹⁴ More cannot be expected from a simple introduction. If by means of this demonstration I have succeeded in elucidating the psychological phenomenology of the *I Ching*, I shall have carried out my purpose. As to the thousands of questions, doubts, and criticisms that this singular book stirs up—I cannot answer these. The *I Ching* does not offer itself with proofs and results; it does not vaunt itself, nor is it easy to approach. Like a part of nature, it waits until it is discovered. It offers neither facts nor power, but for lovers of self-knowledge, of wisdom—if there be such—it

seems to be the right book. To one person its spirit appears as clear as day; to another, shadowy as twilight; to a third, dark as night. He who is not pleased by it does not have to use it, and he who is against it is not obliged to find it true. Let it go forth into the world for the benefit of those who can discern its meaning.

BIBLIOGRAPHY

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in section *A.* Short titles of the ancient volumes are printed in capital letters.

A. ANCIENT VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL TRACTS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum.... Argentorati [Strasbourg], 1566.

Contents quoted in this volume:

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Hortulanus: Commentariolum in Tabulam smaragdinam [pp. 33–47]
- iii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consilium coniugii”]

ARTIS AURIFERAE quam chemiam vocant.... Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [(a) First edition, pp. 1–65; (b) Second edition, pp. 66–139]
- ii Allegoriae super librum Turbae [pp. 139–45]
- iii Aenigmata ex Visione Arislei et allegoriis sapientum [pp. 146–54; usually referred to as “Visio Arislei”]
- iv Aurora consurgens, quae dicitur Aurea hora [pp. 185–246]

v [Zosimus:] Rosinus ad Sarratantam episcopum [pp. 277–319]

vi Tractatulus Avicennae [pp. 405–37]

vii Liber de arte chymica [pp. 575–631]

VOLUME II

viii Rosarium philosophorum [pp. 204–384; contains a second version of the “Visio Arislei” at pp. 246ff.]

AUREUM VELLUS, oder Guldin Schatz und Kunstkammer ... von dem ... bewehrten Philosopho Salomone Trismosino. Rorschach, 1598. (Other editions appeared at Rorschach, 1599; Basel, 1604; Hamburg, 1708.)

Contents quoted in this volume:

i [Trismosin:] Splendor solis [Tractatus III, pp. 3–59]

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad alchemiam pertinentium thesaurus instructissimus....* Coloniae Allobrogum [Geneva], 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

i Hoghelande: De alchemiae difficultatibus [pp. 336–68]

ii Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–445]

iii Turba philosophorum [pp. 445–65; another version, pp. 480–94]

iv Allegoriae sapientum supra librum Turbae philosophorum XXIX distinctiones [pp. 467–79]

VOLUME II

v Bonus: Margarita pretiosa novella correctissima [pp. 1–80]

vi Rosarium philosophorum [pp. 87–119]

vii Consilium coniugii seu De massa solis et lunae libri III [pp. 235–65]

viii Sendivogius: Novum lumen chymicum [pp. 463–73]

ix Sendivogius: Parabola, seu Aenigma philosophicum [pp. 474–75]

x Orthelius: Epilogus et recapitulatio in Novum lumen Sendivogii [pp. 526–30]

MUSAEUM HERMETICUM reformatum et amplificatum ... continens tractatus chimicos XXI praestantissimos.... Francofurti [Frankfurt a. M.], 1678. For translation, see WAITE.

Contents quoted in this volume:

- i Madathanus: Aureum saeculum redivivum [pp. 53–72]
- ii Sendivogius: Novum lumen chemicum e naturae fonte et manuali experientia depromptum [pp. 545–600]
- iii [Sendivogius:] Novi luminis chemici tractatus alter de sulphure [pp. 601–46]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus ... continens. Ursellis [Ursel] and Argentorati [Strasbourg], 1602–61. 6 vols. (Vols. I–III, Ursel, 1602; Vols. IV–VI, Strasbourg, 1613, 1622, 1661 respectively.)

Contents quoted in this volume:

VOLUME I

- i Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]
- ii Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]
- iii Dorn: De spagirico artificio Trithemii sententia [pp. 437–50]
- iv Dorn: Philosophia meditativa [pp. 450–72]
- v Dorn: Philosophia chemica ad meditativam comparata [pp. 472–517]
- vi Dorn: De tenebris contra naturam et vita brevi [pp. 518–35]
- vii Dorn: Congeries Paracelsicae chemicae de transmutatione metallorum [pp. 557–646]
- viii Dorn: De duello animi cum corpore [pp. 535–50]

VOLUME IV

- ix Raymundi Lulli: Theorica et practica [pp. 1–191]
- x Aphorismi Basiliani sive Canones Hermetici. De spiritu, anima, et corpore medio, majoris et minoris mundi [pp. 368–71]

xi Hermetis Trismegisti Tractatus vere aureus de Lapide philosophici secreto
[pp. 672–797]

VOLUME V

xii Allegoriae Sapientum ... supra librum Turbae [pp. 64–100]

xiii Tractatus Micreris suo discipulo Mirnefindo [pp. 101–13]

xiv Liber Platonis quartorum ... [pp. 114–208]

xv Bonus [Lacinius]: Margarita novella correctissima [pp. 589–794]

VOLUME VI

xvi Christopher of Paris: Elucidarius artis transmutatoriae [pp. 195–293]

xvii Grasseus: Arca arcani ... [pp. 294–381]

xviii Orthelius: Epilogus et recapitulatio ... in Novum lumen chymicum
Sendivogii [pp. 430–58]

THE COLLECTED WORKS OF **C. G. JUNG**

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung has been undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation (through Princeton University Press) in the United States. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aron*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and, in most cases, a bibliography; the final volume will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

*1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Crytomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7)

The Associations of Normal Subjects (by Jung and F. Riklin)

Experimental Observations on Memory

The Psychological Diagnosis of the Criminal Case

An Analysis of the Associations of an Epileptic

The Association Method (1910)

The Reaction-Time Ratio in the Association Experiment

On Disturbances in Reproduction in Association Experiment

The Psychopathological Significance of the Association Experiment

Psychoanalysis and Association Experiments

Association, Dream, and Hysterical Symptom

PSYCHOPHYSICAL RESEARCHES (1907–8)

On Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

†3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

*4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: The Jung-Loy Correspondence (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

†5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART 1

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollonian and the Dionysian

The Type Problem in the Discernment of Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Problem of Typical Attitudes in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Conclusion

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

*7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendices: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

†8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behaviour (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)

Analytical Psychology and *Weltanschauung* (1928/1931)

The Real and the Surreal (1933)

The Stages of Life (1930–1931)

The Soul and Death (1934)

Synchronicity: An Acausal Connecting Principle (1952)

***9. PART I. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS**

Archetypes of the Collective Unconscious (1934/1954)

The Concept of the Collective Unconscious (1936)

Concerning the Archetypes, with Special Reference to the Anima Concept (1936/1954)

Psychological Aspects of the Mother Archetype (1938/1954)

Concerning Rebirth (1940/1950)

The Psychology of the Child Archetype (1940)

The Psychological Aspects of the Kore (1941)

The Phenomenology of the Spirit in Fairytales (1945/1948)

On the Psychology of the Trickster-Figure (1954)

Conscious, Unconscious, and Individuation (1939)

A Study in the Process of Individuation (1934/1950)

Concerning Mandala Symbolism (1950)

Appendix: Mandalas (1955)

***9. PART II. AION (1951)**

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

***10. CIVILIZATION IN TRANSITION**

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

The Fight with the Shadow (1946)

The Undiscovered Self (Present and Future) (1957)

Flying Saucers: A Modern Myth (1958)

A Psychological View of Conscience (1958)

Good and Evil in Analytical Psychology (1959)

Introduction to Wolff’s “Studies in Jungian Psychology” (1959)

The Swiss Line in the European Spectrum (1928)

Reviews of Keyserling’s “America Set Free” (1930) and “La Revolution Mondiale” (1934)

Complications of American Psychology (1930)

The Dreamlike World of India (1939)

What India Can Teach Us (1939)

Appendix: Documents (1933–1938)

†11. PSYCHOLOGY AND RELIGION: WEST AND EAST

WESTERN RELIGION

Psychology and Religion (The Terry Lectures) (1938/1940)

A Psychological Approach to the Dogma of the Trinity (1942/1948)

Transformation Symbolism in the Mass (1942/1954)

Forewords to White’s “God and the Unconscious” and Werblowsky’s “Lucifer and Prometheus” (1952)

Brother Klaus (1933)

Psychotherapists or the Clergy (1932)

Psychoanalysis and the Cure of Souls (1928)

Answer to Job (1952)

EASTERN RELIGION

Psychological Commentaries on “The Tibetan Book of the Great Liberation” (1939/1954) and “The Tibetan Book of the Dead” (1935/1953)

Yoga and the West (1936)

Foreword to Suzuki's "Introduction to Zen Buddhism" (1939)

The Psychology of Eastern Meditation (1943)

The Holy Men of India: Introduction to Zimmer's "Der Weg zum Selbst" (1944)

Foreword to the "I Ching" (1950)

*12. PSYCHOLOGY AND ALCHEMY (1944)

Prefatory Note to the English Edition ([1951?] added 1967)

Introduction to the Religious and Psychological Problems of Alchemy

Individual Dream Symbolism in Relation to Alchemy (1936)

Religious Ideas in Alchemy (1937)

Epilogue

†13. ALCHEMICAL STUDIES

Commentary on "The Secret of the Golden Flower" (1929)

The Visions of Zosimos (1938/1954)

Paracelsus as a Spiritual Phenomenon (1942)

The Spirit Mercurius (1943/1948)

The Philosophical Tree (1945/1954)

‡14. MYSTERIUM CONIUNCTIONIS (1955–56)

AN INQUIRY INTO THE SEPARATION AND
SYNTHESIS OF PSYCHIC OPPOSITES IN ALCHEMY

The Components of the Coniunctio

The Paradoxa

The Personification of Opposites

Rex and Regina

Adam and Eve

The Conjunction

*15. THE SPIRIT IN MAN, ART, AND LITERATURE

Paracelsus (1929)

Paracelsus the Physician (1941)

Sigmund Freud in His Historical Setting (1932)

In Memory of Sigmund Freud (1939)

Richard Wilhelm: In Memoriam (1930)

On the Relation of Analytical Psychology to Poetry (1922)

Psychology and Literature (1930/1950)

“Ulysses” (1932)

Picasso (1932)

†16. THE PRACTICE OF PSYCHOTHERAPY

GENERAL PROBLEMS OF PSYCHOTHERAPY

Principles of Practical Psychotherapy (1935)

What Is Psychotherapy? (1935)

Some Aspects of Modern Psychotherapy (1930)

The Aims of Psychotherapy (1931)

Problems of Modern Psychotherapy (1929)

Psychotherapy and a Philosophy of Life (1943)

Medicine and Psychotherapy (1945)

Psychotherapy Today (1945)

Fundamental Questions of Psychotherapy (1951)

SPECIFIC PROBLEMS OF PSYCHOTHERAPY

The Therapeutic Value of Abreaction (1921/1928)

The Practical Use of Dream-Analysis (1934)

The Psychology of the Transference (1946)

Appendix: The Realities of Practical Psychotherapy ([1937] added, 1966)

‡17. THE DEVELOPMENT OF PERSONALITY

Psychic Conflicts in a Child (1910/1946)

Introduction to Wickes’s “Analyse der Kinderseele” (1927/1931)

Child Development and Education (1928)

Analytical Psychology and Education: Three Lectures (1926/1946)

The Gifted Child (1943)

The Significance of the Unconscious in Individual Education (1928)

The Development of Personality (1934)

Marriage as a Psychological Relationship (1925)

18. MISCELLANY

Posthumous and Other Miscellaneous Works

19. BIBLIOGRAPHY AND INDEX

Complete Bibliography of C. G. Jung’s Writings

General Index to the Collected Works

¹ *The Idea of the Holy*.

² *Gratia adiuvens* and *gratia sanctificans* are the effects of the *sacramentum ex opere operato*. The sacrament owes its undoubted efficacy to the fact that it is directly instituted by Christ himself. The Church is powerless to connect the rite with grace in such a way that the sacramental act would produce the presence and effect of grace. Consequently the rite performed by the priest is not a *causa instrumentalis*, but merely a *causa ministerialis*.

³ “But our esteem for facts has not neutralized in us all religiousness. It is itself almost religious. Our scientific temper is devout.” *Pragmatism*, p. 14.

⁴ “Religion is that which gives reverence and worship to some higher nature [which is called divine].” Cicero, *De inventione rhetorica*, II, 53, 161. For “testimony given under the sanction of religion on the faith of an oath” cf. Cicero, *Pro Coelio*, 55.

⁵ Heinrich Scholz (*Die Religionsphilosophie des Als-Ob*) insists on a similar standpoint. Cf. also Percy, *A Vindication of Paul*.

⁶ Cf. my “Studies in Word Association.”

⁷ Frazer, *Taboo and the Perils of the Soul*, pp. 30ff.; Crawley, *The Idea of the Soul*, pp. 82ff.; Lévy-Bruhl, *Primitive Mentality*.

⁸ Fenn, *Running Amok*.

⁹ Ninck, *Wodan und germanischer Schicksalsglaube*.

¹⁰ Lévy-Bruhl, *How Natives Think*, and *Primitive Mentality*, ch. 3, “Dreams,” pp. 97ff.

¹¹ Haeussermann, *Wortempfang und Symbol in der alttestamentlichen Prophetie*.

¹² In his excellent treatise on dreams and their functions, Benedictus Pererius, S.J. (*De Magia; De Observatione Somniorum et de Divinatione Astrologica libri tres*, 1598) says: “For God is not constrained by such laws of time, nor does he await opportune moments for his operation; for he inspires dreams where he will, when he will, and in whomsoever he will” (p. 147). The following passage throws an interesting light on the relation of the Church to the problem of dreams: “For we read in Cassian’s 22nd Collation, that the old governors and directors of the monks were well versed in seeking out and testing the causes of certain dreams” (p. 142). Pererius classifies dreams as follows: “Many [dreams] are natural, some are of human origin, and some are even divine” (p. 145). There are four causes of dreams: (1) An affection of the body. (2) An affect or vehement commotion of the mind caused by love, hope, fear, or hatred (pp. 126ff.). (3) The power and cunning of the demon, i.e. of a heathen god or the Christian devil. (“For the devil is able to know natural effects which will needs come about at some future time from fixed causes; he can know those things which he himself is going to bring about at a later time; he can know things, both present and past, which are hidden from men, and make them known to men in dreams” [p. 129]. Concerning the diagnosis of demonic dreams, the author says: “It can be surmised that dreams are sent by the devil, firstly if dreams often occur which signify future or hidden events, knowledge whereof is advantageous not to any useful end whether for oneself or for others, but only for the vain display of curious information, or even for the doing of some evil act ...” [p. 130].) (4) Dreams sent by God. Concerning the signs indicating the divine nature of a dream, the author says: “... from the importance of the matters made known by the dream, especially if, in the dream, those things are made known to a man of which certain knowledge can come to him only by God’s leave and bounty. Of such sort are those things which in the schools of the theologians are called contingent future events; further, the secrets of the heart which are

wholly hidden from all men's understanding; and lastly, those highest mysteries of our faith which are known to no man unless he be taught them by God [!] ... That this [is divine] is especially declared by a certain enlightenment and moving of the spirits, whereby God so illumines the mind, so acts upon the will, and so assures the dreamer of the credibility and authority of his dream that he so clearly recognizes and so certainly judges God to be its author that he not only desires to believe it, but must believe it without any doubt whatsoever" (pp. 131ff.). Since the demon, as stated above, is also capable of producing dreams accurately predicting future events, the author adds a quotation from Gregory the Great (*Dialogorum Libri IV*, cap. 48, in Migne, *P.L.*, vol. 77, col. 412): "Holy men discern between illusions and revelations, the very words and images of visions, by a certain inward sensibility, so that they know what they receive from the good spirit and what they endure from the deceiver. For if a man's mind were not careful in this regard, it would plunge itself into many vanities through the deceiving spirit, who is sometimes wont to foretell many true things, in order that he may entirely prevail to ensnare the soul by some one single falsity" (p. 132). It seemed to be a welcome safeguard against this uncertainty if dreams were concerned with the "highest mysteries of our faith." Athanasius, in his biography of St. Anthony, gives us some idea of how clever the devils are in foretelling future events. (Cf. Budge, *The Book of Paradise*, I, pp. 37ff.) The same author says they sometimes appear even in the shape of monks, singing psalms, reading the Bible aloud, and making disturbing remarks about the moral conduct of the brethren (pp. 33ff. and 47). Pererius, however, seems to trust his own criterion, for he continues: "As therefore the natural light of our minds enables us clearly to discern the truth of first principles, so that they are embraced by our assent immediately and without any argument; so in dreams sent by God the divine light shining upon our minds brings it about that we understand and believe with certainty that those dreams are true and of God." He does not touch on the delicate question of whether every unshakable conviction derived from a dream necessarily proves the divine origin of the dream. He merely takes it for granted that a dream of this sort would naturally exhibit a character consistent with the "highest mysteries of our faith," and not perchance with those of another one. The humanist Kaspar Peucer (in his *Commentarius de praecipuis generibus divinationum*, 1560) is far more definite and restrictive in this respect. He says (p. 270): "Those dreams are of God which the sacred scriptures affirm to be sent from on high, not to every one promiscuously, nor to those who strive after and expect revelations of their own opinion, but to the Holy Patriarchs and Prophets by the will and judgment of God. [Such dreams are concerned] not with light matters, or with trifles and ephemeral things, but with Christ, the governance of the Church, with empires and their well ordering, and other remarkable events; and to these God always adds sure testimonies, such as the gift of interpretation and other things, by which it is clear that they are not rashly to be objected to, nor are they of natural origin, but are divinely inspired." His crypto-Calvinism is palpably manifest in his words, particularly when one compares them with the natural theology of his Catholic contemporaries. It is probable that Peucer's hint about "revelations" refers to certain heretical innovations. At any rate, in the next paragraph, where he deals with dreams of diabolical origin, he says these are the dreams "which the devil shows nowadays to Anabaptists, and at all times to Enthusiasts and suchlike fanatics." Pererius with more perspicacity and human understanding devotes one chapter to the question "Whether it be lawful for a Christian man to observe dreams?" (pp. 142ff) and another to the question "To what kind of man does it belong to interpret dreams aright?" (pp. 245ff.). In the first he reaches the conclusion that important dreams should be considered. I quote his words: "Finally, to consider whether the dreams which oftentimes disturb us and move us to evil courses are put before us by the devil, as likewise on the other hand to ponder whether those by which we are aroused and incited to good, as for example to celibacy, almsgiving, and entering the religious life, are sent us by God, is the part not of a superstitious mind, but of one that is religious, prudent, and

careful and solicitous for its salvation.” Only stupid people would observe all the other futile dreams. In the second chapter, he answers that nobody should or could interpret dreams “unless he be divinely inspired and instructed.” “Even so,” he adds, “the things of God knoweth no man, but the Spirit of God” (I Cor. 2:11). This statement, eminently true in itself, reserves the art of interpretation to such persons as are endowed by their office with the gift of the Holy Spirit. It is obvious, however, that a Jesuit author could not envisage a descent of the Holy Spirit outside the Church.

¹³ “Dream Symbols of the Individuation Process.” [Orig. in *Eranos-Jahrbuch 1935*. A revised and expanded version of this appears in *Psychology and Alchemy*, as Part II.—EDITORS.] Although the dreams cited here are mentioned in the above publication, they are examined there from a different standpoint. Since dreams have many aspects they can be studied from various angles.

¹⁴ Freud, *The Interpretation of Dreams*. Silberer (*Der Traum*, 1919) presents a more cautious and more balanced point of view. As to the difference between Freud’s and my own views, I would refer the reader to my little essay on this subject, “Freud and Jung: Contrasts.” Further material in *Two Essays on Analytical Psychology*, pars. 16ff.; Kranefeldt, *Secret Ways of the Mind*; Gerhard Adler, *Entdeckung der Seele*; and Toni Wolff, “Einführung in die Grundlagen der komplexen Psychologie,” in *Die kulturelle Bedeutung der komplexen Psychologie*.

¹⁵ Cf. the relation of Odin as the god of poets, seers, and raving enthusiasts, and of Mimir, the Wise One, to Dionysus and Silenus. The word Odin has a root-connection with Gall. *obāteis*, Ir. *fāith*, L. *vates*, similar to *μάντις* and *μαίνομαι*. Ninck, *Wodan und germanischer Schicksalsglaube*, pp. 30ff.

¹⁶ “The Role of the Unconscious.”

¹⁷ Cf. my “Wotan,” *Neue Schweizer Rundschau*, 1936 [an abbreviated version in the *Saturday Review of Literature*, Oct. 16, 1937; subsequently published in *Essays on Contemporary Events*, 1947, now in *Coll. Works*, vol. 10]. The Wotan parallels in Nietzsche’s work are to be found in the poem “To the Unknown God” (*Werke*, ed. Baeumler, V, p. 457); *Thus Spake Zarathustra*, trans. by Thomas Common, pp. 293ff., 150, and 185f.; and the Wotan dream of 1859 in Elisabeth Foerster-Nietzsche, *Der werdende Nietzsche*, pp. 84ff.

¹⁸ Cf. my *Two Essays*, pars. 296ff.; *Psychological Types*, Defs. 48, 49; “Archetypes of the Collective Unconscious,” pars. 52ff.; and “Concerning the Archetypes.”

¹⁹ Cf. my “Concerning the Archetypes,” pars. 120ff.

²⁰ Maitland, *Anna Kingsford*, I, pp. 129ff. [Cf. “Comm. on *Golden Flower*,” par. 40.]

²¹ The statement about the hermaphroditic nature of the Deity in *Corpus Hermeticum*, Lib. I (ed. Scott, *Hermetica*, 1, p. 118): “For the first Mind was bisexual,” is probably taken from Plato, *Symposium*, XIV. It is questionable whether the later medieval representations of the hermaphrodite stem from “Poimandres” (*Hermetica*, I), since the hermaphrodite figure was practically unknown in the West before the *Poimander* was printed by Marsilio Ficino in 1471. It is possible, however, that one of the few scholars of those days who understood Greek got the idea from one of the Greek codices then extant, as for instance the Codex Laurentianus 71, 33, the Codex Parisinus Graecus 1220, or the Codices Vaticanus Graecus 237 and 951, all from the 14th century. There are no older codices. The first Latin translation by Marsilio Ficino had a sensational effect. But before that date we have the hermaphroditic symbols from the Codex Germanicus Monacensis 598, dated 1417. It seems to me more probable that the hermaphrodite symbol derives from Arabic or Syriac MSS. translated in the 11th or 12th century. In the old Latin

“Tractatulus Avicennae,” which is strongly influenced by Arabic tradition, we find: “[The elixir] is a voluptuous serpent impregnating itself” (*Artis auriferae*, I, 1593, p. 406). Although the author was a Pseudo-Avicenna and not the authentic Ibn Sina (970–1037), he is one of the Arabic-Latin sources for medieval Hermetic literature. We find the same passage in “Rosinus ad Sarratantam” (*Artis aurif.*, I, p. 303). “Rosinus” is an Arabic-Latin corruption of “Zosimos,” a Greek neo-Platonic philosopher of the 3rd century. His treatise “Ad Sarratantam” belongs to the same class of literature, and since the history of these texts is still shrouded in darkness, nobody can say who copied from whom. The *Turba philosophorum*, Sermo LXV, a Latin text of Arabic origin, makes the same allusion: “The composite brings itself forth.” (Ruska, *Turba philosophorum*, 1931, p. 165.) So far as I can judge, the first text that definitely mentions the hermaphrodite is the “Liber de arte chymica” of the 16th century (*Artis aurif.*, I, pp. 575ff.). On p. 610 it says: “For that Mercurius is all metals, male and female, and an hermaphroditic monster even in the marriage of soul and body.” Of the later literature I mention only Hieronymus Reusner, *Pandora* (1588); “Splendor Solis” (*Aureum vellus*, 1598); Michael Maier, *Symbola aureae mensae* (1617) and *Atalanta fugiens* (1618); J. D. Mylius, *Philosophia reformata* (1622).

²² The “Tractatus aureus Hermetis” is of Arabic origin and does not belong to the *Corpus Hermeticum*. Its history is unknown (first printed in *Ars chemica*, 1566). Dominicus Gnosius wrote a commentary on the text in his *Hermetis Trismegisti Tractatus vere Aureus de Lapide philosophici secreto* (1610). On p. 101 he says: “As a shadow continually follows the body of one who walks in the sun ... so our Adamic hermaphrodite, though he appears in masculine form, nevertheless always carries about with him Eve, or his feminine part, hidden in his body.” This commentary, together with the text, is reproduced in Manget, *Bibliotheca chemica curiosa*, I (1702), pp. 401ff.

²³ There is a description of both these figures in *Two Essays*, Part II, pars. 296ff. See also *Psychological Types*, Def. 48, and Emma Jung, “On the Nature of the Animus.” [Cf. also *Aion*, ch. III.]

²⁴ Anima and animus do not only occur in negative form. They may sometimes appear as a source of enlightenment, as messengers (ἄγγελοι), and as mystagogues. [Cf. Jung, *Aion (Coll. Works*, Vol. 9, pt. II), p. 16; “Psychology of the Transference,” par. 504.—EDITORS.]

²⁵ [Cf. *Psychology and Alchemy*, pars. 164ff., 183ff.—EDITORS.]

¹ [Cf. *Psychology and Alchemy*, par. 175.—EDITORS.]

² [Cf. *ibid.*, par. 293.—EDITORS.]

³ A bishop is allowed four candles for a private mass. Some of the more solemn forms of the Mass, such as the *Missa cantata*, also have four. Still higher forms have six or seven.

⁴ Origen, *In Jeremiam homiliae*, XX, 3, in Migne, *P.G.*, vol. 13, col. 532. Also in James, *The Apocryphal New Testament*, p. 35.

⁵ Irenaeus, *Against Heresies*, trans. by Keble, p. 81.

⁶ Cf. Zeller, *Die Philosophie der Griechen*, where all the sources are collected. “Four is the origin and root of eternal nature” (I, p. 291). Plato derives the human body from the four. According to the Neoplatonists, Pythagoras himself called the soul a square (Zeller, III, II, p. 120).

⁷ The “four” in Christian iconography appears chiefly in the form of the four evangelists and their symbols, arranged in a rose, circle, or melothesia, or as a tetramorph, as for instance in the *Hortus deliciarum* of Herrad of Landsberg and in works of mystical speculation. Of these I mention only: (1) Jakob Böhme, *XL Questions concerning the Soule* (1647). (2) Hildegard of Bingen, Codex Luccensis, fol. 372, and Codex Heidelbergensis, “Scivias,” representations of the mystic universe; cf. Singer, *Studies in the History and Method of Science*. (3) The remarkable drawings of Opicinus de Canistris in the Codex Palatinus Latinus 1993, Vatican; cf. Salomon, *Weltbild und Bekenntnisse eines avignonesischen Klerikers des 14. Jahrhunderts*. (4) Heinrich Khunrath, *Vom hylealischen, das ist, pri-materialischen catholischen, oder allgemeinen naturlichen Chaos* (1597), pp. 204 and 281, where he says the “Monas catholica” arises from the rotation of the “Quaternarium” and interprets it as an image and allegory of Christ (further material in Khunrath, *Amphitheatrum sapientiae aeternae*, 1604). (5) The speculations about the cross: “It is said ... that the cross was made of four kinds of wood,” St. Bernard, *Vitis mystica*, cap. XLVI, in Migne, *P.L.*, vol. 184, col. 752; cf. W. Meyer, *Die Geschichte des Kreuzholzes vor Christus*, p. 7. For the quaternity see also Dunbar, *Symbolism in Mediaeval Thought and Its Consummation in the Divine Comedy*.

⁸ Cf. the systems of Isidorus, Valentinus, Marcus, and Secundus. A most instructive example is the symbolism of the Monogenes in the Codex Brucianus (Bodleian Library, Oxford, MS. Bruce 96), trans. by C. A. Baynes, *A Coptic Gnostic Treatise*, pp. 59ff., 70ff. [Cf. *Psychology and Alchemy*, pars. 138ff.]

⁹ I am thinking of the mystical speculations about the four “roots” (the rhizomata of Empedocles), i.e., the four elements or four qualities (wet, dry, warm, cold), peculiar to Hermetic or alchemical philosophy. Descriptions in Petrus Bonus, *Pretiosa margarita novella* (1546); Joannes Pantheus, *Ars transmutationis metallica* (1519), p. 5, based on a *quaternatio*; Raymond Lully, “Theorica et practica” (*Theatrum chemicum*, IV, 1613, p. 174), a *quaternatio elementorum* and of chemical processes; Michael Maier, *Scrutinium chymicum* (1687), symbols of the four elements. The last-named author wrote an interesting treatise called *De circulo physico quadrato* (1616). There is much the same symbolism in Mylius, *Philosophia reformata* (1622). Pictures of the Hermetic redemption in the form of a tetrad with symbols of the four evangelists (from Reusner’s *Pandora* and the Codex Germanicus Monacensis 598) are reproduced in *Psychology and Alchemy*, figs. 231 and 232; quaternity symbolism, *ibid.*, par. 327. Further material in Kuekelhaus, *Urzahl und Gebärde*. Eastern parallels in Zimmer, *Kunstform und Yoga im indischen Kultbild*; Wilhelm and Jung, *The Secret of the Golden Flower*. The literature on the symbolism of the cross is also relevant here.

¹⁰ This sentence may sound presumptuous, for I seem to be forgetting that we are concerned here with a single and unique dream from which no far-reaching conclusions can be drawn. My conclusions, however, are based not on this dream alone but on many similar experiences to which I have alluded elsewhere.

¹¹ Cf. the *Hypnerotomachia Poliphili* (1499). This book is supposed to have been written by a monk of the 15th century. It is an excellent example of an anima-romance. [Fierz-David's study *The Dream of Poliphilo* treats it as such.—EDITORS.]

¹² Ecclesiastical vestments are not for adornment only, they also serve to protect the officiating priest. "Fear of God" is no groundless metaphor, for at the back of it there is a very real phenomenology. Cf. Exodus 20:18f.

¹³ Gnosis, as a special kind of knowledge, should not be confused with "Gnosticism."

¹⁴ Cf. *Psychological Types*, Def. 26 [Also "On the Nature of the Psyche," *Coll. Works*, Vol 8, pp. 212ff.—EDITORS]

¹⁵ The term "archetypus" is used by Cicero, Pliny, and others. It appears in the *Corpus Hermeticum*, Lib. I (Scott, *Hermetica*, I, p. 116, 8a) as a definitely philosophical concept: "Thou knowest in thy mind the *archetypal form* [τὸ ἀρχέτυπον εἶδος], the beginning before the beginning, the unbounded."

¹⁶ *Das Bestandige in den Menschenrassen*, p. 75; *Die Vorstellungen von der Seele*, p. 306; *Der Volkergedanke im Aufbau einer Wissenschaft vom Menschen; Ethnische Elementargedanken in der Lehre vom Menschen*.

¹⁷ "In sleep and in dreams we pass through the whole thought of earlier humanity.... I mean, as a man now reasons in dreams, so humanity also reasoned for many thousands of years when awake: the first cause which occurred to the mind as an explanation of anything that required explanation was sufficient and passed for truth.... This atavistic element in man's nature continues to manifest itself in our dreams, for it is the foundation upon which the higher reason has developed and still develops in every individual. Dreams carry us back to remote conditions of human culture and afford us a ready means of understanding it better." Nietzsche, *Human All-Too-Human*, I, pp. 24–25, trans. by Zimmern and Cohn, modified.

¹⁸ Hubert and Mauss, *Mélanges d'Histoire des Religions*, p. xxix: "Constantly set before us in language, though not necessarily explicit in it, ... the categories ... generally exist rather under the form of habits that guide consciousness, themselves remaining unconscious. The notion of *mana* is one of these principles; it is a datum of language; it is implied in a whole series of judgments and reasonings concerned with attributes that are those of *mana*. We have described *mana* as a category, but it is a category not confined to primitive thought; and today, in a weakened degree, it is still the primal form that certain other categories which always function in our minds have covered over: those of substance, cause ..." etc.

¹⁹ Lévy-Bruhl, *How Natives Think*.

²⁰ For the psychology of the *tetraktys*, see my "Commentary on *The Secret of the Golden Flower*," par. 31; ["Dogma of the Trinity," pars. 246, 268ff.]; and Hauer, "Symbole und Erfahrung des Selbstes in der Indo-Arischen Mystik."

²¹ [For a tabulation of these dreams, see *Psychology and Alchemy*, par. 329, n.—EDITORS.]

²² There is an excellent presentation of the problem in Maier, *De circulo* (1616).

²³ [On the source of this saying, see par. 229, n. 6, below.—EDITORS.]

²⁴ Cf. his essay "Circles" (*Essays*, Everyman edn., p. 167).

²⁵ Plato, *Timaeus*, 7; Steeb, *Coelum Sefhiroticum Hebraeorum* (1679), p. 15.

²⁶ Steeb, p. 19. Maier (*De circulo*, p. 27) says: “The circle is a symbol of eternity or an indivisible point.” Concerning the “round element,” see *Turba philosophorum*, Sermo XLI (ed. Ruska, p. 148), where the “rotundum which turns copper into four” is mentioned. Ruska says there is no similar symbol in the Greek sources. This is not quite correct, since we find a *στοιχείον στρογγύλον* (round element) in the *περὶ ὀργάνων* of Zosimos (Berthelot, *Alch. grecs*, III, xlix, 1). The same symbolism may also occur in his *ποίημα* (Berthelot, III, v bis), in the form of the *περιηκονισμένον*, which Berthelot translates as “objet circulaire.” (The correctness of this translation, however, is doubtful.) [Cf. “The Visions of Zosimos,” pal. 86, n. 12.] A better parallel might be Zosimos’ “omega element.” He himself describes it as “round” (Berthelot, III, xlix, 1).

The idea of the creative point in matter is mentioned in Sendivogius, “Novum lumen” (*Musaeum hermeticum*, 1678, p. 559); cf. *The Hermetic Museum Restored and Enlarged*, trans. by A. E. Waite, II, p. 89: “For there is in every body a centre, the seeding-place or spermatic point.” This point is a “point born of God” (p. 59). Here we encounter the doctrine of the “panspermia” (all-embracing seed-bed), about which Athanasius Kircher, S.J. (*Mundus subterraneus*, 1678, II, p. 347) says: “Thus from the holy words of Moses ... it appears that God, the creator of all things, in the beginning created from nothing a certain Matter, which we not unfittingly call Chaotic ... within which something ... confused lay hidden as if in a kind of panspermia ... as though he brought forth afterward from the underlying material all things which had already been fecundated and incubated by the divine Spirit... But he did not forthwith destroy the Chaotic Matter, but willed it to endure until the consummation of the world, as at the first beginning of things so to this very day, a panspermia replete with all things....” These ideas lead us back to the “descent” or “fall of the deity” in the Gnostic systems. Cf. Bussell, *Religious Thought and Heresy in the Middle Ages*, pp. 554ff.; Reitzenstein, *Poimandres*, p. 50; Mead, *Pistis Sophia*, pp. 36ff., and *Fragments of a Faith Forgotten*, p. 470.

²⁷ “There is in the sea a round fish, lacking bones and scales, and having in itself a fatness” (the *humidum radicale* —the *anima mundi* imprisoned in matter). From “Allegoriae super Turbam,” *Art. aurif.*, I (1593), p. 141. [Cf. *Aion*, pars. 195ff.]

²⁸ *Tīmaeus* 7.

²⁹ See above, n. 26.

³⁰ “For as the heaven which is visible is round in form and motion ... so is the Gold” (Maier, *De circulo*, p. 39).

³¹ *Rosarium philosophiorum* (*Art. aurif.*, II, p. 261). This treatise is ascribed to Petrus Toletanus, who lived in Toledo about the middle of the 13th century. He is said to have been either an older contemporary or a brother of Arnold of Villanova, the famous physician and philosopher. The present form of the *Rosarium*, based on the first printing of 1550, is a compilation and probably does not date further than the 15th century, though certain parts may have originated early in the 13th century.

³² *Symposium* XIV.

³³ Petrus Bonus in Janus Lacinius, *Pretiosa margarita novella* (1946). For the *allegoria Christi*, see *Psychology and Alchemy*, “The Lapis-Christ Parallel.”

³⁴ *Beati Thomae de Aquino Aurora sive Aurea hora*. Complete text in the rare printing of 1625: *Harmoniae Inperscrutabilis Chymico-philosophicae sive Philosophorum Antiquorum Consentientium Decas I* (Francofurti apud Conrad Eifridum. Anno MDCXXV). (British Museum 1033 d.11.) The interesting part of this treatise is the first part, “Tractatus paraboliarum,” which was omitted on account of its “blasphemous” character from the printings of *Artis*

auriferae in 1572 and 1593. In the so-called Codex Rhenoviensis (Zurich Central Library), about four chapters of the “Parabolarum” are missing. The Codex Parisinus Fond. Lat. 14006 (Bibl. nat.) contains a complete text. [For English translation, see *Aurora Consurgens*, edited by M.-L. von Franz.—EDITORS.]

³⁵ A good example is the commentary of Gnosius on the “Tractatus aureus Hermetis,” *Theatr. chem.*, IV, pp. 672ff.; Mangel, *Bibl. chein.*, I, pp. 400ff.

³⁶ *Aurora Consurgens* (ed. von Franz), p. 129. Zosimos (Berthelot, *Alch grecs*, III, xlix, 4–5), quoting from a Hermetic writing, says that ὁ θεοῦ υἱὸς πανταγενόμενος was Adam or Thoth, who was made of the four elements and the four cardinal points. Cf. *Psychology and Alchemy*, par. 456, sec. 6.

³⁷ *Aurora Consurgens* (ed. von Franz), p. 129.

³⁸ Cf. *Psychology and Alchemy*, pars. 347ff.

³⁹ Horace, *Epistles*, I, x, 24.

⁴⁰ Baynes, ed., *A Coptic Gnostic Treatise*, pp. 22, 89, 94.

⁴¹ The *Rosarium philosophorum* is one of the first attempts at a synopsis and gives a fairly comprehensive account of the medieval quaternity.

⁴² Cf., for instance, the 5th and 8th Annual Reports of the Smithsonian Institution, Bureau of Ethnology, Washington (1887 and 1892).

⁴³ Cf. the paleolithic (?) “sun wheels” of Rhodesia. [But see infra, par. 484, n. 9.]

⁴⁴ [In his commentary to *The Secret of the Golden Flower*, first pub. (in German) in 1929.—EDITORS.]

⁴⁵ Koepgen, *Die Gnosis des Christentums*, pp. 189, 190.

⁴⁶ *Ibid.*, pp. 185ff.

⁴⁷ Dorn thinks that God created the *binarius* on the second day of Creation, when he separated the upper waters from the lower, and that this was the reason why he omitted to say on the evening of the second day what he said on all the others, namely that “it was good.” The emancipation of the *binarius*, Dorn holds, was the cause of “confusion, division, and strife.” From the *binarius* issued “its quaternary offspring” (*sua proles quaternaria*). Since the number 2 is feminine, it also signified Eve, whereas the number 3 was equated with Adam. Therefore the devil tempted Eve first: “For [the devil] knew, being full of all guile, that Adam was marked with the *unarius*, and for this cause he did not at first attack him, for he greatly doubted whether he could do anything against him. Moreover, he was not ignorant that Eve was divided from her husband as a natural binary from the unity of its ternary [*tanquam naturalem binarium ab unario sui ternarii*]. Accordingly, armed with a certain likeness of binary to binary, he made his attack on the woman. For all even numbers are feminine, of which two, Eve’s proper and original number, is the first,” (Dorn, “De tenebris contra naturam et vita brevi,” *Theatr. chem.*, 1602, 1, p. 527. In this treatise and the one that follows it, “De Duello Animi cum Corpore,” pp. 535ff., the reader will find everything I have mentioned here.) The reader will have noticed how Dorn, with great cunning, discovers in the *binarius* a secret affinity between the devil and woman. He was the first to point out the discord between threeness and fourness, between God as Spirit and Empedoclean nature, thus—albeit unconsciously—cutting the thread of alchemical projection. Accordingly, he speaks of the *quaternarius* as “fundamental to the medicine of the infidels.” We must leave it an open question whether by “infidels” he meant the Arabs or the pagans of antiquity. At any rate Dorn suspected that there was

something ungodly in the quaternity, which was intimately associated with the nature of woman. Cf. my remarks concerning the “virgo terra,” pars. 107, n. 52, 123, 126.

⁴⁸ I am not referring here to the dogma of the human nature of Christ.

⁴⁹ This identification has nothing to do with the Catholic conception of the assimilation of the individual’s life to the life of Christ and his absorption into the *corpus mysticum* of the Church. It is rather the opposite of this view.

⁵⁰ I am thinking chiefly of works that contain alchemical legends and didactic tales. A good example would be Maier’s *Symbola aureae mensae* (1617), with its symbolic *peregrinatio* (pp. 569ff.).

⁵¹ So far as I know, there are no complaints in alchemical literature of persecution by the Church. The authors allude usually to the tremendous secret of the magistry as a reason for secrecy.

⁵² Cf. *Psychology and Alchemy*, fig. 232, showing the glorification of the body in the form of the Assumption of the Virgin (from Reusner, *Pandora*, 1588). St. Augustine used the earth to symbolize the Virgin: “Truth is arisen from the earth, for Christ is born of a virgin” (*Sermones*, 189, II, in Migne, *P.L.*, vol. 38, col. 1006). Likewise Tertullian: “That virgin earth, not yet watered by the rains nor fertilized by the showers” (*Adversus Judaeos*, 13, in Migne, *P.L.*, vol. 2, col. 655).

⁵³ The *rebis* (‘made of two’) is the philosophers’ stone, for in it the masculine and the feminine nature are united. [Cf. *Psychology and Alchemy*, fig. 125, and “The Psychology of the Transference,” pars. 525ff.—EDITORS]

¹ Cf. *Symbols of Transformation*.

² A recurrence of the ancient symbol of the uroboros, ‘tail-eater.’

³ An Eastern parallel is the “circulation of the light” mentioned in the Chinese alchemical treatise, *The Secret of the Golden Flower* [1962, pp. 30ff.], edited by R. Wilhelm and myself.

⁴ This refers to a previous vision, where a black eagle carried away a golden ring. [For this entire clock vision, cf. *Psychology and Alchemy*, pars. 307ff.—EDITORS.]

⁵ The “blood-letting manikins” are *melothesia*. [These are the little figures which medieval physicians used to draw inside a circle or mandala on the part of the body affected, when bleeding or “cupping” a patient. *Melothesia* is the “assignment of parts of the body to the tutelage of signs or planets” (Liddell and Scott, *Greek-English Lexicon*, p. 1099). Woodcuts of *melothesia* are reproduced in Jacobi, ed., *Paracelsus: Selected Writings*, figs. 36 and 45.—EDITORS.]

⁶ Budge, *Osiris and the Egyptian Resurrection*, I, 3; *The Egyptian Book of the Dead* (facsimile), pl. 5. In a manuscript from the 7th century (Gellone), the evangelists are represented with the heads of their symbolic animals instead of human heads.

⁷ [See “Concerning Mandala Symbolism,” fig. 1 and pars. 636f.]

⁸ *Shrīchakrasambhāra Tantra*, ed. by Avalon.

⁹ Abbé Joseph Delacotte, *Guillaume de Digulleville, Trois romans-poèmes du XIV^e siècle*. [A 15th-cent. verse translation of the “Pilgrimage” by John Lydgate was published by the Early English Text Society (1899–1904). For other early English translations, published in recent times, see the *Oxford History of English Literature*, II, part i, p. 308.—EDITORS.]

¹⁰ The Holy Ghost is the cause of the *viriditas* (greenness). Cf. below, pp. 91–92.

¹¹ Gerhard Dorn had a similar conception of circular figures intersecting and disturbing one another: on the one hand the circular system of the Trinity and on the other the devil’s attempt to construct a system of his own. He says: “It is to be noted, moreover, that the centre is unary, and its circle is ternary, but whatever is inserted between the centre [and the circumference], and enters the enclosed realm, is to be taken as binary, be it another circle ... or any other figure whatever.” So the devil fabricated a circle of sorts for himself and tried to devise a circular system with it, but for various reasons the attempt failed. In the end all he produced was the “figure of a twofold serpent lifting up four horns, and therefore is the kingdom of the monomachy [*monomachiae regnum*] divided against itself.” Being the *binarius* in person, the devil could hardly have produced anything else. (“De Duello,” *Theatrum chemicum*, 1602, I, p. 547.) Already in the alchemy of Zosimos the devil appears as *ἀντίμιμος*, the imitator, ape of God. (Berthelot, *Alch. grecs*, III, xlix, 9. Cf. also Mead, *Pistis Sophia*, *passim*.)

¹² A peculiar coincidence of three and four is to be found in Wernher vom Niederrhein’s allegory of Mary, where, besides the three men in the burning fiery furnace, a fourth appears who is interpreted as Christ. Cf. Salzer, *Die Sinnbilder und Beiworte Mariens*, p. 21.

¹³ Eisler, *Weltenmantel und Himmelszelt*, I, pp. 85ff.

¹⁴ Salzer, p. 66.

¹⁵ Zeller, *Die Philosophie der Griechen*, III, ii, p. 120. According to Archytas, the soul is a circle or sphere.

¹⁶ Cf. the invocation in the Acts of Thomas (Mead, *Fragments; of a Faith Forgotten*, pp. 422ff.). Also the “seat of wisdom” in the Litany of Loreto, and the readings from Proverbs on Mary’s feast-days, e.g. the Immaculate Conception (Prov. 8:22–35).

¹⁷ For the Gnostics the quaternity was decidedly feminine. Cf. Irenaeus, *Against Heresies*, I, ch. xi (Keble trans., p. 36).

¹⁸ *Die Gnosis des Christentums*, p. 194.

¹⁹ See *Psychological Types*, Defs. 48 and 49. [Also *Aion (Coll. Works, Vol. 9, pt. 11)*, pars. 20ff.—EDITORS.]

²⁰ A special instance is the “inferior function.” See *Psychological Types*, Def. 30. [And *Aion*, pars. 13ff.—EDITORS.]

²¹ Widely known because of his book *Natural Law in the Spiritual World*. The quotation comes from *The Greatest Thing in the World*.

²² Irenaeus, *Against Heresies*, XXV (Keble, p. 75). Cf. Mead, *Fragments*, p. 231.

²³ James, trans., *The Apocryphal New Testament*, p. 33.

²⁴ In Tibetan Buddhism the four colours are associated with psychic qualities (the four forms of wisdom). Cf. my psychological commentary to the *Tibetan Book of the Dead*, below, p. 522.

²⁵ See *Psychological Types*, Def. 51.

²⁶ The cross has also the meaning of a boundary-stone between heaven and hell, since it is set up in the centre of the cosmos and extends to all sides. (Cf. Kroll, *Gott und Holle*, p. 18, n. 3) The Tibetan mandala occupies a similar central position, its upper half rising up to heaven out of the earth (like the hemispherical stupas at Sanchi, India), with hell lying below. I have often found the same construction in individual mandalas: the light world on top, the dark below, as if they were projecting into these worlds. There is a similar design in Jakob Bohme’s “reversed eye” or “philosophical mirror” (*XL Questions concerning the Soule*, 1647 [Cf. “A Study in the Process of Individuation,” fig. 1, p. 297.]

²⁷ Cf the illustrations in Jung, “Concerning Mándala Symbolism. —EDITORS.]

²⁸ This is a technical term referring to a method I have proposed for raising unconscious contents to consciousness. [Cf. “The Relations between the Ego and the Unconscious,” pars. 342ff.; “The Psychological Aspects of the Kore,” pars. 319ff., “The Transcendent Function,” pars. 167f., *Mysterium Coniunctionis*, pars. 753f.]

²⁹ For the psychology of the mandala, see my “Commentary on *The Secret of the Golden Flower*,” pars. 31ff. [Also “Concerning Mandala Symbolism,” pars. 627ff.:—EDITORS.]

³⁰ See *Psychological Types*, Def. 16 [and 46 in *Coll. Works*, vol. 6]. [Also “The Relations between the Ego and the Unconscious,” par. 274; *Aion*, pars. 43ff.—EDITORS.]

³¹ C. Hauer, “Symbole und Erfahrung des Selbsten,” p. 33.

³² Concerning the concept of the “relativity of God,” see *Psychological Types*, ch. V, 4 b.

³³ This fact accounts for the theory of animism.

³⁴ Concerning the concept “inflation,” see “The Relations between the Ego and the Unconscious,” pars. 228ff.

³⁷ *Theatrum chemicum*, VI (1661), p. 431.

³⁸ Cf. the very similar formula in the “Fundamentum” of St. Ignatius Loyola’s *Spiritual Exercises*. [Cf. *Aion*, par. 252.]

³⁹ *Corpus Hermeticum*, IV, 4.

⁴⁰ Mercury is “wholly aerial and spiritual.” Theobald de Hoghelande, “De alchemiae difficultatibus,” *Theatr. chem.*, I (1602), p. 183.

⁴¹ Berthelot, *Alch. grecs*, III, vi, 5.

^{41a} Daniel, *Thesaurus*, V, pp. 201–2.

⁴² Mylius, *Philosophia reformata*, p. 42; Dorn, “Congeries,” *Theatr. chem.*, I, p. 584; “Turba philosophorum,” *Artis auriferae*, I (1593), p. 89.

⁴³ Originally a Platonic idea.

⁴⁴ Mylius, p. 8.

⁴⁵ St. Gregory, *Expositiones in librum I Regum*, I, i, 1; Migne, *P.L.*, vol. 79, col. 23.

⁴⁶ Barbelo or Ennoia plays the role of the anima in Barbelo-Gnosis. Bousset thinks the name “Barbelo” is a corruption of *parthenos*, ‘virgin.’ It is also translated as ‘God is in the Four.’

⁴⁷ This idea was formulated in the conception of the “anima in compedibus,” the fettered or imprisoned soul. (Cf. Dorn, “Speculativa philosophia,” *Theatr. chem.*, I, pp. 272, 298; “De spagirico artificio,” etc., *ibid.*, I, pp. 457, 497.) So far, I have found no evidence that the medieval natural philosophers based themselves consciously on any heretical traditions. But the parallels are astonishing. Those “enchained in Hades” are mentioned very early on, in the Comarius text dating from the 1st century (Berthelot, *Alch. grecs*, IV, xx, 8.) For the spark in the darkness and the spirit imprisoned in matter, see Leisegang, *Die Gnosis*, pp. 154f. and 233. A similar motif is the conception of the “natura abscondita,” which is discoverable in man and in all things, and is of the same nature as the anima. Thus Dorn (“De spagirico artificio,” p. 457) says: “In the body of man there is hidden a certain substance of heavenly nature known to very few.” In his “Philosophia speculativa” (p. 298) the same author says: “There is in natural things a certain truth not seen by the outward eye but perceived by the mind alone. Of this the philosophers had experience, and found its virtue to be such that it worked miracles.” The idea of the “hidden nature” occurs already in Pseudo-Democritus. (Berthelot, II, iii, 6.)

⁴⁸ A classical example is the “Visio Arislei” (*Art. aurif.*, I, pp. 146ff.). Also the visions of Zosimos (Berthelot, III, i-vi); cf. my paper “The Visions of Zosimos.” Revelation of the magistry in a dream in Sendivogius, “Parabola” (*Bibliotheca chemica curiosa*, II, 1702, p. 475).

⁵³ “Speculativa philosophia,” *Theatr. chem.*, I, p. 267.

⁵⁴ Olympiodorus (Berthelot, *Alch. grecs*, II, iv, 43).

⁵⁵ Cf. *Psychology and Alchemy*, pars. 357ff.

⁵⁶ Mylius (*Phil. ref.*, p. 106) says that the masculine and feminine components of the stone must first be killed “that they may be brought to life again in a new and incorruptible resurrection, so that thereafter they may be immortal.” The stone is also compared to the future resurrected body as a “*corpus glorificatum*.” The “Aurea hora,” or “Aurora consurgens” (*Art. aurif.*, I, p. 201) says it is “like to a body which is glorified in the day of judgment.” Cf. de Hoghelande, *Theatr. chem.*, I, p. 189; “*Consilium coniugii*,” *Ars chemica* (1566), p. 128; “Aurea hora,” *Art. aurif.*, I, p. 195; Djibir, “Le Livre de la miséricorde,” in Berthelot, *La Chimie au moyen age*, III, p. 188; “Le Livre d’Ostanès,” in *ibid.*, p. 117; Comarius, in Berthelot, *Alch. grecs*, IV, xx, 15; Zosimos, in *ibid.*, III, viii, 2, and III, i, 2; *Turba phil.*, ed. Ruska, p. 139; Michael Maier, *Symbola aureae mensae* (1617), p. 599; *Rosarium philosophorum* (1550), fol. 2a, IV, illustration.

⁵⁷ “Aphorismi Basiliani,” *Theatr. chem.*, IV (1613), p. 368; de Hoghelande, *ibid.*, (1602), p. 178; Dorn, “Congeries,” *ibid.*, I, p. 585; and many other places.

⁵⁸ *Philosophia reformata* (1622), p. 21.

⁵⁹ Koepgen (see above, p. 59n.), rightly speaks of the “circular thinking” of the Gnostics. This is only another term for totality or “all-round” thinking, since, symbolically, roundness is the same as wholeness.

⁶⁰ Berthelot, *Alch. grecs*, IV, xx. According to F. Sherwood Taylor, in “A Survey of Greek Alchemy,” pp. 109ff., this is probably the oldest Greek text of the 1st century. Cf. also Jensen, *Die älteste Alchemie*.

⁶¹ Berthelot, III, *iff.*

⁶² Scott, *Hermetica*.

⁶³ *Psychology and Alchemy*, pars. 401ff.

⁶⁴ Berthelot, *Alch. grecs*, II, *if.*

⁶⁵ Very early among the Greek alchemists we encounter the idea of the “stone that has a spirit” (Berthelot, *Alch. grecs*, III, vi). The “stone” is the *prima materia*, called *hyle* or chaos or *massa confusa*. This alchemical terminology was based on Plato’s *Timaeus*. Joannes C. Steeb (*Coelum spheroticum Hebraeorum*, 1679) says: “Neither earth, nor air, nor fire, nor water, nor those things which are made of these things nor those things of which these are made, should be called the *prima materia*, which must be the receptacle and the mother of that which is made and that which can be beheld, but a certain species which cannot be beheld and is formless and sustains all things” (p. 26). The same author calls the *prima materia* “the primeval chaotic earth, Hyle, Chaos, the abyss, the mother of things.... That first chaotic matter ... was watered by the streams of heaven, and adorned by God with numberless Ideas of the species.” He explains how the spirit of God descended into matter and what became of him there (p. 33): “The spirit of God fertilized the upper waters with a peculiar fostering warmth and made them as it were milky.... The fostering warmth of the Holy Spirit brought about, therefore, in the waters that are above the heavens [*aquis supracoelestibus*; cf. Genesis 1:7], a virtue subtly penetrating and nourishing all things, which, combining with light, generated in the mineral kingdom of the lower regions the mercurial serpent [this could refer just as well to the caduceus of Aesculapius, since the serpent is also the origin of the *medicina catholica*, the panacea], in the vegetable kingdom the blessed greenness [chlorophyll], in the animal kingdom a formative virtue, so that the supracelestial spirit of the waters united in marriage with light may justly be called the soul of the world.” “The lower waters are darksome, and absorb the outflowings of light in their capacious depths” (p. 38). This doctrine is based on nothing less than the

Gnostic legend of the Nous descending from the higher spheres and being caught in the embrace of Physis. The Mercurius of the alchemists is winged (“volatile”). Abu’l-Qāsim Muhammad (*Kitāb al’ilm al muktasab*, etc., ed. Holmyard), speaks of “Hermes, the volatile” (p. 37), and in many other places he is called a “spiritus.” Moreover, he was understood to be a Hermes *psychopompos*, showing the way to Paradise (Michael Maier, *Symbola*, p. 592). This is very much the role of a redeemer, which was attributed to the Nous in “**Ἑρμοῦ πρὸς Τάτ** .” (Scott, *Hermética*, I, pp. 149ff.). For the Pythagoreans the soul was entirely devoured by matter, except for its reasoning part. (Zeller, *Die Philosophie der Griechen*, III, II, p. 158.)

In the old “Commentariolum in Tabulam smaragdinam” (*Ars chemica*), Hortulanus speaks of the “massa confusa” or the “chaos confusum” from which the world was created and from which also the mysterious *lapis* is generated. The *lapis* was identified with Christ from the beginning of the 14th century (Petrus Bonus, *Pretiosa margarita*, 1546). Orthelius (*Theatr. chem.*, VI, p. 431) says: “Our Saviour Jesus Christ ... partakes of two natures.... So likewise is that earthly saviour made up of two parts, the heavenly and the earthly.” In the same way the Mercurius imprisoned in matter was identified with the Holy Ghost. Johannes Grasseus (“Area arcani,” *Theatr. chem.*, VI, p. 314) quotes: “The gift of the Holy Spirit, that is the lead of the philosophers which they call the lead of the air, wherein is a resplendent white dove which is called the salt of the metals, in which consists the magistry of the work.”

Concerning the extraction and transformation of the Chaos, Christopher of Paris (“Elucidarius artis transmutatoriae,” *Theatr. chem.*, VI, p. 228) writes: “In this Chaos the said precious substance and nature truly exists potentially, in a single confused mass of the elements. Human reason ought therefore to apply itself to bringing our heaven into actuality.” “Our heaven” refers to the microcosm and is also called the “quintessence.” It is “incorruptible” and “immaculate.” Johannes de Rupescissa (*La Vertu et la Propriété de la Quinte Essence*, 1581) calls it “le ciel humain.” It is clear that the philosophers projected the vision of the golden and blue circle onto their *aurum philosophicum* (which was named the “rotundum”; see Maier, *De circulo*, 1616, p. 15) and onto the blue quintessence. The terms chaos and *massa confusa* were in general use, according to the testimony of Bernardus Sylvestris, a contemporary of William of Champeaux (1070–1121). His work, *De mundi universitate libri duo*, had a widespread influence. He speaks of the “confusion of the primary matter, that is, Hyle” (p. 5, li. 18), the “congealed mass, formless chaos, refractory matter, the face of being, a discolored mass discordant with itself” (p. 7, li. 18–19), “a mass of confusion” (p. 56, XI, li. 10). Bernardus also mentions the *descensus spiritus* as follows: “When Jove comes down into the lap of his bride, all the world is moved and would urge the soil to bring forth” (p. 51, li. 21–22). Another variant is the idea of the King submerged or concealed in the sea (Maier, *Symbola*, p. 380; “Visio Arislei,” *Art. aurif.*, I, pp. 146ff.). [Cf. *Psychology and Alchemy*, pars. 434ff.]

⁶⁶ For instance, the genius of the planet Mercury reveals the mysteries to Pseudo-Democritus. (Berthelot, *Alch. grecs*, I, Introduction, p. 236.)

⁶⁷ J. de Rupescissa, *La Vertu*, p. 19.

⁶⁸ Djibir, in *La Livre de la Miséricorde*, says that the philosophers’ stone is equal to a microcosm. (Berthelot, *La Chimie au moyen âge*, III, p. 179.)

⁶⁹ It is difficult not to assume that the alchemists were influenced by the allegorical style of patristic literature. They even claimed some of the Fathers as representatives of the Royal Art, for instance Albertus Magnus, Thomas Aquinas, Alanus de Insulis. A text like the “Aurora consurgens” is full of allegorical interpretations of the scriptures.

It has even been ascribed to Thomas Aquinas. Nevertheless, water was in fact used as an allegory of the Holy Spirit: “Water is the living grace of the Holy Spirit” (Rupert, Abbot of Deutz, in Migne, *P.L.*, vol. 169, col. 353). “Flowing water is the Holy Spirit” (Bruno, Bishop of Würzburg, in Migne, *P.L.*, vol. 142, col. 293). “Water is the infusion of the Holy Spirit” (Garnerius of St. Victor, in Migne, *P.L.*, vol. 193, col. 279). Water is also an allegory of Christ’s humanity (Gaudentius, in Migne, *P.L.*, vol. 20, col. 983). Very often water appears as dew (*ros Gedeonis*), and dew, likewise, is an allegory of Christ: “Dew is seen in the fire” (Romanus, *De theophania*, in Pitra, *Analecta sacra*, I, p. 21). “Now has Gideon’s dew flowed on earth” (Romanus, *De nativitate*, *ibid.*, p. 237). The alchemists thought that their *aqua permanens* was endowed with a virtue which they called “flos” (flower). It had the power of changing body into spirit and giving it an incorruptible quality (*Turba phil.*, ed. Ruska, p. 197). The water was also called “acetum” (acid), “whereby God finished his work, whereby also bodies take on spirit and are made spiritual” (*Turba*, p. 126). Another name for it is “spiritus sanguis” (blood spirit, *Turba*, p. 129). The *Turba* is an early Latin treatise of the 12th century, translated from an originally Arabic compilation dating back to the 9th and 10th centuries. Its contents, however, stem from Hellenistic sources. The Christian allusion in “spiritualis sanguis” might be due to Byzantine influence. *Aqua permanens* is quicksilver, *argentum vivum* (Hg). “Our living silver is our clearest water” (*Rosarium phil.*, in *Art. aurif.*, II, p. 213). The *aqua* is also called fire (*ibid.*, p. 218). The body, or substance, is transformed by water and fire, a complete parallel to the Christian idea of baptism and spiritual transformation.

⁷⁰ Missale Romanum. The rite is old and was known as the “lesser (or greater) blessing of salt and water” from about the 8th century.

⁷¹ In “Isis the Prophetess to her Son Horus” (Berthelot, *Alch. grecs*, I, xiii), an angel brings Isis a small vessel filled with transparent water, the arcanum. This is an obvious parallel to the krater of Hermes (*Corpus Hermeticum*, I) and of Zosimos (Berthelot, III, li, 8), which was filled with *nous*. In the *φυσικά καὶ μυστικά*. of Pseudo-Democritus (Berthelot, II, i, 63), the divine water is said to effect a transformation by bringing the “hidden nature” to the surface. And in the treatise of Comarius we find the miraculous waters that produce a new springtime (Berthelot, Traductions, p. 281).

⁷² Gnosius (in *Hermetis Trismegisti Tractatus vere Aureus, cum Scholiis Dominici Gnosii*, 1610, pp. 44 and 101) speaks of “Hermaphroditus noster Adamicus” when treating of the quaternity in the circle. The centre is the “mediator making peace between enemies,” obviously a uniting symbol (cf. *Psychological Types*, 1923 edn., pp. 234ff. and Def. 51). [Further developed in *Aion*, pp. 194ff—EDITORS.] The hermaphrodite is born of the “self-impregnating dragon” (*Art. aurif.*, I, p. 303), who is none other than Mercurius, the *anima mundi*. (Maier, *Symbola*, p. 43; Berthelot, I, 87.) The uroboros is an hermaphroditic symbol. The hermaphrodite is also called the Rebis (“made of two”), frequently depicted in the form of an apotheosis (for instance in the *Rosarium*, in *Art. aurif.*, II, pp. 291 and 359; Reusner, *Pandora*, 1588, p. 253).

⁷³ *Aurora Consurgens* (ed. von Franz, p. 129) says, quoting Senior: “There is One thing that never dieth, for it continueth by perpetual increase, when the body shall be glorified in the final resurrection of the dead.... Then saith the second Adam to the first and to his sons: Come ye blessed of my Father,” etc.

⁷⁴ Alphidius (12th cent.): “Of them is born the modern light (*lux moderna*), to which no light is like in all the world.” (*Rosarium*, in *Art. aurif.*, II, p. 248; “Tractatus aureus,” *Ars chem.*)

¹³ Judging, of course, from the standpoint of the most differentiated function.

¹⁴ Cf. *Psychological Types*, Def. 30.

¹⁵ “The world is narrow and the brain is wide;

Thoughts in the head dwell lightly side by side,

Yet things in space run counter and fall foul.”

—Schiller, *Wallensteins Tod*, II, 2.

¹⁶ “Not being.”

¹⁷ Cornford, p. 58, slightly modified.

¹⁸ Theodor Gomperz (*Greek Thinkers*, III, p. 215) mentions two primary substances which are designated as follows in Plato’s *Philebus*: limit, unlimited; the same, the other; the divisible, the indivisible. He adds that Plato’s pupils would have spoken of “unity” and of “the great and the small” or of “duality.” From this it is clear that Gomperz regards the “Same” and the “indivisible” as synonymous, thus overlooking the resistance of the “Other,” and the fundamentally fourfold nature of the world soul. (See below.)

¹⁹ [The version here given is translated from the German text of Otto Apelt (*Plato: Timaios und Kritias*, p. 52) cited by the author.—TRANS.]

20

Τῆς ἀμερίστου καὶ αἰεὶ κατὰ ταῦτὰ ἐχούσης οὐσίας καὶ τῆς αὐτῆς περὶ τὰ σώματα γιγνομένης μεριστῆς, τρίτον ἐξ ἀμφοῖν ἐν μέσῳ συνεκεράσατο οὐσίας εἶδος· τῆς τε ταύτου φύσεως αὐτῆς περὶ καὶ τῆς τοῦ ἑτέρου, καὶ κατὰ ταῦτὰ συνέστησεν ἐν μέσῳ τοῦ τε ἀμεροῦς αὐτῶν καὶ τοῦ κατὰ τὰ σώματα μεριστοῦ· καὶ τρία λαβὼν αὐτὰ ὄντα συνεκεράσατο εἰς μίαν πάντα ἰδέαν, τὴν θατέρου φύσιν δύσμεικτον οὔσαν εἰς ταύτῳ συναρμόττων βία, μειγνὺς δὲ μετὰ τῆς οὐσίας.

Cornford (pp. 59–60) translates as follows: “Between the indivisible Existence that is ever in the same state and the divisible Existence that becomes in bodies, he compounded a third form of Existence composed of both. Again, in the case of Sameness and in that of Difference, he also on the same principle made a compound intermediate between that kind of them which is indivisible and the kind that is divisible in bodies. Then, taking the three, he blended them all into a unity, forcing the nature of Difference, hard as it was to mingle, into union with Sameness, and mixing them together with Existence” (35A).

²¹ Cf. *Timaeus* 37C, where the first God is described as the “father” and his creation as the copy of an original “pattern,” which is himself (Cornford, p. 97).

²² This seems borne out by the fact that the first pair of opposites is correlated with *οὐσία* (being), and the second with *φύσις* (nature). If one had to choose between *οὐσία* and *φύσις*, the latter would probably be considered the more concrete of the two.

²³ Reprinted as Bollingen Series III, *Plato: Timaeus and Critias*, p. 71.

²⁴ *Timaeus* 36B (Cornford, p. 73).

²⁵ Taylor, p. 75.

²⁶ Griffith, *A Collection of Hieroglyphs*, p. 34 B. Fig. 142:  = Plan of a village with cross-streets.

²⁷ P. 61. The intermedia are constructed on the assumption that Indivisible and Divisible are opposite attributes of each of the three principles, Existence, Sameness, Difference. I do not know whether the text permits of such an operation.

²⁸ Gomperz, III, p. 200 [The two unfinished tetralogies are (a) *Republic, Timaeus, Critias* (left incomplete), (*Hermocrates*, never written); (b) *Theaetetus, Sophist, Statesman, (Philosopher*, never written).—TRANS.]

²⁹ Leisegang, *Pneuma Hagion*, p. 86.

¹ Here one might recall the legend that, after the death of Christ, Mary betook herself with John to Ephesus, where she is said to have lived until her death.

¹ *Panarium (Contra octoginta haereses)* LXXIX. See Migne. *P.G.*, vol. 41, cols. 739ff.

³ “Quod genus lubricum et in errorem proclive, ac pusilli admodum et angusti animi esse solet.”

⁴ The special emphasis I lay on archetypal predispositions does not mean that mythologems are of exclusively psychic origin. I am not overlooking the social conditions that are just as necessary for their production.

⁵ The *ka* of the king even has an individual name. Thus “the living *ka* of the Lord of the Two Lands,” Thutmosis III, was called the “victorious bull which shines in Thebes.” Erman, *Life in Ancient Egypt*, p. 307.

⁶ The “doubling” of the spirit occurs also in the Old Testament, though more as a “potency” emanating from God than as an hypostasis. Nevertheless, Isaiah 48:16 looks very like a hypostasis in the Septuagint text: **Κύριος Κύριος ἀπεστειλὲν με καὶ τὸ πνεῦμα αὐτοῦ** (The Lord the Lord sent me and his spirit).

⁷ For an instructive account of the Greek background see Harrison, *Themis*, ch. 1.

⁸ Cf. the detailed exposition of the death and rebirth of the divine *κοῦρος*, in Harrison, *Themis*.

⁹ The relation of Father to Son is not arithmetical, since both the One and the Other are still united in the original Unity and are, so to speak, eternally on the point of becoming two. Hence the Son is eternally being begotten by the Father, and Christ’s sacrificial death is an eternally present act.

¹⁰ The *πάθη* of Dionysus would be the Greek parallels.

¹ The so-called “Comma Johanneum,” which would seem to be an exception, is a demonstrably late interpolation of doubtful origin. Regarded as a dogmatic and revealed text *per se*, it would afford the strongest evidence for the occurrence of the Trinity in the New Testament. The passage reads (I John 5:8: “And there are three that bear witness: the Spirit, and the water, and the blood; and these three are one” (DV). That is to say, they agree in their testimony that Christ “came in water and in blood” (verse 6, DV). [In verse 8, AV has “and these three agree in one”; RSV: “and these three agree.”—TRANS.] The Vulgate has the late interpolation in verse 7: “Quoniam tres sunt, qui testimonium dant *in caelo: Pater, Verbum et Spiritus Sanctus: et hi tres unum sunt.*” Note that in the Greek text the three neuter nouns *πνεῦμα, ὕδωρ, and αἷμα* are followed by a masculine plural: *οἱ τρεῖς εἰς τὸ ἓν εἰσιν.*

² II Cor. 13:14 (AV). The baptismal formula “In the name of the Father and the Son and the Holy Ghost” comes into this category, though its authenticity is doubted. It seems that originally people were baptized only in the name of Jesus Christ. The formula does not occur in Mark and Luke. Cf. Krueger, *Das Dogma von der Dreieinigkeit und Gottmenschheit in seiner geschichtlichen Entwicklung*, p. 11.

³ I Peter 1:2 (RSV).

⁴ Apostolic Fathers, trans. by Lake, I, p. 89. Clement was the third bishop of Rome after Peter, according to Irenaeus. His dating is unsure, but he seems to have been born in the second half of the 2nd cent.

⁵ Panarium, LXII, 11, in Migne, P.G., vol. 41, cols. 1052-53.

⁶ Cf. James, *The Apocryphal New Testament*, pp. 10f.

⁷ We might also mention the division of Christ’s forbears into 3 × 14 generations in Matthew 1:17. Cf. the role of the 14 royal ancestors in ancient Egypt: Jacobsohn, “Die dogmatische Stellung des Königs in der Theologie der alten Aegypter,” pp. 66ff.

⁸ As we know, St. John’s gospel marks the beginning of this process.

⁹ Cf. *Psychological Types*, Def. 51.

¹² Caspari, *Alte und neue Quellen zur Geschichte des Taufsymbols*, pp. 10–17.

¹³ First mentioned in Tertullian (d. 220).

¹⁴ Origen, *On First Principles*, trans. by Butterworth, pp. 331.

¹⁵ *Ibid.*, p. 31.

¹⁶ *Ibid.*

¹⁷ Cf. J. R. Palanque and others, *The Church in the Christian Roman Empire, I: The Church and the Arian Crisis*, p. 96.

¹⁸ More accurately, the unity of substance consists in the fact that the Aeons are descended from the Logos, which proceeds from Nous, the direct emanation of Bythos. Cf. Irenaeus, *Adversus haereses*, II, 17, 4, in Migne, P.G., vol. 7, cols. 762–63 (trans. by Roberts and Rambaut, p. 174).

¹⁹ [The addition at this point of the words “and from the Son” (*Filioque*), which, though never accepted by the Eastern Churches, has been universal in the West, both Catholic and Protestant, since the beginning of the eleventh

century, is still one of the principal points of contention between the two main sections of the Christian body.—
EDITORS.]

²⁰ It is also known as the “Symbolum Quicumque,” on account of the opening words: “Quicumque vult salvus esse” (Whosoever would be saved). It does not go back to Athanasius.

²¹ [Official version from the Revised Book of Common Prayer (1928), with alternative readings.—TRANS.]

²² [From the Decrees of the Lateran Council, ch. 1.—TRANS.]

²³ Erroneously ascribed to St. Augustine. Cf. *Opera*, VI.

²⁴ *Ibid.*, p. 1194, B.

²⁵ “The begetter is the Father, the begotten is the Son, and that which proceeds from both is the Holy Spirit.” *Ibid.*, p. 1195, D.

¹ Cf. my “On the Nature of the Psyche,” pp. 200ff.

² I have often been asked where the archetype comes from and whether it is acquired or not. This question cannot be answered directly. Archetypes are, by definition, factors and motifs that arrange the psychic elements into certain images, characterized as archetypal, but in such a way that they can be recognized only from the effects they produce. They exist preconsciously, and presumably they form the structural dominants of the psyche in general. They may be compared to the invisible presence of the crystal lattice in a saturated solution. As *a priori* conditioning factors they represent a special, psychological instance of the biological “pattern of behaviour,” which gives all living organisms their specific qualities. Just as the manifestations of this biological ground plan may change in the course of development, so also can those of the archetype. Empirically considered, however, the archetype did not ever come into existence as a phenomenon of organic life, but entered into the picture with life itself.

³ Cf. the detailed argument which I have put forward in “On the Nature of the Psyche,” pp. 200ff.

⁴ It is very probable that the activation of an archetype depends on an alteration of the conscious situation, which requires a new form of compensation.

⁵ Koepgen makes the following trenchant remark in his *Gnosis des Christentums*, p. 198: “If there is such a thing as a history of the Western mind ... it would have to be viewed from the standpoint of the personality of Western man, which grew up under the influence of trinitarian dogma.”

⁶ “Deus est circulus cuius centrum est ubique, circumferentia vero nusquam” (God is a circle whose centre is everywhere and the circumference nowhere). This definition occurs in the later literature. In the form “Deus est sphaera infinita” (God is an infinite sphere) it is supposed to have come from the *Liber Hermetis, Liber Termegisti*, Cod. Paris. 6319 (14th cent.); Cod. Vat. 3060 (1315). Cf. Baumgartner, *Die Philosophie des Alanus de Insults*, p. 118. In this connection, mention should be made of the tendency of Gnostic thought to move in a circle, eg: “In the beginning was the Word, and the Word was with God, and God was the Word.” Cf. Leisegang, *Denkformen*, pp. 60ff.

⁷ Koepgen (p. 307) puts it very aptly: “Jesus relates everything to his ego, but this ego is not the subjective ego, it is a cosmic ego.”

⁸ Cf. Jacob’s struggle with the angel at the ford.

⁹ “Reflection” should be understood not simply as an act of thought, but rather as an attitude. [Cf. *Psychological Types*, Def. 8.—EDITORS.] It is a privilege born of human freedom in contradistinction to the compulsion of natural law. As the word itself testifies (“reflection” means literally “bending back”), reflection is a spiritual act that runs counter to the natural process; an act whereby we stop, call something to mind, form a picture, and take up a relation to and come to terms with what we have seen. It should, therefore, be understood as an act of *becoming conscious*.

¹⁰ “Active spiration” is a manifestation of life, an immanent act of Father and Son; “passive spiration,” on the other hand, is a quality of the Holy Ghost. According to St. Thomas, spiration does not proceed from the intellect but from the will of the Father and Son. In relation to the Son the Holy Ghost is not a spiration, but a procreative act of the Father.

¹¹ Cf. the Acts of Thomas (trans. by James, p. 388): “Come, O communion of the male; come, she that knoweth the mysteries of him that is chosen.... Come, holy dove that beareth the twin young; come, hidden mother.”

¹² For this seeming *contradictio in adjecto* see “On the Nature of the Psyche,” p. 172.

¹³ The existence of such process is evidenced by the content of dreams.

¹⁴ *Die Gnosis des Christentums*, p. 194.

¹⁵ In the *Rituale Romanum* (“On the Exorcism of Persons Possessed by the Devil”: 1952 edn., pp. 839ff.), states of possession are expressly distinguished from diseases. We are told that the exorcist must learn to know the signs by which the possessed person may be distinguished from “those suffering from melancholy or any morbid condition.” The criteria of possession are: “... speaking fluently in unknown tongues or understanding those who speak them; revealing things that take place at a distance or in secret; giving evidence of greater strength than is natural in view of one’s age or condition; and other things of the same kind.” The Church’s idea of possession, therefore, is limited to extremely rare cases, whereas I would use it in a much wider sense as designating a frequently occurring psychic phenomenon: any autonomous complex not subject to the conscious will exerts a possessive effect on consciousness proportional to its strength and limits the latter’s freedom. On the question of the Church’s distinction between disease and possession, see Tonquédec, *Les Maladies nerveuses ou mentales et les manifestations diaboliques*.

¹⁶ I am always coming up against the misunderstanding that a psychological treatment or explanation reduces God to “nothing but” psychology. It is not a question of God at all, but of man’s ideas of God, as I have repeatedly emphasized. There are people who do have such ideas and who form such conceptions, and these things are the proper study of psychology.

¹ “Feeling is all; / Names are sound and smoke.” [This problem of the “fourth” in *Faust* is also discussed in *Psychology and Alchemy*, pars. 201ff.—EDITORS.]

² Cf. *Psychological Types*, Def. 30.

³ Cf. the hymn of Valentinus (Mead, *Fragments of a Faith Forgotten*, p. 307): “All things depending in spirit I see; all things supported in spirit I view; flesh from soul depending; soul by air supported; air from aether hanging; fruits born of the deep; babe born of the womb.” Cf. also the *προσφυής ψυχή* of Isidorus, who supposed that all manner of animal qualities attached to the human soul in the form of “outgrowths.” [Cf. *Aion*, par. 370.]

⁴ Cf. the alchemical symbol of the *umbra solis* and the Gnostic idea that Christ was born “not without some shadow.”

⁵ The four *ρίζώματα* of Empedocles.

⁶ “On the Fourfold Root of the Principle of Sufficient Reason,” in *Two Essays by Arthur Schopenhauer*.

⁷ In Plato the quaternity takes the form of a cube, which he correlates with earth. Lü Pu-wei (*Frühling und Herbst*, trans. into German by Wilhelm, p. 38) says: “Heaven’s way is round, earth’s way is square.”

⁸ In her “Die Gestalt des Satans im Alten Testament” (*Symbolik des Geistes*, pp. 153ff.), Riwkah Scharf shows that Satan is in fact one of God’s sons, at any rate in the Old Testament sense.

⁹ The Suffix *-el* means god, so Satanaël = Satan-God.

^{9a} Michael Psellus, “De Daemonibus,” 1497, fol. NVv, ed. M. Ficino. Cf. also Epiphanius, *Panarium*, Haer. XXX, in Migne, *P.G.*, vol. 41, cols. 406ff.

¹⁰ Cf. Przywara’s meditations on the Cross and its relation to God in *Deus Semper Major*, I. Also the early Christian interpretation of the Cross in the Acts of John, trans. by James, pp. 228ff.

¹¹ See *Psychology and Alchemy*, fig. 28.

¹² Cf. *Psychology and Alchemy*, pars. 315ff., and the first paper in this volume, pars. 122ff.

¹³ As this doctrine has already got beyond the stage of “conclusio probabilis” and has reached that of “conclusio certa,” the “definitio sollemnis” is now only a matter of time. The Assumption is, doctrinally speaking, a “revelatum implicitum”; that is to say, it has never been revealed explicitly, but, in the gradual course of development, it became clear as an original content of the Revelation. (Cf. Wiederkehr, *Die leibliche Aufnahme der allerseligsten Jungfrau Maria in den Himmel*.) From the psychological standpoint, however, and in terms of the history of symbols, this view is a consistent and logical restoration of the archetypal situation, in which the exalted status of Mary is revealed implicitly and must therefore become a “conclusio certa” in the course of time.

[This note was written in 1948, two years before the promulgation of the dogma. The bodily assumption of Mary into heaven was defined as a dogma of the Catholic faith by Pope Pius XII in November 1950 by the Apostolic Constitution *Munificentissimus Deus* (*Acta Apostolicae Sedis*, Rome, XLII, pp. 753ff), and in an Encyclical Letter, *Ad Caeli Reginam*, of October 11, 1954, the same Pope instituted a feast to be observed yearly in honour of Mary’s “regalis dignitas” as Queen of Heaven and Earth (*Acta Apostolicae Sedis*, XLVI, pp. 625ff.).—EDITORS.]

¹⁴ Although the assumption of Mary is of fundamental significance, it was not the first case of this kind. Enoch and Elijah were taken up to heaven with their bodies, and many holy men rose from their graves when Christ died.

¹⁵ Her divinity may be regarded as a tacit *conclusio probabilis*, and so too may the worship or adoration (*προσκύνησις*) to which she is entitled.

¹⁶ Koepgen (p. 185) expresses himself in similar terms: “The essence of the devil is his hatred for God; and God allows this hatred. There are two things which Divine Omnipotence alone makes possible: Satan’s hatred and the existence of the human individual. Both are by nature completely inexplicable. But so, too, is their relationship to God.”

¹⁷ Just how alive and ingrained such conceptions are can be seen from the title of a modern book by Sosnosky, *Die rote Dreifaltigkeit: Jakobiner und Bolscheviken* [“The Red Trinity: Jacobins and Bolsheviks”].

¹⁸ Koepgen’s views are not so far from my own in certain respects. For instance, he says that “Satan acts, in a sense, as God’s power.... The mystery of one God in Three Persons opens out a new freedom in the depths of God’s being, and this even makes possible the thought of a personal devil existing alongside God and in opposition to him” (p. 186).

¹⁹ Since Satan, like Christ, is a son of God, it is evident that we have here the archetype of the hostile brothers. The Old Testament prefiguration would therefore be Cain and Abel and their sacrifice. Cain has a Luciferian nature because of his rebellious progressiveness, but Abel is the pious shepherd. At all events, the vegetarian trend got no encouragement from Yahweh [Gen. 4:5].

²⁰ See the first paper in this volume, par. 104.

²¹ In antiquity, regard for astrology was nothing at all extraordinary. [Cf. “Synchronicity: An Acausal Connecting Principle,” pars. 872ff., and *Aion*, pars. 127ff.—EDITORS.]

²² This applies to the zodion of the Fishes. In the astronomical constellation itself, the fish that corresponds approximately to the first 1,000 years of our era is vertical, but the other fish is horizontal.

²³ God’s antithetical nature is also expressed in his androgyny. Priscillian therefore calls him “masculofemina,” on the basis of Genesis 1:27: “So God created man in his own image ... male and female created he them.”

²⁴ Cf. *Psychology and Alchemy*, pars. 520ff.

²⁵ Cf. above, pars. 104ff.

²⁶ *Faust*, Part II, Act 5. (“Earth’s residue to bear / Hath sorely pressed us.” Trans. by Bayard Taylor.)

²⁷ Cf. James, *The Apocryphal New Testament*, p. 255.

²⁸ [From a play by Marc Connelly, adapted from stories by Roark Bradford based on American Negro folk-themes.—EDITORS.]

¹ Yahweh approaches the moral problem comparatively late—only in Job. Cf. “Answer to Job,” in this volume.

² Koepgen (p. 231) therefore calls Jesus, quite rightly, the first “autonomous” personality.

³ Justin Martyr, *Apologia* II: “that we may not remain children of necessity and ignorance, but of choice and knowledge.” Clement of Alexandria, *Stromata*, I, g: “And how necessary is it for him who desires to be partaker of the power of God, to treat of intellectual subjects by philosophizing!” II, 4: “Knowledge accordingly is characterized by faith; and faith, by a kind of divine mutual and reciprocal correspondence, becomes characterized by knowledge.” VII, 10: “For by it (Gnosis) faith is perfected, inasmuch as it is solely by it that the believer becomes perfect.” “And knowledge is the strong and sure demonstration of what is received by faith.” (Trans. by Wilson, I, p. 380; II, pp. 10, 446–47.)

⁴ Submission to any metaphysical authority is, from the psychological standpoint, submission to the unconscious. There are no scientific criteria for distinguishing so-called metaphysical factors from psychic ones. But this does not mean that psychology denies the existence of metaphysical factors.

⁵ The Church knows that the “discernment of spirits” is no simple matter. It knows the dangers of subjective submission to God and therefore reserves the right to act as a director of conscience.

⁶ The “Oxford Movement” was originally the name of the Catholicizing trend started by the Anglican clergy in Oxford, 1833. [Whereas the “Oxford Groups,” or “Moral Rearmament Movement,” were founded in 1921. also at Oxford, by Frank Buchman as “a Christian revolution ... the aim of which is a new social order under the dictatorship of the Spirit of God, and which issues in personal, social racial, national, and supernational renaissance” Buchman, cited in *Webster’s International Dictionary*, 2nd edn., 1950—EDITORS.]

⁷ Cf. *Psychology and Alchemy*, Part II.

⁸ Thomas Aquinas (*Summa theologica*, I, xxxvi, art. 1): “Non habet nomen proprium” (he has no proper name). I owe this reference to the kindness of Fr. Victor White, O.P.

⁹ Both these categories are, as we know, attributes of the *lapis philosophorum* and of the symbols of the self.

¹⁰ It should not be forgotten, however, that the opposites which Nicholas had in mind were very different from the psychological ones.

¹¹ Cf. “Die Gestalt des Satans im Alten Testament,” in *Symbolik des Geistes*, pp. 153ff.

¹ In the Greek Church the Trinity is called *τριάς*.

¹ “St. Thomas emphasizes that prophetic revelation is, as such, independent of good morals—not to speak of personal sanctity” (*De veritate*, xii, 5; *Summa theol.*, I–II, p. 172). I take this remark from the MS. of an essay on “St. Thomas’s Conception of Revelation,” by Fr. Victor White, O.P., with the kind permission of the author.

² The Axiom of Maria. Cf. *Psychology and Alchemy*, pars. 209f.

³ Cf. James, *The Apocryphal New Testament*, p. 33.

⁴ I am thinking here of the *sola fide* standpoint of the Protestants.

¹ The following account and examination of the principal symbol in the Mass is not concerned either with the Mass as a whole, or with its liturgy in particular, but solely with the ritual actions and texts which relate to the transformation process in the strict sense. In order to give the reader an adequate account of this, I had to seek professional help. I am especially indebted to the theologian Dr. Gallus Jud for reading through and correcting the first two sections.

² [This is a translation of the Karl von Weizsäcker version (1875) used here by the author. Elsewhere the Biblical quotations are taken from the AV and occasionally from the RSV and the DV. Following are the Greek and Latin (Vulgate) versions of the italicized portion of this passage.—TRANS.]

“... τοῦτο μού ἐστίν τὸ σῶμα τὸ ὑπὲρ ὑμῶν. τοῦτο ποιεῖτε εἰς τὴν ἐμὴν ἀνάμνησιν. ὡσαύτως καὶ τὸ ποτήριον μετὰ τὸ δειπνῆσαι λέγων· τοῦτο τὸ ποτήριον ἡ καινὴ διαθήκη ἐστίν ἐν τῷ ἐμῷ αἵματι.”

“... hoc est corpus meum, quod pro vobis tradetur: hoc facite in meam commemorationem. Similiter et calicem, postquam coenavit, dicens: Hic calix novum testamentum est in meo sanguine.”

³ δειπνον, ‘coena.’

⁴ This of course has nothing to do with the official conception of spirit by the Church.

⁵ “τὸ σῶμα τὸ ὑπὲρ ὑμῶν.”

⁶ Käsemann, *Leib und Leib Christi*, p. 120.

⁷ Dr. Jud kindly drew my attention to the equally relevant passage in Malachi 1:10–11: “Who is there even among you that would shut the doors for nought? neither do ye kindle fire on mine altar for nought.... And in every place incense shall be offered unto my name, and a pure offering ...”

⁸ That is to say, not before he has accomplished the preparatory part of the service. In offering these gifts the priest is not the “master” of the sacrifice. “Rather that which causes them to be sacrificed in the first place is sanctifying grace. For that is what their sacrifice means: their sanctification. The man who each time performs the sacred act is the servant of grace, and that is why the gifts and their sacrifice are always pleasing to God. The fact that the servant may be bad does not affect them in any way. The priest is only the servant, and even this he has from grace, not from himself.” Joseph Kramp, S.J., *Die Opferanschauungen der römischen Messliturgie*, p. 148.

⁹ Ibid., p. 17.

¹ In the account that follows I have made extensive use of Brinktrine, *Die Heilige Messe in ihrem Werden und Wesen*.

² Τύπος τοῦ ἄρτου τῆς εὐχαριστίας.”

³ That is, in the Roman rite. In the Greek Uniate rites, communion is received in bread *and* wine.

⁴ This is the interpretation of Yves, bishop of Chartres (d. 1116).

⁵ Cyprian attacks this heretical custom in his letter to Caecilius. Letter 63 to Caecilius, Migne, *P.L.*, vol. 4, cols. 372ff. (trans. by Carey, pp. 181ff.).

⁶ “In umbra erat aqua de petra quasi sanguis ex Christo.” The *umbra*, ‘shadow,’ refers to the foreshadowing in the Old Testament, in accordance with the saying: “Umbra in lege, imago in evangelio, veritas in coelestibus” (The shadow in the Law, the image in the Gospel, the truth in Heaven). Note that this remark of Ambrose does not refer to the Eucharist but to the water symbolism of early Christianity in general; and the same is true of the passages from John. St. Augustine himself says: “There the rock was Christ; for to us that is Christ which is placed on the altar of God.” *Tractatus in Joannem*, XLV, 9 (trans. by Innes).

⁸ Berthelot, *Collection des anciens alchimistes grecs*. III, li. 8.

⁹ *Corpus Hermeticum*, Lib. IV, 4, in *Hermetica*, I, p. 151.

¹⁰ Strack and Billerbeck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, II, p. 492.

¹¹ A collection of Gnostic hymns from the 2nd cent.

¹² Ode VI in *The Odes of Solomon*, ed. Bernard, p. 55, after the J. Rendel Harris version. Cf. the ὕδωρ θεῖον, the *aqua permanens* of early alchemy, also the treatise of Komarius (Berthelot, IV, xx).

¹³ “Deus, qui humanae substantiae dignitatem mirabiliter condidisti, et mirabilius reformasti; da nobis per huius aquae et vini mysterium, eius divinitatis esse consortes, qui humanitatis nostrae fieri dignatus est particeps, Jesus Christus ...” [Here and throughout this essay the English translation is taken from *The Small Missal*, London, 1924. —TRANS.]

¹⁴ This is *my* interpretation and not that of the Church, which sees in this only an act of devotion.

¹⁵ “Mozarabic” from Arabic *musta‘rib*, ‘Arabianized,’ with reference to the Visigothic-Spanish form of ritual. [The Latin phrases: “Come, O sanctifying one.” “Come, O sanctifying spirit.”—EDITORS.]

¹⁶ The circumambulation from left to right is strictly observed in Buddhism.

¹⁷ The censuring is only performed at High Mass.

¹⁸ [“Let my prayer, O Lord, ascend like incense in thy sight.”]

¹⁹ [“May the Lord enkindle in us the fire of his love.” / “I will wash my hands among the innocent.”]

²⁰ [“Blessed is he that cometh in the name of the Lord.”]

²¹ [“Be present, be present in our midst, O Jesus, great High Priest: as thou wert in the midst of thy disciples.”]

²² According to the edict of the Church these words ought not, on account of their sacredness, to be translated into any profane tongue. Although there are missals that sin against this wise edict, I would prefer the Latin text to stand untranslated.

²³ Klug, in *Theologie and Glaube*, XVIII (1926), 335f. Cited by Brinktrine, p. 192.

²⁴ “idem ille Christus continetur et incruente immolatur.” Sessio XXII. Denzinger and Bannwart, *Enchiridion Symbolorum*, p. 312.

²⁵ “Missa est sacrificium hac ratione quia Christus aliquo modo moritur et a sacerdote mactatur” (The Mass is a sacrifice for the reason that in it Christ dies after a certain manner, and is slain by the priest). Hauck, *Realenzyklopädie*, XII, p. 693. The question of the *mactatio* had already been raised by Nicholas Cabasilas of Thessalonica: “De divino altaris sacrificio,” in Migne, *P.G.*, vol. 150, cols. 363ff. The sword as a sacrificial instrument also occurs in the Zosimos visions (see section 3).

²⁶ Kramp, p. 56.

²⁷ “Unde et memores, Domine, nos servi tui, sed et plebs tua sancta, eiusdem Christi Filii tui, Domini nostri, tam beatæ passionis, nec non et ab inferis resurrectionis, sed et in caelos gloriosæ ascensionis: offerimus præclaræ majestati tuæ de tuis donis ac datis, hostiam puram, hostiam sanctam, hostiam immaculatam, Panem sanctum vitæ æternæ, et Calicem salutis perpetuæ.

“Supra quæ propitio ac sereno vultu respicere digneris: et accepta habere, sicuti accepta habere dignatus es munera pueri tui justî Abel, et sacrificium Patriarchæ nostrî Abrahæ: et quod tibi obtulit summus sacerdos tuus Melchisedech, sanctum sacrificium, immaculatam hostiam.

“Supplices te rogamus, omnipotens Deus: jube hæc perferri per manus sancti Angeli tui in sublime altare tuum, in conspectu divinæ majestatis tuæ: ut, quotquot ex hac altaris participatione sacrosanctum Filii tui corpus, et sanguinem sumpserimus, omni benedictione cælesti et gratia repleamur. Per eundem Christum, Dominum nostrum. Amen.”

²⁸ Eusebius, *Evangelica præparatio*, I, 10, 11 (Migne, *P.G.*, vol. 21, col. 30).

²⁹ “Sidik” is a Phœnician name for God. Sir Leonard Woolley gives a very interesting explanation of this in his report on the excavations at Ur: *Abraham: Recent Discoveries and Hebrew Origins*.

³⁰ Kramp, p. 98.

³¹ Rücker, ed., *Ritus baptismi et missæ quam descripsit Theodorus ep. Mopsuestanus*.

³² This unity is a good example of *participation mystique*, which Lévy-Bruhl stressed as being one of the main characteristics of primitive psychology—a view that has recently been contested by ethnologists in a very short-sighted manner. The idea of unity should not, however, be regarded as “primitive” but rather as showing that *participation mystique* is a characteristic of symbols in general. The symbol always includes the unconscious, hence man too is contained in it. The *numinosity* of the symbol is an expression of this fact.

³³ Kramp, p. 55.

¹ Bernardino de Sahagún, *General History of the Things of New Spain*, Book 3: *The Origin of the Gods*, trans. by Anderson and Dibble, pp. 5f. (slightly modified).

² Cumont, *Textes et monuments*, I, p. 182. [And cf. Jung, *Symbols of Transformation*, p. 428 and frontispiece.—EDITORS.]

³ Cf. Frazer's *The Golden Bough*, Part III: "The Dying God." For the Eucharistic meal of fish, see *Aion*, pars. 174ff., 181ff.

⁴ *Alchimistes*, III, i, 2, 3; III, v; III, vi.

⁵ Cf. my paper "The Visions of Zosimos," par. 86, which quotes the relevant passages.

⁶ *Alchimistes*, III, li, 8. Cf. supra, par. 313.

⁷ Cf. the examples given in *Psychology and Alchemy*, pars. 347f.

⁸ Olympiodorus says this is particularly the effect of lead. Cf. Berthelot, II, iv, 43.

⁹ The dismemberment motif belongs in the wider context of rebirth symbolism. Consequently it plays an important part in the initiation experiences of shamans and medicine men, who are dismembered and then put together again. For details, see Eliade, *Shamanism*, ch. II.

¹⁰ [Cf. Berthelot, III, i, 3 and v, 1–2; and "The Visions of Zosimos," par. 86.—EDITORS.]

¹¹ Cf. Frazer's *The Golden Bough*, Part IV: *Adonis, Attis, Osiris*, pp. 242ff. and p. 405, and my *Symbols of Transformation*, pars. 594f. Cf. also Colin Campbell, *The Miraculous Birth of King Amon-Hotep III*, p. 142, concerning the presentation of the dead man, Sen-nezem, before Osiris, Lord of Amentet: "In this scene the god is usually represented enthroned. Before and behind him, hanging from a pole, is the dripping skin of a slain bull that was slaughtered to yield up the soul of Osiris at his reconstruction, with the vase underneath to catch the blood."

¹² Cf. Eduard Seler's account in Hastings, *Encyclopedia*, VIII, pp. 615f.

¹³ [*Symbols of Transformation*, pars. 309f.; *Psychology and Alchemy*, par. 490.]

¹⁴ Barbers were comparatively well-to-do people in ancient Egypt, and evidently did a flourishing trade. Cf. Erman, *Life in Ancient Egypt*, p. 304: "Barbers, all of whom must ... have lived in easy circumstances."

¹⁵ The real author of the *Chymische Hochzeit* was Johann Valentin Andreae. [It appeared under the pseudonym "Christian Rosencreutz," dated 1459, but actually published at Strasbourg, 1616. Concerning Andreae, cf. "The Psychology of the Transference," par. 407 and n. 18.—EDITORS.]

¹⁶ As Andreae must have been a learned alchemist, he might very well have got hold of a copy of the Codex Marcianus and seen the writings of Zosimos. Manuscript copies exist in Gotha, Leipzig, Munich, and Weimar. I know of only one printed edition, published in Italy in the 16th cent., which is very rare.

¹⁷ Hence the "shaving of a man" and the "plucking of a fowl," mentioned further on among the magical sacrificial recipes. A similar motif is suggested by the "changing of wigs" at the Egyptian judgment of the dead. Cf. the picture in the tomb of Sennezem (Campbell, p. 143). When the dead man is led before Osiris his wig is black; afterwards (at the sacrifice in the Papyrus of Ani) it is white.

¹⁸ Plutarch, *Quaestiones convivales*, IV, 5, and Diogenes Laertius, II, §112: Reitzenstein, *Poimandres*, pp. 75f. and 112. In a text named "Ghāya al-hakīm," ascribed to Maslama al-Madjrī, the following instructions are given when

invoking Saturn: “Arrive vêtu à la manière des Juifs, car il est leur patron.” Dozy and de Goeje, “Nouveaux documents pour l’étude de la religion des Harraniens,” p. 350.

¹⁹ Origen, *Contra Celsum*, VI, 31. Mead, *Pistis Sophia*, ch. 45. Bousset, *Hauptprobleme der Gnosis*, pp. 351ff. Roscher, *Lexikon*, s.v. Kronos, II, col. 1496. The dragon (κρόνος) and Kronos are often confused.

²⁰ Lippmann, *Entstehung und Ausbreitung der Alchemie*, II, p. 229.

²¹ Cf. *Aion*, pars. 128f.

²² “Beatus homo qui invenerit hanc scientiam et cui affluit providentia Saturni.” [Ed. von Franz, pp. 37f.]

²³ See the illustration in Reusner, *Pandora* (1588), and in *Le Songe de Poliphile*, trans. Béroalde de Verville (1600). [*Psych. and Alch.*, fig. 4.] Mostly the pictures show two lions eating one another. The uroboros, too, is often pictured in the form of two dragons engaged in the same process (*Viridarium chymicum*, 1624).

²⁴ Cf. the *Rosarium philosophorum*, in the *Artis auriferae* (1593), II, p. 206.

²⁵ Cf. the Cretan fragment of Euripides (Dieterich, *Eine Mithrasliturgie*, p. 105):

ἀγνὸν δὲ βίον τείνων ἐξ οὗ
Διὸς Ἰδαίου μύστης γενόμεν
καὶ νυκτιπόλου Ζαγρέως βούτας
τοὺς ὠμοφάγους δαΐτας τελέσας

(living a holy life, since I have been initiated into the mysteries of the Idaean Zeus, and eaten raw the flesh of Zagreus, the night-wandering shepherd).

²⁶ [Cf. “The Visions of Zosimos,” par. 86, III, i, 3, and—for the reference lower down to “blood”—III, v bis.]

²⁷ “Est et coelestis aqua sive potius divina Chymistarum ... pneuma, ex aetheris natura et essentia rerum quinta” (There is also the celestial, or rather the divine, water of the alchemists ... the pneuma, having the nature of the pneuma and the quintessence of things).—Hermolaus Barbarus, *Coroll. in Dioscoridem*, cited in M. Maier, *Symbola aureae mensae* (1617), p. 174.

“Spiritus autem in hac arte nihil aliud quam aquam indicari ...” (In this art, spirit means nothing else but water).—Theobaldus de Hoghelande, in the *Theatrum chemicum*, I (1602), p. 196. Water is a “spiritus extractus,” or a “spiritus qui in ventre (corporis) occultus est et fiet aqua et corpus absque spiritu: qui est spiritualis naturae” (spirit which is hidden in the belly [of the substance], and water will be produced and a substance without spirit, which is of a spiritual nature).—J. D. Mylius, *Philosophia reformata* (1622), p. 150. This quotation shows how closely spirit and water were associated in the mind of the alchemist.

“Sed aqua coelestis gloriosa scil. aes nostrum ac argentum nostrum, sericum nostrum, totaque oratio nostra, quod est unum et idem scil. sapientia, quam Deus obtulit, quibus voluit” (But the glorious celestial water, namely our copper and our silver, our silk, and everything we talk about, is one and the same thing, namely the Wisdom, which God has given to whomsoever he wished).—“Consilium coniugii,” in the *Ars chemica* (1566), p. 120.

²⁸ Berthelot, *La Chimie au moyen âge*, III, p. 53.

²⁹ Mylius, pp. 121 and 123. For the blood—water—fire equation see George Ripley, *Opera omnia chemica* (1649), pp. 162, 197, 295, 427.

³⁰ Ripley, *Opera*, p. 62; *Rosarium*, p. 264.

³² Khunrath, *Von hylealischen ... Chaos* (1597), pp. 274f

³³ Berthelot, *Alchimistes*, I, xiii. [Cf. “The Visions of Zosimos,” pars. 97ff.]

³⁴ *Ibid.*, III, li, 8, and *Hermetica*, ed. Scott, I, p. 151.

³⁵ Berthelot, *Alchimistes*, III, vi, 5.

³⁶ Of the later authors I will mention only Johannes Christophorus Steeb, *Coelum sephiroticum* (1679, p. 138): “Omnis intellectus acuminis auctor ... a coelesti mercurio omnem ingeniorum vim provenire” (The author of all deeper understanding ... all the power of genius comes from the celestial Mercurius). For the astrological connection see Bouché-Leclercq, *L’Astrologie grecque*, pp. 312, 321–23.

³⁷ “Aurora consurgens.” In Mylius (p. 533) he is a giver of life.

³⁸ *Lexicon*.

³⁹ *Symbola*, p. 592.

⁴⁰ *Ibid.*, p. 600.

⁴¹ Ripley, *Opera*, Foreword, and in Khunrath’s *Chaos*. In Plutarch, Mercurius acts as a kind of world soul.

⁴² Gerhard Dom, “Congeries Paracelsicae chemicae,” in the *Theatrum chemicum*, I, p. 589.

⁴³ Cf “The Spirit Mercurius,” pars. 255, 256ff.

⁴⁴ Illustration in “Splendor solis,” *Aureum vellus* (1598).

⁴⁵ Cf. Khunrath, *Chaos*, and *Amphitheatrum sapientiae aeternae* (1604).

⁴⁶ Dorn, “Speculativae philosophiae,” in the *Theatrum chemicum*, I, pp. 284ff. The whole passage runs as follows:

“Post primam hominis inobedientiam, Dominus viam hanc amplissimam in callem strictissimam difficilimamque (ut videtis) restrinxit, in cuius ostio collocavit Cherubim angelum, ancipitem gladium manu tenentem, quo quidem arceret omnes ab introitu felicis patriae: hinc deflectentes Adae filii propter peccatum primi sui parentis, in sinistram latam sibimet viam construxerunt, quam evitastis. Longo postea temporis intervallo D. O. M. secreta secretorum suorum introivit, in quibus amore miserente, accusanteque iustitia, conclusit angelo gladium irae suae de manibus eripere, cuius loco tridentem hamum substituit aureum, gladio ad arborem suspenso: & sic mutata est ira Dei in amorem, servata iustitia: quod antequam fieret, fluvius iste non erat, ut iam, in se collectus, sed ante lapsum per totum orbem terrarum roris instar expansus aequaliter: post vero rediit unde processerat tandem, ut pax & iustitia sunt osculatae se, descendit affluentius ab alto manans aqua gratiae, totum nunc mundum alluens. In sinistram partem qui deflectunt, partim suspensum in arbore gladium videntes, eiusque noscentes historiam, quia mundo nimium sunt insiti, praetereunt: nonnulli videntes eius efficaciam perquirere negligunt, alii nec vident, nec vidisse voluissent: hi recta peregrinationem suam ad vallem dirigunt omnes, nisi per hamos resipiscentiae, vel poenitentiae nonnulli retrahantur ad montem Sion. Nostro iam saeculo (quod gratiae est) mutatus est gladius in Christum salvatorem nostrum qui crucis arborem pro peccatis nostris ascendit.”

(After man’s first disobedience the Lord straitened this wide road into a very narrow and difficult path, as you see. At its entrance he placed an angel of the Cherubim, holding in his hand a double-edged sword with which he was to keep all from entering into Paradise. Turning from thence on account of the sin of their first parents, the sons of Adam built for themselves a broad left-hand path: this you have shunned. After a long interval of time the Deus Optimus Maximus immersed himself in the innermost of his secrets, and he decided, out of the compassion of his love as well as for the demands of justice, to take the sword of wrath from the hand of the angel. And having

hung the sword on the tree, he substituted for it a golden trident, and thus was the wrath of God changed into love, and justice remained unimpaired. Previous to this, however, the river was not collected into one as it is now, but before the Fall it was spread equally over the whole world, like dew. But later it returned to the place of its origin. When peace and justice were united, the water of Grace flowed more abundantly from above, and now it bathes the whole world. Some of those who take the left-hand path, on seeing the sword suspended from the tree, and knowing its history, pass it by, because they are too entangled in the affairs of this world; some, on seeing it, do not choose to inquire into its efficacy; others never see it and would not wish to see it. All these continue their pilgrimage into the valley, except for those who are drawn back to Mount Zion by the hook of repentance. Now in our age, which is an age of grace, the sword has become Christ our Saviour, who ascended the tree of the Cross for our sins.) Cf. "The Philosophical Tree," pars. 447ff.

⁴⁷ Another remark of Dorn's points in the same direction: "The sword was suspended from a tree over the bank of the river" (p. 288).

⁴⁸ A few pages later Dorn himself remarks: "Scitote, fratres, omnia quae superius dicta sunt et dicentur in posterum, intelligi posse de praeparationibus alchemicis" (Know, brothers, that everything which has been said above and everything which will be said in what follows can also be understood of the alchemical preparations).

⁴⁹ Leisegang, *Die Gnosis*, pp. 171f.

⁵⁰ The passage which follows occurs in Hippolytus, *Elenchos*, vi, pp. 4f.

⁵¹ Genesis 3:24.

⁵² Leisegang, p. 80.

⁵³ That is why it is called "Hermaphroditus."

⁵⁴ One of its symbols is the scorpion, which stings itself to death.

⁵⁵ So far I have come across only one alchemical author who admits to having read the *Panarium* of Epiphanius, while declaring at the same time his sincere abhorrence of heresies. The silence of the alchemists in this matter is nothing to wonder at, since the mere proximity to heresy would have put them in danger of their lives. Thus even 90 years after the death of Trithemius of Spanheim, who was supposed to have been the teacher of Paracelsus, the abbot Sigismund of Seon had to compose a moving defence in which he endeavoured to acquit Trithemius of the charge of heresy. Cf. *Trithemius sui-ipsius vindex* (1616).

⁵⁶ *Ars chemica*, p. 259. Printed in Manget (1702), II.

⁵⁷ "Micreris" is probably a corruption of "Mercurius."

⁵⁸ *Theatr. chem.*, V (1622), p. 103.

⁵⁹ *Ibid.*, p. 68.

⁶⁰ *Artis auriferae*, I, pp. 139f.

⁶¹ *Ibid.*, pp. 151, 140, 140, 139, 151, 151, resp.

⁶² *Papyri Graecae Magicae*, trans. and ed. by Karl Preisendanz.

⁶³ ἀποθέωσις = 'sacrifice.'

⁶⁴ *Theatr. chem.*, V, p. 153.

⁶⁵ See also pp. 127, 128, 130, and 149 of the same work.

⁶⁶ Dozy and de Goeje, p. 365.

⁶⁷ “Τὸν πάνυ λευκότετον λίθον τὸν ἐγκέφαλον.” Berthelot, *Alchimistes*, III, xxix, 4. Cf. also I, iii, 1 and III, ii. 1.

⁶⁹ *Jewish Encyclopaedia*, XII, s.v. “Teraphim,” pp. 108f.

⁷⁰ Josef bin Gorion, *Die Sagen der Juden*, p. 325. I am indebted to Dr. Riwkah Schärf for drawing my attention to this passage.

⁷¹ Cf. the alchemical *albedo* and *homo albus*.

⁷² Hastings, VI, pp. 535f.

⁷³ *Varia historia*, XII, 8.

⁷⁴ Onians, *The Origins of European Thought*, pp. 101 ff.

⁷⁵ Pars. 480–89.

⁷⁶ The classical example being *The I Ching or Book of Changes*.

⁷⁷ Mystical or *unconscious* identity occurs in every case of projection, because the content projected upon the extraneous object creates an apparent relationship between it and the subject.

¹ John 6:44: “No man can come to me, except the Father which hath sent me draw him.”

² “Et mortuus est Dei filius, prorsus credibile est, quia ineptum est. Et sepultus resurrexit; certum est, quia impossibile est” (And the Son of God is dead, which is to be believed because it is absurd. And buried He rose again, which is certain because it is impossible). Migne, *P.L.*, vol. 2, col. 751.

³ The audacity of Tertullian’s argument is undeniable, and so is its danger, but that does not detract from its psychological truth.

⁴ *Die Opferanschauungen*, p. 55.

⁵ My reason for saying this is that every symbol has an objective and a subjective—or psychic—origin, so that it can be interpreted on the “objective level” as well as on the “subjective level.” This is a consideration of some importance in dream-analysis. Cf. *Psychological Types*, Defs. 38 and 50.

⁶ Further material in Eisler, *Orpheus—the Fisher*, pp. 280f.

⁷ Similarly, in hunting, the *rites d’entrée* are more important than the hunt itself, for on these rites the success of the hunt depends.

⁸ Cf. *Psychological Types*, Def. 51.

⁹ Leisegang, *Der Heilige Geist*, pp. 248ff.

¹⁰ *How Natives Think*.

¹¹ Michael Sendivogius, “Tractatus de sulphure” (16th cent.), in the *Musaeum hermeticum* (1678), p. 617: “[Anima] quae extra corpus multa profundissima imaginatur” ([The soul] which imagines many things of the utmost profundity outside the body).

¹² The parallel to this is total destruction of the sacrificial gift by burning, or by throwing it into water or into a pit.

¹³ If there were really nothing behind him but collective standards of value on the one hand and natural instincts on the other, every breach of morality would be simply a rebellion of instinct. In that case valuable and meaningful innovations would be impossible, for the instincts are the oldest and most conservative element in man and beast alike. Such a view forgets the creative instinct which, although it can behave like an instinct, is seldom found in nature and is confined almost exclusively to *Homo sapiens*.

¹⁴ To the defiler of the Sabbath he said: “Man, if indeed thou knowest what thou doest, thou art blessed; but if thou knowest not, thou art cursed, and a transgressor of the law.” James, *The Apocryphal New Testament*, p. 33.

¹⁵ In order to avoid misunderstandings, I must emphasize that I am speaking only from personal experience, and not of the mysterious reality which the Mass has for the believer.

¹⁶ Cf. the “uniting symbol” in *Psychological Types*, Def. 51.

¹⁷ In Indian philosophy we find a parallel in Prajapati and Purusha Narayana. Purusha sacrifices himself at the command of Prajapati, but at bottom the two are identical. Cf. the *Shatapatha-Brahmana* (Sacred Books of the East, XLIV, pp. 172ff.); also the *Rig-Veda*, X, 90 (trans. by Macnicol, pp. 28–29).

¹⁸ This contradiction is unavoidable because the concept of the self allows only of antinomial statements. The self is by definition an entity more comprehensive than the conscious personality. Consequently the latter cannot pass any comprehensive judgment on the self; any judgment and any statement about it is incomplete and has to be supplemented (but not nullified) by a conditioned negative. If I assert, “The self exists,” I must supplement this by

saving, “But it seems not to exist.” For the sake of completeness I must also invert the proposition and say, “The self does not exist, but yet seems to exist.” Actually, this inversion is superfluous in view of the fact that the self is not a philosophical concept like Kant’s “thing-in-itself,” but an empirical concept of psychology, and can therefore be hypostatized if the above precautions are taken.

¹⁹ In so far as it is the self that actuates the ego’s self-recollection.

²⁰ If I use the unhistorical term “self” for the corresponding processes in the psyche, I do so out of a conscious desire not to trespass on other preserves, but to confine myself exclusively to the field of empirical psychology.

²¹ Firmicus Maternus, *De errore profanarum religionum*, 7, 8.

²² Hippolytus, *Elenchos*, VIII, 15.

²³ And also on account of the fact that the unconscious is only conditionally bound by space and time. The comparative frequency of telepathic phenomena proves that space and time have only a relative validity for the psyche. Evidence for this is furnished by Rhine’s experiments. Cf. my “Synchronicity.”

²⁴ The word “hell” may strike the reader as odd in this connection I would, however, recommend him to study the brothel scene in James Joyce’s *Ulysses*, or James Hogg’s *The Private Memoirs and Confessions of a Justified Sinner*.

²⁵ How Jewish piety reacted to this sacrifice can be seen from the following Talmudic legend: “‘And I,’ cried Abraham, ‘swear that I will not go down from the altar until you have heard me. When you commanded me to sacrifice my son Isaac you offended against your word, “in Isaac shall your descendants be named.” So if ever my descendants offend against you, and you wish to punish them, then remember that you too are not without fault, and forgive them.’ ‘Very well, then,’ replied the Lord, ‘there behind you is a ram caught in the thicket with his horns. Offer up that instead of your son Isaac. And if ever your descendants sin against me, and I sit in judgment over them on New Year’s Day, let them blow the horn of a ram, that I may remember my words, and temper justice with mercy.’” Fromer and Schnitzer, *Legenden aus dem Talmud*, pp. 34f.

²⁶ Isaiah 53:5: “But he was wounded for our transgressions, he was bruised for our iniquities: the chastisement of our peace was upon him; and with his stripes we are healed.”

²⁷ See “Answer to Job,” in this volume.

²⁸ Caussin, *De symbolica Aegyptiorum sapientia. Polyhistor symbolicus, Electorum symbolorum, et Parabolarum historicarum stromata* (1618), p. 401. Cf. also Philippus Picinelli, *Mondo Simbolico*, p. 299: “Of a truth God, terrible beyond measure, appeared before the world peaceful and wholly tamed after dwelling in the womb of the most blessed Virgin. St. Bonaventura said that Christ was tamed and pacified by the most kindly Mary, so that he should not punish the sinner with eternal death.”

²⁹ Eliade, *Shamanism*, esp. chs. II and VII.

³⁰ Particularly in Gerhard Dorn, “Speculativae philosophiae,” *Theatrum chemicum*, I (1602), pp. 276f.

³¹ Cf. my *Aion*, Ch. V.

³² *The Apocryphal New Testament*. The Acts of John were probably written during the first half of the 2nd cent.

³³ *Ibid.*, pp. 253f., modified.

³⁴ [Or: I will be freed and I will free.—TRANS.]

³⁵ Trans. based on James, pp. 253f., and that of Ralph Manheim from the German of Max Pulver, “Jesus’ Round Dance and Crucifixion according to the Acts of St. John,” in *The Mysteries*, pp. 179f.

³⁶ See James, p. 33.

³⁷ Another idea of the kind is that every human being is a ray of sunlight. This image occurs in the Spanish poet Jorge Guillen, *Cántico: Fe de Vida*, pp. 24–25 (“Más allá,” VI):

Where could I stray to, where?

This point is my centre ...

With this earth and this ocean

To rise to the infinite:

One ray more of the sun. (Trans. by J. M. Cohen.)

³⁸ Cf. *Aion*, Ch. IV.

³⁹ The universality of this figure may explain why its epiphanies take so many different forms. For instance, it is related in the Acts of John (James, p. 251) that Drusiana saw the Lord once “in the likeness of John” and another time “in that of a youth.” The disciple James saw him as a child, but John as an adult. John saw him first as “a small man and uncomely,” and then again as one reaching to heaven (p. 251). Sometimes his body felt “material and solid,” but sometimes “the substance was immaterial and as if it existed not at all” (p. 252).

⁴⁰ “The Spirit Mercurius,” pt. 2, ch. 9.

⁴¹ “Haec meditare” (ταῦτα μελέτα) in I Tim. 4:15 has more the meaning of ‘see to’ or ‘attend to’ these things. [Both DV and AV have “meditate on these things,” but RSV has “practise these duties.”—TRANS.]

⁴² Lipsius and Bonnet, eds., *Acta Apostolorum Apocrypha*, I, p. 197.

⁴³ James, p. 335.

⁴⁴ James, p. 335.

⁴⁵ *Ibid.*, p. 254.

⁴⁶ *Ανάγγη βιάβα* uncertain.

⁴⁷ Based on James, pp. 254ff., and the author’s modified version of Hennecke, ed., *Neutestamentliche Apokryphen*, pp. 186ff.

⁴⁸ Cf. *Aion*.

⁴⁹ The quaternity, earlier hinted at in the vision of Ezekiel, is patently manifest in the pre-Christian Book of Enoch. (Cf. “Answer to Job,” below, pars. 662ff.) In the Apocalypse of Sophonias [Zephaniah], Christ appears surrounded by a garland of doves (Stern, “Die koptische Apokalypse des Sophonias,” p. 124). Cf. also the mosaic of St. Felix at Nola, showing a cross surrounded by doves. There is another in San Clemente, Rome (Wickhoff, “Das Apsismosaik in der Basilica des H. Felix zu Nola,” pp. 158ff.; and Rossi, *Musaici Cristiani delle Chiese di Roma anteriori al secolo XV*, pl. XXIX).

⁵⁰ Symbolized by the formless multitude.

⁵¹ Cf. “speaking with tongues” and glossolalia.

⁵² Based on James, pp. 334f.

⁵³ *Ibid.*, p. 255.

⁵⁴ Genesis 3:5.

⁵⁵ The possibility of inflation was brought very close indeed by Christ's words: "Ye are gods" (John 10:34).

⁵⁶ Cf. Pauli, "The Influence of Archetypal Ideas on Kepler's Scientific Theories."

⁵⁷ Cf. the remarkable account of developing consciousness in an ancient Egyptian text, translated, with commentary, by Jacobsohn, entitled "Das Gespräch eines Lebensmüden mit seinem Ba."

⁵⁸ [Cf. *Psychological Types*, Def. 18, and *Two Essays on Analytical Psychology*, par. 111.—EDITORS.]

⁵⁹ This view may be implicit in the *kenosis* passage (Philippians 2:5f.): "Have this mind in you which was also in Christ Jesus, who though he was by nature God, did not consider being equal to God a thing to be clung to, but emptied himself [ἐκένωσεν, *exinanivit*], taking the nature of a slave and being made like unto man" (DV).

⁶⁰ Including shamanism, whose widespread phenomenology anticipates the alchemist's individuation symbolism on an archaic level. For a comprehensive account see Eliade, *Shamanism*.

⁶¹ Cf. Portmann, "Die Bedeutung der Bilder in der lebendigen Energiewandlung."

⁶² Cf. Neumann, *The Origins and History of Consciousness*, pp. 220ff.

⁶³ *Aion*, pp. 162ff.

¹ [Originally trans. (by Fr. White) from the German ms. for publication in the book by Fr. Victor White, O.P. (London, 1952; Chicago, 1953). The foreword was there subscribed May 1952. It has been slightly revised, on the basis of the original ms.—EDITORS.]

² [The two previous ones were by the Protestant theologian Hans Schaer: *Religion and the Cure of Souls in Jung's Psychology*, and *Erlösungsvorstellungen und ihre psychotogischen Aspekte*.—EDITORS.]

³ The fact that the psyche is not a *tabula rasa*, but brings with it instinctive conditions, just as somatic life does, naturally does not suit a Marxist philosophy at all. True, the psyche can be crippled just like the body, but such a prospect would not be pleasing even to Marxists.

⁴ A recent suggestion that evil should be looked upon as a “decomposition” of good does not alter this fact in the slightest. A rotten egg is unfortunately just as real as a fresh one.

⁵ The justice of this dictum strikes me as questionable, since Adam can hardly be held responsible for the wickedness of the serpent.

¹ [Originally trans. by R. F. C. Hull from the German ms. for publication in the book by R. J. Zwi Werblowsky (London, 1952). The present text contains only minor alterations. Professor Jung subscribed the foreword March 1951.—EDITORS.]

²¹ 34:19 (ZB).

²² 16:19–21.

²³ 19:25. [‘Vindicator’ is RSV alternative reading for ‘Redeemer,’ and comes very close to the ZB *Anwalt*, ‘advocate.’—TRANS.]

²⁴ Verses 28, 34, 35.

²⁵ Psalm 89:46, 47, 49 (AV; last line from RSV).

²⁶ Or to be “blessed,” which is even more captious of him.

¹ Zechariah 4:10 (AV). Cf. also the Wisdom of Solomon 1:10 (AV): “For the ear of jealousy heareth all things: and the noise of murmurings is not hid.”

² The 89th Psalm is attributed to David and is supposed to have been a community song written in exile.

³ Satan is presumably one of God’s eyes which “go to and fro in the earth and walk up and down in it” (Job 1:7). In Persian tradition, Ahriman proceeded from one of Ormuzd’s doubting thoughts.

⁴ Job 38:2 (ZB).

⁵ Job 38:3 and 40:7.

⁶ 40:8–9.

⁷ 40:12–14 (“in the hidden place” is RSV alternative reading for “in the world below”).

⁸ This is an allusion to an idea found in the later cabalistic philosophy. [These “shards,” also called “shells” (Heb. *kelipot*), form ten counterpoles to the ten *sefiroth*, which are the ten stages in the revelation of God’s creative power. The shards, representing the forces of evil and darkness, were originally mixed with the light of the *sefiroth*. The *Zohar* describes evil as the by-product of the life process of the *sefiroth*. Therefore the *sefiroth* had to be cleansed of the evil admixture of the shards. This elimination of the shards took place in what is described in the cabalistic writings—particularly of Luria and his school—as the “breaking of the vessels.” Through this the powers of evil assumed a separate and real existence. Cf. Scholem, *Major Trends in Jewish Mysticism*, p. 267.—EDITORS.]

⁹ 42:2.

¹⁰ 42:3–6 (modified).

¹¹ Job 41:25 (ZB); cf. 41:34 (AV and RSV).

¹² Ezekiel 1:26.

¹³ The naïve assumption that the creator of the world is a conscious being must be regarded as a disastrous prejudice which later gave rise to the most incredible dislocations of logic. For example, the nonsensical doctrine of the *privatio boni* would never have been necessary had one not had to assume in advance that it is impossible for the consciousness of a good God to produce evil deeds. Divine unconsciousness and lack of reflection, on the other hand, enable us to form a conception of God which puts his actions beyond moral judgment and allows no conflict to arise between goodness and beastliness.

¹⁴ Job 42:7.

²⁰ Ecclesiasticus 24:11 and 18 (AV).

²¹ Tertullian, *Adversus Judaeos*, XIII (Migne, *P.L.*, vol. 2, col. 635): “... ilia terra virgo nondum pluviis rigata nec imbribus foecundata, ex qua homo tunc primum plasmatus est, ex qua nunc Christus secundum carnem ex virgine natus est” (... that virgin soil, not yet watered by the rains nor fertilized by the showers, from which man was originally formed [and] from which Christ is now born of a Virgin through the flesh).

²² Ezekiel 1:18.

¹ Not for nothing was the apostle John nicknamed “son of thunder” by Christ.

² I John 4:7–21.

¹ [Herostratus, in order to make his name immortal, burned down the temple of Artemis in Ephesus, in 365 B.C.—
EDITORS.]

¹ Psychologically the God-concept includes every idea of the ultimate, of the first or last, of the highest or lowest. The name makes no difference.

² The God-concept, as the idea of an all-embracing totality, also includes the unconscious, and hence, in contrast to consciousness, it includes the objective psyche, which so often frustrates the will and intentions of the conscious mind. Prayer, for instance, reinforces the potential of the unconscious, thus accounting for the sometimes unexpected effects of prayer.

³ “Of changeful countenance, both white and black.” Horace, *Epistulae*, II, 2.

⁴ *Apostolic Constitution* (“*Munificentissimus Deus*”) of ... *Pius XII*, §22: “Oportebat sponsam quam Pater desponsaverat, in thalamis caelestibus habitare” (The place of the bride whom the Father had espoused was in the heavenly courts).—St. John Damascene, *Encomium in Dormitionem, etc.*, Homily II, 14 (cf. Migne, *P.G.*, vol. 96, col. 742). §30: Comparison with the Bride in the Song of Solomon. §33: “... ita pariter surrexit et Area sanctificationis suae, cum in hac die Virgo Mater ad aethereum thalamum est assumpta” (... so in like manner arose the Ark which he had sanctified, when on this day the Virgin Mother was taken up to her heavenly bridal-chamber).—St. Anthony of Padua, *Sermones Dominicales, etc.* (ed. Locatelli. III, p. 730).

⁵ *Apostolic Constitution*, §31: “Ac praeterea scholastici doctores non modo in variis Veteris Testamenti figuris, sed in illa etiam Muliere amicta sole, quam Joannes Apostolus in insula Patmo [Rev. 12:1ff.] contemplatus est, Assumptionem Deiparae Virginis significatam viderunt” (Moreover, the Scholastic doctors saw the Assumption of the Virgin Mother of God signified not only in the various figures of the Old Testament, but also in the Woman clothed with the sun, whom the Apostle John contemplated on the island of Patmos).

⁶ The marriage of the Lamb repeats the Annunciation and the Overshadowing of Mary.

¹ Codex Bezae, apocryphal insertion at Luke 6:4. [Trans. by James; see above, par. 696. n. 6.—TRANS.]

¹ “A mediator making peace between enemies.”

² The papal rejection of psychological symbolism may be explained by the fact that the Pope is primarily concerned with the reality of metaphysical happenings. Owing to the undervaluation of the psyche that everywhere prevails, every attempt at adequate psychological understanding is immediately suspected of psychologism. It is understandable that dogma must be protected from this danger. If, in physics, one seeks to explain the nature of light, nobody expects that as a result there will be no light. But in the case of psychology everybody believes that what it explains is explained away. However, I cannot expect that my particular deviationist point of view could be known in any competent quarter.

¹ [Written in English in 1939 and first published in *The Tibetan Book of the Great Liberation*, the texts of which were translated from Tibetan by various hands and edited by W. Y. Evans-Wentz (London and New York, 1954), pp. xxix–lxiv. The commentary is republished here with only minor alterations.—EDITORS.]

² I am purposely leaving out of account the modernized East.

³ *Psychological Types*, Defs. 19 and 34.

⁴ Written in the year 1939.

⁵ *Samyutta-nikāya* 12, *Nidāna-samyutta*.

⁶ [Cf. Otto, *The Idea of the Holy*. pp. 26ff —EDITORS.]

⁷ “Whereas who holdeth not God as such an inner possession, but with every means must fetch Him from without ... verily such a man hath Him not, and easily something cometh to trouble him.” Meister Eckhart (Büttner, II, p. 185). Cf. *Meister Eckhart*, trans. by Evans, II, p. 8.

⁸ In so far as “higher” and “lower” are categorical judgments of consciousness, Western psychology does not differentiate unconscious contents in this way. It appears that the East recognizes subhuman psychic conditions, a real “subconsciousness” comprising the instincts and semi-physiological psychisms, but classed as a “higher consciousness.”

⁹ *Psychological Types* (1923 edn., pp. 472ff.).

^{9a} [Date of Mohammed’s flight (*hegira*) to Medina: beginning of Moslem era.]

¹⁰ This is not the unacceptable translation of *ἀπιούσιος* by Jerome but the ancient spiritual interpretation by Tertullian, Origen, and others.

¹¹ *Psychological Types*, Def. 51. [Cf. also “The Transcendent Function.”]

¹² Some people find such statements incredible. But either they have no knowledge of primitive psychology, or they are ignorant of the results of psychopathological research. Specific observations occur in my *Symbols of Transformation* and *Psychology and Alchemy*, Part II; Nelken, “Analytische Beobachtungen über Phantasien eines Schizophrenen,” pp. 504ff.; Spielrein, “Über den psychologischen Inhalt eines Falls von Schizophrenie” pp. 329ff.; and C. A. Meier, “Spontanmanifestationen des kollektiven Unbewussten.”

²⁵ I have explained this in my “Commentary on *The Secret of the Golden Flower*,” pars, 64ff.

²⁶ From the [German] trans. of L. C. Lo, I, p. 114. [Cf. *Golden Flower*, 1962, pp. 77f.]

²⁷ *Psychological Types*, Def. 25.

²⁸ Cf. Lévy-Bruhl, *How Natives Think*. Recently this concept as well as that of the *état prélogique* have been severely criticized by ethnologists, and moreover Lévy-Bruhl himself began to doubt their validity in the last years of his life. First he cancelled the adjective “mystique,” growing afraid of the term’s bad reputation in intellectual circles. It is rather to be regretted that he made such a concession to rationalistic superstition, since “mystique” is just the right word to characterize the peculiar quality of “unconscious identity.” There is always something numinous about it. Unconscious identity is a well-known psychological and psychopathological phenomenon (identity with persons, things, functions, roles, positions, creeds, etc.), which is only a shade more characteristic of the primitive than of the civilized mind. Lévy-Bruhl, unfortunately having no psychological knowledge, was not aware of this fact, and his opponents ignore it.

²⁹ Cf. *The Critique of Pure Reason*, sec. i, Part I, 2, 3 (cf. trans. by Meiklejohn, p. 188).

¹⁵ *Theologia Germanica*, ed. by Trask, p. 115.

¹⁶ *Ibid.*, pp. 120–21.

¹⁷ There is a similar image in Zen: When a Master was asked what Buddhahood consisted in, he answered, "The bottom of a pail is broken through" (Suzuki, *Essays*, I, p. 229). Another analogy is the "bursting of the bag" (*Essays*, II, p. 117).

¹⁸ Cf. Suzuki, *Essays*, I, pp. 231, 255. Zen means catching a glimpse of the original nature of man, or the recognition of the original man (p. 157).

¹⁹ Cf. Evans, *Meister Eckhart*, p. 221; also *Meister Eckhart: A Modern Translation*, by Blakney, pp. 231f.

²⁰ Suzuki, *Introduction*, pp. 93. S4.

²¹ “Its root is above, its branches below—this eternal fig-tree! ... That is Brahma, that is called the Immortal.” Katha Upanishad, 6, 1, trans. by Hume, *The Thirteen Principal Upanishads*, p. 358.

²² John of Ruysbroeck, *The Adornment of the Spiritual Marriage*, p. 47. One can hardly suppose that this Flemish mystic, who was born in 1273, borrowed this image from any Indian text.

²³ *Ibid.*, p. 51.

²⁴ P. 57, modified.

²⁵ *Ibid.*, p. 62, modified.

²⁶ “O Lord ... instruct me in the doctrine of the non-ego, which is grounded in the self-nature of mind.” Cited from the Lankavatāra Sutra, in Suzuki, *Essays*, I, p. 89.

²⁷ A Zen Master says: “Buddha is none other than the mind, or rather, him who strives to see this mind.”

²⁸ Galatians 2:20: “It is no longer I who live, but Christ who lives in me.”

²⁹ Suzuki says of this change, “The old way of viewing things is abandoned and the world acquires a new signification ... a new beauty which exists in the ‘refreshing breeze’ and in the ‘shining jewel.’” *Essays*, I, p. 249. See also p. 138.

³⁰ From *Der Cherubinischer Wandersmann*. [Trans. by W. R. Trask (unpub.).]

³¹ “*Satori* is the most intimate individual experience.” *Essays*, I, p. 261.

A Master says to his pupil: “I have really nothing to impart to you, and if I tried to do so you might have occasion to make me an object of ridicule. Besides, whatever I can tell you is my own and can never be yours.” *Introduction*, p. 91.

A monk says to the Master: “I have been seeking for the Buddha, but do not yet know how to go on with my research.” Said the Master: “It is very much like looking for an ox when riding on one.” *Essays*, II, p. 74.

A Master says: “The mind that does not understand is the Buddha: there is no other.” *Ibid.*, p. 72.

³² *Essays*, II, pp. 84, 90.

³³ “Zen consciousness is to be nursed to maturity. When it is fully matured, it is sure to break out as *satori*, which is an insight into the unconscious.” *Essays*, II, p. 60.

³⁴ The fourth maxim of Zen is “Seeing into one’s nature and the attainment of Buddhahood” (I, p. 18). When a monk asked Hui-neng for instruction, the Master told him: “Show me your original face before you were born” (I, p. 224). A Japanese Zen book says: “If you wish to seek the Buddha, you ought to see into your own nature; for this nature is the Buddha himself” (I, p. 231). A *satori* experience shows a Master the “original man” (I, p. 255). Hui-neng said: “Think not of good, think not of evil, but see what at the moment your own original features are, which you had even before coming into existence” (II, p. 42).

³⁵ Bodhidharma, the founder of Zen in China, says: “The incomparable doctrine of Buddhism can be comprehended only after a long hard discipline and by enduring what is most difficult to endure, and by practising what is most difficult to practise. Men of inferior virtue and wisdom are not allowed to understand anything about it. All the labours of such ones will come to naught.” (*Ibid.*, I, p. 188.)

³⁶ This is more probable than one that is merely “complementary.”

³⁷ This “necessity” is a working hypothesis. People can, and do, hold very different views on this point. For instance, are religious ideas “necessary”? Only the course of the individual’s life can decide this, i.e., his individual experience. There are no abstract criteria.

³⁸ “When the mind discriminates, there is manifoldness of things; when it does not it looks into the true state of things.” *Essays*, I, p. 99.

³⁹ See the passage beginning “Have your mind like unto space....” Suzuki, *Essays*, I, p. 223.

⁴⁰ *Introduction to Zen Buddhism*, p. 94.

⁴¹ In this connection I must also mention the English mystic, William Blake. Cf. an excellent account in Percival, *William Blake’s Circle of Destiny*.

⁴² The genius of the Greeks lay in the break-through of consciousness into the materiality of the world, thus robbing the world of its original dreamlike quality.

⁴³ [Cf. above, par. 844.]

⁴⁴ *Faust*, Part I, trans. by Wayne, p. 54.

⁴⁵ *Ibid.*, p. 44.

⁴⁶ *Introduction*, p. 95.

⁴⁷ “It is no pastime but the most serious task in life; no idlers will ever dare attempt it.” Suzuki, *Essays*, I, p. 27; cf. also p. 92.

⁴⁸ Says a Master: “If thou seekest Buddhahood by thus sitting cross-legged, thou murderest him. So long as thou freest thyself not from sitting so, thou never comest to the truth.” *Essays*, I, p. 235. Cf. also II, p. 83f.

¹ [Delivered as a lecture to the Schweizerische Gesellschaft der Freunde ostasiatischer Kultur, in Zurich, Basel, and Bern, during March–May 1943, and published as “Zur Psychologie östlicher Meditation” in the Society’s *Mitteilungen* (St. Gallen), V (1943), 33–53; repub. in *Symbolik des Geistes* (Zurich, 1948), pp. 447–72. Previously trans. by Carol Baumann in *Art and Thought*, a volume in honour of Ananda K. Coomaraswamy (London, 1948), pp. 169–79.

[The work of Heinrich Zimmer’s which the author refers to in the opening sentence was his *Kunstform und Yoga im indischen Kultbild* (1926), the central argument of which has been restated in his posthumous English works, particularly *Myths and Symbols in Indian Art and Civilization* (1946) and *The Art of Indian Asia* (1955). Cf. also the next paper in this volume.—EDITORS.]

² In *Buddhist Mahāyāna Sūtras* (Sacred Books of the East, vol. 49), Part II, pp. 159–201, trans. by J. Takakusu, slightly modified.

³ Jambunadi = Jambu-tree. A river formed of the juice of the fruit of the Jambu-tree flows in a circle round Mount Meru and returns to the tree.

⁴ Cf. *Symbols of Transformation*, Part II, chs. 6 and 7, especially par. 510.

⁵ Cf. *Psychology and Alchemy*, fig. 61.

⁶ Cf. Stoeckli, *Die Visionen des Seligen Bruder Klaus*. Cf. also the sixth paper in this volume, pars. 474ff.

⁷ Cf. the first paper in this volume, pars. 136ff.

¹ [Introduction to Heinrich Zimmer, *Der Weg zum Selbst: Lehre und Leben des indischen Heiligen Shri Ramana Maharshi aus Tiruvannamalai* (Zurich, 1944), edited by C. G. Jung. The work consists of 167 pages translated by Zimmer from English publications of the Sri Ramanasramam Book Depot, Tiruvannamalai India, preceded by a brief (non-significant) foreword and this introduction, both by Jung, an obituary notice by Emil Abegg of Zimmer's death in New York in 1944, and an introduction to the Shri Ramana Maharshi texts by Zimmer.—EDITORS.]

² *Worte des Ramakrishna*, ed. by Emma von Pelet, p. 77.

³ *The Gospel of Ramakrishna*, p. 56.

⁴ Ibid.

¹ [Grateful acknowledgment is made here to Cary F. Baynes for permission to use, with a few minor changes, her translation of this Foreword, which Professor Jung wrote specially for the English edition of the *I Ching or Book of Changes*, translated by Mrs. Baynes from the German translation of Richard Wilhelm (New York and London, 1950); 2nd edn. in 1 vol., 1961; 3rd edn. in small format, 1967. References are to the 3rd edn.—TRANS.]

² Legge makes the following comment on the explanatory text for the individual lines: “According to our notions, a framer of emblems should be a good deal of a poet, but those of the *Yi* only make us think of a dryasdust. Out of more than three hundred and fifty, the greater number are only grotesque” (*The Yi King*, p. 22). Of the “lessons” of the hexagrams, the same author says: “But why, it may be asked, why should they be conveyed to us by such an array of lineal figures, and in such a farrago of emblematic representations” (p. 25). However, we are nowhere told that Legge ever bothered to put the method to a practical test.

³ [Cf. Jung’s “Synchronicity: An Acausal Connecting Principle.” In that work (pp. 450–53) he is concerned with the synchronistic aspects of the *I Ching*.—EDITORS.]

⁴ Cf. J. B. Rhine, *The Reach of the Mind*.

⁵ They are *shén*, that is, ‘spirit-like.’ “Heaven produced the ‘spirit-like things’” (Legge, p. 41).

⁶ [Cf. the *I Ching*, pp. 193ff.—EDITORS.]

⁷ See the explanation of the method, *ibid.*, pp. 721ff.

⁸ For example, the *invidi* (‘the envious’) are a constantly recurring image in the old Latin books on alchemy, especially in the *Turba philosophorum* (11th or 12th cent.).

⁹ From the Latin *concupere*, ‘to take together,’ e.g., in a vessel: *concupere* derives from *capere*, ‘to take,’ ‘to grasp.’

¹⁰ This is the classical etymology. The derivation of *religio* from *religare*, ‘reconnect,’ ‘link back,’ originated with the Church Fathers.

¹¹ I made this experiment before I actually wrote the foreword.

¹² The Chinese interpret only the changing lines in the hexagram obtained by use of the oracle. I have found all the lines of the hexagram to be relevant in most cases.

¹³ [Cf. Wilhelm and Jung, *The Secret of the Golden Flower* (1931), in which this address appears as an appendix. The book did not appear in English until a year after Wilhelm’s death.—C. F. B.]

[For the address, see vol. 15 of the *Coll. Works*.—EDITORS.]

¹⁴ The reader will find it helpful to look up all four of these hexagrams in the [Baynes-Wilhelm] text and to read them together with the relevant commentaries.

PREFATORY NOTE TO THE ENGLISH EDITION

To the reader who knows little or nothing of my work, a word of explanation may be helpful. Some thirty-five years ago I noticed to my amazement that European and American men and women coming to me for psychological advice were producing in their dreams and fantasies symbols similar to, and often identical with, the symbols found in the mystery religions of antiquity, in mythology, folklore, fairytales, and the apparently meaningless formulations of such esoteric cults as alchemy. Experience showed, moreover, that these symbols brought with them new energy and new life to the people to whom they came.

From long and careful comparison and analysis of these products of the unconscious I was led to postulate a “collective unconscious,” a source of energy and insight in the depth of the human psyche which has operated in and through man from the earliest periods of which we have records.

In this present study of alchemy I have taken a particular example of symbol-formation, extending in all over some seventeen centuries, and have subjected it to intensive examination, linking it at the same time with an actual series of dreams recorded by a modern European not under my direct supervision and having no knowledge of what the symbols appearing in the dreams might mean. It is by such intensive comparisons as this (and not one but many) that the hypothesis of the collective unconscious—of an activity in the human psyche making for the spiritual development of the individual human being—may be scientifically established.

[*Undated*]

C. G. JUNG

***From* EDITORIAL NOTE TO THE FIRST EDITION**

This volume of Professor Jung's *Collected Works* is a translation, with minor alterations made at the instance of the author, of *Psychologie und Alchemie* (Zurich, 1944; 2nd edition, revised, 1952). That work was based on the two lectures mentioned in Professor Jung's foreword, "Traumsymbole des Individuationsprozesses," *Eranos-Jahrbuch 1935* (Zurich, 1936), and "Die Erlösungsvorstellungen in der Alchemie," *Eranos-Jahrbuch 1936* (Zurich, 1937).

The two lectures were previously translated by Stanley Dell and published in *The Integration of the Personality* (New York, 1939; London, 1940) under the titles "Dream Symbols of the Process of Individuation" and "The Idea of Redemption in Alchemy." Professor Jung then considerably expanded them and added an introduction, in which he set out his whole position particularly in relation to religion. These three parts together with a short epilogue make up the Swiss volume.

The translation now presented to the public has been awaited with impatience in many quarters, for it is one of Professor Jung's major works, to be compared in importance with *Psychology of the Unconscious* and *Psychological Types*. It may be said that round the material contained in this volume the major portion of his later work revolves. On this account *Psychology and Alchemy* is being published first, though it is not Volume 1 of the *Collected Works*.

EDITORIAL NOTE TO THE SECOND EDITION

For this second edition of Volume 12, technical considerations made it necessary to reset the text, and this in turn made various improvements possible. The translation has been thoroughly revised, and additions and revisions have been made in accordance with the second Swiss edition, 1952. The bibliography and the footnote references have been corrected and brought up to date, particularly in respect of the author's subsequent publications in English. The paragraph numeration has been preserved, but the pagination has unavoidably changed. An entirely new index has been prepared. The late Mr. A. S. B. Glover was responsible for numerous improvements in the translations from the Latin and in the bibliographical references. The illustrations are printed almost entirely from new photographs; consequently the sources have sometimes had to be altered. For valuable assistance in obtaining new photographs the Editors are indebted to Mrs. Aniela Jaffé, Dr. Jolande Jacobi, and Dr. Rudolf Michel; for general editorial help, to Mrs. B. L. Honum Hull.

After the author's death in 1961, the unpublished draft of a "prefatory note to the English edition," written in English, was found among his papers, and this has been added to the present edition. For permission to publish it, the Editors are indebted to the late Mrs. Marianne Niehus-Jung, then acting on behalf of the heirs of C. G. Jung.

A variant of the text of [Part II](#) presenting the essay in its *Eranos-Jahrbuch 1935* form appeared as "Dream Symbols of the Individuation Process" in *Spiritual Disciplines* (Papers from the Eranos Yearbooks, 4; New York and London, 1959).

TRANSLATOR'S NOTE

So far as concerns the translation of this and other volumes of these collected works, the primary aim has naturally been to reproduce the straightforward, lively, and often informal language of the author. In an undertaking such as this one, it would indeed be an act of presumption for the translator to ignore the labours of his predecessors, and the present edition does not seek to stress its newness and difference by studiously overlooking the manifold excellences of the existing translations. In general, therefore, the secondary aim has been to establish a standard terminology for all volumes in this series and to reduce them to a uniform style, while making the fullest use of previous work in this field. In preparing the text of the present volume I had frequent recourse to the material already translated by Stanley Dell in *The Integration of the Personality*; I gratefully acknowledge my debt to him, and also to Miss Barbara Hannah, who magnanimously placed her private, unpublished version of *Psychology and Alchemy* at my disposal, as well as giving me every possible help in the correction of the typescripts and the proofs.

FOREWORD TO THE SWISS EDITION

The present volume contains two major studies which grew out of lectures delivered at the Eranos Congress. They were first printed in the *Eranos-Jahrbuch* for 1935 and 1936. The present edition has been augmented by nearly a half through the inclusion of additional material and the full apparatus of documentation. The text has been improved in certain respects and part of it newly arranged. Another new feature is the wealth of illustrations, the large number of which is justified by the fact that symbolical images belong to the very essence of the alchemist's mentality. What the written word could express only imperfectly, or not at all, the alchemist compressed into his images; and strange as these are, they often speak a more intelligible language than is found in his clumsy philosophical concepts. Between such images and those spontaneously produced by patients undergoing psychological treatment there is, for the expert, a striking similarity both in form and in content, although I have not gone into it very deeply in the course of my exposition.

I am particularly indebted to Dr. M. L. von Franz for philological help in translating the Zosimos text, which, besides being corrupt, is hard to construe and controversial. I wish also to thank Miss R. Schärf for information on the Og and Unicorn legend in Talmudic literature and Mrs. O. Fröbe-Kapteyn for obtaining photographic copies of a number of alchemical pictures. Lastly, I should like to express my very warm thanks to Dr. J. Jacobi for choosing and arranging the illustrations and looking after the details of printing.

Küsnacht, January, 1943

Mutus liber (1702), p. 11, detail. (M.C.A.O.)

23. [The mystic vessel](#)

“Figurarum Aegyptiorum secretarum,” MS. in author’s coll. (18th cent.), p. 13. (C.G.J.)

24. [The activities presided over by Mercurius](#)

MS. (c. 1400), Tübingen, Universitätsbibliothek.

25. [The fountain of life as *fons mercurialis*](#)

Rosarium philosophorum (1550). (C.G.J.)

26. [The Virgin Mary surrounded by her attributes](#)

Devotional picture (17th cent.); from Prinz, *Altorientalische Symbolik*, p. 6. (C.G.J.)

27. [Life-renewing influence of the conjoined sun and moon on the bath](#)

Milan, Biblioteca Ambrosiana, Codex I, 6 inf. p: F. Busi, Milan.

28. Capture of the Leviathan

Herrad of Landsberg's *Hortus deliciarum* (12th cent.); from the Keller and Straub edn., Pl. XXIV. (New York Public Library.)

29. Seven-petalled rose

Fludd, *Summum bonum* (1629), frontispiece. British Museum.

30. The red-and-white rose

"Ripley Scrowle," MS. Add. 5025 (1588), British Museum, No. 1, detail.

31. The symbolic city as centre of the earth

Maier, *Viatorium* (1651), p. 57. (C.G.J.)

32. *Coniunctio solis et lunae*

Trismosin, "Splendor solis," MS. Harley 3469 (1582), British Museum.

33. Poliphilo surrounded by nymphs

Béroalde de Verville, *Le Songe de Poliphile* (1600), p. 9. (M.C.A.O.)

34. The *nigredo* standing on the *rotundum*

Mylius, *Philosophia reformatata* (1622), p. 117, fig. 9. (C.G.J.)

35. A medieval version of the "wild man"

Codex Urbanus Latinus 899 (15th cent.), Biblioteca Vaticana, fol. 85.

36. The devil as aerial spirit and ungodly intellect

Illustration by Eugène Delacroix (1799–1863) for *Faust*, Part I. p: Courtesy of The Heritage Club, New York.

37. The seven-petalled flower

Boschius, *Symbolographia* (1702), Symbol. LCCXXIII, Class. 1. Tab. XXI. (C.G.J.)

38. Mercurius as *virgo*

Thomas Aquinas (pseud.), "De alchimia," Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 95a.

39. Shri-Yantra

Traditional, from Avalon, *The Serpent Power*.

40. Tibetan World Wheel (*sidpe-korlo*)

Painted banner. Private collection.

41. The Aztec "Great Calendar Stone"

National Museum, Mexico. p: Instituto Nacional de Antropología y Historia, Mexico.

42. [Mandala containing the Infant Christ carrying the Cross](#)
Mural painting by Albertus Pictor in the church of Harkeberga, Sweden (c. 1480); from Cornell, *Iconography of the Nativity of Christ*, p. 53. P: Courtesy of J. Jacobi.
43. [Lamaic Vajramandala](#)
Tibetan painted banner. Formerly in the China Institute, Frankfurt on the Main; destroyed in 2nd World War.
44. [Mexican calendar](#)
Engraving from Herrliberger, *Heilige Ceremonien* (1748), Pl. XC, No. 1. (C.G.J.)

Gem in a Roman ring; from King, *The Gnostics and Their Remains*, fig. 14. (C.G.J.)
- 46, 47. [Crowned dragon as tail-eater](#)
Eleazar, *Uraltes chymisches Werk* (1760), Part II, nos. 4 and 3 facing p. 8. (M.C.A.O.)
48. [The putrefactio](#)
Stolcius de Stolcenberg, *Viridarium chymicum* (1624), fig. VIII. (C.G.J.)
49. [Diagram showing the four functions of consciousness](#)
Author's diagram, taken from Jacobi, *The Psychology of Jung*, Diag. 4.
50. [Baneful spirits attacking the Impregnable Castle](#)
Fludd, *Summum bonum* (1629). British Museum.
51. [The Lapis Sanctuary](#)
Van Vreeswyck, *De Groene Leeuw* (1672), p. 123. British Museum.
52. [Harpokrates on the lotus](#)
Gnostic gem; from King, *The Gnostics and Their Remains*, fig. 6. (C.G.J.)
53. [The tetramorph, the steed of the Church](#)
Crucifixion in Herrad of Landsberg's *Hortus deliciarum* (12th cent.), detail; from the Keller and Straub edn., Pl. XXXVIII. (New York Public Library.)
54. [Hermaphrodite with three serpents and one serpent](#)
Rosarium philosophorum, in *Artis auriferae* (1593), II, p. 359. (C.G.J.)
55. [Faust before the magic mirror](#)
Rembrandt etching (c. 1652). Albertina, Vienna.
56. [Fountain of youth](#)

Codex de Sphaera, in Codex Estensis Latinus 209 (15th cent.), Modena. P: Orlandini, Modena.

57. Imperial bath with the miraculous spring of water

Alcadini, “De balneis Puteolanis,” Codex 1474 (14th cent.), Rome, Biblioteca Angelica.

58. Christ as the source of fire

Stained-glass window (14th cent.) in the choir of the former monastery church at Königsfelden (Aargau), Switzerland; from copy in author’s house at Küssnacht.

59. “All things do live in the three ...”

Jamsthaler, *Viatorium spagyricum* (1625), p. 272. (C.G.J.)

60. Squaring of the circle to make the two sexes one whole

Maier, *Scrutinium chymicum* (1687), Emblema XXI, p. 61. (C.C.J.)

61. The pearl as symbol of Ch’ien

Chinese bronze mirror of the T’ang Period (7th to 9th cent.); from Laignel-Lavastine, *Histoire générale de la médecine*, I, p. 543. P: Courtesy of J. Jacobi.

62. Rectangular mandala with cross

Zwiefalten Abbey breviary (12th cent.), fol. 10; from Löffler, *Schwäbische Buchmalerei*, Pl. 20. P: Courtesy of J. Jacobi.

63. Hermes

Greek vase painting (Hamilton Collection); from Lenormant and Witte, *Élite des monuments céramographiques*, III, Pl. LXXVIII.

64. Christ as Anthropos

Glanville, *Le Propriétaire des choses* (1482). P: Inst.

65. Tetramorph standing on two wheels

Vatopedi Monastery, Mt. Athos (1213); from Gillen, *Ikono-graphische Studien*, p. 15. P: Courtesy of J. Jacobi.

66. Ammon-Ra

From Champollion, *Panthéon égyptien*. (New York Public Library.)

67. Demon in the shape of a monkey

“Speculum humanae salvationis,” Codex Latinus 511 (14th cent.), Paris, Bibliothèque Nationale.

68. Thoth as cynocephalus

From tomb of Amen-her-khopshef, near Der el-Medina, Luxor (XXth dynasty, 12th cent. B.C.). Formerly in the Hahnloser Collection, Bern.

69. Dante and Virgil on their journey to the underworld
Illumination for the *Inferno*, Codex Urbanus Latinus 365 (15th cent.), Biblioteca Vaticana. P: Inst.
70. Pagan rites of transformation in the Middle Ages
Gnostic design; from Hammer-Purgstall, *Mémoire sur deux coffrets gnostiques*, Pl. K. (C.G.J.)
71. Creation of Adam from the clay of the *prima materia*
Schedel, *Das Buch der Chroniken* (1493), p. V. P: Courtesy of J. Jacobi.
72. The “union of irreconcilables”: marriage of water and fire
After an Indian painting; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. II, fig. 17.
73. The deliverance of man from the power of the dragon
Wynandi de Stega, “Adamas colluctancium aquilarum,” Codex Palatinus Latinus 412 (15th cent.), Biblioteca Vaticana. P: Inst.
74. Heaven fertilizing Earth and begetting mankind
Thenaud, “Traité de la cabale,” MS. 5061 (16th cent.), Paris, Bibliothèque de l’Arsenal.
75. Trimurti picture
After an Indian painting; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. II, fig. 40.
76. The tortoise: an alchemical instrument
Porta, *De distillationibus* (1609), p. 40. P: Inst.
77. Telesphorus
Bronze figure from Roman Gaul; marble statuette from Austria; after figs. in Roscher, *Lexikon*, V, col. 316.
78. Maria Prophetissa
Maier, *Symbola aureae mensae* (1617), frontispiece. (M.C.A.O.)
79. King Sol with his six planet-sons
Bonus, *Pretiosa margarita novella* (1546). (M.C.A.O.)
80. Mercurius turning the eight-spoked wheel
“Speculum veritatis,” Codex Vaticanus Latinus 7286 (17th cent.), Biblioteca Vaticana. P: Inst.
81. “Sol et eius umbra”
Maier, *Scrutinium chymicum* (1687), p. 133.

82. [The Anthropos with the four elements](#)
Russian MS. (18th cent.). P: Inst.
83. [Dante being led before God in the heavenly rose](#)
Illumination for the *Paradiso*, Codex Urbanus Latinus 365 (15th cent.), Biblioteca Vaticana. P: Inst.
84. [The fountain in the walled garden](#)
Boschius, *Symbolographia* (1702), Symbol. CCLI, Class. I, Tab. XVI. (C.G.J.)
85. [The eight-petalled flower](#)
“Recueil de figures astrologiques,” MS. Français 14770 (18th cent.). Paris, Bibliothèque Nationale.
86. [The alchemical apparatus for distillation](#)
Kelley, *Tractatus de Lapide philosophorum* (1676), p. 109. (C.G.J.)
87. [The Virgin as the vas of the divine child](#)
From a Venetian *Rosario dela gloriosa vergine Maria* (1524), in Inman, *Ancient Pagan and Modern Christian Symbolism*, p. 62.
88. [Vision of the Holy Grail](#)
“Roman de Lancelot du Lac,” MS. Français 116 (15th cent.), Paris, Bibliothèque Nationale. fol. 610^v.
89. [The pelican nourishing its young with its own blood](#)
Boschius, *Symbolographia* (1702), Symbol. LXX, Class. I, Tab. IV. (C.G.J.)
90. [The bear representing the dangerous aspect of the *prima materia*](#)
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 82.
91. [Anima Mundi](#)
Thurneisser zum Thurn, *Quinta essentia* (1574), p. 92, woodcut. (C.G.J.)
92. [The alchemical process in the zodiac](#)
“Ripley Scrowle,” MS. Add. 5025 (1588), British Museum, No. 1, detail.
93. [The Mountain of the Adepts](#)
Michelspacher, *Cabala* (1654). P: Photo Archives, Marburg.
94. [Etna: “gelat et ardet”](#)
Boschius, *Symbolographia* (1702), Symbol. XXX, Class. II, Tab. II. (C.G.J.)
95. [Ludus puerorum](#)
Trismosin, “Splendor solis,” MS. Harley 3469 (1582), British Museum.

96. [Pygmies \(helpful child-gods\)](#)
Fragments of an Egyptian mechanical toy, Cairo Museum. P: Courtesy of A. Piankoff.
97. [The “Grand Peregrination” by ship](#)
Maier, *Viatorium* (1651), p. 183. (C.G.J.)
98. [The philosophical egg](#)
Wynandi de Stega, “Adamas colluctancium aquilarum,” Codex Palatinus Latinus 412 (15th cent.), Biblioteca Vaticana. P: Inst.
99. [Time-symbol of the lapis](#)
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 74.
100. [Horoscope, showing the houses, zodiac, and planets](#)
Woodcut by Erhard Schoen for the nativity calendar of Leonhard Reymann (1515); from Strauss, *Der astrologische Gedanke*, p. 54.
101. [Christ in the mandorla](#)
Mural painting, church of Saint-Jacques-des-Guérets, Loir-et-Cher, France; from Clemen, *Die romanische Monumentalmalerei*, fig. 195, p. 260.
102. [Osiris, with the four sons of Horus on the lotus](#)
Budge, *The Book of the Dead* (1899), Papyrus of Hunefer, Plate 5.
103. [Sponsus et sponsa](#)
Detail from *Polittico con I’Incoronazione*, by Stefano da Sant’Agnese (15th cent.), Venice, Accademia. P: Alinari.
104. [God as Father and Logos creating the zodiac](#)
Peter Lombard, “De sacramentis,” Codex Vaticanus Latinus 681 (14th cent.), Biblioteca Vaticana.
105. [The Virgin, personifying the starry heaven](#)
“Speculum humanae saluacionis,” Codex Palatinus Latinus 413 (15th cent.), Biblioteca Vaticana.
106. [“Elixir of the moon”](#)
Codex Reginensis Latinus 1458 (17th cent.), Biblioteca Vaticana.
107. [Virgin carrying the Saviour](#)
“Speculum humanae saluacionis,” Codex Palatinus Latinus 413 (15th cent.), Biblioteca Vaticana.
108. [Maya encircled by the Uroboros](#)

Damaged vignette from frontispiece of a collection of Brahminic sayings; from Mueller, *Glauben, Wissen und Kunst der alten Hindus*, Pl. I, fig. 91.

109. [The four evangelists with their symbols and the four rivers of paradise](#)

Miniature in an Evangeliary, Aschaffenburg, Codex 13 (13th cent.), fol. 177. P: Samhaber, Aschaffenburg.

110. [Sand-painting of the Navajo Indians](#)

Ethnological drawing; from Stevenson, "Ceremonial of Hasjelti Dailjis," Pl. CXXI.

111. [The *cauda pavonis*](#)

Boschius, *Symbolographia* (1702), Symbol. LXXXIV, Class. I, Tab. V. (C.G.J.)

112. [The principal symbols of alchemy](#)

Trismosin, *La Toyson d'or* (1612), frontispiece. Coll. C. A. Meier, Zurich.

113. [Moon and sun furnaces](#)

Mutus liber (1702), p. 14, detail. (M.C.A.O.)

114. [The four stages of the alchemical process](#)

Mylius, *Philosophia reformata* (1622), p. 96, fig. 2. (C.G.J.)

115. [The *nigredo*: eclipse of *Mercurius senex*, exhaling the *spiritus* and *anima*](#)

Jamsthaler, *Viatorium spagyricum* (1625), p. 118. (C.G.J.)

116. [Crowned hermaphrodite](#)

"Traité d'alchimie," MS. 6577 (17th cent.), Paris, Bibliothèque de l'Arsenal.

117. [Anthropos as *anima mundi*](#)

From Albertus Magnus, *Philosophia naturalis* (1650). (C.G.J.)

118. [Brother-sister pair in the "bath of life"](#)

Theatrum chemicum Britannicum (1652), p. 350. P: Inst.

119. [Alchemical furnace](#)

Geber, *De alchimia* (1529), frontispiece. (C.G.J.)

120. [Mercurius in the vessel](#)

Barchusen, *Elementa chemiae* (1718), fig. 75, Paris, Bibliothèque Nationale.

121. [The transformations of Mercurius in the Hermetic vessel](#)

"Cabala mineralis," MS. Add. 5245, British Museum, fol. 2. P: Inst.

122. [The twelve alchemical operations in the form of the *arbor philosophica*](#)

Samuel Norton, *Mercurius redivivus* (1630), British Museum.

123. [Hermaphrodite](#)

Hermaphroditisches Sonn- und Mondskind (1752), p. 16, detail. (C.G.J.)

124. Alchemists at work

Mutus liber (1702), p. 13, detail. (M.C.A.O.)

125. Mercurius as the sun-moon hermaphrodite, standing on the (round) chaos

Mylius, *Philosophia reformata* (1622), p. 354, fig. 5. (C.G.J.)

126. The six days of creation, culminating in the seventh day

St. Hildegarde of Bingen, “Scivias,” MS. (12th cent.); from *Hildegard von Bingen: Wisse die Wege*, ed. Böckeler.

127. The transformation of Mercurius in the fire

Barchusen, *Elementa chemiae* (1718), fig. 76, Paris, Bibliothèque Nationale.

128. Hermes Trismegistus

Senior, *De chemia*, in Mangetus, *Bibliotheca chemica curiosa* (1702), Vol. II, facing p. 216. (M.C.A.O.) [In the original edition, Jung used the Strasbourg 1566 version of Senior’s *De chemia*, now unavailable.]

129. Personified *spiritus* escaping from the heated *prima materia*

Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 60a, detail.

130. The Mercurial serpent devouring itself in water or fire

Barchusen, *Elementa chemiae* (1718), figs. 58–61, Paris, Bibliothèque Nationale.

131. Adam as *prima materia*, pierced by the arrow of Mercurius

“Miscellanea d’alchimia.” MS. Ashburnham 1166 (14th cent.), Florence, Biblioteca Medicea-Laurenziana. P: Inst.

132. The “secret” contents of the work

Mutus liber (1702), fig. 3. (M.C.A.O.)

133. Alchemists at work

Mutus liber (1702), p. 6. (M.C.A.O.)

134. Saturn, or *Mercurius senex*, being cooked in the bath

Trismosin, “Splendor solis,” MS. Harley 3169 (1582), British Museum.

135. The skull, symbol of the *mortificatio* of Eve

“Miscellanea d’alchimia,” MS. Ashburnham 1166 (14th cent.), Florence, Biblioteca Medicea-Laurenziana. P: Inst.

136. God enlightening the artifex

Barchusen, *Elementa chemiae* (1718), fig. 2, Paris, Bibliothèque Nationale.

137. Alchemist in the initial *nigredo* state, meditating
Jamsthaler, *Viatorium spagyricum* (1625), p. 27. (C.G.J.)
138. The Mercurial spirit of the *prima materia*, as salamander, frolicking in the fire
Maier, *Scrutinium chymicum* (1687), Emblema XXIX, p. 85. (C.G.J.)
139. Hermes conjuring the winged soul out of an urn
Attic funeral lekythos, Jena; from Harrison, *Themis*, p. 295, fig. 78.
140. The artifex with his *soror mystica*, holding the keys to the work
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.),
Leiden, Univ. Bibl., fol. 99.
141. The artifex with book and altar
Kelley, *Tractatus de Lapide philosophorum* (1676), p. 118.
142. The sequence of stages in the alchemical process
Libavius, *Alchymia* (1606), Commentarium, Part II, p. 55. (C.G.J.)
143. Alchemists at work
Mutus liber (1702), p. 7, detail. (M.C.A.O.)
144. Artists in library and laboratory
Maier, *Tripus aureus* (1618), from title-page (M.C.A.O.) [In his original edition,
Jung used an identical version from *Musaeum hermeticum* (1678).]
145. Laboratory and oratory
Khunrath, *Amphitheatrum sapientiae* (1604), Tab. III. p: Courtesy of J. Jacobi.
146. Mercurius as “uniting symbol”
Valentinus. “Duodecim claves,” in *Musaeum hermeticum* (1678), p. 396. (C.G.J.)
147. Uroboros
Codex Marcianus (11th cent.), Venice, fol. 188^v; in Berthelot, *Collection des
anciens alchimistes grecs*, Introduction, p. 132.
148. Mercurius as caduceus, uniting the paired opposites
“Figurarum Aegyptiorum secretarum,” MS. (18th cent.), in author’s coll., p. 14.
(C.G.J.)
149. The sick king (*prima materia*)
“La Sagesse des anciens,” MS. (18th cent.), in author’s coll. (C.G.J.)
150. The penetrating Mercurius
“Speculum veritatis,” Codex Vaticanus Latinus 7286 (17th cent.), Biblioteca
Vaticana. p: Inst.

151. Prisoners in the underworld
Izquierdo, *Praxis exercitiorum spiritualium* (1695), p. 72.
152. Saturn eating his children
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.),
Leiden, Univ. Bibl., fol. 73.
153. The artist lifting the homunculus out of the Hermetic vessel
Kelley, *Tractatus de Lapide philosophorum* (1676), p. 108.
- 154, 155. The king with the six planets or metals; the renewed king (*filius philosophorum*) worshipped by the six planets
Kelley, *Tractatus de Lapide philosophorum* (1676), pp. 122, 125.
156. The Dyad (day and night)
“Très Riches Heures du duc de Berry,” MS. 1284 (15th cent.), Chantilly, Musée Condé, fol. 14^v. P: Giraudon.
157. *Anima Mercurii*
“Figurarum Aegyptiorum secretarum,” MS. (18th cent.), in author’s coll., p. 1.
(C.G.J.)
158. The “Mill of the Host”
High altar of church at Tribsees, Pomerania (15th cent.); from Falke, *Geschichte des deutschen Kunstgewerbes*, facing p. 100.
159. The *coniunctio* of soul and body
“Grandes heures du duc de Berry,” MS. Latin 919 (1413), Paris, Bibliothèque Nationale.
160. Symbol of the art as union of water and fire
Eleazar, *Uraltes chymisches Werk* (1760), Part II, no. 9, facing p. 52. (M.C.A.O.)
161. The *prima materia* as Saturn devouring his children
Mutus liber (1702), p. 7, detail. (M.C.A.O.)
162. The unfettered opposites in chaos
Marolles, *Tableaux du temple des muses* (1655), British Museum.
163. Earth as *prima materia*, suckling the son of the philosophers
Mylius, *Philosophia reformata* (1622), p. 96, fig. 1. (C.G.J.)
164. Mercurius, standing on the round chaos, holding the scales
“Figurarum Aegyptiorum secretarum,” MS. (18th cent.), in author’s coll., p. 45.
(C.G.J.)
165. “L’occasione”: Mercurius standing on the globe

Cartari, *Le imagini de i dei* (1581), p. 400. P: Courtesy of J. Jacobi.

166. The *Rex marinus* calling for help

Trismosin, “Splendor solis,” MS. Harley 3469 (1582), British Museum.

167. Allegory of the psychic union of opposites

Rosarium philosophorum (1550). (C.G.J.)

168. The king as *prima materia*, devouring his son

Lambspringk, “Figurae et emblemata,” fig. XIII, in *Musaeum hermeticum* (1678), p. 367. P: Inst.

169. The “green lion” devouring the sun

Rosarium philosophorum (1550). P: Courtesy of J. Fraser.

170. The night sea journey

Biblia pauperum (1471); edn. of 1906, fig. 170.

171. Hercules on the night sea journey in the vessel of the sun

Base of an Attic vase (5th cent. B.C.), Etruscan Museum, Vatican. P: Alinari.

172. Jonah emerging from the belly of the whale

“Speculum humanae salvationis,” Codex Latinus 512 (15th cent.), Paris, Bibliothèque Nationale.

173. The slaying of the king

Stolcius de Stolcenberg, *Viridarium chymicum* (1624), fig. 101. (C.G.J.)

174. Jonah in the whale

Early Christian earthenware lamp, Marseilles Museum; from Eisler, *Orpheus—the Fisher*, Pl. XLVII.

175. The wolf as *prima materia*, devouring the dead king

Maier, *Scrutinium chymicum* (1687), Emblema XXIV. (C.G.J.)

176. Jonah in the belly of the whale

Khludov Psalter, Codex 129, fol. 157 (Monastery of St. Nicholas, Preobrazhensk, Russia), (Byzantine, 9th cent.); from Tikkanen, *Die Psalterillustration im Mittelalter*, p. 24.

177. The Resurrection

Biblia pauperum (1471); edn. of 1906, fig. 170.

178. The dove (*avis Hermetis*) rising from the four elements

“De summa et universalis medicinae sapientiae veterum philosophorum,” MS. 974 (18th cent.), Paris, Bibliothèque de l’Arsenal, fig. 18.

179. [The alchemical trinity](#)
Lambspringk, “Figurae et emblemata,” fig. XV, in *Musaeum hermeticum* (1678), p. 371. (M.C.A.O.)
180. [The Christian Trinity with the Holy Ghost as a winged man](#)
Engraving (15th cent.), by the Master of the Berlin Passion; from Molsdorf, *Christliche Symbolik*, Pl. I.
181. [Sun as symbol of God](#)
Boschius, *Symbolographia* (1702), Symbol. CXII, Class. I, Tab. VII. (C.G.J.)
182. [Christ as the Saviour of souls](#)
Mural painting in church of the Braunweiler monastery, Rhineland (12th cent.), p: Marburg.
183. [Androgynous deity](#)
Late Babylonian gem; from Lajard, “Mémoire sur une représentation figurée de la Vénus orientale androgyne,” p. 161.
184. [The three youths in the fiery furnace](#)
Early Christian ornament on sarcophagus from Villa Carpegna, Rome; from Ehrenstein, *Das alie Testament im Bilde*, p. 818.
185. [Triad as unity; quaternity standing on the binarius](#)
Valentinus, “Duodecim claves,” in *Musaeum hermeticum* (1678), p. 415. (C.G.J.)
186. [The tree of coral in the sea](#)
From Dioscorides, “De materia medica,” MS. (16th cent.), Vienna, Nationalbibliothek, fol. 391b; in Koemstedt, *Vormittelalterliche Malerei*, fig. 79.
187. [The dragon spewing forth Jason](#)
Attic vase (5th cent, B.C.), Etruscan Museum, Vatican. P: Anderson.
188. [The tree of the philosophers](#)
Mylius, *Philosophia reformata* (1622), p. 316. (C.G.J.)
189. [Dragon with tree of the Hesperides](#)
Boschius, *Symbolographia* (1702), Symbol. LVII, Class. III, Tab. IV. (C.G.J.)
190. [Mayan ritual tree with serpent](#)
Dresden Codex, Dresden, Landesbibliothek, Pl. XXVI, detail.
191. [Descent of the Holy Ghost in the form of cloven tongues](#)
Munich Lectionary or *Perikopenbuch*, Codex Latinus 15713 (12th cent.), Munich, Staatsbibliothek, fol. 37^v;. P: Marburg.

192. The quaternity of the cross in the zodiac
Böhme, *Signatura rerum*, in Amsterdam edn. (1682), frontispiece. P: Inst.
193. The white and the red rose as end-product of the transformation of king and queen
“Trésor des trésors,” MS. 975 (17th cent.), Paris, Bibliothèque de l’Arsenal, figs. 11, 12.
194. Sulphur as sun and Mercurius as moon bridging the river of “eternal water”
Barchusen, *Elementa chemiae* (1718), fig. 9, Paris, Bibliothèque Nationale.
195. Creator, macrocosm, and microcosm in human form
St. Hildegarde of Bingen, “Liber divinorum operum,” Codex 1942 (12th cent.), Lucca, Biblioteca governativa. P: Inst.
196. The three manifestations of the Anthropos during his transformation
“Ripley Scrowle,” MS. Add. 5025 (1588), No. 2, detail, British Museum.
197. Christ in the midst of the four rivers of paradise
Peregrinus, “Speculum virginum,” Codex Palatinus Latinus 565 (13th cent.), Biblioteca Vaticana. P: Inst.
198. *Anser or cygnus Hermetis*
Hermaphroditisches Sonn- und Mondskind (1752), p. 54. (C.G.J.)
199. Hermaphrodite on the winged globe of chaos
Jamsthaler, *Viatorium spagyricum* (1625), p. 75. (C.G.J.)
200. Eagle and swan as symbols of the sublimated *spiritus*
Mylius, *Philosophia reformata* (1622), p. 126, fig. 13. (C.G.J.)
201. Sapientia as mother of the wise
Thomas Aquinas (pseud.), “De alchimia,” Codex Vossianus 29 (16th cent.), Leiden, Univ. Bibl., fol. 53, detail.
202. Communion table with seven fish
Christian earthenware lamp, Carthage; from Eisler, *Orpheus—the Fisher*, Pl. LIX.
- 203, 204. The Chnuphis serpent with seven-rayed crown
Gnostic gem and amulet; from King, *The Gnostics and Their Remains*, Pl. III, figs. 7 and 2.
205. Goddess of fate (?) as serpent with seven heads
Seal of St. Servatius, from Maastricht Cathedral; from King, *The Gnostics and Their Remains*, p. 119.
206. Helios riding a chariot with four horses

Theodore Psalter, MS. Add. 19352 (1066), British Museum.

207. [The ascension of Elijah](#)

Early Christian mural painting, crypt of Lucina, Rome; from Ehrenstein, *Das Alte Testament im Bilde*, p. 699. P: Courtesy of J. Jacobi.

208. [Mercurius as *anima mundi*](#)

“Turba philosophorum,” Codex Latinus 7171 (16th cent.), Paris, Bibliothèque Nationale. P: Inst.

209. [The winged sphere \(*aurum aurae*\)](#)

Balduinus, *Aurum hermeticum* (1675), frontispiece. (C.G.J)

210. [“The wind hath carried it in his belly” \(“Tabula smaragdina”\)](#)

Maier, *Scrutinium chymicum* (1687), Emblem I. (C.G.J.)

211. [The god Aër as procreator of all harmony](#)

INTRODUCTION TO THE RELIGIOUS AND PSYCHOLOGICAL PROBLEMS OF ALCHEMY

Calamum quassatum non conteret, et linum fumigans non extinguet....

—ISAIAH 42 : 3

The bruised reed he shall not break, and the smoking flax he shall not quench.... (D.V.)

2. A pair of alchemists, kneeling by the furnace and praying for God's blessing.

–*Mutus liber* (1702)

[1] For the reader familiar with analytical psychology, there is no need of any introductory remarks to the subject of the following study. But for the reader whose interest is not professional and who comes to this book unprepared, some kind of preface will probably be necessary. The concepts of alchemy and the individuation process are matters that seem to lie very far apart, so that the imagination finds it impossible at first to conceive of any bridge between them. To this reader I owe an explanation, more particularly as I have had one or two experiences since the publication of my recent lectures which lead me to infer a certain bewilderment in my critics.

[2] What I now have to put forward as regards the nature of the human psyche is based first and foremost on my observations of people. It has been objected that these observations deal with experiences that are either unknown or barely accessible. It is a remarkable fact, which we come across again and again, that absolutely everybody, even the most unqualified layman, thinks he knows all about psychology as though the psyche were something that enjoyed the most universal understanding. But anyone who really knows the human psyche will agree with me when I say that it is one of the darkest and most mysterious regions of our experience. There is no end to what can be learned in this field. Hardly a day passes in my practice but I come across something new and unexpected. True enough, my experiences are not commonplaces lying on the surface of life. They are, however, within easy reach of every psychotherapist working in this particular field. It is therefore rather absurd, to say the least, that ignorance of the experiences I have to offer should be twisted into an accusation against me. I do not hold myself responsible for the shortcomings in the lay public's knowledge of psychology.

[3] There is in the analytical process, that is to say in the dialectical discussion between the conscious mind and the unconscious, a development or an advance towards some goal or end, the perplexing nature of which has engaged my attention for many years. Psychological treatment may come to an *end* at any stage in the

development without one's always or necessarily having the feeling that a *goal* has also been reached. Typical and temporary terminations may occur (1) after receiving a piece of good advice; (2) after making a fairly complete but nevertheless adequate confession; (3) after having recognized some hitherto unconscious but essential psychic content whose realization gives a new impetus to one's life and activity; (4) after a hard-won separation from the childhood psyche; (5) after having worked out a new and rational mode of adaptation to perhaps difficult or unusual circumstances and surroundings; (6) after the disappearance of painful symptoms; (7) after some positive turn of fortune such as an examination, engagement, marriage, divorce, change of profession, etc.; (8) after having found one's way back to the church or creed to which one previously belonged, or after a conversion; and finally, (9) after having begun to build up a practical philosophy of life (a "philosophy" in the classical sense of the word).

[4] Although the list could admit of many more modifications and additions, it ought to define by and large the main situations in which the analytical or psychotherapeutic process reaches a temporary or sometimes even a definitive end. Experience shows, however, that there is a relatively large number of patients for whom the outward termination of work with the doctor is far from denoting the end of the analytical process. It is rather the case that the dialectical discussion with the unconscious still continues, and follows much the same course as it does with those who have not given up their work with the doctor. Occasionally one meets such patients again after several years and hears the often highly remarkable account of their subsequent development. It was experiences of this kind which first confirmed me in my belief that there is in the psyche a process that seeks its own goal independently of external factors, and which freed me from the worrying feeling that I myself might be the sole cause of an unreal—and perhaps unnatural—process in the psyche of the patient. This apprehension was not altogether misplaced inasmuch as no amount of argument based on any of the nine categories mentioned above—not even a religious conversion or the most startling removal of neurotic symptoms—can persuade certain patients to give up their analytical work. It was these cases that finally convinced me that the treatment of neurosis opens up a problem which goes far beyond purely medical considerations and to which medical knowledge alone cannot hope to do justice.

[5] Although the early days of analysis now lie nearly half a century behind us, with their pseudo-biological interpretations and their depreciation of the whole process of psychic development, memories die hard and people are still very fond of describing a lengthy analysis as "running away from life," "unresolved transference," "auto-eroticism"—and by other equally unpleasant epithets. But since there are two sides to everything, it is legitimate to condemn this so-called "hanging on" as negative to life

only if it can be shown that it really does contain nothing positive. The very understandable impatience felt by the doctor does not prove anything in itself. Only through infinitely patient research has the new science succeeded in building up a profounder knowledge of the nature of the psyche, and if there have been certain unexpected therapeutic results, these are due to the self-sacrificing perseverance of the doctor. Unjustifiably negative judgments are easily come by and at times harmful; moreover they arouse the suspicion of being a mere cloak for ignorance if not an attempt to evade the responsibility of a thorough-going analysis. For since the analytical work must inevitably lead sooner or later to a fundamental discussion between “I” and “You” and “You” and “I” on a plane stripped of all human pretences, it is very likely, indeed it is almost certain, that not only the patient but the doctor as well will find the situation “getting under his skin.” Nobody can meddle with fire or poison without being affected in some vulnerable spot; for the true physician does not stand outside his work but is always in the thick of it.

[6] This “hanging on,” as it is called, may be something undesired by both parties, something incomprehensible and even unendurable, without necessarily being negative to life. On the contrary, it can easily be a positive “hanging on,” which, although it constitutes an apparently insurmountable obstacle, represents just for that reason a unique situation that demands the maximum effort and therefore enlists the energies of the whole man. In fact, one could say that while the patient is unconsciously and unswervingly seeking the solution to some ultimately insoluble problem, the art and technique of the doctor are doing their best to help him towards it. “Ars totum requirit hominem!” exclaims an old alchemist. It is just this *homo totus* whom we seek. The labours of the doctor as well as the quest of the patient are directed towards that hidden and as yet unmanifest “whole” man, who is at once the greater and the future man. But the right way to wholeness is made up, unfortunately, of fateful detours and wrong turnings. It is a *longissima via*, not straight but snakelike, a path that unites the opposites in the manner of the guiding caduceus, a path whose labyrinthine twists and turns are not lacking in terrors. It is on this *longissima via* that we meet with those experiences which are said to be “inaccessible.” Their inaccessibility really consists in the fact that they cost us an enormous amount of effort: they demand the very thing we most fear, namely the “wholeness” which we talk about so glibly and which lends itself to endless theorizing, though in actual life we give it the widest possible berth.¹ It is infinitely more popular to go in for “compartment psychology,” where the left-hand pigeon-hole does not know what is in the right.

[7] I am afraid that we cannot hold the unconsciousness and impotence of the individual entirely responsible for this state of affairs: it is due also to the general psychological education of the European. Not only is this education the proper

concern of the ruling religions, it belongs to their very nature—for religion excels all rationalistic systems in that it alone relates to the outer and inner man in equal degree. We can accuse Christianity of arrested development if we are determined to excuse our own shortcomings; but I do not wish to make the mistake of blaming religion for something that is due mainly to human incompetence. I am speaking therefore not of the deepest and best understanding of Christianity but of the superficialities and disastrous misunderstandings that are plain for all to see. The demand made by the *imitatio Christi*—that we should follow the ideal and seek to become like it—ought logically to have the result of developing and exalting the inner man. In actual fact, however, the ideal has been turned by superficial and formalistically-minded believers into an external object of worship, and it is precisely this veneration for the object that prevents it from reaching down into the depths of the psyche and giving the latter a wholeness in keeping with the ideal. Accordingly the divine mediator stands outside as an image, while man remains fragmentary and untouched in the deepest part of him. Christ can indeed be imitated even to the point of stigmatization without the imitator coming anywhere near the ideal or its meaning. For it is not a question of an imitation that leaves a man unchanged and makes him into a mere artifact, but of realizing the ideal on one's own account—*Deo concedente*—in one's own individual life. We must not forget, however, that even a mistaken imitation may sometimes involve a tremendous moral effort which has all the merits of a total surrender to some supreme value, even though the real goal may never be reached and the value is represented externally. It is conceivable that by virtue of this total effort a man may even catch a fleeting glimpse of his wholeness, accompanied by the feeling of grace that always characterizes this experience.

[8] The mistaken idea of a merely outward *imitatio Christi* is further exacerbated by a typically European prejudice which distinguishes the Western attitude from the Eastern. Western man is held in thrall by the “ten thousand things”; he sees only particulars, he is ego-bound and thing-bound, and unaware of the deep root of all being. Eastern man, on the other hand, experiences the world of particulars, and even his own ego, like a dream; he is rooted essentially in the “Ground,” which attracts him so powerfully that his relations with the world are relativized to a degree that is often incomprehensible to us. The Western attitude, with its emphasis on the object, tends to fix the ideal—Christ—in its outward aspect and thus to rob it of its mysterious relation to the inner man. It is this prejudice, for instance, which impels the Protestant interpreters of the Bible to interpret ἐν τοῖς ὑμῶν (referring to the Kingdom of God) as “among you” instead of “within you.” I do not mean to say anything about the validity of the Western attitude: we are sufficiently convinced of its rightness. But if we try to come to a real understanding of Eastern man—as the psychologist must—we find it hard to rid ourselves of certain misgivings. Anyone

who can square it with his conscience is free to decide this question as he pleases, though he may be unconsciously setting himself up as an *arbiter mundi*. I for my part prefer the precious gift of doubt, for the reason that it does not violate the virginity of things beyond our ken.

[9] Christ the ideal took upon himself the sins of the world. But if the ideal is wholly outside then the sins of the individual are also outside, and consequently he is more of a fragment than ever, since superficial misunderstanding conveniently enables him, quite literally, to “cast his sins upon Christ” and thus to evade his deepest responsibilities—which is contrary to the spirit of Christianity. Such formalism and laxity were not only one of the prime causes of the Reformation, they are also present within the body of Protestantism. If the supreme value (Christ) and the supreme negation (sin) are outside, then the soul is void: its highest and lowest are missing. The Eastern attitude (more particularly the Indian) is the other way about: everything, highest and lowest, is in the (transcendental) Subject. Accordingly the significance of the Atman, the Self, is heightened beyond all bounds. But with Western man the value of the self sinks to zero. Hence the universal depreciation of the soul in the West. Whoever speaks of the reality of the soul or psyche² is accused of “psychologism.” Psychology is spoken of as if it were “only” psychology and nothing else. The notion that there can be psychic factors which correspond to divine figures is regarded as a devaluation of the latter. It smacks of blasphemy to think that a religious experience is a psychic process; for, so it is argued, a religious experience “is not *only* psychological.” Anything psychic is *only* Nature and therefore, people think, nothing religious can come out of it. At the same time such critics never hesitate to derive all religions—with the exception of their own—from the nature of the psyche. It is a telling fact that two theological reviewers of my book *Psychology and Religion*—one of them Catholic, the other Protestant—assiduously overlooked my demonstration of the psychic origin of religious phenomena.

[10] Faced with this situation, we must really ask: How do we know so much about the psyche that we can say “only” psychic? For this is how Western man, whose soul is evidently “of little worth,” speaks and thinks. If much were in his soul he would speak of it with reverence. But since he does not do so we can only conclude that there is nothing of value in it. Not that this is necessarily so always and everywhere, but only with people who put nothing into their souls and have “all God outside.” (A little more Meister Eckhart would be a very good thing sometimes!)

[11] An exclusively religious projection may rob the soul of its values so that through sheer inanition it becomes incapable of further development and gets stuck in an unconscious state. At the same time it falls victim to the delusion that the cause of all misfortune lies outside, and people no longer stop to ask themselves how far it is

their own doing. So insignificant does the soul seem that it is regarded as hardly capable of evil, much less of good. But if the soul no longer has any part to play, religious life congeals into externals and formalities. However we may picture the relationship between God and soul, one thing is certain: that the soul cannot be “nothing but.”³ On the contrary it has the dignity of an entity endowed with consciousness of a relationship to Deity. Even if it were only the relationship of a drop of water to the sea, that sea would not exist but for the multitude of drops. The immortality of the soul insisted upon by dogma exalts it above the transitoriness of mortal man and causes it to partake of some supernatural quality. It thus infinitely surpasses the perishable, conscious individual in significance, so that logically the Christian is forbidden to regard the soul as a “nothing but.”⁴ As the eye to the sun, so the soul corresponds to God. Since our conscious mind does not comprehend the soul it is ridiculous to speak of the things of the soul in a patronizing or depreciatory manner. Even the believing Christian does not know God’s hidden ways and must leave him to decide whether he will work on man from outside or from within, through the soul. So the believer should not boggle at the fact that there are *somnia a Deo missa* (dreams sent by God) and illuminations of the soul which cannot be traced back to any external causes. It would be blasphemy to assert that God can manifest himself everywhere save only in the human soul. Indeed the very intimacy of the relationship between God and the soul precludes from the start any devaluation of the latter.⁵ It would be going perhaps too far to speak of an affinity; but at all events the soul must contain in itself the faculty of relationship to God, i.e., a correspondence, otherwise a connection could never come about.⁶ *This correspondence is, in psychological terms, the archetype of the God-image.*

- [12] Every archetype is capable of endless development and differentiation. It is therefore possible for it to be more developed or less. In an outward form of religion where all the emphasis is on the outward figure (hence where we are dealing with a more or less complete projection), the archetype is identical with externalized ideas but remains unconscious as a psychic factor. When an unconscious content is replaced by a projected image to that extent, it is cut off from all participation in and influence on the conscious mind. Hence it largely forfeits its own life, because prevented from exerting the formative influence on consciousness natural to it; what is more, it remains in its original form—unchanged, for nothing changes in the unconscious. At a certain point it even develops a tendency to regress to lower and more archaic levels. It may easily happen, therefore, that a Christian who believes in all the sacred figures is still undeveloped and unchanged in his inmost soul because he has “all God outside” and does not experience him in the soul. His deciding motives, his ruling interests and impulses, do not spring from the sphere of Christianity but from the unconscious and undeveloped psyche, which is as pagan

and archaic as ever. Not the individual alone but the sum total of individual lives in a nation proves the truth of this contention. The great events of our world as planned and executed by man do not breathe the spirit of Christianity but rather of unadorned paganism. These things originate in a psychic condition that has remained archaic and has not been even remotely touched by Christianity. The Church assumes, not altogether without reason, that the fact of *semel credidisse* (having once believed) leaves certain traces behind it; but of these traces nothing is to be seen in the broad march of events. Christian civilization has proved hollow to a terrifying degree: it is all veneer, but the inner man has remained untouched and therefore unchanged. His soul is out of key with his external beliefs; in his soul the Christian has not kept pace with external developments. Yes, everything is to be found outside—in image and in word, in Church and Bible—but never inside. Inside reign the archaic gods, supreme as of old; that is to say the inner correspondence with the outer God-image is undeveloped for lack of psychological culture and has therefore got stuck in heathenism. Christian education has done all that is humanly possible, but it has not been enough. Too few people have experienced the divine image as the innermost possession of their own souls. Christ only meets them from without, never from within the soul; that is why dark paganism still reigns there, a paganism which, now in a form so blatant that it can no longer be denied and now in all too threadbare disguise, is swamping the world of so-called Christian civilization.

[13] With the methods employed hitherto we have not succeeded in Christianizing the soul to the point where even the most elementary demands of Christian ethics can exert any decisive influence on the main concerns of the Christian European. The Christian missionary may preach the gospel to the poor naked heathen, but the spiritual heathen who populate Europe have as yet heard nothing of Christianity. Christianity must indeed begin again from the very beginning if it is to meet its high educative task. So long as religion is only faith and outward form, and the religious function is not experienced in our own souls, nothing of any importance has happened. It has yet to be understood that the *mysterium magnum* is not only an actuality but is first and foremost rooted in the human psyche. The man who does not know this from his own experience may be a most learned theologian, but he has no idea of religion and still less of education.

[14] Yet when I point out that the soul possesses by nature a religious function,⁷ and when I stipulate that it is the prime task of all education (of adults) to convey the archetype of the God-image, or its emanations and effects, to the conscious mind, then it is precisely the theologian who seizes me by the arm and accuses me of “psychologism.” But were it not a fact of experience that supreme values reside in the soul (quite apart from the *ἀντίμιμον πνεῦμα* who is also there), psychology would not interest me in the least, for the soul would then be nothing but a miserable

vapour. I know, however, from hundredfold experience that it is nothing of the sort, but on the contrary contains the equivalents of everything that has been formulated in dogma and a good deal more, which is just what enables it to be an eye destined to behold the light. This requires limitless range and unfathomable depth of vision. I have been accused of “deifying the soul.” Not I but God himself has deified it! I did not attribute a religious function to the soul, I merely produced the facts which prove that the soul is *naturaliter religiosa*, i.e., possesses a religious function. I did not invent or insinuate this function, it produces itself of its own accord without being prompted thereto by any opinions or suggestions of mine. With a truly tragic delusion these theologians fail to see that it is not a matter of proving the existence of the light, but of blind people who do not know that their eyes could see. It is high time we realized that it is pointless to praise the light and preach it if nobody can see it. It is much more needful to teach people the art of seeing. For it is obvious that far too many people are incapable of establishing a connection between the sacred figures and their own psyche: they cannot see to what extent the equivalent images are lying dormant in their own unconscious. In order to facilitate this inner vision we must first clear the way for the faculty of seeing. How this is to be done without psychology, that is, without making contact with the psyche, is frankly beyond my comprehension.⁸

[15] Another equally serious misunderstanding lies in imputing to psychology the wish to be a new and possibly heretical doctrine. If a blind man can gradually be helped to see it is not to be expected that he will at once discern new truths with an eagle eye. One must be glad if he sees anything at all, and if he begins to understand what he sees. Psychology is concerned with the act of seeing and not with the construction of new religious truths, when even the existing teachings have not yet been perceived and understood. In religious matters it is a well-known fact that we cannot understand a thing until we have experienced it inwardly, for it is in the inward experience that the connection between the psyche and the outward image or creed is first revealed as a relationship or correspondence like that of *sponsus* and *sponsa*. Accordingly when I say as a psychologist that God is an archetype, I mean by that the “type” in the psyche. The word “type” is, as we know, derived from *τύπος*, “blow” or “imprint”; thus an archetype presupposes an imprinter. Psychology as the science of the soul has to confine itself to its subject and guard against overstepping its proper boundaries by metaphysical assertions or other professions of faith. Should it set up a God, even as a hypothetical cause, it would have implicitly claimed the possibility of proving God, thus exceeding its competence in an absolutely illegitimate way. Science can only be science; there are no “scientific” professions of faith and similar *contradictiones in adiecto*. We simply do not know the ultimate derivation of the archetype any more than we know the origin of the psyche. The

competence of psychology as an empirical science only goes so far as to establish, on the basis of comparative research, whether for instance the imprint found in the psyche can or cannot reasonably be termed a “God-image.” Nothing positive or negative has thereby been asserted about the possible existence of God, any more than the archetype of the “hero” posits the actual existence of a hero.

[16] Now if my psychological researches have demonstrated the existence of certain psychic types and their correspondence with well-known religious ideas, then we have opened up a possible approach to those experienceable contents which manifestly and undeniably form the empirical foundations of all religious experience. The religious-minded man is free to accept whatever metaphysical explanations he pleases about the origin of these images; not so the intellect, which must keep strictly to the principles of scientific interpretation and avoid trespassing beyond the bounds of what can be known. Nobody can prevent the believer from accepting God, Purusha, the Atman, or Tao as the Prime Cause and thus putting an end to the fundamental disquiet of man. The scientist is a scrupulous worker; he cannot take heaven by storm. Should he allow himself to be seduced into such an extravagance he would be sawing off the branch on which he sits.

[17] The fact is that with the knowledge and actual experience of these inner images a way is opened for reason and feeling to gain access to those other images which the teachings of religion offer to mankind. Psychology thus does just the opposite of what it is accused of: it provides possible approaches to a better understanding of these things, it opens people’s eyes to the real meaning of dogmas, and, far from destroying, it throws open an empty house to new inhabitants. I can corroborate this from countless experiences: people belonging to creeds of all imaginable kinds, who had played the apostate or cooled off in their faith, have found a new approach to their old truths, not a few Catholics among them. Even a Parsee found the way back to the Zoroastrian fire-temple, which should bear witness to the objectivity of my point of view.

[18] But this objectivity is just what my psychology is most blamed for: it is said not to decide in favour of this or that religious doctrine. Without prejudice to my own subjective convictions I should like to raise the question: Is it not thinkable that when one refrains from setting oneself up as an *arbiter mundi* and, deliberately renouncing all subjectivism, cherishes on the contrary the belief, for instance, that God has expressed himself in many languages and appeared in divers forms and that all these statements are *true*—is it not thinkable, I say, that this too is a decision? The objection raised, more particularly by Christians, that it is impossible for contradictory statements to be true, must permit itself to be politely asked: Does one equal three? How can three be one? Can a mother be a virgin? And so on. Has it not

yet been observed that all religious statements contain logical contradictions and assertions that are impossible in principle, that this is in fact the very essence of religious assertion? As witness to this we have Tertullian's avowal: "And the Son of God is dead, which is worthy of belief because it is absurd. And when buried He rose again, which is certain because it is impossible."⁹ If Christianity demands faith in such contradictions it does not seem to me that it can very well condemn those who assert a few paradoxes more. Oddly enough the paradox is one of our most valuable spiritual possessions, while uniformity of meaning is a sign of weakness. Hence a religion becomes inwardly impoverished when it loses or waters down its paradoxes; but their multiplication enriches because only the paradox comes anywhere near to comprehending the fulness of life. Non-ambiguity and non-contradiction are one-sided and thus unsuited to express the incomprehensible.

[19] Not everyone possesses the spiritual strength of a Tertullian. It is evident not only that he had the strength to sustain paradoxes but that they actually afforded him the highest degree of religious certainty. The inordinate number of spiritual weaklings makes paradoxes dangerous. So long as the paradox remains unexamined and is taken for granted as a customary part of life, it is harmless enough. But when it occurs to an insufficiently cultivated mind (always, as we know, the most sure of itself) to make the paradoxical nature of some tenet of faith the object of its lucubrations as earnest as they are impotent, it is not long before such a one will break out into iconoclastic and scornful laughter, pointing to the manifest absurdity of the mystery. Things have gone rapidly downhill since the Age of Enlightenment, for, once this petty reasoning mind, which cannot endure any paradoxes, is awakened, no sermon on earth can keep it down. A new task then arises: to lift this still undeveloped mind step by step to a higher level and to increase the number of persons who have at least some inkling of the scope of paradoxical truth. If this is not possible, then it must be admitted that the spiritual approaches to Christianity are as good as blocked. We simply do not understand any more what is meant by the paradoxes contained in dogma; and the more external our understanding of them becomes the more we are affronted by their irrationality, until finally they become completely obsolete, curious relics of the past. The man who is stricken in this way cannot estimate the extent of his spiritual loss, because he has never experienced the sacred images as his inmost possession and has never realized their kinship with his own psychic structure. But it is just this indispensable knowledge that the psychology of the unconscious can give him, and its scientific objectivity is of the greatest value here. Were psychology bound to a creed it would not and could not allow the unconscious of the individual that free play which is the basic condition for the production of archetypes. It is precisely the spontaneity of archetypal contents that convinces, whereas any prejudiced intervention is a bar to genuine experience. If the

theologian really believes in the almighty power of God on the one hand and in the validity of dogma on the other, why then does he not trust God to speak in the soul? Why this fear of psychology? Or is, in complete contradiction to dogma, the soul itself a hell from which only demons gibber? Even if this were really so it would not be any the less convincing; for as we all know the horrified perception of the reality of evil has led to at least as many conversions as the experience of good.

[20] The archetypes of the unconscious can be shown empirically to be the equivalents of religious dogmas. In the hermeneutic language of the Fathers the Church possesses a rich store of analogies with the individual and spontaneous products to be found in psychology. What the unconscious expresses is far from being merely arbitrary or opinionated; it is something that happens to be “just-so,” as is the case with every other natural being. It stands to reason that the expressions of the unconscious are natural and not formulated dogmatically; they are exactly like the patristic allegories which draw the whole of nature into the orbit of their amplifications. If these present us with some astonishing *allegoriae Christi*, we find much the same sort of thing in the psychology of the unconscious. The only difference is that the patristic allegory *ad Christum spectat*—refers to Christ—whereas the psychic archetype is simply itself and can therefore be interpreted according to time, place, and milieu. In the West the archetype is filled out with the dogmatic figure of Christ; in the East, with Purusha, the Atman, Hiranyagarbha, the Buddha, and so on. The religious point of view, understandably enough, puts the accent on the imprinter, whereas scientific psychology emphasizes the *typos*, the imprint—the only thing it can understand. The religious point of view understands the imprint as the working of an imprinter; the scientific point of view understands it as the symbol of an unknown and incomprehensible content. Since the *typos* is less definite and more variegated than any of the figures postulated by religion, psychology is compelled by its empirical material to express the *typos* by means of a terminology not bound by time, place, or milieu. If, for example, the *typos* agreed in every detail with the dogmatic figure of Christ, and if it contained no determinant that went beyond that figure, we would be bound to regard the *typos* as at least a faithful copy of the dogmatic figure, and to name it accordingly. The *typos* would then coincide with Christ. But as experience shows, this is not the case, seeing that the unconscious, like the allegories employed by the Church Fathers, produces countless other determinants that are not explicitly contained in the dogmatic formula; that is to say, non-Christian figures such as those mentioned above are included in the *typos*. But neither do these figures comply with the indeterminate nature of the archetype. It is altogether inconceivable that there could be any definite figure capable of expressing archetypal indefiniteness. For this reason I have found myself obliged to give the corresponding archetype the psychological name of the “self”—a term on the one hand definite enough to convey

the essence of human wholeness and on the other hand indefinite enough to express the indescribable and indeterminable nature of this wholeness. The paradoxical qualities of the term are a reflection of the fact that wholeness consists partly of the conscious man and partly of the unconscious man. But we cannot define the latter or indicate his boundaries. Hence in its scientific usage the term “self” refers neither to Christ nor to the Buddha but to the totality of the figures that are its equivalent, and each of these figures is a symbol of the self. This mode of expression is an intellectual necessity in scientific psychology and in no sense denotes a transcendental prejudice. On the contrary, as we have said before, this objective attitude enables one man to decide in favour of the determinant Christ, another in favour of the Buddha, and so on. Those who are irritated by this objectivity should reflect that science is quite impossible without it. Consequently by denying psychology the right to objectivity they are making an untimely attempt to extinguish the life-light of a science. Even if such a preposterous attempt were to succeed, it would only widen the already catastrophic gulf between the secular mind on the one hand and Church and religion on the other.

[21] It is quite understandable for a science to concentrate more or less exclusively on its subject—indeed, that is its absolute *raison d’être*. Since the concept of the self is of central interest in psychology, the latter naturally thinks along lines diametrically opposed to theology: for psychology the religious figures point to the self, whereas for theology the self points to its—theology’s—own central figure. In other words, theology might possibly take the psychological self as an allegory of Christ. This opposition is, no doubt, very irritating, but unfortunately inevitable, unless psychology is to be denied the right to exist at all. I therefore plead for tolerance. Nor is this very hard for psychology since as a science it makes no totalitarian claims.

[22] The Christ-symbol is of the greatest importance for psychology in so far as it is perhaps the most highly developed and differentiated symbol of the self, apart from the figure of the Buddha. We can see this from the scope and substance of all the pronouncements that have been made about Christ: they agree with the psychological phenomenology of the self in unusually high degree, although they do not include all aspects of this archetype. The almost limitless range of the self might be deemed a disadvantage as compared with the definiteness of a religious figure, but it is by no means the task of science to pass value judgments. Not only is the self indefinite but—paradoxically enough—it also includes the quality of definiteness and even of uniqueness. This is probably one of the reasons why precisely those religions founded by historical personages have become world religions, such as Christianity, Buddhism, and Islam. The inclusion in a religion of a unique human personality—especially when conjoined to an indeterminable divine nature—is consistent with the absolute individuality of the self, which combines uniqueness with eternity and the

individual with the universal. The self is a union of opposites *par excellence*, and this is where it differs essentially from the Christ-symbol. The androgyny of Christ is the utmost concession the Church has made to the problem of opposites. The opposition between light and good on the one hand and darkness and evil on the other is left in a state of open conflict, since Christ simply represents good, and his counterpart the devil, evil. This opposition is the real world problem, which at present is still unsolved. The self, however, is absolutely paradoxical in that it represents in every respect thesis and antithesis, and at the same time synthesis. (Psychological proofs of this assertion abound, though it is impossible for me to quote them here *in extenso*. I would refer the knowledgeable reader to the symbolism of the mandala.)

[23] Once the exploration of the unconscious has led the conscious mind to an experience of the archetype, the individual is confronted with the abysmal contradictions of human nature, and this confrontation in turn leads to the possibility of a direct experience of light and darkness, of Christ and the devil. For better or worse there is only a bare possibility of this, and not a guarantee; for experiences of this kind cannot of necessity be induced by any human means. There are factors to be considered which are not under our control. Experience of the opposites has nothing whatever to do with intellectual insight or with empathy. It is more what we would call fate. Such an experience can convince one person of the truth of Christ, another of the truth of the Buddha, to the exclusion of all other evidence.

[24] Without the experience of the opposites there is no experience of wholeness and hence no inner approach to the sacred figures. For this reason Christianity rightly insists on sinfulness and original sin, with the obvious intent of opening up the abyss of universal opposition in every individual—at least from the outside. But this method is bound to break down in the case of a moderately alert intellect: dogma is then simply no longer believed and on top of that is thought absurd. Such an intellect is merely one-sided and sticks at the *ineptia mysterii*. It is miles from Tertullian's antinomies; in fact, it is quite incapable of enduring the suffering such a tension involves. Cases are not unknown where the rigorous exercises and proselytizing of the Catholics, and a certain type of Protestant education that is always sniffing out sin, have brought about psychic damage that leads not to the Kingdom of Heaven but to the consulting room of the doctor. Although insight into the problem of opposites is absolutely imperative, there are very few people who can stand it in practice—a fact which has not escaped the notice of the confessional. By way of a reaction to this we have the palliative of “moral probabilism,” a doctrine that has suffered frequent attack from all quarters because it tries to mitigate the crushing effect of sin.¹⁰ Whatever one may think of this phenomenon one thing is certain: that apart from anything else it holds within it a large humanity and an understanding of human weakness which compensate for the world's unbearable antinomies. The tremendous

paradox implicit in the insistence on original sin on the one hand and the concession made by probabilism on the other is, for the psychologist, a necessary consequence of the Christian problem of opposites outlined above—for in the self good and evil are indeed closer than identical twins! The reality of evil and its incompatibility with good cleave the opposites asunder and lead inexorably to the crucifixion and suspension of everything that lives. Since “the soul is by nature Christian” this result is bound to come as infallibly as it did in the life of Jesus: we all have to be “crucified with Christ,” i.e., suspended in a moral suffering equivalent to veritable crucifixion. In practice this is only possible up to a point, and apart from that is so unbearable and inimical to life that the ordinary human being can afford to get into such a state only occasionally, in fact as seldom as possible. For how could he remain ordinary in face of such suffering! A more or less probabilistic attitude to the problem of evil is therefore unavoidable. Hence the truth about the self—the unfathomable union of good and evil—comes out concretely in the paradox that although sin is the gravest and most pernicious thing there is, it is still not so serious that it cannot be disposed of with “probabilist” arguments. Nor is this necessarily a lax or frivolous proceeding but simply a practical necessity of life. The confessional proceeds like life itself, which successfully struggles against being engulfed in an irreconcilable contradiction. Note that at the same time the conflict remains in full force, as is once more consistent with the antinomial character of the self, which is itself both conflict and unity.

[25] Christianity has made the antinomy of good and evil into a world problem and, by formulating the conflict dogmatically, raised it to an absolute principle. Into this as yet unresolved conflict the Christian is cast as a protagonist of good, a fellow player in the world drama. Understood in its deepest sense, being Christ’s follower involves a suffering that is unendurable to the great majority of mankind. Consequently the example of Christ is in reality followed either with reservation or not at all, and the pastoral practice of the Church even finds itself obliged to “lighten the yoke of Christ.” This means a pretty considerable reduction in the severity and harshness of the conflict and hence, in practice, a relativism of good and evil. Good is equivalent to the unconditional imitation of Christ and evil is its hindrance. Man’s moral weakness and sloth are what chiefly hinder the imitation, and it is to these that probabilism extends a practical understanding which may sometimes, perhaps, come nearer to Christian tolerance, mildness, and love of one’s neighbour than the attitude of those who see in probabilism a mere laxity. Although one must concede a number of cardinal Christian virtues to the probabilist endeavour, one must still not overlook the fact that it obviates much of the suffering involved in the imitation of Christ and that the conflict of good and evil is thus robbed of its harshness and toned down to tolerable proportions. This brings about an approach to the psychic archetype of the

self, where even these opposites seem to be united—though, as I say, it differs from the Christian symbolism, which leaves the conflict open. For the latter there is a rift running through the world: light wars against night and the upper against the lower. The two are not one, as they are in the psychic archetype. But, even though religious dogma may condemn the idea of two being one, religious practice does, as we have seen, allow the natural psychological symbol of the self at one with itself an approximate means of expression. On the other hand, dogma insists that three are one, while denying that four are one. Since olden times, not only in the West but also in China, uneven numbers have been regarded as masculine and even numbers as feminine. The Trinity is therefore a decidedly masculine deity, of which the androgyny of Christ and the special position and veneration accorded to the Mother of God are not the real equivalent.

[26] With this statement, which may strike the reader as peculiar, we come to one of the central axioms of alchemy, namely the saying of Maria Prophetissa: “One becomes two, two becomes three, and out of the third comes the one as the fourth.” As the reader has already seen from its title, this book is concerned with the psychological significance of alchemy and thus with a problem which, with very few exceptions, has so far eluded scientific research. Until quite recently science was interested only in the part that alchemy played in the history of chemistry, concerning itself very little with the part it played in the history of philosophy and religion. The importance of alchemy for the historical development of chemistry is obvious, but its cultural importance is still so little known that it seems almost impossible to say in a few words wherein that consisted. In this introduction, therefore, I have attempted to outline the religious and psychological problems which are germane to the theme of alchemy. The point is that alchemy is rather like an undercurrent to the Christianity that ruled on the surface. It is to this surface as the dream is to consciousness, and just as the dream compensates the conflicts of the conscious mind, so alchemy endeavours to fill in the gaps left open by the Christian tension of opposites. Perhaps the most pregnant expression of this is the axiom of Maria Prophetissa quoted above, which runs like a *leitmotiv* throughout almost the whole of the lifetime of alchemy, extending over more than seventeen centuries. In this aphorism the even numbers which signify the feminine principle, earth, the regions under the earth, and evil itself are interpolated between the uneven numbers of the Christian dogma. They are personified by the *serpens mercurii*, the dragon that creates and destroys itself and represents the *prima materia*. This fundamental idea of alchemy points back to the תְּהוֹם (Tehom),¹¹ to Tiamat with her dragon attribute, and thus to the primordial matriarchal world which, in the theomachy of the Marduk myth,¹² was overthrown by the masculine world of the father. The historical shift in the world’s consciousness towards the masculine is compensated at first by the chthonic femininity of the

unconscious. In certain pre-Christian religions the differentiation of the masculine principle had taken the form of the father-son specification, a change which was to be of the utmost importance for Christianity. Were the unconscious merely complementary, this shift of consciousness would have been accompanied by the production of a mother and daughter, for which the necessary material lay ready to hand in the myth of Demeter and Persephone. But, as alchemy shows, the unconscious chose rather the Cybele-Attis type in the form of the *prima materia* and the *filius macrocosmi*, thus proving that it is not complementary but compensatory. This goes to show that the unconscious does not simply act *contrary* to the conscious mind but *modifies* it more in the manner of an opponent or partner. The son type does not call up a daughter as a complementary image from the depths of the “chthonic” unconscious—it calls up another son. This remarkable fact would seem to be connected with the incarnation in our earthly human nature of a purely spiritual God, brought about by the Holy Ghost impregnating the womb of the Blessed Virgin. Thus the higher, the spiritual, the masculine inclines to the lower, the earthly, the feminine; and accordingly, the mother, who was anterior to the world of the father, accommodates herself to the masculine principle and, with the aid of the human spirit (alchemy or “the philosophy”), produces a son—not the antithesis of Christ but rather his chthonic counterpart, not a divine man but a fabulous being conforming to the nature of the primordial mother. And just as the redemption of man the microcosm is the task of the “upper” son, so the “lower” son has the function of a *salvator macrocosmi*.

[27] This, in brief, is the drama that was played out in the obscurities of alchemy. It is superfluous to remark that these two sons were never united, except perhaps in the mind and innermost experience of a few particularly gifted alchemists. But it is not very difficult to see the “purpose” of this drama: in the Incarnation it looked as though the masculine principle of the father-world were approximating to the feminine principle of the mother-world, with the result that the latter felt impelled to approximate in turn to the father-world. What it evidently amounted to was an attempt to bridge the gulf separating the two worlds as compensation for the open conflict between them.

[28] I hope the reader will not be offended if my exposition sounds like a Gnostic myth. We are moving in those psychological regions where, as a matter of fact, Gnosis is rooted. The message of the Christian symbol is Gnosis, and the compensation effected by the unconscious is Gnosis in even higher degree. Myth is the primordial language natural to these psychic processes, and no intellectual formulation comes anywhere near the richness and expressiveness of mythical imagery. Such processes are concerned with the primordial images, and these are best and most succinctly reproduced by figurative language.

[29] The process described above displays all the characteristic features of psychological compensation. We know that the mask of the unconscious is not rigid—it reflects the face we turn towards it. Hostility lends it a threatening aspect, friendliness softens its features. It is not a question of mere optical reflection but of an autonomous answer which reveals the self-sufficing nature of that which answers. Thus the *filius philosophorum* is not just the reflected image, in unsuitable material, of the son of God; on the contrary, this son of Tiamat reflects the features of the primordial maternal figure. Although he is decidedly hermaphroditic he has a masculine name—a sign that the chthonic underworld, having been rejected by the spirit and identified with evil, has a tendency to compromise. There is no mistaking the fact that he is a concession to the spiritual and masculine principle, even though he carries in himself the weight of the earth and the whole fabulous nature of primordial animality.

[30] This answer of the mother-world shows that the gulf between it and the father-world is not unbridgeable, seeing that the unconscious holds the seed of the unity of both. The essence of the conscious mind is discrimination; it must, if it is to be aware of things, separate the opposites, and it does this *contra naturam*. In nature the opposites seek one another—*les extrêmes se touchent*—and so it is in the unconscious, and particularly in the archetype of unity, the self. Here, as in the deity, the opposites cancel out. But as soon as the unconscious begins to manifest itself they split asunder, as at the Creation; for every act of dawning consciousness is a creative act, and it is from this psychological experience that all our cosmogonic symbols are derived.

[31] Alchemy is pre-eminently concerned with the seed of unity which lies hidden in the chaos of Tiamat and forms the counterpart to the divine unity. Like this, the seed of unity has a trinitarian character in Christian alchemy and a triadic character in pagan alchemy. According to other authorities it corresponds to the unity of the four elements and is therefore a quaternity. The overwhelming majority of modern psychological findings speaks in favour of the latter view. The few cases I have observed which produced the number three were marked by a systematic deficiency in consciousness, that is to say, by an unconsciousness of the “inferior function.” The number three is not a natural expression of wholeness, since four represents the minimum number of determinants in a whole judgment. It must nevertheless be stressed that side by side with the distinct leanings of alchemy (and of the unconscious) towards quaternity there is always a vacillation between three and four which comes out over and over again. Even in the axiom of Maria Prophetissa the quaternity is muffled and alembicated. In alchemy there are three as well as four *regimina* or procedures, three as well as four colours. There are always four elements, but often three of them are grouped together, with the fourth in a special

position—sometimes earth, sometimes fire. Mercurius¹³ is of course *quadratus*, but he is also a three-headed snake or simply a triunity. This uncertainty has a duplex character—in other words, the central ideas are ternary as well as quaternary. The psychologist cannot but mention the fact that a similar puzzle exists in the psychology of the unconscious: the least differentiated or “inferior” function is so much contaminated with the collective unconscious that, on becoming conscious, it brings up among others the archetype of the self as well—τὸ ἔν τέταρτον, as Maria Prophetissa says. Four signifies the feminine, motherly, physical; three the masculine, fatherly, spiritual. Thus the uncertainty as to three or four amounts to a wavering between the spiritual and the physical—a striking example of how every human truth is a last truth but one.

[32] I began my introduction with human wholeness as the goal to which the psychotherapeutic process ultimately leads. This question is inextricably bound up with one’s philosophical or religious assumptions. Even when, as frequently happens, the patient believes himself to be quite unprejudiced in this respect, the assumptions underlying his thought, mode of life, morale, and language are historically conditioned down to the last detail, a fact of which he is often kept unconscious by lack of education combined with lack of self-criticism. The analysis of his situation will therefore lead sooner or later to a clarification of his general spiritual background going far beyond his personal determinants, and this brings up the problems I have attempted to sketch in the preceding pages. This phase of the process is marked by the production of symbols of unity, the so-called mandalas, which occur either in dreams or in the form of concrete visual impressions, often as the most obvious compensation of the contradictions and conflicts of the conscious situation. It would hardly be correct to say that the gaping “rift”¹⁴ in the Christian order of things is responsible for this, since it is easy to show that Christian symbolism is particularly concerned with healing, or attempting to heal, this very wound. It would be more correct to take the open conflict as a symptom of the psychic situation of Western man, and to deplore his inability to assimilate the whole range of the Christian symbol. As a doctor I cannot demand anything of my patients in this respect, also I lack the Church’s means of grace. Consequently I am faced with the task of taking the only path open to me: the archetypal images—which in a certain sense correspond to the dogmatic images—must be brought into consciousness. At the same time I must leave my patient to decide in accordance with his assumptions, his spiritual maturity, his education, origins, and temperament, so far as this is possible without serious conflicts. As a doctor it is my task to help the patient to cope with life. I cannot presume to pass judgment on his final decisions, because I know from experience that all coercion—be it suggestion, insinuation, or any other method of persuasion—ultimately proves to be nothing but an obstacle to the highest and

most decisive experience of all, which is to be alone with his own self, or whatever else one chooses to call the objectivity of the psyche. The patient must be alone if he is to find out what it is that supports him when he can no longer support himself. Only this experience can give him an indestructible foundation.

[33] I would be only too delighted to leave this anything but easy task to the theologian, were it not that it is just from the theologian that many of my patients come. They ought to have hung on to the community of the Church, but they were shed like dry leaves from the great tree and now find themselves “hanging on” to the treatment. Something in them clings, often with the strength of despair, as if they or the thing they cling to would drop off into the void the moment they relaxed their hold. They are seeking firm ground on which to stand. Since no outward support is of any use to them they must finally discover it in themselves—admittedly the most unlikely place from the rational point of view, but an altogether possible one from the point of view of the unconscious. We can see this from the archetype of the “lowly origin of the redeemer.”

[34] The way to the goal seems chaotic and interminable at first, and only gradually do the signs increase that it is leading anywhere. The way is not straight but appears to go round in circles. More accurate knowledge has proved it to go in spirals: the dream-motifs always return after certain intervals to definite forms, whose characteristic it is to define a centre. And as a matter of fact the whole process revolves about a central point or some arrangement round a centre, which may in certain circumstances appear even in the initial dreams. As manifestations of unconscious processes the dreams rotate or circumambulate round the centre, drawing closer to it as the amplifications increase in distinctness and in scope. Owing to the diversity of the symbolical material it is difficult at first to perceive any kind of order at all. Nor should it be taken for granted that dream sequences are subject to any governing principle. But, as I say, the process of development proves on closer inspection to be cyclic or spiral. We might draw a parallel between such spiral courses and the processes of growth in plants; in fact the plant motif (tree, flower, etc.) frequently recurs in these dreams and fantasies and is also spontaneously drawn or painted.¹⁵ In alchemy the tree is the symbol of Hermetic philosophy.

[35] The first of the following two studies—that which composes [Part II](#)—deals with a series of dreams which contain numerous symbols of the centre or goal. The development of these symbols is almost the equivalent of a healing process. The centre or goal thus signifies *salvation* in the proper sense of the word. The justification for such a terminology comes from the dreams themselves, for these contain so many references to religious phenomena that I was able to use some of them as the subject of my book *Psychology and Religion*. It seems to me beyond all

doubt that these processes are concerned with the religion-creating archetypes. Whatever else religion may be, those psychic ingredients of it which are empirically verifiable undoubtedly consist of unconscious manifestations of this kind. People have dwelt far too long on the fundamentally sterile question of whether the assertions of faith are true or not. Quite apart from the impossibility of ever proving or refuting the truth of a metaphysical assertion, the very existence of the assertion is a self-evident fact that needs no further proof, and when a *consensus gentium* allies itself thereto the validity of the statement is proved to just that extent. The only thing about it that we can verify is the psychological phenomenon, which is incommensurable with the category of objective rightness or truth. No phenomenon can ever be disposed of by rational criticism, and in religious life we have to deal with phenomena and facts and not with arguable hypotheses.

[36] During the process of treatment the dialectical discussion leads logically to a meeting between the patient and his shadow, that dark half of the psyche which we invariably get rid of by means of projection: either by burdening our neighbours—in a wider or narrower sense—with all the faults which we obviously have ourselves, or by casting our sins upon a divine mediator with the aid of *contritio* or the milder *attritio*.¹⁶ We know of course that without sin there is no repentance and without repentance no redeeming grace, also that without original sin the redemption of the world could never have come about; but we assiduously avoid investigating whether in this very power of evil God might not have placed some special purpose which it is most important for us to know. One often feels driven to some such view when, like the psychotherapist, one has to deal with people who are confronted with their blackest shadow.¹⁷ At any rate the doctor cannot afford to point, with a gesture of facile moral superiority, to the tablets of the law and say, “Thou shalt not.” He has to examine things objectively and weigh up possibilities, for he knows, less from religious training and education than from instinct and experience, that there is something very like a *felix culpa*. He knows that one can miss not only one’s happiness but also one’s final guilt, without which a man will never reach his wholeness. Wholeness is in fact a charisma which one can manufacture neither by art nor by cunning; one can only grow into it and endure whatever its advent may bring. No doubt it is a great nuisance that mankind is not uniform but compounded of individuals whose psychic structure spreads them over a span of at least ten thousand years. Hence there is absolutely no truth that does not spell salvation to one person and damnation to another. All universalisms get stuck in this terrible dilemma. Earlier on I spoke of Jesuit probabilism: this gives a better idea than anything else of the tremendous catholic task of the Church. Even the best-intentioned people have been horrified by probabilism, but, when brought face to face with the realities of life, many of them have found their horror evaporating or their laughter dying on their

lips. The doctor too must weigh and ponder, not whether a thing is for or against the Church but whether it is for or against life and health. On paper the moral code looks clear and neat enough; but the same document written on the “living tables of the heart” is often a sorry tatter, particularly in the mouths of those who talk the loudest. We are told on every side that evil is evil and that there can be no hesitation in condemning it, but that does not prevent evil from being the most problematical thing in the individual’s life and the one which demands the deepest reflection. What above all deserves our keenest attention is the question “Exactly *who* is the doer?” For the answer to this question ultimately decides the value of the deed. It is true that society attaches greater importance at first to what is done, because it is immediately obvious; but in the long run the right deed in the hands of the wrong man will also have a disastrous effect. No one who is far-sighted will allow himself to be hoodwinked by the right deed of the wrong man, any more than by the wrong deed of the right man. Hence the psychotherapist must fix his eye not on what is done but on how it is done, because therein is decided the whole character of the doer. Evil needs to be pondered just as much as good, for good and evil are ultimately nothing but ideal extensions and abstractions of doing, and both belong to the chiaroscuro of life. In the last resort there is no good that cannot produce evil and no evil that cannot produce good.

[37] The encounter with the dark half of the personality, or “shadow,” comes about of its own accord in any moderately thorough treatment. This problem is as important as that of sin in the Church. The open conflict is unavoidable and painful. I have often been asked, “And what do you *do* about it?” I do nothing; there is nothing I can do except wait, with a certain trust in God, until, out of a conflict borne with patience and fortitude, there emerges the solution destined—although I cannot foresee it—for that particular person. Not that I am passive or inactive meanwhile: I help the patient to understand all the things that the unconscious produces during the conflict. The reader may believe me that these are no ordinary products. On the contrary, they are among the most significant things that have ever engaged my attention. Nor is the patient inactive; he must do the right thing, and do it with all his might, in order to prevent the pressure of evil from becoming too powerful in him. He needs “justification by works,” for “justification by faith” alone has remained an empty sound for him as for so many others. Faith can sometimes be a substitute for lack of experience. In these cases what is needed is real work. Christ espoused the sinner and did not condemn him. The true follower of Christ will do the same, and, since one should do unto others as one would do unto oneself, one will also take the part of the sinner who is oneself. And as little as we would accuse Christ of fraternizing with evil, so little should we reproach ourselves that to love the sinner who is oneself is to make a pact with the devil. Love makes a man better, hate makes him worse—even

when that man is oneself. The danger in this point of view is the same as in the imitation of Christ; but the Pharisee in us will never allow himself to be caught talking to publicans and whores. I must emphasize of course that psychology invented neither Christianity nor the imitation of Christ. I wish everybody could be freed from the burden of their sins by the Church. But he to whom she cannot render this service must bend very low in the imitation of Christ in order to take the burden of his cross upon him. The ancients could get along with the Greek wisdom of the ages: *Μηδὲν ἄγαν, τῷ καιρῷ πάντα πρόσεστι καλά* (Exaggerate nothing, all good lies in right measure). But what an abyss still separates us from reason!

[38] Apart from the moral difficulty there is another danger which is not inconsiderable and may lead to complications, particularly with individuals who are pathologically inclined. This is the fact that the contents of the personal unconscious (i.e., the shadow) are indistinguishably merged with the archetypal contents of the collective unconscious and drag the latter with them when the shadow is brought into consciousness. This may exert an uncanny influence on the conscious mind; for activated archetypes have a disagreeable effect even—or I should perhaps say, particularly—on the most cold-blooded rationalist. He is afraid that the lowest form of conviction, namely superstition, is, as he thinks, forcing itself on him. But superstition in the truest sense only appears in such people if they are pathological, not if they can keep their balance. It then takes the form of the fear of “going mad”—for everything that the modern mind cannot define it regards as insane. It must be admitted that the archetypal contents of the collective unconscious can often assume grotesque and horrible forms in dreams and fantasies, so that even the most hard-boiled rationalist is not immune from shattering nightmares and haunting fears. The psychological elucidation of these images, which cannot be passed over in silence or blindly ignored, leads logically into the depths of religious phenomenology. The history of religion in its widest sense (including therefore mythology, folklore, and primitive psychology) is a treasure-house of archetypal forms from which the doctor can draw helpful parallels and enlightening comparisons for the purpose of calming and clarifying a consciousness that is all at sea. It is absolutely necessary to supply these fantastic images that rise up so strange and threatening before the mind’s eye with some kind of context so as to make them more intelligible. Experience has shown that the best way to do this is by means of comparative mythological material.

[39] [Part II](#) of this volume gives a large number of such examples. The reader will be particularly struck by the numerous connections between individual dream symbolism and medieval alchemy. This is not, as one might suppose, a prerogative of the case in question, but a general fact which only struck me some ten years ago when first I began to come to grips with the ideas and symbolism of alchemy.

[40] Part III contains an introduction to the symbolism of alchemy in relation to Christianity and Gnosticism. As a bare introduction it is naturally far from being a complete exposition of this complicated and obscure subject—indeed, most of it is concerned only with the *lapis-Christ* parallel. True, this parallel gives rise to a comparison between the aims of the *opus alchymicum* and the central ideas of Christianity, for both are of the utmost importance in understanding and interpreting the images that appear in dreams and in assessing their psychological effect. This has considerable bearing on the practice of psychotherapy, because more often than not it is precisely the more intelligent and cultured patients who, finding a return to the Church impossible, come up against archetypal material and thus set the doctor problems which can no longer be mastered by a narrowly personalistic psychology. Nor is a mere knowledge of the psychic structure of a neurosis by any means sufficient; for once the process has reached the sphere of the collective unconscious we are dealing with healthy material, i.e., with the universal basis of the individually varied psyche. Our understanding of these deeper layers of the psyche is helped not only by a knowledge of primitive psychology and mythology, but to an even greater extent by some familiarity with the history of our modern consciousness and the stages immediately preceding it. On the one hand it is a child of the Church; on the other, of science, in whose beginnings very much lies hid that the Church was unable to accept—that is to say, remnants of the classical spirit and the classical feeling for nature which could not be exterminated and eventually found refuge in the natural philosophy of the Middle Ages. As the “*spiritus metallorum*” and the astrological components of destiny the old gods of the planets lasted out many a Christian century.¹⁸ Whereas in the Church the increasing differentiation of ritual and dogma alienated consciousness from its natural roots in the unconscious, alchemy and astrology were ceaselessly engaged in preserving the bridge to nature, i.e., to the unconscious psyche, from decay. Astrology led the conscious mind back again and again to the knowledge of Heimarmene, that is, the dependence of character and destiny on certain moments in time; and alchemy afforded numerous “hooks” for the projection of those archetypes which could not be fitted smoothly into the Christian process. It is true that alchemy always stood on the verge of heresy and that certain decrees leave no doubt as to the Church’s attitude towards it,¹⁹ but on the other hand it was effectively protected by the obscurity of its symbolism, which could always be explained as harmless allegory. For many alchemists the allegorical aspect undoubtedly occupied the foreground to such an extent that they were firmly convinced that their sole concern was with chemical substances. But there were always a few for whom laboratory work was primarily a matter of symbols and their psychic effect. As the texts show, they were quite conscious of this, to the point of condemning the naïve goldmakers as liars, frauds, and dupes. Their own standpoint they proclaimed with propositions like “*Aurum nostrum non est aurum vulgi.*”

Although their labours over the retort were a serious effort to elicit the secrets of chemical transformation, it was at the same time—and often in overwhelming degree—the reflection of a parallel psychic process which could be projected all the more easily into the unknown chemistry of matter since that process is an unconscious phenomenon of nature, just like the mysterious alteration of substances. What the symbolism of alchemy expresses is the whole problem of the evolution of personality described above, the so-called individuation process.

[41] Whereas the Church's great buttress is the imitation of Christ, the alchemist, without realizing it and certainly without wanting it, easily fell victim, in the loneliness and obscure problems of his work, to the promptings and unconscious assumptions of his own mind, since, unlike the Christians, he had no clear and unmistakable models on which to rely. The authors he studied provided him with symbols whose meaning he thought he understood in his own way; but in reality they touched and stimulated his unconscious. Ironical towards themselves, the alchemists coined the phrase "obscurum per obscurius." But with this method of explaining the obscure by the more obscure they only sank themselves deeper in the very process from which the Church was struggling to redeem them. While the dogmas of the Church offered analogies to the alchemical process, these analogies, in strict contrast to alchemy, had become detached from the world of nature through their connection with the historical figure of the Redeemer. The alchemical four in one, the philosophical gold, the *lapis angularis*, the *aqua divina*, became, in the Church, the four-armed cross on which the Only-Begotten had sacrificed himself once in history and at the same time for all eternity. The alchemists ran counter to the Church in preferring to seek through knowledge rather than to find through faith, though as medieval people they never thought of themselves as anything but good Christians. Paracelsus is a classical example in this respect. But in reality they were in much the same position as modern man, who prefers immediate personal experience to belief in traditional ideas, or rather has it forced upon him. Dogma is not arbitrarily invented nor is it a unique miracle, although it is often described as miraculous with the obvious intent of lifting it out of its natural context. The central ideas of Christianity are rooted in Gnostic philosophy, which, in accordance with psychological laws, simply *had* to grow up at a time when the classical religions had become obsolete. It was founded on the perception of symbols thrown up by the unconscious individuation process which always sets in when the collective dominants of human life fall into decay. At such a time there is bound to be a considerable number of individuals who are possessed by archetypes of a numinous nature that force their way to the surface in order to form new dominants. This state of possession shows itself almost without exception in the fact that the possessed identify themselves with the archetypal contents of their unconscious, and, because

they do not realize that the role which is being thrust upon them is the effect of new contents still to be understood, they exemplify these concretely in their own lives, thus becoming prophets and reformers. In so far as the archetypal content of the Christian drama was able to give satisfying expression to the uneasy and clamorous unconscious of the many, the *consensus omnium* raised this drama to a universally binding truth—not of course by an act of judgment, but by the irrational fact of possession, which is far more effective. Thus Jesus became the tutelary image or amulet against the archetypal powers that threatened to possess everyone. The glad tidings announced: “It has happened, but it will not happen to you inasmuch as you believe in Jesus Christ, the Son of God!” Yet it could and it can and it will happen to everyone in whom the Christian dominant has decayed. For this reason there have always been people who, not satisfied with the dominants of conscious life, set forth—under cover and by devious paths, to their destruction or salvation—to seek direct experience of the eternal roots, and, following the lure of the restless unconscious psyche, find themselves in the wilderness where, like Jesus, they come up against the son of darkness, the *ἀντίμιμον πνεῦμα*. Thus an old alchemist—and he a cleric!—prays: “Horridas nostrae mentis purga tenebras, accende lumen sensibus!” (Purge the horrible darkneses of our mind, light a light for our senses!) The author of this sentence must have been undergoing the experience of the *nigredo*, the first stage of the work, which was felt as “melancholia” in alchemy and corresponds to the encounter with the shadow in psychology.

[42] When, therefore, modern psychotherapy once more meets with the activated archetypes of the collective unconscious, it is merely the repetition of a phenomenon that has often been observed in moments of great religious crisis, although it can also occur in individuals for whom the ruling ideas have lost their meaning. An example of this is the *descensus ad inferos* depicted in *Faust*, which, consciously or unconsciously, is an *opus alchymicum*.

[43] The problem of opposites called up by the shadow plays a great—indeed, the decisive—role in alchemy, since it leads in the ultimate phase of the work to the union of opposites in the archetypal form of the *hierosgamos* or “chymical wedding.” Here the supreme opposites, male and female (as in the Chinese *yang* and *yin*), are melted into a unity purified of all opposition and therefore incorruptible. The prerequisite for this, of course, is that the artifex should not identify himself with the figures in the work but should leave them in their objective, impersonal state. So long as the alchemist was working in his laboratory he was in a favourable position, psychologically speaking, for he had no opportunity to identify himself with the archetypes as they appeared, since they were all projected immediately into the chemical substances. The disadvantage of this situation was that the alchemist was forced to represent the incorruptible substance as a chemical product—an impossible

undertaking which led to the downfall of alchemy, its place in the laboratory being taken by chemistry. But the psychic part of the work did not disappear. It captured new interpreters, as we can see from the example of *Faust*, and also from the signal connection between our modern psychology of the unconscious and alchemical symbolism.

3. Symbol of the alchemical work.

—*Hermaphroditisches Sonn- und Mondskind* (1752)

INDIVIDUAL DREAM SYMBOLISM IN RELATION TO ALCHEMY

A STUDY OF THE UNCONSCIOUS PROCESSES AT WORK IN DREAMS

*... facilis descensus Averno; noctes atque dies patet atri ianua Ditis;
sed revocare gradum superasque evadere ad auras, hoc opus, hic labor est....*

VIRGIL, *Aeneid*, VI, 126–29

... easy is the descent to Avernus: night and day the door of gloomy Dis stands open; but to recall thy steps and pass out to the upper air, this is the task, this the toil!

—Trans. by H. R. Fairclough

5. Seven virgins being transformed.—Béroalde de Verville, *Le Songe de Poliphile* (1600)

1. INTRODUCTION

I. THE MATERIAL

[44] The symbols of the process of individuation that appear in dreams are images of an archetypal nature which depict the centralizing process or the production of a new centre of personality. A general idea of this process may be got from my essay, "The Relations between the Ego and the Unconscious." For certain reasons mentioned there I call this centre the "self," which should be understood as the totality of the psyche. The self is not only the centre, but also the whole circumference which embraces both conscious and unconscious; it is the centre of this totality, just as the ego is the centre of consciousness.

[45] The symbols now under consideration are not concerned with the manifold stages and transformations of the individuation process, but with the images that refer directly and exclusively to the new centre as it comes into consciousness. These images belong to a definite category which I call mandala symbolism. In *The Secret of the Golden Flower*, published in collaboration with Richard Wilhelm, I have described this symbolism in some detail. In the present study I should like to put before you an individual series of such symbols in chronological order. The material consists of over a thousand dreams and visual impressions coming from a young man of excellent scientific education.¹ For the purposes of this study I have worked on the first four hundred dreams and visions, which covered a period of nearly ten months. In order to avoid all personal influence I asked one of my pupils, a woman doctor, who was then a beginner, to undertake the observation of the process. This went on for five months. The dreamer then continued his observations alone for three months. Except for a short interview at the very beginning, before the commencement of the observation, I did not see the dreamer at all during the first eight months. Thus it happened that 355 of the dreams were dreamed away from any personal contact with myself. Only the last forty-five occurred under my observation. No interpretations worth mentioning were then attempted because the dreamer, owing to his excellent scientific training and ability, did not require any assistance. Hence conditions were really ideal for unprejudiced observation and recording.

[46] First of all, then, I shall present extracts from the twenty-two initial dreams in order to show how the mandala symbolism makes a very early appearance and is embedded in the rest of the dream material. Later on I shall pick out in chronological order the dreams that refer specifically to the mandala.²

[47] With few exceptions all the dreams have been abbreviated, either by extracting the part that carries the main thought or by condensing the whole text to essentials. This simplifying procedure has not only curtailed their length but has also removed personal allusions and complications, as was necessary for reasons of discretion. Despite this somewhat doubtful interference I have, to the best of my knowledge and scrupulosity, avoided any arbitrary distortion of meaning. The same considerations had also to apply to my own interpretation, so that certain passages in the dreams may appear to have been overlooked. Had I not made this sacrifice and kept the material absolutely complete, I should not have been in a position to publish this series, which in my opinion could hardly be surpassed in intelligence, clarity, and consistency. It therefore gives me great pleasure to express my sincere gratitude here and now to the “author” for the service he has rendered to science.

II. THE METHOD

[48] In my writings and lectures I have always insisted that we must give up all preconceived opinions when it comes to the analysis and interpretation of the objective psyche,³ in other words the “unconscious.” We do not yet possess a general theory of dreams that would enable us to use a deductive method with impunity, any more than we possess a general theory of consciousness from which we can draw deductive conclusions. The manifestations of the subjective psyche, or consciousness, can be predicted to only the smallest degree, and there is no theoretical argument to prove beyond doubt that any causal connection necessarily exists between them. On the contrary, we have to reckon with a high percentage of arbitrariness and “chance” in the complex actions and reactions of the conscious mind. Similarly there is no empirical, still less a theoretical, reason to assume that the same does not apply to the manifestations of the unconscious. The latter are just as manifold, unpredictable, and arbitrary as the former and must therefore be subjected to as many different ways of approach. In the case of conscious utterances we are in the fortunate position of being directly addressed and presented with a content whose purpose we can recognize; but with “unconscious” manifestations there is no directed or adapted language in our sense of the word—there is merely a psychic phenomenon that would appear to have only the loosest connections with conscious contents. If the expressions of the conscious mind are incomprehensible we can always ask what they mean. But the objective psyche is something alien even to the conscious mind through which it expresses itself. We are therefore obliged to adopt the method we would use in deciphering a fragmentary text or one containing unknown words: we examine the context. The meaning of the unknown word may become evident when we compare a series of passages in which it occurs. The psychological context of dream-contents consists in the web of associations in which the dream is naturally

embedded. Theoretically we can never know anything in advance about this web, but in practice it is sometimes possible, granted long enough experience. Even so, careful analysis will never rely too much on technical rules; the danger of deception and suggestion is too great. In the analysis of isolated dreams above all, this kind of knowing in advance and making assumptions on the grounds of practical expectation or general probability is positively wrong. It should therefore be an absolute rule to assume that every dream, and every part of a dream, is unknown at the outset, and to attempt an interpretation only after carefully taking up the context. We can then apply the meaning we have thus discovered to the text of the dream itself and see whether this yields a fluent reading, or rather whether a satisfying meaning emerges. But in no circumstances may we anticipate that this meaning will fit in with any of our subjective expectations; for quite possibly, indeed very frequently, the dream is saying something surprisingly different from what we would expect. As a matter of fact, if the meaning we find in the dream happens to coincide with our expectations, that is a reason for suspicion; for as a rule the standpoint of the unconscious is complementary or compensatory⁴ to consciousness and thus unexpectedly “different.” I would not deny the possibility of *parallel* dreams, i.e., dreams whose meaning coincides with or supports the conscious attitude, but, in my experience at least, these are rather rare.

[49] Now, the method I adopt in the present study seems to run directly counter to this basic principle of dream interpretation. It looks as if the dreams were being interpreted without the least regard for the context. And in fact I have not taken up the context at all, seeing that the dreams in this series were not dreamed (as mentioned above) under my observation. I proceed rather as if I had had the dreams myself and were therefore in a position to supply the context.

6. A maternal figure presiding over the goddesses of fate.—Thenaud, “Traité de la cabale” (MS., 16th cent.)

[50] This procedure, if applied to *isolated* dreams of someone unknown to me personally, would indeed be a gross technical blunder. But here we are not dealing with isolated dreams; they form a coherent series in the course of which the meaning gradually unfolds more or less of its own accord. *The series is the context which the dreamer himself supplies.* It is as if not one text but many lay before us, throwing light from all sides on the unknown terms, so that a reading of all the texts is sufficient to elucidate the difficult passages in each individual one. Moreover, in the third chapter we are concerned with a definite archetype—the mandala—that has long been known to us from other sources, and this considerably facilitates the interpretation. Of course the interpretation of each individual passage is bound to be largely conjecture, but the series as a whole gives us all the clues we need to correct any possible errors in the preceding passages.

[51] It goes without saying that while the dreamer was under the observation of my pupil he knew nothing of these interpretations and was therefore quite unprejudiced by anybody else’s opinion. Moreover I hold the view, based on wide experience, that the possibility and danger of prejudgment are exaggerated. Experience shows that the

objective psyche is independent in the highest degree. Were it not so, it could not carry out its most characteristic function: the compensation of the conscious mind. The conscious mind allows itself to be trained like a parrot, but the unconscious does not—which is why St. Augustine thanked God for not making him responsible for his dreams. The unconscious is an autonomous psychic entity; any efforts to drill it are only apparently successful, and moreover are harmful to consciousness. It is and remains beyond the reach of subjective arbitrary control, in a realm where nature and her secrets can be neither improved upon nor perverted, where we can listen but may not meddle.

7. The Uroboros as symbol of the aeon.—Horapollo, *Selecta hieroglyphica* (1597)

8. The *anima mundi*, guide of mankind, herself guided by God.—Engraving by J.-T. de Bry, from Fludd, *Utriusque cosmi* (1617)

2. THE INITIAL DREAMS

1. DREAM:

[52] *The dreamer is at a social gathering. On leaving, he puts on a stranger's hat instead of his own.*

[53] The hat, as a covering for the head, has the general sense of something that epitomizes the head. Just as in summing up we bring ideas “under one head” (*unter einen Hut*), so the hat, as a sort of leading idea, covers the whole personality and imparts its own significance to it. Coronation endows the ruler with the divine nature of the sun, the doctor's hood bestows the dignity of a scholar, and a stranger's hat imparts a strange personality. Meyrink uses this theme in his novel *The Golem*, where the hero puts on the hat of Athanasius Pernath and, as a result, becomes involved in a strange experience. It is clear enough in *The Golem* that it is the unconscious which entangles the hero in fantastic adventures. Let us stress at once the significance of the *Golem* parallel and assume that the hat in the dream is the hat of an Athanasius, an immortal, a being beyond time, the universal and everlasting man as distinct from the ephemeral and “accidental” mortal man. Encircling the head, the hat is round like the sun-disc of a crown and therefore contains the first allusion to the mandala. We shall find the attribute of eternal duration confirmed in the ninth mandala dream (par. 134), while the mandala character of the hat comes out in the thirty-fifth mandala dream (par. 254). As a general result of the exchange of hats we may expect a development similar to that in *The Golem*: an emergence of the unconscious. The unconscious with its figures is already standing like a shadow behind the dreamer and pushing its way into consciousness.

2. DREAM:

[54] *The dreamer is going on a railway journey, and by standing in front of the window, he blocks the view for his fellow passengers. He must get out of their way.*

[55] The process is beginning to move, and the dreamer discovers that he is keeping the light from those who stand *behind* him, namely the unconscious components of his personality. We have no eyes behind us; consequently “behind” is the region of the unseen, the unconscious. If the dreamer will only stop blocking the window (consciousness), the unconscious content will become conscious.

3. HYPNAGOGIC VISUAL IMPRESSION:

[56] *By the sea shore. The sea breaks into the land, flooding everything. Then the dreamer is sitting on a lonely island.*

[57] The sea is the symbol of the collective unconscious, because unfathomed depths lie concealed beneath its reflecting surface.¹ Those who stand behind, the shadowy personifications of the unconscious, have burst into the *terra firma* of consciousness like a flood. Such invasions have something uncanny about them because they are irrational and incomprehensible to the person concerned. They bring about a momentous alteration of his personality since they immediately constitute a painful personal secret which alienates and isolates him from his surroundings. It is something that we “cannot tell anybody.” We are afraid of being accused of mental abnormality—not without reason, for much the same thing happens to lunatics. Even so, it is a far cry from the intuitive perception of such an invasion to being inundated by it pathologically, though the layman does not realize this. Isolation by a secret results as a rule in an animation of the psychic atmosphere, as a substitute for loss of contact with other people. It causes an activation of the unconscious, and this produces something similar to the illusions and hallucinations that beset lonely wanderers in the desert, seafarers, and saints. The mechanism of these phenomena can best be explained in terms of energy. Our normal relations to objects in the world at large are maintained by a certain expenditure of energy. If the relation to the object is cut off there is a “retention” of energy, which then creates an equivalent substitute. For instance, just as persecution mania comes from a relationship poisoned by mistrust, so, as a substitute for the normal animation of the environment, an illusory reality rises up in which weird ghostly shadows flit about in place of people. That is why primitive man has always believed that lonely and desolate places are haunted by “devils” and suchlike apparitions.

4. DREAM:

[58] *The dreamer is surrounded by a throng of vague female forms (cf. fig. 33). A voice within him says, “First I must get away from Father.”*

[59] Here the psychic atmosphere has been animated by what the Middle Ages would call succubi. We are reminded of the visions of St. Anthony in Egypt, so eruditely described by Flaubert in *La Tentation de Saint-Antoine*. The element of hallucination shows itself in the fact that the thought is spoken aloud. The words “first I must get away” call for a concluding sentence which would begin with “in order to.” Presumably it would run “in order to follow the unconscious, i.e., the alluring female forms” (fig. 9). The father, the embodiment of the traditional spirit as expressed in religion or a general philosophy of life, is standing in his way. He imprisons the dreamer in the world of the conscious mind and its values. The traditional masculine world with its intellectualism and rationalism is felt to be an impediment, from which

we must conclude that the unconscious, now approaching him, stands in direct opposition to the tendencies of the conscious mind and that the dreamer, despite this opposition, is already favourably disposed towards the unconscious. For this reason the latter should not be subordinated to the rationalistic judgments of consciousness; it ought rather to be an experience *sui generis*. Naturally it is not easy for the intellect to accept this, because it involves at least a partial, if not a total, *sacrificium intellectus*. Furthermore, the problem thus raised is very difficult for modern man to grasp; for to begin with he can only understand the unconscious as an inessential and unreal appendage of the conscious mind, and not as a special sphere of experience with laws of its own. In the course of the later dreams this conflict will appear again and again, until finally the right formula is found for the correlation of conscious and unconscious, and the personality is assigned its correct position between the two. Moreover, such a conflict cannot be solved by understanding, but only by experience. Every stage of the experience must be lived through. There is no feat of interpretation or any other trick by which to circumvent this difficulty, for the union of conscious and unconscious can only be achieved step by step.

[60] The resistance of the conscious mind to the unconscious and the depreciation of the latter were historical necessities in the development of the human psyche, for otherwise the conscious mind would never have been able to differentiate itself at all. But modern man's consciousness has strayed rather too far from the fact of the unconscious. We have even forgotten that the psyche is by no means of our design, but is for the most part autonomous and unconscious. Consequently the approach of the unconscious induces a panic fear in civilized people, not least on account of the menacing analogy with insanity. The intellect has no objection to "analysing" the unconscious as a passive object; on the contrary such an activity would coincide with our rational expectations. But to let the unconscious go its own way and to experience it as a reality is something that exceeds the courage and capacity of the average European. He prefers simply not to understand this problem. For the spiritually weak-kneed this is the better course, since the thing is not without its dangers.

9. The awakening of the sleeping king depicted as a judgment of Paris, with Hermes as psychopomp.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

10, 11, 12. Melusina; two-headed Melusina; mermaid with mask.—Eleazar, *Uraltes chymisches Werk* (1760)

[61] The experience of the unconscious is a personal secret communicable only to very few, and that with difficulty; hence the isolating effect we noted above. But isolation brings about a compensatory animation of the psychic atmosphere which strikes us as uncanny. The figures that appear in the dream are feminine, thus

pointing to the feminine nature of the unconscious. They are fairies or fascinating sirens and lamias (figs. 10, 11, 12; cf. also fig. 157), who infatuate the lonely wanderer and lead him astray. Likewise seductive maidens appear at the beginning of the *nekyia*² of Poliphilo³ (fig. 33), and the Melusina of Paracelsus⁴ is another such figure.

13. The “tail-eater” (Uroboros) as the *prima materia* of the alchemical process, with the red-and-white rose, the *flos sapientum*. Below, *coniunctio solis et lunae*, with the *lapis philosophorum* as the son.—Reusner, *Pandora* (1588)

5. VISUAL IMPRESSION:

[62] A snake describes a circle round the dreamer, who stands rooted to the ground like a tree.

[63] The drawing of a spellbinding circle (fig. 13) is an ancient magical device used by everyone who has a special or secret purpose in mind. He thereby protects himself from the “perils of the soul” that threaten him from without and attack anyone who is isolated by a secret. The same procedure has also been used since olden times to set a place apart as holy and inviolable; in founding a city, for instance, they first drew the *sulcus primigenius* or original furrow⁵ (cf. fig. 31). The fact that the dreamer stands rooted to the centre is a compensation of his almost insuperable desire to run away from the unconscious. He experienced an agreeable feeling of relief after this vision—and rightly, since he has succeeded in establishing a protected *temenos*,⁶ a taboo area where he will be able to meet the unconscious. His isolation, so uncanny before, is now endowed with meaning and purpose, and thus robbed of its terrors.

6. VISUAL IMPRESSION, DIRECTLY FOLLOWING UPON 5:

[64] *The veiled figure of a woman seated on a stair.*

[65] The motif of the unknown woman—whose technical name is the “anima”⁷—appears here for the first time. Like the throng of vague female forms in dream 4, she is a personification of the animated psychic atmosphere. From now on the figure of the unknown woman reappears in a great many of the dreams. Personification always indicates an autonomous activity of the unconscious. If some personal figure appears we may be sure that the unconscious is beginning to grow active. The activity of such figures very often has an anticipatory character: something that the dreamer himself will do later is now being done in advance. In this case the allusion is to a stair, thus indicating an ascent or a descent (fig. 14).

[66] Since the process running through dreams of this kind has an historical analogy in the rites of initiation, it may not be superfluous to draw attention to the important part which the Stairway of the Seven Planets played in these rites, as we know from Apuleius, among others. The initiations of late classical syncretism, already saturated with alchemy (cf. the visions of Zosimos⁸), were particularly concerned with the theme of ascent, i.e., sublimation. The ascent was often represented by a ladder (fig. 15); hence the burial gift in Egypt of a small ladder for the *ka* of the dead.⁹ The idea of an ascent through the seven spheres of the planets symbolizes the return of the soul to the sun-god from whom it originated, as we know for instance from Firmicus Maternus.¹⁰ Thus the Isis mystery described by Apuleius¹¹ culminated in what early medieval alchemy, going back to Alexandrian tradition as transmitted by the Arabs,¹² called the *solificatio*, where the initiand was crowned as Helios.

14. Jacob's dream.—Watercolour by William Blake

Mothus corporis asment. spiritus soluti. Spiritus corporis. m. k.
 septem illa equitatis cum Solis et cum O. d. lumine. 2

15. The *scala lapidis*, representing the stages of the alchemical process.—“Emblematical Figures of the Philosophers’ Stone” (MS., 17th cent.)

7. VISUAL IMPRESSION:

[67] *The veiled woman uncovers her face. It shines like the sun.*

[68] The *solificatio* is consummated on the person of the anima. The process would seem to correspond to the *illuminatio*, or enlightenment. This “mystical” idea contrasts strongly with the rational attitude of the conscious mind, which recognizes only intellectual enlightenment as the highest form of understanding and insight. Naturally this attitude never reckons with the fact that scientific knowledge only satisfies the little tip of personality that is contemporaneous with ourselves, not the collective psyche¹³ that reaches back into the grey mists of antiquity and always requires a special rite if it is to be united with present-day consciousness. It is clear, therefore, that a “lighting up” of the unconscious is being prepared, which has far more the character of an *illuminatio* than of rational “elucidation.” The *solificatio* is infinitely far removed from the conscious mind and seems to it almost chimerical.

8. VISUAL IMPRESSION:

[69] *A rainbow is to be used as a bridge. But one must go under it and not over it. Whoever goes over it will fall and be killed.*

[70] Only the gods can walk rainbow bridges in safety; mere mortals fall and meet their death, for the rainbow is only a lovely semblance that spans the sky, and not a highway for human beings with bodies. These must pass “under it” (fig. 16). But water flows under bridges too, following its own gradient and seeking the lowest place. This hint will be confirmed later.

16. *Mercurius tricephalus* as Anthropos. Below, blindfolded man led by an animal.—Kelley, *Tractatus de Lapide philosophorum* (1676)

9. DREAM:

[71] *A green land where many sheep are pastured. It is the “land of sheep.”*

[72] This curious fragment, inscrutable at first glance, may derive from childhood impressions and particularly from those of a religious nature, which would not be far to seek in this connection—e.g., “He maketh me to lie down in green pastures,” or the early Christian allegories of sheep and shepherd¹⁴ (fig. 18). The next vision points in the same direction.

10. VISUAL IMPRESSION:

[73] *The unknown woman stands in the land of sheep and points the way.*

[74] The anima, having already anticipated the *solificatio*, now appears as the psychopomp, the one who shows the way¹⁵ (fig. 19). The way begins in the children’s land, i.e., at a time when rational present-day consciousness was not yet separated from the historical psyche, the collective unconscious. The separation is indeed inevitable, but it leads to such an alienation from that dim psyche of the dawn of mankind that a loss of instinct ensues. The result is instinctual atrophy and hence disorientation in everyday human situations. But it also follows from the separation that the “children’s land” will remain definitely infantile and become a perpetual source of childish inclinations and impulses. These intrusions are naturally most unwelcome to the conscious mind, and it consistently represses them for that reason.

But the very consistency of the repression only serves to bring about a still greater alienation from the fountainhead, thus increasing the lack of instinct until it becomes lack of soul. As a result, the conscious mind is either completely swamped by childishness or else constantly obliged to defend itself in vain against the inundation, by means of a cynical affectation of old age or embittered resignation. We must therefore realize that despite its undeniable successes the rational attitude of present-day consciousness is, in many human respects, childishly un-adapted and hostile to life. Life has grown desiccated and cramped, crying out for the rediscovery of the fountainhead. But the fountainhead can only be found if the conscious mind will suffer itself to be led back to the “children’s land,” there to receive guidance from the unconscious as before. To remain a child too long is childish, but it is just as childish to move away and then assume that childhood no longer exists because we do not see it. But if we return to the “children’s land” we succumb to the fear of becoming childish, because we do not understand that everything of psychic origin has a double face. One face looks forward, the other back. It is ambivalent and therefore symbolic, like all living reality.

17. The artifex (or Hermes) as shepherd of Aries and Taurus, who symbolize the vernal impulses, the beginning of the *opus*.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

18. Christ as shepherd.—Mosaic, mausoleum of Galla Placidia, Ravenna (c. 424–451)

[75] We stand on a peak of consciousness, believing in a childish way that the path leads upward to yet higher peaks beyond. That is the chimerical rainbow bridge. In order to reach the next peak we must first go down into the land where the paths begin to divide.

11. DREAM:

[76] *A voice says, “But you are still a child.”*

[77] This dream forces the dreamer to admit that even a highly differentiated consciousness has not by any means finished with childish things, and that a return to the world of childhood is necessary.

19. The soul as guide, showing the way.—Watercolour by William Blake for Dante's *Purgatorio*, Canto IV

12. DREAM:

[78] *A dangerous walk with Father and Mother, up and down many ladders.*

[79] A childish consciousness is always tied to father and mother, and is never by itself. Return to childhood is always the return to father and mother, to the whole burden of the psychic non-ego as represented by the parents, with its long and momentous history. Regression spells disintegration into our historical and hereditary determinants, and it is only with the greatest effort that we can free ourselves from their embrace. Our psychic prehistory is in truth the spirit of gravity, which needs steps and ladders because, unlike the disembodied airy intellect, it cannot fly at will. Disintegration into the jumble of historical determinants is like losing one's way, where even what is right seems an alarming mistake.

[80] As hinted above, the steps and ladders theme (cf. [figs. 14, 15](#)) points to the process of psychic transformation, with all its ups and downs. We find a classic example of this in Zosimos' ascent and descent of the fifteen steps of light and darkness.¹⁶

[81] It is of course impossible to free oneself from one's childhood without devoting a great deal of work to it, as Freud's researches have long since shown. Nor can it be achieved through intellectual knowledge only; what is alone effective is a remembering that is also a re-experiencing. The swift passage of the years and the overwhelming inrush of the newly discovered world leave a mass of material behind that is never dealt with. We do not shake this off; we merely remove ourselves from it. So that when, in later years, we return to the memories of childhood we find bits of our personality still alive, which cling round us and suffuse us with the feeling of earlier times. Being still in their childhood state, these fragments are very powerful in their effect. They can lose their infantile aspect and be corrected only when they are reunited with adult consciousness. This "personal unconscious" must always be dealt with first, that is, made conscious, otherwise the gateway to the collective unconscious cannot be opened. The journey with father and mother up and down many ladders represents the making conscious of infantile contents that have not yet been integrated.

13. DREAM:

[82] *The father calls out anxiously, "That is the seventh!"*

[83] During the walk over many ladders some event has evidently taken place which is spoken of as "the seventh" (fig. 20). In the language of initiation, "seven" stands for the highest stage of illumination and would therefore be the coveted goal of all desire (cf. fig. 28). But to the conventional mind the *solificatio* is an outlandish, mystical idea bordering on madness. We assume that it was only in the dark ages of misty superstition that people thought in such a nonsensical fashion, but that the lucid and hygienic mentality of our own enlightened days has long since outgrown such nebulous notions, so much so, indeed, that this particular kind of "illumination" is to be found nowadays only in a lunatic asylum. No wonder the father is scared and anxious, like a hen that has hatched out ducklings and is driven to despair by the aquatic proclivities of its young. If this interpretation—that the "seventh" represents the highest stage of illumination—is correct, it would mean in principle that the process of integrating the personal unconscious was actually at an end. Thereafter the collective unconscious would begin to open up, which would suffice to explain the anxiety the father felt as the representative of the traditional spirit.

[84] Nevertheless the return to the dim twilight of the unconscious does not mean that we should entirely abandon the precious acquisition of our forefathers, namely the intellectual differentiation of consciousness. It is rather a question of the *man* taking the place of the *intellect*—not the man whom the dreamer imagines himself to be, but someone far more rounded and complete. This would mean assimilating all sorts of things into the sphere of his personality which the dreamer still rejects as

disagreeable or even impossible. The father who calls out so anxiously, “That is the seventh!” is a psychic component of the dreamer himself, and the anxiety is therefore his own. So the interpretation must bear in mind the possibility that the “seventh” means not only a sort of culmination but something rather ominous as well. We come across this theme, for instance, in the fairytale of Tom Thumb and the Ogre. Tom Thumb is the youngest of seven brothers. His dwarflike stature and his cunning are harmless enough, yet he is the one who leads his brothers to the ogre’s lair, thus proving his own dangerous double nature as a bringer of good and bad luck; in other words, he is also the ogre himself. Since olden times “the seven” have represented the seven gods of the planets (fig. 20); they form what the Pyramid inscriptions call a *paut neteru*, a “company of gods”¹⁷ (cf. figs. 21, 23). Although a company is described as “nine,” it often proves to be not nine at all but ten, and sometimes even more. Thus Maspero¹⁸ tells us that the first and last members of the series can be added to, or doubled, without injury to the number nine. Something of the sort happened to the classical *paut* of the Greco-Roman or Babylonian gods in the post-classical age, when the gods were degraded to demons and retired partly to the distant stars and partly to the metals inside the earth. It then transpired that Hermes or Mercurius possessed a double nature, being a chthonic god of revelation and also the spirit of quicksilver, for which reason he was represented as a hermaphrodite (fig. 22). As the planet Mercury, he is nearest to the sun, hence he is pre-eminently related to gold. But, as quicksilver, he dissolves the gold and extinguishes its sunlike brilliance. All through the Middle Ages he was the object of much puzzled speculation on the part of the natural philosophers: sometimes he was a ministering and helpful spirit, a *πάρεδρος* (literally “assistant, comrade”) or *familiaris*; and sometimes the *servus* or *cervus fugitivus* (the fugitive slave or stag), an elusive, deceptive, teasing goblin¹⁹ who drove the alchemists to despair and had many of his attributes in common with the devil. For instance he is dragon, lion, eagle, raven, to mention only the most important of them. In the alchemical hierarchy of gods Mercurius comes lowest as *prima materia* and highest as *lapis philosophorum*. The *spiritus mercurialis* (fig. 23) is the alchemists’ guide (Hermes Psychopompos: cf. fig. 146), and their tempter; he is their good luck and their ruin. His dual nature enables him to be not only the seventh but also the eighth—the eighth on Olympus “whom nobody thought of” (see *infra*, par. 204f.).

20. The six planets united in the seventh, Mercury, depicted as the Uroboros, and the red-and-white (hermaphroditic) double eagle.—Thomas Aquinas (pseud.). “De alchimia” (MS., 16th cent.)

21. The seven gods of the planets in Hades.—Mylius, *Philosophia reformata* (1622)

22. Mercurius in the “philosopher’s egg” (the alchemical vessel). As *filius* he stands on the sun and moon, tokens of his dual nature. The birds betoken spiritualization, while the scorching rays of the sun ripen the homunculus in the vessel.—*Mutus liber* (1702)

[85] It may seem odd to the reader that anything as remote as medieval alchemy should have relevance here. But the “black art” is not nearly so remote as we think; for as an educated man the dreamer must have read *Faust*, and *Faust* is an alchemical drama from beginning to end, although the educated man of today has only the haziest notion of this. Our conscious mind is far from understanding everything, but

the unconscious always keeps an eye on the “age-old, sacred things,” however strange they may be, and reminds us of them at a suitable opportunity. No doubt *Faust* affected our dreamer much as Goethe was affected when, as a young man in his Leipzig days, he studied Theophrastus Paracelsus with Fräulein von Klettenberg.²⁰ It was then, as we certainly may assume, that the mysterious equivalence of seven and eight sank deep into his soul, without his conscious mind ever unravelling the mystery. The following dream will show that this reminder of *Faust* is not out of place.

14. DREAM:

- [86] The dreamer is in America looking for an employee with a pointed beard. They say that everybody has such an employee.
- [87] America is the land of practical, straightforward thinking, uncontaminated by our European sophistication. The intellect would there be kept, very sensibly, as an employee. This naturally sounds like *lèse-majesté* and might therefore be a serious matter. So it is consoling to know that everyone (as is always the case in America) does the same. The “man with a pointed beard” is our time-honoured Mephisto whom Faust “employed” and who was not permitted to triumph over him in the end, despite the fact that Faust had dared to descend into the dark chaos of the historical psyche and steep himself in the ever-changing, seamy side of life that rose up out of that bubbling cauldron.
- [88] From subsequent questions it was discovered that the dreamer himself had recognized the figure of Mephistopheles in the “man with the pointed beard.” Versatility of mind as well as the inventive gift and scientific leanings are attributes of the astrological Mercurius. Hence the man with the pointed beard represents the intellect, which is introduced by the dream as a real *familiaris*, an obliging if somewhat dangerous spirit. The intellect is thus degraded from the supreme position it once occupied and is put in the second rank, and at the same time branded as daemonic. Not that it had ever been anything but daemonic—only the dreamer had not noticed before how possessed he was by the intellect as the tacitly recognized supreme power. Now he has a chance to view this function, which till then had been the uncontested dominant of his psychic life, at somewhat closer quarters. Well might he exclaim with Faust: “So that’s what was inside the poodle!” Mephistopheles is the diabolical aspect of every psychic function that has broken loose from the hierarchy of the total psyche and now enjoys independence and absolute power (fig. 36). But this aspect can be perceived only when the function becomes a separate entity and is objectivated or personified, as in this dream.

23. The mystic vessel where the two natures unite (*sol* and *luna*, *caduceus*) to produce the *filius hermaphroditus*, Hermes Psychopompos, flanked by the six gods of the planets.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

[89] Amusingly enough, the “man with the pointed beard” also crops up in alchemical literature, in one of the “Parabolae” contained in the “Güldenene Tractat vom philosophischen Stein,”²¹ written in 1625, which Herbert Silberer²² has analysed from a psychological point of view. Among the company of old white-bearded philosophers there is a young man with a black pointed beard. Silberer is uncertain whether he should assume this figure to be the devil.

[90] Mercurius as quicksilver is an eminently suitable symbol for the “fluid,” i.e., mobile, intellect (fig. 24). Therefore in alchemy Mercurius is sometimes a “spirit” and sometimes a “water,” the so-called *aqua permanens*, which is none other than *argentum vivum*.

15. DREAM:

[91] *The dreamer’s mother is pouring water from one basin into another. (The dreamer only remembered in connection with vision 28 of the next series that this basin belonged to his sister.) This action is performed with great solemnity: it is of*

the highest significance for the outside world. Then the dreamer is rejected by his father.

24. The activities presided over by Mercurius.—Tübingen MS. (c. 1400)

[92] Once more we meet with the theme of “exchange” (cf. dream 1): one thing is put in the place of another. The “father” has been dealt with; now begins the action of the “mother.” Just as the father represents collective consciousness, the traditional spirit, so the mother stands for the collective unconscious, the source of the water of life²³ (fig. 25). (Cf. the maternal significance of πηγῆ,²⁴ the *fons signatus*,²⁵ as an attribute of the Virgin Mary, etc.—fig. 26.) The unconscious has altered the locus of the life forces, thus indicating a change of attitude. The dreamer’s subsequent recollection enables us to see who is now the source of life: it is the “sister.” The mother is superior to the son, but the sister is his equal. Thus the deposition of the intellect frees the dreamer from the domination of the unconscious and hence from his infantile attitude. Although the sister is a remnant of the past, we know definitely from later dreams that she was the carrier of the anima-image. We may therefore assume that the transferring of the water of life to the sister really means that the mother has been replaced by the anima.²⁶

26. The Virgin Mary surrounded by her attributes, the quadrangular enclosed garden, the round temple, tower, gate, well and fountain, palms and cypresses (trees of life), all feminine symbols.—17th-century devotional picture

[93] The anima now becomes a life-giving factor, a psychic reality which conflicts strongly with the world of the father. Which of us could assert, without endangering his sanity, that he had accepted the guidance of the unconscious in the conduct of his life, assuming that anyone exists who could imagine what that would mean? Anyone who could imagine it at all would certainly have no difficulty in understanding what a monstrous affront such a *volte face* would offer to the traditional spirit, especially to the spirit that has put on the earthly garment of the Church. It was this subtle change of psychic standpoint that caused the old alchemists to resort to deliberate mystification, and that sponsored all kinds of heresies. Hence it is only logical for the father to reject the dreamer—it amounts to nothing less than excommunication. (Be it noted that the dreamer is a Roman Catholic.) By acknowledging the reality of the psyche and making it a co-determining ethical factor in our lives, we offend against the spirit of convention which for centuries has regulated psychic life from outside by means of institutions as well as by reason. Not that unreasoning instinct rebels of itself against firmly established order; by the strict logic of its own inner laws it is itself of the firmest structure imaginable and, in addition, the creative foundation of all binding order. But just because this foundation is creative, all order which proceeds from it—even in its most “divine” form—is a phase, a stepping-stone. Despite appearances to the contrary, the establishment of order and the dissolution of what has been established are at bottom beyond human control. The secret is that only that which can destroy itself is truly alive. It is well that these things are difficult to understand and thus enjoy a wholesome concealment, for weak heads are only too easily addled by them and thrown into confusion. From all these dangers dogma—whether ecclesiastical, philosophical, or scientific—offers effective protection, and, looked at from a social point of view, excommunication is a necessary and useful consequence.

[94] The water that the mother, the unconscious, pours into the basin belonging to the anima is an excellent symbol for the living power of the psyche (cf. [fig. 152](#)). The old alchemists never tired of devising new and expressive synonyms for this water. They called it *aqua nostra*, *mercurius vivus*, *argentum vivum*, *vinum ardens*, *aqua vitae*, *succus lunariae*, and so on, by which they meant a living being not devoid of substance, as opposed to the rigid immateriality of mind in the abstract. The expression *succus lunariae* (sap of the moon-plant) refers clearly enough to the nocturnal origin of the water, and *aqua nostra*, like *mercurius vivus*, to its earthliness ([fig. 27](#)). *Acetum fontis* is a powerful corrosive water that dissolves all created things and at the same time leads to the most durable of all products, the mysterious *lapis*.

[95] These analogies may seem very far-fetched. But let me refer the reader to dreams 13 and 14 in the next section (pars. 154 and 158), where the water symbolism is taken up again. The importance of the action “for the outside world,” noted by the

dreamer himself, points to the collective significance of the dream, as also does the fact—which had a far-reaching influence on the conscious attitude of the dreamer—that he is “rejected by the father.”

[96] The saying “extra ecclesiam nulla salus”—outside the Church there is no salvation—rests on the knowledge that an institution is a safe, practicable highway with a visible or definable goal, and that no paths and no goals can be found outside it. We must not underestimate the devastating effect of getting lost in the chaos, even if we know that it is the *sine qua non* of any regeneration of the spirit and the personality.

27. Life-renewing influence of the conjoined sun and moon on the bath.—Milan, Biblioteca Ambrosiana, Codex I

16. DREAM:

[97] *An ace of clubs lies before the dreamer. A seven appears beside it.*

[98] The ace, as “1,” is the lowest card but the highest in value. The ace of clubs, being in the form of a cross, points to the Christian symbol.²⁷ Hence in Swiss-German the club is often called *Chrüüz* (cross). At the same time the three leaves

contain an allusion to the threefold nature of the one God. Lowest and highest are beginning and end, alpha and omega.

[99] The seven appears after the ace of clubs and not before. Presumably the idea is: first the Christian conception of God, and then the seven (stages). The seven stages symbolize the transformation (fig. 28) which begins with the symbolism of Cross and Trinity, and, judging by the earlier archaic allusions in dreams 7 and 13, culminates in the *solificatio*. But this solution is not hinted at here. Now, we know that the regression to the Helios of antiquity vainly attempted by Julian the Apostate was succeeded in the Middle Ages by another movement that was expressed in the formula “per crucem ad rosam” (through the cross to the rose), which was later condensed into the “Rosie Crosse” of the Rosicrucians. Here the essence of the heavenly Sol descends into the flower—earth’s answer to the sun’s countenance (fig. 29). The solar quality has survived in the symbol of the “golden flower” of Chinese alchemy.²⁸ The well-known “blue flower” of the Romantics might well be the last nostalgic perfume of the “rose”; it looks back in true Romantic fashion to the medievalism of ruined cloisters, yet at the same time modestly proclaims something new in earthly loveliness. But even the golden brilliance of the sun had to submit to a descent, and it found its analogy in the glitter of earthly gold—although, as *aurum nostrum*, this was far removed from the gross materiality of the metal, at least for subtler minds. One of the most interesting of the alchemical texts is the *Rosarium philosophorum*, subtitled *Secunda pars alchimiae de lapide philosophico vero modo praeparando... Cum figuris rei perfectionem ostendentibus* (1550).²⁹ The anonymous author was very definitely a “philosopher” and was apparently aware that alchemy was not concerned with ordinary goldmaking but with a philosophical secret. For these alchemists the gold undoubtedly had a symbolic nature³⁰ and was therefore distinguished by such attributes as *vitreum* or *philosophicum*. It was probably owing to its all too obvious analogy with the sun that gold was denied the highest philosophical honour, which fell instead to the *lapis philosophorum*. The transformer is above the transformed, and transformation is one of the magical properties of the marvellous stone. The *Rosarium philosophorum* says: “For our stone, namely the living western quicksilver which has placed itself above the gold and vanquished it, is that which kills and quickens.”³¹ As to the “philosophical” significance of the *lapis*, the following quotation from a treatise ascribed to Hermes is particularly enlightening: “Understand, ye sons of the wise, what this exceeding precious stone proclaims ... “And my light conquers every light, and my virtues are more excellent than all virtues.... I beget the light, but the darkness too is of my nature. ...”³²

17. DREAM:

[100] *The dreamer goes for a long walk, and finds a blue flower on the way.*

[101] To go for a walk is to wander along paths that lead nowhere in particular; it is both a search and a succession of changes. The dreamer finds a blue flower blossoming aimlessly by the wayside, a chance child of nature, evoking friendly memories of a more romantic and lyrical age, of the youthful season when it came to bud, when the scientific view of the world had not yet broken away from the world of actual experience—or rather when this break was only just beginning and the eye looked back to what was already the past. The flower is in fact like a friendly sign, a numinous emanation from the unconscious, showing the dreamer, who as a modern man has been robbed of security and of participation in all the things that lead to man's salvation, the historical place where he can meet friends and brothers of like mind, where he can find the seed that wants to sprout in him too. But the dreamer knows nothing as yet of the old solar gold which connects the innocent flower with the obnoxious black art of alchemy and with the blasphemous pagan idea of the *solificatio*. For the “golden flower of alchemy” (fig. 30) can sometimes be a blue flower: “The sapphire blue flower of the hermaphrodite.”³³

30. The red-and-white rose, the “golden flower” of alchemy, as birthplace of the *filius philosophorum*.—“Ripley Scrowle” (MS., 1588)

18. DREAM:

[102] A man offers him some golden coins in his outstretched hand. The dreamer indignantly throws them to the ground and immediately afterwards deeply regrets his action. A variety performance then takes place in an enclosed space.

[103] The blue flower has already begun to drag its history after it. The “gold” is offered and is indignantly refused. Such a misinterpretation of the *aurum philosophicum* is easy to understand. But hardly has it happened when there comes a pang of remorse that the precious secret has been rejected and a wrong answer given to the riddle of the Sphinx. The same thing happened to the hero in Meyrink’s *Golem*, when the ghost offered him a handful of grain which he spurned. The gross materiality of the yellow metal with its odious fiscal flavour, and the mean look of the grain, make both rejections comprehensible enough—but that is precisely why it is so hard to find the *lapis*: it is *exilis*, uncomely, it is thrown out into the street or on the dunghill, it is the commonest thing to be picked up anywhere—“in planitie, in montibus et aquis.” It has this “ordinary” aspect in common with Spitteler’s jewel in *Prometheus and Epimetheus*, which, for the same reason, was also not recognized by the worldly wise. But “the stone which the builders rejected, the same is become the head of the corner,” and the intuition of this possibility arouses the liveliest regret in the dreamer.

[104] It is all part of the banality of its outward aspect that the gold is minted, i.e., shaped into coins, stamped, and valued. Applied psychologically, this is just what Nietzsche refuses to do in his *Zarathustra*: to give names to the virtues. By being shaped and named, psychic life is broken down into coined and valued units. But this is possible only because it is intrinsically a great variety of things, an accumulation of unintegrated hereditary units. Natural man is not a “self”—he is the mass and a particle in the mass, collective to such a degree that he is not even sure of his own

ego. That is why since time immemorial he has needed the transformation mysteries to turn him into something, and to rescue him from the animal collective psyche, which is nothing but a *variété*.

[105] But if we reject this unseemly *variété* of man “as he is,” it is impossible for him to attain integration, to become a self.³⁴ And that amounts to spiritual death. Life that just happens in and for itself is not real life; it is real only when it is *known*. Only a unified personality can experience life, not that personality which is split up into partial aspects, that bundle of odds and ends which also calls itself “man.” The dangerous plurality already hinted at in dream 4 (par. 58) is compensated in vision 5 (par. 62), where the snake describes a magic circle and thus marks off the taboo area, the *temenos* (fig. 31). In much the same way and in a similar situation the *temenos* reappears here, drawing the “many” together for a united variety performance—a gathering that has the appearance of an entertainment, though it will shortly lose its entertaining character: the “play of goats” will develop into a “tragedy.” According to all the analogies, the satyr play was a mystery performance, from which we may assume that its purpose, as everywhere, was to re-establish man’s connection with his natural ancestry and thus with the source of life, much as the obscene stories, αἰσχρολογία, told by Athenian ladies at the mysteries of Eleusis, were thought to promote the earth’s fertility.³⁵ (Cf. also Herodotus’ account³⁶ of the exhibitionistic performances connected with the Isis festivities at Bubastis.)

31. The symbolic city as centre of the earth, its four protecting walls laid out in a square: a typical *temenos*.—Maier, *Vitorium* (1651)

[106] The allusion to the compensatory significance of the *temenos*, however, is still wrapped in obscurity for the dreamer. As might be imagined, he is much more concerned with the danger of spiritual death, which is conjured up by his rejection of the historical context.

19. VISUAL IMPRESSION:

[107] *A death's-head. The dreamer wants to kick it away, but cannot. The skull gradually changes into a red ball, then into a woman's head which emits light.*

[108] The skull soliloquies of Faust and of Hamlet are reminders of the appalling senselessness of human life when "sicklied o'er with the pale cast of thought." It was traditional opinions and judgments that caused the dreamer to dash aside the doubtful and uninviting-looking offerings. But when he tries to ward off the sinister vision of the death's-head it is transformed into a red ball, which we may take as an allusion to the rising sun, since it at once changes into the shining head of a woman, reminding us directly of vision 7 (par. 67). Evidently an enantiodromia, a play of opposites,³⁷ has occurred: after being rejected the unconscious insists on itself all the more

strongly. First it produces the classical symbol for the unity and divinity of the self, the sun; then it passes to the motif of the unknown woman who personifies the unconscious. Naturally this motif includes not merely the archetype of the anima but also the dreamer's relationship to a real woman, who is both a human personality and a vessel for psychic projections. ("Basin of the sister" in dream 15, par. 91.)

[109] In Neoplatonic philosophy the soul has definite affinities with the sphere. The soul substance is laid round the concentric spheres of the four elements above the fiery heaven.³⁸

20. VISUAL IMPRESSION:

[110] *A globe. The unknown woman is standing on it and worshipping the sun.*

[111] This impression, too, is an amplification of vision 7 (par. 67). The rejection in dream 18 evidently amounted to the destruction of the whole development up to that point. Consequently the initial symbols reappear now, but in amplified form. Such enantiodromias are characteristic of dream-sequences in general. Unless the conscious mind intervened, the unconscious would go on sending out wave after wave without result, like the treasure that is said to take nine years, nine months, and nine nights to come to the surface and, if not found on the last night, sinks back to start all over again from the beginning.

[112] The globe probably comes from the idea of the red ball. But, whereas this is the sun, the globe is rather an image of the earth, upon which the anima stands worshipping the sun (fig. 32). Anima and sun are thus distinct, which points to the fact that the sun represents a different principle from that of the anima. The latter is a personification of the unconscious, while the sun is a symbol of the source of life and the ultimate wholeness of man (as indicated in the *solificatio*). Now, the sun is an antique symbol that is still very close to us. We know also that the early Christians had some difficulty in distinguishing the ἥλιος ἀνατολῆς (the rising sun) from Christ.³⁹ The dreamer's anima still seems to be a sun-worshipper, that is to say, she belongs to the ancient world, and for the following reason: the conscious mind with its rationalistic attitude has taken little or no interest in her and therefore made it impossible for the anima to become modernized (or better, Christianized). It almost seems as if the differentiation of the intellect that began in the Christian Middle Ages, as a result of scholastic training, had driven the anima to regress to the ancient world. The Renaissance gives us evidence enough for this, the clearest of all being the *Hypnerotomachia* of Francesco Colonna, where Poliphilo meets his anima, the lady Polia, at the court of Queen Venus, quite untouched by Christianity and graced with all the "virtues" of antiquity. The book was rightly regarded as a mystery text.⁴⁰ With this anima, then, we plunge straight into the ancient world. So that I would not think anyone mistaken who interpreted the rejection of the gold in dream 18 *ex effectu* as

an attempt to escape this regrettable and unseemly regression to antiquity. Certain vital doctrines of alchemical philosophy go back textually to late Greco-Roman syncretism, as Ruska, for instance, has sufficiently established in the case of the *Turba*. Hence any allusion to alchemy wafts one back to the ancient world and makes one suspect regression to pagan levels.

32. *Coniunctio solis el lunae*.—Trismosin, “*Splendor solis*” (MS., 1582)

[113] It may not be superfluous to point out here, with due emphasis, that consciously the dreamer had no inkling of all this. But in his unconscious he is immersed in this sea of historical associations, so that he behaves in his dreams as if he were fully cognizant of these curious excursions into the history of the human mind. He is in fact an unconscious exponent of an autonomous psychic development, just like the medieval alchemist or the classical Neoplatonist. Hence one could say—*cum grano salis*—that history could be constructed just as easily from one’s own unconscious as from the actual texts.

21. VISUAL IMPRESSION:

[114] *The dreamer is surrounded by nymphs. A voice says, “We were always there, only you did not notice us.” (fig. 33).*

[115] Here the regression goes back even further, to an image that is unmistakably classical. At the same time the situation of dream 4 (par. 58) is taken up again and also the situation of dream 18, where the rejection led to the compensatory enantiodromia in vision 19. But here the image is amplified by the hallucinatory recognition that the drama has always existed although unnoticed until now. The realization of this fact joins the unconscious psyche to consciousness as a coexistent entity. The phenomenon of the “voice” in dreams always has for the dreamer the final and indisputable character of the *αὐτὸς ἔφα*,⁴¹ i.e., the voice expresses some truth or condition that is beyond all doubt. The fact that a sense of the remote past has been established, that contact has been made with the deeper layers of the psyche, is accepted by the unconscious personality of the dreamer and communicates itself to his conscious mind as a feeling of comparative security.

33. Poliphilo surrounded by nymphs.—Béroalde de Verville, *Le Songe de Poliphile* (1600)

[116] Vision 20 represents the anima as a sun-worshipper. She has as it were stepped out of the globe or spherical form (cf. fig. 32). But the first spherical form was the skull. According to tradition the head or brain is the seat of the *anima intellectualis*. For this reason too the alchemical vessel must be round like the head, so that what comes out of the vessel shall be equally “round,” i.e., simple and perfect like the *anima mundi*.⁴² The work is crowned by the production of the *rotundum*, which, as the *materia globosa*, stands at the beginning and also at the end, in the form of gold (fig. 34; cf. also figs. 115, 164, 165). Possibly the nymphs who “were always there” are an allusion to this. The regressive character of the vision is also apparent from the fact that there is a multiplicity of female forms, as in dream 4 (par. 58). But this time they are of a classical nature, which, like the sun-worship in vision 20, points to an

historical regression. The splitting of the anima into many figures is equivalent to dissolution into an indefinite state, i.e., into the unconscious, from which we may conjecture that a relative dissolution of the conscious mind is running parallel with the historical regression (a process to be observed in its extreme form in schizophrenia). The dissolution of consciousness or, as Janet calls it, *abaissement du niveau mental*, comes very close to the primitive state of mind. A parallel to this scene with the nymphs is to be found in the Paracelsan *regio nymphididica*, mentioned in the treatise *De vita longa* as the initial stage of the individuation process.⁴³

34. The *nigredo* standing on the *rotundum*, i.e., *sol niger*.—Mylius, *Philosophia reformata* (1622)

22. VISUAL IMPRESSION:

[117] *In a primeval forest. An elephant looms up menacingly. Then a large ape-man, bear, or cave-man threatens to attack the dreamer with a club (fig. 35). Suddenly the “man with the pointed beard” appears and stares at the aggressor, so that he is spellbound. But the dreamer is terrified. The voice says, “Everything must be ruled by the light.”*

[118] The multiplicity of nymphs has broken down into still more primitive components; that is to say, the animation of the psychic atmosphere has very considerably increased, and from this we must conclude that the dreamer’s isolation from his contemporaries has increased in proportion. This intensified isolation can be traced back to vision 21, where the union with the unconscious was realized and accepted as a fact. From the point of view of the conscious mind this is highly irrational; it constitutes a secret which must be anxiously guarded, since the

justification for its existence could not possibly be explained to any so-called reasonable person. Anyone who tried to do so would be branded as a lunatic. The discharge of energy into the environment is therefore considerably impeded, the result being a surplus of energy on the side of the unconscious: hence the abnormal increase in the autonomy of the unconscious figures, culminating in aggression and real terror. The earlier entertaining variety performance is beginning to become uncomfortable. We find it easy enough to accept the classical figures of nymphs thanks to their aesthetic embellishments; but we have no idea that behind these gracious figures there lurks the Dionysian mystery of antiquity, the satyr play with its tragic implications: the bloody dismemberment of the god who has become an animal. It needed a Nietzsche to expose in all its feebleness Europe's schoolboy attitude to the ancient world. But what did Dionysus mean to Nietzsche? What he says about it must be taken seriously; what it did to him still more so. There can be no doubt that he knew, in the preliminary stages of his fatal illness, that the dismal fate of Zagreus was reserved for him. Dionysus is the abyss of impassioned dissolution, where all human distinctions are merged in the animal divinity of the primordial psyche—a blissful and terrible experience. Humanity, huddling behind the walls of its culture, believes it has escaped this experience, until it succeeds in letting loose another orgy of bloodshed. All well-meaning people are amazed when this happens and blame high finance, the armaments industry, the Jews, or the Freemasons.⁴⁴

35. A medieval version of the “wild man.”—Codex Urbanus Latinus 899 (15th cent.)

[119] At the last moment, friend “Pointed Beard” appears on the scene as an obliging *deus ex machina* and exorcizes the annihilation threatened by the formidable ape-man. Who knows how much Faust owed his imperturbable curiosity, as he gazed on the spooks and bogeys of the classical *Walpurgisnacht*, to the helpful presence of Mephisto and his matter-of-fact point of view! Would that more people could remember the scientific or philosophical reflections of the much-abused intellect at the right moment! Those who abuse it lay themselves open to the suspicion of never having experienced anything that might have taught them its value and shown them why mankind has forged this weapon with such unprecedented effort. One has to be singularly out of touch with life not to notice such things. The intellect may be the devil (fig. 36), but the devil is the “strange son of chaos” who can most readily be trusted to deal effectively with his mother. The Dionysian experience will give this devil plenty to do should he be looking for work, since the resultant settlement with the unconscious far outweighs the labours of Hercules. In my opinion it presents a whole world of problems which the intellect could not settle even in a hundred years—the very reason why it so often goes off for a holiday to recuperate on lighter tasks. And this is also the reason why the psyche is forgotten so often and so long, and why the intellect makes such frequent use of magical apotropaic words like “occult” and

“mystic,” in the hope that even intelligent people will think that these mutterings really mean something.

[120] The voice finally declares, “Everything must be ruled by the light,” which presumably means the light of the discerning, conscious mind, a genuine *illuminatio* honestly acquired. The dark depths of the unconscious are no longer to be denied by ignorance and sophistry—at best a poor disguise for common fear—nor are they to be explained away with pseudo-scientific rationalizations. On the contrary it must now be admitted that things exist in the psyche about which we know little or nothing at all, but which nevertheless affect our bodies in the most obstinate way, and that they possess at least as much reality as the things of the physical world which ultimately we do not understand either. No line of research which asserted that its subject was unreal or a “nothing but” has ever made any contribution to knowledge.

36. The devil as aerial spirit and ungodly intellect.—Illustration by Eugène Delacroix (1799–1863) for *Faust*, [Part I](#)

[121] With the active intervention of the intellect a new phase of the unconscious process begins: the conscious mind must now come to terms with the figures of the unknown woman (“anima”), the unknown man (“the shadow”), the wise old man (“mana personality”),⁴⁵ and the symbols of the self. The last named are dealt with in the following section.

37. The seven-petaled flower.—Boschius, *Symbolographia* (1702)

38. Mercurius as virgo standing on the gold (*sol*) and silver (*luna*) fountain, with the dragon as her son.—Thomas Aquinas (pseud.), “*De alchimia*” (MS., 16th cent.)

39. Shri-Yantra

3. THE SYMBOLISM OF THE MANDALA

I. CONCERNING THE MANDALA

[122] As I have already said, I have put together, out of a continuous series of some four hundred dreams and visions, all those that I regard as mandala dreams. The term “mandala” was chosen because this word denotes the ritual or magic circle used in Lamaism and also in Tantric yoga as a *yantra* or aid to contemplation (fig. 39). The Eastern mandalas used in ceremonial are figures fixed by tradition; they may be drawn or painted or, in certain special ceremonies, even represented plastically.¹

[123] In 1938, I had the opportunity, in the monastery of Bhutia Busty, near Darjeeling, of talking with a Lamaic *rimpoche*, Lingdam Gomchen by name, about the *khilkor* or mandala. He explained it as a *dmigs-pa* (pronounced “migpa”), a mental image which can be built up only by a fully instructed lama through the power of imagination. He said that no mandala is like any other, they are all individually different. Also, he said, the mandalas to be found in monasteries and temples were of no particular significance because they were external representations only. The true mandala is always an inner image, which is gradually built up through (active) imagination, at such times when psychic equilibrium is disturbed or when a thought cannot be found and must be sought for, because it is not contained in holy doctrine. The aptness of this explanation will become apparent in the course of my exposition. The alleged free and individual formation of the mandala, however, should be taken with a considerable grain of salt, since in all Lamaic mandalas there predominates not only a certain unmistakable style but also a traditional structure. For instance they are all based on a quaternary system, a *quadratura circuli*, and their contents are invariably derived from Lamaic dogma. There are texts, such as the Shri-Chakra-Sambhara Tantra,² which contain directions for the construction of these “mental images.” The *khilkor* is strictly distinguished from the so-called *sidpe-korlo*, or World Wheel (fig. 40), which represents the course of human existence in its various forms as conceived by the Buddhists. In contrast to the *khilkor*, the World Wheel is based on a ternary system in that the three world-principles are to be found in its centre: the cock, equalling concupiscence; the serpent, hatred or envy; and the pig, ignorance or unconsciousness (*avidya*). Here we come upon the dilemma of three and four, which also crops up in Buddhism. We shall meet this problem again in the further course of our dream-series.

[124] It seems to me beyond question that these Eastern symbols originated in dreams and visions, and were not invented by some Mahayana church father. On the

contrary, they are among the oldest religious symbols of humanity (figs 41–44) and may even have existed in paleolithic times (cf. the Rhodesian rock-paintings). Moreover they are distributed all over the world, a point I need not insist on here. In this section I merely wish to show from the material at hand how mandalas come into existence.

40. Tibetan World Wheel (*sidpe-korlo*)

[125] The mandalas used in ceremonial are of great significance because their centres usually contain one of the highest religious figures: either Shiva himself—often in the embrace of Shakti—or the Buddha, Amitabha, Avalokiteshvara, or one of the great Mahayana teachers, or simply the *dorje*, symbol of all the divine forces together, whether creative or destructive (fig. 43). The text of the *Golden Flower*, a product of Taoist syncretism, specifies in addition certain “alchemical” properties of this centre after the manner of the *lapis* and the *elixir vitae*, so that it is in effect a Φάρμακον ἀθανασίας.³

41. The Aztec "Great Calendar Stone"

[126] It is not without importance for us to appreciate the high value set upon the mandala, for it accords very well with the paramount significance of individual mandala symbols which are characterized by the same qualities of a—so to speak—"metaphysical" nature.⁴ Unless everything deceives us, they signify nothing less than a psychic centre of the personality not to be identified with the ego. I have observed these processes and their products for close on thirty years on the basis of very extensive material drawn from my own experience. For fourteen years I neither wrote nor lectured about them so as not to prejudice my observations. But when, in 1929, Richard Wilhelm laid the text of the *Golden Flower* before me, I decided to publish at least a foretaste of the results. One cannot be too cautious in these matters, for what with the imitative urge and a positively morbid avidity to possess themselves of outlandish feathers and deck themselves out in this exotic plumage, far too many people are misled into snatching at such "magical" ideas and applying them externally, like an ointment. People will do anything, no matter how absurd, in order to avoid facing their own souls. They will practise Indian yoga and all its exercises, observe a strict regimen of diet, learn theosophy by heart, or mechanically repeat mystic texts from the literature of the whole world—all because they cannot get on with themselves and have not the slightest faith that anything useful could ever come out of their own souls. Thus the soul has gradually been turned into a Nazareth from which nothing good can come. Therefore let us fetch it from the four corners of the earth—the more far-fetched and bizarre it is the better! I have no wish to disturb such people at their pet pursuits, but when anybody who expects to be taken seriously is deluded enough to think that I use yoga methods and yoga doctrines or that I get my patients, whenever possible, to draw mandalas for the purpose of bringing them to

the “right point”—then I really must protest and tax these people with having read my writings with the most horrible inattention. The doctrine that all evil thoughts come from the heart and that the human soul is a sink of iniquity must lie deep in the marrow of their bones. Were that so, then God had made a sorry job of creation, and it were high time for us to go over to Marcion the Gnostic and depose the incompetent demiurge. Ethically, of course, it is infinitely more convenient to leave God the sole responsibility for such a Home for Idiot Children, where no one is capable of putting a spoon into his own mouth. But it is worth man’s while to take pains with himself, and he has something in his soul that can grow.⁵ It is rewarding to watch patiently the silent happenings in the soul, and the most and the best happens when it is not regulated from outside and from above. I readily admit that I have such a great respect for what happens in the human soul that I would be afraid of disturbing and distorting the silent operation of nature by clumsy interference. That was why I even refrained from observing this particular case myself and entrusted the task to a beginner who was not handicapped by my knowledge—anything rather than disturb the process. The results which I now lay before you are the unadulterated, conscientious, and exact self-observations of a man of unerring intellect, who had nothing suggested to him from outside and who would in any case not have been open to suggestion. Anyone at all familiar with psychic material will have no difficulty in recognizing the authentic character of the results.

42. Mandala containing the Infant Christ carrying the Cross.—Mural painting by Albertus Pictor in the church of Harkeberga, Sweden (c. 1480)

43. Lamaic Vajramandala.—Cf. Jung, “Concerning Mandala Symbolism,” [fig. 1](#)

44. Mexican calendar.—Herrliberger, *Heilige Ceremonien* (1748)

45. Hermes as psychopomp.—Gem in a Roman ring

46, 47. Crowned dragon as tail-eater; two dragons forming a circle and, in the four corners, signs of the four elements.—Eleazar, *Uraltes chymisches Werk* (1760)

[127] For the sake of completeness I will recapitulate the mandala symbols which occur in the initial dreams and visions already discussed:

1. The snake that described a circle round the dreamer (5).
2. The blue flower (17).
3. The man with the gold coins in his hand, and the enclosed space for a variety performance (18).
4. The red ball (19).
5. The globe (20).

[128] The next mandala symbol occurs in the first dream of the new series:⁶

6. DREAM:

An unknown woman is pursuing the dreamer. He keeps running round in a circle.

[129] The snake in the first mandala dream was anticipatory, as is often the case when a figure personifying a certain aspect of the unconscious does or experiences something that the subject himself will experience later. The snake anticipates a circular movement in which the subject is going to be involved; i.e., something is taking place in the unconscious which is perceived as a circular movement, and this occurrence now presses into consciousness so forcefully that the subject himself is gripped by it. The unknown woman or anima representing the unconscious continues to harass the dreamer until he starts running round in circles. This clearly indicates a potential centre which is not identical with the ego and round which the ego revolves.

7. DREAM:

[130] *The anima accuses the dreamer of paying too little attention to her. There is a clock that says five minutes to the hour.*

[131] The situation is much the same: the unconscious pesters him like an exacting woman. The situation also explains the clock, for a clock's hands go round in a circle. Five minutes to the hour implies a state of tension for anybody who lives by the clock: when the five minutes are up he must do something or other. He might even be pressed for time. (The symbol of circular movement—cf. [fig. 13](#)—is always connected with a feeling of tension, as we shall see later.)

8. DREAM:

[132] *On board ship. The dreamer is occupied with a new method of taking his bearings. Sometimes he is too far away and sometimes too near: the right spot is in the middle. There is a chart on which is drawn a circle with its centre.*

[133] Obviously the task set here is to find the centre, the right spot, and this is the centre of a circle. While the dreamer was writing down this dream he remembered that he had dreamed shortly before of shooting at a target (fig. 48): sometimes he shot too high, sometimes too low. The right aim lay in the middle. Both dreams struck him as highly significant. The target is a circle with a centre. Bearings at sea are taken by the apparent rotation of the stars round the earth. Accordingly the dream describes an activity whose aim is to construct or locate an objective centre—a centre outside the subject.

9. DREAM:

[134] *A pendulum clock that goes forever without the weights running down.*

[135] This is a species of clock whose hands move unceasingly, and, since there is obviously no loss due to friction, it is a *perpetuum mobile*, an everlasting movement in a circle. Here we meet with a “metaphysical” attribute. As I have already said, I use this word in a psychological sense, hence figuratively. I mean by this that eternity is a quality predicated by the unconscious, and not a hypostasis. The statement made by the dream will obviously offend the dreamer’s scientific judgment, but this is just what gives the mandala its peculiar significance. Highly significant things are often rejected because they seem to contradict reason and thus set it too arduous a test. The movement without friction shows that the clock is cosmic, even transcendental; at any rate it raises the question of a quality which leaves us in some doubt whether the psychic phenomenon expressing itself in the mandala is under the laws of space and time. And this points to something so entirely different from the empirical ego that the gap between them is difficult to bridge; i.e., the other centre of personality lies on a different plane from the ego since, unlike this, it has the quality of “eternity” or relative timelessness.

10. DREAM:

[136] *The dreamer is in the Peterhofstatt in Zurich with the doctor, the man with the pointed beard, and the “doll woman.” The last is an unknown woman who neither speaks nor is spoken to. Question: To which of the three does the woman belong?*

[137] The tower of St. Peter’s in Zurich has a clock with a strikingly large face. The Peterhofstatt is an enclosed space, a *temenos* in the truest sense of the word, a precinct of the church. The four of them find themselves in this enclosure. The circular dial of the clock is divided into four quarters, like the horizon. In the dream the dreamer represents his own ego, the man with the pointed beard the “employed” intellect (Mephisto), and the “doll woman” the anima. Since the doll is a childish object it is an excellent image for the non-ego nature of the anima, who is further characterized as an object by “not being spoken to.” This negative element (also present in dreams 6 and 7 above) indicates an inadequate relationship between the conscious mind and the unconscious, as also does the question of whom the unknown woman belongs to. The “doctor,” too, belongs to the non-ego; he probably contains a faint allusion to myself, although at that time I had no connections with the dreamer.⁷ The man with the pointed beard, on the other hand, belongs to the ego. This whole situation is reminiscent of the relations depicted in the diagram of functions (fig. 49). If we think of the psychological functions⁸ as arranged in a circle, then the most differentiated function is usually the carrier of the ego and, equally regularly, has an auxiliary function attached to it. The “inferior” function, on the other hand, is unconscious and for that reason is projected into a non-ego. It too has an auxiliary function. Hence it would not be impossible for the four persons in the dream to represent the four functions as components of the total personality (i.e., if we include the unconscious). But this totality is ego plus non-ego. Therefore the centre of the circle which expresses such a totality would correspond not to the ego but to the self as the summation of the total personality. (The centre with a circle is a very well-known allegory of the nature of God.) In the philosophy of the Upanishads the Self is in one aspect the *personal* atman, but at the same time it has a cosmic and metaphysical quality as the *suprapersonal* Atman.⁹

49. Diagram showing the four functions of consciousness. Thinking, the superior function in this case, occupies the centre of the light half of the circle, whereas feeling, the inferior function, occupies the dark half. The two auxiliary functions are partly in the light and partly in the dark

[138] We meet with similar ideas in Gnosticism: I would mention the idea of the Anthropos, the Pleroma, the Monad, and the spark of light (Spinther) in a treatise of the Codex Brucianus:

This same is he [Monogenes] who dwelleth in the Monad, which is in the Setheus, and which came from the place of which none can say where it is.... From Him it is the Monad came, in the manner of a ship, laden with all good things, and in the manner of a field, filled or planted with every kind of tree, and in the manner of a city, filled with all races of mankind.... This is the fashion of the Monad, all these being in it: there are twelve Monads as a crown upon its head.... And to its veil which surroundeth it in the manner of a defence [πύργος = tower] there are twelve gates.... This same is the Mother-City [μητρόπολις] of the Only-begotten [μονογενής].¹⁰

[139] By way of explanation I should add that “Setheus” is a name for God, meaning “creator.” The Monogenes is the Son of God. The comparison of the Monad with a field and a city corresponds to the idea of the *temenos* (fig. 50). Also, the Monad is crowned (cf. the hat which appears in dream 1 of the first series [par. 52] and dream 35 of this series [par. 254]). As “metropolis” (cf. fig. 51) the Monad is feminine, like the *padma* or lotus, the basic form of the Lamaic mandala (the Golden Flower in China and the Rose or Golden Flower in the West). The Son of God, God made manifest, dwells in the flower.¹¹ In the Book of Revelation, we find the Lamb in the centre of the Heavenly Jerusalem. And in our Coptic text we are told that Setheus dwells in the innermost and holiest recesses of the Pleroma, a city with four gates (equivalent to the Hindu City of Brahma on the world-mountain Meru). In each gate there is a Monad.¹² The limbs of the Anthropos born of the Autogenes (=

Monogenes) correspond to the four gates of the city. The Monad is a spark of light (Spinther) and an image of the Father, identical with the Monogenes. An invocation runs: "Thou art the House and the Dweller in the House."¹³ The Monogenes stands on a *tetrapeza*,¹⁴ a table or platform with four pillars corresponding to the quaternion of the four evangelists.¹⁵

50. Baneful spirits attacking the Impregnable Castle.—Fludd, *Summum bonum*(1629)

[140] The idea of the *lapis* has several points of contact with all this. In the *Rosarium* the *lapis* says, quoting Hermes:¹⁶ “I beget the light, but the darkness too is of my nature ... therefore nothing better or more worthy of veneration can come to pass in the world than the conjunction of myself and my son.”¹⁷ Similarly, the Monogenes is called the “dark light,”¹⁸ a reminder of the *sol niger*, the black sun of alchemy¹⁹ (fig. 34).

[141] The following passage from chapter 4 of the “Tractatus aureus” provides an interesting parallel to the Monogenes who dwells in the bosom of the Mother-City and is identical with the crowned and veiled Monad:

But the king reigns, as is witnessed by his brothers, [and] says: “I am crowned, and I am adorned with the diadem; I am clothed with the royal garment, and I bring joy to the heart; for, being chained to the arms and breast of my mother, and to her substance, I cause my substance to hold together and rest; and I compose the invisible from the visible, making the occult to appear; and everything that the philosophers have concealed will be generated from us. Hear then these words, and understand them; keep them, and meditate upon them, and seek for nothing more. Man is generated from the principle of Nature whose inward parts are fleshy, and from no other substance.”

52. Harpokrates on the lotus.—Gnostic gem

53. The tetramorph, the steed of the Church.—Crucifixion in Herrad of Landsberg’s *Hortus deliciarum* (12th cent.)
detail

[142] The “king” refers to the *lapis*. That the *lapis* is the “master” is evident from the following Hermes quotation in the *Rosarium*.²⁰ “Et sic Philosophus non est Magister lapidis, sed potius minister” (And thus the philosopher is not the master of the stone but rather its minister). Similarly the final production of the *lapis* in the form of the crowned hermaphrodite is called the *aenigma regis*.²¹ A German verse refers to the *aenigma* as follows (fig. 54):

Here now is born the emperor of all honour
 Than whom there cannot be born any higher,
 Neither by art nor by the work of nature
 Out of the womb of any living creature.
 Philosophers speak of him as their son
 And everything they do by him is done.²²

[143] The last two lines might easily be a direct reference to the above quotation from Hermes.

[144] It looks as if the idea had dawned on the alchemists that the Son who, according to classical (and Christian) tradition, dwells eternally in the Father and reveals himself as God's gift to mankind, was something that man could produce out of his own nature—with God's help, of course (*Deo concedente*). The heresy of this idea is obvious.

[145] The feminine nature of the inferior function derives from its contamination with the unconscious. Because of its feminine characteristics the unconscious is personified by the anima (that is to say, in men; in women it is masculine).²³

[146] If we assume that this dream and its predecessors really do mean something that justly arouses a feeling of significance in the dreamer, and if we further assume that this significance is more or less in keeping with the views put forward in the commentary, then we would have reached here a high point of introspective intuition whose boldness leaves nothing to be desired. But even the everlasting pendulum clock is an indigestible morsel for a consciousness unprepared for it, and likely to hamper any too lofty flight of thought.

Ænigma Regis.
*Hie ist geboren der Keyser aller ehren/
kein h her mag vber in geboren werden.*

54. Hermaphrodite with three serpents and one serpent. Below, the three-headed Mercurial dragon.—*Rosarium philosophorum*, in *Artis auriferae* (1593)

[147] *The dreamer, the doctor, a pilot, and the unknown woman are travelling by airplane. A croquet ball suddenly smashes the mirror, an indispensable instrument of navigation, and the airplane crashes to the ground. Here again there is the same doubt: to whom does the unknown woman belong?*

[148] Doctor, pilot, and unknown woman are characterized as belonging to the non-ego by the fact that all three of them are strangers. Therefore the dreamer has retained possession only of the differentiated function, which carries the ego; that is, the unconscious has gained ground considerably. The croquet ball is part of a game where the ball is driven under a hoop. Vision 8 of the first series (par. 69) said that people should not go over the rainbow (fly?), but must go *under* it. Those who go over it fall to the ground. It looks as though the flight had been too lofty after all. Croquet is played on the ground and not in the air. We should not rise above the earth with the aid of “spiritual” intuitions and run away from hard reality, as so often happens with people who have brilliant intuitions. We can never reach the level of our intuitions and should therefore not identify ourselves with them. Only the gods can pass over the rainbow bridge; mortal men must stick to the earth and are subject to its laws (cf. [fig. 16](#)). In the light of the possibilities revealed by intuition, man’s earthliness is certainly a lamentable imperfection; but this very imperfection is part of his innate being, of his reality. He is compounded not only of his best intuitions, his highest ideals and aspirations, but also of the odious conditions of his existence, such as heredity and the indelible sequence of memories that shout after him: “You did it, and that’s what you are!” Man may have lost his ancient saurian’s tail, but in its stead he has a chain hanging on to his psyche which binds him to the earth—an anything-but-Homeric chain²⁴ of given conditions which weigh so heavy that it is better to remain bound to them, even at the risk of becoming neither a hero nor a saint. (History gives us some justification for not attaching any absolute value to these collective norms.) That we are bound to the earth does not mean that we cannot grow; on the contrary it is the *sine qua non* of growth. No noble, well-grown tree ever disowned its dark roots, for it grows not only upward but downward as well. The question of where we are going is of course extremely important; but equally important, it seems to me, is the question of *who* is going where. The “who” always implies a “whence.” It takes a certain greatness to gain lasting possession of the heights, but anybody can overreach himself. The difficulty lies in striking the dead centre (cf. dream 8, par. 132). For this an awareness of the two sides of man’s personality is essential, of their respective aims and origins. These two aspects must never be separated through arrogance or cowardice.

[149] The “mirror” as an “indispensable instrument of navigation” doubtless refers to the intellect, which is able to think and is constantly persuading us to identify ourselves with its insights (“reflections”). The mirror is one of Schopenhauer’s

favourite similes for the intellect. The term “instrument of navigation” is an apt expression for this, since it is indeed man’s indispensable guide on pathless seas. But when the ground slips from under his feet and he begins to speculate in the void, seduced by the soaring flights of intuition, the situation becomes dangerous (fig. 55).

[150] Here again the dreamer and the three dream figures form a quaternity. The unknown woman or anima always represents the “inferior,” i.e., the undifferentiated function, which in the case of our dreamer is feeling. The croquet ball is connected with the “round” motif and is therefore a symbol of wholeness, that is, of the self, here shown to be hostile to the intellect (the mirror). Evidently the dreamer “navigates” too much by the intellect and thus upsets the process of individuation. In *De vita longa*, Paracelsus describes the “four” as *Scaiolae*, but the self as Adech (from Adam=the first man). Both, as Paracelsus emphasizes, cause so many difficulties in the “work” that one can almost speak of Adech as hostile.²⁵

12. DREAM:

[151] *The dreamer finds himself with his father, mother, and sister in a very dangerous situation on the platform of a tram-car.*

[152] Once more the dreamer forms a quaternity with the other dream figures. He has fallen right back into childhood, a time when we are still a long way from wholeness. Wholeness is represented by the family, and its components are still projected upon the members of the family and personified by them. But this state is dangerous for the adult because regressive: it denotes a splitting of personality which primitive man experiences as the perilous “loss of soul.” In the break-up the personal components that have been integrated with such pains are once more sucked into the outside world. The individual loses his guilt and exchanges it for infantile innocence; once more he can blame the wicked father for this and the unloving mother for that, and all the time he is caught in this inescapable causal nexus like a fly in a spider’s web, without noticing that he has lost his moral freedom.²⁶ But no matter how much parents and grandparents may have sinned against the child, the man who is really adult will accept these sins as his own condition which has to be reckoned with. Only a fool is interested in other people’s guilt, since he cannot alter it. The wise man learns only from his own guilt. He will ask himself: Who am I that all this should happen to me? To find the answer to this fateful question he will look into his own heart.

55. Faust before the magic mirror.—Rembrandt, etching (c. 1652).

[153] As in the previous dream the vehicle was an airplane, so in this it is a tram. The type of vehicle in a dream illustrates the kind of movement or the manner in which the dreamer moves forward in time—in other words, how he lives his psychic life, whether individually or collectively, whether on his own or on borrowed means, whether spontaneously or mechanically. In the airplane he is flown by an unknown pilot; i.e., he is borne along on intuitions emanating from the unconscious. (The mistake is that the “mirror” is used too much to steer by.) But in this dream he is in a collective vehicle, a tram, which anybody can ride in; i.e., he moves or behaves just like everybody else. All the same he is again one of four, which means that he is in both vehicles on account of his unconscious striving for wholeness.

13. DREAM:

[154] *In the sea there lies a treasure. To reach it, he has to dive through a narrow opening. This is dangerous, but down below he will find a companion. The dreamer takes the plunge into the dark and discovers a beautiful garden in the depths, symmetrically laid out, with a fountain in the centre (fig. 56).*

[155] The “treasure hard to attain” lies hidden in the ocean of the unconscious, and only the brave can reach it. I conjecture that the treasure is also the “companion,” the one who goes through life at our side—in all probability a close analogy to the lonely ego who finds a mate in the self, for at first the self is the strange non-ego. This is the theme of the magical travelling companion, of whom I will give three famous examples: the disciples on the road to Emmaus, Krishna and Arjuna in the Bhagavad Gita, Moses and El-Khidr in Sura 18 of the Koran.²⁷ I conjecture further that the treasure in the sea, the companion, and the garden with the fountain are all one and the same thing: the self. For the garden is another *temenos*, and the fountain is the source of “living water” mentioned in John 7 : 38, which the Moses of the Koran also sought and found, and beside it El-Khidr,²⁸ “one of Our servants whom We had endowed with Our grace and wisdom” (Sura 18). And the legend has it that the ground round about El-Khidr blossomed with spring flowers, although it was desert. In Islam, the plan of the *temenos* with the fountain developed under the influence of early Christian architecture into the court of the mosque with the ritual wash-house in the centre (e.g., Ahmed ibn-Tulun in Cairo). We see much the same thing in our Western cloisters with the fountain in the garden. This is also the “rose garden of the philosophers,” which we know from the treatises on alchemy and from many beautiful engravings. “The Dweller in the House” (cf. commentary to dream 10, par. 139) is the “companion.” The centre and the circle, here represented by fountain and garden, are analogues of the *lapis*, which is among other things a living being (cf. [figs. 25, 26](#)). In the *Rosarium* the *lapis* says: “Protege me, protegam te. Largire mihi ius meum, ut te adiuvem” (Protect me and I will protect you. Give me my due that I may help you).²⁹ Here the *lapis* is nothing less than a good friend and helper who helps those that help him, and this points to a compensatory relationship. (I would call to mind what was said in the commentary to dream 10, pars. 138ff., more particularly the Monogenes-*lapis*-self parallel.)

[156] The crash to earth thus leads into the depths of the sea, into the unconscious, and the dreamer reaches the shelter of the *temenos* as a protection against the splintering of personality caused by his regression to childhood. The situation is rather like that of dream 4 and vision 5 in the first series (pars. 58 and 62) where the magic circle warded off the lure of the unconscious and its plurality of female forms. (The dangers of temptation approach Poliphilo in much the same way at the beginning of his *nekyia*.)

56. Fountain of youth.—Codex de Sphaera (Modena, 15th cent.)

[157] The source of life is, like El-Khidr, a good companion, though it is not without its dangers, as Moses of old found to his cost, according to the Koran. It is the symbol of the life force that eternally renews itself (fig. 57; cf. also figs. 25–27, 84) and of the clock that never runs down. An uncanonical saying of our Lord runs: “He who is near unto me is near unto the fire.”³⁰ Just as this esoteric Christ is a source of fire (fig. 58)—probably not without reference to the $\pi\acute{\iota}\rho\ \acute{\alpha}\epsilon\iota\ \zeta\omega\omicron\nu$ of Heraclitus—so the alchemical philosophers conceive their *aqua nostra* to be *ignis* (fire).³¹ The source means not only the flow of life but its warmth, indeed its heat, the secret of passion, whose synonyms are always fiery.³² The all-dissolving *aqua nostra* is an essential ingredient in the production of the *lapis*. But the source is underground and therefore the way leads underneath: only down below can we find the fiery source of life. These depths constitute the natural history of man, his causal link with the world of instinct (cf. fig. 16). Unless this link be rediscovered no *lapis* and no self can come into being.

[158] *The dreamer goes into a chemist's shop with his father. Valuable things can be got there quite cheap, above all a special water. His father tells him about the country the water comes from. Afterwards he crosses the Rubicon by train.*

[159] The traditional apothecary's shop, with its carboys and gallipots, its waters, its *lapis divinus* and *infernalis* and its magisteries, is the last visible remnant of the kitchen paraphernalia of those alchemists who saw in the *donum spiritus sancti*—the precious gift—nothing beyond the chimera of goldmaking. The “special water” is literally the *aqua nostra non vulgi*.³³ It is easy to understand why it is his father who leads the dreamer to the source of life, since he is the natural source of the latter's life. We could say that the father represents the country or soil from which that life sprang. But figuratively speaking, he is the “informing spirit” who initiates the dreamer into the meaning of life and explains its secrets according to the teachings of old. He is a transmitter of the traditional wisdom. But nowadays the fatherly pedagogue fulfils this function only in the dreams of his son, where he appears as the archetypal father figure, the “wise old man.”

57. Imperial bath with the miraculous spring of water, beneath the influence of sun and moon.—“De balneis Puteolanis” (MS., 14th cent.)

58. Christ as the source of fire, with the “flaming” stigmata.—14th-cent. stained-glass window, church at Königsfelden, Aargau, Switzerland

[160] The water of life is easily had: everybody possesses it, though without knowing its value. “Spernitur a stultis”—it is despised by the stupid, because they assume that every good thing is always outside and somewhere else, and that the source in their own souls is a “nothing but.” Like the *lapis*, it is “pretio quoque vilis,” of little price, and therefore, like the jewel in Spitteler’s *Prometheus*, it is rejected by everyone from the high priest and the academicians down to the very peasants, and “in viam eiectus,” flung out into the street, where Ahasuerus picks it up and puts it into his pocket. The treasure has sunk down again into the unconscious.

[161] But the dreamer has noticed something and with vigorous determination crosses the Rubicon. He has realized that the flux and fire of life are not to be underrated and are absolutely necessary for the achievement of wholeness. But there is no recrossing the Rubicon.

15. DREAM:

[162] *Four people are going down a river: the dreamer, his father, a certain friend, and the unknown woman.*

[163] In so far as the “friend” is a definite person well known to the dreamer, he belongs, like the father, to the conscious world of the ego. Hence something very important has happened: in dream 11 the unconscious was three against one, but now the situation is reversed and it is the dreamer who is three against one (the latter being the unknown woman). The unconscious has been depotentiated. The reason for this is that by “taking the plunge” the dreamer has connected the upper and the lower regions—that is to say, he has decided not to live only as a bodiless abstract being but to accept the body and the world of

instinct, the reality of the problems posed by love and life, and to act accordingly.³⁴ This was the Rubicon that was crossed. Individuation, becoming a self, is not only a spiritual problem, it is the problem of all life.

16. DREAM:

[164] *Many people are present. They are all walking to the left around a square. The dreamer is not in the centre but to one side. They say that a gibbon is to be reconstructed.*

[165] Here the square appears for the first time. Presumably it arises from the circle with the help of the four people. (This will be confirmed later.) Like the *lapis*, the *tinctura rubea*, and the *aurum philosophicum*, the squaring of the circle was a problem that greatly exercised medieval minds. It is a symbol of the *opus alchymicum* (fig. 59), since it breaks down the original chaotic unity into the four elements and then combines them again in a higher unity. Unity is represented by a circle and the four elements by a square. The production of one from four is the result of a process of distillation and sublimation which takes the so-called “circular” form: the distillate is subjected to sundry distillations³⁵ so that the “soul” or “spirit” shall be extracted in its purest state. The product is generally called the “quintessence,” though this is by no means the only name for the ever-hoped-for and never-to-be-discovered “One.” It has, as the alchemists say, a “thousand names,” like the *prima materia*. Heinrich Khunrath has this to say about the circular distillation: “Through Circumrotation or a Circular Philosophical revolving of the Quaternarius, it is brought back to the highest and purest Simplicity of the plusquamperfect Catholic Monad.... Out of the gross and impure One there cometh an exceeding pure and subtile One,” and so forth.³⁶ Soul and spirit must be separated from the body, and this is equivalent to death: “Therefore Paul of Tarsus saith, Cupio dissolvi, et esse cum Christo.³⁷ Therefore, my dear Philosopher, must thou catch the Spirit and Soul of the Magnesia.”³⁸ The spirit (or spirit and soul) is the *ternarius* or number three which must first be separated from its body and, after the purification of the latter, infused back into it.³⁹ Evidently the body is the fourth. Hence Khunrath refers to a passage from Pseudo-Aristotle,⁴⁰ where the circle re-emerges from a triangle set in a square.⁴¹ This circular figure, together with the Uroboros—the dragon devouring itself tail first—is the basic mandala of alchemy.

59. “All things do live in the three / But in the four they merry be.” (Squaring the circle.)—Jamsthaler, *Viatorium spagyricum* (1625)

60. Squaring of the circle to make the two sexes one whole.—Maier, *Scrutinium chymicum* (1687)

[166] The Eastern and more particularly the Lamaic mandala usually contains a square ground-plan of the stupa (fig. 43). We can see from the mandalas constructed in solid form that it is really the plan of a *building*. The square also conveys the idea of a house or temple, or of an inner walled-in space⁴² (cf. below). According to the ritual, stupas must always be circumambulated to the right, because a leftward movement is evil. The left, the “sinister” side, is the unconscious side. Therefore a leftward movement is equivalent to a movement in the direction of the unconscious, whereas a movement to the right is “correct” and aims at consciousness. In the East these unconscious contents have gradually, through long

practice, come to assume definite forms which have to be accepted as such and retained by the conscious mind. Yoga, so far as we know it as an established practice, proceeds in much the same way: it impresses fixed forms on consciousness. Its most important Western parallel is the *Exercitia spiritualia* of Ignatius Loyola, which likewise impress fixed concepts about salvation on the psyche. This procedure is “right” so long as the symbol is still a valid expression of the unconscious situation. The psychological rightness of both Eastern and Western yoga ceases only when the unconscious process—which anticipates future modifications of consciousness—has developed so far that it produces shades of meaning which are no longer adequately expressed by, or are at variance with, the traditional symbol. Then and only then can one say that the symbol has lost its “rightness.” Such a process signifies a gradual shift in man’s unconscious view of the world over the centuries and has nothing whatever to do with intellectual criticisms of this view. Religious symbols are phenomena of *life, plain facts and not intellectual opinions*. If the Church clung for so long to the idea that the sun rotates round the earth, and then abandoned this contention in the nineteenth century, she can always appeal to the psychological truth that for millions of people the sun did revolve round the earth and that it was only in the nineteenth century that any major portion of mankind became sufficiently sure of the intellectual function to grasp the proofs of the earth’s planetary nature. Unfortunately there is no “truth” unless there are people to understand it.

[167] Presumably the leftward circumambulation of the square indicates that the squaring of the circle is a stage on the way to the unconscious, a point of transition leading to a goal lying as yet unformulated beyond it. It is one of those paths to the centre of the non-ego which were also trodden by the medieval investigators when producing the *lapis*. The *Rosarium* says:⁴³ “Out of man and woman make a round circle and extract the quadrangle from this and from the quadrangle the triangle. Make a round circle and you will have the philosophers’ stone”⁴⁴ (figs. 59, 60).

[168] The modern intellect naturally regards all this as poppycock. But this estimate fails to get rid of the fact that such concatenations of ideas do exist and that they even played an important part for many centuries. It is up to psychology to *understand* these things, leaving the layman to rant about poppycock and obscurantism. Many of my critics who call themselves “scientific” behave exactly like the bishop who excommunicated the cockchafers for their unseemly proliferation.

[169] Just as the stupas preserve relics of the Buddha in their innermost sanctuary, so in the interior of the Lamaic quadrangle, and again in the Chinese earth-square, there is a Holy of Holies with its magical agent, the cosmic source of energy, be it the god Shiva, the Buddha, a bodhisattva, or a great teacher. In China it is Ch’ien—heaven—with the four cosmic effluences radiating from it (fig. 61). And equally in the Western mandalas of medieval Christendom the deity is enthroned at the centre, often in the form of the triumphant Redeemer together with the four symbolical figures of the evangelists (fig. 62). The symbol in our dream presents the most violent contrast to these highly metaphysical ideas, for it is a gibbon, unquestionably an ape, that is to be reconstructed in the centre. Here we meet again

the ape who first turned up in vision 22 of the first series (par. 117). In that dream he caused a panic, but he also brought about the helpful intervention of the intellect. Now he is to be “reconstructed,” and this can only mean that the anthropoid—man as an archaic fact—is to be put together again. Clearly the left-hand path does not lead upwards to the kingdom of the gods and eternal ideas, but down into natural history, into the bestial instinctive foundations of human existence. We are therefore dealing, to put it in classical language, with a Dionysian mystery.

61. The pearl as symbol of Ch'ien, surrounded by the four cosmic effluences (dragons).
—Chinese bronze mirror of the T'ang Period (7th to 9th cent.)

62. Rectangular mandala with cross, the Lamb in the centre, surrounded by the four evangelists and the four rivers of Paradise. In the medallions, the four cardinal virtues.
—Zwiefalten Abbey breviary (12th cent.)

[170] The square corresponds to the *temenos* (fig. 31), where a drama is taking place—in this case a play of apes instead of satyrs. The inside of the “golden flower” is a “seeding-place” where the “diamond body” is produced. The synonymous term “the ancestral land”⁴⁵ may actually be a hint that this product is the result of integrating the ancestral stages.

[171] The ancestral spirits play an important part in primitive rites of renewal. The aborigines of central Australia even identify themselves with their mythical ancestors of the *alcheringa* period, a sort of Homeric age. Similarly the Pueblo Indians of Taos, in preparation for their ritual dances, identify with the sun, whose sons they are. This atavistic identification with human and animal ancestors can be interpreted psychologically as an integration of the unconscious, a veritable bath of renewal in the life-source where one is once again a fish, unconscious as in sleep, intoxication, and death. Hence the sleep of incubation, the Dionysian orgy, and the ritual death in initiation. Naturally the proceedings always take place in some hallowed spot. We can easily translate these ideas into the concretism of Freudian theory: the *temenos* would then be the womb of the mother and the rite a regression to incest. But these are the neurotic misunderstandings of people who have remained partly infantile and who do not realize that such things have been practised since time immemorial by adults whose activities cannot possibly be explained as a mere

regression to infantilism. Otherwise the highest and most important achievements of mankind would ultimately be nothing but the perverted wishes of children, and the word “childish” would have lost its *raison d’être*.

[172] Since the philosophical side of alchemy was concerned with problems that are very closely related to those which interest the most modern psychology, it might perhaps be worth while to probe a little deeper into the dream motif of the ape that is to be reconstructed in the square. In the overwhelming majority of cases alchemy identifies its transforming substance with the *argentum vivum* or Mercurius. Chemically this term denotes quicksilver, but philosophically it means the *spiritus vitae*, or even the world-soul (cf. fig. 91), so that Mercurius also takes on the significance of Hermes, god of revelation. (This question has been discussed in detail elsewhere.⁴⁶) Hermes is associated with the idea of roundness and also of squareness, as can be seen particularly in Papyrus V (line 401) of the *Papyri Graecae Magicae*,⁴⁷ where he is named *στρογγύλος καὶ τετράγωνος*, “round and square.” He is also called *τετραγώνιον*, “quadrangular.” He is in general connected with the number four; hence there is a *Ἑρμῆς τετρακέφαλος*, a “four-headed Hermes.”⁴⁸ These attributes were known also in the Middle Ages, as the work of Cartari,⁴⁹ for instance, shows. He says:

63. Hermes.—Greek vase painting (Hamilton Collection)

Again, the square figures of Mercury [Hermes] [fig. 63], made up of nothing but a head and a virile member, signify that the Sun is the head of the world, and scatters the seed of all things; while the four sides of the square figure have the same significance as the four-stringed sistrum which was likewise attributed to Mercury, namely, the four quarters of the world or the four seasons of the year; or again, that the two equinoxes and the two solstices make up between them the four parts of the whole zodiac.

64. Christ as Anthropos, standing on the globe, flanked by the four elements.—Glanville, *Le Propriétaire des choses* (1482)

[173] It is easy to see why such qualities made Mercurius an eminently suitable symbol for the mysterious transforming substance of alchemy; for this is round and square, i.e., a totality consisting of four parts (four elements). Consequently the Gnostic quadripartite original man⁵⁰ (fig. 64) as well as Christ Pantokrator is an *imago lapidis* (fig. 65). Western alchemy is mainly of Egyptian origin, so let us first of all turn our attention to the Hellenistic figure of Hermes Trismegistus, who, while standing sponsor to the medieval Mercurius, derives ultimately from the ancient Egyptian Thoth (fig. 66). The attribute of Thoth was the baboon, or again he was represented outright as an ape.⁵¹ This idea was visibly preserved all through the numberless editions of the Book of the Dead right down to the most recent times. It is true that in the existing alchemical texts—which with few exceptions belong to the Christian era—the ancient connection between Thoth-Hermes and the ape has disappeared, but it still existed at the time of the Roman Empire. Mercurius, however, had several things in common with the devil—which we will not enter upon here—and so the ape once more crops up in the vicinity of Mercurius as the *simia Dei* (fig. 67). It is of the essence of the transforming substance to be on the one hand extremely common, even contemptible (this is expressed in the series of attributes it shares with the devil, such as serpent, dragon, raven, lion, basilisk, and eagle), but on the other hand to mean something of great value, not to say divine. For the transformation leads from the depths to the heights, from the bestially archaic and infantile to the mystical *homo maximus*.

65. Tetramorph (Anthropos symbol) standing on two wheels, symbols of the Old and New Testaments.—Mosaic, Vatopedi Monastery, Mt. Athos (1213)

[174] The symbolism of the rites of renewal, if taken seriously, points far beyond the merely archaic and infantile to man's innate psychic disposition, which is the result and deposit of all ancestral life right down to the animal level—hence the ancestor and animal symbolism. The rites are attempts to abolish the separation between the conscious mind and the unconscious, the real source of life, and to bring about a reunion of the individual with the native soil of his inherited, instinctive make-up. Had these rites of renewal not yielded definite results they would not only have died out in prehistoric times but would never have arisen in the first place. The case before us proves that even if the conscious mind is miles away from the ancient conceptions of the rites of renewal, the unconscious still strives to bring them closer in dreams. It is true that without the qualities of autonomy and autarky there would be no consciousness at all, yet these qualities also spell the danger of isolation and stagnation since, by splitting off the unconscious, they bring about an unbearable alienation of instinct. Loss of instinct is the source of endless error and confusion.

66. Ammon-Ra, the Egyptian spirit of the four elements.—Temple of Esneh, Ptolemaic, from Champollion, *Pantheon égyptien*

67. Demon in the shape of a monkey.—“Speculum humanae salvationis” (Cod. Lat. 511, Paris, 14th cent.)

[175] Finally the fact that the dreamer is “not in the centre but to one side” is a striking indication of what will happen to his ego: it will no longer be able to claim the central place but must presumably be satisfied with the position of a satellite, or at least of a planet revolving round the sun. Clearly the important place in the centre is reserved for the gibbon about to be reconstructed. The gibbon belongs to the anthropoids and, on account of its kinship with man, is an appropriate symbol for that part of the psyche which goes down into the subhuman. Further, we have seen from the cynocephalus or dog-headed baboon associated with Thoth-Hermes (fig. 68), the highest among the apes known to the Egyptians, that its godlike affinities make it an equally appropriate symbol for that part of the unconscious which transcends the conscious level. The assumption that the human psyche possesses layers that lie *below* consciousness is not likely to arouse serious opposition. But that there could just as well be layers lying *above* consciousness seems to be a surmise which borders on a *crimen laesae majestatis humanae*. In my experience the conscious mind can claim only a relatively central position and must accept the fact that the unconscious psyche transcends and as it were surrounds it on all sides. Unconscious contents connect it *backwards* with physiological states on the one hand and archetypal data on the other. But it is extended *forwards* by intuitions which are determined partly by archetypes and partly by subliminal perceptions depending on the relativity of time and space in the unconscious. I must leave it to the reader, after thorough consideration of this

dream-series and the problems it opens up, to form his own judgment as to the possibility of such an hypothesis.

[176] The following dream is given unabridged, in its original text:

17. DREAM:

All the houses have something theatrical about them, with stage scenery and decorations. The name of Bernard Shaw is mentioned. The play is supposed to take place in the distant future. There is a notice in English and German on one of the sets:

*This is the universal Catholic Church.
It is the Church of the Lord.
All those who feel that they are the instruments of the Lord
may enter.*

Under this is printed in smaller letters: "The Church was founded by Jesus and Paul"—like a firm advertising its long standing.

I say to my friend, "Come on, let's have a look at this." He replies, "I do not see why a lot of people have to get together when they're feeling religious." I answer, "As a Protestant you will never understand." A woman nods emphatic approval. Then I see a sort of proclamation on the wall of the church. It runs:

Soldiers!

When you feel you are under the power of the Lord, do not address him directly. The Lord cannot be reached by words. We also strongly advise you not to indulge in any discussions among yourselves concerning the attributes of the Lord. It is futile, for everything valuable and important is ineffable.

(Signed) Pope ... (Name illegible)

Now we go in. The interior resembles a mosque, more particularly the Hagia Sophia: no seats—wonderful effect of space; no images, only framed texts decorating the walls (like the Koran texts in the Hagia Sophia). One of the texts reads "Do not flatter your benefactor." The woman who had agreed with me before bursts into tears and cries, "Then there's nothing left!" I reply, "I find it quite right!" but she vanishes. At first I stand with a pillar in front of me and can see nothing. Then I change my position and see a crowd of people. I do not belong to them and stand alone. But they are quite distinct, so that I can see their faces. They all say in unison, "We confess that we are under the power of the Lord. The Kingdom of Heaven is within us." They repeat this three times with great solemnity. Then the organ starts to play and they sing a Bach fugue with chorale. But the original text is omitted; sometimes there is only a sort of coloratura singing, then the words are repealed: "Everything else is paper" (meaning that it does not make a living impression on me). When the chorale has faded away the gemütlich part of the ceremony begins; it is almost like a students' party. The people are all cheerful and equable. We move about, converse, and greet one another, and wine (from an episcopal seminary) is served with other

refreshments. The health of the Church is drunk and, as if to express everybody's pleasure at the increase in membership, a loudspeaker blares out a ragtime melody with the refrain, "Charles is also with us now." A priest explains to me: "These somewhat trivial amusements are officially approved and permitted. We must adapt a little to American methods. With a large crowd such as we have here this is inevitable. But we differ in principle from the American churches by our decidedly anti-ascetic tendency." Thereupon I awake with a feeling of great relief.

68. Thoth as cynocephalus.—From tomb of Amen-her-khopshef, near Der el-Medina, Luxor (XXth dynasty, 12th cent. B.C.)

[177] Unfortunately I must refrain from commenting on this dream as a whole⁵² and confine myself to our theme. The *temenos* has become a sacred building (in accordance with the hint given earlier). The proceedings are thus characterized as "religious." The grotesque-humorous side of the Dionysian mystery comes out in the so-called *gemütlich* part of the ceremony, where wine is served and a toast drunk to the health of the Church. An inscription on the floor of an Orphic-Dionysian shrine puts it very aptly: μόνον μὴ ὕδωρ (Only no water!).⁵³ The Dionysian relics in the Church, such as the fish and wine symbolism, the Damascus chalice, the seal-cylinder with the crucifix and the inscription ΟΡΦΕΟC ΒΑΚΚΙΚΟC,⁵⁴ and much else besides, can be mentioned only in passing.

[178] The "anti-ascetic" tendency clearly marks the point of difference from the Christian Church, here defined as "American" (cf. commentary to dream 14 of the first series). America is the ideal home of the reasonable ideas of the practical intellect, which would

like to put the world to rights by means of a “brain trust.”⁵⁵ This view is in keeping with the modern formula “intellect = spirit,” but it completely forgets the fact that “spirit” was never a human “activity,” much less a “function.” The movement to the left is thus confirmed as a withdrawal from the modern world of ideas and a regression to pre-Christian Dionysos worship, where “asceticism” in the Christian sense is unknown. At the same time the movement does not lead right out of the sacred spot but remains within it; in other words it does not lose its sacramental character. It does not simply fall into chaos and anarchy, it relates the Church directly to the Dionysian sanctuary just as the historical process did, though from the opposite direction. We could say that this regressive development faithfully retreads the path of history in order to reach the pre-Christian level. Hence it is not a relapse but a kind of systematic descent *ad inferos* (fig. 69), a psychological *nekyia*.⁵⁶

[179] I encountered something very similar in the dream of a clergyman who had a rather problematical attitude to his faith: *Coming into his church at night, he found that the whole wall of the choir had collapsed. The altar and ruins were overgrown with vines hanging full of grapes, and the moon was shining in through the gap.*

[180] Again, a man who was much occupied with religious problems had the following dream: *An immense Gothic cathedral, almost completely dark. High Mass is being celebrated. Suddenly the whole wall of the aisle collapses. Blinding sunlight bursts into the interior together with a large herd of bulls and cows.* This setting is evidently more Mithraic, but Mithras is associated with the early Church in much the same way Dionysos is.

69. Dante and Virgil on their journey to the underworld.—Illumination for the *Inferno*, Canto XVII, Codex Urbanus Latinus 365 (15th cent.)

[181] Interestingly enough, the church in our dream is a syncretistic building, for the Hagia Sophia is a very ancient Christian church which, however, served as a mosque until quite recently. It therefore fits in very well with the purpose of the dream: to attempt a combination of Christian and Dionysian religious ideas. Evidently this is to come about

without the one excluding the other, without any values being destroyed. This is extremely important, since the reconstruction of the “gibbon” is to take place in the sacred precincts. Such a sacrilege might easily lead to the dangerous supposition that the leftward movement is a *diabolica fraus* and the gibbon the devil—for the devil is in fact regarded as the “ape of God.” The leftward movement would then be a perversion of divine truth for the purpose of setting up “His Black Majesty” in place of God. But the unconscious has no such blasphemous intentions; it is only trying to restore the lost Dionysos who is somehow lacking in modern man (*pace* Nietzsche!) to the world of religion. At the end of vision 22 (par. 117), where the ape first appears, it was said that “everything must be ruled by the light,” and everything, we might add, includes the Lord of Darkness with his horns and cloven hoof—actually a Dionysian corybant who has rather unexpectedly risen to the rank of Prince.

[182] The Dionysian element has to do with emotions and affects which have found no suitable religious outlets in the predominantly Apollonian cult and ethos of Christianity. The medieval carnivals and *jeux de paume* in the Church were abolished relatively early; consequently the carnival became secularized and with it divine intoxication vanished from the sacred precincts. Mourning, earnestness, severity, and well-tempered spiritual joy remained. But intoxication, that most direct and dangerous form of possession, turned away from the gods and enveloped the human world with its exuberance and pathos. The pagan religions met this danger by giving drunken ecstasy a place within their cult. Heraclitus doubtless saw what was at the back of it when he said, “But Hades is that same Dionysos in whose honour they go mad and keep the feast of the wine-vat.” For this very reason orgies were granted religious license, so as to exorcise the danger that threatened from Hades. Our solution, however, has served to throw the gates of hell wide open.

18. DREAM:

[183] *A square space with complicated ceremonies going on in it, the purpose of which is to transform animals into men. Two snakes, moving in opposite directions, have to be got rid of at once. Some animals are there, e.g., foxes and dogs. The people walk round the square and must let themselves be bitten in the calf by these animals at each of the four corners (cf. fig. 118). If they run away all is lost. Now the higher animals come on the scene—bulls and ibexes. Four snakes glide into the four corners. Then the congregation files out. Two sacrificial priests carry in a huge reptile and with this they touch the forehead of a shapeless animal lump or life-mass. Out of it there instantly rises a human head, transfigured. A voice proclaims: “These are attempts at being.”*

70. Pagan rites of transformation in the Middle Ages, with serpents.—Gnostic design

[184] One might almost say that the dream goes on with the “explanation” of what is happening in the square space. Animals are to be changed into men; a “shapeless life-mass” is to be turned into a transfigured (illuminated) human head by magic contact with a reptile. The animal lump or life-mass stands for the mass of the inherited unconscious which is to be united with consciousness. This is brought about by the ceremonial use of a reptile, presumably a snake. The idea of transformation and renewal by means of a serpent is a well-substantiated archetype (fig. 70). It is the healing serpent, representing the god (cf. figs. 203, 204). It is reported of the mysteries of Sabazius: “Aureus coluber in sinum demittitur consecratis et eximitur rursus ab inferioribus partibus atque imis” (A golden snake is let down into the lap of the initiated and taken away again from the lower parts).⁵⁷ Among the Ophites, Christ was the serpent. Probably the most significant development of serpent symbolism as regards renewal of personality is to be found in Kundalini yoga.⁵⁸ The shepherd’s experience with the snake in Nietzsche’s *Zarathustra* would accordingly be a fatal omen (and not the only one of its kind—cf. the prophecy at the death of the rope-dancer).

[185] The “shapeless life-mass” immediately recalls the ideas of the alchemical “chaos,”⁵⁹ the *massa* or *materia informis* or *confusa* which has contained the divine seeds of life ever since the Creation. According to a midrashic view, Adam was created in much the same way: in the first hour God collected the dust, in the second made a shapeless mass out of it, in the third fashioned the limbs, and so on⁶⁰ (fig. 71).

71. Creation of Adam from the clay of the *prima materia*.—Schedel, *Das Buch der Chroniken* (1493)

[186] But if the life-mass is to be transformed a *circumambulatio* is necessary, i.e., exclusive concentration on the centre, the place of creative change. During this process one is “bitten” by animals; in other words, we have to expose ourselves to the animal impulses of the unconscious without identifying with them and without “running away”; for flight from the unconscious would defeat the purpose of the whole proceeding. We must hold our ground, which means here that the process initiated by the dreamer’s self-observation must be experienced in all its ramifications and then articulated with consciousness to the best of his understanding. This often entails an almost unbearable tension because of the utter incommensurability between conscious life and the unconscious process, which can be experienced only in the innermost soul and cannot touch the visible surface of life at any point. The principle of conscious life is: “Nihil est in intellectu, quod non prius fuerit in sensu.” But the principle of the unconscious is the autonomy of the psyche itself, reflecting in the play of its images not the world but *itself*, even though it utilizes the illustrative possibilities offered by the sensible world in order to make its images clear. The sensory datum, however, is not the *causa efficiens* of this; rather, it is autonomously selected and exploited by the psyche, with the result that the rationality of the cosmos is constantly being violated in the most distressing manner. But the sensible world has an equally devastating effect on the deeper psychic processes when it breaks into them as a *causa efficiens*. If reason is not to be outraged on the one hand and the creative play of images not violently suppressed on the other, a circumspect and farsighted synthetic procedure is required in order to accomplish the paradoxical union of irreconcilables (fig. 72). Hence the alchemical parallels in our dreams.

[187] The focusing of attention on the centre demanded in this dream and the warning about “running away” have clear parallels in the *opus alchymicum*: the need to concentrate on the work and to meditate upon it is stressed again and again. The tendency to run away, however, is attributed not to the operator but to the transforming substance. Mercurius is evasive and is labelled *servus* (servant) or *cervus fugitivus* (fugitive stag). The vessel must be well sealed so that what is within may not escape. Eirenaeus Philalethes⁶¹ says of this *servus*: “You must be very wary how you lead him, for if he can find an opportunity he will give you the slip, and leave you to a world of misfortune.”⁶² It did not occur to these philosophers that they were chasing a projection, and that the more they attributed to the substance the further away they were getting from the psychological source of their expectations. From the difference between the material in this dream and its medieval predecessors we can measure the psychological advance: the running away is now clearly apparent as a characteristic of the dreamer, i.e., it is no longer projected into the unknown substance. Running away thus becomes a moral question. This aspect was recognized by the alchemists in so far as they emphasized the need for a special religious devotion at their work, though one cannot altogether clear them of the suspicion of having used their prayers and pious exercises for the purpose of forcing a miracle—there are even some who aspired to have the Holy Ghost as their familiar!⁶³ But, to do them justice, one should not overlook the fact that there is more than a little evidence in the literature that they realized it was a matter of their own transformation. For instance, Gerhard Dorn exclaims. “Transmutemini in vivos lapides philosophicos!” (Transform yourselves into living philosophical stones!)

72. The “union of irreconcilables”: marriage of water and fire. The two figures each have four hands to symbolize their many different capabilities.—After an Indian painting

[188] Hardly have conscious and unconscious touched when they fly asunder on account of their mutual antagonism. Hence, right at the beginning of the dream, the snakes that are making off in opposite directions have to be removed; i.e., the conflict between conscious and unconscious is at once resolutely stopped and the conscious mind is forced to stand the tension by means of the *circumambulatio*. The magic circle thus traced will also prevent the unconscious from breaking out again, for such an eruption would be equivalent to psychosis. “Nonnulli perierunt in opere nostro”: “Not a few have perished in our work,” we can say with the author of the *Rosarium*. The dream shows that the difficult operation of thinking in paradoxes—a feat possible only to the superior intellect—has succeeded. The snakes no longer run away but settle themselves in the four corners, and the process of transformation or integration sets to work. The “transfiguration” and illumination, the conscious recognition of the centre, has been attained, or at least anticipated, in the dream. This potential achievement—if it can be maintained, i.e., if the conscious mind does not lose touch with the centre again⁶⁴—means a renewal of personality. Since it is a subjective state whose reality cannot be validated by any external criterion, any further attempt to describe and explain it is doomed to failure, for only those who have had this experience are in a position to understand and attest its reality. “Happiness,” for example, is such a noteworthy reality that there is nobody who does not long for it, and yet there is not a single objective criterion which would prove beyond all doubt that this condition necessarily exists. As so often with the most important things, we have to make do with a subjective judgment.

[189] The arrangement of the snakes in the four corners is indicative of an order in the unconscious. It is as if we were confronted with a pre-existent ground plan, a kind of Pythagorean *tetraktys*. I have very frequently observed the number four in this connection. It probably explains the universal incidence and magical significance of the cross or of the circle divided into four. In the present case the point seems to be to capture and regulate the animal instincts so as to exorcise the danger of falling into unconsciousness. This may well be the empirical basis of the cross as that which vanquishes the powers of darkness ([fig. 73](#)).

73. The deliverance of man from the power of the dragon.—Codex Palatinus Latinus 412 (15th cent.)

[190] In this dream the unconscious has managed to stage a powerful advance by thrusting its contents dangerously near to the conscious sphere. The dreamer appears to be deeply entangled in the mysterious synthetic ceremony and will unfailingly carry a lasting memory of the dream into his conscious life. Experience shows that this results in a serious conflict for the conscious mind, because it is not always either willing or able to put forth the extraordinary intellectual and moral effort needed to take a paradox seriously. Nothing is so jealous as a truth.

[191] As a glance at the history of the medieval mind will show, our whole modern mentality has been moulded by Christianity. (This has nothing to do with whether we believe the truths of Christianity or not.) Consequently the reconstruction of the ape in the sacred precincts as proposed by the dream comes as such a shock that the majority of people will seek refuge in blank incomprehension. Others will heedlessly ignore the abysmal depths of the Dionysian mystery and will welcome the rational Darwinian core of the dream as a safeguard against mystic exaltation. Only a very few will feel the collision of the two worlds and realize what it is all about. Yet the dream says plainly enough that in the place where, according to tradition, the deity dwells, the ape is to appear. This substitution is almost as bad as a Black Mass.

[192] In Eastern symbolism the square—signifying the earth in China, the *padma* or lotus in India—has the character of the *yonis*: femininity. A man's unconscious is likewise feminine

and is personified by the anima.⁶⁵ The anima also stands for the “inferior” function⁶⁶ and for that reason frequently has a shady character; in fact she sometimes stands for evil itself. She is as a rule the *fourth* person (cf. dreams 10, 11, 15; pars. 136, 147, 162). She is the dark and dreaded maternal womb (fig. 74), which is of an essentially ambivalent nature. The Christian deity is one in three persons. The fourth person in the heavenly drama is undoubtedly the devil. In the more harmless psychological version he is merely the inferior function. On a moral valuation he is a man’s sin, a function belonging to him and presumably masculine. The feminine element in the deity is kept very dark, the interpretation of the Holy Ghost as Sophia being considered heretical. Hence the Christian metaphysical drama, the “Prologue in Heaven,” has only masculine actors, a point it shares with many of the ancient mysteries. But the feminine element must obviously be somewhere—so it is presumably to be found in the dark. At any rate that is where the ancient Chinese philosophers located it: in the *yin*.⁶⁷ Although man and woman unite they nevertheless represent irreconcilable opposites which, when activated, degenerate into deadly hostility. This primordial pair of opposites symbolizes every conceivable pair of opposites that may occur: hot and cold, light and dark, north and south, dry and damp, good and bad, conscious and unconscious. In the psychology of the functions there are two conscious and therefore masculine functions, the differentiated function and its auxiliary, which are represented in dreams by, say, father and son, whereas the unconscious functions appear as mother and daughter. Since the conflict between the two auxiliary functions is not nearly as great as that between the differentiated and the inferior function, it is possible for the third function—that is, the unconscious auxiliary one—to be raised to consciousness and thus made masculine. It will, however, bring with it traces of its contamination with the inferior function, thus acting as a kind of link with the darkness of the unconscious. It was in keeping with this psychological fact that the Holy Ghost should be heretically interpreted as Sophia, for he was the mediator of birth in the flesh, who enabled the deity to shine forth in the darkness of the world. No doubt it was this association that caused the Holy Ghost to be suspected of femininity, for Mary was the dark earth of the field—“illa terra virgo nondum pluviis irrigata” (that virgin earth not yet watered by the rains), as Tertullian called her.⁶⁸

74. Heaven fertilizing Earth and begetting mankind.—Thenaud, “Traité de la cabale” (MS., 16th cent.)

[193] The fourth function is contaminated with the unconscious and, on being made conscious, drags the whole of the unconscious with it. We must then come to terms with the unconscious and try to bring about a synthesis of opposites.¹¹⁰ At first a violent conflict breaks out, such as any reasonable man would experience when it became evident that he had to swallow a lot of absurd superstitions. Everything in him would rise up in revolt and he would defend himself desperately against what looked to him like murderous nonsense. This situation explains the following dreams.

19. DREAM:

[194] *Ferocious war between two peoples.*

[195] This dream depicts the conflict. The conscious mind is defending its position and trying to suppress the unconscious. The first result of this is the expulsion of the fourth function, but, since it is contaminated with the third, there is a danger of the latter disappearing as well. Things would then return to the state that preceded the present one, when only two functions were conscious and the other two unconscious.

20. DREAM:

[196] *There are two boys in a cave. A third falls in as if through a pipe.*

[197] The cave represents the darkness and seclusion of the unconscious; the two boys correspond to the two unconscious functions. Theoretically the third must be the auxiliary function, which would indicate that the conscious mind had become completely absorbed in the differentiated function. The odds now stand 1 : 3, greatly in favour of the unconscious. We may therefore expect a new advance on its part and a return to its former position. The “boys” are an allusion to the dwarf motif (fig. 77), of which more later.

21. DREAM:

[198] *A large transparent sphere containing many little spheres. A green plant is growing out of the top.*

[199] The sphere is a whole that embraces all its contents; life which has been brought to a standstill by useless struggle becomes possible again. In Kundalini yoga the “green womb” is a name for Ishvara (Shiva) emerging from his latent condition.

75. Trimurti picture. The triangle symbolizes the tendency of the universe to converge towards the point of unity. The tortoise represents Vishnu; the lotus growing out of the skull between two flames, Shiva. The shining sun of Brahma forms the background. The whole picture corresponds to the alchemical *opus*, the tortoise symbolizing the *massa confusa*, the skull the *vas* of transformation, and the flower the “self” or wholeness.—After an Indian painting

22. DREAM:

[200] *The dreamer is in an American hotel. He goes up in the lift to about the third or fourth floor. He has to wait there with a lot of other people. A friend (an actual person) is also there and says that the dreamer should not have kept the dark unknown woman waiting so long below, since he had put her in his (the dreamer’s) charge. The friend now gives him an unsealed note for the dark woman, on which is written: “Salvation does not come from refusing to take part or from running away. Nor does it come from just drifting. Salvation comes from complete surrender, with one’s eyes always turned to the centre.” On the margin of the note there is a drawing: a wheel or wreath with eight spokes. Then a lift-boy appears and says that the dreamer’s room is on the eighth floor. He goes on up in the lift, this time to the seventh or eighth floor. An unknown red-haired man, standing there, greets him in a friendly way. Then the scene changes. There is said to be a revolution in Switzerland: the military party is making propaganda for “completely throttling the left.” The objection that the left is weak enough anyway is met by the answer that this is just why it ought to be throttled completely. Soldiers in old-fashioned uniforms now appear, who all resemble the red-haired man. They load their guns with ramrods, stand in a circle, and prepare to shoot at the centre. But in the end they do not shoot and seem to march away. The dreamer wakes up in terror.*

[201] The tendency to re-establish a state of wholeness—already indicated in the foregoing dream—once more comes up against a consciousness with a totally different orientation. It is therefore appropriate that the dream should have an American background. The lift is

going up, as is right and proper when something is coming “up” from the “sub-” conscious. What is coming up is the unconscious content, namely the mandala characterized by the number four (cf. [figs. 61, 62](#)). Therefore the lift should rise to the fourth floor; but, as the fourth function is taboo, it only rises to “about the third or fourth.” This happens not to the dreamer alone but to many others as well, who must all wait like him until the fourth function can be accepted. A good friend then calls his attention to the fact that he should not have kept the dark woman, i.e., the anima who stands for the tabooed function, waiting “below,” i.e., in the unconscious, which was just the reason why the dreamer himself had to wait upstairs with the others. It is in fact not merely an individual but a collective problem, for the animation of the unconscious which has become so noticeable in recent times has, as Schiller foresaw, raised questions which the nineteenth century never even dreamed of. Nietzsche in his *Zarathustra* decided to reject the “snake” and the “ugliest man,” thus exposing himself to an heroic cramp of consciousness which led, logically enough, to the collapse foretold in the same book.

[202] The advice given in the note is as profound as it is to the point, so that there is really nothing to add. After it has been more or less accepted by the dreamer the ascent can be resumed. We must take it that the problem of the fourth function was accepted, at least broadly, for the dreamer now reaches the seventh or eighth floor, which means that the fourth function is no longer represented by a quarter but by an eighth, and is apparently reduced by a half.

[203] Curiously enough, this hesitation before the last step to wholeness seems also to play a part in *Faust II*, where, in the Cabiri scene, “resplendent mermaids” come from over the water:⁷⁰

NEREIDS AND TRITONS:

Bear we, on the waters riding,
That which brings you all glad tiding.
In Chelone’s giant shield
Gleams a form severe revealed:
These are gods that we are bringing;
Hail them, you high anthems singing.

SIRENS:

Little in length,
Mighty in strength!
Time-honoured gods
Of shipwreck and floods.

NEREIDS AND TRITONS:

Great Cabin do we bear,
That our feast be friendly fair:
Where their sacred powers preside
Neptune’s rage is pacified.

A “form severe” is brought by “mermaids,” feminine figures (cf. [figs. 10, 11, 12. 157](#)) who represent as it were the sea and the waves of the unconscious. The word “severe” reminds us of “severe” architectural or geometrical forms which illustrate a definite idea without any romantic (feeling-toned) trimmings. It “gleams” from the shell of a tortoise⁷¹ ([fig. 76](#)), which, primitive and cold-blooded like the snake, symbolizes the instinctual side of the unconscious. The “image” is somehow identical with the unseen, creative dwarf-gods ([fig. 77](#)), hooded and cloaked manikins who are kept hidden in the dark *cista*, but who also appear on the seashore as little figures about a foot high, where, as kinsmen of the unconscious, they protect navigation, i.e., the venture into darkness and uncertainty. In the form of the Dactyls they are also the gods of invention, small and apparently insignificant like the impulses of the unconscious but endowed with the same mighty power. (*El gabir* is “the great, the mighty one.”)

77. Telesphorus, one of the Cabiri, the *familiaris* of Aesculapius: (a) Bronze figure from Roman Gaul; (b) Marble statuette from Austria.

NEREIDS AND TRITONS: Three have followed where we led,
But the fourth refused to call;
He the rightful seer, he said,
His to think for one and all.

SIRENS: A god may count it sport
To set a god at naught.
Honour the grace they bring,
And fear their threatening.

[204] It is characteristic of Goethe’s feeling-toned nature that the fourth should be the thinker. If the supreme principle is “feeling is all,” then thinking has to play an unfavourable role and be submerged. *Faust I* portrays this development. Since Goethe acted as his own model, thinking became the fourth (taboo) function. Because of its contamination with the unconscious it takes on the grotesque form of the Cabiri, for the Cabiri, as dwarfs, are chthonic gods and misshapen accordingly. (“I call them pot-bellied freaks of common clay.”) They thus stand in grotesque contrast to the heavenly gods and poke fun at them (cf. the “ape of God”). The Nereids and Tritons sing:

Seven there should really be.

SIRENS:

Where, then, stay the other three?

That we know not. You had best
 On Olympus make your quest.
 There an eighth may yet be sought
 Though none other gave him thought.
 Well inclined to us in grace,
 Not all perfect yet their race.
 Beings there beyond compare,
 Yearning, unexplainable,
 Press with hunger's pang to share
 In the unattainable.

[205] We learn that there are “really” seven of them; but again there is some difficulty with the eighth as there was before with the fourth. Similarly, in contradiction to the previous emphasis placed on their lowly origin in the dark, it now appears that the Cabiri are actually to be found on Olympus; for they are eternally striving from the depths to the heights and are therefore always to be found both below *and* above. The “severe image” is obviously an unconscious content that struggles towards the light. It seeks, and itself is, what I have elsewhere called “the treasure hard to attain.”⁷² This hypothesis is immediately confirmed:

SIRENS: Fame is dimmed of ancient time,
 Honour droops in men of old;
 Though they have the Fleece of Gold,
 Ye have the Cabiri.

[206] The Golden Fleece is the coveted goal of the argosy, the perilous quest that is one of the numerous synonyms for attaining the unattainable. Thales makes this wise remark about it:

That is indeed what men most seek on earth:

'Tis rust alone that gives the coin its worth!

[207] The unconscious is always the fly in the ointment, the skeleton in the cupboard of perfection, the painful lie given to all idealistic pronouncements, the earthliness that clings to our human nature and sadly clouds the crystal clarity we long for. In the alchemical view rust, like verdigris, is the metal's sickness. But at the same time this leprosy is the *vera prima materia*, the basis for the preparation of the philosophical gold. The *Rosarium* says:

Our gold is not the common gold. But thou hast inquired concerning the greenness [*viriditas*, presumably verdigris], deeming the bronze to be a leprous body on account of the greenness it hath upon it. Therefore I say unto thee that whatever is perfect in the bronze is that greenness only, because that greenness is straightway changed by our magistry into our most true gold.⁷³

[208] The paradoxical remark of Thales that the rust alone gives the coin its true value is a kind of alchemical quip, which at bottom only says that there is no light without shadow and no psychic wholeness without imperfection. To round itself out, life calls not for perfection but for completeness; and for this the “thorn in the flesh” is needed, the suffering of defects without which there is no progress and no ascent.

[209] The problem of three and four, seven and eight, which Goethe has tackled here was a great puzzle to alchemy and goes back historically to the texts ascribed to Christianos.⁷⁴ In

the treatise on the production of the “mythical water” it is said: “Therefore the Hebrew prophetess cried without restraint, ‘One becomes two, two becomes three, and out of the third comes the One as the fourth.’”⁷⁵ In alchemical literature this prophetess is taken to be Maria Prophetissa⁷⁶ (fig. 78), also called the Jewess, sister of Moses, or the Copt, and it is not unlikely that she is connected with the Maria of Gnostic tradition. Epiphanius testifies to the existence of writings by this Maria, namely the “Interrogationes magnae” and “Interrogationes parvae,” said to describe a vision of how Christ, on a mountain, caused a woman to come forth from his side and how he mingled himself with her.⁷⁷ It is probably no accident that the treatise of Maria (see n. 76) deals with the theme of the *matrimonium alchymicum* in a dialogue with the philosopher Aros,⁷⁸ from which comes the saying, often repeated later: “Marry gum with gum in true marriage.”⁷⁹ Originally it was “gum arabic,” and it is used here as a secret name for the transforming substance, on account of its adhesive quality. Thus Khunrath⁸⁰ declares that the “red” gum is the “resin of the wise”—a synonym for the transforming substance. This substance, as the life force (*vis animans*), is likened by another commentator to the “glue of the world” (*glutinum mundi*), which is the medium between mind and body and the union of both.⁸¹ The old treatise “Consilium coniugii” explains that the “philosophical man” consists of the “four natures of the stone.” Of these three are earthy or in the earth, but “the fourth nature is the water of the stone, namely the viscous gold which is called red gum and with which the three earthy natures are tinted.”⁸² We learn here that gum is the critical fourth nature: it is duplex, i.e., masculine and feminine, and at the same time the one and only *aqua mercurialis*. So the union of the two is a kind of self-fertilization, a characteristic always ascribed to the mercurial dragon.⁸³ From these hints it can easily be seen who the philosophical man is: he is the androgynous original man or Anthropos of Gnosticism⁸⁴ (cf. figs. 64, 82, 117, 195), whose parallel in India is *purusha*. Of him the Brihadaranyaka Upanishad says: “He was as large as a man and woman embracing. He divided his self [Atman] in two, and thence arose husband and wife. He united himself with her and men were born,” etc.⁸⁵ The common origin of these ideas lies in the primitive notion of the bisexual original man.

[210] The fourth nature—to return to the text of the “*Consilium coniugii*”—leads straight to the Anthropos idea that stands for man’s wholeness, that is, the conception of a unitary being who existed before man and at the same time represents man’s goal. The one joins the three as the fourth and thus produces the synthesis of the four in a unity⁸⁶ (fig. 196). We seem to be dealing with much the same thing in the case of seven and eight, though this motif occurs much less frequently in the literature. It is, however, to be found in Paracelsus’ *Ein ander Erklärung der gantzen Astronomie*,⁸⁷ to which Goethe had access. “One is powerful, Six are subjects, the Eighth is also powerful”—and somewhat more so than the first. One is the king, the six are his servants and his son; so here we have King Sol and the six planets or metallic homunculi as depicted in the *Pretiosa margarita novella* of Petrus Bonus (Lacinius edition, 1546)⁸⁸ (fig. 79). As a matter of fact the eighth does not appear in this text; Paracelsus seems to have invented it himself. But since the eighth is even more “powerful” than the first, the crown is presumably bestowed on him. In *Faust II*, the eighth who dwells on Olympus is a direct reference to the Paracelsan text in so far as this describes the “astrology of Olympus” (that is, the structure of the *corpus astrale*).⁸⁹

[211] Returning now to our dream, we find at the critical point—the seventh or eighth floor—the red-haired man, a synonym for the “man with the pointed beard” and hence for the shrewd Mephisto, who magically changes the scene because he is concerned with something that Faust himself never saw: the “severe image,” symbolizing the supreme treasure, the immortal self.⁹⁰ He changes himself into the soldiers, representatives of uniformity, of collective opinion, which is naturally dead against tolerating anything “unsuitable.” For collective opinion the numbers three and seven are, on the highest authority, sacred; but four and eight are the very devil, something inferior,—“common clay”—that in the stern judgment of bonzes of every hue has no right to exist. The “left” is to be “completely throttled,” meaning the unconscious and all the “sinister” things that come from it. An antiquated view, no doubt, and one that uses antiquated methods; but even muzzle-loaders can hit the mark. For reasons unknown, i.e., not stated in the dream, the destructive attack on the “centre”—to which, according to the advice in the note, “one’s eyes must always be turned”—peters out. In the drawing on the margin of the note this centre is portrayed as a wheel with eight spokes (cf. fig. 80).

79. King Sol with his six planet-sons.—Bonus, *Pretiosa margarita novella* (1546)

80. Mercurius turning the eight-spoked wheel which symbolizes the process. In one hand he holds the *telum passionis*.
—“Speculum veritatis” (MS., 17th cent.)

23. DREAM:

[212] *In the square space. The dreamer is sitting opposite the unknown woman whose portrait he is supposed to be drawing. What he draws, however, is not a face but three-leaved clovers or distorted crosses in four different colours: red, yellow, green, and blue.*

[213] In connection with this dream the dreamer spontaneously drew a circle with quarters tinted in the above colours. It was a wheel with eight spokes. In the middle there was a four-petaled blue flower. A great many drawings now followed at short intervals, all dealing with the curious structure of the “centre,” and arising from the dreamer’s need to discover a configuration that adequately expresses the nature of this centre. The drawings were based partly on visual impressions, partly on intuitive perceptions, and partly on dreams.

[214] It is to be noted that the wheel is a favourite symbol in alchemy for the circulating process, the *circulatio*. By this is meant firstly the *ascensus* and *descensus*, for instance the ascending and descending birds symbolizing the precipitation of vapours,⁹¹ and secondly the

rotation of the universe as a model for the work, and hence the cycling of the year in which the work takes place. The alchemist was not unaware of the connection between the *rotatio* and his drawings of circles. The contemporary moral allegories of the wheel emphasize that the *ascensus* and *descensus* are, among other things, God's descent to man and man's ascent to God. (On the authority of one of St. Bernard's sermons: "By his descent he established for us a joyful and wholesome ascent."⁹²) Further, the wheel expresses virtues that are important for the work: *constantia*, *obedientia*, *moderatio*, *aequalitas*, and *humilitas*.⁹³ The mystical associations of the wheel play no small part in Jakob Böhme. Like the alchemists he too operates with the wheels of Ezekiel, saying: "Thus we see that the spiritual life stands turned in upon itself, and that the natural life stands turned out of and facing itself. We can then liken it to a round spherical wheel that goes on all its sides, as the wheel in Ezekiel shows."⁹⁴ He goes on to explain: "The wheel of nature turns in upon itself from without; for God dwells within himself and has such a figure, not that it can be painted, it being only a natural likeness, the same as when God paints himself in the figure of this world; for God is everywhere entire, and so dwells in himself. Mark: the outer wheel is the zodiac with the stars, and after it come the seven planets," etc.⁹⁵ "Albeit this figure is not fashioned sufficiently, it is nevertheless a meditation: and we could make a fine drawing of it on a great circle for the meditation of those of less understanding. Mark therefore, desire goes in upon itself to the heart, which is God," etc. But Böhme's wheel is also the "impression" (in alchemical terms, the *informatio*) of the eternal will. It is Mother Nature, or the "mind [*Gemüth*] of the mother, from whence she continually creates and works; and these are the stars with the planetary orb [after the model] of the eternal *astrum*, which is only a spirit, and the eternal mind in the wisdom of God, viz., the Eternal Nature, from whence the eternal spirits proceeded and entered into a creaturely being."⁹⁶ The "property" of the wheel is *life* in the form of "four bailiffs" who "manage the dominion in the life-giving mother." These bailiffs are the four elements "to which the wheel of the mind, viz., the *astrum*, affords will and desire; so that this whole essence is but one thing only, like the mind of a man. Even as he is in soul and body, so also is this whole essence"; for he is created in the likeness of this "whole essence." But nature in her four elements is also a whole essence with a soul.⁹⁷ This "sulphurean wheel" is the origin of good and evil, or rather it leads into them and out of them.⁹⁸

[215] Böhme's mysticism is influenced by alchemy in the highest degree. Thus he says: "The form of the birth is as a turning wheel, which Mercurius causes in the sulphur."⁹⁹ The "birth" is the "golden child" (*filius philosophorum* = archetype of the divine child¹⁰⁰) whose "master-workman" is Mercurius.¹⁰¹ Mercurius himself is the "fiery wheel of the essence" in the form of a serpent. Similarly the (unenlightened) soul is just "such a fiery Mercurius." Vulcan kindles the fiery wheel of the essence in the soul when it "breaks off" from God; whence come desire and sin, which are the "wrath of God." The soul is then a "worm" like the "fiery serpent," a "larva" and a "monster."¹⁰²

[216] The interpretation of the wheel in Böhme reveals something of the mystical secret of alchemy and is thus of considerable importance in this respect as well as from the psychological point of view: the wheel appears here as a concept for wholeness which

represents the essence of mandala symbolism and therefore includes the *mysterium iniquitatis*.

[217] The idea of the “centre,” which the unconscious has been repeatedly thrusting upon the conscious mind of the dreamer, is beginning to gain foothold there and to exercise a peculiar fascination. The next drawing is again of the blue flower (cf. [fig. 85](#)), but this time subdivided into eight; then follow pictures of four mountains round a lake in a crater, also of a red ring lying on the ground with a withered tree standing in it, round which a green snake (cf. [fig. 13](#)) creeps up with a leftward movement.

[218] The layman may be rather puzzled by the serious attention devoted to this problem. But a little knowledge of yoga and of the medieval philosophy of the *lapis* would help him to understand. As we have already said, the squaring of the circle was one of the methods for producing the *lapis*; another was the use of *imaginatio*, as the following text unmistakably proves:

And take care that thy door be well and firmly closed, so that he who is within cannot escape, and—God willing—thou wilt reach the goal. Nature performeth her operations gradually; and indeed I would have thee do the same: let thy imagination be guided wholly by nature. And observe according to nature, through whom the substances regenerate themselves in the bowels of the earth. And imagine this with true and not with fantastic imagination.¹⁰³

[219] The *vas bene clausum* (well-sealed vessel) is a precautionary measure very frequently mentioned in alchemy, and is the equivalent of the magic circle. In both cases the idea is to protect what is within from the intrusion and admixture of what is without, as well as to prevent it from escaping.¹⁰⁴ The *imaginatio* is to be understood here as the real and literal power to create images (*Einbildungskraft* = imagination)—the classical use of the word in contrast to *phantasia*, which means a mere “conceit” in the sense of insubstantial thought. In the *Satyricon* this connotation is more pointed still: *phantasia* means something ridiculous.¹⁰⁵ *Imaginatio* is the active evocation of (inner) images *secundum naturam*, an authentic feat of thought or ideation, which does not spin aimless and groundless fantasies “into the blue”—does not, that is to say, just play with its objects, but tries to grasp the inner facts and portray them in images true to their nature. This activity is an *opus*, a work. And we cannot call the manner in which the dreamer handles the objects of his inner experience anything but true work, considering how conscientiously, accurately, and carefully he records and elaborates the content now pushing its way into consciousness. The resemblance to the *opus* is obvious enough to anyone familiar with alchemy. Moreover the analogy is borne out by the dreams themselves, as dream 24 will show.

81. "Sol et eius umbra." The earth is midway between light and darkness.—Maier, *Scrutinium chymicum* (1687)

[220] The present dream, from which the above-mentioned drawings originated, shows no signs of the "left" having been in any way "throttled." On the contrary, the dreamer finds himself once more in the *temenos* facing the unknown woman who personifies the fourth or "inferior" function.¹⁰⁶ His drawing of the wheel with a four-petalled blue flower in the middle was anticipated by the dream: what the dream represents in personified form the dreamer reproduces as an abstract ideogram. This might well be a hint that the *meaning* of the personification could also be represented in quite another form. This "other form" (three-leaved clover, distorted cross) refers back to the ace of clubs in dream 16 of the first series (par. 97), where we pointed out its analogy with the irregular cross. The analogy is confirmed here. In this dream, however, the symbol of the Christian Trinity has been overshadowed or "coloured" by the alchemical quaternity. The colours appear as a concretization of the *tetraktys*. The *Rosarium* quotes a similar statement from the "Tractatus aureus": "Vultur¹⁰⁷ ... clamat voce magna, inquiens: Ego sum albus niger et rubeus citrinus"¹⁰⁸ (The vulture ... exclaims in a loud voice: I am the white black and the red yellow). On the other hand it is stressed that the *lapis* unites *omnes colores* in itself. We can thus take it that the quaternity represented by the colours is a kind of preliminary stage of the *lapis*. This is confirmed by the *Rosarium*: "Our stone is from the four elements."¹⁰⁹ (Cf. [figs. 64, 82, 117.](#)) The same applies to the *aurum philosophicum*: "In the gold the four elements are contained in equal proportions."¹¹⁰ The fact is that the four colours in the dream represent the transition from trinity to quaternity and thus to the squared circle ([figs. 59, 60](#)), which, according to the alchemists, comes nearest to the *lapis* on account of its roundness or perfect simplicity. For this reason a recipe for the preparation of the *lapis*, attributed to Raymundus, says:

Take of the body that is most simple and round, and do not take of the triangle or quadrangle but of the round, for the round is nearer to simplicity than the triangle. Hence it is to be noted that a simple body has no corners, for it is the first and last among the planets, like the sun among the stars.¹¹¹

82. The Anthropos with the four elements.—Russian MS. (18th cent.)

24. DREAM:

[221] *Two people are talking about crystals, particularly about a diamond.*

[222] Here one can hardly avoid thinking of the *lapis*. In fact this dream discloses the historical background and indicates that we really are dealing with the coveted *lapis*, the “treasure hard to attain.” The dreamer’s *opus* amounts to an unconscious recapitulation of the efforts of Hermetic philosophy. (More about the diamond in dreams 37, 39, 50 below.)

25. DREAM:

[223] *It is a question of constructing a central point and making the figure symmetrical by reflection at this point.*

[224] The word “constructing” points to the synthetic character of the *opus* and also to the laborious building process that taxes the dreamer’s energy. The “symmetry” is an answer to the conflict in dream 22 (“completely throttling the left”). Each side must perfectly balance the other as its mirror-image, and this image is to fall at the “central point,” which evidently possesses the property of reflection—it is a *vitrum*,¹¹² a crystal or sheet of water (cf. [fig. 209](#)). This power of reflection seems to be another allusion to the underlying idea of the *lapis*, the *aurum philosophicum*, the elixir, the *aqua nostra*, etc. (cf. [fig. 265](#)).

[225] Just as the “right” denotes the world of consciousness and its principles, so by “reflection” the picture of the world is to be turned round to the left, thus producing a corresponding world in reverse. We could equally well say: through reflection the right appears as the reverse of the left. Therefore the left seems to have as much validity as the right; in other words, the unconscious and its—for the most part unintelligible—order becomes the symmetrical counterpart of the conscious mind and its contents, although it is still not clear which of them is reflected and which reflecting (cf. [fig. 55](#)). To carry our reasoning a step further, we could regard the centre as the point of intersection of two worlds that correspond but are inverted by reflection.¹¹³

[226] The idea of creating a symmetry would thus indicate some kind of climax in the task of accepting the unconscious and incorporating it in a general picture of the world. The unconscious here displays a “cosmic” character.

26. DREAM:

[227] *It is night, with stars in the sky. A voice says, “Now it will begin.” The dreamer asks, “What will begin?” Whereupon the voice answers, “The circulation can begin.” Then a shooting star falls in a curious leftward curve. The scene changes, and the dreamer is in a rather squalid night club. The proprietor, who appears to be an unscrupulous crook, is there with some bedraggled-looking girls. A quarrel starts about left and right. The dreamer then leaves and drives round the perimeter of a square in a taxi. Then he is in the bar again. The proprietor says, “What they said about left and right did not satisfy my feelings. Is there really such a thing as a left and a right side of human society?” The dreamer answers, “The existence of the left does not contradict that of the right. They both exist in everyone. The left is the mirror-image of the right. Whenever I feel it like that, as a mirror-image, I am at one with myself. There is no right and no left side to human society, but there are symmetrical and lopsided people. The lopsided are those who can fulfil only one side of themselves, either left or right. They are still in the childhood state.” The proprietor says meditatively, “Now that’s much better,” and goes about his business.*

[228] I have given this dream in full because it is an excellent illustration of how the ideas hinted at in the last dream have been taken up by the dreamer. The idea of symmetrical proportion has been stripped of its cosmic character and translated into psychological terms, expressed in social symbols. “Right” and “left” are used almost like political slogans.

[229] The beginning of the dream, however, is still under the cosmic aspect. The dreamer noted that the curious curve of the shooting star corresponded exactly to the line he drew when sketching the picture of the eightfold flower (cf. par. 217). The curve formed the edge of the petals. Thus the shooting star traces the outline, so to speak, of a flower that spreads over the whole starry heaven. What is now beginning is the circulation of the light.¹¹⁴ This cosmic flower corresponds roughly to the rose in Dante’s *Paradiso* ([fig. 83](#)).

[230] The “cosmic” nature of an experience—as an aspect of some inner occurrence that can only be understood psychologically—is offensive and at once provokes a reaction “from below.” Evidently the cosmic aspect was too high and is compensated “downward,” so that

the symmetry is no longer that of two world pictures but merely of human society, in fact of the dreamer himself. When the proprietor remarks that the latter's psychological understanding is "much better," he is making an estimate whose conclusion should run: "but still not good enough."

83. Dante being led before God in the heavenly rose.—Illumination for the *Paradiso*, Canto XXXI. Codex Urbanus Latinus 365 (15th cent.)

[231] The quarrel about right and left that starts in the bar is the conflict which breaks out in the dreamer himself when he is called upon to recognize the symmetry. He cannot do this because the other side looks so suspicious that he would rather not investigate it too closely. That is the reason for the magical *circumambulatio* (driving round the square): he has to stay inside and learn to face his mirror-image without running away. He does this as best he can, though not quite as the other side would wish. Hence the somewhat chill recognition of his merits.

27. VISUAL IMPRESSION:

[232] *A circle with a green tree in the middle. In the circle a fierce battle is raging between savages. They do not see the tree.*

[233] Evidently the conflict between right and left has not yet ended. It continues because the savages are still in the "childhood state" and therefore, being "lopsided," only know either the left or the right but not a third that stands above the conflict.

28. VISUAL IMPRESSION:

[234] *A circle: within it, steps lead up to a basin with a fountain inside.*

[235] When a condition is unsatisfactory because some essential aspect of the unconscious content is lacking, the unconscious process reverts to earlier symbols, as is the case here. The symbolism goes back to dream 13 (par. 154), where we met the mandala garden of the philosophers with its fountain of *aqua nostra* (fig. 84; cf. also figs. 25, 26, 56). Circle and basin emphasize the mandala, the rose of medieval symbolism.¹¹⁵ The “rose garden of the philosophers” is one of alchemy’s favourite symbols.¹¹⁶

84. The fountain in the walled garden, symbolizing *constantia in adversis*—a situation particularly characteristic of alchemy.

—Boschius, *Symbolographia* (1702)

29. VISUAL IMPRESSION:

[236] *A bunch of roses, then the sign , but it should be. .*

[237] A rose bouquet is like a fountain fanning out. The meaning of the first sign—possibly a tree—is not clear, whereas the correction represents the eightfold flower (fig. 85). Evidently a mistake is being corrected which somehow impaired the wholeness of the rose. The aim of the reconstruction is to bring the problem of the mandala—the correct valuation and interpretation of the “centre”—once more into the field of consciousness.

30. DREAM:

[238] *The dreamer is sitting at a round table with the dark unknown woman.*

[239] Whenever a process has reached a culmination as regards either its clarity or the wealth of inferences that can be drawn from it, a regression is likely to ensue. From the dreams that come in between the ones we have quoted here it is evident that the dreamer is finding the insistent demands of wholeness somewhat disagreeable; for their realization will have far-reaching practical consequences, whose personal nature, however, lies outside the scope of our study.

[240] The round table again points to the circle of wholeness, and the anima comes in as representative of the fourth function, especially in her “dark” aspect, which always makes itself felt when something is becoming concrete, i.e., when it has to be translated, or

threatens to translate itself, into reality. “Dark” means chthonic, i.e., concrete and earthy. This is also the source of the fear that causes the regression.¹¹⁷

85. The eight-petalled flower as the eighth or the first of seven.—“Recueil de figures astrologiques” (MS., 18th cent.)

31. DREAM:

[241] *The dreamer is sitting with a certain man of unpleasant aspect at a round table. On it stands a glass filled with a gelatinous mass.*

[242] This dream is an advance on the last in that the dreamer has accepted the “dark” as his own darkness, to the extent of producing a real “shadow” belonging to him personally.¹¹⁸ The anima is thus relieved of the moral inferiority projected upon her and can take up the living and creative function¹¹⁹ which is properly her own. This is represented by the glass with its peculiar contents which we, like the dreamer, may compare with the undifferentiated “life-mass” in dream 18 (par. 183). It was then a question of the gradual transformation of primitive animality into something human. So we may expect something of the sort here, for it seems as if the spiral of inner development had come round to the same point again, though higher up.

86. The alchemical apparatus for distillation, the *unum vas*, with the serpents of the (double) Mercurius.—Kelley, *Tractatus de Lapide philosophorum* (1676)

[243] The glass corresponds to the *unum vas* of alchemy (fig. 86) and its contents to the living, semi-organic mixture from which the body of the *lapis*, endowed with spirit and life, will emerge—or possibly that strange Faustian figure who bursts into flame three times: the Boy Charioteer, the Homunculus who is dashed against the throne of Galatea, and Euphorion (all symbolizing a dissolution of the “centre” into its unconscious elements). We know that the *lapis* is not just a “stone” since it is expressly stated to be composed “de re animali, vegetabili et minerali,” and to consist of body, soul, and spirit,¹²⁰ moreover, it grows from flesh and blood.¹²¹ For which reason the philosopher (Hermes in the “*Tabula smaragdina*”) says: “The wind hath carried it in his belly” (fig. 210). Therefore “wind is air, air is life, and life is soul.” “The stone is that thing midway between perfect and imperfect bodies, and that which nature herself begins is brought to perfection through the art.”¹²² The stone “is named the stone of invisibility” (*lapis invisibilitatis*).¹²³

[244] The dream takes up the question of giving the centre life and reality—giving birth to it, so to speak. That this birth can issue from an amorphous mass has its parallel in the alchemical idea of the *prima materia* as a chaotic *massa informis* impregnated by the seeds of life (figs. 162, 163). As we have seen, the qualities of gum arabic and glue are attributed to it, or again it is called *viscosa* and *unctuosa*. (In Paracelsus the “*Nostoc*” is the arcane substance.) Although modern conceptions of nutrient soil, jelly-like growths, etc., underlie the dreamer’s “gelatinous mass,” the atavistic associations with far older alchemical ideas still persist, and these, although not consciously present, nevertheless exert a powerful unconscious influence on the choice of symbols.

87. The Virgin as the *vas* of the divine child.—From a Venetian *Rosario dela gloriosa vergine Maria* (1524)

32. DREAM:

[245] *The dreamer receives a letter from an unknown woman. She writes that she has pains in the uterus. A drawing is attached to the letter, looking roughly like this:*¹²⁴

In the primeval forest there are swarms of monkeys. Then a panorama of white glaciers opens out.

[246] The anima reports that there are painful processes going on in the life-creating centre, which in this case is no longer the “glass” containing the life-mass but a point designated as a “uterus,” to be reached—so the spiral suggests—by means of a *circumambulatio*. At all events the spiral emphasizes the centre and hence the uterus, which is a synonym frequently employed for the alchemical vessel, just as it is one of the basic meanings of the Eastern mandala.¹²⁵ The serpentine line leading to the vessel is analogous to the healing serpent of Aesculapius (figs. 203, 204) and also to the Tantric symbol of *Shiva bindu* the creative, latent god without extension in space who, in the form of a point or *lingam*, is encircled three and a half times by the Kundalini serpent.¹²⁶ With the primeval forest we meet the animal or ape motif again, which appeared before in vision 22 of the first series (par. 117) and in dreams 16 and 18 of this (pars. 164, 183). In vision 22 it led to the announcement that “everything must be ruled by the light” and, in dream 18, to the “transfigured” head. Similarly the present dream ends with a panorama of white “glaciers,” reminding the dreamer of an earlier dream (not included here) in which he beheld the Milky Way and was having a conversation about immortality. Thus the glacier symbol is a bridge leading back

again to the cosmic aspect that caused the regression. But, as is nearly always the case, the earlier content does not return in its first simple guise—it brings a new complication with it, which, though it might have been expected logically, is no less repugnant to the intellectual consciousness than the cosmic aspect was. The complication is the memory of the conversation about immortality. This theme was already hinted at in dream 9 (par. 134), with its pendulum clock, a *perpetuum mobile*. Immortality is a clock that never runs down, a mandala that revolves eternally like the heavens. Thus the cosmic aspect returns with interest and compound interest. This might easily prove too much for the dreamer, for the “scientific” stomach has very limited powers of digestion.

88. Vision of the Holy Grail.—“Roman de Lancelot du lac” (MS., Paris, 15th cent.)

[247] The unconscious does indeed put forth a bewildering profusion of semblances for that obscure thing we call the mandala or “self.” It almost seems as if we were ready to go on dreaming in the unconscious the age-old dream of alchemy, and to continue to pile new synonyms on top of the old, only to know as much or as little about it in the end as the ancients themselves. I will not enlarge upon what the *lapis* meant to our forefathers, and what the mandala still means to the Lamaist and Tantrist, Aztec and Pueblo Indian, the “golden pill”¹²⁷ to the Taoist, and the “golden seed” to the Hindu. We know the texts that give us a vivid idea of all this. But what does it mean when the unconscious stubbornly persists in presenting such abstruse symbolisms to a cultured European? The only point of view I can apply here is a psychological one. (There may be others with which I am not familiar.) From this point of view, as it seems to me, everything that can be grouped together under the general concept “mandala” expresses the essence of a certain kind of *attitude*. The known attitudes of the conscious mind have definable aims and purposes. But a man’s attitude towards the self is the only one that has no definable aim and no visible purpose. It is easy enough to say “self,” but exactly what have we said? That remains

shrouded in “metaphysical” darkness. I may define “self” as the totality of the conscious and unconscious psyche, but this totality transcends our vision; it is a veritable *lapis invisibilitatis*. In so far as the unconscious exists it is not definable; its existence is a mere postulate and nothing whatever can be predicated as to its possible contents. The totality can only be experienced in its parts and then only in so far as these are contents of consciousness; but *qua* totality it necessarily transcends consciousness. Consequently the “self” is a pure borderline concept similar to Kant’s *Ding an sich*. True, it is a concept that grows steadily clearer with experience—as our dreams show—without, however, losing anything of its transcendence. Since we cannot possibly know the boundaries of something unknown to us, it follows that we are not in a position to set any bounds to the self. It would be wildly arbitrary and therefore unscientific to restrict the self to the limits of the individual psyche, quite apart from the fundamental fact that we have not the least knowledge of these limits, seeing that they also lie in the unconscious. We may be able to indicate the limits of consciousness, but the unconscious is simply the unknown psyche and for that very reason illimitable because indeterminable. Such being the case, we should not be in the least surprised if the empirical manifestations of unconscious contents bear all the marks of something illimitable, something not determined by space and time. This quality is numinous and therefore alarming, above all to a cautious mind that knows the value of precisely delimited concepts. One is glad not to be a philosopher or theologian and so under no obligation to meet such numina professionally. It is all the worse when it becomes increasingly clear that numina are psychic *entia* that force themselves upon consciousness, since night after night our dreams practise philosophy on their own account. What is more, when we attempt to give these numina the slip and angrily reject the alchemical gold which the unconscious offers, things do in fact go badly with us, we may even develop symptoms in defiance of all reason, but the moment we face up to the stumbling-block and make it—if only hypothetically—the cornerstone, the symptoms vanish and we feel “unaccountably” well. In this dilemma we can at least comfort ourselves with the reflection that the unconscious is a necessary evil which must be reckoned with, and that it would therefore be wiser to accompany it on some of its strange symbolic wanderings, even though their meaning be exceedingly questionable. It might perhaps be conducive to good health to relearn Nietzsche’s “lesson of earlier humanity.”

[248] The only objection I could make to such rationalistic explanations is that very often they do not stand the test of events. We can observe in these and similar cases how, over the years, the entelechy of the self becomes so insistent that consciousness has to rise to still greater feats if it is to keep pace with the unconscious.

[249] All that can be ascertained at present about the symbolism of the mandala is that it portrays an autonomous psychic fact, characterized by a phenomenology which is always repeating itself and is everywhere the same. It seems to be a sort of atomic nucleus about whose innermost structure and ultimate meaning we know nothing. We can also regard it as the actual—i.e., effective—reflection of a conscious attitude that can state neither its aim nor its purpose and, because of this failure, projects its activity entirely upon the virtual centre of the mandala.¹²⁸ The compelling force necessary for this projection always lies in

some situation where the individual no longer knows how to help himself in any other way. That the mandala is merely a psychological reflex is, however, contradicted firstly by the autonomous nature of this symbol, which sometimes manifests itself with overwhelming spontaneity in dreams and visions, and secondly by the autonomous nature of the unconscious as such, which is not only the original form of everything psychic but also the condition we pass through in early childhood and to which we return every night. There is no evidence for the assertion that the activity of the psyche is merely reactive or reflex. This is at best a biological working hypothesis of limited validity. When raised to a universal truth it is nothing but a materialistic myth, for it overlooks the creative capacity of the psyche, which—whether we like it or not—exists, and in face of which all so-called “causes” become mere occasions.

89. The pelican nourishing its young with its own blood, an allegory of Christ.—Boschius, *Symbolographia* (1702)

33. DREAM:

[250] *A battle among savages, in which bestial cruelties are perpetrated.*

[251] As was to be foreseen, the new complication (“immortality”) has started a furious conflict, which makes use of the same symbols as the analogous situation in dream 27 (par. 232).

34. DREAM:

[252] *A conversation with a friend. The dreamer says, “I must carry on with the figure of the bleeding Christ before me and persevere in the work of self-redemption.”*

[253] This, like the previous dream, points to an extraordinary, subtle kind of suffering (fig. 89) caused by the breaking through of an alien spiritual world which we find very hard to accept—hence the analogy with the tragedy of Christ: “My kingdom is not of this world.” But it also shows that the dreamer is now continuing his task in deadly earnest. The reference to Christ may well have a deeper meaning than that of a mere moral reminder: we are concerned here with the process of individuation, a process which has constantly been held up to Western man in the dogmatic and religious model of the life of Christ. The accent has always fallen on the “historicity” of the Saviour’s life, and because of this its symbolical nature has remained in the dark, although the Incarnation formed a very essential part of the *symbolon* (creed). The efficacy of dogma, however, by no means rests on Christ’s unique historical reality but on its own symbolic nature, by virtue of which it expresses a more or less ubiquitous psychological assumption quite independent of the existence of any dogma.

There is thus a “pre-Christian” as well as a “non-Christian” Christ, in so far as he is an autonomous psychological fact. At any rate the doctrine of prefiguration is founded on this idea. In the case of the modern man, who has no religious assumptions at all, it is therefore only logical that the Anthropos or Poimen figure should emerge, since it is present in his own psyche (figs. 117, 195).

35. DREAM:

[254] *An actor smashes his hat against the wall, where it looks like this:*

[255] As certain material not included here shows, the “actor” refers to a definite fact in the dreamer’s personal life. Up to now he had maintained a certain fiction about himself which prevented him from taking himself seriously. This fiction has become incompatible with the serious attitude he has now attained. He must give up the actor, for it was the actor in him who rejected the self. The hat refers to the first dream of all, where he put on a *stranger’s* hat. The actor throws the hat against the wall, and the hat proves to be a mandala. So the “strange” hat was the self, which at that time—while he was still playing a fictitious role—seemed like a stranger to him.

36. DREAM:

[256] *The dreamer drives in a taxi to the Rathausplatz, but it is called the “Marienhof.”*

[257] I mention this dream only in passing because it shows the feminine nature of the *temenos*, just as *hortus conclusus* (enclosed garden) is often used as an image for the Virgin Mary in medieval hymns, and *rosa mystica* is one of her attributes in the Litany of Loreto (cf. fig. 26).

37. DREAM:

[258] *There are curves outlined in light around a dark centre. Then the dreamer is wandering about in a dark cave, where a battle is going on between good and evil. But there is also a prince who knows everything. He gives the dreamer a ring set with a diamond and places it on the fourth finger of his left hand.*

[259] The circulation of light that started in dream 26 reappears more clearly. Light always refers to consciousness, which at present runs only along the periphery. The centre is still dark. It is the dark cave, and to enter it is obviously to set the conflict going again. At the same time it is like the prince who stands aloof, who knows everything and is the possessor of the precious stone. The gift means nothing less than the dreamer’s vow to the self—for as a rule the wedding ring is worn on the fourth finger of the left hand. True, the left is the unconscious, from which it is to be inferred that the situation is still largely shrouded in

unconsciousness. The prince seems to be the representative of the *aenigma regis* (fig. 54; cf. commentary to dream 10, par. 142). The dark cave corresponds to the vessel containing the warring opposites. The self is made manifest in the opposites and in the conflict between them; it is a *coincidentia oppositorum*. Hence the way to the self begins with conflict.

38. DREAM:

[260] *A circular table with four chairs round it. Table and chairs are empty.*

[261] This dream confirms the above conjecture. The mandala is not yet “in use.”

90. The bear representing the dangerous aspect of the *prima materia*.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

39. VISUAL IMPRESSION:

[262] *The dreamer is falling into the abyss. At the bottom there is a bear whose eyes gleam alternately in four colours: red, yellow, green, and blue. Actually it has four eyes that change into four lights. The bear disappears and the dreamer goes through a long dark tunnel. Light is shimmering at the far end. A treasure is there, and on top of it the ring with the diamond. It is said that this ring will lead him on a long journey to the east.*

[263] This waking dream shows that the dreamer is still preoccupied with the dark centre. The bear stands for the chthonic element that might seize him. But then it becomes clear that the animal is only leading up to the four colours (cf. dream 23, par. 212), which in their turn lead to the *lapis*, i.e., the diamond whose prism contains all the hues of the rainbow. The way to the east probably points to the unconscious as an antipode. According to the legend the Grail-stone comes from the east and must return there again. In alchemy the bear corresponds to the *nigredo* of the *prima materia* (fig. 90), whence comes the colourful *cauda pavonis*.

40. DREAM:

[264] *Under the guidance of the unknown woman the dreamer has to discover the Pole at the risk of his life.*

[265] The Pole is the point round which everything turns—hence another symbol of the self. Alchemy also took up this analogy: “In the Pole is the heart of Mercurius, who is the true fire, wherein his master rests. When navigating over this great sea ... he sets his course by the aspect of the North star.”¹²⁹ Mercurius is the world-soul, and the Pole is its heart (fig. 149). The idea of the *anima mundi* (fig. 91; cf. fig. 8) coincides with that of the collective unconscious whose centre is the self. The symbol of the sea is another synonym for the unconscious.

41. VISUAL IMPRESSION:

[266] *Yellow balls rolling round to the left in a circle.*

[267] Rotation about a centre, recalling dream 21 (par. 198).

42. DREAM:

[268] *An old master points to a spot on the ground illuminated in red.*

[269] The *philosophus* shows him the “centre.” The redness may mean the dawn, like the *rubedo* in alchemy, which as a rule immediately preceded the completion of the work.

43. DREAM:

[270] *A yellow light like the sun looms through the fog, but it is murky. Eight rays go out from the centre. This is the point of penetration: the light ought to pierce through, but has not quite succeeded.*

[271] The dreamer himself observed that the point of penetration was identical with the Pole in dream 40. So it is, as we surmised, a question of the sun’s appearing, which now turns yellow. But the light is still murky, which probably means insufficient understanding. The “penetration” alludes to the need for effort in coming to a decision. In alchemy yellow (*citrinitas*) often coincides with the *rubedo*. The “gold” is yellow or reddish yellow.

91. *Anima Mundi*.—Thurneisser zum Thurn, *Quinta essentia* (1574)

44. DREAM:

[272] *The dreamer is in a square enclosure where he must keep still. It is a prison for Lilliputians (or children?). A wicked woman is in charge of them. The children start moving and begin to circulate round the periphery. The dreamer would like to run away but may not do so. One of the children turns into an animal and bites him in the calf (fig. 118).*

[273] The lack of clarity demands further efforts of concentration; hence the dreamer finds himself still in the childhood state (figs. 95, 96), hence “lopsided” (cf. dream 26, par. 227), and imprisoned in the *temenos* in the charge of a wicked mother anima. The animal appears as in dream 18 (par. 183) and he is bitten, i.e., he must expose himself and pay the price. The *circumambulatio* means, as always, concentration on the centre. He finds this state of tension almost unendurable. But he wakes up with an intense and pleasant feeling of having solved something, “as if he held the diamond in his hand.” The children point to the dwarf motif, which may express Cabiric elements, i.e., it may represent unconscious formative powers (see dreams 56ff., below), or it may at the same time allude to his still childish condition.

45. DREAM:

[274] *A parade ground with troops. They are not equipping themselves for war but form an eight-rayed star rotating to the left.*

[275] The essential point here is that the conflict seems to be overcome. The star is not in the sky and not a diamond, but a configuration on the earth formed by human beings.

46. DREAM:

[276] *The dreamer is imprisoned in the square enclosure. Lions and a wicked sorceress appear.*

[277] He cannot get out of the chthonic prison because he is not yet ready to do something that he should. (This is an important personal matter, a duty even, and the cause of much misgiving.) Lions, like all wild animals, indicate latent affects. The lion plays an important part in alchemy and has much the same meaning. It is a “fiery” animal, an emblem of the devil, and stands for the danger of being swallowed by the unconscious.

47. DREAM:

[278] *The wise old man shows the dreamer a place on the ground marked in a peculiar way.*

[279] This is probably the place on earth where the dreamer belongs if he is to realize the self (similar to dream 42).

48. DREAM:

[280] *An acquaintance wins a prize for digging up a potter’s wheel.*

[281] The potter’s wheel rotates on the ground (cf. dream 45) and produces earthenware (“earthly”) vessels which may figuratively be called “human bodies.” Being round, the wheel refers to the self and the creative activity in which it is manifest. The potter’s wheel also symbolizes the recurrent theme of circulation.

92. The alchemical process in the zodiac.—“Ripley Scrowle” (MS., 1588)

49. DREAM:

[282] *A starry figure rotating. At the cardinal points of the circle there are pictures representing the seasons.*

[283] Just as the place was defined before, so now the time. Place and time are the most general and necessary elements in any definition. The determination of time and place was stressed right at the beginning (cf. dreams 7, 8, 9; pars. 130–34). A definite location in place and time is part of a man's reality. The seasons refer to the quartering of the circle which corresponds to the cycle of the year (fig. 92). The year is a symbol of the original man¹³⁰ (figs. 99, 100, 104). The rotation motif indicates that the symbol of the circle is to be thought of not as static but as dynamic.

50. DREAM:

[284] *An unknown man gives the dreamer a precious stone. But he is attacked by a gang of apaches. He runs away (nightmare) and is able to escape. The unknown woman tells him afterwards that it will not always be so: sometime he will have to stand his ground and not run away.*

[285] When a definite time is added to a definite place one is rapidly approaching reality. That is the reason for the gift of the jewel, but also for the fear of decision, which robs the dreamer of the power to make up his mind.

51. DREAM:

[286] *There is a feeling of great tension. Many people are circulating round a large central oblong with four smaller oblongs on its sides. The circulation in the large oblong goes to the left and in the smaller oblongs to the right. In the middle there is the eight-rayed star. A bowl is placed in the centre of each of the smaller oblongs, containing red, yellow, green, and colourless water. The water rotates to the left. The disquieting question arises: Is there enough water?*

[287] The colours point once more to the preliminary stage. The “disquieting” question is whether there is enough water of life—*aqua nostra*, energy, libido—to reach the central star (i.e., the “core” or “kernel”; cf. next dream). The circulation in the central oblong is still going to the left, i.e., consciousness is moving towards the unconscious. The centre is therefore not yet sufficiently illuminated. The rightward circulation in the smaller oblongs, which represent the quaternity, seems to suggest that the four functions are becoming conscious. The four are generally characterized by the four colours of the rainbow. The striking fact here is that the blue is missing, and also that the square ground-plan has suddenly been abandoned. The horizontal has extended itself at the cost of the vertical. So we are dealing with a “disturbed” mandala.¹³¹ We might add by way of criticism that the

antithetical arrangement of the functions has not yet become sufficiently conscious for their characteristic polarity to be recognized.¹³² The predominance of the horizontal over the vertical indicates that the ego-consciousness is uppermost, thus entailing a loss of height and depth.

52. DREAM:

[288] *A rectangular dance hall. Everybody is going round the periphery to the left. Suddenly the order is heard: "To the kernels!" But the dreamer has first to go into the adjoining room to crack some nuts. Then the people climb down rope ladders to the water.*

[289] The time has come to press on to the "kernel" or core of the matter, but the dreamer still has a few more "hard nuts" to crack in the little rectangle (the "adjoining room"), i.e., in one of the four functions. Meanwhile the process goes on and descends to the "water." The vertical is thus lengthened, and from the incorrect oblong we again get the square which expresses the complete symmetry of conscious and unconscious with all its psychological implications.

53. DREAM:

[290] *The dreamer finds himself in an empty square room which is rotating. A voice cries, "Don't let him out. He won't pay the tax!"*

[291] This refers to the dreamer's inadequate self-realization in the personal matter already alluded to, which in this case was one of the essential conditions of individuation and therefore could not be circumvented. As was to be expected, after the preparatory emphasis on the vertical in the preceding dream, the square is now re-established. The cause of the disturbance was an underestimation of the demands of the unconscious (the vertical), which led to a flattening of the personality (recumbent oblong).

[292] After this dream the dreamer worked out six mandalas in which he tried to determine the right length of the vertical, the form of "circulation," and the distribution of colour. At the end of this work came the following dream (given unabridged):

54. DREAM:

[293] *I come to a strange, solemn house—the "House of the Gathering." Many candles are burning in the background, arranged in a peculiar pattern with four points running upward. Outside, at the door of the house, an old man is posted. People are going in. They say nothing and stand motionless in order to collect themselves inwardly. The man at the door says of the visitors to the house, "When they come out again they are cleansed." I go into the house myself and find I can concentrate perfectly. Then a voice says: "What you are doing is dangerous. Religion is not a tax to be paid so that you can rid yourself of the woman's image, for this image cannot be got rid of. Woe unto them who use religion as a substitute for another side of the soul's life; they are in error and will be accursed. Religion is no substitute; it is to be added to the other activities of the soul as the ultimate completion. Out of the fulness of life shall you bring forth your religion; only then shall you*

be blessed!” While the last sentence is being spoken in ringing tones I hear distant music, simple chords on an organ. Something about it reminds me of Wagner’s *Fire Music*. As I leave the house I see a burning mountain and I feel: “The fire that is not put out is a holy fire” (Shaw, *St. Joan*).

93. The Mountain of the Adepts. The temple of the wise (“House of the Gathering” or of “Self-Collection”), lit by the sun and moon, stands on the seven stages, surmounted by the phoenix. The temple is hidden in the mountain—a hint that the philosophers’ stone lies buried in the earth and must be extracted and cleansed. The zodiac in the background symbolizes the duration of the *opus*, while the four elements indicate wholeness. In foreground, blindfolded man and the investigator who follows his natural instinct.—Michelspacher, *Cabala* (1654)

[294] The dreamer notes that this dream was a “powerful experience.” Indeed it has a numinous quality and we shall therefore not be far wrong if we assume that it represents a new climax of insight and understanding. The “voice” has as a rule an absolutely authoritative character and generally comes at decisive moments.

[295] The house probably corresponds to the square, which is a “gathering place” (fig. 93). The four shining points in the background again indicate the quaternity. The remark about cleansing refers to the transformative function of the taboo area. The production of wholeness, which is prevented by the “tax evasion,” naturally requires the “image of the woman,” since as anima she represents the fourth, “inferior” function, feminine because contaminated with the unconscious. In what sense the “tax” is to be paid depends on the nature of the inferior function and its auxiliary, and also on the attitude type.¹³³ The payment

can be either concrete or symbolic, but the conscious mind is not qualified to decide which form is valid.

[296] The dream's view that religion may not be a substitute for "another side of the soul's life" will certainly strike many people as a radical innovation. According to it, religion is equated with wholeness; it even appears as the expression of the integration of the self in the "fulness of life."

[297] The faint echo of the Fire Music—the Loki motif—is not out of key, for what does "fulness of life" mean? What does "wholeness" mean? I feel that there is every reason here for some anxiety, since man as a whole being casts a shadow. The fourth was not separated from the three and banished to the kingdom of everlasting fire for nothing. Does not an uncanonical saying of our Lord declare: "Whoso is near unto me is near unto the fire"?¹³⁴ (Cf. [fig. 58](#).) Such dire ambiguities are not meant for grown-up children—which is why Heraclitus of old was named "the dark," because he spoke too plainly and called life itself an "ever-living fire." And that is why there are uncanonical sayings for those that have ears to hear.

94. Etna: "gelat et ardet."—Boschius, *Symbolographia* (1702)

[298] The theme of the Fire Mountain ([fig. 94](#)) is to be met with in the Book of Enoch.¹³⁵ Enoch sees the seven stars chained "like great mountains and burning with fire" at the angels' place of punishment. Originally the seven stars were the seven great Babylonian gods, but at the time of Enoch's revelation they had become the seven Archons, rulers of "this world," fallen angels condemned to punishment. In contrast to this menacing theme there is an allusion to the miracles of Jehovah on Mount Sinai, while according to other sources the number seven is by no means sinister, since it is on the seventh mountain of the western land that the tree with the life-giving fruit is to be found, i.e., the *arbor sapientiae* (cf. [fig. 188](#)).¹³⁶

55. DREAM:

[299] *A silver bowl with four cracked nuts at the cardinal points.*

[300] This dream shows that some of the problems in dream 52 have been settled, though the settlement is not complete. The dreamer pictured the goal that has now been attained as a circle divided into four, with the quadrants painted in the four colours. The circulation is to

the left. Though this satisfies the demands of symmetry, the polarity of the functions is still unrecognized—despite the last, very illuminating dream—because, in the painting, red and blue, green and yellow, are side by side instead of opposite one another. From this we must conclude that the “realization” is meeting with strong inner resistances, partly of a philosophical and partly of an ethical nature, the justification for which cannot lightly be set aside. That the dreamer has an inadequate understanding of the polarity is shown by the fact that the nuts have still to be cracked in reality, and also that they are all alike, i.e., not yet differentiated.

95. *Ludus puerorum*—Trismosin, “Splendor solis” (MS., 1582)

96. Pygmies (helpful child-gods).—Fragments of an Egyptian mechanical toy

56. DREAM:

[301] *Four children are carrying a large dark ring. They move in a circle. The dark unknown woman appears and says she will come again, for it is the festival of the solstice.*

[302] In this dream the elements of dream 44 come together again: the children and the dark woman, who was a wicked witch before. The “solstice” indicates the turning-point. In alchemy the work is completed in the autumn (*Vindemia Hermetis*). Children (fig. 95), dwarf-gods, bring the ring—i.e., the symbol of wholeness is still under the sway of childlike creative powers. Note that children also play a part in the *opus alchymicum*: a certain portion of the work is called *ludus puerorum*. Save for the remark that the work is as easy as “child’s play,” I have found no explanation for this. Seeing that the work is, in the unanimous testimony of all the adepts, exceedingly difficult, it must be a euphemistic and probably also a symbolical definition. It would thus point to a co-operation on the part of “infantile” or unconscious forces represented as Cabiri and hobgoblins (homunculi: fig. 96).

97. The “Grand Peregrination” by ship. Two eagles fly round the earth in opposite directions, indicating that it is an odyssey in search of wholeness.—Maier, *Viatorium* (1651)

98. The philosophical egg, whence the double eagle is hatched, wearing the spiritual and temporal crowns.—Codex Palatinus Latinus 412 (15th cent.)

57. VISUAL IMPRESSION:

[303] *The dark ring, with an egg in the middle.*

58. VISUAL IMPRESSION:

[304] *A black eagle comes out of the egg and seizes in its beak the ring, now turned to gold. Then the dreamer is on a ship and the bird flies ahead.*

[305] The eagle signifies height. (Previously the stress was on depth: people descending to the water.) It seizes the whole mandala and, with it, control of the dreamer, who, carried along on a ship, sails after the bird (fig. 97). Birds are thoughts and the flight of thought. Generally it is fantasies and intuitive ideas that are represented thus (the winged Mercurius, Morpheus, genii, angels). The ship is the vehicle that bears the dreamer over the sea and the depths of the unconscious. As a man-made thing it has the significance of a system or method (or a way: cf. Hinayana and Mahayana = the Lesser and Greater Vehicle, the two schools of Buddhism). The flight of thought goes ahead and methodical elaboration follows after. Man cannot walk the rainbow bridge like a god but must go underneath with whatever reflective afterthoughts he may have. The eagle—synonymous with phoenix, vulture, raven—is a well-known alchemical symbol. Even the *lapis*, the *rebis* (compounded of two parts and therefore frequently hermaphroditic as an amalgam of Sol and Luna), is often represented with wings (figs. 22, 54, 208), denoting intuition or spiritual (winged)

potentiality. In the last resort all these symbols depict the consciousness-transcending fact we call the self. This visual impression is rather like a snapshot of an evolving process as it leads on to the next stage.

[306] In alchemy the egg stands for the chaos apprehended by the artifex, the *prima materia* containing the captive world-soul. Out of the egg—symbolized by the round cooking-vessel—will rise the eagle or phoenix, the liberated soul, which is ultimately identical with the Anthropos who was imprisoned in the embrace of Physis (fig. 98).

99. Time-symbol of the *lapis*: the cross and the evangelical emblems mark its analogy with Christ.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

III. THE VISION OF THE WORLD CLOCK

59. THE “GREAT VISION”:¹³⁷

[307] *There is a vertical and a horizontal circle, having a common centre. This is the world clock. It is supported by the black bird.*

The vertical circle is a blue disc with a white border divided into $4 \times 8 = 32$ partitions. A pointer rotates upon it.

The horizontal circle consists of four colours. On it stand four little men with pendulums, and round about it is laid the ring that was once dark and is now golden (formerly carried by the children).

The “clock” has three rhythms or pulses:

1. *The small pulse: the pointer on the blue vertical disc advances by 1/32.*

2. The middle pulse:

one complete revolution of the pointer. At the same time the horizontal circle advances 1/32.

3. The great pulse:

32 middle pulses are equal to one revolution of the golden ring.

[308] This remarkable vision made a deep and lasting impression on the dreamer, an impression of “the most sublime harmony,” as he himself puts it. The world clock may well be the “severe image” which is identical with the Cabiri, i.e., the four children or four little men with the pendulums. It is a three-dimensional mandala—a mandala in bodily form signifying realization. (Unfortunately medical discretion prevents my giving the biographical details. It must suffice to say that this realization did actually take place.) Whatever a man does in reality he himself becomes.

[309] Just why the vision of this curious figure should produce an impression of “the most sublime harmony” is, in one sense, very difficult to understand; but it becomes comprehensible enough as soon as we consider the comparative historical material. It is difficult to feel our way into the matter because the meaning of the image is exceedingly obscure. If the meaning is impenetrable and the form and colour take no account of aesthetic requirements, then neither our understanding nor our sense of beauty is satisfied, and we are at a loss to see why it should give rise to the impression of “the most sublime harmony.” We can only venture the hypothesis that disparate and incongruous elements have combined here in the most fortunate way, simultaneously producing an image which realizes the “intentions” of the unconscious in the highest degree. We must therefore assume that the image is a singularly happy expression for an otherwise unknowable psychic fact which has so far only been able to manifest apparently disconnected aspects of itself.

[310] The impression is indeed extremely abstract. One of the underlying ideas seems to be the intersection of two heterogeneous systems by the sharing of a common centre. Hence if we start as before from the assumption that the centre and its periphery represent the totality of the psyche and consequently the self, then the figure tells us that two heterogeneous systems intersect in the self, standing to one another in a functional relationship that is governed by law and regulated by “three rhythms.” The self is by definition the centre and the circumference of the conscious and unconscious systems. But the regulation of their functions by three rhythms is something that I cannot substantiate. I do not know what the three rhythms allude to. But I do not doubt for a moment that the allusion is amply justified. The only analogy I could adduce would be the three *regimina* mentioned in the Introduction (par. 31), by which the four elements are converted into one another or synthesized in the quintessence:

1st
2nd
3rd

regimen:” :
” :

earth to water.
water to air.
air to fire.

[311] We shall hardly be mistaken if we assume that our mandala aspires to the most complete union of opposites that is possible, including that of the masculine trinity and the feminine quaternity on the analogy of the alchemical hermaphrodite.

[312] Since the figure has a cosmic aspect—world clock—we must suppose it to be a small-scale model or perhaps even a source of space-time, or at any rate an embodiment of it and therefore, mathematically speaking, four-dimensional in nature although only visible in a three-dimensional projection. I do not wish to labour this argument, for such an interpretation lies beyond my powers of proof.

[313] The thirty-two pulses may conceivably derive from the multiplication of 4×8 , as we know from experience that the quaternity found at the centre of a mandala often becomes 8, 16, 32, or more when extended to the periphery. The number 32 plays an important role in the Cabala. Thus we read in the *Sepher Yetsirah* (1 : 1): “Jehovah, the Lord of Hosts, the God of Israel, the living God and King of the world ... has graven his name in thirty-two mysterious paths of wisdom.” These consist of “ten self-contained numbers [*Sephiroth*] and twenty-two basic letters” (1 : 2). The meaning of the ten numbers is as follows: “1: the spirit of the Living God; 2: spirit from spirit; 3: water from spirit; 4: fire from water; 5–10: height, depth, East, West, South, North.”¹³⁸ Cornelius Agrippa mentions that “the learned Jews attribute the number 32 to Wisdom, for so many are the ways of Wisdom described by Abram.”¹³⁹ Franck establishes a connection between 32 and the cabalistic trinity, Kether, Binah, and Hokhmah: “These three persons contain and unite in themselves everything that exists, and they in turn are united in the White Head, the Ancient of Days, for he is everything and everything is he. Sometimes he is represented with three heads which make but a single head, and sometimes he is likened to the brain which, without impairing its unity, divides into three parts and spreads through the whole body by means of thirty-two pairs of nerves, just as God spreads through the universe along thirty-two miraculous paths.”¹⁴⁰ These thirty-two “canales occulti” are also mentioned by Knorr von Rosenroth,¹⁴¹ who calls Hokhmah “the supreme path of all, embracing all,” on the authority of Job 28 : 7 (A.V.): “There is a path which no fowl knoweth, and which the vulture’s eye hath not seen.” Allendy, in his very valuable account of number symbolism, writes: “32 ... is the differentiation which appears in the organic world; not creative generation, but rather the plan and arrangement of the various forms of created things which the creator has modelled—as the product of 8×4”¹⁴² Whether the cabalistic number 32 can be equated with the thirty-two fortunate signs (*mahavyanjana*) of the Buddha-child is doubtful.

[314] As to the interpretation based on comparative historical material, we are in a more favourable position, at least as regards the general aspects of the figure. We have at our disposal, firstly, the whole mandala symbolism of three continents, and secondly, the specific time symbolism of the mandala as this developed under the influence of astrology, particularly in the West. The horoscope (fig. 100) is itself a mandala (a clock) with a dark centre, and a leftward *circumambulatio* with “houses” and planetary phases. The mandalas of ecclesiastical art, particularly those on the floor before the high altar or beneath the transept, make frequent use of the zodiacal beasts or the yearly seasons. A related idea is the identity of Christ with the Church calendar, of which he is the fixed pole and the life. The Son of Man is an anticipation of the idea of the self (fig. 99): hence the Gnostic adulteration of Christ with the other synonyms for the self among the Naassenes, recorded by Hippolytus. There is also a connection with the symbolism of Horus: on the one hand,

Christ enthroned with the four emblems of the evangelists—three animals and an angel (fig. 101); on the other, Father Horus with his four sons, or Osiris with the four sons of Horus¹⁴³ (fig. 102). Horus is also the ἥλιος ἀνατολῆς (rising sun),¹⁴⁴ and Christ was still worshipped as such by the early Christians.

100. Horoscope, showing the houses, zodiac, and planets.—Woodcut by Erhard Schoen for the nativity calendar of Leonhard Reymann (1515)

101. Christ in the mandorla, surrounded by the symbols of the four evangelists.—Mural painting, church of Saint-Jacques-des-Guérets, Loir-et-Cher, France

102. Osiris, with the four sons of Horus on the lotus.—*The Book of the Dead*

[315] We find a remarkable parallel in the writings of Guillaume de Digulleville, prior of the Cistercian monastery at Châlis, a Norman poet who, independently of Dante, composed three “pélerinages” between 1330 and 1355: *Les Pélerinages de la vie humaine, de l’âme, and de Jésus Christ*.¹⁴⁵ The last canto of the *Pélerinage de l’âme* contains a vision of Paradise, which consists of seven large spheres each containing seven smaller spheres.¹⁴⁶ All the spheres rotate, and this movement is called a *siècle* (*saeculum*). The heavenly *siècles* are the prototypes of the earthly centuries. The angel who guides the poet explains: “When holy Church ends her prayers with *in saecula saeculorum* [for ever and ever], she has in mind, not earthly time, but eternity.” At the same time the *siècles* are spherical spaces in which the blessed dwell. *Siècles* and *cieux* are identical. In the highest heaven of pure gold the King sits on a round throne which shines more brightly than the sun. A *couronne* of precious stones surrounds him. Beside him, on a circular throne that is made of brown crystal, sits the Queen, who intercedes for the sinners (fig. 103).

[316] “Raising his eyes to the golden heaven, the pilgrim perceived a marvellous circle which appeared to be three feet across. It came out of the golden heaven at one point and re-entered it at another, and it made the whole tour of the golden heaven.” This circle is sapphire-coloured. It is a small circle, three feet in diameter, and evidently it moves over a great horizontal circle like a rolling disc. This great circle intersects the golden circle of heaven.

[317] While Guillaume is absorbed in this sight, three spirits suddenly appear clad in purple, with golden crowns and girdles, and enter the golden heaven. This moment, so the angel tells him, is *une fête*, like a church festival on earth:

Ce cercle que tu vois est le calendrier
Qui en faisant son tour entier,
Montre des Saints les journées
Quand elles doivent être fêtées.
Chacun en fait le cercle un tour,
Chacune étoile y est pour jour,
Chacun soleil pour l’espace
De jours trente ou zodiaque.

(This circle is the calendar
Which spinning round the course entire
Shows the feast day of each saint
And when it should be celebrate.
Each saint goes once round all the way,
Each star you see stands for a day,

And every sun denotes a spell
Of thirty days zodiacal.)

103. *Sponsus et sponsa*.—Detail from *Polittico con l'Incoronazione*, by Stefano da Sant' Agnese (15th cent.)

104. God as Father and Logos creating the zodiac.—Peter Lombard, “*De sacramentis*”
(MS., 14th cent.)

[318] The three figures are saints whose feast day is even now being celebrated. The small circle that enters the golden heaven is *three* feet in width, and likewise there are *three* figures who make their sudden entry. They signify the moment of time in

eternity, as does the circle of the calendar (fig. 104). But why this should be exactly three feet in diameter and why there are three figures remains a mystery. We naturally think of the three rhythms in our vision which are started off by the pointer moving over the blue disc, and which enter the system just as inexplicably as the calendar-circle enters the golden heaven.

[319] The guide continues to instruct Guillaume on the significance of the signs of the zodiac with particular reference to sacred history, and ends with the remark that the feast of the twelve fishermen will be celebrated in the sign of Pisces, when the twelve will appear before the Trinity. Then it suddenly occurs to Guillaume that he has never really understood the nature of the Trinity, and he begs the angel for an explanation. The angel answers, “Now, there are three principal colours, namely green, red, and gold. These three colours are seen united in divers works of watered silk and in the feathers of many birds, such as the peacock. The almighty King who puts three colours in one, cannot he also make one substance to be three?” Gold, the royal colour, is attributed to God the Father; red to God the Son, because he shed his blood; and to the Holy Ghost green, “la couleur qui verdoie et qui réconforte.” Thereupon the angel warns Guillaume not to ask any more questions, and disappears. The poet wakes up to find himself safely in his bed, and so ends the *Pélerinage de l’âme*.

105. The Virgin, personifying the starry heaven.—“Speculum humanae saluacionis”

(MS., Vatican, 15th cent.)

[320] There is, however, one thing more to be asked: “Three there are—but where is the fourth?” Why is blue missing? This colour was also missing in the “disturbed” mandala of our dreamer (see par. 287). Curiously enough, the *calendrier* that

intersects the golden circle is blue, and so is the vertical disc in the three-dimensional mandala. We would conjecture that blue, standing for the vertical, means height and depth (the blue sky above, the blue sea below), and that any shrinkage of the vertical reduces the square to an oblong, thus producing something like an inflation of consciousness.¹⁴⁷ Hence the vertical would correspond to the unconscious. But the unconscious in a man has feminine characteristics, and blue is the traditional colour of the Virgin's celestial cloak (fig. 105). Guillaume was so absorbed in the Trinity and in the threefold aspect of the *roy* that he quite forgot the *reyne*. Faust prays to her in these words: "Supreme Mistress of the world! Let me behold thy secret in the outstretched azure canopy of heaven."

[321] It was inevitable that blue should be missing for Guillaume in the tetrad of rainbow colours, because of its feminine nature. But, like woman herself, the anima means the height and depth of a man. Without the blue vertical circle the golden mandala remains bodiless and two-dimensional, a mere abstraction. It is only the intervention of time and space here and now that makes reality. Wholeness is realized for a moment only—the moment that Faust was seeking all his life.

[322] The poet in Guillaume must have had an inkling of the heretical truth when he gave the King a Queen sitting on a throne made of earth-brown crystal. For what is heaven without Mother Earth? And how can man reach fulfilment if the Queen does not intercede for his black soul? She understands the darkness, for she has taken her throne—the earth itself—to heaven with her, if only by the subtlest of suggestions. She adds the missing blue to the gold, red, and green, and thus completes the harmonious whole.

IV. THE SYMBOLS OF THE SELF

[323] The vision of the "world clock" is neither the last nor the highest point in the development of the symbols of the objective psyche. But it brings to an end the first third of the material, consisting in all of some four hundred dreams and visions. This series is noteworthy because it gives an unusually complete description of a psychic fact that I had observed long before in many individual cases.¹⁴⁸ We have to thank not only the completeness of the objective material but the care and discernment of the dreamer for having placed us in a position to follow, step by step, the synthetic work

of the unconscious. The troubled course of this synthesis would doubtless have been depicted in even greater completeness had I taken account of the 340 dreams interspersed among the 59 examined here. Unfortunately this was impossible, because the dreams touch to some extent on the intimacies of personal life and must therefore remain unpublished. So I had to confine myself to the impersonal material.

[324] I hope I may have succeeded in throwing some light upon the development of the symbols of the self and in overcoming, partially at least, the serious difficulties inherent in all material drawn from actual experience. At the same time I am fully aware that the comparative material so necessary for a complete elucidation could have been greatly increased. But, so as not to burden the exposition unduly, I have exercised the greatest reserve in this respect. Consequently there is much that is only hinted at, though this should not be taken as a sign of superficiality. I believe myself to be in a position to offer ample evidence for my views, but I do not wish to give the impression that I imagine I have said anything final on this highly complicated subject. It is true that this is not the first time I have dealt with a series of spontaneous manifestations of the unconscious. I did so once before, in my book *Psychology of the Unconscious*,¹⁴⁹ but there it was more a problem of neurosis in puberty, whereas this is the broader problem of individuation.

107. Virgin carrying the Saviour.—“Speculum humanae saluacionis” (MS., Vatican)

108. Maya, eternal weaver of the illusory world of the senses, encircled by the Uroboros.

—Damaged vignette from a collection of Brahminic sayings

Moreover, there is a very considerable difference between the two personalities in question. The earlier case, which I never saw at first hand, ended in psychic catastrophe—a psychosis; but the present case shows a normal development such as I have often observed in highly intelligent persons.

[325] What is particularly noteworthy here is the consistent development of the central symbol. We can hardly escape the feeling that the unconscious process moves spiral-wise round a centre, gradually getting closer, while the characteristics of the centre grow more and more distinct. Or perhaps we could put it the other way round and say that the centre—itsself virtually unknowable—acts like a magnet on the disparate materials and processes of the unconscious and gradually captures them as in a crystal lattice. For this reason the centre is (in other cases) often pictured as a spider in its web (fig. 108), especially when the conscious attitude is still dominated by fear of unconscious processes. But if the process is allowed to take its course, as it was in our case, then the central symbol, constantly renewing itself, will steadily and consistently force its way through the apparent chaos of the personal psyche and its dramatic entanglements, just as the great Bernoulli's epitaph¹⁵⁰ says of the spiral: "Eadem mutata resurgo." Accordingly we often find spiral representations of the centre, as for instance the serpent coiled round the creative point, the egg.

[326] Indeed, it seems as if all the personal entanglements and dramatic changes of fortune that make up the intensity of life were nothing but hesitations, timid shrinkings, almost like petty complications and meticulous excuses for not facing the finality of this strange and uncanny process of crystallization. Often one has the impression that the personal psyche is running round this central point like a shy animal, at once fascinated and frightened, always in flight, and yet steadily drawing nearer.

[327] I trust I have given no cause for the misunderstanding that I know anything about the nature of the “centre”—for it is simply unknowable and can only be expressed symbolically through its own phenomenology, as is the case, incidentally, with every object of experience. Among the various characteristics of the centre the one that struck me from the beginning was the phenomenon of the quaternity (fig. 109). That it is not simply a question of, shall we say, the “four” points of the compass or something of that kind is proved by the fact that there is often a competition between four and three.¹⁵¹ There is also, but more rarely, a competition between four and five, though five-rayed mandalas must be characterized as abnormal on account of their lack of symmetry.¹⁵² It would seem, therefore, that there is normally a clear insistence on four, or as if there were a greater statistical probability of four. Now it is—as I can hardly refrain from remarking—a curious “sport of nature” that the chief chemical constituent of the physical organism is carbon, which is characterized by four valencies; also it is well known that the diamond is a carbon crystal. Carbon is black—coal, graphite—but the diamond is “purest water.” To draw such an analogy would be a lamentable piece of intellectual bad taste were the phenomenon of four merely a poetic conceit on the part of the conscious mind and not a spontaneous product of the objective psyche. Even if we supposed that dreams could be influenced to any appreciable extent by auto-suggestion—in which case it would naturally be more a matter of their meaning than of their form—it would still have to be proved that the conscious mind of the dreamer had made a serious effort to impress the idea of the quaternity on the unconscious. But in this case as in many other cases I have observed, such a possibility is absolutely out of the question, quite apart from the numerous historical and ethnological parallels¹⁵³ (fig. 110; cf. also figs. 50, 61–66, 82, 109). Surveying these facts as a whole, we come, at least in my opinion, to the inescapable conclusion that there is some psychic element present which expresses itself through the quaternity. No daring speculation or extravagant fancy is needed for this. If I have called the centre the “self,” I did so after mature consideration and a careful appraisal of the empirical and historical data. A materialistic interpretation could easily maintain that the “centre” is “nothing but” the point at which the psyche ceases to be knowable because it there coalesces with the body. And a spiritualistic interpretation might retort that this “self” is nothing but “spirit,” which animates both soul and body and irrupts into time and space at that creative point. I purposely refrain from all such physical and metaphysical speculations and content myself with establishing the empirical facts, and this seems to me infinitely more important for the advance of human knowledge than running after fashionable intellectual crazes or jumped-up “religious” creeds.

110. Sand-painting of the Navajo Indians.—Ethnological drawing

[328] To the best of my experience we are dealing here with very important “nuclear processes” in the objective psyche—“images of the goal,” as it were, which the psychic process, being goal-directed, apparently sets up of its own accord, without any external stimulus.¹⁵⁴ Externally, of course, there is always a certain condition of psychic need, a sort of hunger, but it seeks for familiar and favourite dishes and never imagines as its goal some outlandish food unknown to consciousness. The goal which beckons to this psychic need, the image which promises to heal, to make whole, is at first strange beyond all measure to the conscious mind, so that it can find entry only with the very greatest difficulty. Of course it is quite different for people who live in a time and environment when such images of the goal have dogmatic validity. These images are then *eo ipso* held up to consciousness, and the unconscious is thus shown its own secret reflection, in which it recognizes itself and so joins forces with the conscious mind.

[329] As to the question of the origin of the mandala motif, from a superficial point of view it looks as if it had gradually come into being in the course of the dream-series. The fact is, however, that it only *appeared* more and more distinctly and in increasingly differentiated form; in reality it was always present and even occurred in the first dream—as the nymphs say later: “We were always there, only you did not notice us.” It is therefore more probable that we are dealing with an *a priori* “type,” an archetype which is inherent in the collective unconscious and thus beyond individual birth and death. The archetype is, so to speak, an “eternal” presence, and the only question is whether it is perceived by the conscious mind or not. I think we are forming a more probable hypothesis, and one that better explains the observed facts, if we assume that the increase in the clarity and frequency of the mandala motif is due to a more accurate perception of an already existing “type,” rather than that it

is generated in the course of the dream-series.¹⁵⁵ The latter assumption is contradicted by the fact, for instance, that such fundamental ideas as the hat which epitomizes the personality, the encircling serpent, and the *perpetuum mobile* appear right at the beginning (first series: dream 1, par. 52, and vision 5, par. 62; second series: dream 9, par. 134).

[330] If the motif of the mandala is an archetype it ought to be a collective phenomenon, i.e., theoretically it should appear in everyone. In practice, however, it is to be met with in distinct form in relatively few cases, though this does not prevent it from functioning as a concealed pole round which everything ultimately revolves. In the last analysis every life is the realization of a whole, that is, of a self, for which reason this realization can also be called “individuation.” All life is bound to individual carriers who realize it, and it is simply inconceivable without them. But every carrier is charged with an individual destiny and destination, and the realization of these alone makes sense of life. True, the “sense” is often something that could just as well be called “nonsense,” for there is a certain incommensurability between the mystery of existence and human understanding. “Sense” and “nonsense” are merely man-made labels which serve to give us a reasonably valid sense of direction.

[331] As the historical parallels show, the symbolism of the mandala is not just a unique curiosity; we can well say that it is a regular occurrence. Were it not so there would be no comparative material, and it is precisely the possibility of comparing the mental products of all times from every quarter of the globe that shows us most clearly what immense importance the *consensus gentium* has always attached to the processes of the objective psyche. This is reason enough not to make light of them, and my medical experience has only confirmed this estimate. There are people, of course, who think it unscientific to take anything seriously; they do not want their intellectual playground disturbed by graver considerations. But the doctor who fails to take account of man’s feelings for values commits a serious blunder, and if he tries to correct the mysterious and well-nigh inscrutable workings of nature with his so-called scientific attitude, he is merely putting his shallow sophistry in place of nature’s healing processes. Let us take the wisdom of the old alchemists to heart: “Naturalissimum et perfectissimum opus est generare tale quale ipsum est.”¹⁵⁶

RELIGIOUS IDEAS IN ALCHEMY

AN HISTORICAL SURVEY OF ALCHEMICAL IDEAS

Habentibus symbolum facilis est transitus (For those who have the symbol the passage is easy).—

An alchemical *verbum magistri* from Mylius, *Philosophia reformata*.

113. Moon and sun furnaces, showing the *coniunctio*, the union of opposites.

—*Mutus liber* (1702)

1. BASIC CONCEPTS OF ALCHEMY

I. INTRODUCTION

[332] Slowly, in the course of the eighteenth century, alchemy perished in its own obscurity. Its method of explanation—“*obscurum per obscurius, ignotum per ignotius*” (the obscure by the more obscure, the unknown by the more unknown)—was incompatible with the spirit of enlightenment and particularly with the dawning science of chemistry towards the end of the century. But these two new intellectual forces only gave the *coup de grâce* to alchemy. Its inner decay had begun at least a century earlier, at the time of Jakob Böhme, when many alchemists deserted their alembics and melting-pots and devoted themselves entirely to (Hermetic) philosophy. It was then that the chemist and the Hermetic philosopher parted company. Chemistry became natural science, whereas Hermetic philosophy lost the empirical ground from under its feet and aspired to bombastic allegories and inane speculations which were kept alive only by memories of a better time.¹ This was a time when the mind of the alchemist was still grappling with the problems of matter, when the exploring consciousness was confronted by the dark void of the unknown, in which figures and laws were dimly perceived and attributed to matter although they really belonged to the psyche. Everything unknown and empty is filled with psychological projection; it is as if the investigator's own psychic background were mirrored in the darkness. What he sees in matter, or thinks he can see, is chiefly the data of his own unconscious which he is projecting into it. In other words, he encounters in matter, as apparently belonging to it, certain qualities and potential meanings of whose psychic nature he is entirely unconscious. This is particularly true of classical alchemy, when empirical science and mystical philosophy were more or less undifferentiated. The process of fission which separated the φνσικὰ from the μνστικὰ set in at the end of the sixteenth century and produced a quite fantastic species of literature whose authors were, at least to some extent, conscious of the psychic nature of their “alchemistical” transmutations. On this aspect of alchemy, especially as regards its psychological significance, Herbert Silberer's book *Problems of Mysticism and Its Symbolism* gives us abundant information. The fantastic symbolism bound up with it is graphically described in a paper by R. Bernoulli,² and a detailed account of Hermetic philosophy is to be found in a study by J. Evola.³ But a comprehensive study of the ideas contained in the texts, and of their history, is still lacking, although we are indebted to Reitzenstein for important preparatory work in this field.

II. THE ALCHEMICAL PROCESS AND ITS STAGES

[333] Alchemy, as is well known, describes a process of chemical transformation and gives numberless directions for its accomplishment. Although hardly two authors are of the same opinion regarding the exact course of the process and the sequence of its stages, the majority are agreed on the principal points at issue, and have been so from the earliest times, i.e., since the beginning of the Christian era. Four stages are distinguished (fig. 114), characterized by the original colours mentioned in Heraclitus: *melanosis* (blackening), *leukosis* (whitening), *xanthosis* (yellowing), and *iosis* (reddening).⁴ This division of the process into four was called the *τετραμερεῖν τὴν φιλοσοφίαν*, the quartering of the philosophy. Later, about the fifteenth or sixteenth century, the colours were reduced to three, and the *xanthosis*, otherwise called the *citrinitas*, gradually fell into disuse or was but seldom mentioned. Instead, the *viriditas* sometimes appears after the *melanosis* or *nigredo* in exceptional cases, though it was never generally recognized. Whereas the original tetrameria corresponded exactly to the quaternity of elements, it was now frequently stressed that although there were four elements (earth, water, fire, and air) and four qualities (hot, cold, dry, and moist), there were only three colours: black, white, and red. Since the process never led to the desired goal and since the individual parts of it were never carried out in any standardized manner, the change in the classification of its stages cannot be due to extraneous reasons but has more to do with the symbolical significance of the quaternity and the trinity; in other words, it is due to inner psychological reasons.⁵

114. The four stages of the alchemical process. The four elements are indicated on the balls.

—Mylius, *Philosophia reformata* (1622)

115. The *nigredo*: eclipse of *Mercurius senex*, exhaling the *spiritus* and *anima*. The raven is a *nigredo* symbol.—

Jamsthaler, *Viatorium spagyricum* (1625)

[334] The *nigredo* or blackness (fig. 115) is the initial state, either present from the beginning as a quality of the *prima materia*, the chaos or *massa confusa*, or else produced by the separation (*solutio, separatio, divisio, putrefactio*) of the elements. If the separated condition is assumed at the start, as sometimes happens, then a union of opposites is performed under the likeness of a union of male and female (called the *coniugium, matrimonium, coniunctio, coitus*), followed by the death of the product of the union (*mortificatio, calcinatio, putrefactio*) and a corresponding *nigredo*. From this the washing (*ablutio, baptisma*) either leads direct to the whitening (*albedo*), or else the soul (*anima*) released at the “death” is reunited with the dead body and brings about its resurrection, or again the “many colours” (*omnes colores*), or “peacock’s tail” (*cauda pavonis*), lead to the one white colour that contains all colours. At this point the first main goal of the process is reached, namely the *albedo*, *tinctura alba, terra alba foliata, lapis albus*, etc., highly prized by many alchemists as if it were the ultimate goal. It is the silver or moon condition, which still has to be raised to the sun condition. The *albedo* is, so to speak, the daybreak, but not till the *rubedo* is it sunrise. The transition to the *rubedo* is formed by the *citrinitas*, though this, as we have said, was omitted later. The *rubedo* then follows direct from the *albedo* as the result of raising the heat of the fire to its highest intensity. The red and the white are King and Queen, who may also celebrate their “chymical wedding” at this stage (fig. 116).

116. Crowned hermaphrodite representing the union of king and queen, between the sun and moon trees.—“Traité d'alchimie” (MS., Paris, 17th cent.)

III. CONCEPTIONS AND SYMBOLS OF THE GOAL

[335] The arrangement of the stages in individual authors depends primarily on their conception of the goal: sometimes this is the white or red tincture (*aqua permanens*); sometimes the philosophers' stone, which, as hermaphrodite, contains both; or again it is the panacea (*aurum potabile*, *elixir vitae*), philosophical gold, golden glass (*vitrum aureum*), malleable glass (*vitrum malleabile*). The conceptions of the goal are as vague and various as the individual processes. The *lapis philosophorum*, for instance, is often the *prima materia*, or the means of producing the gold; or again it is an altogether mystical being that is sometimes called *Deus terrestris*, *Salvator*, or *filius macrocosmi*, a figure we can only compare with the Gnostic Anthropos, the divine original man⁶ (fig. 117).

[336] Besides the idea of the *prima materia*, that of water (*aqua permanens*) and that of fire (*ignis noster*) play an important part. Although these two elements are antagonistic and even constitute a typical pair of opposites, they are yet one and the same according to the testimony of the authors.⁷ Like the *prima materia* the water has a thousand names;⁸ it is even said to be the original material of the stone.⁹ In spite of this we are on the other hand assured that the water is extracted from the stone or

prima materia as its life-giving soul (*anima*).¹⁰ This perplexity comes out very clearly in the following passage from the “VIII Exercitatio in Turbam”:

117. Anthropos as *anima mundi*, containing the four elements and characterized by the number 10, which represents perfection (1 + 2 + 3 + 4).—Albertus Magnus, *Philosophia naturalis* (1650)

Many dispute in long controversies whether the stone, under different names, consists of several substances, or of two, or only of one. But this philosopher [Scites]¹¹ and Bonellus¹² say that the whole work and the substance of the whole work are nothing but the water; and that the treatment [*regimen*] of the same also takes place in nothing but the water. And there is in fact one substance in which everything is contained and that is the *sulphur philosophorum*, [which] is water and soul, oil, Mercurius and Sol, the fire of nature, the eagle, the *lachryma*, the first *hyle* of the wise, the *materia prima* of the perfect body. And by whatever names the philosophers have called their stone they always mean and refer to this one substance, i.e., to the water from which everything [originates] and in which everything [is contained], which rules everything, in which errors are made and in which the error is itself corrected. I call it “philosophical” water, not ordinary [*vulgi*] water but *aqua mercurialis*, whether it be simple or composite. For both are the philosophical water, although the vulgar

mercury is different from the philosophical. That [water] is simple [and] unmixed, this [water] is composed of two substances: namely of our mineral and of simple water. These composite waters form the philosophical Mercurius. from which it must be assumed that the substance, or the *prima materia* itself, consists of composite water. Some [alchemists] put three together, others, only two. For myself two species are sufficient: male and female or brother and sister [fig. 118]. But they also call the simple water poison, quicksilver [*argentum vivum*], cambar, *aqua permanens*, gum, vinegar, urine, sea-water, dragon, and serpent.¹³

118. Brother-sister pair in the “bath of life,” being bitten in the calf by dragons while the lunar water, fertilized by the divine breath, is poured over their heads.—*Theatrum chemicum Britannicum* (1652)

[337] This account makes one thing very evident: the philosophical water is the stone or the *prima materia* itself; but at the same time, it is also its solvent, as is proved by the prescription immediately following:

Grind the stone to a very fine powder and put it into the sharpest celestial [*coelestino*] vinegar, and it will at once be dissolved into the philosophical water.

119. Alchemical furnace.—Geber, *De alchimia* (1529)

[338] It can also be shown that fire played the same role as water. Another, no less important, idea is that of the Hermetic vessel (*vas Hermetis*), typified by the retorts or melting-furnaces that contained the substances to be transformed (fig. 119). Although an instrument, it nevertheless has peculiar connections with the *prima materia* as well as with the *lapis*, so it is no mere piece of apparatus. For the alchemists the vessel is something truly marvellous: a *vas mirabile*. Maria Prophetissa (fig. 78) says that the whole secret lies in knowing about the Hermetic vessel. “Unum est vas” (the vessel is one) is emphasized again and again.¹⁴ It must be completely round,¹⁵ in imitation of the spherical cosmos,¹⁶ so that the influence of the stars may contribute to the success of the operation.¹⁷ It is a kind of matrix or uterus from which the *filius philosophorum*, the miraculous stone, is to be born¹⁸ (fig. 120). Hence it is required that the vessel be not only round but egg-shaped¹⁹ (fig. 121; cf. fig. 22). One naturally thinks of this vessel as a sort of retort or flask; but one soon learns that this is an inadequate conception since the vessel is more a mystical idea, a true symbol like all the central ideas of alchemy. Thus we hear that the *vas* is the water or *aqua permanens*, which is none other than the Mercurius of the philosophers.²⁰ But not only is it the water, it is also its opposite: fire.²¹

120. Mercurius in the vessel.—Barchusen, *Elementa chemiae* (1718)

121. The transformations of Mercurius in the Hermetic vessel. The homunculus shown as a “pissing manikin” is an allusion to the *urina puerorum* (= *aqua permanens*).—“Cabala mineralis” (MS., British Museum, Add. 5245)

[339] I will not enter further into all the innumerable synonyms for the vessel. The few I have mentioned will suffice to demonstrate its undoubted symbolical significance.

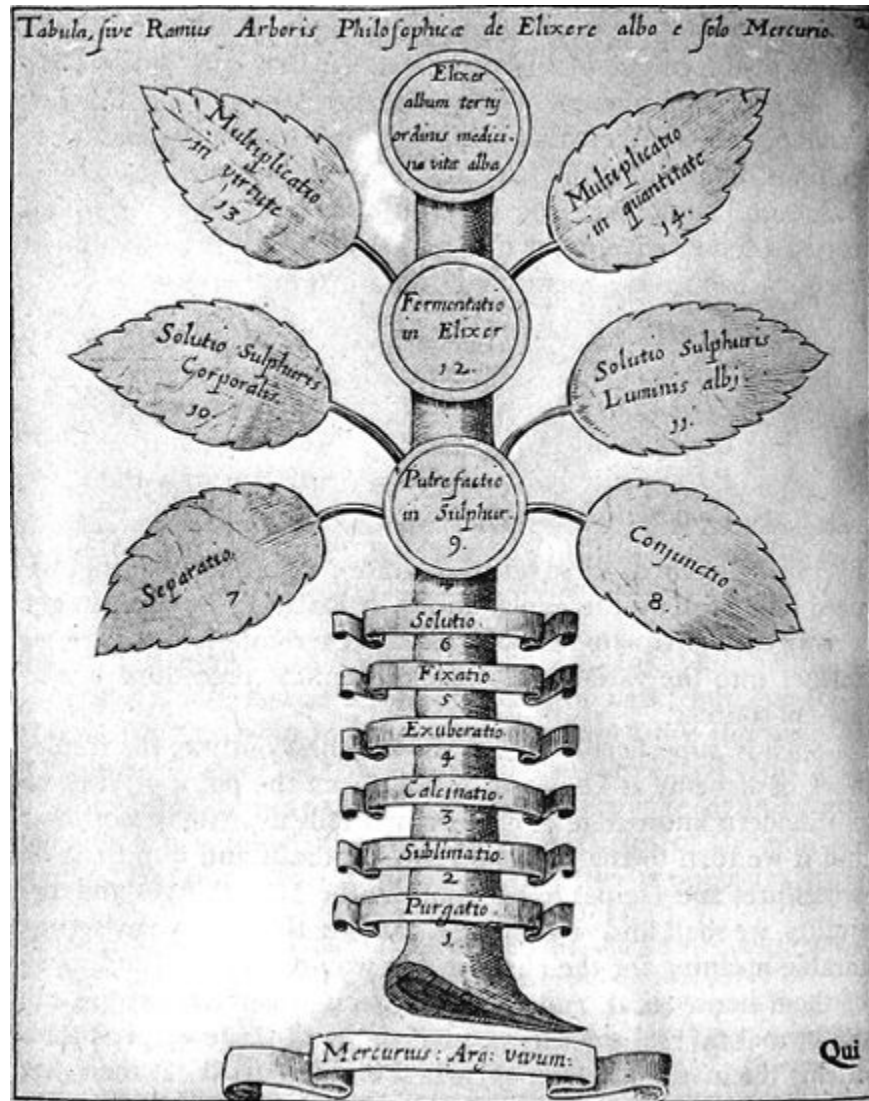

[340] As to the course of the process as a whole, the authors are vague and contradictory. Many content themselves with a few summary hints, others make an elaborate list of the various operations. Thus in 1576, Josephus Quercetanus, alchemist, physician, and diplomat, who in France and French Switzerland played a somewhat similar role to that of Paracelsus, established a sequence of twelve operations²² as follows (fig. 122):

1. *Calcinatio*
2. *Solutio*
3. *Elementorum separatio*

4. *Coniunctio*
5. *Putrefactio*
6. *Coagulatio*
7. *Cibatio*
8. *Sublimatio*
9. *Fermentatio*
10. *Exaltatio*
11. *Augmentatio*
12. *Proiectio*

Every single one of these terms has more than one meaning; we need only look up the explanations in Ruland's *Lexicon* to get a more than adequate idea of this. It is therefore pointless to go further into the variations of the alchemical procedure in the present context.

[341] Such is, superficially and in the roughest outline, the framework of alchemy as known to us all. From the point of view of our modern knowledge of chemistry it tells us little or nothing, and if we turn to the texts and the hundreds and hundreds of procedures and recipes left behind by the Middle Ages and antiquity, we shall find relatively few among them with any recognizable meaning for the chemist. He would probably find most of them nonsensical, and furthermore it is certain beyond all doubt that no real tincture or artificial gold was ever produced during the many centuries of earnest endeavour. What then, we may fairly ask, induced the old alchemists to go on labouring—or, as they said, “operating”—so steadfastly and to write all those treatises on the “divine” art if their whole undertaking was so portentously futile? To do them justice we must add that all knowledge of the nature of chemistry and its limitations was still completely closed to them, so that they were as much entitled to hope as those who dreamed of flying and whose successors made the dream come true after all. Nor should we underestimate the sense of satisfaction born of the enterprise, the excitement of the adventure, of the *quaerere* (seeking) and the *invenire* (finding). This always lasts as long as the methods employed seem sensible. There was nothing at that time to convince the alchemist of the senselessness of his chemical operations; what is more, he could look back on a long tradition which contained not a few testimonies of such as had achieved the marvellous result.²³ Finally the matter was not entirely without promise, since a number of useful discoveries did occasionally emerge as byproducts of his labours in the laboratory. As the forerunner of chemistry alchemy had a sufficient *raison d'être*. Hence, even if alchemy had consisted in—if you like—an unending series of futile and barren chemical experiments, it would be no more astonishing than the venturesome endeavours of medieval medicine and pharmacology.

122. The twelve alchemical operations in the form of the *arbor philosophica*.

—Samuel Norton, *Mercurius redivivus* (1630)

123. Hermaphrodite.—*Hermaphroditisches Sonn- und Mondskind* (1752)

124. Alchemists at work.—*Mutus liber* (1702)

2. THE PSYCHIC NATURE OF THE ALCHEMICAL WORK

I. THE PROJECTION OF PSYCHIC CONTENTS

[342] The alchemical *opus* deals in the main not just with chemical experiments as such, but with something resembling psychic processes expressed in pseudochemical language.¹ The ancients knew more or less what chemical processes were; therefore they must have known that the thing they practised was, to say the least of it, no ordinary chemistry. That they realized the difference is shown even in the title of a treatise by (Pseudo-)Democritus, ascribed to the first century, *τά φυσικιά καὶ τά μυστικά*. And soon afterwards a wealth of evidence accumulates to show that in alchemy there are two—in our eyes—heterogeneous currents flowing side by side, which we simply cannot conceive as being compatible. Alchemy’s “tam ethice quam physice” (as much ethical—i.e., psychological—as physical) is impenetrable to our *logic*. If the alchemist is admittedly using the chemical process only symbolically, then why does he work in a laboratory with crucibles and alembics? And if, as he constantly asserts, he is describing chemical processes, why distort them past recognition with his mythological symbolisms?

[343] This puzzle has proved something of a headache to many an honest and well-meaning student of alchemy. On the one hand the alchemist declares that he is concealing the truth intentionally, so as to prevent wicked or stupid people from gaining possession of the gold and thus precipitating a catastrophe. But, on the other hand, the same author will assure us that the gold he is seeking is not—as the stupid suppose—the ordinary gold (*aurum vulgi*), it is the philosophical gold or even the marvellous stone, the *lapis invisibilitatis* (the stone of invisibility),² or the *lapis aethereus* (the ethereal stone),³ or finally the unimaginable hermaphroditic *rebis* (fig. 125), and he will end up by saying that all recipes whatsoever are to be despised.⁴ For psychological reasons, however, it is highly unlikely that the motive prompting the alchemist to secrecy and mystification was consideration for mankind. Whenever anything real is discovered it is usually announced with a flourish of trumpets. The fact is that the alchemists had little or nothing to divulge in the way of chemistry, least of all the secret of goldmaking.

[344] Mystification can be pure bluff for the obvious purpose of exploiting the credulous. But any attempt to explain alchemy as a whole from this angle is, in my opinion, contradicted by the fact that a fair number of detailed, scholarly, and conscientious treatises were written and published anonymously, and therefore could

not be of unlawful advantage to anyone. At the same time there are undoubtedly a great many fraudulent productions written by charlatans.

125. Mercurius as the sun-moon hermaphrodite (*rebis*), standing on the (round) chaos.—Mylius, *Philosophia reformata* (1622)

[345] But mystification can also arise from another source. The real mystery does not behave mysteriously or secretly; it speaks a secret language, it adumbrates itself by a variety of images which all indicate its true nature. I am not speaking of a secret personally guarded by someone, with a content known to its possessor, but of a mystery, a matter or circumstance which is “secret,” i.e., known only through vague hints but essentially unknown. The real nature of matter was unknown to the alchemist: he knew it only in hints. In seeking to explore it he projected the unconscious into the darkness of matter in order to illuminate it. In order to explain the mystery of matter he projected yet another mystery—his own unknown psychic background—into what was to be explained: *Obscurum per obscurius, ignotum per ignotius!* This procedure was not, of course, intentional; it was an involuntary occurrence.

[346] Strictly speaking, projection is never made; it happens, it is simply there. In the darkness of anything external to me I find, without recognizing it as such, an interior or psychic life that is my own. It would therefore be a mistake in my opinion to explain the formula “tam ethice quam physice” by the theory of correspondences, and to say that this is its “cause.” On the contrary, this theory is more likely to be a rationalization of the experience of projection. The alchemist did not practise his art because he believed on theoretical grounds in correspondence; the point is that he had a theory of correspondence because he experienced the presence of pre-existing

ideas in physical matter. I am therefore inclined to assume that the real root of alchemy is to be sought less in philosophical doctrines than in the projections of individual investigators. I mean by this that while working on his chemical experiments the operator had certain psychic experiences which appeared to him as the particular behaviour of the chemical process. Since it was a question of projection, he was naturally unconscious of the fact that the experience had nothing to do with matter itself (that is, with matter as we know it today). He experienced his projection as a property of matter; but what he was in reality experiencing was his own unconscious. In this way he recapitulated the whole history of man's knowledge of nature. As we all know, science began with the stars, and mankind discovered in them the dominants of the unconscious, the "gods," as well as the curious psychological qualities of the zodiac: a complete projected theory of human character. Astrology is a primordial experience similar to alchemy. Such projections repeat themselves whenever man tries to explore an empty darkness and involuntarily fills it with living form.

[347] This being so, I turned my attention to the question of whether the alchemists themselves had reported any such experiences in the course of their work. I had no reason to hope for a very rich find, since they would be "unconscious" experiences which would escape record for precisely that reason. But in point of fact there are one or two unmistakable accounts in the literature. Characteristically enough, the later accounts are more detailed and specific than the earlier ones. The most recent account comes from a treatise⁵ alleged to have been translated from Ethiopian into Latin and from Latin into German, of which Chapter VIII, "The Creation," reads:

Take of common rainwater a good quantity, at least ten quarts, preserve it well sealed in glass vessels for at least ten days, then it will deposit matter and faeces on the bottom. Pour off the clear liquid and place in a wooden vessel that is fashioned round like a ball, cut it through the middle and fill the vessel a third full, and set it in the sun about midday in a secret or secluded spot.

When this has been done, take a drop of the consecrated red wine and let it fall into the water, and you will instantly perceive a fog and thick darkness on top of the water, such as also was at the first creation. Then put in two drops, and you will see the light coming forth from the darkness; whereupon little by little put in every half of each quarter hour first three, then four, then five, then six drops, and then no more, and you will see with your own eyes one thing after another appearing by and by on top of the water, how God created all things in six days [fig. 126], and how it all came to pass, and such secrets as are not to be spoken aloud and I also have not the power to reveal. Fall on your knees before you undertake this operation. Let your

eyes judge of it; for thus was the world created. Let all stand as it is, and in half an hour after it began it will disappear.

By this you will see clearly the secrets of God, that are at present hidden from you as from a child. You will understand what Moses has written concerning the creation; you will see what manner of body Adam and Eve had before and after the Fall, what the serpent was, what the tree, and what manner of fruits they ate: where and what Paradise is, and in what bodies the righteous shall be resurrected; not in this body that we have received from Adam, but in that which we attain through the Holy Ghost, namely in such a body as our Saviour brought from heaven.

[348] In Chapter IX, “The Heavens,” we read:

You shall take seven pieces of metal, of each and every metal as they are named after the planets, and shall stamp on each the character of the planet in the house of the same planet, and every piece shall be as large and thick as a rose noble.⁶ But of Mercury only the fourth part of an ounce by weight and nothing stamped upon it.

126. The six days of creation, culminating in the seventh day.—St. Hildegarde of Bingen, “Scivias” (MS., 12th cent.)

Then put them after the order in which they stand in the heavens into a crucible, and make all windows fast in the chamber that it may be quite dark within, then melt them all together in the midst of the chamber and drop in seven drops of the blessed Stone, and forthwith a flame of fire will come out of the crucible [fig. 127] and spread itself over the whole chamber (fear no harm), and will light up the whole chamber more brightly than sun and moon, and over your heads you shall behold the

whole firmament as it is in the starry heavens above, and the planets shall hold to their appointed courses as in the sky. Let it cease of itself, in a quarter of an hour everything will be in its own place.

127. The transformation of Mercurius in the fire.—Barchusen, *Elementa chemiae* (1718)

[349] Let us take another example from a treatise by Theobald de Hoghelande (sixteenth century):

They say also that different names are given to the stone on account of the wonderful variety of figures that appear in the course of the work, inasmuch as colours often come forth at the same time, just as we sometimes imagine in the clouds or in the fire strange shapes of animals, reptiles, or trees. I found similar things in a fragment of a book ascribed to Moses: when the body is dissolved, it is there written, then will appear sometimes two branches, sometimes three or more, sometimes also the shapes of reptiles; on occasion it also seems as if a man with a head and all his limbs were seated upon a cathedra.⁷

128. Hermes Trismegistus.—Senior, *De chemia*, in Mangetus, *Bibliotheca chemica curiosa* (1702)

[350] Like the two preceding texts, Hoghelande's remarks prove that during the practical work certain events of an hallucinatory or visionary nature were perceived, which cannot be anything but projections of unconscious contents. Hoghelande quotes Senior as saying that the "vision" of the Hermetic vessel "is more to be sought than the scripture."⁸ The authors speak of seeing with the eyes of the spirit, but it is not always clear whether they mean vision in a real or a figurative sense. Thus the "Novum lumen" says:

To cause things hidden in the shadow to appear, and to take away the shadow from them, this is permitted to the intelligent philosopher by God through nature.... All these things happen, and the eyes of the common men do not see them, but the eyes of the understanding [*intellectus*] and of the imagination perceive them [*percipiunt*] with true and truest vision [*visu*].⁹

[351] Raymond Lully writes:

You should know, dear son, that the course of nature is turned about, so that without invocation [e.g., of the *familiaris*] and without spiritual exaltation you can see certain

fugitive spirits condensed in the air in the shape of divers monsters, beasts and men, which move like the clouds hither and thither [fig. 129].¹⁰

129. Personified *spiritus* escaping from the heated *prima materia*.— Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

[352] Dorn says much the same:

Thus he will come to see with his mental eyes [*oculis mentalibus*] an indefinite number of sparks shining through day by day and more and more and growing into a great light.¹¹

[353] The psychologist will find nothing strange in a figure of speech becoming concretized and turning into an hallucination. Thus in his biographical notes (1594), Hoghelande describes how, on the third day of the *decoctio*, he saw the surface of the substance cover itself with colours, “chiefly green, red, grey, and for the rest iridescent.” Whenever he remembered that day a verse of Virgil’s came into his mind: “Ut vidi, ut perii, ut me malus abstulit error” (When I saw, how utterly I perished and evil delusion took me off). This error or optical illusion (“*ludibrium oculis oblatum*”), he said, was the cause of much subsequent trouble and expense, for he had believed that he was on the point of attaining the *nigredo*. But a few days later his fire went out in the night, which led to an *irreparabile damnum*; in other words, he never succeeded in repeating the phenomenon.¹² Not that the iridescent skin on molten metal is necessarily an hallucination; but the text shows a remarkable willingness on the part of the author to suspect something of the sort.

[354] The “*Tractatus Aristotelis*” contains a passage that is noteworthy from the point of view of the alchemist’s psychology:

The serpent is more cunning than all the beasts of the earth; under the beauty of her skin she shows a harmless face, and she forms herself in the manner of a *materia hypostatica*, through illusion, when immersed in water.¹³ There she gathers together the virtues from the earth, which is her body. Because she is very thirsty she drinks immoderately and becomes drunken, and she causes the nature wherewith she is united to vanish [*decipere*].¹⁴

[355] The serpent is Mercurius, who as the fundamental substance (*hypostatica*) forms himself in the water and swallows the nature to which he is joined (fig. 130). (Cf. sun drowning in the Fountain of Mercurius, lion devouring the sun [fig. 169], Beya dissolving Gabricus in her own body.) Matter is thus formed through illusion, which is necessarily that of the alchemist. This illusion might well be the *vera imaginatio* possessed of “informing” power.

[356] The fact that visions allied themselves to the alchemical work may also explain why dreams and dream-visions are often mentioned as important *intermezzi* or as sources of revelation. Thus Nazari, for instance, puts his doctrine of transmutation in the form of three dreams,¹⁵ a fairly plain analogy to *Poliphilo*. The classical “*Visio Arislei*” has a similar dream form.¹⁶ Ostances likewise communicates his doctrine dressed up as a revelation in a dream.¹⁷ While the dreams and visions in these texts (as also in Senior and Krates) are mainly a literary convention, the dream-vision of Zosimos has a much more authentic character.¹⁸ It is repeatedly stressed in the literature that the much-sought-after *aqua permanens* would be revealed in a dream.¹⁹ Generally speaking the *prima materia*, indeed the stone itself—or the secret of its production—is revealed to the operator by God. Thus Laurentius Ventura says: “But one cannot know the procedure unless it be a gift of God, or through the instruction of a most experienced Master: and the source of it all is the Divine Will.”²⁰ Khunrath²¹ is of the opinion that one could “perfectly prepare our Chaos Naturae [= *prima materia*] in the highest simplicity and perfection” from a “special Secret Divine Vision and revelation, without further probing and pondering of the causes.”²² Hoghelande explains the necessity for divine illumination by saying that the production of the stone transcends reason²³ and that only a supernatural and divine knowledge knows the exact time for the birth of the stone.²⁴ This means that God alone knows the *prima materia*.²⁵ After the time of Paracelsus the source of enlightenment was the *lumen naturae*:

130. The Mercurial serpent devouring itself in water or fire.—Barchusen, *Elementa chemiae* (1718)

This Light is the true Light of nature, which illuminates all the God-loving Philosophers who come into this World. It is in the World and the whole edifice of the World is beautifully adorned and will be naturally preserved by it until the last and great day of the Lord, but the World knows it not. Above all it is the Subject of the Catholic and Great Stone of the Philosophers, which the whole World has before its eyes yet knows not.²⁶

II. THE MENTAL ATTITUDE TOWARDS THE OPUS

[357] A somewhat different aspect of the psyche's relations to the chemical work is apparent in the following quotation from the text of an anonymous author:²⁷ "I pray you, look with the eyes of the mind at this little tree of the grain of wheat, regarding all its circumstances, that you may be able to plant the tree of the philosophers."²⁸ (Fig. 131; cf. also figs. 135, 188, 189, 221.) This seems to point to active imagination as the thing that sets the process really going.

[358] Dorn says in his "Philosophia meditativa": "Thou wilt never make from others the One that thou seekest, except there first be made one thing of thyself."²⁹

Whatever he may have meant by the “One”³⁰ it must refer to the “artifex,” whose unity is postulated as the absolute condition for the completion of the work. We can hardly doubt that the *psychological* condition for the *opus* is meant, and that this is of fundamental importance.

131. Adam as *prima materia*, pierced by the arrow of Mercurius. The *arbor philosophica* is growing out of him.
—“Miscellanea d’alchimia” (MS., 14th cent.)

[359] The *Rosarium* says:³¹

Who therefore knows the salt and its solution knows the hidden secret of the wise men of old. Therefore turn your mind upon the salt and think not of other things; for in it alone [i.e., the mind] is the science concealed and the most excellent and most hidden secret of all the ancient philosophers.³²

[360] The Latin text has “in ipsa sola,” referring therefore to “mens.” One would have to assume a double misprint were the secret after all concealed in the *salt*. But as a matter of fact “mind” and “salt” are close cousins—*cum grano salis!*³³ Hence, according to Khunrath, the salt is not only the physical centre of the earth but at the same time the *sal sapientiae*,³⁴ of which he says: “Therefore direct your feelings,

senses, reason and thoughts upon this salt alone.”³⁵ The anonymous author of the *Rosarium* says in another place that the work must be performed “with the true and not with the fantastic imagination,”³⁶ and again that the stone will be found “when the search lies heavy on the searcher.”³⁷ This remark can only be understood as meaning that a certain psychological condition is indispensable for the discovery of the miraculous stone.

[361] Both these remarks, therefore, make it seem very possible that the author was in fact of the opinion that the essential secret of the art lies hidden in the human mind—or, to put it in modern terms, in the unconscious (fig. 132).

[362] If it really did dawn on the alchemists that their work was somehow connected with the human psyche and its functions, then it seems to me probable that the passage from the *Rosarium* is no mere misprint. It agrees too well with the statements of other authors. They insist throughout upon careful study and meditation of the books. Thus Richardus Anglicus³⁸ says in his so-called “Correctorium alchymiae”:

Therefore all those who desire to attain the blessing of this art should apply themselves to study, should gather the truth from the books and not from invented fables and untruthful works. There is no way by which this art can truly be found (although men meet with many deceptions), except by completing their studies and understanding the words of the philosophers....³⁹

[363] Bernard of Treviso tells us how he struggled in vain for many years till at last he was “directed into the straight path” through a *sermo* of Parmenides in the *Turba*.⁴⁰

[364] Hoghelande says:

He should collect the books of different authors, because otherwise it is impossible to understand them, and he should not throw aside a book which he has read once, twice, or even three times, although he has not understood it, but should read it again ten, twenty, fifty times or even more. At last he will see wherein the authors are mainly agreed: there the truth lies hidden....⁴¹

[365] Quoting Raymond Lully as his authority, the same author says that owing to their ignorance men are not able to accomplish the work until they have studied universal philosophy, which will show them things that are unknown and hidden from others. “Therefore our stone belongs not to the vulgar but to the very heart of our philosophy.”⁴² Dionysius Zacharius relates that a certain “religiosus Doctor excellentissimus” advised him to refrain from useless expense in “sophisticationibus diabolicis” and to devote himself rather to the study of the books of the old philosophers, so as to acquaint himself with the *vera materia*. After a fit of despair he revived with the help of the Holy Spirit and, applying himself to a serious study of

the literature, read diligently, and meditated day and night until his finances were exhausted. Then he worked in his laboratory, saw the three colours appear, and on Easter Day of the following year the wonder happened: “Vidi perfectionem”—“I saw the perfect fulfilment”: the quicksilver was “conversum in purum aurum prae meis oculis.” This happened, so it was said, in 1550.⁴³ There is an unmistakable hint here that the work and its goal depended very largely on a mental condition. Richardus Anglicus rejects all the assorted filth the alchemists worked with, such as eggshells, hair, the blood of a red-haired man, basilisks, worms, herbs, and human faeces. “Whatsoever a man soweth that also shall he reap. Therefore if he soweth filth, he shall find filth.”⁴⁴ “Turn back, brethren, to the way of truth of which you are ignorant; I counsel you for your own sake to study and to labour with steadfast meditation on the words of the philosophers, whence the truth can be summoned forth.”⁴⁵

132. The “secret” contents of the work. Centre, the *soror mystica*, with the artifex, fishing for Neptune (animus); below, artifex, with *soror*, fishing for Melusina (anima).—*Mutus liber* (1702)

[366] The importance or necessity of understanding and intelligence is insisted upon all through the literature, not only because intelligence above the ordinary is needed in the performance of so difficult a work, but because it is assumed that a species of

magical power capable of transforming even brute matter dwells in the human mind. Dorn, who devoted a series of interesting treatises⁴⁶ to the problem of the relationship between the work and the man (fig. 133), says: “In truth the form, which is the intellect of man, is the beginning, middle and end of the procedure: and this form is made clear by the saffron colour, which indicates that man is the greater and principal form in the spagyric *opus*.”⁴⁷ Dorn draws a complete parallel between the alchemical work and the moral-intellectual transformation of man. His thought, however, is often anticipated in the Harranite “Treatise of Platonic Tetralogies,” the Latin title of which is “Liber Platonis quattorum.”⁴⁸ Its author establishes four series of correspondences, each containing four “books,” “for the help of the investigator”:⁴⁹

133. Alchemists at work: various stages of the process. Sol appears below, bringing the golden flower.—*Mutus liber* (1702)

I	II ⁵³	III	IV
1. De opere naturalium (Concerning the work of natural things)	1. Elementum aquae	1. Naturae composite (Composite natures)	1. Sensus (Senses)

2. Exaltatio divisionis naturae (Emphasis on—or exaltation of—the division of nature) ⁵⁰	2. Elementum terrae	2. Naturae discretæ (Discriminated natures)	2. Discretio intellectualis (Intellectual discrimination)
3. Exaltatio animae (Emphasis on—or exaltation of—the soul) ⁵¹	3. Elementum aëris	3. Simplicia (Simple things)	3. Ratio (Reason) ⁵⁴
4. Exaltatio intellectus (Emphasis on—or exaltation of—the intellect) ⁵²	4. Elementum ignis	4. Aetheris simplicioris (Things pertaining to yet simpler ether)	4. Res quam concludunt hi effectus præcedentes (The thing included in the foregoing effects) ⁵⁵

[367] The four series show four aspects of the *opus*. The first horizontal series begins with natural things, the *prima materia* as represented by water. These things are composite, i.e., mixed. Their “correspondence” in column IV is sense perception. The second horizontal series represents a higher stage in the process: in column I, the composite natures are decomposed or changed back into their initial elements; in column II, the earth is separated from the (primal) water as in the Book of Genesis, a favourite theme in alchemy; in column III, there is a separation into categories; and column IV is concerned with the psychological act of discrimination.

[368] The third horizontal series shows the upward advance still more clearly: in column I, the soul emerges from nature; in column II, there is an elevation into the realm of air; in column III, the process reaches the “simple” things which, because of their unalloyed quality, are incorruptible, eternal, and akin to Platonis ideas; and in column IV, there is the final ascent from *mens* to *ratio*, to the *anima rationalis*, i.e., the highest form of the soul. The fourth horizontal series illustrates the perfection or completion of each of the vertical columns.

[369] *First vertical series:* This column has a “phenomenological” character, if such a modern term is permissible here. The psychic element emerges from the sum of natural phenomena and culminates in the *exaltatio intellectus*, the phenomenon of clear insight and understanding. We can, without doing violence to the text, take this *intellectus* as the highest lucidity of which consciousness is capable.

[370] *Second vertical series:* The earth emerges from the chaotic waters of the beginning, from the *massa confusa*, in accordance with the ancient alchemical view; above it lies air, the volatile element rising from the earth. Highest of all comes fire⁵⁶ as the “finest” substance, i.e., the fiery pneuma⁵⁷ which reaches up to the seat of the gods⁵⁸ (fig. 134; cf. figs. 166, 178, 200).

[371] *Third vertical series:* This column has a categorical or ideal character; hence it contains intellectual judgments. All composites are dissolved into their “discriminated” components, which in their turn are reduced to the “simple” substance. From this there finally emerge the quintessences, the simple primordial ideas. Ether is the quintessence.⁵⁹

[372] *Fourth vertical series:* This column is exclusively “psychological.” The senses mediate perception, while the *discretio intellectualis* corresponds to apperception. This activity is subject to the *ratio* or *anima rationalis*, the highest faculty bestowed by God on man. Above the *anima rationalis* there is only the *res*, which is the product of all the preceding effects. The “*Liber Platonis quartorum*” interprets this *res* as the

invisible and immovable God⁶⁰ whose will created the intelligence; from the will and intelligence [to be understood here as *intellectus*] is produced the simple soul,⁶¹ but the soul gives rise to the discriminated natures from which the composite natures are produced, and these show that a thing cannot be comprehended save by something superior to it. The soul is above nature and through it nature is comprehended, but the intelligence is above the soul and through it the soul is comprehended, and the intelligence is comprehended by that which is above itself, and is surrounded by the One God whose nature is not to be comprehended.⁶²

134. Saturn, or *Mercurius senex*, being cooked in the bath until the spirit or white dove (*pneuma*) ascends.—

Trismosin, “*Splendor solis*” (MS., 1582)

[373] The original text runs:

... scias quod scientia antiquorum quibus appraeparatae sunt scientiae et virtutes, est quod res ex qua sunt res, est Deus invisibilis et immobilis, cuius voluntate intelligentia condita est; et voluntate et intelligentia⁶³ est anima simplex; per animam sunt naturae discretae, ex quibus generatae sunt compositae, et indicant quod res non cognoscitur, nisi per suam superius. Anima vero est super naturam, et per eam cognoscitur natura, sed intelligentia est superior anima et per eam cognoscitur anima, et intelligentia[m]⁶⁴ noscit, qui⁶⁵ superior ea est, et circumdat eam Deus unus, cuius qualitas apprehendi non potest.

[374] The author adds a quotation whose origin I have not been able to trace. It runs:

The philosopher said in the Book of Dialogues: I went about the three heavens, namely the heaven of composite nature, the heaven of discriminated nature, and the heaven of the soul. But when I sought to go about the heaven of intelligence, the soul said to me: That way is not for thee. Then nature attracted me, and I was attracted.

This saying of the philosopher was not intended by him to specify this science, but because he wished that his words should not fail to make clear the power which liberates the creature, and that by their means the lower process in this kind of work should be made known through the higher.⁶⁶

[375] In this very ancient text—which in its Arabic form cannot be much later than the tenth century, many of its components being still older—we find a systematic classification of the correspondences between the *opus alchemicum* and the philosophical and psychological processes running parallel with it. The text makes it abundantly clear just how much the chemical processes coincided with spiritual or psychic factors for these thinkers. Indeed the connection went so far that the product to be extracted from matter was known as the *cogitatio*.⁶⁷ This strange idea is explicable only on the assumption that the old philosophers did have a faint suspicion that psychic contents were being projected into matter. Because of the intimate connection between man and the secret of matter, both Dorn and the much earlier “Liber Platonis Quartorum” demand that the operator should rise to the height of his task: he must accomplish in his own self the same process that he attributes to matter, “for things are perfected by their like.” Therefore the operator must himself participate in the work (“oportet operatorem interesse operi”), “for if the investigator does not remotely possess the likeness [i.e., to the work] he will not climb the height I have described, nor reach the road that leads to the goal.”⁶⁸

[376] As a result of the projection there is an unconscious identity between the psyche of the alchemist and the arcane substance, i.e., the spirit imprisoned in matter. The “Liber Platonis quartorum” accordingly recommends the use of the *occiput* (fig. 75) as the vessel of transformation,⁶⁹ because it is the container of thought and intellect⁷⁰ (fig. 135). For we need the brain as the seat of the “divine part.” The text continues:

Through time and exact definition things are converted into intellect, inasmuch as the parts are assimilated [to one another] in composition and in form. But on account of its proximity to the *anima rationalis* the brain had to be assimilated to the amalgam, and the *anima rationalis* is simple, as we have said.⁷¹

135. The skull, symbol of the *mortificatio* of Eve, the feminine aspect of the *prima materia*. Whereas in the case of Adam the tree corresponds to the phallus (see [fig. 131](#)), here the tree grows out of Eve's head.—“Miscellanea d'alchimia” (MS., 14th cent.)

[377] The assumption underlying this train of thought is the causative effect of analogy. In other words, just as in the psyche the multiplicity of sense perceptions produces the unity and simplicity of an idea, so the primal water finally produces fire, i.e., the ethereal substance—not (and this is the decisive point) as a mere analogy but as the result of the mind's working on matter. Consequently Dorn says: “Within the human body is concealed a certain metaphysical substance, known to very few, which needs no medicament, being itself an incorrupt medicament.” This medicine is “of threefold nature: metaphysical, physical, and moral” (“moral” is what we would call “psychological”). “From this,” Dorn goes on, “the attentive reader will conclude that one must pass from the metaphysical to the physical by a philosophic procedure.”⁷² This medicine is clearly the arcane substance which he defines elsewhere as *veritas*:

There is in natural things a certain truth which cannot be seen with the outward eye, but is perceived by the mind alone [*sola mente*], and of this the Philosophers

have had experience, and have ascertained that its virtue is such as to work miracles.⁷³

In this [truth] lies the whole art of freeing the spirit [*spiritus*] from its fetters, in the same way that, as we have said, the mind [*mens*] can be freed [i.e., morally] from the body.⁷⁴

As faith works miracles in man, so this power, the *veritas efficaciae*, brings them about in matter. This truth is the highest power and an impregnable fortress wherein the stone of the philosophers lies hid.⁷⁵

[378] By studying the philosophers man acquires the skill to attain this stone. But again, the stone is man. Thus Dorn exclaims: “Transform yourselves from dead stones into living philosophical stones!”⁷⁶ Here he is expressing in the clearest possible way the identity of something in man with something concealed in matter.

[379] In his “Recueil stéganographique”⁷⁷ Béroalde de Verville says:

If any man wish at times to change the drop of mastic, and by pressing it to cause a clear tear to issue from it, let him take care, and he will see in a fixed time, under the gentle pressure of the fire, a like substance issue from the philosophic matter; for as soon as its violet darkness is excited for the second time, it will stir up from it as it were a drop or flower or flame or pearl, or other likeness of a precious stone, which will be diversified until it runs out in very clear whiteness, which thereafter will be capable of clothing itself with the honour of beauteous rubies, or ethereal stones, which are the true fire of the soul and light of the philosophers.

[380] It should now be sufficiently clear that from its earliest days alchemy had a double face: on the one hand the practical chemical work in the laboratory, on the other a psychological process, in part consciously psychic, in part unconsciously projected and seen in the various transformations of matter.

[381] Not much effort is needed at the beginning of the work; it is sufficient to approach it with “a free and empty mind,” as one text says.⁷⁸ But one important rule must be observed: “the mind [*mens*] must be in harmony with the work”⁷⁹ and the work must be above all else. Another text says that in order to acquire the “golden understanding” (*aurea apprehensio*) one must keep the eyes of the mind and soul well open, observing and contemplating by means of that inner light which God has lit in nature and in our hearts from the beginning.⁸⁰

[382] Since the investigator’s psyche was so closely bound up with the work—not only as its necessary medium but also as its cause and point of departure—it is easy to understand why so much emphasis was laid on the psychic condition and mental attitude of the laboratory worker. Alphidius says: “Know that thou canst not have this science unless thou shalt purify thy mind before God, that is, wipe away all

corruption from thy heart.”⁸¹ According to *Aurora*, the treasure-house of Hermetic wisdom rests on a firm foundation of fourteen principal virtues: health, humility, holiness, chastity, virtue,⁸² victory, faith, hope, charity, goodness (*benignitas*), patience, temperance, a spiritual discipline or understanding,⁸³ and obedience.

[383] The Pseudo-Thomas who is author of this same treatise quotes the saying “Purge the horrible darkneses of our mind,”⁸⁴ and gives as a parallel Senior’s “he maketh all that is black white ...”⁸⁵ Here the “darkneses of our mind” coincide unmistakably with the *nigredo* (figs. 34, 48, 115, 137); i.e., the author feels or experiences the initial stage of the alchemical process as identical with his own psychic condition.

[384] Another old authority is Geber. The *Rosarium* says that in his *Liber perfecti magisterii* Geber requires the following psychological and characterological qualities of the artifex: He must have a most subtle mind and an adequate knowledge of metals and minerals. But he must not have a coarse or rigid mind, nor should he be greedy and avaricious, nor irresolute and vacillating. Further, he must not be hasty or vain. On the contrary, he must be firm in purpose, persevering, patient, mild, long-suffering, and good-tempered.⁸⁶

[385] The author of the *Rosarium* goes on to say that he who wishes to be initiated into this art and wisdom must not be arrogant, but devout, upright, of profound understanding, humane, of a cheerful countenance and a happy nature. He continues: “My son, above all I admonish thee to fear God, who knoweth what manner of man thou art and in whom is help for the solitary, whosoever he may be.”⁸⁷

[386] Particularly instructive is the introduction to the art given by Morienus to Kalid:⁸⁸

This thing for which you have sought so long is not to be acquired or accomplished by force or passion. It is to be won only by patience and humility and by a determined and most perfect love. For God bestows this divine and immaculate science on his faithful servants, namely those on whom he resolved to bestow it from the original nature of things.⁸⁹ ... [Some remarks follow concerning the handing down of the art to pupils.] Nor were they [the elect] able to hold anything back save through the strength granted to them by God, and they themselves could no longer direct their minds save towards the goal⁹⁰ appointed for them by God. For God charges those of his servants whom he has purposely chosen [fig. 136] that they seek this divine science which is hidden from men, and that they keep it to themselves. This is the science that draws its master away from the suffering of this world and leads to the knowledge of future good.

When Morienus was asked by the king why he lived in mountains and deserts rather than in hermitages, he answered: “I do not doubt that in hermitages and

brotherhoods I would find greater repose, and fatiguing work in the deserts and in the mountains; but no one reaps who does not sow.... Exceeding narrow is the gateway to peace, and none may enter save through affliction of the soul.”⁹¹

136. God enlightening the artifex.—Barchusen, *Elementa chemiae* (1718)

[387] We must not forget, in considering this last sentence, that Morienus is not speaking for the general edification but is referring to the divine art and its work. Michael Maier expresses himself in similar vein when he says:

There is in our chemistry a certain noble substance, in the beginning whereof is wretchedness with vinegar, but in its ending joy with gladness. Therefore I have supposed that the same will happen to me, namely that I shall suffer difficulty, grief, and weariness at first, but in the end shall come to glimpse pleasanter and easier things.⁹²

[388] The same author also affirms that “our chemistry stirs up the artifex to a meditation of the heavenly good,”⁹³ and that whoso is initiated by God into these mysteries “casts aside all insignificant cares like food and clothing, and feels himself as it were new-born.”⁹⁴

[389] The difficulty and grief to be encountered at the beginning of the work once more coincide with the *nigredo*, like the “horrible darkneses of our mind” of which *Aurora* speaks; and these in their turn are surely the same as the “affliction of soul” mentioned by Morienus. The term he uses for the attitude of the adept—*amor perfectissimus*—expresses an extraordinary devotion to the work. If this “serious meditation” is not mere bragging—and we have no reason to assume any such thing—then we must imagine the old adepts carrying out their work with an unusual

concentration, indeed with religious fervour (cf. below). Such devotion would naturally serve to project values and meanings into the object of all this passionate research and to fill it with forms and figures that have their origin primarily in the unconscious of the investigator.

III. MEDITATION AND IMAGINATION

[390] The point of view described above is supported by the alchemist's remarkable use of the terms *meditatio* and *imaginatio*. Ruland's *Lexicon alchemiae* defines *meditatio* as follows: "The word *meditatio* is used when a man has an inner dialogue with someone unseen. It may be with God, when He is invoked, or with himself, or with his good angel"⁹⁵ (fig. 137). The psychologist is familiar with this "inner dialogue"; it is an essential part of the technique for coming to terms with the unconscious.⁹⁶ Ruland's definition proves beyond all doubt that when the alchemists speak of *meditari* they do not mean mere cogitation, but explicitly an inner dialogue and hence a living relationship to the answering voice of the "other" in ourselves, i.e., of the unconscious. The use of the term "meditation" in the Hermetic dictum "And as all things proceed from the One through the meditation of the One" must therefore be understood in this alchemical sense as a creative dialogue, by means of which things pass from an unconscious potential state to a manifest one. Thus we read in a treatise of Philalethes:⁹⁷ "Above all it is marvellous that our stone, although already perfect and able to impart a perfect tincture, does voluntarily humble itself again and will meditate a new volatility, apart from all manipulation."⁹⁸ What is meant by a "meditated volatility" we discover a few lines lower down, where it says: "Of its own accord it will liquefy ... and by God's command become endowed with spirit, which will fly up and take the stone with it."⁹⁹ Again, therefore, to "meditate" means that through a dialogue with God yet more spirit will be infused into the stone, i.e., it will become still more spiritualized, volatilized, or sublimated (cf. fig. 178). Khunrath says much the same thing:

137. Alchemist in the initial *nigredo* state, meditating.—Jamsthaler, *Viatorium spagyricum* (1625)

Therefore study, meditate, sweat, work, cook ... so will a healthful flood be opened to you which comes from the Heart of the Son of the great World, a Water which the Son of the Great World pours forth from his Body and Heart, to be for us a True and Natural Aqua Vitae...¹⁰⁰

[391] Likewise the “meditation of the heavenly good,” mentioned earlier, must be taken in the sense of a living dialectical relationship to certain dominants of the unconscious. We have excellent confirmation of this in a treatise by a French alchemist living in the seventeenth and eighteenth centuries.¹⁰¹ He says:

How often did I see them [the *Sacerdotes Aegyptiorum*] overcome with joy at my understanding, how affectionately they kissed me, for the true grasp of the ambiguities of their paradoxical teaching came easily to my mind. How often did their pleasure in the wonderful discoveries I made concerning the abstruse doctrines of the ancients move them to reveal unto my eyes and fingers the Hermetic vessel, the salamander [fig. 138; cf. figs. 129, 130], the full moon and the rising sun.

[392] This treatise, although it is not so much a personal confession as a description of the golden age of alchemy, nevertheless tells us how the alchemist imagined the psychological structure of his *opus*. Its association with the invisible forces of the psyche was the real secret of the *magisterium*. In order to express this secret the old masters readily resorted to allegory. One of the oldest records of this kind, which had a considerable influence on the later literature, is the “*Visio Arislei*,”¹⁰² and its whole character relates it very closely to those visions known to us from the psychology of the unconscious.

[393] As I have already said, the term *imaginatio*, like *meditatio*, is of particular importance in the alchemical opus. Earlier on we came across that remarkable passage in the *Rosarium* telling us that the work must be done with the true *imaginatio*, and we saw elsewhere [par. 357] how the philosophical tree can be made to grow through contemplation (figs. 131, 135). Ruland's *Lexicon* once more helps us to understand what the alchemist meant by *imaginatio*.

138. The Mercurial spirit of the *prima materia*, in the shape of a salamander, frolicking in the fire.—Maier, *Scrutinium chymicum* (1687)

[394] Ruland says, “Imagination is the star in man, the celestial or supercelestial body.”¹⁰³ This astounding definition throws a quite special light on the fantasy processes connected with the *opus*. We have to conceive of these processes not as the immaterial phantoms we readily take fantasy-pictures to be, but as something corporeal, a “subtle body” (fig. 139), semi-spiritual in nature. In an age when there was as yet no empirical psychology such a concretization was bound to be made, because everything unconscious, once it was activated, was projected into matter—that is to say, it approached people from outside. It was a hybrid phenomenon, as it were, half spiritual, half physical; a concretization such as we frequently encounter in the psychology of primitives. The *imaginatio*, or the act of imagining, was thus a physical activity that could be fitted into the cycle of material changes, that brought these about and was brought about by them in turn. In this way the alchemist related himself not only to the unconscious but directly to the very substance which he hoped to transform through the power of imagination. The singular expression “astrum” (star) is a Paracelsan term, which in this context means something like “quintessence.”¹⁰⁴ Imagination is therefore a concentrated extract of the life forces, both physical and psychic. So the demand that the artifex must have a sound physical

constitution is quite intelligible, since he works with and through his own quintessence and is himself the indispensable condition of his own experiment. But, just because of this intermingling of the physical and the psychic, it always remains an obscure point whether the ultimate transformations in the alchemical process are to be sought more in the material or more in the spiritual realm. Actually, however, the question is wrongly put: there was no “either-or” for that age, but there did exist an intermediate realm between mind and matter, i.e., a psychic realm of subtle bodies¹⁰⁵ whose characteristic it is to manifest themselves in a mental as well as a material form. This is the only view that makes sense of alchemical ways of thought, which must otherwise appear nonsensical. Obviously, the existence of this intermediate realm comes to a sudden stop the moment we try to investigate matter in and for itself, apart from all projection; and it remains non-existent so long as we believe we know anything conclusive about matter or the psyche. But the moment when physics touches on the “untrodden, untreadable regions,” and when psychology has at the same time to admit that there are other forms of psychic life besides the acquisitions of personal consciousness—in other words, when psychology too touches on an impenetrable darkness—then the intermediate realm of subtle bodies comes to life again, and the physical and the psychic are once more blended in an indissoluble unity. We have come very near to this turning-point today.

139. Hermes conjuring the winged soul out of an urn.—Attic funeral lekythos

[395] Such reflections are unavoidable if we want to gain any understanding of alchemy’s peculiar terminology. The earlier talk of the “aberration” of alchemy sounds rather old-fashioned today when the psychological aspects of it have faced science with new tasks. There are very modern problems in alchemy, though they lie outside the province of chemistry.

[396] The concept of *imaginatio* is perhaps the most important key to the understanding of the *opus*. The author of the treatise “De sulphure”¹⁰⁶ speaks of the “imaginative faculty” of the soul in that passage where he is trying to do just what the ancients had

failed to do, that is, give a clear indication of the secret of the art. The soul, he says, is the vice-regent of God (*sui locum tenens seu vice Rex est*) and dwells in the life-spirit of the pure blood. It rules the mind (*illa gubernat mentem*) and this rules the body. The soul functions (*operatur*) in the body, but has the greater part of its function (*operatio*) outside the body (or, we might add by way of explanation, in projection). This peculiarity is divine, since divine wisdom is only partly enclosed in the body of the world: the greater part of it is *outside, and it imagines far higher things than the body of the world can conceive (concipere)*. And these things are outside nature: God's own secrets. The soul is an example of this: it too imagines many things of the utmost profundity (*profundissima*) outside the body, just as God does. True, what the soul imagines happens only in the mind (*non exequitur nisi in mente*), but what God imagines happens in reality. "The soul, however, has absolute and independent power [*absolutam et separatam potestatem*] to do other things [*alia facere*] than those the body can grasp. But, when it so desires, it has the greatest power over the body [*potestatem in corpus*], for otherwise our philosophy would be in vain. Thou canst conceive the greater, for we have opened the gates unto thee."¹⁰⁷

IV. SOUL AND BODY

[397] The passage just quoted affords us valuable insight into the alchemical way of thinking. The soul in this text is evidently an *anima corporalis* (figs. 91, 208) that dwells in the blood. It would therefore correspond to the unconscious, if this is understood as the psychic phenomenon that mediates between consciousness and the physiological functions of the body. In the Tantric *chakra* system¹⁰⁸ this *anima* would be located below the diaphragm. On the other hand it is God's lieutenant or viceroy, the analogue of the *Deus Creator*. There are people who can never understand the unconscious as anything but a *subconscious*, and who therefore feel impelled to put a *superconscious* alongside or possibly above it. Such hypotheses do not trouble our philosophers, for according to their teaching every form of life, however elementary, contains its own inner antithesis, thus anticipating the problem of opposites in modern psychology. What our author has to say about the element of air is significant in this respect:

The air is a pure uncorrupted element, in its kind the most worthy, being uncommonly light and invisible, but inside heavy, visible, and solid. Enclosed within it [*inclusus*] is the spirit of the Highest that moved over the waters before the Creation, according to the testimony of the Holy Scripture: "And ... he did fly upon the wings of the wind."¹⁰⁹ All things are integrated [*integrae*] in this element by the imagination of the fire.¹¹⁰

140. The artifex with his *soror mystica*, holding the keys to the work.—Thomas Aquinas (pseud.), “De alchimia” (16th cent.)

[398] In order to understand such a statement we must obviously empty our minds of all modern ideas about the nature of gases, and take it as purely psychological. In this sense, it deals with the projection of pairs of opposites such as light-heavy, visible-invisible, and so on. Now, identity of opposites is a characteristic feature of every psychic event in the unconscious state. Thus the *anima corporalis* is at the same time *spiritualis*, and the air’s heavy, solid kernel is at the same time the *spiritus creator* which moves over the waters. And just as “the images of all creatures” are contained in the creative spirit, so all things are imagined or “pictured” in air “through the power of fire”; firstly because fire surrounds the throne of God and is the source from which the angels and, descending in rank and quality, all other living beings are created or “imagined” through infusion of the fiery *anima* into the breath of life;¹¹¹ secondly because fire destroys all composite things and infuses their images back into the air in the form of smoke.

[399] The soul, says our author, is only partly confined to the body, just as God is only partly enclosed in the body of the world. If we strip this statement of its metaphysics

it asserts that the psyche is only partly identical with our empirical conscious being; for the rest it is projected and in this state it imagines or realizes those greater things which the body cannot grasp, i.e., cannot bring into reality. The “greater things” (*majora*) correspond to the “higher” (*altiora*), referring to the world-creating imagination of God; but because these higher things are imagined by God they at once become substantial instead of lingering in a state of potential reality, like the contents of the unconscious. That this activity of the soul “outside the body” refers to the alchemical *opus* is evident from the remark that the soul has the greatest power over the body, otherwise the royal art or philosophy would be in vain. “Thou canst conceive the greater,” says our author; therefore your body can bring it into reality—with the help of the art and with God’s permission (*Deo concedente*), this being a fixed formula in alchemy.

[400] The *imaginatio*, as the alchemists understand it, is in truth a key that opens the door to the secret of the *opus* (fig. 140). We now know that it was a question of representing and realizing those “greater” things which the soul, on God’s behalf, imagines creatively and *extra naturam*—or, to put it in modern language, a question of actualizing those contents of the unconscious¹¹² which are outside nature, i.e., not a datum of our empirical world, and therefore an *a priori* of archetypal character. The place or the medium of realization is neither mind nor matter, but that intermediate realm of subtle reality which can be adequately expressed only by the symbol. The symbol is neither abstract nor concrete, neither rational nor irrational, neither real nor unreal. It is always both: it is *non vulgi*, the aristocratic preoccupation of one who is set apart (*cuiuslibet sequestrati*), chosen and predestined by God from the very beginning.

141. The artifex with book and altar. In the background, a cornfield (allegory of the *opus*) and the quickening *coniunctio* of *sol* and *luna*.—Kelley, *Tractatus de Lapide philosophorum* (1676)

142. The sequence of stages in the alchemical process.—Libavius, *Alchymia* (1606) (For explanation, see following pages)

In an *explicatio locorum signatorum*, Libavius gives the following “explanation” of this picture (fig. 142):

- A Pedestal or base = earth.
- BB Two giants or Atlases kneeling on the base and supporting a sphere with their hands.
- C Four-headed dragon from whose breath the sphere takes shape. The four grades of fire: the first mouth emits a kind of air, the second a subtle smoke, the third smoke and fire, and the fourth pure fire.
- D Mercurius with a silver chain, to which two recumbent animals are attached.
- E The green lion.
- F One-headed dragon. E and F both mean the same thing: the Mercurial fluid which is the *materia prima* of the stone.
- G A three-headed silver eagle, two of whose heads droop while the third spits white water or the Mercurial fluid into the sea, which is marked H.
- I Picture of the wind, sending forth the breath of the spirit (*spiritus*) into the sea below.

- K Picture of the red lion, with red blood flowing from his breast into the sea below, because the sea must be coloured as if it were a mixture of silver and gold or white and red. The picture is applied to body, soul, and spirit by those who have sought three [principles] from the beginning, or to the blood of the lion and the lime of the eagle. For, because they accept three, they have a double Mercurius. Those who accept two have one only, which comes from a crystal or from the unripe metal of the philosophers.
- L A stream of black water, as in the chaos, representing the *putrefactio*. From it there rises a mountain, which is black at the bottom and white at the top, so that a silver stream flows down from the summit. For it is the picture of the first dissolution and coagulation and of the resultant second dissolution.
- M The above-mentioned mountain.
- NN The heads of black ravens that are looking out of the sea.
- O Silver rain falling from the clouds on to the summit of the mountain. Sometimes this represents the nourishment and cleansing of the Lato by Azoch, sometimes the second dissolution, whereby the element of air is extracted from the earth and water. (The earth is a form of the mountain, and the water is the liquid of the sea aforementioned.)
- PP The clouds from which [come] the dew or rain and the nourishing moisture.
- Q A vision of heaven, where a dragon lies on his back and devours his own tail: he is an image of the second coagulation.
- RR An Ethiopian man and woman, supporting two higher spheres. They sit on the big sphere and accordingly represent the *nigredo* of the second operation in the second putrefaction.
- SS A sea of pure silver, which represents the Mercurial fluid whereby the tinctures are united.
- T A swan swimming on the sea, spitting out a milky liquid from his beak. This swan is the white elixir, the white chalk, the arsenic of the philosophers, the thing common to both ferments. He has to support the upper sphere with his back and wings.
- V Eclipse of the sun.
- XX The sun diving into the sea, i.e., into the Mercurial water into which the elixir also must flow. This leads to the true eclipse of the sun and one should put a rainbow on either side to suggest the peacock's tail that then appears in the coagulation.
- YY Eclipse of the moon, which likewise has a rainbow on either side and [also] in the lowest part of the sea, into which the moon must dive. This is the picture of the white fermentation. But both seas should be fairly dark.
- ZZ The moon gliding into the sea.
- a The king, clad in purple, with a golden crown, has a golden lion beside him. He has a red lily in his hand, whereas the queen has a white lily.
- b The queen, crowned with a silver crown, strokes a white or silver eagle standing beside her.
- c The phoenix on the sphere, cremating itself; many gold and silver birds fly out of the ashes. It is the sign of multiplication and increase.

143. Alchemists at work—*Mutus liber* (1702)

3. THE WORK

I. THE METHOD

[401] The basis of alchemy is the work (*opus*). Part of this work is practical, the *operatio* itself, which is to be thought of as a series of experiments with chemical substances. In my opinion it is quite hopeless to try to establish any kind of order in the infinite chaos of substances and procedures. Seldom do we get even an approximate idea of how the work was done, what materials were used, and what results were achieved. The reader usually finds himself in the most impenetrable darkness when it comes to the names of the substances—they could mean almost anything. And it is precisely the most commonly used substances, like quicksilver, salt, and sulphur, whose alchemical meaning is one of the secrets of the art. Moreover, one must not imagine for a moment that the alchemists always understood one another. They themselves complain about the obscurity of the texts, and occasionally betray their inability to understand even their own symbols and symbolic figures. For instance, the learned Michael Maier accuses the classical authority Geber of being the obscurest of all, saying that it would require an Oedipus to solve the riddle of the “Gebrina Sphinx.”¹ Bernard of Treviso, another famous alchemist, goes so far as to call Geber an obscurantist and a Proteus who promises kernels and gives husks.

[402] The alchemist is quite aware that he writes obscurely. He admits that he veils his meaning on purpose, but nowhere—so far as I know—does he say that he cannot write in any other way. He makes a virtue of necessity by maintaining either that mystification is forced on him for one reason or another, or that he really wants to make the truth as plain as possible, but cannot proclaim aloud just what the *prima materia* or the *lapis* is.

[403] The profound darkness that shrouds the alchemical procedure comes from the fact that although the alchemist was interested in the chemical part of the work he also used it to devise a nomenclature for the psychic transformations that really fascinated him. Every original alchemist built himself, as it were, a more or less individual edifice of ideas, consisting of the dicta of the philosophers and of miscellaneous analogies to the fundamental concepts of alchemy. Generally these analogies are taken from all over the place. Treatises were even written for the purpose of supplying the artist with analogy-making material.² The method of alchemy, psychologically speaking, is one of boundless amplification. The *amplificatio* is always appropriate when dealing with some obscure experience which

is so vaguely adumbrated that it must be enlarged and expanded by being set in a psychological context in order to be understood at all. That is why, in analytical psychology, we resort to amplification in the interpretation of dreams, for a dream is too slender a hint to be understood until it is enriched by the stuff of association and analogy and thus amplified to the point of intelligibility. This *amplificatio* forms the second part of the *opus*, and is understood by the alchemist as *theoria*.³ Originally the theory was the so-called “Hermetic philosophy,” but quite early on it was broadened by the assimilation of ideas taken over from Christian dogma. In the oldest alchemy known to the West the Hermetic fragments were handed down mostly through Arabic originals. Direct contact with the *Corpus Hermeticum* was only established in the second half of the fifteenth century, when the Greek manuscript reached Italy from Macedonia and was translated into Latin by Marsilio Ficino.

144. Left, three artists in the library. Right, the artist, or his assistant, working in the laboratory.—Maier, *Tripus aureus* (1618)

[404] The vignette (fig. 144) that is on the title-page to the *Tripus aureus* (1618) is a graphic illustration of the double face of alchemy. The picture is divided into two parts.⁴ On the right is a laboratory where a man, clothed only in trunks, is busy at the fire; on the left a library, where an abbot,⁵ a monk,⁶ and a layman⁷ are conferring together. In the middle, on top of the furnace, stands the tripod with a round flask on it containing a winged dragon. The dragon symbolizes the visionary experience of the alchemist as he works in his laboratory and “theorizes.”⁸

145. Laboratory and oratory.—Khunrath, *Amphitheatrum sapientiae* (1604)

146. Mercurius as “uniting symbol.”—Valentinus, “Duodecim claves.” in *Musaeum hermeticum* (1678)

The dragon in itself is a *monstrum*—a symbol combining the chthonic principle of the serpent and the aerial principle of the bird. It is, as Ruland says,⁹ a variant of Mercurius. But Mercurius is the divine winged Hermes (fig. 146) manifest in matter, the god of revelation, lord of thought and sovereign psychopomp. The liquid metal, *argentum vivum*—“living silver,” quicksilver—was the wonderful substance that

perfectly expressed the nature of the *σίμβωλον*: that which glistens and animates within. When the alchemist speaks of Mercurius, on the face of it he means quicksilver, but inwardly he means the world-creating spirit concealed or imprisoned in matter. The dragon is probably the oldest pictorial symbol in alchemy of which we have documentary evidence. It appears as the *ούρο βόρος*, the tail-eater, in the Codex Marcianus (fig. 147), which dates from the tenth or eleventh century,¹⁰ together with the legend: *νῆ τὸ πᾶν* (the One, the All).¹¹ Time and again the alchemists reiterate that the *opus* proceeds from the one and leads back to the one,¹² that it is a sort of circle like a dragon biting its own tail (cf. figs. 20, 44, 46, 47). For this reason the *opus* was often called *circularis* (circular) or else *rota* (the wheel) (fig. 80). Mercurius stands at the beginning and end of the work: he is the *prima materia*, the *caput corvi*, the *nigredo*; as dragon he devours himself and as dragon he dies, to rise again as the *lapis*. He is the play of colours in the *cauda pavonis* and the division into four elements. He is the hermaphrodite that was in the beginning, that splits into the classical brother-sister duality and is reunited in the *coniunctio*, to appear once again at the end in the radiant form of the *lumen novum*, the stone. He is metallic yet liquid, matter yet spirit, cold yet fiery,¹³ poison and yet healing draught—a symbol uniting all opposites (fig. 148).¹⁴

147. Uroboros.—Codex Marcianus (11th cent.)

148. Mercurius as caduceus, uniting the paired opposites.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

II. THE SPIRIT IN MATTER

[405] All these ideas were the common property of alchemy from earliest times. Zosimos, writing in the third century A.D., quotes one of the very oldest authorities on alchemy in his treatise “Concerning the Art and Its Interpretation,”¹⁵ namely Ostances,¹⁶ who belongs to the dawn of history and was known even to Pliny. His connection with Democritus, another of the earliest alchemical writers, probably dates from the first century B.C.¹⁷ This Ostances is reported to have said:

Go to the waters of the Nile and there you will find a stone that has a spirit [*πνεῦμα*]. Take this, divide it, thrust in your hand and draw out its heart: for its soul [*ψυχή*] is in its heart¹⁸ [fig. 149]. [An interpolator adds:] There, he says, you will find this stone that has a spirit, which refers to the expulsion of the quicksilver [*ἐξένδραργύρωσις*].¹⁹

149. The sick king (*prima materia*), from whose heart the planet-children receive their crowns.—“La Sagesse des anciens” (MS., 18th cent.)

[406] Nietzsche’s metaphor in *Zarathustra*, “an image slumbers for me in the stone,” says much the same thing, but the other way round. In antiquity the material world was filled with the projection of a psychic secret, which from then on appeared as the secret of matter and remained so until the decay of alchemy in the eighteenth century. Nietzsche, with his ecstatic intuition, tried to wrest the secret of the superman from the stone in which it had long been slumbering. It was in the likeness of this slumbering image that he wished to create the superman, whom, in the language of antiquity, we may well call the divine man. But it is the other way about with the alchemists: they were looking for the marvellous stone that harboured a pneumatic essence in order to win from it the substance that penetrates all substances—since it is itself the stone-penetrating “spirit”—and transforms all base metals into noble ones by a process of coloration. This “spirit-substance” is like quicksilver, which lurks unseen in the ore and must first be expelled if it is to be recovered *in substantia*. The possessor of this penetrating Mercurius (fig. 150) can “project” it into other substances and transform them from the imperfect into the perfect state.²⁰ The imperfect state is like the sleeping state; substances lie in it like the “sleepers chained

in Hades” (fig. 151)²¹ and are awakened as from death to a new and more beautiful life by the divine tincture extracted from the inspired stone. It is quite clear that we have here a tendency not only to locate the mystery of psychic transformation in matter, but at the same time to use it as a *theoria* for effecting chemical changes.

150. The penetrating Mercurius.—“Speculum veritatis” (MS., 17th cent.)

[407] Just as Nietzsche made absolutely sure that nobody could mistake the superman for a sort of spiritual or moral ideal, so it is emphasized that the tincture or divine water is far from being merely curative and ennobling in its effects, but that it may also act as a deadly poison which penetrates other bodies as pervasively as the pneuma penetrates its stone.²²

151. Prisoners in the underworld.—Izquierdo, *Praxis exercitiorum spiritualium* (1695)

[408] Zosimos was a Gnostic who was influenced by Hermes. In his missive to Theosebeia he recommends the “krater” as a vessel of transformation: she should, he says, hasten to the Poimandres in order to be baptized in the krater.²³

[409] This krater refers to the divine vessel of which Hermes tells Thoth in the treatise entitled *ὁ κρατήρ*.²⁴ After the creation of the world, God filled this vessel with nous (*νοῦς* = pneuma) and sent it down to earth as a kind of baptismal font. By so doing God gave man, who wished to free himself from his natural, imperfect, sleeping state of *ἄνοια* (or, as we should say, insufficient consciousness), an opportunity to dip himself in the nous and thus partake of the higher state of *ἔννοια*, i.e., enlightenment or higher consciousness (fig. 159). The nous is thus a kind of *βαφεῖον*, dyestuff or tincture, that ennobles base substances. Its function is the exact equivalent of the tincturing stone-extract, which is also a pneuma and, as Mercurius, possesses the Hermetic dual significance of redeeming psychopomp²⁵ and quicksilver (fig. 152).

[410] Clearly enough, then, Zosimos had a mystic or Gnostic philosophy of sorts whose basic ideas he projected into matter. When we speak of psychological projection we must, as I have already pointed out, always remember that it is an

unconscious process that works only so long as it stays unconscious. Since Zosimos, like all the other alchemists, is convinced not only that his philosophy can be applied to matter but that processes also take place in it which corroborate his philosophical assumptions, it follows that he must have experienced, in matter itself, at the very least an identity between the behaviour of matter and the events in his own psyche. But, as this identity is unconscious, Zosimos is no more able than the rest of them to make any pronouncement about it. For him it is simply there, and it not only serves as a bridge, it actually *is* the bridge that unites psychic and material events in one, so that “what is within is also without.” Nevertheless an unconscious event which eludes the conscious mind will portray itself somehow and somewhere, it may be in dreams, visions, or fantasies. The idea of the pneuma as the Son of God, who descends into matter²⁶ and then frees himself from it in order to bring healing and salvation to all souls, bears the traits of a projected unconscious content (fig. 153). Such a content is an autonomous complex divorced from consciousness, leading a life of its own in the psychic non-ego and instantly projecting itself whenever it is constellated in any way—that is, whenever attracted by something analogous to it in the outside world. The psychic autonomy of the pneuma²⁷ is attested by the Neopythagoreans: in their view the soul was swallowed by matter and only mind—nous—was left. But the nous is outside man: it is his daemon. One could hardly formulate its autonomy more aptly. Nous seems to be identical with the god Anthropos: he appears alongside the demiurge and is the adversary of the planetary spheres. He rends the circle of the spheres and leans down to earth and water (i.e., he is about to project himself into the elements). His shadow falls upon the earth, but his image is reflected in the water. This kindles the love of the elements, and he himself is so charmed with the reflected image of divine beauty that he would fain take up his abode within it. But scarcely has he set foot upon the earth when Physis locks him in a passionate embrace. From this embrace are born the seven first hermaphroditic beings.²⁸ The seven are an obvious allusion to the seven planets and hence to the metals (figs. 154, 155; cf. figs. 21, 79) which in the alchemical view spring from the hermaphrodite Mercurius.

152. Above, Saturn eating his children and being sprinkled with Mercurial water (*lac virginis, vinum ardens*). Below, the regeneration in the bath.—Thomas Aquinas (pseud.), “De alchimia” (M.S., 16th cent.)

153. The artist lifting the homunculus, the “son of the philosophers,” out of the Hermetic vessel.—Kelley, *Tractatus de Lapide philosophorum* (1676)

154, 155. The king with the six planets or metals; the renewed king (*filius philosophorum*) worshipped by the six planets.—Kelley, *Tractatus de Lapide philosophorum* (1676)

[411] In such visionary images as the Anthropos glimpsing his own reflection there is expressed the whole phenomenon of the unconscious projection of autonomous contents. These myth-pictures are like dreams, telling us that a projection has taken place and also what has been projected. This, as the contemporary evidence shows, was nous, the divine daemon, the god-man, pneuma, etc. In so far as the standpoint of analytical psychology is realistic, i.e., based on the assumption that the contents of the psyche are realities, all these figures stand for an unconscious component of the personality which might well be endowed with a higher form of consciousness transcending that of the ordinary human being. Experience shows that such figures always express superior insight or qualities that are not yet conscious; indeed, it is extremely doubtful whether they can be attributed to the ego at all in the proper sense of the word. This problem of attribution may appear a captious one to the layman, but in practical work it is of great importance. A wrong attribution may bring about dangerous inflations which seem unimportant to the layman only because he has no idea of the inward and outward disasters that may result.²⁹

156. The Dyad (day and night): symbolical representation of the correspondence between zodiac and man.—“Très Riches Heures du duc de Berry” (MS., Chantilly, 15th cent.)

[412] As a matter of fact, we are dealing here with a content that up to the present has only very rarely been attributed to any human personality. The one great exception is Christ. As *νῑός τοῦ ἀνθρώπου* the Son of Man, and as *θεοῦ νῑός*, the Son of God, he embodies the God-man; and as an incarnation of the Logos by “pneumatic” impregnation, he is an avatar of the divine *νοῦς*.

[413] Thus the Christian projection acts upon the unknown in man, or upon the unknown man, who becomes the bearer of the “terrible and unheard-of secret.”³⁰ The pagan projection, on the other hand, goes beyond man and acts upon the unknown in the material world, the unknown substance which, like the chosen man, is somehow filled with God. And just as, in Christianity, the Godhead conceals itself in the man of low degree, so in the “philosophy” it hides in the uncomely stone. In the Christian projection the *descensus spiritus sancti* stops at the *living body* of the Chosen One, who is at once very man and very God, whereas in alchemy the descent goes right down into the darkness of inanimate matter whose nether regions, according to the Neopythagoreans, are ruled by evil.³¹ Evil and matter together form the Dyad, the

duality (fig. 156). This is feminine in nature, an *anima mundi*, the feminine Physis who longs for the embrace of the One, the Monad, the good and perfect.³² The Justinian Gnosis depicts her as Edem, virgin above, serpent below³³ (fig. 157). Vengefully she strives against the pneuma because, in the shape of the demiurge, the second form of God, he faithlessly abandoned her. She is “the divine soul imprisoned in the elements,” whom it is the task of alchemy to redeem.³⁴

157. *Anima Mercurii*.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

III. THE WORK OF REDEMPTION

[414] Now, all these myth-pictures represent a drama of the human psyche on the further side of consciousness, showing *man as both the one to be redeemed and the redeemer*. The first formulation is Christian, the second alchemical. In the first case man attributes the need of redemption to himself and leaves the work of redemption, the actual *ἔργον* or *opus*, to the autonomous divine figure; in the latter case man takes upon himself the duty of carrying out the redeeming *opus*, and attributes the state of suffering and consequent need of redemption to the *anima mundi* imprisoned in matter.³⁵

[415] In both cases redemption is a *work* (fig. 158). In Christianity it is the life and death of the God-man which, by a unique sacrifice, bring about the reconciliation of man, who craves redemption and is sunk in materiality, with God. The mystical effect of the God-man's self-sacrifice extends, broadly speaking, to all men, though it is efficacious only for those who submit through faith or are chosen by divine grace; but in the Pauline acceptance it acts as an apocatastasis and extends also to non-human creation in general, which, in its imperfect state, awaits redemption like the merely natural man. By a certain "synchronicity" of events, man, the bearer of a soul submerged in the world and the flesh, is potentially related to God at the moment when he, as Mary's Son, enters into her, the *virgo terrae* and representative of matter in its highest form; and, potentially at least, man is fully redeemed at the moment when the eternal Son of God returns again to the Father after undergoing the sacrificial death.

[416] The ideology of this *mysterium* is anticipated in the myths of Osiris, Orpheus, Dionysus, and Hercules, and in the conception of the Messiah among the Hebrew prophets.³⁶ These anticipations go back to the primitive hero myths where the conquest of death is already an important factor.³⁷ The projections upon Attis and Mithras, more or less contemporary with the Christian one, are also worth mentioning. The Christian projection differs from all these manifestations of the mystery of redemption and transformation by reason of the historical and personal figure of Jesus. The mythical event incarnates itself in him and so enters the realm of world history as a unique historical and mystical phenomenon.

158. The "Mill of the Host." The Word, in the form of scrolls, is poured into a mill by the four evangelists, to reappear as the Infant Christ in the chalice. (Cf. John 1 : 14: "And the word was made flesh....")—High altar of church at Tribsees, Pomerania (15th cent.)

[417] In the figure of the divine hero, God himself wrestles with his own imperfect, suffering, living creation; he even takes its suffering condition upon himself and, by this sacrificial act, accomplishes the *opus magnum*, the ἄθλον of salvation and victory over death. As regards the actual performance of this entirely metaphysical work, man is powerless to do anything really decisive. He looks to his Redeemer, full of faith and confidence, and does what he can in the way of “imitation”; but this never reaches the point where man himself becomes the Redeemer—or at least his own redeemer. Yet a complete imitation and reestablishment of Christ in the believer would necessarily lead to such a conclusion. But this is out of the question. Were such an approximation to occur, then Christ would have re-established himself in the believer and replaced the latter’s personality. We should have to be satisfied with this statement were it not for the existence of the Church. The institution of the Church means nothing less than the everlasting continuation of the life of Christ and its sacrificial function. In the *officium divinum* or, in Benedictine parlance, the *opus divinum*, Christ’s sacrifice, the redeeming act, constantly repeats itself anew while still remaining the unique sacrifice that was accomplished, and is accomplished ever again, by Christ himself inside time and outside all time. This *opus supernaturale* is represented in the sacrifice of the Mass. In the ritual act the priest as it were shows forth the mystical event, but the real agent is Christ, who sacrifices himself everywhere always. Though his sacrificial death occurred in time it is an essentially timeless occurrence. In the Thomist view the Mass is not a real *immolatio* (sacrifice) of the body of Christ but a “re-presentation” of his sacrificial death.³⁸ Such an interpretation would be sufficient and consistent were it not for the transubstantiation of the offered substances, the bread and wine. This offering is meant as a *sacrificium*, literally a “making sacred.” The etymology of the German word for sacrifice, *Opfer*, is obscure, it being a moot point whether it comes from *offerre*, “to offer,” or from *operari*, “to effect, to be active.” In its ancient usage *operari Deo* meant to serve the god or to sacrifice to him. But if the *Opfer* is an *opus*, then it is far more than an *oblatio*, the offering of such a modest gift as bread and wine. It must be an effectual act, giving the ritual words spoken by the priest a causal significance. The words of the consecration (*qui pridie quam pateretur*, etc.) are therefore to be taken not merely as representative, but as the *causa efficiens* of the transubstantiation. That is why the Jesuit Lessius (d. 1623) called the words of the consecration the “sword” with which the sacrificial lamb is slaughtered.³⁹ The so-called theory of mactation (slaughtering) occupies an important place in the literature of the Mass, though it has not been generally accepted in its more objectionable outgrowths. Perhaps the clearest of all is the Greek ritual as described by the Archbishop Nikolaus Kabasilas of Thessalonika (d. circa 1363).⁴⁰ In the first (preparatory) part of the Mass the bread and wine are placed not on the main altar but on the *πρόθεσις*, a sort of sideboard. There the priest cuts a piece off the loaf and repeats the text, “He is led as a lamb to the slaughter.”

Then he lays it on the table and repeats, “The lamb of God is sacrificed.” The sign of the cross is then imprinted on the bread and a small lance stabbed into its side, to the text, “But one of the soldiers with a spear pierced his side and forthwith came there out blood and water.” At these words water and wine are mixed in the chalice. Then comes the *oblatio* in solemn procession, with the priest carrying the offering. (Here the *δῶρον*, the gift, represents the giver: Christ the sacrificant is also the sacrificed.) Thus the priest re-enacts the traditional event, and in so far as Christ, in the sacramental state, possesses a *vita corporea actualis*,⁴¹ an actual bodily life, one could say that a physical slaying⁴² (*mortificatio*) of his body has taken place. This happens as a result of the consecrating words spoken by the priest, and the destruction of the offering, the *oblatio occisi ad cultum Dei* (the offering up of the slain to the service of God), brings about the transubstantiation. The latter is a transmutation of the elements, which pass from a natural, soiled, imperfect material state into a subtle body. The bread, which must be wheaten, signifies the body, and the wine, representing blood, the soul. After the transubstantiation a piece of the host is mingled with the wine, thus producing the *coniunctio* of the soul with the body (fig. 159) and establishing the living body of Christ, namely the unity of the Church.

[418] St. Ambrose called the transformed bread *medicina*. It is the *φάρμακον ἀθανασίας*, the drug of immortality, which, in the act of communion, displays its characteristic effect in and on the believer—the effect of uniting the body with the soul. This takes the form of a healing of the soul and a *reformatio* of the body. The text of the Missal shows us how this is meant:

159. The *coniunctio* of soul and body: an ecclesiastical version of the alchemical marriage bath.—“Grandes heures du duc de Berry” (MS., 1413)

Da nobis per huius aquae et vini mysterium, eius divinitatis esse consortes, qui humanitatis nostrae fieri dignatus est particeps, Jesus Christus ... (Grant that through the mystery of this water and wine, we may have fellowship in the divine nature of Him who vouchsafed to become partaker of our humanity ...).

[419] Perhaps I may be allowed to introduce a personal remark here. It was a real revelation for me, as a Protestant, to read the words of the Offertory for the first time: “Deus, qui humanae substantiae dignitatem mirabiliter condidisti” (O God, who didst marvellously create the dignity of human nature) and “qui humanitatis nostrae fieri dignatus est particeps” (who vouchsafed to become partaker of our humanity). What respect for the dignity of human nature! *Deus et homo!* There is no sign of that unworthy sinful man whom Protestantism has so often slandered in the past and is only too ready to slander again. Moreover, there seems to be still something else hidden in this almost “transcendental” estimate of man. For if God “dignatus est” to become partaker of our human nature, then man may also deem himself worthy to become partaker of the divine nature. In a certain sense this is just what the priest does in the performance of the sacrificial mystery, when he offers himself as the

victim in place of Christ; and the congregation does likewise when it eats the consecrated body and thus shares in the substance of Deity.

[420] By pronouncing the consecrating words that bring about the transformation, the priest redeems the bread and wine from their elemental imperfection as created things. This idea is quite unchristian—it is alchemical. Whereas Catholicism emphasizes the effectual presence of Christ, alchemy is interested in the fate and manifest redemption of the substances, for in them the divine soul lies captive and awaits the redemption that is granted to it at the moment of release. The captive soul then appears in the form of the “Son of God.” For the alchemist, the one primarily in need of redemption is not man, but the deity who is lost and sleeping in matter. Only as a secondary consideration does he hope that some benefit may accrue to himself from the transformed substance as the panacea, the *medicina catholica*, just as it may to the imperfect bodies, the base or “sick” metals, etc. His attention is not directed to his own salvation through God’s grace, but to the liberation of God from the darkness of matter. By applying himself to this miraculous work he benefits from its salutary effect, but only incidentally. He may approach the work as one in need of salvation, but he knows that his salvation depends on the success of the work, on whether he can free the divine soul. To this end he needs meditation, fasting, and prayer; more, he needs the help of the Holy Ghost as his *πάρεδρος*.⁴³ Since it is not man but matter that must be redeemed, the spirit that manifests itself in the transformation is not the “Son of Man” but, as Khunrath very properly puts it,⁴⁴ the *filius macrocosmi*. Therefore, what comes out of the transformation is not Christ but an ineffable material being named the “stone,” which displays the most paradoxical qualities apart from possessing *corpus, anima, spiritus*, and supernatural powers (fig. 214). One might be tempted to explain the symbolism of alchemical transformation as a parody of the Mass were it not pagan in origin and much older than the latter.

[421] The substance that harbours the divine secret is everywhere, including the human body.⁴⁵ It can be had for the asking and can be found anywhere, even in the most loathsome filth⁴⁶ (fig. 256). In these circumstances the *opus* is no longer a ritualistic *officium*, but the same work of redemption which God himself accomplished upon mankind through the example of Christ, and which is now recognized by the philosopher who has received the *donum spiritus sancti*, the divine art, as his own individual *opus*. The alchemists emphasize this point: “He who works through the spirit of another and by a hired hand will behold results that are far from the truth; and conversely he who gives his services to another as assistant in the laboratory will never be admitted to the Queen’s mysteries.”⁴⁷ One might quote the words of Kabasilas: “As kings, when they bring a gift to God, bear it themselves and do not permit it to be borne by others.”

[422] Alchemists are, in fact, decided solitaries;⁴⁸ each has his say in his own way.⁴⁹ They rarely have pupils, and of direct tradition there seems to have been very little, nor is there much evidence of any secret societies or the like.⁵⁰ Each worked in the laboratory for himself and suffered from loneliness. On the other hand, quarrels were rare. Their writings are relatively free of polemic, and the way they quote each other shows a remarkable agreement on first principles, even if one cannot understand what they are really agreeing about.⁵¹ There is little of that disputatiousness and splitting of hairs that so often mar theology and philosophy. The reason for this is probably the fact that “true” alchemy was never a business or a career, but a genuine *opus* to be achieved by quiet, self-sacrificing work. One has the impression that each individual tried to express his own particular experiences, quoting the dicta of the masters only when they seemed to offer analogies.

[423] All, from the very earliest times, are agreed that their art is sacred and divine,⁵² and likewise that their work can be completed only with the help of God. This science of theirs is given only to the few, and none understands it unless God or a master has opened his understanding.⁵³ The knowledge acquired may not be passed on to others unless they are worthy of it.⁵⁴ Since all the essentials are expressed in metaphors they can be communicated only to the intelligent, who possess the gift of comprehension.⁵⁵ The foolish allow themselves to be infatuated by literal interpretations and recipes, and fall into error.⁵⁶ When reading the literature, one must not be content with just *one* book but must possess many books,⁵⁷ for “one book opens another.”⁵⁸ Moreover one must read carefully, paragraph by paragraph; then one will make discoveries.⁵⁹ The terminology is admitted to be quite unreliable.⁶⁰ Sometimes the nature of the coveted substance will be revealed in a dream.⁶¹ The *materia lapidis* may be found by divine inspiration.⁶² The practice of the art is a hard road⁶³ and the longest road.⁶⁴ The art has no enemies except the ignorant.⁶⁵

[424] It goes without saying that there are good and bad authors in alchemical literature as elsewhere. There are productions by charlatans, simpletons, and swindlers. Such inferior writings are easily recognized by their endless recipes, their careless and uneducated composition, their studied mystification, their excruciating dulness, and their shameless insistence on the making of gold. Good books can always be recognized by the industry, care, and visible mental struggles of the author.

160. Symbol of the art as union of water and fire.—Eleazar, *Uraltes chymisches Werk* (1760)

161. The *prima materia* as Saturn devouring his children.—*Mutus liber* (1702)

4. THE PRIMA MATERIA

I. SYNONYMS FOR THE MATERIA

[425] The basis of the *opus*, the *prima materia*, is one of the most famous secrets of alchemy. This is hardly surprising, since it represents the unknown substance that carries the projection of the autonomous psychic content. It was of course impossible to specify such a substance, because the projection emanates from the individual and is consequently different in each case. For this reason it is incorrect to maintain that the alchemists never said what the *prima materia* was; on the contrary, they gave all too many definitions and so were everlastingly contradicting themselves. For one alchemist the *prima materia* was quicksilver, for others it was ore, iron, gold, lead, salt, sulphur, vinegar, water, air, fire, earth, blood, water of life, *lapis*, poison, spirit, cloud, sky, dew, shadow, sea, mother, moon, dragon, Venus, chaos, microcosm (fig. 162). Ruland's *Lexicon* gives no less than fifty synonyms, and a great many more could be added.

[426] Besides these half chemical, half mythological definitions there are also some "philosophical" ones which have a deeper meaning. Thus in the treatise of Komarios¹ we find the definition "Hades." In Olympiodorus the black earth contains the "accursed of God" (θεοκατάρατος). The "Consilium coniugii" says that the father of gold and silver—i.e., their *prima materia*—is "the animal of earth and sea," or "man," or a "part of man," e.g., his hair, blood, etc. Dorn calls the *prima materia* "Adamica" and—basing himself on Paracelsus—*limbus microcosmicus*. The material of the stone is "no other than the fiery and perfect Mercurius" and the true hermaphroditic "Adam and Microcosm" (= man)² (see fig. 163). Hermes Trismegistus is said to have called the stone the "orphan." Since Dorn was a pupil of Paracelsus his views are probably connected with the Anthropos doctrine of his master. For this I must refer the reader to my essay "Paracelsus as a Spiritual Phenomenon." Further connections between man and the *prima materia* are mentioned in other authors, but I cannot quote them all here.

162. The unfettered opposites in chaos. “Chaos” is one of the names for the *prima materia*.

—Marolles, *Tableaux du temple des muses* (1655)

[427] The mercurial dragon of Greek alchemy, surnamed ἔν τὸ πᾶν gave rise to descriptions of the *prima materia* as *Unum*, *Unica Res*,³ and *Monad*⁴ and to the statement in the “*Liber Platonis quattorum*” that man is well qualified to complete the work because he possesses that which is *simple*, i.e., the soul.⁵ Mylius describes the *prima materia* as the *elementum primordiale*. It is the “pure subject and the unity of forms,” and in it any form whatsoever may be assumed (*in quo retinetur quaelibet forma cum possibilitate*).⁶

[428] In the second version of the *Turba*, Eximindus says:⁷

I make known to you, ye sons of the doctrine, that the beginning of all creatures is a certain primary everlasting and infinite nature which cooks and rules everything, and whose active and passive [aspects] are known and recognized only by those on whom the knowledge of the sacred art has been bestowed.

[429] In Sermo IX of the *Turba*⁸ “Eximendus” puts forward a theory of creation that corresponds to the Biblical one (creation through the “Word”) but stands in flagrant contradiction to the above, according to which the beginning is a *natura perpetua et*

infinita. In the *Rosarium* the *prima materia* is called *radix ipsius* (root of itself). Because it roots in itself it is autonomous and dependent on nothing.

II. THE INCREATUM

[430] Being a *radix ipsius*, the *prima materia* is a true *principium*, and from this it is but a step to the Paracelsan view that it is something *increatum*, uncreated. In his “*Philosophia ad Athenienses*,” Paracelsus says that this unique (*unica*) *materia* is a great secret having nothing in common with the elements. It fills the entire *regio aetherea*, and is the mother of the elements and of all created things (fig. 163). Nothing can express this mystery, nor has it been created (*nec etiam creatum fuit*). This uncreated mystery was prepared (*praeparatum*) by God in such a way that nothing will ever be like it in the future nor will it ever return to what it was.⁹ For it was so corrupted as to be beyond reparation (which presumably refers to the Fall). Dorn’s rendering gives the sense of the original text.¹⁰

163. Earth as *prima materia*, suckling the son of the philosophers.—Mylius, *Philosophia reformata* (1622)

[431] The autonomy and everlastingness of the *prima materia* in Paracelsus suggest a principle equal to the Deity, corresponding to a *dea mater*. Just how Paracelsus managed to reconcile such a view with his professions of Christianity is his own private concern; nor is it by any means an isolated instance. The interpretations contained in “*Aquarium sapientum*”¹¹—interesting on account of their truly preposterous character and hardly to be outdone even by *Aurora*—carry Paracelsan speculation still further, though without mentioning the author. The following texts, for example, are applied to the *prima materia*: “and his going forth is from the beginning, from the days of eternity” (Micah 5 : 2, D.V.), and “before Abraham was

made, I am” (John 8 : 58, D.V.). This is supposed to show that the stone is without beginning and has its *primum Ens* from all eternity, and that it too is without end and will exist in all eternity. To understand this properly, one must open wide the eyes of the soul and the spirit and observe and discern accurately by means of the inner light. God has lit this light in nature and in our hearts from the beginning.¹² And in the same way, continues the author, that the stone together with its material has a thousand names and is therefore called “miraculous,” all these names can in eminent degree be predicated of God,¹³ and the author thereupon proceeds to this application. A Christian can hardly believe his ears, but this conclusion only repeats what has already been said quite plainly in the “Liber Platonis quartorum”: “Res ex qua sunt res, est Deus invisibilis et immobilis”¹⁴ (That from which things arise is the invisible and immovable God). The first “res” is the subject matter of the divine art. It is true that very few of the philosophers pressed forward to this conclusion *expressis verbis*, but it is an aspect that makes their hints and veiled allusions decidedly more transparent. Moreover such a conclusion was inevitable psychologically, because the unconscious, being unknown, is bound to coincide with itself everywhere: lacking all recognizable qualities, no unconscious content can be distinguished from any other. This is not a logical sophistry but a very real phenomenon of great practical importance, for it affects the problems of identity and identification in social life, which are based on the collective (and indiscriminable) nature of unconscious contents. These, once they have taken possession of certain individuals, irresistibly draw them together by mutual attraction and knit them into smaller or larger groups which may easily swell into an avalanche.

[432] The above quotations clearly show that the alchemists came to project even the highest value—God—into matter. With the highest value thus safely embedded in matter, a starting-point was given for the development of genuine chemistry on the one hand and of the more recent philosophical materialism on the other, with all the psychological consequences that necessarily ensue when the picture of the world is shifted 180 degrees. However remote alchemy may seem to us today, we should not underestimate its cultural importance for the Middle Ages. Today is the child of the Middle Ages and it cannot disown its parents.

III. UBIQUITY AND PERFECTION

[433] The *prima materia* has the quality of ubiquity: it can be found always and everywhere, which is to say that projection can take place always and everywhere. The English alchemist Sir George Ripley (c. 1415–90) writes: “The philosophers tell the inquirer that birds and fishes bring us the *lapis*,¹⁵ every man has it, it is in every place, in you, in me, in everything, in time and space.”¹⁶ “It offers itself in lowly form [*vili figura*]. From it there springs our eternal water [*aqua permanens*].”¹⁷ According

to Ripley the *prima materia* is water; it is the material principle of all bodies,¹⁸ including mercury.¹⁹ It is the *hyle* which the divine act of creation brought forth from the chaos as a dark sphere²⁰ (*sphaericum opus*: cf. fig. 34).²¹ The chaos is a *massa confusa* that gives birth to the stone (figs. 125, 164). The hylical water contains a hidden elemental fire.²² In the treatise “De sulphure” hell-fire (*ignis gehennalis*) is attributed to the element earth as its inner opposite.²³ According to Hortulanus, the stone arises from a *massa confusa* containing in itself all the elements²⁴ (fig. 162). Just as the world came forth from a *chaos confusum*,²⁵ so does the stone.²⁶ The idea of the rotating aquasphere reminds us of the Neopythagoreans: in Archytas the world-soul is a circle or sphere;²⁷ in Philolaos it draws the world round with it in its rotation.²⁸ The original idea is to be found in Anaxagoras, where the nous gives rise to a whirlpool in chaos.²⁹ The cosmogony of Empedokles is also relevant: here the σφᾱῖρος (spherical being) springs from the union of dissimilars, owing to the influence of φιλία. The definition of this spherical being as εἰδαιμονέστατος Θεός, “the most serene God,” sheds a special light on the perfect, “round” nature of the lapis,³⁰ which arises from, and constitutes, the primal sphere; hence the *prima materia* is often called lapis (figs. 164, 165). The initial state is the hidden state, but by the art and the grace of God it can be transmuted into the second, manifest state. That is why the *prima materia* sometimes coincides with the idea of the initial stage of the process, the *nigredo*. It is then the black earth in which the gold or the lapis is sown like the grain of wheat (cf. fig. 48). It is the black, magically fecund earth that Adam took with him from Paradise, also called antimony and described as a “black blacker than black” (*nigrum nigrius nigro*).³¹

164. Mercurius, standing on the round chaos, holding the scales which signify the *pondus et mensura*. The *rotundum* is a prefiguration of the gold.—“Figurarum Aegyptiorum secretarum” (MS., 18th cent.)

165. “L’occasione”: Mercurius standing on the globe (the *rotundum*). The caduceus and horns of plenty nearby symbolize the richness of his gifts.—Cartari, *Le imagini de i dei* (1581)

IV. THE KING AND THE KING’S SON

[434] As the grain of fire lies concealed in the *hyle*, so the King’s Son lies in the dark depths of the sea as though dead, but yet lives and calls from the deep³² (fig. 166): “Whosoever will free me from the waters and lead me to dry land, him will I prosper with everlasting riches.”³³

[435] The connection with the *Rex marinus* of the “*Visio Arislei*”³⁴ is obvious. Arisleus³⁵ tells of his adventure with the *Rex marinus*, in whose kingdom nothing prospers and nothing is begotten. Moreover there are no philosophers there. Only like mates with like,³⁶ consequently there is no procreation. The King must seek the counsel of the philosophers and mate Thabritius with Beya,³⁷ his two children whom he has hatched in his brain³⁸ (fig. 167).

166. Background, the *Rex marinus* calling for help; foreground, his renewed form with the *rotundum* and the *columba spiritus sancti*.—Trismosin, “Splendor solis” (MS., 1582)

[436] When we are told that the King is *exanimis*, inanimate, or that his land is unfruitful, it is equivalent to saying that the hidden state is one of latency and potentiality. The darkness and depths of the sea symbolize the unconscious state of an invisible content that is projected. Inasmuch as such a content belongs to the total personality³⁹ and is only apparently severed from its context by projection, there is always an attraction between conscious mind and projected content. Generally it takes the form of a fascination. This, in the alchemical allegory, is expressed by the King’s cry for help from the depths of his unconscious, dissociated state. The conscious mind should respond to this call: one should *operari regi*, render service to the King, for this would be not only wisdom but salvation as well.⁴⁰ Yet this brings with it the necessity of a descent into the dark world of the unconscious, the ritual *κατάβασις εἰς ἄντρον*, the perilous adventure of the night sea journey (figs. 69, 170, 171), whose end and aim is the restoration of life, resurrection, and the triumph over death (figs. 172, 174, 177). Arisleus and his companions brave the quest, which ends in catastrophe, the death of Thabritius. His death is a punishment for the incestuous *coniunctio oppositorum* (figs. 223, 226). The brother-sister pair stands allegorically

for the whole conception of opposites. These have a wide range of variation: dry-moist, hot-cold, male-female, sun-moon, gold-silver, mercury-sulphur, round-square, water-fire, volatile-solid, physical-spiritual, and so on.⁴¹ The *regius filius* is a rejuvenated form of the Father-King. The youth is frequently shown with a sword and represents the spirit, while the father represents the body. In the *Rosarium* version of the “Visio” the death of the son is the result of his complete disappearance into the body of Beya during coitus. In another version he is eaten by his father (fig. 168), or the Sun is drowned in Mercurius or swallowed by the lion (fig. 169). Thabritius is the masculine, spiritual principle of light and Logos which, like the Gnostic Nous, sinks into the embrace of physical nature (Physis). Death therefore represents the completion of the spirit’s descent into matter. The alchemists depicted the sinful nature of this occurrence in various ways but, because they do not appear to have quite understood it, they rationalize or minimize the incest, in itself so repellent.⁴²

CONIVNCTIO SIVE *Coitus.*

**O Luna durch meyn umbgeben/vnd susse mynne/
Wirstu schön/ starck/vnd gewaltig als ich byn.
O Sol/ du bist vber alle liecht zu erkennen/
So bedarffstu doch mein als der han der hennen.**

167. Allegory of the psychic union of opposites. [Verses: “O Luna, folded by my embrace, / Be you as strong as I, as fair of face. / O Sol, brightest of all lights known to men, / And yet you need me, as the cock the hen.”]—*Rosarium philosophorum* (1550)

168. The king as *prima materia*, devouring his son.—Lambspringk, “Figurae et emblemata,” in *Musaeum hermeticum* (1678)

169. The “green lion” devouring the sun.—*Rosarium philosophorum* (1550)

170. The night sea journey. Joseph in the cistern, Christ in the sepulchre, Jonah swallowed by the whale.—*Biblia pauperum* (1471)

V. THE MYTH OF THE HERO

[437] Resulting as it did from the advice of the philosophers, the death of the King's Son is naturally a delicate and dangerous matter. By descending into the unconscious, the conscious mind puts itself in a perilous position, for it is apparently extinguishing itself. It is in the situation of the primitive hero who is devoured by the dragon. Since all this means a diminution or extinction of consciousness, an *abaissement du niveau mental* equivalent to that "peril of the soul" which is primitive man's greatest dread (i.e., the fear of ghosts⁴³), the deliberate and indeed wanton provocation of this state is a sacrilege or breach of taboo attended by the severest punishments. Accordingly the King imprisons Arisleus and his companions in a triple glass house together with the corpse of the King's Son. The heroes are held captive in the underworld at the bottom of the sea, where, exposed to every kind of terror, they languish for eighty days in an intense heat. At the request of Arisleus, Beya is imprisoned with them. (The *Rosarium* version of the "Visio" interprets the prison as Beya's womb.⁴⁴) Clearly, they have been overpowered by the unconscious and are helplessly abandoned, which means that they have volunteered to die in order to beget a new and fruitful life in that region of the psyche which has hitherto lain fallow in darkest unconsciousness, and under the shadow of death (fig. 171).

171. Hercules on the night sea journey in the vessel of the sun.—Base of an Attic vase (5th cent. B.C.)

[438] Although the possibility of life is hinted at by the brother-sister pair, these unconscious opposites must be activated by the intervention of the conscious mind, otherwise they will merely remain dormant. But this is a dangerous undertaking. We can understand the anxious plea in *Aurora consurgens*: “Horridas nostrae mentis purga tenebras, accende lumen sensibus!”⁴⁵ We can also understand why Michael Maier found few that were willing to plunge into the sea.⁴⁶ Arisleus is in danger of succumbing to the fate of Theseus and Peirithous, who descended into Hades and grew fast to the rocks of the underworld, which is to say that the conscious mind, advancing into the unknown regions of the psyche, is overpowered by the archaic forces of the unconscious: a repetition of the cosmic embrace of *Nous* and *Physis*. The purpose of the descent as universally exemplified in the myth of the hero is to show that only in the region of danger (watery abyss, cavern, forest, island, castle, etc.) can one find the “treasure hard to attain” (jewel, virgin, life-potion, victory over death) (fig. 172).

172. Jonah emerging from the belly of the whale. The goal of the night sea journey is equivalent to the *lapis angularis* or cornerstone.—“Speculum humanae salvationis” (Cod. Lat. 512, Paris, 15th cent.)

173. The slaying of the king (*mortificatio*).—Stolcius de Stolcenberg, *Viridarium chymicum* (1624)

[439] The dread and resistance which every natural human being experiences when it comes to delving too deeply into himself is, at bottom, the fear of the journey to Hades. If it were only resistance that he felt, it would not be so bad. In actual fact, however, the psychic substratum, that dark realm of the unknown,⁴⁷ exercises a fascinating attraction that threatens to become the more overpowering the further he penetrates into it.⁴⁸ The psychological danger that arises here is the disintegration of personality into its functional components, i.e., the separate functions of consciousness, the complexes, hereditary units, etc. Disintegration—which may be

functional or occasionally a real schizophrenia—is the fate which overtakes Gabricus (in the *Rosarium* version): he is dissolved into atoms in the body of Beya,⁴⁹ this being equivalent to a form of *mortificatio* (fig. 173).

174. Jonah in the whale.—Early Christian earthenware lamp

175. The wolf as *prima materia*, devouring the dead king. In the background, sublimation of the *prima materia* and rebirth of the king.—Maier, *Scrutinium chymicum* (1687)

[440] Here again we have a repetition of the *coniunctio* of Nous and Physis.⁵⁰ But the latter is a cosmogonic event, whereas this is a catastrophe brought about by the intervention of the philosophers. So long as consciousness refrains from acting, the opposites will remain dormant in the unconscious. Once they have been activated, the *regius filius*—spirit, Logos, Nous—is swallowed up by Physis; that is to say, the body and the psychic representatives of the organs gain mastery over the conscious

mind. In the hero myth⁵¹ this state is known as being swallowed up in the belly of the whale or dragon⁵² (fig. 174). The heat there is usually so intense that the hero loses his hair,⁵³ i.e., he is reborn bald as a babe (fig. 176). This heat is the *ignis gehennalis*, the hell into which Christ descended in order to conquer death as part of his *opus*.

[441] The philosopher makes the journey to hell as a “redeemer.” The “hidden fire” forms the inner antithesis to the cold wetness of the sea.⁵⁴ In the “Visio” this heat is undoubtedly the warmth of incubation,⁵⁵ equivalent to the self-incubating or “brooding” state of meditation. In Indian yoga we find the kindred idea of *tapas*, self-incubation.⁵⁶ The aim of *tapas* is the same as in the “Visio”: transformation and resurrection (cf. fig. 177).

176. Jonah in the belly of the whale.—Khludov Psalter (Byzantine, 9th cent.)

177. The Resurrection: Samson with the city gates of the Philistines, Christ rising from the grave, Jonah being spewed forth by the whale.—*Biblia pauperum* (1470)

VI. THE HIDDEN TREASURE

[442] The “treasure hard to attain,” whose presence was suspected in the dark *prima materia*, is symbolized by the alchemists in various ways. Christopher of Paris, for instance, says that the chaos (as *prima materia*) is the work of all-wise nature. Our understanding (*intellectus*), aided by the “celestial and glowing spirit,” must transform this natural work of art—chaos—into the celestial nature of the quintessence, and into the life-giving (*vegetabilis*) essence of heaven. The precious substance is potentially contained in this chaos as a *massa confusa* of all the elements rolled into one, and man must diligently apply his mind to it so that “our heaven” may come into reality (*ad actum*).⁵⁷

[443] Johannes Grasseus quotes the view that the *prima materia* is the lead (*plumbum*) of the philosophers, also called the “lead of the air”⁵⁸ (an allusion to the inner opposite). This lead contains the radiant white dove (fig. 178), called the “salt of the metals.” The dove is the “chaste, wise, and rich Queen of Sheba, veiled in white, who was willing to give herself to none but King Solomon.”⁵⁹

178. The dove (*avis Hermetis*) rising from the four elements as symbol of the spirit freed from the embrace of Physis.
—“De summa et universalis medicinae sapientiae veterum philosophorum” (M.S., 18th cent.)

179. The alchemical trinity: the king and his son with Hermes between them (Hermes = *Spiritus Mercurii*).—
Lamspringk, “Figurae et emblemata,” in *Musaeum hermeticum* (1678)

[444] According to Basilus Valentinus, the earth (as *prima materia*) is not a dead body, but is inhabited by a spirit that is its life and soul. All created things, minerals included, draw their strength from the earth-spirit. This spirit is life, it is nourished by the stars, and it gives nourishment to all the living things it shelters in its womb. Through the spirit received from on high, the earth hatches the minerals in her womb (cf. [fig. 163](#)) as the mother her unborn child. This invisible spirit is like the reflection in a mirror, intangible, yet it is at the same time the root of all the substances necessary to the alchemical process or arising therefrom (*radix nostrorum corporum*).⁶⁰

180. The Christian Trinity with the Holy Ghost as a winged man.—Engraving (15th cent.) by the Master of the Berlin Passion

[445] A similar idea is to be found in Michael Maier.⁶¹ The sun, by its many millions of revolutions, spins the gold into the earth. Little by little the sun has imprinted its image on the earth, and that image is the gold. The sun is the image of God, the heart⁶² is the sun's image in man, just as gold is the sun's image in the earth (also called *Deus terrenus*), and God is known in the gold. This golden image of God is the *anima aurea*, which, when breathed into common quicksilver, changes it into gold.

[446] Ripley is of the opinion that the fire must be extracted from the chaos and made visible.⁶³ This fire is the Holy Ghost, who unites father and son.⁶⁴ He is often represented as a winged old man,⁶⁵ i.e., Mercurius in the form of the god of revelation, who is identical with Hermes Trismegistus⁶⁶ and, together with the King and the King's Son, forms the alchemical trinity (figs. 179, 180). God wrought this fire in the bowels of the earth, just as he wrought the purging flames of hell, and in this fire⁶⁷ God himself glows with divine love.⁶⁸

5. THE LAPIS-CHRIST PARALLEL

I. THE RENEWAL OF LIFE

[447] The examples given in the last chapter show that there is a spirit hidden in the *prima materia*, just as there was in the Nile stone of Ostanes. This spirit was eventually interpreted as the Holy Ghost in accordance with the ancient tradition of the Nous swallowed up by the darkness while in the embrace of Physis—with this difference, however, that it is not the supreme feminine principle, earth, who is the devourer, but Nous in the form of Mercurius or the tail-eating Uroboros (fig. 147). In other words, the devourer is a sort of material earth-spirit, an hermaphrodite possessing a masculine-spiritual and feminine-corporeal aspect (fig. 183; cf. figs. 54, 125). The original Gnostic myth has undergone a strange transformation: Nous and Physis are indistinguishably one in the *prima materia* and have become a *natura abscondita*.

[448] The psychological equivalent of this theme is the projection of a highly fascinating unconscious content which, like all such contents, exhibits a numinous —“divine” or “sacred”—quality. Alchemy set itself the task of acquiring this “treasure hard to attain” and of producing it in visible form, as the physical gold or the panacea or the transforming tincture—in so far as the art still busied itself in the laboratory. But since the practical, chemical work was never quite free from the unconscious contents of the operator which found expression in it, it was at the same time a psychic activity which can best be compared with what we call active imagination.¹ This method enables us to get a grasp of contents that also find expression in dream life. The process is in both cases an irrigation of the conscious mind by the unconscious, and it is related so closely to the world of alchemical ideas that we are probably justified in assuming that alchemy deals with the same, or very similar, processes as those involved in active imagination and in dreams, i.e., ultimately with the process of individuation.

[449] Earlier on, we left Arisleus and his companions, together with Beya and the dead Thabritius, in the triple glass house where they had been imprisoned by the *Rex marinus*. They suffer from the intense heat, like the three whom Nebuchadnezzar cast into the fiery furnace (fig. 184). King Nebuchadnezzar had a vision of a fourth, “like the Son of God,” as we are told in Daniel 3 : 25. This vision is not without bearing on alchemy, since there are numerous passages in the literature stating that the stone is *trinus et unus* (fig. 185; cf. fig. 1). It consists of the four elements, with fire representing the spirit concealed in matter. This is the fourth, absent and yet present, who always appears in the fiery agony of the furnace and symbolizes the divine presence—succour and the completion of the work. And, in their hour of need, Arisleus and his companions see their master Pythagoras in a dream and beg him for help. He sends them his disciple Harforetus, the “author of nourishment.”² So the work is completed and Thabritius comes to life again.³ We may suppose that Harforetus brought them the miraculous food, though this only becomes clear through a discovery of Ruska’s, who gave us access to the text of the Codex Berolinensis. There, in an introduction that is missing from the printed versions of the “Visio,”⁴ we read: “Pythagoras says, ‘Ye write and have written down for posterity how this most precious tree is planted, and how he that eats of its fruits shall hunger no more.’”⁵ Since the “Visio” was written for the express purpose of leaving an example of the alchemical process to posterity, it naturally deals with the planting of trees, and the end of the legend is designed to show the miraculous regenerating effects of the fruit. While Arisleus was in such dire straits, and Thabritius lay in the sleep of death, the tree⁶ was evidently growing and bearing fruit. The part played by Arisleus in the glass house is entirely passive. The decisive action comes from the master, who sends his messenger with the food of life.

184. The three youths in the fiery furnace.—Early Christian ornament on sarcophagus from Villa Carpegna, Rome

185. Below, the triad as unity; above, the quaternity standing on the binarius.—Valentinus, "Duodecim claves," in *Mus. herm.* (1678)

[450] We are told that a man can receive the secret knowledge only through divine inspiration or from the lips of a master, and also that no one can complete the work except with the help of God.⁷ In the "Visio" it is the legendary master, the divine Pythagoras,⁸ who takes the place of God⁹ and completes the work of regeneration (fig. 187). This divine intervention, as we may venture to call it, occurs in a dream, when Arisleus sees the master and implores his help. If the union of the opposites—mind and body—portrayed by Thabritius and Beya, the putting to death, and the cremation in the furnace are, according to one alchemist,¹⁰ the equivalent of the offertory in the Mass, we find an analogy to the petition for help in the *memento vivorum*—the intercession for the living—and in the commemoration of martyrs, both of which precede the transubstantiation in the *ordo missae*. The invocation is

made “pro redemptione animarum suarum, pro spe salutis et incolumnitatis suae” (for the redemption of their souls, for the hope of their health and welfare), and the saints are remembered in order that God, for the sake of their merits and prayers, may grant “that we be defended in all things with the help of Thy protection.” The petition ends with the *epiclesis*, which ushers in the transubstantiation: “ut nobis corpus et sanguis fiat” (that it may become for us the Body and the Blood), i.e., the miraculous food,¹¹ the *φάρμακον ζωῆς*. In the “Visio” it is the fruit of the immortal tree that brings salvation (figs. 188–90). But when the Church speaks of the “fructus sacrificii missae”—the fruits of the sacrifice of the Mass—it is not quite the same thing, since moral and other effects are meant, not the consecrated substances themselves which are likewise produced *ex opere operato* (“from the performed work”).

186. The tree of coral in the sea.—Dioscorides, “De materia medica” (MS., Vienna, 16th cent.)

187. The dragon spewing forth Jason, after drinking the potion prepared by Athene.—Attic vase (5th cent. B.C.)

188. The tree of the philosophers, surrounded by symbols of the *opus*.—Mylius, *Philosophia reformata* (1622)

189. Dragon with tree of the Hesperides.—Boschius, *Symbolographia* (1702)

[451] Here we come to a parting of the ways. The Christian receives the fruits of the Mass for himself personally and for the circumstances of his own life in the widest sense. The alchemist, on the other hand, receives the *fructus arboris immortalis* not merely for himself but first and foremost for the King or the King's Son, for the perfecting of the coveted substance. He may play a part in the *perfectio*, which brings him health, riches, illumination, and salvation; but since he is the redeemer of God and not the one to be redeemed, he is more concerned to perfect the substance than himself. Moral qualities he takes for granted and considers them only in so far as they help or hinder the *opus*. We could say that he lays the whole emphasis on the effect *ex opere operantis* ("of the work of the operator"), naturally to a much higher degree than the Church, since he takes the place of the Christ who sacrifices himself in the Mass. One should not for a moment suppose that he presumes to the role of redeemer from religious megalomania. He does so even less than the officiating priest who figuratively sacrifices Christ. The alchemist always stresses his humility and begins his treatises with invocations to God. He does not dream of identifying himself with Christ; on the contrary, it is the coveted substance, the *lapis*, that he likens to Christ. It is not really a question of identification at all, but of the hermeneutic *sicut*—"as" or "like"—which characterizes the analogy. For medieval man, however, analogy was not so much a logical figure as a secret identity, a remnant of primitive thinking which is still very much alive. An instructive example of this is the rite of hallowing the fire on the Saturday before Easter (fig. 191).¹² The fire is "like unto" Christ, an *imago Christi*. The stone from which the spark is struck is the "cornerstone"—another *imago*; and the spark that leaps from the stone is yet again an *imago Christi*. The analogy with the extraction of the pneuma from the stone in the saying of Ostanès forces itself upon us. We are already familiar with the idea of pneuma as fire, and with Christ as fire, and fire as the earth's inner counter-element; but the "firestone" from which the spark is struck is also analogous to the rocky sepulchre, or the stone before it. Here Christ lay as one asleep or in the fetters of death during the

three days of his descent into hell, when he went down to the *ignis gehennalis*, from which he rises again as the New Fire (fig. 234).

190. Mayan ritual tree with serpent.—Dresden Codex

191. Descent of the Holy Ghost in the form of cloven tongues.—Munich Lectionary or *Perikopenbuch* (12th cent.)

[452] Without knowing it, the alchemist carries the idea of the *imitatio* a stage further and reaches the conclusion we mentioned earlier, that complete assimilation to the Redeemer would enable him, the assimilated, to continue the work of redemption in the depths of his own psyche. This conclusion is unconscious, and consequently the alchemist never feels impelled to assume that Christ is doing the work in him. It is by virtue of the wisdom and art which he himself has acquired, or which God has bestowed upon him, that he can liberate the world-creating *Nous* or *Logos*, lost in the

world's materiality, for the benefit of mankind. The artifex himself bears no correspondence to Christ; rather he sees this correspondence to the Redeemer in his wonderful stone. From this point of view, alchemy seems like a continuation of Christian mysticism carried on in the subterranean darkness of the unconscious—indeed some mystics pressed the materialization of the Christ figure even to the appearance of the stigmata. But this unconscious continuation never reached the surface, where the conscious mind could have dealt with it. All that appeared in consciousness were the symbolic symptoms of the unconscious process. Had the alchemist succeeded in forming any concrete idea of his unconscious contents, he would have been obliged to recognize that he had taken the place of Christ—or, to be more exact, that he, regarded not as ego but as self,¹³ had taken over the work of redeeming not man but God. He would then have had to recognize not only himself as the equivalent of Christ, but Christ as a symbol of the self. This tremendous conclusion failed to dawn on the medieval mind. What seems like a monstrous presumption to the Christian European would have been self-evident to the spirit of the Upanishads. Modern man must therefore consider himself fortunate not to have come up against Eastern ideas until his own spiritual impoverishment was so far gone that he did not even notice what he was coming up against. He can now deal with the East on the quite inadequate and therefore innocuous level of the intellect, or else leave the whole matter to Sanskrit specialists.

192. The quaternity of the cross in the zodiac, surrounded by the six planets. Mercurius corresponds to the cross between sun and moon: a paraphrase of ♄.—Böhme, *Signatura rerum* (1682)

II. EVIDENCE FOR THE RELIGIOUS INTERPRETATION OF THE LAPIS

a. Raymond Lully

[453] It is not surprising that the *lapis*-Christ parallel came to the fore among the medieval Latin authors at a comparatively early date, since alchemical symbolism is steeped in ecclesiastical allegory. Although there is no doubt that the allegories of the Church Fathers enriched the language of alchemy, it remains in my opinion exceedingly doubtful just how far the *opus alchemicum*, in its various forms, can be regarded as a transmogrification of ecclesiastical rites (baptism, Mass) and dogmas (Christ's conception, birth, passion, death, and resurrection). Undeniably, borrowings were made over and over again from the Church, but when we come to the original basic ideas of alchemy we find elements that derive from pagan, and more particularly from Gnostic, sources. The roots of Gnosticism do not lie in Christianity at all—it is far truer to say that Christianity was assimilated through Gnosticism.¹⁴

Apart from this we have a Chinese text,¹⁵ dating from the middle of the second century, which displays fundamental similarities with Western alchemy. Whatever the connection between China and the West may have been, there is absolutely no doubt that parallel ideas exist outside the sphere of Christianity, in places where Christian influence is simply out of the question. A. E. Waite¹⁶ has expressed the opinion that the first author to identify the stone with Christ was the Paracelsist, Heinrich Khunrath (1560–1605), whose *Amphitheatrum* appeared in 1598. In the writings of the somewhat later Jakob Böhme, who frequently uses alchemical terms, the stone has already become a metaphor for Christ (fig. 192). Waite's assumption is undoubtedly erroneous, for we have much earlier testimonies to the connection between Christ and the *lapis*, the oldest that I have so far been able to discover being contained in the *Codicillus* (Ch. IX) of Raymond Lully (1235–1315). Even if many of the treatises ascribed to him were written by his Spanish and Provençal disciples, that does not alter the approximate date of his main works, to which the *Codicillus* belongs. At any rate I know of no authoritative opinion that puts this treatise later than the fourteenth century. There it is said:

And as Jesus Christ, of the house of David, took on human nature for the deliverance and redemption of mankind, who were in the bonds of sin on account of Adam's disobedience, so likewise in our art that which has been wrongfully defiled by one thing is absolved by its opposite; cleansed, and delivered from that stain.¹⁷

b. Tractatus aureus

[454] A still older source would assuredly be the "Tractatus aureus"—ascribed to Hermes and regarded as of Arabic origin even in the Middle Ages—were Christ mentioned directly by name. The reason why I nevertheless quote it is that it describes things which bear a remarkable resemblance to the mysterious happenings at Eastertide, and yet are clothed in quite another language. The passage runs as follows:

Our precious stone, that was cast upon the dung-heap, is altogether vile.... But when we marry the crowned king with the red daughter, she will conceive a son in the gentle fire, and shall nourish him through our fire.... Then is he transformed, and his tincture remains red as flesh. Our son of royal birth takes his tincture from the fire, and death, darkness, and the waters flee away. The dragon shuns the light of the sun, and our dead son shall live. The king shall come forth from the fire and rejoice in the marriage. The hidden things shall be disclosed, and the virgin's milk be whitened. The son is become a warrior fire and surpasses the tincture, for he himself is the treasure and himself is attired in the philosophic matter. Come hither, ye sons of

wisdom, and rejoice, for the dominion of death is over, and the son reigns; he wears the red garment [fig. 193],¹⁸ and the purple is put on.¹⁹

193. The white and the red rose as end-product of the transformation of king and queen.—“Trésor des trésors” (MS., 17th cent.)

[455] We can take this text as a variant of the mythical God-man and his triumph over death, and thus as an analogy of the Christian drama. Since the age and origin of this Hermetic text are still unknown, we cannot decide with any certainty whether Christian influence is at work here. Probably not. There is no reason to suspect Christian influence in the very early texts, such as that of Komarios.²⁰ (The Christian prefaces, etc., to these manuscripts are interpolations by Byzantine monastic copyists.) And yet it is just the Komarios text that has all the characteristics of a regeneration mystery, although here the resurrection of the dead is effected not by a redeemer but by the ὕδωρ θεῖον (the *aqua permanens* of the Latinists; cf. fig. 194), to which the Christian water symbolism (*aqua* = *spiritus veritatis*, baptism, and Eucharist) forms an unmistakable parallel.

194. Sulphur as sun and Mercurius as moon bridging the river of “eternal water.”

— Barchusen, *Elementa chemiae* (1718)

c. Zosimos and the Doctrine of the Anthropos

[456] In the later texts, however, which are ascribed to Zosimos, we find the Son of God in unmistakable association with the priestly art (*ἱερατικῆ τέχνη*). I give the relevant passages in a literal translation:²¹

4: ... If you have meditated and have dwelt in human community, you will see that the Son of God has become all things for the sake of devout souls: in order to draw the soul forth from the dominion of Heimarmene²² into the [realm of the] incorporeal, behold how he has become all—God, angel, and man capable of suffering.²³ For having power in all, he can become all as he wills; and he obeys the Father inasmuch as he penetrates²⁴ all bodies and illuminates the mind of each soul,²⁵ spurring²⁶ it on to follow him up to the blessed region where it²⁷ was before the beginning of corporeal things,²⁸ yearning and led by him into the light.²⁹

5: And consider the tablet which Bitos³⁰ also wrote, and the thrice-great Plato³¹ and the infinitely great Hermes, saying that³² the first man is designated with the first hieratic word Thoyth,³³ who is the interpreter of all things that are and the giver of names to all corporeal things. The Chaldeans, Parthians, Medes, and Hebrews call him Adam, which is, being interpreted, virgin earth, blood-red [or bloody] earth, fiery³⁴ or carnal earth. This is to be found in the libraries of the Ptolemies. They put it³⁵ in every sanctuary, and especially in the Serapeum, at the time when Asenas³⁶ went to the High Priest of Jerusalem,³⁷ who sent Hermes, who translated the whole of the Hebrew into Greek and Egyptian.

6: So the first man is called by us Thoyth and by them Adam, which is a name in the language of the angels; but with reference to his body³⁸ they named him

symbolically after the four elements³⁹ of the whole heavenly sphere [fig. 195]. For his letter A stands for ascent [ἀνατολή: the East] or the air; D for descent [δύσις: the West] ...⁴⁰ because it [the earth] is heavy; A for arctic [ἄρκτος: the North]; and M for meridian [μεσημβρία: the South], the midmost of these bodies, the fire that burns in the midst of the fourth region.⁴¹ Thus the fleshly Adam according to his outward and visible form is called Thoyth, but the spiritual man in him has a proper name as well as the name by which he is called. His proper name as yet⁴² I know not: for Nikotheus alone knows this, and he is not to be found. But his common name is Man [φῶς], which is Light [φῶς]; wherefore it came that men are called φῶτας.

7: Now when the Man of Light⁴³ abode in Paradise, pervaded⁴⁴ by the breath of Heimarmene, they [the elements]⁴⁵ persuaded him, who was without evil and free from their activity, to put on the Adam that was with him,⁴⁶ namely the Adam wrought of the four elements of Heimarmene⁴⁷ [cf. figs. 82, 117]. And he in his innocence did not turn aside; but they boasted that he was their slave. [Wherefore] Hesiod⁴⁸ called the outer man the bond with which⁴⁹ Zeus bound Prometheus. But after this fetter Zeus sent him yet another: Pandora, whom the Hebrews call Eve. For, in the allegorical language, Prometheus and Epimetheus are but one man, namely soul and body. And sometimes he⁵⁰ bears the likeness of the soul, sometimes that of the spirit, and sometimes the likeness of the flesh [fig. 196], because of the disobedience of Epimetheus, who heeded not the counsel of Prometheus, his own mind.⁵¹ For our mind⁵² says: “The Son of God, having power in all things and becoming all things when⁵³ he wills, appears⁵⁴ as he wills to each. Jesus Christ made himself one with Adam and bore him up to that place where the Men of Light dwelt before.”⁵⁵

195. Creator, macrocosm, and microcosm in human form, the microcosm surrounded by the elements.—St. Hildegarde of Bingen, “Liber divinorum operum” (MS., 12th cent.)

8: But he appeared to the very feeble as a man capable of suffering and like one scourged. And after he had privily stolen away the Men of Light that were his own,⁵⁶ he made known that in truth he did not suffer, and that death was trampled down and cast out. And to this day and to the end of the world⁵⁷ he is present in many places,⁵⁸ both secretly and openly consorting with his own,⁵⁹ counselling them secretly, yea through their own minds,⁶⁰ to suffer confusion⁶¹ with the Adam who was with them, that he might be beaten away from them⁶² and slain, this blind chatterer who is envious of the spiritual Man of Light. [Thus] they kill their Adam.

9: And these things are so until the coming of the daemon Antimimos, the jealous one,⁶³ who seeks to lead them astray as before,⁶⁴ declaring that he is the Son of God, although he is formless in both body and soul. But they, having become wiser since the true Son of God has taken possession of them, deliver up to him their own Adam to be put to death, and bring their shining spirits safely back to the place where they were before the beginning of the world. Yet before Antimimos, the jealous one, does this,⁶⁵ he sends his forerunner from Persia, who circulates false fables and leads men astray through the power of Heimarmene. The letters of his name are nine, if you

keep the diphthong,⁶⁶ corresponding to Heimarmene. Later, at the end of about seven periods,⁶⁷ he will appear in his own⁶⁸ shape.

10: And only the Hebrews and the sacred books of Hermes [tell of] these things concerning the Man of Light and his guide the Son of God, and concerning the earthly Adam and his guide Antimimos, who blasphemously calls himself the Son of God to lead men astray. But the Greeks call the earthly Adam Epimetheus, who was counselled by his own mind, his brother, not to accept the gifts of Zeus. Yet, inasmuch as he erred and afterwards repented, seeking the abode of bliss, he⁶⁹ makes everything plain and fully advises them that have spiritual hearing. But those that have only bodily hearing are slaves of Heimarmene, for they neither understand nor admit anything else.

196. The three manifestations of the Anthropos during his transformation: body, soul, spirit. Below, dragon and toad as preliminary forms.—“Ripley Scrowle” (MS., 1588)

11: And all who meet with success in the matter of colourings at the propitious moment, consider nothing but the great book about furnaces, for they do not esteem the art; nor do they understand the poet when he says: “But the gods have not given to men equally.”⁷⁰ Neither do they observe and see the manner of men’s lives: how,

even in the same art, men may reach the goal in different ways and practise the same art in different ways, according to their different characters and the constellations of the stars in the exercise of the same art; how one worker is inactive,⁷¹ another alone,⁷² one blasphemously desiring too much, another too timid and therefore without progress—this is so in all the arts—and how those who practise the same art use different implements and procedures, having also different attitudes to the spiritual conception of it and its practical realization.

12: And this is more to be considered in the sacred art than in all the other arts....

[457] To all appearances, Zosimos' Son of God is a Gnostic Christ who has more affinity with the Iranian conception of Gayomart than with the Jesus of the Gospels. The author's connections with Christianity are by no means clear, since he undoubtedly belonged to the Hermetic Poimandres sect, as is evident from the passage about the Krater.⁷³ As in later Christian alchemy, the Son of God is a sort of paradigm of sublimation, i.e., of the freeing of the soul from the grip of Heimarmene. In both cases he is identical with Adam, who is a quaternity compounded of four different earths. He is the Anthropos, the first man, symbolized by the four elements, just like the *lapis* which has the same structure. He is also symbolized by the cross, whose ends correspond to the four cardinal points (fig. 197; cf. figs. 82, 192). This motif is often replaced by corresponding journeys, such as those of Osiris,⁷⁴ the labours of Herakles,⁷⁵ the travels of Enoch,⁷⁶ and the symbolic *peregrinatio* to the four quarters in Michael Maier⁷⁷ (1568–1622) (cf. fig. 97). Journeys are also related of Hermes Trismegistus,⁷⁸ and this may have inspired Maier's *peregrinatio*, although it is more probable that Maier imagined the *opus* as a wandering or odyssey, rather like the voyage of the Argonauts in quest of the *aureum vellus* (Golden Fleece), so beloved of the alchemists, a theme that figures in the title of more than one treatise. Alexander's campaign is mentioned in a treatise ascribed to Albertus Magnus, the journey ending in the discovery of Hermes' grave, where a stork is perched on the tree instead of a phoenix.⁷⁹

197. Christ in the midst of the four rivers of paradise, evangelists, Fathers of the Church, virtues, etc.—Peregrinus, “Speculum virginum” (MS., 13th cent.)

198. Anser or cygnus Hermelis.—Hermaphroditisches Sonn- und Mondskind (1752)

[458] Adam corresponds to Thoth (Θωϋς), the Egyptian Hermes (fig. 68). Adam’s inner, spiritual man is named φῶς (light). Nikotheos, who knows the Man of Light’s secret name, occurs twice in Zosimos as a mysterious personage,⁸⁰ and he is also mentioned in a Coptic Gnostic text as one who has beheld the Monogenes (*unigenitus*). Porphyry, in his life of Plotinus, speaks of him as the author of an

Apocalypse.⁸¹ The Manichees reckon him among the prophets, along with Shēm, Sēm, Enōš, and Enoch.⁸²

[459] Prometheus and Epimetheus represent the inner and outer man, like Christ and Adam. The ability to “become all,” attributed to the Son of God, is an attribute not only of the pneuma but of the alchemical Mercurius, whose boundless powers of transformation are praised⁸³ in accordance with the versatility of the astrological Mercury (fig. 24). He is the *materia lapidis*, the transforming substance par excellence, and is said to penetrate all bodies⁸⁴ like a poison⁸⁵ (fig. 150).

[460] Antimimos, the imitator and evil principle, appears as the antagonist of the Son of God: he too considers himself to be God’s son. Here the opposites inherent in the deity are clearly divided. We meet this daemon in many other places as the *ἀντίμιμον πνεῦμα*: he is the spirit of darkness in a man’s body, compelling his soul to fulfil all his sinful tendencies.⁸⁶ The alchemical parallel to this polarity is the double nature of Mercurius, which shows itself most clearly in the Uroboros, the dragon that devours, fertilizes, begets, slays, and brings itself to life again. Being hermaphroditic, it is compounded of opposites and is at the same time their uniting symbol (fig. 148): at once deadly poison, basilisk, scorpion, panacea, and saviour (fig. 199).

199. Hermaphrodite on the winged globe of chaos, with the seven planets and the dragon.

—Jamsthaler, *Vitorium spagyricum* (1625)

[461] Zosimos discloses practically the whole of the recondite and highly peculiar theology of alchemy, by drawing a parallel between the esoteric meaning of the *opus* and the Gnostic mystery of redemption. This is only one indication that the lapis-

Christ parallel of the scholastic alchemists had a pagan Gnostic precursor and was by no means a mere speculation of the Middle Ages.

200. Eagle and swan as symbols of the sublimated *spiritus*. In the foreground, Saturn.

—Mylius, *Philosophia reformatata* (1622)

d. Petrus Bonus

[462] The oldest source to treat specifically of the stone's connection with Christ would appear to be a text, *Pretiosa margarita novella*, written by Petrus Bonus of Ferrara between 1330 and 1339,⁸⁷ from which I give the following extract:⁸⁸

This art is partly natural and partly divine or supernatural. At the end of the sublimation [fig. 200] there germinates, through the mediation of the spirit, a shining white soul [*anima candida*] which flies up to heaven with the spirit [cf. fig. 134]. This is clearly and manifestly the stone. So far the procedure is indeed somewhat marvellous, yet still within the framework of nature. But as regards the fixation and permanence of the soul and spirit at the end of the sublimation, this takes place when the secret stone is added, which cannot be grasped by the senses, but only by the intellect, through inspiration or divine revelation, or through the teaching of an initiate. Alexander says that there are two categories: seeing through the eye and understanding through the heart.⁸⁹ This secret stone is a gift of God. There could be no alchemy without this stone. It is the heart and tincture of the gold, regarding which Hermes says: "It is needful that at the end of the world heaven and earth be united: which is the philosophic Word."⁹⁰ Pythagoras also said in the *Turba*: "God

concealed this from Apollo, so that the world should not be destroyed.” Thus alchemy stands above nature and is divine. The whole difficulty of the art lies in this stone. The intellect cannot comprehend it, so must believe it, like the divine miracles and the foundation of the Christian creed. Therefore God alone is the operator, while nature remains passive. It was through their knowledge of the art that the old philosophers knew of the coming of the end of the world and the resurrection of the dead. Then the soul will be united with its original body for ever and ever. The body will become wholly transfigured [*glorificatum*], incorruptible, and almost unbelievably subtilized,⁹¹ and it will penetrate all solids. Its nature will be as much spiritual as corporeal. When the stone decomposes to a powder like a man in his grave, God restores to it soul and spirit, and takes away all imperfection; then is that substance [*illa res*] strengthened and improved, as after the resurrection a man becomes stronger and younger than he was before. The old philosophers discerned the Last Judgment in this art, namely in the germination and birth of this stone, for in it the soul to be beatified [*beatificandae*] unites with its original body, to eternal glory. So also the ancients knew that a virgin must conceive and bring forth, for in their art the stone begets, conceives, and brings itself forth.⁹² Such a thing can happen only by the grace of God. Therefore Alphidius⁹³ says of the stone that its mother was a virgin and that its father had never known woman. They knew besides that God would become man on the Last Day of this art⁹⁴ [*in novissima die huius artis*], when the work is perfected; and that begetter and begotten, old man and boy, father and son, all become one. Now, since no creature except man can unite with God, on account of their dissimilarity, God must needs become one with man. And this came to pass in Christ Jesus and his virgin mother.⁹⁵ Therefore Balgus says in the *Turba*: “O what miracles of nature, that have changed the soul of the old man into a youthful body, and the father has become the son” [cf. [figs. 166, 167](#)]. In like manner Plato, writing of alchemical matters, wrote a gospel which was completed long after by John the Evangelist. Plato wrote the opening verses from “In the beginning was the Word” to “There was a man sent from God.”⁹⁶ God has shown the philosopher this wonderful example that he might perform supernatural works. Morienus says that God has entrusted this *magisterium* to his philosophers or prophets, for whose souls he has prepared a dwelling in his paradise.⁹⁷

[463] This text, which is at least a century older than Khunrath, shows beyond all doubt that the connection between the mystery of Christ and the mystery of the *lapis* was even then so obvious that the philosophical *opus* seemed like a parallel and imitation—perhaps even a continuation—of the divine work of redemption.

e. “Aurora consurgens” and the Doctrine of Sapientia

[464] The next source is *Aurora consurgens*,⁹⁸ of which a manuscript copy of the fifteenth century, the Codex Rhenoviensis, from the monastery at Rheinau, is to be found in Zurich. Unfortunately the manuscript is mutilated and begins only at the fourth parable. I was made aware of it through the fact that the printer of *Artis auriferae* (1593) published only [Part II](#) of *Aurora*. He prefixed to it a short notice to the reader in which he says that he has purposely omitted the entire treatise consisting of parables or allegories because the author, in the ancient manner of obscurantists (*antiquo more tenebrionum*), treated almost the whole Bible—particularly Proverbs, Psalms, but above all the Song of Songs—in such a way as to suggest that the Holy Scriptures had been written solely in honour of alchemy. The author, he says, has even profaned the most holy mystery of the incarnation and death of Christ by turning it into the mystery of the *lapis*—not, of course, with any evil intent, as he, the typographer Conrad Waldkirch, readily admits, but as was only to be expected in that benighted epoch (*seculum illud tenebrarum*). By this Waldkirch meant the pre-Reformation epoch, whose conception of man and the world, and experience of the divine presence in the mystery of matter, had entirely vanished from the purview of the Protestants of his own day.

[465] The treatise is preserved entire in the Codex Parisinus Latinus 14006. There is also a printing of it in the compilation edited by Johannes Rhenanus, *Harmoniae inperscrutabilis chymico-philosophicae Decades duae* (Frankfort, 1625).⁹⁹ The age of the text, which is attributed to St. Thomas Aquinas (d. 1274), may be gauged more or less from the fact that the most recent author quoted in it is Albertus Magnus (1193–1280). The other authors who are everywhere quoted in the fifteenth century—Arnold of Villanova (d. 1313) and Raymond Lully (d. 1315)—are not mentioned. Since Thomas was canonized in 1323 and was thus at the height of his fame, it was worth while ascribing texts to him from that time on. We shall probably not be far out if we put the date in the first half of the fourteenth century. The author is evidently a cleric who knows his Vulgate by heart. His whole idiom is steeped in Biblical quotation, just as his mind is full of alchemical philosophy. Alchemy is for him absolutely identical with the *Sapientia Dei*. He begins his treatise with words taken from the Wisdom of Solomon (7 : 11) and Proverbs (1 : 20–21):

Venerunt mihi omni bona pariter cum illa¹⁰⁰ sapientia austri, quae foris praedicat, in plateis dat vocem suam, in capite turbarum clamitat, in foribus portarum urbis profert verba sua dicens:¹⁰¹ Accedite ad me et illuminamini et operationes vestrae non confundentur;¹⁰² omnes qui concupiscitis me¹⁰³ divitiis meis adimplemini. Venite ergo filii, audite me, scientiam Dei docebo vos. Quis sapiens et intelligit hanc, quam Alphidius dicit homines et pueros in viis et plateis praeterire et cottidie a iumentis et pecoribus in sterquilinio conculcari....

(All good things come to me together with her,¹⁰⁰ that Wisdom of the south, who preacheth abroad, who uttereth her voice in the streets,¹⁰¹ crieth out at the head of the multitudes, and in the entrance of the gates of the city uttereth her words, saying: “Come ye to me and be enlightened, and your operations shall not be confounded;¹⁰² all ye that desire me shall be filled with my riches.¹⁰³ Come, children, hearken to me, I will teach you the science of God. Who is wise, and understandeth this, of which Alphidius saith, that men and children pass her by daily in the streets and public places, and she is trodden into the mire by beasts of burden and by cattle ...”)

201. Sapientia as mother of the wise.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

[466] The *sapientia austri* is, in patristic usage,¹⁰⁴ the wisdom of the Holy Ghost. For our author Sapientia is the “regina Austri, quae ab oriente dicitur venisse, ut aurora consurgens”—Queen of the South,¹⁰⁵ who is said to have come from the east, like unto the morning rising¹⁰⁶ (fig. 201).

202. Communion table with seven fish.—Christian earthenware lamp, Carthage

[467] Without mentioning our text, the *Rosarium* quotes it as follows:¹⁰⁷

This [Sapientia] is my daughter, for whose sake men say that the Queen of the South came out of the east, like the rising dawn, in order to hear, understand, and behold the wisdom of Solomon; power, honour, strength, and dominion are given into her hand; she wears the royal crown of seven glittering stars, like a bride adorned for her husband, and on her robe is written in golden lettering, in Greek, Arabic, and Latin: I am the only daughter of the wise, utterly unknown to the foolish.

[468] This is without doubt a citation from *Aurora*. The original text has twelve instead of seven stars, the latter evidently referring to the seven stars in the hand of the apocalyptic “one like unto the Son of Man” (Rev. 1 : 13; 2 : 1). These represent the seven angels of the seven Churches and the seven spirits of God (fig. 202). The historical *sous-entendu* of the seven is the antique company of seven gods who later took up their abode in the seven metals of alchemy (figs. 21, 79, 154). They were deposed by science only during the last one hundred and fifty years. For Paracelsus the gods were still enthroned as archons in the *mysterium magnum* of the *prima materia*, “to their own undoing and ours.”¹⁰⁸

[469] The twelve stars of the original text refer to the twelve disciples and the twelve signs of the zodiac (figs. 92, 100). The Agathodaimon serpent on Gnostic gems also has seven or twelve rays about its head (figs 203–5). In Clement’s second homily it is observed that the number of apostles corresponds to the twelve months.¹⁰⁹ In the Manichean system the saviour constructs a cosmic wheel with twelve buckets—the zodiac—for the raising of souls.¹¹⁰ This wheel has a significant connection¹¹¹ with the *rota* or *opus circulatorium* of alchemy,¹¹² which serves the same purpose of sublimation. As Dorn says: “The wheel of creation takes its rise from the *prima materia*, whence it passes to the simple elements.”¹¹³ Enlarging on the idea of the *rota philosophica* (cf. figs. 80, 104), Ripley says that the wheel must be turned by the four seasons and the four quarters, thus connecting this symbol with the *peregrinatio* and the quaternity. The wheel turns into the wheel of the sun rolling round the heavens, and so becomes identical with the sun-god or -hero who submits to arduous labours and to the passion of self-cremation, like Herakles, or to captivity and dismemberment at the hands of the evil principle, like Osiris. A well-known parallel to the chariot of the sun is the fiery chariot in which Elijah ascended to heaven (figs. 206, 207).¹¹⁴ Accordingly Pseudo-Aristotle says:¹¹⁵ “Take the serpent, and place it on the chariot with four wheels, and let it be turned about on the earth until it is immersed in the depths of the sea, and nothing more is visible but the blackest dead sea.” The image used here is surely that of the sun sinking into the sea, save that the sun has been replaced by the mercurial serpent, i.e., the substance to be transformed. Michael Maier actually takes the *opus circulatorium* as an image of the sun’s course:

For while the hero, like a joyful giant,¹¹⁶ rises in the east and hastens to his sinking in the west, that he may forever return out of the east, he sets in motion these circulations, depositing in the shining substance of the quicksilver, as in a mirror, forms [wherein] by human diligence the gold may be sought, cleansed from impurities, tested by fire and water, and put to a use pleasing to God the Creator.¹¹⁷

203, 204. The Chnuphis serpent with seven-rayed crown; the lion-headed, twelve-rayed XNOYMIC-serpent, over an altar-stone.—Gnostic gem and amulet

205. Goddess of fate as serpent with seven heads.—Seal of St. Servatius, from Maastricht Cathedral

[470] The circle described by the sun is the “line that runs back on itself, like the snake that with its head bites its own tail, wherein God may be discerned.” Maier calls it the “shining clay moulded by the wheel [rota] and hand of the Most High and Almighty Potter” into that earthly substance wherein the sun’s rays are collected and caught. This substance is the gold.¹¹⁸ In “Introitus apertus,”¹¹⁹ Philalethes elaborates Maier’s views: there is in “our” mercury, he says, a fiery sulphur or sulphureous fire. This fire is the “spiritual seed” which our Virgin¹²⁰ has gathered in herself, because unspotted virginity can admit of “spiritual love,” according to the author of the Hermetic mystery and as experience itself shows. It is to be noted that this virgin, who being “unspotted” (*intemerata*) is obviously analogous to the Virgin Mary, is made pregnant by a seed deriving not from any Holy Ghost but from a “sulphureous fire,” i.e., an *ignis gehennalis*.¹²¹ The virgin is Mercurius¹²² (fig. 208). who, owing to the presence of sulphur, the active masculine principle, is hermaphroditic.¹²³ Sulphur is the *aurum volatile* (fig. 209), a “spiritual” gold, the *aurum non vulgi* of the *Rosarium* and at the same time the “*primum movens, quod rotam vertit axemque vertit in gyrum*” (prime mover that turns wheel and axle in a circle).

207. The ascension of Elijah.—Early Christian mural painting, crypt of Lucina, Rome

208. Mercurius as *anima mundi*.—"Turba philosophorum" (MS., Paris, 16th cent.)

209. The winged sphere (*aurum aurae*) as the end-product of the *opus*, and its reflection in the fountain of life. Symbolic representation of the *opus* with attributes (trees, planetary mountains, etc.).—Balduinus, *Aurum*

- [471] Laurentius Ventura¹²⁴ cannot resist connecting the wheel with the vision of Ezekiel. Thus, speaking of the *lapis*, he says that Ezekiel saw “in its shape the wheel within the wheel and the spirit of the living creature that was in the midst of the wheels”¹²⁵ (figs. 109, 207). “Wherefore,” he says, “this *mysterium* has been called by some the *Deus terrestris*.”¹²⁶ It appears that this last thought is not a conceit of Ventura’s but, as he says, a quotation from “Lilium,” a source I have been unable to trace, though it must go back to the fourteenth century or even earlier.¹²⁷
- [472] The idea of the circulatory *opus*, or rotating arcane substance, finds expression as early as Komarios, who speaks of the “mystery of the whirlwind in the manner of a wheel” (μυστήριον τῆς λαίλαπος τροχοῦ δίκην).¹²⁸ Compare Zach. 9 : 14 (D.V.): “... and the Lord God will sound the trumpet and go in the whirlwind of the south.” The mystic logion of Zosimos probably has some bearing here:¹²⁹ “And what meaneth this: ‘the nature that conquers the natures,’ and ‘it is perfected and becometh like a whirl’?” [καί γίνεται ἰλιγγιῶσα]. The transforming substance is an analogy of the revolving universe, of the macrocosm, or a reflection of it imprinted in the heart of matter. Psychologically, it is a question of the revolving heavens being reflected in the unconscious, an *imago mundi* that was projected by the alchemist into his own *prima materia*. But such an interpretation is somewhat one-sided, since the idea of the arcane substance is itself an archetype, expressed most simply in the idea of the soul-spark (*scintilla*, *Spinther*) and the Monad.
- [473] The personification of Sapientia in the Wisdom of Solomon evidently caused the author of *Aurora* to identify her with the “Queen of the South.” In alchemy she always appears as *Sapientia Dei*, and in the writings of the Church Fathers the south wind is an allegory of the Holy Ghost, presumably because it is hot and dry. For the same reason the process of sublimation is known in Arabic alchemy as the “great south wind,” referring to the heating of the retort.¹³⁰ The Holy Ghost, too, is fiery and causes an exaltation. His equivalent, so to speak, is the hidden fire, the *spiritus igneus* dwelling in Mercurius, whose opposite poles are an *agens* (i.e., fire) and a *patiens* (i.e., quicksilver). When therefore Abu’l Qāsim speaks of the fire as the “great south wind,” he is in agreement with the ancient Greek view that Hermes was a wind-god¹³¹ (figs. 210, 211).

210. "The wind hath carried it in his belly" ("Tabula smaragdina"). The *foetus spagyricus* is the renewed Mercurius.
—Maier, *Scrutinium chymicum* (1687)

211. The god Aër as procreator of all harmony. In the inner circle, Arion, Pythagoras, Orpheus; in the outer, the nine muses; in the corners, the four winds.—“Recueil des fausses décrétales” (MS., 13th cent.)

212. The Trinity as *tricephalus*.—*Speculum humane salvationis* (Augsburg, 1480)

[474] I have dwelt at some length on the opening passages of *Aurora* because they are an excellent illustration of the composition as a whole as regards both language and subject matter. Here I will mention only a few of the *lapis*-Christ parallels. In ch. II the author calls “the science” (i.e., alchemy) a gift and a sacrament of God, a divine matter that the wise have veiled in images. From this it appears that the *opus alchemicum* is deemed the equal of the *opus divinum* or Mass.¹³² In ch. VI the stone is described in the words of the Song of Songs 5 : 16, “Such is my beloved,” and Ps. 44 : 3 (D.V.), “Behold ye him, beautiful above the sons of men, at whose beauty the sun and moon wonder.”¹³³ The *filius philosophorum* is here identified with the “bridegroom” who, as we know, is interpreted as Christ. In the second parable, “Of the Flood of Waters and of Death,” we read: “Then the fulness of the time shall come, when God shall send his son,¹³⁴ as he hath said, whom he hath appointed heir of all things, by whom also he made the world,¹³⁵ to whom he said of old time: “Thou art my Son, today have I begotten thee,¹³⁶ to whom the Wise Men from the East brought three precious gifts ...” Here again Christ is a parallel of the *lapis*. In the fourth parable, “Of the Philosophic Faith,” a parallel is drawn with the Holy Trinity (cf. figs. 179, 180): “... like as the Father is, so is the Son, and so also is the Holy Spirit, and these three are One: body, spirit, and soul; for all perfection consisteth in the number three, that is, in measure, number, and weight.”

[475] The sixth parable, “Of Heaven and Earth and the Arrangement of the Elements,” says:

In the *Turba philosophorum* it is written: The earth, since it is heavy, beareth all things,¹³⁷ for it is the foundation of the whole heaven, because it appeared dry¹³⁸ at the separation of the elements.¹³⁹ Therefore in the Red Sea there was a way without

hindrance, since this great and wide sea¹⁴⁰ smote the rock¹⁴¹ and the metallic waters¹⁴² flowed forth [fig. 213]. Then the rivers¹⁴³ disappeared in dry land, which make the city of God joyful;¹⁴⁴ when this mortal shall put on immortality, and the corruption of the living shall put on incorruption, then indeed shall that word come to pass which is written, Death is swallowed up in victory. O death, where is thy victory?¹⁴⁵ Where thy sin abounded, there now grace doth more abound. For as in Adam all die, so also in Christ all shall be made alive. For by a man indeed came death, and by himself the resurrection of the dead. For the first Adam and his sons took their beginning from the corruptible elements, and therefore it was needful that the composed should be corrupted, but the second Adam, who is called the philosophic man, from pure elements entered into eternity. Therefore what is composed of simple and pure essence, remaineth for ever.¹⁴⁶ As Senior saith: There is One thing, that never dieth,¹⁴⁷ for it continueth by perpetual increase, when the body shall be glorified in the final resurrection of the dead, wherefore the Creed beareth witness to the resurrection of the flesh and eternal life after death. Then saith the second Adam to the first and to his sons:¹⁴⁸ Come, ye blessed of my Father, possess you the eternal kingdom prepared for you from the beginning of the Work,¹⁴⁹ and eat my bread and drink the wine which I have mingled for you, for all things are made ready for you. He that hath ears to hear, let him hear what the spirit of the doctrine saith to the sons of the discipline concerning the earthly and the heavenly Adam, which the philosophers treat of in these words: When thou hast water from earth, air from water, fire from air, earth from fire,¹⁵⁰ then shalt thou fully and perfectly possess our art.

213. Moses striking water from the rock.—Bible Moralisee (MS., 13th cent.)

[476] What is particularly interesting in this passage is the parallel between the *lapis* or the *aqua sapientum* and the second Adam, which connects Christ—through the quotation in Senior (n. 147)—with the alchemical doctrine of the Anthropos: Christ is identified with the *homo philosophicus*, the Microcosm (fig. 214), the “One that dieth not, and bringeth alive anything dead.” The *homo philosophicus* appears to have two meanings: he is the “One,” i.e., the tincture or elixir of life, but he is also the everlasting inner man, identical or at least connected with the Anthropos (cf. figs. 117, 195). (This doctrine is elaborated by Paracelsus.¹⁵¹)

214. Symbol of Hermetic transformation: the *homo philosophicus* Mercurius.—Samuel Norton, *Mercurius redivivus* (1630)

[477] *Aurora* continues in the same vein and gives us in the seventh and last parable a “Confabulation of the Lover with the Beloved” (which Luther’s Bible interprets as “the mutual love of Christ and his Church”), closing with the words: “Behold, how good and pleasant it is for two to dwell together in unity. Let us make therefore three tabernacles, one for thee, a second for me, and a third for our sons, for a threefold cord is not easily broken.” These three tabernacles the author connects with the “Liber trium verborum” of Kalid.¹⁵² The Three Words “wherein is hidden all the

science” are to be “given to the pious, that is to the poor,¹⁵³ from the first man even unto the last.” The Three Words are: “For three months water preserveth the foetus in the womb; air nourisheth it for the second three; fire guardeth it for the third three.” “And this word,” adds Kalid, “and this teaching and the dark goal, stand open so that all may see the truth.”

[478] Although the three tabernacles, according to the preceding text, are intended for the *sponsus Christus* and, we may suppose, for *Sapientia* as the *sponsa*, yet in the end *Sapientia* herself speaks and offers two of the tabernacles to the adept and the philosophers, the sons of wisdom. The “threefold cord” (fig. 215) refers primarily to the bond between *Sapientia* and her adepts, but, as the reference to Kalid’s Three Words shows, it also means the threefold process which holds the body, soul, and spirit of the transforming substance together in imperishable union¹⁵⁴ (cf. figs. 185, 196). The chemical compound thus produced is the end-result of the *opus*, i.e., the *filius philosophorum* or *lapis* in a sense comparable with the “mystical body” of the Church (fig. 234): Christ the vine, the whole; the disciples the branches, the parts. One does indeed have the impression that the anonymous author of this treatise has hitched the Holy Scriptures to the triumphal car of alchemy, as was not unjustly alleged against him. It is astonishing to see how, with a perfectly clear conscience, he launches forth into the most hair-raising interpretations without the least awareness of what he is doing. As I have shown in “Paracelsus as a Spiritual Phenomenon,” we find a similar attitude in Paracelsus some two hundred years later, and also in the author of “*Aquarium sapientum*.” Our author betrays such a ready acquaintance with the Vulgate that we might suspect him of being in holy orders. Moreover we have the testimony of the humanist Patrizi that Hermetic philosophy was not felt to be in any way inimical to the Christianity of the Church. On the contrary, people regarded it as a mainstay of the Christian faith. For which reason Patrizi addressed a plea to Pope Gregory XIV requesting him to let Hermes take the place of Aristotle.¹⁵⁵

215. The completion of the process. Inscription: “*oculatus abis*” (provided with eyes, thou goest thy way). Hermes as Anthropos, united with the artifex and *soror* through the threefold cord. Below, Hercules, a favourite symbol because of his *opera*. Background, the ladder which is no longer needed.—*Mutus liber* (1702)

[479] The text of *Aurora* is of historical importance in that it must be more than two hundred years older than Khunrath (1598) and Böhme (1610). Curiously enough, Böhme’s first work bears the title “*Aurora, oder die Morgenröte im Aufgang*” (Aurora, or the Rising Dawn). Can it be that Böhme knew *Aurora consurgens*, at least by name?

f. Melchior Cibirensis and the Alchemical Paraphrase of the Mass

[480] The next source for the *lapis*-Christ identity is an interesting document from the beginning of the sixteenth century, addressed, as its title shows,¹⁵⁶ to Ladislaus, King of Hungary and Bohemia. The author’s name was Nicholas Melchior of Hermannstadt.¹⁵⁷ He expounded the alchemical process in the form of a Mass (fig. 216), which he arranged as follows:

216. The artifex as priest. Left, Earth suckling the Mercurius-child: “matrix eius terra est” (“Tabula smaragdina”).—
Melchior Cibinensis, *Symbolum*, from Maier, *Symbola aureae mensae* (1617)

INTROITUS MISSAE: Fundamentum vero artis est corporum solutio. (The basis of the Art is the dissolution of the bodies.)

KYRIE, FONIS BONITATIS, inspirator sacrae artis, a quo bona cuncta tuis fidelibus procedunt, Eleison. (Our Lord, fount of goodness, inspirer of the sacred art, from whom all good things come to your faithful, have mercy.)

CHRISTE, Hagie, lapis benedicte artis scientiae qui pro mundi salute inspirasti lumen scientiae, ad extirpandum Turcam, Eleison. (Christ, Holy one, blessed stone of the art of the science who for the salvation of the world hast inspired the light of the science, for the extirpation of the Turk, have mercy.)

KYRIE, IGNIS DIVINE, pectora nostra juva, ut pro tua laude pariter sacramenta artis expandere possimus, Eleison. (Our Lord, divine fire, help our hearts, that we may be able, to your praise, to expand the sacraments of the art, have mercy.)

GLORIA IN EXCELSIS [merely an invocation].

COLLECTA [Prayer before the epistle is read. The main idea is that “thy servant N.N.” may practise the “sacred art of alchemy” to the glory of God and the propagation of the Christian faith].

EPISTOLA [merely an invocation].

GRADUALE [usually a chorale consisting of verses from the Psalms; in the old days it was sung on the steps, *gradus*, of the ambo]: Surge aquilo et veni auster.¹⁵⁸ perfla hortum meum et fluant aromata illius. (Arise, O north wind, and come, O south wind; blow through my garden, and let the aromatical spices thereof flow).

VERSUS: Descendit sicut pluvia in vellus, et sicut stillicidia, stillantia super terram. Alleluja. O felix conditor terrae, nive albior, suavitate dulcior, f[r]agrans in fundo vasis instar balsami. O salutaris medicina hominum, quae curas ... omnem corporis languorem.... O fons sublimis ex quo vere scaturit vera aqua vitae, in praedium tuorum fidelium. (He descends like rain upon the fleece, and as showers falling gently upon the earth. Alleluja. O blest creator of the earth, whiter than snow, sweeter than sweetness, fragrant at the bottom of the vessel like balsam. O

salutary medicine for men, that curest every weakness of the body: O sublime fount whence gushes forth truly the true water of life into the garden of thy faithful.)

An Ave Praeclara follows the Gospel.

[481] Here I will stress only a few of the most important points. After the reading of Gospel and Creed, Melchior introduces an Ave—not an Ave Maria, but an “Ave Praeclara,”¹⁵⁹—of which he mentions only these two words, without the continuation. “Ave Praeclara” is the opening of a hymn to the Virgin Mary, which has been attributed to various authors, including Albertus Magnus, whose putative authorship must have been particularly interesting to an alchemist. Rémy de Gourmont, in his *Le Latin mystique*,¹⁶⁰ quotes the following legend taken from the so-called Osnabrück Register of Santa Maria: A virgin in royal raiment appeared to Albertus in a dream and reproached him for not having shown himself sufficiently grateful to the Virgin Mary for the blessing she had bestowed. It was on account of this dream that Albertus composed the Ave Praeclara. An alchemist would find it full of alluring allusions:

Ave praeclara maris stella, in lucem gentium Maria divinitus orta...

Virgo, decus mundi, regina coeli, praelecta ut sol, pulchra lunaris ut fulgor...

Fac fontem dulcem, quem in deserto petra demonstravit,

degustare cum sincera fide, renesque constringi lotos

in mari, anguem aeneum in cruce speculari [fig. 217].

Fac igni sancto patrisque verbo, quod, rubus ut

flamma, tu portasti, virgo mater facta, pecuali

pelle distinctos,¹⁶¹ pede, mundis labiis, cordeque propinquare.

Hail, clear-shining star of the sea, Mary, divinely born for the enlightenment of the nations...

Virgin, ornament of the world, queen of heaven, elect above all like the sun, lovely as the light of the moon...

Let us drink in steadfast faith of the sweet stream that flowed from the rock in the desert, and, girding our loins that the sea has bathed, gaze on the crucified brazen serpent [fig. 217].

O Virgin, who hast been made mother by the sacred fire and the Father’s word, which thou didst bear like the Burning Bush, let us, as cattle ringstraked, speckled and spotted,¹⁶¹ draw near with our feet, with pure lips and heart.

[482] While Melchior’s text leaves it an open question whether “praeclara” means the *aqua vitae*, he leaves us in no doubt that it refers not only to the Virgin but to a hymn in her praise, for he goes on to say: “The Ave Praeclara must be sung; it shall be called the ‘testament of the art,’ since the whole chemical art is figuratively concealed therein,¹⁶² and blessed is he that understands this sequence.”

[483] By “this sequence” he means a hymn to Mary, in all probability the one we have quoted above, as is clear from Melchior’s next words. In any case the Virgin is identified with the arcanum of the art, possibly on the authority—then at its height—of Raymond Lully.¹⁶³ We come across a similar idea in the treatise of Komarios: “Ostanes and his companions said to Cleopatra: ‘The whole awful and marvellous secret is hidden in thee.’”¹⁶⁴

217. The crucified *serpens mercurialis*, the brazen serpent of Moses.—Abraham le Juif, “Livre des figures hiéroglyphiques” (MS., 18th cent.)

[484] Melchior now gives his alchemical paraphrase of the hymn to Mary:

Hail beautiful lamp of heaven, shining light¹⁶⁵ of the world! Here art thou united with the moon, here is made the band of Mars¹⁶⁶ [*copula martialis*] and the conjunction of Mercury.¹⁶⁷ From these three is born through the magistry of the art, in the river bed, the strong giant¹⁶⁸ whom a thousand times a thousand seek, when these three shall have dissolved, not into rain water ... but into mercurial water, into this our blessed gum¹⁶⁹ which dissolves of itself and is named the Sperm of the Philosophers. Now he¹⁷⁰ makes haste to bind and betroth himself to the virgin bride, and to get her with child in the bath over a moderate fire [fig. 218]. But the virgin

will not become pregnant at once unless she be kissed in repeated embraces. Then she conceives in her body, and thus is begotten the child of good omen, in accordance with the order of nature. Then will appear in the bottom of the vessel the mighty Ethiopian, burned, calcined, discoloured, altogether dead and lifeless¹⁷¹ [fig. 219]. He asks to be buried, to be sprinkled with his own moisture and slowly calcined¹⁷² till he shall arise in glowing form from the fierce fire.... Behold a wondrous restoration and renewal of the Ethiopian! Because of the bath of rebirth he takes a new name, which the philosophers call the natural sulphur and their son, this being the stone of the philosophers. And behold it is *one* thing, *one* root, *one* essence with nothing extraneous added and from which much that was superfluous is taken away by the magistry of the art.... It is the treasure of treasures, the supreme philosophical potion, the divine secret of the ancients. Blessed is he that finds such a thing. One that has seen this thing writes and speaks openly, and I know that his testimony is true. Praise be to God for evermore!

218. The “bath of the philosophers.”—Mylius, *Philosophia reformata* (1622)

219. The “Ethiopian” as the *nigredo*.—Trismosin, “Splendor solis” (MS., 1582)

[485] The liturgy proper ends here. What now follows is a sort of recapitulation of the main parts. Melchior associates the Offertory with the stone that the builders rejected and that became the head of the corner. “This is the Lord’s doing, and it is marvellous in our eyes.” Then comes the Secret, leading over to the alchemical oblation. The offering is the *opus*, i.e., “our work of the blessed art of alchemy,” which “shall ever be dedicated to the glorious name of God and to the saving reformation of the Church, through our Lord Jesus Christ, Amen.”

[486] The regeneration of the Ethiopian is actually the equivalent of the transubstantiation, but the Consecration is missing. Melchior takes the *Ave Praeclara* sequence to include the transubstantiation as a mystery *in gremio virginis*. This view is supported by tradition, as is shown by the following passage from Senior: “The full moon is the philosophical water and the root of the science, for she is the mistress of moisture, the perfect round stone and the sea, wherefore I know that the moon is the root of this hidden science.”¹⁷³

[487] Being the mistress of moisture, the moon, like Isis, is the *prima materia* in the form of water and thus the mother of the “Hydrolith,” the water-stone—another name

for the *lapis* and hence for Christ. Since the terms *scientia* and *prima materia* are often used as though they were identical, *scientia* or *sapientia* is here identical with the moon, the feminine principle (fig. 220); hence the Gnostic doctrine of Sophia as the mother or bride of Christ.

[488] Last of all comes the “Post-communion”: “Glory be to our King who comes out of the fire,¹⁷⁴ who is illumined and crowned with the diadem, for ever and ever, Amen.” In conclusion there is a form of compline for the strengthening of the Christian faith and the extermination of the Turk.

220. Figure of the moon.—Codex Urbanus Latinus 899 (15th cent.)

[489] Apart from its bad taste the text is highly illuminating for our theme. Melchior obviously recognized the analogy between the two *opera* and naïvely substituted the individual *opus*, in all its poverty, for the time-honoured words of the Mass. He lived at the time of the Reformation, and not so long afterwards the Mass was replaced, over a wide area of Europe, by the far from sacrosanct words of various preachers all declaring the word of God in their own way. Melchior was doing something of this kind. If we grant him the right to a subjective credo he becomes more acceptable. It is clear enough from the text that he felt the alchemical process to be the equivalent of

the transubstantiation in the Mass, and that he had the need to express his experience¹⁷⁵ in precisely that form. It is to be noted, however, that he puts the alchemical transmutation not in the place of the transubstantiation but somewhere in the vicinity of the Credo, so that the action breaks off before the Consecration. In the second version of the recapitulation the climax of the rite is again missing, and the sequence jumps straight from the Secret at the Offertory to the Post-communion. This peculiarity may be explained by the holy awe of the most solemn and moving part of the Mass, namely the Consecration. One could therefore take it as at least an indirect sign of a conflict of conscience—a conscience torn between the experience of a rite acting from without and an individual experience acting from within. Although Christ is nowhere mentioned as the *lapis* or *medicina*, their identity is overpoweringly evident from the whole drift of the text.

g. Sir George Ripley

[490] Additional evidence, which ought to have been known to Waite, is furnished (cf. [figs. 30, 92, 196, 228, 251, 257](#)) by his countryman Sir George Ripley (1415–90), canon of Bridlington, whose main work, “*Liber duodecim portarum*,”¹⁷⁶ is prefaced by a table of philosophical correspondences, compiled by B. à Portu, Aquitanus. The table sets forth the correspondences between the seven metals and chemical substances and what are called “types,” by which are meant the alchemical symbols, e.g., tinctures, the ages of man, signs of the zodiac, and so forth. These correspondences include seven mysteries, the *Mysterium Altaris* (i.e., the Mass) being attributed to gold, whereas the alchemical equivalent is the *transmutatio* ([fig. 221](#)). The kind of grain that belongs to this mystery is *triticum* (wheat). B. à Portu is probably to be identified with Bernhardus Georgius Penotus, the Paracelsist, who was born between 1520 and 1530 at Port-Ste-Marie in Guienne (part of the old Aquitaine) and who died in 1620 in the poorhouse at Yverdon (Vaud, Switzerland), hoary with age and disillusioned with the Paracelsan optimism that had fired his student days in Basel. He shared the inevitable fate of those who lacked sufficient humour to understand the testy old master and who found that the secret teaching about the *aurum non vulgi* remained all too secret. But his table shows that the analogy between the *opus* and the Mass was also valid in Paracelsist circles. Paracelsus was a contemporary of Melchior’s, but may well have reached similar conclusions independently, for such ideas were then in the air. Michael Maier was sufficiently impressed by Melchior’s analogy to use it as Symbol XI ([fig. 216](#)) in his *Symbola aureae mensae* (1617), with the motto: “*Lapis, ut infans, lacte nutriendus est virginali*” (The stone, like to an infant, is to be fed with virgin’s milk) [[cf. fig. 222](#)].

221. *Arbor philosophica*: the tree as symbol of the stages in the transformation process.

—Samuel Norton, *Catholicon physicorum* (1630)

[491] We find the following legend in the “*Cantilena Ripplaei*”:¹⁷⁷

There was once a noble king [the *caput corporum*] who had no descendants. He lamented his sterility and concluded that a *defectus originalis* must have arisen in him, although he was “nurtured under the wings of the sun” without any natural bodily defects. He says, in his own words: “Alas, I fear and know for a certainty that unless I can obtain the help of the species at once, I shall never beget a child. But I have heard with astonishment, by the mouth of Christ above, that I shall be born anew.” He then wished to return to his mother’s womb and to dissolve himself in the *prima materia*. His mother encouraged him in this venture, and forthwith concealed him under her robe, until she had incarnated him again in herself. She then became pregnant. During her pregnancy she ate peacock’s flesh and drank the blood of the green lion. At length she brought forth the child, who resembled the moon and then changed into the splendour of the sun. The son once more became king. The text says: “God gave thee the glorious, glittering armoury of the four elements, and the Crowned Maid [*Virgo redimita*] was in their midst.” A wonderful balsam flowed

from her [cf. [fig. 222](#)] and she shone with a radiant face, adorned with the precious stone. But in her lap lay the green lion,¹⁷⁸ with blood flowing from his side [cf. [fig. 242](#)]. She was crowned with a diadem and was set as a star in the highest heaven. The king became a supreme victor triumphant, a great healer of the sick and a redeemer [*reformer*] of all sins.

222. The sea of renewal arising from virgin's milk. Symbolic representation of the life.
—giving power of the unconscious (= whale).—Stolcius de Stolcenberg, *Viridarium chymicum* (1624)

223. *Mortificatio*, or *nigredo* and *putrefactio*: Sol and Luna overcome by death after the *coniunctio*.—Mylius, *Philosophia reformata* (1622)

Christ said: “I, if I be lifted up, will draw all men unto me.”¹⁸⁰ From that time forward, when both parts, having been crucified and exanimated, are betrothed to one another, man and wife shall be buried together [fig. 223] and afterward quickened again by the spirit of life. Then must they be raised to heaven, so that body and soul may be there transfigured and enthroned on the clouds; then they will draw all bodies to their own high estate [fig. 224].

[493] If we realize that the author was no layman but a learned canon, we can hardly suppose him to have been unaware of the parallels with certain fundamental ideas of Christian dogma. It is never said outright that the stone is Christ, but the sacred figures can easily be recognized in the guise of the King and the Virgin-Mother. Ripley must have made a deliberate choice of these parallels without being conscious of any blasphemy. The Basel typographer, Conrad Waldkirch, would have rained fire and brimstone on his head. Ripley belonged to an age when God and his mysteries still dwelt in nature, when the mystery of redemption was at work on every level of existence, because unconscious happenings still lived in untroubled, paradisaical participation with matter and could be experienced there.

[494] I came across a last outcropping of this medieval view of the world in my youth, in the form of the following tale. We had at that time a cook from the Swabian part of the Black Forest, on whom fell the duty of executing the victims from the poultry yard destined for the kitchen. We kept bantams, and bantam cocks are renowned for their singular quarrelsomeness and malice. One of these exceeded all others in savagery, and my mother commissioned the cook to dispatch the malefactor for the Sunday roast. I happened to come in just as she was bringing back the decapitated cock and saying to my mother: “He died like a Christian, although he was so wicked. He cried out, ‘Forgive me, forgive me!’ before I cut off his head, so now he’ll go to heaven.” My mother answered indignantly: “What nonsense! Only human beings go to heaven.” The cook retorted in astonishment: “But of course there’s a chicken heaven for chickens just as there’s a human heaven for humans.” “But only people have an immortal soul and a religion,” said my mother, equally astonished. “No, that’s not so,” replied the cook. “Animals have souls too, and they all have their special heaven, dogs, cats, and horses, because when the Saviour of men came down to earth, the chicken saviour also came to the chickens, and that’s why they must repent of their sins before they die if they want to go to heaven.”

[495] The theology of our cook is a remnant of that folklore mentality which saw the drama of redemption going on at all levels and could therefore discover it even in the mysterious and incomprehensible transformations of matter.

[496] As to the details of the “Cantilena,” the sick king who was nevertheless born perfect is the man who suffers from spiritual sterility. In the vision of Arisleus the land is unfruitful because only like mates with like, instead of the opposites being united. The philosophers advise the king to join his son and daughter together and make the land fruitful again by means of a brother-sister incest (fig. 225). With Ripley it is a mother-son incest. Both forms are familiar to alchemy and constitute the prototype of the royal marriage (fig. 32). This endogamous mating is simply a variant of the Uroboros, which, because it is by nature hermaphroditic, completes the circle in itself. The king in Arisleus remarks that he is king because he has a son and a daughter, while his subjects have none on account of their sterility. The “gestation in the brain”¹⁸¹ points to a psychic content, or more accurately to a psychic pair of opposites that can become creative of their own accord (fig. 226). But evidently the king has so far not allowed his children to propagate, by repressing or ignoring the manifestations of their vitality. It looks as though he had been unconscious of their existence and had only become aware of their significance on the advice of the philosophers. The blame for his sterility is to be sought in the projection of

unconscious contents, which can neither develop nor find “redemption” until they are integrated with consciousness. The brother-sister pair stands for the unconscious or for some essential content (fig. 227). A modern psychologist would therefore have advised the king to remember the existence of his unconscious and so put an end to his stagnation. As generally happens in such cases, an opposition, a painful conflict, thereupon comes to the surface, and it is easy to understand why the king preferred to remain unconscious of it. Since the conflict is never lacking in moral complications, it is, from this point of view, appropriately expressed in the morally obnoxious form of incest. In Ripley the mother-incest is disguised under the classical rite of adoption, but the mother becomes pregnant all the same. The vanishing of the king under his mother’s robes corresponds to the total dissolution of Gabricus in the body of Beya in the second version of the “Visio Arislei.”¹⁸² The king represents the domineering conscious mind which, in the course of coming to terms with the unconscious, is swallowed up by it. This brings about the *nigredo* (cf. figs. 34, 137, 219), a state of darkness that eventually leads to the renewal and rebirth of the king.

225. The love-potion being handed to the brother-sister pair.—Maier, *Scrutinium chymicum* (1687)

226. *Coniunctio* of opposites in the Hermetic vessel or in water (= unconscious).—“Trésor des trésors” (MS., 17th cent.)

227. *Coniunctio* as a fantastic monstrosity.—Brant, *Hexastichon* (1503)

228. The plumed king who plucks out his feathers for food.—“Ripley Scrowle” (MS., 1588)

229. Eagle as symbol of the spirit ascending from the *prima materia*.—*Hermaphroditisches Sonn- und Mondskind*
(1752)

[497] The strange idea of the king “nurtured under the wings of the sun” (fig. 228) may refer to the passage in Malachi (D.V., 4 : 2) which helped to put the early worship of Christ as Helios or Sol on a rational basis—a tendency that St. Augustine still had to combat: “But unto you that fear my name the Sun of justice shall arise, and health in his wings; and you shall go forth and shall leap like calves of the herd.” The passage has always been understood as a Messianic prophecy, and was obviously known to Ripley. The “wings of the sun”¹⁸³ is a very ancient image, and one which must have touched the Hebrew Malachi very closely: for it is the Egyptian sun-symbol. He who is nourished by this sun is the son of God, i.e., the king.¹⁸⁴

230. The peacock rising from the retort.—18th cent. MS.

231. Mercurius as virgin (Pandora) and *arbor philosophica*.—Reusner, *Pandora* (1588)

[498] Just as in the vision of Arisleus the king's dead son is brought back to life by the fruit of the philosophical tree, so in Ripley the sick king is to be healed by the "species"—obviously a *φάρμακον ζωής* or *elixir vitae*. The mother's food during her pregnancy is blood and peacock's flesh. The peacock is an early Christian symbol for the Redeemer, though it is doubtful whether Ripley knew this. But the peacock (figs. 111, 230) is second cousin to the phoenix,¹⁸⁵ a Christ symbol he must surely have known (see the figures in the "Ripley Scrowle"). The blood comes from the green lion that lies in the lap of the virgin, bleeding from a wound in his side;¹⁸⁶ these are clearly communion and Pietà symbols. The green lion is also one of the forms of Mercurius.¹⁸⁷

[499] As the giver of new birth, the mother is identical with the tree. In the 1588 edition of *Pandora* the tree is shown as a naked virgin¹⁸⁸ wearing a crown (fig. 231). The *arbor philosophica* is a favourite symbol for the alchemical process, and when Ripley speaks of the "Crowned Maid" (*virgo redimita*) we at once recognize the *anima mundi*, the feminine half of Mercurius (fig. 208).

[500] The "Cantilena" ends with the apotheosis of the virgin-mother. This the above-mentioned *Pandora* depicts as a glorification of Mary, the *assumptio Beatae Mariae Virginis* (fig. 232). After her death, by a divine miracle her body was again united

with her soul and both together were taken up to heaven. This has long been the view of the Church, although it has only recently been promulgated as a dogma. In [fig. 232](#) she is marked with the words “terra” and “corpus Lyb” (body) and “die wonn der jung-frowenn wardt” (who became the joy of virgins); the dove descends upon her, and God the Father touches her with his right hand in benison. She is crowned. The figure of God holding the orb is inscribed “Anima Seel” and “Jesse pater, filius et mater.” “Mater” refers to the Queen of Heaven enthroned beside him, the King; for in her the earth substance, becoming transfigured in her resurrected body, is absorbed into the Godhead.¹⁸⁹ On the left is a bearded figure equal in rank to God the Father, inscribed “Sapientia Wyssheit.” In the shield below there is a picture of the rebis being freed from the *prima materia*. The whole has the form of a mandala, framed by the emblems of the evangelists. The inscription at the bottom of the picture reads: “Figura speculi Sanctae Trinitatis. Gstalt des Spiegels der Heiligen Dryheit” (Figure of the Mirror of the Holy Trinity).¹⁹⁰

232. Glorification of the body portrayed as coronation of the Virgin Mary. Sapientia (*Hermes senex*) takes the place of the Son, and the Holy Ghost has a quite separate entity. Together they form a quaternity. Below, extraction of the spirit of Mercurius from the *prima materia*.

—*Speculum Trinitatis* from Reusner, *Pandora* (1588)

233. Christian quaternity: the Three and the One (Trinity and Mary).—French School (1457), detail

[501] Ripley portrays his king as victor, healer of the sick, and redeemer from sin. At the end of the *Rosarium* there is a picture of the Risen Christ with the inscription (fig. 234):

After my many sufferings and great martyrty
I rise again transfigured, of all blemish free.

234. The Risen Christ as symbol of the *filius philosophorum*.—*Rosarium philosophorum* (1550)

h. The Epigoni

[502] By “Epigoni” I mean the authors of the seventeenth century, an age which saw the full flowering of alchemy but which also inaugurated its downfall by separating the *mystica* more and more clearly from the *physica*. The mystical and philosophical trend became ever more pronounced, while on the other hand chemistry proper began to mark itself off more distinctly. The age of science and technology was dawning, and the introspective attitude of the Middle Ages was fast approaching its decline. Religious and metaphysical values became less and less able to give adequate expression to the psychic experiences brought to light by the *opus alchymicum*. Only after the lapse of several centuries did it fall to empirical psychology to throw new light on the obscure psychic content of Hermetic experiences.

[503] In the literature written at the close of the sixteenth and the beginning of the seventeenth centuries, mystical speculation, no doubt encouraged by humanism and the schism of the Church, began to emerge from behind the veil of the earlier esotericism, in so far as it was possible for the authors to express the inexpressible at all in words and images. But the pictorial symbolism they produced, much of it quite grotesque, not only made no contribution towards elucidating the arcanum but was

largely responsible for devaluing it in the eyes of the profane, thus accelerating the decay of Hermetic wisdom. How much was lost to the spiritual heritage of Europe in this way we, with our sharpened psychological understanding, are just beginning to realize, as we contemplate the unparalleled disorganization of our continent. Happily the loss is not irreparable: *natura tamen usque recurret*.

[504] In what follows I should like to mention a few more *lapis*-Christ parallels drawn from this literature.

[505] In the treatise entitled “Liber de arte chymica,”¹⁹¹ by an anonymous author,¹⁹² there is a Mercurius-*lapis* parallel which I cannot pass over without mention, since it is an *aequiparatio* of Mercurius with the Virgin Mary:

Give ear¹⁹³ to this profound parable: The ethereal heaven was closed to all men, so that they descended into hell and remained imprisoned there forever. But Christ Jesus unlocked the gate of the ethereal Olympus, and threw open the realm of Pluto, that the souls might be freed, when the Virgin Mary, with the cooperation of the Holy Ghost in an unutterable mystery and most profound sacrament, conceived in her virginal womb that which was most sublime in heaven and on earth, and finally bore for us the Saviour of the whole world, who by his overflowing goodness shall save all those who are lost in their sins, if only the sinner will often turn to him. But the Virgin remained incorrupt and inviolate; wherefore it is not without good reason that Mercurius is made equal [*non immerito ... aequiparatur*] to the most glorious and worshipful Virgin Mary. For Mercurius is virginal, because he has never increased any kind of metallic body in the bowels of the earth, and yet has generated the stone for us by means of the solution of “heaven”; that is to say, he opens the gold and leads out the soul, which you must understand as a divinity [*divinitatem*]; and for a little while he carries it in his belly and in his own time he changes it into a purified body, whence there shall come to us the boy [*puer*], the *lapis*, by whose blood the lower bodies are tintured [*tincta*], and taken back whole to the golden heaven.¹⁹⁴

[506] As the *anima mundi*, Mercurius can in fact be compared with the Gnostic *παρθένος τοῦ φωός* (virgin of light) and with the Christian Virgin Mary (figs. 8, 105, 107, 164, 165, 208)—or even, as the text asserts, made her “equal,” though note that I am only giving the opinion of our anonymous author. The “puer” would then be the *filius macrocosmi* (figs. 64, 192, 214, 234) and as such an analogy of Christ. The author too draws this conclusion, for he compares the corporeal nature of Christ with the effects of the stone:

In Christ’s body, because he committed no sin, and on account also of the miraculous union of the divine essence, there was such a great affinity [*affinitas*] of the elements and such an alliance thereof [*colligatio*] that he would never have died, had he not

sought death of his own free will, in order to redeem mankind for whose sake he was born.¹⁹⁵

[507] In the stone, as we know, the chaotic antagonism of the elements is replaced by the most intense mutual alliance, which is what makes the stone incorruptible, this being the reason why, in our author's opinion, it has the same effect as the blood of the Saviour: "sanitas atque vita diuturna in foelicitate, propter quam praecipue lapis noster est petendus" (health and long life in felicity, on account of which our stone is chiefly to be sought).¹⁹⁶

[508] To the doubtful authors also belongs the much-quoted Basilius Valentinus, a pseudonymous writer who is supposed to have lived at the beginning of the fifteenth century.¹⁹⁷ Johann Thölde (c. 1600), of Frankenhausen in Thuringia, is sometimes considered as the possible author of the so-called Valentinus texts, which began to appear in 1602. One of the earliest references to them is to be found in Michael Maier's *Symbola aureae mensae* (1617). Maier is exceedingly uncertain as to the authorship of these writings: "Obscurus omnibus manere quam innotescere maluit" (Rather than become notorious he preferred to remain unknown to everyone). Stylistically, the writings undoubtedly belong to the end of the sixteenth century at the earliest. The author is strongly influenced by Paracelsus and has taken over his idea of the Archaeus as well as his doctrines about astral and elemental spirits.¹⁹⁸ In the complete edition of 1700, now lying before me, there is an "Allegoria sanctissimae trinitatis et lapidis philosophici," from which I extract the following:

Therefore *Mercurius philosophorum* is to be considered a spiritual body, as the philosophers call him. From God the Father was born his own Son Jesus Christ, who is God and man, and is without sin, and who also had no need to die. But he died of his own free will, and rose again for the sake of his brothers and sisters, that they might live with him without sin for ever. So, too, is the gold without flaw, and is fixed, potent to withstand all examinations, and glorious; yet, for the sake of its imperfect and sick brothers and sisters, it dies and rises again, glorious and redeemed, and tinctures them to eternal life, making them perfect like to pure gold.

The third person of the Trinity is God the Holy Ghost, a comforter sent by our Lord Jesus Christ to his faithful Christians to strengthen and console them in the faith until eternal life. Therefor the *Spiritus Solis* is likewise *materialis* or *Mercurius corporis*. When they come together, he is called *Mercurius duplicatus*; that is, the two spirits, God the Father and God the Holy Ghost: but God the Son is the *homo glorificatus*, like our glorified and fixed gold, the *lapis philosophorum*; wherefore this *lapis* is also called *trinus*: namely *ex duabus aquis vel spiritibus, minerali & vegetabili*, and from the animal *sulphure Solis*.¹⁹⁹

[509] In the year 1619, there appeared an alchemical book of devotions entitled *Wasserstein der Weysen*. On page 67, the anonymous author says that he will now set forth how the rejected cornerstone (*lapis angularis* = Christ) “accords and is in exceeding subtle and artful agreement with the terrestrial and corporeal Philosophical Stone,” from which it will be seen “how that the terrestrial Philosophical Stone is a veritable Harmonia, Contrafactur, and Prototype of the true spiritual and heavenly Stone Jesu Christ.” The demonstration occupies close on fifty pages. The book made a great stir, and even Jakob Böhme is to be counted among its admirers. Kopp, who mentions the book,²⁰⁰ is scandalized by the blasphemous mixture of alchemical ideas—which make use of highly obnoxious symbols—and religion. We should not, however, judge medieval naïveté too severely, but must try to understand what such an unwieldy language was intended to convey.

[510] The *lapis*-Christ parallel plays an important role in Jakob Böhme (1575–1624), but I do not want to go into this here. A characteristic passage is to be found in *De signatura rerum*.²⁰¹

[511] It is clear enough from this material what the ultimate aim of alchemy really was: it was trying to produce a *corpus subtile*, a transfigured and resurrected body, i.e., a body that was at the same time spirit.²⁰² In this it finds common ground with Chinese alchemy, as we have learned from *The Secret of the Golden Flower*. There the main concern is the “diamond body,” in other words, the attainment of immortality through the transformation of the body. The diamond is an excellent symbol because it is hard, fiery, and translucent. Orthelius²⁰³ tells us that the philosophers have never found a better medicament than that which they called the noble and blessed stone of the philosophers, on account of its hardness, transparency, and rubeous hue.

[512] This same Orthelius also wrote at length on the “theology” of the *lapis*. Since he is later than Böhme I mention him here only because of his preoccupation with the spirit embedded in matter:

There are said to be two treasures: one is the written word and the other is the word become fact [*verbum factum*]. In the *verbum scriptum* Christ is still in swaddling clothes in his cradle [*in cunis suis involutus*]; but in the *verbum dictum et factum* the word is incarnate in God’s creatures, and there, in a manner of speaking, we may touch it with our hands. From them we must raise up our treasure, for the word is nothing other than the fire, the life, and the spirit which the Holy Trinity did scatter abroad from the beginning of creation, and which brooded [*incubavit*] on the face of the waters, and which was breathed into [*inspiratus*] all things by the word of God, and embodied in them, as it is written: “The spirit of God filled the whole world.” Some have expressed the opinion that this world spirit [*spiritus mundi*] was the third person of the Godhead; but they have not considered the word “Elohim,”

which, being plural, extends to *all* persons of the Trinity. They say this spirit proceeded from thence and was by it created, that it became corporeal, and is the chief constituent of the Saviour [*salvatoris*] or Philosophical Stone, and is the true medium whereby body and soul are held united during our life [fig. 235].

235. Alchemical quaternity: the Three and the One (body and female principle).—*Rosarium philosophorum* (1550)

The *spiritus mundi*, that lay upon the waters of old, impregnated them and hatched a seed within them, like a hen upon the egg. It is the virtue that dwells in the inward parts of the earth, and especially in the metals; and it is the task of the art to separate the *Archaeus*,²⁰⁴ the *spiritus mundi*, from matter, and to produce a quintessence whose action may be compared with that of Christ upon mankind.

[513] Once more the Gnostic vision of Nous entangled in the embrace of Physis flashes forth in the work of this latecomer to alchemy. But the philosopher who once descended like a Hercules into the darkness of Acheron to fulfil a divine *opus* has become a laboratory worker with a taste for speculation; having lost sight of the lofty goal of Hermetic mysticism, he now labours to discover a tonic potion that will “keep body and soul together,” as our grandfathers used to say of a good wine. This change of direction in alchemy was due to the all-powerful influence of Paracelsus, the father

of modern medicine. Ortelius is already tending towards natural science, leaving mystical experience to the Church.

[514] Paracelsus and Böhme between them split alchemy into natural science and Protestant mysticism. The stone returned to its former condition: *vilis vilissimus*, the vilest of the vile, *in via eiectus*, thrown out into the street, like Spitteler's jewel. Morienus²⁰⁵ could say again today: "Take that which is trodden underfoot in the dunghill, for if thou dost not, thou wilt fall on thine head when thou wouldst climb without steps"—meaning that if a man refuses to accept what he has spurned, it will recoil upon him the moment he wants to go higher.

[515] The *lapis*-Christ parallel recurs all through the last days of alchemy in the seventeenth century, but only in epigonic form. This was the age that saw the rise of the secret societies, above all the Rosicrucians—the best proof that the secret of alchemy had worn itself out. For the whole *raison d'être* of a secret society is to guard a secret that has lost its vitality and can only be kept alive as an outward form. Michael Maier allows us a glimpse into this tragedy: at the end of his chef-d'œuvre he confesses that in the course of his grand *peregrinatio* he found neither Mercurius nor the phoenix, but only a feather—his pen! This is a delicate hint at his realization that the great adventure had led to nothing beyond his copious literary achievements, whose merits would no doubt have gone unremembered had it depended solely on the spirit of the next three centuries. But, although the growing materialism of the age dismissed alchemy as a huge disappointment and an absurd aberration, there is yet "quaedam substantia in Mercurio quae nunquam moritur"—a fascination that never entirely disappeared, even when wrapped in the fool's garb of goldmaking.

6. ALCHEMICAL SYMBOLISM IN THE HISTORY OF RELIGION

I. THE UNCONSCIOUS AS THE MATRIX OF SYMBOLS

[516] After chemistry in the real sense had broken away from the groping experiments and speculations of the royal art, only the symbolism was left as a sort of phantasmal mist, seemingly devoid of all substance. Yet it never lost a certain fascinating quality, and there was always somebody who felt its enchantment in greater or lesser degree. A symbolism as rich as that of alchemy invariably owes its existence to some adequate cause, never to mere whim or play of fancy. At the very least it is the expression of an essential part of the psyche. This psyche, however, was unknown, for it is rightly called the unconscious. Although there is, materialistically speaking, no *prima materia* at the root of everything that exists, yet nothing that exists could be discerned were there no discerning psyche. Only by virtue of psychic existence do we have any “being” at all. Consciousness grasps only a fraction of its own nature, because it is the product of a preconscious psychic life which made the development of consciousness possible in the first place. Consciousness always succumbs to the delusion that it developed out of itself, but scientific knowledge is well aware that all consciousness rests on unconscious premises, in other words on a sort of unknown *prima materia*; and of this the alchemists said everything that we could possibly say about the unconscious. For instance, the *prima materia* comes from the mountain in which there are no differences,¹ or as Abu’l Qāsim says, it is “derived from one thing, and not from separate things, nor from things distinguishing or distinguished.”² And in the *mysterium magnum* of Paracelsus, which is the same as the *prima materia*, “there is no kind of gender.”³ Or the *prima materia* is found in the mountain where, as Abu’l Qāsim also says, everything is upside down: “And the top of this rock is confused with its base, and its nearest part reaches to its farthest, and its head is in the place of its back, and vice versa.”⁴

[517] Such statements are intuitions about the paradoxical nature of the unconscious, and the only place where intuitions of this kind could be lodged was in the unknown aspect of things, be it of matter or of man. There was a feeling, often expressed in the literature, that the secret was to be found either in some strange creature or in man’s brain.⁵ The *prima materia* was thought of as an ever-changing substance, or else as the essence or soul of that substance. It was designated with the name “Mercurius,” and was conceived as a paradoxical double being called *monstrum*, *hermaphroditus*, or *rebis* (cf. [figs. 125, 199](#)). The lapis-Christ parallel establishes an analogy between the transforming substance and Christ ([fig. 192](#)), in the Middle Ages doubtless under

the influence of the doctrine of transubstantiation, though in earlier times the Gnostic tradition of older pagan ideas was the dominant factor. Mercurius is likened to the serpent hung on the cross (John 3 : 14) (figs. 217, 238), to mention only one of the numerous parallels.

238. The brazen serpent of Moses on the cross: *serpens mercurialis* (cf. fig. 217).—Eleazar, *Uraltes chymisches Werk* (1760)

239. Unicorn, the horn a narwhal horn.—Amman, *Ein new Thierbuch* (1569)^{5a}

II. THE PARADIGM OF THE UNICORN

a. The Unicorn in Alchemy

[518] I have chosen the example of the unicorn in order to show how the symbolism of Mercurius is intermingled with the traditions of pagan Gnosticism and of the Church. The unicorn is not a single, clearly defined entity but a fabulous being with a great many variations: there are, for instance, one-horned horses, asses, fish, dragons,

scarabs, etc. Therefore, strictly speaking, we are more concerned with the theme of the single horn (the alicorn). In the *Chymical Wedding* of Rosencreutz, a snow-white unicorn appears and makes his obeisance before the lion. Lion and unicorn are both symbols of Mercurius. A little further on in the book the unicorn gives place to a white dove,⁶ another symbol of Mercurius, who, in his volatile form of *spiritus*, is a parallel of the Holy Ghost. At least ten out of the fifteen figures in Lamspringk's symbols⁷ are representations of the dual nature of Mercurius. Figure III shows the unicorn facing a stag (fig. 240). The latter, as *cervus fugitivus*, is also a symbol of Mercurius.⁸ Mylius⁹ illustrates the *opus* by a series of seven symbols, of which the sixth is the unicorn couched under a tree, symbolizing the spirit of life that leads the way to resurrection (cf. fig. 188). Penotus¹⁰ gives a table of symbols where the unicorn, together with the lion, the eagle, and the dragon, is the co-ordinate of gold. The *aurum non vulgi*, like the lion,¹¹ eagle, and dragon,¹² is a synonym for Mercurius. The poem entitled "Von der Materi und Prattick des Steins"¹³ says:

240. Stag and unicorn, symbolizing soul and spirit.—Lamspringk, "Figurae et emblemata," in *Musaeum hermeticum* (1625 edn.)

I am the right true Unicorn.
 What man can cleave me hoof from horn
 And join my body up again
 So that it no more falls in twain?

[519] Here I must refer once again to Ripley, where we meet the “green lion lying in the queen’s lap with blood flowing from his side.” This image is an allusion on the one hand to the Pieta, on the other to the unicorn wounded by the hunter and caught in the lap of a virgin (figs. 241, 242), a frequent theme in medieval pictures. True, the green lion has replaced the unicorn here, but that did not present any difficulty to the alchemist since the lion is likewise a symbol of Mercurius. The virgin represents his passive, feminine aspect, while the unicorn or the lion illustrates the wild, rampant, masculine, penetrating force of the *spiritus mercurialis*. Since the symbol of the unicorn as an allegory of Christ and of the Holy Ghost was current all through the Middle Ages, the connection between them was certainly known to the alchemists, so that there can be no question that Ripley had in his mind, when he used this symbol, the affinity, indeed the identity, of Mercurius with Christ.

241. Virgin taming a unicorn.—Thomas Aquinas (pseud.), “De alchimia” (MS., 16th cent.)

242. Slaying the unicorn in the Virgin's lap. (Note the significance of the "wound in his side.")—Initial from MS. Harley 4751, London

b. The Unicorn in Ecclesiastical Allegory

[520] The language of the Church borrows its unicorn allegories from the Psalms, where the unicorn stands in the first place for the might of the Lord, as in Psalm 29 : 6: "He maketh them also to skip like a calf; Lebanon and Sirion like a young unicorn"¹⁴; and in the second place for the vitality of man (figs. 243, 244), as in Psalm 92 : 10: "But my horn shalt thou exalt like the horn of an unicorn. ..." ¹⁵ The power of evil is also compared to the strength of the unicorn, as in Psalm 22 : 21: "Save me from the lion's mouth: for thou hast heard me from the horns of the unicorns."¹⁶ On these metaphors is based Tertullian's allusion to Christ: "His glory is that of a bull, his horn is that of a unicorn."¹⁷ This refers to the blessing of Moses (Deut. 33 : 13, 14, 17):

243. Unicorn crest of the von Gachnang family (Thurgau, Switzerland).—From the Zurich Roll of Arms (1340)

... Blessed of the Lord be his land, for the precious things of heaven, for the dew, and for the deep that coucheth beneath,

And for the precious fruits brought forth by the sun, and for the precious things put forth by the moon, ...

His glory is like the firstling of his bullock, and his horns are like the horns of unicorns: with them he shall push the people together to the ends of the earth....

[521] From this it is clear that the horn of the unicorn signifies the health, strength, and happiness of the blessed. “Thus,” says Tertullian, “Christ was named the bull on account of two qualities: the one hard [*ferus*, ‘wild, untamed’] as a judge, the other gentle [*mansuetus*, ‘tame’] as a saviour. His horns are the ends of the cross. ...” Justin Martyr¹⁸ interprets the same passage in a similar way: “*Cornua unicornis cornu eius*. For no one can say or prove that the horns of the unicorn could be found in any other object or in any other shape than in that represented by the cross.” For the might of God is manifest in Christ. Accordingly Priscillian calls God one-horned: “One-horned is God, Christ a rock to us, Jesus a cornerstone, Christ the man of men.”¹⁹ Just as the unicorn symbolizes the uniqueness of the Unigenitus, so St. Nilus uses it to express the fearless independence of the καλόγηρος the monk: Μονόκερώς ἔστιν οὗτος, ζῶν αὐτόνομον (he is a unicorn, a creature on his own).²⁰

244. The glorification of Ariosto. (The horse's forelock is twisted into a stiff plait to make it look like the horn of the unicorn.)—Drawing by Giovanni Battista Benvenuti, called Ortolano (1488–?1525)

245. The Virgin Mary with the loving unicorn in the “enclosed garden.”—Swiss tapestry (1480)

[522] St. Basil takes the *filius unicornium* to be Christ. The origin of the unicorn is a mystery, says St. Ambrose, like Christ’s procreation. Nicolas Caussin, from whom I have culled these extracts, observes that the unicorn is a fitting symbol for the God of the Old Testament, because in his wrath he reduced the world to confusion like an angry rhinoceros (unicorn) until, made captive by love, he was soothed in the lap of a virgin.²¹ This ecclesiastical train of thought has its parallel in the alchemical taming of the lion and the dragon (fig. 246). Concerning the conversion of the Old Testament Jehovah into the God of Love in the New Testament, Picinelli says: “Of a truth God, terrible beyond measure, appeared before the world peaceful and wholly tamed after dwelling in the womb of the most blessed Virgin. St. Bonaventure said: Christ was tamed and pacified by the most kindly Mary, so that he should not punish the sinner with eternal death.”²²

246. Mandala with four ornamental medallions containing a stag, lion, griffin, and unicorn.

—Pavement from St. Urban’s Monastery, Lucerne

247. Virgin with unicorn.—Khludov Psalter (Byzantine, 9th cent.)

[523] In his *Speculum de mysteriis ecclesiae*, Honorius of Autun says:

The very fierce animal with only one horn is called unicorn. In order to catch it, a virgin is put in a field; the animal then comes to her and is caught, because it lies down in her lap. Christ is represented by this animal, and his insuperable strength²³ by its horn. He, who lay down in the womb of the Virgin, has been caught by the hunters; that is to say, he was found in human shape by those who loved him²⁴ [fig. 247].

[524] St. Rupert²⁵ compares Christ to the rhinoceros, and Bruno of Würzburg²⁶ simply calls him *cornu* (horn). Caussin writes that Albertus Magnus, in his “Hypotyposes,” mentions the Virgin in connection with the monoceros. Albertus was an expert on alchemy and drew his quotations from the Hermetic treatises. In the “Tabula smaragdina” there is a “son” of immense strength who comes down to earth and penetrates everything solid. It is not only in astrology that Virgo is an earth-sign: in Tertullian and Augustine the Virgin actually signifies earth (fig. 248). Isidore of Seville emphasizes the “perforating” effects of the unicorn.²⁷ In the “Tabula” the mother-son incest is very thinly disguised,²⁸ a fact of which the alchemist Albertus was possibly aware.

249. Wild unicorn.—From Bock, *Kräuterbuch* (1595)

[525] As I said before, the unicorn has more than one meaning. It can also mean evil. The *Physiologus Graecus*,²⁹ for instance, says of the unicorn that “it is a swift-running animal, having one horn, and evilly disposed towards man” (μνησίκακον δέ ὑπάρχει ἐν ἀνθρώποις). And St. Basil says: “And take heed unto thyself, O man, and

beware of the unicorn, who is the Demon [fig. 249]. For he plotteth evil against man, and he is cunning in evil-doing.”

[526] These examples should suffice to show how close is the connection between alchemical symbolism and the language of the Church. It is to be noted in the ecclesiastical quotations that the unicorn also contains the element of evil (fig. 250). Originally a monstrous and fabulous beast, it harbours in itself an inner contradiction, a *complexio oppositorum*, which makes it a singularly appropriate symbol for the *monstrum hermaphroditum* of alchemy.³⁰

250. Wild man riding the unicorn.—Engraving from the sequence of the *Grösseres Kartenspiel*, by the monogrammist E.S. (c. 1463)

c. The Unicorn in Gnosticism

[527] There is also a connection between the language of the Church and pagan Gnostic symbolism. Hippolytus, giving an account of the doctrine of the Naassenes, says that the serpent dwells in all things and creatures, and that all temples were named after her (ναούις ἀπὸ τοῦ νάα; a play on the words νάα; = serpent, ναός = temple). Every shrine, he says, every initiation (ηλετή), and every mystery is

dedicated to the serpent. This immediately recalls the passage in the “Tabula smaragdina”: “Pater omnis telesmi totius mundi est hic” (This is the father of the perfection of the whole world). Τέλος, τελετή, and τελεσμός all mean the same: perfection and maturation of the *corpora imperfecta*, and of the alchemist himself.³¹

These [Naassenes] say that the serpent is the moist element, as Thales of Miletus also said,³² and that nothing which exists, whether immortal or mortal, animate or inanimate, could exist without it.

[528] This definition of the serpent agrees with the alchemical Mercurius, who is likewise a kind of water: the “divine water” (ὕδωρ θεῖον), the wet, the *humidum radicale* (radical moisture), and the spirit of life, not only indwelling in all living things, but immanent in everything that exists, as the world-soul. Hippolytus continues:

They say, too, that all things are subject to her [the serpent], that she is good and has something of everything in herself as in the horn of the one-horned bull [ἐν κέρατι τάουρου μονοκέρωτος]. She imparts beauty and ripeness to all things....

[529] Like the alicorn, therefore, the serpent is an alexipharmic and the principle that brings all things to maturity and perfection. We are already familiar with the unicorn as a symbol of Mercurius, the transforming substance par excellence which also ripens and perfects unripe or imperfect bodies and is consequently acclaimed in alchemy as the *salvator* and *servator*. “The serpent,” says Hippolytus, “penetrates everything, as if coming forth from Edem and dividing herself into the four first principles.”³³ That everything proceeds from the One is a fundamental tenet of alchemy (fig. 251): “As all things proceed from the One ... so all things are born of this one thing,” says the “Tabula smaragdina”; and also that the One divides into the four elements (fig. 252) and then recombines into unity. The *prima materia* is called among other things the “paradisal earth” which Adam took with him on his expulsion from Paradise. *Mercurius philosophorum* consists of the four elements (cf. fig. 214). In one of the Mystery hymns quoted by Hippolytus, Osiris is named the “heavenly horn of the moon” (ἐπουράνιον μηνὸς κέρας), and the same primal being is also called Sophia and Adam.³⁴ These analogies we already know in their alchemical aspect. Another one mentioned by Hippolytus is the “many-formed Attis.” The changeability and multiformity of Mercurius is a key idea in alchemy. It is hardly necessary to enter into the ideas which this pagan system took over from Christianity; comparison with the Christian quotations should suffice.

253. Harpokrates encircled by the Uroboros.—Gnostic gem

d. The One-Horned Scarabaeus

[530] An important source of information concerning the unicorn symbolism of Mercurius is the *Hieroglyphica* of Horapollo (ch. 10). This author says that the third genus of the scarab is unicornered (μονόκερως) and, on account of this peculiarity, sacred to Mercurius, like the ibis. Moreover the scarab is a μονογενής (only-begotten, *unigena*) in so far as it is an αὐτογενὲς ζῶον (a creature born of itself). In Paracelsus the *prima materia* is an *incretum*, and throughout alchemy, as Mercurius, *serpens*, or *draco*, it is bisexual, capable of self-fertilization and self-parturition (fig. 253). The *unicus filius* is the *filius philosophorum*, i.e., the stone. The scarab undergoes the same dismemberment as the dragon, the “separation of the elements,” in a papyrus text: “The sun-beetle, the winged ruler standing at heaven’s meridian, was beheaded and dismembered.”³⁵ I would also mention the “sixth parable” in “Splendor solis,”³⁶ where the *separatio* is portrayed as a dismembered corpse, accompanied by the text: “Rosinus³⁷ says that he would like to make plain a vision that he has seen of a man who was dead, whose body was yet all white like a salt, and whose limbs were divided, and his head was of fine gold but separated from the body. ...”³⁸ The golden head referred originally to the head of Osiris who is described in a Greek papyrus as “headless.”³⁹ The Greek alchemists styled themselves “Children of the Golden Head.”⁴⁰

[531] The scarab is seldom mentioned in alchemical literature, but among the old texts it can be found in the “Consilium coniugii”: “Nulla aqua fit quelles, nisi illa que fit de scarabaeis aquae nostrae”⁴¹ (No water will become the elixir save that which comes from the scarabs of our water). The *aqua nostra* is nothing other than the *aqua divina*, i.e., Mercurius.

e. The Unicorn in the Vedas

[532] The track of the unicorn in pre-Christian days leads us to the East.⁴² We meet it as early as the hymns of the Atharva-Veda (III, 7) in a “charm against *kshetriya*,

hereditary disease”:⁴³

1. Upon the head of the nimble antelope a remedy grows! He has driven the *kshetriya* in all directions by means of the horn.

2. The antelope has gone after thee with his four feet. O horn, loosen the *kshetriya* that is knitted into his heart!

3. (The horn) that glistens yonder like a roof with four wings (sides), with that do we drive out every *kshetriya* from thy limbs.

254. The so-called sea-unicorn (*monodon*, *monoceros*). Its tusk was used as a model in old pictures of the unicorn.—

Pommet, *Histoire gènèrale des drogues* (1694)

[533] The fish of Manu (cf. [fig. 254](#)) seems to have been unicornered, although this is not specifically stated: but always its horn is mentioned, never its horns. According to the legend recounted in the Shatapatha-Brahmana,⁴⁴ Manu hooked a fish which grew larger and larger and eventually towed him over the flood to dry land. Manu tied his ship to its horn.⁴⁵ The fish is an incarnation of Vishnu ([fig. 255](#)), and Manu means “man.”⁴⁶ In many respects he corresponds to the Greek Anthropos: he is the father of humanity and is descended direct from God, here called Svayambhu, the “Self-So,” i.e., Brahma. He is a God-man, identified with Prajapati, Lord of created things, and even with Brahman itself, the highest soul. In the Rig-Veda he is named Father Manu, and is said to have begotten mankind on his daughter. He is the founder of the social and moral order,⁴⁷ the first sacrificiant and priest.⁴⁸ He transmitted the Upanishadic doctrine to mankind.⁴⁹ It is of particular interest that he is also derived from the androgynous Viraj. The Shatapatha-Brahmana associates him with a bull who was entrusted with the task of annihilating the Asuras and Rakshas (demons hostile to the gods).⁵⁰ Lastly, Manu is the father of medicine,⁵¹ and, in Buddhist tradition, Lord of the Golden Age.⁵² The horn, then, is connected with a figure which, in both name and character, has close affinities with the Anthropos.

255. Vishnu in his fish incarnation.—18th-cent. Indian miniature

[534] The virgin and unicorn motif is to be found in the Ramayana and in the Mahabharata (III, 110–113). A hermit by name of Rishyashringa (gazelle's horn), son of Vibhandaka or Ekasringa (one-horn), is fetched out of his solitary retreat by the king's daughter Shanta, who marries him; or, in another version, he is seduced by a courtesan. Only by this means can the terrible drought that is scourging the land be broken.⁵³

f. The Unicorn in Persia

[535] There is an impressive account of the unicorn in the Bundahish (Ch. XIX):

Regarding the three-legged ass, they say that it stands amid the wide-formed ocean, and its feet are three, eyes six, mouths nine, ears two, and horn one, body white, food spiritual, and it is righteous. And two of its six eyes are in the position of eyes, two on the top of the head, and two in the position of the hump; with the sharpness of those six eyes it overcomes and destroys. Of the nine mouths three are in the head, three in the hump, and three in the inner part of the flanks; and each mouth is about the size of a cottage, and it is itself as large as Mount Alvand. Each

one of the three feet, when it is placed on the ground, is as much as a flock of a thousand sheep comes under when they repose together; and each pastern is so great in its circuit that a thousand men with a thousand horses may pass inside. As for the two ears, it is Mazendaran which they will encompass. The one horn is as it were of gold and hollow, and a thousand branch horns have grown upon it, some befitting a camel, some befitting a horse, some befitting an ox, some befitting an ass, both great and small. With that horn it will vanquish and dissipate all the vile corruption due to the efforts of noxious creatures.

256. Fabulous monster containing the *massa confusa*, from which rises the pelican (symbol of Christ and the *lapis*).

—*Hermaphroditisches Sonn- und Mondskind* (1752)

When that ass shall hold its neck in the ocean its ears will terrify, and all the water of the wide-formed ocean will shake with agitation, and the side of Ganavad will tremble. When it utters a cry all the female water-creatures, of the creatures of Auharmazd, will become pregnant; and all pregnant noxious water-creatures, when they hear that cry, will cast their young. When it stales in the ocean all the sea-water will become purified, which is in the seven regions of the earth—it is even on that account when all asses which come into water stale in the water—as it says thus: “If, O three-legged ass! you were not created for the water, all the water in the sea would have perished from the contamination which the poison of the evil spirit has brought into its water, through the death of the creatures of Auharmazd.”

Tiîstar seizes the water more completely from the ocean with the assistance of the three-legged ass. Of ambergris also (ambar-ik) it is declared, that it is the dung of the three-legged ass; for if it has much spirit food, then also the moisture of the liquid nourishment goes through the veins pertaining to the body into the urine, and the dung is cast away.⁵⁴

[536] The monster is evidently based on the number three. Its ass aspect is reminiscent of the Indian wild onager in Ctesias, but, as a cosmological being, it recalls the monstrous personifications of the *prima materia* (fig. 256) in Arabic alchemy. In the “Book of Ostanès,” for instance, one such monster (with the wings of a vulture, the head of an elephant, and the tail of a dragon) gives the adept the key to the treasure-house.⁵⁵ The ass stands in the ocean, like the tree Gokard that grows from the deep mud of the sea.⁵⁶ The Bundahish says of this tree:

... it is necessary as a producer of the renovation of the universe, for they prepare its immortality therefrom.... Some say it is the proper-curing, some the energetic-curing, some the all-curing.⁵⁷

[537] The ass and the tree⁵⁸ are evidently related, because they both represent the power of life, procreation, and healing. This is a truly primitive equation: both are or have mana. The Arabic alchemists likewise obtain their *prima materia* from the tree in the western land. We read in the book of Abu’l Qāsim:⁵⁹

257. The transformations of Mercurius. The Melusina (Lilith) on the tree is Sapientia.—“Ripley Scrowle” (MS., 1588)

This prime matter which is proper for the form of the Elixir is taken from a single tree which grows in the lands of the West... And this tree grows on the surface of the ocean as plants grow on the surface of the earth. This is the tree of which whosoever eats, man and jinn obey him; it is also the tree of which Adam (peace be upon him!) was forbidden to eat, and when he ate thereof he was transformed from his angelic form to human form. And this tree may be changed into every animal shape.

[538] The monster and the tree both stand for the *φάρμακον ἀθανασίας*, the elixir, the alexipharmic, and the panacea. The tree’s peculiar power to change into any animal shape is also attributed to *Mercurius versipellis* (fig. 257).

[539] The ass is a *daemon triunus*, a chthonic trinity, which is portrayed in Latin alchemy as a three-headed monster and identified with Mercurius, salt, and sulphur.⁶⁰ The classical rumour about the worship of an ass in the Temple of Jerusalem, and the graffito on the Palatine showing a mock crucifixion,⁶¹ I will mention only in passing; likewise the saturnine aspect of Jehovah and Ialdabaoth as demiurges, which brings these figures into conjunction with the equally saturnine *prima materia*.

g. The Unicorn in Jewish Tradition

[540] The Talmud⁶² tells the story of how the unicorn (*re'em*) escaped the flood: it was tied to the outside of the ark because, owing to its gigantic size, it could not go inside. Og, the King of Bashan, survived the flood in the same way. The passage runs:

The preservation of the unicorn is easily explained by those who say that the flood did not descend on the Land of Israel; but how was it preserved in the opinion of those who say that the flood did descend? R. Jannai answered: They took young unicorns into the ark.—But Rabba b. Bar Hana reported that he had seen a young unicorn as large as Mount Tabor, which measures forty parasangs, and that the girth of its neck was three parasangs, and its head one and a half parasangs, and that the Jordan was choked with the dirt it voided.⁶³ R. Johanan answered: They took [only] its head into the ark.—But the master said that its head measured one and a half parasangs.—Peradventure they took the tip of its nose into the ark.— ... But when the ark rose on the water?—Reš Laqiš answered: They tied its horns to the ark.—But R. Hisda said that they had sinned with heat and were punished with hot water.⁶⁴—How was the ark preserved⁶⁵ in your opinion? And moreover where was Og, the King of Bashan?⁶⁶—Peradventure a miracle happened to them and [the water] remained cold at the sides of the ark.

[541] There is a corresponding version of this story in the midrash collection entitled *Pirkê R. Eliezer*, according to which Og “sat down on a piece of wood under the gutter of the ark.”⁶⁷

[542] The “Targum Pseudo-Jonathan,” commenting on Genesis 14 : 13, says that Og stayed on the roof of the ark.⁶⁸

[543] According to one Talmud legend,⁶⁹ Og was descended from one of the fallen angels mentioned in Genesis 6 who “came in unto” the daughters of men: “Take note, Sihon and Og were brothers, for the master said: ‘Sihon and Og were the sons of Ahijah the son of Samhazai.’”⁷⁰ The commentary of Rashi says that Sihon and Og were the sons of Ahijah “who was descended from Shemhazai and Azael, the two angels who came down to earth in the days of Enoch.”

[544] Og’s gigantic size is described in several passages of the Talmud—probably at its most gigantic in “Tractate Nidda”:⁷¹

Abba Saul, according to others R. Johanan, said: “I was a digger of graves. One day I was chasing a deer, and I found myself inside the thigh-bone of a dead man; I chased the deer for three parasangs, yet I did not catch up with him, nor had the thigh-bone come to an end. When I turned back they told me: ‘It belonged to Og, the King of Bashan.’”

[545] It is conceivable that there is an inner connection between Og and the unicorn: both escaped the flood by being somehow attached to the outside of the ark, and both are gigantic. Moreover we saw that the unicorn was compared to Mount Tabor, and Og also is connected with a mountain: he uprooted a mountain and hurled it on the camp of the Israelites.⁷² The parallel is carried still further in one midrash:⁷³ the unicorn is a mountain and is threatened by a lion, and, in the continuation of the story, Og is killed by Moses, “the servant of Jahweh,” who is so often compared to a lion in the Old Testament. The midrash runs:

R. Huna bar Idi said: At the time when David was still tending the sheep, he went and found the unicorn [*re'em*] asleep in the desert, and thinking it was a mountain he climbed to the top and pastured his flock there. Then the unicorn shook himself and stood up. And David rode on his back and reached up to heaven. And in that hour David spoke to God: If thou wilt take me down from this unicorn I will build thee a temple, one hundred cubits in size, like the horn of this unicorn.... What did the Holy One, blessed be He, do for him? He ordained that a lion should come, and when the unicorn saw the lion, he was afraid and crouched down before him, because the lion is his king, and David descended on to the earth. But when David saw the lion, he was afraid. Therefore it is said: “Save me from the lion’s mouth, for thou hast heard [freed] me from the horns of the unicorns.”

[546] Another midrash⁷⁴ shows the unicorn fighting with the lion. Here it is explicitly called the unicorn (*ha-unicorius*) and not *re'em*. The passage runs:

259. The ch'i-lin announcing the birth of Confucius. "Before K'ung-tse was born, a ch'i-lin came to the governor's house in Tsou and spat out a jade tablet, bearing the inscription: 'The son of the mountain crystal [lit. water-essence] will perpetuate the fallen kingdom of Chou and be a king without a crown.' His mother was astonished and tied an embroidered bow to the unicorn's horn. The beast stayed for two nights and then departed."—From a Chinese illustrated work (c. 18th cent.), *Shèng Chi-t'u*

260. The ch'i-lin announcing the death of Confucius. "In the 14th year of the reign of the Duke Ai [of Lu—481 B.C.] a ch'i-lin was caught on a winter hunt in the West. This gave K'ung-tse a severe shock and he stopped writing the *Ch'un-t's'in*. The *K'ung-t's'ung-tse* [collection of stories about Confucius] says: While the clan of Shu-sun [aristocratic family in Lu] were firing some undergrowth they caught a ch'i-lin. No one recognized it. They threw it away at Wu-fu crossroads. [The disciple] Jan-yu reported it and said: 'The body of a stag with a horn of flesh, is that not the heavenly monster of ill omen?' K'ung-tse went to look at it. He wept and said: 'It is a ch'i-lin! The ch'i-lin, benevolent beast, appears and dies. My Tao is exhausted.' "—From *Shèng Chi-t'u*

h. The Unicorn in China

[548] The unicorn also appears in China. According to the *Li Chi*, or *Book of Rites*, there are four beneficent or spiritual animals: the unicorn (*ch'i-lin*), the phoenix, the tortoise, and the dragon. The *ch'i-lin* is chief among four-footed beasts. "It resembles the stag, but is larger, with the tail of an ox and the hoofs of a horse: it has a single horn of flesh, there are five colours in the hair of its back, and the hair of its belly is yellow (or brown), it does not tread any living grass underfoot nor eat any living creature; it shows itself when perfect rulers [*chen-jen*] appear and the *Tao* of the king is accomplished." If it is wounded, this is an evil omen. Its first appearance was in the garden of the Yellow Emperor (2697 B.C.). Later two unicorns sojourned in P'ing-yang, Emperor Yao's capital. A unicorn appeared to the mother of Confucius when she was pregnant (fig. 259), and, as an omen before the death of the sage, it chanced that a charioteer wounded a unicorn (fig. 260).⁷⁵ It is worth noting that the male unicorn is called *ch'i* and the female *lin*, so that the generic term is formed by the

union of both characters (*ch'i-lin*).⁷⁶ The unicorn is thus endowed with an androgynous quality. Its connection with the phoenix and the dragon also occurs in alchemy, where the dragon stands for the lowest form of Mercurius and the phoenix for the highest.

[549] As mentioned before, the horn of the rhinoceros is an alexipharmic and for this reason is, even today, a favourite article of commerce between the African east coast and China, where it is made into poison-proof drinking cups. The *Physiologus Graecus* tells us that when a snake has poisoned their drinking water, the animals, noticing the poison, will wait for the unicorn to come down to the water; “for his horn is a symbol of the cross” (σταυρὸν ἐκτυπώσας τῷ κέρατι αὐτοῦ), and by drinking he dissipates the virulence of the poison.⁷⁷

i. The Unicorn Cup

[550] The healing cup is not unconnected with the “cup of salvation,” the Eucharistic Chalice, and with the vessel used in divination. Migne⁷⁸ says that Cardinal Torquemada always kept a unicorn cup at table: “La corne de licorne préserve des sortilèges” (fig. 261). Hippolytus, in his summing up of the teachings of the Naassenes, says that the Greeks called “Geryon of the threefold body” the “heavenly horn of the moon.” But Geryon was the “Jordan,”⁷⁹ the “masculo-feminine Man in all things, by whom all things were made.” In this connection Hippolytus mentions the cup of Joseph and Anacreon:

261. Pope with the unicorn as the symbol of the Holy Ghost.—From Scaliger, *Explanatio imaginum* (1570); antithesis to Paracelsus, *Auslegung der Figuren* (1569)

The words “without him was not any thing made”⁸⁰ refer to the world of forms, because this was created without his help through the third and fourth [members of

the quaternity]. For this is ... the cup from which the king, when he drinks, draws his omens.⁸¹ The Greeks likewise alluded to this secret in the Anacreontic verses:

My tankard tells me
Speaking in mute silence
What I must become.

This alone sufficed for it to be known among men, namely the cup of Anacreon which mutely declares the ineffable secret. For they say Anacreon's cup is dumb; yet Anacreon affirms that it tells him in mute language what he must become, that is, spiritual and not carnal, if he will hear the secret hidden in silence. And this secret is the water which Jesus, at that fair marriage, changed into wine. That was the great and true beginning of the miracles which Jesus wrought in Cana in Galilee, and thus he showed forth the kingdom of heaven. This [beginning] is the kingdom of heaven that lies within us as a treasure, like the "leaven hidden in three measures of meal."⁸²

262. The lunar unicorn.—Reverse of a medal (1447) by Antonio Pisano

[551] We have seen that the "heavenly horn of the moon" is closely connected with the unicorn. Here it means not only "Geryon of the threefold body"⁸³ and the Jordan, but the hermaphroditic Man as well, who is identical with the Johannine Logos. The "third and fourth" are water and earth; these two elements are thought of as forming the lower half of the world in the alchemical retort, and Hippolytus likens them to a cup (κόνδυ). This is the divining-vessel of Joseph and Anacreon: the water stands for the content and the earth for the container, i.e., the cup itself. The content is the water that Jesus changed into wine, and the water is also represented by the Jordan, which signifies the Logos, thus bringing out the analogy with the Chalice. Its content gives life and healing, like the cup in IV Ezra (14 : 39–40):

263. The Champion Pendant (front view), made from the horn of a narwhal set in enamelled gold. On the back, bits of the horn have been scraped off for medicinal purposes (16th cent.?)

Then I opened my mouth, and Io! there was reached unto me a full cup, which was full as it were with water, but the colour of it was like fire.⁸⁴

And I took it and drank; and when I had drunk,
My heart poured forth understanding,
wisdom grew in my breast,
and my spirit retained its memory.⁸⁵

[552] The secret of the cup is also the secret of the horn, which in its turn contains the essence of the unicorn as bestower of strength, health, and life (fig. 263). The alchemists attribute the same qualities to their stone, calling it the “carbuncle.”⁸⁶ According to legend, this stone may be found under the horn of the unicorn, as Wolfram von Eschenbach says:

264. Mandala of the unicorn and the tree of life.—Verteuil tapestry (15th cent.), “The Hunt of the Unicorn”

We caught the beast called Unicorn
That knows and loves a maiden best
And falls asleep upon her breast;
We took from underneath his horn
The splendid male carbuncle stone
Sparkling against the white skull-bone.⁸⁷

[553] The horn as an emblem of vigour and strength has a masculine character, but at the same time it is a cup, which, as a receptacle, is feminine.⁸⁸ So we are dealing here with a “uniting symbol”⁸⁹ that expresses the bipolarity of the archetype (fig. 264).

[554] These assorted unicorn symbolisms aim at giving no more than a sample of the extremely intricate and tangled connections between pagan and natural philosophy, Gnosticism, alchemy, and ecclesiastical tradition, which, in its turn, had a deep and lasting influence on the world of medieval alchemy. I hope that these examples have made clear to the reader just how far alchemy was a religious-philosophical or

“mystical” movement. It may well have reached its peak in Goethe’s religious *Weltanschauung*, as this is presented to us in *Faust*.

265. The unicorn and his reflection, depicting the motto “De moy je m’èpouvante.”

—Boschius, *Symbolographia* (1702)

266. Double-headed eagle with crowns of Pope and Emperor, symbolizing the kingdoms of both worlds. The eagle is covered with eyes (enlightenment!).—Codex Palatinus Latinus 412 (15th cent.)

EPILOGUE

267. The *prima materia* as the dragon, being fertilized by the Holy Ghost (the *avis Hermetis*).—"Hermes Bird,"
Theatrum chemicum Britannicum (1652)

[555] What the old philosophers meant by the *lapis* has never become quite clear. This question can be answered satisfactorily only when we know exactly what the unconscious content was that they were projecting. The psychology of the unconscious alone is in a position to solve this riddle. It teaches us that so long as a content remains in the projected state it is inaccessible, which is the reason why the labours of those authors have revealed so little to us of the alchemical secret. But the yield in symbolic material is all the greater, and this material is closely related to the process of individuation.

[556] In dealing with alchemy we must always consider what an important part this philosophy played in the Middle Ages, what a vast literature it left behind, and what a far-reaching effect it had on the spiritual life of the time. How far the claims of alchemy itself went in this direction is best shown by the *lapis*-Christ parallel, a fact which may explain, or excuse, my excursions into fields that seem to have nothing to do with alchemy. For the moment we embark upon the psychology of alchemical thought we must take account of connections that seem, on the face of it, very remote from the historical material. But if we try to understand the phenomenon from inside, i.e., from the standpoint of the psyche, we can start from a central position where many lines converge, however far apart they may be in the external world. We are then confronted with the underlying human psyche which, unlike consciousness, hardly changes at all in the course of many centuries. Here, a truth that is two thousand years old is still the truth today—in other words, it is still alive and active. Here too we find those fundamental psychic facts that remain unchanged for thousands of years and will still be unchanged thousands of years hence. From this point of view, the recent past and the present seem like episodes in a drama that began in the grey mists of antiquity and continues through the centuries into a remote future. This drama is an "Aurora consurgens"—the dawning of consciousness in mankind.

[557] The alchemy of the classical epoch (from antiquity to about the middle of the seventeenth century) was, in essence, chemical research work into which there entered, by way of projection, an admixture of unconscious psychic material. For this reason the psychological conditions necessary for the work are frequently stressed in the texts. The contents under consideration were those that lent themselves to projection upon the unknown chemical substance. Owing to the impersonal, purely objective nature of matter, it was the impersonal, collective archetypes that were projected: first and foremost, as a parallel to the collective spiritual life of the times, the image of the spirit imprisoned in the darkness of the world. In other words, the state of relative unconsciousness in which man found himself, and which he felt to be painful and in need of redemption, was reflected in matter and accordingly dealt with in matter. Since the psychological condition of any unconscious content is one of potential reality, characterized by the polar opposites “being” and “not-being,” it follows that the union of opposites must play a decisive role in the alchemical process. The result is something in the nature of a “uniting symbol,” and this usually has a numinous character.¹ The projection of the redeemer-image, i.e., the correspondence between Christ and the *lapis*, is therefore almost a psychological necessity, as is the parallelism between the redeeming *opus* or *officium divinum* and the magistry—with the essential difference that the Christian *opus* is an *operari* in honour of God the Redeemer undertaken by man who stands in need of redemption, while the alchemical *opus* is the labour of Man the Redeemer in the cause of the divine world-soul slumbering and awaiting redemption in matter. The Christian earns the fruits of grace *ex opere operato*, but the alchemist creates for himself—*ex opere operantis* in the most literal sense—a “panacea of life” which he regards either as a substitute for the Church’s means of grace or as the complement and parallel of the divine work of redemption that is continued in man. The two opposed points of view meet in the ecclesiastical formula of the *opus operatum* and the *opus operantis*²—but in the last analysis they are irreconcilable. Fundamentally it is a question of polar opposites: the collective or the individual, society or personality. This is a modern problem in so far as it needed the hypertrophy of collective life and the herding together of incredible masses of people in our own day to make the individual aware that he was being suffocated in the toils of the organized mob. The collectivism of the medieval Church seldom or never exerted sufficient pressure on the individual to turn his relations with society into a general problem. So this question, too, remained on the level of projection, and it was reserved for our own day to tackle it with at least an embryonic degree of consciousness under the mask of neurotic individualism.

[558] Some time previous to this latest development, however, alchemy had reached its final summit, and with it the historical turning-point, in Goethe’s *Faust*, which is

steeped in alchemical forms of thought from beginning to end. The essential Faustian drama is expressed most graphically in the scene between Paris and Helen. To the medieval alchemist this episode would have represented the mysterious *coniunctio* of Sol and Luna in the retort (fig. 268); but modern man, disguised in the figure of Faust, recognizes the projection and, putting himself in the place of Paris or Sol, takes possession of Helen or Luna, his own inner, feminine counterpart. The objective process of the union thus becomes the subjective experience of the artifex: instead of watching the drama, he has become one of the actors. Faust's personal intervention has the disadvantage that the real goal of the entire process—the production of the incorruptible substance—is missed. Instead Euphorion, who is supposed to be the *filius philosophorum*, imperishable and “incombustible,” goes up in flames and disappears—a calamity for the alchemist and an occasion for the psychologist to criticize Faust, although the phenomenon is by no means uncommon. For every archetype, at its first appearance and so long as it remains unconscious, takes possession of the whole man and impels him to play a corresponding role. Consequently Faust cannot resist supplanting Paris in Helen's affections, and the other “births” and rejuvenations, such as the Boy Charioteer and the Homunculus, are destroyed by the same greed. This is probably the deeper reason why Faust's final rejuvenation takes place only in the post-mortal state, i.e., is projected into the future. Is it a mere coincidence that the perfected figure of Faust bears the name (which we have already met) of one of the most famous of the early alchemists: “Marianus” or, in its more usual spelling, Morienus?

PHILOSOPHORVM FERMENTATIO.

**Hye wird Sol aber verschlossen
Vnd mit Mercurio philosophorum vbergossen.**

268. *Fermentatio*, symbolic representation of the *coniunctio spirituum*. [Verses: “But here King Sol is tight shut in / And Mercurius philosophorum pours over him.”]—*Rosarium philosophorum* (1550)

[559] By identifying with Paris, Faust brings the *coniunctio* back from its projected state into the sphere of personal psychological experience and thus into consciousness. This crucial step means nothing less than the solution of the alchemical riddle, and at the same time the redemption of a previously unconscious part of the personality. But every increase in consciousness harbours the danger of inflation, as is shown very clearly in Faust’s superhuman powers. His death, although necessary in his day and generation, is hardly a satisfactory answer. The rebirth and transformation that follow the *coniunctio* take place in the hereafter, i.e., in the unconscious—which leaves the problem hanging in the air. We all know that Nietzsche took it up again in *Zarathustra*, as the transformation into the superman; but he brought the superman into dangerously close proximity with the man-in-the-street. By so doing he inevitably called up all the latter’s reserves of anti-Christian resentment, for his superman is the overweening pride, the hybris, of individual consciousness, which must necessarily collide with the collective power of Christianity and lead to the catastrophic destruction of the individual. We know just how, and in what an exceedingly characteristic form, this fate overtook Nietzsche,

tam ethice quam physice. And what kind of an answer did the next generation give to the individualism of Nietzsche's superman? It answered with a collectivism, a mass organization, a herding together of the mob, *tam ethice quam physice*, that made everything that went before look like a bad joke. Suffocation of the personality and an impotent Christianity that may well have received its death-wound—such is the unadorned balance sheet of our time.

[560] Faust's sin was that he identified with the thing to be transformed and that had been transformed. Nietzsche overreached himself by identifying his ego with the superman Zarathustra, the part of the personality that was struggling into consciousness. But can we speak of Zarathustra as a part of the personality? Was he not rather something superhuman—something which man is not, though he has his share in it? Is God really dead, because Nietzsche declared that he had not been heard of for a long time? May he not have come back in the guise of the superman?

[561] In his blind urge for superhuman power, Faust brought about the murder of Philemon and Baucis. Who are these two humble old people? When the world had become godless and no longer offered a hospitable retreat to the divine strangers Jupiter and Mercury, it was Philemon and Baucis who received the superhuman guests. And when Baucis was about to sacrifice her last goose for them, the metamorphosis came to pass: the gods made themselves known, the humble cottage was changed into a temple, and the old couple became immortal servitors at the shrine.

[562] In a sense, the old alchemists were nearer to the central truth of the psyche than Faust when they strove to deliver the fiery spirit from the chemical elements, and treated the mystery as though it lay in the dark and silent womb of nature. It was still outside them. The upward thrust of evolving consciousness was bound sooner or later to put an end to the projection, and to restore to the psyche that which had been psychic from the beginning. Yet, ever since the Age of Enlightenment and in the era of scientific rationalism, what indeed was the psyche? It had become synonymous with consciousness. The psyche was "what I know." There was no psyche outside the ego. Inevitably, then, the ego identified with the contents accruing from the withdrawal of projections. Gone were the days when the psyche was still for the most part "outside the body" and imagined "those greater things" which the body could not grasp. The contents that were formerly projected were now bound to appear as personal possessions, as chimerical phantasms of the ego-consciousness. The fire chilled to air, and the air became the great wind of Zarathustra and caused an inflation of consciousness which, it seems, can be damped down only by the most terrible catastrophe to civilization, another deluge let loose by the gods upon inhospitable humanity.

[563] An inflated consciousness is always egocentric and conscious of nothing but its own existence. It is incapable of learning from the past, incapable of understanding contemporary events, and incapable of drawing right conclusions about the future. It is hypnotized by itself and therefore cannot be argued with. It inevitably dooms itself to calamities that must strike it dead. Paradoxically enough, inflation is a regression of consciousness into unconsciousness. This always happens when consciousness takes too many unconscious contents upon itself and loses the faculty of discrimination, the *sine qua non* of all consciousness. When fate, for four whole years, played out a war of monumental frightfulness on the stage of Europe—a war that *nobody* wanted—nobody dreamed of asking exactly who or what had caused the war and its continuation. Nobody realized that European man was possessed by something that robbed him of all free will. And this state of unconscious possession will continue undeterred until we Europeans become scared of our “god-almightiness.” Such a change can begin only with individuals, for the masses are blind brutes, as we know to our cost. It seems to me of some importance, therefore, that a few individuals, or people individually, should begin to understand that there are contents which do not belong to the ego-personality, but must be ascribed to a psychic non-ego. This mental operation has to be undertaken if we want to avoid a threatening inflation. To help us, we have the useful and edifying models held up to us by poets and philosophers—models or *archetypi* that we may well call remedies for both men and the times. Of course, what we discover there is nothing that can be held up to the masses—only some hidden thing that we can hold up to ourselves in solitude and in silence. Very few people care to know anything about this; it is so much easier to preach the universal panacea to everybody else than to take it oneself, and, as we all know, things are never so bad when everybody is in the same boat. No doubts can exist in the herd; the bigger the crowd the better the truth—and the greater the catastrophe.

[564] What we may learn from the models of the past is above all this: that the psyche harbours contents, or is exposed to influences, the assimilation of which is attended by the greatest dangers. If the old alchemists ascribed their secret to matter, and if neither Faust nor Zarathustra is a very encouraging example of what happens when we embody this secret in ourselves, then the only course left to us is to repudiate the arrogant claim of the conscious mind to be the whole of the psyche, and to admit that the psyche is a reality which we cannot grasp with our present means of understanding. I do not call the man who admits his ignorance an obscurantist; I think it is much rather the man whose consciousness is not sufficiently developed for him to be aware of his ignorance. I hold the view that the alchemist’s hope of conjuring out of matter the philosophical gold, or the panacea, or the wonderful stone, was only in part an illusion, an effect of projection; for the rest it corresponded

to certain psychic facts that are of great importance in the psychology of the unconscious. As is shown by the texts and their symbolism, the alchemist projected what I have called the process of individuation into the phenomena of chemical change. A scientific term like “individuation” does not mean that we are dealing with something known and finally cleared up, on which there is no more to be said.³ It merely indicates an as yet very obscure field of research much in need of exploration: the centralizing processes in the unconscious that go to form the personality. We are dealing with life-processes which, on account of their numinous character, have from time immemorial provided the strongest incentive for the formation of symbols. These processes are steeped in mystery; they pose riddles with which the human mind will long wrestle for a solution, and perhaps in vain. For, in the last analysis, it is exceedingly doubtful whether human reason is a suitable instrument for this purpose. Not for nothing did alchemy style itself an “art,” feeling—and rightly so—that it was concerned with creative processes that can be truly grasped only by experience, though intellect may give them a name. The alchemists themselves warned us: “Rumpite libros, ne corda vestra rumpantur” (Rend the books, lest your hearts be rent asunder), and this despite their insistence on study. Experience, not books, is what leads to understanding (fig. 269).

[565] In the foregoing study of dream-symbols I have shown how such an experience looks in reality. From this we can see more or less what happens when an earnest inquiry is turned upon the unknown regions of the soul. The forms which the experience takes in each individual may be infinite in their variations, but, like the alchemical symbols, they are all variants of certain central types, and these occur universally. They are the primordial images, from which the religions each draw their absolute truth.

269. The artifex and his *soror mystica* making the gesture of the secret at the end of the work.—*Mutus liber* (1702)

270. The phoenix as symbol of resurrection.—Boschius, *Symbolographia* (1702)

BIBLIOGRAPHY

The items of the bibliography are arranged alphabetically under two headings: *A.* Ancient volumes containing collections of alchemical tracts by various authors; *B.* General bibliography, including cross-references to the material in *A.* Short titles of the ancient volumes are printed in capital letters.

BIBLIOGRAPHY

A. VOLUMES CONTAINING COLLECTIONS OF ALCHEMICAL WORKS BY VARIOUS AUTHORS

ARS CHEMICA, quod sit licita recte exercentibus, probationes doctissimorum iurisconsultorum ... Argentorati [Strasbourg], 1566. *Contents quoted in this volume:*

- i Septem tractatus seu capitula Hermetis Trismegisti aurei [pp. 7–31; usually referred to as “Tractatus aureus”]
- ii Tabula smaragdina [pp. 32–33]
- iii Studium Consilii coniugii de massa solis et lunae [pp. 48–263; usually referred to as “Consilium coniugii”]

ARTIS AURIFERAE quam chemiam vocant ... Basileae [Basel], [1593]. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Turba philosophorum [two versions: pp. 1–64, 65–139]
- ii Allegoriae super librum Turbae [pp. 139–45]
- iii Aenigmata ex visione Arislei et allegoriis sapientum [pp. 146–54; usually referred to as “Visio Arislei”]
- iv In Turbam philosophorum exercitationes [pp. 154–82]
- v Aurora consurgens, quae dicitur Aurea hora [pp. 185–246; Part II only]
- vi Rosinus ad Sarratantam episcopum [pp. 277–319]
- vii Maria Prophetissa: Practica ... in artem alchemicam [pp. 319–24]
- viii Kalid: Liber trium verborum [pp. 352–61]
- ix Merlinus: Allegoria de arcano lapidis [pp. 392–96]
- x Liber de arte chimica [pp. 575–631]

VOLUME II

- xi Morienus Romanus: Sermo de transmutatione metallorum [pp. 7–54]
- xii Rosarium philosophorum [pp. 204–384; contains a second version of “Visio Arislei” at pp. 246ff.]

AUREUM VELLUS, oder Guldin Schatz und Kunstkammer ... von dem ... bewehrten Philosopho Salomone Trismosino, Rorschach, 1598.

Contents quoted in this volume:

- i [Trismosin:] Splendor solis [Tract. III, pp. 3–59]
- ii Melchior, Cardinal Bishop of Brixen: Von dem gelben und rotten Mann [Tract. III, pp. 177–91]

For translations of this volume, see: *La Toyson d'or, ou La Fleur des thresors ...*
Translated from German into French by L. I. Paris, 1612. / “The Golden Fleece, or The
Flower of Treasures.” Translated by William Backhouse, 1718. / In MS. Bodleian 7597,
Oxford.

MANGETUS, JOANNES JACOBUS (ed.). *BIBLIOTHECA CHEMICA CURIOSA, seu Rerum ad
alchemiam pertinentium thesaurus instructissimus ...* Geneva, 1702. 2 vols.

Contents quoted in this volume:

VOLUME I

- i Hoghelande: De alchemiae difficultatibus [pp. 336–68]
- ii Hermes Trismegistus: Tractatus aureus de lapidis physici secreto [pp. 400–445]
- iii Turba philosophorum [pp. 445–65; another version, pp. 480–94]
- iv Allegoriae sapientum supra librum Turbae philosophorum XXIX distinctiones [pp. 467–79]
- v Geber. Summa perfectionis magisterii [pp. 519–57]
- vi Lully: Compendium artis alchemiae et naturalis philosophiae secundum naturalem cursum [pp. 875–78]
- vii Lully: Codicillus, seu vade mecum aut Cantilena [pp. 880–911]
- vii-a Mutus liber, in quo tamen tota philosophia hermetica, figuris hieroglyphicis depingitur [unpaged; bound in Mellon Alchemical Library copy]

VOLUME II

- viii Bonus: Margarita pretiosa novella correctissima [pp. 1–80]
- ix Rosarium philosophorum [pp. 87–119]
- x Ficinus [Marsilio Ficino]: Liber de arte chimica [pp. 172–83]
- xi [Zadith] Senior: De chymia [pp. 198–235]
- xii Ripley: Liber duodecim portarum [pp. 275–85]
- xiii Sendivogius: Parabola, seu Aenigma philosophicum [pp. 474–75]
- xiv Orthelius: Epilogus et recapitulatio in Novum lumen Sendivogii [pp. 526–30]
- xv [Siebmacher:] Hydrolithus sophericus, seu Aquarium sapientum [pp. 537–58]
- xvi Grasseus: Lilium inter spinas [pp. 596–600]
- xvii [Espagnet:] Arcanum hermeticae philosophiae [pp. 649–61]

*In hoc volumine DE ALCHEMIA continentur haec. Gebri Arabis ... De investigatione
perfectionis metallorum ...* Norimbergae [Nuremberg], 1541.

Contents quoted in this volume:

- i Rosarius minor [pp. 309–37]
- ii Tabula smaragdina Hermetis Trismegisti [p. 363]

MUSAEUM HERMETICUM reformatum et amplification ... continens tractatus chemicos XXI praestantissimos ... Francofurti [Frankfort], 1678. (For translation, see (B) WAITE, ARTHUR EDWARD.) (Also an edn. of 1625. See [fig. 240.](#))

Contents quoted in this volume:

- i [Hermes Trismegistus:] Tractatus aureus de lapide philosophorum [pp. 1–52]
- ii Madathanus Aureum saeculum redivivum [pp. 53–72]
- iii [Siebmacher:] Hydrolithus sophericus, seu Aquarium sapientum [pp. 73–144]
- iv Mehung: Demonstratio naturae [pp. 145–71]
- v Flamel: Tractatus brevis sive Summarium philosophicum [pp. 172–79]
- vi [Barcius (F. von Sternberg):] Gloria mundi, alias Paradysi tabula [pp. 203–304]
- vii Lamspringk: De lapide philosophico figurae et emblemata [pp. 337–72]
- viii [Maier:] Tripus aureus, hoc est, Tres tractatus chymici selectissimi [pp. 373–544]
- ix Valentinus: Practica una cum duodecim clavibus [pp. 377–432; Duodecim claves, pp. 393–423]
- x Norton: Crede mihi, seu Ordinale [pp. 433–532]
- xi Cremer: Testamentum [pp. 533–44]
- xii Sendivogius: Novum lumen chemicum e naturae fonte et manuali experientia depromptum [pp. 545–600]
- xiii [Sendivogius:] Novi luminis chemici tractatus alter de sulphure [pp. 601–46]
- xiv Philalethes: Introitus apertus ... [pp. 647–700]
- xv Philalethes: Metallorum metamorphosis [pp. 714–74]
- xvi Philalethes: Fons chymicae veritatis [pp. 799–814]

THEATRUM CHEMICUM, praecipuos selectorum auctorum tractatus ... continens. Ursellis [Ursel], 1602. 3 vols. (Vol. IV, Argentorati [Strasbourg], 1613; Vol. V, 1622; Vol. VI, 1661.)

Contents quoted in this volume:

VOLUME I

- i Hoghelande: Liber de alchemiae difficultatibus [pp. 121–215]
- ii Dorn: Speculativae philosophiae, gradus septem vel decem continens [pp. 255–310]
- iii Dorn: Physica genesis [pp. 367–404]
- iv Dorn: Physica Trismegisti [pp. 405–37]
- v Dorn: De spagirico artificio Trithemii sententia [pp. 437–50]
- vi Dorn: Philosophia meditativa [pp. 450–72]
- vii Dorn: Philosophia chemica ad meditativam comparata [pp. 472–517]
- viii Dorn: Congeries Paracelsicae chemicae de transmutationibus metallorum [pp. 557–646]

- ix Bernard of Treviso: Liber de alchemia [pp. 773–803]
x Zacharius: Opusculum philosophiae naturalis metallorum [pp. 804–48]

VOLUME II

- xi Aegidius de Vadis: Dialogus inter naturam et filium philosophiae [pp. 95–123]
xii Penotus: Philosophi potius occultare artem conati sunt quam patefacere ... [p. 123; a table]
xiii Quercetanus: Ad Jacobi Auberti Vendonis de ortu et causis metallorum contra chemicos explicationem [pp. 202]
xiv Dee: Monas hieroglyphica [pp. 218–43]
xv Ventura: De ratione conficiendi lapidis [pp. 244–356]
xvi Richardus Anglicus: Correctorium alchymiae [pp. 442–66]
xvii Albertus Magnus: Super arborem Aristotelis [pp. 524–27]

VOLUME III

- xviii [Melchior:] Addam et processum sub forma missae [pp. 853–60]

VOLUME IV

- xix Von der Materi und Prattick des Steins [pp. 284–93]
xx Aphorismi Basiliani sive Canones Hermetici [pp. 368–71]
xxi Sendivogius: Dialogus Mercurii, alchymistae, et naturae [pp. 509–17]
xxii Arnaldus de Villanova: Carmen [pp. 614–15]
xxiii Guilhelmus Tecenensis: Liliium ... de spinis evulsum [pp. 1000–1027]

VOLUME V

- xxiv Turba philosophorum [pp. 1–57]
xxv Allegoriae sapientum ... supra librum Turbae [pp. 64–100]
xxvi Tractatus Micreris suo discipulo Mirnefindo [pp. 101–13]
xxvii Liber Platonis quartorum ... [pp. 114–208]
xxviii Tractatus Aristotelis alchymistae ad Alexandrum Magnum de lapide philosophico [pp. 880–92]
xxix Epistola ad ... Hermannum archiepiscopum Coloniensem de lapide philosophico [pp. 893–900]

VOLUME VI

- xxx Espagnet: Instructio ... de arbore solari [pp. 163–94]
xxxi Christopher of Paris: Elucidarius artis transmutatoriae metallorum [pp. 195–293]
xxxii Grasseus: Arca arcani ... [pp. 294–381]

THEATRUM CHEMICUM BRITANNICUM. Containing Severall Poeticall Pieces of Our Famous English Philosophers, Who Have Written the Hermetique Mysteries in Their Owne Ancient Language. Collected with annotations by Elias Ashmole. London, 1652.

Contents quoted in this volume:

- i Norton: The Ordinall of Alchimy [pp. 1–106]
- ii Liber patris sapientiae [pp. 195–212]
- iii [Lully:] Hermes Bird [pp. 213–26]
- iv Verses Belonging to an Emblematicall Scrowle: Supposed to Be Invented by Geo: Ripley [pp. 375–79]

INDEX

The following subjects are indexed under collective entries: ANIMALS (including birds, insects, reptiles, etc., and fabulous beasts), BIBLE, CODICES & MSS., COLOURS (including alchemical terms), and NUMBERS. The references to illustrations, by “*fig.*,” indicate data included in the List of Illustrations (pp. xvff) as well as in the text captions. For references to “names of individual authors and treatises” in alchemical collections, see the Bibliography, part A (pp. 487ff), where these are listed. Italic type is used for all literary titles, whether MS. or printed, except in the case of papers under the entry for Jung, whose titles appear in quotation marks.

THE COLLECTED WORKS OF *C. G. JUNG*

THE PUBLICATION of the first complete edition, in English, of the works of C. G. Jung was undertaken by Routledge and Kegan Paul, Ltd., in England and by Bollingen Foundation in the United States. The American edition is number XX in Bollingen Series, which since 1967 has been published by Princeton University Press. The edition contains revised versions of works previously published, such as *Psychology of the Unconscious*, which is now entitled *Symbols of Transformation*; works originally written in English, such as *Psychology and Religion*; works not previously translated, such as *Aion*; and, in general, new translations of virtually all of Professor Jung's writings. Prior to his death, in 1961, the author supervised the textual revision, which in some cases is extensive. Sir Herbert Read (d. 1968), Dr. Michael Fordham, and Dr. Gerhard Adler compose the Editorial Committee; the translator is R. F. C. Hull (except for Volume 2) and William McGuire is executive editor.

The price of the volumes varies according to size; they are sold separately, and may also be obtained on standing order. Several of the volumes are extensively illustrated. Each volume contains an index and in most a bibliography; the final volumes will contain a complete bibliography of Professor Jung's writings and a general index to the entire edition.

In the following list, dates of original publication are given in parentheses (of original composition, in brackets). Multiple dates indicate revisions.

• 1. PSYCHIATRIC STUDIES

On the Psychology and Pathology of So-Called Occult Phenomena (1902)

On Hysterical Misreading (1904)

Cryptomnesia (1905)

On Manic Mood Disorder (1903)

A Case of Hysterical Stupor in a Prisoner in Detention (1902)

On Simulated Insanity (1903)

A Medical Opinion on a Case of Simulated Insanity (1904)

A Third and Final Opinion on Two Contradictory Psychiatric Diagnoses (1906)

On the Psychological Diagnosis of Facts (1905)

†2. EXPERIMENTAL RESEARCHES

Translated by Leopold Stein in collaboration with Diana Riviere

STUDIES IN WORD ASSOCIATION (1904–7, 1910)

The Associations of Normal Subjects (by Jung and F. Riklin)

An Analysis of the Associations of an Epileptic

The Reaction-Time Ratio in the Association Experiment

Experimental Observations on the Faculty of Memory

Psychoanalysis and Association Experiments

The Psychological Diagnosis of Evidence

Association, Dream, and Hysterical Symptom

The Psychopathological Significance of the Association Experiment

Disturbances in Reproduction in the Association Experiment

The Association Method

The Family Constellation

PSYCHOPHYSICAL RESEARCHES (1907–8)

On the Psychophysical Relations of the Association Experiment

Psychophysical Investigations with the Galvanometer and Pneumograph in Normal and Insane Individuals (by F. Peterson and Jung)

Further Investigations on the Galvanic Phenomenon and Respiration in Normal and Insane Individuals (by C. Ricksher and Jung)

Appendix: Statistical Details of Enlistment (1906); New Aspects of Criminal Psychology (1908); The Psychological Methods of Investigation Used in the Psychiatric Clinic of the University of Zurich (1910); On the Doctrine of Complexes ([1911] 1913); On the Psychological Diagnosis of Evidence (1937)

•3. THE PSYCHOGENESIS OF MENTAL DISEASE

The Psychology of Dementia Praecox (1907)

The Content of the Psychoses (1908/1914)

On Psychological Understanding (1914)

A Criticism of Bleuler's Theory of Schizophrenic Negativism (1911)

On the Importance of the Unconscious in Psychopathology (1914)

On the Problem of Psychogenesis in Mental Disease (1919)

Mental Disease and the Psyche (1928)

On the Psychogenesis of Schizophrenia (1939)

Recent Thoughts on Schizophrenia (1957)

Schizophrenia (1958)

†4. FREUD AND PSYCHOANALYSIS

Freud's Theory of Hysteria: A Reply to Aschaffenburg (1906)

The Freudian Theory of Hysteria (1908)

The Analysis of Dreams (1909)

A Contribution to the Psychology of Rumour (1910–11)

On the Significance of Number Dreams (1910–11)

Morton Prince, "The Mechanism and Interpretation of Dreams": A Critical Review (1911)

On the Criticism of Psychoanalysis (1910)

Concerning Psychoanalysis (1912)

The Theory of Psychoanalysis (1913)

General Aspects of Psychoanalysis (1913)

Psychoanalysis and Neurosis (1916)

Some Crucial Points in Psychoanalysis: A Correspondence between Dr. Jung and Dr. Loÿ (1914)

Prefaces to "Collected Papers on Analytical Psychology" (1916, 1917)

The Significance of the Father in the Destiny of the Individual (1909/1949)

Introduction to Kranefeldt's "Secret Ways of the Mind" (1930)

Freud and Jung: Contrasts (1929)

‡ 5. SYMBOLS OF TRANSFORMATION (1911–12/1952)

PART I

Introduction

Two Kinds of Thinking

The Miller Fantasies: Anamnesis

The Hymn of Creation

The Song of the Moth

PART II

Introduction

The Concept of Libido

The Transformation of Libido

The Origin of the Hero

Symbols of the Mother and of Rebirth

The Battle for Deliverance from the Mother

The Dual Mother

The Sacrifice

Epilogue

Appendix: The Miller Fantasies

•6. PSYCHOLOGICAL TYPES (1921)

Introduction

The Problem of Types in the History of Classical and Medieval Thought

Schiller's Ideas on the Type Problem

The Apollinian and the Dionysian

The Type Problem in Human Character

The Type Problem in Poetry

The Type Problem in Psychopathology

The Type Problem in Aesthetics

The Type Problem in Modern Philosophy

The Type Problem in Biography

General Description of the Types

Definitions

Epilogue

Four Papers on Psychological Typology (1913, 1925, 1931, 1936)

†7. TWO ESSAYS ON ANALYTICAL PSYCHOLOGY

On the Psychology of the Unconscious (1917/1926/1943)

The Relations between the Ego and the Unconscious (1928)

Appendix: New Paths in Psychology (1912); The Structure of the Unconscious (1916) (new versions, with variants, 1966)

‡8. THE STRUCTURE AND DYNAMICS OF THE PSYCHE

On Psychic Energy (1928)

The Transcendent Function ([1916]/1957)

A Review of the Complex Theory (1934)

The Significance of Constitution and Heredity in Psychology (1929)

Psychological Factors Determining Human Behavior (1937)

Instinct and the Unconscious (1919)

The Structure of the Psyche (1927/1931)

On the Nature of the Psyche (1947/1954)

General Aspects of Dream Psychology (1916/1948)

On the Nature of Dreams (1945/1948)

The Psychological Foundations of Belief in Spirits (1920/1948)

Spirit and Life (1926)

Basic Postulates of Analytical Psychology (1931)

Analytical Psychology and *Weltanschauung* (1928/1931)

The Real and the Surreal (1933)

The Stages of Life (1930–1931)

The Soul and Death (1934)

Synchronicity: An Acausal Connecting Principle (1952)

Appendix: On Synchronicity (1951)

•9. PART 1. THE ARCHETYPES AND THE COLLECTIVE UNCONSCIOUS

Archetypes of the Collective Unconscious (1934/1954)

The Concept of the Collective Unconscious (1936)

Concerning the Archetypes, with Special Reference to the Anima Concept
(1936/1954)

Psychological Aspects of the Mother Archetype (1938/1954)

Concerning Rebirth (1940/1950)

The Psychology of the Child Archetype (1940)

The Psychological Aspects of the Kore (1941)

The Phenomenology of the Spirit in Fairytales (1945/1948)

On the Psychology of the Trickster-Figure (1954)

Conscious, Unconscious, and Individuation (1939)

A Study in the Process of Individuation (1934/1950)

Concerning Mandala Symbolism (1950)

Appendix: Mandalas (1955)

•9. PART II. AION (1951)

RESEARCHES INTO THE PHENOMENOLOGY OF THE SELF

The Ego

The Shadow

The Syzygy: Anima and Animus

The Self

Christ, a Symbol of the Self

The Sign of the Fishes

The Prophecies of Nostradamus

The Historical Significance of the Fish

The Ambivalence of the Fish Symbol

The Fish in Alchemy

The Alchemical Interpretation of the Fish

Background to the Psychology of Christian Alchemical Symbolism

Gnostic Symbols of the Self

The Structure and Dynamics of the Self

Conclusion

• 10. CIVILIZATION IN TRANSITION

The Role of the Unconscious (1918)

Mind and Earth (1927/1931)

Archaic Man (1931)

The Spiritual Problem of Modern Man (1928/1931)

The Love Problem of a Student (1928)

Woman in Europe (1927)

The Meaning of Psychology for Modern Man (1933/1934)

The State of Psychotherapy Today (1934)

Preface and Epilogue to “Essays on Contemporary Events” (1946)

Wotan (1936)

After the Catastrophe (1945)

C. G. JUNG SPEAKING: Interviews and Encounters

Edited by William McGuire and R.F.C. Hull

C. G. JUNG: Word and Image

Edited by Aniela Jaffé

¹ It is worth noting that a Protestant theologian, writing on homiletics, had the courage to demand wholeness of the preacher from the ethical point of view. He substantiates his argument by referring to my psychology. See Händler, *Die Predigt*.

²[The translation of the German word *Seele* presents almost insuperable difficulties on account of the lack of a single English equivalent and because it combines the two words “psyche” and “soul” in a way not altogether familiar to the English reader. For this reason some comment by the Editors will not be out of place.

[In previous translations, and in this one as well, “psyche”—for which Jung in the German original uses either *Psyche* or *Seele*—has been used with reference to the totality of *all* psychic processes (cf. Jung, *Psychological Types*, Def. 48); i.e., it is a comprehensive term. “Soul,” on the other hand, as used in the technical terminology of analytical psychology, is more restricted in meaning and refers to a “function complex” or partial personality and never to the whole psyche. It is often applied specifically to “anima” and “animus”; e.g., in this connection it is used in the composite word “soul-image” (*Seelenbild*). This conception of the soul is more primitive than the Christian one with which the reader is likely to be more familiar. In its Christian context it refers to “the transcendental energy in man” and “the spiritual part of man considered in its moral aspect or in relation to God.” (Cf. definition in *The Shorter Oxford English Dictionary*.)

[In the above passage in the text (and in similar passages), “soul” is used in a non-technical sense (i.e., it does not refer to “animus” or “anima”), nor does it refer to the transcendental conception, but to a psychic (phenomenological) fact of a highly numinous character. This usage is adhered to except when the context shows clearly that the term is used in the Christian or Neoplatonic sense.—EDITORS.]

³ [The term “nothing but” (*nichts als*), which occurs frequently in Jung to denote the habit of explaining something unknown by reducing it to something apparently known and thereby devaluing it, is borrowed from William James, *Pragmatism*, p. 16: “What is higher is explained by what is lower and treated for ever as a case of ‘nothing but’—nothing but something else of a quite inferior sort.”]

⁴ The dogma that man is formed in the likeness of God weighs heavily in the scales in any assessment of man—not to mention the Incarnation.

⁵ The fact that the devil too can take possession of the soul does not diminish its significance in the least.

⁶ It is therefore psychologically quite unthinkable for God to be simply the “wholly other,” for a “wholly other” could never be one of the soul’s deepest and closest intimacies—which is precisely what God is. The only statements that have psychological validity concerning the God-image are either paradoxes or antinomies.

⁷ Tertullian, *Apologeticus*, xvii: “Anima naturaliter christiana.”

⁸ Since it is a question here of human effort, I leave aside acts of grace which are beyond man’s control.

⁹ Tertullian, *De carne Christi*, 5 (Migne, *P.L.*, vol. 2, col. 751).

¹⁰ Zöckler (“Probabilismus,” p. 67) defines it as follows: “Probabilism is the name generally given to that way of thinking which is content to answer scientific questions with a greater or lesser degree of probability. The moral probabilism with which alone we are concerned here consists in the principle that acts of ethical self-determination are to be guided not by conscience but according to what is probably right, i.e., according to whatever has been recommended by any representative or doctrinal authority.” The Jesuit probabilist Escobar (d. 1669) was, for instance, of the opinion that if the penitent should plead a probable opinion as the motive of his action, the father-

confessor would be obliged to absolve him even if he were not of the same opinion. Escobar quotes a number of Jesuit authorities on the question of how often one is bound to love God in a lifetime. According to one opinion, loving God once shortly before death is sufficient; another says once a year or once every three or four years. He himself comes to the conclusion that it is sufficient to love God once at the first awakening of reason, then once every five years, and finally once in the hour of death. In his opinion the large number of different moral doctrines forms one of the main proofs of God's kindly providence, "because they make the yoke of Christ so light" (Zöckler, p. 68). Cf. also Harnack, *History of Dogma*, VII, pp. 101ff.

¹¹ Cf. Genesis 1 : 2.

¹² The reader will find a collection of these myth motifs in Lang, *Hat ein Gott die Welt erschaffen?* Unfortunately philological criticism will have much to take exception to in this book, interesting though it is for its Gnostic trend.

¹³ In alchemical writings the word "Mercurius" is used with a very wide range of meaning, to denote not only the chemical element mercury or quicksilver, Mercury (Hermes) the god, and Mercury the planet, but also—and primarily—the secret "transforming substance" which is at the same time the "spirit" indwelling in all living creatures. These different connotations will become apparent in the course of the book. It would be misleading to use the English "Mercury" and "mercury," because there are innumerable passages where neither word does justice to the wealth of implications. It has therefore been decided to retain the Latin "Mercurius" as in the German text, and to use the personal pronoun (since "Mercurius" is personified), the word "quicksilver" being employed only where the chemical element (Hg) is plainly meant. [*Author's note for the English edn.*]

¹⁴ Przywara, *Deus semper maior*, I, pp. 71ff.

¹⁵ See the illustrations in Jung, "Concerning Mandala Symbolism."

¹⁶ *Contritio* is "perfect" repentance; *attritio* "imperfect" repentance (*contritio imperfecta*, to which category *contritio naturalis* belongs). The former regards sin as the opposite of the highest good; the latter reprehends it not only on account of its wicked and hideous nature but also from fear of punishment.

¹⁷ A religious terminology comes naturally, as the only adequate one in the circumstances, when we are faced with the tragic fate that is the unavoidable concomitant of wholeness. "My fate" means a daemonic will to precisely that fate—a will not necessarily coincident with my own (the ego will). When it is opposed to the ego, it is difficult not to feel a certain "power" in it, whether divine or infernal. The man who submits to his fate calls it the will of God; the man who puts up a hopeless and exhausting fight is more apt to see the devil in it. In either event this terminology is not only universally understood but meaningful as well.

¹⁸ Paracelsus still speaks of the "gods" enthroned in the *mysterium magnum* (*Philosophia ad Athenienses*, p. 403), and so does the 18th-cent. treatise of Abraham Eleazar, *Uraltes chymisches Werk*, which was influenced by Paracelsus.

¹⁹ Cf. Sanchez, *Opus morale*, Decalog. 2, 49n., 51; and Pignatelli, *Consultationes canonicae*, canon ix.

¹ I must emphasize that this education was not historical, philological, archaeological, or ethnological. Any references to material derived from these fields came unconsciously to the dreamer.

² “Mandala” (Sanskrit) means “circle,” also “magic circle.” Its symbolism includes—to mention only the most important forms—all concentrically arranged figures, round or square patterns with a centre, and radial or spherical arrangements.

³ For this concept see Jung, “Basic Postulates of Analytical Psychology,” and Wolff, “Einführung in die Grundlagen der komplexen Psychologie,” pp. 34ff.

⁴ I intentionally omit an analysis of the words “complementary” and “compensatory,” as it would lead us too far afield.

¹ The sea is a favourite place for the birth of visions (i.e., invasions by unconscious contents). Thus the great vision of the eagle in II Esdras 11 : 1 rises out of the sea, and the vision of “Man”—*ἄνθρωπος*—in 13: 3, 25, and 51 comes up “from the midst of the sea.” Cf. also 13 : 52: “Like as thou canst neither seek out nor know the things that are in the deep of the sea: even so can no man upon earth see my Son. ...”

² *Νεκρία* from *νέκρς* (corpse), the title of the eleventh book of the *Odyssey*, is the sacrifice to the dead for conjuring up the departed from Hades. *Nekyia* is therefore an apt designation for the “journey to Hades,” the descent into the land of the dead, and was used by Dieterich in this sense in his commentary on the Codex of Akhmim, which contains an apocalyptic fragment from the Gospel of Peter (*Nekyia: Beiträge zur Erklärung der neuentdeckten Petrusapokalypse*). Typical examples are the *Divine Comedy*, the classical *Walpurgisnacht* in *Faust*, the apocryphal accounts of Christ’s descent into hell, etc.

³ Cf. the French edition of *Hypnerotomachia*, called *Le Tableau des riches inventions* or *Songe de Poliphile* (1600), trans. Bérolalde de Verville. (See fig. 4.) [The original Italian edn. appeared in 1499.]

⁴ For details see Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 179f., 214ff.

⁵ Knuchel, *Die Umwandlung in Kult, Magie und Rechtsbrauch*.

⁶ A piece of land, often a grove, set apart and dedicated to a god.

⁷ For the concept of the “anima,” see Jung, “The Relations between the Ego and the Unconscious,” pars. 296ff.

⁸ Zosimos lived c. A.D. 300. Cf. Reitzenstein, *Poimandres*, pp. 9ff.; Berthelot, *Collection des anciens alchimistes grecs*, III, i, 2.

⁹ The ladder motif is confirmed in dreams 12 and 13 (pars. 78 and 82). Cf. also Jacob’s ladder (fig. 14).

¹⁰ *De errore profanarum religionum*: “Animo descensus per orbem solis tribuitur” (It is said [by the pagans] that the soul descends through the circle of the sun).

¹¹ *The Golden Ass*.

¹² Cf. Ruska, *Turba*.

¹³ Cf. “collective unconscious” in Jung, *Psychological Types*, Def. 56.

¹⁴ The direct source of the Christian sheep symbolism is to be found in the visions of the Book of Enoch 89 : 10ff. (Charles, *Apocrypha and Pseudepigrapha*, II, p. 252). The Apocalypse of Enoch was written about the beginning of the 1st cent. B.C.

¹⁵ In the vision of Enoch, the leader and prince appears first as a sheep or ram: Book of Enoch 89 : 48 (Charles, II, p. 254).

¹⁶ Berthelot, *Collection des anciens alchimistes grecs*, III, i, 2. Cf. also Jung, “The Visions of Zosimos.”

¹⁷ Budge, in *Gods of the Egyptians*, I, p. 87, uses this expression.

¹⁸ *Études de mythologie*, II, p. 245.

¹⁹ Cf. the entertaining dialogue between the alchemist and Mercurius in Sendivogius, “Dialogus,” *Theatr. chem.*, IV.

²⁰ Goethe, *Dichtung und Wahrheit*.

²¹ Printed in *Geheime Figuren der Rosenkreuzer*.

²² *Problems of Mysticism and Its Symbolism*.

²³ For water as origin, cf. Egyptian cosmogony, among others.

²⁴ Wirth, *Aus orientalischen Chroniken*, p. 199.

²⁵ “A fountain sealed”: Song of Songs 4 : 12.

²⁶ This is really a normal life-process, but it usually takes place quite unconsciously. The anima is an archetype that is always present. (Cf. Jung, *Psychological Types*, Defs. 48, 49, and “The Relations between the Ego and the Unconscious,” pars. 296ff.) The mother is the first carrier of the anima-image, which gives her a fascinating quality in the eyes of the son. It is then transferred, via the sister and similar figures, to the beloved.

²⁷ Cf. dream 23 of second series (par. 212, also par. 220).

²⁸ Concerning the “golden flower” of medieval alchemy (cf. fig. 30), see Adolphus Senior, *Azoth*. The golden flower comes from the Greek χρυσάνθιον (Berthelot, *Alch. grecs*, III, xlix. 19) and χρυσάνθεμον = ‘golden flower’, a magical plant like the Homeric μῶλυ, which is often mentioned by the alchemists. The golden flower is the noblest and purest essence of gold. The same name is sometimes given to pyrites. (Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 70.) The strength of the *aqua permanens* is also called *flos*, ‘flower’ (*Turba*, ed. Ruska, p. 214, 20). *Flos* is used by later alchemists to express the mystical transforming substance. (Cf. “flos citrinus” in *Aurora consurgens*; “flos aeris aureus” in “Consil. coniug., *Ars chemica*,” p. 167; “flos est aqua nummosa [Mercurius]” in “Allegoriae sapientum,” p. 81; “flos operis est lapis” in Mylius, *Philosophia reformata*, p. 30.)

²⁹ Reprinted in *Artis auriferae*, II, pp. 204ff. (1593) and *Bibliotheca chemica curiosa*, II, pp. 87ff. (1702). My quotations are usually taken from the 1593 version.

³⁰ As the *Rosarium* says: “Aurum nostrum non est aurum vulgi” (Our gold is not the common gold). *Art. aurif.*, II, p. 220.

³¹ “Quia lapis noster scilicet argentum vivum occidentale, quod praetulit se auro et vicit illud, est illud quod occidit et vivere facit.”—*Ibid.*, p. 223.

³² “Intelligite, filii sapientum, quod hic lapis preciosissimus clamat, ... et lumen meum omne lumen superat ac mea bona omnibus bonis sunt sublimiora.... Ego gigno lumen, tenebrae autem naturae meae sunt. ...” *Ibid.*, p. 239. Concerning the Hermes quotations in *Rosarium*, see *infra*, par. 140, n. 17.

³³ “Epistola ad Hermannum,” *Theatr. chem.*, V, p. 899.

³⁴ This does not mean that the self is created, so to speak, only during the course of life; it is rather a question of its becoming conscious. The self exists from the very beginning, but is latent, that is, unconscious. Cf. my later explanations.

³⁵ Foucart, *Les Mystères d’Eleusis*.

³⁶ [*Histories*, II, 58; trans. Powell, I, p. 137.]

³⁷ See *Psychological Types*, Def. 18.

³⁸ Cf. Fleischer, *Hermes Trismegistus*, p. 6; also the spherical form of Plato’s Original Man and the σφαῖρος of Empedocles. As in the *Timaeus*, the alchemical *anima mundi*, like the “soul of the substances,” is spherical, and so is the gold (cf. fig. 209). (See Maier, *De circulo physico*, pp. 11f.) For the connection between the *rotundum* and the skull or head, see Jung, “Transformation Symbolism in the Mass,” pp. 239ff.

³⁹ Cf. St. Augustine’s argument that God is not this sun but he who made the sun (*In Joannis Evang. Tract.*, XXXIV, 2) and the evidence of Eusebius, who actually witnessed “Christian” sun-worship (*Constantini Oratio ad Sanctorum*

Coelum, VI; Migne, *P.G.*, vol. 20, cols. 1245–50).

⁴⁰ Béroalde de Verville, in his introduction [“Recueil stéganographique”] to the French translation (1600) of *Hypnerotomachia*, plainly adopts this view.

⁴¹ “He said [it] himself.” The phrase originally alluded to the authority of Pythagoras.

⁴² Cf. “Liber Platonis quattorum,” *Theatr. chem.*, V, pp. 149ff., 174. This treatise is a Harranite text of great importance for the history of alchemy. It exists in Arabic and Latin, but the latter version is unfortunately very corrupt. The original was probably written in the 10th cent. Cf. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen*.

⁴³ Cf. “Paracelsus as a Spiritual Phenomenon,” par. 214.

⁴⁴ I wrote this passage in spring, 1935.

⁴⁵ For these concepts see Jung, “The Relations between the Ego and the Unconscious.”

¹ Cf. Wilhelm and Jung, *Secret of the Golden Flower*, and Zimmer, *Myths and Symbols in Indian Art and Civilization*.

² Avalon, *The Serpent Power*, VII.

³ Cf. Reitzenstein, *Die hellenistischen Mysterienreligionen*.

⁴ The quotation marks indicate that I am not positing anything by the term “metaphysical”: I am only using it figuratively, in the psychological sense, to characterize the peculiar statements made by dreams.

⁵ As Meister Eckhart says, “It is not outside, it is inside: wholly within.”—Trans. Evans, p. 8.

⁶ [Inasmuch as the five mandala dreams and visions listed in par. 127 necessarily figure in this new series (though actually part of the first dream-series), the author initiated the number sequence of the new—i.e., the mandala—series with them.—EDITORS.]

⁷ As the dream at most alludes to me and does not name me, the unconscious evidently has no intention of emphasizing my personal role.

⁸ Cf. Jung, *Psychological Types*, ch. X.

⁹ Deussen, *Allgemeine Geschichte der Philosophie*, I.

¹⁰ Baynes, *A Coptic Gnostic Treatise*, p. 89.

¹¹ The Buddha, Shiva, etc., in the lotus (fig. 52); Christ in the rose, in the womb of Mary (ample material on this theme in Salzer, *Die Sinnbilder und Beiworte Mariens*); the seeding-place of the diamond body in the golden flower. Cf. the circumambulation of the square in dream 16, par. 164.

¹² Baynes, *A Coptic Gnostic Treatise*, p. 58. Cf. the Vajramandala (fig. 43), where the great *dorje* is found in the centre surrounded by the twelve smaller *dorjes*, like the one Monad with the “twelve Monads as a crown upon its head.” Moreover there is a *dorje* in each of the four gates.

¹³ Baynes. p. 94.

¹⁴ *Ibid.*, p. 70. Similar to the tetramorph, the steed of the Church (fig. 53).

¹⁵ Cf. Irenaeus, *Adversus haereses*, III, xi, and Clement of Alexandria, *Stromata*, V, vi.

¹⁶ *Art. aurif.*, II, pp. 239f. The Hermes quotations come from the fourth chapter of “Tractatus aureus” (*Ars chemica*, pp. 23f., or *Bibl. chem.*, I, pp. 427f).

¹⁷ “Ego gigno lumen, tenebrae autem naturae meae sunt ... me igitur et filio meo conjuncto, nihil melius ac venerabilius in mundo fieri potest.” The Hermes sayings as quoted by the anonymous author of the *Rosarium* contain deliberate alterations that have far more significance than mere faulty readings. They are authentic recastings, to which he lends higher authority by attributing them to Hermes. I have compared the three printed editions of the “Tractatus aureus,” 1566, 1610, and 1702, and found that they all agree. The *Rosarium* quotation runs as follows in the “Tractatus aureus”: “Iam Venus ait: Ego genero lumen, nec tenebrae meae naturae sunt ... me igitur et fratri meo iunctis nihil melius ac venerabilius” (Venus says: I beget the light, and the darkness is not of my nature ... therefore nothing is better or more worthy of veneration than the conjunction of myself and my brother).

¹⁸ Baynes, p. 87.

¹⁹ Cf. Mylius, *Philosophia reformata*, p. 19.

²⁰ *Art. aurif.*, II, p. 356.

²¹ Ibid., p. 359.

²² Ibid.

²³ Cf. Jung, “The Relations between the Ego and the Unconscious,” pars. 296ff.

²⁴ The Homeric chain in alchemy is the series of great wise men, beginning with Hermes Trismegistus, which links earth with heaven. At the same time it is the chain of substances and different chemical states that appear in the course of the alchemical process. Cf. *Aurea catena Homeri*.

²⁵ Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 209ff.

²⁶ Meister Eckhart says: “‘I came not upon earth to bring peace but a sword; to cut away all things, to part thee from brother, child, mother and friend, which are really thy foes.’ For verily thy comforts are thy foes. Doth thine eye see all things and thine ear hear all things and thy heart remember them all, then in these things thy soul is destroyed.”—Trans. Evans, I, pp. 12–13.

²⁷ Cf. Jung, “Concerning Rebirth,” pp. 135ff.

²⁸ Vollers, “Chidher,” p. 235.

²⁹ *Art. aurif.*, II, p. 239. This is a Hermes quotation from the “Tractatus aureus,” but in the edition of 1566 (*Ars chemica*) it runs: “Largiri vis mihi meum ut adiuvem te” (You want to give me freely what is mine, that I may help you).

³⁰ A quotation from Aristotle in the *Rosarium*, *Art. aurif.*, II, p. 317, says: “Elige tibi pro lapide, per quem reges venerantur in Diadematibus suis ... quia ille est propinquus igni” (Choose for your stone that through which kings are venerated in their crowns ... because that [stone] is near to the fire).

³¹ Cf. the treatise of Komarios, in which Cleopatra explains the meaning of the water (Berthelot, *Collection des anciens alchimistes grecs*, IV, xx).

³² *Rosarium*, *Art. aurif.*, II, p. 378: “Lapis noster hic est ignis ex igne creatus et in ignem vertitur, et anima eius in igne moratur” (This our stone is fire, created of fire, and turns into fire; its soul dwells in fire). This may have been based on the following: “Item lapis noster, hoc est ignis ampulla, ex igne creatus est, et in eum vertitur” (Likewise this our stone, i.e., the flask of fire, is created out of fire and turns back into it).—“Allegoriae sapientum,” *Bibl. chem. curiosa*, I, p. 468a.

³³ *Aqua nostra* is also called *aqua permanens*, corresponding to the ὕδωρ θεῖον of the Greeks: “aqua permanens, ex qua quidem aqua lapis noster pretiosissimus generatur,” we read in the “Turba philosophorum,” *Art. aurif.*, I, p. 14. “Lapis enim est haec ipsa permanens aqua et dum aqua est, lapis non est” (For the stone is this selfsame permanent water; and while it is water it is not the stone).—Ibid., p. 16. The commonness of the “water” is very often emphasized, as for instance in *ibid.*, p. 30. “Quod quaerimus publice minimo pretio venditur, et si nosceretur, ne tantillum venderent mercatores” (What we are seeking is sold publicly for a very small price, and if it were recognized, the merchants would not sell it for so little).

³⁴ The alchemists give only obscure hints on this subject, e.g., the quotation from Aristotle in *Rosarium* (*Art. aurif.*, II, p. 318): “Fili, accipere debes de pinguiori carne” (Son, you must take of the fatter flesh). And in the “Tractatus aureus,” ch. IV, we read: “Homo a principio naturae generatur, cuius viscera carnea sunt” (Man is generated from the principle of Nature whose inward parts are fleshy).

³⁵ Cf. “Paracelsus as a Spiritual Phenomenon,” pars. 185ff.

³⁶ *Von hylealischen Chaos*, p. 204.

³⁷ "... having a desire to be dissolved and to be with Christ" (Phil. (D.V.) 1 : 23).

³⁸ The "magnesia" of the alchemists has nothing to do with magnesia (MgO). In Khunrath (ibid., p. 161) it is the "materia coelestis et divina," i.e., the "materia lapidis Philosophorum," the arcane or transforming substance.

³⁹ Ibid., p. 203.

⁴⁰ Ibid., p. 207.

⁴¹ There is a figurative representation of this idea in Maier, *Scrutinium chymicum*: Emblema XXI. But Maier interprets the *ternarius* differently (cf. fig. 60). He says (p. 63): "Similiter volunt Philosophi quadrangulum in triangulum ducendum esse, hoc est, in corpus, spiritum et animam, quae tria in trinis coloribus ante rubedinem praevisis apparent, utpote corpus seu terra in Saturni nigredine, spiritus in lunari albedine, tanquam aqua, anima sive aer in solari citrinitate. Tum triangulus perfectus erit, sed hic vicissim in circulum mutari debet, hoc est in rubedinem invariabilem." (Similarly the philosophers maintain that the quadrangle is to be reduced to a triangle, that is, to body, spirit, and soul. These three appear in three colours which precede the redness: the body, or earth, in Saturnine blackness; the spirit in lunar whiteness, like water; and the soul, or air, in solar yellow. Then the triangle will be perfect, but in its turn it must change into a circle, that is into unchangeable redness.) Here the fourth is fire, and an *everlasting* fire.

⁴² Cf. "city" and "castle" in commentary to dream 10, pars. 137ff. (See figs. 31, 50, 51.) The alchemists similarly understand the *rotundum* arising out of the square as the *oppidum* (city). See Aegidius de Vadis, "Dialogus inter naturam et filium Philosophiae," *Theatr. chem.*, II, p. 115.

⁴³ A quotation attributed to Pseudo-Aristotle ("Tractatus Aristotelis," *Theatr. chem.*, V, pp. 880ff.), but not traceable.

⁴⁴ In the *Tractatus aureus ... cum Scholiis Dominici Gnosii* (1610), p. 43, there is a drawing of the "secret square of the sages." In the centre of the square is a circle surrounded by rays of light. The scholium gives the following explanation: "Divide lapidem tuum in quatuor elementa ... et coniunge in unum et totum habebis magisterium" (Reduce your stone to the four elements ... and unite them into one and you will have the whole magistry)—a quotation from Pseudo-Aristotle. The circle in the centre is called "mediator, pacem faciens inter inimicos sive elementa imo hic solus efficit quadraturam circuli" (the mediator, making peace between enemies, or [the four] elements; nay rather he alone effects the squaring of the circle).—Ibid., p. 44. The circumambulation has its parallel in the "circulatio spirituum sive distillatio circularis, hoc est exterius intro, interius foras: item inferius et superius, simul in uno circulo convenient, neque amplius cognoscas. quid vel exterius, vel interius, inferius vel superius fuerit: sed omnia sint unum in uno circulo sive vase. Hoc enim vas est Pelecanus verus Philosophicus, nec alius est in toto mundo quaerendus." (... circulation of spirits or circular distillation, that is, the outside to the inside, the inside to the outside, likewise the lower and the upper; and when they meet together in one circle, you could no longer recognize what was outside or inside, or lower or upper; but all would be one thing in one circle or vessel. For this vessel is the true philosophical Pelican, and there is no other to be sought for in all the world.) This process is elucidated by the accompanying drawing. The little circle is the "inside," and the circle divided into four is the "outside": four rivers flowing in and out of the inner "ocean."—Ibid., pp. 262f.

⁴⁵ Wilhelm and Jung, *Secret of the Golden Flower* (1962 edn.), p. 22.

⁴⁶ Cf. Jung, “The Spirit Mercurius.”

⁴⁷ Ed. Preisendanz, *Papyri Graecae Magicae*, I, p. 195.

⁴⁸ Cf. Bruchmann, *Epitheta deorum*, s.v.

⁴⁹ *Les Images des dieux*, p. 403.

⁵⁰ “Paracelsus as a Spiritual Phenomenon,” pars. 168, 206ff.

⁵¹ Budge, *The Gods of the Egyptians*, I, pp. 21 and 404.

⁵² It was considered at length in my “Psychology and Religion.” pp. 24ff.

⁵³ Orphic mosaic from Tramithia (Eisler, *Orpheus—the Fisher*, pp. 271f.). We can take this inscription as a joke without offending against the spirit of the ancient mysteries. (Cf. the frescoes in the Villa dei Misteri in Pompeii—Maiuri, *La Villa dei Misteri*—where drunkenness and ecstasy are not only closely related but actually one and the same thing.) But, since initiations have been connected with healing since their earliest days, the advice may possibly be a warning against water drinking, for it is well known that the drinking water in southern regions is the mother of dysentery and typhoid fever.

⁵⁴ Eisler, *Orpheus—the Fisher*.

⁵⁵ This is roughly the opinion of the dreamer.

⁵⁶ Cf. figs. 170, 171, 172, 174, 176, 177.

⁵⁷ Arnobius, *Adversus gentes*, V, 21 (Migne. *P.L.*, vol. 5, col. 1125). For similar practices during the Middle Ages, cf. Hammer-Purgstall, *Mémoire sur deux coffrets gnostiques du moyen age*. See fig. 70.

⁵⁸ Avalon, *The Serpent Power*; Woodroffe, *Shakti and Shakta*.

⁵⁹ The alchemists refer to Lactantius, *Opera*, I, p. 14, 20: “a chaos, quod est rudis inordinataeque materiae confusa congeries” (from the chaos, which is a confused assortment of crude disordered matter).

⁶⁰ Dreyfuss, *Adam und Eva*, quoted by Reitzenstein, *Poimandres*, p. 258.

⁶¹ Pseudonymous author (“peaceable lover of truth”) who lived in England at the beginning of the 17th century.

⁶² Philalethes, *Ripley Reviv’d*, p. 100.

⁶³ [Cf. *Mysterium Coniunctionis*, p. 288, n. 116.—EDITORS.]

⁶⁴ Cf. the commentary to dream 10, second series, par. 141: “And, being chained to the arms and breast of my mother, and to her substance, I cause my substance to hold together and rest.” (“Tractatus aureus,” ch. IV.)

⁶⁵ The idea of the anima as I define it is by no means a novelty but an archetype which we meet in the most diverse places. It was also known in alchemy, as the following scholium proves (“Tractatus aureus,” in *Bibl. chem. curiosa*, I, p. 417): “Quemadmodum in sole ambulantis corpus continuo sequitur umbra ... sic hermaphroditus noster Adamicus, quamvis in forma masculi appareat semper tamen in corpore occultatam Evam sive foeminam suam secum circumfert” (As the shadow continually follows the body of one who walks in the sun, so our hermaphroditic Adam,

though he appears in the form of a male, nevertheless always carries about with him Eve, or his wife, hidden in his body).

⁶⁶ Cf. Jung, *Psychological Types*, Def. 30.

⁶⁷ “Tractatus aureus,” *Ars chemica*, p. 12: “Verum masculus est coelum foeminae et foemina terra masculi” (The male is the heaven of the female, and the female is the earth of the male).

⁶⁸ *Adversus Judaeos*, 13 (Migne, *P.L.*, vol. 2, col. 655).

⁶⁹ Alchemy regarded this synthesis as one of its chief tasks. The *Turba philosophorum* (ed. Ruska, p. 26) says: “Coniungite ergo masculinum servi rubei filium suae odoriferae uxori et iuncti artem gignunt” (Join therefore the male son of the red slave to his sweet-scented wife, and joined together they will generate the Art). This synthesis of opposites was often represented as a brother-and-sister incest, which version undoubtedly goes back to the “Visio Arislei,” *Art. aurif.*, I (see fig. 167), where the cohabitation of Thabritius and Beya, the children of the *Rex marinus*, is described (see *infra*, pars. 434ff.).

⁷⁰ [Based on the translation by Philip Wayne (*Faust, Part Two*, pp. 145f.). Slight modifications have been necessary to accommodate his version to Jung’s commentary.—TRANS.]

⁷¹ The *testudo* (tortoise) is an alchemical instrument, a shallow bowl with which the cooking-vessel was covered on the fire. See Rhenanus, *Solis e puteo emergentis*, p. 40.

⁷² Jung, *Symbols of Transformation*, index, s.v.

⁷³ *Art. aurif.*, II, p. 220: a quotation from Senior. *Viriditas* is occasionally called *azoth*, which is one of the numerous synonyms for the stone.

⁷⁴ According to Berthelot (*Origines de l’alchimie*, p. 100), the anonymous author called Christianos was a contemporary of Stephanos of Alexandria, and must therefore have lived about the beginning of the 7th century.

⁷⁵ Berthelot, *Alchimistes grecs*, VI, v, 6. The almost bestial *κραυγάζειν* (shriek) points to an ecstatic condition.

⁷⁶ A treatise (of Arabic origin?) is ascribed to her under the title “Practica Mariae Prophetissae in artem alchemicam,” *Art. aurif.*, I, pp. 319ff.

⁷⁷ *Panarium*, XXVI. Concerning further possible connections with Mariamne and with the Mary Magdalene of the *Pistis Sophia*, cf. Leisegang, *Die Gnosis*, pp. 113f., and Schmidt, “Gnostische Schriften,” pp. 596ff. [On *Panarium*, cf. *Aion*, pars. 314ff.]

⁷⁸ Aros = Horos. *Ἰσις προφήτις τῷ νιῷ αὐτῆς* (Berthelot, *Alchimistes grecs*, I, xiii) may be an earlier version of the Maria dialogue. Isis and Maria were easy to confuse.

⁷⁹ “Matrimonifica gummi cum gummi vero matrimonio.”—*Art. aurif.*, I, p. 320.

⁸⁰ *Von hylealischen Chaos*, pp. 239f.

⁸¹ “Aphorismi Basiliani,” *Theatr. chem.*, IV, p. 368.

⁸² *Ars chemica*, pp. 247, 255.

⁸³ Arnaldus de Villanova (“Carmen,” *Theatr. chem.*, IV, p. 614) has summed up the quintessence of Maria’s treatise very aptly in the following verses:

“Maria mira sonat breviter, quod talia tonat.

Gummis cum binis fugitivum figit in imis....

Filia Plutonis consortia iungit amoris,
Gaudet in assata sata per tria sociata.”

(Maria utters brief wonders because such are the things that she thunders. She fixes what runs to the bottom with double-strong gums.... This daughter of Pluto unites love’s affinities, Delighting in everything sown, roasted, assembled by threes.)

⁸⁴ Cf. my remarks on Paracelsus’ “Adech” in “Paracelsus as a Spiritual Phenomenon,” pars. 168, 203ff.

⁸⁵ 1. 4. 3. (Cf. Max Müller, *The Upanishads*, II, pp. 85–86.)

⁸⁶ There is a rather different formulation in Distinction XIV of the “Allegoriae sapientum” (*Theatr. chem.*, V, p. 86): “Unum et est duo, et duo et sunt tria, et tria et sunt quatuor, et quatuor et sunt tria, et tria et sunt duo, et duo et sunt unum” (One, and it is two; and two, and it is three; and three, and it is four; and four, and it is three; and three, and it is two; and two, and it is one). This evidently represents the quartering (tetrameria) of the one and the synthesis of the four in one.

⁸⁷ In Sudhoff/Matthiessen, XII.

⁸⁸ Folio VIII^v. The *aqua mercurialis* is characterized here as the “bright and clear fluid of Bacchus.” The king and the son are united in the operation, so that at the end only the renewed king and his five servants are left. The *senarius* (sixth) plays a modest role only in later alchemy.

⁸⁹ Paracelsus, *Opera*, ed. Huser, I, p. 503.

⁹⁰ The angels bear Faust’s “immortal part” to heaven, after cheating the devil of it. This, in the original version, is “Faust’s entelechy.”

⁹¹ Cf. the movements of the transforming substance in the “Tabula smaragdina” (*De alchemia*, p. 363).

⁹² “Suo nobis descensu suavem ac salubrem dedicavit ascensum.” *Sermo IV de Ascensione Domini* (Migne, *P.L.*, vol. 183, col. 312).

⁹³ Picinelli, *Mundus symbolicus*, s.v. “rota.”

⁹⁴ “Vom irdischen und himmlischen Mysterium,” ch. V, 1f.

⁹⁵ *Von dem dreyfachen Leben*, ch. IX, 58f.

⁹⁶ *De signatura rerum*, ch. XIV, 15 (trans. Bax, p. 179).

⁹⁷ *Ibid.*, 16 (p 179).

⁹⁸ *Ibid.*

⁹⁹ *Ibid.*, IV, 28 (Bax, p. 37).

¹⁰⁰ Cf. Jung, “The Psychology of the Child Archetype.”

¹⁰¹ Böhme, *De signatura rerum*, ch. IV, 27 (Bax, p. 37).

¹⁰² Böhme, *Gespräch einer erleuchteten und unerleuchteten Seele*, 11–24.

¹⁰³ *Rosarium, Art. aurif.*, II, p. 214.

¹⁰⁴ *Ibid.*, p. 213: “Nec intrat in eum [lapidem], quod non sit ortum ex eo, quoniam si aliquid extranei sibi apponatur, statim corrumpitur” (Nothing enters into it [the stone] that did not come from it; since, if anything extraneous were to be added to it, it would at once be spoiled).

¹⁰⁵ Petronius, *Satyricon*, par. 38: “Phantasia non homo” (He’s a fantasy, not a man).

¹⁰⁶ Prescription for preparation of the *lapis* (Hermes quotation in *Rosarium, Art. aurif.*, II, p. 317): “Fili, extrahe a radio suam umbram: accipe ergo quartam partem sui, hoc est, unam partem de fermento et tres partes de corpore imperfecto,” etc. (Son, extract from the ray its shadow: then take a fourth part of it, i.e., one part of the ferment and three parts of the imperfect body, etc.). For *umbra*, see *ibid.*, p. 233: “Fundamentum artis est sol et eius umbra” (The basis of the art is the sun and its shadow) (fig. 81). The above quotation gives only the sense of the “Tractatus aureus” and is not literal.

¹⁰⁷ Cf. dream 58, par. 304. The alchemical vulture, eagle, and crow are all essentially synonymous.

¹⁰⁸ This quotation from Hermes is likewise an arbitrary reading. The passage runs literally: “Ego sum albus nigri et rubeus albi et citrinus rubei et certe veridicus sum” (I am the white of the black, and the red of the white, and the yellow of the red, and I speak very truth). In this way three meanings are expressed by four colours, in contrast to the formula of Hortulanus which attributes four natures and three colours to the *lapis*.—*De alchemia*, p. 372.

¹⁰⁹ *Art. aurif.*, II, p. 207: “Lapis noster est ex quatuor elementis.”

¹¹⁰ *Ibid.*, p. 208: “In auro sunt quatuor elementa in aequali proportione aptata.”

¹¹¹ *Ibid.*, p. 317: “Recipe de simplicissimo et de rotundo corpore, et noli recipere de triangulo vel quadrangulo sed de rotundo: quia rotundum est propinquius simplicitati quam triangulus. Notandum est ergo, quod corpus simplex nullum habens angulum, quia ipsum est primum et posterius in planetis, sicut Sol in stellis.”

¹¹² A quotation from Ademar (ibid., p. 353): “[Lapis] nihilominus non funditur, nec ingreditur, nec permiscetur, sed vitrificatur” (But [the stone] can neither be melted nor penetrated nor mixed but is made as hard as glass).

¹¹³ There are very interesting parapsychological parallels to this, but I cannot enter upon them here.

¹¹⁴ See pars. 245f., 258f.; and my commentary on *The Secret of the Golden Flower*, ch. I, sec. 2.

¹¹⁵ Valli, “Die Geheimsprache Dantes.”

¹¹⁶ Cf. “Rosarius minor,” *De alchemia*, p. 309.

¹¹⁷ “Symbola Pythagore phylosophi” in Ficino, *Auctores platonici*, Fol. X, III, says: “Ab eo, quod nigram caudam habet abstinere, terrestrium enim deorum est” (Keep your hands from that which has a black tail, for it belongs to the gods of the earth).

¹¹⁸ Although the theme of this study does not permit a full discussion of the psychology of dreams, I must make a few explanatory remarks at this point. Sitting together at one table means relationship, being connected or “put together.” The round table indicates that the figures have been brought together for the purpose of wholeness. If the anima figure (the personified unconscious) is separated from ego-consciousness and therefore unconscious, it means that there is an isolating layer of personal unconscious embedded between the ego and the anima. The existence of a personal unconscious proves that contents of a personal nature which could really be made conscious are being kept unconscious for no good reason. There is thus an inadequate or even non-existent consciousness of the shadow. The shadow corresponds to a negative ego-personality and includes all those qualities we find painful or regrettable. Shadow and anima, being unconscious, are then contaminated with each other, a state that is represented in dreams by “marriage” or the like. But if the existence of the anima (or the shadow) is accepted and understood, a separation of these figures ensues, as has happened in the case of our dreamer. The shadow is thus recognized as belonging, and the anima as not belonging, to the ego.

¹¹⁹ Cf. what I have said about the anima in “The Archetypes of the Collective Unconscious.” pars. 53ff. In Hermes’ treatise, *An die menschliche Seele*, she is called “the highest interpreter and nearest custodian (of the eternal),” which aptly characterizes her function as mediator between conscious and unconscious.

¹²⁰ *Rosarium, Art. aurif.*, II, p. 237.

¹²¹ *Ibid.*, p. 238.

¹²² p. 236.

¹²³ p. 231.

¹²⁴ The uterus is the centre, the life-giving vessel (fig. 87). The stone, like the grail, is itself the creative vessel, the *elixir vitae*. It is surrounded by the spiral, the symbol of indirect approach by means of the *circumambulatio*.

¹²⁵ The centre of the mandala corresponds to the calyx of the Indian lotus, seat and birthplace of the gods. This is called the *padma*, and has a feminine significance. In alchemy the *vas* is often understood as the uterus where the “child” is gestated. In the Litany of Loreto, Mary is spoken of three times as the “*vas*” (“*vas spirituale*,” “*honorabile*,” and “*insigne devotionis*”) and in medieval poetry she is called the “flower of the sea” which shelters the Christ (cf. dream 36). The grail (fig. 88) is closely related to the Hermetic vessel: Wolfram von Eschenbach calls the stone of the grail “*lapsit exillis*.” Arnold of Villanova (d. ?1312) calls the *lapis* “*lapis exilis*,” the uncomely stone (*Rosarium, Art. aurif.*, II, p. 210), which may be of importance for the interpretation of Wolfram’s term.

¹²⁶ See Avalon, *The Serpent Power*.

¹²⁷ Synonymous with the “golden flower.”

¹²⁸ Projection is considered here a spontaneous phenomenon, and not the deliberate extrapolation of anything. It is not a phenomenon of the will.

¹²⁹ “In polo est cor Mercurii, qui verus est ignis, in quo requies est Domini sui, navigans per mare hoc magnum ... cursum dirigit per aspectum astri septentrionalis”—Philalethes, “Introitus apertus,” *Musaeum hermeticum*, p. 655.

¹³⁰ See “Paracelsus as a Spiritual Phenomenon,” pars. 229, 237.

¹³¹ “Disturbed” mandalas occur from time to time. They consist of all forms that deviate from the circle, square, or regular cross, and also of those based not on the number four but on three or five. The numbers six and twelve are something of an exception. Twelve can be based on either four or three. The twelve months and the twelve signs of the zodiac are definite symbolic circles in daily use. And six is likewise a well-known symbol for the circle. Three suggests the predominance of ideation and will (trinity), and five that of the physical man (materialism).

¹³² Cf. the psychological functions in *Psychological Types*, ch. X.

¹³³ *Psychological Types*, pars. 556ff.

¹³⁴ “Ait autem ipse salvator: Qui iuxta me est, iuxta ignem est, qui longe est a me, longe est a regno” (The Saviour himself says: He that is near me is near the fire. He that is far from me is far from the kingdom).—Origen, *Homiliae in Jeremiam*, XX, 3; cited in James, *Apocryphal New Testament*, p. 35.

¹³⁵ Book of Enoch 18 13 and ch. 21 (Charles, *Apocrypha and Pseudepigrapha*, II, pp. 200, 201).

¹³⁶ A more detailed commentary on this dream is to be found in Jung, “Psychology and Religion,” pars. 59ff.

¹³⁷ This vision is treated in greater detail in Jung, “Psychology and Religion,” pars. 112ff.

¹³⁸ Bischoff, *Die Elemente der Kabbalah*, I, pp. 63ff. Further associations with “32” on pp. 175ff.

- ¹³⁹ Agrippa, *De incertitudine*, II, ch. XV.
- ¹⁴⁰ Franck, *Die Kabbala*, p. 137.
- ¹⁴¹ Knorr von Rosenroth, *Kabbala denudata*, I, p. 602.
- ¹⁴² Allendy, *Le Symbolisme des nombres*, p. 378.
- ¹⁴³ Bas-relief at Philae (Budge, *Osiris and the Egyptian Resurrection*, I, p. 3); and *The Book of the Dead* (1899), Papyrus of Hunefer, pl. 5. Sometimes there are three with animal heads and one with a human head, as in the Papyrus of Kerasher (*ibid.*). In a 7th-century manuscript (Gellone) the evangelists actually wear their animal heads, as in several other Romanesque monuments.
- ¹⁴⁴ So called by Melito of Sardis, *De baptismo*, in Pitra, *Analecta sacra*, II, p. 5.
- ¹⁴⁵ Delacotte, *Guillaume de Digulleville*.
- ¹⁴⁶ An idea which corresponds to dream 21 (par. 198), of the large sphere containing many little spheres.
- ¹⁴⁷ Cf. my remarks on “inflation” in “The Relations between the Ego and the Unconscious,” pars. 227ff.
- ¹⁴⁸ Cf. my commentary on *The Secret of the Golden Flower*, pars. 31ff. Cf. also “Concerning Mandala Symbolism.”
- ¹⁴⁹ Revised edition: *Symbols of Transformation*.
- ¹⁵⁰ In the cloisters of Basel Cathedral.
- ¹⁵¹ This was observed chiefly in men, but whether it was mere chance I am unable to say.
- ¹⁵² Observed mainly in women. But it occurs so rarely that it is impossible to draw any further conclusions.
- ¹⁵³ I have mentioned only a few of these parallels here.
- ¹⁵⁴ The image that presents itself in this material as a goal may also serve as the origin when viewed from the historical standpoint. By way of example I would cite the conception of paradise in the Old Testament, and especially the creation of Adam in the Slavonic Book of Enoch. Charles, *Apocrypha and Pseudepigrapha*, II, 425ff.; Förster, “Adams Erschaffung und Namengebung.”
- ¹⁵⁵ If we divide the four hundred dreams into eight groups of fifty each, we come to the following results:

I	6	mandalas
II	4	”
III	2	”
IV	9	”
V	11	”
VI	11	”
VII	11	”
VIII	17	”

So a considerable increase in the occurrence of the mandala motif takes place in the course of the whole series.

- ¹⁵⁶ “The most natural and perfect work is to generate its like.”

¹ An alarming example of this kind of “alchemy” is to be found in the illustrated work *Geheime Figuren der Rosenkreuzer*, belonging to the 16th and 17th centuries. The so-called Sachse Codex, belonging to the first half of the 18th century, also gives an excellent idea of this amazing literature. (Cf. Hall, *Codex Rosae Crucis*.)

² “Spiritual Development as Reflected in Alchemy and Related Disciplines.”

³ *La tradizione ermetica*.

⁴ This word comes from *íos* (poison). But since it has about the same meaning as the red tincture of later alchemy I have translated *iosis* as “reddening.”

⁵ This is particularly evident in the writings of Dorn, who violently attacked the quaternity from the trinitarian standpoint, calling it the “quadricornutus serpens” (four-horned serpent). See Jung, “Psychology and Religion,” pars. 103f.

⁶ Cf. Jung, “Paracelsus as a Spiritual Phenomenon,” pars. 165ff., 203ff.

⁷ *Rosarium, Art. aurif.*, II, p. 264: the *aqua permanens* is the “fiery form of the true water.” Ripley, *Opera omnia chemica*, p. 62: “Anima aerea est secretus ignis nostrae philosophiae, oleum nostrum, nostra aqua mystice” (The aerial soul is the secret fire of our philosophy, our oil, our mystic water). “Figurarum Aegyptiorum secretarum” (MS. in author’s coll.), p. 6: “The water of the philosophers is fire.” Philalethes, “Introitus apertus,” *Mus. herm.*, p. 653: “Est nempe in Aqua nostra requisitus ... Ignis” etc. (For in our water fire ... is sought). *Aurora* I, ch. XI, parab. VI: Senior saith: “And when they desire to extract this divine water, which is fire, they warm it with their fire, which is water, which they have measured unto the end and have hidden on account of the unwisdom of fools.” *Aurora* II, *Art. aurif.*, I, p. 212 (quotation from Senior): “Ignis noster est aqua.” *Ibid.*, p. 227: “Philosophus autem per aquam, vulgus vero per ignem” (The philosopher through water, ordinary people through fire).

⁸ Zosimos, in Berthelot, *Alch. grecs*, III, lii, 2.

⁹ “Turba philosophorum,” *Art. aurif.*, I, p. 14: “... aqua permanens, ex qua quidem aqua lapis noster preciosissimus generatur” (... the permanent water, out of which water our most precious stone is generated). “Con., coniug.” *Ars chem.*, p. 128: “Lapidem esse aquam fontis vivi” (That stone is water of a living fountain).

¹⁰ *Ibid.*, p. 66: “Vita uniuscuiusque rei ... est vivum quod non moritur, quamdiu mundus est, quia est caput mundi” etc. ([Water is] the life of everything; it is alive because it does not die as long as the world exists, for it is the head [i.e., principle] of the world).

¹¹ Scites, Frictes, Feritis = Socrates (*Turba* [ed. Ruska], p. 25).

¹² Bonellus, Balinus, Belinus = Apollonius of Tyana (Steinschneider and Berthelot, cited in Ruska, *ibid.*, p. 26).

¹³ “In Turbam philosophorum exercitationes,” *Art. aurif.*, I, p. 167.

¹⁴ For instance, “Unum in uno circulo sive vase” (One in one circle or vessel).—Scholia to the Hermetic “Tractatus aureus,” *Bibl. chem. curiosa*, I, p. 442.

¹⁵ Therefore it is called “domus vitrea sphaeratis sive circularis” (the spherical or circular house of glass).—“Epistola ad Hermannum,” *Theatr. chem.*, V, p. 896. The *vas* is a “sphaera, quam cribrum vocamus” (sphere, which we call a sieve).—“Allegoriae super librum Turbae,” *Art. aurif.*, I, p. 144. This idea appears as early as Greek alchemy, for instance in Olympiodorus (Berthelot, *Alch. grecs*, II, iv, 44, 11. 17–18). The *vas* is an *ὄργανον κυκλικόν, ἀφιάλη σφαιροειδής* (a circular instrument, a phial of spherical shape).

¹⁶ “Vas spagyricum ad similitudinem vasis naturalis construendum. Videmus enim totum caelum et elementa similitudinem habere sphaerici corporis, in cuius centro viget ignis calor inferioris ... necessarium igitur fuit nostrum ignem poni extra nostrum vas, et sub eius rotundi fundi centro, instar solis naturalis.” (The spagyric vessel is to be constructed after the model of the natural vessel. For we see that the whole sky and the elements resemble a spherical body, in the centre of which lives the heat of the lower fire.... It was therefore necessary to put our fire outside our vessel, beneath the centre of its rounded base, like the natural sun.)—Dorn, “Physica Trismegisti,” *Theatr. chem.*, I, p. 430. “Vas est sicut opus Dei in vase germinis divi” (The vessel is like the work of God in the vessel of divine germination). “Vas autem factum est rotundum ad imitationem superi[oris] et inferi[oris]” (The vessel is made round, in imitation of the upper and the lower).—“Liber Platonis quattorum,” *Theatr. chem.*, V, pp. 148, 152. Reitzenstein (*Poimandres*, p. 141) is therefore justified in comparing the *vas mirabile* on the head of the angel (in the treatise “Isis to Horus” in Berthelot, *Alch. grecs*, I, xiii, 1) to the *κύκλος δισκοειδής* on the head of Chnuphis in Porphyry. (Cf. fig. 203.)

¹⁷ Dorn, “Congeries,” *Theatr. chem.*, I, p. 574: “Vas nostrum ad hunc modum esse debet, ut in eo materia regi valeat a caelestibus corporibus. Influentiae namque caelestes invisibiles et astrorum impressiones apprime necessariae sunt ad opus.” (Our vessel must be such that in it matter can be influenced by the heavenly bodies. For the invisible celestial influences and the impressions of the stars are necessary to the work.)

¹⁸ *Vas as matrix*: Ripley, *Opera omnia*, p. 23; “In Turbam philosophorum exercitationes,” *Art. aurif.*, I, p. 159; *Aurora II*, *Art. aurif.*, I, p. 203; “Consil. coniug.,” *Ars chem.*, p. 204.

¹⁹ Ripley, *Opera omnia*, p. 30: “In uno vitro debent omnia fieri, quod sit forma ovi” (Everything must be done in one glass, which must be egg-shaped).

²⁰ Philalethes, “Fons chymicae veritatis,” *Mus. herm.*, p. 803: “Quum igitur de vase nostro loquimur, intellige aquam nostram, quum de igne, itidem aquam intellige, et quum de furno disputamus, nihil ab aqua diversum aut divisum volumus” (When, therefore, we speak of “our vessel,” understand “our water”; when we speak of fire, again understand water; and when we discuss the furnace, we mean nothing that is different or distinct from water). Mercurius, i.e., the *aqua permanens*, is “vas nostrum verum occultum, hortus item Philosophicus, in quo Sol noster orietur et surgit” (our true hidden vessel, and also the Philosophical Garden in which our sun rises and ascends). (Philalethes, “Metallorum metamorphosis,” *Mus. herm.*, p. 770.) Other names are *mater*, *ovum*, *furnus secretus*, etc. (Ibid., p. 770; also *Aurora II*, *Art. aurif.*, I, p. 203). “The vessel of the Philosophers is their water” (Hermes quotation in Hoghelande, “De alchimiae difficultatibus,” *Theatr. chem.*, I, p. 199).

²¹ *Vas = ignis verus* (Philalethes, “Metallorum metamorphosis,” *Mus. herm.*, p. 770) and *vinum ardens, ignis* (Mylius, *Philosophia reformata*, p. 245). “[Vas Hermetis] est mensura ignis tui” (The vessel of Hermes is the measure of your fire). “Practica Mariae,” *Art. aurif.*, I, p. 323. In the alchemical commentary (“Recueil stéganographique”) to Bérolalde de Verville’s *Songe de Poliphile*, fire and water are interpreted morally as “flames and tears.”

²² Quercetanus, “De ortu et causis metallorum,” *Theatr. chem.*, II, pp. 198ff.

²³ Even Meyrink (in the 20th century) still believed in the possibility of the alchemical procedure. We find a remarkable report of his own experiments in his introduction to *Aquinas: Abhandlung über den Stein*, pp. xxixff.

¹ Evola (*La tradizione ermetica*, pp. 28f.) says: “The spiritual constitution of man in the premodern cycles of culture was such that each physical perception had simultaneously a psychic component which ‘animated’ it, adding a ‘significance’ to the bare image, and at the same time a special and potent emotional tone. Thus ancient physics was both a theology and a transcendental psychology, by reason of the illuminating flashes from metaphysical essences which penetrated through the matter of the bodily senses. Natural science was at once a spiritual science, and the many meanings of the symbols united the various aspects of a single knowledge.”

² *Rosarium, Art. aurif.*, II, p. 231: “Et ille dicitur lapis invisibilitatis, lapis sanctus, res benedicta” (And it is called the stone of invisibility, the sacred stone, the blessed thing).

³ Maier, *Symbola aureae mensae*, p. 386: “... non parvis sumptibus illam invenere artem,/Qua non ars dignior ulla est,/Tingendi lapidem Aetherium ...” (... not with small expense did they find that art, than which there is no more worthy art; the art of tincturing the ethereal stone). This is a reference to Marcellus Palingenius, “poeta et sacerdos,” and his group.

⁴ “Omnes receptae spernendae sunt in arte” (*Rosarium, Art. aurif.*, II, p. 223).

⁵ Jurain, *Hyle und Coahyl; aus dem Aethiopischen ins Lateinische, und aus dem Lateinischen in das Teutsche translätiret und übergesezt durch D. Johann Elias Müller* (Hamburg, 1732). The text is by no means old, and bears all the traits of the decadent period (18th century). I am indebted to Prof. Th. Reichstein (Basel) for introducing me to this little book.

⁶ Rose noble = English gold coin of the 15th and 16th centuries.

⁷ “De alchimiae difficultatibus,” *Theatr. chem.*, I, p. 164. Likewise Philalethes, “Introitus apertus,” *Mus. herm.*, p. 687: “Terra enim germinandi avida aliquid semper fabricat, interdum aves aut bestias reptiliaque in vitro conspiciere imaginabere ...” (The earth, being eager to germinate, always produces something; sometimes you will imagine that you see birds or beasts or reptiles in the glass). The man on the cathedra undoubtedly refers to a vision of Hermes such as can be found in the old treatise *Senioris Zadith filii Hamuelis Tabula chymica*, pp. 1ff. (see fig. 128). Senior was an Arabic author of the 10th century. The figure as depicted in the treatise, of a wise old man holding the book of secrets on his knees, was taken over in the frontispiece of Bérolalde de Verville, *Le Songe de Poliphile* (see fig. 4). The oldest vision extant of this kind is perhaps that of Krates. The “Book of Krates” was handed down in Arabic and—in its present form—would appear to belong to the 9th century, but the greater part of it is of Greek origin and therefore considerably older. Berthelot gives the following passage: “Then I saw an old man, the handsomest of men, sitting in a chair. He was dressed in white, and was holding in his hand a board from the chair, on which rested a book.... When I asked who this old man was, I was told: He is Hermes Trismegistus, and the book he has in front of him is one of those which contain the explanation of the secret things he has hidden from men.” (*La Chimie au moyen âge*, III, pp. 46ff.)

⁸ “De alch. diff.,” *Theatr. chem.*, I, p. 199. It is not clear whether by “scripture” he means the traditional description of the vessel in the treatises of the masters, or the Holy Scripture.

⁹ Sendivogius, “Novum lumen,” *Mus. herm.*, p. 574.

¹⁰ “Compendium,” *Bibl. chem. curiosa*, I, p. 875.

¹¹ “Speculativa philosophia,” *Theatr. chem.*, I, p. 275.

¹² Hoghelande, “De alch. diff.,” *Theatr. chem.*, I, p. 150.

¹³ Text of the operative passage: "... quasi Materia Hypostatica fingit se in aquam demersum per illusionem. ..." The illusion could refer to *demergere* or to *fingere*. Since the former makes no sense I have chosen the latter possibility.

¹⁴ *Theatr. chem.*, V, p. 884.

¹⁵ *Della tramutatione metallica*. A song by Josephus Avantius about Nazari runs: "Somnia credentur vix; non tamen omnia falsa, / Quae tali fuerint praemeditata viro" (The dreams will hardly be believed; they are not, however, all false that were meditated by such a man).

¹⁶ *Art. aurif.*, I, pp. 146ff.

¹⁷ Berthelot, *Chimie au moyen âge*, III, p. 119.

¹⁸ Cf. Jung, "The Visions of Zosimos."

¹⁹ Sendivogius, "Parabola," *Bibl. chem.*, II, p. 475. Khunrath (*Von hylealischen Chaos*, p. 42) says; "[The] Cabalistic *habitaculum Materiae Lapidis* was originally made known from on high through Divine Inspiration and special Revelation, both with and without instrumental help, 'awake as well as asleep or in dreams.'"

²⁰ "De ratione conficiendi lapidis," *Theatr. chem.*, II, p. 256.

²¹ *Von hylealischen Chaos*, p. 185.

²² Similar views in Hoghelande, "De alch. diff.," *Theatr. chem.*, I, p. 154; *Turba*, ed. Ruska, p. 155, 8; and Dorn, "Physica Trismegisti," *Theatr. chem.*, I, p. 413; and these tracts in *Musaeum hermeticum*: "Tractatus aureus," p. 8; Madathanus, "Aureum saeculum," p. 55; "Aquarium sapientum," p. 75; "Gloria mundi," p. 212.

²³ "De alch. diff.," *Theatr. chem.*, I, p. 194. He refers there to *Turba XXXIX* (ed. Ruska, p. 147, 2): "Maius est, quam quod ratione percipiatur [nisi] divina inspiratione" (It is too great to be conceived by reason without divine inspiration).

²⁴ "De alch. diff.," p. 205.

²⁵ Sendivogius, "Novum lumen," *Mus. herm.*, p. 577: "Materia prima, quam solus Deus scit."

²⁶ Khunrath, *Von hyleal. Chaos*, pp. 71f. Note the implied reference to the Logos (John 1 : 9–11).

²⁷ "Instructio de arbore," *Theatr. chem.*, VI, p. 168. [Though Espagnet is held on good authority to be the author of this work and it is listed under his name in the bibliography for purposes of reference, his authorship is controversial. —EDITORS.]

²⁸ "Quaeso, oculis mentis hanc grani tritici arbusculam secundum omnes suas circumstantias aspice, ut arborem Philosophorum plantare ... queas."

²⁹ *Theatr. chem.*, I, p. 472: "Ex aliis nunquam unum facies quod quaeris, nisi prius ex te ipso fiat unum."

³⁰ Probably a reference to the "Tabula smaragdina" (ed. Ruska, p. 2): "Et sicut omnes res fuerunt ab uno, meditatione unius: sic omnes res natae," etc. (And as all things proceed from the One, through the meditation of the One, so all things are born ... etc.). Hence the rule that the alchemist must not have any serious physical defects, mutilated limbs, etc. See Geber, *Summa perfectionis*, Lib. I: "Si vero fuerit artificis corpus debile et aegrotum, sicut febrientium, vel leprosum corpora, quibus membra cadunt, et in extremis vitae laborantium, et iam aetatis decrepitae senum ad artis complementum non perveniet. His igitur naturalibus corporis impotentiis impeditur artifex in intentione sua." (But if the body of the artifex is weak and sick, like bodies of people with fever or leprosy, whose limbs fall off, or like the bodies of people labouring at the end of their life, or of old men of decrepit age, he will not achieve the completion of the Art. By these natural disabilities of the body the artifex is hindered in his intention.)

Another old text, the “Septem tractatus seu capitula Hermetis Trismegisti aurei,” *Ars chemica*, ch. I, gives similar advice: “Ecce vobis exposui, quod celatum fuerat, quoniam opus vobiscum, et apud vos est, quod intus arripiens et permanens in terra vel in mari habere potes” (I have expounded to you what had been hidden; the work is with you and among you, and grasping it steadfastly you can have it on land or sea).

³¹ *Art. aurif.*, II, p. 244. Ruska (*Turba*, p. 342) dates the *Rosarium* to the middle of the 15th century.

³² “Pone ergo mentem tuam super salem, nec cogites de aliis. Nam in *ipsa sola* occultatur scientia et arcanum praecipuum, et secretissimum omnium antiquorum Philosophorum.” The *Bibliotheca chemica* version, p. 95, has “*ipsa sola*”; likewise the *Rosarium philosophorum* of 1550. Unfortunately I have no access to the manuscripts.

³³ Cf. the *sal sapientiae* which, according to the ancient rite of baptism, was and still is given to the baptized.

³⁴ Khunrath, *Von hyleal. Chaos*, pp. 257, 260, 262.

³⁵ *Ibid.*, p. 258.

³⁶ *Art. aurif.*, II, p. 214: “Et vide secundum naturam, de qua regenerantur corpora in visceribus terrae. Et hoc imaginare per veram imaginationem et non phantasticam.” (And look according to nature, by which the bodies are regenerated in the bowels of the earth. And imagine this with the true and not with the fantastic imagination.)

³⁷ *Ibid.*, p. 243: “Et invenitur in omni loco et in quolibet tempore et apud omnem rem, cum inquisitio aggravat inquirentem” (And it is found in every place and at any time and in every circumstance, when the search lies heavy on the searcher).

³⁸ Canon of St. Paul’s, London, physician in chief to Pope Gregory XII, died c. 1252 (Ferguson, *Bibliotheca chemica*, II, p. 271).

³⁹ *Theatr. chem.*, II, p. 444.

⁴⁰ “Liber de alchemia,” *Theatr. chem.*, I, p. 793: “Parmenides ... qui me primum retraxit ab erroribus, et in rectam viam direxit” (Parmenides ... who first pulled me back from errors, and directed me into the straight path).

⁴¹ “De alch. diff.,” *Theatr. chem.*, I, pp. 213f.

⁴⁴ Richardus, “Correctorium alchymiae,” *Theatr. chem.*, II, p. 451.

⁴⁵ *Ibid.*, p. 459.

⁴⁶ In *Theatr. chem.*, I.

⁴⁷ “Philosophia chemica,” *Theatr. chem.*, I, p. 485: “Verum forma quae hominis est intellectus, initium est, medium, et finis in praeparationibus: et ista denotatur a croceo colore, quo quidem indicatur hominem esse maiorem formam et principalem in opere spagirico.” The *forma* works through *informatio* (also described as *fermentatio*). *Forma* is identical with *idea*. Gold, silver, and so on are forms of matter, therefore one can make gold if one succeeds in impressing the form of gold (*impressio formae*) on the *informis massa* or chaos, i.e., the *prima materia*.

⁴⁸ *Theatr. chem.*, V.

⁴⁹ *Ibid.*, p. 137.

⁵⁰ This “book” explains “quid separetur et praeparetur.” The *separatio* or *solutio* refers to the decomposition of the original matter into elements.

⁵¹ The text says: "... liber in exaltatione animae, cum sit separatio naturae, et ingenium in conversione sua a materia sua" (... the book [treating of] the exaltation of the soul, its separation from nature, its intrinsic spirituality and its conversion from its own materiality). The *anima* is separated from its body (*separatio*). As an *ingenium*, it is the body's essential quality or "soul," whose material nature has to be transformed into something higher.

⁵² "Est sicut praeparatio totius, et conversio naturae ad simplex ... et necesse est in eo elevari ab animalitate, plus quam natura, ut assimuletur praeparation[e] ipsis intelligentiis, altissimis, veris" (It is like the preparation of the whole, and the conversion of nature to the simple ... and it is necessary to rise above animality more than does nature, in order to be assimilated by means of this preparation to the highest, truest intelligences). So the chief work falls to the intellect, namely sublimation up to the highest stage, where nature is transformed into the *res simplex*, which, in accordance with its own nature, is akin to the spirits, angels, and eternal ideas. In the second column this highest stage is fire, "qui est super omnia elementa, et agit in eis"; in the third column it is the ethereal (highest) form of transformed nature, and in the fourth it is the goal of the whole process.

⁵³ There is an introductory remark to this series: "Vel si vis potes illas [*scil.* exaltationes] comparare elementis" (If you wish you can compare those [exaltations] to the elements).

⁵⁴ "... rationis vere dirigentis ad veritatem" (... [of] reason that truly leads to truth).

⁵⁵ The *effectus* refer to the preceding stages in the process of transformation.

⁵⁶ 'Ανωτάτω μὲν οὖν εἶναι τό πῦρ (Fire has the uppermost place).—Diogenes Laertius, *Lives of Eminent Philosophers*, VII, i (on Zeno), 137.

⁵⁷ Stoic doctrine

⁵⁸ The soul still has a luminous or fiery nature in Lactantius.

⁵⁹ Aristotle, *De Coelo* (trans. Guthrie, I, p. 3), and *Meteorologica* (ed. Bekker), I, p. 3.

⁶⁰ *Ibid.*, XII, p. 7: God is οὐσία τις αἰδιος καί ἀκίνητος (an eternal and immovable being).

⁶¹ Fechner (*Elemente der Psychophysik*, II, p. 526) thinks in the same way: "That which is psychically homogeneous and simple is associated with physical multiplicity, whereas physical multiplicity contracts psychically into the homogeneous, the simple, and yet simpler."

⁶² *Theatr. chem.*, V, p. 145.

⁶³ Instead of "intelligentiae."

⁶⁴ Instead of "intelligentia."

⁶⁵ Instead of "et quid."

⁶⁶ "Et dixit philosophus in libro Dialogorum: Circuivi tres coelos, scilicet coelum naturae compositae, coelum naturae discretae et coelum animae. Cum autem volui circumire coelum intelligentiae, dixit mihi anima, non habes illuc iter, et attraxit me natura et attractus sum. Hoc autem dictum principale, non posuit philosophus ad significandam hanc scientiam, sed quia voluit ut sermones sui non vacarent manifestatione, virtutis liberantis creaturam, et voluit per eos in hac specie operis, ut cognoscatur praeparatio deterior, per praeparationem superiorem."—"Liber Platonis Quartorum," *Theatr. chem.*, V, p. 145.

⁶⁷ *Ibid.*, p. 144: "Sedentes super flumina Eufrates sunt Caldaeii ... priores, qui adinvenerunt extrahere cogitationem" (The Chaldaeans dwelling on the river Euphrates were ... the first to find out how to extract the cogitation).

⁶⁸ *Ibid.*, p. 137.

⁶⁹ Ibid., p. 124: “Si utaris opere exteriori, non utaris nisi occipitio capitis et invenies” (If you use an exterior operation you should use only the occiput and then you will find [the goal]). The conjecture “goal” is subject to the reservation that I have not yet been able to obtain the Arabic text.

⁷⁰ Ibid., p. 124: “Os capitis est mundum et est ... minus os, quod sit in [h]omine [text: nomine], et vas mansionis cogitationis et intellectus ...” (The skull is pure and ... moreover it is a comparatively small bone in [man], and it is the vessel of cogitation and intellect ...).

⁷¹ “Res convertuntur per tempus ad intellectum per certitudinem, quantum partes assimilantur in compositione et in forma. Cerebrum vero propter vicinitatem cum anima rationali [the “et” here should be deleted] permixtioni oportuit assimilari, et anima rationalis est simplex sicut diximus.”

⁷² “Speculativa philosophia,” *Theatr. chem.*, I. p. 265.

⁷³ Ibid., p. 298.

⁷⁴ Ibid., p. 264.

⁷⁵ Ibid., p. 266.

⁷⁶ Ibid., p. 267: “Transmutemini de lapidibus mortuis in vivos lapides philosophicos.”

⁷⁷ To *Le Tableau des riches inventions*.

⁷⁸ Mehung, “Demonstratio naturae,” *Mus. herm.*, p. 157: “liberi et vacui anima.” (Jean de Meung, born between 1250 and 1280.)

⁷⁹ Norton, “Ordinale,” *Mus. herm.*, p. 519: “nam mens eius cum opere consentiat. ...”

⁸⁰ “Aquarium sapientum,” *Mus. herm.*, p. 107.

⁸¹ *Aurora consurgens* I, ch. X, parab. V: “Alfidius: Scito quod hanc scientiam habere non poteris, quousque mentem tuam deo purifices, hoc est in corde omnem corruptionem deleas.”

⁸² The text has “... virtus, de qua dicitur: virtus ornat animam. Et Hermes: et recipit virtutem superiorum et inferiorum planetarum et sua virtute penetrat omnem rem solidam.” (... virtue of which it is said: virtue adorneth the soul. And Hermes: and it receiveth the virtue of the upper and lower planets and by its virtue penetrateth every solid thing.) Cf. “Tabula smaragdina,” ed. Ruska, p. 2: “et recipit vim superiorum et inferiorum.”

⁸³ The text explains by quoting the Vulgate, Eph. 4 : 23, 24: “Renovamini [autem] spiritu mentis vestrae, et induite novum hominem ...” (D.V.: “And be renewed in the spirit of your mind: and put on the new man ...”) and adds: “hoc est intellectum subtilem.”

⁸⁴ *Aurora* I, ch. IV, parab. IV: “... horridas nostrae mentis purga tenebras.”

⁸⁵ Ibid.: “Senior: et facit omne nigrum album ...”

⁸⁶ *Art. aurif.*, II, p. 228. The text in Geber’s *Summa perfectionis* is much more detailed. It occupies the whole of ch. V of Lib. I, under the title “De impedimentis ex parte animae artificis.” See Darmstaedter, *Die Alchemie des Geber*, pp. 20ff.

⁸⁷ *Art. aurif.*, II, p. 227: “Deum timere, in quo dispositionis tuae visus est, et adjuvatio cujuslibet sequestrati.” This quotation derives from the “Tractatus aureus” in what was probably the first edition (*Ars chemica*). But there the passage (which comes at the beginning of ch. II) runs: “Fili mi, ante omnia moneo te Deum timere, in quo est nisus tuae dispositionis et adunatio cuiuslibet sequestrati” (My son, above all I admonish thee to fear God in whom is the

strength of thy disposition, and companionship for the solitary, whosoever he may be). Concerning the alteration of the Hermes quotations in *Rosarium*, see par. 140, n. 17.

⁸⁸ Cf. Reitzenstein. “Alchemistische Lehrschriften.” Morienus (Morieneus or Marianus) is said to have been the teacher of the Omayyad prince, Kalid or Khalid ibn-Jazid ibn-Muawiyah (635–704). Cf. Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 357. The passage is to be found in Morienus, “De transmutatione metallorum,” *Art. aurif.*, II, pp. 22f.

⁸⁹ “Quibus eam a primaeva rerum natura conferre disposuit” (ibid., p. 22).

⁹⁰ “Animos suos etiam ipsi regere non possunt diutius, nisi usque ad terminum,” etc. (ibid., p. 23).

⁹¹ “... nisi per animae afflictionem” (ibid., pp. 17f.).

⁹² Maier, *Symbola aureae mensae*, p. 568.

⁹³ Ibid., p. 144.

⁹⁴ Ibid., p. 143.

⁹⁵ P. 327: “Meditatio (s.v.) dicitur, quoties cum aliquo alio colloquium habetur internum, qui tamen non videtur. Ut cum Deo ipsum invocando, vel cum se ipso, vel proprio angelo bono.” This description is very similar to the *colloquium* in the *Exercitia spiritualia* of Ignatius of Loyola. All the authors are unanimous in emphasizing the importance of meditation. Examples are unnecessary.

⁹⁶ Cf. Jung. “The Relations between the Ego and the Unconscious,” pars. 341ff.

⁹⁷ “Introitus apertus,” *Mus. herm.*, p. 693.

⁹⁸ “... novam volatilitatem citra ullam manuum impositionem meditabitur.”

⁹⁹ Cf. the Mohammedan legend of the rock in the mosque of Omar, at Jerusalem, which wanted to fly up with Mohammed when he ascended to heaven.

¹⁰⁰ *Von hyleal, Chaos*, pp. 274f.

¹⁰¹ I take this text from a manuscript in my possession entitled “Figurarum Aegyptiorum secretarum ...” *Incipit*: “Ab omni aevo aegyptiorum sacerdotes.” Colophon: “laus jesu in saecula.” (Fol. 47, parchment, 18th cent.) The pictures in this manuscript are identical with those in MS. No. 973 (18th cent.), Bibliothèque de l’Arsenal, Paris. They come from the “Pratique” of Nicolas Flamel (1330–1418). The origin of the Latin text in my manuscript is at present unknown. (See figs. 23, 148, 157, 164.) [See also *Mysterium Coniunctionis*, par. 720.]

¹⁰² *Art. aurif.*, I. Cf. Ruska’s version in *Historische Studien und Skizzen* (ed. Sudhoff), pp. 22ff. A still older series of visions is that of Zosimos in [Ἐπι ἀπερτῆς (Berthelot, *Alch. grecs*, III) and also of Krates (Berthelot, *Chimie au moyen âge*, III).

¹⁰³ “Astrum in homine, coeleste sive supracoeleste corpus.” Since Ruland joins forces with Paracelsus here, I refer the reader to my “Paracelsus as a Spiritual Phenomenon” [especially par. 173].

¹⁰⁴ Ruland, *Lexicon*, s.v. “astrum”: “virtus et potentia rerum, ex praeparationibus acquisita” (the virtue and power of things, that is acquired through the preparations). Hence also extract or Quinta Essentia.

¹⁰⁵ Figulus (*Rosarium novum olympicum*, p. 109) says: “[Anima] is a subtle imperceptible smoke.”

¹⁰⁶ Sendivogius, in *Mus. herm.*, pp. 601ff.

¹⁰⁷ Ibid., p. 618.

¹⁰⁸ Avalon, *The Serpent Power*.

¹⁰⁹ “Et ... volavit super pennas ventorum.”—Vulgate, Ps. 17: 11 (A.V., Ps. 18 : 10).

¹¹⁰ Sendivogius, “De sulphure,” *Mus. herm.*, p. 612.

¹¹¹ *Ibid.*, p. 615. Christ is similarly “imagined” in us—“Aquarium sapientum,” *Mus. herm.*, p. 113: “Deus, antequam Christus filius eius in nobis formatus imaginatusque fuit, nobis potius terribilis Deus” (Before Christ his son was formed and imagined in us, God was more terrible to us).

¹¹² All “our secrets” are formed from an “image” (*imago*), says Ripley (*Opera omnia chemica*, p. 9).

¹ Maier, *Symbola aureae mensae*, p. 202: “Sunt enim plerique libri adeo obscure scripti, ut a solis auctoribus suis percipiantur” (For many of the books are written so obscurely that they are understood only by their authors). Cf. also Maier, *Scrutinium chymicum*, p. 33.

² For instance, the second part of the *Aurora*, in *Art. aurif.*, I.

³ Philalethes (“Introitus apertus,” *Mus. herm.*, p. 660): “Sunt enim in principiis nostris multae heterogenae superfluitates, quae in puritatem nunquam reduci possunt, ea propter penitus expurgare illas expedit, quod factu impossibile erit absque arcanorum nostrorum theoria, qua medium docemus, quo cum ex meretricis menstruo excernatur Diadema Regale” (For there are in our initial material many superfluities of various kinds which can never be reduced to purity. Therefore it is advantageous to wash them all out thoroughly, but this cannot be done without the *theoria* of our secrets, in which we give instructions for extracting the Royal Diadem from the menstruum of a whore). The *Rosarium philosophorum*, subtitled *secunda pars alchemiae*, is such a *theoria* in the true sense of a *visio* (spectacle, watching scenes in a theatre, etc.). Cf. the *theorica* of Paracelsus, in Jung, “Paracelsus the Physician,” par. 41.

⁴ There is a similar illustration in Khunrath’s *Amphitheatrum* (cf. fig. 145).

⁵ John Cremer, Abbot of Westminster, who lived at the beginning of the 14th century. His “Testamentum” is printed in the *Musaeum Hermeticum*.

⁶ Basilus Valentinus, a legendary or fictitious personality.

⁷ Thomas Norton, putative author of the famous “Ordinall of Alchimy.” On the question of his personality, cf. Nierenstein and Chapman, “Enquiry into the Authorship of the *Ordinall of Alchimy*.”

⁸ The vision of the father of Benvenuto Cellini—described in Cellini’s autobiography, I, iv, p. 6—gives us a good idea of such visions: “When I was about five years old my father happened to be in a basement chamber of our house, where they had been washing, and where a good fire of oak logs was still burning; he had a viol in his hand, and was playing and singing alone beside the fire. The weather was very cold. Happening to look into the fire, he spied in the middle of those most burning flames a little creature like a lizard, which was sporting in the core of the intensest coals. Becoming instantly aware of what the thing was, he had my sister and me called, and pointing it out to us children, gave me a great box on the ears, which caused me to howl and weep with all my might. Then he pacified me good-humouredly, and spoke as follows: ‘My dear little boy, I am not striking you for any wrong that you have done, but only to make you remember that that lizard which you see in the fire is a salamander, a creature which has never been seen before by anyone of whom we have credible information.’ So saying, he kissed me and gave me some pieces of money.”

⁹ *Lexicon alchemiae*, s.v. “draco.”

¹⁰ Cf. Taylor, “A Survey of Greek Alchemy.”

¹¹ Reproduced in Berthelot, *Alch. grecs*. Introduction, p. 132.

¹² *Rosarium*, *Art. aurif.*, II, p. 206: “Unius ergo esto voluntatis in opere naturae, nec modo hoc, modo illud attentare praesumas quia in rerum multitudine ars nostra non perficitur. Quantumcunque enim diversificentur eius nomina, tamen semper una sola res est, et de eadem re. ...” (Therefore you must be single-minded in the work of nature, and you must not try now this, now that, because our art is not perfected in a multiplicity of things. For however much its names may differ, yet it is ever one thing alone, and from the *same* thing. ...) “Unus est lapis, una medicina, unum

vas, unum regimen, unaque dispositio” (One is the stone, one the medicine, one the vessel, one the method, and one the disposition). Cf. Reitzenstein, “Alchemistische Lehrschriften,” p. 71. Morienus (“De transmutatione metall.,” *Art. aurif.*, II, pp. 25f.) quotes the Emperor Heraclius (610–41): “Hercules dixit: Hoc autem magisterium ex una primum radice procedit quae postmodum in plures res expanditur et iterum ad unam revertitur. ...” (Hercules [Heraclius] said: This magistry proceeds first from one root, which afterwards expands into several things, and returns again to the one.)

¹³ *Rosarium*, *Art. aurif.*, II, p. 210: “Scitote ergo, quod argentum vivum est ignis, corpora comburens magis quam ignis” (Know therefore that the quicksilver is a fire which burns bodies more than fire [itself]).

¹⁴ Cf. the meaning of the uniting symbol in Jung, *Psychological Types*, pars. 318ff.

¹⁵ Berthelot, *Alch. grecs*, III, vi, 5.

¹⁶ A text ascribed to Ostanes, and transmitted in Arabic, is to be found in Berthelot, *Chimie au moyen âge*, III, pp. 116ff.; also a Greek text in Berthelot, *Alch. grecs*, IV, ii.

¹⁷ Lippmann, *Entstehung und Ausbreitung der Alchemie*, I, p. 334.

¹⁸ Cf. Maier, *Symbola aureae mensae*, p. 19: “[ol]eum extrahere a cordibus statuarum” (extract the oil from the hearts of statues), referring to Raymond Lully. “Codicillus” (*Bibl. chem. curiosa*, I, p. 894). Cf. also the “extraction of the cogitation” mentioned above (par. 375, n. 67).

¹⁹ Berthelot, *Alch. grecs*, III, vi, 5.

²⁰ It is indeed remarkable that the alchemists should have picked on the term *proiectio* in order to express the application of the philosophical Mercurius to base metals.

²¹ Berthelot, *Alch. grecs*, IV, xx, 8.

²² *Ibid.*, III, vi, 8.

²³ *Ibid.*, III, li, 8.

²⁴ Scott, *Hermetica*, I, pp. 149ff.

²⁵ Here we probably enter the realm of Neopythagorean ideas. The penetrating quality of the soul-pneuma is mentioned in Aenesidemus (Zeller, *Die Philosophie der Griechen*, III, p. 26). He also speaks of aer as the original substance, corresponding to the pneuma of the Stoics (p. 23). Hermes, whose pneumatic (wind-) quality (see figs. 210, 211) is indicated by his wings, leads the souls to the Highest, according to Alexander Polyhistor (p. 75), but the impure souls are fettered in the underworld by the Erinyes with unbreakable bonds, like the imperfect ones who in the treatise of Komarios are “chained in Hades” (see fig. 151).

²⁶ The cabalistic idea of God pervading the world in the form of soul-sparks (*scintillae*) and the Gnostic idea of the Spinther (spark) are similar.

²⁷ The concepts of nous and pneuma are used promiscuously in syncretism. The older meaning of pneuma is wind, which is an aerial phenomenon: hence the equivalence of aer and pneuma (Zeller, *Die Philosophie der Griechen*, III, p. 23). Whereas in Anaximenes the original substance is aer (*ibid.*, I, pp. 713ff.), in Archelaus of Miletus, the pupil of Anaxagoras, God is aer and nous. In Anaxagoras the world-creator is Nous, who produces a whirlpool in chaos and thus brings about the separation of ether and air (*ibid.*, I, pp. 687ff.). Concerning the idea of pneuma in syncretism, cf. Leisegang, *Der heilige Geist*, pp. 26ff.

²⁸ Schultz, *Dokumente der Gnosis*, p. 64; Reitzenstein, *Poimandres*, p. 50. In the Neopythagorean view, hermaphroditism is also an attribute of the deity. Cf. Nicomachus, in Zeller, *Philosophie der Griechen*, III, p. 107.

²⁹ The effect of inflation is that one is not only “puffed up” but too “high up.” This may lead to attacks of giddiness, or to a tendency to fall downstairs, to twist one’s ankle, to stumble over steps and chairs, and so on.

³⁰ Berthelot, *Alch. grecs*, IV, xx, 8: τὸ μυστήριον τὸ φρικτὸν καὶ παράδοξον.

³¹ Zeller, *Philosophie der Griechen*, II, p. 152.

³² *Ibid.*, III, pp. 99, 151.

³³ Hippolytus, *Elenchos*, V, 26, 1.—Alchemy transferred the Edem-motif to Mercurius, who was likewise represented as virgin above, serpent below. This is the origin of the Melusina in Paracelsus (see “Paracelsus as a Spiritual Phenomenon,” pars. 179f.).

³⁴ Cf. the salvation and purification of the ἔν τοῖς στοιχείοις συνδεθῆσα θεία ψυχή in the Book of Sophe (Berthelot, *Alch. grecs*, III, xlii, 1).

³⁵ Late Jewish (cabalistic) Gnosis developed a very similar attitude to that of alchemy. Cf. the excellent description by Gaugler, “Das Spätjudentum,” pp. 279ff.

³⁶ The main points of resemblance are: in Osiris, his God-man nature, which guarantees human immortality, his corn characteristics, his dismemberment and resurrection; in Orpheus, the taming of the passions, the fisherman, the good shepherd, the teacher of wisdom, the dismemberment; in Dionysus, his wine characteristics, the ecstatic revelations, the fish symbolism, the dismemberment and resurrection; in Hercules, his subjection to Eurystheus and Omphale, his labours (mainly to redeem suffering humanity from various evils), the cross formed by his journeys (labours 7–10 lead South-North-East-West, while labours 11–12 lead upwards; cf. St. Paul: Eph. 3 : 18), his self-cremation and *sublimatio* culminating in divinity.

³⁷ Cf. for instance, the Polynesian myth of Maui (Hambruch, *Südseemärchen*, p. 289). Further material in Frobenius, *Das Zeitalter des Sonnengottes*.

³⁸ Hauck, *Realencyklopädie*, XII, p. 689, 35: “Celebratio huius sacramenti est imago quaedam repraesentativa passionis Christi, quae est vera eius immolatio” (The celebration of this sacrament is a kind of image that represents Christ’s passion, which is his true immolation).

³⁹ This point of view finds acceptance in the Beuron edition of the Missal (p. x).

⁴⁰ Kramp, *Die Opferanschauungen der römischen Messliturgie*, p. 114.

⁴¹ “Vita corporea actualis sensitiva aut a sensibus pendens” (A real bodily life, apprehended by the senses or dependent on the senses).—Cardinal Álvarez Cienfuegos, S.J. (d. 1739), in Hauck, *Realencyklopädie*, XII, p. 693, 59.

⁴² Cf. sacrifice of the lamb in the “Vita S. Brendani,” from *La Légende latine de S. Brandaines* (based on 11th–13th century MSS.), p. 12: “Dixitque sanctus Brendanus fratribus: ‘Faciamus hic *opus divinum*, et sacrificemus Deo agnum immaculatum, quia hodie cena Domini est.’ Et ibi manserunt usque in Sabbatum sanctum Pasche. Invenerunt eciam ibi multos greges ovium unius coloris, id est albi, ita ut non possent terram videre pre multitudine ovium. Convocatis autem fratribus, vir sanctus dixit eis: ‘Accipite que sunt necessaria ad diem festum de grege.’ Illi autem acceperunt unam ovem et cum illam ligassent per cornua, sequebatur quasi domestica, sequens illorum vestigia. At ille: ‘Accipite, inquit, unum agnum immaculatum.’ Qui cum viri Dei mandata complerent, paraverunt omnia ad

opus diei crastine. ...” (And St. Brendan said to the brothers: “Let us perform here the divine work and sacrifice to God an immaculate lamb, for today is the supper of the Lord.” And they remained there until Holy Saturday. They also found there many flocks of sheep of one colour, i.e., white, so that they could not see the ground because of the great number of sheep. The holy man called the brothers together and said to them: “Take from the flock what you need for the feast day.” And they took one sheep, and when they had bound it by the horns, it followed as if it were a domestic animal, following in their footsteps. And he said: “Take an immaculate lamb.” And when they had done the bidding of the man of God, they prepared everything for the work of the following day.)

Ibid., p. 34: “Confestim tunc cantaverunt tres psalmos: ‘Miserere mei, Deus, et Domine refugium, et Deus, deus meus.’ Ad terciam vero alios tres: ‘Omnes gentes, Deus in nomine, Dilexi quoniam,’ cum alleluya. Deinde immolaverunt agnum immaculatum, et omnes venerunt ad communionem dicentes: ‘Hoc sacrum corpus Domini, et Salvatoris nostri, sanguinem sumite vobis in vitam aeternam.’” (At once they sang three psalms: “Have mercy on me, O God,” and “Lord, thou hast been our refuge,” and “O God, my God”; and at terce three others: “O clap your hands, all ye nations,” “Save me, O God, by thy name,” and “I have loved, because,” with alleluia. Then they sacrificed an immaculate lamb, and they all came to communion, saying: “This is the sacred body of the Lord our Saviour, take the blood unto you for life eternal.”)

⁴³ Ἰϊάρεδρος = ministering spirit. So Khunrath and others.

⁴⁴ Von hyleal. *Chaos*, p. 59 et passim. The much earlier Morienus (“De transmutatione metall.,” *Art. aurif.*, II. p. 37) says: “In hoc enim lapide quattuor continentur elementa, assimilaturque Mundo et Mundi composition!” (For in this stone the four elements are contained, and it is made similar to the World and the composition of the World).

⁴⁵ Morienus says to King Kalid (ibid., p. 37): “Haec enim res a te extrahitur: cuius etiam minera tu existis, apud te namque illam inveniunt, et ut verius confitear, a te accipiunt: quod cum probaveris, amor eius et dilectio in te augebitur. Et scias hoc verum et indubitabile permanere.” (For this thing is extracted from thee, and thou art its ore [raw material]; in thee they find it, and that I may speak more plainly, from thee they take it; and when thou hast experienced this, the love and desire for it will be increased in thee. And know that this remains true and indubitable.)

⁴⁶ “In stercore invenitur.”

⁴⁷ Maier, *Symbola aureae mensae*, p. 336.

⁴⁸ Khunrath (*Von hyleal, Chaos*, p. 410), for instance, says: “So work even in the laboratory by thyself alone, without collaborators or assistants, in order that God, the Jealous, may not withdraw the art from thee, on account of thy assistants to whom He may not wish to impart it.”

⁴⁹ Geber, “Summa perfectionis,” *Bibl. chem.*, I, p. 557b: “Quia nobis solis artem per nos solos investigatam tradimus et non aliis ...” (Because we hand down the art which we alone have investigated, to ourselves alone and to no one else ...).

⁵⁰ I am setting aside the later Rosicrucians and the early “Poimandres” community, of which Zosimos speaks [infra, par. 456]. Between these two widely separated epochs I have found only one questionable passage, in the “Practica Mariae Prophetissae” (*Art. aurif.*, I, p. 323) (see fig. 78), where the “interlocutor” Aros (Horus) asks Maria: “O domina, obedisti in societate Scoyari: O prophetissa, an invenisti in secretis Philosophorum ...” (O lady, did you obey in the society of Scoyarus: O Prophetess, did you find the secrets of the philosophers ...?). The name *Scoyaris* or *Scoyarus* recalls the mysterious *Scayolus* in the writings of Paracelsus (*De vita longa*), where it means the adept.

(*Scayolae* are the higher spiritual forces or principles. See “Paracelsus as a Spiritual Phenomenon,” pars. 206ff.) Is there perhaps a connection here? At any rate there seems to be an allusion to a *societas*. The treatise of Maria may go back to very early times and thus to the Gnostic societies. Agrippa (*De incertitudine scientiarum*, ch. XC) mentions an alchemical initiation vow which may possibly refer to the existence of secret societies. Waite (*The Secret Tradition in Alchemy*) comes to a negative conclusion in this respect.

⁵¹ The *Turba philosophorum* is an instructive example in this respect.

⁵² Morienus, “De transmut. metall.,” *Art. aurif.*, II, p. 37: “Magisterium est arcanum Dei gloriosi.” “Consil. coniug.,” *Ars chemica*, p. 56: “Donum et secretorum secretum Dei.” *Rosarium*, *Art. aurif.*, II, p. 280; “Divinum mysterium a Deo datum et in mundo non est res sublimior post animam rationalem” (The divine mystery was given by God and there is in the world no thing more sublime except the rational soul).

⁵³ *Ibid.*, pp. 212, 228.

⁵⁴ *Ibid.*, pp. 219, 269.

⁵⁵ *Ibid.*, p. 230. Alchemy is superior to all other sciences in the opinion of Djabir or Geber (8th cent.): “Indeed, any man who is learned in any science whatever, who has not given part of his time to the study of one of the principles of the Work, in theory or in practice, his intellectual culture is utterly insufficient” (Berthelot, *Chimie au moyen âge*, III, p. 214). Djabir is said to have been a Christian or Sabaeen. (See also Ruska, “Die siebzig Bücher des Gabir ibn Hajjan,” p. 38.) Synesius also appeals to the intelligence (Berthelot, *Alch. grecs*, II, iii, 16). Olympiodorus even compares the art to the divine intelligence (*ibid.*, II, iv, 45) and appeals to the intelligence of his public (*ibid.*, II, iv, 55). Christianos too lays stress on intelligence (*ibid.*, VI, i, 4, and iii, 2). Likewise *Aurora* II, in *Art. aurif.*, I, “Prologus”: “oportet intellectum valde subtiliter et ingeniose acuere” (one must sharpen the intellect very subtly and ingeniously).

⁵⁶ *Rosarium*, *Art. aurif.*, II, p. 210.

⁵⁷ Hoghelande, “De alchem. difficultatibus,” *Bibl. chem. curiosa*, I, p. 342: “Librorum magnam habeat copiam.”

⁵⁸ “Rhasis dixit: liber enim librum aperit.” (Quoted by Bonus, “Pret. marg. nov.,” *Bibl. chem.*, II, ch. VIII.)

⁵⁹ *Rosarium*, *Art. aurif.*, II, p. 230.

⁶⁰ *Ibid.*, pp. 211, 243, 269.

⁶¹ Sendivogius, “Parabola,” *Bibl. chem. curiosa*, II, p. 475: “Aqua Philosophica tibi in somno aliquoties manifestata” (The philosophic water that was shown to you a number of times in a dream).
